Securities and Exchange Commission
Washington, DC 20549

Form 19b-4
Proposed Rules

By
Public Company Accounting Oversight Board

In accordance with Rule 19b-4 under the Securities Exchange Act of 1934
1. **Text of the Proposed Rules**

   (a) Pursuant to the provisions of Section 107(b) of the Sarbanes-Oxley Act of 2002 ("Act"), the Public Company Accounting Oversight Board ("Board" or "PCAOB") is filing with the Securities and Exchange Commission ("SEC" or "Commission") proposed amendments to improve the transparency of audits: rules to require disclosure of certain audit participants on a new PCAOB form (Rule 3210, Amendments, and Rule 3211, Auditor Reporting of Certain Audit Participants) and related amendments to auditing standards (collectively, the "proposed rules"). The proposed rules are attached as Exhibit A to this filing. In addition, the Board is also requesting the SEC's approval, pursuant to Section 103(a)(3)(C) of the Act, of the application of these proposed rules to audits of emerging growth companies ("EGCs"), as that term is defined in Section 3(a)(80) of the Securities Exchange Act of 1934 ("Exchange Act"). Section 104 of the Jumpstart Our Business Startups Act provides that any additional rules adopted by the Board subsequent to April 5, 2012, do not apply to the audits of EGCs unless the SEC "determines that the application of such additional requirements is necessary or appropriate in the public interest, after considering the protection of investors and whether the action will promote efficiency, competition, and capital formation." See Exhibit 3.

   (b) The proposed rules would amend AS 3101 (currently AU sec. 508), Reports on Audited Financial Statements; and AS 1205 (currently AU sec. 543), Part of Audit Performed by Other Independent Auditors.

   (c) Not applicable.
2. **Procedures of the Board**

   (a) The Board approved the proposed rules and authorized them for filing with the SEC at its open meeting on December 15, 2015. No other action by the Board is necessary for the filing of the proposed rules.

   (b) Questions regarding this rule filing may be directed to Jennifer Rand, Deputy Chief Auditor (202-207-9206, randj@pcaobus.org); Jessica Watts, Associate Chief Auditor (202-207-9376, wattsj@pcaobus.org); Karen Wiedemann, Associate Counsel (202-591-4411, wiedemannk@pcaobus.org); Lisa Calandriello, Assistant Chief Auditor (202-207-9337, calandriellol@pcaobus.org); or Vincent Meehan, Assistant General Counsel (202-591-4208, meehanv@pcaobus.org).

3. **Board's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rules Change**

   (a) Purpose

   The Board is adopting new rules and related amendments to its auditing standards that will improve transparency regarding the engagement partner and other accounting firms that took part in the audit. The rules will require disclosure of the name of the engagement partner and information about other accounting firms on new PCAOB Form AP, Auditor Reporting of Certain Audit Participants ("Form AP"). Under the final rules, firms will be required to file a new PCAOB form for each issuer audit, disclosing, among other things: the name of the engagement partner; the name, location, and extent of participation of each other accounting firm participating in the audit whose work constituted at least 5% of total audit hours; and the number and aggregate extent of participation of all other accounting firms participating in the audit whose individual
participation was less than 5% of total audit hours. The information will be filed on Form AP, Auditor Reporting of Certain Audit Participants, and will be available in a searchable database on the Board's website.

As described in the release, see Exhibit 3, the Board is adopting two new rules (Rule 3210, Amendments, and Rule 3211, Auditor Reporting of Certain Audit Participants) and one new form (Form AP). These are disclosure requirements and do not change the performance obligations of the auditor in conducting the audit. The Board is also adopting amendments to AS 3101 (currently AU sec. 508), Reports on Audited Financial Statements, and AS 1205 (currently AU sec. 543) related to voluntary disclosure in the auditor's report.

(b) Statutory Basis

The statutory basis for the proposed rules is Title I of the Act.

4. Board's Statement on Burden on Competition

Not applicable. The Board's consideration of the economic impacts of the proposed rules is discussed in Exhibit 1.

5. Board's Statement on Comments on the Proposed Rules Change Received from Members, Participants, or Others

The Board initially released the proposed rules for public comment on July 28, 2009, October 11, 2011, December 4, 2013, and June 30, 2015. See Exhibit 2(a)(A). The Board received 184 written comment letters (including one letter which was withdrawn) relating to its initial proposed rules. See Exhibits 2(a)(B) and 2(a)(C). The Board's Standing Advisory Group and Investor Advisory Group also discussed the proposed rules at meetings on February 16, 2005, June 21, 2007, October 23, 2008, October 14, 2009,

6. **Extension of Time Period for Commission Action**

   The Board does not consent to an extension of the time period specified in Section 19(b)(2) of the Exchange Act.

7. **Basis for Summary Effectiveness Pursuant to Section 19(b)(3) or for Accelerated Effectiveness Pursuant to Section 19(b)(2)**

   Not applicable.

8. **Proposed Rules Based on Rules of Another Board or of the Commission**

   Not applicable.

9. **Exhibits**

   **Exhibit A**— Text of the Proposed Rules.

   **Exhibit 1**— Form of Notice of Proposed Rules for Publication in the Federal Register.

   PCAOB Release No. 2015-004 (Supplemental Request).

10. Signatures

Pursuant to the requirements of the Act and the Securities Exchange Act, as amended, the Board has duly caused this filing to be signed on its behalf by the undersigned thereunto duly authorized.

EXHIBIT A—TEXT OF THE PROPOSED RULES

RULES OF THE BOARD AND AMENDMENTS TO AUDITING STANDARDS

The Board adopts: (i) new Rule 3210, Amendments, and Rule 3211, Auditor Reporting of Certain Audit Participants; (ii) new Form AP, Auditor Reporting of Certain Audit Participants; and (iii) amendments to AS 3101 (currently AU sec. 508), Reports on Audited Financial Statements, and AS 1205 (currently AU sec. 543), Part of the Audit Performed by Other Independent Auditors. The text of these rules, form, and amendments is set forth below.

RULES OF THE BOARD

SECTION 3. AUDITING AND RELATED PROFESSIONAL PRACTICE STANDARDS

Rule 3210. Amendments

The provisions of Rule 2205 concerning amendments shall apply to any Form AP filed pursuant to Rule 3211 as if the submission were a report on Form 3.

Rule 3211. Auditor Reporting of Certain Audit Participants

(a) For each audit report it issues for an issuer, a registered public accounting firm must file with the Board a report on Form AP in accordance with the instructions to that form.

Note 1: A Form AP filing is not required for an audit report of a registered public accounting firm that is referred to by the principal auditor in accordance with AS 1205, Part of the Audit Performed by Other Independent Auditors.

Note 2: Rule 3211 requires the filing of a report on Form AP regarding an audit report only the first time the audit report is included in a document filed with the Commission. Subsequent inclusion of precisely the same audit report in other documents filed with the Commission does not give rise to a requirement to file
another Form AP. In the event of any change to the audit report, including any change in the dating of the report, Rule 3211 requires the filing of a new Form AP the first time the revised audit report is included in a document filed with the Commission.

(b) Form AP is deemed to be timely filed if—

1. The form is filed by the 35th day after the date the audit report is first included in a document filed with the Commission; provided, however, that

2. If such document is a registration statement under the Securities Act, the form is filed by the 10th day after the date the audit report is first included in a document filed with the Commission.

(c) Unless directed otherwise by the Board, a registered public accounting firm must file such report electronically with the Board through the Board's Web-based system.

(d) Form AP shall be deemed to be filed on the date that the registered public accounting firm submits a Form AP in accordance with this rule that includes the certification in Part VI of Form AP.

* * * * *

**AMENDMENTS TO BOARD FORMS**

**FORM AP—AUDITOR REPORTING OF CERTAIN AUDIT PARTICIPANTS**

**GENERAL INSTRUCTIONS**

1. **Submission of this Report.** Effective [insert effective date of Rule 3211], a registered public accounting firm must use this Form to file with the Board reports required by Rule
3211 and to file any amendments to such reports. Unless otherwise directed by the Board, the registered public accounting firm must file this Form electronically with the Board through the Board's Web-based system.

2. **Defined Terms.** The definitions in the Board's rules apply to this Form. Italicized terms in the instructions to this Form are defined in the Board's rules. In addition, as used in the instructions to this Form, the term "the Firm" means the registered public accounting firm that is filing this Form with the Board; and the term, "other accounting firm" means (i) a registered public accounting firm other than the Firm; or (ii) any other person or entity that opines on the compliance of any entity's financial statements with an applicable financial reporting framework.

3. **When this Report is Considered Filed.** A report on Form AP is considered filed on the date the Firm submits to the Board a Form AP in accordance with Rule 3211 that includes the certification required by Part VI of Form AP.

   Note 1: A Form AP filing is not required for an audit report of a registered public accounting firm that is referred to by the Firm in accordance with AS 1205, **Part of the Audit Performed by Other Independent Auditors.**

   Note 2: Rule 3211 requires the filing of a report on Form AP regarding an audit report only the first time the audit report is included in a document filed with the Commission. Subsequent inclusion of precisely the same audit report in other documents filed with the Commission does not give rise to a requirement to file another Form AP. In the event of any change to the audit report, including any change in the dating of the report, Rule 3211 requires the filing of a new Form AP the first time the revised audit report is included in a document filed with the Commission.
4. Amendments to this Report. Amendments to Form AP are required to correct information that was incorrect at the time the Form was filed or to provide information that was omitted from the Form and was required to be provided at the time the Form was filed. When filing a Form AP to amend an earlier filed Form AP, the Firm must supply not only the corrected or supplemental information, but it must include in the amended Form AP all information and certifications that were required to be included in the original Form AP. The Firm may access the originally filed Form AP through the Board's Web-based system and make the appropriate amendments without needing to re-enter all other information.

   Note: The Board will designate an amendment to a report on Form AP as a report on "Form AP/A."

5. Rules Governing this Report. In addition to these instructions, Rules 3210 and 3211 govern this Form. Read these rules and the instructions carefully before completing this Form.

6. Language. Information submitted as part of this Form must be in the English language.

7. Partner ID. For purposes of responding to Item 3.1.a.6, the Firm must assign each engagement partner that is responsible for the Firm's issuance of an issuer audit report a 10-digit Partner ID number. The Firm must assign a unique Partner ID number to each such engagement partner and must use the same Partner ID for that engagement partner in every Form AP filed by the Firm that identifies that engagement partner. The Partner ID must begin with the Firm ID—a unique five-digit identifier based on the number assigned to the Firm by the PCAOB—and be followed by a unique series of five digits.
assigned by the Firm. When an engagement partner is no longer associated with the Firm, his/her Partner ID must be retired and not reassigned.

If the engagement partner was previously associated with a different registered public accounting firm and had a Partner ID at that previous firm, the Firm must assign a new Partner ID in accordance with the instructions above. The new Firm must report, in Item 3.1.a.6, the new Partner ID and all Partner IDs previously associated with the engagement partner.

Note: The Firm ID can be found by viewing the firm's summary page on the PCAOB website, where it is displayed parenthetically next to the name of the firm—firm name (XXXXX). For firms that have PCAOB-assigned identifiers with fewer than 5 digits, leading zeroes should be added before the number to make 5 digits, e.g., 99 should be presented as 00099.

PART I—IDENTITY OF THE FIRM

In Part I, the Firm should provide information that is current as of the date of the certification in Part VI.

Item 1.1 Name of the Firm

a. State the legal name of the Firm.

b. If different than its legal name, state the name under which the Firm issued this audit report.

PART II—AMENDMENTS

Item 2.1 Amendments

If this is an amendment to a report previously filed with the Board:

a. Indicate, by checking the box corresponding to this item, that this is an amendment.
b. Identify the specific Part or Item number(s) in this Form (other than this Item 2.1) as to which the Firm's response has changed from that provided in the most recent Form AP or amended Form AP filed by the Firm with respect to an audit report related to the issuer named in Item 3.1.a.1.

PART III—AUDIT CLIENT AND AUDIT REPORT

Item 3.1 Audit Report

a. Provide the following information concerning the issuer for which the Firm issued the audit report—

1. Indicate, by checking the box corresponding to this item, whether the audit client is an issuer other than an employee benefit plan or investment company; an employee benefit plan; or an investment company;

2. The Central Index Key (CIK) number, if any, and Series identifier, if any;

3. The name of the issuer whose financial statements were audited;

4. The date of the audit report;

5. The end date of the most recent period's financial statements identified in the audit report;

6. The name (that is, first and last name, all middle names and suffix, if any) of the engagement partner on the most recent period's audit, his/her Partner ID, and any other Partner IDs by which he/she has been identified on a Form AP filed by a different registered public accounting firm or on a Form AP filed by the Firm at the time when it had a different Firm ID; and

7. The city and state (or, if outside the United States, city and country) of the office of the Firm issuing the audit report.
b. Indicate, by checking the box corresponding to this item, if the most recent period and one or more other periods presented in the financial statements identified in Item 3.1.a.5 were audited during a single audit engagement.

c. In the event of an affirmative response to Item 3.1.b, indicate the periods audited during the single audit engagement for which the individual named in Item 3.1.a.6 served as engagement partner (for example, as of December 31, 20XX and 20X1 and for the two years ended December 31, 20XX).

d. Indicate, by checking the box corresponding to this item, if the audit report was dual-dated pursuant to AS 3110, Dating of the Independent Auditor's Report.

e. In the event of an affirmative response to Item 3.1.d, indicate the date of the dual-dated information and if different from the engagement partner named in Item 3.1.a.6, information about the engagement partner who audited the information within the financial statements to which the dual-dated opinion applies in the same detail as required by Item 3.1.a.6.

Note: In responding to Item 3.1.e, the Firm should provide each date of any dual-dated audit report.

Item 3.2 Other Accounting Firms

Indicate, by checking the box corresponding to this item, if one or more other accounting firms participated in the Firm's audit. If this item is checked, complete Part IV. By checking this box, the Firm is stating that it is responsible for the audits or audit procedures performed by the other accounting firm(s) identified in Part IV and has supervised or performed procedures to assume responsibility for their work in accordance with PCAOB standards.
Note: For purposes of Item 3.2, an other accounting firm participated in the Firm's audit if: (1) the Firm assumes responsibility for the work and report of the other accounting firm as described in paragraphs .03-.05 of AS 1205, Part of the Audit Performed by Other Independent Auditors, or (2) the other accounting firm or any of its principals or professional employees was subject to supervision under AS 1201, Supervision of the Audit Engagement.

Item 3.3 Divided Responsibility

Indicate, by checking the box corresponding to this item, if the Firm divided responsibility for the audit in accordance with AS 1205, Part of the Audit Performed by Other Independent Auditors, with one or more other public accounting firm(s). If this item is checked, complete Part V.

PART IV—RESPONSIBILITY FOR THE AUDIT IS NOT DIVIDED

In responding to Part IV, total audit hours in the most recent period's audit should be comprised of hours attributable to: (1) the financial statement audit; (2) reviews pursuant to AS 4105, Reviews of Interim Financial Information; and (3) the audit of internal control over financial reporting pursuant to AS 2201, An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements. Excluded from disclosure and from total audit hours in the most recent period's audit are, respectively, the identity and hours incurred by: (1) the engagement quality reviewer; (2) the person who performed the review pursuant to SEC Practice Section 1000.45 Appendix K; (3) specialists engaged, not employed, by the Firm; (4) an accounting firm performing the audit of the entities in which the issuer has an investment that is accounted for using the equity method; (5) internal auditors, other company personnel, or third parties working under the direction of management or the audit committee who provided direct assistance in the audit of internal control over financial reporting; and (6) internal auditors who
provided direct assistance in the audit of the financial statements. Hours incurred in the audit by entities other than other accounting firms are included in the calculation of total audit hours and should be allocated among the Firm and the other accounting firms participating in the audit on the basis of which accounting firm commissioned and directed the applicable work.

Actual audit hours should be used if available. If actual audit hours are unavailable, the Firm may use a reasonable method to estimate the components of this calculation. The Firm should document in its files the method used to estimate hours when actual audit hours are unavailable and the computation of total audit hours on a basis consistent with AS 1215, *Audit Documentation*. Under AS 1215, the documentation should be in sufficient detail to enable an experienced auditor, having no previous connection with the engagement, to understand the computation of total audit hours and the method used to estimate hours when actual hours were unavailable.

In responding to Part IV, if the financial statements for the most recent period and one or more other periods covered by the audit report identified in Item 3.1.a.4 were audited during a single audit engagement (for example, in a reaudit of a prior period(s)), the calculation should be based on the percentage of audit hours attributed to such firms in relation to the total audit hours for the periods identified in Item 3.1.c.

Indicate, by checking the box, if the percentage of total audit hours will be presented within ranges in Part IV.

Item 4.1 Other Accounting Firm(s) Individually 5% or Greater of Total Audit Hours

a. State the legal name of other accounting firms and the extent of participation in the audit—as a single number or within the appropriate range of the percentage of hours,
according to the following list—attribution to the audits or audit procedures performed by such accounting firm in relation to the total hours in the most recent period's audit.

- 90%-or-more of total audit hours;
- 80% to less than 90% of total audit hours;
- 70% to less than 80% of total audit hours;
- 60% to less than 70% of total audit hours;
- 50% to less than 60% of total audit hours;
- 40% to less than 50% of total audit hours;
- 30% to less than 40% of total audit hours;
- 20% to less than 30% of total audit hours;
- 10% to less than 20% of total audit hours; and
- 5% to less than 10% of total audit hours.

b. For each other accounting firm named, state the city and state (or, if outside the United States, city and country) of the headquarters' office and, if applicable, the other accounting firm's Firm ID.

Note 1: In responding to Items 4.1 and 4.2, the percentage of hours attributable to other accounting firms should be calculated individually for each firm. If the individual participation of one or more other accounting firm(s) is less than 5%, the Firm should complete Item 4.2.

Note 2: In responding to Item 4.1.b, the Firm ID represents a unique five-digit identifier for firms that have a publicly available PCAOB-assigned number.
a. State the number of other accounting firm(s) individually representing less than 5% of total audit hours.

b. Indicate the aggregate percentage of participation of the other accounting firm(s) that individually represented less than 5% of total audit hours by filling in a single number or by selecting the appropriate range as follows:

- 90%-or-more of total audit hours;
- 80% to less than 90% of total audit hours;
- 70% to less than 80% of total audit hours;
- 60% to less than 70% of total audit hours;
- 50% to less than 60% of total audit hours;
- 40% to less than 50% of total audit hours;
- 30% to less than 40% of total audit hours;
- 20% to less than 30% of total audit hours;
- 10% to less than 20% of total audit hours;
- 5% to less than 10% of total audit hours; and
- Less-than-5% of total audit hours.

PART V—RESPONSIBILITY FOR THE AUDIT IS DIVIDED

Item 5.1 Identity of the Other Public Accounting Firm(s) to which the Firm Makes Reference

a. Provide the following information concerning each other public accounting firm the Firm divided responsibility with in the audit—

1. State the legal name of the other public accounting firm and when applicable, the other public accounting firm's Firm ID.
2. State the city and state (or, if outside the United States, city and country) of the office of the other public accounting firm that issued the other audit report.

3. State the magnitude of the portion of the financial statements audited by the other public accounting firm.

Note: In responding to Item 5.1.a.3, the Firm should state the dollar amounts or percentages of one or more of the following: total assets, total revenues, or other appropriate criteria, as it is described in the audit report in accordance with AS 1205.

PART VI—CERTIFICATION OF THE FIRM

Item 6.1 Signature of Partner or Authorized Officer

This Form must be signed on behalf of the Firm by an authorized partner or officer of the Firm by typing the name of the signatory in the electronic submission. The signer must certify that:

a. The signer is authorized to sign this Form on behalf of the Firm;

b. The signer has reviewed this Form;

c. Based on the signer's knowledge, this Form does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading; and

d. Based on the signer's knowledge, the Firm has not failed to include in this Form any information that is required by the instructions to this Form.

The signature must be accompanied by the signer's title, the capacity in which the signer signed the Form, the date of signature, and the signer's business telephone number and business e-mail address.

*   *   *   *   *   *
AMENDMENTS TO PCAOB AUDITING STANDARDS FOR OPTIONAL DISCLOSURE OF CERTAIN AUDIT PARTICIPANTS IN THE AUDITOR'S REPORT

The amendments below are adopted to PCAOB auditing standards.

AS 3101 (currently AU sec. 508), Reports on Audited Financial Statements

AS 3101 (currently AU sec. 508), Reports on Audited Financial Statements, is amended as follows:

a. Paragraph .09A is added, as follows:

The auditor may include in the auditor's report information regarding the engagement partner and/or other accounting firms participating in the audit that is required to be reported on PCAOB Form AP, Auditor Reporting of Certain Audit Participants. If the auditor decides to provide information about the engagement partner, other accounting firms participating in the audit, or both, the auditor must disclose the following:

a. Engagement partner—the engagement partner's full name as required on Form AP; or

b. Other accounting firms participating in the audit—

i. A statement that the auditor is responsible for the audits or audit procedures performed by the other public accounting firms and has supervised or performed procedures to assume responsibility for their work in accordance with PCAOB standards;

ii. Other accounting firms individually contributing 5% or more of total audit hours—for each firm, (1) the firm's legal name, (2) the city and state (or, if outside the United States, city and country) of headquarters' office, and (3) percentage of total audit hours as a single
number or within an appropriate range, as is required to be reported on Form AP; and

iii. Other accounting firms individually contributing less than 5% of total audit hours—(1) the number of other accounting firms individually representing less than 5% of total audit hours and (2) the aggregate percentage of total audit hours of such firms as a single number or within an appropriate range, as is required to be reported on Form AP.

* * * *

AS 1205 (currently AU sec. 543), Part of the Audit Performed by Other Independent Auditors

AS 1205 (currently AU sec. 543), Part of the Audit Performed by Other Independent Auditors, is amended as follows:

a. In paragraph .03, the following phrase is added to the end of the second sentence, ", except as provided in paragraph .04."

b. In paragraph .04, the last sentence is deleted and replaced with the following:

If the principal auditor decides to take this position, the auditor may include information about the other auditor in the auditor's report pursuant to paragraph .09A of AS 3101, Reports on Audited Financial Statements, but otherwise should not state in its report that part of the audit was made by another auditor.

c. In paragraph .07:

- The last sentence is deleted.
- Footnote 3 is deleted.

EXHIBIT 1

SECURITIES AND EXCHANGE COMMISSION

(Release No. 34-XXXXX; File No. PCAOB-2016-01)

[Date]

Public Company Accounting Oversight Board; Notice of Filing of Proposed Rules on Improving the Transparency of Audits: Rules to Require Disclosure of Certain Audit Participants on a New PCAOB Form and Related Amendments to Auditing Standards

Pursuant to Section 107(b) of the Sarbanes-Oxley Act of 2002 (the "Act" or "Sarbanes-Oxley Act"), notice is hereby given that on January 29, 2016, the Public Company Accounting Oversight Board (the "Board" or "PCAOB") filed with the Securities and Exchange Commission (the "Commission" or "SEC") the proposed rules described in Items I and II below, which items have been prepared by the Board. The Commission is publishing this notice to solicit comments on the proposed rules from interested persons.

I. Board's Statement of the Terms of Substance of the Proposed Rules

On December 15, 2015, the Board adopted new rules, a new form, and amendments to auditing standards (collectively, the "proposed rules") to improve transparency regarding the engagement partner and other accounting firms that participate in issuer audits. The text of the proposed rules is set out below.

RULES OF THE BOARD AND AMENDMENTS TO AUDITING STANDARDS

The Board adopts: (i) new Rule 3210, Amendments, and Rule 3211, Auditor Reporting of Certain Audit Participants; (ii) new Form AP, Auditor Reporting of Certain Audit Participants; and (iii) amendments to AS 3101 (currently AU sec. 508), Reports on Audited Financial Statements, and AS 1205 (currently AU sec. 543), Part of the Audit
RULES OF THE BOARD

SECTION 3. AUDITING AND RELATED PROFESSIONAL PRACTICE STANDARDS

Rule 3210. Amendments

The provisions of Rule 2205 concerning amendments shall apply to any Form AP filed pursuant to Rule 3211 as if the submission were a report on Form 3.

Rule 3211. Auditor Reporting of Certain Audit Participants

(a) For each audit report it issues for an issuer, a registered public accounting firm must file with the Board a report on Form AP in accordance with the instructions to that form.

Note 1: A Form AP filing is not required for an audit report of a registered public accounting firm that is referred to by the principal auditor in accordance with AS 1205, Part of the Audit Performed by Other Independent Auditors.

Note 2: Rule 3211 requires the filing of a report on Form AP regarding an audit report only the first time the audit report is included in a document filed with the Commission. Subsequent inclusion of precisely the same audit report in other documents filed with the Commission does not give rise to a requirement to file another Form AP. In the event of any change to the audit report, including any change in the dating of the report, Rule 3211 requires the filing of a new Form AP the first time the revised audit report is included in a document filed with the Commission.
(b) Form AP is deemed to be timely filed if—

1. The form is filed by the 35th day after the date the audit report is first included in a document filed with the Commission; provided, however, that

2. If such document is a registration statement under the Securities Act, the form is filed by the 10th day after the date the audit report is first included in a document filed with the Commission.

c) Unless directed otherwise by the Board, a registered public accounting firm must file such report electronically with the Board through the Board's Web-based system.

d) Form AP shall be deemed to be filed on the date that the registered public accounting firm submits a Form AP in accordance with this rule that includes the certification in Part VI of Form AP.

AMENDMENTS TO BOARD FORMS

FORM AP—AUDITOR REPORTING OF CERTAIN AUDIT PARTICIPANTS

GENERAL INSTRUCTIONS

1. Submission of this Report. Effective [insert effective date of Rule 3211], a registered public accounting firm must use this Form to file with the Board reports required by Rule 3211 and to file any amendments to such reports. Unless otherwise directed by the Board, the registered public accounting firm must file this Form electronically with the Board through the Board's Web-based system.

2. Defined Terms. The definitions in the Board's rules apply to this Form. Italicized terms in the instructions to this Form are defined in the Board's rules. In addition,
as used in the instructions to this Form, the term "the Firm" means the registered public accounting firm that is filing this Form with the Board; and the term, "other accounting firm" means: (i) a registered public accounting firm other than the Firm or (ii) any other person or entity that opines on the compliance of any entity's financial statements with an applicable financial reporting framework.

3. **When this Report is Considered Filed.** A report on Form AP is considered filed on the date the Firm submits to the Board a Form AP in accordance with Rule 3211 that includes the certification required by Part VI of Form AP.

   Note 1: A Form AP filing is not required for an audit report of a registered public accounting firm that is referred to by the Firm in accordance with AS 1205, Part of the Audit Performed by Other Independent Auditors.

   Note 2: Rule 3211 requires the filing of a report on Form AP regarding an audit report only the first time the audit report is included in a document filed with the Commission. Subsequent inclusion of precisely the same audit report in other documents filed with the Commission does not give rise to a requirement to file another Form AP. In the event of any change to the audit report, including any change in the dating of the report, Rule 3211 requires the filing of a new Form AP the first time the revised audit report is included in a document filed with the Commission.

4. **Amendments to this Report.** Amendments to Form AP are required to correct information that was incorrect at the time the Form was filed or to provide information that was omitted from the Form and was required to be provided at the time the Form was filed. When filing a Form AP to amend an earlier filed
Form AP, the Firm must supply not only the corrected or supplemental information, but it must include in the amended Form AP all information and certifications that were required to be included in the original Form AP. The Firm may access the originally filed Form AP through the Board's Web-based system and make the appropriate amendments without needing to re-enter all other information.

Note: The Board will designate an amendment to a report on Form AP as a report on "Form AP/A."

5. Rules Governing this Report. In addition to these instructions, Rules 3210 and 3211 govern this Form. Read these rules and the instructions carefully before completing this Form.

6. Language. Information submitted as part of this Form must be in the English language.

7. Partner ID. For purposes of responding to Item 3.1.a.6, the Firm must assign each engagement partner that is responsible for the Firm's issuance of an issuer audit report a 10-digit Partner ID number. The Firm must assign a unique Partner ID number to each such engagement partner and must use the same Partner ID for that engagement partner in every Form AP filed by the Firm that identifies that engagement partner. The Partner ID must begin with the Firm ID—a unique five-digit identifier based on the number assigned to the Firm by the PCAOB—and be followed by a unique series of five digits assigned by the Firm. When an engagement partner is no longer associated with the Firm, his/her Partner ID must be retired and not reassigned.
If the engagement partner was previously associated with a different registered public accounting firm and had a Partner ID at that previous firm, the Firm must assign a new Partner ID in accordance with the instructions above. The new Firm must report, in Item 3.1.a.6, the new Partner ID and all Partner IDs previously associated with the engagement partner.

Note: The Firm ID can be found by viewing the firm's summary page on the PCAOB website, where it is displayed parenthetically next to the name of the firm—firm name (XXXXX). For firms that have PCAOB-assigned identifiers with fewer than 5 digits, leading zeroes should be added before the number to make 5 digits, e.g., 99 should be presented as 00099.

PART I—IDENTITY OF THE FIRM

In Part I, the Firm should provide information that is current as of the date of the certification in Part VI.

Item 1.1 Name of the Firm

a. State the legal name of the Firm.

b. If different than its legal name, state the name under which the Firm issued this audit report.

PART II—AMENDMENTS

Item 2.1 Amendments

If this is an amendment to a report previously filed with the Board:

a. Indicate, by checking the box corresponding to this item, that this is an amendment.
b. Identify the specific Part or Item number(s) in this Form (other than this Item 2.1) as to which the Firm's response has changed from that provided in the most recent Form AP or amended Form AP filed by the Firm with respect to an audit report related to the issuer named in Item 3.1.a.1.

PART III—AUDIT CLIENT AND AUDIT REPORT

Item 3.1 Audit Report

a. Provide the following information concerning the issuer for which the Firm issued the audit report—

1. Indicate, by checking the box corresponding to this item, whether the audit client is an issuer other than an employee benefit plan or investment company; an employee benefit plan; or an investment company;

2. The Central Index Key (CIK) number, if any, and Series identifier, if any;

3. The name of the issuer whose financial statements were audited;

4. The date of the audit report;

5. The end date of the most recent period's financial statements identified in the audit report;

6. The name (that is, first and last name, all middle names and suffix, if any) of the engagement partner on the most recent period's audit, his/her Partner ID, and any other Partner IDs by which he/she has been identified on a Form AP filed by a different registered public accounting firm or on a Form AP filed by the Firm at the time when it had a different Firm ID; and

7. The city and state (or, if outside the United States, city and country) of the office of the Firm issuing the audit report.
b. Indicate, by checking the box corresponding to this item, if the most recent period and one or more other periods presented in the financial statements identified in Item 3.1.a.5 were audited during a single audit engagement.

c. In the event of an affirmative response to Item 3.1.b, indicate the periods audited during the single audit engagement for which the individual named in Item 3.1.a.6 served as engagement partner (for example, as of December 31, 20XX and 20X1 and for the two years ended December 31, 20XX).

d. Indicate, by checking the box corresponding to this item, if the audit report was dual-dated pursuant to AS 3110, Dating of the Independent Auditor's Report.

e. In the event of an affirmative response to Item 3.1.d, indicate the date of the dual-dated information and if different from the engagement partner named in Item 3.1.a.6, information about the engagement partner who audited the information within the financial statements to which the dual-dated opinion applies in the same detail as required by Item 3.1.a.6.

Note: In responding to Item 3.1.e, the Firm should provide each date of any dual-dated audit report.

Item 3.2 Other Accounting Firms

Indicate, by checking the box corresponding to this item, if one or more other accounting firms participated in the Firm's audit. If this item is checked, complete Part IV. By checking this box, the Firm is stating that it is responsible for the audits or audit procedures performed by the other accounting firm(s) identified in Part IV and has supervised or performed procedures to assume responsibility for their work in accordance with PCAOB standards.
Note: For purposes of Item 3.2, an other accounting firm participated in the Firm's audit if (1) the Firm assumes responsibility for the work and report of the other accounting firm as described in paragraphs .03-.05 of AS 1205, Part of the Audit Performed by Other Independent Auditors, or (2) the other accounting firm or any of its principals or professional employees was subject to supervision under AS 1201, Supervision of the Audit Engagement.

Item 3.3     Divided Responsibility

Indicate, by checking the box corresponding to this item, if the Firm divided responsibility for the audit in accordance with AS 1205, Part of the Audit Performed by Other Independent Auditors, with one or more other public accounting firm(s). If this item is checked, complete Part V.

PART IV—RESPONSIBILITY FOR THE AUDIT IS NOT DIVIDED

In responding to Part IV, total audit hours in the most recent period's audit should be comprised of hours attributable to: (1) the financial statement audit; (2) reviews pursuant to AS 4105, Reviews of Interim Financial Information; and (3) the audit of internal control over financial reporting pursuant to AS 2201, An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements. Excluded from disclosure and from total audit hours in the most recent period's audit are, respectively, the identity and hours incurred by: (1) the engagement quality reviewer; (2) the person who performed the review pursuant to SEC Practice Section 1000.45 Appendix K; (3) specialists engaged, not employed, by the Firm; (4) an accounting firm performing the audit of the entities in which the issuer has an investment that is accounted for using the equity method; (5) internal auditors, other company personnel, or
third parties working under the direction of management or the audit committee who
provided direct assistance in the audit of internal control over financial reporting; and (6)
internal auditors who provided direct assistance in the audit of the financial statements.
Hours incurred in the audit by entities other than other accounting firms are included in
the calculation of total audit hours and should be allocated among the Firm and the other
accounting firms participating in the audit on the basis of which accounting firm
commissioned and directed the applicable work.
Actual audit hours should be used if available. If actual audit hours are unavailable, the
Firm may use a reasonable method to estimate the components of this calculation. The
Firm should document in its files the method used to estimate hours when actual audit
hours are unavailable and the computation of total audit hours on a basis consistent with
AS 1215, Audit Documentation. Under AS 1215, the documentation should be in
sufficient detail to enable an experienced auditor, having no previous connection with the
engagement, to understand the computation of total audit hours and the method used to
estimate hours when actual hours were unavailable.
In responding to Part IV, if the financial statements for the most recent period and one or
more other periods covered by the audit report identified in Item 3.1.a.4 were audited
during a single audit engagement (for example, in a reaudit of a prior period(s)), the
calculation should be based on the percentage of audit hours attributed to such firms in
relation to the total audit hours for the periods identified in Item 3.1.c.
Indicate, by checking the box, if the percentage of total audit hours will be presented
within ranges in Part IV.
Item 4.1 Other Accounting Firm(s) Individually 5% or Greater of Total Audit Hours

a. State the legal name of other accounting firms and the extent of participation in the audit—as a single number or within the appropriate range of the percentage of hours, according to the following list—attributable to the audits or audit procedures performed by such accounting firm in relation to the total hours in the most recent period's audit.

- 90%-or-more of total audit hours;
- 80% to less than 90% of total audit hours;
- 70% to less than 80% of total audit hours;
- 60% to less than 70% of total audit hours;
- 50% to less than 60% of total audit hours;
- 40% to less than 50% of total audit hours;
- 30% to less than 40% of total audit hours;
- 20% to less than 30% of total audit hours;
- 10% to less than 20% of total audit hours; and
- 5% to less than 10% of total audit hours.

b. For each other accounting firm named, state the city and state (or, if outside the United States, city and country) of the headquarters' office and, if applicable, the other accounting firm's Firm ID.

Note 1: In responding to Items 4.1 and 4.2, the percentage of hours attributable to other accounting firms should be calculated individually for each firm. If the
individual participation of one or more other accounting firm(s) is less than 5%,
the Firm should complete Item 4.2.

Note 2: In responding to Item 4.1.b, the Firm ID represents a unique five-digit
identifier for firms that have a publicly available PCAOB-assigned number.

Item 4.2 Other Accounting Firm(s) Individually Less Than 5% of Total Audit Hours

a. State the number of other accounting firm(s) individually representing less than
5% of total audit hours.

b. Indicate the aggregate percentage of participation of the other accounting firm(s)
that individually represented less than 5% of total audit hours by filling in a single
number or by selecting the appropriate range as follows:

90%-or-more of total audit hours;
80% to less than 90% of total audit hours;
70% to less than 80% of total audit hours;
60% to less than 70% of total audit hours;
50% to less than 60% of total audit hours;
40% to less than 50% of total audit hours;
30% to less than 40% of total audit hours;
20% to less than 30% of total audit hours;
10% to less than 20% of total audit hours;
5% to less than 10% of total audit hours; and
Less-than-5% of total audit hours.

PART V—RESPONSIBILITY FOR THE AUDIT IS DIVIDED
Item 5.1  Identity of the Other Public Accounting Firm(s) to which the Firm Makes Reference

a. Provide the following information concerning each other public accounting firm the Firm divided responsibility with in the audit—

1. State the legal name of the other public accounting firm and when applicable, the other public accounting firm's Firm ID.

2. State the city and state (or, if outside the United States, city and country) of the office of the other public accounting firm that issued the other audit report.

3. State the magnitude of the portion of the financial statements audited by the other public accounting firm.

Note: In responding to Item 5.1.a.3, the Firm should state the dollar amounts or percentages of one or more of the following: total assets, total revenues, or other appropriate criteria, as it is described in the audit report in accordance with AS 1205.

PART VI—CERTIFICATION OF THE FIRM

Item 6.1  Signature of Partner or Authorized Officer

This Form must be signed on behalf of the Firm by an authorized partner or officer of the Firm by typing the name of the signatory in the electronic submission. The signer must certify that:

a. The signer is authorized to sign this Form on behalf of the Firm;

b. The signer has reviewed this Form;
c. Based on the signer's knowledge, this Form does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading; and
d. Based on the signer's knowledge, the Firm has not failed to include in this Form any information that is required by the instructions to this Form.

The signature must be accompanied by the signer's title, the capacity in which the signer signed the Form, the date of signature, and the signer's business telephone number and business e-mail address.

*   *   *   *   *

AMENDMENTS TO PCAOB AUDITING STANDARDS FOR OPTIONAL DISCLOSURE OF CERTAIN AUDIT PARTICIPANTS IN THE AUDITOR'S REPORT

The amendments below are adopted to PCAOB auditing standards.

AS 3101 (currently AU sec. 508), Reports on Audited Financial Statements

AS 3101 (currently AU sec. 508), Reports on Audited Financial Statements, is amended as follows:

a. Paragraph .09A is added, as follows:

The auditor may include in the auditor's report information regarding the engagement partner and/or other accounting firms participating in the audit that is required to be reported on PCAOB Form AP, Auditor Reporting of Certain Audit Participants. If the auditor decides to provide information about the engagement partner, other accounting
firms participating in the audit, or both, the auditor must disclose the following:

a. Engagement partner—the engagement partner's full name as required on Form AP; or

b. Other accounting firms participating in the audit—
   
i. A statement that the auditor is responsible for the audits or audit procedures performed by the other public accounting firms and has supervised or performed procedures to assume responsibility for their work in accordance with PCAOB standards;

ii. Other accounting firms individually contributing 5% or more of total audit hours—for each firm, (1) the firm's legal name, (2) the city and state (or, if outside the United States, city and country) of headquarters' office, and (3) percentage of total audit hours as a single number or within an appropriate range, as is required to be reported on Form AP; and

iii. Other accounting firms individually contributing less than 5% of total audit hours—(1) the number of other accounting firms individually representing less than 5% of total audit hours and (2) the aggregate percentage of total audit hours of such firms as a single number or within an
appropriate range, as is required to be reported on Form AP.

AS 1205 (currently AU sec. 543), Part of the Audit Performed by Other Independent Auditors

AS 1205 (currently AU sec. 543), Part of the Audit Performed by Other Independent Auditors, is amended as follows:

a. In paragraph .03, the following phrase is added to the end of the second sentence, ", except as provided in paragraph .04."

b. In paragraph .04, the last sentence is deleted and replaced with the following:

If the principal auditor decides to take this position, the auditor may include information about the other auditor in the auditor's report pursuant to paragraph .09A of AS 3101, Reports on Audited Financial Statements, but otherwise should not state in its report that part of the audit was made by another auditor.

c. In paragraph .07:

- The last sentence is deleted.
- Footnote 3 is deleted.

II. Board's Statement of the Purpose of, and Statutory Basis for, the Proposed Rules

In its filing with the Commission, the Board included statements concerning the purpose of, and basis for, the proposed rules and discussed any comments it received on the proposed rules. The text of these statements may be examined at the places specified in Item IV below. The Board has prepared summaries, set forth in sections A, B, and C
below, of the most significant aspects of such statements. In addition, the Board is requesting that the Commission approve the proposed rules, pursuant to Section 103(a)(3)(C) of the Sarbanes-Oxley Act, for application to audits of emerging growth companies ("EGCs"), as that term is defined in Section 3(a)(80) of the Securities Exchange Act of 1934 ("Exchange Act"). The Board's request is set forth in section D.

A. Board's Statement of the Purpose of, and Statutory Basis for, the Proposed Rules

(a) Purpose

Introduction

The Board has adopted new rules and related amendments to its auditing standards that will provide investors and other financial statement users with information about engagement partners and accounting firms that participate in audits of issuers. Under the final rules, firms will be required to file a new PCAOB form for each issuer audit, disclosing: the name of the engagement partner; the name, location, and extent of participation of each other accounting firm that took part in the audit whose work constituted at least 5% of total audit hours; and the number and aggregate extent of participation of all other accounting firms participating in the audit whose individual participation was less than 5% of total audit hours. The information will be filed on Form AP, Auditor Reporting of Certain Audit Participants, and will be available in a searchable database on the Board's website.

Audits serve a crucial public function in the capital markets. However, investors have had very little ability to evaluate the quality of particular audits. Generally, in the United States, investor decisions about how much credence to give to an auditor's report
have been based on proxies of audit quality, such as the size and reputation of the firm that issues the auditor's report. Investors and other financial statement users know the name of the accounting firm signing the auditor's report and may have other information related to the reputation and quality of services of the firm, but they are generally unable to readily identify the engagement partner leading the audit. They are also unlikely to know the extent of the role played by other accounting firms participating in the audit.

The Board has adopted these rules and amendments after considering four rounds of public comment, as well as comments from members of the Board's Standing Advisory Group ("SAG") and Investor Advisory Group ("IAG"). The Board has received consistent comments from investors throughout this rulemaking that stress the importance and value to them of increased transparency and accountability in relation to certain participants in the audit. These commenters indicated that access to such information would be relevant to their decision making, for example, in the context of voting to ratify the company's choice of auditor.\(^1\) The Board believes that its approach to providing information about the engagement partner and the other accounting firms that participated in the audit will achieve the objectives of enhanced transparency and accountability for the audit while appropriately addressing concerns raised by commenters.

\(^1\) See, e.g., Letter from Jeff Mahoney, General Counsel, Council of Institutional Investors, to the Office of the Secretary, PCAOB (Aug. 15, 2014), ("[I]nformation about engagement partners' track record compiled as the result of requiring disclosure of the partner's name in the auditor's report would be relevant to our members as long-term shareowners in overseeing audit committees and determining how to cast votes on the more than two thousand proposals that are presented annually to shareowners on whether to ratify the board's choice of outside auditor.").
In the Board's own experience, gained through more than ten years of overseeing public company audits, information about the engagement partner and other accounting firms participating in the audit can be used along with other information, such as history on other issuer audits or disciplinary proceedings, in order to provide insights into audit quality. The rules the Board adopted will add more specific data points to the mix of information that can be used when evaluating audit quality. Since audit quality is a component of financial reporting quality, high audit quality increases the credibility of financial reporting.

For example, the name of the engagement partner could, when combined with additional information about the experience and reputation of that partner, provide more information about audit quality than solely the name of the firm. Through its oversight activities, the Board has observed that the quality of individual audit engagements varies within firms, notwithstanding firmwide or networkwide quality control systems. Although such variations may be due to a number of factors, the Board's staff uses engagement partner history as one factor in making risk-based selections of audit engagements for inspection. Some firms closely monitor engagement partner quality

---

2 The Board's project on the auditor's reporting model, Proposed Auditing Standards—The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards, PCAOB Release No. 2013-005 (Aug. 13, 2013), is also focused on providing the market with additional information about the audit. In addition, the Board has issued a concept release, Concept Release on Audit Quality Indicators, PCAOB Release No. 2015-005 (July 1, 2015), regarding the content and possible uses of "audit quality indicators," a potential portfolio of quantitative measures that may provide new insights into how to evaluate the quality of audits and how high-quality audits are achieved.

3 Most non-US jurisdictions with highly developed capital markets require transparency regarding the engagement partner responsible for the audit.
history themselves, utilizing this information to manage risk to the firm and to comply with quality control standards.

Under the final rules, investors and other financial statement users will have access, in one location, to the names of engagement partners on all issuer audits. As this information accumulates and is aggregated with other publicly available information, investors will be able to take into account not just the firm issuing the auditor's report but also the specific partner in charge of the audit and his or her history as an engagement partner on issuer audits. This will allow interested parties to compile information about the engagement partner, such as whether the partner is associated with restatements of financial statements or has been the subject of public disciplinary proceedings, as well as whether he or she has experience as an engagement partner auditing issuers of a particular size or in a particular industry. While this information may not be useful in every instance or meaningful to every investor, the Board believes that, overall, it will contribute to the mix of information available to investors.

The final rules requiring disclosures about other accounting firms that participate in issuer audits should also provide benefits to investors and other financial statement users. In many audit engagements, especially audits of public companies operating in multiple locations internationally, the firm signing the auditor's report performs only a portion of the audit. The remaining work is performed by other (often affiliated) accounting firms that are generally located in other jurisdictions. The accounting firm issuing the auditor's report assumes responsibility for the procedures performed by other

---

4 At this time, the Board is not extending the Form AP requirements to audits of brokers and dealers pursuant to Rule 17a-5 under the Exchange Act. If a broker or dealer were an issuer required to file audited financial statements under Section 13 or 15(d) of the Exchange Act, the requirements would apply.
accounting firms participating in the audit\(^5\) or supervises the work of other accounting
and nonaccounting firm participants in the audit.\(^6\) However, under current requirements,
the auditor's report generally provides no information about these arrangements, even
though other accounting firms may perform a significant portion of the audit work. As a
result, the auditor's report may give the impression that the work was performed solely by
one firm—the firm issuing the auditor's report—and investors have no way of knowing
whether the firm expressing the opinion did all of the work or only a portion of it.

Information provided on Form AP is intended to help investors understand how
much of the audit was performed by the accounting firm signing the auditor's report and
how much was performed by other accounting firms. Investors will also be able to
research publicly available information about the firms identified in the form, such as
whether a participating firm is registered with the PCAOB, whether it has been inspected
and, if so, what the results were and whether it has any publicly available disciplinary
history. Investors will also have a better sense of how much of the audit was performed
by firms in other jurisdictions, including jurisdictions in which the PCAOB cannot

\(^5\) See AS 1205 (currently AU sec. 543), Part of the Audit Performed by
Other Independent Auditors. On March 31, 2015, the PCAOB adopted the reorganization
of its auditing standards using a topical structure and a single, integrated numbering
system. See Reorganization of PCAOB Auditing Standards and Related Amendments to
September 17, 2015, the SEC approved the PCAOB’s adoption of the reorganization. See
Public Company Accounting Oversight Board; Order Granting Approval of Proposed
Rules to Implement the Reorganization of PCAOB Auditing Standards and Related
Changes to PCAOB Rules and Attestation, Quality Control, and Ethics and Independence
Standards, Exchange Act Release No. 34-75935 (Sept. 17, 2015), 80 FR 57263 (Sept. 22,
2015). The reorganized amendments will be effective as of December 31, 2016, and
nothing precludes auditors and others from using and referencing the reorganized

\(^6\) See AS 1201 (currently Auditing Standard No. 10), Supervision of the
Audit Engagement.
currently conduct inspections. As with disclosure of the name of the engagement partner, these additional data points will add to the mix of information that investors can use.

In addition to the informational value of the disclosures required under the final rules, the Board believes the transparency created by public disclosure should promote increased accountability in the audit process. As Justice Brandeis famously observed, "Sunlight is said to be the best of disinfectants; electric light the most efficient policeman."7 Although auditors already have incentives to maintain a good reputation, such as internal performance reviews, regulatory oversight, and litigation risk, public disclosure will create an additional reputation risk, which should provide an incremental incentive for auditors to maintain a good reputation, or at least avoid a bad one. While this additional incentive will not affect all engagement partners in the same way, in the Board's view, it should provide an overall benefit.

The Board believes additional transparency should also increase accountability at the firm level. The Board has observed that some auditors allowed other accounting firms that did not possess the requisite expertise or qualifications to play significant roles in audits. Firms similarly have not always given the critical task of engagement partner assignment the care it deserves. For example, the Board's inspections have found instances in which accounting firms lacked independence because they failed to rotate the engagement partner, as required by the Act and the rules of the Commission. The Board has also imposed sanctions on firms that staffed a public company audit with an

7 Louis Brandeis, Other People's Money and How the Bankers Use It 92 (1914).
engagement partner who lacked the necessary competencies. Making firms publicly accountable in a way they have not been previously for their selections of engagement partners and other accounting firms participating in the audit should provide additional discipline on the process and discourage such lapses.

The requirement to provide disclosure on Form AP, rather than in the auditor's report as previously proposed, is primarily a response to concerns raised by some commenters about potential liability and practical concerns about the potential need to obtain consents for identified parties in connection with registered securities offerings. Investors commenting in the rulemaking process have generally stated a preference for disclosure in the auditor's report. Under the final rules, in addition to filing Form AP, firms will also have the ability to identify the engagement partner and/or provide disclosure about other accounting firms participating in the audit in the auditor's report. This is not required, but firms may choose to do so voluntarily. The Board believes that providing information about the engagement partner and the other accounting firms that participated in the audit on Form AP, coupled with allowing voluntary reporting in the auditor's report, will achieve the objectives of enhanced transparency and accountability for the audit while appropriately addressing concerns raised by commenters.

In response to commenter suggestions, the Board adopted a phased effective date to give firms additional time to develop systems necessary to implement the new rules. Subject to approval of the new rules and amendments by the Commission, Form AP disclosure regarding the engagement partner will be required for audit reports issued on

---

or after the later of three months after Commission approval of the final rules or January 31, 2017. Disclosure regarding other accounting firms will be required for audit reports issued on or after June 30, 2017.

The Board adopted two new rules (Rules 3210 and 3211) and one new form (Form AP). These are disclosure requirements and do not change the performance obligations of the auditor in conducting the audit. The Board also adopted amendments to AS 3101 (currently AU sec. 508), Reports on Audited Financial Statements, and AS 1205 (currently AU sec. 543) related to voluntary disclosure in the auditor's report.

In the Board's view, the final rules and amendments to its auditing standards, which the Board adopted pursuant to its authority under the Sarbanes-Oxley Act, will further the Board's mission of protecting the interests of investors and furthering the public interest in the preparation of informative, accurate, and independent audit reports.

(b) Statutory Basis

The statutory basis for the proposed rules is Title I of the Act.

B. Board's Statement on Burden on Competition

Not applicable.

C. Board's Statement on Comments on the Proposed Rules Received from Members, Participants or Others

Proposed Amendments to PCAOB Auditing Standards to Provide Disclosure in the
(December 4, 2013) ("2013 Release"), and Supplemental Request for Comment: Rules to
Require Disclosure of Certain Audit Participants on a New PCAOB Form, PCAOB
comment letters received in response to the PCAOB's requests for comment are available
on the PCAOB's website at
http://www.pcaobus.org/Rules/Rulemaking/Pages/Docket029.aspx. The Board received
184 written comment letters (including one letter which was withdrawn). The Board's
response to the comments it received and the changes made to the rules in response to the
comments received are discussed below.

Discussion of the Final Rules

The required disclosures under the final rules principally include:

- The name of the engagement partner; and

- For other accounting firms\(^9\) participating in the audit:

  5% or greater participation: The name, city and state (or, if outside the
  United States, the city and country), and the percentage of total audit
  hours attributable to each other accounting firm whose participation in
  the audit was at least 5% of total audit hours;

\(^9\) For purposes of Form AP, "other accounting firm" means (i) a registered
public accounting firm other than the firm filing Form AP or (ii) any other person or
entity that opines on the compliance of any entity's financial statements with an
applicable financial reporting framework.
Less than 5% participation: The number of other accounting firms that participated in the audit whose individual participation was less than 5% of total audit hours, and the aggregate percentage of total audit hours of such firms.

The final rules require this information to be filed on Form AP. In addition to filing the form, the firm signing the auditor's report may voluntarily provide information about the engagement partner, other accounting firms, or both in the auditor's report.

Form AP—Auditor Reporting of Certain Audit Participants

Introduction

Under the final rules, firms will be required to provide specified disclosures regarding the engagement partner and other accounting firms participating in the audit on a new PCAOB form, Form AP. Most commenters supported Form AP as a vehicle for disclosures about the engagement partner and other participants in the audit. However, some commenters criticized the Form AP approach generally because they disputed the net value of the information to be disclosed, regardless of the means of disclosure, or believed that the information was more appropriately presented elsewhere, such as in the auditor's report, the issuer's proxy statement, or PCAOB Form 2. Investors and investor groups generally preferred auditor signature or disclosure in the auditor's report and characterized Form AP as an acceptable second-best approach. Most other commenters, on the other hand, preferred Form AP, generally on the basis that it would help mitigate legal and practical issues associated with disclosure in the auditor's report.

As noted in the 2015 Supplemental Request, Form AP serves the same purpose as disclosure in the auditor's report. Its intended audience is the same as the audience for the
auditor's report—investors and other financial statement users—and its filing is tied to
the issuance of an auditor's report. In that respect, it differs from the PCAOB's existing
forms,\textsuperscript{10} which are intended primarily to elicit information for the Board's use in
connection with its oversight activities, with a secondary benefit of making as much
reported information as possible available to the public as soon as possible after filing
with the Board.\textsuperscript{11} Form AP is primarily intended as a vehicle for public disclosure, much
like the auditor's report itself.\textsuperscript{12} While information on Form AP could also benefit the
Board's oversight activities, that is ancillary to the primary goal of public disclosure.

\textbf{Disclosures About the Engagement Partner}

Since the inception of this rulemaking, the Board has explored a variety of means
of providing public disclosure of the name of the engagement partner, including
engagement partner signature on the auditor's report, identification of the engagement

\textsuperscript{10} Existing PCAOB reporting forms have been developed for the principal
purpose of registration with the Board and reporting to the Board about a registered
public accounting firm's issuer, broker, and dealer audit practice. These forms are: (1)
Form 1, Application for Registration; (2) Form 1-WD, Request for Leave to Withdraw
from Registration; (3) Form 2, Annual Report; (4) Form 3, Special Report; and (5) Form
4, Succeeding to Registration Status of Predecessor.

\textsuperscript{11} Rules on Periodic Reporting by Registered Public Accounting Firms,

\textsuperscript{12} The Board has authority under Section 103 of the Sarbanes-Oxley Act to
adopt, by rule, audit standards "to be used by registered public accounting firms in the
preparation and issuance of audit reports . . . as may be necessary or appropriate in the
public interest or for the protection of investors." In addition, under Section 102 of the
Sarbanes-Oxley Act, the Board has authority to require registered public accounting firms
to submit periodic and special reports, which are publicly available unless certain
conditions are met. If a firm requests confidential treatment of information under Section
102(e) of the Sarbanes-Oxley Act, the information is not publicly disclosed unless there
is a final determination that it does not meet the conditions for confidentiality. Because of
the intended purpose of Form AP and the Board's related authority under Section 103 of
the Sarbanes-Oxley Act, confidential treatment of the information filed on Form AP will
not be available.
partner in the auditor's report, and identification of the name of the engagement partner on Form 2. The 2013 Release contemplated identifying the engagement partner in the auditor's report. The 2015 Supplemental Request solicited comment on the potential use of Form AP, with optional additional disclosure in the auditor's report.

Commenters on the 2013 Release and on the 2015 Supplemental Request expressed divergent views on a requirement to disclose the name of the engagement partner. Commenters that supported the disclosure requirement argued that it would provide information that would be useful to investors and other financial statement users (for example, in connection with a vote on ratification of auditors), or could improve audit quality by increasing the sense of accountability of engagement partners. Commenters that opposed the requirement generally claimed that identification of the engagement partner would give rise to unintended negative consequences, particularly with respect to liability; would not be useful information for investors and other financial statement users; could incentivize engagement partners to act in ways that protect their reputations but potentially conflict with the audit quality goals of their audit firms or with broader indicators of audit quality; and could mislead or confuse users about the role of the engagement partner, in particular by overemphasizing the role of the engagement partner as compared to the role of the firm. Several of the commenters that previously opposed disclosure in the auditor's report were more supportive of disclosure in a PCAOB form, if the Board determined to mandate disclosure.

The Board believes that disclosure of the name of the engagement partner will, overall, be useful to investors and other financial statement users. Although the disclosure of the name of the engagement partner might provide limited information initially, it is
reasonable to expect that, over time, the disclosures will allow investors and other
financial statement users to consider a number of other data points about the engagement
partner, such as the number and names of other issuer audit engagements in which the
partner is the engagement partner and other publicly available data. Such bodies of
information have developed in some other jurisdictions, such as Taiwan, where public
companies are required to disclose the names of the engagement partners,\(^\text{13}\) and some
commenters believe that, in the United States, third-party vendors will supply
information in addition to what is provided by Form AP.

Some commenters on the 2015 Supplemental Request suggested that disclosure
regarding a number of these matters, such as industry experience, partner tenure,
restatements and disciplinary actions, be added to Form AP or linked to Form AP data.
One of these commenters pointed out that the academic literature supports the potential
usefulness of metrics, such as the number of years the individual has served as the
engagement partner or the engagement partner for prior years as signals of audit quality,
and that, by requesting additional background information in the first year of
implementation, the PCAOB could accelerate the usefulness of Form AP data. In striking
a balance between the anticipated benefits of the rule and its anticipated costs, including
the costs and timing of initial implementation, the Board has determined not to expand
the disclosures required on Form AP at this time.

\(^\text{13}\) As described in Daniel Aobdia, Chan-Jane Lin, and Reining Petacchi,
Capital Market Consequences of Audit Partner Quality, 90 The Accounting Review 2143
(2015), the Taiwan Economic Journal collects data that covers all public companies in
Taiwan and includes, among other things, the names of the engagement partners, the
accounting firm issuing the auditor's report, the regulatory sanction history of the
partners, and the audit opinions. Professor Aobdia is a research fellow at the PCAOB. His
research cited above was undertaken prior to joining the PCAOB.
Some commenters raised concerns that public identification of the engagement partner could lead to a rating, or "star," system resulting in particular individuals being in high demand, to the unfair disadvantage of other equally qualified engagement partners. These commenters also suggested that, if such a system were created, engagement partners may not be willing to accept the most challenging audit engagements. The Board is aware that, as a consequence of the required disclosures, certain individuals may develop public reputations based on their industry specializations, audit history, and track records. The Board does not believe that such information would necessarily be harmful and could, to the contrary, be useful to investors and other financial statement users. In recent years, detailed information about the backgrounds, expertise, and reputations among clients and peers has become commonly available regarding other skilled professionals and such information is widely available to consumers of those services. The role of an auditor, including an engagement partner, differs from that of other professions, but the underlying principle that consumers of professional services could make better decisions with more information still applies. Further, investors generally commented that they would benefit from information about the identity of those who perform audits.

Some commenters were concerned that identification of the engagement partner may confuse investors by putting a misleading emphasis on a single individual when an audit, particularly a large audit, is in fact a group effort. One commenter suggested that the disclosure should be expanded to include members of firm leadership to help clarify the responsibility for the audit; other commenters suggested adding context, such as disclosure of the proportion of total audit hours attributable to the engagement partner;
identification of other parties that play a role in the engagement; identification of the engagement quality reviewer; or a sentence that explains the roles of the engagement partner and the firm signing the auditor's report in the performance of the audit.

It is true that an audit is often a group effort and that a large audit of a multinational company generally involves a very large team with more than one partner involved. Nevertheless, the engagement partner, who is the "member of the engagement team with primary responsibility for the audit,"14 plays a unique and critical role in the audit. It is not unusual in audits of large companies for audit committees to interview several candidates for their engagement partner when a new engagement partner is to be chosen because the qualifications and personal characteristics of the engagement partner are viewed by the audit committee and senior management as particularly important. Because of the engagement partner's key role in the audit, it is appropriate when shareholders are asked to ratify the company's choice of the registered firm as its auditor to be well informed about the leader of the team that conducted the most recently completed audit. Public identification of the name of the engagement partner will help serve that end. The role played in the audit by others such as the engagement quality reviewer, while important, is not comparable and, in the Board's view, does not warrant separate identification at this time.

Some commenters on the 2013 and 2011 Releases expressed concerns that public identification of engagement partners may make them susceptible to threats of violence and suggested adding an exception to the disclosure requirement analogous to that in the EU's Eighth Company Law Directive, which allows for an exception "if such disclosure

14 See Appendix A of AS 2101 (currently Auditing Standard No. 9), Audit Planning, and Appendix A of AS 1201 (currently Auditing Standard No. 10).
could lead to an imminent and significant threat to the personal security of any person.\textsuperscript{15} However, other commenters on the 2011 Release indicated that auditors should not be treated differently, for security purposes, than other individuals involved in the financial reporting process who are publicly associated with a company in its SEC filings. The Board notes that a requirement to disclose the names of financial executives, board members, and audit committee members has been in place in the U.S. for quite some time, yet there is no indication that personal security risks have increased for these individuals. Therefore, the final rules do not include an exception to the required disclosure.

Many commenters have also suggested that the simple act of naming the engagement partner will increase the engagement partner's sense of accountability. Some of these commenters argued that increased accountability would lead to changes in behavior that would enhance audit quality. In their view, the availability of information about engagement partner history, and the potential that individuals may develop public reputations based on their industry specializations, audit history, and track records could be a powerful antidote to internal pressures or may foster improved compliance with existing auditing standards. Many accounting firms, associations of accountants, and others disputed this argument, claiming that engagement partners are already accountable as a result of internal performance reviews, regulatory oversight, and litigation risk. The Board believes allowing investors and other financial statement users to distinguish not just among firms, but also among partners, should enhance the incentive for engagement partners to develop a reputation for performing high-quality audits.

Public disclosure of the engagement partner's name could also have a beneficial effect on the engagement partner assignment process at some firms. In many public companies, particularly larger ones, the choice of an engagement partner is determined by both the firm and the audit committee. As discussed above, firms would be publicly accountable for these assignments in a way that they have not been previously. Some commenters noted that audit committees are currently able to obtain non-public information about engagement partners. These commenters suggested that mandated disclosure would not be useful to audit committees, since audit committees already know the information being disclosed. However, as noted by another commenter, disclosure would lead to more information becoming publicly available about all engagement partners on audits of issuers conducted under PCAOB standards, which should provide audit committees with additional context and benchmarking information when participating in the assignment process.

Some commenters suggested that, because the financial statements and the auditor's report are retrospective, the disclosure required under the proposed amendments would not be useful for shareholders deciding whether to ratify the audit committee's choice of auditor. Under the final rules, shareholders will be able to find the identity of the engagement partner for the most recently completed audit but not for the next period. Other commenters, however, claimed that historical information would provide insight into the audit process and would enable investors to better evaluate the audit, which would assist them in making the ratification decision.

For the reasons discussed above, the Board believes that disclosure of the name of the engagement partner will benefit investors and other financial statement users by
providing more specific data points in the mix of information that can be used when evaluating audit quality and hence credibility of financial reporting. At the same time, the disclosure should, at least in some circumstances, enhance the accountability of both engagement partners and accounting firms.

In commenting on the 2015 Supplemental Request, some academics noted potential uncertainty or ambiguity that could arise if engagement partners' names were not presented consistently in Form AP, if an engagement partner changed his or her name or changed firms, or if two engagement partners had the same name. Some commenters suggested that the PCAOB include a unique partner identifying number to ensure that partners could be unambiguously identified over time. Evidence available to PCAOB staff indicates that the problem of partner name confusion among the largest audit firms would be quite limited.\(^{16}\) However, because it may improve the usability of the data, Form AP includes a field for such a partner identifying number, and the final rules require each registered accounting firm to assign a 10-digit partner identifying number—Partner ID—to each of its partners serving as the engagement partner on audits of issuers.\(^{17}\) The number will be identified to a particular partner and will not be reassigned.

---

\(^{16}\) In order to evaluate the potential extent of confusion about partner names, staff researched six years of partner name data for the largest four accounting firms. Three scenarios of potential name confusion were constructed and quantitatively evaluated. The first scenario was two partners in a firm sharing the exact same name. The second scenario was a lead engagement partner changing audit firms. The final scenario was a partner changing last names. The total incidence of such scenarios appeared to affect less than 0.5% of the partner population in the sample.

\(^{17}\) See general instruction 7 and Item 3.1.a.6 of Form AP. The firm is required to assign a 10-digit Partner ID number, beginning with the Firm ID (a unique five-digit number based on the number assigned to the firm by the PCAOB) followed by a unique series of five digits assigned by the firm. The unique series element can be any series of numbers of the firm's choosing that is unique to each engagement partner associated with the firm. For example, the unique series element could be sequential.
if the partner retires or otherwise ceases serving as engagement partner on issuer audits conducted by that firm. If an engagement partner changes firms, the new firm must assign a new Partner ID to the engagement partner. The new firm will be responsible for reporting on Form AP the engagement partner with his or her new Partner ID and all Partner IDs previously associated with the engagement partner. The Board believes that the ability to unambiguously identify each engagement partner with his or her issuer audit history may improve the usability of the data gathered on Form AP and the overall cost of implementation should be low.

Disclosure About Other Participants in the Audit

Introduction

In the 2013 Release, the Board proposed disclosure in the auditor's report of: (1) the names, locations, and extent of participation of other independent public accounting firms that took part in the audit and (2) the locations and extent of participation, on an aggregate basis by country, of certain other persons not employed by the auditor that took part in the audit. Extent of participation would have been determined as a percentage of total audit hours, excluding hours attributable to the engagement quality reviewer, Appendix K\(^\text{18}\) review and internal audit. Extent of participation would have been numbers, numbers based on the year the partner was admitted into the partnership, or random numbers.

\(^{18}\) See SEC Practice Section ("SECPS") Section 1000.45 Appendix K, SECPS Member Firms With Foreign Associated Firms That Audit SEC Registrants. The Board adopted Appendix K as part of its interim standards. See Rule 3400T(b), Interim Quality Control Standards; SECPS Section 1000.08(n). Appendix K requires accounting firms associated with international firms to seek the adoption of policies and procedures consistent with certain objectives, including having policies and procedures for certain filings of SEC registrants which are the clients of foreign associated firms to be reviewed by persons knowledgeable in PCAOB standards.
disclosed as a number or within a range (less than 5%, 5% to less than 10%, 10% to less
than 20%, and so on in 10% increments) and would have been based on estimates of
audit hours. Other accounting firms whose participation was less than 5% of total audit
hours were not required to be individually identified; rather, the number of such other
accounting firms and their aggregate participation would have been disclosed. Similarly,
for nonaccounting firm participants in the same country whose aggregate participation
was less than 5%, disclosure of the number of such countries and the aggregate
participation of nonaccounting firm participants in such countries would have been
required.

The 2015 Supplemental Request solicited comment on limiting disclosures with
respect to nonaccounting firm participants, including the possibility of eliminating such
disclosures altogether or tailoring the requirements so that disclosure would only be
provided with respect to nonaccounting firms that were not entities controlled by or under
common control with the auditor or employees of such entities. In addition, unlike the
2013 Release (but aligned with the 2011 Release), the disclosure requirements and
computation of total audit hours presented in the 2015 Supplemental Request excluded
specialists engaged, not employed, by the auditor.

Some commenters generally supported the requirements in the 2013 Release and
asserted that disclosure of the other accounting firms involved in the audit would provide
useful information to investors. Other commenters opposed the requirement, because of
potential consent requirements and liability under the Securities Act of 1933 ("Securities
Act"), or based on the belief that disclosures were not useful information, could confuse
financial statement users about the degree of responsibility for the audit assumed by the
accounting firm signing the auditor's report, or could contribute to information overload.

Others suggested that the current auditing standards (for example, AS 1205 (currently, AU sec. 543)) in this area are adequate. Many commenters on the 2015 Supplemental Request supported other accounting firm disclosures on Form AP (even some who disagreed with engagement partner disclosure requirements). Most commenters supported having no required disclosure of nonaccounting firm participants.

The Board believes that information about other accounting firms participating in the audit is of increasing importance as companies become more global.\(^{19}\) Many companies with substantial operations outside the United States are audited by U.S.-based, PCAOB-registered public accounting firms.\(^{20}\) The Board's inspection process has revealed that the extent of participation by firms other than the one that signs the auditor's report ranges from none to most of the audit work (or, in extreme cases, substantially all...)

\(^{19}\) For example, in their most recent audited financial statements filed as of May 15, 2015, approximately 51% and 41% of the population of companies in the Russell 3000 Index reported segment sales and assets, respectively, in geographic areas outside the country or region of the accounting firm issuing the auditor's report. For the population of companies in the Russell 3000 Index that reported segment sales or assets in geographic areas outside the country or region of the accounting firm issuing the auditor's report, approximately 40% and 35% of those segment sales and assets, respectively, were in geographic areas outside the country or region of the accounting firm issuing the auditor's report.

\(^{20}\) See Auditor Considerations Regarding Using the Work of Other Auditors and Engaging Assistants from Outside the Firm, PCAOB's Staff Audit Practice Alert No. 6 (July 12, 2010) (discussing the trend of smaller U.S. firms' auditing companies with operations in emerging markets and reminding auditors of their responsibilities in such audits). Staff Audit Practice Alert No. 6, at 2, noted that "in a 27-month period ending March 31, 2010, at least 40 U.S. registered public accounting firms with fewer than five partners and fewer than ten professional staff issued audit reports on financial statements filed with the SEC by companies whose operations were substantially all in the China region." See also Activity Summary and Audit Implications for Reverse Mergers Involving Companies from the China Region: January 1, 2007 through March 31, 2010, PCAOB Research Note No. 2011-P1 (Mar. 14, 2011) (discussing available information on the role of registered public accounting firms in auditing issuers in the China region).
of the work). In many situations, the accounting firm signing the auditor's report uses another accounting firm in a foreign country to audit the financial statements of a subsidiary in that country. These arrangements are often used in auditing today's multinational corporations. At the same time, the quality of the audit is dependent, to some degree, on the competence and integrity of the participating accounting firms. This is especially true when the firm signing the auditor's report has reviewed only a portion of the work done by the other accounting firm, as is permitted under AS 1205 (currently AU sec. 543). The Board and its staff previously conveyed their concern about some practices they have seen in these arrangements. In addition to providing potentially valuable information to investors and other financial statement users about who actually performed the audit, the disclosure of other accounting firms participating in the audit could provide other potentially valuable information, such as the extent of participation in

21 AS 1205.02 (currently AU sec. 543.02) requires the auditor to decide whether his own participation is sufficient to enable him to serve as the principal auditor and to report as such on the financial statements. Current auditing standards state that the firm may serve as principal auditor even when "significant parts of the audit may have been performed by other auditors." AS 1205.02. The PCAOB has a project on its agenda to improve the auditing standards that govern the planning, supervision, and performance of audits involving other auditors. See Standard-Setting Agenda, Office of the Chief Auditor (Dec. 31, 2015).

22 See AS 1205 (currently AU sec. 543) for a list of matters the auditor is required to review.

23 See Audit Risk in Certain Emerging Markets, PCAOB's Staff Audit Practice Alert No. 8, at 19 (Oct. 3, 2011) ("Through the Board's oversight activities, the Board's staff has observed instances in certain audits of companies in emerging markets in which the auditor did not properly coordinate the audit with another auditor."); see also Order Instituting Disciplinary Proceedings, Making Findings, and Imposing Sanctions, In the Matter of Clancy and Co., P.L.L.C. et al., PCAOB Release No. 105-2009-001 (Mar. 31, 2009) (imposing sanctions in a case in which a U.S. firm used a significant amount of audit work performed by a Hong Kong firm without adequately coordinating its work with that of the Hong Kong firm).
the audit by other accounting firms in jurisdictions in which the PCAOB cannot conduct inspections.

Some commenters expressed concern that including information in the auditor's report about other participants in the audit might confuse financial statement users as to who has overall responsibility for the audit or appear to dilute the responsibility of the firm signing the auditor's report. Other commenters, including investors and other financial statement users, expressed support for the disclosure and indicated that investors and other financial statement users are able to distinguish and evaluate many disclosures made by management. These commenters have also asserted that they would be able to consider the information appropriately. To address concerns about potential confusion regarding who has overall responsibility for the audit or potential dilution of the responsibility of the signing firm, the final rules provide that if disclosure regarding other accounting firms is voluntarily included in the auditor's report, the auditor's report must also include a statement that the firm signing the auditor's report is responsible for the audits and audit procedures performed by the other accounting firms and has supervised or performed procedures to assume responsibility for the work in accordance with PCAOB standards.

**Participants for Which Disclosure is Required**

**Other Accounting Firms**

Under the final rules, disclosure is required with respect to all other accounting firms that participated in the audit. The final rules define an "other accounting firm" as (i) a registered public accounting firm other than the firm filing Form AP, or (ii) any other
person or entity that opines on the compliance of any entity's financial statements with an applicable financial reporting framework.

For purposes of Form AP, an other accounting firm participated in the audit if (i) the firm filing Form AP assumed responsibility for the work and report of the other accounting firm as described in paragraphs .03–.05 of AS 1205 (currently AU sec. 543), or (ii) the other accounting firm or any of its principals or professional employees was subject to supervision under AS 1201 (currently Auditing Standard No. 10).

As noted above, the 2013 Release contemplated that disclosure would be required with respect to other "public accounting firms" that took part in the audit. Under the Board's rules, "public accounting firm" means "a proprietorship, partnership, incorporated association, corporation, limited liability company, limited liability partnership, or other legal entity that is engaged in the practice of public accounting or preparing or issuing audit reports."24 The change in the definition is intended to facilitate compliance and avoid potential uncertainty about the entities for which disclosure must be provided on Form AP.

The amount of disclosure required varies with the level of participation in the audit. For each other accounting firm whose participation accounted for at least 5% of total audit hours, the following information must be provided: Legal name; a unique five-digit identifier ("Firm ID") for firms that have a publicly available PCAOB-assigned number;25 headquarters office location (city and state (or, if outside the US, city and

---

24 PCAOB Rule 1001(p)(iii), Definition of Terms Employed in Rules.

25 This number can be found by viewing the firm's summary page on the PCAOB website, where it is displayed parenthetically next to the name of the firm—firm name (XXXXX). If the number assigned to the firm by the PCAOB has fewer than five digits, leading zeroes should be added before the number to make the five digit Firm ID,
country)); and extent of participation, expressed as a percentage (either as a single number or within a range) of total audit hours.

Form AP includes a new requirement to provide the Firm ID for all currently-registered firms as well as other accounting firms that have a publicly available PCAOB-assigned number. Although commenters did not raise a concern about needing unique identifiers for firms as they did for engagement partners, the staff is aware that some accounting firms in the same country may have the same or very similar names. To alleviate possible confusion among accounting firm names and to ensure that firms that have a publicly available PCAOB-assigned number can be more easily linked to other PCAOB registration and inspection data, Form AP requires disclosure of the Firm ID.

Some commenters expressed concern that disclosure of other accounting firms participating in the audit may provide information about the issuer's operations that would not otherwise be required to be disclosed (for example, countries in which the issuer operates). Given that the reporting provides information about where the audit was conducted and not necessarily where the issuer's business operations are located and that the names and locations of other accounting firms are only identified if their work constitutes at least 5% of total audit hours, the Board has not revised the proposed requirements to address this concern.

For other accounting firms that participated in the audit but whose individual participation accounted for less than 5% of total audit hours, the following aggregated information is required: the number of such other accounting firms; and the aggregate for example, 99 should be presented as 00099. For example, all currently-registered firms have a number assigned by the PCAOB.
extent of participation of such other accounting firms, expressed as a percentage of total
audit hours.

Similar to comments received on the 2011 Release, a few commenters on the
2013 Release suggested that the Board should consider requiring disclosure regarding the
nature of the work of or areas audited by other accounting firms. Further, some
commenters suggested that the Board require the addition of clarifying language
regarding the structure of the firm, the firm's system of quality controls, and the work
performed by the firm signing the auditor's report over the work of other accounting
firms participating in the audit.

After considering comments on the 2011 and 2013 Releases, no requirement was
added for additional clarifying language because the Board does not believe that
requiring the disclosure of this more detailed information is necessary to meet the Board's
overall objective of this rulemaking. Moreover, the final rules require the firm preparing
Form AP to acknowledge its responsibility for the audits or audit procedures performed
by other accounting firms that participated in the audit.

Referred-to Auditors

In situations in which the auditor makes reference to another accounting firm in
the auditor's report, the 2015 Supplemental Request suggested that the auditor would
also disclose the name of the other public accounting firm ("referred-to auditor"), the city
and state (or, if outside the United States, city and country) of the office of the other
public accounting firm that issued the other audit report, and the magnitude of the portion
of the financial statements audited by the referred-to auditor on Form AP. The Board

26 See AS 1205.03, .06-.09 (currently AU sec. 543.03, .06-.09).
adopted these requirements substantially as described in the 2015 Supplemental Request.\textsuperscript{27} The requirement to file Form AP does not apply to referred-to auditors, since the referred-to auditor may not be required to register with the PCAOB\textsuperscript{28} and would not generally be conducting the audit of an issuer, but rather a subsidiary or business unit of an issuer.

Unlike the disclosures for other accounting firm participants, which are based on the percentage of total audit hours, Form AP disclosures for referred-to auditors effectively incorporate the existing requirements for disclosure of the magnitude of the portion of the financial statements audited by the referred-to auditor.\textsuperscript{29} In addition, Form AP requires the name, the city and state (or, if outside the United States, city and country) of headquarters' office location, and Firm ID, if any, of the referred-to auditor.

**Nonaccounting Firm Participants**

Under the 2013 Release, disclosure would have been required with respect to all

\textsuperscript{27} Additionally, the amendments to AS 1205 (currently AU sec. 543) remove, as unnecessary, the requirement to obtain express permission of the other accounting firm when deciding to disclose the firm's name in the auditor's report because, as discussed below, the SEC rules already include a requirement that the auditor's report of the referred-to auditor be filed with the SEC.

\textsuperscript{28} Under PCAOB Rule 2100, \textit{Registration Requirements for Public Accounting Firms}, each public accounting firm that "plays a substantial role in the preparation or furnishing of an audit report with respect to any issuer, broker, or dealer must be registered with the Board."

\textsuperscript{29} See AS 1205.07 (currently AU sec. 543.07). Existing PCAOB standards require that the auditor disclose the magnitude of the portion of the financial statements audited by the referred-to accounting firm by stating the dollar amount or percentages of one or more of the following: total assets, total revenues, or other appropriate criteria, whichever most clearly reveals the portion of the financial statements audited by the referred-to accounting firm.
"persons not employed by the auditor”\textsuperscript{30} that the auditor was required to supervise pursuant to AS 1201 (currently Auditing Standard No. 10). Such nonaccounting firm participants would not have been identified by name. Rather, these participants would have been identified in the auditor's report as "persons in [country] not employed by our firm." These disclosures would have permitted investors to determine how much of the audit was performed by nonaccounting firm participants in a particular jurisdiction but not the nature of the work performed by those nonaccounting firm participants or whether they were, for example, offshore service centers, consultants, or another type of entity.

Commenters' reactions to the reproposed disclosure requirements were mixed. Some commenters argued for uniform treatment of accounting firm participants and nonaccounting firm participants, either to make disclosure easier to understand or to avoid the creation of incentives to engage nonaccounting firm participants rather than other accounting firms. Some of these commenters suggested that the nature of services performed by persons not employed by the auditor should also be disclosed. Other commenters questioned the value of the disclosures or suggested that the disclosures could be confusing or subject to misinterpretation. Some commenters were particularly critical of requiring disclosures regarding "offshored" work\textsuperscript{31} and work performed by

\textsuperscript{30} PCAOB Release No. 2011-007, at 18.

\textsuperscript{31} The 2011 Release noted that some accounting firms had begun a practice, known as offshoring, whereby certain portions of the audit are performed by offices in a country different than the country where the firm is headquartered. The Board understands that offshored work may be performed by another office of or by entities that are distinct from, but that may be affiliated with, the registered firm that signs the auditor's report. The Board notes that the practice of sending some audit work to offshore service centers, typically in countries where labor is inexpensive, has been increasing in recent years.
leased personnel (often in firms that have an alternative practice structure\textsuperscript{32}). These commenters asserted that work performed by nonaccounting firm participants under the direct supervision and review of the firm signing the auditor's report should not be required to be separately identified, regardless of who performed the work and where the work was performed. One commenter further asserted that disclosure should not be required regarding subsidiaries of, or other entities controlled by, the registered firm issuing the auditor's report or entities that are subject to common control (for example, sister entities that perform tax, valuation, or other assistance to the registered firm), arguing that the manner in which a registered firm is structured should not trigger a disclosure requirement.

The 2015 Supplemental Request solicited comment on eliminating disclosures regarding nonaccounting firm participants or tailoring them to eliminate disclosure for entities that are controlled by or under common control with the auditor, and the employees of such entities. While some commenters supported the disclosure requirements, most argued that disclosure would not be useful and may be confusing or inconsistent, given the differences in legal structures and practice arrangements across global networks.

After considering the comments and the intention of the disclosure, the requirement to disclose the location and extent of participation of nonaccounting firm participants...
participants has been eliminated from the final rule. The Board recognizes that, while nonaccounting firms may participate in the audit, the Board's intent is to provide information about the participation of accounting firms. Accounting firms are responsible for supervising the work of nonaccounting firm participants. In addition, the Board's website includes names of registered accounting firms and inspection reports, as well as disciplinary actions with respect to registered public accounting firms. Information about nonaccounting firm audit participants may not be as meaningful to users since similar information is not available for these participants. The Board can monitor trends in the use of nonaccounting firms, which could have an effect on audit quality, and analyze whether such trends are related to the requirements of Form AP.

Nonaccounting firm participants participate in audits at the request of and in support of the audit work of accounting firms participating in the audit. For that reason, unless expressly excluded from the computation of total audit hours, hours incurred by nonaccounting firm participants in the audit are included in the calculation of total audit hours and should be allocated among the other accounting firms that participated in the audit on the basis of which accounting firm commissioned and directed the applicable work of the nonaccounting firm.

Exclusions from Disclosure and Computation of Total Audit Hours

The 2015 Supplemental Request indicated that the following persons would be excluded from the disclosures and from the computation of total audit hours: the

---

33 Unless the context dictates otherwise, "nonaccounting firm participant" as used in this release means any person or entity other than the principal auditor or any other accounting firm that participates in an audit.
engagement quality reviewer;\textsuperscript{34} persons performing a review pursuant to Appendix K; specialists engaged, not employed, by the auditor;\textsuperscript{35} internal auditors, other company personnel, or third parties working under the direction of management or the audit committee, who provided direct assistance in the audit of internal control over financial reporting;\textsuperscript{36} or internal auditors who provided direct assistance in the audit of the financial statements.\textsuperscript{37} While some commenters on the 2015 Supplemental Request suggested that excluding the engagement quality reviewer and Appendix K review from calculation of audit hours would add administrative effort, commenters at earlier stages of the rulemaking were supportive of these exclusions. The Board continues to believe that the exclusion of the engagement quality reviewer is appropriate because he or she is not under the supervision of the engagement partner.\textsuperscript{38} Similarly, the Appendix K review is

\begin{footnotesize}

  \item See AS 1220 (currently Auditing Standard No. 7), \textit{Engagement Quality Review}.
  \item See AS 1210 (currently AU sec. 336), \textit{Using the Work of a Specialist}, describes a specialist as "a person (or firm) possessing special skill or knowledge in a particular field other than accounting or auditing." Examples of specialists include, but are not limited to, actuaries, appraisers, engineers, environmental consultants, and geologists. Income taxes and information technology are specialized areas of accounting and auditing and, therefore, persons or firms possessing such skills are not considered specialists. AS 1210.01.
  \item See paragraph 17 of AS 2201 (currently Auditing Standard No. 5), \textit{An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements}.
  \item See paragraph .27 of AS 2605, \textit{Consideration of the Internal Audit Function} (currently AU sec. 322, \textit{The Auditor’s Consideration of the Internal Audit Function in an Audit of Financial Statements}).

  \item Nonetheless, the engagement quality reviewer has an important role in the audit. The engagement quality reviewer performs an evaluation of the significant judgments made by the engagement team and the related conclusions reached in forming the overall conclusion on the engagement and in preparing the engagement report, if a
\end{enumerate}
\end{footnotesize}
excluded because the engagement partner does not supervise or assume responsibility for that work.

The hours incurred by persons employed or engaged by the company who provided direct assistance to the auditor are excluded because determining the extent of their participation in the audit may be impractical. Such persons also may perform other tasks for the company not related to providing direct assistance to the auditor or may not track time spent on providing the direct assistance.

Under the 2013 Release, the hours of persons with specialized skill or knowledge ("specialists") engaged by the auditor were included in the calculation of audit hours. This was a change from the 2011 Release, under which engaged specialists were excluded from total audit hours. One commenter on the 2013 Release suggested that including specialists in the calculation of audit hours and disclosure of persons not employed by the auditor may put firms that engage specialists at a competitive disadvantage compared to firms that employ specialists. Some commenters also expressed concerns that it may be challenging to obtain hours incurred by the specialists, especially in cases where the engagement is on a fixed-fee basis. After considering comments, the Board determined to exclude specialists engaged, not employed, by the auditor from disclosure and the computation of total audit hours.

Some commenters requested clarification regarding the treatment of audit hours related to investments accounted for using the equity method of accounting. The final report is to be issued, in order to determine whether to provide concurring approval of issuance. See AS 1220 (currently Auditing Standard No. 7).

See Financial Accounting Standards Board ("FASB") Accounting Standards Codification ("ASC") Topic 323, Investments—Equity Method and Joint Ventures.
rules have been revised to clarify that hours incurred in the audit of entities in which the
issuer has such an investment are not part of total audit hours.

Extent of Participation in the Audit—Percentage of Total Audit Hours

Audit Hours as a Metric for Participation in the Audit

Under the 2013 Release, the extent of participation in the audit would have been
determined using the percentage of total audit hours as the metric.

Most commenters agreed with measurement based on the percentage of audit
hours. Some commenters suggested using other metrics, including audit fees, the
percentage of assets or revenue that the auditor and other participants were responsible
for auditing, and the magnitude of the company's segment or subsidiary audited by the
other participants.

After consideration of the comments received, the Board believes that percentage
of total hours in the most recent period's audit is an appropriate and practical metric for
the extent of other accounting firms' participation in the audit, for the purpose of
disclosure on Form AP. Audit fees may not fairly represent the extent of other accounting
firms' participation in the audit. Audit fees in the proxy disclosure may include fees for
other services (for example, other regulatory and statutory filings) and may exclude fees
paid directly to other accounting firms rather than to the auditor. Further, because labor
rates vary widely around the world, audit fees would result in an inconsistent metric
compared to audit hours. The use of revenue or assets tested may not be suitable in all
circumstances, particularly when other accounting firms and the auditor perform audit
procedures on the same location, business unit, or financial statement line item.
The firm should document in its files the computation of total audit hours on a basis consistent with AS 1215 (currently Auditing Standard No. 3), Audit Documentation.40

Elements of Total Audit Hours

In general, total audit hours will be comprised of the hours of the principal auditor, nonaccounting firm participants that assist the principal auditor or other accounting firms, and other accounting firms participating in the audit. Total audit hours exclude hours incurred by the engagement quality reviewer, Appendix K reviewer, specialists engaged by the auditor, internal audit, among others.

Disclosure Threshold

The 2013 Release set 5% of total audit hours as the threshold for identification of other participants in the audit. Many commenters supported the 5% threshold. Other commenters suggested various other thresholds, such as 3%, 10%,41 or the PCAOB’s substantial role threshold of 20%.42

40 Under AS 1215 (currently Auditing Standard No. 3), the audit documentation should be in sufficient detail to enable an experienced auditor, having no previous connection with the engagement, to understand the computation of total audit hours and the method used to estimate hours when actual hours were unavailable.

41 On the 2011 Release, commenters suggested 10% to be consistent with certain requirements in accounting standards, such as the 10% of revenue threshold for disclosing sales to a single customer under FASB pronouncements. See FASB ASC, Topic 280, Segment Reporting, subparagraph 10-50-42.

42 According to paragraph (p)(ii), "Play a Substantial Role in the Preparation or Furnishing of an Audit Report," of PCAOB Rule 1001, "[t]he phrase 'play a substantial role in the preparation or furnishing of an audit report' means—(1) to perform material services that a public accounting firm uses or relies on in issuing all or part of its audit report, or (2) to perform the majority of the audit procedures with respect to a subsidiary or component of any issuer, broker, or dealer the assets or revenues of which constitute 20% or more of the consolidated assets or revenues of such issuer, broker, or dealer necessary for the principal auditor to issue an audit report [on the issuer]."
The Board's intention is to provide meaningful information to investors and other financial statement users about participants in the audit, without imposing an undue compliance burden on auditors. Based on PCAOB staff analysis of available data about the participation of other accounting firms in the audit, the Board believes using a 5% threshold would, in most cases, result in disclosing the names of other accounting firms that collectively make up most of the audit effort (measured by hours) beyond that of the firm signing the auditor's report, and would result in identification of one or two other participant(s) on average.\textsuperscript{43} The final rule therefore retains the threshold at 5% of total audit hours. The final rule also requires firms to disclose the total number of other accounting firms that were individually less than 5% and their total extent of participation to provide investors and others with a complete picture of the effort by participating firms.

**Presentation as a Single Number or Within a Range**

The 2013 Release would have required firms to disclose the percentage of total audit hours of other participants either as a single number or within a series of ranges. Commenters supported the ability to present the disclosure of other participants in ranges or as a single number. This requirement was adopted in Form AP as reproposed to 2100, each public accounting firm that "plays a substantial role in the preparation or furnishing of an audit report with respect to any issuer, broker, or dealer must be registered with the Board."

\textsuperscript{43} PCAOB staff analyzed information provided by auditors of more than 100 larger issuers with respect to audit engagements conducted in 2013 and 2014. The selected information included the names of other accounting firms that participated in the audit and their individual extent of participation as a percentage of the total audit hours, without using a threshold. The Board's staff used this information to determine the approximate number of other accounting firm participants in larger audit engagements that would be required to be disclosed individually using 3%, 5%, and 10% thresholds.
provide firms flexibility in completing the disclosures while providing investors and other financial statement users meaningful information about the relative extent of participation of other accounting firms and to allow firms flexibility to choose the method of presentation, i.e., as a single number or within a range, that best suits their circumstances, for all other accounting firms required to be identified.

Use of Estimates

The 2013 Release stated that auditors would be able to use estimates of audit hours when actual hours were not available. Many commenters on the 2015 Supplemental Request requested clarification that estimation of audit hours would be permitted. To respond to commenters' concerns, the instructions to Form AP provide that firms may use a reasonable method to estimate audit hours when actual hours have not been reported or are otherwise unavailable. The firm should document in its files the method used to estimate hours when actual audit hours are unavailable on a basis consistent with AS 1215 (currently Auditing Standard No. 3).

Liability Considerations

Throughout the Board's rulemaking process, commenters have expressed concern about the impact that public identification of key audit participants, particularly in the auditor's report, could have on the potential liability or litigation risks of those participants under the federal securities laws. The Board takes these concerns seriously and has sought comment throughout this rulemaking on various means of disclosure—from engagement partner signature on the auditor's report, to disclosure in the auditor's report, to disclosure on Form AP—in part to respond to them. The Board believes the
final rule accomplishes its disclosure goals while appropriately addressing these concerns by commenters.

As noted in the 2015 Supplemental Request, some commenters on the 2013 Release suggested that identifying the engagement partner and the other participants in the audit in the auditor's report could create both legal and practical issues under the federal securities laws by increasing the named parties' potential liability and could require their consent if the auditors' reports naming them were included in, or incorporated by reference into, registration statements under the Securities Act.44 In addition, some commenters expressed concerns about the possible effects of the engagement partner's name appearing in the auditor's report on liability and litigation risk under Section 10(b) of the Exchange Act and Rule 10b-5 thereunder. In their view, identification in the auditor's report could make it more likely that identified persons would be named in a lawsuit or could affect their liability position. Many commenters on the 2013 Release urged the Board to proceed with the new disclosure requirements, if it determined to do so, by mandating disclosure on an amended PCAOB Form 2, firm's annual report, or on a newly created PCAOB form as a means of responding to such concerns.

Other commenters stated that, in view of the PCAOB's investor protection mission, the 2013 Release gave too much weight to commenters' concerns about liability.

44 Section 11 of the Securities Act imposes liability on certain participants in a securities offering, including every accountant who, with his or her consent, has been named as having prepared or certified any part of the registration statement or any report used in connection with the registration statement. Section 7 of the Securities Act requires that the consent of every accountant so named in a registration statement must be filed with the registration statement.
These commenters asserted that naming the engagement partner, in itself, would not affect the basis on which liability could be founded.

The 2015 Supplemental Request solicited comment on whether disclosure on Form AP would mitigate commenters' concerns about liability-related consequences under federal or state law. While some commenters asserted that requiring disclosure on Form AP would not reduce litigation risk, others argued that there was no risk that Form AP disclosure would give rise to additional liability. Most accounting firms that commented on the issue agreed that Form AP would address some or all of their liability concerns. Several commenters asserted that the use of Form AP would eliminate the need to obtain consents under Section 7 of the Securities Act and mitigate or eliminate concerns about potential liability under Section 11 of the Securities Act. Commenter views on the impact of Form AP on potential liability under Exchange Act Section 10(b) and Rule 10b-5 were less uniform, with some saying that disclosures on Form AP would not have an impact on potential liability under Section 10(b) and Rule 10b-5, some suggesting the disclosures on Form AP would increase potential liability, and others saying that the impact would be uncertain because of continued development of the law in the area.

The Board believes that disclosure on Form AP appropriately addresses concerns raised by commenters about liability. As commenters suggested, disclosure on Form AP should not raise potential liability concerns under Section 11 of the Securities Act or trigger the consent requirement of Section 7 of that Act because the engagement partner and other accounting firms would not be named in a registration statement or in any
While the Board recognizes that commenters expressed mixed views on the potential for liability under Exchange Act Section 10(b) and Rule 10b-5 and the ultimate resolution of Section 10(b) liability is outside of its control, the Board nevertheless does not believe any such risks warrant not proceeding with the Form AP approach.

Finally, one commenter asserted that the Board should not pursue disclosure requirements for the engagement partner and other participants in the audit unless it can be done in a "liability neutral" way. The Board's purpose in this project is not to expose auditors to additional liability, and, consistent with that, it has endeavored to reduce any such liability consequences. The Board does not agree, however, that it should not seek to achieve the anticipated benefits of a new rule—here, increased transparency and accountability for key participants in the audit—unless it can somehow be certain that its actions will not affect liability in any way. On the whole, the Board believes it has appropriately addressed the concerns regarding liability consequences of its proposal in a manner compatible with the objectives of this rulemaking, and in view of the rulemaking's anticipated benefits.

Voluntary Disclosure in the Auditor's Report

The 2015 Supplemental Request solicited comment on whether, in addition to filing Form AP, auditors could voluntarily provide the same information in the auditor's report. Comments on this issue were mixed. Several commenters noted that they preferred disclosure of this information in the auditor's report, although they were willing

---

45 While the requirement to file Form AP is triggered by the issuance of an auditor's report, the form would not automatically be incorporated by reference into or otherwise made part of the auditor's report.
to accept Form AP as a compromise. Another commenter stated that optionality about whether to provide disclosure in the auditor's report could also provide a signal for differentiation.

Other commenters, including almost all the accounting firms that commented, suggested that the Board should prohibit or not encourage voluntary disclosure in the auditor's report. They stated that voluntary disclosure in the auditor's report would give rise to the same legal and practical challenges as the previously proposed required auditor's report disclosure. Some of these commenters suggested that if the auditor chose to add disclosures in the auditor's report then related costs would also increase. Some other commenters were concerned that information in some, but not all, auditors' reports may confuse financial statement users about where to obtain the information.

The amendments will permit voluntary disclosure in the auditor's report. AS 3101 (currently AU sec. 508) is amended to permit voluntary disclosure in the auditor's report of the engagement partner and other accounting firms. AS 1205 (currently AU sec. 543) is amended to permit firms to disclose in certain circumstances that other accounting firms participated in the audit, which had been previously prohibited. Under these amendments, auditors can provide information in the auditor's report about the engagement partner, other accounting firms, or both, choosing if any information is disclosed in the auditor's report. However, Form AP will provide investors and financial statement users with all of the required disclosures.

If disclosure is made in the auditor's report about other accounting firms, the disclosure must include information about all of the other accounting firms required on Form AP, so that auditors cannot choose to include some other accounting firms and
exclude others. The auditor's report must also include a statement confirming the principal auditor's responsibility for the work of other auditors and that it has supervised or performed procedures to assume responsibility for their work in accordance with PCAOB standards, to avoid potential confusion about the respective responsibilities of the principal auditor and the other accounting firms. When making these disclosures in the auditor's report, the language should be consistent with PCAOB standards. In particular, any additional language that could be viewed as disclaiming, qualifying, restricting, or minimizing the auditor's responsibility for the audit or the audit opinion on the financial statements is not appropriate and may not be used.

The Board also adopted amendments to AS 1205 (currently AU sec. 543) to remove, as unnecessary, the requirement to obtain express permission of the other accounting firm when deciding to disclose the firm's name in the auditor's report when responsibility for the audit is divided with another firm. Because the Commission rules already include a requirement that the auditor's report of the referred-to firm should be filed with the Commission, the name of the firm is already made public.

Allowing voluntary disclosure in the auditor's report responds to some investors' preference regarding location and timing for disclosures. Some auditors may choose to make the disclosures in the auditor's report, and this might provide auditors a way to differentiate themselves. Auditors are not required to include anything in the auditor's report and would presumably do so only if they choose, taking into account, for example, any costs associated with disclosure in the auditor's report, such as obtaining consents

\[46\] See AU sec. 1205.03,.06–.09 (currently AU sec. 543.03,.06–.09).

\[47\] See Rule 2-05 of Regulation S-X, 17 CFR 210.2-05.
pursuant to the Securities Act, if required, and the resulting potential for liability.

Inconsistency across auditor's reports should not be a source of concern because complete data will be available on the PCAOB's website as a result of mandatory disclosures on Form AP for all issuer audits.

Filing Requirements

   Filing Deadline

   The 2015 Supplemental Request contemplated a filing deadline for Form AP of 30 days after the date the auditor's report is first included in a document filed with the SEC, with a shorter deadline of 10 days for initial public offerings ("IPOs"). This period was intended to balance the time needed to compile the required information, particularly for firms that submit multiple forms at the same time, with investor preference that the information be made available promptly.

   Comments on the filing deadline were mixed. Some commenters preferred a shorter filing deadline, suggesting that the form should be filed concurrently with the issuance of the auditor's report or within 10 days of initial SEC filing, similar to the deadline for IPOs. In their view a shorter deadline would make it more likely that the information would be available for investors to consider in connection with their voting and investment decisions.

   Other commenters suggested a longer filing deadline, which would provide firms with additional time to gather the information. Some of these commenters also indicated that with a longer deadline the information regarding the extent of participation of other accounting firms would be more accurate, requiring less estimation. These commenters suggested several alternative deadlines, including: 45 days after the report issuance, to
coincide with the documentation completion date;\textsuperscript{48} 60 days after report issuance, which would include the 45-day documentation completion date plus extra time to gather the information; monthly filings, due, for example, at the end of the month subsequent to inclusion in an SEC filing; and quarterly or annual filings.

There were very few comments on the IPO deadline. Of those that commented, most considered the 10-day filing deadline to be appropriate, while some other commenters suggested the deadline be extended, for example to 14 days.

After considering comments, the Board believes the information on Form AP should be made available so that it is useful to investors, while also affording firms sufficient time to compile the necessary information. For audits of non-IPOs, a key consideration is making the identity of the engagement partner publicly available before the shareholder vote to ratify the appointment of the auditor. For audits of IPOs, a key consideration regarding timing is ensuring that the information is available before any IPO roadshow, if applicable.

Taking into account investors' preference for timely access to the information together with commenter suggestions to provide firms with sufficient time to file Form AP, the Board has modified the deadline for filing Form AP to be 35 days after the date the auditor's report is first included in a document filed with the Commission. Based on PCAOB staff's analysis of available data regarding the timing of annual shareholders' meetings, the Board believes that this filing deadline would likely allow information to be provided to investors prior to the annual shareholders' meeting in most cases, thus

\textsuperscript{48} AS 1215 (currently Auditing Standard No. 3) requires that a complete and final set of audit documentation should be assembled for retention as of a date not more than 45 days after the report release date.
making the information available in time to inform voting decisions.\textsuperscript{49} Filing deadlines of 45 days or greater may not achieve the intended benefits of providing investors with timely information. Firms have the ability to file Form APs in batches, so that firms that prefer to file periodically (for example, every month or twice a month) will be able to do so.

The deadline for filing Form AP in an IPO situation is adopted as contemplated in the 2015 Supplemental Request, as 10 days after the auditor's report is first included in a document filed with the Commission. This deadline is intended to facilitate making the information available prior to the IPO roadshow, if applicable. The text of the rule has been simplified and clarified.

\textbf{Other Filing Considerations}

Many firms commenting on the 2015 Supplemental Request requested additional clarification or guidance about how Form AP requirements would apply in particular circumstances, such as filing requirements for reissued auditor's reports and reporting on mutual fund families, the allocation of audit hours between audits of consolidated financial statements and statutory audits of issuer subsidiaries, and batch filing of Form APs. Some commenters recommended Form AP include other information, such as notification of a change in the engagement partner.

Form AP provides information only about completed audits, so there is no requirement to file in connection with interim reviews (although the hours incurred for

\textsuperscript{49} While there is no requirement under federal securities laws for an issuer to have an annual meeting of shareholders and therefore no uniform deadline for such a meeting, PCAOB staff review indicates that approximately 98\% of annual meetings are held 35 days or later after the date of the auditor's report.
interim reviews are included in total audit hours). Form AP is required to be amended only when there was an error or omission in the original submission. Changes from one year to the next (for example, a change in engagement partner from the one assigned in the prior year) do not necessitate an amendment and are reflected on a Form AP that will be filed when the next auditor's report is issued.

If the auditor's report is reissued and dual-dated, a new Form AP is required even when no information on the form, other than the date of the report, changes. If the auditor's report date in Form AP matches the date on the auditor's report, users will be able to match the auditor's report with the related Form AP. To clarify the filing requirements for reissued reports, a note has been added to Rule 3211. The note provides that the filing of a report on Form AP regarding an audit report is required only the first time the audit report is included in a document filed with the Commission. Subsequent inclusion of precisely the same audit report in other documents filed with the Commission does not give rise to a requirement to file another Form AP. In the event of any change to the audit report, including any change in the dating of the report, Rule 3211 requires the filing of a new Form AP the first time the revised audit report is included in a document filed with the Commission.

---

50 In addition, Form AP would not be required to be filed in connection with attestation engagements, for example, compliance with servicing criteria pursuant to SEC Rule 13a-18—Regulation AB.

51 For example, if a previously issued audit report is reissued and dual-dated to refer to the addition of a subsequent events note in the financial statements, a new Form AP filing would be required. When completing the new form, the firm should consider if any other information should be changed, including information regarding the participation of other accounting firms.
For audits of mutual funds, Form AP permits one form to be filed in cases where multiple audit opinions are included in the same auditor's report—such as in the case for mutual fund families. If multiple audit opinions included on the same auditor's report involved different engagement partners, a Form AP would be filed for each engagement partner, covering the audit opinions for the funds for which he or she served as engagement partner.

When actual hours are not available, auditors may estimate audit hours for purposes of calculating the extent of participation of other accounting firms. This situation may arise, for example, in the context of statutory audits. Accounting firms that participate in audits of multinational issuers often perform local statutory audits of subsidiaries in addition to their participation in the issuer's audit. The materiality threshold and legal requirements for the statutory audit may necessitate a different level of work than would have been required for the issuer's audit. In these cases, it may be difficult for the auditor to determine how much work performed at the subsidiary relates solely to the participation in the issuer's audit. The auditor may use a reasonable method to estimate the components of this calculation, such as 100% of actual hours incurred by other accounting firms during the issuer's audit or estimating the hours incurred by the other accounting firm participating to perform work necessary for the issuer's audit.

To ease compliance, firms must, unless otherwise directed by the Board, file Form AP through the PCAOB's existing web-based Registration, Annual, and Special Reporting system ("RASR") using the username and password they were issued in
connection with the registration process. The system requirements for filing Form AP are similar to the system requirements for filing annual and special reports with the PCAOB.

Some accounting firms commented that they would like the ability to file Form APs in batches to reduce their administrative burden. Some of these firms also stated that they would like the ability to file information about more than one audit report on a single Form AP. As described in the 2015 Supplemental Request, the Board has developed a template, also known as a schema, that will allow firms to submit multiple forms simultaneously using an extensible markup language ("XML"). Firms will be able to submit multiple forms simultaneously in a batch when utilizing the schema provided by the Board. Unlike other PCAOB forms, the schema for Form AP will enable firms to complete the entire form using XML rather than only portions of it. After considering commenters' concerns and the technological constraints of RASR, no changes were made regarding to the ability to file information about more than one audit report on a single Form AP.

Form APs filed with the Board will be available on the Board's website. The Board's website will allow users to search Form APs by engagement partner, to find the audits of issuers that he or she led, and by issuer, to find the engagement partner and other accounting firms that worked on its audit. Over time, the PCAOB anticipates enhancing the search functionality and plans to allow users to download search results.

---

52 Form AP is not required to be filed for audit reports issued in connection with non-issuer audits, even when those audits are conducted in accordance with PCAOB standards.
The information filed on Form AP is anticipated to be available on the Board's website indefinitely.

A commenter noted that there would be a potential redundancy between Form AP and the list of audit clients and audit reports required on Form 2, and suggested that the Board consider eliminating the Form 2 requirement. After considering the commenter's concern and evaluating the potential redundancies, the Board has determined not to amend Form 2 at this time. While some information on Form 2 does overlap with Form AP, more information is collected on Form 2 than would be filed on Form AP; for example, Form 2 also requires the dates of any consents to an issuer's use of an auditor's report previously issued.

One commenter suggested that Form AP allow a firm to assert that it cannot provide information called for by Form AP without violating non-U.S. laws, which would make Form AP consistent with other forms filed with the Board. The Board is committed to cooperation and reasonable accommodation in its oversight of registered non-U.S. firms, and has provided non-U.S. firms the opportunity to at least preliminarily withhold some information from required PCAOB forms on the basis of an asserted conflict with non-U.S. laws. Generally, the Board has not provided for firms to assert such a conflict with respect to all information required by PCAOB forms. In considering whether to allow the opportunity to assert conflicts, the Board has considered both whether it is realistically foreseeable that any law would prohibit providing the information and, even if it were realistically foreseeable, whether allowing a firm preliminarily to withhold the information is consistent with the Board's broader
responsibilities and the particular regulatory objective. In addition, even where the Board has allowed registered firms to assert legal conflicts in connection with Forms 2, 3, and 4, that accommodation does not entail a right for a firm to continue to withhold the information if it is "sufficiently important." In this case, nothing has been brought to the Board's attention indicating a realistic possibility that any law would prohibit a firm from providing the information, and the information is categorically of sufficient importance that the Board sees no reason to allow a firm to withhold it on the basis of an asserted conflict.

The 2015 Supplemental Request proposed to apply PCAOB Rule 2204, Signatures, to Form AP. Application of the rule would have required firms to electronically sign and certify and retain manually signed copies of Form APs filed with the Board. Some commenters identified the manual signature requirement as an administrative burden that would be time consuming and costly. After considering these views, the Board determined to simplify the requirements for Form AP. Firms will be required to have each Form AP signed on behalf of the Firm by typing the name of the signatory in the electronic submission, but there is no requirement for manual signature or retention of manually signed or record copies.

Audit of Brokers and Dealers under Exchange Act Rule 17a-5

Pursuant to Exchange Act Rule 17a-5, brokers and dealers are generally required to file annual reports with the Commission and other regulators. The annual report

---

54 See id. at 37–38 n.38.

includes a financial report, either a compliance report or exemption report, and reports by the auditor covering the financial report and the compliance report or exemption report. The annual report is public, except that, if the statement of financial condition in the financial report is bound separately from the balance of the annual report, the balance of the annual report is deemed confidential and nonpublic.\(^{56}\) Therefore, in situations in which the broker or dealer binds the statement of financial condition separately from the balance of the annual report, the auditor generally would issue two separate auditor's reports that would have different content: (1) an auditor's report on the statement of financial condition that would be available to the public and (2) an auditor's report on the complete annual report that, except as provided in paragraph (c)(2)(iv) of Exchange Act Rule 17a-5, would be confidential and not available to the public.\(^{57}\)

As discussed in the 2013 Release, ownership of brokers and dealers is primarily private, with individual owners generally being part of the management team. The 2015 Supplemental Request sought comment about whether Form AP posed specific issues with respect to brokers and dealers. Some commenters asserted that the disclosure requirements should apply to all audits conducted under PCAOB standards. However, others asserted that the value of the disclosures for brokers and dealers would be significantly limited because of the closely held nature of brokers and dealers. These commenters suggested that the engagement partner and other participants in the audit would be known to the management team, who are the owners in many instances.

\(^{57}\) See also Exchange Act Rule 17a-5(c)(2), 17 CFR 240.17a-5(c)(2), regarding audited statements required to be provided to customers.
While economic theory suggests that there are benefits resulting from enhanced transparency, commenters suggested that the benefits may be relatively less for brokers and dealers. There is likely a lesser degree of information asymmetry between owners and managers for entities that are mostly private, closely-held, and small. However, information regarding the auditor may benefit those who are not part of management of the broker or dealer, such as customers. Although these benefits should be considered when determining whether to apply the new rules to brokers and dealers, they must be assessed relative to the potential costs of the required disclosures, which could be disproportionately high for smaller accounting firms that audit brokers and dealers. Overall, it appears likely that the net benefit of the required disclosures would be less for brokers and dealers than for issuers.

Accordingly, at this time, the Board is not extending the Form AP filing requirements to brokers and dealers. The Form AP filing requirements are therefore limited to issuer audits. As the PCAOB and registered public accounting firms gain experience in filing and administering Form AP, and as more information is gathered on broker and dealer audits through the PCAOB’s inspections and other oversight functions, the Board will continue to consider whether to make the Form AP requirement applicable to broker and dealer audits and could revisit its decision to limit the Form AP filing requirements to issuer audits.

Audits of Employee Stock Purchase Plans

One commenter on the 2013 Release recommended that the reproposed amendments not apply to the audits of employee stock purchase, savings, and similar

\[58\text{ If a broker or dealer were an issuer required to file audited financial statements under Section 13 or 15(d) of the Exchange Act, the requirements would apply.}\]
plans that file annual reports on Form 11-K. This commenter did not believe that
disclosure of the name of the engagement partner or information about other participants
in the audit would be meaningful for participants in an employee benefit plan that is
subject to PCAOB auditing standards.

The Board believes similar transparency and accountability rationales apply to
employee stock purchase, savings and similar plans that file annual reports on Form 11-
K. For example, disclosing the name of the engagement partner and other accounting
firms that participated in the audit on Form AP could increase audit quality by increasing
auditors' sense of accountability. In the Board's view, increasing the audit quality in
audits of employee stock purchase, savings and similar plans is important for the
protection of employee benefit plan participants. Disclosure of the engagement partner's
name for the audits of employee benefit plans will provide additional information about
an engagement partner's experience for those engagement partners that also audit other
issuers.

Effective Date

The 2015 Supplemental Request suggested making the requirements effective for
auditors' reports issued or reissued on or after June 30, 2016 or three months after
approval by the SEC, whichever occurs later. Many commenters generally advocated a
later effective date, although some suggested a phased approach, with disclosure of the
engagement partner implemented first and disclosure of other participants delayed for six
months to a year after that to provide time for firms to develop data gathering systems
and processes. Commenters that suggested a phased approach said that since the
engagement partner was already known by the firm, a June 30, 2016 effective date would
be appropriate. Some commenters suggested not linking the effective date to a calendar year-end to allow firms to test and implement new systems at a less busy time of year.

After considering comments, the Board has chosen a phased effective date. If approved by the Commission, the new rules of the Board and amendments to auditing standards will take effect as set forth below:

- Engagement partner: auditors' reports issued on or after January 31, 2017, or three months after SEC approval of the final rules, whichever is later
- Other accounting firms: auditors' reports issued on or after June 30, 2017.

A phased effective date will provide investors with the engagement partner's name as soon as reasonably practicable. Providing a later effective date for the other accounting firms' disclosure allows firms time to develop a methodology to gather information regarding the other accounting firms' participation.

D. Economic Considerations and Application to Audits of Emerging Growth Companies

Economic Considerations

The Board is mindful of the economic impacts of its standard setting. The following discussion addresses in detail the potential economic impacts, including potential benefits and costs, most recently considered by the Board. The Board has requested input from commenters several times over the course of the rulemaking. Commenters provided views on a wide range of issues pertinent to economic considerations, including potential benefits and costs, but did not provide empirical data. The potential benefits and costs considered by the Board are inherently difficult to quantify, therefore the Board's economic discussion is qualitative in nature.
Commenters who commented specifically on the economic analysis in the Board's 2015 Supplemental Request provided a wide range of views. Some commenters provided academic research in support of their views for the Board to consider. Some commenters expressed concern that the economic analysis in the Board's 2015 Supplemental Request was unpersuasive or incomplete. Other commenters said that the Board's economic analysis carefully reviewed the relevant evidence on the potential costs and benefits attributable to the disclosures. The Board has considered all comments received and has sought to develop an economic analysis that evaluates the potential benefits and costs of mandating the disclosures in Form AP, as well as facilitates comparisons to alternative approaches.

**Need for Mandatory Disclosure**

There exists an information asymmetry\(^{59}\) between users of the financial statements and management about the company's performance, and high quality financial information can help mitigate this information asymmetry. Audit quality matters to users of the financial statements, because audit quality is a component of financial reporting quality, in that high audit quality increases the credibility of financial reports. Thus, better knowledge of audit quality can help mitigate the information asymmetry between users of the financial statements and management about company performance.

Users of financial statements are generally not in a position to observe the quality of the audit of a public company or the factors that drive audit quality. In addition to relying on the audit committee, which, at least for listed companies, is charged with overseeing the external auditor, users of financial statements may rely on proxies such as

\(^{59}\) Economists often describe information asymmetry as an imbalance, where one party has more or better information than another party.
the reputation of the accounting firm issuing the auditor's report, aggregated measures of auditor expertise (for example, dollar value of issuer market capitalization audited or audit fees charged), or information about the geographic location of the office where the auditor's report was signed as a signal for audit quality. Users of financial statements could seek to reduce the degree of information asymmetry between them and management by gathering information about the skills, expertise, and independence of the engagement partner and firms that participate in the audit.

The Board is considering a number of ways to provide more information related to audit quality. In addition to the disclosures of the engagement partner and certain audit participants mandated in Form AP, these efforts include formulation of a series of audit quality indicators, a portfolio of quantitative measures that may provide new insights into how quality audits are achieved. The Board is also considering a standard that would update the form and content of the auditor's report to make it more relevant and informative by, among other things, including communication of critical audit matters. The Board intends that, over time, these and other efforts will provide investors and other financial statement users with additional information they can use when evaluating audit quality. When used in conjunction with other publicly available data (including any audit quality indicators that are made publicly available), the name of the engagement partner

---

60 See, e.g., Linda Elizabeth DeAngelo, Auditor Size and Audit Quality, 3 Journal of Accounting and Economics 183 passim (1981); and Jere R. Francis, What Do We Know About Audit Quality?, 36 The British Accounting Review 345 passim (2004).

and information about other participants in the audit, collectively, could provide more information about audit quality.

PCAOB oversight activities have revealed that audit quality varies among engagement partners within the same firm. PCAOB oversight activities also reveal variations in audit quality among firms, including variations among firms in the global networks established by large accounting firms. In addition to a number of other factors, the PCAOB uses information about engagement partners and other participants in the audit to identify audit engagements for risk-based selections in its inspections program. Academic research also analyzes variations in audit quality at both the firm and engagement partner levels.63 These findings suggest that firm reputation is an imprecise

---

63 See, e.g., W. Robert Knechel, Ann Vanstraelen, and Mikko Zerni, Does the Identity of Engagement Partners Matter? An Analysis of Audit Partner Reporting Decisions, 32 Contemporary Accounting Research 1443 (2015); Daniel Aobdia, Chan-Jane Lin, and Reining Petacchi, Capital Market Consequences of Audit Partner Quality, 90 The Accounting Review 2143 (2015); and Carol Callaway Dee, Ayalew Lulseged, and Tianming Zhang, Who Did the Audit? Audit Quality and Disclosures of Other Audit Participants in PCAOB Filings, 90 The Accounting Review 1939 (2015). Professors Dee and Aobdia are former and current research fellows at the PCAOB. Their research cited above was undertaken prior to joining the PCAOB. On the point of whether audit quality varies within accounting firms, a commenter suggested additional research to consider. See Steven F. Cahan and Jerry Sun, The Effect of Audit Experience on Audit Fees and Audit Quality, 30 Journal of Accounting, Auditing and Finance 78 (2015) (clients of more experienced CPAs have lower absolute discretionary accruals than clients of less experienced CPAs); Kim Ittonen, Karla Johnstone, and Emma-Riikka Myllymäki, Audit Partner Public-Client Specialisation and Client Abnormal Accruals, 24 European Accounting Review 607 (2015) (a significant negative association between greater public-client specialization and absolute abnormal accruals); and Ferdinand A. Gul, Donghui Wu, and Zhifeng Yang, Do Individual Auditors Affect Audit Quality? Evidence from Archival Data, 88 The Accounting Review 1993 passim (2013) (individual audit partners affect audit quality in ways that are both economically and statistically significant).
signal\textsuperscript{64} of audit quality because engagement partners and other audit participants differ in the quality of their audit work.

The difficulty that investors and other financial statement users have in evaluating audit quality may have important effects for accounting firms and the functioning of the audit profession and capital markets.\textsuperscript{65} The capacity to differentiate between alternative products is a fundamental requirement of competitive markets.\textsuperscript{66} One way to improve the functioning of a market is to provide mechanisms that enable market participants to better evaluate quality, thereby reducing the degree of information asymmetry.

Mandating public disclosure of the name of the engagement partner and other accounting firms that participated in an audit provides financial markets with information that may have otherwise been more costly or difficult to obtain. It enables the development of a standardized and comprehensive source of data that can facilitate comparison and analysis, which would be more valuable than a potentially piecemeal data source that could develop under a voluntary disclosure regime. Mandating public disclosure of the name of the engagement partner and other accounting firms provides financial markets with information that may have otherwise been more costly or difficult to obtain. It enables the development of a standardized and comprehensive source of data that can facilitate comparison and analysis, which would be more valuable than a potentially piecemeal data source that could develop under a voluntary disclosure regime.

\textsuperscript{64} Information economics frequently treats information as consisting of two components: a signal that conveys information and noise which inhibits the interpretation of the signal. Precision is the inverse of noise so that decreased noise results in increased precision and a more readily interpretable signal. See, e.g., Robert E. Verrecchia, \textit{The Use of Mathematical Models in Financial Accounting}, 20 Journal of Accounting Research 1 passim (1982).

\textsuperscript{65} There is a long stream of research regarding the effects that information asymmetry about product features, such as quality, and disclosure have on markets. See, e.g., George A. Akerlof, \textit{The Market for "Lemons": Quality Uncertainty and the Market Mechanism}, 84 The Quarterly Journal of Economics 488 passim (1970); and Robert E. Verrecchia, \textit{Essays on Disclosure}, 32 Journal of Accounting and Economics 97 (2001).

Disclosure also assures that the information is accessible to all market participants, so that any value-relevant information can more readily be incorporated into market prices.

This information may influence investors' decisions and allow them to make better informed investment decisions. The disclosure of information may also lead the identified parties to change their behavior because they know their performance can be more broadly and easily observed by investors and other financial statement users. In general, an important feature of accountability is identifiability.67 In the context of the audit, transparency will allow market participants to separately identify auditors from the accounting firm signing the auditor's report. This disclosure will impose incremental reputation risk, which should, at least in some circumstances, lead to increased accountability because the ability for investors and other financial statement users to identify and evaluate the performance of engagement partners and other accounting firms may induce changes in behavior.

Because of the influence that engagement partners and other accounting firms participating in the audit can exert over the audit process, information about the people and entities who actually performed the audit of a particular company will be a useful addition to the mix of information related to the audit that investors can use to assess audit quality and hence credibility of financial reporting. As identifying information becomes publicly available, it could also provide a further incentive to engagement partners and other accounting firms that participate in the audit to develop and enhance a

---

67 Academic research finds that accountability is a complex phenomenon and is affected by numerous factors. See, e.g., Jennifer Lerner and Philip Tetlock, Accounting for the Effects of Accountability, 125 Psychological Bulletin 255 passim (1999). See also Todd DeZoort, Paul Harrison, and Mark Taylor, Accountability and Auditors' Materiality Judgments: The Effects of Differential Pressure Strength on Conservatism, Variability, and Effort, 31 Accounting, Organizations and Society 373 (2006).
reputation for providing reliable audits and to avoid being associated with adverse audit outcomes that could be attributed to deficiencies in their audit work.\textsuperscript{68}

Under the disclosures adopted by the Board, investors would gain additional information that could help them assess the reputation of not only the firm, but also of the engagement partner on the audits of companies in which they invest, which they can use as a signal for audit quality. Likewise, investors will have visibility into the extent of the audit work being performed by other accounting firms that participated in the audit, including accounting firms in jurisdictions where the PCAOB has been unable to conduct inspections. Collectively, the disclosures, when used in conjunction with other publicly available data, can facilitate investors' ability to assess audit quality and hence credibility of financial reporting by providing investors with information about who conducted the audit and the extent to which the accounting firm signing the auditor's report used the audit work performed by other accounting firms.

Although the disclosure of the name of the engagement partner might provide limited information initially, experience in other countries suggests that over time the disclosures would enable databases to be developed that would allow investors and other financial statement users to evaluate a number of data points about the engagement partner,\textsuperscript{69} including:

\textsuperscript{68} Adverse audit outcomes may include financial statement restatements for errors, nontimely reporting of internal control weaknesses, and nontimely reporting of going concern issues, among others.

\textsuperscript{69} For example, the Taiwan Economic Journal collects data that covers all public companies in Taiwan and includes, among other things, the names of the engagement partners, the accounting firms issuing auditors' reports, the regulatory sanction history of the partners, and the audit opinions.
- Number and names of other issuer audits for which the partner is the engagement partner;
- Industry experience of the engagement partner;
- Number and nature of restatements of financial statements for which he or she was the engagement partner;
- Number and nature of going concern report modifications on financial statements for which he or she was the engagement partner;
- Number of auditors' reports citing a material weakness in internal control over financial reporting where he or she was the engagement partner;
- Number of years as the engagement partner of a particular company;
- Disciplinary proceedings and litigation in which the engagement partner was involved; and
- Other information about the engagement partner in the public domain, such as education, professional titles and qualifications, and association memberships.

Additional databases may also develop about other accounting firms that participate in public company audits, and additional data points should contribute to the mix of information that investors would be able to use, such as:

- The extent of the audit performed by the firm signing the auditor's report;
The extent of participation in the audit by other accounting firms in other jurisdictions, including jurisdictions in which the PCAOB cannot currently conduct inspections,\(^70\)

- Whether the other accounting firms are registered with the PCAOB, have been inspected, and the inspection results, if any;
- Industry experience of the other accounting firms;
- Whether the other accounting firms belong to a global network;
- Trends and changes in the level of participation of other accounting firms in the audit work; and
- Disciplinary proceedings and litigation involving the other accounting firms.

These data points, when analyzed together with the audited financial statements, potential audit quality indicators, and information provided on Form AP, should provide investors with more information about the audit and, therefore, the reliability of the financial statements. As a result, this should reduce the degree of information asymmetry about financial reporting quality between investors and company management.

Providing investors with data at this level of specificity will add to the mix of information that they can use. This could induce changes in the market dynamics for audit services because investors would have additional information about the identity of engagement partners and other accounting firms participating in the audit. If investors are able to identify certain engagement partners and other accounting firms that participated

\(^70\) See Non-U.S. Firm Inspections on the PCAOB's website for information about firms in non-U.S. jurisdictions that deny PCAOB inspection access.
in the audit who consistently perform high-quality audit work, the companies audited by
these engagement partners and other accounting firms should benefit from a lower cost of
capital relative to those companies whose auditor’s performance record suggests a higher
risk.\footnote{There is an emerging body of academic research analyzing market
reactions to disclosure of the engagement partner and the firms participating in audits. See
Knechel et al., Does the Identity of Engagement Partners Matter? An Analysis of
Audit Partner Reporting Decisions; Aobdia et al., Capital Market Consequences of Audit
Partner Quality; and Dee et al., Who Did the Audit? Audit Quality and Disclosures of
Other Audit Participants in PCAOB Filings.}

As some engagement partners and other accounting firms that participated in the
audit develop a reputation for performing reliable audits, a further incentive may develop
for others to attract similarly favorable attention. Conversely, as some engagement
partners and other accounting firms are associated with adverse audit outcomes that could
be attributed to deficiencies in their audit work, others may have additional incentives to
perform audits that comply with applicable standards in order to avoid similar
association.\footnote{The unintended consequence of engagement partner disclosure creating an
incentive for some engagement partners to avoid challenging an aggressive accounting
treatment in an effort to protect their reputations is discussed below.} The disclosures may also create additional incentives for audit committees
to engage auditors with a reputation for performing reliable audits. As a result, the
disclosures may also promote increased competition based on audit quality.

Baseline

Current PCAOB rules and standards do not require registered firms to publicly
disclose the name of the engagement partner or information about other accounting firms
participating in the audit. The identity of the engagement partner is known by people
close to the financial reporting process, for example by company management and the
audit committee, that interact directly with the engagement partner. Additionally, auditors are required to communicate to the audit committee certain information about other accounting firms and other participants in the audit.\(^{73}\)

Today, the name of the engagement partner is disclosed in auditors' reports filed with the SEC in only a small percentage of cases, such as when the audit is conducted by a firm having only one certified public accountant whose name appears in the firm's name or by a foreign firm in a jurisdiction in which local requirements or practice norms dictate identification of the engagement partner. The identity of the engagement partner is also sometimes made available to investors attending an annual shareholders' meeting in person. It is possible that engagement partners could be identified in other ways; for example, an academic study inferred that in instances where accounting firm personnel are copied on issuers' correspondence with the SEC's Division of Corporation Finance, the copy party is the engagement partner.\(^{74}\) However, because there is no current requirement to disclose information about engagement partners, the process of acquiring this information may be costly and the information may be less useful relative to a database that covers audits across time and is available to all interested users.

With respect to other accounting firms participating in the audit, AS 1205.04 (currently AU sec. 543.04) has prohibited principal auditors from disclosing in the auditor's report the involvement of other accounting firms that participated in the audit

\(^{73}\) For example, the auditor is required to communicate the names, locations, and planned responsibilities of other independent public accounting firms or other persons not employed by the auditor that perform audit procedures. See paragraph 10.d of AS 1301 (currently Auditing Standard No. 16), Communications with Audit Committees.

\(^{74}\) See Henry Laurion, Alastair Lawrence, and James Ryans, U.S. Audit Partner Rotations (Sept. 14, 2015) (working paper, available in Social Science Research Network ("SSRN")).
unless responsibility for the audit has been divided.  

However, investors and other financial statement users have been able to obtain information about a limited subset of other accounting firms from PCAOB Form 2.  

There are no other current requirements under which the identity of other accounting firms participating in the audit would be publicly disclosed and, to the Board's knowledge, firms generally do not make such information public.  

The Impact of Disclosure  

The final rules adopted by the Board impact certain participants in the audit, financial statement users, and companies to the extent that this information is currently not publicly available and affects participants' decision making. As discussed below, not all of these market participants are affected in the same ways or to the same degree.  

The Benefits of Disclosure  

--- 

75 The sentence in AS 1205.04 (currently AU sec. 543.04) that states that if the principal auditor decides not to make reference to the work of other auditors, the principal auditor "should not state in his report that part of the audit was made by another auditor because to do so may cause a reader to misinterpret the degree of responsibility being assumed" is deleted under the amendments. In the Board's view, the language included on Form AP clearly states the auditor's responsibility regarding the work of other participants in the audit and should not cause financial statement users to misinterpret or be confused about the degree of responsibility being assumed by the accounting firm signing the auditor's report.  

76 PCAOB Form 2 requires independent public accounting firms that audited no issuers during the applicable reporting period to provide information on each issuer for which they "play[ed] a substantial role in the preparation or furnishing of an audit report," as defined by PCAOB Rule 1001(p)(ii).  

77 Item 9(e)(6) of Schedule 14A (17 CFR 240.14a-101) requires disclosure of the percentage of hours expended on the audit of the financial statements for the most recent fiscal year by persons other than the principal accountant's full-time, permanent employees, if greater than 50% of total hours, but does not require identification of such persons.
The final rules adopted by the Board aim to improve the transparency and accountability of issuer audits by adding to the mix of information available to investors. Among other things, the disclosures would allow investors to research whether engagement partners have been associated with adverse audit outcomes that could be attributed to deficiencies in their audit work or have been sanctioned by the PCAOB or SEC. The disclosures could also allow financial statement users to understand how much of the audit was performed by the firm issuing the report and how much was performed by other accounting firms, including those in jurisdictions where the PCAOB has been unable to conduct inspections. Moreover, as the disclosed information accumulates and is aggregated and analyzed in conjunction with other publicly available information, investors and financial intermediaries (for example, research analysts and credit rating agencies) would have a basis to evaluate additional data points, together with the information disclosed on Form AP, that may give them insight into individual audits. While this information may not be useful in every instance or meaningful to every investor, as discussed in more detail below, academic research suggests that, overall, the disclosures add to the mix of information used by investors.78

Disclosures regarding the engagement partner and the other accounting firms that participated in the audit would allow investors and other financial statement users to supplement the accounting firm’s name with more granular information when assessing audit quality and hence the credibility of financial reporting. The disclosed information will provide investors and other financial statement users with more information about

78 See, e.g., Knechel et al., Does the Identity of Engagement Partners Matter? An Analysis of Audit Partner Reporting Decisions; Aobdia et al., Capital Market Consequences of Audit Partner Quality; and Dee et al., Who Did the Audit? Audit Quality and Disclosures of Other Audit Participants in PCAOB Filings.
individual audits in accounting firms that conduct a large number of issuer audits. This information should be particularly valuable to investors where there is a greater degree of information asymmetry, as may be the case for smaller and less seasoned public companies.

The new disclosures should, at least in some circumstances, also increase accountability for auditors through Justice Brandeis' "disinfectant" effect: disclosure of their names, when accompanied by other information about their history, should create incentives for the engagement partner and other accounting firms to take voluntary steps that could result in improved audit quality. The additional incentives likely will be a result of Form AP disclosures imposing additional reputation risk on engagement partners and other accounting firms. The effect on accountability is not expected to be uniform across all engagement partners and other accounting firms.

Transparency

The PCAOB uses various data, including information about engagement partners and other accounting firms, to identify audit engagements for its risk-based inspections program. Over time, financial statement users would be able to combine the disclosed information with other financial information, such as any previous adverse audit outcomes that could be attributed to deficient audit work, which would allow them to better assess the quality of individual audits. For example, investors and other financial statement users would be able to observe whether financial statements audited by the engagement partner have been restated or whether the engagement partner has been sanctioned by the PCAOB or SEC, and investors and other financial statement users could also research other publicly available information about the engagement partner.
Commenters provided mixed views regarding the usefulness of the disclosures. While some commenters argued that the information would not be useful or could be confusing, \(^79\) other commenters indicated that this information may be useful for investment decisions and decisions about whether to ratify the appointment of an accounting firm. On the point of whether investors may misunderstand the role of engagement partners, for example, a commenter cited academic research suggesting that, 

". . . investors process public information in a sophisticated manner and investor responses to public disclosures cause relevant information to be reflected in security prices."\(^80\)

**Disclosure Regarding the Engagement Partner**

Other countries have adopted or may soon adopt requirements to disclose the name of the engagement partner. Experiences from countries that have already adopted similar disclosure requirements are important in assessing possible consequences, intended or not, of any changes in this area. Recent academic research conducted using data from those jurisdictions has studied how investors and other financial statement

\(^79\) See above for a discussion of commenter reactions to the disclosure requirements.

\(^80\) See Letter from Maureen McNichols, Marriner S. Eccles Professor of Public and Private Management and Accounting, Stanford University Graduate School of Business, to the Office of the Secretary, PCAOB (Aug. 31, 2015). The commenter references several academic papers in support of the argument that investors are able to incorporate information into security prices. See Maureen McNichols, Evidence of Informational Asymmetries from Management Earnings Forecasts and Stock Returns, 64 The Accounting Review 1 (1989) (The differential response to forecasts which are ex post too high or too low indicates that, in the aggregate, investors do not take management forecasts at face value.), or Maureen F. McNichols and Stephen Stubben, The Effect of Target-Firm Accounting Quality on Valuation in Acquisitions, 20 Review of Accounting Studies 110 (2015) (accounting information helps mitigate information asymmetry between acquirers and target firms).
users use the information to assess audit quality, and hence credibility of financial reporting. Disclosures of this type have been found to have informative value in other settings, and empirical studies using data from the jurisdictions where the disclosures are available, discussed below, suggest that these disclosures would be useful to investors and other financial statement users. However, in considering the implications of these studies for the audits under the Board's jurisdiction, the Board has been mindful, as some commenters suggested, of the specific characteristics of the U.S.-issuer audit market, which may make it difficult to generalize observations made in other markets. For example, results from non-U.S. studies may depend on different baseline conditions (for example, market efficiency, affected parties, policy choices, legal environment, or regulatory oversight) than prevail in the United States.

Several studies have examined whether engagement partner disclosure requirements affect the price of securities and promote a more efficient allocation of capital. Knechel et al. found "considerable evidence that similar audit reporting failures persist for individual partners over time" and that, in Sweden, where engagement partners' names are disclosed, "the market recognizes and prices differences in audit reporting style among engagement partners" of public companies.81

In a critique that will be published alongside the original manuscript, Kinney described several issues that challenge the validity of the results from the Knechel et al. paper.82 In particular, Kinney argued that it may be difficult to generalize the results from

81 See Knechel et al., Does the Identity of Engagement Partners Matter? An Analysis of Audit Partner Reporting Decisions.

the Knechel et al. paper because many of the results from the original paper were obtained using data on private companies that undergo statutory audits under Swedish law. In addition, Kinney argued that the accuracy of going concern evaluations is a relatively poor measure of audit quality compared to financial statement misstatements. Kinney also noted that the Knechel et al. paper does not attempt to control for the effects of the mechanism by which audit partners are assigned to specific engagements. Kinney argued that if accounting firms assign high-quality audit partners to risky audit engagements, then the results from the Knechel et al. paper would have the opposite interpretation. Ultimately, Kinney argued that it may be inappropriate to conclude that engagement partner names would provide useful information to U.S. financial markets based on evidence obtained from the available studies.83

Other papers using data from foreign jurisdictions also analyze whether capital markets react to data on engagement partner quality and experience. For example, Aobdia et al. used data from Taiwan and found that both debt and equity markets priced engagement partners' quality, where higher quality is measured by the companies' lower level of discretionary accruals.84 Results are similar when the authors used regulatory

83 Kinney suggests that other papers referenced in the Board's 2013 release could benefit from additional effort to bolster the validity of the research methodologies. For example, Kinney suggested that the authors of these papers could work with accounting firms to compare the proxies for audit quality used in academic research, such as discretionary accruals or the accuracy of going concern evaluations, with the accounting firms' proprietary assessment of engagement partner quality. The Board recognizes that discretionary accruals and the accuracy of going concern evaluations are only proxies for audit quality. However, a recent academic study has assessed the validity of commonly used proxies for audit quality by analyzing their associations with PCAOB inspection findings, which may be a more precise measure of audit quality. See Daniel Aobdia, The Validity of Publicly Available Measures of Audit Quality: Evidence from the PCAOB Inspection Data (June 30, 2015) (working paper, available in SSRN).

84 See Aobdia et al., Capital Market Consequences of Audit Partner Quality.
sanctions history as an alternate measure of engagement partner quality, which they argue is less subject to measurement error than estimates of discretionary accruals. This result partially addresses the concerns raised in Kinney's discussion paper about using discretionary accruals as a measure of audit quality. Evidence from another study using data from Taiwan is consistent with these results.

Another paper using data from Taiwan found that recent financial statement restatements disclosed by an engagement partner's client are associated with a higher likelihood of that engagement partner's other clients misstating in the current year. However, the authors find that this effect was mitigated by the engagement partner's experience. Although these results are based on evidence from a non-U.S. jurisdiction, they suggest that the disclosures could provide investors with useful information about the reliability of other financial statements audited by individual engagement partners who have been associated with a recent financial statement restatement.

———

85 See Kinney, Discussion of "Does the Identity of Engagement Partners Matter? An Analysis of Audit Partner Reporting Decisions."

86 See Wuchun Chi, Linda A. Myers, Thomas C. Omer, and Hong Xie, The Effects of Audit Partner Pre-Client and Client-Specific Experience on Audit Quality and on Perceptions of Audit Quality (Jan. 2015) (working paper, available in SSRN) (Auditor experience is an important factor in determining audit quality and the perceived level of audit quality as measured by the bank loan interest rate spread).

The limited research on engagement partner identification in the United States provides some support that the name of the engagement partner may be used as a signal of audit quality. Using data collected from SEC comment letters, Laurion et al. find substantial increases in the number of material restatements of previously issued financial statements and total valuation allowances after engagement partner rotations.\(^8\) While the authors do not explicitly analyze potential benefits related to engagement partner disclosure, they argue that engagement partner disclosures would reveal partner rotations, thus providing meaningful information to investors, supporting the PCAOB's rulemaking initiative.

The Board believes that a requirement to disclose the name of the engagement partner may provide useful information to financial markets based on extensive public outreach and its own experience conducting its inspection program. The Board notes that it may not be possible to generalize results of academic studies, including those based on data in foreign jurisdictions. However, the papers discussed above typically find evidence consistent with a broad stream of academic literature demonstrating that markets benefit from more information associated with quality.

**Disclosure Regarding Other Participants in the Audit**

Empirical evidence also suggests that the market values information about other participants in the audit. Dee et al. examined the effect on issuers' stock prices\(^9\) when investors learn (from participating auditors' Form 2 filings) that these issuers' audits

\(^8\) See Laurion et al., *U.S. Audit Partner Rotations*. Engagement partner rotation was inferred from changes in accounting firm personnel copied on issuer correspondence with the SEC's Division of Corporation Finance.

\(^9\) See Dee et al., *Who Did the Audit? Audit Quality and Disclosures of Other Audit Participants in PCAOB Filings.*
included the substantial use of other accounting firms that do not audit other issuers.

Using event study methodology, the authors find that, when accounting firms disclosed in Form 2 the identity of issuer audits in which they substantially participated, the stock prices of these issuers were negatively affected. The authors also find that earnings surprises for these issuers are less informative to the stock market after these disclosures in Form 2 are made, meaning that investors perceive earnings quality to be lower.\(^90\) The authors concluded that the results of the study suggested "that PCAOB mandated disclosures by auditors of their significant participation in the audits of issuers provides new information, and investors behave as if they perceive such audits in which other participating auditors are involved negatively." It should be noted that the negative market reaction in this instance may, at least to some extent, reflect the fact that the other participants in the study were auditors that have no issuer clients themselves but play a substantial role (i.e., participate at least 20%) in an audit of an issuer. The disclosures being adopted would also apply to other accounting firms that take a smaller role in the audit and/or may have more experience in the application of PCAOB standards to audits of issuers. Market reaction to disclosures regarding these types of participants may differ.

To the extent that investors and other financial statement users are better able to assess the level of audit risk stemming from multi-location engagements, it should incent the accounting firm signing the auditor's report to use higher-quality, less risky firms as

---

\(^{90}\) Academic research suggests that the financial markets' reaction to earnings surprises depends, among other things, upon the extent to which the disclosed earnings are perceived to be reliable. Thus, if markets react less to earnings surprises after an event, it could suggest that the earnings are perceived to be less reliable after the event. Academic research has tied this to perceived audit quality by investors. See, e.g., Siew Hong Teoh and T.J. Wong, Perceived Auditor Quality and the Earnings Response Coefficient, 68 The Accounting Review 346 (1993).
other audit participants. If investors react negatively to the use of an affiliated accounting firm that was previously associated with a failed audit, it may encourage the accounting firm signing the auditor's report to enhance their supervision and risk management practices. It should also provide other accounting firms incentives to increase the quality of their audit work to help ensure that they can continue to receive referred audit work.

Accountability

Public disclosure of the name of the engagement partner and other accounting firms may create incentives for the engagement partner and other accounting firms to take voluntary steps that could result in improved audit quality. As discussed above, the Board expects that external sources would develop a body of information about the histories of engagement partners and other accounting firms. Although auditors already have incentives to maintain a good reputation, such as internal performance reviews, regulatory oversight, and litigation risk, such public disclosure likely will create an additional reputation risk, which should provide an incremental incentive for auditors to maintain a good reputation, or at least avoid a bad one. While this would not affect all engagement partners and all other accounting firms participating in audits to the same degree, as some already operate with a high sense of accountability, others may respond to the additional incentives to deliver high quality audits.

On whether reputational effects may incent global network firms to monitor audit work performed by an affiliate, there is a paper documenting that global audit firm networks have created a network-wide reputation that is susceptible not only to failures of the U.S. Big 4, but also to those of non-U.S. affiliates. See Yoshie Saito and Fumiko Takeda, Global Audit Firm Networks and Their Reputation Risk, 29 Journal of Accounting, Auditing and Finance 203 (2014).
The additional incentives likely will be a result of Form AP disclosures imposing additional reputation risk on engagement partners and other accounting firms. As described in the economic literature, reputation risk is not imposed by regulators or courts, but rather by the market through actions such as the threat of termination of business relationships. Auditors and other accounting firms that participated in audits already face some degree of reputation risk. For example, auditors' names are known by their issuers' audit committees, within their audit firms, and to some extent in the audit industry; these parties can potentially alter or terminate current business relationships with the partners or reduce the probability of their being hired in the future, thereby imposing reputation risk on engagement partners. Form AP, by making names publicly available, will further increase reputation risk.

**Disclosure Regarding the Engagement Partner**

Form AP will make the names of engagement partners known to investors and audit committees of companies that have not worked with the engagement partner. To the extent such knowledge affects their current business relationships or future job market prospects, Form AP disclosures likely will impose additional reputation risk on engagement partners. For example, shareholders may express their discontent with an engagement partner though their voting decisions on the ratification of the audit firm, and to the extent that shareholder votes can affect the engagement partner's job market projects, the engagement partner would face increased reputation risk, hence higher accountability.

Many investors, as well as some other commenters, believe that public identification of the engagement partner may result in increased accountability, which
could prompt voluntary changes in behavior. However, other commenters, primarily accounting firms, asserted that disclosure of engagement partners would not affect accountability. If engagement partner behavior were to change, such changes could include increased professional skepticism, which could, in turn, result in better supervision of the engagement team and lower reliance on management's assertions. The auditor may have greater willingness to challenge management's assertions in the auditor's consideration of the substance and quality of management's financial statements and disclosures. In addition, public disclosure of the name of the engagement partner may make that person less willing to accept an inappropriate position accepted by a previous engagement partner because of the potential effects on his or her reputation.\footnote{As discussed previously, an academic study, analyzing instances where engagement partner rotation can be inferred, documents an increased rate of financial statement restatements following the rotation of engagement partners. See Laurion, et al., U.S. Audit Partner Rotations.} The disclosures being adopted by the Board will reveal engagement partner rotations to investors, including instances where engagement partners left the engagement before rotation would have been required.

Academic research also analyzed whether engagement partner disclosures has an effect on accountability.\footnote{See, e.g., Joseph V. Carcello and Chan Li, Costs and Benefits of Requiring an Engagement Partner Signature: Recent Experience in the United Kingdom, 88 The Accounting Review 1511 passim (2013); Allen D. Blay, Matthew Notbohm, Caren Schelleman, and Adrian Valencia, Audit Quality Effects of an Individual Audit Engagement Partner Signature Mandate, 18 International Journal of Auditing 172 (2014); and Ronald R. King, Shawn M. Davis, and Natalia M. Mintchik, Mandatory Disclosure of the Engagement Partner's Identity: Potential Benefits and Unintended Consequences, 26 Accounting Horizons 533 passim (2012).} For example, a recent study examined the impact of the European Union's audit engagement partner signature requirement on audits in the United
Kingdom and found improvements in several proxies for audit quality,\textsuperscript{94} as well as a statistically significant increase in audit fees, after controlling for client and auditor characteristics.\textsuperscript{95} It is worth highlighting that this study evaluated a policy alternative (a signature requirement) that some commenters have asserted would have a more pronounced effect than the rules being adopted. In addition, the authors note that there were several other audit and financial reporting requirements implemented in the United Kingdom contemporaneously with the signature requirement and, accordingly, it is not possible for the authors to rule out the possibility that these other requirements may have driven their results. Furthermore, the study was conducted using data from the period of the recent financial crisis, which may also have affected the results.

This contrasts with another study suggesting that disclosure requirements could produce limited or no observable improvement in audit quality.\textsuperscript{96} Blay et al. analyzed data from the Netherlands and were unable to document any statistically significant changes in audit quality as measured by estimates of earnings quality. The authors

\textsuperscript{94} Specifically, Carcello and Li found a significant decline in abnormal accruals, a decrease in the propensity to meet an earnings threshold, an increase in the incidence of qualified auditors' reports, and an increase in a measure of earnings informativeness. Some commenters criticized the use of one of these metrics, abnormal accruals, as a proxy for audit quality. While abnormal accruals are an imperfect proxy for audit quality, the results were corroborated using alternate proxies.

\textsuperscript{95} Specifically, they find that the increase in audit fees from $475,900 to $477,000 between the pre- and post-signature requirement periods, was statistically significant, after controlling for client and auditor characteristics that could impact audit fees. Carcello and Li, Costs and Benefits of Requiring an Engagement Partner Signature: Recent Experience in the United Kingdom, at 1532.

\textsuperscript{96} See Blay et al., Audit Quality Effects of an Individual Audit Engagement Partner Signature Mandate.
speculated that the lack of findings may be attributable to sufficiently high levels of accountability and audit quality in the Netherlands.

As previously noted, the baseline conditions in other jurisdictions may differ from those in the United States, which could affect the extent to which these findings can be generalized to the United States.

Disclosure Regarding Other Participants in the Audit

While some commenters questioned the value of disclosures regarding other participants in the audit, others argued that the disclosure of the extent of the audit work performed by other participants in the audit could increase accountability for accounting firms that are named. Other commenters indicated that, as with disclosure of the name of the engagement partner, information sources would likely develop over time. This may increase scrutiny of the overall reputation of such firms. This increased reputational risk should incent other accounting firms participating in an audit to perform high-quality audits for all engagements. Further, if another accounting firm performs a substantial portion of the audit, then its reputation would be closely tied to the overall results of the audit. This may help further align the interests of the other accounting firms participating in the audit with investors and other financial statement users and thus enhance audit quality.

The final rules may also incent global network firms to increase accountability for all of the firms in their networks. The audit process for many multinational companies currently depends on the affiliated firms within a global network to audit company subsidiaries in their respective countries. This introduces vulnerabilities to the audit if quality varies across the network. To counter this risk, the global network firm may be
further incented to increase its efforts to maintain uniform quality control standards and accountability across the global network. The global network firm may also improve its monitoring of other audit participants to ensure audit quality as well. This increased accountability of the other accounting firms that participated in the audit to the accounting firm signing the auditor's report could improve audit quality.

For principal auditors that are not part of a global network, disclosures regarding other accounting firms participating in the audit could provide an additional incentive for the principal auditor to choose firms that have a good reputation for quality.

The Costs and Other Possible Consequences of Disclosure

Over the course of the rulemaking, the Board was mindful of concerns voiced by commenters about potential compliance and other costs associated with public disclosure. In particular, many commenters on the 2013 Release argued that naming the engagement partner and other audit participants in the auditor's report, as contemplated by the 2013 Release, may create both legal and practical issues under the federal securities laws and therefore increase the cost of performing audits compared to the costs in the current environment. Some commenters suggested that an increase in costs would be passed on to companies through higher audit fees. Some commenters urged the Board to proceed with the new transparency requirements, if it determined to do so, by mandating disclosure in an amended PCAOB Form 2 or in a newly created PCAOB form. Some commenters suggested that disclosure on a form may not raise the same concerns about liability or consent requirements as disclosure in the auditor's report.

Direct Costs
Under the Form AP approach, the direct costs for auditors would include the costs of compiling information about the engagement partner and other participants in the audit and calculating the percentage of audit work completed by other participants in the audit. In general, costs should be lower for audits not involving other participants because the only required disclosure would be the engagement partner's name and Partner ID. Compliance with the Form AP approach will entail initial costs of implementation—which could include creating systems to assign and track Partner ID numbers and to gather the required information from each engagement team—and ongoing costs associated with aggregating the information and filling out and filing Form AP.

A number of commenters observed that administrative effort would be required to compile data for, prepare, and review the required disclosures, both initially and on an ongoing basis. Accounting firms that commented on this issue asserted that the administrative efforts and related costs would not be significant.

**Indirect Costs and Possible Unintended Consequences**

In addition to the direct costs, there may be indirect costs and unintended consequences associated with the disclosures under consideration, some of which could be more significant than the direct compliance costs.

**Differential Demand Based on Reputation**

The disclosures aim to provide investors and other financial statement users with additional information they can consider in relation to audit quality at the engagement level, as opposed to the accounting firm level. This may result in some degree of differentiation in stature and reputation of individual auditors who serve as engagement partners and in other accounting firms that participate in audits.
Currently, investors and other financial statement users use proxies for quality, such as accounting firm size and industry experience, to differentiate accounting firms. Some commenters suggested that the new requirements could be detrimental to smaller and less well-known accounting firms, even when they perform audit work in accordance with PCAOB standards. Others raised concerns that public identification of the engagement partner could lead to a rating, or "star," system resulting in particular individuals and entities being in high demand, to the unfair disadvantage of other equally qualified engagement partners. It is also possible that engagement partners may be unfairly disadvantaged because of association with an adverse audit outcome, which could be particularly damaging to their professional development and future opportunities if it occurred at the outset of their career. Unwarranted attribution of an adverse audit outcome to an engagement partner could also adversely affect other public companies whose audits were led by the same engagement partner. While commenters did not raise similar concerns related to other accounting firms participating in audits, the implications of identification could be similar.

Differential demand based on reputation could be a cost of the disclosures under consideration to the extent the reputation (whether good or bad) was undeserved. It may be reasonable, however, to expect that financial markets would be discerning in considering information about the engagement partner and other accounting firms in the audit. As one commenter stated, "investors are accustomed to weighing a variety of factors when assessing performance. . . . This approach can be seen in the careful analysis investors and proxy advisors do when they are asked to withhold support from directors

97 See DeAngelo, Auditor Size and Audit Quality, and Francis, What Do We Know About Audit Quality?
standing for election. There is no reason to believe they will do otherwise with respect to auditors. 98 Academic research also suggests that financial markets do not treat all restatements and going concern modifications equally. Instead, financial markets respond to the facts and circumstances related to an individual restatement or going concern modification. 99 The results from this research suggest that financial markets may be similarly discerning when forming their opinion about an engagement partner or other participant in the audit.

**Overauditing and Audit Fees**

Some commenters have suggested that the increased reputational risk associated with public disclosure may lead to instances of overauditing, in which the engagement team undertakes more procedures than they otherwise might have performed, which do not contribute to forming an opinion on the financial statements. It should be noted that the final rules are not performance standards and do not mandate the performance of additional audit procedures. However, it is possible that some auditors may perform additional procedures as a result of the requirements (for example, because they want to obtain a higher level of confidence in some areas). This could result in unnecessary costs and an inefficient utilization of resources, and might cause undue delays in financial reporting. If and to the extent there are increased costs for auditors as a result of the new

---

rules, however, such costs may be passed on—in whole, in part, or not at all—to companies and their investors in the form of higher audit fees.\footnote{100} Further, increased procedures may also require additional time from the company's management to deal with such procedures.

While the possibility of overauditing cannot be eliminated, competitive pressures to reduce the costs of conducting the audit should provide counterincentives that mitigate that risk.

**Other Changes in Behavior of Engagement Partners**

A recent study documents certain ways in which the disclosures could change the incentives of engagement partners resulting in changed behavior.\footnote{101} Under a purely theoretical model developed by Carcello and Santore that has not yet been empirically tested, potential reputation costs stemming from disclosure leads engagement partners to become more conservative and gather more evidence than the accounting firm finds to be optimal. Although the results of the study suggested that the disclosures lead to increased audit quality, the authors' analysis indicated that engagement partner identification likely leads to decreases in the welfare\footnote{102} of engagement partners and accounting firms. The

\footnote{100}{The Board is aware of public reports that have analyzed historical and aggregate data on audit fees and which suggest that audit fees generally have remained stable in recent years, notwithstanding the fact that the Board and other auditing standard setters have issued new performance standards during that period. See, e.g., Audit Analytics, Audit Fees and Non-Audit Fees: A Twelve Year Trend (Sept. 30, 2014). In its 2013 Release, the Board sought data that might provide information or insight into such costs. As noted previously, commenters did not provide data regarding the extent of such costs.}

\footnote{101}{See Joseph V. Carcello and Rudy Santore, *Engagement Partner Identification: A Theoretical Analysis*, 29 Accounting Horizons 297 (2015).}

\footnote{102}{The term "welfare" can be thought of as overall well-being. In economic theory, welfare typically refers to the prosperity and living standards of individuals or
authors argued that changes in the welfare of engagement partners and accounting firms may not be optimal within their theoretical analysis.

The Carcello and Santore analysis is limited since they do not explicitly analyze the effects of increased auditor conservatism and increased audit quality on investor utility. Therefore, their description of the "society" is missing a key participant, the investors. This limitation notwithstanding, they do note that increased conservatism at large accounting firms may actually be socially optimal as it could limit damages to market participants stemming from aggressive financial reporting at large issuers.

Disincentive to Perform Risky Audits

Some commenters have suggested that engagement partners and other accounting firms participating in audits may avoid complex and/or risky audits because of the potential negative consequences of an adverse audit outcome. It is also possible that accounting firms could increase audit fees or adjust their client acceptance and retention policies because of heightened concerns about liability, including the cost of insurance, or reputational risks. This could enhance auditors' performance of their gatekeeper function to the extent that it increases auditors' reluctance to take on clients at a high risk of fraudulent or otherwise materially misstated financial statements. But it would impose a cost if firms or partners become so risk averse that companies that do not pose such risk cannot obtain well-performed audits. This could effectively compel certain particularly risky companies to use engagement partners or accounting firms with substandard reputations or, in extreme circumstances, lead them to cease SEC reporting. If investors are better able to evaluate the quality of audit work performed by engagement partners...
and other accounting firms participating in the audit, companies that engage accounting firms with a reputation for substandard quality may experience an increased cost of capital.

Mismatch of Skills

Some commenters suggested that reputational concerns may lead audit committees not to select qualified engagement partners associated with prior restatements and to select a perceived "star" partner. It is, therefore, possible that, in some instances, high-demand auditors might be engaged when other auditors whose skills may be more relevant for a particular engagement are not selected. This could result in decreased audit quality. However, accounting firms have incentives to staff engagements appropriately, and high-demand engagement partners would also be incented to avoid performing audits for which they are not qualified in order to maintain that status or to mitigate any skill mismatch and maintain or enhance their reputation by consulting with others within their firm as necessary to ensure audit quality.

The ability to identify partners and other accounting firms involved in specific engagements could also facilitate the intentional selection of auditors with a reputation for substandard quality. Companies may do this for a variety of reasons, including the potential for lower audit fees or to identify auditors who are less likely to challenge management's assertions.

Possible Changes in Competitive Dynamics

Differentiation in stature and reputation of individual auditors who serve as engagement partners, and in other accounting firms that participate in audits, could have a number of competitive effects. One commenter suggested that transparency could
create a permanent structural bias against smaller, less-known firms and partners as audit committees may be reluctant to engage firms or select partners that are not well-established or well-known. It appears that the disclosures under consideration could promote increased competition based on factors other than general firm reputation. In particular, if investors are better able to assess variations in audit quality, any resultant financial market effects should incent accounting firms to increase the extent to which they compete based on audit quality.

Moreover, the disclosures could result in changes to the market dynamics for the services of engagement partners and other accounting firms participating in audits. The ability to differentiate among engagement partners and among other accounting firms participating in audits could change external perceptions of particular partners and accounting firms, which may affect the demand for their services.

It should be noted, however, that a marked increase in the mobility of engagement partners and other accounting firms participating in audits seems unlikely due to high switching costs and contractual limitations. For example, partnership agreements, noncompete agreements, and compensation and retirement arrangements may affect partners' incentives and contractual ability to change firms. In addition, the costs to an issuer of replacing the global audit team and explaining the decision to change accounting firms to the market may affect companies' incentives to follow an engagement partner to a new firm. As a result, engagement partners may be reluctant to or contractually precluded from changing accounting firms, and those who elect to change firms may be unable to bring their clients with them. Additionally, the five-year partner
rotation requirement would preclude an engagement partner from serving a company for more than five years, even if the engagement partner switched accounting firms.  

Potential Liability Consequences

The Board believes that disclosure on Form AP appropriately addresses concerns raised by commenters about liability. As commenters suggested, disclosure on Form AP should not raise potential liability concerns under Section 11 of the Securities Act or trigger the consent requirement of Section 7 of that Act because the engagement partner and other accounting firms would not be named in a registration statement or in any document incorporated by reference into one. While the Board recognizes that commenters expressed mixed views on the potential for liability under Exchange Act Section 10(b) and Rule 10b-5 and the ultimate resolution of Section 10(b) liability is outside of its control, the Board nevertheless does not believe any such risks warrant not proceeding with the Form AP approach.

Alternatives Considered

After considering these factors and public comments, the Board adopted new rules and amendments to its standards that require the names of the engagement partner and certain other audit participants to be disclosed in a newly created PCAOB form, Form AP. Commenters have indicated that disclosure in Form AP could produce the intended benefits of transparency while addressing concerns related to auditor liability.

\[103\] Rule 2-01(c)(6) of Regulation S-X, 17 CFR 210.2-01(c)(6); see also Section 203 of the Sarbanes-Oxley Act.

\[104\] While the requirement to file Form AP is triggered by the issuance of an auditor's report, the form would not automatically be incorporated by reference into or otherwise made part of the auditor's report.
As described below, the Board has considered a number of alternative approaches to achieve the potential benefits of enhanced disclosure.

**Alternatives Considered Previously**

Over the past several years, the Board has considered a number of alternative approaches to the issue of transparency. Initially, the Board considered whether an approach short of rulemaking would be a less costly means of achieving the desired end. The Board's usual vehicles for informal guidance—such as staff audit practice alerts, answers to frequently asked questions, or reports under PCAOB Rule 4010, Board Public Reports—did not seem suitable. U.S. accounting firms have not voluntarily disclosed information about engagement partners. Also, even if some auditors disclosed more information under a voluntary regime, practices among auditors likely would vary widely. That would defeat one of the Board's goals of achieving widespread and consistent disclosures about the auditors that carry out PCAOB audits. Thus, the Board did not pursue an informal or voluntary approach.

In the 2009 Release, the Board considered a requirement for the engagement partner to sign the auditor's report in his or her own name in addition to the name of the accounting firm. A number of commenters supported and continue to support the signature requirement. However, many other commenters opposed it, mainly because including the signature in the auditor's report, in their view, would appear to minimize the role of the accounting firm in the audit and could increase the engagement partner's liability. Some commenters believed that this alternative would increase both transparency and the engagement partner's sense of accountability. Other commenters believed that engagement partners already have sufficient incentives to have a strong
sense of accountability and that signing their own name on the audit opinion would not affect that.

In the 2011 Release, in addition to the requirement to disclose the name of the engagement partner in the auditor's report, the Board proposed to add to Form 2, the annual report, a requirement to disclose the name of the engagement partner for each audit required to be reported on the form. As originally proposed, disclosure on Form 2 would supplement more timely disclosures in the auditor's report by providing a convenient mechanism to retrieve information about all of a firm's engagement partners for all of its audits. The 2011 Release also proposed to require disclosure about other participants in the most recent period's audit in the auditor's report.

The Board also considered only requiring disclosure in Form 2. There are, however, a number of disadvantages to a Form 2-only approach, as discussed in the 2013 Release. It would delay the disclosure of information useful to investors and other financial statement users from 3 to 15 months.\textsuperscript{105} It also would make the information more difficult to find by investors interested only in the name of the engagement partner for a particular audit, rather than an aggregation of all of the firm's engagement partners for a given year, because they would have to search for it in the midst of unrelated information in Form 2.

Some commenters on both the 2011 Release and 2013 Release suggested that the names of the engagement partner and the other participants in the audit should be included, if they were to be disclosed at all, not in the auditor's report but on an existing

\textsuperscript{105} Form 2 must be filed no later than June 30 of each year—according to PCAOB Rule 2201, Time for Filing of Annual Report—and covers the preceding 12-month period from April 1 to March 31; see Form 2, General Instruction 4.
or newly created PCAOB form only. This would make the information publicly available, while responding to concerns expressed by commenters related to liability and related practical issues. Some commenters on the 2013 Release also suggested that these disclosures would be more appropriately made in the company's audit committee report.

In considering commenters' views, the Board also considered providing auditors the option of making disclosure either in the auditor's report or on a newly created PCAOB form. This alternative would have had the advantage of allowing auditors to decide how to comply with the disclosure requirements based on their particular circumstances, may have imposed lower compliance costs in some instances compared to mandatory form filing or mandatory auditor's report disclosure, and may have resulted in more disclosures in the auditor's report than a mandatory form because some auditors may have preferred to avoid the cost of filing the form by disclosing the information in the auditor's report. However, such an approach would have permitted disclosures in multiple locations, which could have caused confusion and increased search costs compared to either auditor's report disclosure or a mandatory form.

**Disclosure in the Auditor's Report**

Under the alternative proposed in the 2013 Release, auditors would have been required to disclose the name of the engagement partner and certain other participants in the audit in the auditor's report. This approach has certain benefits to market participants related to timing and visibility of the disclosures. For example, mandated disclosure in the auditor's report would reduce search costs for market participants in some instances. The required information would be disclosed in the primary vehicle by which the auditor communicates with investors and where other information about the audit is already
found, and would be available immediately upon filing with the SEC of a document containing the auditor's report. However, market participants may incur costs to aggregate the information disclosed in separate auditors' reports.

Some commenters indicated that, compared to disclosure on Form AP, disclosing the information in the auditor's report may have an incrementally larger effect on the sense of accountability of identified participants in the audit because, for example, the engagement partner would be involved in the preparation of the auditor's report, but may not be involved in the preparation of the form. As discussed above, increased auditor accountability could have both positive and potentially some negative effects on the audit.

Mandating disclosure of the name of the engagement partner in the auditor's report would also create consistency between PCAOB auditing standards and requirements of other global standard setters regarding engagement partner disclosure.106 For example, 16 out of the 20 countries with the largest market capitalization, including 7 E.U. member states, already require disclosure of the name of the engagement partner in the auditor's report.107 However, it should be noted that baseline conditions, including those regarding auditor liability, may differ among these jurisdictions.

106 In 2014, the IAASB adopted ISA 700 (Revised), Forming an Opinion and Reporting on Financial Statements, which generally requires disclosure of the name of the engagement partner in the auditor's report. Following this adoption, disclosure of the engagement partner's name in the auditor's report of a listed entity will become the norm in those jurisdictions that have adopted the ISAs as adopted by the IAASB. See also 2013 Release for further discussion of the requirements regarding engagement partner disclosure in other jurisdictions.

107 Out of the 20 countries with the largest market capitalization (based on data obtained from the World Bank, World Development Indicators), the four that currently do not require the disclosure of the name of the engagement partner are the United States, Canada, Republic of Korea, and Hong Kong. The 16 countries that
As previously discussed, disclosure in the auditor's report could trigger the consent requirement of Section 7 and subject the identified parties to potential liability under Section 11 of the Securities Act. As a result, there could be additional indirect costs to engagement partners and other accounting firms participating in audits associated with defense of the litigation.

**Disclosure on a New PCAOB Form**

Under the final rules adopted by the Board, firms are be required to disclose the name of the engagement partner and certain other accounting firms that participated in the audit in a separate PCAOB form to be filed by the 35th day after the date the auditor's report is first included in a document filed with the SEC, with a shorter deadline of 10 days for initial public offerings.

The approach described in the 2015 Supplemental Request would allow auditors to decide whether to also provide disclosure in the auditor's report taking into account, for example, any costs associated with obtaining consents pursuant to the Securities Act and the potential for liability stemming from disclosure in the auditor's report. Although many auditors may prefer to avoid the potential legal and practical issues associated with disclosure in the auditor's report, some auditors may choose to also make the required disclosures in the auditor's report. Financial statement users could interpret an auditor's willingness to be personally associated with the audit in the auditor's report as a signal of audit quality or, more generally, as a means of differentiating among auditors.108

Currently require disclosure of the name of the engagement partner are Japan, United Kingdom, France, Germany, Australia, India, Brazil, China, Switzerland, Spain, Russian Federation, the Netherlands, South Africa, Sweden, Mexico, and Italy.

108 Changes to the format of the auditor's report in the United Kingdom may have provided auditors with a mechanism to distinguish themselves from their peers.
Requiring disclosure in a separate PCAOB form may decrease the chances that investors and other financial statement users would seek out the information. While disclosure in the auditor's report would make information available on the date of SEC filing of the document containing the auditor's report, disclosure on Form AP could occur up to 35 days later and information would only be included in the auditor's report when the auditor also chose to disclose in the auditor's report. Regardless of where it is disclosed, investors should be able to consider the information in developing their investment strategies.\textsuperscript{109}

**Applicability to Brokers and Dealers under Exchange Act Rule 17a-5**

For a discussion of the economic considerations relevant to the application of the final rules to audits of brokers and dealers, see above.

**Considerations for Audits of Emerging Growth Companies**

Pursuant to Section 104 of the Jumpstart Our Business Startups ("JOBS") Act, any rules adopted by the Board subsequent to April 5, 2012, do not apply to the audits of EGCs (as defined in Section 3(a)(80) of the Exchange Act) unless the SEC "determines that the application of such additional requirements is necessary or appropriate in the

Some filings suggest that some auditors may be using the new format to showcase the rigor and quality of their audit work. See Citi Research, New UK Auditor's Reports Update (Sept. 3, 2014).

\textsuperscript{109} There is an extensive body of academic literature demonstrating that financial markets are able to incorporate information into securities prices. Because securities prices can be viewed as public goods, investors are able to learn important information about a company by looking at the prices of its securities. See, e.g., Eugene F. Fama, Efficient Capital Markets: A Review of Theory and Empirical Work, 25 The Journal of Finance 383 (1970); Sanford Grossman, Further Results on the Informational Efficiency of Competitive Stock Markets, 18 Journal of Economic Theory 81 (1978); John C. Coffee, Jr., Market Failure and the Economic Case for a Mandatory Disclosure System, 70 Virginia Law Review 717 (1984); and Verrecchia, Essays on Disclosure.
public interest, after considering the protection of investors and whether the action will promote efficiency, competition, and capital formation." As a result of the JOBS Act, the rules and related amendments to PCAOB standards the Board is adopting are subject to a separate determination by the SEC regarding their applicability to audits of EGCs.

The 2015 Supplemental Request as well as the 2013 Release sought comment on the applicability of the proposed disclosure requirements to the audits of EGCs. Commenters generally supported requiring the same disclosures for audits of EGCs on the basis that EGCs have the same characteristics as other issuers and that the same benefits would be applicable to EGCs.

The data on EGCs outlined below in "Characteristics of Self-Identified EGCs," remains consistent with the data discussed in the 2013 Release, although the number of EGCs has nearly doubled since the issuance of that release. A majority of EGCs continue to be smaller public companies that are generally new to the SEC reporting process. Overall, there is less information available in the market about smaller and newer companies than there is about larger and more established companies. The communication of the name of the engagement partner and information about other accounting firms in the audit could assist the market in assessing some risks associated with the audit and in valuing securities, which could make capital allocation more efficient. Disclosures about audits of EGCs could produce these effects no less than disclosures about audits of other companies. Because there is generally less information available to investors about EGCs, additional disclosures about audits of EGCs may be of

---

greater benefit to investors in EGCs than to investors in established issuers with a longer reporting history.

As noted below, some EGCs operate in geographic segments that are outside the country or region of the accounting firm issuing the auditor's report, which may suggest involvement of participants in the audit other than the accounting firm issuing the auditor's report. While a smaller percentage of EGCs report such sales and assets than the companies in the Russell 3000 Index, for those EGCs that do, the amounts represent a larger portion of total sales and assets. The percentage of EGCs reporting segment sales (15%) and assets (17%) in geographic areas outside the country or region of the accounting firm issuing the auditor's report is smaller as compared to companies in the Russell 3000 Index (51% and 42%, respectively). However, for these EGCs, the average percentage of reported segment sales (58%) and assets (73%) in geographic areas outside the country or region of the accounting firm issuing the auditor's report is significantly higher than the analogous average segment sales (40%) and assets (35%) reported by companies in the Russell 3000 Index. Therefore, providing the disclosures regarding other accounting firms in the audit may be as relevant, or more relevant, to investors in EGCs and other financial statement users as it would be to investors in larger and more established companies.

One commenter asserted that costs to collect data about other participants in the audit will likely be more significant and probably more burdensome for auditors of EGCs than those of other issuers. Based on the characteristics of EGCs it is unlikely that the cost of collecting data will be disproportionately high for EGCs as a group because the percentage of EGCs that operate outside the country or region of the accounting firm
issuing the auditor's report appears to be relatively low compared to companies in the Russell 3000 Index. Although for those EGCs that do, the percentage of sales and assets that may be subject to audit by other participants could be greater.

The costs associated with the final rules, which are discussed above, are equally applicable to all companies, including EGCs. To the extent compliance costs do not vary with the size of the company, they may have a disproportionately greater impact on audits of smaller companies, including audits of smaller EGCs. As previously noted, however, the Board does not believe that direct costs for auditors to comply with the final rule will be significant. Such costs would not, in any case, be borne by companies, including EGCs, except to the extent they are passed on in the form of higher audit fees.

As noted above, the Board was mindful of concerns voiced by commenters about compliance and other costs. The final rule responds to those concerns by requiring disclosure on Form AP, which should not raise the same concerns about potential liability or consent requirements as disclosure in the auditor's report.

Approximately 3% of EGCs were audited by firms having only one certified public accountant whose full name is included in the firm's name (for example, sole proprietor). For those EGCs, the name of the audit engagement partner is already disclosed through the required signature of the firm on the auditor's report. No companies in the Russell 3000 Index are audited by such firms.

The Board is providing this analysis and the information set forth below to assist the SEC in its consideration of whether it is "necessary or appropriate in the public interest, after considering the protection of investors and whether the action will promote efficiency, competition, and capital formation," to apply the standard and amendments to
audits of EGCs. This information includes data and analysis of EGCs identified by the Board's staff from public sources.

The final rules will provide investors and other financial statement users with improved transparency about those who conduct audits, adding more specific data points to the mix of information that can be used to make decisions about audit quality and evaluate the credibility of financial reporting. The information will also allow investors and other financial statement users to evaluate the reputations of engagement partners and other accounting firms, which should have an effect on their sense of accountability.

For the reasons explained above, the Board believes that the final rules are in the public interest and, after considering the protection of investors and the promotion of efficiency, competition, and capital formation, recommends that the final rules should apply to audits of EGCs. Accordingly, the Board recommends that the Commission determine that it is necessary or appropriate in the public interest, after considering the protection of investors and whether the action will promote efficiency, competition, and capital formation, to apply the final rules to audits of EGCs. The Board stands ready to assist the Commission in considering any comments the Commission receives on these matters during the Commission's public comment process.

Characteristics of Self-Identified EGCs

The PCAOB has been monitoring implementation of the JOBS Act in order to understand the characteristics of EGCs\textsuperscript{111} and inform the Board's consideration of

\textsuperscript{111} Pursuant to the JOBS Act, an EGC is defined in Section 3(a)(80) of the Exchange Act. In general terms, an issuer qualifies as an EGC if it has total annual gross revenue of less than $1 billion during its most recently completed fiscal year (and its first sale of common equity securities pursuant to an effective Securities Act registration statement did not occur on or before Dec. 8, 2011). See JOBS Act Section 101(a), (b),
whether it should recommend that the SEC approve the application of the final rules to audits of EGCs. To assist the SEC, the Board is providing the following information regarding EGCs that it has compiled from public sources.\(^\text{112}\)

As of May 15, 2015, based on the PCAOB's research, there were 1,972 SEC registrants that filed audited financial statements and identified themselves as EGCs in at least one public filing. Among the 1,972 EGCs, there were 171 that did not file audited financial statements within the 18 months preceding May 15, 2015.\(^\text{113}\)

Characteristics of...
the remaining 1,801 companies that filed audited financial statements in the 18 months preceding May 15, 2015 are discussed below.

These companies operate in diverse industries. The five most common SIC codes applicable to these companies are: (i) pharmaceutical preparations; (ii) blank check companies; (iii) real estate investment trusts; (iv) prepackaged software services; and (v) business services.

The five SIC codes with the highest total assets as a percentage of the total assets of the population of EGCs are codes for: (i) real estate investment trusts; (ii) state commercial banks; (iii) crude petroleum or natural gas; (iv) national commercial banks; and (v) electric services. Total assets of EGCs in these five SIC codes represent approximately 46% of the total assets of the population of EGCs. EGCs in two of these five SIC codes (state commercial banks and national commercial banks) represent financial institutions, and the total assets for these two SIC codes represent approximately 17% of the total assets of the population of EGCs.

Approximately 13% of the EGCs identified themselves in registration statements and had not reported under the Exchange Act as of May 15, 2015. Approximately 74% of EGCs began reporting under the Exchange Act in 2012 or later. The remaining 13% of these companies have been reporting under the Exchange Act since 2011 or earlier. Accordingly, a majority of the companies that have identified themselves as EGCs have been reporting information under the securities laws since 2012.
Approximately 62% of the companies that have identified themselves as EGCs and filed an Exchange Act filing with information on smaller reporting company status indicated that they were smaller reporting companies.\textsuperscript{114}

Approximately 54% of the companies that have identified themselves as EGCs provided a management report on internal control over financial reporting.\textsuperscript{115} Of those companies that provided a management report, approximately 50% stated in the report that the company's internal control over financial reporting was not effective.\textsuperscript{116}

The most recent audited financial statements filed as of May 15, 2015, for those companies that identified as EGCs indicated the following:

\textsuperscript{114} The SEC adopted its current smaller reporting company rules in \textit{Smaller Reporting Company Regulatory Relief and Simplification}, Securities Act Release No. 8876 (Dec. 19, 2007). Generally, companies qualify to be smaller reporting companies and, therefore, have scaled disclosure requirements if they have less than $75 million in public equity float. Companies without a calculable public equity float will qualify if their revenues were below $50 million in the previous year. Scaled disclosure requirements generally reduce the compliance burden of smaller reporting companies compared to other issuers.

\textsuperscript{115} The management report on internal control over financial reporting is required only in annual reports, starting with the second annual report filed by the company. \textit{See} Instruction 1 to Item 308(a) of Regulation S-K. EGCs that have not yet filed at least one annual report are therefore not required to provide it.

\textsuperscript{116} For purposes of comparison, the PCAOB compared the data compiled with respect to the population of companies that identified themselves as EGCs with companies listed in the Russell 3000 Index in order to compare the EGC population with the broader issuer population. The Russell 3000 Index was chosen for comparative purposes because it is intended to measure the performance of the largest 3,000 U.S. companies representing approximately 98% of the investable U.S. equity market (as indicated on the Russell website). To contrast, approximately 98% of the companies in the Russell 3000 Index provided a management report on internal control over financial reporting. Of those companies that provided a management report, approximately 5% stated in the report that the company's internal control over financial reporting was not effective.
• The reported assets ranged from zero to approximately $12.9 billion. The average and median reported assets were approximately $227.4 million and $3.1 million, respectively.\(^{117}\)

• The reported revenue ranged from zero to approximately $926.4 million. The average and median reported revenue were approximately $53.7 million and $48 thousand, respectively.

• Approximately 43% reported zero revenue in their financial statements.

• The average and median reported assets among companies that reported revenue greater than zero were approximately $382.3 million and $71.1 million, respectively. The average and median reported revenue among these companies that reported revenue greater than zero were approximately $94.0 million and $13.5 million, respectively.

• Approximately 50% had an explanatory paragraph included in the auditor's report on their most recent audited financial statements describing that there is substantial doubt about the company's ability to continue as a going concern.\(^{118}\)

\(^{117}\) For purposes of comparison, the PCAOB compared the data compiled with respect to the population of companies that identified themselves as EGCs with companies listed in the Russell 3000 Index in order to compare the EGC population with the broader issuer population. The average and median reported assets of issuers in the Russell 3000 Index were approximately $13.2 billion and approximately $1.9 billion, respectively. The average and median reported revenue from the most recent audited financial statements filed as of May 15, 2015, of issuers in the Russell 3000 were approximately $4.9 billion and $812.9 million, respectively.

\(^{118}\) Less than 1% of companies in the Russell 3000 Index have an explanatory paragraph describing that there is substantial doubt about the company's ability to continue as a going concern.
• Approximately 44% were audited by firms that are annually inspected by the PCAOB (that is, firms that have issued auditor's reports for more than 100 public company audit clients in a given year) or are affiliates of annually inspected firms. Approximately 56% were audited by triennially inspected firms (that is, firms that have issued auditor's reports for 100 or fewer public company audit clients in a given year) that are not affiliates of annually inspected firms.

• Approximately 3% were audited by firms: (1) whose names contain the full name of an individual that is in a leadership role at the firm and (2) have disclosed only one certified public accountant.¹¹⁹

• Approximately 15% and 17% of the EGCs reported segment sales and assets,¹²⁰ respectively, in geographic areas outside the country or region of the accounting firm issuing the auditor's report.¹²¹ For these EGCs, on average, 58% and 73% of the reported segment sales and assets, respectively, were in geographic areas outside the country or region of the accounting firm issuing the auditor's report.¹²²

¹¹⁹ This data is based on firms' annual disclosures on PCAOB Form 2. No companies in the Russell 3000 Index were audited by such firms.

¹²¹ Approximately 51% and 41% of the population of companies in the Russell 3000 Index reported segment sales and assets, respectively, in geographic areas outside the country or region of the accounting firm issuing the auditor's report.

¹²² For the population of companies in the Russell 3000 Index that reported segment sales or assets in geographic areas outside the country or region of the accounting firm issuing the auditor's report, approximately 40% and 35% of those
III. Date of Effectiveness of the Proposed Rules and Timing for Commission Action

Within 45 days of the date of publication of this notice in the Federal Register or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Board consents, the Commission will:

(A) by order approve or disapprove such proposed rules; or
(B) institute proceedings to determine whether the proposed rules should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rules are consistent with the requirements of Title I of the Act. Comments may be submitted by any of the following methods:

Electronic comments:

- Use the Commission's Internet comment form (http://www.sec.gov/rules/pcaob.shtml); or
- Send an e-mail to rule-comments@sec.gov. Please include File Number PCAOB-2016-01 on the subject line.

Paper comments:

- Send paper comments in triplicate to Brent J. Fields, Secretary, Securities and Exchange Commission, 100 F Street, NE, Washington, DC 20549-1090.

segment sales and assets, respectively, were in geographic areas outside the country or region of the accounting firm issuing the auditor's report.
All submissions should refer to File Number PCAOB-2016-01. This file number should be included on the subject line if e-mail is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet website (http://www.sec.gov/rules/pcaob.shtml). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rules that are filed with the Commission, and all written communications relating to the proposed rules between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing will also be available for inspection and copying at the principal office of the PCAOB. All comments received will be posted without charge; we do not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number PCAOB-2016-01 and should be submitted on or before [insert 21 days from publication in the Federal Register].

By the Commission.

Secretary
CONCEPT RELEASE ON REQUIRING THE ENGAGEMENT PARTNER TO SIGN THE AUDIT REPORT

PCAOB Release No. 2009-005
July 28, 2009
PCAOB Rulemaking
Docket Matter No. 029

Summary: The Public Company Accounting Oversight Board ("PCAOB" or "Board") is issuing a concept release to solicit public comment on whether it should require the auditor with final responsibility for the audit to sign the audit report.

Public Comment: Interested persons may submit written comments to the Board. Such comments should be sent to the Office of the Secretary, PCAOB, 1666 K Street, N.W., Washington, D.C. 20006-2803. Comments also may be submitted by e-mail to comments@pcaobus.org or through the Board's Web site at www.pcaobus.org. All comments should refer to PCAOB Rulemaking Docket Matter No. 29 in the subject or reference line. Comments should be received by the Board no later than 5:00 PM EDT on September 11, 2009.

Board Contacts: Bella Rivshin, Associate Chief Auditor (rivshinb@pcaobus.org), Jacob Lesser, Associate General Counsel (lesserj@pcaobus.org), Mary Peters, Assistant General Counsel (petersm@pcaobus.org), 202-207-9100.

*   *   *
CONCEPT RELEASE

I. Introduction

A public company audit typically involves a substantial amount of work by highly skilled practitioners exercising significant professional judgment. At the end of this process, the registered public accounting firm issues its report on the client's financial statements and, when applicable, its internal control over financial reporting. The audit report is usually the only document related to the audit that investors see. Among other things, it describes, in general terms, the work required to be performed in every audit, represents that the work was performed in accordance with the standards of the PCAOB, and, most important to investors, states the auditor's opinion. PCAOB standards require the audit report to be signed by the audit firm.\footnote{1}

Because of the audit report's importance, commentators have, at various times, considered ways to make it more informative and whether changes to the standard audit report could enhance audit quality. Beginning in 2005, the Board has sought the advice of its Standing Advisory Group ("SAG") several times on this topic, with a particular emphasis on whether PCAOB standards should require engagement partners to sign the audit report.\footnote{2} Members of the SAG with backgrounds as investors have generally strongly supported such a requirement. These SAG members generally believe that a signature requirement could enhance the engagement partner's accountability and increase transparency. Some other SAG members have expressed concerns and noted the benefits of the existing requirement for the firm to sign the audit report.

In 2006, the European Union issued the Eighth Company Law Directive (the "Eighth Directive"), which requires member states to adopt a requirement for the

\footnote{1}{AU sec. 508.08; Auditing Standard No. 5, para. 85. PCAOB standards do not prohibit the engagement partner from also signing the audit report. The auditing standards of the International Auditing and Assurance Standards Board ("IAASB") allow the auditor to sign the report "either in the name of the audit firm, the personal name of the auditor or both, as appropriate for the particular jurisdiction." IAASB International Standard on Auditing 700, Forming an Opinion and Reporting on Financial Statements, paragraph A37.}

\footnote{2}{The SAG discussed requiring the engagement partner to sign the audit report in February 2005, June 2007 and October 2008. Transcripts of the relevant portions of these meetings are available at http://www.pcaobus.org/Rules/Docket_029/index.aspx.}
CONCEPT RELEASE

engagement partner to sign the audit report. The Eighth Directive "establishes rules concerning the statutory audit of annual and consolidated accounts" and "aims at high level – though not full – harmonisation of statutory audit requirements." Article 28 of the Eighth Directive provides that "[w]here an audit firm carries out the statutory audit, the audit report shall be signed at least by the statutory auditor(s) carrying out the statutory audit on behalf of the audit firm." Moreover, even before the Eighth Directive, some countries in continental Europe already required the engagement partner to sign the audit report.

Most recently, in 2008, the Advisory Committee on the Auditing Profession ("ACAP"), convened by the U.S Department of the Treasury, considered the audit report. Chaired by former Securities and Exchange Commission ("SEC") Chairman Arthur Levitt and former SEC Chief Accountant Donald Nicolaisen, ACAP was charged with "provid[ing] informed advice and recommendations . . . on the sustainability of a strong and vibrant public company auditing profession." Chairman Mark Olson was an observer to the ACAP.

4/ Id. at Art. 28. Article 2 of the Eighth Directive defines a "statutory auditor" as a "natural person who is approved in accordance with the provisions of the directive by the competent authorities of a member state to carry out statutory audits."

6/ Id. at B:1.

CONCEPT RELEASE

On October 6, 2008, ACAP issued its final report, which recommends, among other things, "urg[ing] the PCAOB to undertake a standard-setting initiative to consider mandating the engagement partner's signature on the auditor's report." The ACAP Report notes that ACAP received "testimony and commentary regarding the benefits and complexities of engagement partner signatures" and that "[t]he Committee believes that the engagement partner's signature on the auditor's report would increase transparency and accountability." The ACAP Report states that "the signature requirement should not impose on any signing partner any duties, obligations or liability that are greater than the duties, obligations and liability imposed on such person as a member of an auditing firm."

---

8/ ACAP Report, at VII:19. Also regarding the audit report, the ACAP Report recommends that the PCAOB "undertake a standard-setting initiative to consider improvements to the auditor's standard reporting model" and "that the PCAOB and the SEC clarify in the auditor's report the auditor's role in detecting fraud . . . ." Id. at VII:13. The Board continues to consider these recommendations, along with ACAP's other recommendations to the Board.

10/ ACAP Report at VII:20. According to the ACAP Report, "[t]his language is similar to safe harbor language the SEC promulgated in its rulemaking pursuant to Sarbanes-Oxley's Section 407 for audit committee financial experts." Id. The reference is to Item 407(d)(5)(iv) of Regulation S-K, 17 C.F.R. § 229.407(d)(5)(iv), which provides:

(iv) Safe harbor.

(A) A person who is determined to be an audit committee financial expert will not be deemed an expert for any purpose, including without limitation for purposes of section 11 of the Securities Act, as a result of being designated or identified as an audit committee financial expert pursuant to this Item 407.

(B) The designation or identification of a person as an audit committee financial expert pursuant to this Item 407 does not impose on such person any duties, obligations or liability that are greater than the duties, obligations and liability imposed on such person as a member of the audit committee and board of directors in the absence of such designation or identification.
CONCEPT RELEASE

As described below, requiring the engagement partner to sign the audit report could improve audit quality. Accordingly, the Board is considering whether to impose such a requirement, which would be in addition to, not in place of, the existing requirement for the firm to sign the audit report. The Board seeks comment on all aspects of this concept release.

II. Reasons for a Signature Requirement

A requirement for the engagement partner to sign the audit report could improve audit quality in two ways. First, it might increase the engagement partner's sense of accountability to financial statement users, which could lead him or her to exercise greater care in performing the audit. Second, it would increase transparency about who is responsible for performing the audit, which could provide useful information to investors and, in turn, provide an additional incentive to firms to improve the quality of all of their engagement partners.

Many have suggested that an engagement partner who knows that he or she will have to sign his or her own name to an engagement report will perform a higher quality audit. As described by one commenter on a draft of the ACAP Report:

the personal signature . . . might have the effect of focusing the attention on those named individuals on the potential future consequences of a badly done audit. Knowing that any failure will be clearly and unambiguously associated with the named individuals and that the veil of the firm will not be there to obscure their responsibility may be of value.11/

Put another way, a requirement for the engagement partner to sign the report may increase that individual's sense of personal accountability for the work performed and

(C) The designation or identification of a person as an audit committee financial expert pursuant to this Item does not affect the duties, obligations or liability of any other member of the audit committee or board of directors.

CONCEPT RELEASE

the opinion expressed, which could, in turn, have a positive effect on his or her behavior.12/

Some have noted that the identity of the engagement partner generally is not a secret and that regulators and others may easily determine who served in that role on a given audit.13/ While this is certainly correct, knowing that one's name is obtainable by interested parties is not the same as knowing that one's name will be associated with the work performed by every reader of the audit report. As one panelist at a SAG discussion noted, "accountability is being answerable to an audience" and "the engagement partner's signature proposal just expands the audience" to investors.14/ In addition, the act of signing itself may increase an engagement partner's sense of responsibility for the quality of the audit.15/

12/ See Jean Bedard, Comments at Panel Discussion before the SAG (Oct. 23, 2008) (noting the absence of reported studies on whether audit quality is affected by a requirement for the engagement partner to sign the report but that "when an individual is accountable, there is an increase in self-critical thinking, which is thinking harder about the decisions you must make and possible threats to the quality of your response based on your intended audience"), available at http://www.pcaobus.org/Rules/Docket_029/index.aspx.

13/ For example, in connection with ratifying the appointment of the independent auditor, the engagement partner typically attends the annual shareholders' meeting and is available to answer shareholders' questions.

15/ See Letter from Donald H. Chapin to The Advisory Committee on the Auditing Profession (June 9, 2008) ("In my experience . . . nothing so focuses the mind on 'getting it right' as having to sign the audit report."). available at http://comments.treas.gov/files/TreasuryAdvisoryCommittee.doc; Robert Tarola, Comments at Meeting of the SAG (June 21, 2007) ("I used to sign off in the name of a firm. Now I'm certifying financial statements under SOX in my personal name. I would like to believe . . . that it wouldn't have made a difference, but it does. It is psychologically different."), available at http://www.pcaobus.org/Rules/Docket_029/index.aspx; Arnold Hanish, Comments at Meeting of the SAG (Feb. 16, 2005) ("We find behaviors within our company where we're asking people to sign their name. You get different
CONCEPT RELEASE

For these reasons, some have suggested that a requirement for the engagement partner to sign the audit report would be similar to the requirement imposed by Section 302 of the Sarbanes-Oxley Act. Under that section, an issuer's principal executive officer and principal financial officer must certify in each annual or quarterly report that, among other things, based on the officer's knowledge the report does not contain any untrue statement of a material fact and that the financial statements are fairly presented. Congress enacted this requirement because it "believe[d] that management should be held responsible for the financial representations of their companies." Some have suggested that this requirement has focused the signing officers on their existing responsibilities when preparing financial information. A requirement for the engagement partner to sign the audit report might similarly focus engagement partners on their existing responsibilities.

behaviors when someone has to put their name on something."), available at http://www.pcaobus.org/Rules/Docket_029/index.aspx.

17/ See, e.g., Cynthia A. Glassman, Commissioner, SEC, Internal Controls Over Financial Reporting – Putting Sarbanes-Oxley Section 404 in Perspective, Remarks at the Twelfth Annual CFO Summit (May 8, 2006) ("numerous CEOs and CFOs and other market constituents have told me that the Section 302 and 906 certifications have really forced management to focus on establishing, maintaining, and regularly evaluating disclosure controls, as well as internal controls, and making sure that financial and other disclosure is complete and accurate. The certifications are making a difference.")., available at http://www.sec.gov/news/speech/2006/spch050806cag.htm; see also Cohen, J., Krishnamoorthy, G. and Wright, A. Corporate Governance in the Post Sarbanes-Oxley Era: Auditor Experiences, Working Paper (June 2009) (68% of auditors surveyed indicated that the certification requirement has had a positive effect on the integrity of financial reports), available at http://ssrn.com/abstract=1014029; Center for Audit Quality, Report on the Survey of Audit Committee Members (Mar. 2008) (in response to question about impact of CEO and CFO certification requirement on overall quality of public company audits, 44% of audit committee members surveyed responded "somewhat positive impact" and 37% responded "very positive impact").
CONCEPT RELEASE

Questions –

1. Would requiring the engagement partner to sign the audit report enhance audit quality and investor protection?

2. Would such a requirement improve the engagement partner's focus on his or her existing responsibilities? The Board is particularly interested in any empirical data or other research that commenters can provide.

3. Would disclosure of the engagement partner's name in the report serve the same purpose as a signature requirement, or is the act of signing itself important to promote accountability?

As noted above, a signature requirement would enhance transparency by providing investors with the name of the engagement partner—a piece of information generally not otherwise known to them. Such information could be useful to financial statement users and might lead to an improvement in audit quality. As one member of the SAG noted, "[i]f partners have to sign . . . you could start measuring expertise at the individual partner level in industries."

While we agree with those who have noted the importance of the expertise, quality control system, and skill of the firm as a whole, the skill and expertise of the engagement partner also undoubtedly contribute to audit quality. Providing financial

---

18/ Joseph Carcello, Comments at Meeting of the SAG (June 21, 2007), available at http://www.pcaobus.org/Rules/Docket_029/index.aspx. A requirement to disclose the name of the engagement partner in the audit report would, presumably, serve this purpose as well as a signature requirement.

19/ See, e.g., Randy Fletchall, Comments at Meeting of the SAG (June 21, 2007) ("in a large firm, coordinating a large audit around the world, you can’t expect that lead partner to have trained everyone on that team . . . . you really do have to allow that partner to rely on the firm’s quality control system around many things like independence, training, competency"), available at http://www.pcaobus.org/Rules/Docket_029/index.aspx.

20/ See, e.g., Nick Cyprus, Comments at Meeting of the SAG (Feb. 16, 2005) ("as good as firm policies are, and I've said this multiple times, the quality of an audit is very much dependent on the partner on a job"), available at
CONCEPT RELEASE

statement users, audit committees, and others with the name of the engagement partner might help them evaluate the extent of an engagement partner's experience on a particular type of audit and, to a degree, his or her track record. Such information could be useful to investors in making investment decisions and to audit committees in making retention decisions.

Over time, the additional transparency could also provide an incentive for firms to enhance the skill and experience of their engagement partners overall. Audit committees might increasingly seek out engagement partners who are viewed as performing consistently high quality audits. The resulting competition could lead to an improvement in audit quality.

Questions –

4. Would increased transparency about the identity of the engagement partner be useful to investors, audit committees, and others?

5. Would such information allow users of audit reports to better evaluate or predict the quality of a particular audit? Could increased transparency lead to inaccurate conclusions about audit quality under some circumstances? We are particularly interested in any empirical data or other research that commenters can provide.

6. Are there potential unintended consequences of requiring the engagement partner to sign the audit report that the Board should be aware of?

7. The EU's Eighth Directive requires a natural person to sign the audit report, but provides that "[i]n exceptional circumstances, Member States may provide that this signature does not need to be disclosed to the public if such disclosure could lead to an imminent, significant threat to the personal security of any person." If the Board adopts an engagement

http://www.pcaobus.org/Rules/Docket_029/index.aspx; Lynn Turner, Comments at Meeting of the SAG (Oct. 23, 2008) ("And while certainly you get all of the resources of the firm behind [the engagement partner], anytime anyone goes out for evaluation of an auditor, the number one thing that comes up is, who is that audit partner? . . . And you can have a good firm, but if you've got a lousy audit partner, you're probably going to have a lousy audit at the end of the day."), available at http://www.pcaobus.org/Rules/Docket_029/index.aspx.
CONCEPT RELEASE

partner signature requirement, is a similar exception necessary? If so, under what circumstances should it be available?

Some SAG members and some commenters on the ACAP Report noted significant benefits resulting from the existing requirement for the firm to sign the audit report. Some suggested that the firm’s signature on an audit report is often viewed as a statement that the firm, as a whole, stands by the opinion expressed. The opinion and other statements in the report are those of the firm, collectively, rather than of the individual engagement partner who authorized the report’s issuance. Some believe that such collective responsibility promotes audit quality because individual partners risk not only their own reputations by performing substandard audit work but those of their partners and employees as well. The firm’s signature on the audit report may also reflect the fact that an audit often involves consultations with a firm’s national office and others who may not participate more directly in the day-to-day audit work.

The Board agrees that requiring the firm’s signature on the audit report serves important goals, including many of those identified by SAG members and commenters on the ACAP Report. The intent of any signature requirement would not be to suggest that the firm as a whole is not accountable for the contents of its audit report, or that the engagement partner is solely responsible for the audit. The Board understands that, as one SAG member stated, "big, complex clients demand the attention of the entire firm, and if you give too much authority to a level below the firm . . . you can get into some

\[21\] For example, in commenting on the ACAP Report, the Center for Audit Quality stated:

The CAQ believes that signing a firm’s name on an audit report carries a more serious connotation, as it associates the institution of the entire firm with the content of the report, and that signing by individual partners is inconsistent with the consultative environment that is fostered inside firms and the requirement that the firm as a whole stand behind the audit report. Each partner working on the audit report already knows that his or her career and reputation are on the line – not to mention the possibility of civil liability or regulatory enforcement – each time a report is issued.

Letter from Cynthia M. Fornelli, Executive Director, Center for Audit Quality to Advisory Committee on the Auditing Profession (June 27, 2008), available at http://comments.treas.gov/_files/CAQCommentletter62708FINAL.pdf.
CONCEPT RELEASE

trouble."22/ At the same time, the benefits resulting from requiring the firm to sign the audit report should not be diminished by an additional requirement for the engagement partner also to sign it.

The Board's intent with any signature requirement would not be to increase the liability of engagement partners. Any such requirement would not increase or otherwise affect the duties and obligations of the engagement partner under PCAOB standards in performing the audit. At the same time, the Board believes that the engagement partner should be – and is – responsible for the audit work performed and the contents of the audit report. A firm may only act through its partners and other employees. PCAOB standards refer to the engagement partner as "the auditor with final responsibility for the audit."23/ Engagement partners may be liable in PCAOB and SEC enforcement actions without regard to whether they signed the audit report.24/

Accountants may also be held liable to private parties in both state and federal courts under a variety of different legal theories depending upon the facts of a particular case. Section 10(b) of the Securities Exchange Act of 1934 prohibits securities fraud and is a significant source of private liability. Under that provision, when the firm signs the audit report it makes the statements within it and may be held liable for them.25/ The

23/ AU sec. 311, Planning and Supervision.

24/ See, e.g., Christopher E. Anderson, CPA, PCAOB Release No. 105-2008-103 (Oct. 31, 2008) (finding engagement partner liable for violations of PCAOB standards in auditing financial statements and authorizing issuance of unqualified opinion); SEC v. KPMG, 412 F. Supp. 2d 349, 376 (S.D.N.Y. 2006) (holding engagement partner who does not sign audit report may be held liable as primary violator under antifraud provisions of federal securities laws); see also Section 20(e) of the Securities Exchange Act, 15 U.S.C. § 78t(e) (providing that in an action brought by the SEC, "any person that knowingly provides substantial assistance to another person in violation of a provision of this Act, or any rule or regulation issued under this Act, shall be deemed to be in violation of such provision to the same extent as the person to whom such assistance is provided").

CONCEPT RELEASE

law is not settled, however, as to the private liability of those who do not directly make – but otherwise play some important role in the making of – a material misstatement.\(^{26}\) In particular, some courts have held that private liability attaches only to those to whom a statement may be publicly attributed; others have not imposed such a requirement.\(^{27}\) Accordingly, an engagement partner who does not sign the audit report might, at least in some judicial circuits, be able to avoid liability under Section 10(b) by successfully arguing that the statements in the report can be publicly attributed only to the firm. That argument, of course, would not be available if the engagement partner signed the audit report.

\(^{26}\) While it is clear that there is no private right of action under Section 10(b) against those who aid and abet a securities fraud, Central Bank of Denver, N.A. v. First Interstate Bank of Denver, N.A., 511 U.S. 164, 191 (1994), it is not clear when someone should be treated as a "primary violator" or as an aider and abetter.

\(^{27}\) Compare Wright v. Ernst & Young LLP, 152 F.3d 169, 175 (2d Cir. 1998) (holding that "the misrepresentation must be attributed to that specific actor at the time of public dissemination, that is, in advance of the investment decision," which has become known as the "bright line" test) with In re Software Toolworks Inc., 50 F.3d 615, 628 n.3 (9th Cir. 1994) (holding that an actor can be liable for a statement that the actor played a significant role in making but that is not publicly attributable to the actor, which has become known as the "substantial participation" test); see also U.S. Dep't of the Treasury, Legislative Proposal on Financial Regulatory Reform 73 (June 17, 2009) (noting that "[t]he SEC also proposes amending the federal securities laws to provide a single explicit standard for primary liability to replace various circuits' formulations of different 'tests' for primary liability"). For an overview of the federal courts' decisions on this point, see In re Mutual Funds Investment Litigation, 566 F.3d. 111, 121-28 (4th Cir. 2009).
CONCEPT RELEASE

Questions –

8. What effect, if any, would a signature requirement have on an engagement partner's potential liability in private litigation? Would it lead to an unwarranted increase in private liability? Would it affect an engagement partner's potential liability under provisions of the federal securities laws other than Section 10(b) of the Securities Exchange Act, such as Section 11 of the Securities Act of 1933? Would it affect an engagement partner's potential liability under state law?

9. Are there steps the Board could or should take to mitigate the likelihood of increasing an engagement partner's potential liability in private litigation?

10. Some commenters on the ACAP Report who expressed concern about liability suggested that a safe harbor provision accompany any signature requirement. While the Board has no authority to create a safe harbor from private liability, it could, for example, undertake to define the engagement partner's responsibilities more clearly in PCAOB standards. Would such a standard-setting project be appropriate?

III. Potential Amendments to PCAOB Standards

A signature requirement could be imposed by amending paragraph .08 of AU sec. 508, Reports on Audited Financial Statements, of the Board's interim standards and paragraph 85 of Auditing Standard No. 5, An Audit of Internal Control Over Financial Reporting That is Integrated with an Audit of Financial Statements, each of which describes the elements of the standard audit report. These paragraphs currently require the audit report to include "the manual or printed signature of the auditor's firm." A requirement for "the manual and printed signature of the auditor with final responsibility for the audit" could be added to those paragraphs.

In general, an audit report contains an opinion on prior years' financial statements in addition to the opinion on those of the current year.²⁸/ For a variety of reasons, however, including partner rotation requirements, the engagement partner on

²⁸/ Under PCAOB standards, the auditor "should be alert for circumstances or events that affect the prior-period financial statements presented . . . or the adequacy of informative disclosures concerning those statements" and "consider the effects of any such circumstances or events coming to his or her attention." See AU sec. 508.66.
CONCEPT RELEASE

the current year's audit may not be the person who served in that role on the audits of
the prior years presented in the report. This may be the case even though the same firm
audited all of the years presented. Similar issues could arise when prior period financial
statements are revised due to, for example, errors or changes in accounting principles.
The Board is considering whether the current year engagement partner should be
required to sign an audit report only as it relates to a year for which he or she served in
that role.

The Board is also considering how an engagement partner signature requirement
should apply when part of the audit is performed by another auditor. Under AU sec. 543,
Part of Audit Performed by Other Independent Auditors, the principal auditor must
decide whether to make reference to the other auditor in the audit report or to assume
responsibility for the other auditor's work. If a signature requirement were adopted, it
might be appropriate, for example, for a principal auditor that makes reference to the
other auditor also to reference the other engagement partner. In addition, under AU sec.
543, firms generally choose not to make reference to other firms within the same
network that performed part of the audit. In such cases, the firm issuing the report may
feel comfortable taking responsibility for the work of the other firm because of the
network affiliation. Some have suggested that an engagement partner signing the report
may, however, feel less comfortable about taking responsibility for the work of other
auditors he or she may not know personally. The Board is considering whether an
engagement partner signature requirement would change existing practice in this area.

Questions –

11. If the Board adopts an engagement partner signature requirement, would
other PCAOB standards, outside of AU sec. 508 and Auditing Standard
No. 5, need to be amended?

12. Should the Board only require the engagement partner's signature as it
relates to the current year's audit? If so, how should the Board do so? For
example, should firms be permitted to add an explanatory paragraph in
the report that states that the engagement partner's signature relates only
to the current year?

13. If a signature requirement is adopted, should a principal auditor that
makes reference to another auditor also be required to make reference to
the other engagement partner? Would an engagement partner at the
CONCEPT RELEASE

14. Auditors are not required to issue a report on a review of interim financial information, though AU sec. 722, *Interim Financial Information*, imposes requirements on the form of such a report in the event one is issued. Should the engagement partner be required to sign a report on interim financial information if the firm issues one?

15. Would requiring the engagement partner to sign the audit report make other changes to the standard audit report necessary?

16. If the Board adopts a signature requirement, should it specify a form of the engagement partner's signature? For example, should the engagement partner sign on behalf of the firm and then “by” the engagement partner?

IV. Opportunity for Public Comment

The Board will seek comment for a 45-day period. Interested persons are encouraged to submit their views to the Board. Written comments should be sent to the Office of the Secretary, PCAOB, 1666 K Street, N.W., Washington, D.C. 20006-2803. Comments also may be submitted by e-mail to comments@pcaobus.org or through the Board’s Web site at www.pcaobus.org. All comments should refer to PCAOB Rulemaking Docket Matter No. 29 in the subject or reference line and should be received by the Board no later than 5:00 PM EDT on September 11, 2009. The Board will consider all comments received.

On the 28th day of July, in the year 2009, the foregoing was, in accordance with the bylaws of the Public Company Accounting Oversight Board,

ADOPTED BY THE BOARD.

/s/ J. Gordon Seymour

J. Gordon Seymour
Secretary

July 28, 2009
Summary: The Public Company Accounting Oversight Board ("PCAOB" or "Board") is soliciting public comment on amendments to its standards that would improve the transparency of public company audits. The proposed amendments would: (1) require registered public accounting firms to disclose the name of the engagement partner in the audit report, (2) amend the Board's Annual Report Form to require registered firms to disclose the name of the engagement partner for each audit report already required to be reported on the form, and (3) require disclosure in the audit report of other independent public accounting firms and other persons that took part in the audit.

Public Comment: Interested persons may submit written comments to the Board. Such comments should be sent to the Office of the Secretary, PCAOB, 1666 K Street, N.W., Washington, D.C. 20006-2803. Comments also may be submitted by e-mail to comments@pcaobus.org or through the Board's Web site at www.pcaobus.org. All comments should refer to PCAOB Rulemaking Docket Matter No. 29 in the subject or reference line. Comments should be received by the Board no later than 5:00 PM EDT on January 9, 2012.

Board Contacts: Jennifer Rand, Deputy Chief Auditor (202/207-9206, randj@pcaobus.org); Dima Andriyenko, Associate Chief Auditor (202/207-9130, andriyenkod@pcaobus.org); and Lisa Calandriello, Assistant Chief Auditor (202/207-9337, calandriellol@pcaobus.org).
RELEASE

I. Introduction

The audit report is typically an investor’s primary source of information about the audit. Usually a single page, the report provides general information about how every audit must be conducted, states that the audit complied with applicable standards, gives the firm’s opinion on the company’s financial statements or internal control over financial reporting, and includes the signature of the firm that issued it. While the report provides useful information—the opinion, primarily—it tells the reader little about the key participants in the audit.

For example, while an audit today may involve only the registered firm issuing the report, it is more likely, at least for the largest audits, that two or more firms play a role. In many cases, these other firms are affiliated with the firm issuing the report and share a common brand name. Other times, there is no affiliation between firms working on an audit, or the firm issuing the report may use other participants from outside the firm to perform certain audit procedures. In most cases these other firms are engaged in auditing company operations in the country in which the other firm is located. Regardless of the approach, it is the engagement partner who is at the center of the effort. He or she “is responsible for the engagement and its performance,” and must, therefore, make sure that the work and those who perform it are appropriately supervised and coordinated.1/

Generally, however, little, if any, of this is transparent to investors. The audit report typically contains no information about who served in the role of engagement partner, or whether the firm issuing the report actually performed all of the work.2/

1/ See paragraph 3 of Auditing Standard No. 9, Audit Planning, and paragraph 3 of Auditing Standard No. 10, Supervision of the Audit Engagement.

2/ There are no provisions requiring the disclosure of the name of the engagement partner or the name and extent of participation in the audit of other accounting firms or persons in the standards of the PCAOB, standards of Auditing Standards Board of the American Institute of Certified Public Accountants (“AICPA”) or standards of the International Auditing and Assurance Standards Board. In some countries outside the United States, there are statutory requirements regarding disclosing the name of the engagement partner in the audit report. For example, the Eighth Company Law Directive of the European Union (“EU”) requires the EU member states to adopt a requirement for the audit report to be “signed by at least the statutory auditor(s) carrying out the statutory audit on behalf of the audit firm.” Directive 2006/43/EC of the European Parliament and of the Council, Article 28 (May 17, 2006). According to the Directive, “statutory auditor” means "a natural person who is approved
June 2011, the Board issued a concept release seeking commenters’ views on how the audit report can be made more useful to readers. That release is intended to generate a broad-based discussion on changes that could be made to the auditor’s reporting model. In the meantime, however, the Board believes that certain targeted changes could be made to provide more transparency within the existing framework. Specifically, providing investors with the name of the engagement partner and the names of other persons and independent public accounting firms that took part in the audit would require only relatively modest changes to the audit report but could increase transparency by providing investors with information regarding certain key participants in the audit process.

Accordingly, the Board is soliciting comment on a series of amendments to PCAOB standards that would:

- Require the audit report to disclose the name of the engagement partner responsible for the most recent period's audit,
- Require registered firms to disclose in their PCAOB annual report on Form 2 the name of the engagement partner for each audit report already required to be reported on the form, and
- Require disclosure in the audit report about other persons and independent public accounting firms that took part in the most recent period's audit.

These proposals are each described in greater detail below. The Board seeks comment on all aspects of the proposed amendments.

II. Disclosure of the Engagement Partner

On July 28, 2009, the Board issued a concept release seeking comment on whether the Board should require that the audit report include the engagement partner's name in accordance with this Directive by the competent authorities of a Member State to carry out statutory audits." Id. at Article 2.

signature in addition to the firm's signature.\footnote{4}{See Concept Release on Requiring the Engagement Partner to Sign the Audit Report available at http://pcaobus.org/Rules/Rulemaking/Pages/Docket029.aspx.} The concept release grew, in part, out of the 2008 Final Report of the Advisory Committee on the Auditing Profession (“ACAP”) to the U.S. Department of the Treasury.\footnote{5}{The ACAP was chaired by former Chairman of the Securities and Exchange Commission (“SEC”) Arthur Levitt and former SEC Chief Accountant Donald Nicolaisen. Mark Olson, then Chairman of the PCAOB, was an observer.} That report recommended, among other things, that the PCAOB “undertake a standard-setting initiative to consider mandating the engagement partner’s signature on the auditor’s report.” The ACAP report stated that “[t]he Committee believes that the engagement partner’s signature on the auditor’s report would increase transparency and accountability.”\footnote{6}{U.S. Department of the Treasury, Final Report of the Advisory Committee on the Auditing Profession to the U.S. Department of the Treasury, VII:19, VII:20 (2008).}

The Board had heard similar views from members of its Standing Advisory Group (“SAG”) with backgrounds as investors or investor advocates and from its Investor Advisory Group (“IAG”).\footnote{7}{The names of SAG members and their biographies can be found on http://pcaobus.org/Standards/SAG/Pages/Current.aspx. The names of IAG members and their biographies can be found on http://pcaobus.org/About/Advisory/Pages/Investor_Advisory_Group_Members.aspx.} Beginning in 2005, the Board had sought the advice of its SAG several times on changes that could be made to the standard audit report, with a particular emphasis on whether the report should include the engagement partner's signature. Investor members of the SAG generally supported a signature requirement, while some other SAG members expressed concerns and noted the benefits of the existing requirement for the audit report to include the firm's signature.\footnote{8}{See paragraph .08i of AU sec. 508, Reports on Audited Financial Statements.} The IAG also discussed the signature requirement at its inaugural meeting in May 2010, at which time most IAG members expressed support for such a requirement.\footnote{9}{The SAG discussed requiring the engagement partner to sign the audit report in February 2005, June 2007 and October 2008. After the Board issued the concept release, the SAG discussed the topic again at its October 14, 2009 meeting and the IAG discussed it at its May 4, 2010 meeting. Transcripts of the relevant
RELEASE

The concept release explored how a signature requirement could enhance investor protection by increasing transparency into and accountability for the preparation and issuance of audit reports, as well as the concerns expressed by some commenters on the ACAP Report and at SAG meetings. The Board also asked whether a report on a review of interim financial information, if one is issued, should include the engagement partner's signature. The Board received 23 comment letters in response.

After considering commenters’ views, including those expressed at meetings of the SAG and IAG, the Board has decided to propose a rule that would require the name of the engagement partner to be disclosed, but would not require the engagement partner's signature to be included in the audit report. As discussed below, such an approach would retain most of the potential benefits discussed in the concept release while seeking to mitigate concerns that a signature requirement would minimize the firm’s role in conducting the audit. The changes would be made by amending AU sec. 508, Reports on Audited Financial Statements, and Auditing Standard No. 5, An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements, which describe the required elements of the audit report. Additionally, the Board is proposing conforming amendments to certain other PCAOB standards that include examples of the report.

The Board is also proposing to amend Part IV of Form 2 – Annual Report Form to require registered firms to disclose the name of the engagement partner for each audit report already required to be reported on the form. This would make this information available in one place that could be easily retrieved since such reports are posted on the Board’s website.

Appendix A to this release contains the proposed amendments for disclosure of the engagement partner. Appendix B to this release contains the proposed amendments to Form 2. The Board seeks comment on all aspects of the proposed amendments.

10/ The concept release noted that an engagement partner signature requirement would be in addition to, not in place of, the existing requirement for the firm to sign the audit report.

A. The Proposed Audit Report Disclosure

The concept release discussed two ways in which including the engagement partner’s signature in the audit report might enhance investor protection. First, it stated that “a requirement for the engagement partner to sign the report may increase that individual’s sense of personal accountability for the work performed and the opinion expressed, which could, in turn, have a positive effect on his or her behavior.” The concept release also noted that some have suggested that the act of signing his or her own name may increase an engagement partner’s sense of responsibility for the quality of the audit. The Board noted that, for these reasons, some commenters have suggested that a signature requirement would be analogous to the requirement in Section 302 of the Sarbanes-Oxley Act of 2002 for an issuer’s chief executive officer (“CEO”) and chief financial officer (“CFO”) to make certain certifications about the company’s financial statements.\(^{12}\)

Second, the concept release noted that a signature requirement “would increase transparency about who is responsible for performing the audit, which could provide useful information to investors and, in turn, provide an additional incentive to firms to improve the quality of all of their engagement partners.” More specifically, the concept release suggested that providing financial statement users, audit committees, and others with the name of the engagement partner might provide them the opportunity to evaluate, to a degree, an engagement partner’s experience and track record. If so, audit committees might increasingly seek out engagement partners who are viewed as performing consistently high quality audits, and the resulting competition could lead to an improvement in audit quality.

Investors and investor advocates who commented generally agreed that a signature requirement would enhance accountability and transparency and, in turn, investor protection. For example, the Council of Institutional Investors stated:

> Armed with valuable information provided by the lead auditor’s signature, investors and boards will demand skilled engagement partners. The Council consequently believes that enhanced focus on the performance of the lead

\(^{12}\) Some commenters disagreed with the analogy between signing the name of the CEO or CFO and signing the name of the engagement partner and stated that the engagement partner’s and the firm’s responsibility for the audit report is well-established and understood, while, on the other hand, some CEOs and CFOs had attempted to avoid their responsibility for specific aspects of the financial reporting process, and the certification under Section 302 of the Sarbanes-Oxley Act of 2002 was intended to affirm that responsibility.
auditor will motivate audit firms to strengthen the quality, expertise, and oversight of their engagement partners. By more explicitly tying the lead auditor’s professional reputation to audit quality, requiring engagement partners to sign the audit report will further result in better supervision of the audit team and the entire audit process.13

Similarly, a group of accounting professors, while “acknowledg[ing] that the current research does not definitively settle the issue,” stated that a signature requirement “is likely to have a number of positive effects, including a change in partner behavior that would positively influence audit quality, and an increase in transparency for audit and financial statement users.”14

Another group of accounting professors similarly commented that “[b]ased on the existing research, it is unclear whether the signature of the engagement partner will improve audit quality,” but suggested that “it seems likely that the signature requirement would enhance partner perceptions regarding personal accountability,” and noted that "there is a variety of research in auditing contexts that suggests there are benefits that may result from requiring the engagement partner to sign the audit report." At the same time,

14/ Letter from Audrey Gramling, Past President, Auditing Section of the American Accounting Assoc., Kennesaw St. University, Joseph Carcello, Ernst & Young Professor and Director of Research – Corporate Governance Center, University of Tenn., Todd DeZoort, Professor of Accounting and Accounting Advisory Board Fellow, University of Ala., and Dana Hermanson, Dinos Eminent Scholar Chair and Professor of Accounting, Kennesaw St. University, to J. Gordon Seymour, Secretary, PCAOB (August 14, 2009); see also Email from Stephen Zeff, Herbert S. Autrey Professor of Accounting, Rice University, to PCAOB (July 29, 2009), attaching Letter from Stephen Zeff to Advisory Committee on the Auditing Profession (June 25, 2008) (stating that “[t]he association of the engagement partner by name with the audit report should serve to lift his or her standard of professionalism” and that “[t]here is no justification for the anonymity that shrouds the identity of the engagement partner in the United States”). But see Allen Blay, Matthew Notbohm, Caren Schelleman, and Adrian Valencia, Audit Quality Effects of an Individual Engagement Partner Signature Mandate 29-30, available at: http://aaahq.org/AM2011/display.cfm?Filename=SubID_2403.pdf&MIMEType=application%2Fpdf (July 22, 2011) (reporting that the authors were “unable to document any relation between mandatory engagement partner-level signatures and audit quality in the Netherlands”).
time, they cautioned that the signature requirement could have a negative effect if it diminishes firm accountability, and that incorrect inferences could be drawn about the quality of audits associated with an individual partner because of "other factors that impact audit and financial reporting quality" and the "small number of audits associated with individual partners."15/

Other commenters, generally accounting firms and associations, did not believe that a signature requirement would enhance accountability or provide meaningful information to investors. Some suggested that engagement partners already feel accountable for the statements in the audit report due to existing factors such as the partners’ sense of professionalism and strong interest in maintaining his or her own reputation as well as that of the firm, and the possibility of enforcement action by the Board or the Securities and Exchange Commission ("SEC"). These commenters generally believed that a signature requirement would not make engagement partners feel more accountable than they already do.

With respect to transparency, some auditors suggested that the identity of the engagement partner would not be useful to investors. Some believed that a company’s audit committee is in a better position to evaluate information about the qualifications of an engagement partner and sufficiently represents investors’ interests, making widespread disclosure of the engagement partner’s identity unnecessary. Others expressed concern that databases would be developed that attempt to create a "box score" of partners’ skills and qualifications, or to rank them by, for example, number of restatements.16/ These commenters expressed concern that such efforts would result in investors receiving incomplete and misleading information or drawing inappropriate inferences about the audit based solely on the identity of the engagement partner.

Auditors also suggested that a signature requirement could minimize the role of a firm’s quality control system in promoting audit quality. In the concept release, the Board said that it “agree[s] with those who have noted the importance of the expertise, quality control system, and skill of the firm as a whole,” but “the skill and expertise of the engagement partner also undoubtedly contribute to audit quality.” Some commenters continued to express concern that a signature requirement might be misunderstood by

15/ Email from Auditing Standards Committee, Auditing Section – American Accounting Associations to Office of the Secretary, PCAOB (September 9, 2009).

16/ While overall restatement levels may be a general indicator of audit effectiveness, the fact of a restatement alone, without additional context, may not be a sufficient basis to make predictions about a particular engagement partner’s performance.
readers of the audit report to reflect significant changes in audit procedures, or a shift in responsibility for the audit from the firm to the engagement partner. Some commenters suggested that unintended consequences of a signature requirement might include engagement partners practicing “defensive auditing,” firms shedding their riskier clients, and talented individuals leaving, or refusing to enter, the profession, all of which, according to some commenters, could increase audit costs.

While the Board agrees with commenters that engagement partners already have reasons to feel accountable for their work, the Board is considering whether a partner who is publicly identified with an engagement report may feel even more accountable for the quality of the work that went into it. The Board’s inspections show that there is still significant room for improvement in compliance with PCAOB standards, including those that require auditors to perform the audit with due care and professional skepticism. Disclosing the name of the engagement partner may be one means of promoting better performance.

The Board is, by this proposal, considering whether additional transparency about the identity of the person responsible for the engagement could provide investors with useful information and could further incentivize firms to assign more experienced and capable engagement partners to engagements. Once in effect for at least five years, the additional transparency could also allow investors to consider whether the engagement partner was replaced sooner than is required under the partner rotation requirements in the Act and SEC rules. Could that additional transparency, in turn, promote auditor independence by discouraging audit clients from inappropriately pressuring the firm to remove an engagement partner? The Board will consider commenters’ views on these issues.

At the same time, the Board remains sensitive to concerns about minimizing the role of the firm or suggesting that the engagement partner is solely responsible for the audit engagement and its performance. Many commenters noted the important role

---

17/ Under PCAOB standards, the engagement partner is responsible for the engagement and its performance. See paragraph 3 of Auditing Standard No. 9, and paragraph 3 of Auditing Standard No. 10. Engagement partners also, as noted in the concept release, may be held liable in PCAOB and SEC enforcement actions without regard to whether they signed the audit report.

18/ See Section 203 of the Act; Rule 2-01(c)(6) of Regulation S-X, 17 C.F.R. § 210.2-01(c)(6).

19/ The engagement partner is not expected to fulfill his or her responsibilities alone. Rather, “[t]he engagement partner may seek assistance from appropriate
RELEAS

that other professionals, including other members of the engagement team and national office partners, and the firm's quality control system play in performing a quality audit. Accordingly, the Board is proposing an approach that involves only one signature – i.e., that of the firm issuing the report – and that the Board therefore believes will better reflect the roles of both the firm as a whole and the engagement partner.20

After considering comments on the concept release, the amendments the Board is proposing would require the audit report to disclose the engagement partner responsible for the most recent period's audit.21 The name of the engagement partner would be disclosed and the only signature included in the audit report would be the signature of the firm issuing the report. Inclusion of the partner's name would not increase or otherwise affect the duties and obligations of the engagement partner under PCAOB standards in performing the audit.

The proposed approach has most of the same potential benefits as a signature requirement. Disclosure should serve the same transparency purpose as a signature because the name of the partner would become known to readers of the report through either approach. Furthermore, to the extent that association of the partner's name with the report could increase his or her sense of personal accountability, disclosure would serve that purpose as effectively as would a signature requirement.

In the concept release, the Board asked whether disclosure of the engagement partner's name would serve the same purpose as a signature requirement or whether the act of signing itself is important to promote accountability. Relatively few commenters responded to this question. Of those who did, some said that there should

engagement team members," see paragraph 4 of Auditing Standard No. 10. The proposed amendments would not affect this basic principle.

20/ Because under the Board's proposal the partner would not sign his or her name on the audit report, the Board's proposal could also mitigate concerns expressed by some commenters that a signature requirement would encourage unnecessarily cautious auditing or discourage talented individuals from entering or remaining in the profession.

21/ Few commenters responded to the question about whether the interim review report should include the engagement partner's signature. Of those who responded, commenters who opposed the signature requirement for the audit report were generally against requiring the signature for the interim review report. Some commenters believed that if a signature is required for the audit report, it should also be required for the interim review report. The Board is proposing to require the disclosure only in the audit report.
be no difference between signing and disclosure, some said neither would improve accountability, and some said that a signature requirement would better enhance accountability. While the Board believes that disclosure strikes the appropriate balance between enhancing the engagement partner’s individual accountability and preserving the firm’s responsibility for the audit, the Board is particularly interested in receiving comment on this issue.

Questions:

1. Would disclosure of the engagement partner’s name in the audit report enhance investor protection? If so, how? If not, why not?

2. Would disclosing the name of the engagement partner in the audit report increase the engagement partner’s sense of accountability? If not, would requiring signature by the engagement partner increase the sense of accountability?

3. Does the proposed approach reflect the appropriate balance between the engagement partner’s role in the audit and the firm’s responsibility for the audit? Are there other approaches that the Board should consider?

The concept release noted that an audit report typically contains an opinion on financial statements for more than one year and that the engagement partner on the most recent period’s audit may not be the person who served in that role on the audits of the prior years presented in the report. The Board sought comment on whether it should only require the engagement partner’s signature as it relates to the most recent period’s audit. Of the few commenters who responded to that question, most noted practical issues that would need to be resolved if the engagement partner’s signature was intended to reflect responsibility for anything beyond the current period. At the same time, some believed that a paragraph explaining that the signature only relates to the current period would make the report confusing or unnecessarily complicated.

After considering these comments, the Board is proposing to require disclosure of the engagement partner for the most recent period’s audit only. The disclosure would be accomplished by adding a sentence to the audit report stating:

22/ For example, when comparative financial statements are presented as of 12/31/20X3 and 12/31/20X2 and for the three years ended 12/31/20X3, the proposed amendments would require disclosing in the audit report on these financial statements the name of the engagement partner (Partner A) responsible for the audit for the year ended 12/31/20X3. If, in the prior year, another engagement partner (Partner B) was responsible for the audit for the year ended 12/31/20X2, the proposed amendments
RELEASE

The engagement partner responsible for the audit for the [period] ended [date] was [name].

This statement should succinctly reflect the scope of the engagement partner's responsibility in the most recent period.\textsuperscript{23} In cases in which the financial statements for all periods presented were audited during one audit engagement (e.g., in an initial public offering, single-period audit, or re-audit), i.e., when the engagement partner was the same for all of the periods presented, the disclosure would not include reference to financial reporting periods, as follows:

The engagement partner responsible for the audit resulting in this report was [name].

There may be situations in which an audit report is dual-dated. In such situations, if the firm has changed the engagement partner since the original date of the report, the disclosure would be accomplished by adding the following sentences to the audit report:

The engagement partner responsible for the audit for the [period] ended [date] was [name], except for Note X, for which the engagement partner was [name].

Questions:

4. Would the proposed disclosure clearly describe the engagement partner's responsibilities regarding the most recent reporting period's audit? If not, how could it be improved?

5. Would the proposed disclosure clearly describe the engagement partner's responsibilities when the audit report is dual-dated? If not, how could it be improved?

The concept release also noted that the European Union's Eighth Directive requires a natural person to sign the audit report but allows for an exception “if such

\textsuperscript{23} See Letter from Jo Ann Guattery, Chair, Accounting Principles and Auditing Standards Committee, California Society of Certified Public Accountants, to Secretary, PCAOB (September 9, 2009) (opposing signature or disclosure requirement but stating that “[t]he easiest way to do this is to name the engagement partner for the current year audit, and not require an actual signature”).
release could lead to an imminent and significant threat to the personal security of any person.}\textsuperscript{24/} The concept release solicited comment on whether a similar exception should be provided if the Board adopted a signature requirement. Some commenters, generally accounting firms and associations, argued that such an exception would be necessary and two cited incidents that they believed supported that position.\textsuperscript{25/} Some commenters believed that an exception would be difficult to craft or would be ineffective because, for example, “[i]t is difficult to imagine all circumstances where there could be a threat to the personal security of the engagement partner, particularly if events causing the threat arise after he or she has already been named.”\textsuperscript{26/}

The Board continues to consider this issue, but, after considering the comments it already received, is not including an exception to the proposed disclosure requirement. The names of others involved in the financial reporting process are routinely publicly disclosed.\textsuperscript{27/} The Board is not aware that these disclosures have posed significant safety concerns, or that auditors are subject to any greater risk than others who may be publicly associated with their jobs. The Board takes concerns about personal security seriously, however, and accordingly, is seeking additional comment on this issue.

\textsuperscript{25/} One commenter noted “[a] recent example in the U.K. . . . where animal rights activists carried out an aggressive campaign against [a] company and its advisors, including partners and employees of the company’s audit firm.” See Letter from Katharine E. Bagshaw, Manager, Auditing Standards, Institute of Chartered Accountants in England and Wales, to Office of the Secretary, PCAOB (September 11, 2009). Another referred to the “Rubicon and Young advertising executive who was killed outside his New Jersey home a few years ago.” Letter from Paul Rohan, UHY LLP, to J. Gordon Seymour, Office of the Secretary, PCAOB (September 11, 2009).

\textsuperscript{26/} See Letter from Jo Ann Guattery, Chair, Accounting Principles and Auditing Standards Committee, California Society of Certified Public Accountants, to Secretary, PCAOB (September 9, 2009).

\textsuperscript{27/} For example, the names of a company’s directors, as well as its CEO and CFO, are contained in its periodic reports. Some commenters also expressed concern that if the partner’s name were disclosed, investors might contact him or her seeking information about the company or audit that the partner could not or would not provide. To the extent it happens, the partner could simply decline to comment.
RELEASE

Question:

6. Would the proposed amendments to the auditing standards create particular security risks that warrant treating auditors differently from others involved in the financial reporting process?

The Board also sought comment on the liability implications of requiring the engagement partner to sign the audit report. In doing so, the Board stated that its intent with any signature requirement was to increase accountability and to provide for increased transparency in the audit report and not to increase the liability of engagement partners. In July 2009, when the concept release was issued, the case law with respect to liability in private civil actions brought pursuant to Section 10(b) and Rule 10b-5(b) of the Securities Exchange Act of 1934 varied according to federal judicial circuit. The concept release noted that, under the state of the law at the time, signing the audit report would make it harder, at least in some federal judicial circuits, for an engagement partner to argue that he or she should not be held liable to private parties for fraudulent statements or omissions in the audit report. The concept release sought comment on (1) what effect, if any, a signature requirement would have on an engagement partner's potential liability in private litigation; (2) whether the signature requirement would lead to an unwarranted increase in private liability; and (3) whether it would affect an engagement partner's potential liability under other provisions of the federal securities laws or under state law.

28/ In making its recommendation that the PCAOB undertake a standard-setting initiative to consider requiring the engagement partner to sign the audit report, ACAP stated that "the signature requirement should not impose on any signing partner any duties, obligations or liability that are greater than the duties, obligations and liability imposed on such person as a member of an auditing firm." ACAP Report at VII:20. According to the ACAP Report, "[t]his language is similar to safe harbor language the SEC promulgated in its rulemaking pursuant to Sarbanes-Oxley's Section 407 for audit committee financial experts." Id. at n.87 (referencing Item 407(d)(5)(iv) of Regulation S-K, 17 C.F.R. § 229.407(d)(5)(iv)). Some have understood ACAP's statement to mean that such a requirement would not, given the state of the law at the time, have had an effect on the liability of engagement partners. Others, however, noting ACAP's reference to the audit committee expert safe harbor, have understood it as a recommendation that the PCAOB coordinate with the SEC to ensure that appropriate rulemaking occurs to provide a similar safe harbor for engagement partners.

29/ As noted in the concept release, engagement partners can be liable in PCAOB and SEC enforcement actions without regard to whether they signed the audit report.
RELEASE

In response, auditors reiterated what had been noted in the concept release with respect to the state of the Section 10(b) private action case law and argued that the Board should not impose a signature requirement because it would increase engagement partners' liability under Section 10(b). Auditors also expressed concern that the signature requirement would increase liability for engagement partners in actions brought pursuant to Section 11 of the Securities Act of 1933 and possibly under other federal and state securities laws.

Auditors distinguished the litigation environment that exists in the United States from that in European Union ("EU") member states, where the Eighth Directive requires the member states to adopt an engagement partner signature requirement. For example, they noted that United Kingdom law does not allow shareholder class action lawsuits against auditors based on a decline in a company's share price and that the European Commission has called for the EU member states to adopt one of three approaches to limit auditor liability – through contracts with clients, liability caps, or proportionate liability.

Auditors also stated that a signature requirement might increase litigation against engagement partners because they would become more visible to the public. According to these commenters, an increase in litigation, regardless of its merits, would, in turn, increase legal fees and insurance costs for firms and individuals. Auditors also suggested that an increased risk of litigation could impact an engagement partner's behavior, such as by reducing his or her willingness to utilize professional judgment or participate in audits of higher risk companies. One accounting firm also suggested that increased litigation against engagement partners could serve as a disincentive for college graduates to enter the public accounting profession.

In June 2011, the United States Supreme Court issued its decision in Janus Capital Group, Inc. v. First Derivative Traders, 131 S.Ct. 2296 (2011), a Section 10(b) private action involving two separate legal entities – a mutual fund and an investment advisor. In Janus, the Court addressed what it means to “make any untrue statement of a material fact” under Section 10(b) and Rule 10b-5(b). The Court held that, “for Section 11 imposes liability for material misstatements or omissions in a registration statement on “every accountant . . . who has with his consent been named as having prepared or certified any part of the registration statement, or as having prepared or certified any report or valuation which is used in connection with the registration statement, with respect to the statement . . . which purports to have been prepared or certified by him.” Section 7 of the Securities Act requires issuers to file the consent of any accountant who is named as having prepared or certified any part of the registration statement or any valuation or report included in the registration statement.
purposes of Rule 10b-5, the maker of a statement is the person or entity with ultimate authority over the statement, including its content and whether and how to communicate it.\textsuperscript{31/} The Court added that “in the ordinary case, attribution within a statement or implicit from surrounding circumstances is strong evidence that a statement was made by – and only by – the party to whom it is attributed.”\textsuperscript{32/}

Few lower courts have yet had occasion to apply the Court’s ruling in Janus and its ultimate implications will not be known for some time. The Board is proposing disclosure of the engagement partner’s name and not a signature requirement and specifically invites comment on the implications of that approach for private liability under Section 10(b).

Commenters also expressed concern that a signature requirement would create potential liability for engagement partners under Section 11 of the Securities Act of 1933. Specifically, commenters were concerned that, if the engagement partner were required to sign the audit report, the engagement partner might be deemed to have prepared and/or certified the audit report, and as a result, the issuer would be required to file not only the consent of the accounting firm that prepared the audit report but also a separate consent of the engagement partner who signed it, which would subject the partner, along with the accounting firm, to potential Section 11 liability.

Questions:

7. Would the proposed amendments to the auditing standards lead to an increase in private liability of the engagement partner?

8. What are the implications of the proposed disclosure rule for private liability under Section 10(b)?

9. Would the disclosure of the engagement partner’s identity affect Section 11 liability? If so, what should the Board’s approach be?

10. Would the disclosure of the engagement partner’s identity have any other liability consequences (such as under state or foreign laws) that the Board should consider?

11. Would a different formulation of the disclosure of the engagement partner ameliorate any effect on liability?

\textsuperscript{31/} Janus, 131 S.Ct. at 2302.

\textsuperscript{32/} Id.
B. The Proposed Amendment to Form 2

Pursuant to Rule 2201, each registered firm must file an annual report on Form 2 by June 30 of each year. The report provides basic information about the firm and the firm’s issuer-related practice over the most recent 12-month period. Towards that end, Item 4.1 of Form 2 requires the firm to provide, for any audit reports issued during the reporting period, the issuer’s name, the issuer’s CIK number (if it has one), and the date of the audit report. The Board is proposing to add to Item 4.1 a requirement for firms to disclose the name of the engagement partner. All of the instructions for completing the form, as well as the other required disclosures, would remain the same.

As discussed above, disclosure of the name of the partner responsible for the audit might increase the partner’s sense of accountability and might provide useful transparency. While disclosure in the audit report itself would serve those purposes, it would not provide investors with a convenient mechanism to retrieve information about a firm’s engagement partners for all of its audits. The proposed amendment to Form 2 would compile this information in one place that could be easily accessed. Because the relevant information is readily available to firms, the proposed disclosure requirement should not add in any significant way to the time or cost involved in completing Form 2.

Questions:

12. If the Board adopts the proposed requirement that audit reports disclose the name of the engagement partner, should the Board also require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2?

13. If the Board does not adopt the proposed requirement that audit reports disclose the name of the engagement partner, should the Board nonetheless require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2?

14. Disclosure in the audit report and on Form 2 would provide notice of a change in engagement partner only after the most recent period’s audit is completed. Would more timely information about auditor changes be more useful? Should the Board require the firm to file a special report on Form 3 whenever there is a change in engagement partners?

33/ In cases in which an audit report is dual-dated and the engagement partner is changed after the original date of the report, the rule would require disclosure of the names of both engagement partners.
RELEASE

15. A change in engagement partner prior to the end of the rotation period could be information that investors may want to consider before the most recent period's audit is completed. Should the Board require the firm to file a special report on Form 3 when it replaces an engagement partner for reasons other than mandatory rotation to provide an explanation of the reasons for the change?

III. Disclosure of Other Participants in the Audit and Referred-to Accounting Firms

In many public company audits, the accounting firm issuing the audit report ("auditor" for purposes of Section III of this release) does not perform 100 percent of the audit procedures. This may be especially common in, but not limited to, audits of companies with operations in more than one country. In these situations, audit procedures on, or audits of the company's foreign operations are performed by other accounting firms or other participants in the audit not employed by the auditor.

Additionally, some accounting firms have begun a practice, known as off-shoring, whereby certain portions of the audit are performed by offices in a country different than the country where the firm is headquartered. For example, an accounting firm could establish an office in a country with a relatively low cost of labor and employ local personnel to perform certain audit procedures on audits of companies located in the country of the accounting firm's headquarters or in a third country.

The Board is proposing amendments that would require the auditor to disclose in the audit report other independent public accounting firms and other persons not employed by the auditor that took part in the most recent period's audit. The proposed amendments would require disclosure when the auditor (a) assumes responsibility for or supervises the work of another independent public accounting firm or supervises the work of a person that performed audit procedures on the audit; and (b) divides responsibility with another independent public accounting firm. Specifically:

- Disclosure when assuming responsibility or supervising – The auditor would be required to disclose the name, location, and extent of participation in the audit of (i) independent public accounting firms for whose audit the auditor assumed responsibility pursuant to AU sec. 543, Part of Audit Performed by Other Independent Auditors, and (ii) independent public accounting firms or other persons not employed by the auditor that performed audit procedures on the most recent period's audit and whose work the auditor was required to

34/ As defined by PCAOB Rule 1001(p)(iv), the term "person" means any natural person or any business, legal or governmental entity or association.
The auditor’s responsibilities with respect to the work of other persons not employed by the auditor are governed by Auditing Standard No. 10. The auditor's responsibilities with respect to the work of other independent public accounting firms are governed by AU sec. 543, when that standard applies, or Auditing Standard No. 10 in all other situations.

35/ The auditor’s responsibilities with respect to the work of other persons not employed by the auditor are governed by Auditing Standard No. 10. The auditor's responsibilities with respect to the work of other independent public accounting firms are governed by AU sec. 543, when that standard applies, or Auditing Standard No. 10 in all other situations.

36/ See paragraphs .03 and .06 through .09 of AU sec. 543. Paragraph .07 of AU sec. 543 states that "[w]hen the principal auditor decides that he will make reference to the audit of another auditor, his report should indicate clearly, in both the introductory, scope and opinion paragraphs, the division of responsibility as between that portion of the financial statements covered by his own audit and that covered by the audit of the other auditor."

37/ Many affiliated accounting firms share a common name but are separate legal entities.

38/ According to PCAOB Rule 2100, Registration Requirements for Public Accounting Firms, public accounting firms that must be registered with the Board are those that (a) prepare or issue any audit report with respect to any issuer; or (b) play a substantial role in the preparation or furnishing of an audit report with respect to any issuer.
RELEASE

While investors can currently evaluate publicly available information about the auditor, they generally do not know the identities of other participants in the audit. The proposed disclosure would provide investors and other users of the audit report with the ability to evaluate other participants in the audit in the same manner that they evaluate the auditor. For example, the proposed disclosure would enable investors and other users of the audit report to determine whether a disclosed independent public accounting firm is registered with the Board and has been subject to PCAOB inspection, and whether a disclosed independent public accounting firm or another person has had any publicly available disciplinary history with the Board or other regulators.

Additionally, the proposed amendments would increase the transparency of financial reporting with respect to the referred-to accounting firms. While the audit report prepared by a referred-to firm on a portion of company's operations is required to be filed with the SEC, the firm's name and location typically are not disclosed in the audit report.

---

39/ In December 2008, the Board solicited comment on the potential advantages and disadvantages of requiring certain disclosures in the audit report about whether the principal auditor, or any registered firm whose work the principal auditor used, failed to provide information to the PCAOB in respect to an inspection demand on the basis of non-U.S. legal restrictions or sovereignty concerns. See http://pcaobus.org/Rules/Rulemaking/Pages/Docket027.aspx. Since 2008, obstacles to conducting PCAOB inspections have been removed in some jurisdictions and progress is being made toward that end in other countries. Nonetheless, the PCAOB remains unable to inspect registered firms in China and some parts of Europe. The Board continues to consider whether requiring disclosures like those described in the 2008 release would advance the public interest. The Board also continues to consider whether additional steps should be taken to protect investors in U.S. public companies that are audited by registered firms located in jurisdictions that do not allow the Board to conduct inspections. In the meantime, the Board publishes on its Web site a list that names every registered firm that has triggered an inspection requirement and notes whether the firm has ever been inspected. See http://pcaobus.org/Inspections/Pages/InspectedFirms.aspx. In addition, the Board has published on its Web site a listing of issuer audit clients of non-U.S. registered firms in jurisdictions where the PCAOB had been denied access to conduct inspections. See http://pcaobus.org/International/Inspections/Pages/IssuerClientsWithoutAccess.aspx.

40/ Pursuant to Rule 2-05 of Regulation S-X, "[i]f, with respect to the examination of the financial statements, part of the examination is made by an independent accountant other than the principal accountant and the principal accountant elects to place reliance on the work of the other accountant and makes reference to that effect in his report, the separate report of the other accountant shall be filed. However, notwithstanding the provisions of this section, reports of other..."
RELEASE

report on the consolidated financial statements and, if applicable, internal control over financial reporting. Such firms are typically described by the auditor in the audit report as "other auditors."[^41]

Investors have requested greater transparency about who is performing the audit and how much of the audit they have performed. In a March 2010 survey conducted by the Chartered Financial Analysts Institute ("CFA"), "91 percent [of respondents] agree that in cases where there is more than one auditor, the identities and specific roles of other auditors should be disclosed."[^42] Some respondents also thought that "[i]f reliance by one audit team is being placed upon the work conducted by another, we definitely need disclosure of these roles."[^43]

Separately, a task force of the IAG discussed the auditor’s reporting model in March 2011.[^44] The task force conducted a survey of investors in investment banks, mutual funds, pension funds, and hedge funds representing over $8 trillion under management. The survey solicited views regarding various changes to the audit report. Of the investors surveyed who responded to the question regarding disclosure of work performed by other audit firms, 70 percent said they would like to know the level of involvement of the firms that are not signing the audit report.[^45]

[^41]: Paragraph .07 of AU sec. 543.

[^43]: Id.

[^45]: Id. The response rate for the question regarding disclosing the work performed by other audit firms was approximately 67 percent. Of those who responded, approximately 70 percent (or 47 percent of the total surveyed) would like to know the level of involvement from firms that are not signing the audit report, and approximately 30 percent (or 20 percent of the total surveyed) disagreed with requiring this disclosure.
RELEASE

Furthermore, the SAG has discussed matters related to providing greater transparency about the audit.\textsuperscript{46} Many SAG members suggested that greater transparency about who performed portions of the audit, including the names of affiliate firms was warranted, since the quality of the services provided by other accounting firms may vary. Some SAG members also suggested that—in situations in which the auditor does not make reference to the audit of another independent public accounting firm—it should be clear that the auditor has assumed responsibility for the work of the other firm. Other SAG members, however, expressed concerns that disclosing the names of the other independent public accounting firms in such situations might give the impression that the responsibility of the auditor was being changed. The Board considered these comments in drafting these proposed amendments.

Sections III.A and III.B of this release contain an overview of the proposed amendments. Appendix C to this release contains the proposed amendments for disclosure of other participants in the audit. The Board seeks comment on all aspects of the proposed amendments and is particularly interested in responses to the specific questions in the following sections.

A. Disclosure When Assuming Responsibility or Supervising

1. Applicability of the Proposed Disclosure

The proposed amendments regarding the disclosure of other participants in the audit for whose audit the auditor takes responsibility or whose audit procedures the auditor supervises would apply to:

(a) Independent public accounting firms for whose audit the auditor assumed responsibility pursuant to AU sec. 543,\textsuperscript{47} and

(b) Independent public accounting firms or other persons not employed by the auditor that performed audit procedures on the most recent period's audit and whose work the auditor was required to supervise pursuant to Auditing Standard No. 10.

The proposed amendments would not require disclosure of:

\textsuperscript{46} The topic was discussed at SAG meetings in February 2005, April 2010, July 2010, and March 2011. Event details and archived webcast for SAG meetings are available at: http://pcaobus.org/Standards/SAG/Pages/SAGMeetingArchive.aspx.

\textsuperscript{47} Paragraphs .03 through .05 of AU sec. 543.
RELEASE

- Individuals performing the engagement quality review ("EQR"); \(48/\) or

- Persons performing a review pursuant to Appendix K ("Appendix K review"); \(49/\) or

- Persons with specialized skill or knowledge in a particular field other than accounting or auditing; \(50/\) or

- Persons employed or engaged by the company who provided direct assistance to the auditor, including:
  - Internal auditors, other company personnel, or third parties working under the direction of management or the audit committee, who provided direct assistance in the audit of internal control over financial reporting; \(51/\) or,  
  - Internal auditors who provided direct assistance in the audit of the financial statements. \(52/\)

The Board does not propose disclosing individuals performing the EQR because the EQR is intended to be an objective second look at work performed by the engagement team, and the reviewers' work is not supervised by the auditor in accordance with Auditing Standard No. 10. According to PCAOB standards, "[t]o maintain objectivity, the engagement quality reviewer . . . should not make decisions on behalf of the engagement team or assume any responsibilities of the engagement team." \(53/\) Unlike the engagement team, the engagement quality reviewer and those

\(48/\) See Auditing Standard No. 7, Engagement Quality Review.

\(49/\) See SECPS Section 1000.45 Appendix K, SECPS Member Firms With Foreign Associated Firms That Audit SEC Registrants. The Board adopted the requirements of the Securities and Exchange Commission Practice Section ("SECPS") of the AICPA as part of its interim standards.

\(50/\) AU sec. 336, Using the Work of a Specialist.

\(51/\) See paragraph 17 of Auditing Standard No. 5.

\(52/\) See paragraph .27 of AU sec. 322, The Auditor's Consideration of the Internal Audit Function in an Audit of Financial Statements.

\(53/\) Paragraph 7 of Auditing Standard No. 7.
RELEASE

assisting the reviewer do not perform substantive procedures or obtain sufficient evidence to support an opinion on the financial statements or internal control over financial reporting. EQRs could be performed by individuals from the same accounting firm issuing the audit report or individuals outside of the accounting firm issuing the audit report. Similarly, the Board does not propose disclosing persons performing the Appendix K review because the auditor does not supervise or assume responsibility for the Appendix K review.

The Board does not propose disclosing persons with specialized skill or knowledge in a particular field other than accounting or auditing because AU sec. 336, Using the Work of a Specialist, (rather than Auditing Standard No. 10) applies to situations in which the auditor engages a specialist in an area other than accounting or auditing and uses the work of that specialist as audit evidence.

The Board does not propose disclosing persons employed or engaged by the company who provided direct assistance to the auditor because determining the extent of their participation in the audit may be impractical. Such persons also may perform other tasks for the company not related to providing direct assistance to the auditor or may not track time spent on providing the direct assistance.

With respect to “off-shoring” arrangements, (as defined on page 18 of this release), the proposed amendments would not result in disclosure of such arrangements to the extent that the off-shored work is performed by another office of the same accounting firm (even though that office may be located in a country different from the country where the firm is headquartered). The Board is interested in comments regarding whether any disclosure of off-shoring arrangements should be required and whether there are any other types of arrangements to perform audit procedures that should be disclosed.

Questions:

16. Is it sufficiently clear who the disclosure would apply to? If not, how could this be made clear?

17. Is it appropriate not to require disclosure of the individual who performed the EQR? If not, should disclosure of the engagement quality reviewer be required when the EQR is performed by an individual outside the accounting firm issuing the audit report or should the disclosure be required in all cases?

18. Is it appropriate not to require disclosure of the person that performed the Appendix K review?
RELEASE

19. Is it appropriate not to require disclosure of persons with specialized skill or knowledge in a particular field other than accounting and auditing not employed by the auditor or persons employed or engaged by the company who provided direct assistance to the auditor?

20. Would disclosure of off-shoring arrangements (as defined in the release) or any other types of arrangements to perform audit procedures provide useful information to investors and other users of the audit report? If yes, what information about such arrangements should be disclosed?

2. Details of the Disclosure Requirements

The proposed amendments would require the auditor to disclose in an explanatory paragraph to the audit report:

• The names of other participants in the audit (including the financial statement audit and, when applicable, the audit of internal control over financial reporting, and reviews pursuant to AU sec. 722, Interim Financial Information);

• The location of other participants in the audit (the country of headquarters' office location for a firm and the country of residence or headquarters' office location for another person); and

• The percentage of hours attributable to the audits or audit procedures performed by the other participants in the audit in relation to the total hours in the most recent period's audit, excluding the hours attributable to the performance of the EQR and Appendix K review ("the percentage of the total hours in the most recent period's audit, excluding EQR and Appendix K review").

The explanatory paragraph would be presented in the audit report after the opinion on the financial statements and, when applicable, the opinion on the effectiveness of internal control over financial reporting and any other explanatory paragraphs. The proposed amendments would allow the auditor to include in the

54/ The total hours in the most recent period's audit are comprised of hours attributable to the financial statement audit and, when applicable, the audit of internal control over financial reporting, and reviews pursuant to AU sec. 722, Interim Financial Information.

55/ Paragraphs 86 through 88 of Auditing Standard No. 5.
explanatory paragraph a reference to an appendix to the audit report, immediately following the report, that would include the required disclosure information about the other firms and persons. Some auditors may prefer this alternative in audits where there is more than one other participant in the audit. If the auditor issues separate reports on the financial statement audit and the audit of the effectiveness of internal control over financial reporting, the explanatory paragraph in each separate report would include reference to the same appendix.

The proposed amendments would require the disclosure of the name of the independent public accounting firms and the country of their headquarters' office location and the name of persons not employed by the auditor along with their country of residence or headquarters' office location. For purposes of this disclosure, the name of any independent public accounting firm or person with whom the auditor has the contractual relationship should be disclosed. For example, if the auditor contracted with an entity specializing in tax preparation services to perform audit procedures on the income tax provision, the auditor would disclose the name of the entity, instead of the names of the individuals from the entity, who performed the audit procedures. However, if the auditor contracted directly with an individual employed by the entity, the auditor would disclose the name of the individual who performed the audit procedures and not the name of the entity.

The disclosure of the names of other participants in the audit would include the names of all independent public accounting firms that participated in the audit, which may or may not be affiliated with the accounting firm issuing the audit report. The names of these firms may be similar to the name of the accounting firm issuing the audit report, as is the case with many of the larger public accounting firms. In the case of smaller public accounting firms, such firms may not be part of a network of firms or the network firms may not have names similar to the name of the accounting firm issuing the audit report. The Board is interested in comments on whether the proposed disclosure would have any effects on competition.

The proposed amendments also would require including a statement in the audit report that the auditor (a) is responsible for the audits of the financial statements of one or more of the company's subsidiaries, divisions, branches, components, or investments or audit procedures performed by other participants in the audit and (b) has supervised the work of other participants in the audit or performed procedures to assume responsibility for the work of the other participants in accordance with PCAOB standards. Because this statement would clarify who is responsible for the audit procedures performed, the Board has proposed to delete language in AU sec. 543 that prohibits independent public accounting firms from making reference to another firm unless the firm is dividing responsibility with the other firm.
RELEASE

Under the Board's proposal, disclosing other participants in the audit would not represent a qualification of the auditor's opinion nor would it change the responsibility of the auditor for the performance of the audit. The proposed disclosure would not constitute making reference pursuant to paragraphs .06 through .09 of AU sec. 543 and would not suggest that the auditor has divided responsibility with another independent public accounting firm. Furthermore, the proposed amendments would not change the requirements regarding the auditor's determination of whether the auditor's extent of participation in the audit is sufficient to serve as principal auditor pursuant to paragraph .02 of AU sec. 543.

Questions:

21. Would disclosure in the audit report of other participants in the audit provide useful information to investors and other users of the audit report? Why or why not?

22. Are the proposed requirements sufficiently clear and appropriate with respect to identifying other participants in the audit? If not, how should the proposed requirements be revised?

23. Are the proposed requirements sufficiently clear as to when the name of a public accounting firm or a person would be required to be named in the audit report? Is it appropriate that the name of the firm or person that is disclosed is based on whom the auditor has the contractual relationship?

24. Would disclosure in the audit report of other participants in the audit have an impact on the ability of independent public accounting firms to compete in the marketplace? If so, how would the proposed requirement impact a firm's ability to compete in the marketplace?

25. Are there any challenges in implementing a requirement regarding the disclosure of other participants in the audit? If so, what are the challenges and how can the Board address them in the requirements?

3. Disclosure of Percentage of the Total Hours in the Most Recent Period's Audit, Excluding EQR and Appendix K review

The proposed amendments would require the auditor to state the percentage of hours attributable to the audits or audit procedures performed by other participants in
the audit in relation to the total hours in the most recent period's audit, excluding EQR and Appendix K review. The percentage of the total hours in the most recent period's audit, excluding EQR and Appendix K review would be determined as of the date of the audit report for each other firm or person participating in the audit. In calculating this percentage, the auditor may estimate the total hours for the audit and the portion of hours attributable to each participant in the audit in situations when the actual number of hours have not been reported.

The audit report includes an opinion on all periods presented in the financial statements and, when applicable, an opinion on the effectiveness of internal control over financial reporting as of the end of the most recent period. The disclosure requirement would apply only to the most recent period under audit, and, if applicable, the audit of internal control over financial reporting as of the end of the most recent period. This requirement is consistent with the proposed requirement to disclose the name of the engagement partner in the audit report for the most recent period's audit.

In cases in which the financial statements for all periods presented were audited during one audit engagement (e.g., in an initial public offering, single-period audit, or re-audit), the disclosure would state the percentage of audit hours attributable to the audits or audit procedures performed by other participants in the audit in relation to the total audit hours, excluding EQR and Appendix K review, for all periods presented. In these circumstances, the auditor should indicate that the percentages are aggregations of multiple periods by modifying the first sentence of the explanatory paragraph and, if applicable, in the introductory paragraph in the appendix to the audit report to include all relevant periods.

There may be situations in which an audit report is dual-dated. In these circumstances, the proposed amendments would require that the auditor: (a) repeat in the audit report the most recent disclosure before the dual-dating and (b) supplement it by stating, separately, the percentage of hours attributable to the work performed subsequent to the original report date.

The percentage of the total hours in the most recent period's audit, excluding EQR and Appendix K review, is included in the proposed requirement because it appears to be the most appropriate quantitative measure of the other participants' relative participation in the audit. Other metrics were considered to reflect the audit procedures performed by other participants in the audit. For instance, fees incurred in

---

56/ The total hours in the most recent period's audit are comprised of hours attributable to the financial statement audit and, when applicable, the audit of internal control over financial reporting; and reviews pursuant to AU sec. 722.
RELEASE

the most recent period's audit incurred by other participants in the audit as a percentage of audit fees in the issuer's proxy disclosure were considered. However, this measure may not be representative of the extent of other participants' participation in the audit because audit fees in the proxy disclosure may include fees for other services (e.g., other regulatory and statutory filings) and also may exclude fees paid directly to other participants rather than to the auditor.

The Board also considered requiring a disclosure of percentages of revenues or assets, which would be similar to the disclosure required when making reference pursuant to AU sec. 543. However, percentages of revenues or assets tested may not be appropriate in the context of assuming responsibility for or supervising the work of other participants because the level of procedures applied to the accounts can vary significantly and different participants can apply procedures to the same account. For instance, other participants in the audit might perform an inventory observation to test the existence of the inventory at a particular location, and the auditor might test the valuation of the inventory at all locations including the one tested by the other firms and persons.

The percentage of the total hours in the most recent period's audit, excluding EQR and Appendix K review, quantitatively represents the extent of participation of each other participant in the audit. The Board believes that auditors routinely record and collect time spent on the audit. Therefore, the incremental effort to comply with the proposed disclosure should be limited to calculating the percentage of time incurred as required by this proposal.

For reasons stated above, the percentage of the total hours in the most recent period's audit, excluding EQR and Appendix K review, appears to be the most relevant and practical metric of the extent of other participants' participation in the audit. The proposed amendments include an example of the proposed disclosure.

---

57/ Paragraph .07 of AU sec. 543. The Board does not propose to change this requirement. See detailed discussion of the proposed requirements when making reference pursuant to AU sec. 543 in Section III.B later in this release.

58/ The Board seeks comment on situations in which auditors do not routinely record or collect time spent on performing audits of particular entities (e.g., audits of equity-method investees) and whether such information could be obtained with reasonable effort (see Question 27).
RELEASE

Questions:

26. Is the percentage of the total hours in the most recent period's audit, excluding EQR and Appendix K review, a reasonable measure of the extent of other participants' participation in the audit? If not, what other alternatives would provide meaningful information about the extent of participation in the audit of other participants?

27. What challenges, if any, would requiring the percentage of audit hours as the measure of the other participants' participation present?

28. Should the Board require discussion of the nature of the work performed by other participants in the audit in addition to the extent of participation as part of the disclosure? If so, what should be the scope of such additional disclosures?

29. Would the proposed disclosure of the percentage of hours attributable to the work performed subsequent to the original report date in situations in which an audit report is dual-dated be useful to users of the audit report?

30. Is the example disclosure in the proposed amendments helpful? Would additional examples be helpful? If so, what kind?

4. Thresholds

The proposed amendments would apply to all other participants in the audit. In preparing these amendments the Board's intention was to provide the most meaningful information to investors and other users of the financial statements about participants in the audit and therefore the Board considered whether there should be a threshold below which firms or persons would not be required to be disclosed. The thresholds considered by the Board included:

- The "substantial role" threshold – The role played by other participants in preparing or furnishing the audit report was not substantial, as defined in PCAOB Rule 1001;\(^{59}\)

\(^{59}\) According to paragraph (p)(ii), "Play a Substantial Role in the Preparation or Furnishing of an Audit Report," of PCAOB Rule 1001, Definitions of Terms Employed in Rules, "[t]he phrase "play a substantial role in the preparation or furnishing of an audit report" means – (1) to perform material services that a public accounting firm uses or relies on in issuing all or part of its audit report with respect to any issuer, or (2) to perform the majority of the audit procedures with respect to a subsidiary or component
RELEASE

- A minimum percentage threshold – A certain minimum percentage of the total hours in the most recent period's audit attributable to other participants individually or as a group (e.g., 1 percent, 3 percent, 5 percent); and,

- The registration threshold – Other firms not registered with the PCAOB.

Given the various considerations regarding each of these possible thresholds, the Board decided to propose a 3% threshold for disclosing other participants in the audit. Specifically, the Board proposes requiring that other participants in the audit whose individual extent of participation is 3% or more of total hours in the most recent period's audit be disclosed individually with their respective percentage of total hours in the most recent period's audit. Those other participants in the audit whose individual extent of participation is less than 3% of the total hours in the most recent period's audit should be disclosed either individually with their respective percentage of total hours in the most recent period's audit or as a group titled "other participants" with the percentage of total hours attributable to the audit procedures performed by the group.

Questions:

31. Should disclosure of the names of all other participants in the audit be required, or should the Board only require disclosing the names of those whose participation is 3% or greater? Would another threshold be more appropriate?

32. Is the proposed manner in which other participants in the audit whose individual extent of participation is less than 3% of total hours would be aggregated appropriate?

B. Disclosure When Dividing Responsibility

In situations in which another independent public accounting firm has audited the financial statements and, if applicable, internal control over financial reporting of one or more subsidiaries, divisions, branches, components, or investments included in the financial statements, and certain conditions are met, PCAOB standards allow the auditor to make reference in the audit report to the report of the other firm. This of any issuer the assets or revenues of which constitute 20% or more of the consolidated assets or revenues of such issuer necessary for the principal accountant to issue an audit report on the issuer." Under PCAOB Rule 2100, each public accounting firm that "plays a substantial role in the preparation or furnishing of an audit report with respect to any issuer must be registered with the Board."
reference is an indication of the divided responsibility between the auditor and the referred-to accounting firm that conducted the audit of various components of the consolidated financial statements. Under existing PCAOB standards, the auditor is not required to name the referred-to accounting firm and should not disclose the name of a referred-to firm without obtaining that firm's express permission.60/ The proposed amendments to AU sec. 543 would require the auditor to disclose in the audit report the name of the referred-to accounting firm and the country of its headquarters' office location. Additionally, the proposed amendments to AU sec. 543 would remove the existing requirement to obtain express permission of the referred-to firm when disclosing the firm's name. The SEC rules already include a requirement that the audit report of a referred-to firm should be filed with the SEC, so the name of the firm is already made public.61/ However, including the name of referred-to firm in the audit report on the consolidated financial statements would make it more transparent for investors and other users of the audit report.

The proposed amendments would not change the existing requirement to disclose the magnitude of the portion of the financial statements audited by the referred-to firm by stating the dollar amounts or percentages of one or more of the following: total assets, total revenues, or other appropriate criteria, whichever most clearly reveals the portion of the financial statements audited by the referred-to accounting firm.62/

Questions:

33. Are the requirements to disclose the name and country of headquarters' office location of the referred-to firm sufficiently clear and appropriate?

34. Are there any challenges associated with removing the requirement to obtain express permission of the referred-to firm for disclosing its name in the audit report? If so, what are the challenges and how could they be overcome?

35. In situations in which the audit report discloses both the referred-to firm and other participants in the audit, would using different disclosure metrics (e.g., revenue for the referred-to firm and percentage of the total hours in the most recent period's audit for the other firms and persons) create

60/ Paragraphs .03 and .06 through .09 of AU sec. 543.

61/ See Rule 2-05 of Regulation S-X.

62/ Paragraph .07 of AU sec. 543.
IV. Opportunity for Public Comment

The Board will seek comment for a 90-day period. Interested persons are encouraged to submit their views to the Board. Written comments should be sent to the Office of the Secretary, PCAOB, 1666 K Street, N.W., Washington, D.C. 20006-2803. Comments also may be submitted by e-mail to comments@pcaobus.org or through the Board's Web site at www.pcaobus.org. All comments should refer to PCAOB Rulemaking Docket Matter No. 29 in the subject or reference line and should be received by the Board no later than 5:00 PM EDT on January 9, 2012. The Board will consider all comments received.

On the 11th day of October, in the year 2011, the foregoing was, in accordance with the bylaws of the Public Company Accounting Oversight Board,

ADOPTED BY THE BOARD.

/s/ J. Gordon Seymour

APPENDIX A – Proposed Amendments to PCAOB Auditing Standards for Disclosure of the Engagement Partner

APPENDIX B – Proposed Amendment to Form 2

APPENDIX C – Proposed Amendments to PCAOB Auditing Standards for Disclosure of Other Participants in the Audit
Appendix A

Proposed Amendments to PCAOB Auditing Standards for Disclosure of the Engagement Partner

AU sec. 508, "Reports on Audited Financial Statements"

SAS No. 58, "Reports on Audited Financial Statements" (AU sec. 508, "Reports on Audited Financial Statements"), as amended, is amended as follows:

a. In paragraph .08, subparagraph c-1 is added, as follows:

   The name of the engagement partner responsible for the most recent period's audit, except that:

   (1) In cases in which the financial statements for all periods presented were audited during one audit engagement (e.g., in an initial public offering, single-period audit, or re-audit) i.e., when the engagement partner was responsible for the audit for all of the periods presented, the name of the engagement partner for all periods presented should be disclosed, and

   (2) In cases in which an audit report is dual-dated and the engagement partner is changed after the original date of the report, the names of both engagement partners.

b. In paragraph .08, at the end of the first paragraph of the example report on financial statements covering a single year, the following new sentence is added:

   The engagement partner responsible for the audit resulting in this report was [name].

c. In paragraph .08, at the end of the first paragraph of the example report on comparative financial statements, the following new sentences are added:

   The engagement partner responsible for the audit for the [period] ended [date] was [name]. [[When the financial statements for all periods presented were audited during one audit engagement] The engagement
RELEASE

partner responsible for the audit resulting in this report was [name]. [When the report is dual-dated and the firm changes the engagement partner after the original date of the report] The engagement partner responsible for the audit for the period ended December 31, 20X2 was Partner A, except for Note X, for which the engagement partner was Partner B.]

d. In paragraph .13, between the third and fourth sentences of the first paragraph of the example report indicating a division of responsibility, the following new sentence is inserted:

The engagement partner responsible for the audit for the [period] ended [date] was [name].

e. In paragraph .34, at the end of the first paragraph of the example report on the balance sheet only, the following new sentence is added:

The engagement partner responsible for the audit for the [period] ended [date] was [name].

f. In paragraph .44, at the end of the first paragraph of the example of a qualified report, the following new sentence is added:

The engagement partner responsible for the audit for the [period] ended [date] was [name].

g. In paragraph .63, at the end of the first paragraph of the example of a report disclaiming an opinion, the following new sentence is added:

The engagement partner responsible for the audit for the [period] ended [date] was [name].

h. In paragraph .74, between the third and fourth sentences of the first paragraph of the example of a successor auditor’s report, the following new sentence is inserted:

The engagement partner responsible for the audit for the [period] ended [date] was [name].
RELEASE

AU sec. 9508, "Reports on Audited Financial Statements: Auditing Interpretations of Section 508"

AU sec. 9508, "Reports on Audited Financial Statements: Auditing Interpretations of Section 508," as amended, is amended as follows:

a. In paragraph .36, at the end of the first paragraph of the example Report on Single Year Financial Statements in Year of Adoption of Liquidation Basis, the following new sentence is added:

   The engagement partner responsible for the audit resulting in this report was [name].

b. In paragraph .36, at the end of the first paragraph of the example report on Comparative Financial Statements in Year of Adoption of Liquidation Basis, the following new sentence is added:

   The engagement partner responsible for the audit for the [period] ended [date] was [name].

AU sec. 543, "Part of Audit Performed by Other Independent Auditors"

SAS No. 1, "Codification of Auditing Standards and Procedures," section 543 "Part of Audit Performed by Other Independent Auditors" (AU sec. 543, "Part of Audit Performed by Other Independent Auditors"), as amended, is amended as follows:

In paragraph .09, between the third and fourth sentences of the first paragraph of the example report indicating a division of responsibility, the following new sentence is inserted:

   The engagement partner responsible for the audit for the [period] ended [date] was [name].

Auditing Standard No. 1, References in Auditors’ Reports to the Standards of the Public Company Accounting Oversight Board

Auditing Standard No. 1 is amended as follows:

In paragraph 1 of the Appendix, at the end of the first paragraph of the illustrative report on an audit of financial statements, the following new sentence is added:
RELEASE

The engagement partner responsible for the audit for the [period] ended [date] was [name].

Auditing Standard No. 5, An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements

Auditing Standard No. 5 is amended as follows:

a. In paragraph 85, subparagraph d-1 is added, as follows:

The name of the engagement partner responsible for the engagement resulting in the audit report on internal control over financial reporting.

b. In paragraph 87, at the end of the first paragraph of the example report, the following new sentences are added:

The engagement partner responsible for the audit for the [period] ended [date] was [name]. [[When the financial statements for all periods presented were audited during one audit engagement] The engagement partner responsible for the audit resulting in this report was [name]. [When the report is dual-dated and the firm changes the engagement partner after the original date of the report] The engagement partner responsible for the audit for the period ended December 31, 20X8 was Partner A, except for Note X, for which the engagement partner was Partner B.]
RELEASE

Appendix B

Proposed Amendment to Form 2

Form 2 – Annual Report Form

a. Item 4.1a is amended by adding the following new subparagraph:

4. The name of the engagement partner responsible for the engagement resulting in the audit report.

b. Item 4.1.a is amended by adding the following new note:

Note: In responding to Items 4.1.a.4, in cases in which an audit report is dual-dated and the engagement partner is changed after the original date of the report provide the names of both engagement partners.
RELEASE

Appendix C

Proposed Amendments to PCAOB Auditing Standards for Disclosure of Other Participants in the Audit

AU sec. 508, Reports on Audited Financial Statements

SAS No. 58, "Reports on Audited Financial Statements" (AU sec. 508, "Reports on Audited Financial Statements"), as amended, is amended as follows:

a. In subparagraph .11a, the text is replaced with the following:

The auditor's opinion is based, in part, on the report of another auditor, and the auditor makes reference to the audit of the other auditor pursuant to AU sec. 543, Part of Audit Performed by Other Independent Auditors (paragraphs .12 and .13).

b. In paragraph .11, subparagraph a-1 is added, as follows:

Other independent public accounting firms perform an audit of the financial statements of one or more of the company's subsidiaries, divisions, branches, components, or investments, or other independent public accounting firms or persons 10a not employed by the auditor perform audit procedures in the most recent reporting period's audit, other than in the circumstance described in paragraph 11.a (paragraphs .14A through .14C).

10a PCAOB Rule 1001(p)(iv) defines the term "person" to mean any natural person or any business, legal or governmental entity or association.

c. In paragraph .12, delete the title "Part of Audit Performed by Other Independent Auditors" from the parentheses.

d. In paragraph .13, in the example of a report indicating a division of responsibility,

- The last sentence of the first paragraph is replaced with the following:
RELEASE

Those statements were audited by [name of other auditors and country of their headquarters' office location] whose report has been furnished to us, and our opinion, insofar as it relates to the amounts included for B Company, is based solely on the report of [name of other auditors].

- The last sentence of the second paragraph is replaced with the following:

  We believe that our audits and the report of [name of other auditors] provide a reasonable basis for our opinion.

- In the first sentence of the third paragraph, the phrase "other auditors" is replaced with "[name of other auditors]."

e. The following section header is inserted after the amended paragraph .13:

Other Independent Public Accounting Firms or Persons Not Employed By the Auditor Perform an Audit or Audit Procedures in the Most Recent Period's Audit

f. Paragraph .14A is inserted, as follows:

When another independent public accounting firm performs an audit of the financial statements of one or more of the company's subsidiaries, divisions, branches, components, or investments or another independent public accounting firm or person not employed by the auditor performs audit procedures in the most recent period's audit, other than an independent auditor whose audit is referred to pursuant to paragraphs .06 through .09 of AU sec. 543 and other than as provided by paragraph .14B, the following items should be disclosed in the audit report through the addition of an explanatory paragraph following the opinion paragraph and any other explanatory paragraphs: (1) the name(s) and country(ies) of headquarters' office location of such firm(s) and/or (2) the name(s) and country(ies) of residence or headquarters' office location of such person(s), and (3) the percentage of the hours attributable to audits or audit procedures performed by the firm(s) or person(s) in relation to the total hours in the most recent period's audit, which include the hours incurred in performing reviews pursuant to AU sec. 722, Interim Financial Information, as of the date of the audit report. The explanatory paragraph
RELEASE

also should include a statement that the auditor is responsible for the audits or audit procedures performed by the firm(s) or person(s) and has supervised or performed procedures to assume responsibility for the work in accordance with PCAOB standards.

Note: The explanatory paragraph can refer to an appendix immediately following the audit report that includes the required disclosure.

Note: For purposes of this disclosure, the auditor should disclose the name of the firm or person with whom the auditor has the contractual relationship.

Note: In cases in which the financial statements for all periods presented were audited during one audit engagement (e.g., in an initial public offering, single-period audit, or re-audit), the disclosure should state the percentage of audit hours attributable to the audits or audit procedures performed by independent public accounting firms other than the firm issuing the audit report and other persons participating in the audit in relation to the total audit hours for all periods presented.

Note: In cases in which an audit report is dual-dated, the auditor should: (a) repeat in the audit report the most recent disclosure before the dual-dating and (b) supplement it by stating, separately, the percentage of hours attributable to the work performed subsequent to the original report date.

Note: Independent public accounting firms other than the firm issuing the audit report and other persons participating in the audit whose individual extent of participation is 3% or more of total hours in the most recent period's audit should be disclosed individually with their respective percentage of total hours. Other firms and persons participating in the audit whose individual extent of participation is less than 3% of the total hours in the most recent period's audit should be disclosed either individually, with their respective percentage of total hours in the most recent period's audit, or as a group titled "other participants," with the percentage
RELEASE

of total hours attributable to the audit or audit procedures performed by the group.

Note: The disclosure required by this paragraph does not constitute making reference pursuant to paragraphs .06 through .09 of AU sec. 543 or suggest that the auditor has divided responsibility for the performance of the audit with another auditor.

g. Paragraph .14B is inserted, as follows:

Excluded from the disclosures required by paragraph .14A is the name of the individual who performed the engagement quality review ("EQR") and the name of persons that performed the filing review pursuant to SECPS Section 1000.45 Appendix K ("Appendix K review") and the hours attributable to the EQR and Appendix K review. Also excluded from the disclosures required by paragraph .14A are (1) persons with specialized skill or knowledge in a particular field other than accounting or auditing, (2) internal auditors, other company personnel, or third parties working under the direction of management or the audit committee who provided direct assistance in the audit of internal control over financial reporting, and (3) internal auditors who provide direct assistance in the audit of the financial statements.

h. Paragraph .14C is inserted, as follows:

Examples of the explanatory paragraph described in paragraph .14A follow:

An example of the explanatory paragraph for situations in which another independent accounting firm performed certain audit procedures – In our audit of the financial statements of XYZ Company and subsidiaries as of and for the year ended December 31, 20x2, ABC Audit Firm (country of headquarters' office location) performed certain audit procedures. We are responsible for the audit procedures performed by ABC Audit Firm and, accordingly, have supervised their work in accordance with PCAOB standards. The portion of the total audit hours attributable to audit procedures performed by ABC Audit Firm in our audit was X%.
An example or the explanatory paragraph for situations in which another independent accounting firm performed an audit of the financial statements of one or more of the company's subsidiaries, divisions, branches, components, or investments – In our audit of the financial statements of XYZ Company and subsidiaries as of and for the year ended December 31, 20x2, ABC Audit Firm (country of headquarters' office location) performed an audit of the financial statements of one of XYZ Company's subsidiaries. We are responsible for the audit performed by ABC Audit Firm, insofar as that audit relates to our expression of an opinion on the financial statements taken as a whole and, accordingly, have performed procedures to assume responsibility for their work in accordance with PCAOB standards. The portion of the total audit hours attributable to the audit performed by ABC Audit Firm in our audit was X%.

i. Paragraph .14D is inserted, as follows:

An example of the explanatory paragraph using an appendix described in paragraph .14A follows:

In our audit of the financial statements of XYZ Company and subsidiaries as of and for the year ended December 31, 20x2, the other independent public accounting firms listed in the Appendix to this report performed [choose applicable: audits of the financial statements of one or more of the company's subsidiaries, divisions, branches, components, or investments or certain audit procedures], and persons listed in the Appendix performed certain audit procedures. We are responsible for the audits and audit procedures performed by the other independent public accounting firms and persons listed in the Appendix to this report and, accordingly, have supervised or performed procedures to assume responsibility for their work in accordance with PCAOB standards.

APPENDIX

In our audit of the financial statements of XYZ Company and subsidiaries as of and for the year ended December 31, 20x2, the other independent public accounting firms listed below performed [choose applicable: audits of the financial statements of one or more of the company's subsidiaries, divisions, branches, components, or investments or certain audit
procedures], and persons listed below performed certain audit procedures. The portion of the total audit hours attributable to audits and audit procedures performed by these other independent public accounting firms and persons in our audit follows:

<table>
<thead>
<tr>
<th>Other participants in the audit</th>
<th>Percentage of total audit hours for the [period] ended [date]</th>
</tr>
</thead>
<tbody>
<tr>
<td>ABC Audit Firm (country of headquarters' office location)</td>

<td>15</td>
</tr>
</tbody>
</table>

j. Paragraph .14E is inserted, as follows:

In cases in which the financial statements for all periods presented were audited during one audit engagement (e.g., in an initial public offering, single-period audit, or re-audit), an example of the explanatory paragraph described in paragraph .14A follows:

In our audit of the financial statements of XYZ Company and subsidiaries as of and for the [period(s)] ended [date(s)], ABC Audit Firm (country of headquarters' office location) performed certain audit procedures. We are responsible for the audit procedures performed by ABC Audit Firm and, accordingly, have supervised their work in accordance with PCAOB standards. The portion of the total audit hours attributable to audit procedures performed by ABC Audit Firm in our audit was X%.

k. Paragraph .14F is inserted, as follows:

In cases in which the financial statements for all periods presented were audited during one audit engagement (e.g., in an initial public offering,
single-period audit, or re-audit), an example of the explanatory paragraph using an appendix described in paragraph .14A follows:

In our audit of the financial statements of XYZ Company and subsidiaries as of and for the [period(s)] ended [date(s)], the other independent public accounting firms and persons listed in the Appendix to this report performed certain audit procedures. We are responsible for the audit procedures performed by the other independent public accounting firms and persons listed in the Appendix to this report and, accordingly, have supervised their work in accordance with PCAOB standards.

APPENDIX

In our audit of the financial statements of XYZ Company and subsidiaries as of and for the [period(s)] ended [dates(s)], the other independent public accounting firms and persons listed below performed certain audit procedures. The portion of the total audit hours attributable to audit procedures performed by these other independent public accounting firms and persons in our audit follows:

<table>
<thead>
<tr>
<th>Other participants in the audit</th>
<th>Percentage of total audit hours for the [period(s)] ended [date(s)]</th>
</tr>

<td>4</td>
</tr>
<tr>
<td>Mr. Person Y (country of residence)</td>
<td>3</td>
</tr>
<tr>
<td>Other participants, all individually less than 3% of total audit hours</td>
<td>15</td>
</tr>
</tbody>
</table>

I. Paragraph .14G is inserted, as follows:

In cases in which an auditor dual-dates the audit report (e.g., the company restates its financial statements before the end of the next annual
reporting period), an example of the explanatory paragraph described in paragraph .14A follows:

In our audit of the financial statements of XYZ Company and subsidiaries as of and for the [period] ended [date], ABC Audit Firm (country of headquarters' office location) performed certain audit procedures. We are responsible for the audit procedures performed by ABC Audit Firm and, accordingly, have supervised their work in accordance with PCAOB standards. The portion of the total audit hours attributable to audit procedures performed by ABC Audit Firm in our audit was X%. The portion of the total audit hours attributable to audit procedures performed subsequent to [date of original audit report] was Y%.

m. Paragraph .14H is inserted, as follows:

In cases in which an auditor dual-dates the audit report (e.g., the company restates its financial statements before the end of the next annual reporting period), an example of the explanatory paragraph using an appendix described in paragraph .14A follows:

In our audit of the financial statements of XYZ Company and subsidiaries as of and for the [period] ended [date], the other independent public accounting firms and persons listed in the Appendix to this report performed certain audit procedures. We are responsible for the audit procedures performed by the other independent public accounting firms and persons listed in the Appendix to this report and, accordingly, have supervised their work in accordance with PCAOB standards.

APPENDIX

In our audit of the financial statements of XYZ Company and subsidiaries as of and for the [period] ended [date], the other independent public accounting firms and persons listed below performed certain audit procedures. The portion of the total audit hours attributable to audit procedures performed by these other independent public accounting firms and persons in our audit follows:

**AU sec. 543, "Part of Audit Performed by Other Independent Auditors"

SAS No. 1, "Codification of Auditing Standards and Procedures" section 543, "Part of Audit Performed by Other Independent Auditors" (AU sec. 543, "Part of Audit Performed by Other Independent Auditors"), as amended, is amended as follows:

a. In paragraph .04, the last sentence is replaced with the following:

   If the principal auditor decides to take this position, he should not make reference to the audit of the other auditor in the audit report, as described in paragraphs .06 through .09.

b. The following note is added after paragraph .04:

   Note: When the principal auditor does not make reference to the audit of the other auditor, paragraph .14A of AU sec. 508, *Reports on Audited Financial Statements*, requires disclosure of the other auditor.

c. In paragraph .07,

   - The second and third sentences are replaced with the following:
The report should disclose the name of the other auditor, the country of headquarters' office location of the other auditor, and the magnitude of the portion of the financial statements audited by the other auditor. Disclosing the magnitude of the portion of the financial statements audited by the other auditor may be accomplished by stating the dollar amounts or percentages of one or more of the following: total assets, total revenues, or other appropriate criteria, whichever most clearly reveals the portion of the financial statements audited by the other auditor.

- The last sentence and footnote 3 are deleted.

d. In paragraph .09,

- The last sentence of the first paragraph of the example report is replaced with the following:

> Those statements were audited by [name of other auditors and country of headquarters' office location] whose report has been furnished to us, and our opinion, insofar as it relates to the amounts included for B Company, is based solely on the report of [name of other auditors].

- The last sentence of the second paragraph of the example report is replaced with the following:

> We believe that our audit and the report of [name of other auditors] provide a reasonable basis for our opinion.

- In the first sentence of the third paragraph of the example report, the phrase "the other auditors" is replaced with "[name of other auditors]."

Auditing Standard No. 5, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*, is amended, as follows:
RELEASE

a. In paragraph C1, subparagraph c-1 is added, as follows:

Other independent public accounting firms perform an audit of the financial statements of one or more of the company's subsidiaries, divisions, branches, components, or investments, or other independent public accounting firms or persons0a not employed by the auditor perform audit procedures in the most recent period's audit, other than in the circumstance described in paragraph C1.c.

0a PCAOB Rule 1001(p)(iv) defines the term "person" to mean any natural person or any business, legal or governmental entity or association.

b. Paragraph C11-A is added, as follows:

Other Independent Public Accounting Firms or Persons Not Employed by the Auditor Perform an Audit or Audit Procedures in the Most Recent Period's Audit.

When another independent public accounting firm performs an audit of the financial statements of one or more of the company's subsidiaries, divisions, branches, components, or investments or another independent public accounting firm or a person who is not employed by the auditor performs audit procedures in the audit of the company's internal control over financial reporting, other than an independent auditor whose audit is referred to pursuant to paragraphs .06 through .09 of AU sec. 543 and other than as provided by paragraph C11-B, the following items should be disclosed in the combined audit report for the most recent reporting period under audit through the addition of an explanatory paragraph following the opinion paragraph and any other explanatory paragraphs: (1) the name(s) and country(ies) of headquarters' office location of such firm(s) and/or (2) the name(s) and country(ies) of residence or headquarters' office location of such person(s), and (3) the percentage of the hours attributable to audits or audit procedures performed by the firm(s) or person(s) in relation to the total hours in the most recent period's audit, which include the hours incurred in performing reviews pursuant to AU sec. 722, Interim Financial Information, as of the date of the audit report. When the auditor chooses to issue a separate report on internal control over financial reporting, this paragraph should follow the paragraph required by paragraph 88 in each
RELEASE

separate report. The explanatory paragraph also should include a statement that the auditor is responsible for the audits or audit procedures performed by the firm(s) or person(s) and has supervised or performed procedures to assume responsibility for the work in accordance with PCAOB standards.

Note: The explanatory paragraph can refer to an appendix immediately following the audit report that includes the required disclosure.

Note: For purposes of this disclosure, the auditor should disclose the name of the firm or person with whom the auditor has the contractual relationship.

Note: In cases in which the financial statements for all periods presented were audited during one audit engagement (e.g., in an initial public offering, single-period audit, or re-audit), the disclosure should state the percentage of audit hours attributable to the audits or audit procedures performed by independent public accounting firms other than the firm issuing the audit report and other persons participating in the audit in relation to the total audit hours for all periods presented.

Note: In cases in which an audit report is dual-dated, the auditor should: (a) repeat in the audit report the most recent disclosure before the dual-dating and (b) supplement it by stating, separately, the percentage of hours attributable to the work performed subsequent to the original report date.

Note: Independent public accounting firms other than the firm issuing the audit report and other persons participating in the audit whose individual extent of participation is 3% or more of total hours in the most recent period's audit should be disclosed individually with their respective percentage of total hours. Other firms and persons participating in the audit whose individual extent of participation is less than 3% of the total hours in the most recent period's audit should be disclosed either individually, with their respective percentage of total hours in the most recent period's audit, or as a group titled "other participants," with the percentage
RELEASE

of total hours attributable to the audit or audit procedures performed by the group.

Note: The disclosure required by this paragraph does not constitute making reference pursuant to paragraphs .06 through .09 of AU sec. 543 or suggest that the auditor has divided responsibility for the performance of the audit with another auditor.

c. Paragraph C11-B is inserted, as follows:

Excluded from the disclosures required by paragraph C11-A is the name of the individual who performed the engagement quality review ("EQR") and the name of persons that performed the filing review pursuant to SECPS Section 1000.45 Appendix K ("Appendix K review") and the hours attributable to the EQR and Appendix K review. Also excluded from the disclosures required by paragraph C11-A are (1) persons with specialized skill or knowledge in a particular field other than accounting or auditing, (2) internal auditors, other company personnel, or third parties working under the direction of management or the audit committee who provided direct assistance in the audit of internal control over financial reporting, and (3) internal auditors who provide direct assistance in the audit of the financial statements.

d. Paragraph C11-C is inserted, as follows:

Examples of the explanatory paragraph described in paragraph C11-A follow:

An example of the explanatory paragraph for situations in which another independent accounting firm performed certain audit procedures – In our audit of the financial statements of XYZ Company and subsidiaries as of and for the year ended December 31, 20x2 and of the effectiveness of internal control over financial reporting as of December 31, 20x2, ABC Audit Firm (country of headquarters’ office location) performed certain audit procedures. We are responsible for the audit procedures performed by ABC Audit Firm and, accordingly, have supervised their work in accordance with PCAOB standards. The portion of the total audit hours attributable to audit procedures performed by ABC Audit Firm in our audit was X%.
RELEASE

IMPROVING THE TRANSPARENCY OF AUDITS:
PROPOSED AMENDMENTS TO PCAOB
AUDITING STANDARDS TO PROVIDE
DISCLOSURE IN THE AUDITOR'S REPORT OF
CERTAIN PARTICIPANTS IN THE AUDIT

Summary: The Public Company Accounting Oversight Board ("PCAOB" or "Board") is represposing amendments to its standards that would improve the transparency of public company audits. The amendments would require (1) disclosure in the auditor's report of the name of the engagement partner and (2) disclosure in the auditor's report of the names, locations, and extent of participation of other independent public accounting firms that took part in the audit and the locations and extent of participation of other persons not employed by the auditor that took part in the audit.

Public Comment: Interested persons may submit written comments to the Board. Such comments should be sent to the Office of the Secretary, PCAOB, 1666 K Street, NW, Washington, D.C. 20006-2803. Comments also may be submitted by e-mail to comments@pcaobus.org or through the Board's website at www.pcaobus.org. All comments should refer to PCAOB Rulemaking Docket Matter No. 029 in the subject or reference line. Comments should be received by the Board no later than 5:00 p.m. EST on February 3, 2014.

Board Contacts: Jennifer Rand, Deputy Chief Auditor (202/207-9206, randj@pcaobus.org); Jessica Watts, Associate Chief Auditor (202/207-9376, wattsj@pcaobus.org); Lisa Calandriello, Assistant Chief Auditor (202/207-9337, calandrielloc@pcaobus.org); and Ekaterina Dizna, Assistant Chief Auditor (202/591-4125, diznae@pcaobus.org).
I. Introduction

The Board is reproposing amendments to its auditing standards that would require the accounting firm issuing an auditor's report ("auditor") to disclose in the auditor's report (1) the name of the engagement partner on the most recent period's audit and (2) the names, locations, and extent of participation of other public accounting firms1/ that took part in the audit and the locations and extent of participation of other persons (whether an individual or a company)2/ not employed by the auditor who performed procedures on the audit ("other participants in the audit"). These are disclosure requirements and, except for the disclosure obligations they would impose, would not change the performance obligations of the auditor in conducting the audit. The Board believes that providing information about the engagement partner and the other participants in the audit in the auditor's report would be useful to investors and other financial statement users and would be consistent with the Board's mission to further the public interest in the preparation of "informative, accurate, and independent audit reports."3/

Robust disclosure is the cornerstone of the U.S. federal securities regulatory regime and is essential to efficient capital formation and allocation. Access to meaningful information about a public company allows investors to make informed judgments about the company's financial position and about the stewardship of the company's directors and management. The Board believes that more disclosure about certain aspects of the audit of a public company, including about the identity of the engagement partner and other firms associated with the audit, would add to the mix of information that investors and other financial statement users have about public companies, which they would find useful.

Auditors perform a crucial public function in financial markets. Their very designation as independent public accountants recognizes that their duties transcend their responsibilities to the companies they audit. The salutation of the auditor's report

1/ PCAOB Rule 1001(p)(iii) defines the term "public accounting firm" to mean "a proprietorship, partnership, incorporated association, corporation, limited liability company, limited liability partnership, or other legal entity that is engaged in the practice of public accounting or preparing or issuing audit reports."

2/ PCAOB Rule 1001(p)(iv) defines the term "person" to mean any natural person or any business, legal or governmental entity or association.

3/ Section 101(a) of the Sarbanes-Oxley Act of 2002.
itself, when it is addressed to the shareholders.\footnote{Based on the PCAOB staff’s review of 125 Form 10-K filings for fiscal year 2011, approximately 95% of auditors’ reports were addressed to shareholders or other investors in the company; approximately 5% were not. To promote consistency in the addressees included in the auditor’s report, under the \textit{Proposed Auditing Standards on the Auditor’s Report and the Auditor’s Responsibilities Regarding Other Information and Related Amendments}, PCAOB Release 2013-005 (August 13, 2013) available at http://pcaobus.org/Rules/Rulemaking/Docket034/Release_2013-005_ARM.pdf, the auditor would be required to address the auditor’s report to investors in the company, such as shareholders, as well as the board of directors or equivalent body.} emphasizes the public nature of the auditor’s responsibility. The public, however, has had little or no information about the participants in the audit, including those who serve in the role of engagement partner or the identity of other firms and individuals who participated in the audit. Generally, in the United States, only the name of the firm that issued the opinion is disclosed in the auditor’s report.

An audit firm’s reputation matters, both to investors and to the audit committee of the company that retains it. But firms are comprised of individuals who conduct the audit, and investors in U.S. securities generally have not had access to information about the engagement partner responsible for the audit for the firm or whether, and to what extent, other firms played a role in the audit. This information could be valuable to investors in making investment decisions as well as if they are asked to vote to ratify the company’s choice of registered firm as its auditor.

While the present lack of transparency about the persons who conduct the audit is not unique to the United States, a number of other jurisdictions with highly developed capital markets follow a different practice. For example, the European Union’s (“EU’s”) Eighth Company Law Directive requires “at least the statutory auditor(s) carrying out the statutory audit on behalf of the audit firm” to sign the auditor’s report.\footnote{Directive 2006/43/EC of the European Parliament and of the Council, Article 28, Audit Reporting (May 17, 2006) available at http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=CELEX:32006L0043:en:NOT.} This directive requires all EU members to enact conforming legislation.\footnote{As of November 2013, 27 of the 28 EU members have enacted conforming legislation. Croatia, which joined the EU in 2013, has until 2015 to enact conforming legislation. A list of countries which have enacted conforming legislation is available at http://ec.europa.eu/internal_market/auditing/directives/index_en.htm.} For example, one EU member, the United Kingdom, requires the auditor’s report to “state the name of the
auditor and be signed" and, "where the auditor is a firm, the report must be signed by
the senior statutory auditor in his own name, for and on behalf of the auditor." Other
countries have similar requirements. For example, Taiwan requires audit partners to
sign the auditor's report, in addition to the audit firm. Australia mandates by statute that
the auditor's report be signed in the name of the person responsible for the audit, as
well as in the name of the audit firm. The International Auditing and Assurance
Standards Board ("IAASB") also recently proposed a requirement for firms to disclose
the name of the engagement partner in the auditor's report of a listed entity. If the
IAASB's proposal is adopted, disclosure of the engagement partner's name in the
auditor's report of a listed entity will become the norm in those jurisdictions that follow
IAASB standards. While practice in other countries is not dispositive, it is indicative of a
global trend toward greater transparency about audits and those who conduct them.

From its Investor Advisory Group ("IAG") and Standing Advisory Group ("SAG"),
as well as from meetings with investors and other financial statement users, the Board
has heard repeatedly that many people, particularly investors, want more information
about the independent audit, such as information about those who conduct it. The
Board believes that there are benefits to greater transparency about the audit and has
attempted to respond through several initiatives, including the recently proposed
standards dealing with changes to the auditor's reporting model as well as these

7/ Companies Act 2006, Chapter 46, as amended, Chapter 3, section 503,
"Signature of auditor's report" (June 4, 2008). The Companies Act requires a signed
auditor's report be maintained by the company, although published copies of the
auditor's report state the name of the engagement partner and do not require signature.

8/ See Articles 2 and 6 of Regulations Governing Approval of Certified Public
Accountants to Audit and Attest to the Financial Reports of Public Companies (as

324AB(3), "Effect of appointing firm as auditor—general" (May 16, 2012).

10/ See IAASB's exposure draft, Reporting on Audited Financial Statements:
Proposed New and Revised International Standards on Auditing, at
https://www.ifac.org/publications-resources/reporting-audited-financial-statements-
proposed-new-and-revised-international.

11/ See Proposed Auditing Standards on the Auditor's Report and the
Auditor's Responsibilities Regarding Other Information and Related Amendments,
reproposed amendments. The Board believes that disclosure of the identity of the engagement partner, as well as enhanced transparency about other participants in the audit, would provide investors with information about the audits conducted for their benefit that they would find useful. The Board also recognizes that many investors as well as some other commenters believe that these measures would prompt engagement partners to perform their duties with a heightened sense of accountability to the various users of the auditor's report.\textsuperscript{12}

After careful study and deliberation, the Board believes that disclosure of the engagement partner and other participants in the audit would provide investors in U.S. companies with important information about the audits conducted for their benefit. The Board reached the decision to repropose these amendments, not just based on the extensive public comment it has received as it explored this issue, but also based on what the Board has learned through its oversight activities and relevant empirical research.\textsuperscript{13}

The Board is reproposing the amendments to seek additional comment on matters such as the usefulness of the information that would be required to be disclosed, the potential costs the reproposed amendments might impose, whether the reproposed amendments would have any effect on competition, and any other aspects of the reproposal. The Board has also made technical changes to the originally proposed requirement that the auditor disclose information about other participants in the audit, such as changing the threshold for disclosure, and seeks commenters' views on those revisions. Finally, the Board is soliciting commenters' views regarding whether the reproposed amendments should apply to audits of emerging growth companies.
("EGCs"), as that term is defined in the Jumpstart Our Business Startups Act of 2012 ("JOBS Act"). In particular, the Board requests comments, including any available empirical data, on whether application of the reproposed amendments to audits of EGCs would protect investors, and on whether it would promote efficiency, competition, and capital formation. Specific questions appear at the end of this release.

II. **Background of the Reproposed Amendments**

A. **Disclosure of the Name of the Engagement Partner**

The Board began in 2005 to seek advice on and to explore a variety of alternatives to make the auditor's report more informative, including by requiring disclosure of the name of the engagement partner. In addition to the Board's efforts, in 2008, the ACAP issued its final report recommending, among other things, that "the PCAOB undertake a standard-setting initiative to consider mandating the engagement partner's signature on the audit report." The ACAP report stated that "[t]he Committee believes that the engagement partner's signature on the auditor's report would increase transparency and accountability."  

Based on more than ten years of oversight, the Board knows that, even within a single firm and notwithstanding firm-wide or network-wide quality control systems, the quality of individual audit engagements varies. PCAOB inspectors have observed a wide variation in the quality of auditing by many engagement teams at each of the large accounting firms that audit the largest U.S. and multinational companies. Although such differences might be due to a number of factors, the role of the engagement partner, who is responsible for the engagement and its performance, is an important factor to consider.

---

14/ Pub. L. No. 112-106 (April 5, 2012).

16/ See ACAP report at VII:20.

Through the Board's oversight process, it has obtained information related to engagement partner quality history through a firm's internal and external inspection processes, as well as a firm's internal processes to monitor its quality controls. The Board's inspection staff historically has used this information related to engagement partner quality history in its inspection processes. This information, among other factors, is considered to be useful in making risk-based selections of audit engagements. The Board's inspection staff also understands that individual firms monitor engagement partner quality history closely and utilize this information to manage risk to the firm. Information about individual audit partners has been useful to the Board in the Board's risk-based selection of audits to inspect. While the Board recognizes the reproposed amendments would not provide investors with all of the information the Board or a firm has regarding an engagement partner, the Board also believes that information about who engagement partners are would be valuable, and, as described below, would become more so over time.

On July 28, 2009, the PCAOB issued a concept release (the "2009 Release") seeking commenters' views on whether it would be advisable for the Board to require the engagement partner to sign his or her own name to the auditor's report. While many investors supported such a requirement, a number of other commenters were concerned that it would appear to minimize the role of the accounting firm in the audit and also could result in a potential increase in the engagement partner's liability.

After considering commenters' views and its own experience, the Board issued a proposing release on October 11, 2011 (the "2011 Release") that, among other things, proposed amendments to the Board's auditing standards that would have required disclosure of the name of the engagement partner in the auditor's report. In the

---

Board's view, this disclosure approach retains most of the potential benefits of a signature requirement, while mitigating some of the concerns, particularly liability concerns, expressed by commenters on the 2009 Release.21/

The Board received 43 comment letters on the 2011 Release.22/ It was also discussed at the November 2011 and May 2013 meetings of the Board's SAG23/ and the October 2013 meeting of the IAG.24/ Commenters on the 2011 Release were divided and remained so over the course of the dialogue. Accounting firms generally opposed a requirement to disclose the name of the engagement partner in the auditor's report25/—whether by signature or only disclosure—and expressed concern that it would confuse readers of the auditor's report or lead to unintended consequences. Investors, on the other hand, argued in favor of more transparency throughout the Board's consideration of the issue. Others, such as some audit committee members and corporate officials, as well as an association of European auditors, shared the investors' views and expressed the view that naming the engagement partner in the auditor's report would be beneficial.

After considering the comment letters, the views expressed in SAG and IAG discussions, and relevant empirical research, the Board is reproposing amendments to

21/ Id.

25/ While accounting firms generally opposed the disclosure of the name of the engagement partner in the auditor's report, one accounting firm expressed support for disclosure of the name of the engagement partner in the firm's annual report filed with the PCAOB on Form 2. Some other firms, which opposed the disclosure requirement, expressed a preference for disclosure in Form 2 if the Board were to proceed with a requirement. Disclosure in Form 2 is discussed in Section V.C., Economic Considerations, Alternatives Considered, Disclosure in Firms' Annual Reports Filed with the PCAOB on Form 2, of this release.
its auditing standards that would require disclosure in the auditor's report of the name of
the engagement partner in the most recent period's audit.

Specifically, the Board is reproposing to amend the following: AU sec. 508, Reports on Audited Financial Statements, AU sec. 9508, Reports on Audited Financial Statements: Auditing Interpretations of Section 508, AU sec. 543, Part of Audit Performed by Other Independent Auditors, Auditing Standard No. 1, References in Auditors' Reports to the Standards of the Public Company Accounting Oversight Board, and Auditing Standard No. 5, An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements.26/

B. Disclosure About Certain Other Participants in the Audit

Investors also have called for greater disclosure in the auditor's report of the names and locations of other participants in the audit. For instance, in a March 2010 survey by the Chartered Financial Analysts Institute, 91% of respondents agreed that "in cases where there is more than one auditor, the identities and specific roles of other auditors should be disclosed."27/ Additionally, a task force of the Board's IAG conducted a survey of investors affiliated with investment banks, mutual funds, pension funds, and hedge funds. Seventy percent of the investors surveyed who responded to a question about the desirability of disclosure of work on the audit performed by other audit firms said that they would like to know the degree of involvement in the audit of the firms that are not signing the auditor's report.28/

In many audit engagements, especially audits of companies with multiple locations and international operations, the auditor may perform only a portion of the audit. The remainder of the work may be performed by other affiliated accounting firms, non-affiliated accounting firms, and/or other persons not employed by the auditor, for example, consulting firms and individual accountants. The accounting firm issuing the

---

26/ The reproposed amendments to these standards can be found in Appendix 1.

28/ The IAG task force survey results were discussed in March 2011 in connection with a discussion of the auditor's reporting model. The response rate for the question regarding disclosing the work performed by other audit firms was approximately 67%. Event details and archived webcast for IAG meetings are available at http://pcaobus.org/About/Advisory/Pages/IAGMeetingArchive.aspx.
The auditor's report supervises the work of or assumes responsibility for the procedures performed by other participants in the audit. The Board has seen cases in which the extent of participation of other persons ranges from none to substantially all of the work. Although the portion of the audit work performed by other participants in the audit could be significant, under the current requirements, the auditor's report provides no information about the work performed by other participants in the audit. Instead, the auditor's report gives the impression that the work was performed solely by one firm—the signing firm.

In the 2011 Release, the Board proposed a series of amendments to its auditing standards that would have required, among other things, disclosure in the auditor's report about other accounting firms and other persons that participated in the audit.

Commenters supported, to varying degrees, the originally proposed requirement to disclose other participants in the audit. After considering the comment letters, the views expressed in SAG and IAG discussions, the Board's observations from its oversight activities, and relevant empirical research, the Board is repposing amendments to its auditing standards relating to other participants in the audit but with certain modifications from the 2011 Release. The repposed amendments would require the auditor to disclose in the auditor's report (1) the name, location, and the extent of participation (as a percentage of the total audit hours) of certain other independent public accounting firms and (2) the location and extent of participation of certain persons not employed by the auditor who took part in the most recent period's audit.

See Auditing Standard No. 10.

See AU sec. 543.

Under existing AU sec. 543.04, when other auditors participate in the audit, the principal auditor "should not state in his report that part of the audit was made by another auditor because to do so may cause a reader to misinterpret the degree of responsibility being assumed." The repposed amendments, like the originally proposed amendments, would delete this requirement and add a new requirement that the auditor expressly state that the auditor has assumed responsibility for or supervised the work of the other accounting firms who are disclosed in the auditor's report. In the Board's view, this should avoid any potential misinterpretation of the new requirement.
Specifically, the Board is reproposing to amend the following auditing standards: AU sec. 508, AU sec. 543, and Auditing Standard No. 5.32/

III. Discussion of the Reproposed Amendments

This section describes the general requirements of the reproposed amendments and significant changes made to the originally proposed amendments. Appendix 3 of this release discusses in greater detail the requirements of the reproposed amendments, comments received, and the Board's responses to those comments.

A. Disclosure of the Name of the Engagement Partner

The first part of the Board's reproposal would require audit firms to disclose in the auditor's report the name of the engagement partner for the most recent period's audit. The Board is cognizant that, initially at least, disclosure of an engagement partner's name, without more, might provide limited useful information because there may be little publicly available information about such individuals. Some commenters have suggested that over time with the reproposed disclosure requirements in place, a body of information about the engagement partner's history will be developed that, when connected with other data, would be useful to investors and other financial statement users.33/

For example, the disclosure of the name of the engagement partner, combined with other information compiled over time, could enable investors and other financial statement users to research the number, size, and nature of companies and industries in which the partner served as engagement partner. Investors and other financial statement users also could determine whether the engagement partner for a particular audit has any U.S. Securities and Exchange Commission ("SEC" or "Commission") or PCAOB disciplinary history. Investors and other financial statement users also could

32/ The reproposed amendments to these standards can be found in Appendix 2.

33/ Such bodies of information are already being created, for example, in Taiwan where public companies are required to disclose the names of the engagement partners. As described in Daniel Aobdia, Chan-Jane Lin, and Reining Petacchi, Capital Market Consequences of Individual Audit Partners, Working paper (August 2013) available at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2321333, the Taiwan Economic Journal collects data that covers all public companies in Taiwan and includes, among other things, the names of the engagement partners, the accounting firm issuing the auditor's report, the regulatory sanction history of the partners, and the audit opinions.
determine the identity of the engagement partner during periods involving a restatement or issuance of an audit opinion with a going concern modification. The reproposed amendments would allow investors and other financial statement users to combine information about the engagement partner with other information regarding the restatement or the going concern modification. Academic research suggests that investors and other financial statement users would respond to the facts and circumstances related to individual restatements or going concern modifications when forming their views regarding the engagement partner.\textsuperscript{34/} Investors do not treat all restatements and going concern opinions equally. Based on academic research, they appear to consider other factors in making judgments about restatements and going concern. The Board believes investors would be similarly discerning in considering information about the engagement partner.

Additional information also could become available in readily accessible formats about private litigation in which the individual was a defendant in his or her capacity as an engagement partner. Information also could become available about the engagement partner's education, honors, awards, service on professional and public bodies and publications. In some cases, such information is available today to audit committee members who ask for it and to whom it is given voluntarily (for example, in the course of interviewing a new engagement partner), but it is not readily available to the investing public or other financial statement users. The Board believes that despite the potential limited initial usefulness, public disclosure of the current engagement partner's name is a first and necessary step in the development of the type of robust information sources about engagement partners of public companies that would be useful to investors and other financial statement users.

The Board has heard concerns that public identification of the engagement partner could lead to a rating or "star" system resulting in particular individuals being in high demand to the unfair disadvantage of other equally qualified engagement partners. The Board is aware that, as a consequence of the proposed disclosures, certain individuals may develop public reputations based on their industry specializations, audit history and track records. The Board does not believe that such information would

necessarily be harmful and could, to the contrary, be useful to investors and other financial statement users.

In recent years, detailed information about the backgrounds, expertise and reputations among clients and peers has become commonly available for other skilled professionals, such as lawyers and physicians, and such information is widely available to consumers of those services. Indeed, it can be argued that the consumers of such services can make more informed decisions with more rather than less knowledge about the qualifications and professional reputations of those whose services they retain. The role of an auditor, including an engagement partner, differs from that of a lawyer or physician, but the underlying principle that consumers of professional services could make better decisions with more information still applies and the Board believes that investors and other financial statement users would benefit from more information about the identity of those who perform audits.

Because the financial statements and the auditor's report are retrospective, disclosure of an engagement partner's identity in the auditor's report provides information only about the most recent period's audit of the financial statements. It does not provide information about the identity of the next period's engagement partner, which may be of most interest to shareholders, such as in ratifying the company's choice of registered firm as its auditor. Nevertheless, such retrospective information provides a basis for analysts, investors, and others to ask a company's management whether last year's engagement partner is continuing on the engagement and, if not, why not. A change in the engagement partner could prompt further questions about the identity and qualifications of the new engagement partner. Those questions could of course be asked today, but such questions and answers could be informed by additional public information about engagement partners.

Further, concerns have been expressed by some commenters that identification of the engagement partner puts misleading emphasis on a single individual when an audit, particularly a large audit, is in fact a group effort. Such commenters have asserted that the disclosure could confuse rather than enlighten investors. It is true that in most cases an audit is a group effort and that a large audit often involves a very large team. It is also indisputably true that the engagement partner plays a unique role in the audit. The engagement partner has the most direct relationship with the audit committee and senior management and serves as the primary interface between the audit firm and the audit committee and senior management. It is not unusual, in large companies at least,

35/ Engagement partners may change for a variety of reasons, including the SEC's requirement for mandatory partner rotation. See Section 203 of the Sarbanes-Oxley Act; Rule 2-01(c)(6) of Regulation S-X, 17 C.F.R. § 210.2-01(c)(6).
for audit committees to interview several candidates for an engagement partner when a new engagement partner is to be chosen because the qualifications and personal characteristics of the engagement partner are viewed by the audit committee and senior management as particularly important. Because of the engagement partner's key role in the audit, the Board believes it is appropriate when shareholders are asked to ratify the company's choice of the registered firm as its auditor to be as well informed as possible about the leader of the team that will conduct the audit. Public identification of the engagement partner would help serve that end.

B. Disclosure About Certain Other Participants in the Audit

The second part of the Board's reproposal would require inclusion of information about certain other participants in the audit in a paragraph that would follow the opinion in the auditor's report itself or in an appendix immediately following the auditor's report that would be referenced in the auditor's report. The information to be disclosed would be:

- With respect to other independent public accounting firms, the name of the firm(s); with respect to persons not employed by the auditor, the phrase "persons not employed by our firm";
- The location of other participants in the audit (the country of headquarters' office location for a firm and the country of residence of a natural person or headquarters' office location of another person that is an entity); and
- The percentage of hours attributable to the audits or audit procedures performed by the other participants in the audit in relation to the total hours in the most recent period's audit ("the percentage of the total hours in the most recent period's audit").

1. Applicability of the Disclosure

The reproposed amendments would require the auditor to disclose information about independent public accounting firms and other persons not employed by the auditor that took part in the audit under arrangements pursuant to either AU sec. 543\(^{36}\) or Auditing Standard No. 10, as applicable.

\(^{36}\) See AU secs. 543.03-.05.
2. **Exclusions from the Disclosure**

The reproposed amendments would not require disclosure of information about the following participants in the audit:

- Individuals performing the engagement quality review ("EQR");\(^{37/}\)
- Persons performing a review pursuant to Appendix K\(^{38/}\) ("Appendix K review"); and
- Persons employed or engaged by the company who provided direct assistance to the auditor, including:
  - Internal auditors, other company personnel, or third parties working under the direction of management or the audit committee, who provided direct assistance in the audit of internal control over financial reporting;\(^{39/}\) and
  - Internal auditors who provided direct assistance in the audit of the financial statements.\(^{40/}\)

These exclusions from the disclosure were retained from the 2011 Release.

The 2011 Release also excluded from the disclosure requirements persons engaged by the auditor with specialized skill or knowledge in a particular field other than accounting or auditing. After further considering the role of such persons in the audit, the Board is proposing to require, rather than exclude, disclosure in the auditor's report of persons engaged by the auditor with specialized skill or knowledge in a particular field other than accounting or auditing. As discussed below, persons engaged by the auditor with specialized skill or knowledge in a particular field other than accounting or auditing.

---

\(^{37/}\) See Auditing Standard No. 7, *Engagement Quality Review*.

\(^{38/}\) See Securities and Exchange Commission Practice Section ("SECPS") 1000.45 Appendix K, *SECPS Member Firms With Foreign Associated Firms That Audit SEC Registrants*. The Board adopted the requirements of SECPS of the American Institute of Certified Public Accountants as part of its interim standards.

\(^{39/}\) See paragraph 17 of Auditing Standard No. 5.

\(^{40/}\) See paragraph .27 of AU sec. 322, *The Auditor's Consideration of the Internal Audit Function in an Audit of Financial Statements*. 
auditing would be disclosed as other persons not employed by the auditor. The Board believes that disclosure about the location and extent of participation of these other participants would be as relevant to investors and other financial statement users as information about any other participants in the audit.

3. Disclosing Names of Certain Other Participants in the Audit

In the 2011 Release, the Board proposed that the names of all other participants whose extent of participation exceeded the disclosure threshold would be included in the auditor's report. After considering comments raised regarding the applicability of the proposed disclosure to alternative practice structures and the impact on such structures, the Board is proposing to require only the names of other independent public accounting firms participating in the audit to be disclosed. Other persons not employed by the auditor, including persons employed by other entities in alternative practice structures and persons engaged by the auditor with specialized skill or knowledge in areas other than accounting or auditing, would be listed in the disclosure as "persons not employed by our firm," rather than identified by their names, including only the location and extent of participation of those persons.

4. Affiliate Relationships, Including Offshoring Arrangements

In the 2011 Release, the Board proposed that the disclosure of the names of other participants in the audit would include the names of all independent public accounting firms that participated in the audit, which may or may not be affiliated with the accounting firm issuing the auditor's report. In the 2011 Release, the Board indicated that disclosure of any offshored work would not be required to the extent that the offshored work is performed by another office of the same accounting firm, even though that office may be located in a country different from the country where the firm is headquartered. The staff of such office is employed by the accounting firm issuing the auditor's report.

After considering comments, the Board retained the proposed disclosure provisions from the 2011 Release. The Board understands that offshored work may be performed by another office of or by entities that are distinct from, but that may be affiliated with, the registered firm that issues the report. Disclosure of entities that are

---

41/ The Board's standards describe alternative practice structures as "nontraditional structures" whereby a substantial (the nonattest) portion of an accounting firm's practice is conducted under public or private ownership, and the attest portion of the practice is conducted through the accounting firm. ET section 101.16, 101.14—The effect of alternative practice structures on the applicability of independence rules.
distinct from the firm that issues the report in the audit would be consistent with the overall objective of the amendments the Board is reproposing and is an application of the requirement to disclose other participants in the audit notwithstanding any network affiliation or other relationship.

5. Disclosure Threshold

Similar to the originally proposed amendments, the reproposed amendments would require disclosures about other participants in the audit based on a percentage of the total audit hours in the most recent period's audit. In the 2011 Release, the Board proposed disclosure of information about other participants in the audit if the contribution of those persons exceeded 3% of the total hours in the audit engagement. Because a number of commenters suggested that the 3% threshold was too low and would include information that was not meaningful, the Board is proposing to raise the disclosure threshold to 5%. This approach has the advantages of limiting disclosure to work that is a significant part of the audit, but would allow a user of the information to gain a general understanding of the relative magnitude of each other participant's contribution to the audit.

6. Presentation as a Single Number or as Ranges

In the 2011 Release, the Board originally proposed that the disclosures of the work of other participants in the audit should be stated as a single number. After considering the views of commenters, the Board is reproposing that the disclosure be stated as a single number or within a series of ranges, beginning with narrower ranges—less-than-5% and 5% to less-than-10%—and then in wider ranges—10% to less-than-20%, 20% to less-than-30%, and so on up to a range of 90%-or-more.

In situations in which the extent of participation is less-than-5%, individually for firms or in the aggregate for persons from the same country, the auditor would not be required to disclose the names and locations of other accounting firms or the locations of other persons not employed by the auditor. However, the auditor would be required to group and disclose the aggregate percent of participation of the other accounting firms or other persons not employed by the auditor. Examples of the application of these requirements can be found in Appendix 3, Section II.D.2., Presentation as a Single Number or as Ranges, of this release.

7. Discussion

Information about other participants in the audit could become increasingly important as commercial activity becomes ever more global. Many companies with substantial operations outside the United States are audited by U.S.-based, PCAOB-
registered public accounting firms.\textsuperscript{42} In such cases, other firms from around the world—some PCAOB-registered, some not, but almost always separately established legal entities likely participated to varying degrees in the audits of such companies.\textsuperscript{43} In fact, the Board's inspection process has revealed that the extent of participation by firms other than the one that signs the auditor's report ranges from none to most of the audit work (or, in extreme cases, substantially all of the work).\textsuperscript{44} To investors in such companies who read today's auditor's report, however, these situations are indistinguishable. In each case, investors see only the name of the signing firm, notwithstanding the possible significance of other firms' roles or their location or identity.

In many situations, the signing firm uses another firm in a foreign country to audit the financial statements of a subsidiary in that foreign country. These arrangements can be an effective and cost-efficient way to audit today's multinational corporations. At the same time the quality of the audit is dependent, to some degree, on the competence and integrity of the participating accounting firms. This is especially true when the signing firm has not reviewed all the work done by the other firm.\textsuperscript{45} The Board

\textsuperscript{42} See PCAOB's Staff Audit Practice Alert No. 6, \textit{Auditor Considerations Regarding Using the Work of Other Auditors and Engaging Assistants from Outside the Firm}, (July 12, 2010) (discussing the trend of smaller U.S. firms auditing companies with operations in emerging markets and reminding auditors of their responsibilities in such audits). Audit Practice Alert No. 6 at 2 noted that "in a 27-month period ending March 31, 2010, at least 40 U.S. registered public accounting firms with fewer than five partners and fewer than ten professional staff issued audit reports on financial statements filed with the SEC by companies whose operations were substantially all in the China region." See also PCAOB Research Note No. 2011-P1, \textit{Activity Summary and Audit Implications for Reverse Mergers Involving Companies from the China Region: January 1, 2007 through March 31, 2010} (March 14, 2011) (discussing available information on the role of registered public accounting firms in auditing issuers in the China region).

\textsuperscript{43} Firms that do not prepare or issue any auditor's report or play a substantial role in the preparation or furnishing of an auditor's report need not be registered with the Board. PCAOB Rule 2100, \textit{Registration Requirements for Public Accounting Firms}.

\textsuperscript{44} As previously noted, the accounting firm issuing the auditor's report supervises the work of or assumes responsibility for the procedures performed by other participants in the audit.

\textsuperscript{45} See, \textit{e.g.}, AU sec. 543.
previously conveyed its concern about some practices it has seen in these arrangements.46/

Knowing the names, locations, and extent of participation of the accounting firms involved in the audit would allow users of the auditor's report to research publicly available information about these participants. For example, information on the PCAOB website indicates whether a firm is registered with the Board and has been inspected or sanctioned by the Board or whether a firm is located in a country that does not allow PCAOB inspections. The disclosure of the location and extent of participation in the audit of other independent public accounting firms and other persons not employed by the auditor would allow users to understand whether the other participants are headquartered or reside in the auditor's home country or in other jurisdictions, as well as how much of the audit work they performed.

Through its inspections, the Board also has seen circumstances in which disclosure regarding other firms that participate in audits could have been particularly valuable to investors and other financial statement users. For example, through the Board's oversight activities, the Board observed that for some large, U.S.-based financial institutions, a significant portion of the audit work was performed outside the U.S. by a firm other than the firm that signed the auditor's report (typically, a member firm of the same network). In another case, a small U.S.-registered public accounting firm signed an auditor's report for an issuer based in China even though "the audit procedures performed by the other firm [based in China] constituted substantially all of the audit procedures on the issuer's financial statements."47/ Investors had no practical means of learning these facts, which the Board believes would be useful information.

46/ See PCAOB's Staff Audit Practice Alert No. 8, Audit Risk in Certain Emerging Markets, at 19 (October 3, 2011) ("Through the Board's oversight activities, the Board's staff has observed instances in certain audits of companies in emerging markets in which the auditor did not properly coordinate the audit with another auditor."); see also In the Matter of Clancy and Co., P.L.L.C., Jennifer C. Nipp, CPA, and Judith J. Clancy, CPA, PCAOB Release No. 105-2009-001 (March 31, 2009) (imposing sanctions in a case in which a U.S. firm used a significant amount of audit work performed by a Hong Kong firm without adequately coordinating its work with that of the Hong Kong firm).

47/ See Staff Audit Practice Alert No. 6, at 3. The Board previously warned investors and auditors of the heightened fraud risk related to audits of companies based in certain emerging markets. See Staff Audit Practice Alert No. 8, at 1 ("Local business practices and cultural norms in emerging markets may differ from those in more
Transparency could discourage practices that would not withstand scrutiny to go unchallenged, at least until they are discovered by regulators. In one case, the Board's inspectors learned, for example, that a registered firm opined on the financial statements of a large, multinational company and reported having performed an audit in accordance with PCAOB standards, even though another firm in another country (albeit, a member firm of the same network) had performed the audit. In other circumstances, PCAOB inspections have revealed that some registered firms have allowed other firms that did not possess the requisite expertise or qualifications to play significant roles in audits of issuers. Disclosure about other firms participating in the audit could expose, and therefore discourage, such practices.

As with disclosure of the name of the engagement partner, over time, information sources likely would develop about the firms that participate in public company audits, such as lists of their public company accounts, size of the accounting firms, disciplinary proceedings and litigation in which they have been involved, and similar matters. Such information likely would be useful to audit committees, investors, and other financial statement users. In addition, over time, these disclosures would provide information that could prompt further useful inquiry about the audit. For example, if the percentage of contribution to the audit by a participating accounting firm or individual either increases or decreases over time (which can be determined since participation is disclosed in ranges), or if it spikes in a particular year, such facts may lead to questions about the underlying reasons.

C. Liability Considerations

A concern voiced frequently by commenters on the Board’s 2009 and 2011 Releases is that there could be an increase in the potential liability of persons named in the auditor’s report in litigation, particularly securities litigation. Since 2009, the Board has sought and carefully considered commenters’ views on the liability effects of its 2009 and 2011 Releases. While the Board has not sought to increase the risk that an engagement partner would be held liable in private litigation, it has recognized and, where it could, consistent with its policy objectives, tried to mitigate this possibility.48/ The Board takes seriously commenters’ concerns about the potential effects of the developed markets, and auditors should be alert to the effect of these differences on the risks of material misstatement”.

48/ Most private litigation arising out of audits involves claims against accounting firms, which generally have significantly greater resources to satisfy any judgment than does any individual partner. The Board's reproposed amendments will not reduce an accounting firm's potential liability for deficient audit work.
proposed amendments on auditor liability in private actions. The Board has sought, and now has considered, two rounds of public comment on these issues and has engaged in its own review of the relevant statutory provisions and case law. The Board has also kept the Commission staff advised of its thoughts on these issues, as commenters suggested.

As explained below, the Board believes that any possible increases in a named engagement partner's or participating accounting firm's exposure to liability should be limited and that the potential risk of such an increase would be justified by the potential benefits to investors and other financial statement users of greater transparency.

The Board has identified two main potential sources of liability: Section 11 of the Securities Act of 1933 ("Securities Act"); and Section 10(b) of the Securities Exchange Act of 1934 ("Exchange Act") and Rule 10b-5 promulgated under it.

1. **Section 11 of the Securities Act**

   Section 11 imposes liability for material misstatements or omissions in a registration statement, subject to a due diligence defense, on "every accountant . . . who has with his consent been named as having prepared or certified any report or valuation which is used in connection with the registration statement, with respect to the statement . . . which purports to have been prepared or certified by him." Section 7 requires issuers to file with the Commission the consent of any accountant who is named as having prepared or certified any part of the registration statement or any valuation or report included in the registration statement filed with the Commission.

   Auditors who issue an auditor's report that is filed with the Commission in connection with a registration statement meet the criteria in Section 7 and therefore must consent to inclusion of their names in a document filed with the Commission and be subject to liability under Section 11.\(^4^9\)\(^/\) The Board has assumed that engagement partners and participating accounting firms named in an auditor's report would have to consent as well to the inclusion of their names in such an auditor's report filed with, or

\(^{4^9}/\) See Section 11 of the Securities Act; see also 17 C.F.R. § 230.405 ("The term 'certified,' when used in regard to financial statements, means examined or reported upon with an opinion expressed by an independent or certified public accountant."). In most cases, the firm issuing the auditor's report assumes responsibility for the participating accounting firm's work and, as a result, the participating accounting firm does not issue an auditor's report or express any opinion on the issuer's financial statements. When the principal auditor does not assume responsibility for the other firm's work, the other firm's report must be filed with the SEC and a consent is required. The repurposed amendments would not change these requirements.
included by reference in, another document filed under the Securities Act with the Commission.

Requiring engagement partners to consent to inclusion of their names in a document filed with the Commission and be subject to Section 11 liability would not change the performance obligations of engagement partners, the firm issuing the auditor's report, or any other participant in the audit. The firm that issued the report would continue to file a consent and to be subject to liability under Section 11. The fact that the engagement partner would be subject to Section 11 liability, however, might provide investors with some additional comfort about the engagement partner's work on the audit.

In this context, the costs imposed by a consent requirement likely would be relatively low. Because an engagement partner's liability would be, at most, coextensive with that of the firm, adding the engagement partner as a defendant should not increase the amount a court could award to investors. A court might hold the engagement partner liable, jointly and severally with the firm, for those same damages, but in most cases the accounting firm will have greater resources to satisfy a judgment than will any individual partner. In any event, the Board seeks input as to the extent to which individual partners or firms may seek to mitigate any costs arising out of a claim under Section 11.50/

Under these circumstances, it seems likely that any increase in overall costs would be small. Such costs as might be incurred would include the administrative costs to obtain and file the additional consents as well as costs inherent in the litigation system. The administrative costs, in particular, should be insignificant. The Board understands that the engagement partner could simply be added to the consent that the accounting firm already provides and that the issuer already files with the Commission.

50/ The Board notes that Section 14 of the Securities Act provides that "[a]ny condition, stipulation, or provision binding any person acquiring any security to waive compliance with any provision of this title or of the rules and regulations of the Commission shall be void." The Board also notes certain positions by the Commission with respect to Section 11. For example, the Commission has stated that indemnification of directors, officers, and persons controlling the registrant for liabilities incurred pursuant to the Securities Act "is against public policy as expressed in the Act and is therefore unenforceable." Item 510 of Regulation S-K, 17 C.F.R. § 229.510; see also Item 508(g) of Regulation S-K, 17 C.F.R. § 229.508 (requiring a registrant to furnish a brief description of any provision in the underwriting agreement for indemnification by the registrant of the underwriters or their controlling persons against any liability arising under the Securities Act).
Litigation-related costs might be more significant than administrative costs but, in the Board's view, in this context should not be substantial. For one thing, consents from engagement partners in an audit should not increase the number of lawsuits filed, though it might increase the number of defendants in any lawsuit that would have been filed anyway. Because the engagement partner's liability would be based on the same facts that already subject the firm to liability, the filing of engagement partner consents should not make the filing of a Section 11 case any more likely than it is today.

In fact, Section 11 cases against accounting firms are relatively rare. Of the 152 federal securities class action cases filed in 2012, only four alleged a violation of Section 11 by an accounting firm. 51/ In 2011, 188 federal securities class action cases were filed, and thirteen included allegations that an accounting firm violated Section 11. 52/ Of those thirteen, nine involved audits of Chinese companies trading in the U.S. after a reverse merger. Eight of the 176 federal securities class action cases filed in 2010 alleged that an accounting firm violated Section 11. 53/

The analysis of Section 11 liability risks in the case of participating accounting firms is somewhat different because of the more limited role of the participating accounting firms in the audit. By its terms, Section 7 requires issuers to file the consents of those experts that are "named as having prepared or certified" any part of the registration statement or a report for use in connection with the registration statement. Section 11, in turn, imposes liability on experts, but only "with respect to the statement . . . which purports to have been prepared or certified by him."

The Board assumes that the participating accounting firm would be liable only for those misstatements in the financial statements associated, in some way, with their own audit work—that is, a participating accounting firm should not be liable for misstatements unrelated to its own work. Any uncertainty about whether participating accounting firms could be liable for other misstatements in the financial statements, however, could act as a disincentive to providing the consent and consequently impose additional costs.

Although it has been asserted that participants in the audit would charge more for their work or refuse to participate in the audit if consents were required, commenters did not present any evidence that this would be the case. The requirement to file a consent

52/ Id.

53/ Id.
does not change the work the auditor must do. Raising the fee charged by a participant based on an unquantifiable assertion of increased risk is unlikely to be well received either by the accounting firm issuing the auditor's report or the audit committee. Also, for firm network members refusing to participate in an audit because of the consent requirement may be incompatible with obligations as a member of the network. Uncertainty as to the forgoing does not, in the Board's view, justify depriving investors of the benefits of the additional information that would be provided pursuant to the reproposed amendments. Even if costs were to increase the Board believes this information would be valuable.

The Board is reproposing the disclosure requirements because the greater transparency afforded by the required disclosures would, in the Board's view, serve the public interest.

2. Section 10(b) and Rule 10b-5 of the Exchange Act

The second main potential source of liability from the Board's reproposed amendments is under Section 10(b) of the Exchange Act and Rule 10b-5 promulgated under it. The concern is that engagement partners and other participants in the audit could become liable under Section 10(b) and Rule 10b-5 for materially untrue statements deemed to be made by them in the auditor's report.

In its 2011 Release, the Board noted that the Supreme Court, in Janus Capital Group, Inc. v. First Derivative Traders, had decided what it means "[t]o make any untrue statement of a material fact" under Section 10(b) and Rule 10b-5(b). That case brought some clarity to an area of the law that had, as the 2009 Release had noted, been unclear. Specifically, the Court held that "[f]or purposes of Rule 10b-5, the maker of a statement is the person or entity with ultimate authority over the statement, including its content and whether and how to communicate it." The Court also explained that "attribution within a statement or implicit from surrounding circumstances

---

54/ Janus Capital Group, Inc. v. First Derivative Traders, 131 S.Ct. 2296, 2302 (2011). Pursuant to Rule 10b-5, "it is unlawful for 'any person, directly or indirectly, . . . [t]o make any untrue statement of a material fact' in connection with the purchase or sale of securities." See id. at 2301 (quoting Rule 10b-5). Because there is no private right of action under Section 10(b) against those who aid and abet a securities fraud, Central Bank of Denver, N.A. v. First Interstate Bank of Denver, N.A., 511 U.S. 164, 191 (1994), to be liable in a Section 10(b) private action for the making of the statement, the actor must be the maker of the statement. See Janus, 131 S.Ct. at 2302.

55/ Id.
is strong evidence that a statement was made by—and only by—the party to whom it is attributed.\textsuperscript{56/}

The Board solicited comment on the Section 10(b) liability implications of a disclosure approach, rather than a signature requirement, in light of \textit{Janus}. Comments filed with the Board on the 2011 Release, after the \textit{Janus} decision, generally reflected the same concerns expressed in response to the 2009 Release. Many of those who opposed the disclosure requirements suggested that the proposed requirements could increase the engagement partner's risk of personal liability under the Exchange Act. In the view of these commenters, this could raise audit costs, discourage good practitioners from auditing public companies, and encourage more lawsuits, even if they ultimately proved meritless.

Some commenters seemed to acknowledge that, in light of \textit{Janus}, a disclosure approach, rather than requiring the engagement partner's signature, could mitigate concerns about private liability for fraud under Section 10(b). At the same time, however, these and other commenters noted that it was still uncertain how lower courts will apply the Supreme Court's decision. One such commenter suggested that if the Board adopted a disclosure requirement it should impose a provisional rule that would be in effect for five years to allow the case law to develop. In this commenter's view, the Board could then decide to make the rule permanent once it becomes clear that concerns about liability were unfounded.

Because the future decisions of courts interpreting \textit{Janus} cannot be known in advance, the Board cannot conclude with certainty whether its approach might increase liability under Section 10(b). The Board does believe, however, that a disclosure rule is unlikely to change the \textit{status quo} regarding private liability for fraud under Section 10(b). The auditor's report would continue to be signed only by the firm. The engagement partner will gain no new authority for, nor make any new statement in, the auditor's report by virtue of the firm's disclosure of his or her name. Because of this, the Board also believes that the better argument is that liability should not be increased under the \textit{Janus} decision.\textsuperscript{57/}

If the reproposed amendments are adopted, the Board would also monitor the rule for some time after it became effective. If the reproposed disclosure requirement

\textsuperscript{56/} See \textit{id.}

\textsuperscript{57/} While disclosure of the engagement partner might, at least in some circuits, make it easier for a plaintiff to plead reliance, the plaintiff would still have to meet all the other elements of Section 10(b) liability, including that the engagement partner was the maker of the statement under the \textit{Janus} standard.
leads to an increase in litigation against either engagement partners or other participants in the audit that results in negative effects on audits of public companies, the Board can revisit it.

In response to comments, the Board also is making a minor change to the language that it proposed to add to the examples of reports that illustrate the reproposed disclosure requirements. Some commenters expressed concern that courts might misconstrue the statement that the engagement partner is "responsible for the audit" to mean that the engagement partner has "ultimate authority," as that term is used in Janus, over the opinion expressed by the firm. Because the phrase "responsible for the audit" is not necessary to make the disclosure clear, the reproposed amendments do not include this phrase.58/

IV. Audits of Brokers and Dealers

Section 982 of the Dodd-Frank Wall Street Reform and Consumer Protection Act ("Dodd-Frank Act")59/ gave the Board oversight of the audits of brokers and dealers registered with the SEC. On July 30, 2013, the SEC amended SEC Rule 17a-5 under the Exchange Act, to require, among other things, that audits of brokers' and dealers' financial statements be performed in accordance with the standards of the PCAOB for fiscal years ending on or after June 1, 2014.60/

The Board determined that the reproposed amendments would be appropriate for the audits of brokers and dealers for similar reasons as the audits of issuers. Commenters who mentioned brokers and dealers in their comment letters did not raise any specific concerns about the applicability of the amendments to the audits of brokers and dealers. Therefore, the reproposed amendments, if adopted by the Board and approved by the SEC, would be applicable to such audits.

Based on research conducted by the PCAOB’s Office of Research and Analysis ("ORA"), ownership of brokers and dealers is primarily private, with individual owners generally being part of the management team. ORA's research indicates that there are

58/ The engagement partner remains responsible for the audit and its performance, as described by Auditing Standard No. 10. As explained above, however, the auditor's report is issued and signed by the firm.

no issuers among the approximately 4,230 brokers and dealers that filed annual audited financial statements with the SEC for fiscal periods ended during 2012. Approximately 9% of the 4,230 brokers and dealers are subsidiaries of issuers. The remainder are not owned by issuers.

According to ORA’s research, for the population of brokers and dealers that are not subsidiaries of issuers (1) approximately 90% are directly owned by an individual or an entity that owns more than 50% of the broker or dealer and (2) approximately 75% have five or fewer direct owners. A review of the title or status of the brokers’ or dealers' direct owners who are individuals suggests that these owners are generally part of the broker’s or dealer’s management. Disclosure of the engagement partner or other participants may be of limited use to individual owners, but it may be useful to other financial statement users. The Board is seeking comment regarding the applicability of the reproposed amendments to audits of brokers and dealers.

V. Economic Considerations

A. Economic Rationale and Discussion of Benefits

The reproposed amendments are designed to provide investors and other financial statement users with information the Board believes could help them evaluate the quality of individual audits. Although the names of the engagement partner and certain other participants in the audit are known to company management, they are not known to investors and other financial statement users despite their potential value in making economic decisions, including investment decisions to buy, hold, or sell shares. The disclosed information may provide a signal about the quality of the audit of the financial statements that could reduce the level of information asymmetry between company management and investors.

Under the current regulatory baseline, in which only the firm name is disclosed, investors and other financial statement users are limited in what they know about the participants who actually perform an audit. PCAOB oversight activities show that audit quality varies among partners within the same firm, suggesting that, on its own, firm-level reputation is an imperfect signal of audit quality. Disclosure of the names of the engagement partner and certain other participants in the audit would allow investors and other users of financial statements to supplement the audit firm’s name with more granular information when forming an opinion about the nature of the audit. This refinement may be of particular interest to investors and other financial statement users.

61/ Economists often describe information asymmetry as an imbalance, where one party has more or better information than another party.
given that a relatively small number of audit firms conduct a relatively large number of public company audits. The reproposed disclosure requirements would allow investors to distinguish between audits beyond the name of the accounting firms.

The capacity to differentiate between alternative products is a fundamental requirement of competitive markets. Investors, for example, benefit from knowing the quality and reputation of not only the firm, but also of the engagement partner on the audit of the company in which they invest. By having information at this level of granularity – that which corresponds to their investment decision – the market for audit services is made more competitive and efficient because investors are better able to discern between audit firms.

By adding granularity to the information about who performed the audit of a particular company, the differentiated information clarifies distinctions between investment alternatives and can empower investors to pursue their investment strategies more effectively. Over time, this could promote competition in the audit industry and could lead to a more efficient allocation of capital.

The following sections describe the findings of several recent studies that provide empirical evidence related to disclosing the name of the engagement partner and certain other participants in the audit. The Board will review the academic literature again before taking further action on the reproposed amendments to identify any relevant new studies or changes to the working papers referenced below.

1. **Research on the Disclosure of the Name of the Engagement Partner**

Several studies examined whether engagement partner disclosure requirements affect the prices of securities leading to more efficient markets. Knechel et. al. found "considerable evidence that similar audit reporting failures persist for individual partners over time" and that in Sweden, where engagement partner's names are disclosed, "the market recognizes and prices differences in audit reporting style among engagement partners." Although much of this analysis was conducted using data on private companies, many of the results continued to hold when the authors separately analyze

---

public companies. A similar study conducted by Aobdia et. al.\(^\text{63}\) used data from Taiwan and also found that both debt and equity markets react to the performance characteristics of engagement partners.\(^\text{64}\)

Lambert et. al. used an experimental framework to examine how investors react to disclosure of the engagement partner.\(^\text{65}\) They found that prospective investors were less likely to invest in a company that has been linked via the disclosure of the name of the engagement partner to another company that had to restate its financials. While this could improve capital allocation, the findings were only statistically significant for less experienced investors. The authors went on to evaluate potential implications on audit partner reputation, accountability, incentives, and independence.

Although the primary benefits of the reproposed amendments pertain to the disclosure of the engagement partner and certain other audit participants, the disclosures may also create an incentive for auditors to voluntarily take steps that could result in improved audit quality. Research summarized below leaves open the question of other benefits. The Board is seeking additional comments and data regarding the disclosures’ potential effects on accountability.

Carcello and Li\(^\text{66}\) examined the impact of the E.U.'s audit engagement partner signature requirement on audits in the U.K., and found improvements in several

\(^{64}\) Aobdia et. al. acknowledge that their use of estimates of abnormal accruals as a proxy for engagement partner performance is subject to measurement error. They continue to find evidence that engagement partner histories matter to capital markets when they use regulatory sanctions history as an alternative measure of audit quality.

financial indicators of audit quality, as well as an increase in audit fees. It is worth highlighting that this study evaluated a policy alternative (signature requirement) that may have a more pronounced effect on accountability than the disclosure requirement being re-proposed since the engagement partner's signature goes one step beyond just disclosing the partner's name.

Two studies suggested that disclosure requirements could produce limited or no observable improvement in audit quality. Blay et al. analyzed data from Norway and were unable to document any statistically significant improvements in audit quality following the E.U. mandate for engagement partners to sign auditors' reports. In a qualitative analysis, King et al. argued that only under certain circumstances would increased accountability through engagement partner disclosure lead to better auditor performance—when the public's perception of audit quality is below the actual level of audit quality. Otherwise, they argued that disclosure could lead to over-auditing.

2. Research on the Disclosure of Certain Other Participants in the Audit

Dee et al. examined the impact on financial markets of current annual PCAOB Form 2 disclosures of other participants in the audit. Using the filing of the Form 2 as

---

67/ Specifically, Carcello and Li found a significant decline in abnormal accruals, a decrease in the propensity to meet an earnings threshold, an increase in the incidence of qualified auditors' reports, and an increase in a measure of earnings informativeness.

71/ PCAOB Form 2 requires independent public accounting firms that audited no issuers during the applicable reporting period to provide information on each issuer for which they "played a substantial role in the preparation or furnishing of an audit report" (as defined by PCAOB Rule 1001 (p)(i)).
the event date, they investigated "whether the market reacts to the disclosure of other participants in audits." For companies whose audits involved other participants disclosed in Form 2, they find a negative market reaction and a decrease in the information content of earnings surprises post disclosure. The authors concluded that the results of the study suggested "that PCAOB required disclosures by auditors of their significant participation in the audits of issuers provide new information, and investors behave as if they perceive audits in which other auditors participate negatively after the information is disclosed."72/

B. Discussion of Costs

Under the reproposed amendments and as discussed above in the liability section, audit firms would likely incur direct compliance costs to obtain consents and to calculate the relative levels of participation of the other participants.73/ These direct costs are believed to be low due to the relatively simple nature of the tasks. In addition, these costs may decline over time as firms are able to automate these procedures.

The disclosure requirements could result in indirect costs related to liability. The liability section above describes in greater detail the potential sources and likelihood of such costs. As a general matter, the magnitude of damages would not change, but the number of defendants listed in the litigation may increase. As a result, there could be indirect costs to engagement partners and other audit participants related to obtaining representation in cases when they may not have been named before.

Investors may also incur costs to obtain the benefit of the disclosure. These costs—which should be interpreted as a reduction in the net benefits received—could include the cost of collecting disclosed information. Given the general availability of the auditor's report to investors and other users of the disclosed information, the costs to investors are expected to be relatively low. For investors choosing to aggregate disclosed information, the costs would be higher.

72/ Id. at 31-32. Of course, this negative perception might result from a lack of sufficient information available for investors to draw conclusions about the quality of audits in which other participants are involved. If so, the reproposed amendments could help address this issue by providing more information regarding participants in the audit than is currently available.

73/ See Section III.C., Liability Considerations, for further discussion of liability considerations.
C. Alternatives Considered

Over the past several years, the Board has considered a number of alternative approaches involving the issue of transparency. A threshold question was whether there was, in fact, a need for greater transparency about the participants in the audit and, if so, whether rulemaking was the appropriate vehicle to achieve it. On the question of need, through its outreach efforts, the Board became convinced that there was a strong desire among investors and other financial statement users to have more information about the audit, such as the identity of the individuals and firms that were doing the audit. Providing such information is consistent with the general approach of the U.S. securities laws favoring disclosure of information for investors' use. The degree of usefulness of the information discussed in this release likely would vary among investors and other financial statement users, but the Board believes that, overall, disclosure of the information would be useful and in the public interest.

The Board considered whether an informal approach rather than regulation would be a less costly means of achieving the desired end. The Board's usual vehicles for informal guidance such as staff audit practice alerts, research reports, answers to frequently asked questions, or summary reports under the Board's Rule 4010, did not seem suitable. Accounting firms also did not seem likely to change long-established practices voluntarily and had not done so voluntarily in those jurisdictions where engagement partner signature on the auditor's report is now required by law or rule. Also, even if some auditors disclosed more information under a voluntary regime, practices among auditors likely would vary widely. That would defeat one of the Board's goals of achieving more robust and consistent disclosures about the auditors of all U.S. public companies. Thus, the Board did not pursue an informal or voluntary approach.

Once the Board concluded that rulemaking was appropriate in this matter, several alternatives were considered. A central consideration for the Board was to provide the information in a form that would be most easily accessible to investors and other financial statement users. That argued for providing the information in a document that was widely disseminated and commonly read by investors, such as the auditor's report that is included in the annual report filed with the SEC. It also argued for keeping the information in the same location as the audited financial statements. As discussed above, the Board believes disclosure in the auditor's report is the most appropriate alternative; however, other alternatives were considered, including the following:

1. Signing the Auditor's Report

In the 2009 Release, the Board considered a requirement for the engagement partner to sign the auditor's report in his or her own name in addition to the name of the audit firm. A number of commenters supported the signature requirement. However, many commenters opposed it, mainly because including the signature in the auditor's report, in their view, would appear to minimize the role of the audit firm in the audit and
could increase the engagement partner's liability. Some commenters believed that this alternative would increase both transparency and the engagement partner's sense of accountability. Other commenters believed that engagement partners already have a strong sense of accountability and that signing their own name on the audit opinion would not impact that. In the Board's view, the reproposed approach includes most of the potential benefits of a signature requirement, while mitigating some of the concerns expressed by commenters.

2. Disclosure in Firms' Annual Reports Filed with the PCAOB on Form 2

All PCAOB registered firms must file a report on Form 2 with the Board at least annually. Form 2 provides basic information about the firm and the firm's issuer-related practice over the most recent 12-month period.\textsuperscript{74} In the 2011 Release, the Board proposed, in addition to the requirement to disclose the name of the engagement partner in the auditor's report, to add to Form 2 a requirement to disclose the name of the engagement partner for each audit required to be reported on the form. As originally proposed, disclosure on Form 2 would supplement more timely disclosures in the auditor's report by providing a convenient mechanism to retrieve information about all of a firm's engagement partners for all of its audits.

Some commenters on the 2011 Release suggested that the names of the engagement partner and the other participants in the audit should be included, if they were to be disclosed at all, not in the auditor's report, but on Form 2 only. This would make the information publicly available but likely would obviate any requirement for a consent by the named parties under Section 7 of the Securities Act and might further lessen any potential risk of liability under Section 10(b) by not including the names in the auditor's report itself.

There are, however, a number of disadvantages to this approach. It would delay the disclosure of information useful to investors and other financial statement users from 3 to 15 months\textsuperscript{75} and would entail some additional costs for accounting firms to develop systems and tocompile and report that information. It also would make the information

\textsuperscript{74} Under the Amendments to Conform PCAOB Rules and Forms to the Dodd-Frank Act and Make Certain Updates and Clarifications, PCAOB Release 2013-010 (December 4, 2013), the Board has adopted amendments to Form 2 to call for relevant information concerning a firm's audits of brokers and dealers.

\textsuperscript{75} Form 2 must be filed no later than June 30 of each year, PCAOB Rule 2201, Time for Filing of Annual Report, and covers the preceding 12-month period from April 1 to March 31; See Form 2, General Instruction 4. Special reports must be filed no later than 30 days after the triggering event. See PCAOB Rule 2203, Special Reports.
more difficult to find by investors interested only in the name of the engagement partner for a particular audit, rather than an aggregation of all of the firm's engagement partners for a given year, because they would have to search for it in the midst of other unrelated information in Form 2.

While the Board could expend resources to develop systems to make the information more easily accessible, doing so would not address the disadvantages as to timing or the need for investors to look in several places for information that would be provided by the requirements of this reproposal. Therefore, the Board believes that adopting only a Form 2 requirement would seriously diminish the value of the disclosures. The Board remains interested, however, in commenters' views about whether annual disclosure in Form 2 would be a useful supplement to the more timely disclosures that the reproposed amendments would require.

3. **A New, Targeted PCAOB Form**

The Board also considered creating a new PCAOB form—to be filed with the Board at the same time or shortly after the auditor's report is filed with the SEC—that would identify the company, the date the auditor's report was issued, the identity of the engagement partner and the other participants in the audit, but only that information. The information would be publicly available through the PCAOB's website. This approach would have the same advantages as Form 2's approach but would coordinate the timing of the disclosure with the release of the auditor's report and would limit the information on each form to a single company. The disadvantage with this approach is that it still would require investors and other financial statement users to search two different places, at two different regulators (SEC and PCAOB) to see both the auditor's report and the disclosures about the participants in the audit. It also would require audit firms to set up new reporting structures and the PCAOB to administer and police the filing of thousands of individual forms annually and to create a system to make the forms easily available.

Because of the effort and costs involved—for investors to locate relevant information and for the firms and the Board to administer the filing of a new form—the Board believes that the selected alternative is both more useful and cost effective.

4. **Disclosure of the Required Information Either in the Audit Committee Report or in the Auditor's Report**

Under this approach, the Board would require disclosures to be made in the auditor's report itself, unless the audit committee agreed to do so in the audit committee's report filed with the proxy statement. This approach also poses several problems, however. There would not be a uniform source for the information among companies. In some cases, the information would be in the proxy statement, in others, in the auditor's report included in the annual report. Investors and other financial
statement users would not readily know where the information was for any particular company. Another consideration is that the circumstance could arise where the auditor does not include the required disclosures in the auditor's report anticipating that the audit committee will include it in its report and, for whatever reason, the audit committee fails to do so. This would require the auditor to amend its auditor's report. Also, the timing of the filing of the proxy statement would pose the same problem as with the Form 2 approach. The proxy statement is almost always filed later than the auditor's report which must be included in the annual report filed with the SEC. Altogether this approach appeared to present risks of information dispersion and lack of uniformity of presentation that would defeat one of the Board's cardinal objectives in this project: ease of use.

VI. Considerations for Audits of Emerging Growth Companies

A. Background

Pursuant to Section 104 of the JOBS Act, any rules adopted by the Board subsequent to April 5, 2012, do not apply to the audits of EGCs (as defined in Section 3(a)(80) of the Exchange Act) unless the SEC "determines that the application of such additional requirements is necessary or appropriate in the public interest, after considering the protection of investors, and whether the action will promote efficiency, competition, and capital formation." As a result of the JOBS Act, the amendments to PCAOB standards the Board is reproposing, if adopted by the Board, would be subject to a separate determination by the SEC regarding their applicability to audits of EGCs.

The PCAOB has been monitoring implementation of the JOBS Act in order to understand the characteristics of EGCs and inform the Board's considerations

\[^{77}\] In general terms, an issuer qualifies as an EGC if it has total annual gross revenue of less than $1 billion during its most recently completed fiscal year (and its first sale of common equity securities pursuant to an effective Securities Act registration statement did not occur on or before December 8, 2011). See JOBS Act Section 101(a), (b), and (d). Once an issuer is an EGC, the issuer retains its EGC status until the earliest of: (1) the first year after it has total annual gross revenue of $1 billion or more (as indexed for inflation every five years by the SEC); (2) the end of the fiscal year after the fifth anniversary of its first sale of common equity securities under an effective Securities Act registration statement; (3) the date on which the company issues more than $1 billion in non-convertible debt during the prior three-year period; or (4) the date
regarding whether it should request that the SEC apply the reproposed amendments to audits of EGCs, if adopted. To assist commenters, the Board is providing the following information regarding EGCs that it has compiled from public sources.78/

B. Characteristics of Self-Identified EGCs

As of October 1, 2013, based on the PCAOB’s research, 1,144 SEC registrants have identified themselves as EGCs in SEC filings.

These companies operate in diverse industries. The five most common Standard Industrial Classification ("SIC") codes applicable to these companies are: blank check companies; pharmaceutical preparations; real estate investment trusts; prepackaged software services; and computer processing/data preparations services.

Approximately 22% of the EGCs identified themselves in registration statements and were not previously reporting under the Exchange Act as of October 1, 2013. Approximately 61% of the companies that have identified themselves as EGCs began reporting under the Exchange Act in 2012 or later. The remaining 17% of these companies have been reporting under the Exchange Act since 2011 or earlier. Accordingly, a majority of the companies that have identified themselves as EGCs have begun reporting information under the securities laws since 2012.

Approximately 64% of the companies that have identified themselves as EGCs and filed an Exchange Act filing with information on smaller reporting company status indicated that they were smaller reporting companies.79/

78/ To obtain data regarding EGCs, the PCAOB’s Office of Research and Analysis has reviewed registration statements and Exchange Act reports filed with the SEC with filing dates between April 5, 2012, and October 1, 2013, for disclosures by companies related to their EGC status. Companies with filings indicating they are no longer EGCs are not included in this analysis. Any filings subsequent to October 1, 2013 are not included in this analysis. The PCAOB has not validated these companies' self-identification as EGCs. The information presented also does not include data for companies that have filed confidential registration statements and have not subsequently made a public filing.

79/ The SEC amended its smaller reporting company rules in Smaller Reporting Company Regulatory Relief and Simplification, Securities Act Release No.
Audited financial statements were available for nearly all of the companies that have identified themselves as EGCs.\(^{80/}\) For those companies for which audited financial statements were available and based on information included in the most recent audited financial statements filed as of October 1, 2013:

- The reported assets ranged from zero to approximately $18.2 billion. The average and median reported assets were approximately $182.4 million and $0.3 million, respectively.\(^{81/}\)
- The reported revenue ranged from zero to approximately $962.9 million. The average and median reported revenue were approximately $60.2 million and $2 thousand, respectively.
- The average and median reported assets among companies that reported revenue greater than zero were approximately $360.8 million and $69.3 million, respectively. The average and median reported revenue among these companies that reported revenue greater than zero were approximately $118.7 million and $22.1 million, respectively.

\(^{80/}\) Audited financial statements were available for 1,134 of the 1,144 self-identified EGCs. Audited financial statements were not available for some EGCs that have filed registration statements that have not been declared effective.

\(^{81/}\) For purposes of comparison, the PCAOB compared the data compiled with respect to the population of companies that identified themselves as EGCs with companies listed in the Russell 3000 Index in order to compare the EGC population with the broader issuer population. The Russell 3000 was chosen for comparative purposes because it is intended to measure the performance of the largest 3,000 U.S. companies representing approximately 98% of the investable U.S. equity market (as marketed on the Russell website). The average and median reported assets of issuers in the Russell 3000 were approximately $12.1 billion and approximately $1.6 billion, respectively. The average and median reported revenue from the most recent audited financial statements filed as of October 1, 2013 of issuers in the Russell 3000 were approximately $4.6 billion and $725.8 million, respectively.
Approximately 48% identified themselves as "development stage entities" in their financial statements.82/

Approximately 55% had an explanatory paragraph included in the auditor's report on their most recent audited financial statements describing that there is substantial doubt about the company's ability to continue as a going concern.83/

Approximately 38% were audited by firms that are annually inspected by the PCAOB (that is, firms that have issued auditor's reports for more than 100 public company audit clients in a given year) or are affiliates of annually inspected firms. Approximately 62% were audited by triennially inspected firms (that is, firms that have issued auditor's reports for 100 or fewer public company audit clients in a given year) that are not affiliates of annually inspected firms.

Approximately 4% were audited by firms (1) whose names contain the full name of an individual that is in a leadership role at the firm and (2) have disclosed only one certified public accountant.84/

Approximately 14% and 18% of the EGCs reported segment sales and assets,85/ respectively, in geographic areas outside the country or region

---

82/ According to the Financial Accounting Standards Board standards ("FASB"), development stage entities are entities devoting substantially all of their efforts to establishing a new business and for which either of the following conditions exists: (1) planned principal operations have not commenced or (2) planned principal operations have commenced, but there has been no significant revenue from operations. See FASB Accounting Standards Codification, Subtopic 915-10, Development Stage Entities—Overall.

83/ Approximately 1% of the population of companies in the Russell 3000 Index have an explanatory paragraph describing that there is substantial doubt about the company's ability to continue as a going concern.

84/ This data is based on firms' annual disclosures on PCAOB Form 2. No companies in the Russell 3000 Index were audited by such firms.

85/ See FASB Accounting Standards Codification, Topic 280, Segment Reporting.
of the accounting firm issuing the auditor's report.\textsuperscript{86} For these EGCs, on average, 59% and 76% of the reported segment sales and assets, respectively, were in geographic areas outside the country or region of the accounting firm issuing the auditor's report.\textsuperscript{87}

C. Applicability of the Reproposed Amendments for Audits of EGCs

Based on the data outlined in Section VI.B., Characteristics of Self-Identified EGCs, above, EGCs generally appear to be smaller and newer public companies. Overall, there is less information available in the market about smaller and newer companies than there is about larger and more established companies. The communication of the name of the engagement partner and information about other participants in the audit could assist the market in assessing some risks associated with the audit and valuing securities, which could make capital allocation more efficient. Disclosures about audits of EGCs could produce these effects no less than disclosures about audits of companies that are not EGCs.\textsuperscript{88}

Some EGCs operate in geographic segments that are outside the country or region of the accounting firm issuing the auditor's report. This characteristic may suggest involvement of participants in the audit other than the accounting firm issuing the auditor's report. The data above indicates that the percentage of EGCs reporting segment sales (14%) and assets (18%) in geographic areas outside the country or region of the accounting firm issuing the auditor's report is smaller as compared to companies in the Russell 3000 Index (51% and 37%, respectively). However, for these EGCs the average percentage of reported segment sales (59%) and assets (76%) in geographic areas outside the country or region of the accounting firm issuing the auditor's report is significantly higher than the analogous average segment sales (41%) and assets (37%) reported by companies in the Russell 3000 Index. Therefore,

\textsuperscript{86} Approximately 51% and 37% of the population of companies in the Russell 3000 Index reported segment sales and assets, respectively, in geographic areas outside the country or region of the accounting firm issuing the auditor's report.

\textsuperscript{87} For the population of companies in the Russell 3000 Index that reported segment sales or assets in geographic areas outside the country or region of the accounting firm issuing the auditor's report, approximately 41% and 37% of those segment sales and assets, respectively, were in geographic areas outside the country or region of the accounting firm issuing the auditor's report.

\textsuperscript{88} This assumes that the market does not view information provided by the disclosure in audits of EGCs as less valuable than information in audits of issuers that are not EGCs. The Board is aware of no reason for such a distinction.
providing the reproposed disclosures regarding other participants in the audit may be as relevant to EGC investors and other financial statement users as it would be to investors in larger and more established companies.

As noted in the data above, some of the EGCs were audited by firms having only one certified public accountant whose full name is included in the firm's name. For those EGCs, the name of the audit engagement partner is already disclosed, in practice, in the auditor's report through the required signature of the auditor's firm. No companies in the Russell 3000 Index are audited by such firms.

The EGC data above also indicates that for 55% of the EGCs, the auditor's report on the most recent audited financial statements includes an explanatory paragraph describing that there is substantial doubt about the company's ability to continue as a going concern, as compared to 1% for the population of companies in the Russell 3000 Index. This suggests that, for the majority of EGCs, the auditor is modifying the auditor's report to indicate there is substantial doubt about the company's ability to continue as a going concern. Determining the identity of the engagement partner ultimately responsible for the going concern evaluation could be a factor that investors and other financial statement users consider in connection with the facts and circumstances relevant to a going concern modification of the auditor's report.

Exempting EGCs from the reproposed amendments might put investors in EGCs at an informational disadvantage compared to investors in larger and more established companies that would be subject to the reproposed amendments. For example, if the reproposed amendments do not apply to audits of EGCs, but are applicable to audits of larger and more established companies, the potential disparity between the two groups of companies in the amount and quality of public information available for investment decision making could increase.

Matters pertaining to all costs, discussed earlier in this release, are equally applicable to all companies, including EGCs. As previously described, the reproposed disclosure requirements are not anticipated to be costly to implement for the accounting firms that audit EGCs or other accounting firms. The Board has posed questions and seeks input on whether these reproposed amendments should apply to the audits of EGCs.

VII. Questions for Commenters

1. Would the reproposed requirements to disclose the engagement partner's name and information about other participants in the audit provide investors and other financial statement users with useful information? How might investors and other financial statement users use the information?
2. Would the name of the engagement partner or the extent of participation of other participants be useful to shareholders in deciding whether to ratify the company's choice of registered firm as its auditor? If so, how?

3. Over time, would the reproposed requirement to disclose the engagement partner's name allow databases and other compilations to be developed in which investors and other financial statement users could track certain aspects of an individual engagement partner's history, including, for example, his or her industry expertise, restatement history, and involvement in disciplinary proceedings or other litigation?
   a. Would such databases or compilations be useful to investors and other financial statement users? If so, how?
   b. Would they provide investors and audit committees with relevant benchmarks against which the engagement partner could be compared? If so, how?

4. Over time, would the reproposed requirement to disclose the other participants in the audit allow investors and other financial statement users to track information about the firms that participate in the audit, such as their public company accounts, size of the firms, disciplinary proceedings, and litigation in which they have been involved? Would this information be useful to investors and if so, how?

5. Is the ability to research publicly available information about the engagement partner or other participants in the audit important? If so, why, and under what circumstances?

6. Would the reproposed requirement to disclose the engagement partner's name promote more effective capital allocation? If so, how? Can an engagement partner's history provide a signal about the reliability of the audit and, in turn, the company's financial statements? If so, under what circumstances?

7. Would the reproposed requirements to disclose the engagement partner's name and information about other participants in the audit either promote or inhibit competition among audit firms or companies? If so, how?

8. Would the reproposed disclosure requirements mislead investors and other financial statement users or lead them to make unwarranted inferences about the engagement partner or the other participant in the audit? If so, how? Would there be other unintended consequences? If so, what are those consequences, and how could they be mitigated?
9. What costs could be imposed on firms, issuers, or others by the reproposed requirement to disclose the name of the engagement partner in the auditor's report? Please provide any available empirical data. Will there be greater or lesser effects on EGCs or auditors of EGCs than on other issuers or auditors of other issuers?

10. What costs could be imposed by the application of the consent requirement to an engagement partner who is named in the auditor's report? Please discuss both administrative costs to obtain and file consents with the SEC, as well as any indirect costs that might result. How could insurance or other private contracts affect these costs?

11. Would application of the consent requirement to an engagement partner named in the auditor's report result in benefits, such as improved compliance with existing auditing requirements? Will there be greater or lesser effects on EGCs or auditors of EGCs than on other issuers or auditors of other issuers?

12. Would the reproposed amendments increase the engagement partner's or the other participants' sense of accountability? If so, how? Would an increased sense of accountability for engagement partners or other participants have an impact on audit quality? If yes, please provide specifics.

13. What costs could be imposed on firms, issuers, or others by the reproposed requirement to disclose the information about other participants in the auditor's report? Please provide any available empirical data. Will there be greater or lesser effects on EGCs or auditors of EGCs than on other issuers or auditors of other issuers?

14. What costs could be imposed by the application of the consent requirement to other firms that are named in the auditor's report? Please discuss both administrative costs to obtain and file consents with the SEC, as well as any indirect costs that might result. How could insurance or other private contracts affect these costs?

15. Would application of the consent requirement to other firms named in the auditor's report result in benefits, such as improved compliance with existing requirements? Will there be greater or lesser effects on EGCs or auditors of EGCs than on other issuers or auditors of other issuers?

16. Would disclosure of the extent of other participants' participation, within a range rather than as a specific number, provide sufficiently useful information to investors and other financial statement users? Why or why
not? Would the reproposed requirement to disclose the extent of other participant participation within ranges impose fewer costs than a specifically identified percentage?

17. Would increasing the threshold for individual disclosure of other participants to 5% from the originally proposed threshold of 3% improve the relevance of the disclosure? Would it reduce potential costs? Would another threshold, such as 10%, be more appropriate? If so, why?

18. Under the reproposed amendments disclosure would not be required when audit work is offshored to an office of the firm that issues the auditor's report (even though that office may be located in a country different from where the firm is headquartered), but disclosure would be required when audit work is performed by a foreign affiliate or other entities that are distinct from the accounting firm issuing the auditor's report.

a. Should all arrangements whether performed by an office of the firm issuing the auditor's report in a country different from where the firm is headquartered, a foreign affiliate or another entity that is distinct from the accounting firm issuing the auditor's report be disclosed as other participants in the audit? Why or why not?

b. Is it sufficiently clear how the disclosure requirement would apply in the context of offshoring? If not, how could this be made clearer?

19. Are there special considerations for alternative practice structures or other nontraditional practice structures that the Board should take into account regarding the reproposed requirement to disclose other participants in the audit?

20. Under the reproposed amendments, the auditor would be required to include the extent of participation of persons engaged by the auditor with specialized skill or knowledge in a particular field other than accounting and auditing ("engaged specialists") in the total audit hours and to disclose the location and extent of participation of such persons. The engaged specialists would not be identified by name, but would be disclosed as "other persons not employed by the auditor."

a. Is it appropriate to require disclosure of the location and extent of participation of engaged specialists? If not, why?
b. Would there be any challenges in or costs associated with implementing this requirement for engaged specialists? If so, what are the challenges or costs?

21. In the case of other participants that are not public accounting firms (such as individuals, consulting firms, or specialists), is the participant's name a relevant or useful piece of information that should be disclosed? Does disclosure of the participant's location and the extent of the participant's participation provide sufficient information?

22. If the Board adopts the reproposed amendments for auditors to disclose the name of the engagement partner and certain information about other participants in the audit in the auditor's report, should the Board also require firms to disclose the same information on Form 2 or another PCAOB reporting form? Why or why not?

23. Are the reproposed amendments to disclose the engagement partner's name and information about other participants in the audit appropriate for audits of brokers and dealers? If yes, are there any considerations that the Board should take into account with respect to audits of brokers and dealers?

24. Should the reproposed disclosure requirements be applicable for the audits of EGCs? Are there other considerations relating to efficiency, competition, and capital formation that the Board should take into account when determining whether to recommend that the Commission approve the reproposed amendments to disclose the engagement partner's name and information about other participants in the audit for application to audits of EGCs?

25. Are the disclosures that would be required under the reproposed amendments either more or less important in audits of EGCs than in audits of other public companies? Are there benefits of the reproposed amendments that are specific to the EGC context?

VIII. Appendices

The Board's reproposal includes this Release ("release") and the following appendices:

- Appendix 1 contains reproposed amendments to PCAOB auditing standards for disclosure of the engagement partner.
Appendix 2 contains reproposed amendments to PCAOB auditing standards for disclosure of other accounting firms and other persons not employed by the auditor.

Appendix 3 discusses in greater detail the requirements of the reproposed amendments, comments received, and the Board's responses to those comments.

IX. Opportunity for Public Comment

Interested persons are encouraged to submit their views to the Board. Written comments should be sent to the Office of the Secretary, PCAOB, 1666 K Street, NW, Washington, D.C. 20006-2803. Comments also may be submitted by e-mail to comments@pcaobus.org or through the Board’s website at www.pcaobus.org. All comments should refer to PCAOB Rulemaking Docket Matter No. 29 in the subject or reference line and should be received by the Board no later than 5:00 p.m. EST on February 3, 2014. The Board will consider comments received.

On the 4th day of December, in the year 2013, the foregoing was, in accordance with the bylaws of the Public Company Accounting Oversight Board,

ADOPTED BY THE BOARD.

/s/ Phoebe W. Brown

APPENDIX 1

Reproposed Amendments to PCAOB Auditing Standards for Disclosure of the Engagement Partner\(^1\)

AU sec. 508, "Reports on Audited Financial Statements"

SAS No. 58, "Reports on Audited Financial Statements" (AU sec. 508, "Reports on Audited Financial Statements"), as amended, is amended as follows:

a. In paragraph .08, subparagraph c-1 is added, as follows:

The name of the engagement partner\(^{4A}\) on the most recent period's audit.

Note: In cases in which the financial statements for all periods presented were audited during one audit engagement (for example, in an initial public offering or re-audit of multiple periods), the name of the engagement partner on the audits for all periods presented should be disclosed.

Note: In cases in which an auditor's report is dual dated and the engagement partner is changed after the original date of the report, the names of both engagement partners should be disclosed.

\(^{4A}\) The term "engagement partner" has the same meaning as the term used in Auditing Standard No. 9, *Audit Planning.*

\(^1\) PCAOB Release No. 2013-005, *Proposed Auditing Standards—The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and related amendments to PCAOB Standards* (August 13, 2013), includes proposed amendments that would supersede, amend, or delete paragraphs for which amendments are included in the reproposed amendments. If, prior to the conclusion of this rulemaking, the Board has adopted amendments that affect the amendments reproposed in this release, the Board may make conforming changes to the reproposed amendments.
b. In paragraph .08, at the end of the first paragraph of the example report on financial statements covering a single year, the following new sentence is added:

The engagement partner on the audit resulting in this report was [name].

c. In paragraph .08, at the end of the first paragraph of the example report on comparative financial statements, the following new sentences are added:

The engagement partner on the audit for the [period] ended [date] was [name]. [When the financial statements for all periods presented were audited during one audit engagement: The engagement partner on the audits resulting in this report was [name]. When the report is dual dated and the firm changes the engagement partner after the original date of the report: The engagement partner on the audit for the period ended December 31, 20X2 was Partner A, except for Note Z, for which the engagement partner was Partner B.]

d. In paragraph .13, between the third and fourth sentences of the first paragraph of the example report indicating a division of responsibility, the following new sentence is inserted:

The engagement partner on the audit for the [period] ended [date] was [name].

e. In paragraph .34, at the end of the first paragraph of the example report on the balance sheet only, the following new sentence is added:

The engagement partner on the audit resulting in this report was [name].

f. In paragraph .44, at the end of the first paragraph of the example of a qualified report, the following new sentence is added:

The engagement partner on the audit for the [period] ended [date] was [name].

g. In paragraph .63, at the end of the first paragraph of the example of a report disclaiming an opinion, the following new sentence is added:

The engagement partner on the engagement for the [period] ended [date] was [name].
h. In paragraph .74, between the third and fourth sentences of the first paragraph of the example of a successor auditor's report, the following new sentence is inserted:

The engagement partner on the audit resulting in this report was [name].

**AU sec. 9508, "Reports on Audited Financial Statements: Auditing Interpretations of Section 508"**

AU sec. 9508, "Reports on Audited Financial Statements: Auditing Interpretations of Section 508," as amended, is amended as follows:

a. In paragraph .36, at the end of the first paragraph of the example *Report on Single Year Financial Statements in Year of Adoption of Liquidation Basis*, the following new sentence is added:

The engagement partner on the audit resulting in this report was [name].

b. In paragraph .36, at the end of the first paragraph of the example *Report on Comparative Financial Statements in Year of Adoption of Liquidation Basis*, the following new sentence is added:

The engagement partner on the audit for the [period] ended [date] was [name].

**AU sec. 543, "Part of Audit Performed by Other Independent Auditors"**

SAS No. 1, "Codification of Auditing Standards and Procedures," section 543 "Part of Audit Performed by Other Independent Auditors" (AU sec. 543, "Part of Audit Performed by Other Independent Auditors"), as amended, is amended as follows:

In paragraph .09, between the third and fourth sentences of the first paragraph of the example report indicating a division of responsibility, the following new sentence is inserted:

The engagement partner on the audit resulting in this report was [name].
Auditing Standard No. 1, *References in Auditors’ Reports to the Standards of the Public Company Accounting Oversight Board*

Auditing Standard No. 1 is amended as follows:

In paragraph 1 of the Appendix, at the end of the first paragraph of the illustrative report on an audit of financial statements, the following new sentence is added:

The engagement partner on the audit for the [period] ended [date] was [name].

Auditing Standard No. 5 is amended as follows:

a. In paragraph 85, subparagraph d-1 is added, as follows:

The name of the engagement partner\(^{18A}\) on the most recent period's audit of internal control over financial reporting.

\(^{18A}\) The term "engagement partner" has the same meaning as the term used in Auditing Standard No. 9, *Audit Planning*.

b. In paragraph 87, at the end of the first paragraph of the example report, the following new sentences are added:

The engagement partner on the audit for the [period] ended [date] was [name]. [When the financial statements for all periods presented were audited during one audit engagement: The engagement partner on the audit(s) resulting in this report was [name]. When the report is dual dated and the firm changes the engagement partner after the original date of the report: The engagement partner on the audit for the period ended December 31, 20X8 was Partner A, except for Note X, for which the engagement partner was Partner B.]
APPENDIX 2

Reproposed Amendments to PCAOB Auditing Standards for Disclosure of Other Accounting Firms and Other Persons Not Employed by the Auditor1/

AU sec. 508, Reports on Audited Financial Statements

SAS No. 58, "Reports on Audited Financial Statements" (AU sec. 508, "Reports on Audited Financial Statements"), as amended, is amended as follows:

a. In subparagraph .11a, the text is replaced with the following:

The auditor's opinion is based, in part, on the report of another auditor, and the auditor makes reference to the audit of the other auditor pursuant to PCAOB standards (paragraphs .12 and .13).

b. In paragraph .11, subparagraph a-1 is added, as follows:

The auditor assumes responsibility, pursuant to AU sec. 543, for or is required to supervise, pursuant to Auditing Standard No. 10, Supervision of the Audit Engagement, the work of other independent public accounting firms or persons10A not employed by the auditor in the most recent reporting period's audit (paragraphs .14A through .14F).

10A PCAOB Rule 1001(p)(iv) defines the term "person" to mean any natural person or any business, legal or governmental entity, or association.

1/ PCAOB Release No. 2013-005, Proposed Auditing Standards—The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and related amendments to PCAOB Standards (August 13, 2013), includes proposed amendments that would supersede, amend, or delete paragraphs for which amendments are included in the reproposed amendments. If, prior to the conclusion of this rulemaking, the Board has adopted amendments that affect the amendments reproposed in this release, the Board may make conforming changes to the reproposed amendments.
c. In paragraph .12, delete the title "Part of Audit Performed by Other Independent Auditors" from the parentheses.

d. In paragraph .13, in the example of a report indicating a division of responsibility,

- The last sentence of the first paragraph is replaced with the following:

  Those statements were audited by [name of other auditors and country of their headquarters' office location] whose report has been furnished to us, and our opinion, insofar as it relates to the amounts included for B Company, is based solely on the report of [name of other auditors].

- The last sentence of the second paragraph is replaced with the following:

  We believe that our audit and the report of [name of other auditors] provide a reasonable basis for our opinion.

- In the first sentence of the third paragraph, the phrase "other auditors" is replaced with "[name of other auditors]"

e. The following section header is inserted after the amended paragraph .13:

Auditor Assumes Responsibility for or is Required to Supervise the Work of Other Independent Public Accounting Firms or Persons Not Employed by the Auditor in the Most Recent Period's Audit

f. Paragraph .14A is inserted, as follows:

When another independent public accounting firm performs an audit of the financial statements of one or more of a company's subsidiaries, divisions, branches, components, or investments, or another independent public accounting firm or person not employed by the auditor perform audit procedures in the most recent period's audit, other than an independent public accounting firm whose audit is referred to pursuant to PCAOB standards and except as provided by paragraph .14B, the following items should be disclosed in the auditor's report through the addition of an explanatory paragraph, or a reference to an appendix that includes the
required disclosure, following the opinion paragraph and any other explanatory paragraphs:

(1) With respect to other firms, the name of the firm(s); with respect to persons not employed by the auditor, the phrase "persons not employed by our firm," except as provided by paragraph .14D;

(2) The country(ies) of headquarters' office location of such firm(s) and the country(ies) of residence of natural persons or headquarters' office location of person(s) that are entities, except as provided by paragraph .14D;

(3) The percentage of the hours attributable to audits or audit procedures performed by such firm(s) or person(s) in relation to the total hours as of the date of the auditor's report in the most recent period's audit of the financial statements and, when applicable, internal control over financial reporting, which include the hours incurred in performing reviews pursuant to AU sec. 722, *Interim Financial Information*, (paragraphs .14C and .14D); and

Note: In cases in which the financial statements for all periods presented were audited during one audit engagement (for example, in an initial public offering or re-audit multiple periods), the disclosure should state the percentage of audit hours attributable to the audits or audit procedures performed by such firms and such persons in relation to the total audit hours for all periods presented.

Note: In cases in which an auditor's report is dual dated, the disclosure should be as of the second date of the auditor's report.

(4) A statement that the auditor is responsible for the audits or audit procedures performed by such firm(s) and persons and has supervised or performed procedures to assume responsibility for the work in accordance with PCAOB standards.
g. Paragraph .14B is inserted, as follows:

Excluded from the disclosures required by paragraph .14A are:

(1) The individual who performed the engagement quality review ("EQR");

(2) The person who performed the review pursuant to Securities and Exchange Commission Practice Section ("SECPs") 1000.45 Appendix K ("Appendix K review");

(3) Internal auditors, other company personnel, or third parties working under the direction of management or the audit committee who provided direct assistance in the audit of internal control over financial reporting; and

(4) Internal auditors who provided direct assistance in the audit of the financial statements.

h. Paragraph .14C is inserted, as follows:

When the aggregate extent of participation of all other persons from the same country not employed by the auditor or the individual extent of participation of other independent public accounting firms is 5% or more of the total hours in the most recent period's audit, the percentage of hours attributable to audits or audit procedures performed by such persons and firms should be disclosed as a single number, or by listing such persons and firms within the applicable range(s) as follows: 5% to less-than-10%, 10% to less-than-20%, 20% to less-than-30%, 30% to less-than-40%, 40% to less-than-50%, 50% to less-than-60%, 60% to less-than-70%, 70% to less-than-80%, 80% to less-than-90%, and 90%-or-more.

i. Paragraph .14D is inserted, as follows:

When the aggregate extent of participation of all other persons from the same country not employed by the auditor or the individual extent of participation of other independent public accounting firms is less than 5% of the total hours in the most recent period's audit, the other persons or firms should be disclosed as a group titled "other persons not employed by our firm" or "other firms," respectively. In addition, the following items should be included in the disclosure:
(1) A statement that the aggregate extent of participation of such persons or the individual extent of participation of such firms is less than 5%;

(2) The aggregate extent of participation of each group—as a single number, in one of the ranges described in paragraph .14C, or in the range of less-than-5%, as applicable; and

(3) The number of firms in the group titled "other firms" or the number of countries in the group titled "other persons not employed by our firm."

Note: When other persons or firms are disclosed as a group in accordance with this paragraph, disclosure of a country of their headquarters' office location or residence is not required as such persons and firms are not individually identified.

j. Paragraph .14E is inserted, as follows:

Examples of the explanatory paragraph described in paragraph .14A follow:

An example of the explanatory paragraph for situations in which another independent public accounting firm performs certain audit procedures—In our audit of the financial statements of XYZ Company and subsidiaries as of and for the year ended December 31, 20x2, ABC Audit Firm (country of headquarters' office location) performed certain audit procedures. We are responsible for the audit procedures performed by ABC Audit Firm and, accordingly, have supervised its work in accordance with PCAOB standards. The portion of the total audit hours attributable to audit procedures performed by ABC Audit Firm in our audit was X%.

An example of the explanatory paragraph for situations in which another independent public accounting firm performs an audit of the financial statements of one or more of the company's subsidiaries, divisions, branches, components, or investments—In our audit of the financial statements of XYZ Company and subsidiaries as of and for the year ended December 31, 20x2, ABC Audit Firm (country of headquarters' office location) performed an audit of the financial statements of one of XYZ Company's subsidiaries. We are responsible for the audit performed by ABC Audit Firm, insofar as that audit relates to our expression of an
opinion on the financial statements taken as a whole and, accordingly, have performed procedures to assume responsibility for its work in accordance with PCAOB standards. The portion of the total audit hours attributable to the audit performed by ABC Audit Firm in our audit was X%.

An example of the explanatory paragraph for situations in which persons not employed by the auditor perform certain audit procedures—In our audit of the financial statements of XYZ Company and subsidiaries as of and for the year ended December 31, 20x2, persons ([country of residence or headquarters' office location]) not employed by our firm performed certain audit procedures. We are responsible for the audit procedures performed by these persons and, accordingly, have supervised their work in accordance with PCAOB standards. The portion of the total audit hours attributable to audit procedures performed by these persons in our audit was X%.

k. Paragraph .14F is inserted, as follows:

An example of the explanatory paragraph using an appendix described in paragraph .14A follows:

In our audit of the financial statements of XYZ Company and subsidiaries as of and for the year ended December 31, 20x2, the other independent public accounting firms listed in the Appendix to this report performed [choose applicable: audits of the financial statements of one or more of the company's subsidiaries, divisions, branches, components, or investments or certain audit procedures], and persons not employed by our firm listed in the Appendix performed certain audit procedures. We are responsible for the audits and audit procedures performed by these other independent public accounting firms and persons not employed by our firm and, accordingly, have supervised or performed procedures to assume responsibility for their work in accordance with PCAOB standards.

APPENDIX

In our audit of the financial statements of XYZ Company and subsidiaries as of and for the year ended December 31, 20x2, the other independent public accounting firms listed below performed [choose applicable: audits of the financial statements of one or more of the company's subsidiaries, divisions, branches, components, or investments or certain audit procedures], and persons not employed by our firm listed below performed certain audit procedures. The portion of the total audit hours attributable to
audits and audit procedures performed by these firms and persons in our audit follows:

**Other participants in the audit and their extent of participation**

30% to less than 40%:
- ABC Audit Firm (country of headquarters' office location)

10% to less than 20%:
- Persons (country of residence or headquarters' office location) not employed by our firm
- JKL Audit Firm (country of headquarters' office location)

5% to less than 10%:
- Persons (country of residence or headquarters' office location) not employed by our firm

Other participants whose individual or aggregate extent of participation was less than 5%:
- [Fill in number] other firms, whose individual extent of participation was less than 5% of the total audit hours, participated in the audit. Their aggregate extent of participation was within the range of [fill in the appropriate range, as described in paragraph .14D].

- Other persons from [fill in number] countries not employed by our firm, whose aggregate extent of participation by country was less than 5% of the total audit hours, participated in the audit. Their aggregate extent of participation was within the range of [fill in the applicable range, as described in paragraph .14D].

**AU sec. 543, "Part of Audit Performed by Other Independent Auditors"**

SAS No. 1, "Codification of Auditing Standards and Procedures" section 543, "Part of Audit Performed by Other Independent Auditors" (AU sec. 543, "Part of Audit Performed by Other Independent Auditors"), as amended, is amended as follows:

a. In paragraph .04, the last sentence is deleted.

b. The following note is added after paragraph .04:

Note: When the principal auditor assumes responsibility for the work of the other auditor, paragraph .14A of AU sec. 508, *Reports on Audited*
Financial Statements, requires certain disclosures regarding the other auditor.

c. In paragraph .07:

- The following sentence is added after the third sentence:

  The report should also disclose the name of the other auditor and the country of headquarters' office location of the other auditor.

- The last sentence is deleted.

- Footnote 3 is deleted.

d. In paragraph .09:

- The last sentence of the first paragraph of the example report is replaced with the following:

  Those statements were audited by [name of other auditors and country of headquarters' office location] whose report has been furnished to us, and our opinion, insofar as it relates to the amounts included for B Company, is based solely on the report of [name of other auditors].

- The last sentence of the second paragraph of the example report is replaced with the following:

  We believe that our audit and the report of [name of other auditors] provide a reasonable basis for our opinion.

- In the first sentence of the third paragraph of the example report, the phrase "the other auditors" is replaced with "[name of other auditors]."

Auditing Standard No. 5, An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements

Auditing Standard No. 5, An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements, is amended, as follows:
a. In paragraph C1, subparagraph c-1 is added, as follows:

The auditor assumes responsibility, pursuant to AU sec. 543, *Part of Audit Performed by Other Independent Auditors*, for or is required to supervise, pursuant to Auditing Standard No. 10, *Supervision of the Audit Engagement*, the work of other independent public accounting firms or persons* not employed by the auditor in the most recent period's audit of the company's internal control over financial reporting.

* PCAOB Rule 1001(p)(iv) defines the term "person" to mean any natural person or any business, legal or governmental entity, or association.

b. Paragraph C11-A is added, as follows:

*The Auditor Assumes Responsibility for or is Required to Supervise the Work of Other Independent Public Accounting Firms or Persons Not Employed by the Auditor in the Most Recent Period's Audit of the Company's Internal Control Over Financial Reporting.*

When another independent public accounting firm performs an audit of the financial statements of one or more of the company's subsidiaries, divisions, branches, components, or investments or when another independent public accounting firm or a person not employed by the auditor performs audit procedures in the most recent period's audit of the company's internal control over financial reporting and the auditor assumes responsibility for or supervises the work, the auditor should include the disclosures described in paragraph .14A of AU sec. 508, *Reports on Audited Financial Statements*, regarding the other independent public accounting firm or person not employed by the auditor in the auditor's report on the audit of internal control over financial reporting. If the auditor chooses to issue a separate report on internal control over financial reporting, the explanatory paragraph described by AU sec. 508.14A should follow the paragraph required by paragraph 88 in each separate report. Further, in each separate report, these explanatory paragraphs should include a reference to the same appendix, if an appendix is used pursuant to AU sec. 508.14A.
APPENDIX 3

Additional Discussion and the Board's Consideration of Comments on the 2011 Release

The release describes the Board's principal considerations for the reproposed amendments to certain PCAOB auditing standards, which are presented in Appendices 1 and 2.

On October 11, 2011, the Board proposed amendments to the Board's auditing standards that would have required disclosure of the name of the engagement partner in the auditor's report and disclosure in the auditor's report about other participants in the audit (the "2011 Release"). Additionally, comments were made on the originally proposed amendments during meetings of the Board's Standing Advisory Group ("SAG") and Investor Advisory Group ("IAG").

This Appendix provides additional discussion of the Board's responses to comments raised by commenters on the originally proposed amendments, as well as the basis for the Board's preliminary views regarding certain requirements.

---

I. **Board's Consideration of Comments on the 2011 Release to Require Disclosure of the Engagement Partner**

A. **Providing Useful Information to Investors and Other Financial Statement Users**

The 2011 Release sought comments on whether additional transparency about the identity of the person responsible for the engagement would provide investors and other financial statement users with useful information. A number of varying views were expressed regarding the usefulness of the proposed disclosure.

Commenters who supported the proposed disclosure generally believed that disclosing the engagement partner's name in the auditor's report would provide investors and other financial statement users with useful information. For example, one commenter stated that, while signing the auditor's report with the engagement partner's name "would be responsive to the information needs of investors," they "would not object to a final standard requiring disclosure of the engagement partner's name, rather than signature, in the audit report" because it would have most of the same potential benefits as a signature requirement.3/

Further, a group of academics wrote in a comment letter that, "based on existing research, there is reason to believe that disclosure of the engagement partner's name in the auditor's report would enhance investor protection" and that "investors may find this information useful." The letter also stated that "requiring disclosure would provide market participants with potentially useful information."4/ An association of accountants in its letter stated that it "fully supports the aim of improving transparency of audits and believes that including the name and the signature of the engagement partner responsible for the audit will contribute to achieve this."5/

---

A variety of commenters, however, questioned the usefulness of providing users of the auditor's report with the engagement partner's name. Some commenters noted that the audit committee, which selects the auditor, already has information about the engagement partner's identity and qualifications. For example, one commenter stated that, "[t]ypically, when a new engagement partner is introduced to an audit committee, the committee is presented with the qualifications of the engagement partner, including experience with audits of similarly complex entities and specialized industries."6/ Other commenters believed that the disclosure would distort the user's perception of the role the firm plays in the conduct of the audit. Finally, some commenters were concerned about incorrect inferences investors and other financial statement users would make about the quality of audits or qualifications of the engagement partners.

Consistent with views expressed by investors in comment letters on the 2011 Release, comments made by a number of investors in meetings of the Board's SAG and IAG suggest that they see value in learning the identity of the engagement partner. Some investors, for example, indicated that the engagement partner's expertise would be relevant in ratifying the company's choice of a registered firm as its auditor.

The Board believes that disclosure of the engagement partner's name in the auditor's report would provide valuable information to investors and other financial statement users. Making the identity of the engagement partner publicly available would, over time, enable investors and other financial statement users to research the number, size, and nature of companies that the partner has audited, and industries that the partner has served as engagement partner. The disclosure also would enable investors and other financial statement users to determine whether the engagement partner was named in a public disciplinary proceeding, or it would inform shareholders' decisions about whether to ratify the company's choice of registered firm as its auditor.

Having considered the comments received on the 2011 Release, views of investors expressed in SAG and IAG meetings, and academic research, the Board is reproposing the disclosure of the engagement partner's name in the auditor's report substantially as proposed.

The reproposed amendments do not change the accounting firm's role in performing the audit or in issuing the auditor's report or any of the engagement partner's responsibilities. The engagement partner remains responsible for the audit and its

performance, as described by Auditing Standard No. 10, *Supervision of the Audit Engagement*. The only signature on an auditor's report would continue to be that of the accounting firm.

**B. Other Considerations**

1. **Disclosure in Reissued Auditor's Reports of Predecessor Auditors**

   In situations in which a predecessor auditor has been asked to reissue the auditor's report on the financial statements of a prior period, existing standards require the auditor to consider whether the auditor's report on those statements is still appropriate after certain required procedures are performed.\(^7\) If the predecessor auditor determines that the auditor's report is still appropriate and the auditor's report is reissued, the disclosure of the engagement partner in the audit need not be repeated in that auditor's report. Since the disclosure of the engagement partner in the audit is required only for the most recent period's audit, the reproposed amendments would not require the disclosure of the engagement partner in the audit in the reissued report of the predecessor auditor for prior years.

2. **Reputational Considerations**

   Some commenters expressed concern that an engagement partner's reputation could be unfairly harmed due to association with an audit. For example, some commenters suggested that users of the auditor's report might misinterpret the role of a partner in a restatement of the company's financial statements.\(^8\) Some commenters stated that some partners might be reluctant to serve on the audits of certain issuers or to remain in the accounting profession because of reputational risk associated with the disclosure of their names.

   As noted earlier in this release, requiring disclosure of engagement partners is intended to increase transparency about who led the audit. By increasing transparency, the reproposed amendments, if adopted, are intended to improve the usefulness of information available to investors and other financial statement users. Allowing

---

\(^7\) See paragraphs .70-.73 of AU sec. 508, *Reports on Audited Financial Statements*, which discuss the report of a predecessor auditor.

\(^8\) The Board notes that restatements occur for a variety of reasons, including corrections of errors in prior-year financial statements, identification of new information related to a particular account or disclosure, and retrospective application of new accounting pronouncements.
investors, shareholders, audit committee members and other market participants to consider an engagement partner's past work and reputation would be an intended result of the reproposed amendments.

The Board has, of course, considered whether investors might misunderstand the disclosure or make unfair or unwarranted assumptions about engagement partners as a result of the requirement. A fundamental premise of the federal securities laws is that the disclosure of relevant and accurate information enhances market efficiency by improving investors' ability to decide how to allocate their capital. The names of a public company's officers and directors—as well as its audit firm—are routinely disclosed in its public filings. The Board believes that investors and other market participants would be able to understand and make appropriate use of the disclosure required by the reproposed amendments.

One commenter also expressed concern that "[u]nder the proposed rule, underwriters might eventually develop a sub-set of 'approved engagement partner' or partners with specialized industry knowledge, despite the fact that industry expertise might be provided by other than the engagement partner, and in some engagements in some firms, by an individual below the level of partner."9/ The expertise of other members of the audit engagement team, however, cannot substitute for lack of the engagement partner's industry expertise. PCAOB standards on quality control contain specific requirements regarding industry expertise that the engagement partner should possess. For example, the engagement partner should possess "an understanding of the industry in which a client operates. In performing an audit or review of financial statements, this understanding would include an industry's organization and operating characteristics sufficient to identify areas of high or unusual risk associated with an engagement and to evaluate the reasonableness of industry specific estimates."10/

3. Personal Security

On July 28, 2009, the Board issued a concept release to seek commenters' views on whether it would be advisable for the Board to require the engagement partner

---

10/ Paragraph .08 of QC Section 40, The Personnel Management Element of a Firm's System of Quality Control—Competencies Required by a Practitioner-in-Charge of an Attest Engagement.
to sign his or her own name to the auditor's report ("2009 Release"). In the 2009 Release, the Board noted that the European Union's ("EU's") Eighth Company Law Directive requires a natural person to sign the auditor's report but allows for an exception "if such disclosure could lead to an imminent and significant threat to the personal security of any person." Some commenters on the 2009 Release suggested that such an exception could be necessary if a signature requirement is adopted. Other commenters did not believe an exception was necessary.

The Board originally proposed the requirement to disclose the engagement partner's name without an exception analogous to that in the EU's Eighth Directive. In the 2011 Release, the Board sought comment on whether the proposed disclosure would create particular security risks that warrant treating auditors differently from others involved in the financial reporting process.

In general, comments on the 2011 Release with respect to personal security were similar to comments on the 2009 Release. Some of the commenters believed that naming the engagement partner may create security risks for the engagement partner, and that even the perception of increased personal security concerns could have a negative impact on accounting firms' ability to recruit and retain the most qualified professionals. Other commenters indicated that auditors should not be treated differently, for security purposes, than other individuals involved in the financial reporting process who are publicly associated with an issuer's filing, or that personal security risks would increase as a result of the proposed disclosure.

After considering the comments received, the Board has not included an exception to the disclosure requirement analogous to that in the EU's Eighth Directive in the reproposed amendments. Further, a requirement to disclose the engagement partner's name has been in place in certain foreign jurisdictions for quite some time, yet no specific experience brought to the Board's attention provided persuasive information that personal risks to the engagement partners would increase as a result of these requirements.

---

II. Board's Consideration of Comments in the 2011 Release Relating to Other Participants in the Audit

A. Applicability of, and Exclusions from, the Disclosure

The reproposed amendments describe those participants in the audit to whom the requirements are applicable and those participants that are excluded from the disclosure.

1. Applicability of the Disclosure

The reproposed amendments to the Board's auditing standards would require the auditor to disclose information about independent public accounting firms and other persons not employed by the auditor that took part in the audit under arrangements pursuant to either AU sec. 543, Part of the Audit Performed by Other Independent Auditors, or Auditing Standard No. 10, as applicable.

The commenters' views on the usefulness, and therefore applicability, of the proposed disclosure were divided. Some commenters believed that the proposed disclosure would provide useful information, whereas others did not see value in including in the auditor's report information about the other participants. Some such commenters were concerned that the proposed disclosure may cause confusion over who has responsibility for the audit. Some other commenters believed that the evaluation of the other participants should be performed by the audit committee, who selects the auditor, rather than by investors.

For reasons previously described, the Board is reproposing the amendments to provide information about other participants in the audit. The required disclosure states that the auditor is responsible for the audits and audit procedures performed by the other participants in the audit. Thus, the disclosure would provide accurate and descriptive information to readers of the auditor's report regarding the responsibilities of the parties involved in the audit.

The Board recognizes that the audit committee generally has greater access to information about the auditor and other participants in the audit than investors and other financial statement users because of the audit committee's role in the appointment, compensation, and oversight of the company's auditor. This does not mean that

---

13/ See AU secs. 543.03-.05.

14/ Paragraph 10.d. of Auditing Standard No. 16, Communications with Audit Committees, requires the auditor to communicate to the audit committee, among other
information about the auditor and other participants in the audit would not also be useful to investors and other financial statement users, nor that enhanced transparency would not also assist audit committee members in performing their roles.

In addition to the more general comments on the requirements, one commenter raised a concern regarding the applicability of the proposed disclosure to alternative practice structures. Specifically, the commenter expressed a concern that alternative practice structures could be viewed negatively if a large number of individuals on audit engagements are disclosed in the auditor's report as non-employees of the audit firm. The Board's standards describe alternative practice structures as "nontraditional structures" whereby a substantial (the nonattest) portion of an accounting firm's practice is conducted under public or private ownership, and the attest portion of the practice is conducted through the accounting firm. Employee sharing or employee leasing arrangements between an accounting firm and a secondary party are a common form of alternative practice structures.

The originally proposed amendments were intended to provide investors and other financial statement users with greater transparency into the other participants in the audit, including other persons. After considering comments received, no change was made regarding the applicability of the requirement with respect to alternative practice structures. However, as described in the next section of this Appendix, the Board has modified the amendments so that the other persons not employed by the auditor would be listed in the disclosure as "persons not employed by our firm," rather than identified by their names. The other accounting firms participating in the audit would continue to be identified by their names.

2. **Exclusions from the Disclosure**

   Similar to the 2011 Release, the reproposed amendments exclude the following participants in the audit from the disclosure requirements:

   - Individuals performing the engagement quality review ("EQR").

---

16/ See Auditing Standard No. 7, *Engagement Quality Review.*
• Persons performing a review pursuant to Appendix K ("Appendix K review");\(^{17/}\) and

• Persons employed or engaged by the company who provided direct assistance to the auditor, including:
  
  o Internal auditors, other company personnel, or third parties working under the direction of management or the audit committee, who provided direct assistance in the audit of internal control over financial reporting;\(^{18/}\) and

  o Internal auditors who provided direct assistance in the audit of the financial statements.\(^{19/}\)

Similar to the 2011 Release, the reproposed amendments exclude individuals performing the EQR because the EQR is intended to be an objective second look at work performed by the engagement team, and the reviewers' work is not supervised by the auditor in accordance with Auditing Standard No. 10. Similarly, persons performing the Appendix K review would be excluded because the auditor does not supervise or assume responsibility for the Appendix K review. Finally, persons employed or engaged by the company who provide direct assistance to the auditor would be excluded because determining the extent of their participation in the audit may be impractical. Such persons also may perform other tasks for the company not related to providing direct assistance to the auditor or may not track time spent on providing the direct assistance.

The 2011 Release also excluded persons engaged by the auditor with specialized skill or knowledge in a particular field other than accounting or auditing. After further considering the role of such persons in the audit, the Board proposes to require, rather than exclude, disclosure in the auditor's report of persons with specialized skill or knowledge in a particular field other than accounting or auditing.

\(^{17/}\) See Securities and Exchange Commission Practice Section ("SECPS") 1000.45 Appendix K, SECPs Member Firms With Foreign Associated Firms That Audit SEC Registrants. The Board adopted the requirements of the SECPS of the American Institute of Certified Public Accountants as part of its interim standards.

\(^{18/}\) See paragraph 17 of Auditing Standard No. 5.

\(^{19/}\) See paragraph .27 of AU sec. 322, The Auditor's Consideration of the Internal Audit Function in an Audit of Financial Statements.
Currently, persons employed by the auditor with specialized skill or knowledge are supervised in accordance with Auditing Standard No. 10, while AU sec. 336, *Using the Work of a Specialist*, governs the auditor's use of persons engaged by the auditor with specialized skill or knowledge. As discussed below, persons engaged by the auditor with specialized skill or knowledge in a particular field other than accounting or auditing would be disclosed as "persons not employed by our firm." The Board believes that disclosure about the location and extent of participation of these other participants would be as relevant to investors and other financial statement users as information about any other participants in the audit.

B. Information to be Disclosed

The 2011 Release included the following disclosure requirements in an explanatory paragraph to the auditor's report:

- The names of other participants in the audit (including the financial statement audit and, when applicable, the audit of internal control over financial reporting, and reviews pursuant to AU sec. 722, *Interim Financial Information*);

- The location of other participants in the audit (the country of headquarters' office location for a firm and the country of residence or headquarters' office location of another person); and

- The percentage of hours attributable to the audits or audit procedures performed by the other participants in the audit in relation to the total hours in the most recent period's audit ("the percentage of the total hours in the most recent period's audit").

In general, commenters expressed their support for the disclosure, although some commenters suggested certain modifications. Those suggested modifications, and the Board's responses, are described below.

1. **Disclosing Names of the Accounting Firms vs. Other Persons Not Employed by the Auditor**

As described previously, one commenter raised a concern regarding the applicability of the proposed disclosure relating to other persons not employed by the auditor in relation to alternative practice structures. Specifically, the commenter requested a change in the applicability of the requirement to exclude alternative practice structures.
The Board made no such change; however, the originally proposed amendments have been modified so that the other persons not employed by the auditor would be listed in the disclosure as "persons not employed by our firm," rather than identified by their names.\(^{20/}\) For instance, such persons may include persons with specialized skill or knowledge in a particular field other than accounting or auditing. The Board recognizes that while other persons may participate in the audit, the intent of the 2011 Release principally was to capture the names of accounting firms. The Board's website includes names of registered accounting firms, inspection reports, and disciplinary actions.

The names of other types of companies or individuals not employed by the auditor may not be as meaningful as the fact of their participation and the location where the work was performed. The reproposed amendments would require disclosing the location of such persons (depending on the extent of participation) and the percentage or range of their extent of participation—combined, if there are multiple other persons from the same country not employed by the auditor.\(^{21/}\) The disclosure of the location and extent of participation in the audit of other participants would allow users to understand whether the other participants are headquartered or reside in the auditor's home country or in other jurisdictions, as well as how much of the audit was performed by those other participants.

2. Affiliate Relationships, Including Offshoring Arrangements

Some commenters suggested that the disclosure of affiliated accounting firms should be different from the disclosure of non-affiliated firms. For example, such commenters recommended disclosing that the affiliated firms follow a common audit methodology and employ consistent quality controls. Some of these commenters and others also recommended describing the auditor's oversight of affiliated firms

\(^{20/}\) While the reproposed amendments do not include a requirement to describe alternative practice structure arrangements, the reproposed amendments would not prohibit the accounting firm issuing the auditor's report from including additional language in the auditor's report describing that the firm leases its employees as part of its alternative practice structure. However, any additional language that could be viewed as disclaiming, qualifying, restricting, or minimizing the auditor's responsibility for the audit or the auditor's opinion on the financial statements is not appropriate and may not be used.

\(^{21/}\) The location for a natural person is the country of residence. The location of a person that is an entity is the country of the entity's headquarters' office location.
participating in the audit. Other commenters suggested that accounting firms affiliated with the auditor should not be disclosed at all.

Another group of commenters noted that many of the smaller accounting firms, unlike larger firms, routinely use participants from outside the firm in their audits as they are not part of a network of firms. In some of these commenters’ views, the proposed disclosure of non-affiliated firms or persons not employed by the firm may suggest to some that audits conducted by smaller accounting firms are of inferior quality.

The Board considered these comments and decided that the same disclosure requirements would apply to all accounting firms, whether or not a firm is affiliated with an audit network. The arrangements by which firms affiliate with one another and the related effect on the affiliated firms’ quality controls varies. The Board is reproposing disclosure requirements that would provide users of the auditor’s report with the names and locations of other accounting firms involved in the audit regardless of their network affiliation or other relationship. Regarding an additional disclosure of the auditor’s oversight of other participating affiliated firms, as suggested by some commenters, the reproposed amendments, like the proposed amendments, clearly describe the auditor’s oversight and supervision of the disclosed participants. Accordingly, no such additional disclosure requirement was added to the reproposed amendments.

The 2011 Release also noted that some accounting firms had begun a practice, known as offshoring, whereby certain portions of the audit are performed by offices of the accounting firm issuing the auditor’s report in a country different than the country where the firm is headquartered. While large U.S. accounting firms have, for some time, referred audit work on U.S.-based, multinational corporations to their foreign network affiliates, the practice of sending some audit work to offshore service centers, typically in countries where labor is inexpensive, has been increasing in recent years. In the 2011 Release, the Board explained that the proposed amendments would not require disclosure of offshoring arrangements to the extent that the offshored work is performed by another office of the same accounting firm.

Some commenters agreed with the Board’s proposed treatment of offshoring, while others suggested that disclosure of all offshoring arrangements should be required. Other commenters did not believe the proposed amendments should require disclosure of any offshoring arrangements. For example, one commenter stated that
"assessment of the impact of these sorts of arrangements is the responsibility of the audit committee, not the marketplace."\^[22/]

One commenter stated that "[t]he proposed amendments are not clear how to make the determination whether an off-shore location should be considered another office of the firm," rather than a separate entity requiring disclosure. This commenter noted that "firms may structure their operations in separate legal entities" that "often are wholly-owned and controlled by the registered public accounting firm and its partners," and recommended that the reproposed amendments use "different criteria than those proposed in the Release" to determine if disclosure was required. Specifically, this commenter recommended that the Board not require disclosure when offshored work "is subject to the direct supervision and review of the principal auditor" and the principal auditor retains "[d]etails of the work performed" in its home country.\^[23/]

After considering the comments, the Board has determined to address the disclosure of offshoring arrangements in the reproposal as originally proposed. Thus, disclosure would not be required when offshored work is performed by an office of the firm that issues the auditor's report, but it is required when it is performed by a separate firm or entity.\^[24/]

The Board understands that offshored work often is performed by companies that are distinct from, but that may be affiliated in some way with, the registered firm that issues the report. Disclosure of these participants in the audit would be consistent with the overall objective of the amendments the Board is reproposing and is an application of the reproposed requirement to disclose other audit participants notwithstanding any network affiliation or other relationship.

\^[22/] See letter from James L. Fuehrmeyer, Jr., Associate Teaching Professor, University of Notre Dame to Public Company Accounting Oversight Board, Attention: Office of the Secretary (December 13, 2011) available at http://pcaobus.org/Rules/Rulemaking/Docket029/012b_JLF.pdf.

\^[24/] If the offshore entity is a "public accounting firm," as defined by Rule 1001(p)(iii), the auditor’s report should include the disclosures required when another independent public accounting firm participates in the audit. If the offshore entity is not a "public accounting firm," the auditor’s report should make the disclosures required when persons other than the auditor’s full-time, permanent employees participate in the audit.
3. **Nature of Work**

In the 2011 Release, the Board asked for comments on whether the disclosure in the auditor's report should include a discussion of the nature of the work performed by other participants in addition to the extent of participation.

Some commenters recommended disclosing the nature of the work performed by the other participants because, in these commenters' views, it would provide more meaningful information about the other participants' involvement in the audit than the other participants' share of audit hours. Other commenters, however, believed that if the nature of work were required to be disclosed, the disclosure language could eventually become boilerplate. Many other commenters disagreed with disclosing the nature of the work. After considering the commenter's views, no requirement for disclosure of the nature of the work performed by other participants was added because the Board does not believe that requiring the disclosure of this more detailed information is necessary to achieve the Board's intended objective of providing more transparency of participants in the audit.25/

4. **Firm's Registration and Board's Ability to Inspect**

Although it was not proposed, some commenters believed that a disclosure of other accounting firms participating in the audit should include information about the firm's registration status with the PCAOB and the Board's ability to inspect in the jurisdiction in which the firms are located.

The Board recognizes that some auditors, their overseas offices, and other participants in the audit are located in jurisdictions in which the Board currently is unable to conduct inspections.26/ However, a requirement to disclose a participating accounting firm's registration status or the Board's ability to inspect in foreign countries was not added to the repoposed amendments. Such disclosures would (1) duplicate information

---

25/ While the repoposed amendments do not include a requirement to describe the nature of the work performed, the repoposed amendments would not prohibit the accounting firm issuing the auditor's report from including a description of the work performed by other participants in the audit. However, any description of the work performed that could be viewed as disclaiming, qualifying, restricting, or minimizing the auditor's responsibility for the audit or the auditor's opinion on the financial statements is not appropriate and may not be used.

26/ The Board is actively pursuing the necessary arrangements that would enable the Board to conduct inspections in all relevant foreign jurisdictions.
that is already publicly available on the Board's website and (2) not reflect any changes that took place after the auditor's report date.\(^{27}\) Users of the auditor's report would be able to obtain the most up-to-date registration and inspection information from the Board's website based on the name and location of an accounting firm disclosed in the auditor's report.

**C. Extent of Participation**

The originally proposed requirements included a 3% threshold for disclosing the other participants' relative participation in the audit. As originally proposed, the amendments would have required other participants in the audit whose individual extent of participation would have been 3% or more of the total hours in the most recent period's audit to be disclosed individually with their respective extent of participation. Those other participants in the audit whose individual extent of participation would have been less than 3% would be disclosed either individually or as a group.

As described below, comments were expressed about the originally proposed disclosure metric and disclosure threshold.

1. **Disclosure Metric**

The reproposed amendments, like the originally proposed amendments, would require that the percentage of the total hours in the most recent period's audit be determined as of the date of the auditor's report for each other accounting firm or other person participating in the audit. The reproposed disclosure requirements would apply only to the most recent period under audit.

In cases in which the financial statements for all periods presented were audited during one audit engagement (for example, in an initial public offering, single-period audit, or re-audit of multiple periods), the auditor would be required to disclose, as was proposed, the percentage of audit hours attributable to the audits or audit procedures performed by other participants in the audit in relation to the total audit hours for all periods presented. Section II.D., *Presentation in the Report*, later in this Appendix, includes a discussion of the disclosure in cases in which the auditor's report is dual dated.

Most commenters agreed with using the percentage of audit hours as the metric for disclosing the extent of participation. Some commenters suggested using other metrics that, in their view, would be more appropriate, for example, audit fees, the extent to which the auditor and other participants were responsible for auditing the assets and revenue of the company, and the company's segment or subsidiary audited by the other participants.

When developing the proposed amendments, metrics similar to those suggested by commenters were considered. For instance, the Board considered audit fees incurred in the most recent period's audit by other participants in the audit as a percentage of audit fees in the issuer's proxy disclosure. However, the Board concluded that this measure may not be representative of the extent of other participants' participation in the audit because audit fees in the proxy disclosure may include fees for other services (for example, other regulatory and statutory filings) and also may exclude fees paid directly to other participants rather than to the auditor.

Another metric considered was the percentage of revenues or assets tested by other participants. AU sec. 543 currently uses this metric when the auditor divides responsibility with the other auditor who audited part of the company. However, the use of this metric may not be suitable in all circumstances, particularly when both the other participants and the auditor perform audit procedures on the same location, business unit, or financial statement line item. For instance, other participants in the audit might perform an inventory observation to test the existence of the inventory at a particular location, and the auditor might test the valuation of the inventory at all locations, including the one tested by the other participants.

The Board continues to be of the view that the percentage of total hours in the most recent period's audit appears to be the most relevant and practical metric for the purpose of disclosure of the extent of other participants' participation in the audit. The reproposed amendments, like the proposed amendments, would require the use of this metric.

2. Disclosure Threshold

The originally proposed amendments would have required the auditor to state the percentage of hours attributable to the audits or audit procedures performed by other participants in the audit in relation to the total hours in the most recent period's audit. Specifically, the Board proposed requiring that other participants in the audit whose individual extent of participation would have been 3% or more of total hours in the most recent period's audit were to be disclosed individually with their respective extent of participation. Those other participants in the audit whose individual extent of participation would have been less than 3% were to be disclosed either individually or as a group titled "other participants" with the group's aggregate extent of participation.
The Board received many comments on the proposed threshold. Some of the commenters suggested that a 3% threshold is too low because it would result in disclosing information that is not meaningful to the users of the auditor's report. In the view of these commenters, a higher threshold would be more appropriate and useful. For example, a couple of commenters suggested the percentage should be the same as the 10% of revenue threshold for disclosing sales to a single customer under Financial Accounting Standards Board pronouncements.28/ Other commenters believed that the threshold should be 20%, as in the substantial role criteria for registration with the Board.29/ In contrast, another commenter suggested that a 1% threshold would provide the most meaningful information to users of the auditor's report about the extent of the other participants' participation in the audit.

The Board's intention is to provide meaningful information to investors and other financial statement users about participants in the audit. In light of the commenters' recommendations for a higher threshold, the Board's staff analyzed the impact of raising the threshold on the disclosure of other participants in a number of larger audit engagements.30/ According to the analysis, the maximum number of other participants

29/ According to paragraph (p)(ii), "Play a Substantial Role in the Preparation or Furnishing of an Audit Report," of PCAOB Rule 1001, Definitions of Terms Employed in Rules, "[t]he phrase 'play a substantial role in the preparation or furnishing of an audit report' means—(1) to perform material services that a public accounting firm uses or relies on in issuing all or part of its audit report with respect to any issuer, or (2) to perform the majority of the audit procedures with respect to a subsidiary or component of any issuer the assets or revenues of which constitute 20% or more of the consolidated assets or revenues of which constitute 20% or more of the consolidated assets or revenues of such issuer necessary for the principal accountant to issue an audit report on the issuer." Under Rule 2100, each public accounting firm that "plays a substantial role in the preparation or furnishing of an audit report with respect to any issuer must be registered with the Board."

30/ The Board's staff analyzed information provided by auditors of more than 100 larger issuers with respect to audit engagements conducted in 2011 and 2012. The selected information included the names of other participants in the audit and their individual extent of participation as the percentage of the total audit hours, without using a threshold. The Board's staff used this information to determine the approximate number of other participants in larger audit engagements that would be required to be disclosed individually using a 3%, 5%, and 10% threshold.
disclosed individually using a 3%, 5%, and 10% threshold was 10, 7, and 3, respectively, per issuer.

Taking into account the comments received and the results of the analysis described above, the disclosure threshold in the reproposed amendments was raised from 3% to 5%. In the Board’s view, using a 10% threshold could significantly reduce visibility into participants performing a large part of an audit, compared with using a 3% threshold or a 5% threshold.31/

The reproposed amendments would require the auditor to disclose other participants in the audit whose individual extent of participation is 5% or more of the total hours in the most recent period's audit. The extent of participation would be disclosed either as a single number or within a range (see Section II.D., Presentation in the Report, in this Appendix for further discussion on disclosure within ranges). Only public accounting firms whose individual contribution to the audit exceeded 5% of total audit hours would have their names and locations disclosed. With respect to other persons, to the extent that such persons reside or are headquartered in the same country, those persons whose aggregate contribution to the audit exceeded 5% of total audit hours would be disclosed as "persons in [insert country] not employed by our firm."

Finally, those who commented on the disclosure of other participants with the extent of participation below the threshold generally believed that it would be more appropriate to disclose such other participants as a group, rather than individually. This is consistent with the reproposed amendments. Accordingly, for those other participants in the audit whose individual extent of participation is less than 5% of the total hours (if there is more than one other person not employed by the auditor from the same country, their combined extent of participation should be used for this purpose), the reproposed amendments would require the auditor to disclose them as a group and state their aggregate extent of participation either as a single number or as a range. Other independent public accounting firms and persons not employed by the auditor would be required to be disclosed in separate groups. The reproposed amendments also would require the auditor to disclose the number of accounting firms whose individual extent of participation is below the 5% threshold.

31/ Based on the staff's analysis, raising the threshold from 5% to 10% could result in disclosing four fewer participants in an audit. More than a third of an audit could be performed by four participants whose extent of participation is individually 9% of the total audit hours.
D. Presentation in the Report

The reproposed amendments would require the auditor to make the required disclosures about other participants in the audit in the auditor's report. Specifically, the auditor would be required to add an explanatory paragraph to the auditor's report and also may include a reference to an appendix to the report. The following section discusses consideration of the disclosure in the auditor's report, how the information would be presented, and considerations for when an auditor's report is dual dated.

1. Disclosure in the Auditor's Report

The Board originally proposed that the disclosure of information about other participants in the audit be made in the auditor's report for the most recent period's audit as an explanatory paragraph that would be presented after the opinion on the financial statements and, when applicable, the opinion on the effectiveness of internal control over financial reporting and other explanatory paragraphs. The 2011 Release also noted that the explanatory paragraph could include a reference to an appendix immediately following the auditor's report that would include the required disclosure of other participants in the audit. Further, the 2011 Release noted that some auditors may prefer this alternative in audits in which there is more than one other participant in the audit. The 2011 Release stated that if the auditor issues separate reports on the financial statement audit and the audit of the effectiveness of internal control over financial reporting, the explanatory paragraph in each separate report should include a reference to the same appendix. Illustrative disclosure examples were also included in the originally proposed amendments.

Those commenters who supported the originally proposed amendments agreed with the proposed presentation in the auditor's report. Two opponents of the disclosure in the auditor's report suggested that consideration be given to utilizing Form 2 for the disclosure of other participants. One of these commenters suggested that Form 2 "would be a more useful location for such disclosures, as the determination of information in SEC filings is more appropriately maintained within the SEC's jurisdiction, Form 2 disclosures would not lengthen issuer and broker-dealer filings with tangential information, and Form 2 disclosures would not be subject to the estimation of hours necessitated by the short time constraints for SEC filings."\(^{32}\) The other commenter

believed that "Form 2 would allow investors, audit committees, and other third parties that seek the name of . . . other audit participants to obtain such information from one location." \(^{33/}\)

After considering the views of these commenters and the advantages and disadvantages of disclosure on Form 2,\(^{34/}\) the Board determined that the disclosures would be best presented in the auditor's report. As such, the Board is reproposing such disclosure in the auditor's report through an explanatory paragraph with illustrative examples substantially as proposed.

2. **Presentation as a Single Number or as Ranges**

The Board originally proposed that the extent of participation of the other participants in the audit be presented as a single number.

Some commenters on the 2011 Release cautioned about potential difficulties for auditors in determining an exact percentage of the total audit hours attributable to the other participants in the audit. For instance, in the commenters' view, extra effort may be required for determining separately the other participants' time spent on consolidated and local statutory audits, or determining whether time incurred on performing interim reviews, engagement acceptance and retention procedures, or review of the predecessor auditor's work should be included in the total audit hours.

Many of these commenters suggested that this type of disclosure could be costly to prepare and disruptive for both the auditor and other participants in the audit. These commenters recommended disclosing the extent of participation in ranges (for example, X%-Y%) rather than as a single number as the information would still be useful for the reader, but obtaining and presenting it would be less costly and disruptive. The commenters suggested various ranges for such a disclosure.

Having considered comments on the originally proposed amendments, the Board modified the originally proposed requirements to propose presentation of the extent of participation within a range or as a single number. In calculating the percentage of the

---

\(^{34/}\) Refer to Section V.C.2., Economic Considerations, Alternatives Considered, *Disclosure in Firms' Annual Reports Filed with the PCAOB on Form 2*, in the release for further discussion of this alternative.
total audit hours in the most recent period's audit, the auditor may estimate the total hours for the audit and the portion of hours attributable to each participant in the audit in situations in which the actual number of hours has not been reported. Further, the staff's analysis, described earlier, indicated that generally there are more participants in the range of 5% to less-than-10% than in the range of over 10%. The analysis also indicated that—cumulatively—participants whose extent of participation is less than 10% could perform a significant part of the audit.

Accordingly, to provide investors and other financial statement users with greater visibility into the relative extent of participation of other participants in the audit, the reproposed amendments would allow disclosure of the other participants as a single number or by listing such persons and firms within the applicable range(s), beginning with narrower ranges—less-than-5% and 5% to less-than-10%—and then in wider ranges—10% to less-than-20%, 20% to less-than-30%, and so on up to a range of 90%-or-more. Ranges below 50% may contain multiple participants.

In situations in which the extent of participation is less-than-5%, individually for firms or in the aggregate for person from the same country, the auditor would not be required to disclose the names and locations of other accounting firms or the locations of other persons not employed by the auditor. However, the auditor would be required to group and disclose the aggregate percent of participation of the other accounting firms or other persons not employed by the auditor and provide the number of firms in the group titled "other firms" or the number of countries in the group titled "other persons not employed by our firm."

Shown below are examples of the application of these requirements.

a. Example of Application for Other Participating Accounting Firms

In the case of other participating accounting firms, the auditor considers other participating accounting firms individually to determine the appropriate disclosure. For
example, if there are four other accounting firms that participate in the audit—three whose individual extent of participation was 4% and one (ABC Audit Firm in Country A) whose individual extent of participation was 15%—the auditor’s report would present the following:

**Other Participants in the Audit and Their Extent of Participation**

10% to less-than-20%

- ABC Audit Firm (Country A) [or alternatively, if a single number option is selected: 15%]

Other participants whose individual or aggregate extent of participation was less-than-5%:

- Three other firms, whose individual extent of participation was less than 5% of the total audit hours, participated in the audit. Their aggregate extent of participation was within the range of 10% to less-than-20% [or alternatively, if a single number option is selected: 12%].

In this example, the names and locations of the three other accounting firms are not disclosed because their individual extent of participation was each less than the 5% threshold.

b. Example of Application for Other Persons Not Employed by the Auditor

In the case of other persons not employed by the auditor, the auditor would group persons based on the country of headquarters' office location or residence to determine the appropriate disclosure. For example, if there are ten persons not employed by the auditor involved in the audit—two persons from Country A, three persons from Country B, two persons from Country C, and three persons from Country D—the auditor first groups the persons by country:

- In Country A, Person 1’s individual extent of participation was 2% and Person 2’s individual extent of participation was 7% equaling 9% of total audit hours performed by persons in Country A not employed by the auditor (included in the range of 5% to less-than-10% in the example below).

- In Country B, Person 1’s individual extent of participation was 3%, Person 2’s individual extent of participation was 4%, and Person 3’s individual extent of participation was 4% equaling 11% of total audit hours performed
by persons in Country B not employed by the auditor (included in the range of 10% to less-than-20% in the example below).

- In Country C, Person 1's individual extent of participation was 2% and Person 2's individual extent of participation was 2% equaling 4% of total audit hours performed by persons in Country C not employed by the auditor (included in the individually less than 5% category in the example below).

- In Country D, Person 1's individual extent of participation was 1%, Person 2's individual extent of participation was 2%, and Person 3's individual extent of participation was 1% equaling 4% of total audit hours performed by persons in Country D not employed by the auditor (included in the individually less than 5% category in the example below).

In this example, the auditor's report would present the following:

**Other Participants in the Audit and Their Extent of Participation**

10% to less-than-20%

- Persons in Country B not employed by our firm [or alternatively, if a single number option is selected: 11%]

5% to less-than-10%

- Persons in Country A not employed by our firm [or alternatively, if a single number option is selected: 9%]

Other participants whose individual or aggregate extent of participation was less than 5%:

- Other persons from two countries not employed by our firm, whose aggregate extent of participation by country was less than 5% of the total audit hours, participated in the audit. Their aggregate extent of participation was within the range of 5 to less-than-10% [or alternatively, if a single number option is selected: 8%].

In this example, the location and extent of participation for persons in Countries A and B are disclosed because the aggregate percent of participation is greater than the 5% threshold; however, for Countries C and D, only the total extent of participation is disclosed as the aggregate contribution of persons from Countries C and D was each less than 5% of the total audit hours.
3. \textit{Disclosure in Dual-Dated Auditor's Reports}

The Board proposed that in instances in which an auditor's report is dual dated due to subsequent discovery of facts, the auditor's report include the information presented at the original issuance date and then separately disclose the incremental extent of participation from the original issuance date to the latest report date.

Commenters expressed mixed views on the originally proposed disclosure requirements in these circumstances. Some commenters supported separate disclosure of the incremental extent of participation when an auditor's report is dual dated. Other commenters did not believe that separate disclosure of the percentage of hours attributed to the work performed subsequent to the original report date would be useful to users of the auditor's report.

After considering the commenters' views, the originally proposed disclosure requirement for when an auditor's report is dual dated was modified. Specifically, the reproposed amendments would not require the auditor to disclose in the auditor's report separately the percentage of hours attributable to the work performed as of the original report date and the percentage of hours attributable to the work performed subsequent to the original report date. Instead, the reproposed amendments would require that the auditor disclose in the auditor's report the extent of participation as the total percentage of the hours attributable to the work performed by other participants in the audit as of the latest report date.

Pursuant to the Board's standards, an auditor's report may be dual dated at the original issuance (generally because of a subsequent event) or upon a subsequent reissuance (generally because of a financial statement restatement or a material subsequent event).\footnote{See paragraphs .05 and .06 of AU sec. 530, \textit{Dating of the Independent Auditor's Report}.} The Board recognizes that, in situations in which an auditor's report is reissued and dual dated,\footnote{Based on the Board's staff analysis of auditors' reports filed in SEC annual (for example, Forms 10-K and 20-F) and amended annual (for example, Forms 10-K/A and 20-F/A) reporting forms for fiscal years 2011, 2010, and 2009, there were 15, 145, and 173 instances, respectively, in which the auditor's report was reissued and dual dated.} the auditor would be required to recompute the extent of the other participants' participation and present the disclosure as of the latest report date.
4. **Disclosure in Reissued Auditor’s Reports of Predecessor Auditors**

In situations in which a predecessor auditor has been asked to reissue the auditor’s report on the financial statements of a prior period, existing standards require the auditor to consider whether the auditor’s report on those statements is still appropriate after certain required procedures are performed. If the predecessor auditor determines that the auditor’s report is still appropriate and the auditor’s report is reissued, the disclosure of other participants in the audit need not be repeated in that auditor’s report. Since the disclosure of other participants in the audit is only required for the most recent period’s audit, the reproposed amendments would not require the disclosure of the other participants in the audit in the reissued report of the predecessor auditor for prior years.

E. **Disclosure Requirements in Situations in Which the Auditor Divides Responsibility for the Audit with Another Accounting Firm**

In situations in which the auditor divides responsibility for the audit with another accounting firm, the Board originally proposed that the auditor’s report require the auditor to disclose in the auditor’s report the name of the referred-to accounting firm and the country of its headquarters’ office location, which is not part of the existing requirements when dividing responsibility for an audit. Additionally, the originally proposed amendments to AU sec. 543 would have removed the existing requirement to obtain express permission of the referred-to accounting firm when disclosing the firm’s name. The SEC rules already include a requirement that the auditor’s report of a referred-to accounting firm should be filed with the SEC, so the name of the firm is already made public. The Board did not propose any changes to the existing requirements for disclosure of the magnitude of the portion of the financial statements audited by the referred-to accounting firm.

---

38/ See AU secs. 508.70-.73, which discuss the report of a predecessor auditor.

39/ See AU secs. 543.03 and .06-.09.

40/ See Rule 2-05 of Regulation S-X, 17 C.F.R. § 210.2-05.

41/ See AU sec. 543.07. Existing PCAOB standards require that the auditor disclose the magnitude of the portion of the financial statements audited by the referred-
Commenters had mixed views on this requirement. A few commenters supported the inclusion of the name and location of the referred-to accounting firms in the auditor's report. Other commenters believed that the name of the referred-to accounting firm in the auditor's report was unnecessary as the information is already public since the auditor's report of the referred-to accounting firm is required to be filed with the SEC. These commenters believed the disclosure would be redundant. Others who did not support the requirement for disclosure of other participants in the audit did not support this level of information in the auditor's report.

Further, commenters on this matter expressed mixed views on whether express permission should continue to be obtained from the referred-to accounting firm. A few commenters noted that obtaining permission for including the name is a common courtesy and should be retained. The remaining commenters supported the removal of the requirement and did not believe that it would pose any implementation challenges.

Some commenters expressed concern that the different metrics for disclosing the magnitude of the portion of the financial statements audited by the referred-to accounting firm (expressed in dollar amounts or percentages of total assets, total revenues, or other criteria) and the extent of participation of other participants in the audit (expressed as a percentage of total hours) may create confusion among users of the auditor's report. Others suggested that any confusion would be minimal and that investors would be able to navigate the information disclosed effectively, even with two different metrics.

Having considered comments on the originally proposed amendments, the Board is reproposing the requirements as originally proposed. The reproposed amendments to AU sec. 543 would require, as originally proposed, the name of the referred-to firm and the country of its headquarters' office location to be disclosed in the auditor's report. Also, as proposed, the reproposed amendments would remove the existing requirement in AU sec. 543 to obtain express permission of the referred-to firm when disclosing the firm's name. Including the name of the referred-to firm in the auditor's report on the consolidated financial statements makes it more readily available for investors and other financial statement users.

to accounting firm by stating the dollar amount or percentages of one or more of the following: total assets, total revenues, or other appropriate criteria, whichever most clearly reveals the portion of the financial statements audited by the referred-to accounting firm.
Further, the reproposed amendments, like the originally proposed amendments, do not amend the existing requirements for disclosure of the magnitude of the portion of the financial statements audited by the referred-to firm. As discussed earlier, percentage of audit hours appears to be the most relevant and practical metric for disclosing the extent of participation of other participants in the audit.\footnote{Refer to Section II.C., Extent of Participation, Disclosure Metric, for further discussion of the rationale and requirement for using percentage of audit hours as the metric for disclosing extent of participation of other participants in the audit.} The existing metrics for disclosing referred-to firms—described in AU sec. 543—also appear to be the most appropriate for such disclosure.
Summary: The Public Company Accounting Oversight Board ("PCAOB" or "Board") is issuing this supplemental request for comment on its 2013 reproposal to require auditors to disclose in the auditor's report the name of the engagement partner and information about certain other participants in the audit. The Board is considering an alternative to disclosure of this information in the auditor's report, whereby the information would be required to be disclosed on a new PCAOB form. This supplemental request for comment seeks commenters' views on disclosure on a new PCAOB form.

Public Comment: Interested persons may submit written comments to the Board. Such comments should be sent to the Office of the Secretary, PCAOB, 1666 K Street, NW, Washington, DC 20006-2803. Comments also may be submitted via e-mail to comments@pcaobus.org or through the Board's website at http://www.pcaobus.org. All comments should refer to PCAOB Rulemaking Docket Matter No. 029 in the subject or reference line and should be received by the Board no later than 5:00 p.m. EDT on August 31, 2015.

Board Contacts: Jennifer Rand, Deputy Chief Auditor (202/207-9206, randj@pcaobus.org); Jessica Watts, Associate Chief Auditor (202/207-9376, wattsj@pcaobus.org); Karen Wiedemann, Associate Counsel (202/591-4411, wiedemannk@pcaobus.org); and Lisa Calandriello, Assistant Chief Auditor (202/207-9337, calandriellol@pcaobus.org).

****
I. Summary

The Board is issuing this release to solicit comment on an alternative to its 2013 repropose to require disclosure in the auditor’s report of the name of the engagement partner and information about certain other participants in the audit. The new alternative would mandate disclosure of this information on a new PCAOB form, Form AP, Auditor Reporting of Certain Audit Participants ("Form AP"). This alternative could provide information about participants in the audit, which investors have consistently sought throughout the Board's rulemaking process, while responding to concerns raised by accounting firms and other commenters about the potential for increased auditor liability or litigation risk. Information filed on Form AP would be available in a searchable database on the Board's website.

The Board continues to consider whether to mandate auditor disclosure regarding certain audit participants and, if so, whether disclosure should be made in the auditor's report or on Form AP. The Board is considering trade-offs as it evaluates the potential of these two different disclosure mechanisms to achieve the benefits of disclosure—transparency and an increased sense of accountability. This supplemental request for comment presents the new PCAOB rule that would be necessary for the Board to implement this alternative, along with instructions for Form AP. The Board is seeking commenters' views on this approach as an alternative to mandated disclosure in the auditor's report.

This supplemental request for comment should be read in conjunction with the 2013 Release, which describes the proposal to mandate disclosure in the auditor's report.

Studies, memoranda, or other substantive items may be added by the Board or staff to the comment file during this rulemaking. A notification of the inclusion in the comment file of any such materials will be made available on the Board's website. To ensure direct electronic receipt of such notifications via e-mail, subscribe to PCAOB updates at http://pcaobus.org/About/Pages/PCAOBUpdates.aspx.

II. Background

For several years, the Board has been considering requiring auditors to provide more information about key participants in audits that are subject to PCAOB standards. Providing such information would provide additional transparency about who is

responsible for performing an audit for the benefit and use of investors and other market participants.

The Board began this rulemaking process in 2009, in response to a recommendation of the U.S. Department of the Treasury's Advisory Committee on the Auditing Profession ("ACAP"),\(^2\) by seeking comment on whether the engagement partner should be required to sign the auditor's report.\(^3\) In 2011, after considering commenters' views on a signature requirement, the Board proposed rules that would have required disclosure in the auditor's report of the name of the engagement partner. The Board proposed a disclosure approach instead of a signature requirement primarily in response to commenters' concerns regarding liability and to better reflect the roles of both the firm as a whole and the engagement partner. In addition, the Board proposed rules that would have required disclosures of certain information about accounting firms and other participants in the audit to provide investors and other financial statement users with greater transparency into the other participants in the audit.\(^4\)

In December 2013, the Board reproposed amendments to its standards that would require disclosure in the auditor's report of: (1) the name of the engagement partner; (2) the names, locations, and extent of participation of other independent public accounting firms that took part in the audit; and (3) the locations and extent of participation, on an aggregate basis by country, of certain nonaccounting firm participants in the audit.\(^5\)

\(^2\) ACAP, Final Report of the Advisory Committee on the Auditing Profession to the U.S. Department of the Treasury (October 6, 2008), at VII:20 (recommending that the PCAOB undertake a standard-setting initiative to consider mandating the engagement partner's signature on the audit report).

\(^3\) Concept Release on Requiring the Engagement Partner to Sign the Audit Report, PCAOB Release No. 2009-005 (July 28, 2009) ("2009 Release").

\(^4\) Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2, PCAOB Release No. 2011-007 (October 11, 2011) ("2011 Release"). The proposal would also have required accounting firms to name the engagement partner on the public Form 2, Annual Report Form, which is the reporting form registered firms are required to file to fulfill their annual reporting obligation to the Board regarding basic information about the firm and the firm’s issuer-, broker-, and dealer-related practices over the most recent 12-month period.

\(^5\) See 2013 Release.
Throughout this process, the Board has sought to balance the potential benefits of such disclosure with concerns expressed by some commenters about the potential for an increase in auditors’ private liability and litigation risk. Toward that end, the Board has looked for ways to achieve the stated goals of the rulemaking while minimizing, to the extent it can, these potential unintended consequences.

III. Comments on the 2013 Release About the Method and Location of Disclosures

The Board received 69 comment letters on the 2013 Release. While the Board continues to consider all comments received on the 2013 Release, and will more fully discuss its responses upon adoption of any final rules, this supplemental request for comment responds to the principal comments received regarding the consequences of disclosure in the auditor’s report and other potential locations for the disclosure.

Some commenters on the 2013 Release expressed concern that identifying the engagement partner and the other participants in the audit in the auditor’s report could create both legal and practical issues under the federal securities laws by increasing the named parties’ potential liability and by requiring their consent if the auditors’ reports naming them were included in, or incorporated by reference into, registration statements under the Securities Act of 1933 (“Securities Act”). In addition, some commenters expressed concerns about the possible effects of the engagement partner’s name appearing in the auditor’s report on litigation risk under Section 10(b) of the Securities Exchange Act of 1934 (“Exchange Act”) and Rule 10b-5 thereunder. In their view, identification in the auditor’s report could make it more likely that identified persons would be named in a lawsuit or could affect their liability position. Many commenters on the 2013 Release urged the Board to proceed with the new disclosure requirements, if it

---

6 The Board also received 43 comment letters on its 2011 Release and 23 comment letters on its 2009 Release. As noted in the 2013 Release, this topic has also been discussed at several meetings of the Board’s advisory groups, beginning in 2005. All of the comments and transcripts of the relevant portions of the meetings are available on the Board’s website. See Docket 029, Improving Transparency Through Disclosure of Engagement Partner and Certain Other Participants in Audits.

7 Section 11 of the Securities Act imposes liability on certain participants in a securities offering, including every accountant who, with his or her consent, has been named as having prepared or certified any part of the registration statement or any report used in connection with the registration statement or any report used in connection with the registration statement. Section 7 of the Securities Act requires that the consent of every accountant so named in a registration statement must be filed with the registration statement.
determined to do so, by mandating disclosure on an amended PCAOB Form 2\textsuperscript{8} or on a newly created PCAOB form as a means of responding to liability concerns.

Other commenters stated that, in view of the PCAOB's investor protection mission, the 2013 Release gave too much weight to commenters' concerns about liability. These commenters asserted that naming the engagement partner, in itself, would not affect the basis on which liability could be founded.

Some commenters suggested that the audit committee report in the company's proxy statement would be a more appropriate place for these disclosures, as the audit committee is responsible for engaging the auditor.\textsuperscript{9}

IV. Disclosure on Form AP

Form AP—Auditor Reporting of Certain Audit Participants

As an alternative to disclosure in the auditor's report, the Board is considering requiring disclosures regarding the engagement partner and other accounting firms participating in the audit to be made on a new PCAOB form, Form AP. Auditors would not be required to include the information in the auditor's report but could choose to do so in addition to filing the form.\textsuperscript{10} To implement this alternative, the Board could adopt a

\textsuperscript{8} Form 2 is due no later than June 30 of each year covering the 12-month period from April 1 to March 31. The purpose of Form 2 reporting is principally to provide a profile of the firm at a point in time, based on its activity related to issuers, brokers, and dealers. The Board collects information reflecting the extent and nature of the firm's audit practice related to issuers, brokers, and dealers in order to facilitate analysis and planning related to the Board's inspection responsibilities and to inform other Board functions.

\textsuperscript{10} If the Board adopts this alternative, paragraph .04 of AU sec. 543, Part of the Audit Performed by Other Independent Auditors, would be amended substantially as
rule requiring firms to file Form AP in connection with each issuance of an auditor's report. As discussed in more detail below, Form AP would be filed in a similar way as other PCAOB forms, and the data reported on Form AP would be accessible through a searchable database on the Board's website.

In its consideration of this standard-setting project, the Board has noted that its purpose was not to expose auditors to additional private liability; rather, it was to provide information about certain participants in the audit. The Board understands, however, that disclosure in the auditor's report could trigger the consent requirement of Section 7 and subject the named parties to potential liability under Section 11 of the Securities Act. As commenters suggested, disclosure on a form filed with the PCAOB should not raise those concerns because the engagement partner and other firms would not be named in a registration statement or in any document incorporated by reference into one. Commenters also raised concerns that disclosure in the auditor's report would increase the risk of potential liability in private actions under Exchange Act Section 10(b) in light of the Supreme Court's Janus decision. The Board is seeking comment on whether disclosure on Form AP would address concerns about this liability risk.

The Board believes that Form AP could serve the same purpose as disclosure in the auditor's report. Its intended audience would be the same as the audience for the auditor's report—investors and other financial statement users—and its filing would be tied to the issuance of an auditor's report. In that respect, it would differ from the PCAOB's existing forms, which are intended primarily to elicit information for the

---

11 While the requirement to file Form AP would be triggered by the issuance of an auditor's report, the form would not be incorporated by reference into or otherwise made part of the auditor's report.

12 Janus Capital Group, Inc. v. First Derivative Traders, 131 S. Ct. 2296 (2011). As noted in the 2013 Release, while any form of public identification of the engagement partner might, at least in some circuits, make it easier for a private plaintiff to plead reliance, the plaintiff would still have to meet all the other elements of Section 10(b) liability, including, with respect to claims based on Rule 10b-5(b), that the engagement partner was the maker of the statement under the Janus standard.

13 Existing PCAOB reporting forms have been developed for the purpose of registration with the Board and reporting to the Board about a firm's issuer, broker, and dealer audit practice. These forms are: (1) Form 1, Application for Registration; (2) Form
Board’s use in connection with its oversight activities, with a secondary benefit of making as much reported information as possible available to the public as soon as possible after filing with the Board.\textsuperscript{14} Form AP would be primarily intended as a vehicle for public disclosure, much like the auditor’s report itself.\textsuperscript{15} While information on Form AP could also benefit the Board’s oversight activities, that is ancillary to the primary goal of public disclosure.

In addition to the required filing of Form AP, auditors may decide to voluntarily provide the same disclosures in the auditor’s report. Since this would not be mandatory, however, fewer disclosures in the auditor’s report would be expected than under the requirements proposed in the 2013 Release. The Form AP approach may, therefore, require more effort for investors to find the information, and it thereby could impose higher search costs in some instances, given that the auditor’s report is the existing vehicle by which the auditor communicates with investors and is the place where other information about the audit is already found. Form AP would require a user to visit the PCAOB website to find information disclosed on the form. However, the use of Form AP may in other circumstances result in lower search costs than disclosure in the auditor’s report because investors and other financial statement users would be able to find all of the required disclosures regarding engagement partners and other audit participants in a searchable database on the Board’s website. As a result, search costs would likely be lower, for example, for persons seeking information about a single engagement partner across multiple audits or about multiple audit participants.

\textsuperscript{14} Periodic Reporting by Registered Public Accounting Firms, PCAOB Release No. 2008-004 (June 10, 2008), at 28.

\textsuperscript{15} The Board has authority under Section 103 of the Sarbanes-Oxley Act of 2002 ("Sarbanes-Oxley") to adopt, by rule, audit standards "to be used by registered public accounting firms in the preparation and issuance of audit reports . . . as may be necessary or appropriate in the public interest or for the protection of investors." In addition, under Section 102 of Sarbanes-Oxley, the Board has authority to require registered public accounting firms to submit periodic and special reports, which are publicly available unless certain conditions are met. If a firm requests confidential treatment of information under Section 102(e) of Sarbanes-Oxley, the information is not publicly disclosed unless there is a final determination that it does not meet the conditions for confidentiality. Because of the intended purpose of Form AP and the Board’s related authority under Section 103 of Sarbanes-Oxley, the Board does not believe it would be appropriate to provide for confidential treatment of the information filed on Form AP as it does for certain information filed on other PCAOB forms.
In the 2013 Release, the Board observed that requiring disclosure on a PCAOB form rather than in the auditor's report could impose additional compliance costs on accounting firms, which would have to develop systems for compiling and reporting the required information. The commenters that addressed that issue—primarily large accounting firms—argued, however, that the cost of compliance with a new PCAOB form filing requirement would be significantly less than the overall costs of disclosure in the auditor's report.

**Filing Requirements**

The use of Form AP would afford the Board flexibility in establishing the timing of disclosure versus a requirement to disclose in the auditor's report. While the Board believes the information should be made available promptly, some time could be allowed for firms to compile the necessary information, particularly for firms that choose to submit multiple forms at the same time. The Board is considering a basic filing deadline of 30 days after the date the auditor's report is first included in a document filed with the SEC, with a shorter deadline of 10 days for initial public offerings ("IPOs") to ensure that the information would be available before any IPO road show.\(^\text{16}\) This time period takes into account recommendations made by the commenters that suggested disclosure on a reporting form. Some of these commenters suggested a periodic filing requirement, such as quarterly reporting; others suggested filing within a specified time after the completion of the audit, such as 4 days, 30 days (consistent with Form 3), or 45 days (consistent with audit documentation requirements). Another commenter suggested that the required information should be reported prior to the filing of the definitive proxy statement. The Board is soliciting comment on the filing deadline.

Form AP would provide information only about completed audits, so there would be no requirement to file in connection with interim reviews.\(^\text{17}\) Form AP would be

---

\(^{16}\) In the context of an IPO, an emerging growth company ("EGC") may confidentially submit to the SEC a draft registration statement for confidential nonpublic review by the staff of the SEC prior to public filing. For auditor's reports initially issued in connection with such a draft submission, Form AP would be required to be filed within the 10 days after the registration statement is publicly filed with the SEC. Under Securities Act Section 6(e)(1), this public filing must occur not later than 21 days before the date on which the issuer conducts a road show. The 10-day deadline the Board is considering would ensure that investors had access to the information disclosed on Form AP before the commencement of a road show.

\(^{17}\) In addition, Form AP would not be required to be filed in connection with attestation engagements, for example, compliance with servicing criteria pursuant to SEC Rule 13a-18—Regulation AB. However, for audits of brokers and dealers, the total audit hours used to determine the extent of participation of other participants in the audit
required to be amended only when there was an error or omission in the original submission. Changes from one year to the next (for example, a change in engagement partner) would not necessitate an amendment and would be reflected on a Form AP that would be filed when the next auditor's report was issued. Since the obligation to file Form AP would be tied to the issuance of the auditor's report, if the auditor's report is reissued and dual-dated, a new Form AP would be required even when no other information on the form changed.

To ease compliance, firms would file Form AP through the PCAOB's existing web-based Registration, Annual, and Special Reporting system using the username and password they were issued in connection with the registration process. The system requirements for filing Form AP would be similar to the system requirements for filing annual and special reports with the PCAOB. The Board would develop a template, also known as a schema, that would allow firms to submit multiple forms simultaneously using an extensible markup language ("XML").

Forms AP filed with the Board would be available on the Board's website. The Board's website would allow users to search Forms AP by engagement partner, to find the audits of companies (i.e., issuers, brokers, and dealers) that he or she led (after the requirement's effective date), and by company, to find the engagement partner and other firms that worked on its audit. Over time, the PCAOB could enhance the search functionality as needed and could allow users to download the search results. It is anticipated that the information filed on Form AP would be available on the Board's website indefinitely.

V. Other Participants in the Audit

In addition to the method of disclosure, the Board is considering narrowing the disclosure requirements regarding other participants in the audit. In the 2013 Release, the Board proposed disclosure of: (1) the names, locations, and extent of participation of other independent public accounting firms that took part in the audit and (2) the locations and extent of participation, on an aggregate basis by country, of other nonaccounting firm participants that took part in the audit. The requirements to disclose other accounting firm participants in the audit are reflected in Appendix 1 substantially would include hours incurred in the performance of the required attestation procedures. See Section VIII.

18 Firms that are not registered with the Board would not be required to file Form AP, even when conducting audits in accordance with PCAOB standards. While not required, these firms could still voluntarily include this information in the auditor's report.
as reproposed. However, in light of comments received, the Board is reexamining the proposed requirements to disclose information about nonaccounting firm participants and engaged specialists.

**Nonaccounting Firm Participants**

As proposed in the 2013 Release, the category of nonaccounting firm participants might include, among others, certain "offshore" service centers, consultants, and entities that provide accounting firms with leased employees. The disclosures would permit investors to determine how much of the audit was performed by nonaccounting firm participants in a particular jurisdiction but not whether those nonaccounting firm participants were, for example, offshore service centers, consultants, or another type of entity that worked on the audit.

Under the 2013 Release, disclosure of the names of nonaccounting firm participants would not have been required. Rather, these participants would have been identified in the auditor's report as "persons in [country] not employed by our firm." Commenters' reactions to the reproposed disclosure requirements were mixed. Some commenters argued for uniform treatment of accounting firm participants and nonaccounting firm participants, either to make disclosure easier to understand or to avoid the creation of incentives to engage nonaccounting firm participants rather than other accounting firms. Other commenters questioned the value of the disclosures or suggested that the disclosures could be confusing or subject to misinterpretation.

After considering these comments, the Board is reconsidering the appropriateness of the disclosures regarding nonaccounting firm participants. As such, Appendix 1 does not include proposed requirements to disclose information regarding nonaccounting firm participants. The Board is, however, continuing to seek additional comment on whether it should adopt disclosure requirements concerning nonaccounting firm participants at this time.19

If, after considering the comments, the Board were to require disclosure regarding nonaccounting firm participants, the Board is also considering a more tailored approach than proposed in the 2013 Release. The more tailored approach, recommended by a commenter, would not require reporting if the nonaccounting firm participants were controlled by or under common control with the accounting firm issuing the auditor's report. The commenter suggested that disclosure of such situations

---

19 The proposed disclosure requirements regarding nonaccounting firm participants can be found in Appendix 2 of the 2013 Release at A2-1. If the Board were to adopt a disclosure requirement with regard to nonaccounting firm participants in Form AP, the instructions to Form AP would be revised for that disclosure.
would not provide useful information because such entities function as an "office" of the registered firm, and the fact that they are formed as separate legal entities would not impact the work performed.

Under this more tailored approach, disclosure of certain information about nonaccounting firm participants in the audit could be required if, in the current period, the auditor was required to supervise\textsuperscript{20} other persons that are not: (1) other accounting firms; (2) the auditor's own employees; or (3) entities that are controlled by or are under common control with the auditor, or employees of such entities. Control could be defined for that purpose as the power to direct or cause the direction of management and policies of the participant, whether through the ownership of voting securities, by contract, or otherwise.\textsuperscript{21}

The Board is seeking comment on retaining disclosures of nonaccounting firm participants and this more tailored approach to disclosure of nonaccounting firm participants to the extent the disclosures are retained.\textsuperscript{22}

\textit{Engaged Specialists}

The disclosure requirements and computation of total audit hours presented in Appendix 1 have been modified to exclude specialists engaged, not employed, by the auditor. This change responds to commenters' concerns that smaller firms, which are more likely to use engaged specialists, would have to disclose other participants more frequently than larger firms that employ specialists, which could place a disproportionate burden on smaller firms.

\textbf{VI. Economic Considerations}

The 2013 Release described the need for the disclosure requirements, as well as the alternatives the Board had considered to meet that need, and discussed potential benefits and costs of the proposed disclosure requirements, including potential indirect costs related to any increase in private liability.\textsuperscript{23} Appendix 2 to this release includes

---

\textsuperscript{20} See Auditing Standard No. 10, \textit{Supervision of the Audit Engagement}.

\textsuperscript{21} This would mirror the definition of "control" in some Securities Act and Exchange Act rules. See, e.g., 17 CFR § 230.405 and § 240.12b-2.

\textsuperscript{22} Regardless of the determination as to disclosure requirements, the hours of such persons would continue to be included in total audit hours.

\textsuperscript{23} 2013 Release at 25, 31. The Board continues to consider comments on the economic analysis included in the 2013 Release.
further discussion on the economic considerations related to the disclosure requirements the Board is considering. This release seeks comment on economic considerations related to disclosure on Form AP as compared to disclosure in the auditor's report, as discussed in Section IV, and on the potential changes to disclosure about other participants in the audit, as discussed in Section V.

Disclosure on Form AP Compared to Disclosure in the Auditor's Report

The Board is considering trade-offs as it evaluates the potential of these two different disclosure mechanisms to achieve the benefits of disclosure—transparency and an increased sense of accountability. Disclosure would publicly associate the engagement partner with the work performed. Accounting firms would similarly be publicly associated with their choices of engagement partners and their choices of other firms participating in the audit. These benefits depend, in part, on the extent to which the information would be made available and accessible so that market participants could use it. The Board is soliciting comment on the extent to which the form-based alternative discussed in this release would achieve these benefits compared to mandatory disclosure in the auditor's report as proposed in the 2013 Release.

As explained in Section III, the Board is considering a form-based alternative because of concerns expressed by some commenters about private liability. The Form AP alternative responds to those concerns by providing for disclosure outside the auditor's report. Since auditors would not be required to make the disclosure in the auditor's report, no auditor would be required to incur costs related to obtaining consents or to the increased risk of private liability under Section 11 of the Securities Act that might come with disclosure in the auditor's report. Such costs would presumably be incurred only if the auditor expected disclosure in the auditor's report in addition to Form AP to produce a net benefit.

The Form AP approach may involve higher direct costs than disclosure in the auditor's report, particularly when first implemented. Registered firms would presumably incur substantially the same direct costs to gather the necessary information, whether disclosure was made in the auditor's report or on the form. Those costs are described in the 2013 Release and Appendix 2 of this supplemental request for comment. However, use of Form AP would entail some additional costs to fill out the form and file it with the Board, and it could also result in the need for firms to develop a system to gather the required information from each engagement team. As described in Section III, however, commenters suggested that the cost of compliance with a new PCAOB filing requirement would not be significant.

Regardless of whether the information is disclosed in the auditor's report as previously proposed or on Form AP, data providers may develop methodologies to
compile the information, and investors that are interested in analyzing the information should be able to find it regardless of where it is disclosed. The Board is seeking comments on whether there are cost-effective ways, including search criteria or functionalities, to make this disclosure more broadly accessible to investors who may not be familiar with filings by firms on forms available on the Board’s website.

Nonaccounting Firm Participants in the Audit and Engaged Specialists

In considering whether to eliminate or narrow proposed disclosure requirements regarding nonaccounting firm participants in the audit and engaged specialists as described in Section V, the Board is considering trade-offs and seeks to strike an appropriate balance between the potential value to investors and other financial statement users of the proposed disclosures and the costs of compliance. For example, one commenter suggested that requiring less disclosure for nonaccounting firm participants than for other accounting firms may create an incentive for auditors to engage nonaccounting firms in order to avoid disclosure, which could negatively affect audit quality. On the other hand, other commenters stated that disclosures regarding nonaccounting firm participants could be distracting or subject to misinterpretation. With respect to engaged specialists, commenters have expressed concern that the proposed disclosure requirements may impose a disproportionate burden on smaller firms, which are more likely than larger firms to engage rather than employ specialists. The Board is seeking comment on these issues.

VII. Considerations for Audits of Emerging Growth Companies

Pursuant to Section 104 of the Jumpstart Our Business Startups ("JOBS") Act, any rules adopted by the Board subsequent to April 5, 2012, do not apply to the audits of EGCs (as defined in Section 3(a)(80) of the Exchange Act) unless the SEC "determines that the application of such additional requirements is necessary or appropriate in the public interest, after considering the protection of investors and

---

24 Some data providers sell subscriptions or charge a fee, while others make information available free of charge.

25 It is not uncommon for market participants to look to multiple sources for information required to be disclosed pursuant to the federal securities laws. For example, information may be incorporated by reference from one SEC filing to another. Also, some SEC rules allow issuers a choice of disclosure location for certain information. See, e.g., Item 406 of Regulation S-K, CFR § 229.406 (choice of location for disclosure regarding the company’s code of ethics).
whether the action will promote efficiency, competition, and capital formation.” As a result of the JOBS Act, the amendments to PCAOB rules and standards that are included in this supplemental request for comment, if adopted by the Board, would be subject to a separate determination by the SEC regarding their applicability to audits of EGCs.

Generally, the costs of making disclosure on Form AP, which are discussed in Section VI, would be equally applicable to all auditors, including auditors of EGCs. As noted above, the Form AP approach may involve more direct costs than disclosure in the auditor's report, such as costs associated with preparing and filing the form, but disclosure in the auditor's report may have more indirect costs, such as potential liability that could arise if the auditor's report is included in a Securities Act registration statement. Such direct costs would be borne with respect to audits of all companies, but such indirect costs may have less impact for auditors of companies that do not regularly conduct registered offerings of securities (including auditors of EGCs that do not regularly conduct such offerings).

In the 2013 Release, the Board discussed and sought comment on the applicability of the proposed disclosure requirements to audits of EGCs. The Board continues to consider comments received in response to the 2013 Release. In addition, the Board seeks further comment, including any available empirical data, on how disclosure on Form AP would affect EGCs and on whether it would protect investors and promote efficiency, competition, and capital formation.

VIII. Application to Audits of Brokers and Dealers

Pursuant to Exchange Act Rule 17a-5, brokers and dealers are generally required to file annual reports with the SEC and other regulators. The annual reports include a financial report, either a compliance report or exemption report, and reports by the auditor covering the financial report and the compliance report or exemption report. The annual reports are public, except that if the statement of financial condition in the financial report is bound separately from the balance of the annual report, the balance of the annual report is deemed confidential and nonpublic. Therefore, in situations in which the broker or dealer binds the statement of financial condition separately from the balance of the annual report, the auditor generally would issue two separate auditor's reports.

27 See 17 CFR § 240.17a-5.

28 See Exchange Act Rule 17a-5(e), 17 CFR § 240.17a-5(e).
reports that would have different content: (1) an auditor’s report on the statement of financial condition that would be available to the public and (2) an auditor’s report on the complete annual report that, except as provided in paragraph (c)(2)(iv) of Exchange Act Rule 17a-5, would be confidential and not available to the public.\(^{29}\)

In such cases, only one Form AP would be required. The audit hours used to determine the extent of participation of other accounting firms participating in the audit would include hours incurred in the performance of: (1) the audit of the financial statements; (2) audit procedures performed on supplemental information; and (3) attestation procedures performed in accordance with Attestation Standard No. 1, Examination Engagements Regarding Compliance Reports of Brokers and Dealers, or Attestation Standard No. 2, Review Engagements Regarding Exemption Reports of Brokers and Dealers.

The Board solicited comment regarding the applicability of the requirements to audits of brokers and dealers in the 2013 Release. Some commenters indicated that the requirements should apply equally to all audits performed in accordance with PCAOB standards, while others opposed the requirements for audits of nonissuer brokers or dealers.

The Board continues to consider these comments. The Board is also seeking comment on whether Form AP presents specific issues with respect to audits of brokers and dealers.

IX. Appendices

This supplemental request for comment includes this release and its appendices:

- Appendix 1 contains the proposed amendments to the Board’s rules and PCAOB auditing standards related to disclosure of the name of the engagement partner and certain information about other accounting firms on Form AP and proposed form instructions.

- Appendix 2 contains economic considerations related to the disclosure requirements.

\(^{29}\) See also Exchange Act Rule 17a-5(c)(2), 17 CFR § 240.17a-5(c)(2), regarding audited statements required to be provided to customers.
X. Effective Date

At this time, the Board is considering making the requirements effective for auditors' reports issued or reissued on or after June 30, 2016, or three months after approval of the requirements by the SEC, whichever occurs later.

XI. Opportunity for Public Comment

The Board is seeking comment on all aspects of the Form AP alternative, including how Form AP compares to the disclosure in the auditor's report proposed in the 2013 Release, its economic implications, and whether there are any special considerations relevant to audits of EGCs, brokers and dealers, and other entities. The Board is also interested in any issues related to the Form AP instructions and filing process and how the Board might address them. In addition, the Board seeks comments on the following more specific questions:

1. Would disclosure on Form AP as described in this release achieve the same potential benefits of transparency and an increased sense of accountability as mandatory disclosure in the auditor's report? How do they compare? Would providing the disclosures on Form AP change how investors or other users would use the information?

2. Are there special considerations relating to the Form AP approach that have not been addressed in this supplemental request for comment? If so, what are the considerations? How might the Board address them? What are the costs of Form AP compared to the costs of disclosure in the auditor's report?

3. Would disclosure on Form AP mitigate commenters' concerns about liability? Are there potential unintended consequences, including liability-related consequences under federal or state law, of the Form AP approach? If so, what are the consequences? How might the Board address them?

4. In addition to the required filing of the Form AP, auditors may decide to voluntarily provide the same disclosures in the auditor's report. Are there any special considerations or unintended consequences regarding voluntary disclosure in the auditor's report? If so, what are those considerations or consequences? How might the Board address them?

5. What search criteria and functionality would users want for information filed on Form AP? What additional criteria and functionality beyond what is described in Section IV of this release would be useful? Would third-party
vendors provide additional functionality if the Board does not? Are there cost-effective ways to make the disclosure more broadly accessible to investors who may not be familiar with PCAOB forms?

6. Is 30 calendar days after the filing of the auditor's report (and 10 calendar days in the case of an IPO) an appropriate amount of time for firms to file Forms AP? Should the deadline be shorter or longer? Why? Are there circumstances that might necessitate a different filing deadline? For example, should there be a longer deadline (e.g., 60 days) in the first year of implementation? Should the 10-day deadline apply whenever the auditor's report is included in a Securities Act registration statement, not just in the case of an IPO?

7. This supplemental request for comment contemplates not requiring disclosure of nonaccounting firm participants in the audit as previously proposed. Is it an appropriate approach to not require disclosure of nonaccounting firm audit participants? If not, should the Board adopt the requirements as proposed in the 2013 Release or the narrower, more tailored approach described in Section V of this supplemental request, which would not require disclosure of information about nonaccounting firm participants controlled by or under common control with the accounting firm issuing the auditor's report, with control as defined in Section V? If the Board were to adopt this narrower, more tailored approach, is the description of the scope of a potential requirement sufficiently clear? Why or why not? Is the definition of control in Section V appropriate? Why or why not?

8. Does Form AP pose any specific issues for EGCs? Would disclosure of the required information on Form AP promote efficiency, competition, and capital formation if applied to EGCs? If so, how? How does disclosure on Form AP compare to disclosure in the auditor's report proposed in the 2013 Release in that regard? Would creating an exemption for audits of EGCs benefit or harm EGCs or their investors? Why?

9. Does Form AP pose any specific issues for brokers, dealers, or other entities? If so, what are those issues? How does disclosure on Form AP compare to disclosure in the auditor's report proposed in the 2013 Release in that regard?

10. Are the rule to implement Form AP, the instructions to Form AP, and the amendments to AU sec. 508 included in Appendix 1 clear and appropriate? Why or why not?
11. Are there additional economic considerations associated with mandated disclosure, either in the auditor’s report or on Form AP, that the Board should consider? If so, what are those considerations? The Board is particularly interested in hearing from academics and in receiving any available empirical data commenters can provide.

12. Assuming the Board adopts a rule during 2015, would it be feasible to make the requirement, either in the auditor's report or on Form AP, effective for auditors’ reports issued or reissued on or after June 30, 2016, or three months after the SEC approves the requirements, whichever is later? How much time following SEC approval would firms need to implement the requirement either in the auditor's report or on Form AP?

Interested persons are encouraged to submit their views to the Board. Written comments should be sent to the Office of the Secretary, PCAOB, 1666 K Street, NW, Washington, DC 20006-2803. Comments also may be submitted by e-mail to comments@pcaobus.org or through the Board's website at http://www.pcaobus.org. All comments should refer to PCAOB Rulemaking Docket Matter No. 029 in the subject or reference line and should be received by the Board no later than 5:00 p.m. EDT on August 31, 2015. The Board will consider comments received.

On the 30th day of June, in the year 2015, the foregoing was, in accordance with the bylaws of the Public Company Accounting Oversight Board,

ADOPTED BY THE BOARD.

/s/ Phoebe W. Brown

Phoebe W. Brown
Secretary

June 30, 2015
APPENDIX 1

Amendments to Rules of the Board to Require Disclosure of Certain Participants in the Audit on Form AP

Section 3. Auditing and Related Professional Practice Standards

* * * * *

Rule 3210. Signatures and Amendments

The provisions of Rule 2204 concerning signatures and Rule 2205 concerning amendments shall apply to any form filed pursuant to this Part of the Rules of the Board as if the submission were a report on Form 3.

Rule 3211. Auditor Reporting of Certain Audit Participants

(a) For each audit report issued pursuant to PCAOB standards for the audit of an issuer or broker or dealer, each registered public accounting firm must file with the Board a report on Form AP in accordance with the instructions to that form.

Note: Form AP is not required to be filed by a public accounting firm that is another auditor pursuant to AU sec. 543, Part of Audit Performed by Other Independent Auditors, whose audit report is issued in accordance with PCAOB standards and is referred to by the registered public accounting firm in accordance with AU sec. 543.07.

(b) Form AP is deemed to be timely filed if—

1. The form is filed by the 30th day after the date the audit report is first included in a document filed with the Commission; or

2. In circumstances where the company had no obligation to file, and did not file, periodic or other reports or registration statements with the Commission as of the auditor's report date, the registered public accounting firm files the form by the 10th day after the date the auditor's report is first included in a document filed with the Commission.
(c) Unless directed otherwise by the Board, a registered public accounting firm must file such report electronically with the Board through the Board's web-based system.

(d) A report on information about the audit of an issuer or broker or dealer on Form AP shall be deemed to be filed on the date that the registered public accounting firm submits a Form AP in accordance with this Rule that includes the signed certification in Part VI of Form AP.

* * * * *

FORM AP—AUDITOR REPORTING OF CERTAIN AUDIT PARTICIPANTS

GENERAL INSTRUCTIONS

1. Submission of This Report. Effective [insert effective date of Rule 3211], a registered public accounting firm must use this Form to file with the Board information about the audit of an issuer or broker or dealer required by Rule 3211 and to file any amendments to this Form. Unless otherwise directed by the Board, the registered public accounting firm must file this Form electronically with the Board through the Board's web-based system.

2. Defined Terms. The definitions in the Board's rules apply to this Form. Italicized terms in the instructions to this Form are defined in the Board's rules. In addition, as used in the instructions to this Form, the term "the Firm" means the registered public accounting firm that is filing this Form with the Board.

3. When This Report is Considered Filed. A report on information about the audit of an issuer or broker or dealer is considered filed when the Firm has submitted to the Board a Form AP in accordance with Rule 3211 that includes the signed certification required by Part VI of Form AP.

4. Amendments to This Report. Amendments shall not be filed to update information in a filed Form AP that was correct at the time the Form was filed, but only to correct information that was incorrect at the time the Form was filed or to provide information that was omitted from the Form and was required to be provided at the time the Form was filed. When filing a Form AP to amend an earlier filed Form AP, the Firm must supply not only the corrected or supplemental information, but it must include in the amended Form AP all information, affirmations, and certifications that were required to be included in the original Form AP. The Firm may access the originally filed Form AP through
the Board's web-based system and make the appropriate amendments without needing to reenter all other information.

Note: The Board will designate an amendment to a report on information about the audit of an issuer or broker or dealer as a report on "Form AP/A."

5. **Rules Governing This Report.** In addition to these instructions, the rules contained in Part 1 of Section 3 of the Board's rules govern this Form. Read these rules and the instructions carefully before completing this Form.

6. **Language.** Information submitted as part of this Form, must be in the English language.
PART I—IDENTITY OF THE FIRM

In Part I, the Firm should provide information that is current as of the date of the certification in Part VI.

Item 1.1  Name of the Firm

a. State the legal name of the Firm.

b. If different than its legal name, state the name under which the Firm issued this audit report.

Item 1.2  Location of the Firm’s Office

a. City and state (or, if outside the United States, city and country) of the office of the Firm issuing the audit report.

PART II—GENERAL INFORMATION CONCERNING THE FILING OF THIS FORM

Item 2.1  Amendments

If this is an amendment to a report previously filed with the Board:

a. Indicate, by checking the box corresponding to this item, that this is an amendment.

b. Identify the specific Part or Item number(s) in this Form (other than this Item 2.1) as to which the Firm’s response has changed from that provided in the most recent Form AP or amended Form AP filed by the Firm with respect to an audit report related to the issuer or broker or dealer named in Item 3.1.a.1.

PART III—AUDIT CLIENT AND AUDIT REPORT

Item 3.1  Audit Report

a. Provide the following information concerning the issuer or broker or dealer for which the Firm issued the audit report –

1. Indicate, by checking the box corresponding to this item, if the audit client is an issuer, other than an employee benefit plan or investment company; a broker or dealer, an employee benefit plan; or an investment company;
2. The Central Index Key (CIK) number, if any, or broker's or dealer's Central Registration Depository (CRD) number, or Series identifier, if any;

3. The name of the issuer or broker or dealer whose financial statements were audited;

4. The date of the audit report;

5. The end date of the current period's financial statements identified in the audit report; and

6. Name (that is, first and last name and any middle name(s) and suffix) of the engagement partner on the current period's audit.

b. Indicate, by checking the box corresponding to this item, if the current period and one or more other periods presented in the financial statements identified in Item 3.1.a.5 were audited during a single audit engagement.

c. In the event of an affirmative response to Item 3.1.b, indicate the periods audited during the single audit engagement for which the individual named in Item 3.1.a.6 served as engagement partner (for example, as of and for the two years ended December 31, 20XX).

d. Indicate, by checking the box corresponding to this item, if the audit report was dual-dated.

e. In the event of an affirmative response to Item 3.1.d, indicate the date of the dual-dated information and if different from the engagement partner named in Item 3.1.a.6, the name of the engagement partner who audited the information within the financial statements to which the dual-dated opinion applies.

f. Indicate, by checking the box corresponding to this item, if other public accounting firm(s) took part in the audit. If this item is checked, complete Part IV. By checking this box, the Firm is stating that it is responsible for the audits or audit procedures performed by the other public accounting firm(s) identified in Part IV and has supervised or performed procedures to assume responsibility for their work in accordance with PCAOB standards.
g. Indicate, by checking the box corresponding to this item, if the Firm divided responsibility for the audit pursuant to PCAOB standards, with one or more other public accounting firm(s). If this item is checked, complete Part V.

Note: In responding to Item 3.1.e, the Firm should provide each date of any dual-dated audit report.

Note: In responding to Item 3.1.f, other public accounting firms that took part in the audit do not include the public accounting firm(s) with which the Firm divided responsibility for the audit and whose report the Firm made reference to pursuant to PCAOB standards.

PART IV—RESPONSIBILITY FOR THE AUDIT IS NOT DIVIDED

In responding to Part IV, total audit hours in the current period’s audit should be comprised of hours attributable to: (1) the financial statement audit; (2) reviews pursuant to AU sec. 722, Interim Financial Information; (3) the audit of internal control over financial reporting pursuant to Auditing Standard No. 5, An Audit of Internal Control Over Financial Reporting That Is Integrated With an Audit of Financial Statements; (4) audit procedures performed on supplemental information, pursuant to Auditing Standard No. 17, Auditing Supplemental Information Accompanying Audited Financial Statements; and (5) attestation procedures performed in accordance with Attestation Standard No. 1, Examination Engagements Regarding Compliance Reports of Brokers and Dealers, or Attestation Standard No. 2, Review Engagements Regarding Exemption Reports of Brokers and Dealers. Excluded from the disclosure and from total audit hours in the current period’s audit are: (1) the engagement quality reviewer; (2) the person who performed the review pursuant to Securities and Exchange Commission Practice Section 1000.45 Appendix K; (3) specialists engaged, not employed, by the Firm; (4) internal auditors, other company personnel, or third parties working under the direction of management or the audit committee who provided direct assistance in the audit of internal control over financial reporting; and (5) internal auditors who provided direct assistance in the audit of the financial statements.

In responding to Part IV, if the financial statements for the current period and one or more other periods covered by the audit report identified in Item 3.1.a.4 were audited during a single audit engagement (for example, in a reaudit of a prior period(s)), the calculation should be based on the percentage of audit hours attributable to the audits or audit procedures performed by such firms in relation to the total audit hours for the periods identified in Item 3.1.c.

Indicate, by checking the box, if the extent of participation in Part IV will be presented within ranges.
Item 4.1  Other Public Accounting Firm(s) Individually 5% or Greater of Total Audit Hours

a. State the legal name of other public accounting firms and the extent of participation in the audit—as a single number or within the appropriate range of the percentage of hours, according to the following list—attributable to the audits or audit procedures performed by such public accounting firm in relation to the total hours in the current period's audit.

90%-or-more of total audit hours;
80% to less than 90% of total audit hours;
70% to less than 80% of total audit hours;
60% to less than 70% of total audit hours;
50% to less than 60% of total audit hours;
40% to less than 50% of total audit hours;
30% to less than 40% of total audit hours;
20% to less than 30% of total audit hours;
10% to less than 20% of total audit hours; and
5% to less than 10% of total audit hours.

b. For each public accounting firm named, state the country of the headquarters' office.

Note: In responding to Items 4.1 and 4.2, percentage of hours attributable to other firms should be calculated individually for each firm. If the individual participation of one or more other public accounting firm(s) is less than 5%, the Firm should complete Item 4.2.

Item 4.2  Other Public Accounting Firm(s) Individually Less Than 5% of Total Audit Hours

a. State the number of other public accounting firm(s) individually representing less than 5% of total audit hours.

b. Indicate the aggregate percentage of participation of the other public accounting firm(s) that individually represented less than 5% of total audit hours by—filling in a single number or by selecting the appropriate range as follows:

90%-or-more of total audit hours;
80% to less than 90% of total audit hours;
70% to less than 80% of total audit hours;
60% to less than 70% of total audit hours;
50% to less than 60% of total audit hours;
40% to less than 50% of total audit hours;
30% to less than 40% of total audit hours;
20% to less than 30% of total audit hours;
10% to less than 20% of total audit hours;
5% to less than 10% of total audit hours; and
Less-than-5% of total audit hours.

PART V—RESPONSIBILITY FOR THE AUDIT IS DIVIDED

Item 5.1 Identity of the Other Auditor(s)

a. Provide the following information concerning each other auditor the Firm divided responsibility with in the audit—

1. State the legal name of the other auditor.

2. State the country of headquarters' office location of the other auditor.

3. State the magnitude of the portion of the financial statements audited by the other auditor.

Note: In responding to Item 5.1.a.3, the Firm should state the dollar amounts or percentages of one or more of the following: total assets, total revenues, or other appropriate criteria, as it is described in the audit report.

PART VI—CERTIFICATION OF THE FIRM

Item 6.1 Signature of Partner or Authorized Officer

This Form must be signed on behalf of the Firm by an authorized partner or officer of the Firm including, in accordance with Rule 3210, both a signature that appears in typed form within the electronic submission and a corresponding manual signature retained by the Firm. The signer must certify that:

a. The signer is authorized to sign this Form on behalf of the Firm;

b. The signer has reviewed this Form;
c. Based on the signer's knowledge, this Form does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading; and

d. Based on the signer's knowledge, the Firm has not failed to include in this Form any information or affirmation that is required by the instructions to this Form.

The signature must be accompanied by the signer's title, the capacity in which the signer signed the Form, the date of signature, and the signer's business mailing address, business telephone number, and business e-mail address.

* * * * *

Amendments to PCAOB Auditing Standards for Optional Disclosure of Certain Audit Participants in the Auditor's Report

AU sec. 508, Reports on Audited Financial Statements

SAS No. 58, "Reports on Audited Financial Statements" (AU sec. 508, Reports on Audited Financial Statements), as amended, is amended as follows:

a. Paragraph .09A is added, as follows:

The auditor may include in the auditor's report the information regarding the engagement partner and other participants in the audit that is required to be reported to the PCAOB pursuant to Rule 3211, Auditor Reporting of Certain Audit Participants. If the auditor chooses to do so, the auditor's report must include the same information as is reported on Form AP. If disclosure is included regarding other participants in the audit, the auditor also should include a statement that the auditor is responsible for the audits or audit procedures performed by the other firms and has supervised or performed procedures to assume responsibility for their work in accordance with PCAOB standards.
APPENDIX 2

Economic Considerations

The Public Company Accounting Oversight Board ("PCAOB" or "Board") is mindful of the economic impacts of its standard setting. The following discussion addresses in detail the potential economic impacts, including potential benefits and costs, most recently considered by the Board.

The Board has requested input from commenters several times over the course of the rulemaking. Commenters provided views on a wide range of issues pertinent to economic considerations, including potential benefits and costs, but did not provide empirical data. The potential benefits and costs considered by the Board are difficult to quantify reliably, so the Board's economic discussion is therefore qualitative in nature. This appendix describes the Board's current analysis about the likely economic impacts of the disclosure requirements under consideration. The Board continues to solicit input from commenters about how the disclosure requirements under consideration may impact the audit profession and financial markets, as well as input specifically related to the Board's economic analysis.

A. Need for Disclosure

Users of financial statements are generally not in a position to observe the quality of the audit of a public company or the factors that drive audit quality. Instead, they rely on proxies such as the reputation of the accounting firm issuing the auditor's report, measures of auditor expertise, or information about the geographic location of the office where the auditor's report was signed as a signal for audit quality.¹ The Board is considering a number of ways to provide a more precise signal of audit quality. In addition to the disclosures discussed in this supplemental request for comment and the 2013 Release, these efforts include formulation of a series of audit quality indicators, a portfolio of quantitative measures that may provide new insights into how quality audits are achieved.² The Board intends that, over time, these and other efforts may provide additional information that may allow investors and other financial statement users to

¹ See, e.g., Linda Elizabeth DeAngelo, Auditor Size and Audit Quality, 3 Journal of Accounting and Economics 183 passim (1981); and Jere R. Francis, What Do We Know About Audit Quality?, 36 The British Accounting Review 345 passim (2004).

When used in conjunction with other publicly available data and potential audit quality indicators, the name of the engagement partner and information about other participants in the audit, collectively, could provide a more precise signal of audit quality. For example, users of financial statements could seek to reduce the asymmetric information about audit quality by gathering information about the skills, expertise, and independence of the specific individuals and firms that participate in the audit.

PCAOB oversight activities show that audit quality varies among engagement partners within the same firm. PCAOB oversight activities also reveal variations in audit quality within the global networks established by large accounting firms. In addition to a number of other factors, the PCAOB uses information about engagement partners and other participants in the audit to identify audit engagements for risk-based selections in its inspections program. Academic research also documents variations in audit quality at both the firm and engagement partner levels. These findings suggest that firm reputation is an imprecise signal of audit quality because engagement partners and other audit participants differ in the quality of their audit work.

The difficulty that investors and other financial statement users have in evaluating audit quality may have important effects for accounting firms and the

---

3 Information economics frequently treats information as consisting of two components: a signal that conveys information and noise, which inhibits the interpretation of the signal. Precision is the inverse of noise so that decreased noise results in increased precision and a more readily interpretable signal. See, e.g., Robert E. Verrecchia, *The Use of Mathematical Models in Financial Accounting*, 20 Journal of Accounting Research 1 passim (1982).

4 Economists often describe information asymmetry as an imbalance, where one party has more or better information than another party.

functioning of the audit profession and capital markets. The capacity to differentiate between alternative products is a fundamental requirement of competitive markets.

One way to improve the functioning of a market is to provide mechanisms that enable market participants to better evaluate quality, thereby reducing the degree of information asymmetry.

Mandatory disclosure provides financial markets with information that may have otherwise been more costly or difficult to obtain. This information may influence investors' decisions and allow them to make better informed investment decisions. The disclosure of information may also lead identified parties to change their behavior because they know their performance can be more easily observed and evaluated. In general, an important feature of accountability is identifiability. In the context of the audit, transparency about audit participants may lead to increased accountability because decision makers can use the disclosed information to identify participants separately from the accounting firm signing the auditor's report. The ability for outsiders to identify and evaluate the performance of individual audit participants may induce these individuals to change their behavior.

Because of the influence that engagement partners and other audit participants can exert over the audit process, more specific information about who actually performed the audit of a particular company could be a useful addition to the mix of information that investors can use to assess audit quality and financial reporting risk. As identifying information becomes publicly available, it could also provide a further incentive to engagement partners and other accounting firms that participate in the audit process.

---

6 There is a long stream of research regarding the effects that information asymmetry about product features, such as quality, and disclosure have on markets. See, e.g., George A. Akerlof, *The Market for "Lemons": Quality Uncertainty and the Market Mechanism*, 84 The Quarterly Journal of Economics 488 passim (1970); and Robert E. Verrecchia, *Essays on Disclosure*, 32 Journal of Accounting and Economics 97 (2001).

to develop and enhance a personal reputation for providing reliable audits and to avoid being associated with adverse audit outcomes that could be attributed to deficiencies in their audit work.9

Under the disclosures considered by the Board, investors would gain additional information that could help them assess the reputation of not only the firm, but also of the engagement partner on the audits of companies in which they invest, which they can use as a signal for audit quality. Likewise, investors would have visibility into the extent of the audit work being performed by other accounting firms that participated in the audit, including accounting firms in jurisdictions where the PCAOB has been unable to conduct inspections. Collectively, the disclosures can facilitate the investor’s ability to assess audit quality and financial reporting risk by providing investors with information about who conducted the audit and the extent to which the accounting firm signing the auditor’s report relied on audit work performed by other accounting firms.10

Although the disclosure of the name of the engagement partner might provide limited information initially, the experiences in other countries suggest that over time the disclosures would allow databases to be developed that could link the engagement partner to other data points,11 including:

- Number of other public company, broker, and dealer engagements in which the partner is the engagement partner;
- Industry experience of the engagement partner;
- Number and nature of restatements of financial statements for which he or she was the engagement partner;

---

9 Adverse audit outcomes may include financial statement restatements for errors, nontimely reporting of internal control weaknesses, and nontimely reporting of going concern issues, among others.

10 As discussed in previous releases, PCAOB oversight activities have revealed instances in which the accounting firm signing the auditor’s report may have exercised undue reliance on the audit work of other accounting firms.

11 For example, the Taiwan Economic Journal collects data that covers all public companies in Taiwan and includes, among other things, the names of the engagement partners, the accounting firms issuing auditors' reports, the regulatory sanction history of the partners, and the audit opinions. For more information, refer to http://www.finasia.biz/ensite/Database/tabid/92/language/en-US/Default.aspx.
- Number and nature of going concern report modifications on financial statements for which he or she was the engagement partner;
- Number of auditors' reports citing a material weakness in internal control over financial reporting for which he or she was the engagement partner;
- Number of years as the engagement partner of a particular company;
- Disciplinary proceedings and litigation in which the engagement partner was involved; and
- Other information about the engagement partner in the public domain, such as education, professional titles and qualifications, and association memberships.

Additional information sources may also develop about other firms that participate in public company audits, and additional data points should add to the mix of information that investors would be able to use, such as:
- The extent of the audit performed by the firm signing the auditor's report;
- The extent of participation in the audit by other firms in other jurisdictions, including jurisdictions in which the PCAOB cannot currently conduct inspections;\(^\text{12}\)
- Whether the other firms are registered with the PCAOB, have been inspected, and the inspection results, if any;
- Industry experience of the other firms;
- Whether the other firms belong to a global network;
- Trends and changes in the level of participation of other firms in the audit work; and
- Disciplinary proceedings and litigation involving the other firms.

\(^{12}\) See Non-U.S. Firm Inspections on the PCAOB's website for information about firms in non-U.S. jurisdictions that deny PCAOB inspection access.
These data points, when analyzed together with the audited financial statements, potential audit quality indicators, and information provided in the auditor's report or on Form AP, could provide investors with a more precise signal about the quality of the audit and, therefore, the reliability of the financial statements. This signal should reduce the level of information asymmetry about audit quality between company management and investors.

Providing investors with data at this level of specificity would add to the mix of information that they can use. This could induce changes in the market dynamics for audit services because investors should be able to identify engagement partners and other firms that took part in the audit in whom they have confidence. The companies audited by these engagement partners and other firms should benefit from a lower cost of capital relative to those companies whose auditor's performance record suggests a higher risk.13

As some engagement partners and other accounting firms that participated in the audit develop a public reputation for performing reliable audits, a further incentive may develop for others to attract similarly favorable attention. Conversely, as some engagement partners and other accounting firms are associated with adverse audit outcomes, others may have additional incentives to perform audits that comply with applicable standards in order to avoid similar association. The disclosures may also create additional incentives for audit committees to engage auditors with a reputation for performing reliable audits. As a result, the disclosures under consideration may also promote increased competition based on audit quality.

1. Baseline

Current PCAOB rules and standards do not require registered firms to publicly disclose the name of the engagement partner or information about other accounting firms participating in the audit and nonaccounting firm participants. However, company management and the audit committee interact directly with the engagement partner.

---

13 There is an emerging body of academic research analyzing market reactions to disclosure of the engagement partner and the firms participating in audits. See Knechel et al., Does the Identity of Engagement Partners Matter? An Analysis of Audit Partner Reporting Decisions; Aobdia et al., Capital Market Consequences of Audit Partner Quality; and Dee et al., Who Did the Audit? Audit Quality and Disclosures of Other Audit Participants in PCAOB Filings.
Additionally, auditors are required to communicate to the audit committee certain information about other accounting firms and other participants in the audit.\textsuperscript{14}

Today, the name of the engagement partner is disclosed in auditors' reports filed with the U.S. Securities and Exchange Commission ("SEC" or "Commission") in only a small percentage of cases, such as when the audit is conducted by a firm having only one certified public accountant whose name appears in the firm's name or by a foreign firm in a jurisdiction in which local requirements or practice norms dictate identification of the engagement partner. The identity of the engagement partner is sometimes made available, for example to investors attending an annual shareholders' meeting or to members of the audit committee in a proposal for audit services, but there is no uniform disclosure. Further, the process of acquiring this information may be costly. For example, investors could incur significant transaction costs\textsuperscript{15} to attend annual meetings and the usefulness of the information they could gather would still be lower relative to the existence of a database that covers audits across time and is available to all interested users. As a result, it is difficult for most investors and other financial statement users to identify the engagement partner in the current environment.

With respect to other firms participating in the audit, paragraph .04 of AU sec. 543, \textit{Part of the Audit Performed by Other Independent Auditors}, has prohibited principal auditors from disclosing in the auditor's report the identities of other firms that participated in the audit unless it is a divided-responsibility opinion.\textsuperscript{16} However, investors

\textsuperscript{14} See Auditing Standard No. 16, \textit{Communications with Audit Committees}.

\textsuperscript{15} These transaction costs could include, among other costs, travel costs, and the costs of gaining access to the annual meeting which may be restricted to shareholders entitled to vote and thus may exclude other types of investors, such as bondholders, as well as prospective investors.

\textsuperscript{16} The sentence in AU sec. 543.04 that states that if the principal auditor decides not to make reference to the work of other auditors, the principal auditor "should not state in his report that part of the audit was made by another auditor because to do so may cause a reader to misinterpret the degree of responsibility being assumed" would be deleted under the proposed amendments in the 2013 Release. In the Board's view, the language included under both alternatives—in the auditor's report and on Form AP—clearly states the auditor's responsibility regarding the work of other participants in the audit and should not cause financial statement users to misinterpret or be confused about the degree of responsibility being assumed by the accounting firm signing the auditor's report.
and other financial statement users have been able to obtain information about a limited subset of other firms from PCAOB Form 2.\footnote{17}

There are no current requirements under which information would be provided publicly about other participants in the audit and, to the Board’s knowledge, firms generally do not make this information public.

B. The Impact of Disclosure

The disclosure requirements under consideration would impact certain participants in the audit, financial statement users, and companies to the extent that this information is currently not publicly available. As discussed below, not all of these market participants would be affected in the same ways or to the same degree.

1. The Benefits of Disclosure

The disclosure requirements under consideration, whether in the auditor’s report or on Form AP, aim to provide investors and other financial statement users with information that could add to the information available when evaluating the quality of individual audits. Among other things, the disclosures would allow investors to research whether engagement partners have been associated with adverse audit outcomes that could be attributed to deficiencies in their audit work or have been sanctioned by the PCAOB or SEC, and to understand how much of the audit was performed by the firm issuing the report and how much was performed by other firms, including those in jurisdictions where the PCAOB has been unable to conduct inspections. Moreover, as the disclosed information accumulates and is aggregated and analyzed in conjunction with other publicly available information, investors and financial intermediaries (for example, research analysts and credit rating agencies) would have a basis to evaluate additional data points, together with the information disclosed in the auditor’s report or on Form AP, that may give them insight into individual audits. While this information may not be useful in every instance or meaningful to every investor, as discussed in more detail below, academic research suggests that, overall, financial markets would respond to it.\footnote{18}

\footnote{17} PCAOB Form 2 requires independent public accounting firms that audited no issuers during the applicable reporting period to provide information on each issuer for which they “play[ed] a substantial role in the preparation or furnishing of an audit report,” as defined by PCAOB Rule 1001 (p)(ii).

\footnote{18} See, e.g., Knechel et al., Does the Identity of Engagement Partners Matter? An Analysis of Audit Partner Reporting Decisions; Aobdia et al., Capital Market
Disclosures regarding the engagement partner and the other accounting firms that participated in the audit would allow investors and other financial statement users to supplement the accounting firm’s name with more granular information when forming an opinion about the audit. The disclosed information may provide a more precise signal of audit quality in accounting firms that conduct a large number of public company audits. This information should be particularly valuable to investors where there is a greater degree of information asymmetry, as may be the case for smaller and less seasoned public companies. The new disclosures should also increase accountability for auditors who are not operating at an appropriate level of accountability, because they would now be publicly associated with the audit. However, the effect of the disclosures on accountability is not expected to have a uniform effect on all auditors.

a. Transparency

The PCAOB uses various data, including information about engagement partners and other accounting firms, to identify audit engagements for its risk-based inspections program. While some commenters argued that the information would not be useful or could be confusing, others stated that, over time, financial statement users would be able to combine the disclosed information with other financial information, including whether any previous adverse audit outcomes could be attributed to deficient audit work, which would allow them to better assess the quality of individual audits. For example, investors and other financial statement users would be able to observe whether financial statements audited by the engagement partner have been restated or whether the engagement partner has been sanctioned by the PCAOB or SEC, and investors and other financial statement users could also research other publicly available information. Commenters indicated that this information may be useful for investment decisions and decisions about whether to ratify the appointment of an accounting firm.

i. Disclosure Regarding the Engagement Partner

Other countries have adopted or may soon adopt requirements to disclose the name of the engagement partner. Experiences from the countries with similar disclosure requirements are important in assessing possible consequences, intended or not, of any changes in this area. Academic research studying those jurisdictions documents how investors and other financial statement users may use the information

Consequences of Audit Partner Quality; and Dee et al., Who Did the Audit? Audit Quality and Disclosures of Other Audit Participants in PCAOB Filings.

See infra footnotes 47 and 48.
to form an opinion about audit quality, as well as financial reporting quality. In general, economic theory argues that these disclosures should be useful to investors and other financial statement users, and studies using data from the jurisdictions where the disclosures are available appear to support the theory. However, in considering the implications of these studies for the audits under the Board's jurisdiction, the Board has been mindful, as some commenters suggested, of the specific characteristics of the U.S.-issuer and broker-dealer audit market, which may make it difficult to generalize observations made in other markets. For example, results from non-U.S. studies may depend on different baseline conditions (e.g., market efficiency, affected parties, policy choices, legal environment, or regulatory oversight) than those prevailing in the United States.

Several studies have examined whether engagement partner disclosure requirements affect the prices of securities, leading to more efficient markets. Knechel et al. found "considerable evidence that similar audit reporting failures persist for individual partners over time" and that, in Sweden, where engagement partners' names are disclosed, "the market recognizes and prices differences in audit reporting style among engagement partners" of public companies.20

A similar study conducted by Aobdia et al. used data from Taiwan and also found that both debt and equity markets react to the performance characteristics of engagement partners as measured by abnormal accruals.21 Although estimates of abnormal accruals are an imperfect proxy for audit quality, the authors continue to find evidence that engagement partner histories matter to capital markets when they use regulatory sanctions history as an alternate measure of engagement partner performance. The results of two other studies also conducted using data from foreign jurisdictions are consistent with these results.22

21 See Aobdia et al., Capital Market Consequences of Audit Partner Quality.

22 See Wuchun Chi, Linda A. Myers, Thomas C. Omer, and Hong Xie, The Effects of Audit Partner Pre-Client and Client-Specific Experience on Audit Quality and on Perceptions of Audit Quality (January 2015) (working paper, on file with Social Science Research Network) (auditor experience is an important factor in determining audit quality and the perceived level of audit quality as measured by the cost of debt funding); see also Ferdinand A. Gul, Donghui Wu, and Zhifeng Yang, Do Individual Auditors Affect Audit Quality? Evidence from Archival Data, 88 The Accounting Review 1993 passim (2013) (effects of individual auditors on audit quality both economically
The limited research on engagement partner identification in the United States provides some support that the name of the engagement partner may be used as a signal of audit quality. Using data collected from SEC comment letters, Laurion et al. are able to identify engagement partners who are copied on correspondence between issuers and the SEC’s Division of Corporation Finance. The authors find that newly rotated engagement partners are responsible for substantial increases in the number of material restatements of previously issued financial statements and write-downs of impaired assets.\(^23\) While the authors do not explicitly analyze potential benefits related to engagement partner disclosure, they argue that engagement partner disclosure would provide useful information to investors because it would allow them to determine who was ultimately responsible for the audit of the financial statements that were misstated.

While empirical evidence suggests that disclosure of the name of the engagement partner could be beneficial, one experimental study pointed out by commenters raises the potential for unintended negative consequences. Lambert et al. used an experimental framework to examine how investors react to disclosure of the engagement partner.\(^24\) They found that prospective investors were less likely to invest in a company that has been linked via the disclosure of the name of the engagement partner to another company that had to restate its financial statements, although the findings were only statistically significant for less-experienced investors. The authors conclude that disclosing the name of the engagement partner may align partner

---

\(^{23}\) See Henry Laurion, Alastair Lawrence, and James Ryans, *U.S. Audit Partner Rotations* (April 10, 2015) (working paper, on file with Social Science Research Network). The authors note that such increases in restatements and write-downs of impaired assets “suggest that new partners may help address the complacency of the former audit partner by bringing a renewed sense of skepticism as well as additional insights and expertise.” *Id.* at 5.

\(^{24}\) See Tamara A. Lambert, Benjamin L. Luippold, and Chad M. Stefaniak, *Audit Partner Disclosure: An Experimental Exploration of Accounting Information Contagion* (October 14, 2014) (working paper, on file with Social Science Research Network).
incentives more closely with those of client management, which could have negative effects on independence.

While individual responses to the disclosed information would vary, it does not necessarily follow that linking an engagement partner’s reputation to the results of an audit would align the incentives of engagement partners with those of management and impair auditor independence. Rather, as discussed below, being publicly associated with an audit may result in an incentive to improve audit quality, for instance by enhancing the engagement partner’s incentive to exercise an appropriate level of professional skepticism.

In addition, empirical evidence suggests that investors may be rational in believing that engagement partners associated with a previous financial statement restatement have an increased risk of misstatement going forward. Using data from Taiwan, Chi et al. found that recent financial statement restatements disclosed by an engagement partner’s client are associated with a higher likelihood of that engagement partner’s other clients misstating in the current year. Although this result is based on evidence from a non-U.S. jurisdiction, it suggests that the disclosures could provide investors with useful information about the reliability of other financial statements audited by individual engagement partners who have been associated with a recent financial statement restatement.

ii. Disclosure Regarding Other Participants in the Audit

Empirical evidence also suggests that the market values information about other participants in the audit. Dee et al. examined the effect on issuers' stock prices when investors learn (from participating auditors' Form 2 filings) that these issuers' audits included the substantial use of other accounting firms that do not audit other issuers. Using event study methodology, the authors find that, when accounting firms disclosed in Form 2 the identity of issuer audits in which they substantially participated, the stock prices of these issuers were negatively affected. The authors also find that earnings surprises for these issuers are less informative to the stock market after these disclosures in Form 2 are made, meaning that investors use these issuers' accounting

26 See Dee et al., Who Did the Audit? Audit Quality and Disclosures of Other Audit Participants in PCAOB Filings.
information less when pricing their securities. The authors concluded that the results of the study suggested "that PCAOB mandated disclosures by auditors of their significant participation in the audits of issuers provides new information, and investors behave as if they perceive such audits in which other participating auditors are involved negatively."  

To the extent that investors and other financial statement users are better able to assess the level of audit risk stemming from multi-location engagements, it should incent the accounting firm signing the auditor's report to use higher-quality, less risky firms as other audit participants. It may also encourage the accounting firm signing the auditor's report to enhance their supervision and risk management practices with respect to audit participants in jurisdictions perceived as posing increased audit risk. It should also provide other firms incentives to increase the quality of their audit work to help ensure that they can continue to receive referred audit work.

b. Accountability

Public disclosure of the name of the engagement partner and certain other accounting firms that participated in the audit may also create incentives for the engagement partner and other firms to take voluntary steps that could result in improved audit quality. As discussed above, the Board expects that external sources would develop a body of information about the histories of engagement partners and other firms. The public nature of this information, through which audit outcomes would be publicly associated with the engagement partners and other firms involved, should provide them with additional incentives to develop a reputation for consistently performing reliable audits. While this would not affect all engagement partners and all

---

27 Academic research suggests that the financial markets' reaction to earnings surprises depends, among other things, upon the extent to which the disclosed earnings are perceived to be reliable. Thus, if markets react less to earnings surprises after an event, it could suggest that the earnings are perceived to be less reliable after the event. Academic researchers often interpret this as an indication of a reduction in perceived audit quality by investors.

28 The negative market reaction in this instance may, at least to some extent, reflect the fact that the other participants in the study were auditors that have no issuer clients themselves but play a substantial role (i.e., participate at least 20%) in an audit of an issuer. The disclosures being considered would also apply to other auditors that take a smaller role in the audit and/or may have more experience in the application of PCAOB standards to audits of issuers. Market reaction to disclosures regarding these types of participants may differ.
other firms participating in audits to the same degree, as some already operate with a high sense of accountability, others may respond to the additional incentives to deliver high quality audits.

i. Disclosure Regarding the Engagement Partner

Many investors, as well as some other commenters, believe that scrutiny of the engagement partner may result in increased accountability, which could prompt voluntary changes in behavior. However, other commenters, primarily accounting firms, asserted that disclosure of engagement partners would not affect accountability. If engagement partner behavior were to change, such changes could include increased professional skepticism, which could, in turn, result in better supervision of the engagement team and lower reliance on management's assertions. The auditor may have greater willingness to challenge management’s assertions in the auditor’s consideration of the substance and quality of management's financial statement disclosures. In addition, public disclosure of the name of the engagement partner may make that person less willing to accept an inappropriate position taken by a previous engagement partner because of the potential effects on his or her personal reputation. For example, an academic study found evidence that engagement partner disclosure could increase the effectiveness of engagement partner rotation in promoting audit quality.

Academic research also analyzed whether engagement partner disclosures could have an effect on accountability. For example, a recent study examined the

29 See Letter from Carl Levin, Chairman, Senate Permanent Subcommittee on Investigations, and Tom Coburn, Ranking Minority Member, Senate Committee on Homeland Security and Governmental Affairs, to the Office of the Secretary, PCAOB (February 3, 2014) (“Public accountability, in which specific audit partners are recognized for high quality audits, as well as audit failures, can be a powerful antidote to internal pressures.”)

30 As discussed previously, academic research documents an increased rate of financial statement restatements following the rotation of engagement partners. This result may become more salient if the identity of the engagement partner is publicly available because engagement partners will have additional incentives to scrutinize their colleagues’ work more closely so as to mitigate the possibility that a restatement will arise from financial statements audited during their tenure. See Laurion, et. al., U.S. Audit Partner Rotations.

31 See, e.g., Joseph V. Carcello and Chan Li, Costs and Benefits of Requiring an Engagement Partner Signature: Recent Experience in the United
impact of the European Union’s audit engagement partner signature requirement on audits in the United Kingdom and found improvements in several proxies for audit quality,\textsuperscript{32} as well as an increase in risk-adjusted audit fees. Although the authors did not find evidence that audit fees actually increased following the implementation of the signature requirement, their model indicates that audit fees increased on a risk-adjusted basis in the year following the implementation of the requirement.\textsuperscript{33} It is worth highlighting that this study evaluated a policy alternative (a signature requirement) that may have a more pronounced effect than the disclosure requirements being considered, since just disclosing the partner’s name in the auditor’s report or in a form on the PCAOB’s website may not affect accountability to the same extent as a signature. In addition, the authors note that there were several other audit and financial reporting requirements implemented in the United Kingdom contemporaneously with the signature requirement and, accordingly, it is not possible for the authors to rule out the possibility that these other requirements may have driven their results. Furthermore, the study was conducted during the recent financial crisis, which may also have affected the results.

\textsuperscript{32} Specifically, Carcello and Li found a significant decline in abnormal accruals, a decrease in the propensity to meet an earnings threshold, an increase in the incidence of qualified auditors’ reports, and an increase in a measure of earnings informativeness. Some commenters criticized the use of one of these metrics, abnormal accruals, as a proxy for audit quality. While, as noted in Section B.1.a.i., abnormal accruals are an imperfect proxy for audit quality, the results were corroborated using alternate proxies.

\textsuperscript{33} Based on the size and risk characteristics of publicly traded companies in the United Kingdom, the model Carcello and Li estimate suggested that audit fees should have decreased following the engagement partner signature requirement. However, audit fees remained relatively stable, whether due to contractual reasons or otherwise. Therefore, the results of their model indicate that audit fees increased on a risk-adjusted basis, even though the audit fees actually paid remained relatively stable.
This contrasts with another study suggesting that disclosure requirements could produce limited or no observable improvement in audit quality.\textsuperscript{34} Blay et al. analyzed data from the Netherlands and were unable to document any statistically significant changes in audit quality as measured by estimates of earnings quality. The authors concluded that the lack of findings may be attributable to sufficiently high levels of accountability and audit quality in the Netherlands.

As previously noted, the baseline conditions in other jurisdictions may differ from those in the United States, which could affect the extent to which these findings can be generalized to the United States.

ii. Disclosure Regarding Other Participants in the Audit

While some commenters questioned the value of disclosures regarding other participants in the audit, others argued that the disclosure of the extent of the audit work performed by other participants in the audit could increase accountability for accounting firms that are named. Other commenters indicated that, as with disclosure of the name of the engagement partner, information sources would likely develop over time. This may increase scrutiny of the overall reputation of such firms. This increased reputational risk should incent other accounting firms participating in an audit to perform high-quality audits for all engagements. Further, if another accounting firm performs a substantial portion of the audit, then its reputation would be closely tied to the overall results of the audit. This may help align the interests of the other firms participating in the audit with investors and other financial statement users and thus enhance audit quality.

The disclosure requirement may also incent global network firms to increase accountability for all of the firms in their networks. The audit process for many multinational companies currently depends on the affiliated firms within a global network to audit company subsidiaries in their respective countries. This introduces vulnerabilities to the audit if quality varies across the network. To counter this risk, the global network firm may be incented to increase its efforts to maintain uniform quality control standards and accountability across the global network. The global network firm may also improve its monitoring of other audit participants to ensure audit quality as well. This increased accountability of the other accounting firms that participated in the audit to the accounting firm signing the auditor’s report could improve audit quality.

\textsuperscript{34} See Blay et. al., \textit{Audit Quality Effects of an Individual Audit Engagement Partner Signature Mandate}. 
For principal auditors that are not part of a global network, disclosures regarding other firms participating in the audit would provide an additional incentive for the principal auditor to choose firms that have a good reputation for quality.

2. The Costs and Other Possible Consequences of Disclosure

Over the course of the rulemaking, the Board was mindful of concerns voiced by commenters about potential compliance and other costs associated with public disclosure. In particular, many commenters on the 2013 Release argued that naming the engagement partner and other audit participants in the auditor's report, as contemplated by the 2013 Release, may create both legal and practical issues under the federal securities laws and therefore increase the cost of performing audits compared to the costs in the current environment. Some commenters suggested that an increase in costs would be passed on to companies through higher audit fees. Some commenters urged the Board to proceed with the new transparency requirements, if it determined to do so, by mandating disclosure in an amended Form 2 or in a newly created PCAOB form. As discussed in Section IV of the release, some commenters suggested that disclosure on a form may not raise the same concerns about Section 11 liability or consent requirements as disclosure in the auditor's report.

As discussed more fully in Section VI of the release, there are trade-offs associated with each of these disclosure locations. For example, if the disclosures are made in the auditor’s report, accounting firms may incur incremental costs to obtain consents and potential additional costs associated with any increase in liability. However, if disclosure in the auditor's report is not mandatory, any such costs would presumably only be incurred in situations where the auditor expects disclosure in the auditor's report to produce a net benefit. Lastly, a requirement to file Form AP on the PCAOB's website would increase the costs of compliance for accounting firms that would otherwise prefer to provide disclosure in the auditor's report. These may include, for example, accounting firms that are not concerned with potential securities law liability and sole proprietorships that already disclose the name of the engagement partner in the auditor's report. The Board is seeking input from commenters as it evaluates these trade-offs.

a. Direct Costs

Under both the 2013 reproposal and the Form AP approach, the direct costs for auditors would include the costs of compiling information about the engagement partner and other participants in the audit and calculating the percentage of audit work completed by other participants in the audit. In general, costs should be lower for audits not involving other participants because the only required disclosure would be the engagement partner's name.
Compliance with the 2013 reproposal would also entail the cost of adding these specific disclosures in the auditor’s report. By comparison, compliance with the Form AP approach would entail initial costs of implementation—which could include creating systems to gather the required information from each engagement team—and ongoing costs associated with aggregating the information and filling out and filing Form AP.

A number of commenters observed that administrative effort would be required to compile data for, prepare, and review the required disclosures, both initially and on an ongoing basis. Accounting firms that commented on this issue asserted that the administrative efforts and related costs would not be significant.

b. Indirect Costs and Possible Unintended Consequences

In addition to the direct costs, there may be indirect costs and unintended consequences associated with the disclosures under consideration, some of which could be more significant than the direct compliance costs.

i. Differential Demand Based on Reputation

The disclosures aim to provide investors and other financial statement users with additional information they can use to evaluate audit quality at the engagement level, as opposed to the accounting firm level. This may result in some degree of differentiation in stature and reputation of individual auditors who serve as engagement partners and in other firms that participate in audits.

Currently, accounting firms are primarily differentiated based on proxies for reputation or experience. Some commenters suggested that the new requirements could be detrimental to smaller and less well-known accounting firms, even when they perform audit work in accordance with PCAOB standards. Others raised concerns that public identification of the engagement partner could lead to a rating, or "star," system resulting in particular individuals and entities being in high demand, to the unfair disadvantage of other equally qualified engagement partners. It is also possible that engagement partners may be unfairly disadvantaged because of association with an adverse audit outcome, which could be particularly damaging to their professional development and future opportunities if it occurred at the outset of their career. Unwarranted attribution of an adverse audit outcome to an engagement partner could also adversely affect other public companies whose audits were led by the same

35 See DeAngelo, Auditor Size and Audit Quality, and Francis, What Do We Know About Audit Quality?. 
engagement partner. While commenters did not raise similar concerns related to other accounting firms participating in audits, the implications of identification could be similar.

Differential demand based on reputation could be a cost of the disclosures under consideration to the extent the reputation (whether good or bad) was undeserved. It may be reasonable, however, to expect that financial markets would be discerning in considering information about the engagement partner and other firms participating in the audit. As one commenter stated, "investors are accustomed to weighing a variety of factors when assessing performance. . . . This approach can be seen in the careful analysis investors and proxy advisors do when they are asked to withhold support from directors standing for election. There is no reason to believe they will do otherwise with respect to auditors." Academic research also suggests that financial markets do not treat all restatements and going concern opinions equally. Instead, financial markets respond to the facts and circumstances related to an individual restatement or going concern modification. The results from this research suggest that financial markets may be similarly discerning when forming their opinion about an engagement partner or other participant in the audit.

ii. Overauditing and Audit Fees

Some commenters have suggested that increased incentives to avoid adverse outcomes may lead to instances of overauditing, in which the engagement team undertakes more procedures than it otherwise might have performed, which do not contribute to forming an opinion on the financial statements. This would result in unnecessary costs and an inefficient utilization of resources, and might cause undue delays in financial reporting. While the possibility of overauditing cannot be eliminated, commenters did not provide any specific evidence that transparency would result in overauditing and there are counterincentives that mitigate that risk.

36 See Letter from Denise L. Nappier, State Treasurer, State of Connecticut, to the Office of the Secretary, PCAOB (March 17, 2014) at 3.

38 See King et. al., Mandatory Disclosure of the Engagement Partner's Identity: Potential Benefits and Unintended Consequences.
It should also be noted that the disclosures under consideration are not performance standards and do not mandate the performance of additional audit procedures. It is possible, however, that some auditors may perform additional procedures as a result of the potential requirements (for example, because they were not previously complying with PCAOB standards or because they want to obtain a higher level of confidence in some areas). If and to the extent there are increased costs for auditors as a result of the application of the disclosures under consideration, however, such costs may be passed on—in whole, in part, or not at all—to companies and their investors in the form of higher audit fees. Further, increased procedures may also require additional time from the company’s management to deal with such procedures.

iii. Changes in Behavior of Engagement Partners

A recent study documents certain ways in which the disclosures could change the incentives of engagement partners resulting in changed behavior. Under a purely theoretical model developed by Carcello and Santore that has not yet been empirically tested, potential reputation costs stemming from disclosure leads engagement partners to become more conservative and gather more evidence than the accounting firm finds to be optimal. Although the authors found that the disclosures lead to increased audit quality, their analysis indicated that engagement partner identification likely leads to decreases in the welfare of engagement partners and accounting firms. The authors argued that changes in the welfare of engagement partners and accounting firms may not be optimal within their theoretical analysis.

The Board is aware of public reports that have analyzed historical and aggregate data on audit fees and which suggest that audit fees generally have remained stable in recent years, notwithstanding the fact that the Board and other auditing standard setters have issued new performance standards during that period. See, e.g., Audit Analytics, Audit Fees and Non-Audit Fees: A Twelve Year Trend (September 2014). In its reproposal, the Board sought data that might provide information or insight into such costs. As noted previously, commenters did not provide data regarding the extent of such costs.

The term "welfare" can be thought of as overall well-being. In economic theory, welfare typically refers to the prosperity and living standards of individuals or groups. Some of the typical factors that are accounted for in welfare functions (or utility functions) include: compensation, leisure, effort, reputation, et cetera.
The Carcello and Santore analysis is limited since, among others, they do not explicitly analyze the effects of increased auditor conservatism and increased audit quality on investor utility. Therefore, their description of the "society" is missing a key participant, the investors. This limitation notwithstanding, they do note that increased conservatism at large accounting firms may actually be socially optimal as it could limit damages to market participants stemming from aggressive financial reporting at large issuers.

iv. Disincentive to Perform Risky Audits

Some commenters have suggested that engagement partners and other accounting firms participating in audits may avoid complex and/or risky audits because of the potential negative consequences of an adverse audit outcome. It is also possible that accounting firms could increase audit fees or adjust their client acceptance and retention policies because of heightened concerns about liability, including the cost of insurance, or reputational risks. This could enhance auditors' performance of their gatekeeper function to the extent that it increases auditors' reluctance to take on clients at a high risk of fraudulent or otherwise materially misstated financial statements. But it would impose a cost if firms or partners become so risk averse that companies that do not pose such risk cannot obtain well-performed audits. This could effectively compel certain particularly risky companies to use engagement partners or accounting firms with substandard reputations or, in extreme circumstances, lead them to cease SEC reporting. If investors are better able to evaluate the quality of audit work performed by engagement partners and other accounting firms participating in the audit, companies that engage accounting firms with a reputation for substandard quality may experience an increased cost of capital.

v. Mismatch of Skills

Some commenters suggested that reputational concerns may lead audit committees not to select qualified engagement partners associated with prior restatements and to select a perceived "star" partner. It is, therefore, possible that, in some instances, high-demand auditors might be engaged when other auditors whose skills may be more relevant for a particular engagement are not selected. This could result in decreased audit quality. However, accounting firms have incentives to staff engagements appropriately, and star engagement partners would also be incentivized to avoid performing audits for which they are not qualified in order to maintain that status or to mitigate any skill mismatch and maintain or enhance their reputation by consulting with others within their firm as necessary to ensure audit quality.

The ability to identify audit quality at the engagement level could also facilitate the intentional selection of auditors with a reputation for substandard quality. Companies may do this for a variety of reasons, including the potential for lower audit
fees or to identify auditors who are less likely to challenge management's assertions. The ability for investors and other financial statement users to identify a mismatch in auditor skill and company-specific audit needs should limit the extent to which companies can choose an auditor with a reputation for substandard quality.

vi. Possible Changes in Competitive Dynamics

Differentiation in stature and reputation of individual auditors who serve as engagement partners, and in other firms that participate in audits, could have a number of competitive effects. One commenter suggested that transparency could create a permanent structural bias against smaller, less-known firms and partners as audit committees may be reluctant to engage firms or select partners that are not well-established or well-known. As described in Section A, it appears that the disclosures under consideration could promote increased competition based on factors other than general firm reputation. In particular, if investors are better able to assess variations in audit quality, any resultant financial market effects should incent accounting firms to increase the extent to which they compete based on audit quality.

Moreover, the disclosures could result in changes to the market dynamics for the services of engagement partners and other firms participating in audits. The ability to differentiate among engagement partners and among other firms participating in audits could change external perceptions of particular partners and accounting firms, which may affect the demand for their services. This shift in demand could, in turn, affect auditor compensation and supply dynamics.

It should be noted, however, that a marked increase in the mobility of engagement partners and other accounting firms participating in audits seems unlikely due to high switching costs and contractual limitations. For example, partnership agreements, noncompete agreements, and compensation and retirement arrangements may affect partners' incentives and contractual ability to change firms. In addition, the costs to an issuer of replacing the global audit team and explaining the decision to change accounting firms to the market may affect companies' incentives to follow an engagement partner to a new firm. As a result, engagement partners may be reluctant to or contractually precluded from changing accounting firms, and those who elect to change firms may be unable to bring their clients with them. Additionally, the five-year partner rotation requirement would preclude an engagement partner from serving a company for more than five years, even if the engagement partner switched accounting firms.42

__________________________
42 Rule 2-01(c)(6) of Regulation S-X, 17 CFR § 210.2-01(c)(6); see also Section 203 of the Sarbanes-Oxley Act.
C. Alternatives Considered

After considering these factors and public comments, the Board continues to consider whether disclosure of the name of the engagement partner and certain information about other participants in the audit is in the public interest. The Board also continues to consider the appropriate location of such disclosure.

In December 2013, the Board reproposed amendments to its standards that would require disclosure in the auditor's report of: (1) the name of the engagement partner; (2) the names, locations, and extent of participation of other independent public accounting firms that took part in the audit; and (3) the locations and extent of participation, on an aggregate basis by country, of certain nonaccounting firm participants in the audit. The Board continues to consider whether to adopt these requirements through disclosure in the auditor's report or on Form AP. As described below, the Board has considered a number of alternative approaches to achieve the potential benefits of enhanced disclosure and in this supplemental request for comment, is considering another disclosure alternative.

1. Alternatives Considered Previously

Over the past several years, the Board has considered a number of alternative approaches to the issue of transparency. Initially, the Board considered whether an approach short of rulemaking would be a less costly means of achieving the desired end. The Board's usual vehicles for informal guidance—such as staff audit practice alerts, answers to frequently asked questions, or reports under PCAOB Rule 4010, Board Public Reports—did not seem suitable. U.S. accounting firms have not voluntarily disclosed information about engagement partners and other audit participants. Also, even if some auditors disclosed more information under a voluntary regime, practices among auditors likely would vary widely. That would defeat one of the Board's goals of achieving widespread and consistent disclosures about the auditors that are registered with the PCAOB. Thus, the Board did not pursue an informal or voluntary approach.

In the 2009 Release, the Board considered a requirement for the engagement partner to sign the auditor's report in his or her own name in addition to the name of the accounting firm. A number of commenters supported and continue to support the signature requirement. However, many other commenters opposed it, mainly because including the signature in the auditor's report, in their view, would appear to minimize

43 As discussed in Section V of the release, the Board is also reconsidering the appropriateness of the proposed disclosures regarding nonaccounting firm participants.
the role of the accounting firm in the audit and could increase the engagement partner's liability. Some commenters believed that this alternative would increase both transparency and the engagement partner's sense of accountability. Other commenters believed that engagement partners already have a strong sense of accountability and that signing their own name on the audit opinion would not affect that.

In the 2011 Release, in addition to the requirement to disclose the name of the engagement partner in the auditor's report, the Board proposed to add to Form 2 a requirement to disclose the name of the engagement partner for each audit required to be reported on the form. As originally proposed, disclosure on Form 2 would supplement more timely disclosures in the auditor's report by providing a convenient mechanism to retrieve information about all of a firm's engagement partners for all of its audits.

There are, however, a number of disadvantages to a Form 2-only approach, as discussed in the 2013 Release. It would delay the disclosure of information useful to investors and other financial statement users from 3 to 15 months. It also would make the information more difficult to find by investors interested only in the name of the engagement partner for a particular audit, rather than an aggregation of all of the firm's engagement partners for a given year, because they would have to search for it in the midst of unrelated information in Form 2.

Some commenters on both the 2011 Release and 2013 Release suggested that the names of the engagement partner and the other participants in the audit should be included, if they were to be disclosed at all, not in the auditor's report but on an existing or newly created PCAOB form only. This would make the information publicly available, while responding to concerns expressed by commenters related to liability. Some commenters on the 2013 Release also suggested that these disclosures would be more appropriately made in the company's audit committee report.

44 Form 2 provides basic information about the firm and the firm's issuer-related practice over the most recent 12-month period.

45 The 2011 Release also proposed to require disclosure about other participants in the most recent period's audit.

46 Form 2 must be filed no later than June 30 of each year—according to PCAOB Rule 2201, Time for Filing of Annual Report—and covers the preceding 12-month period from April 1 to March 31; see Form 2, General Instruction 4. Special reports must be filed no later than 30 days after the triggering event. See PCAOB Rule 2203, Special Reports.
In considering commenters' views in the development of this supplemental request for comment, the Board also considered providing auditors the option of making disclosure either in the auditor's report or on a newly created PCAOB form. This alternative would have had the advantage of allowing auditors to decide how to comply with the disclosure requirements based on their particular circumstances, may have imposed lower compliance costs in some instances compared to mandatory form filing or mandatory auditor's report disclosure, and may have resulted in more disclosures in the auditor's report than a mandatory form because some auditors may have preferred to avoid the cost of filing the form by disclosing the information in the auditor's report. However, such an approach would have permitted disclosures in multiple locations, which could have caused confusion and increased search costs compared to either auditor's report disclosure or disclosure on a mandatory form.

2. Disclosure in the Auditor's Report

Under the alternative proposed in the 2013 Release, auditors would be required to disclose the name of the engagement partner and certain other participants in the audit in the auditor's report. This approach has certain benefits to market participants related to timing and visibility of the disclosures. For example, mandated disclosure in the auditor's report would reduce search costs for market participants in some instances. The required information would be disclosed in the primary vehicle by which the auditor communicates with investors and where other information about the audit is already found, and would be available immediately upon filing with the SEC of a document containing the auditor's report. However, market participants may incur costs to aggregate the information disclosed in separate auditors' reports.

It is possible that, compared to disclosure on Form AP, disclosing the information in the auditor's report may have an incrementally larger effect on the sense of accountability of identified participants in the audit, because, for example, the engagement partner would be involved in the preparation of the auditor's report, but may not be involved in the preparation of the form. As discussed above, increased auditor accountability could have both positive and negative effects on the audit.

Mandating disclosure of the name of the engagement partner in the auditor's report would also create consistency between PCAOB auditing standards and requirements of other global standard setters regarding engagement partner disclosure.47 For example, 16 out of the 20 countries with the largest market

---

47 In 2014, the International Auditing and Assurance Standards Board ("IAASB") adopted International Standards on Auditing ("ISA") 700 (Revised), Forming an Opinion and Reporting on Financial Statements, which generally requires disclosure of the name of the engagement partner in the auditor's report. Following this adoption,
capitalization, including seven European Union member states, already require disclosure of the name of the engagement partner in the auditor's report. However, it should be noted that baseline conditions, including those regarding auditor liability, may differ among these jurisdictions.

As previously discussed, disclosure in the auditor's report could trigger the consent requirement of Section 7 and subject the identified parties to potential liability under Section 11 of the Securities Act. As a result, there could be additional indirect costs to engagement partners and other accounting firms participating in audits associated with defense of the litigation.

3. Disclosure on a New PCAOB Form

Under the new alternative being considered by the Board in this supplemental request for comment, auditors would be required to disclose the name of the engagement partner and certain other accounting firms that participated in the audit in a separate PCAOB form to be filed in most cases by the 30th day after the date the auditor's report is first included in a document filed with the SEC with a shorter deadline of 10 days for initial public offerings.

The approach described in the supplemental request for comment would allow auditors to decide whether to also provide disclosure in the auditor's report taking into account, for example, any costs associated with obtaining consents pursuant to the Securities Act and the potential for liability stemming from disclosure in the auditor's report. Although many auditors may prefer to avoid the potential legal issues associated with disclosure in the auditor's report, some auditors may choose, or be urged by audit clients or investors and other financial statement users, to also make the required disclosures in the auditor's report. Financial statement users could interpret an auditor's disclosure of the engagement partner's name in the auditor's report of a listed entity will become the norm in those jurisdictions that have adopted the ISAs as adopted by the IAASB. See also 2013 Release for further discussion of the requirements regarding engagement partner disclosure in other jurisdictions.

48 Out of the 20 countries with the largest market capitalization (based on data obtained from the World Bank, World Development Indicators), the four that currently do not require the disclosure of the name of the engagement partner are the United States, Canada, Republic of Korea, and Hong Kong. The 16 countries that currently require disclosure of the name of the engagement partner are Japan, United Kingdom, France, Germany, Australia, India, Brazil, China, Switzerland, Spain, Russian Federation, the Netherlands, South Africa, Sweden, Mexico, and Italy.
willingness to be personally associated with the audit in the auditor's report as a signal of audit quality or, more generally, as a means of differentiating among auditors.\textsuperscript{49}

Requiring disclosure in a separate PCAOB form may decrease the chances that investors and financial statement users would seek out the information. While disclosure in the auditor's report would make information available on the date of SEC filing of the document containing the auditor's report, disclosure on Form AP could occur up to 30 days later and information would only be included in the auditor's report when the auditor also chose to disclose in the auditor's report. Regardless of where it is disclosed, investors should be able to consider the information in developing their investment strategies.\textsuperscript{50}

\textsuperscript{49} Changes to the format of the auditor's report in the United Kingdom may have provided auditors with a mechanism to distinguish themselves from their peers. Some filings suggest that some auditors may be using the new format to showcase the rigor and quality of their audit work. See Sara Deans and Terence Fisher, \textit{New UK Auditor's Reports: Findings from the FTSE 100 New Auditor's Reports, Citi Research} (September 3, 2014).

\textsuperscript{50} There is an extensive body of academic literature demonstrating that financial markets are able to incorporate information into securities prices. Because securities prices can be viewed as public goods, investors are able to learn important information about a company by looking at the prices of its securities. See, \textit{e.g.}, Eugene F. Fama, \textit{Efficient Capital Markets: A Review of Theory and Empirical Work}, 25 The Journal of Finance 383 (1970); Sanford Grossman, \textit{Further Results on the Informational Efficiency of Competitive Stock Markets}, 18 Journal of Economic Theory 81 (1978); John C. Coffee, Jr., \textit{Market Failure and the Economic Case for a Mandatory Disclosure System}, 70 Virginia Law Review 717 (1984); and Verrecchia, \textit{Essays on Disclosure}.

RE:  PCAOB Rulemaking Docket Matter No. 029: Concept Release on Requiring the Engagement Partner to Sign the Audit Report  

Dear Board Members:  

The Auditing Standards Committee of the Auditing Section of the American Accounting Association is pleased to provide comments on the *PCAOB Rulemaking Docket Matter No. 029: Concept Release on Requiring the Engagement Partner to Sign the Audit Report*. We appreciate the opportunity to provide input.  

The views expressed in this letter are those of the members of the Auditing Standards Committee and do not reflect an official position of the American Accounting Association. In addition, the comments reflect the overall consensus view of the Committee, not necessarily the views of every individual member.  

We hope that our attached comments and suggestions are helpful and will assist in developing revisions to the PCAOB’s standard on partner signature. If the Board has any questions about our input, please feel free to contact our committee chair for additional follow-up.  

Respectfully submitted,  

Auditing Standards Committee  
Auditing Section - American Accounting Association  

Commenting Committee Members:  
Chair, James L. Bierstaker, Villanova University, phone: (610) 519-6101, email: james.bierstaker@villanova.edu  
Past Chair – Randal J. Elder, Syracuse University  
Paul Caster, Fairfield University  
Brad J. Reed, Southern Illinois University Edwardsville  
Lawrence Abbott, University of Memphis  
Susan Parker, Santa Clara University  
Steven Firer, Monash University – South Africa
General Comments

The Committee commends the PCAOB ("the Board") for addressing the issue of including partner signatures on the audit report. The following section presents a number of specific comments or suggestions, organized along the lines of the questions posed by the Board in the concept release.

Here are comments to selected specific questions in the concept release:

1. **Would requiring the engagement partner to sign the audit report enhance audit quality and investor protection?**

   Based on the existing research, it is unclear whether the signature of the engagement partner will improve audit quality. The requirement is largely based on the assumption of increased partner accountability, but this implies that existing partner accountability to the firm and SEC is insufficient. Further, it assumes that the benefits of increased personal responsibility by the engagement partner exceed any potential loss in accountability by the firm.

   Nevertheless, existing research does suggest that accountability reduces auditors’ information biases, and enhances consensus, effort, and perhaps the quality of audit documentation (Johnson and Kaplan 1991; Kennedy 1993; Brazel et al. 2004; DeZoort et al. 2006). Since it seems likely that the signature requirement would enhance partner perceptions regarding personal accountability, there is a variety of research in auditing contexts that suggests there are benefits that may result from requiring the engagement partner to sign the audit report.

2. **Would such a requirement improve the engagement partners’ focus on his or her existing responsibilities? The Board is particularly interested in any empirical data or other research that commenters can provide.**

   As stated above, there is no research that pertains directly to this issue. However, based on the existing research, including that cited above, it is clear that accountability does focus attention, and could result in elevated levels of audit quality. On the other hand, new standards that provide additional clarity on partners’ responsibilities, or enhanced accountability structures, might be another, and perhaps more direct approach to achieving enhanced audit quality.

3. **Would disclosure of the engagement partner’s name in the report serve the same purpose as a signature requirement, or is the act of signing itself important to promote accountability?**

   It is likely that disclosure would provide transparency, but accountability to a lesser extent than a signature requirement. Another alternative would be a concurring partner signature in the proxy or 10-K. However, one could certainly draw an analogy between
the SOX Section 302 requirement that the CEO and CFO certify the financial statements, and requiring the audit partner to sign the audit report. Lobo and Zhou (2006) document an increase in conservatism in financial reporting following the requirement by the SEC that financial statements be certified by firms’ CEOs and CFOs. Lobo and Zhou (2006) find that firms engage in less income-increasing earnings management in the year of certification by their CEO/CFOs than in the immediately preceding year. They also find that firms incorporate losses more quickly than gains when they report income in the certification year than in the year preceding certification. This, at least on the face, provides empirical, archival support for the notion that - even in a high litigation securities market - signing requirements may increase accountability amongst signing parties. On the other hand, CEO’s and CFO’s may have more control over the financial reporting process than audit partners, who engage in a consultative process with many other members of the audit firm.

4. **Would increased transparency about the identity of the engagement partner be useful to investors, audit committee members, and others?**

It is likely that the identity of the engagement partner is already known to the audit committee. Knowledge of the identity of the engagement partner may be potentially helpful to investors, although we are not aware of research that directly addresses this issue. Research suggests that information about audit firm size and industry specialization is used by market participants (Eichenseher et al. 1989; Menon and Williams 1993; Teoh and Wong 1993;) so it is certainly plausible that knowledge of the identity of the audit partner could provide a meaningful signal regarding audit quality. Additionally, research indicates that there is a change in audit quality surrounding a change in the auditing firm (DeFond and Subramanyam 1998).

A study using Taiwan data (Chi, Omer, Myers and Xie 2008) provides some evidence that characteristics of the audit partner can be used to deduce audit quality. This paper uses audit partner ‘pre-client’ experience (i.e. the number of years in which the audit partner signed the audit opinions of other clients before becoming a signing partner for the current client) and ‘client-specific’ experience (i.e. the number of years in which (s)he has served as a signing partner for the current client). These authors find a modest effect of pre-client experience on reducing extreme negative discretionary accruals. These authors also find that audit partner pre-client experience is negatively related to bank loan pricing – suggesting that some financial statement users find such information about the individual partner useful, although much additional research is needed on this issue. A starting point may be sole practitioners or smaller audit firms who in essence “sign” their reports already.

5. **Would such information allow users of audit reports to better evaluate or predict the quality of a particular audit? Could increased transparency lead to inaccurate conclusions about audit quality under some circumstances? We are particularly interested in any empirical data or other research that commenters can provide.**
As noted above, there is some evidence to suggest that knowledge of the individual partner can be used to infer audit quality. However, because lead engagement partners are generally not involved with an extensive number of engagements, it is quite possible that incorrect inferences could be drawn about the quality of audits associated with an individual partner due to the small number of audits associated with individual partners, and the existence of other factors that impact audit and financial reporting quality.

6. Are there potential unintended consequences of requiring the engagement partner to sign the audit report that the Board should be aware of?

As previously noted, the requirement could actually have an adverse effect on audit quality if it diminishes firm accountability. Also, if the requirement increases individual partner liability, this could have an adverse effect on top talent remaining in the profession and could potentially discourage new entrants into the profession.

Engagement partners may also engage in defensive auditing that increases the costs of audits. In addition, certain partners may find it more appealing to 'shed' more aggressive clients and higher risk clients as a means of maintaining their 'audit quality profile'. This avoidance of risky clients is analogous to the under-investment problem when CEOs are evaluated solely on ROA; the CEO may forgo positive NPV projects because it brings down their overall ROA. Consequently, more senior partners may be unwilling to be the lead partner on a particular client, when, in fact, it is precisely that type of client who needs better audit quality.

7. The EU’s Eighth Directive requires a natural person to sign the audit report, but provides that “[i]n exceptional circumstances, Member States may provide that this signature does not need to be disclosed to the public if such disclosure could lead to an imminent, significant threat to the security of the person.” If the Board adopts an engagement partner signature requirement, is a similar exception necessary? If so, under what circumstances should it be available?

Although it seems likely that situations of imminent threats are rare, we favor taking measures to protect the personal security of the audit partner when there is credible evidence of potential harm from disclosure of the partner’s identity. It is also possible that investors may want to contact partners or interact with them in ways that are not productive or appropriate. It is also worth noting that the legal environment in the EU is quite different from that of the United States.

8. What effect, if any, would a signature requirement have on an engagement partner’s potential liability in private litigation? Would it lead to an unwarranted increase in private liability? Would it affect an engagement partner’s potential liability under provisions of the federal securities laws other than Section 10(b) of the Securities Exchange Act, such as Section 11 of the Securities Act of 1933? Would it affect an engagement partner’s potential liability under state law?
We are not experts in this area. However, it seems likely that partners could be named in civil litigation, potentially triggering other, potentially unintended, negative consequences including privacy and security issues.

9. & 10. Are there steps the Board could or should take to mitigate the likelihood of increasing the audit partner’s potential liability in private litigation? (Question 10 not included).

Again, we are not experts on this. However, the committee is supportive of a safe harbor type provision to help limit liability and other potentially unintended consequences for the partner.

11. Would other audit standards need to be modified?

Not that we are aware of.

12. Should the Board only require the engagement partner’s signature as it relates to the current year audit? If so, how should the Board do so? For example, should firms be permitted to add an explanatory paragraph in the report that states that the engagement partner’s signature relates only to the current year?

This question speaks to the practical problems that could result from a partner signature requirement. If a partner signature is required, it is one additional factor that suggests that the partner signature should be included in the proxy statement. We would not favor an explanatory paragraph that the engagement partner’s signature relates only to the current year as it would unnecessarily complicate the audit report.

13. If a signature requirement is adopted, should a principal auditor that makes reference to another auditor also be required to make reference to the other engagement partner? Would an engagement partner be less willing to assume responsibility for work performed by another audit firm under AU sec. 543?

Although the committee was not unanimous on this issue, the majority believed that the other auditor engagement partner should be referred to. However, as a result of a partner signature requirement, the majority of the committee also believes it is likely that audit firms will be more likely to refer to other auditors. We note that under existing standards references to other auditors do not even contain the name of the other audit firm, which we believe should be included as part of the reference to other auditors.

14. Should partners sign reviews of interim financial information?

The committee believes this is unnecessary, and the signature requirement should only apply to audits.

15. Would other changes to the audit report be necessary?
There are some situations that could require other changes to the audit report. As noted in Q12, requiring the engagement partner to sign the audit report could be problematic when multiple years are covered with different audit engagement partners. In these circumstances, the audit report may require modifications. It is also worth noting that restatements may also create complications regarding partner signature requirements.

16. If the Board adopts a signature requirement, should it specify a form of the engagement partner’s signature? For example, should the engagement partner sign on behalf of the firm and then “by” the engagement partner?

If a signature requirement is adopted, having the engagement partner sign the audit report should not in any way change the existing firm signature requirement.

Re: PCAOB Request for Public Comment: Concept Release on Requiring the Engagement Partner to Sign the Audit Report - PCAOB Rulemaking Docket Matter No. 029

Dear Board Members and Staff:

BDO Seidman, LLP appreciates the opportunity to provide comments on the Concept Release on Requiring the Engagement Partner to Sign the Audit Report (“Concept Release”) and we hope that our comments and recommendations provide helpful insights as you deliberate the matters set out therein.

We share the PCAOB’s objective of enhancing audit quality through continuous consideration of appropriate means of achieving that goal. However, while we understand that some parties believe that requiring the engagement partner signature on an audit report would improve audit quality through enhanced accountability and transparency, we do not agree with that view. We are also concerned that this recommendation may have adverse unintended consequences.

It appears that much of the support for requiring the engagement partner’s signature is driven by analogies to the Eighth Company Law Directive of the European Union and the certification requirement of Section 302 of the Sarbanes-Oxley Act. However, we believe that these analogies are not appropriate for the following reasons:

**Eighth Company Law Directive**

We recognize that the European Union, through the Eighth Company Law Directive, requires member states to adopt a requirement for the engagement partner to sign the audit report. However, the liability regime in Europe (including liability caps in some countries) differs so significantly from that in the U.S. that any consideration of new PCAOB requirements that might trigger liability should not be made without recognition of those differences. In that regard, it should be noted that while the Concept Release refers to a 2005 paper of The Institute of Chartered Accountants in England and Wales entitled...
Shareholder Involvement - Identifying the Audit Partner as supportive of the audit partner signature, that paper recommended a limitation of liability provision in the engagement letter, which would provide that claims could only be brought against the auditing firm, rather than the identified engagement partner. Such limitation is not permitted by the SEC.

Section 302 Certification

We do not believe that this analogy is valid. The purpose of the officer’s signature in a filing is to clarify management’s long-standing responsibility for the information included therein, although such responsibility was written broadly, without significant guidance. In that regard, Section 302 was adopted because some management was attempting to disavow responsibility for the financial statements. In contrast, the engagement partner’s responsibilities for the performance of the audit are set out clearly and extensively in professional standards. The effectiveness with which these professional standards have been implemented is routinely monitored as part of a firm’s system of quality control, in addition to periodic inspections by professional and regulatory bodies. There is no similar monitoring by regulators of management’s exercise of its responsibilities.

We have organized our comments into the following broad categories that address the concepts included within most of the specific questions posed in the Concept Release:

- Accountability
- Transparency
- Potential Liability of the Engagement Partner in Private Litigation

Accountability

The Concept Release indicates that an engagement partner signature may lead to improved audit quality because it increases the engagement partner’s sense of personal accountability for the work performed and the opinion expressed, which could, in turn, result in greater exercise of care in performing the audit. However, there does not appear to be any empirical or anecdotal evidence to support that contention.

In our view, requiring an engagement partner to sign the audit report would not have any meaningful impact on engagement partner accountability (or on any concomitant improvement in audit quality or investor protection). Auditors are already held accountable to multiple parties, including investors, audit committees and partners within their own firms. In that regard, audit committees have primary responsibility for the appointment, compensation and oversight of a public company’s audit firm. The engagement partner’s
frequent meetings with the audit committee on substantive audit issues certainly highlight this line of authority.

While the engagement partner is a key driver of the audit process and audit quality, audits are not performed by one individual, but rather by a coordinated team of professionals, each of whom is responsible for his or her own actions and is subject to sanctions mentioned below. In many audits of public companies, due to their complexity and size, the engagement partner often relies on numerous specialists, consulting partners, and other partners and managers with unique expertise. The Concept Release recognizes this scenario by describing a public company audit as typically involving “a substantial amount of work by highly skilled practitioners exercising significant professional judgment.” While this description of a coordinated team of professionals is accurate, it omits a crucial aspect of the audit -- a firm’s system of quality control.

As set out in QC Section 20, *System of Quality Control for a CPA Firm's Accounting and Auditing Practice*, the firm’s system of quality control encompasses (1) Independence, Integrity and Objectivity, (2) Personnel Management, (3) Acceptance and Continuance of Engagements, (4) Engagement Performance, and (5) Monitoring, all of which play a part in the performance of high quality audits. Although the engagement partner has a key role in the conduct of the audit within the firm’s system of quality control, that system is critical to the effectiveness with which an engagement partner is able to fulfill that responsibility. The significance of the firm’s system of quality control to audit quality emphasizes the importance of holding the firm accountable for the audit, and the signature requirement should reflect this context. In contrast, directing the spotlight only on the engagement partner may have the unintended consequence of diminishing the rest of the engagement team’s sense of responsibility.

Engagement partners are held accountable through regulatory inspections, in addition to the internal monitoring processes conducted as part of the firm’s system of quality control. As a result, engagement partners are keenly aware of their responsibilities and accountability. For example, the PCAOB performs inspections to evaluate the sufficiency of a firm’s quality control system and inspects individual engagements to assist in that evaluation. Any adverse inspection findings are usually a significant input into the firm’s partner evaluation process. Further, engagement partners are also subject to enforcement actions by the PCAOB and SEC. Determinations of improper professional conduct can lead to various penalties, including barring an individual from practicing before those bodies. Enforcement actions are available to the public and the possibility of being subjected to one acts as a strong motivation for the engagement partner to ensure that the audit is performed with the highest level of professionalism.
The engagement partner is also subject to civil litigation, as further described below.

Finally, by putting the firm at risk by signing the firm’s name on the audit report, the partner is also placing at risk his or her capital in the firm and retirement benefits, both of which may be highly significant assets of the partner.

Transparency

The Concept Release suggests that by providing financial statement users, audit committees, and others with the name of the engagement partner, this might help them evaluate the extent of an engagement partner’s experience and, to a degree, his or her track record and, as a result, provide some assessment of audit quality. However, transparency is already provided to financial statement users through a variety of mechanisms, specifically:

- Audit committees already have sufficient transparency as to the qualifications of the engagement partner through their many interactions with the partner during the year and knowledge otherwise gained through discussions with company management.

- Regulators also have ready access to the names of engagement partners. Furthermore, they are able to assess the capabilities of partners in connection with various forms of inspection.

- While investors generally would not know the name of an engagement partner, we do not understand how knowledge of the name would provide any useful information without understanding the specific capabilities of the partner. In that regard, it is important to recognize the corporate governance process operating under the various federal and regulatory regimes. Under those regimes, investors are represented by the Board of Directors and, in turn, by the audit committee. As mentioned above, the audit committee is responsible for assessing the performance of the audit firm as well as the engagement partner. Accordingly, we believe it is appropriate for investors to recognize this audit committee duty without feeling the need to duplicate it (albeit even partially). If investors are dissatisfied with the performance of the audit committee members, they can reflect this view by voting to replace them on the Board of Directors. It has also been suggested that investors would be able to contact the engagement partner directly if the report were signed by the partner. However, confidentiality constraints and liability concerns would likely restrict such communications.
Moreover, the line of reasoning that the engagement partner signature provides increased transparency discounts the significant impact the firm’s system of quality control has on an audit. Rather than providing transparency, providing the engagement partner’s name may actually decrease transparency because some parties may incorrectly assume that the engagement partner is the sole source of audit quality.

**Potential Liability of the Engagement Partner in Private Litigation**

The Concept Release recognizes concerns that the signature requirement may have a negative effect with respect to the engagement partner’s potential liability under certain aspects of private litigation. While there may well be increased liability in certain types of litigation, we also understand that in other cases, the attendant liability of the partner lacks clarity. Therefore, we suggest that the PCAOB perform a thorough analysis of the potential legal consequences of a signature requirement. In any event, we believe that other litigation-related aspects of the signature requirement need to be addressed, as discussed below.

While engagement partners are sometimes named individually in private lawsuits, requiring an engagement partner to sign his or her name on the audit report will undoubtedly increase the number of times that an engagement partner will be the subject of private litigation. We believe that the plaintiffs’ bar will focus unnecessarily on the engagement partner in adding parties to private lawsuits, resulting in firms facing increased costs. If engagement partners begin to be named routinely in private litigation as a result of signing their names on audit reports, firms will likely be required to retain separate counsel for the engagement partner and the firm. Firms also may be required to settle even meritless private lawsuits at an additional cost due to the engagement partner being added as a defendant. Moreover, in the likely event that the signature requirement increases the frequency whereby engagement partners are named in private lawsuits, this also may have a negative impact on the supply of high quality audit partners. Unnecessarily subjecting engagement partners to litigation as an individual defendant will likely cause a chilling effect on the profession, when auditors decide that the stress from being individually named in a lawsuit (even where the claims are unjustified) is not worth the benefits of becoming or acting in the capacity of the engagement partner, particularly on high risk engagements. This could also serve as a disincentive for college graduates to enter the public accounting profession. As a result, investors would lose the benefit of enhanced audit quality that this proposed signature requirement seeks to achieve.

If a signature requirement for the engagement partner is ultimately adopted, we strongly recommend that the PCAOB work with the SEC to ensure that it is accompanied with a safe harbor provision. This would be consistent with the statement in the Concept Release
that the signature requirement is not intended to increase the liability of the engagement partner.

*****

We appreciate your consideration of our comments, and would be pleased to discuss these with you at your convenience. Concept Release on Requiring the Engagement Partner to Sign the Audit Report

Dear Mr. Seymour:

I am writing you on behalf of the California Public Employees’ Retirement System (CalPERS). CalPERS is the largest public pension fund, managing pension and health benefits for more than 1.6 million California public employees, retirees and their families. CalPERS manages approximately $198.5 billion in assets. Acting as fiduciaries to the members of the system, the CalPERS Board of Administration and its staff invest the pension funds of its members over the long term throughout the global capital markets.

CalPERS, which holds equity shares in more than 7,000 publicly-traded companies, views the integrity of financial reporting as an issue of vital importance to all investors and thanks the Public Company Accounting Oversight Board (Board) for the opportunity to provide public comment on rulemaking docket 029, which evaluates whether it should require the auditor with final responsibility for the auditor to sign the audit report.

As a long-term shareowner, CalPERS has a significant financial interest in seeking improvements in the integrity of financial reporting. We believe that accurate and reliable audited financial statements are critical to investors in making informed decisions and maintaining confidence in the marketplace. As reflective in the current financial market meltdown, public and investor confidence and stability are essential to the success and effective functioning of the capital markets. CalPERS’ Global Principles of Accountable Corporate Governance stresses the importance of the integrity of Financial Reporting, link at “Adopt Corporate Governance Principles”: http://www.calpers-governance.org/

CalPERS is supportive of the Board and its efforts to continuously improve the quality of the audit report. We agree and support proposed amendments to paragraph .08 of AU sec. 508, Reports on Audited Financial Statements, of the Board’s interim standards and paragraph 85 of Auditing Standard No. 5, An Audit of Internal Control Over Financial Reporting That is

California Public Employees’ Retirement System
Lincoln Plaza East - 400 Q Street, Suite E4800 - Sacramento, CA 95811
Integrated with an Audit of Financial Statements, each of which describes the elements of the standard audit report.

We strongly believe that change is necessary to ensure the sustainability of a strong and vibrant auditing profession. CalPERS participated, testified and supported the US Treasury, Advisory Committee on the Auditing Profession’s (ACAP) recommendations on increasing transparency requiring auditing firms to produce a public annual report incorporating information such as the firm’s financial results on statutory audits, directly related services on a comparable basis and required disclosure of key performance indicators to foster greater audit quality.\(^1\) CalPERS also stated that the ACAP should include the requirement as outlined in the European Union’s Eighth Directive, Article 40 Transparency Report, that audit firms provide a description of their quality control system and a statement on the effectiveness of the quality control system.\(^2\)

In this letter dated 13 June 2008 (attachment 1), CalPERS agreed and supported ACAP’s recommendation that the PCAOB undertake a standard-setting initiative to consider mandating the engagement partner’s signature on the auditor’s report. CalPERS is convinced that such signatures will foster greater accountability of the individuals signing the auditor’s report, will enhance transparency, and may improve audit quality. We continue to support the certification requirement of the CEO and CFO of companies under Section 302 of Sarbanes-Oxley and directors’ signatures on public company annual reports and liken this proposed recommendation to these requirements and to the inherent benefits this may produce.

With this in mind, investors like CalPERS view the Board’s evaluation of whether it should require the auditor with final responsibility for the auditor to sign the audit report as critical, timely and as an additional basis of the integrity of financial reporting. We offer the following comments:

**Reasons to Support a Signature Requirement:**

Although CalPERS agrees that the skill of the audit firm as a whole is represented and stated in the opinion of the audit report, we believe requiring the engagement partner to sign the audit report will enhance audit quality by increasing the engagement partner’s sense of accountability to financial statement users (providers of capital), lead to greater care in performing the audit and possibly provide better investor protection. CalPERS believes as outlined above that similar positive effects of personal accountability and sense of responsibility through certification can also improve audit quality with the engagement partner’s signature. We concur that requiring the engagement partner’s identity through a signature will motivate investors, companies’ boards, and the audit firms to evaluate:

- the extent of an engagement partner’s experience and the firms’ policy on developing and enhancing engagement partner’s expertise as well as oversight of engagement partners;
- the quality, expertise and better supervision of the audit team and the entire audit process;

---

\(^1\) CalPERS written and oral testimony to the US Treasury Advisory Committee on the Auditing Profession. Panel on General Sustainability, 4 February 2008

\(^2\) CalPERS written response to the US Treasury Advisory Committee on the Auditing Profession’s Addendum to Section VI. Firm Structure and Finances, issued on May 30, 2008, dated 13 June 2008
• whether auditors’ biases in information processing is reduced; and
• whether there is enhanced auditors’ consensus and effort.

**Signature Requirement – Part of the Audit Is Performed by Another Auditor:**

Although, currently standard references to other auditors do not even contain the name of the other audit firm, it would seem more likely that once an engagement signature is necessary that audit firms will be more likely to refer to other auditors by firm name. We encourage and support this additional transparency.

CalPERS supports the Board’s Concept Release and its efforts to improve the audit report. CalPERS believes these proposed changes will enhance transparency and accountability. Thank you for considering our comments. If you would like to discuss any of these points please do not hesitate to contact me at 916-795-4129.

Sincerely,

Mary Hartman Morris

Washington, DC 20220

Chairman Levitt and Chairman Nicolaisen and Members of the ACAP:

I am writing on behalf of the California Public Employees' Retirement System (CalPERS). As the largest public pension system in the U.S., CalPERS manages approximately $247 billion in assets providing retirement and health benefits for nearly 1.5 million members.

This letter is CalPERS' response to the ACAP’s Addendum to Section VI. Firm Structure and Finances, issued on May 30, 2008. CalPERS’ comments on the addendum are as follows:

**Auditor's Report**

CalPERS supports the Committee’s recommendation to improve the auditor’s reporting model. As a long term investor, we believe the Auditor’s Report should include identification of key risk areas, significant changes in risk exposures and provide specific information on how the audit opinion was reached, specifically in areas where significant assumptions and uncertainty in measurement require a higher level of professional judgment.\(^1\) As outlined in CalPERS’ written testimony on February 4, 2008, of critical importance to investors is that auditors accept

---

responsibility for detecting fraud and improving the timely communication of these frauds to investors and shareowners.\(^2\)

CalPERS believes the auditor’s judgments about accounting principles and critical accounting policies and practices should be incorporated into the auditor’s report. CalPERS agrees with the ACAP’s conclusion that an improved auditor’s report would likely lead to more relevant information for users of financial statements and would clarify the role of the auditor in the audit of financial reporting.

**Engagement Partner Signature**

CalPERS agrees with ACAP’s consideration to recommend that the PCAOB revise the auditor’s report standard to mandate the engagement partner’s signature on the auditor’s report to affirm the accountability of the auditor. CalPERS’ testimony on February 4, 2008, also recommended public access to all firm-specific inspection reports even if potential defects in the audit firm’s quality control systems are addressed. Making these inspection reports available to the public would provide an incentive for audit firms to continuously strive to improve audit quality.

**Transparency**

CalPERS supports ACAP’s recommendation that the PCAOB require auditing firms to produce a public annual report incorporating information such as the firm’s financial results on statutory audits, directly related services on a comparable basis and required disclosure of key performance indicators to foster greater audit quality. CalPERS believes the ACAP should also include the requirement as outlined in the European Union’s Eight Directive, Article 40 Transparency Report, that audit firms provide a description of their quality control system and a statement on the effectiveness of the quality control system. Similarly, CalPERS applauds the recent action by the PCAOB which requires registered public accounting firms to submit an annual report requiring two types of additional reporting obligations. This includes basic information about the audit firm and the firm’s issuer-related practice over the most recent 12-month period. The second requirement would include specific reportable events that must be

\(^2\) CalPERS’ written and oral testimony to the US Treasury, Advisory Committee on the Auditing Profession, Panel on General Sustainability, 4 February 2008.
disclosed within 30 days The PCAOB will make each firm’s annual and special reports available to the public.3

CalPERS supports the ACAP’s recommendation that required key performance indicators include average headcount, staff turnover, diversity, client satisfaction, audit and non-audit work, proposal win rate, revenue, profit, profit per partner, engagement team composition, the nature and extent of training programs and the nature and reason for client restatements. CalPERS also suggested in its February 4, 2008 testimony other key performance indicators such as average experience of staff, partner time allocated to each audit and percent of training dollars spent on staff as a percentage of the fees received for the audit. Audit firms should also consider strengthening peer reviews as well as sharing key performance indicators during these reviews to facilitate and strengthen audit quality throughout the industry.

ACAP is considering whether the PCAOB beginning in 2011 require auditing firms to file on a confidential basis, its audited financial statements prepared in accordance with either GAAP or IFRS, allowing the PCAOB to (1) determine, based on broad consultation, whether these audited financial statements be made public in consideration of their utility to audit committee members and investors in assessing audit quality, or alternative 2, which would require audit firms’ audited financial statements be made available publicly. To ensure better transparency and provide audit committees and investors the ability to assess audit quality, CalPERS supports alternative 2, that all audited financial statements of audit firms be available on the PCAOB’s website publicly.

When there is a change in the external auditor, the Audit Committee of companies should publicly disclose to shareowners the reasons for the change in greater detail than what is required by the SEC and within four days of the change. CalPERS also has the position that the independent external auditor should be ratified by shareowners annually.

**Litigation**

ACAP should not recommend that Congress provide federal courts with exclusive jurisdiction over some categories of claims, which presently may be brought in state courts against auditors, when such claims are related to audits of public company financial statements. CalPERS believes that federal jurisdiction

over the public company auditing profession would weaken plaintiffs’ rights and remedies.

Thank you for considering our comments in response to the Advisory Committee on the Auditing Profession’s draft report and addendum. Please contact me at (916) 795-2731 if you have any questions or if I may be of further assistance.

Re: PCAOB Rulemaking Docket Matter No. 29

To the Members of the PCAOB

The Accounting Principles and Auditing Standards Committee (the AP&AS “Committee”) of the California Society of Certified Public Accountants (CALCPA) is pleased to provide our comments to the Public Company Accounting Oversight Board (“PCAOB”) on PCAOB Rulemaking Docket Matter No. 29 “Concept Release on Requiring the Engagement Partner to Sign the Audit Report.”

The AP&AS Committee is the senior technical committee of CALCPA. CALCPA has approximately 32,000 members. The Committee is comprised of 50 members, of whom 67 percent are from local or regional firms, 23 percent are sole practitioners in public practice, 5 percent are in industry and 5 percent are in academia.

General Comment

The Committee strongly opposes any requirement to require the engagement partner to sign the audit report or be identified as the engagement partner in public reports. The Board cites benefits of increased transparency and accountability, but the bases for those benefits uses terms like “might,” “may,” and “could.” That is, they are based on pure conjecture, and not facts. The Committee sees no benefit to any such requirement, and there may be some significant negatives.

1. Would requiring the engagement partner to sign the audit report enhance audit quality and investor protection?

No. There is already sufficient incentive under Sarbanes Oxley, PCAOB inspections and legal exposure to achieve audit quality.

2. Would such a requirement improve the engagement partner’s focus on his or her existing responsibilities? The Board is particularly interested in any empirical data or other research that commenters can provide.
No. For the reasons stated in response to Question 1, the engagement partner is already very well focused on his or her responsibilities. The Committee is not aware that there is any empirical data on this issue, and notes that views supporting the signature requirement cite benefits that “may,” “could,” or “might” be achieved. As such, they are largely conjecture, and as such do not provide an adequate basis for a signature requirement.

3. Would disclosure of the engagement partner’s name in the report serve the same purpose as a signature requirement, or is the act of signing itself important to promote accountability?

The Committee sees no difference.

4. Would increased transparency about the identity of the engagement partner be useful to investors, audit committees, and others?

The name of the engagement partner in most cases will be no more than the name of an unknown person to investors and others outside the entity, and requiring the identity of the engagement partner therefore hardly increases transparency in any meaningful way. The name and the individual would already be known to the audit committee, so there would be no increased transparency.

5. Would such information allow users of audit reports to better evaluate or predict the quality of a particular audit? Could increased transparency lead to inaccurate conclusions about audit quality under some circumstances? We are particularly interested in any empirical data or other research that commenters can provide.

It is hard to see how the name of the engagement partner is of any use in predicting the quality of a particular audit. An audit typically involves a host of resources of the audit firm, and the quality of a particular audit is more dependent on the availability and skill of those resources than on the engagement partner. Further, the best assessment of the engagement partner is made by the audit committee and management, and this is unrelated to whether the name of the engagement partner is disclosed in the audit firm’s report.

The Committee points out that if there are negative indications about an engagement partner’s conduct of an audit on the audit of a public company, most firms will investigate it thoroughly, and often remove the partner from engagement responsibility, at least during the pendency of the investigation. Therefore, it is not likely that naming the engagement partner would be meaningful.

6. Are there potential unintended consequences of requiring the engagement partner to sign the audit report that the Board should be aware of?

The Committee is concerned that naming the engagement partner could lead to harassment or personal danger to the individual; aberrational behavior is an unfortunate fact of life, and it is sometimes difficult to protect individuals from it. As stated below, the Committee is also concerned about possible litigation exposures.
7. The EU’s Eighth Directive requires a natural person to sign the audit report, but provides that “[i]n exceptional circumstances, Member States may provide that this signature does not need to be disclosed to the public if such disclosure could lead to an imminent, significant threat to the personal security of any person.” If the Board adopts an engagement partner signature requirement, is a similar exception necessary? If so, under what circumstances should it be available?

The Committee is opposed to a requirement to name the engagement partner. It is difficult to imagine all circumstances where there could be a threat to the personal security of the engagement partner, particularly if events causing the threat arise after he or she has already been named.

8. What effect, if any, would a signature requirement have on an engagement partner’s potential liability in private litigation? Would it lead to an unwarranted increase in private liability? Would it affect an engagement partner’s potential liability under provisions of the federal securities laws other than Section 10(b) of the Securities Exchange Act, such as Section 11 of the Securities Act of 1933? Would it affect an engagement partner’s potential liability under state law?

As the Release points out, naming the engagement partner or having the engagement partner sign the report may, in the views of some, open up the engagement partner to additional legal liability. Unfortunately, the legal determination may well depend on the outcome of litigation, which is expensive, and the results may be inconsistent from state to state and among federal circuits.

9. Are there steps the Board could or should take to mitigate the likelihood of increasing an engagement partner’s potential liability in private litigation?

The Board should further explore ways to eliminate any increase in the engagement partner’s potential liability in private litigation. The Committee is not certain that the Board could do this, and whether Federal law would successfully preclude action under state law.

10. Some commenters on the ACAP Report who expressed concern about liability suggested that a safe harbor provision accompany any signature requirement. While the Board has no authority to create a safe harbor from private liability, it could, for example, undertake to define the engagement partner’s responsibilities more clearly in PCAOB standards. Would such a standard-setting project be appropriate?

The Committee does not believe a further definition of the engagement partner’s responsibilities would be useful.

11. If the Board adopts an engagement partner signature requirement, would other PCAOB standards, outside of AU sec. 508 and Auditing Standard No. 5, need to be amended?

In view of the Committee’s position on any such requirement, the Committee does not respond to this question.
12. Should the Board only require the engagement partner’s signature as it relates to the current year’s audit? If so, how should the Board do so? For example, should firms be permitted to add an explanatory paragraph in the report that states that the engagement partner’s signature relates only to the current year?

The easiest way to do this is to name the engagement partner for the current year audit, and not require an actual signature. The engagement partner should not be required to attach his or her name to a prior period for which he was not engagement partner.

13. If a signature requirement is adopted, should a principal auditor that makes reference to another auditor also be required to make reference to the other engagement partner? Would an engagement partner at the principal auditor be less willing to assume responsibility for work performed by another firm under AU sec. 543?

The principal firm is taking overall responsibility, and the engagement partner should be able to satisfy himself or herself as to the other auditor. If the other auditor’s report is included, the Committee questions how meaningful it would be to identify the engagement partner of the other firm.

14. Auditors are not required to issue a report on a review of interim financial information, though AU sec. 722, Interim Financial Information, imposes requirements on the form of such a report in the event one is issued. Should the engagement partner be required to sign a report on interim financial information if the firm issues one?

No. A review is not an audit, and an implication of the engagement partner signature is that a reader might misconstrue the scope of work done.

15. Would requiring the engagement partner to sign the audit report make other changes to the standard audit report necessary?

In view of the Committee’s position on any such requirement, the Committee does not respond to this question.

16. If the Board adopts a signature requirement, should it specify a form of the engagement partner’s signature? For example, should the engagement partner sign on behalf of the firm and then “by” the engagement partner?

The Committee believes that this form would at least clarify the roles of the firm and the engagement partner. It should be permitted. There may be other forms that might be used as well. However, as stated previously, the Committee objects to any requirement for the engagement partner to sign the report or be named as the engagement partner.
We thank you for the opportunity to comment on this matter. We would be glad to discuss our opinions with you further should you have any questions or require additional information.

Very truly yours,

Jo Ann Guatterey, Chair
Accounting Principles and Auditing Standards Committee
California Society of Certified Public Accountants

Re: Request for Public Comment: Concept Release on Requiring the Engagement Partner to Sign the Audit Report - PCAOB
Rulemaking Docket Matter No. 029

Dear Office of the Secretary:

The Center for Audit Quality (CAQ) is an autonomous public policy organization dedicated to enhancing investor confidence and public trust in the global capital markets. The CAQ fosters high quality performance by public company auditors, convenes and collaborates with other stakeholders to advance the discussion of critical issues requiring action and intervention, and advocates policies and standards that promote public company auditors’ objectivity, effectiveness and responsiveness to dynamic market conditions. Based in Washington, D.C., the CAQ is affiliated with the American Institute of Certified Public Accountants. The CAQ appreciates the opportunity to respond to the Public Company Accounting Oversight Board (PCAOB or the Board) Concept Release on Requiring the Engagement Partner to Sign the Audit Report (the Concept Release). This letter represents the observations of the CAQ, but not necessarily the views of any specific firm, individual or CAQ Governing Board member.

We have organized our observations and concerns regarding the topics raised in the Concept Release into the following sections:

• Overview
• Perspectives on Accountability
• Perspectives on Transparency
• Potential Unintended Consequences

OVERVIEW

We commend the PCAOB for soliciting input at an early stage in its standards-setting process. This Concept Release will enable the
PCAOB to consider valuable input while it deliberates whether proposed changes to the existing standards are appropriate. We encourage the PCAOB to continue to use Concept Releases or other means to obtain early input on relevant issues for use in considering the relative importance of and need for drafting new proposed standards or revisions to existing standards.

The Concept Release suggests that a signature requirement might enhance the engagement partner’s sense of accountability to financial statement users for the work performed and the opinion expressed, which could, in turn, result in greater exercise of care in performing the audit. The Concept Release also suggests that a signature requirement might increase transparency regarding who is responsible for performing the audit and could provide useful information to investors and audit committees.

We believe that existing PCAOB standards and regulatory oversight sufficiently provide for accountability at all levels of a firm.¹ Within this letter we highlight how a firm’s system of quality control and the engagement partner’s interaction with, and role within, that system fosters accountability. We also provide perspective on other parties to which engagement partners are held accountable, such as other partners within a firm, audit committees, regulators and investors.

We also believe existing standards sufficiently provide for transparency regarding an engagement partner’s identity. For example, the names of engagement partners are known or readily available to audit committees and regulators. Audit committees, in particular, are in a position to act upon this information in representation of investors given their governance authority and knowledge of the particular circumstances of the engagement.

We also describe potential unintended consequences of an engagement partner signature requirement. Such consequences may include inappropriate inferences about the partner based on his or her association with certain public companies, insufficient recognition given to the corporate governance process, potentially misleading information for investors, possible negative impacts on an engagement partner’s liability, and foster reluctance by engagement partners to exercise professional judgment.

As more fully described below, we question whether an engagement partner signature requirement will enhance audit quality in a meaningful way.

**PERSPECTIVES ON ACCOUNTABILITY**

As mentioned above, a firm is required, in accordance with the PCAOB’s standards, to establish and maintain a system of quality control. As part of that system, PCAOB standards place primary responsibility for the planning and supervision of the audit on the engagement partner.² However, as highlighted more fully below, the firm’s system of

---

¹ Throughout this letter, we utilize “firm” to describe a registered public accounting firm, recognizing that generally all firms are either organized as partnerships or utilize organizational structures with similar characteristics.

² See PCAOB Interim Standards, AU Section 311, “Planning and Supervision”
quality control and the establishment and supervision of an engagement team are critical to the effectiveness of an engagement partner’s ability to properly conduct the audit. In addition, partners, as owners in the firm, recognize the significance of their responsibility to the other partners in their firm, who will hold engagement partners accountable for their conduct, as will audit committees, regulators and investors. As such, we believe that the firm’s signature on the audit opinion, which represents the firm’s overall responsibility for the audit, and to which all members of the engagement team and the firm’s system of quality control are accountable, provides the most meaningful indication of responsibility to investors. We provide additional perspective on these matters in the following paragraphs.

**Firm’s System of Quality Control and the Engagement Partner’s Role**

PCAOB standards set forth quality control standards with which registered public accounting firms must comply in order to provide reasonable assurance that the firms, and their personnel, comply with applicable professional standards. Pursuant to these standards, a system of quality control should provide the firm with reasonable assurance that its personnel comply with the applicable professional standards and the firm’s standards of quality. Such policies and procedures, which are a key element of the PCAOB’s inspections of registered firms, should encompass the following interrelated elements:

- Independence, Integrity and Objectivity
- Personnel Management
- Acceptance and Continuance of Clients and Engagements
- Engagement Performance
- Monitoring

These standards place accountability for the conduct of the audit on the firm. While the engagement partner clearly plays an important role within a firm’s system of quality control, we highlight below how these elements illustrate the significance of the firm’s system of quality control, and the engagement partner’s role within, interaction with, and reliance upon such a system. This emphasizes the importance of holding the firm accountable for the audit and the fact that while the engagement partner plays a critical role in the conduct of the audit, a firm’s system of quality control is integral to the performance of an audit in accordance with professional standards, and as such, the firm signature provides the most meaningful representation of the audit.

---

3 Pursuant to PCAOB Rule 3400T, the PCAOB provisionally designated the AICPA’s Auditing Standards Board’s Statements on Quality Control Standards (QC Sections 20-40), as in existence on April 16, 2003, as the PCAOB’s Interim Quality Control Standards.

4 PCAOB Interim Quality Control Standards – QC Section 20, paragraphs 3-7
Independence, Integrity and Objectivity

PCAOB standards require that a firm establish policies and procedures to provide it with reasonable assurance that personnel maintain independence (in fact and in appearance) in all required circumstances, perform all professional responsibilities with integrity and maintain objectivity in discharging professional responsibilities. Policies and procedures that firms establish in response to these requirements vary based on a firm’s individual facts and circumstances, but often include codes of conduct, independence policies and training to emphasize the importance of all of these components within the firm. Of significant importance is the manner in which the firm fosters an environment of integrity and objectivity, as evidenced through the actions of individuals at all levels of the firm. In addition, firms generally have procedures to monitor the independence of both partners and employees of the firm, as well as the firm itself.

Engagement partners clearly play a significant role in fostering an environment of integrity and objectivity within the engagement team in the conduct of the audit. However, in many cases, the engagement partner, by necessity, is reliant on the firm’s system of quality control for monitoring compliance with aspects of the firm’s policies and procedures related to his or her particular audit client. For example, employees of the firm are responsible for certifying their independence with respect to audit clients of the firm, including financial interests. Typically, especially in larger audit firms, engagement partners rely upon these certifications, as well as the firm’s process for evaluating compliance, when concluding whether or not issuance of an audit report is appropriate.

Personnel Management

PCAOB standards require a firm to establish policies and procedures related to hiring, assigning personnel to engagements, professional development, and advancement activities to provide the firm with reasonable assurance that personnel are competent, have appropriate technical training and proficiency, satisfy continuing professional education requirements, and are qualified when selected for advancement. PCAOB standards also require an engagement quality review of each audit report prior to issuance. Firms typically establish policies related to these matters. For example, firms generally have policies for the assignment of personnel to engagements, including partners with final responsibility for the audit and partners responsible for performing the engagement quality review, which consider the requisite skills and risk associated

5 PCAOB Interim Quality Control Standards – QC Section 20, paragraphs 9-10
6 PCAOB Interim Quality Control Standards – QC Section 20, paragraphs 11-13; QC Section 40
7 PCAOB Interim Standards - SECPS Section 1000.08(f); Appendix E, Section 1000.39. In addition, on July 28, 2009, the PCAOB adopted Auditing Standard No. 7, “Engagement Quality Review,” which, if approved by the SEC, replaces the PCAOB Interim Standards related to an engagement quality review.
with the engagement. In addition, firms generally establish mechanisms to train personnel and to track compliance with continuing education requirements.

In the context of an audit, engagement partners have a responsibility to consider the specific skills of engagement team members and to supervise them accordingly. Engagement partners also play an important role in the professional development and evaluation of personnel, which in turn provides a significant input into the firm’s advancement activities. However, as mentioned above, engagement partners are assigned to engagements based on the firm’s evaluation of his or her skills and those required to perform the audit based on the firm’s assessment of the company as described above. Engagement partners also do not select the engagement quality reviewer, whose role is to perform an objective review of the significant auditing, accounting and financial reporting matters prior to the issuance of the firm’s audit report. Finally, engagement partners, especially in larger firms, must rely on a firm’s system of quality control in assessing that personnel are compliant with firm policies regarding training and compliance with continuing professional education requirements.

Acceptance and Continuance of Clients and Engagements

PCAOB standards require firms to establish policies and procedures for client acceptance and continuance to provide reasonable assurance that the firm can complete engagements with professional competence and that risks associated with providing professional services in particular circumstances are appropriately considered. Generally, these policies and procedures are developed and applied in a manner such that certain criteria are used to evaluate whether the firm should be associated with a particular client, as well as whether the firm has resources to enable it to perform the service both timely and competently.

Acceptance and continuance decisions are generally not made solely by the engagement partner, but are a collaborative effort that considers the input of other members of the firm. As such, audit clients represent clients of the firm, not just of an individual engagement partner.

Engagement Performance

PCAOB standards require firms to establish policies and procedures to provide the firm with reasonable assurance that the work performed by engagement personnel meets applicable professional standards, regulatory requirements and the firm's standards of quality. These policies and procedures should cover planning, performing, supervising, reviewing, documenting and communicating the results of each engagement including, where applicable, the engagement quality review and, where applicable, consultation requirements. These policies and procedures should also provide reasonable assurance that personnel refer to

---

8 PCAOB Interim Quality Control Standards – QC Section 20, paragraphs 14-16

9 PCAOB Interim Quality Control Standards – QC Section 20, paragraphs 17-19
authoritative literature and consult with individuals (e.g., specialists in technical areas of accounting, valuation, etc.) either inside or outside the firm under the appropriate circumstances. Firms generally develop policies and procedures in the areas noted above in order to establish uniform requirements for the conduct of audits. These policies and procedures often cover a number of areas, including when consultations are required (e.g., in situations where there are complex or unusual issues), the use of internal specialists (e.g., when dealing with areas involving significant valuation issues) and the manner in which engagement teams are required to coordinate and supervise work performed by other offices and/or firms.

While the engagement partner is responsible for supervising the overall conduct of the audit in order to provide reasonable assurance that the audit is conducted in accordance with professional standards, the firm’s policies and procedures typically significantly influence the manner in which the partner exercises these responsibilities. In addition, the engagement partner is reliant on the firm’s system of quality control in order to effectively perform his or her responsibilities. For example, in situations where consultation is required, policies at larger firms generally require the engagement partner to follow the advice of the party consulted and in those situations, the engagement partner is relying on the expertise of the individual and the firm’s system of quality control to provide personnel with the appropriate competency and experience.

Another example includes situations where the audit team relies on work performed by other offices of the firm. In these situations, the engagement partner is typically responsible for establishing the scope and extent of work required to be performed by the other office as part of the overall audit plan. He or she is also responsible for evaluating the results of the work performed for the purpose of supporting the audit opinion. However, the engagement partner generally relies on the firm’s system of quality control to provide reasonable assurance that the personnel assigned to the engagement comply with applicable professional standards and the firm’s standards of quality.

Monitoring

PCAOB standards also require firms to establish policies and procedures that provide reasonable assurance that the other elements of quality control described above are suitably designed and are being effectively applied. Such policies and procedures govern the ongoing evaluation of compliance with policies and procedures through internal inspections of audit engagements (and evaluation of engagement partners), the appropriateness of firm guidance and effectiveness of professional development activities. These procedures provide the firm with a means of identifying and communicating circumstances that may necessitate changes to or the need to improve compliance with the firm’s policies and procedures.

---

10 PCAOB Interim Quality Control Standards – QC Section 20, paragraph 20; QC Section 30
For example, internal inspections provide the firm with information regarding an audit team’s compliance with the firm’s policies and procedures. These reviews are an important input into the firm’s evaluation of whether its policies and procedures are effectively applied. This evaluation is of significant importance to an engagement partner, as he or she typically must place reliance on the work performed by other audit teams – a common situation for audits of large public companies.

The above is intended to illustrate the significance of the firm’s system of quality control in the performance of audits and to emphasize the importance of holding the firm accountable for the audit rather than one individual.

*Accountability to Partners, Audit Committees, Regulators and Investors*

Engagement partners are accountable to multiple parties with respect to the planning, supervision and execution of individual audits, including other partners within the firm, audit committees, regulators and investors. As further detailed below, the accountability that currently exists provides a significant incentive for engagement partners to conduct audits in accordance with professional standards.

**Accountability to the Firm and Partners within the Firm**

Engagement partners recognize that as owners, their actions affect the entire firm. The responsibility to one’s partners is an important element of firm culture. With regards to individual audits, engagement partners are typically required to certify to the firm through various means that he or she has performed the audit in accordance with firm policies and professional standards. Pursuant to PCAOB standards, audits are also subject to an objective review of the significant auditing, accounting and financial reporting matters prior to the issuance of the firm’s audit report. Finally, engagement partners are subject to evaluation by the firm through various other quality control processes, including internal practice reviews and performance evaluation processes. All of these create significant accountability for engagement partners to the firm.

**Accountability to Audit Committees**

The Sarbanes-Oxley Act of 2002 (the Act) places primary responsibility for the appointment, compensation and oversight of an issuer’s auditing firm with the audit committee. This responsibility, combined with existing requirements for the audit firm to communicate significant audit matters to the audit committee, results in significant interaction throughout the year between the audit committee and the engagement partner. Such interaction provides the audit committee with the ability to hold the engagement partner directly accountable for the performance and conduct of the audit.

**Accountability to Regulators**

Partners are accountable to a number of regulators for their performance, including the PCAOB, the Securities and Exchange Commission (SEC or the
Commission), State Boards of Accountancy and other state and federal regulators. The PCAOB, as mandated by the Act, performs inspections to evaluate the sufficiency of the quality control system of a firm, which includes inspections of individual engagements to assist in that evaluation. Adverse PCAOB inspection findings provide an important source of information for consideration in the partner evaluation process.

Engagement partners are also subject to enforcement actions by the PCAOB and SEC for issuer audits. Determinations of improper professional conduct can lead to the censure, suspension or bar of an engagement partner’s ability to appear or practice before the Commission or be associated with a registered public accounting firm, as well as monetary penalties. In addition, such determinations or additional findings of misconduct by State Boards of Accountancy can result in the suspension or revocation of an engagement partner’s license, which would prevent him or her from practicing as a certified public accountant.

Accountability to Investors

Investors also have a number of ways to hold audit firms and the associated engagement partners accountable. For example, investors often have the ability to ratify the appointment of a registered public accounting firm as a company’s auditor. In addition, investors can influence the composition of an issuer’s board of directors, which in turn affects the composition of the audit committee (as noted above, the audit committee has primary responsibility for the appointment, compensation and oversight of the issuer’s external auditor). Finally, investors have a number of avenues under federal and state securities laws to initiate civil litigation against audit firms and thereby hold them and their personnel accountable for the conduct in the audit of an issuer’s financial statements.

The above highlight the significant means by which engagement partners are held accountable to all relevant stakeholders associated with audits of public companies.

Analogy to CEO/CFO Certifications

The PCAOB’s Concept Release notes that some have suggested requiring engagement partners to sign the audit report would be similar to the requirement imposed on management by Section 302 of the Act because it might focus engagement partners on their existing responsibilities (the intent of Section 302 was to hold management responsible for the representations of their company). In response to the corporate scandals earlier in this decade, the Act intended the certification requirements to clarify management’s responsibility for the information included in periodic reports filed with the SEC.

In contrast, professional standards have always held the engagement partner responsible for the planning and conduct of the audit. Professional standards outline such responsibilities, which include requirements for firms to monitor engagement partner compliance through the firm’s system of quality control. Therefore, given the clarity of the engagement partner’s role under professional standards, as well as the multiple means by which he or she is held accountable, it is unclear how a requirement for engagement
partners to sign the audit report will provide any additional clarity or emphasis on a partner’s existing responsibilities.

Summary

The CAQ believes the above illustrates the importance of the accountability that already exists for the engagement partner to various parties under current professional standards and highlights the significance of the firm’s system of quality control to the audit and the engagement partner’s interaction with, and role within, that system.

PERSPECTIVES ON TRANSPARENCY

The Concept Release indicates that enhanced engagement partner transparency may provide information that is useful to investors when making investment decisions, and to audit committees in retention decisions. However, it is important to highlight that the identity of the lead engagement partner is readily available to those parties that have authority over the auditor – the audit committee as well as applicable regulators.

Audit Committee

Audit committees are keenly aware of the identity of the lead engagement partner through the audit appointment process, periodic required communications, meetings and other communications throughout the audit process. As mentioned above, Section 301 of the Act places responsibility for the appointment, compensation and oversight of the work of the audit firm with the audit committee in its capacity as a committee of the board of directors. As such, the audit committee is responsible for representing investors with regards to the company’s relationship with the external auditor. The audit firm reports directly to the audit committee for the purpose of preparing or issuing an audit report or related work and regularly communicates with the audit committee. Such communications generally include the following:

- Information regarding the scope and results of the audit,
- Information regarding the company’s initial selection of and changes in significant accounting policies or their application,
- The methods used to account for significant unusual transactions,
- Management’s process in formulating particularly sensitive accounting estimates,
- Adjustments identified during the audit,
- The auditor’s judgments about the quality of the entity’s accounting principles,
- The nature and resolution of any disagreements with management, and
- The nature of any difficulties encountered in performing the audit.11

These communications, combined with additional communications regarding independence, the audit committee pre-approval process, the audit committee’s experience with the company and its interaction with management, provide the audit committee with the context necessary to perform its oversight of the external auditor, including evaluating the performance of the audit engagement partner.

---

11 As outlined in PCAOB Interim Standards AU Section 380.
Regulators

As discussed above, public company auditors are subject to multiple layers of oversight by various entities including the SEC, the PCAOB, State Boards of Accountancy and other federal and state regulators. Regulators have the ability to readily identify the lead engagement partner on any public company audit.

Shareholders

As mentioned above, shareholders often have the ability to ratify the appointment of a company’s external auditor. In a number of situations, such as at large, widely held companies, engagement partners typically attend the annual general meeting and are available to answer appropriate questions. Thus, while we recognize that it is not practicable for all shareholders to attend a company’s annual shareholder meeting, it does illustrate that there is visibility and access to the engagement partner on at least an annual basis.

Summary

Based on the above, the CAQ believes that significant transparency exists with respect to the audit engagement partner for those parties with both the context and governance authority to act upon it. Other users may not necessarily have the appropriate context by which to evaluate the engagement partner and as such, the PCAOB should consider the potential consequences that could result from providing the identity of the partner, some of which are outlined below.

POTENTIAL UNINTENDED CONSEQUENCES

We believe that such a requirement could result in a number of unintended consequences, such as drawing inappropriate inferences, insufficient recognition given to the corporate governance process, providing potentially misleading information for investors (as to the role of the engagement partner in general and by implying to investors and other users that there has been a substantive change in the role of the engagement partner when, in fact, no such change was intended by the PCAOB), litigation considerations and an impact on the engagement partner’s use of his or her professional judgment, as more fully detailed below.

Inappropriate Inferences

Investors and other users of audit reports may believe that knowing the identity of the lead engagement partner will help them better evaluate or predict the quality of a particular audit. However, as detailed above, while the engagement partner plays an important role in the conduct of an audit, an audit’s success is dependent upon a firm’s system of quality control. Users could draw inappropriate or inaccurate inferences about the audit based solely on the identity of the engagement partner. These inferences may result from circumstances about a company that do not have a direct linkage to the audit, and users may not properly consider the support of the firm’s system of quality control and the role of the engagement partner. Such inferences may result, after several years, in the collection of very limited data that is incomplete and potentially inappropriate. A
few examples where inappropriate and incomplete inferences may be drawn are as follows:

- There may be situations at companies (e.g., bankruptcy, going concern uncertainty, adverse analyst coverage, activist concerns, etc.) that may not relate to the audit or to audit quality. In these situations, users may attempt to draw conclusions as it relates to the engagement partner where there is no direct link to audit quality.

- Judgments may be made about the engagement partner’s expertise that do not consider the important contributions of others involved in the audit (e.g., other partners, specialists, etc.). These other partners and specialists can play a significant role in a given audit engagement, as described earlier in this letter.

- Investors and other interested parties may devise a “scorecard” for engagement partners that would allegedly measure their expertise, experience and other factors based on characteristics of companies for which he or she has signed audit opinions. It is likely that these “scorecards” would not appropriately consider the partner’s experience outside the public company audit context or the role of the firm’s system of quality control, including the involvement of other partners and specialists. A potential impact of these inferences may be that engagement partners become overly concerned with such a “scorecard” and, therefore, become reluctant to be associated with certain issuers, which may adversely impact the firm’s system of quality control.

Lastly, conclusions drawn from inferences such as those detailed above may result in unintended consequences for smaller firms, who may not be perceived to have as robust a “scorecard” as compared to partners at larger firms, which may impact their ability to compete for audits of public companies.

**Insufficient Recognition Given to the Corporate Governance Process**

Investors are represented through a company’s board of directors and its audit committee. The Act places responsibility for engaging the audit firm, including the engagement partner with the audit committee. Under current governance structures, shareholders and other investors will never have the same level of information by which to evaluate the auditor as the company’s board of directors and/or audit committee. As such, providing the name of the engagement partner may lead investors to place insufficient recognition on the existing governance structure where they may work through their board and audit committee for representation. Instead, they may believe that it is appropriate to contact the engagement partner directly to ask questions about the audit, the company’s financial statements, or other matters. However, partners may be unable to answer questions from shareholders about the company or the audit, due to professional responsibilities with respect to confidentiality of client information and legal issues with respect to disseminating non-public information.
A signature requirement could also result in shareholders placing undue influence on audit committees regarding firm decisions on partner selection, rotation and assignment. Such shareholder actions may be motivated by inferences drawn without the benefit of the same level of information as the company’s audit committee. We believe that such an outcome would be contrary to the manner in which state and federal laws provide for a company’s board of directors (and related committees) to be accountable to a company’s shareholders.

**Potentially Misleading Information for Investors**

A signature requirement could place too much emphasis on one partner and be misleading to investors in terms of how an audit is accomplished. An audit is performed by a team of people, and companies with multiple locations may have multiple groups of auditors as part of the team. In these instances, the lead engagement partner relies on numerous specialists, audit partners, managers and others to complete the audit. It is for this reason that audit firms have established policies and procedures – they provide the firm with reasonable assurance that the work performed by engagement personnel meets applicable professional standards and regulatory requirements, as well as the firm’s standards of quality. Rather than focusing on an individual partner, investors should be focused on assessing the quality of the firm.

When considering the analogy to the Section 302 certifications noted in the PCAOB’s Concept Release, the 302 certifications, among other items, provides that certifying officers are responsible for establishing and maintaining an issuer’s disclosure controls and procedures and internal control over financial reporting. This is not analogous to a partner’s role in the context of an audit. As detailed above, professional standards require the audit firm to maintain a system of internal control that provides reasonable assurance that its personnel comply with the applicable professional standards and the firm’s policies and procedures. While the engagement partner clearly plays a significant role in the implementation of a firm’s system of quality control, we are concerned that investors’ and others’ understanding of these processes may over-emphasize the engagement partner’s role within that system or even confuse the role of the auditor with that of management.

**Litigation Considerations**

The Board noted in the Concept Release that it did not intend for a signature requirement to increase the liability of engagement partners. As also noted in the Concept Release, a signature requirement may cast doubt on an engagement partner’s ability to raise important defenses to private claims under Section 10(b) of the Securities Exchange Act of 1934 in some courts.\(^\text{12}\) We believe that the requirement for an engagement partner to sign an audit report in his or her individual name would likely make it more difficult to

---

\(^{12}\) The Concept Release notes that courts are divided regarding when an individual may be subject to primary liability under Section 10(b) for conduct relating to the misstatement of others. Some courts, including the Second Circuit, require a misstatement to be attributable “to the *specific actor*” that is alleged to have made it “at the time of public dissemination.” *Wright v. Ernst & Young LLP*, 152 F.3d 169, 175 (2d Cir. 1998).
claim successfully that the alleged misstatement cannot be attributed to him or her in some courts. In this respect, we believe a signature requirement would likely increase the risk of liability to a partner. Moreover, there are other areas of the federal and state securities laws where it is unclear whether a signature requirement would increase an engagement partner’s liability. We therefore strongly encourage the PCAOB, to the extent it determines to proceed with further consideration of such a requirement, to perform a thorough analysis on the potential impact an engagement partner’s signature may have on litigation.

In addition to the potential increased liability risks, we believe that a signature requirement would result in more engagement partners being named in lawsuits and becoming involved in regulatory actions, which would increase a firm’s costs associated with these proceedings. Signatures would heighten the visibility of engagement partners and, as a result, increase the likelihood that engagement partners could become the subject of litigation or regulatory scrutiny when there is any question regarding an issuer’s financial statements. In addition, and perhaps more importantly, such additional exposure (whether real or perceived) could impact an engagement partner’s behavior in ways that may not foster enhancements in audit quality. For example, a real or perceived risk of additional exposure may reduce an engagement partner’s willingness to utilize his or her professional judgment or may reduce the number of partners willing to participate in audits of higher risk companies.

However, if the PCAOB decides to propose a requirement for an engagement partner to sign the audit report, we believe that it is imperative that an effective safe harbor be put in place. Such a safe harbor would be consistent with the Board’s intention and the final report of the Treasury Advisory Committee on the Auditing Profession, which noted that a signature requirement should not impose on any signing partner any duties, obligations or liability that are greater than the duties, obligations and liability imposed on such person as a member of an auditing firm. Due to the importance of such a provision, in the event a proposal moves forward, we recommend that the PCAOB coordinate with the SEC to ensure that the appropriate rulemaking occurs to provide protection for engagement partners consistent with the Board’s intention.

Use of Judgment

We believe that an engagement partner signature requirement may create perceptions of additional personal risk and responsibility by engagement partners, motivating negative behaviors that do not presently exist. For example, an increased perception of personal risk and responsibility may reduce an engagement partner’s willingness to utilize his or her own professional judgment and, therefore, result in an increase in the demand for more guidance with “bright lines.” The application of professional judgment is an important element of the audit process – it allows for the application of a risk-based audit approach as well as the application of professional skepticism in assessing the procedures

13 For example, Section 11 authorizes claims against “every accountant” who “has with his consent been named” as “having prepared or certified” any part of the registration statement or any report or valuation used in connection with it. 15 U.S.C. § 77k(a)(4). A signature requirement could make it easier to sue an engagement partner under Section 11 based on the individual’s signature on audit reports.
that may be necessary and appropriate under the circumstances. While we believe, as stated previously, that there are significant means by which partners are held accountable to all relevant stakeholders, we are concerned that an outcome that discourages their use of professional judgment in the conduct of audits will not enhance audit quality.

CONCLUSION

The Board requested whether there was any empirical data or other research that would indicate that a requirement for the engagement partner to sign the audit report would improve the focus on his or her existing responsibilities. We are not aware of any empirical evidence that would suggest there is a direct link between a signature requirement (or disclosure of the engagement partner) and audit quality.\textsuperscript{14} However, as we have noted above, we believe that existing professional requirements, organizational structure of audit firms, and the current regulatory environment provide for significant accountability of both the engagement partner and the audit firm. In addition, we believe there is significant transparency regarding the engagement partner to those charged with oversight of the audit. Therefore, such parties are in the best position to hold the audit firm (including the engagement partner) accountable. We encourage the PCAOB to consider the potential unintended consequences of such a requirement on audit quality, as well as to investors and other users of such information, in conjunction with its evaluation of any potential benefits of such a requirement.

\* \* \* \* \*

\textsuperscript{14} We are aware of a body of behavioral research on manipulated accountability pressures. These studies tend to be conducted on students, or auditors with somewhat limited experience (e.g., an average of 2 – 4 years). See DeZoort et al., “Accountability and auditors’ materiality judgments: The effects of differential pressure strength,” \textit{Accounting, Organizations and Society} 31 (2006) 373–390, Table 1 for a summary of accounting studies that manipulated accountability pressure). While the authors suggest that increased accountability levels induced more complex and careful analysis of available information, they also admit that they did not test possible intervening controls, such as reviews by superiors and peer review. These are activities that are built into the audit process by the firms, and thus the experiments do not accurately reflect how decisions are made during an actual audit. Further, the authors acknowledge that in a real audit, the auditors have multiple sources of accountability – superiors, audit committees, client management and regulators.
We appreciate the opportunity to comment on the Concept Release and would welcome the opportunity to respond to any questions you may have regarding any of our comments and recommendations.

Sincerely,

Cynthia M. Fornelli

Re: PCAOB Rulemaking Docket Matter No. 29
Concept Release on Requiring the Engagement Partner to Sign the Audit Report
July 28, 2009

Dear Board Members,

We would like to begin by expressing our appreciation and thanks to the Board members for their commitment to enhance audit quality and improve the public’s confidence in our financial markets. Cherry, Bekaert & Holland, L.L.P., like the vast majority of the profession, academia and regulators, is equally committed to continuous improvement in the quality of financial reporting and the resulting economic benefit to the financial marketplace and society as a whole. However, we believe the Board members should ensure that their efforts to improve the public’s confidence in the marketplace are based on changes that enhance all aspects of the financial reporting process and, when considering the associated costs of such changes, not implement changes that provide marginal benefits, or which have the potential to provide a false sense of security to the investing public.

Prior to responding to the specific questions contained in the concept release, we would like to make some general comments on the proposal.

We recognize the benefits of transparency in financial reporting and understand the perceived benefits of requiring the engagement partner to individually sign the audit report. However, we believe there will be many unintended consequences of imposing this requirement. First and foremost is the potential for increased individual liability to the partners. The United States is the most litigious country in the world; and to date, lawmakers have not addressed the issue of tort reform. Therefore, we are concerned that future safe harbor provisions designed to ensure that the engagement partner signing a report individually not impose any duties, obligations or liability that are greater than those currently imposed. As a result, we anticipate that the number of partners willing to sign public company audit reports, and indeed, the number of firms willing to undertake this type of work, will be negatively impacted.
We believe there will be unintended consequences beyond the confines of the courtroom. Although the investing public is well aware of the debacles of Enron and WorldCom, there are countless other well conceived and properly executed audits performed on entities that ultimately fail. Companies most often fail because of poor management, bad decisions or the inability to rapidly change in reaction to changes in market conditions. Partners and their families may be unnecessarily exposed to the public scrutiny, harassment, and in extreme cases, threats or bodily harm without the benefit of due process. Due to the professional confidentiality requirements and other laws and regulations, like Reg. FD, partners will be unable to defend themselves in the public forum while they clearly will be targeted in that same public forum. We believe there are many high quality audit firms that provide audit services to a small number of registrants that will determine that they do not have the desire or the resources to battle this scrutiny and will cease to provide audit services to public companies, thereby further consolidating the profession and driving up audit costs.

Next, we believe another unintended consequence of requiring the partner to sign the report is to create the impression that he or she individually has the ultimate responsibility and authority to sign the report. Having one partner's signature may mislead users as to the degree of responsibility taken by the individual. Our professional standard setters, recognizing the highly complex environment in which we all operate, have wisely mandated that all public company audits require a quality reviewer and that firms establish consultation processes for dealing with new and/or complicated accounting and audit issues. This clearly shows that our standard setters recognize the importance of establishing a working environment that fosters collaboration and requires the approval of more than one partner to ensure quality.

Further, the comment that requiring a partner to sign individually will somehow enhance audit quality appears to us to be misguided. As discussed in the transcripts of the Standing Advisory Group posted on the PCAOB website, there appears to be no empirical evidence from countries that employ this requirement that supports the assertion that audit quality improved. The truth is that substantially all CPAs take this responsibility seriously and the very few that do not will not be affected in any way by this new requirement. If a CPA performs substandard work, then that CPA currently is at risk of losing his or her privilege to practice and indeed this would impact their livelihood. To think that adding a requirement to individually sign a report would be more sobering to anyone signing a report than knowing that every report they sign exposes their future career and livelihood is simply not a rational consideration and to expect it in any way to impact the quality of work is likewise not a rational conclusion. If someone is willing to expose their ability to practice in their chosen profession by signing a report when the work is substandard, they would likely not alter their behavior if they were required to individually sign the report.

Finally, we should consider the beneficial impact of the programs already in place. Professional standards in the United States already require that (1) firms implement quality control standards that include internal monitoring to ensure quality, (2) partners' compensation system must factor in quality performance, (3) firms must participate in peer review and, (4) are subject to review by regulators in regulated industries, state boards of accountancy, the SEC and PCAOB. These are the monitoring and review systems that truly ensure the quality and integrity of financial reporting; we must continue to reevaluate their efficacy and look for opportunities for improvement while not overburdening the financial markets with unnecessary and ineffective regulations.
Following, please find our responses to the specific questions posed in the Concept Release:

1. **Would requiring the engagement partner to sign the audit report enhance audit quality and investor protection?** No as described in our general comments, we do not believe that such a requirement will impact audit quality, nor will it enhance investor protection. In fact, such a requirement may have the opposite effect on investor protection by providing a false sense of security to investors which may result in a reduced level of due diligence and consideration on their part when evaluating any specific investment alternative.

2. **Would such a requirement improve the engagement partner’s focus on his or her existing responsibilities?** While we do not have any empirical evidence to support our belief in this area, we do not believe that such an effect will be evidenced. Further, if this “improved focus” is the primary benefit to be gained by this proposal, we would suggest that as an alternative, the audit firm be required to file with the SEC, on a confidential basis, a report signed by the engagement partner individually on behalf of the firm. This would serve to improve the focus of the engagement partner without having many of the unintended consequences that the current proposal contains.

3. **Would disclosure of the engagement partner’s name in the report serve the same purpose as a signature requirement, or is the act of signing itself important to promote accountability?** While we do not support the conclusions in this concept release or the disclosure of the partners’ name, we believe that disclosure would have the same impact as a signature.

4. **Would increased transparency about the identity of the engagement partner be useful to investors, audit committees, and others?** We believe that this information would actually impose a significant risk to investors and others in that they might draw inappropriate conclusions based on this information regarding a partner’s skills and experiences. For example, if a partner and a firm only signed one public company report in a particular industry, but focused the majority of their audit practice serving non-public clients in that particular industry would they be perceived as having less expertise and experience than a partner signing two public company reports in that industry but those were the only two clients in that industry served by the partner and their firm? We believe that there is a very real risk that outside parties might well reach a conclusion that the signer of the two reports was more experienced and qualified than the individual signing one report; however, such conclusion would be unwarranted and potentially inappropriate.

5. **Would such information allow users of audit reports to better evaluate or predict the quality of a particular audit? Could increased transparency lead to inaccurate conclusions about audit quality under some circumstances?** We believe that the answer to part one is no and to part two is yes based on the belief by a number of underwriters that a national firm signature on a report somehow makes an underwriting more likely to succeed. We believe that this is an indication that there is some implied quality difference based on a national firm signature when compared to a regional or local firm signature. When reviewing the various inspection
reports made public by the PCAOB, this does not appear to be warranted. There are a number of very good regional and local firms that have similar or in some instances better results than those national firms and yet the perception by the underwriters about relative quality still remains. We believe that an individual signature will bear a similar risk, that is, a reader may make the automatic conclusion that because a partner signs five or six reports they must perform a higher quality audit than a partner only signing one or two reports—this simply is not the case.

6. Are there potential unintended consequences of requiring the engagement partner to sign the report that the Board should be aware of? We believe that there are indeed unintended consequences that the Board should consider in making its decision in this matter. Among these is a reduction in the number of firms that are willing to sign public reports and even within those firms, the number of people who are willing to serve public companies will decline. Within our firm, there have already been a number of questions expressed by the partners currently serving public companies as well as expressed concerns about the desirability of continuing to serve in that capacity should this proposal be approved. We believe that on significant multi-location engagements where there are a number of partners involved, the decision about who the engagement partner is may not adequately address the desired transparency and may be highly misleading. As a direct result of the reduced competition, fewer firms and partners willing to work on these engagements, audit fees will be driven up, and a number of public companies may go unserved. The proposal if enacted will expose individuals to unwarranted publicity and in fact may expose them to physical danger. It is a fact of our society that when bad things happen, there is a tendency to immediately seek to establish blame. What an easy target we are making of the signing engagement partner when we provide a name and an office location for that individual.

7. The EU's Eighth Directive requires a natural person to sign the audit report, but provides that “in exceptional circumstances, Member States may provide that this signature does not need to be disclosed to the public if such disclosure could lead to an imminent, significant threat to the personal security of any person” if the Board adopts an engagement partner signature requirement, is a similar exception necessary? If so, under what circumstances should it be available? While in concept this is a good thought, the reality is that the circumstances that would dictate such a need will typically arise after such signature has already been published. We would again request consideration of making the individual partner signature a requirement in a supplemental confidential filing to the SEC rather than placing it in the public domain.

8. What effect, if any, would a signature requirement have on an engagement partner’s potential liability in private litigation? Would it lead to an unwarranted increase in private liability? Would it affect an engagement partner’s potential liability under provisions of the federal securities laws other than Section 10(b) of the Securities Exchange Act, such as Section 11 of the Securities Act of 1933? Would it affect an engagement partner’s potential liability under state law? We believe that much of this question is a matter of law and decline to comment on matters of law. However, we believe that by publishing the engagement partner’s name there will definitively be an increase in private litigation against individual partners.
9. Are there steps the Board could or should take to mitigate the likelihood of increasing an engagement partner’s potential liability in private litigation? We believe that the Board should reconsider its position that this information be made public. Should the Board desire an individual partners signature on a report, we would recommend that such signature be produced on a separate opinion and afforded confidential treatment by the SEC.

10. Some commenters on the ACAP Report who expressed concern about liability suggested that a safe harbor provision accompany any signature requirement. While the Board has no authority to create a safe harbor from private liability, it could, for example, undertake to define the engagement partner’s responsibilities more clearly in PCAOB standards. Would such a standard-setting project be appropriate? We believe that such a project would contribute more to enhancing audit quality than the requirement of affixing an individual signature to an audit report. It would ensure that any partner signing a report had performed at least the minimum level of work required by the standards. Additionally, it would allow the PCAOB the ability to critique an individual partner’s performance when they performed their reviews rather than simply focusing on the quality of issued engagements and a firm’s system of quality control. We believe this would also serve to enhance partner accountability as a partner signing a public company report would know that they would be subject to the PCAOB inspection of their performance as well as the engagement results.

The Partners of Cherry Bekaert & Holland, L.L.P. are proud of our chosen profession, honored to be associated with the other professional CPA firms in our industry who are equally committed to provide the highest level of quality service to all of our clients and the investing public.

Thank you for the opportunity to express our views on this important matter.

Sincerely,

Cherry Bekaert & Holland, L.L.P.

Re: Concept Release on Requiring the Engagement Partner to Sign the Audit Report
(PCAOB Rulemaking Docket Matter No. 29)

Dear Mr. Seymour,

The Council of Institutional Investors (“Council”) appreciates the opportunity to provide comments on the Concept Release on Requiring the Engagement Partner to Sign the Audit Report (“Concept Release”). The Council is an association of public, corporate, and union pension funds with combined assets of over $3 trillion.

As a leading voice for long-term, patient capital, we believe that accurate and reliable audited financial statements are critical to investors in making informed investment decisions, and vital to the overall well-being of our capital markets. That strong belief is reflected in the following Council policy on “Independence of Accounting and Auditing Standard Setters” unanimously approved in 2007, and updated in 2008, by our General Members:

Audited financial statements including related disclosures are a critical source of information to institutional investors making investment decisions. The efficiency of global markets—and the well-being of the investors who entrust their financial present and future to those markets—depends, in significant part, on the quality, comparability and reliability of the information provided by audited financial statements and disclosures. The quality, comparability and reliability of that information, in turn, depends directly on the quality of the . . . standards that . . . auditors use in providing assurance that the preparers’ recognition, measurement and disclosures are free of material misstatements or omissions.

Consistent with our policy, the Council believes that accountability and transparency are key features of a reliable audit worthy of investor confidence. Requiring the engagement partner to sign the audit report will enhance audit quality and investor protection by strengthening auditor accountability and improving the transparency of the audit process. The Council accordingly supports the Public Company Accounting Oversight Board’s (PCAOB) Concept Release.
Although a public company audit relies on the work of many highly skilled professionals, the engagement partner plays a unique role in ensuring the overall quality of an audit. That role includes responsibility for planning the audit, supervising engagement team members, and determining whether the financial statements taken as a whole are fairly stated. Given the importance of those tasks to audit quality, the simple step of requiring the engagement partner to sign the audit report will produce valuable returns for investors.

The Council strongly believes that investors should be involved in auditor oversight and accountability. More specifically, as indicated by the following Council policy, we believe shareholders should have the opportunity to vote annually on the board’s choice of independent, external auditor:

**Shareowner Votes on Board’s Choice of Outside Auditor:** Audit committee charters should provide for annual shareowner votes on the board’s choice of independent, external auditor. Such provisions should state that if the board’s selection fails to achieve the support of a majority of the for-and-against votes cast, the audit committee should: (1) take the shareowners’ views into consideration and reconsider its choice of auditor; and (2) solicit the views of major shareowners to determine why broad levels of shareowner support were not achieved.

In order to cast an informed vote on the auditor selection and effectively engage the board if needed, investors require information surrounding factors materially affecting audit quality. Although the identity of the engagement partner generally is not a secret, prominently displaying the name and signature of the lead auditor on the audit report will draw investors’ attention to this important role and its impact. As the Concept Release describes, the lead auditor’s signature will motivate both investors and the board to “evaluate the extent of an engagement partner's experience on a particular type of audit and, to a degree, his or her track record.” Greater transparency regarding the background and experience of the lead auditor will help investors better assess the rigor of the audit process, and by extension, the quality of the financial statements.

Armed with valuable information provided by the lead auditor’s signature, investors and boards will demand skilled engagement partners. The Council consequently believes that enhanced focus on the performance of the lead auditor will motivate audit firms to strengthen the quality, expertise, and oversight of their engagement partners. By more explicitly tying the lead auditor’s professional reputation to audit quality, requiring engagement partners to sign the audit report will further result in better supervision of the audit team and the entire audit process.
The benefits of the lead auditor’s signature have been recognized by a wide range of experts. On October 6, 2008, the Treasury Department’s Advisory Committee on the Auditing Profession (ACAP) issued its final report, which concluded “that the engagement partner’s signature on the auditor’s report would increase transparency and accountability.” The Committee accordingly urged “the PCAOB to undertake a standard-setting initiative to consider mandating the engagement partner's signature on the auditor's report.” In addition to the Council’s executive director Ann Yerger, ACAP included “a philosophically diverse, talented, and committed group of investor, business, academic, and institutional leaders . . . sensitive to the views of auditors (both large and small), public companies, investors, professionals, and the teaching profession.”

In light of the enhanced transparency and accountability resulting from the signature of the engagement partner on the auditor report, the Council strongly supports the PCAOB’s Concept Release. Please do not hesitate to contact me if you have any questions or would like additional information regarding our views on this important matter.

Sincerely,

Jonathan D. Urick

RE: PCAOB Rulemaking Docket Matter No. 029,
Concept Release on Requiring the Engagement Partner to Sign the Audit Report

Dear Office of the Secretary:

Crowe Horwath LLP appreciates the opportunity to comment on the Public Company Accounting Oversight Board’s (“PCAOB”) Concept Release on Requiring the Engagement Partner to Sign the Audit Report (the “Concept Release”).

We do not believe the PCAOB should continue to develop the matters in the Concept Release, or propose a new audit standard that would require the engagement partner to sign the audit report. The concepts discussed in the release are not needed, and are likely to create problems for audit report users as well as audit firms. Such a requirement may confuse users of audit reports so would not serve the public interest, and thus would not further the PCAOB’s mission. Specific observations and comments are in the following paragraphs.

The ideas suggested in the Concept Release would not enhance audit quality. We believe the PCAOB should focus standard setting initiatives on matters that can positively impact audit quality. Those matters would generally be put in place through an audit firm’s system of quality control, not via focus on the single position of the leader of the engagement team.

The engagement partner’s identity is well known to each issuer’s audit committee. The audit committee is the function which has primary oversight for the audit, representing investors and accountable to investors for audit activity. The audit committee’s detailed knowledge of an entity and its needs puts them in the best position to use and act on knowledge of the identity of the engagement partner. The engagement partner’s name is also known to the audit regulator during the PCAOB inspection process or at any other time the PCAOB wants to know the identity. It is not likely that others could use the name of the engagement partner for an effective purpose.
The matters discussed in the Concept Release, if advanced to an audit standard, could weaken audit quality. The overall quality of audits produced by a firm is primarily dependent on two inputs: 1) the audit firm’s system of quality control, and 2) the knowledge and experience of a large group of personnel that perform within the firm’s system of quality control. The focus on one individual, rather than the more important and larger role of a firm’s system of quality control, is not warranted and could mislead users by implying reliance on primarily one person. Large sophisticated audits rely on large groups of personnel and undue focus on the engagement partner position implies diminished importance of that large coordinated team.

The Concept Release, and several references therein, speak to a purported analogy between a requirement to have the engagement partner sign the audit report and CEO and CFO certifications. That analogy is imperfect, as the purpose of the certifications is to clarify management’s responsibilities. However, there is no uncertainty of the engagement partner’s role and responsibilities as those are well defined in publicly available professional standards. The better analogy would be to compare the officer certifications to the signature of the audit firm, which identifies the entity responsible for the audit.

A requirement to sign the audit report by an individual who is assigned to represent the Firm as audit engagement partner will increase the potential for litigation against that individual, and will certainly increase overall cost of litigation defense. Also, such a requirement could lead to personal safety risks for the individual and/or their family. Issues such as these would likely have a significant negative effect on recruiting, retention, and development of personnel, which would have a long term negative impact on the overall quality of auditing.

Addition of an individual signature to audit reports creates a new reporting element which most users will not understand. Such a requirement would risk misleading users of financial statements.

Crowe Horwath LLP supports the Board’s efforts to improve its auditing standards. We hope that our comments and observations will assist the Board in its consideration of the matters in the Concept Release. If the Board has questions on the above comments, please contact Wes Williams.

Cordially,

Crowe Horwath LLP

Re: Concept Release on Requiring the Engagement Partner to Sign the Audit Report
PCAOB Rulemaking Docket Matter No. 029

Deloitte & Touche LLP (“D&T”) is pleased to respond to the request for comments from the Public Company Accounting Oversight Board (the “PCAOB” or the “Board”) on its Concept Release On Requiring the Engagement Partner to Sign the Audit Report, PCAOB Release No. 2009-005; PCAOB Rulemaking Docket Matter No. 029 (July 28, 2009) (the “concept release”). We commend the PCAOB’s decision to issue a concept release in order to obtain viewpoints from interested parties on this topic. Seeking input through a concept release enhances the transparency of the Board’s standard setting process and promotes the development of high quality standards.

We believe changes in audit standards should be considered from the perspective of whether the change can be demonstrated to improve audit quality, and whether the costs and potential unintended consequences associated with the change are acceptable when compared to expected enhancements to audit quality. Evaluating changes in the audit standards based on such principles brings an important discipline to the standard-setting process.

The concept release offers two respects in which the signature requirement for the engagement partner may improve audit quality: by increasing the sense of accountability of the engagement partner for the work performed during the audit, and by providing meaningful transparency to the investing public.\(^1\) We do not believe that the engagement partner signature requirement will meet the objective of improving audit quality in either respect. The suggested beneficial effects on accountability and transparency are speculative, and the concept release does not present evidence that an engagement partner signature requirement will enhance audit quality. However, the associated costs and burdens, including unintended consequences, are real and could be significant.

\(^1\) See PCAOB Release No. 2009-005, at 5.
In order to assess certain aspects of the concept release, we thought it would be instructive to obtain the perspective of our firm’s audit partners. In particular, because the concept release focuses on the notion that requiring the engagement partner’s signature will increase their individual accountability, an empirical assessment as to what individual auditors believe the effect of a signature requirement would be seems appropriate.\textsuperscript{2} We designed an anonymous survey to elicit reactions on the potential effects of the signature requirement. Many of the questions were open-ended, and allowed the individuals surveyed to expand upon their views. Results of this survey are presented at various points in this letter, but, as discussed in more detail below, the auditors responded that a signature requirement would not alter their already strong sense of accountability, and expressed significant concern about the adverse and unintended consequences that could result from the change.

In short, we do not believe the PCAOB should move forward with an engagement partner signature requirement, but rather should focus on other standard setting initiatives that will have a clear and demonstrable effect on improving audit quality.\textsuperscript{3} If, however, the Board is inclined to move forward with the engagement partner signature requirement, we strongly recommend that before proceeding with a standard-setting initiative the PCAOB seek empirical evidence about the impact such a change would have on audit quality, including by commissioning academic research.

A. Requiring The Partner To Sign The Report Will Not Enhance Accountability Or Transparency, Nor Will It Improve Audit Quality.

1. The signature requirement will not enhance accountability.

Engagement partners already have a strong sense of accountability for the quality of the audit. The concept release nonetheless suggests that audit quality will be improved because a signature requirement would increase the partner’s sense of accountability as he or she would exercise greater care in performing the audit. We are not aware of any evidence, however, to support the view that a partner would feel a greater sense of accountability by signing his or her name on the audit report in addition to signing the firm name.\textsuperscript{4} Indeed, in surveying our audit

\footnote{2}{We surveyed the partners in our audit practice on certain of the issues raised in the concept release and experienced a 37% response rate. Of these respondents, 90% currently work on public company audits and 81% have signed an opinion in connection with a public company audit in the last five years.}

\footnote{3}{One member of the PCAOB’s Standing Advisory Group, David Becker, former member of the PCAOB’s Standing Advisory Group and current General Counsel of the Securities and Exchange Commission observed at the October 22-23, 2008 SAG meeting: “I just hope that whatever the Board does in this . . . it spends most of its time on things that are much more important, and are going to have a more demonstrable effect on audit quality.”}

\footnote{4}{Studies have been done with respect to auditor accountability and judgments in general. See DeZoort, T., P. Harrison, and M. Taylor, “Accountability and auditors’ materiality judgments: The effects of differential pressure strength on conservatism, variability, and effort,” \textit{Accounting, Organizations and Society} 31 (4/5) 373–390, Table 1 (2006). However, studies directly related to partner signature on the audit report and the impact that it would have on accountability and audit quality have not been performed. Of the three studies on auditor}
partners, 93% said that such a requirement would not increase accountability, and 98% said that such a requirement would not improve audit quality.

The notion that signing the audit report will increase partner accountability does not recognize that audit partners today are already held fully accountable through a variety of mechanisms. Audit partners are subject to multiple layers of internal quality control mechanisms and multiple sources of external oversight (such as audit committees, federal and state regulators, and the threat of civil liability). It is also important to recognize that both because of their own internal quality control mechanisms and significant external oversight, firms, too, are highly incentivized to be assured regarding the quality of their personnel, including engagement partners in particular. Of the 93% of the partners who responded that their sense of accountability would not change, a majority provided supplemental responses to articulate their views that they already feel a significant sense of accountability. As one respondent to the survey explained, “Based on PCAOB reviews, internal inspections, potential depositions, I believe partners are already well aware of their accountability.”

As noted above, the firms have in place several layers of quality control mechanisms. Under current PCAOB standards, registered firms are responsible for and are required to establish a system of quality control that provides the firm with reasonable assurance that the work performed by engagement personnel meets applicable professional standards, regulatory requirements, and the firm’s standards of quality. These internal quality control processes, which include elements related to, among others, independence, integrity, objectivity, personnel management, acceptance and continuance of clients, engagement performance, and monitoring, hold partners accountable to the firm for the performance of quality audits. Firms closely oversee partner compliance through:

- engagement quality assurance reviews,
- internal inspections,
- performance evaluations, and
- other monitoring, including through peer reviews, and remediation activities, including discipline when appropriate.

[Footnote continued from previous page]

Accountability that have been relied on in support of the signature requirement, we note several key points about these studies: the data for each of the studies was gathered prior to the passage of the Sarbanes-Oxley Act of 2002 (“Sarbanes-Oxley Act”) and implementation of the resulting oversight and regulatory requirements, and, as a result, the studies do not take into account all of the ways in which partners are held accountable; the subjects for two of the studies predominately included auditors with an average of three years of experience or less; and none of the subjects in the studies were partners. See references in June 3, 2009 letter to the Board from Gramling, Carcello, DeZoort, and Hermanson to id. at 373-390; Johnson, V. E. and S. E. Kaplan, “Experimental evidence on the effects of accountability on auditor judgments,” Auditing: A Journal of Practice & Theory 10: 96-107 (1991); Kennedy, J., “Debiasing audit judgment with accountability: A framework and experimental results,” Journal of Accounting Research 31: 231-245 (1993).
As stated in PCAOB Quality Control Standard 20.03, “A firm [h]as a responsibility to ensure that its personnel comply with the professional standards applicable to its accounting and auditing practice.” This reference to the responsibility of “a firm” supports the notion that the firm has responsibility for the audit report, not an individual partner and that the firm is already responsible for and incentivized to hire, train, retain, and assign personnel that have the qualifications necessary to fulfill the responsibilities they will be called on to assume.

Moreover, firms and individual auditors are subject to extensive external oversight by audit committees, federal and state regulators, and through the threat of civil liability, and other means as described in more detail below. These oversight mechanisms function in a variety of ways to bolster the strong sense of accountability already held by engagement partners. For example, engagement partners know that by not adhering to professional standards they risk being subject to individual scrutiny by one or more of the external oversight mechanisms in a way that puts at risk their reputation, personal assets, license and ability to practice, and livelihood. Beyond these risks, too, engagement partners are keenly aware that even if the external oversight is directed at the firm as a whole, and not the individual, an engagement partner’s reputation and career prospects can be significantly impacted by such oversight. Simply put, an engagement partner’s sense of responsibility cannot be overstated.

The multiple sources of external oversight include:

- **Oversight by the Audit Committee and Board of Directors:** The Sarbanes-Oxley Act requires audit committees to be directly responsible for the appointment, compensation, and oversight of the work of the independent auditor. As a result, the engagement partner is accountable to and reports to the audit committee (and through the audit committee to the board of directors). Further, on a regular basis the engagement partner meets with the audit committee and is required to provide certain communications at the completion of the audit. Throughout the audit process the engagement partner is evaluated by the audit committee and the board of directors.

- **PCAOB Oversight:** Engagement partners have a professional responsibility to adhere to PCAOB professional standards. Their work is subject to review by the PCAOB through regular and special inspections and through PCAOB investigations and enforcement proceedings.5

  - Regular PCAOB inspections include reviews of selected audit engagements, during which the PCAOB meets with the engagement partner about the audit and reviews the audit documentation and procedures performed.6 Also as part of regular inspections, the PCAOB assesses whether the design and application of processes by the audit firm related to partner management

---

5 Every registered firm and associated person of the firm (including engagement partners) has a duty under PCAOB rules to cooperate with such inspections. A failure to cooperate may result in disciplinary proceedings and potential sanctions by the Board. See PCAOB Rule 4006.

6 All firms that are registered with the PCAOB and audit more than 100 issuers are subject to annual inspection by the PCAOB, and those registered firms that audit 100 or fewer issuers are inspected every three years.
(including evaluation, compensation, admission, termination, and disciplinary actions) provide assurance of an appropriate emphasis on audit quality.

- Special inspections (of registered firms, including the partners thereof) may be conducted at any time as authorized by the Board on its own initiative or at the request of the U.S. Securities and Exchange Commission (“SEC” or the “Commission”).

- Investigations and enforcement proceedings by the PCAOB represent another significant way that the work of engagement partners is subject to extensive oversight. Being the subject of an investigation or enforcement proceeding can have serious ramifications for an individual partner, including the loss of reputation or even the ability to provide audit services to public companies. The prospect of this regulatory review presents a constant reminder to engagement partners of their accountability. And, as noted above, an investigation or enforcement proceeding, even if directed only at the firm, can have significant consequences for the engagement partner, even if he or she is not named.

- **SEC Oversight and Enforcement:** Auditors, including engagement partners, are also subject to SEC oversight and enforcement. Determinations of improper professional conduct can lead to the suspension or bar of an engagement partner’s ability to practice before the Commission.

- **Oversight by State Licensing Bodies and Professional Associations:** Partners who sign audit reports are licensed certified public accountants. Licensing is determined by state licensing authorities that not only have the ability to determine who obtains and maintains a license, but also have the ability to discipline and sanction licensees. As a result of state disciplinary action, an auditor may have his or her license suspended or taken away, thereby losing the right to practice altogether. In addition, auditors are subject to oversight through disciplinary proceedings conducted by professional associations such as the AICPA and state professional societies.

- **Threat of Litigation:** Engagement partners are well aware that by their roles they risk becoming drawn into civil litigation involving federal and state law claims. Because civil litigation can have serious consequences for an individual partner, as well as for the firm as a whole, the threat of litigation acts as an additional source of an auditor’s sense of accountability.

Separately, it has been suggested, as noted in the concept release, that a requirement for the engagement partner to sign the audit report would be similar to the requirement imposed by Section 302 of the Sarbanes-Oxley Act. This comparison is inappropriate. Management of a public company has primary control over and responsibility for the financial statements; and, in

---

7 Section 302 requires that in each annual or quarterly report filed with the SEC, an issuer’s CEO and CFO provide certain certifications.
passing Section 302, Congress was responding to concerns that CEOs and CFOs were trying to avoid that responsibility. By contrast, the responsibility and accountability of the engagement partner and the firm for the audit report is well-established and accepted. An individual signature of the lead audit partner is not needed to reinforce this responsibility.

Partners are already held to extremely high standards not only internally, but externally. They fully understand and accept these responsibilities, and in this way are fully accountable for their conduct. There is no other profession in which individuals are subject to such intense and comprehensive oversight. We do not believe that requiring a partner signature on an audit report will create any meaningful degree of change in a partner’s sense of accountability or result in an improvement in audit quality.

2. **The signature requirement will not provide meaningful transparency.**

While not fully explaining how transparency will enhance audit quality, the concept release does suggest that additional transparency regarding who is responsible for the audit “could provide useful information to investors.” It is unclear, however, how knowing the engagement partner’s name would be useful in making investment decisions. The concept release emphasizes the ability to “track” a particular engagement partner’s experience, which might, in turn, assist the investment community in evaluating the expertise and quality of the partner’s work. But the number of public company audits for which an individual may be a signing engagement partner would represent only a fraction of the relevant experience of an engagement partner. For example, an auditor may also perform audits for non-public companies, thereby gaining additional valuable experience. An investor will likely also be unaware of the individual auditor’s other professional experience, as well as his or her education and ongoing training. None of these aspects of an engagement partner’s qualifications will be reflected by an engagement partner’s signature. Further, as discussed below, an audit is performed by a wide range of individuals within a given firm, and therefore, focusing the investment community’s attention on “the” engagement partner will provide a distorted picture of how an audit really works and who is responsible for it.

Audit quality is reflective of a firm’s quality control processes and procedures. Providing transparency regarding quality control processes and procedures would be more helpful to investors than identification of the audit partner because it is those processes and procedures that form the basis for being able to sign the firm’s name on the audit report.

**B. Significant Unintended Consequences May Result From The Engagement Partner Signing The Report.**

As discussed above, we believe decisions by the Board regarding changes in audit standards should include consideration of expected costs and burdens (including unintended consequences), as well as anticipated benefits. In this case, the potential benefit, if any, resulting

---

from a partner signature requirement are speculative. However, we believe significant costs and unintended consequences could result, as described below.

1. **It will foster a misunderstanding about the audit process and role of the engagement partner, placing far too much emphasis on the role of a single individual.**

   The performance of an audit, while under the leadership of an engagement partner having final responsibility, requires the work of many professionals, including other members of the engagement team, additional partners, and members of the firm’s quality control network who might be consulted in connection with the engagement. Each individual involved in an audit is responsible for adhering to professional standards, not just the engagement partner. Requiring the engagement partner to sign the audit report will serve to foster a misperception and lack of understanding about how an audit is conducted and who is responsible for it. Supporting this point, in surveying our audit partners, half of the respondents—answering an open-ended question—expressed their concern that requiring a partner signature is not consistent with how an audit is conducted. As an audit is a collaborative effort of all members of an engagement team and is the product of the team’s collective experience, education, training, and expertise as well as the firm’s quality control processes, the signature of a firm name on an audit report best presents how an audit is conducted.

   Audit clients are considered clients of the firm and not of the individual partner who is assigned responsibility to lead the audit. Changing the current practice, which emphasizes the responsibility of the firm as a whole, including all of the individuals participating in the audit, to a practice which would place focus on a particular partner may result in clients being viewed as (or viewing themselves as) clients of the partner and not clients of the firm. This could serve to perpetuate a lack of understanding with respect to how an audit is conducted.

2. **There will be additional legal exposure and costs, which may be significant.**

   As noted above, engagement partners are currently subject to extensive oversight and potential remedial action through, among other things, PCAOB and SEC enforcement actions and private litigation. The concept release acknowledges concerns about the effect of the engagement partner signature requirement on the partner’s exposure to increased litigation and liability. Importantly, the Board indicates that its “intent with any signature requirement would not be to increase the liability of engagement partners.” The possibility of this increased exposure, however, is real. The proposed signature requirement would potentially subject engagement partners to increased liability under the federal securities laws, as explained below. The signature requirement might also increase liability under state law. Although the full effects on liability may not be known at this stage, at a minimum, a personal signature requirement is certain to generate additional lawsuits and other proceedings against individual engagement

---

partners, thereby raising litigation costs and the attendant burdens of litigation for the engagement partners and their firms.

As correctly noted in the concept release, a signature requirement might expose engagement partners to increased liability under Section 10(b) of the Securities Exchange Act of 1934. Courts are divided over when an individual may be subject to primary liability for conduct relating to misstatements not directly attributed to him or her. The Second Circuit, where a large number of securities lawsuits are litigated, holds that a misstatement is actionable under Section 10(b) only if it is “attributed to the specific actor” alleged to have made it (which, in the audit context, typically would include the firm).\(^{11}\) Thus, in some jurisdictions, depending on the circumstances of the case, engagement partners who do not sign audit reports (as opposed to the firms that sign the audit reports) may be able to argue that they are not subject to Section 10(b) claims because they are not the “specific actor” to which a disputed audit report was attributed. The signature requirement could make it more challenging to assert that argument successfully.

The signature requirement could also subject engagement partners to additional claims under Section 11 of the Securities Act of 1933. For example, subsection (a)(4) of Section 11 creates private claims against “every accountant” who “has with his consent been named” as “having prepared or certified any part of the registration statement” or “any report or valuation which is used in connection with the registration statement.”\(^{12}\) Requiring personal signatures could increase the likelihood that plaintiffs will allege that individuals have provided “consent” to be so named. Because Section 11 “imposes a form of strict liability,”\(^{13}\) broadening the reach of Section 11 claims could have a significant impact on litigation risks for engagement partners.\(^{14}\)

In addition, new theories of liability often follow the establishment of new legal obligations, and the consequences of “creative pleading” are difficult to predict. Plaintiffs may assert that partner signatures give rise to new liabilities under common law and under the states’

---

\(^{11}\) *Wright v. Ernst & Young LLP*, 152 F.3d 169, 175 (2d Cir. 1998); *see also Ziemba v. Cascade Int’l, Inc.*, 256 F.3d 1194, 1205 (11th Cir. 2001); *In re Cabletron Sys. Inc.*, 311 F.3d 11, 41 (1st Cir. 2002) (holding that a complaint stated a claim under Section 10(b) against a company’s outside directors, in part, because they signed a disputed Form 10-K).

\(^{13}\) *Greenapple v. Detroit Edison Co.*, 618 F.2d 198, 203 (2d Cir. 1980).

\(^{14}\) The concept release discusses the possibility of requiring the disclosure of engagement partners’ names as an alternative to requiring their signatures. There is no basis to conclude that this alternative would generate less risk of liability or less litigation. For example, the jurisdictions that hold that misstatements are actionable under Section 10(b) only if attributed to a specific actor do not address a distinction between attribution by signature or other means. In any event, a disclosure rule would have all the same undesired consequences of making individual audit partners more visible targets in litigation, as discussed below in more detail.
varied blue sky laws. A signature requirement also could prompt prosecutors and regulators to target for review and potential action the conduct of engagement partners where they would not previously have done so.15

The adoption of a personal signature requirement would undoubtedly impose serious burdens on firms and engagement partners, regardless of how courts ultimately construe the effects of signatures on liability. A signature requirement is certain to generate increased claims against them. Naming individual engagement partners as defendants would often require retaining additional legal counsel. The threat of personal liability would add to the in terrorem effect of litigation, one effect being increased pressure to settle claims without regard to their merit. Novel theories of liability would generate costly disputes over issues of first impression.

Heightened regulatory oversight and litigation could itself trigger additional disclosures and invite yet another layer of review unrelated to the quality of the work on the particular audit—e.g., disclosures to state boards of accountancy, including when renewing CPA licenses. The increased risk of liability, or simply of being involved in regulatory or litigation proceedings, with the attendant effects on the engagement partner’s professional reputation, career advancement, ability to practice, and financial well being, could exacerbate the existing pressures placed on the individuals who serve in that capacity, and affect their willingness to take on the engagement partner role. This unintended and unnecessary effect on the pool of qualified auditors should be avoided.

Although the concept release correctly notes that the European Union now requires its member states to adopt engagement partner signature requirements for audit reports, this does not support adopting the same requirement in the United States. It is well-recognized that the liability environment and legal systems in Europe and the United States are significantly different. For example, securities class actions, at least in the form they exist in the United States, are now not present in the United Kingdom or in the markets of other major European countries.16 In the United States, private securities class actions resulted in $3.5 billion in settlement costs in 2005 alone, not including the massive $6.156 billion settlement in the WorldCom securities litigation.17 This is but one example of how the serious risks posed by litigation in the United States are unique, and not comparable to those faced by firms and

---

15 For example, prosecutors might assume that signatures would increase the likelihood of obtaining a conviction against an individual engagement partner under 18 U.S.C. § 1001, which criminalizes false statements to the government. At least one federal court of appeals has stated it does “not equate a statement issued by and in the name of a corporation with a statement by an individual.” United States v. Lange, 528 F.2d 1280, 1288 (5th Cir. 1976). But see United States v. Lanier, 578 F.2d 1246, 1250 (8th Cir. 1978).

17 Id. The Committee on Capital Markets Regulation also reported that insurance rates for directors and officers are six times higher in the United States than in Europe. Id. at 5.
individuals in Europe. Furthermore, liability reform is proceeding in Europe in respects not present in the United States. For example, last year the European Commission called for its member states to adopt one of three approaches to limit the liability risks for auditors: by contract with the client, liability caps, or adoption of proportionate liability. Further, an open question is whether the addition of a signature requirement in the United States could impact the willingness of partners of member firms outside the United States to audit non-U.S. companies that file reports with the U.S. Securities and Exchange Commission. In light of the absence of any experience here in the United States and given that the engagement partner signature initiative is still in the embryonic stage in the EU, the PCAOB should, at a minimum, wait until it can more thoroughly assess the impact on audit quality, if any, of the signature requirement in the EU.

If the PCAOB moves forward with a proposal related to the signature requirement, consideration must be given to how adequate protections can be put in place to safeguard against these unintended consequences. The concept release correctly points out that the requirement “should not impose on any signing partner any duties, obligations or liability that are greater than the duties, obligations and liability imposed on such person as a member of an auditing firm.”

3. An engagement partner signature requirement would ignore corporate governance structures and the significant reforms put in place as a result of the Sarbanes-Oxley Act.

Corporate governance structures currently in place may be circumvented by requiring the engagement partner to sign the audit report. Investors’ interests are generally represented through the board of directors and the audit committee. As discussed above, under the Sarbanes-Oxley Act audit committees are directly responsible for the appointment, compensation, and oversight of the work of the independent auditor, including the engagement partner, and represent the interests of investors in this regard. It is generally inappropriate for the auditor to answer questions from individual shareholders or shareholder/investor representatives about the company or the audit, due to professional responsibilities with respect to confidentiality of client

---

20 PCAOB Release No. 2009-005, at 4 (citing ACAP Report at VII:20, recommending that any signature requirement be accompanied by measures to ensure that the requirement does not increase the liabilities or duties of an engagement partner). In addition, as recognized in the concept release, the PCAOB does not have authority to promulgate safe harbor protections, and as a result, legislation or an SEC rulemaking or both would be needed to provide such protections. See PCAOB Release No. 2009-005, at 13.
information and legal issues with respect to disseminating non-public information. Were a specific signature be affixed to the report, however, investor inquiries that are appropriately directed to the company may be more likely to be directed to individual auditors—who, of course, would likely not be in a position to respond—leading to unnecessary frustration on the part of investors.

4. The impact on the security and privacy of our partners and that of their families is also a significant concern.

Finally, we believe that the proposed standard could lead to significant security and privacy concerns. As part of the survey, approximately 48% of the audit partners provided candid and unprompted feedback that they would be concerned about the impact such a requirement would have on their personal security and privacy and that of their families. We believe this is an important data point for the Board to consider. Creating a new requirement that leads to fears about the loss of security or personal privacy could trigger a reluctance to accept particular audit engagements and could further challenge the profession’s ability to attract and retain auditors, thereby adversely affecting audit quality.

*   *   *

Fundamentally, we do not believe that adding the engagement partner’s name to an audit report will enhance audit quality. The engagement partner signature requirement will not enhance the already strong sense of accountability held by partners, which is significantly reinforced by many layers of quality control and oversight. Nor will access to the name of the engagement partner provide useful information to the investing public. Indeed, it is likely that the requirement will introduce unwarranted, albeit unintended, costs and burdens to the audit process and to those at audit firms who participate in that process.

D&T appreciates this opportunity to provide our perspectives on this important topic. Our comments are intended to assist the PCAOB in analyzing the relevant issues and potential impacts as discussed herein. If you have any questions or would like to discuss these issues further, please contact Robert Kueppers at (212) 492-4241 or John Fogarty (203) 761-3227.

Very truly yours,

/s/ Deloitte & Touche LLP

---

21 By way of example, two engagement partners responding to the survey expressed this unsolicited concern. One stated, “The [engagement partner] may become the target of unwarranted abuse from those who don’t understand the purpose of an audit. This abuse may put him/her, their family and colleagues at risk of violence or otherwise, which accounting firms are not equipped to protect them from.” Another similarly explained, “I would be deeply concerned about the significant threat to personal security and the security of [my] children. . . . Such a policy would lead to partners refusing certain risky clients or leav[ing] the profession due to security concerns.”

PCAOB Rulemaking Docket Matter No. 029
Concept release on requiring the engagement partner to sign the audit report

Dear Mr. Seymour:

Ernst & Young LLP (Ernst & Young) is pleased to submit comments on the Public Company Accounting Oversight Board’s (PCAOB or the Board) concept release on requiring the engagement partner to sign the audit report (the Concept Release). While we support Board initiatives that are designed to improve audit quality for the users of financial statements, in our view, requiring the engagement partner to sign the audit report would not provide appreciable benefit in audit quality.

In the Concept Release, the Board postulates that an engagement partner signature requirement may lead to improved audit quality through enhanced accountability and increased transparency. Specifically, the arguments offered are that a signature requirement “might increase the engagement partner’s sense of personal accountability to financial statement users” and “would increase transparency about who is responsible for performing the audit, which could provide useful information to investors for investment decisions, audit committees for retention decisions, and in turn, provide additional incentive to firms to improve the quality of all of their engagement partners.” In our view, consistent with the debate in the U.S. on this issue over the last few years, the discussion provided in the Concept Release around these two hypotheses does not make a compelling case that users of the financial statements would benefit from the engagement partner signing the audit report or that there would be a resulting benefit to audit quality.

In the remainder of this letter we discuss our views that sufficient mechanisms are already in place to heighten the engagement partner’s sense of personal accountability to financial statement users. We also discuss our view that added transparency about who is responsible for performing the audit will not provide meaningful information to users and could be used in an adverse and unfair way toward audit professionals. Finally, we share our concerns about the additional liability exposure that would result from this proposal.
Accountability

At a theoretical level, we agree that requiring the engagement partner to sign the audit report may in some degree increase the engagement partner’s sense of accountability to financial statement users. However, at a practical level in terms of audit quality, we do not believe there will be any appreciable benefit in light of the accountability already provided through a firm’s system of quality control, the exposure of the engagement partner to personal sanction and penalty as provided under SEC and PCAOB rules and regulations, potential proceedings by State boards of accountancy and the threat of private litigation. With all of these considerations in mind, our engagement partners already have a strong sense of personal accountability today when they sign an internal form at the completion of the audit authorizing the use of the firm’s signature on an audit report.

The PCAOB and other regulatory bodies recognize that successful, high quality audits depend on a firm’s quality control system. Rule 3400T of the PCAOB’s Interim Quality Control Standards set forth minimum quality control standards for a registered public accounting firm. A firm’s system of quality control is designed to provide the firm with reasonable assurance that audits performed by its personnel, including the work performed by personnel of its domestic or foreign affiliates or correspondents, are in accordance with professional standards in the United States when such standards are applicable. Moreover, through its inspection process, the PCAOB monitors whether the audit firm has appropriately implemented and complied with these professional standards.

The signing of the firm’s name demonstrates the effort of the entire firm behind the audit opinion. An audit report represents the work of many individual CPAs and often involves many partners in the field, national offices and foreign affiliated firms. Public company audits are not simply the work of the engagement partner. We believe it is a mistake to impose a signature requirement suggesting a unique degree of accountability or responsibility for an individual working on a public company audit as this detracts from the concept that the firm as a whole has the responsibility to stand behind the quality of its work. We believe this is true whether an individual were to sign alone or in addition to the firm’s name.

The consultative process that is at the center of our firm’s system of quality control is designed to prevent any individual from making unilateral decisions around critical accounting and auditing decisions and other significant judgments that could significantly affect our firm’s audit opinion. History has shown that a consultative culture and firm decision-making are key drivers of audit quality. We are concerned that an engagement partner signature requirement would send the wrong message and suggest individual responsibility and autonomy over firm responsibility and a consultative quality control system.

The Concept Release suggests that requiring the engagement partner signature on the audit report correlates with the policy requirement of the CEO or CFO signing financial statements. However, we believe this is a false analogy and that the correct analogy supports the firm’s signature on the audit report. The CEO or CFO signature for financial reports is evidence that they, at the top of the company, stand behind the information that is being provided and take responsibility for the quality controls and processes that feed into that work product. Requiring the audit firm (and not the engagement partner) to sign the report does the same thing. It sends
the message that the entire firm stands behind the audit report and that the firm has the necessary quality controls in place to be confident in its signature.

Requiring the engagement partner to sign the audit report may have the effect of focusing attention on information (i.e., identity of the engagement partner) that is not relevant to the user’s ability to rely on the financial statements. Financial statement users primarily are interested in the quality of the financial information and their interest in audit quality is derived from this primary interest. In evaluating the quality of the financial information, users of the financial statements traditionally have focused on whether the financial statements have been subject to audit, the nature of the audit opinion that was issued and any indications of disagreements or other matters that raise concerns about the quality of the financial information. The audit opinion provides reasonable assurance that the financial information presented does not contain material misstatements. Knowing who signed the auditor’s report would not change the conclusion of the report and the added signature of the engagement partner does not further inform users as to the quality of the information in the financial statements.

We believe requiring the engagement partner to sign the audit report will simply be for the sake of transparency, which we discuss below, without any appreciable benefit to audit quality.

Transparency

The identity of the engagement partner is readily known or available to the board of directors, management and regulators who, because of their respective roles as representatives of the financial statement users, are in positions to benefit from this information. Responsibility for evaluating the audit firm and the engagement partner rests with the audit committee of the board of directors. The audit committee recommends the audit firm, and through the board of directors puts the firm name before the shareholders for ratification.

In the situation of a large, widely held company, the engagement partner typically attends the annual shareholder’s meeting and is available to answer appropriate questions. While this does not result in the identity of the engagement partner being readily known to all shareholders, it illustrates that the identity of the engagement partner generally is available to shareholders. However, on its own such information is vastly inadequate to form any judgments regarding the work of any individual or more importantly the work of the firm on this particular audit. We are puzzled as to how the general public might responsibly benefit from or act upon this information. While the PCAOB, as regulator, is in a position to interact with and evaluate the qualifications and work of the audit firm, including the engagement partner, and therefore have a frame of reference from which to benefit from the identification of professionals involved in the audit, the public is not.

We are concerned that third parties may begin to trade on information about engagement partners without any ability to discern any correlation with audit quality. Providing the name of the engagement partner through a report signature requirement may risk a simple “guilt-by-association” conclusion in certain circumstances. If an engagement partner is associated with a
company with financial reporting difficulties (or alleged or even rumored financial reporting problems), what is the public to do with such limited information? The general public does not have access to information to allow them to make informed judgments as to the significance of the audit partner's association with the company with financial reporting difficulties, whether actual, alleged, or rumored. What if the reality is that the auditor's work helped to bring to light underlying matters that are the cause of the financial reporting difficulties? Or that notwithstanding the financial reporting issues, the auditor's work was conducted in accordance with professional auditing standards? The public is well served by the most challenging audits, audit committees and management being matched with engagement partners possessing the knowledge, experience and temperament appropriate for the circumstances. If a partner is repeatedly tasked with handling the toughest of audit engagements, the public may gain an inaccurate impression of the partner due to a perception of guilt-by-association with companies with financial reporting difficulties. As a result, the willingness of audit partners to serve as the engagement partners for certain audit clients might wane.

Because third parties will have no further insight beyond an individual's identity into the qualifications, track records or actual work of individual partners, they therefore are left to infer distinctions without basis. We believe the public and investors appropriately look to the PCAOB and the corporate governance structure of the board of directors and its audit committee to represent their interests in monitoring the work of audit firms and individual auditors.

Liability of engagement partners

The Concept Release notes certain potential liability concerns with requiring the engagement partner to sign the audit report and poses a series of questions about liability in private litigation. For the reasons discussed below, we think requiring the engagement partner to sign the audit report would have an adverse effect on liability and on accounting firm litigation.

In our experience, plaintiffs typically do not name individual partners as defendants in accounting malpractice or accounting fraud lawsuits. Generally, only the firm itself is sued. This is likely because the firm provides the "deep pocket" for recovery of damages; the individual partner is not likely to have personal assets that are substantial enough to warrant pursuit. But it might also be because, in lawsuits under Section 10(b) and Rule 10b-5 of the Securities Exchange Act, it is difficult to establish that the individual has "made" a statement under the post-Central Bank case law in most judicial circuits. As the Concept Release notes, the secondary liability argument based on Central Bank "of course, would not be available if the engagement partner signed the audit report."

The absence of the Central Bank legal impediment might lead to additional claims being filed against individual partners. But we do not think that this would be the primary reason that plaintiffs might add individual partners as defendants. Rather, we think it possible that some law firms that routinely practice in this area might simply conclude that, with a partner's signature on the auditor's report, it would be difficult to explain to a jury why the partner is not named as a defendant - the reasoning might go that since he or she signed the opinion then of course he or she should be sued together with the accounting firm. Indeed, the Concept Release analogizes the signature requirement to the CEO/CFO certification requirement imposed by Section 302 of the
Sarbanes-Oxley Act; at least in part as a result of that requirement, CEOs and CFOs are almost always named as defendants together with their corporate employer.

We have no way of knowing for certain whether this might be the reasoning of some plaintiffs’ law firms, but many changes in the laws or regulations have affected litigation in ways that are impossible to predict. For example, the Private Securities Litigation Reform Act’s lead plaintiff provision, section 21D of the Exchange Act, has significantly changed the way securities litigation is conducted today, in ways that were not foreseen. Moreover, uncertainty as to the effect on litigation also exists because accounting firms often are sued by bankruptcy trustees, litigation trustees, creditors, and others bringing negligence, negligent misrepresentation, and fraud claims under applicable state laws. These lawsuits have many permutations, but we think, based on having experienced scores of such lawsuits over the past couple of decades, that individual partners would likely be named in many of these lawsuits if the PCAOB were to require the engagement partner to sign the audit report.

What would be the effect of naming the individual partner as a defendant? The personal effect would be significant - merely being sued for fraud or negligence could lead to the loss of clients for the individual partner, emotional and personal financial difficulties, and so on. It may mean that the accounting firm defendant would need to retain separate counsel for the individual partner, thereby complicating the litigation and adding substantially to defense costs. It may well mean that, because of these consequences, the accounting firm would opt more readily for settlement rather than for prolonged litigation (indeed, this may be a reason why the plaintiffs’ bar, over the course of time, would conclude that adding the individual partner as a defendant is an effective litigation strategy). And it could, of course, result in a verdict, and the award of damages, that is adverse to the partner.

Absent evidence - certainly, stronger evidence than is set forth in the PCAOB’s Concept Release - that requiring the partner to sign the audit report would improve audit quality, we recommend against moving forward with this proposal.

Summary

As discussed previously, it is our view that the engagement partner’s signature would dilute if not put at risk the benefits gained from the collective, firm signature. We believe that the engagement partner’s strong sense of personal accountability is already well in place and supported by a firm’s system of quality control and PCAOB oversight. It therefore is our view that requiring the engagement partner to sign the audit report will not enhance his or her accountability but rather potentially could have an adverse effect on audit quality. It further is our view that the benefits of transparency with regard to the identity of the engagement partner that might be afforded by requiring the engagement partner to sign the audit report are significantly overstated. The identity of the engagement partner is readily known to members of the board of directors and in particular to the audit committee that, on behalf of the shareholders, is vested with the responsibility of evaluating the audit firm, including the engagement partner, and proposing the firm for ratification by the shareholders. Given the limited nature of information that would be afforded by such a requirement, we believe the general public would be at risk of reaching unjust and inappropriate conclusions regarding the quality of work of an individual engagement partner,
which is already subject to not only the firms' practice monitoring programs but also the PCAOB's inspection process. We also believe that the potential increased liability risks associated with the engagement partner signing the audit report are not justified by the arguments for enhanced accountability and transparency.

Re: PCAOB Rulemaking Docket Matter No. 29
   Concept Release on Requiring the Engagement Partner to Sign the Audit Report
   July 28, 2009

Dear Board Members,

I am submitting my comments to you regarding the above referenced Rulemaking Docket Matter. These are my personal comments and do not necessarily reflect those of my employer. You specifically asked respondents to answer sixteen (16) questions.

**Reasons for a Signature Requirement**

1. **Would requiring the engagement partner to sign the audit report enhance audit quality and investor protection?**

   The engagement partner already has to sign off on the files in order for the report to be issued. If this person does not already possess a strict sense of duty and understand the liability, then he or she is in the wrong position and ought not be an engagement partner in a registered accounting firm.

   Moreover, if the engagement partner is inclined towards deception, he or she can sign every page of the report and financial statements, and they would be just as fraudulent. If our colleagues in Europe feel this is helpful, let them add the requirement. The Board and the Securities and Exchange Commission (SEC) can make reports far more transparent, *i.e.* understandable, with laws and regulations that do not require a signature.

2. **Would such a requirement improve the engagement partner’s focus on his or her existing responsibilities? The Board is particularly interested in any empirical data or other research that commentators can provide.**

   As I mention above, those who are inclined to be deceptive will sign anything to receive the fruits of the fraud and to prevent their misdeeds from being discovered.

3. **Would disclosure of the engagement partner’s name in the report serve the same purpose as a signature requirement, or is the act of signing itself important to promote accountability?**
I should hope that the Board and SEC have improved that sense of accountability in recent years without this requirement.

The issue I have with releasing the name is that we live in a very different world. Suppose Robert “Bob” Anderson signs under the registered accounting firm’s name. People recognize the firm Father Knowles & Best as a responsible firm with a list of well known clients. For some reason unknown to either Bob or the client, the client’s stock dips. One investor decides to look up Bob on the Internet. Before long this investor has set up a site for other investors to vent their frustration. The site may include Bob’s address.

The argument can be made that the client’s Chief Executive Officer (CEO) and Chief Financial Officer (CFO) face this backlash already. They are directly responsible for the company. Bob must rely on his staff and the integrity of client personnel. In the example above, market pressures beyond anyone’s control may weaken the stock price.

The real question the Board must ask is does adding Bob’s signature to the report increase the integrity of the financial statements? Simply put, would the signature of the engagement partner under Arthur Andersen’s logo have prevented Enron from issuing bogus statements?

4. Would increased transparency about the identity of the engagement partner be useful to investors, audit committees, and others?

The Board suggests that audit committees might seek out certain partners, resulting in “competition [that] could lead to an improvement in audit quality.” Taking my example above, let us stipulate that Bob has certain expertise that makes him attractive to audit committees of companies in a certain industry. Every committee making contact with Father, Knowles & Best requests Bob as the engagement partner. Bob’s time is limited. Therefore, the price of the audit goes up.

Furthermore, if I am an investor in a company Bob’s firm audits and know that Bob is well regarded, what conclusion should I draw if someone other than Bob is the engagement partner? Perhaps the price of the stock will drop as informed investors see that Bob is not signing the report. Let us not forget the Board requirements do require partner rotation. Is it the Board’s intention to create engagement partners who are akin to professional athletes – seeking engagements that will provide a larger pay day; even “free agency”? By that I mean that Bob may be courted by other registered accounting firms to enhance their book of clients.

5. Would such information allow users of audit reports to better evaluate or predict the quality of a particular audit? Could increased transparency lead to inaccurate conclusions about audit quality under some circumstances? We are particularly interested in an empirical data or other research that commenters can provide.
The Board is essentially asking if audit report users will begin to discuss financial statements in the same way sports fans discuss coaches and players. Imagine a comment like this, “Bob Anderson signed the report for ABC, Inc. last year, and everyone knows that Bob only signs the best reports.” Another investor may chime in with, “True. But Bob is not signing this year. The audit firm said that Bob was rotating off the engagement, but I heard rumors that Bob was moving to Cleaver, Haskell and Cleaver. There will be a new engagement partner no matter what; a partner who is untested. I may dump ABC now.” A third party to the conversation says, “Bob is high quality – do we all agree? Even if he takes ABC with him to another firm, Bob is going to command more money, and the insurance company is going to want a higher premium because Bob’s exposure is increasing dramatically.”

I will grant the Board that this is far from empirical data or research; however, it does seem to logically follow from the Board’s question.

6. Are there potential unintended consequences of requiring the engagement partner to sign the audit report that the Board should be aware of?

Please see my responses to questions three, four and five above; see also the second paragraph of my response to question seven below.

7. The EU’s Eighth Directive requires a natural person to sign the audit report, but provides that “[i]n exceptional circumstances, Member States may provide that this signature does not need to be disclosed to the public if such disclosure could lead to imminent, significant threat to the personal security of any person.” If the Board adopts an engagement partner signature requirement, is a similar exception necessary? If so, under what circumstances should it be available?

I mention in my response to question three above that any investor might seek to locate a partner when the name is known. How would a firm, partner, or issuer recognize an “imminent, significant threat” before the time of issuance?

The concurrent issue with allowing an exception is that investors will notice the missing signature and may draw the conclusion that the report and financial statements are defective in some manner. After all, the Board would have to permit language as to why the signature is missing. For example, “Under the exception paragraph of Rule ___, the engagement partner’s name and signature is withheld.” Who wants to be an engagement partner if it endangers a life?

8. What effect, if any, would a signature requirement have on an engagement partner’s potential liability in private litigation? Would it lead to an unwarranted increase in private liability? Would it affect an engagement partner’s potential liability under provisions of the federal securities laws other than Section 10(b) of the Securities Exchange Act, such as Section 11 of the Securities Act of 1933? Would it affect an engagement partner’s potential liability under state law?
I am not an attorney, so it is difficult for me to prognosticate potential court actions. One and perhaps only, benefit to having an engagement partner’s signature on the report is it may shield other partners from liability. Had the partner working on Enron signed the report, the firm Arthur Andersen may still exist.

9. Are there steps the Board could or should take to mitigate the likelihood of increasing an engagement partner’s potential liability in private litigation?

The Board appears to be loath to increase liability, while indicating that requiring a signature will somehow make partners more aware of their responsibility; simultaneously somehow making reports and financial statements more transparent. Increasing liability will have a chilling effect on registered accounting firms. Many partners may choose to retire or move to private companies (as I alluded to at the end of my response to question seven above). This will reduce the supply of auditing services and increase the costs. Therefore, I understand why the Board seeks to limit liability. The public, however, may wonder if there is a benefit to shareholders if restrictions are placed on legal remedies.

10. Some commenters on the ACAP Report who expressed concern about liability suggested that a safe harbor provision accompany any signature requirement. While the Board has no authority to create a safe harbor from private liability, it could, for example, undertake to define the engagement partner’s responsibilities more clearly in the PCAOB standards. Would such a standard-setting project be appropriate?

Anything the Board can do to clarify the PCAOB standards is always welcome. The shortcoming with standards is that standards do not have the weight of law or regulations. The SEC in concert with the Board ought to work with Congress to create a safe harbor regardless of whether the signature requirement passes muster.

Potential Amendments to PCAOB Standards

11. If the Board adopts an engagement partner signature requirement, would other PCAOB standards, outside AU sec. 508 and Auditing Standard No. 5, need to be amended?

No comment.

12. Should the Board only require the engagement partner’s signature as it relates to the current year’s audit? If so, how should the Board do so? For example, should firms be permitted to add an explanatory paragraph in the report that states the engagement partner’s signature relates only to the current year?

If the Board does adopt this requirement, and I believe the Board ought not do so, then I would take another approach. If the engagement partner has not changed, then the engagement partner may sign covering all years presented. If the engagement partner has changed, then each partner signs for years presented when he or she was the engagement
partner. Any other language in the report limiting the engagement partner’s exposure may be viewed as dodging responsibility.

13. If a signature requirement is adopted, should a principal auditor that makes reference to another auditor also be required to make reference to the other engagement partner? Would an engagement partner at the principal auditor be less willing to assume responsibility for work performed by another firm under AU sec. 543?

If I were to sign a report as an engagement partner where another audit firm performed work, I would certainly seek to limit my responsibility. Nothing excuses me from due diligence in reviewing the other firm’s work. Nonetheless, I would mention the firm, the “engagement partner” for the work, and want that engagement partner to sign a special report on their limited engagement.

14. Auditors are not required to issue a report on a review of interim financial information, though AU sec. 722, *Interim Financial Information*, imposes requirements on the form of such a report in the event one is issued. Should the engagement partner be required to sign a report on interim financial information if the firm issues one?

If the Board adopts a signature requirement, then for the sake of consistency, the requirement ought to carry to interim reports.

15. Would requiring the engagement partner to sign the audit report make other changes to the standard audit report necessary?

As discussed above, if an engagement partner is limiting his or her responsibility, then such language has to be available. It can also be argued that phrasing may need to be changed. For example, the first sentence generally starts with, “We have audited the accompanying…” To incorporate a signature requirement, it may be better to start the report with, “My firm has audited…” In fact, wherever “we” occurs, it could change to “my firm”. The opinion paragraph might start like this: “In my opinion and that of my firm…” After all, we are pointing out that one person – the engagement partner – is putting his or her mark on the report. The firm is no longer speaking collectively. It is the partner’s voice speaking in the report.

16. If the Board adopts a signature requirement, should it specify a form of the engagement partner’s signature? For example, should the engagement partner sign on behalf of the firm and then “by” the engagement partner?

If the Board does adopt the requirement, then the signature ought to look something like this –

*Robert Anderson*

Father, Knowles & Best LLC
Anytown, Anystate
The stated goal for the signature requirement is to emphasize the engagement partner’s accountability and make reports and statements more transparent. It is my belief that one who becomes an engagement partner better understand this whether he or she has to sign the report *personally* or not. I do not believe the requirement meets the stated goals.

Ultimately, I ask the Board to remember the questions I posed above. First, if the engagement partner at Arthur Andersen had to personally sign the Enron report, would that change the financial statements? Second, does adding the engagement partner’s signature add *integrity* to the financial statements?

Respectfully submitted,

*Frank Gorrell, MSA, CPA*

Re: PCAOB Rulemaking Docket No. 029 – Engagement Partner Signature on the Audit Report

Dear Mr. Seymour:

We are members of the Auditing Section of the American Accounting Association, and are writing to commend the PCAOB for formally considering requiring the engagement partner’s signature on the audit report. As you are aware, the U.S. Department of the Treasury’s Advisory Committee on the Auditing Profession recommended that the PCAOB undertake a standard-setting initiative mandating the engagement partner’s signature on the auditor’s report. We believe that such a requirement is likely to have a number of positive effects, including a change in partner behavior that would positively influence audit quality, and an increase in transparency for audit and financial statement users. We are not advocating any specific requirements of the partner sign-off (e.g., which partners should be required to provide signatures); rather, we want to highlight why having one or more individuals provide a personal signature on the audit report has strong potential merit (addressing Questions 1-3 of the July 28th Concept Release). Below we describe the basis for our belief, including references to relevant research. This letter represents our views, which are not necessarily the views of our universities, the American Accounting Association, or the Auditing Section of the American Accounting Association.

While the academic literature does not directly address the issue of partner sign-off, research (e.g., DeZoort, Harrison, and Taylor 2006; Johnson and Kaplan 1991; Kennedy 1993) shows that accountability (which would likely result from having to provide a personal signature on the audit report) reduces auditors’ biases in information processing and enhances auditors’ consensus and effort. We believe that there is a persuasive body of evidence suggesting accountability effects are robust across a variety of groups representing different ages, professional interests, and hierarchical levels. Further, the psychology literature (Schlenker, Britt, Pennington, Murphy, and Doherty 1994) highlights that individual sense of responsibility for performance “flows” from accountability. We also find it very interesting that a recent research study (Cohen, Krishnamoorthy, and Wright 2009) reports that 68% of practicing auditors interviewed believe that the SOX Section 302 requirements for CEO and CFO certification have had a positive effect on the integrity of financial reporting. Reasoning would suggest that certification by an audit partner, in the form of a personal signature, would have a
similar positive effect on the performance of the audit. We also refer you to Carcello, Bedard, and Hermanson (2009), who expressed strong support for audit partner signatures on the audit report.

We acknowledge that the current research does not definitively settle the issue of partner sign-off, and we recognize that researchers may learn about other effects of partner sign-off with additional research. However, we believe that currently there is a strong basis for anticipating that partners, and hence audit quality, would be affected by the accountability pressure resulting from providing a personal signature.

Thank you for your work on this very important initiative and your continued focus on the public interest.

Sincerely,

Audrey Gramling, Past President, Auditing Section of the American Accounting Association, Kennesaw State University

Joseph Carcello, Ernst & Young Professor and Director of Research – Corporate Governance Center, University of Tennessee

Todd DeZoort, Professor of Accounting and Accounting Advisory Board Fellow, The University of Alabama

Dana Hermanson, Dinos Eminent Scholar Chair and Professor of Accounting, Kennesaw State University

Re: PCAOB Rulemaking Docket Matter No. 029, Concept Release on Requiring the Engagement Partner to Sign the Audit Report

Dear Board Members and Staff:

We appreciate the opportunity to comment on the Concept Release on Requiring the Engagement Partner to Sign the Audit Report (“Concept Release”). We support the practice of issuing a concept release, such as this one, seeking input on high-level issues prior to the issuance of an exposure draft of a proposed standard. We expect you will find the input you receive useful, and encourage you to continue the practice going forward.

We support the goal of increasing accountability and transparency; however, we do not believe requiring the engagement partner to sign the audit report will accomplish that goal. We believe that a requirement to sign the audit report individually will have no effect on the partner’s sense of accountability. Partners are held accountable by their own professionalism, supplemented by mechanisms that are in place that allow third parties to hold them accountable. For those partners, it is impossible to be “more” accountable. To the extent that there may be partners who do not feel this deep sense of accountability, it is hard to imagine that the requirement to sign the audit report will influence them if all the mechanisms that are currently in place to hold partners accountable have failed to do so.

With respect to transparency, we believe that a requirement for the engagement partner to sign the audit report would actually reduce transparency in that it obfuscates how an audit is performed. To imply that an individual is solely responsible for performing the audit is misleading. Furthermore, we believe that this requirement may signal to the markets that there has been a fundamental shift in the responsibilities of the audit firm and the engagement partner, which is not the case.

We also believe pursuing this project at this time will distract the Board’s resources from more meaningful initiatives to enhance market confidence in audit quality, and the Board risks promulgating a new standard with unproven benefits and unintended consequences.
Partner’s sense of accountability

1. Would requiring the engagement partner to sign the audit report enhance audit quality and investor protection?

2. Would such a requirement improve the engagement partner’s focus on his or her existing responsibilities? The Board is particularly interested in any empirical data or other research that commenters can provide.

3. Would disclosure of the engagement partner’s name in the report serve the same purpose as a signature requirement, or is the act of signing itself important to promote accountability?

We believe that a requirement to sign the audit report individually will have no effect on investor protection, audit quality or the partner’s sense of accountability. Partners are held accountable by their own professionalism, supplemented by mechanisms that are in place that allow third parties to hold them accountable. Such mechanisms include a firm’s quality control policies and procedures, such as engagement quality review, a firm’s internal inspection process, and partner compensation programs. Other mechanisms include peer review programs and the PCAOB inspection process. Furthermore, the audit committees and other regulators oversee the auditor. Finally, partners have a significant portion of their net worth invested in the firms in which they are partners. A single audit failure can take down a firm, resulting in a significant personal loss to the engagement partner, and all of his or her partners. We do not believe individually signing a report will promote greater accountability.

Furthermore, we are not aware of any studies that have been done to prove or disprove this presumption that individually signing a report drives greater accountability or whether any such requirement impacts investors’ perceptions.

We are aware that research has shown that, at the staff-level, personnel will make more conservative materiality assessments and design more testing procedures when they realize that higher-level personnel on the engagement team will know who has performed the procedures.1 However, we have quality assurance policies and procedures that recognize this characteristic of human behavior by requiring the documentation and review of who has performed which procedures, up through the partner and engagement quality review level. These policies and procedures, and how they are implemented, are reviewed by our internal inspection program, peer review, and PCAOB inspection. We reward and dismiss partners based on the quality of their work. These policies and procedures impose an appropriate level of accountability on all the participants on the audit team, including the engagement partner.

Transparency

4. Would increased transparency about the identity of the engagement partner be useful to investors, audit committees, and others?

5. Would such information allow users of audit reports to better evaluate or predict the quality of a particular audit? Could increased transparency lead to inaccurate conclusions about audit quality under some circumstances? We are particularly interested in any empirical data or other research that commenters can provide.

The signature of the lead partner on an audit report has been presented as an effort to increase transparency. Increasing transparency implies an underlying process becomes apparent. However, we believe that the signature of the engagement partner on an audit report actually obscures the underlying audit process, which involves firm-level processes, including the firm’s methodology, consultation requirements, review processes, and other audit and quality control policies and procedures. The engagement partner is responsible for oversight of the audit, but often specialists and national office partners assume significant responsibilities related to certain technical matters or complex areas. The confidence in the audit opinion is based on the quality of the firm’s policies and procedures, not just the abilities of the individual partner. It is for this reason that the partner signs the firm’s name on the audit report, not his or her own.

We are very concerned that requiring a partner to individually sign the report will lead to inaccurate conclusions about audit quality under some circumstances. The temptation to rank engagement partners by a simple statistic like number of restatements is too great. However, it must be remembered that the number of restatements is not a pure measure of the quality of a particular partner’s body of work. There are many independent and dependent variables that affect any simple statistic of audit quality, only one of which is the identity of the engagement partner.

Finally, we believe that the addition of a requirement for the engagement partner to sign the audit report individually will signal to the markets a fundamental shift in the responsibilities between the audit firm and the engagement partner, which clearly has not occurred.

Unintended consequences

6. Are there potential unintended consequences of requiring the engagement partner to sign the audit report that the Board should be aware of?

Potential unintended consequences include:

- Shareholders may believe it is appropriate to contact the engagement partner directly to ask questions about the audit, the company’s financial statements, or other matters. This would put both auditors and shareholders in a frustrating position, because, of course, the auditor cannot answer such questions due to confidentiality and other legal requirements. Auditors are accountable to the shareholders through the audit committee and the board of directors. This governance structure allows decisions to be made by people with an appropriate level of understanding of the company. We believe that shareholders, operating outside this governance structure, could add
confusion, cost, and frustration to a process that already contains mechanisms in place to hold auditors appropriately accountable to shareholders.

- An increase in real or perceived personal risk and responsibility by engagement partners will result in increased demand for prescriptive auditing and accounting standards, with a resulting decline in the use of professional judgment. Furthermore, costs in general could increase as auditors perform unnecessary procedures, or engage in unnecessary consultations in order to mitigate such perceived increase in personal risk.

- Engagement partners and their families could be subject to unwarranted and unwelcome communications from shareholders who are unhappy with a particular company’s performance in matters that are wholly unrelated to the completeness and accuracy of the financial statements.

- More highly qualified partners refusing to serve as the engagement partner on more challenging audits because of real or perceived increased legal liability risks or personal security risks associated with particular clients. Furthermore, some auditors may avoid performing riskier audits lest the increased risk of audit failure negatively influences their professional reputations.

- In the event that a question arises about the sufficiency of an audit of a high-profile company, even before the merits of such a question are validated or debunked, the publication of the engagement partner’s name could generate indefensible press coverage that will likely negatively affect his or her reputation even if the audit is later determined to be sufficient.

7. The EU’s Eighth Directive requires a natural person to sign the audit report, but provides that “[i]n exceptional circumstances, Member States may provide that this signature does not need to be disclosed to the public if such disclosure could lead to an imminent, significant threat to the personal security of any person.” If the Board adopts an engagement partner signature requirement, is a similar exception necessary? If so, under what circumstances should it be available?

We believe that, if the Board adopts an engagement partner signature requirement, an exemption is required for those situations where the engagement partner feels that disclosure of the identity of the engagement partner could lead to an imminent, significant threat to the personal security of any person. The exemption should be available at the discretion of the partner and/ or the firm. The need for appropriate guidance for a firm or a partner to use such an exemption would be critical to avoid unnecessary questioning of the professional judgment that would be necessary when using the exemption. However, guidance of this nature would be quite complex. Given that we do not believe a partner individually signing a report enhances audit quality, our belief that this standard is unnecessary is reinforced.
Legal liability concerns

8. What effect, if any, would a signature requirement have on an engagement partner’s potential liability in private litigation? Would it lead to an unwarranted increase in private liability? Would it affect an engagement partner’s potential liability under provisions of the federal securities laws other than Section 10(b) of the Securities Exchange Act, such as Section 11 of the Securities Act of 1933? Would it affect an engagement partner’s potential liability under state law?

We believe that a signature requirement may cast doubt on an engagement partner’s ability to raise important defenses to private claims under Section 10(b) of the Securities Exchange Act of 1934. Therefore, we believe that a signature requirement would likely increase the risk of liability to a partner. We therefore strongly encourage the PCAOB, to the extent it determines to proceed with such a requirement, to perform a thorough analysis on the potential impact an engagement partner’s signature may have on litigation.

We expect that a signature requirement could create similar ambiguities under other federal statutes and state laws; the only bounds of the resulting potential liability to engagement partners is the creativity of plaintiffs. Even if resulting claims are ultimately defeated, the perception of increased personal liability of engagement partners will result in additional costs to defend against those claims, and insurance costs.

9. Are there steps the Board could or should take to mitigate the likelihood of increasing an engagement partner’s potential liability in private litigation?

10. Some commenters on the ACAP Report who expressed concern about liability suggested that a safe harbor provision accompany any signature requirement. While the Board has no authority to create a safe harbor from private liability, it could, for example, undertake to define the engagement partner’s responsibilities more clearly in PCAOB standards. Would such a standard-setting project be appropriate?

In light of the potential for increased litigation against individual engagement partners, we do not believe the Board should implement the signature requirement as long as the Board has no authority to create a safe harbor provision. However, if the Board chooses to go forward with the signature requirement and increased liability of an engagement partner is not intended, the proposed rule should so explicitly state. Further, if an individual signature is not intended to change the liability for the firm as a whole, then the proposed rule should also explicitly state this.

Effects on other standards

Overall, we recommend making as few changes to the other standards as possible. Additional changes, particularly to the audit report, imply that the partner’s signature has a greater meaning than it is possible for it to have.
11. If the Board adopts an engagement partner signature requirement, would other PCAOB standards, outside of AU sec. 508 and Auditing Standard No. 5, need to be amended?

We do not recommend making changes to any of the other PCAOB standards.

12. Should the Board only require the engagement partner’s signature as it related to the current year’s audit? If so, how should the Board do so? For example, should firms be permitted to add an explanatory paragraph in the report that states that the engagement partner’s signature related only to the current year?

Unless there has been a change in engagement partner, we do not recommend permitting the firms to add an explanatory paragraph in the report that states that the engagement partner’s signature related only to the current year. Such a statement implies that there is a difference in the balance of responsibility between the firm and the partner from year-to-year. In fact, we think that the audit report is equally the firm’s responsibility in both years.

13. If a signature requirement is adopted, should a principal auditor that makes reference to another auditor also be required to make reference to the other engagement partner? Would an engagement partner at the principal auditor be less willing to assume responsibility for work performed by another firm under AU sec. 543?

Current standards allow the other auditor to be named, but only with his or her express permission and providing that the other auditor’s report is presented together with that of the principal auditor. Assuming that this requirement is maintained, it is unnecessary for the principal auditor to make reference to the other engagement partner, as the other auditor’s report, signed by the other engagement partner, will be attached.

14. Auditors are not required to issue a report on a review of interim financial information, though AU sec. 722, *Interim Financial Information*, imposes requirements on the form of such a report in the event one is issued. Should the engagement partner be required to sign a report on interim financial information if the firm issues one?

For all of the reasons we do not believe the engagement partner should be required to sign the audit report, we also do not believe the engagement partner should be required to sign a report on interim financial information if the firm issues one.

15. Would requiring the engagement partner to sign the audit report make other changes to the standard audit report necessary?

We discourage the PCAOB from making any additional changes to the audit report as such changes might be read as attaching more importance to the auditor’s signature than is warranted. Any changes in the audit report should be considered carefully and in coordination with other standards setters to avoid the confusion that may be associated with several styles of audit report in the public domain.
16. If the Board adopts a signature requirement, should it specify a form of the engagement partner’s signature? For example, should the engagement partner sign on behalf of the firm and then “by” the engagement partner?

We believe that the firm’s signature should be the only one on the audit report; however, should the Board decide to impose a requirement for the engagement partner to sign the audit report, then both signatures should be on the report in such a way as to make clear that the firm is responsible for the audit.

We would be pleased to discuss our comments and recommendations with you. If you have any questions, please contact Mr. John L. Archambault, National Managing Partner of Professional Standards, at (312) 602-8701.

Sincerely,
September 10, 2009

Re: Request for Public Comment: Concept Release on Requiring the Engagement Partner to Sign the Audit Report – PCAOB Rulemaking Docket Matter No. 029

Dear Office of the Secretary:

HEIN & ASSOCIATES LLP ("HEIN") is a regional CPA firm with offices in Denver, Houston, Dallas and Southern California. Our Firm has consistently ranked, based on revenues, as one of the 100 largest firms in the United States, and in 2008, we had over $50,000,000 in net revenue. We audit approximately 65 public companies, including many accelerated filers. Revenues from our public company practice represent approximately 35% of our net revenue. As a result of our public company practice, we are a member firm of the Center for Audit Quality ("Center") and serve on its Professional Practice Executive Committee. Practically speaking, we believe we represent a smaller firm performing public company audits and fully appreciate the "barriers" that deter smaller firms from performing audits of public companies.

HEIN expresses our appreciation to the PCAOB and its Board for your effort, time and dedication to improving the auditing standards.

We can understand why, on the surface, some might believe that requiring the individual audit partner to sign the audit report might enhance the audit partner's sense of accountability to users of the financial statements and result in greater exercise of care in performing the audit. However, such a requirement would be contradictory to our audit culture and is based on assumptions that are not true. An audit is performed by more than the individual partner. We believe that focusing on the individual audit partner would be a disservice, because it tries to ascribe more responsibility to the partner in an apparent attempt to increase his or her personal risk, based on the unproven assumption it will increase overall audit quality. Also, a successful audit is based on the quality control, training, experience and expertise of the auditing firm as a whole. The engagement partner is already individually accountable to the PCAOB, SEC, state boards, as well as to the firm and his or her partners, and will generally be named in litigation. Having the partner sign his or her name does not add any real individual accountability and would most likely result in unintended consequences. These include having to deal with inquiries from stakeholders that are more appropriately addressed to management, which could lead to an even greater "expectation gap" as to the auditor's role.
We also believe disgruntled shareholders may call and even possibly come to the audit partner’s home. Audit partners would undoubtedly delist their phone numbers and avoid any other publication of their personal information. This would create an undue burden on their families, which is simply not fair. Furthermore, we believe many qualified audit professionals will choose not to be partners that sign audit reports, so we may face the very real possibility of a talent drain within the profession. This will ultimately impact the quality of our audits. Finally, we have little doubt that this requirement would further increase the barriers for smaller firms from performing audits of public companies and thereby further reduce future competition in the marketplace.

Thank you for considering our comments on a matter about which we feel very strongly. If you should request any additional information, please do not hesitate to contact Bill Yeates, our National Director of Audit and Accounting.

RE:  PCAOB Rulemaking Docket Matter No. 029, Concept Release on Requiring the Engagement Partner to Sign the Audit Report

Dear Mr. Secretary:

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board’s (PCAOB or the Board) Release No. 2009-005 that includes the Concept Release on Requiring the Engagement Partner to Sign the Audit Report (the Concept Release).

We would like to take this opportunity to formally recognize the effort of the PCAOB and its staff in development of the Concept Release. We believe that the use of Concept Releases to solicit input on proposed standards or revisions to existing standards is a worthwhile step in the standard setting process, and we encourage the PCAOB to continue to use this approach in the future.

In the United States, audit reports on public company financial statements are signed in the name of the registered public accounting firm taking responsibility for the audit. The Concept Release seeks input on whether the partner who has final responsibility for the audit (we refer to this individual as the engagement partner) also should sign the auditors’ report in his/her name.

A basic premise of the Concept Release is that requiring an engagement partner also to sign the auditors’ report in his/her own name could improve audit quality through a) increasing the engagement partner’s sense of accountability to financial statement users, which would lead to exercising greater care in performing the audit, and b) increasing transparency, which would provide useful information to users as to who is responsible for performing the audit.
In the remainder of this letter, we address the issues of accountability and transparency, as well as other potential unintended consequences that may arise, as it relates to the requirement for the engagement partner to sign the auditors’ report in his/her own name.

**Accountability and the Exercise of Greater Care**

*Interaction Between a Firm’s System of Quality Control and the Role of the Engagement Partner*

The PCAOB has set forth minimum quality control standards that must be complied with, in order to provide the firm with reasonable assurance that its audit engagements are performed in accordance with professional standards. As noted in paragraph 7 of QC Section 20, the “quality control policies and procedures applicable to a firm’s accounting and auditing practice should encompass the following elements: a) Independence, Integrity and Objectivity; b) Personnel Management; c) Acceptance and Continuance of Clients and Engagements; d) Engagement Performance; and e) Monitoring.” These elements influence or impact, either directly or indirectly, almost all aspects of an audit, and the firm has overall responsibility for such elements. Although the engagement partner has primary responsibility for the conduct of the audit, he/she operates within the framework of the firm’s system of quality control, in order to ensure that the audit is conducted in accordance with professional standards. Since the firm is responsible for the establishment and oversight of its system of quality control, we believe the firm’s signature on the auditors’ report best demonstrates the firm’s overall responsibility, and accountability, to the users of the financial statements. We are concerned that requiring the engagement partner also to sign the auditors’ report in his/her individual name may create confusion in the marketplace, since the PCAOB’s quality control standards place accountability for the firm’s system of quality control on the firm.

**Accountability to Constituents**

An engagement partner is accountable to various constituents, including capital markets participants in general, audit committees of the firm’s audit clients, various regulators (including the PCAOB, the Securities and Exchange Commission (SEC), state boards of accountancy and others) and the firm and its partners. We believe that engagement partners currently possess a deep understanding of this accountability. As discussed further below, engagement partners have direct contact on a regular basis with PCAOB

---

1 See PCAOB Interim Quality Control Standards, QC Sections 20 – 40.
and internal inspectors, share information with each other about their experiences, and currently sign the auditors’ report on behalf of the firm with a complete understanding of the potentially significant consequences of failing to perform audits with integrity and in accordance with professional standards. We therefore do not believe that a requirement for the engagement partner also to sign the auditors’ report in his/her own name, as described in the Concept Release, would enhance the engagement partner’s sense of personal accountability.

- **Accountability to Capital Markets Stakeholders**

The engagement partner currently is accountable to capital markets stakeholders, as evidenced by the engagement partner’s responsibility to plan and perform his/her work with due professional care. Due professional care imposes a responsibility upon each professional within the firm to observe the professional standards of the PCAOB.  

- **Accountability to Audit Committees**

The primary responsibility for the appointment, compensation and oversight of an issuer’s auditing firm rests with the company’s audit committee, pursuant to provisions of the Sarbanes-Oxley Act of 2002 (the Act). This responsibility establishes accountability to the audit committee by the engagement partner. The regular communications that an engagement partner has with an audit committee throughout the year help to ensure that the audit committee has the appropriate context with which to hold the engagement partner accountable for fulfilling his/her responsibilities.

- **Accountability to Regulators**

Individual engagement partners are accountable, with respect to their performance on audit engagements, to various regulators. The Act requires that the PCAOB perform periodic inspections of registered public accounting firms. As part of the inspection process, the PCAOB selects and inspects individual engagements and evaluates the quality control system of the firm. An adverse finding from a PCAOB inspection of an individual engagement will be an important consideration in the annual performance evaluation process for that engagement partner. Other negative consequences to the engagement partner, such as monetary penalties, censure, or the suspension or revocation of one’s CPA license, also could arise from adverse findings by regulators.

---

2 See PCAOB Interim Standards, AU Section 230, “Due Professional Care in the Performance of Work.”
Lastly, as an owner in the firm, an engagement partner is keenly aware that conducting an audit that subsequently is determined to not be in accordance with professional standards exposes the engagement partner, his/her fellow partners and the firm to potentially significant adverse consequences. These consequences range from those whose impact is felt at a very personal level to those that are detrimental to the reputational and financial well-being of the firm. This sense of accountability is fundamental to an engagement partner’s disposition of his/her professional responsibilities, and the engagement partner currently acknowledges that he/she has fulfilled such responsibilities through the signing of various internal documents.

**Analogy to Section 302 Certifications**

As noted above, the proposal in the Concept Release is premised, in part, on the notion that requiring the engagement partner to sign the auditors’ report in his/her own name will result in greater care and diligence on the part of the engagement partner, and an analogy to Section 302 of the Act has been put forth by some to support this view. Section 302 requires the chief executive officer (CEO) and chief financial officer (CFO) to certify in each annual or quarterly report that, based on the officer’s knowledge, the report does not contain any untrue statement of a material fact and that the company’s financial statements are fairly presented. This provision of the Act was intended to clarify management’s responsibility for information included in periodic reports filed with the SEC. We believe that both the underlying premise and the analogy to Section 302 are flawed.

We believe that compliance with Section 302, in certain instances, raised management’s level of awareness relative to its financial statement responsibilities. In addition, the Section 302 requirement led some companies to implement more rigorous policies and procedures (e.g., the establishment of a disclosure committee) or to enhance their internal controls. In contrast, the engagement partner’s responsibilities in connection with the planning and conduct of the audit are clearly defined in the professional standards, and the implementation of the signature requirement proposed in the Concept Release would not change those responsibilities. Therefore, unlike the requirement for CEO/CFO signatures pursuant to the provisions of Section 302, which resulted in process changes in certain situations to reflect the clarification of management’s responsibility, a requirement for an engagement partner also to sign the auditors’ report in his/her name will not result in process changes in the conduct of an audit or provide any clarity or...
changes to professional standards. However, such a requirement could inappropriately convey to the marketplace that professional standards have been enhanced or clarified, in the form of a substantive change in the role and responsibility of an engagement partner when, in fact, no such change was intended by the PCAOB.

Transparency

A second argument for the signature requirement described in the Concept Release relates to transparency. Currently, the identity of the engagement partner is fully transparent to company management and audit committee members, by way of the direct and frequent interactions that occur with both groups throughout the audit process. In addition, although there is no requirement to do so, the engagement partner usually attends the annual shareholders’ meeting, and typically is available to respond to appropriate questions. Therefore, shareholders have the opportunity, if they choose to attend the annual shareholders’ meeting, to pose questions directly to the engagement partner. Lastly, regulators have the ability to easily identify the engagement partner for all issuer audits. If the Board believes that greater transparency in this area is desired, consideration should be given to requiring that the engagement partner attend shareholders’ meetings and be made available to respond to appropriate questions.

Other Potential Unintended Consequences

Potential Inappropriate Inferences

Audits are, and should be, a collaborative effort of the entire engagement team, drawing on the professional resources of the entire firm. As a firm, we have increasingly emphasized the importance of collaboration and consultation in the performance of an audit. Engagement teams are encouraged to deliberate thoroughly among themselves and to consult the national office and others whenever the need arises. In addition, there are numerous areas in the performance of an audit where assistance from internal specialists may be sought (e.g., tax specialists, actuaries, valuation specialists, etc.). A requirement that an individual engagement partner affix his/her name to an auditors’ report appears to run counter to this carefully cultivated culture of collaboration, does not take into consideration the role of internal specialists and other members of the engagement team, and would send the wrong message to the marketplace that the opinion is the engagement partner’s sole responsibility.

In addition, although the engagement partner plays a critical role in performing an audit, as noted above, there are certain areas in the conduct of an audit where he/she is
dependent on the firm’s system of quality control with respect to conducting an
evaluation in accordance with applicable professional standards. Since the users of the
financial statements may not be aware of the significant role that a firm’s system of
quality control plays in providing reasonable assurance that an audit is conducted in
accordance with professional standards, we are concerned that an inappropriate inference
may be drawn by the marketplace that the engagement partner is responsible for the
effective operation of firm-level quality controls if such individual is required to sign the
audit report in his/her own name.

Litigation

The Advisory Committee on the Auditing Profession (ACAP), convened by the U.S.
Department of the Treasury, recommended in their final report that “the PCAOB
undertake a standard-setting initiative to consider mandating the engagement partner’s
signature on the auditor’s report.” The ACAP Report goes on to state that the “signature
requirement should not impose on any signing partner any duties, obligations or liability
that are greater than the duties, obligations and liability imposed on such person as a
member of an auditing firm.” In addition, the Concept Release states that the “Board’s
intent with any signature requirement would not be to increase the liability of
engagement partners.” It currently is unclear, from a legal perspective, whether ACAP’s
or the PCAOB’s intent that the engagement partner signature requirement not lead to
additional liability for the engagement partner would be borne out. If the PCAOB
decides to move forward with the engagement partner signature requirement, we
recommend that the PCAOB perform a detailed analysis of the potential liability impact
that such a requirement might have on engagement partners, prior to implementing such
requirement.

Irrespective of the outcome of the detailed analysis that is recommended above, we
believe that an individual engagement partner signature requirement would, at a
minimum, make it easier to name engagement partners in lawsuits. Such an occurrence
likely would result in an increase in costs incurred in connection with defending the
engagement partner, even if the case is without merit. In addition, there are collateral
consequences to being named in a lawsuit, beyond the increase in costs that are
mentioned above. As an example, the fact that an engagement partner has been named in

3 U.S. Department of the Treasury, Final Report of the Advisory Committee on the Auditing Profession to
the U.S. Department of the Treasury (October 6, 2008) (ACAP Report), available at
a suit that seeks a material amount of monetary damages may make it more difficult for that individual to qualify for a mortgage from a lending institution.

**Human Capital**

The pressures currently encountered in the auditing profession have never been more intense and, unless effectively remedied, likely will pose a real challenge to recruiting and retaining the highly qualified professionals necessary to sustain our profession. While we do not believe that a personal signature requirement would improve accountability or transparency, it could impose additional stress, as well as personal security concerns, on the engagement partner – for example, media coverage of financial problems at a company might cite the audit firm and the individual engagement partner by name – further exacerbating the retention and recruitment, as well as potentially decreasing the willingness, of the best qualified partners to oversee higher risk audit engagements.

**Conclusion**

We are committed to continually improving our firm and the profession and working constructively with the PCAOB to improve audit quality. As discussed above, we believe that the proposal in the Concept Release, if adopted, is unlikely to achieve the positive change it contemplates, which is a change in behavior on the part of an engagement partner, and likely would result in negative unintended consequences that run counter to the overarching objective to improve audit quality. In addition, we are concerned that the proposal, if implemented, might convey an inappropriate message to the marketplace that something had changed, either in terms of a change in behavior, the procedures performed, or the level of audit quality, while in fact none of these inferred changes would have actually occurred simply as a result of requiring the engagement partner also to sign the auditors’ report. Accordingly, we do not support the proposal set forth in the Concept Release for the engagement partner to sign the auditors’ report in his/her own name.

RE: PCAOB Rulemaking Docket Matter No. 029

McGladrey & Pullen, LLP appreciates the opportunity to comment on the PCAOB’s Concept Release on Requiring the Engagement Partner to Sign the Audit Report (the Concept Release). McGladrey & Pullen is a registered public accounting firm serving middle-market issuers.

Overall Comments on the Concepts Release

We do not support requiring the engagement partner to sign the audit report because the report is issued upon the authority of the firm and not the authority of the individual engagement partner. In fact the PCAOB’s own standards prohibit the engagement partner from signing the firm’s report until he or she has obtained concurring approval of issuance from the engagement quality reviewer assigned by the firm. While it is true that a firm could not issue an audit report that is inconsistent with the views of the engagement partner, the engagement partner also could not issue an audit report that is inconsistent with the views of the engagement quality reviewer or certain firm consultants. We do not accept the argument that signing the audit report personally would cause the engagement partner to exercise greater care in performing the audit. The consequences to an engagement partner of failing to exercise due care in the performance of an audit are significant, and they would be no more or less significant if the engagement partner were required to personally sign the audit report.

We also do not believe that disclosing the identity of the engagement partner within the audit report would provide an incentive for the firm to improve the quality of their engagement partners. The firm is responsible for assigning the engagement partner and the balance of the engagement team as well as the engagement quality reviewer. The issuer’s audit committee, and not the investors, is responsible for engaging the audit firm. If the audit committee has concerns about the integrity, objectivity, independence or competency of the engagement partner, they would address those concerns with the firm. If they were not satisfied with the firm’s response, they would likely consider engaging another audit firm. These types of decisions are appropriately left with the audit committee and not with the individual shareholders. Providing greater transparency to shareholders would serve no useful purpose because it is not their responsibility to assess the qualifications of the audit firm or the engagement partner.

Engagement-partner vs. firm accountability

A signature requirement by the engagement partner may lead to a misconception by investors in terms of who is responsible for the audit and the issuance of the audit opinion. Audits are accomplished because of all of the resources of a firm. In multi-location and complex audits, the lead engagement partner often relies on the work of
other partners, such as those in other locations or those with a certain professional specialty, such as tax partners. Therefore, in addition to the engagement quality reviewer and firm consultants, there can be other partners supporting the firm’s signature on an engagement, and the lead engagement partner justifiably relies on them.

The framework that supports a registered public accounting firm’s ability to perform high-quality audits is the firm’s system of quality control over its accounting and auditing practice. A quality control system is structured to provide reasonable assurance that firm personnel comply with applicable professional standards and applicable regulatory and legal requirements, and that the firm issues reports that are appropriate in the circumstances.

The PCAOB’s auditing and quality control standards require firms to assign engagement partners with the integrity, objectivity, independence and competence to discharge their responsibility. One element of a firm’s quality control system is the establishment of policies and procedures designed to provide reasonable assurance that a firm has skilled professionals to perform engagements in accordance with professional standards and regulatory and legal requirements and to enable a firm to issue reports that are appropriate in the circumstances. Although the skill and expertise of the engagement partner undoubtedly contribute to audit quality, even an engagement partner who possesses high levels of intelligence, integrity, honesty, motivation, and aptitude for the profession cannot fulfill this element of quality control alone. It takes the extensive resources of a firm to ensure that the capabilities and competence of its professionals are developed through professional education, continuing professional development, work experience, and mentoring by more experienced personnel.

To maintain quality audits, it is critical that all quality control elements be addressed by the firm. Many of these elements cannot be addressed by and are not the sole responsibility of the engagement partner, such as establishing policies and procedures designed to provide reasonable assurance that personnel comply with independence, integrity, objectivity, and other relevant ethical requirements. In addition, some elements of quality control, such as the acceptance and continuance of engagements, require the approval of professionals outside of the engagement team.

Thus, we do not believe that requiring the engagement partner to sign the audit report would enhance audit quality as it is not the engagement partner alone who signs an audit opinion, but rather the firm, which represents the collective efforts of many seasoned professionals.

Transparency

The Concept Release indicates that the signature requirement would increase transparency about who is responsible for performing the audit, which could provide useful information to investors. The audit committee is directly responsible for the appointment, compensation, and oversight of the work of the auditor, and the auditor reports directly to the audit committee. Audit committees therefore represent the investors in this important role. This role has been reinforced by various SEC rules and regulations resulting from the Sarbanes-Oxley Act, as well as stock exchange listing requirements.

To ensure that the audit committee chooses its independent auditor on an informed basis, the audit committee usually develops a list of criteria and expectations that they believe the independent auditor should meet. These criteria include, among others, evaluating the partners who will be assigned to the client service team. During the proposal process the audit committee generally inquires about the SEC and relevant industry experience of the client service team, including the engagement partner.

After an audit committee selects an auditing firm, two-way communication becomes a natural part of an auditor’s relationship with the audit committee. Audit committees receive regular partner-level attention during every phase of the audit, as necessary. In addition, throughout the year, the engagement partner communicates with the audit committee during the performance of quarterly reviews of interim financial information. The audit committee
generally asks probing questions of management, the internal auditor, and the independent auditors, which allows it the opportunity to continually assess the competency of the engagement partner.

We believe there is currently significant transparency regarding the engagement partner’s involvement in the audit. This transparency is achieved through the supervision by the audit committee, which is charged with the responsibility for the appointment and oversight of the work of the auditor on behalf of the investors. Therefore, we do not believe that increased transparency about the identity of the engagement partner would be useful to investors. One potential unintended consequence may be that investors could second guess an audit committee on the selection of an audit firm and the engagement partner. This potentially could result from situations where the engagement partner is associated with another current or former audit client experiencing difficulties (such as bankruptcy, a going concern uncertainty, adverse publicity, etc.) that may not relate to audit quality.

Possible implementation issues

There are implementation issues with respect to the requirement for a partner to sign the audit opinion. In its Concept Release, the PCAOB raised certain matters regarding some of the practical implications of this requirement, such as in situations where there has been a change in the engagement partner and where a principal auditor makes reference to another auditor. These potential implementation issues and others highlight the fact that it is the collective resources of a Firm that stand behind an audit opinion and not solely those of the engagement partner.

We would be pleased to respond to any questions the Board or its staff may have about these comments. Please direct any questions to either Bruce Webb (515.281.9240) or Scott Pohlman (952.921.7734).

Sincerely,

McGladrey & Pullen, LLP

Re:  Request for public comment: Concept Release on Requiring the Engagement Partner to Sign the Audit Report, PCAOB Rulemaking Docket Matter No. 29

Dear Office of the Secretary:

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board’s (“PCAOB”) Concept Release on Requiring the Engagement Partner to Sign the Audit Report.

The Firm of Moore Stephens Lovelace, P.A. strongly opposes requiring the engagement partner to sign the audit report in his/her name, in addition to the name of the registered public accounting firm. We believe that such requirement would substantially increase the individual partner’s exposure in many respects, including legal and potential personal risks, without necessarily providing an outweighing benefit to the quality of audits. We believe that the current requirement for partner’s signing audit reports in the audit firm’s name is adequate, and that the existing regulatory framework provides for sufficient accountability for both the signing audit firm and the engagement partner to provide reasonable assurance in the quality of audits and in the protection of investors.

A registered public accounting firm is required to conduct audits of public companies in accordance with the PCAOB’s and the firm’s own policies and procedures, which are/or should be based on applicable rules and regulations. The engagement partner is an implement of the firm and it is the firm, and its related quality control policies and procedures, including concurring partner review, that has ultimate and final responsibility for the quality of the audit, not the individual engagement partner. An engagement partner is required to follow their firm’s policies and procedures in conducting audits assigned to him/her.

Registered firms are subject to the PCAOB inspection program, and the PCAOB has the authority and has been known in practice to sanction not only the firm but personally the engagement partner in charge of deficient audits. PCAOB enforcement decisions are public information, and they do disclose the partner’s name in addition to the firm’s name. We believe it is at the point when violations are proven that it becomes prudent for the protection of investors to disclose the partner’s identity, along with the nature of violations.
The above arguments are, in our view, just a few of the most obvious practical considerations from the perspective of a registered public accounting firm. We believe these points emphasize significant uncertainties surrounding the perceived benefits of the proposed requirements being justified and warranted over the existing regulatory and enforcement system. In addition, the proposed requirements for engagement partner’s personal signature may result in audit firms potentially leaving the public company audits market due to the perceived and actual unwarranted increased personal risk for audit partners. This, in turn, may result in less competition and increased audit costs for publicly traded companies. Those firms remaining in the market could potentially charge higher fees due to perceived increased liability. Increased costs of regulatory compliance, including increases in audit fees, have arguably resulted in a large number of companies opting out of the United States capital markets in recent years. Additional increases in audit costs could potentially further contribute to this negative trend.

We fully support the mission of the PCAOB and trust that rule-making in the public company auditing arena should be driven by protecting the interests of the investing public, as well as by maintaining a sound balance between providing such protection and ensuring that compliance and liability provisions are reasonable and not overbearing to the extent of potentially limiting free-market participation by audit firms. Let us remember that despite a number of setbacks, the public accounting profession in the United States has been for decades and does remain one of the most trusted professions in our society.

Sincerely,

Moore Stephens Lovelace, P.A.

PCAOB Release No. 2009-005 – Concept Release on Requiring the Engagement Partner to Sign the Audit Report

(PCAOB Rulemaking Docket Matter No. 029)

We are pleased to respond to the Public Company Accounting Oversight Board’s (“PCAOB”) Concept Release on Requiring the Engagement Partner to Sign the Audit Report (the “Release”). We believe that the current practice of signing all audit reports in firm name only should be continued and, for the reasons set forth below, that the Board’s stated goals of increased accountability and transparency will not be met. Moreover, we believe adoption of the requirement will reduce and obscure transparency. Further, the analogies cited as to the standards in the European Union and to the requirements of Section 302 and 906 of the Sarbanes-Oxley Act, in our view, are inapplicable due to a different legal environment in the former and to different objectives of the latter.

Audits of public companies frequently are complex undertakings involving numerous professional staff and partners from the audit firm and, in some instances, associated firms. The engagement partner is primarily responsible to his or her client and the firm for the conduct and management of the audit and the expression of the audit opinion.

In this regard, the engagement partner plans and executes the audit to comply with the standards of the PCAOB. However, the engagement partner will do so utilizing the audit firm’s audit methodology, including its own system of quality control. This enables all firm personnel to have a common understanding of how the engagement will be conducted.

The engagement partner remains primarily responsible for the supervision and review of the audit. Nevertheless, he or she may be assisted by other partners on audits of larger entities, including partners with specialized knowledge (e.g., taxation, information technology, or certain industries).

The audit firm will have consultation standards with which the engagement partner must comply. This could include not only the engagement quality reviewer but also others within the firm’s quality control, industry, or regional or national office structures.

The firm’s signature, therefore, emphasizes the shared responsibilities that the firm has entrusted to the engagement partner, the other partners and consultative resources used during the audit. It also underscores the fact that notwithstanding obligations to the public – a part of the bedrock of the auditing profession – the firm’s client is the registrant’s board of directors, generally through the audit committee. As we
will comment later, the audit committee has the ability to evaluate the competency of the audit firm’s personnel to perform the audit.

The Release hypothesizes that a requirement for the partner to sign the audit report individually could improve audit quality. As indicated in the Release, several individuals have indicated their belief that a sense of personal accountability may be increased resulting in exercising greater care. We disagree. Partners, as professionals, have embraced high ethical standards which require the highest level of due care, recognizing that the professional has a responsibility to the public, the client and the audit firm. The audit firm has accepted responsibility to train, supervise and evaluate all of their professional personnel, including partners. Also, the firm has established a quality control system that includes policies and procedures for client acceptance and continuance, assigning engagement personnel, engagement performance, monitoring and oversight, documentation, etc. Failure to carry out their responsibilities, evidenced, for example, by a deficient audit, subjects the audit firm to grave risks to its reputation and its capital that can, and has, contributed to the collapse of an entire firm.

Further, those partners responsible for the conduct of a particular audit have personal economic and professional risks beyond that of the capital base of the audit firm. We do not believe that the institution of a requirement for the engagement partner to personally sign an audit report would heighten a sense of accountability. Partners should be, and already are, operating at the highest level of ethical and professional responsibility.

To our knowledge, there is no research or empirical evidence that directly or indirectly links the use of the audit partner’s name in the audit report to an enhanced accountability or higher quality audit. Such linkage is entirely supposition.

We believe that litigation against the engagement partner would be encouraged by the proposed requirement, and that the courts could decide that affixing an individual’s personal signature extends the limits of civil liabilities.

The Release further states that a personal signature of the engagement partner would increase transparency about who is responsible for performing the audit. We believe that it is the audit firm which is responsible for the audit. We recognize that it is the collective efforts of the engagement partner and the other partners and staff that assist in or consult on the audit which enables the firm to express its opinion. This shared responsibility is emphasized by the firm’s signature, as it is the firm that has entrusted and delegated the responsibility to the engagement partner and the others participating on the audit. To require that the primary individual responsibility be set forth in the audit report, either by including that partner’s signature or otherwise disclosing his name (as posed as an alternative in Question 3 on Page 8 of the Release) would diminish the emphasis on the responsibility of the firm as a whole.

Further, what benefit would this perceived increased transparency bring? Are users of financial statements aware of the individual qualifications of the thousands of
engagement partners involved with audits of public entities? We think not. The personal
signature alone would not enable a user to make any better judgments about the quality of
the audit.

Also, the representatives of the shareholders, the board of directors through the
audit committee, would have met and be familiar with the qualifications of the
engagement partner and other key members of the audit team. Typically, when a new
engagement partner is introduced to an audit committee, the committee is presented with
the qualifications of the engagement partner, including experience with audits of
similarly complex entities and specialized industries. Similar information is provided
usually for other key members of the audit team. We believe that audit committees
already receive sufficient information about the engagement partner’s qualifications, and
that they have the ability to interview the engagement partner to satisfy the committee’s
due diligence needs. In addition, the audit committee, at a minimum, is in frequent
communication with the responsible audit partner due to the required communications
before every filing of Forms 10-K and 10-Q and registration statements filed with the
SEC.

Further, there are several pitfalls likely to develop by requiring the engagement
partner’s signature. It is a well known practice of the investment banking industry to
require a “Big Four” auditor in connection with various registration statements. This
practice preceded by many years the creation of the PCAOB. Under the proposed rule,
underwriters would eventually develop a sub-set of “approved engagement partners” or
partners with specialized industry knowledge – this despite the fact that industry expertise
might be provided by other than the engagement partner, and in some engagements in
some firms, by an individual below the level of partner. Rather than increase competition
as the Release suggests, we believe such a development would further obscure
transparency.

As noted in the opening paragraph, analogy to Sections 302 and 906 of the
Sarbanes-Oxley Act is not on-point. The degree of responsibility and authority of a
registrant’s CEO and CFO has no analogy in a registered firm, unless the Release were to
be amended to include a requirement that a registered firm’s managing partner or the
engagement quality reviewer and the director of accounting and auditing (or similar
function) for the firm also sign the audit report. The illogic of such a requirement is
clear. It should be noted that those requirements do not change the liability of those
signing SEC filings and no empirical evidence has been developed as to the effect of such
requirements on accounting fraud or audit failures.

Lastly, the Release suggests several technical difficulties in implementation in
regard to: prior year reports; reissued reports; reports on restated financial statements; and
engagements where more than one audit firm is involved; or when engagement partner
rotation has occurred during the period encompassed by the financial statements. The
implementation of this requirement would also create issues with the wording of
“experts” sections and “consents” in registration statements. The impact of such
necessary implementation rules would vitiate any transparency resulting from identifying the current year’s engagement partner.

In conclusion, we believe that the requirement as proposed in the Release would not achieve the stated goals. To the contrary, it would have a deleterious effect on the clarity of the audit reports that have been the hallmark of the profession for so many decades. As CPAs and audit professionals, and in our collective experience, the addition of the signature of the engagement partner would not increase professionalism, dedication, accountability, transparency or the quality of audits. We are convinced that requiring signatures has nothing to do with quality audits and that such a requirement would provide no apparent benefit.

Re: PCAOB Rulemaking Docket Matter No. 29

We are pleased to respond in this letter to the “Concept Release on Requiring the Engagement Partner to Sign the Audit Report” that is contained in PCAOB Release No. 2009-005 dated July 28, 2009 (the Release).

Please be advised that we are firmly against any proposal for individual partner signatures that might follow the Release as entirely unnecessary and without any discernible benefit to investors or others. Accordingly, we are expressing our views directly and frankly with all due respect to those responsible for advocating the Board’s consideration of such a proposal.

We believe the best way to address our concerns about the Release is to address the reasons given for it in the first few paragraphs of part II of the Release. The suggestions that a requirement for audit engagement partners to sign their own names to audit reports (a) “might increase the engagement partner's sense of accountability to financial statement users, which could lead him or her to exercise greater care in performing the audit” (b) “would increase transparency about who is responsible for performing the audit, which could provide useful information to investors and, in turn, provide an additional incentive to firms to improve the quality of all of their engagement partners,” or (c) would cause the partner to “perform a higher quality audit” are virtually imaginary or fictional benefits that must have been proposed to the Board for its consideration only by those who do not understand the professional reality of the environment in which audits are conducted.

First, with rare exceptions, we believe that audit partners in the United States who sign off on audit reports for issuers fully understand the formidable risks and responsibilities undertaken by them in such activities. They function not only in the face of risks of loss of employment and their rights to engage in professional practice, but of severe monetary damages and even possible imprisonment. We believe that the rare individual who is not now sufficiently influenced by such powerful disincentives that are already in place would not likely be moved to alter his or her behavior as consequence of such a requirement as is now under consideration. In other words, in our opinion, it would not be any more than remotely likely that such a requirement for engagement partners to sign their own names to audit reports would afford any significant incremental incentive for them to exercise greater care or to perform higher quality audits, or for their firms to take steps to improve the quality of all of their engagement partners. In fact, we believe such a requirement would add nothing to the probability of a firm’s achievement of an audit quality objective that is not already afforded by the applicable quality control, ethical and other professional standards already in place, the regulatory oversight provided by the PCAOB’s rigorous inspection program, and the other disincentives mentioned above against anything less than quality audit work.

The weak reasons offered by proponents for such a requirement run directly counter to the statement contained in the Release that is attributed to the 2008 report of the Advisory Committee on the Auditing Profession (which we acknowledge and with which we concur) that "the signature requirement should not impose on any signing partner any duties, obligations or liability that are
greater than the duties, obligations and liability imposed on such person as a member of an auditing firm."
Secondly, among the thousands of audit engagement partners now signing their firm’s names to audit
reports, none of their names are household words. On the contrary, such names are unknown and, therefore,
mean nothing to financial statement users. Moreover, even if such names were known to users, it would be
impossible for them to be able to assess the relative capabilities thereof even with access to their brief
professional biographical summaries. Accordingly, we believe it is not reasonable and without basis to
suggest that public disclosure of their names could in any way be “useful to investors.” In fact, the only
parties for whom such information could be useful are private and regulatory litigants who, as also pointed
out in the Release, can obtain such information in discovery proceedings with little or no cost or trouble.

Given the foregoing arguments against the virtually imaginary benefits claimed to be achievable from
adopting such a proposal, if it is forthcoming, it would appear to be motivated by an overzealous
obsession with convergence for its own sake. We object to the “copycat” behavior that results from an
irrational belief that if it is done in the international arena, we should do it here, too. Maybe this
requirement is meaningful in Europe, but we believe it would not be so here because of the legal,
regulatory and other disincentives in this country that are mentioned above.

Accordingly, our answer to each of the questions 1-5 posed on pp. 8-9 in of part II of the Release would
be a firm “no.” We fully concur with the comments of the AICPA’s Center for Audit Quality that is
quoted in footnote 21 on p. 10 of the Release. As to question 6, we believe such a requirement might
cause some signing engagement partners to be entirely unwilling to rely on the judgment of others for
even the most apparently inconsequential matters, thus causing them to invest an unreasonable excess of
time supervising and reviewing the work of subordinates possibly resulting in an inability of certain
issuers to file reports timely. In addition, as noted on p. 74 of the transcript* of the October 23, 2008,
meeting of the Board’s Standing Advisory Group (SAG), one SAG member pointed out the danger of
presented in the form of a risk that a signing partner might interpret his or her signing responsibility as
enabling or requiring him or her to override or ignore the firm’s position on a technical matter. Another
SAG member added (p. 88) that a publicly named partner would be less likely to consult with others, thus
diminishing audit quality. Although we see no other unintended consequence of any proposed
requirement, we see no benefit whatsoever to be achieved by its adoption in the United States.

We cannot speak to questions 7-10, and because we are so firmly against a signature requirement such as
is being considered, we have chosen not to speak at this time to questions 11-16 of part III of the Release.

Thank you for this opportunity to comment. We hope the Board finds our comments useful in its
deliberations on this matter. Please contact the undersigned at hlevy@pbtk.com or 702/384-1120 if there
are any questions about this response.

Very truly yours,

Howard B. Levy, Sr. Principal and
Director of Technical Services

Re: PCAOB Rulemaking Docket Matter No. 29, Concept Release on Requiring the Engagement Partner to Sign the Audit Report

Dear Sir:

PricewaterhouseCoopers LLP ("PwC") appreciates the opportunity to comment on the Public Company Accounting Oversight Board's ("PCAOB" or "Board") Concept Release on Requiring the Engagement Partner to Sign the Audit Report.¹

Currently, under PCAOB Auditing Standards audit reports issued by an accounting firm on the financial statements of an issuer are manually signed in the name of the firm by the partner responsible for the audit (the "engagement partner"). The Concept Release considers whether the Board should require that the engagement partner sign the audit report in his or her own name, in addition to the firm's name. We appreciate that the Board has begun this process with the issuance of a concept release, rather than a proposed standard, given the need to carefully study the merits and consequences of proposing changes to the Board's standards in this area. The Concept Release seeks comment on whether adopting a signature requirement would improve audit quality by (1) increasing an engagement partner's sense of personal accountability and (2) increasing transparency about the qualifications of individual auditors.

PwC supports the goal of improving audit quality and agrees that accountability and transparency are relevant components of audit quality. In PwC's view, however, the proposal set forth in the Concept Release reflects an incomplete assessment of the factors that may contribute to improved audit quality, as well as of the nature of the auditing process and the role of the engagement partner in that process. It is premised on an unsupported assumption that engagement partners, as a class, need to have an increased sense of accountability in order to achieve improved audit quality.

Contrary to the assumption underlying the Concept Release, an audit opinion reflects the cumulative effort of myriad individuals rather than the professionalism or competence of the engagement partner alone. The engagement partner has final responsibility for the audit, but the audit is conducted by a team that may be composed of many other partners, managers and other

¹ PCAOB Release No. 2009-005 (July 29, 2009) ("Concept Release")
professionals, many of whom bring specific substantive expertise to important areas of the audit such as valuation, information technology, treasury and taxation. Engagement teams often consult with the firm’s national office and with other specialists within the firm. Some of these consultations are required by firm policy, while others are the result of an engagement team’s judgment based upon the facts and circumstances of the engagement and the specific expertise of the engagement team. The engagement is subject to an engagement quality review by a partner who is not part of the engagement team but who must provide concurring approval of the issuance of the audit report. Additionally, the firm provides a variety of quality control mechanisms in support of the performance of audits.

The current practice of signing the audit report in the name of the firm appropriately reflects the reality that the quality of an audit depends not just on the qualifications and competence of the engagement partner, but on the qualifications and competence of many people at the firm with involvement in the audit, as well as on the quality controls established and monitored by the firm. An additional requirement that the engagement partner sign the report in his or her individual capacity would inappropriately and incorrectly suggest that the audit was the product of one person rather than of the firm.

PwC believes the proposal to require the engagement partner to sign the audit report would provide no additional benefit over and above the numerous quality control measures currently in place to assure an engagement partner’s performance of his or her function with the appropriate level of care. PwC also believes the proposed requirement could result in unintended adverse consequences and burdensome complexities that would be counterproductive to the efficiency, timeliness and cost effectiveness of the audit process. Finally, and in direct conflict with the Board’s stated intentions, the proposed requirement could significantly increase the likelihood that engagement partners will be named in private litigation brought pursuant to the federal securities laws. Accordingly, PwC does not support the Board’s proposed requirement.

The Proposal Will Not Enhance Audit Quality

Requiring an engagement partner to sign the audit report in his or her own name would not provide any additional benefit over and above existing mechanisms for accountability and transparency, and, in fact, could result in unintended adverse consequences.

Accountability

The Concept Release states that having an engagement partner sign the audit report would enhance audit quality because it “might increase the engagement partner’s sense of accountability to financial statement users, which could lead him or her to exercise greater care in performing the audit.” Given that the Board explicitly disclaims an intention to enhance the engagement partner’s personal liability, it appears that the Board is considering whether the mere physical act of affixing one’s manual signature to the report in and of itself would increase an engagement partner’s sense of accountability, or, perhaps more pointedly, improve the engagement partner’s commitment to audit quality. During the July 28, 2009 open meeting, one

\[^2\] Id. at 5.
Board member stated that “members of the profession, public companies and academics noted the psychological affects of putting your ‘John Hancock’ in an official and public document.”

PwC respectfully disagrees with this premise. In addition to resting on an unsupported assumption that engagement partners, as a class, need to have an increased sense of accountability in order to achieve improved audit quality, it also disregards the many accountability mechanisms, controls, and incentives that already exist to ensure that the engagement partner—along with all other members of the engagement team and the firm as a whole—conduct the audit with the necessary due care and professionalism.

First, engagement partners are already strongly motivated by many tangible and intangible factors to ensure that audits are conducted with due professional care, thereby contributing to audit quality. These motivations include the partner’s sense of personal responsibility to the firm and his or her partners and clients, and to investors; the partner’s desire to maintain his or her personal reputation within the firm and the profession; and the importance of audit quality to the partner’s compensation. Numerous internal firm quality controls exist today that identify the engagement partner and require personal sign-off as evidence of his or her approval of issuance of the firm’s audit report. It is also worth noting that the engagement partner already manually signs the audit report, just in the name of the firm, not his or her own name. There should be little doubt that this act itself, which binds the firm, causes the engagement partner to feel a strong sense of personal responsibility that guides his or her actions throughout the engagement.

Second, there are multiple internal firm and external mechanisms that make the engagement partner accountable and impel him or her—along with the firm as a whole—to exercise care in conducting the audit. A principal driver, of course, is the PCAOB’s auditing standards themselves. An engagement partner and his team conduct an audit with the knowledge that the firm’s audit report, in the end, must state “that the financial statements present fairly, in all material respects, an entity’s financial position, results of operations, and cash flows in conformity with generally accepted accounting principles,” and that “[t]his conclusion may be expressed only when the auditor has formed such an opinion on the basis of an audit performed in accordance with generally accepted auditing standards.”

One of the most fundamental of these standards is that the audit be conducted with due professional care—a standard to which the engagement leader, as well as the other members of the team, is subject. The Board should not presume that an engagement partner will not consistently meet the standard of due professional care absent a requirement to sign the report in his or her own name. In addition, firms’ internal quality control programs are required to be designed to provide reasonable assurance that individual auditors, including engagement partners, comply with professional standards. Such mechanisms include an assessment of the results from internal and external

6 System of Quality Control for a CPA Firm’s Accounting and Auditing Practice, PCAOB Interim Quality Control Standards, QC 20.03
audit quality reviews, as well as an assessment of related compensation penalties and other remedial measures designed to reinforce the importance of achieving consistently high audit quality.

Third, an auditor’s sense of personal accountability is not just driven by a sense of obligation to abide by professional practice standards but also by strong regulatory oversight. Personal accountability is reinforced by the Board’s broad inspection powers and its investigatory and disciplinary authority over acts by an accounting firm and individuals associated with the firm that may violate the Sarbanes-Oxley Act, PCAOB rules, securities laws, or professional standards. The possibility that a board inspection could result in findings of deficiencies in an audit also reinforces accountability for the engagement partner.

Fourth, the SEC’s powers to enforce the securities laws against auditors provide yet another important means of reinforcing auditor accountability above those already discussed. The SEC can charge an auditor, as an individual, for violations of the securities laws and it can, in certain circumstances, bar an accountant from appearing and practicing before the SEC under Rule 102(e).

In light of the strength of the above-described existing auditor accountability framework provided by PCAOB auditing standards, PCAOB and SEC inspection, disciplinary, and enforcement authority, and internal firm quality and accountability controls, the conclusory assertion in the Concept Release that the act of signing one’s name to a report would cause an auditor to “perform a higher quality audit” seems without merit. Accordingly, if and before it proposes any changes to the Board’s existing standards, we would encourage the Board to appropriately study whether meaningful support exists for the assumption that an individual signing in his or her own name would actually promote positive behavioral changes and enhance audit quality.

Finally, PwC believes strongly that all members of an audit team must be accountable for the quality of an audit and that a shared sense of accountability among the entire professional staff on the engagement should be encouraged. Singling out the engagement partner as proposed in the Concept Release may operate counter to that shared sense of responsibility.

The Concept Release and many advocates of the signature requirement rely on an analogy to Section 302 of the Sarbanes-Oxley Act, which requires an issuer’s CEO and CFO to certify the company’s annual and quarterly reports, to support the notion that the act of signing one’s name results in increased accountability. Those certification requirements, along with the parallel provision of Section 906 of the Sarbanes-Oxley Act, were enacted to address a specific problem—a perceived abdication by these senior officers of responsibility for the accuracy and completeness of a company’s financial statements and SEC reports. Those provisions, along with other Sarbanes-Oxley requirements, including management responsibility for establishing

---

disclosure controls and procedures and internal control over financial reporting, were designed to impose on CEOs and CFOs accountability that Congress believed was lacking.\textsuperscript{9} Indeed, a major consequence of the Sarbanes-Oxley certification requirements was to impose personal liability—and in the case of Section 906, even criminal liability—on the CEO and CFO as an incentive to ensure the accuracy of the company’s reports. This stands in direct contravention to the statements in both the Concept Release and the Final Report of the Treasury Department Advisory Committee on the Auditing Profession (“ACAP”) that they do not intend the engagement partner signature requirement to increase an engagement partner’s personal liability.\textsuperscript{10} Here, there is simply no basis whatsoever to conclude that there has been a comparable abdication of responsibility by engagement partners warranting imposition of individual certification requirements. In fact, as noted by one Board member in discussing the Board’s proposal and the analogy to the Sarbanes-Oxley certification requirements, “In contrast, engagement partners rarely, if ever, deny responsibility for the audit report.”\textsuperscript{11}

**Transparency**

In addition to enhanced accountability, the Concept Release states as its second goal “increase[d] transparency about who is responsible for performing the audit, which could provide useful information to investors and, in turn, provide an additional incentive to firms to improve the quality of all of their engagement partners.”\textsuperscript{12} The release suggests that providing financial statement users, audit committees, and others with the name of the engagement partner might help them evaluate that engagement partner’s experience and skill. Of course, audit committees and regulators already have quite ready access to information about the identity of the engagement partner. So the only question is whether the signature requirement would provide meaningful information to financial statements users. PwC submits that a signature requirement is unlikely to assist users of audit reports to evaluate an engagement partner’s qualifications or to predict the quality of an audit.

As discussed previously, including an individual engagement partner signature on the audit report could create the misimpression that a single person is responsible for the quality of an audit, when, in fact, an audit is the result of the effort and collaboration of many individuals in the firm, including accountants, subject matter experts, and the national office. While

\textsuperscript{9} See e.g., 149 Cong. Rec. S5325-31 (daily ed. Apr. 11, 2003) (statement of Sen. Biden); Certification of Disclosure in Companies’ Quarterly and Annual Reports, Securities Act Release No. 8124, Exchange Act Release No. 46427, and Investment Company Act Release No. 25722, 67 Fed. Reg. 57,276, 57, 285 (“We believe that investor confidence in corporate disclosure has suffered, in part, because of a belief that corporate officers may not devote sufficient attention to the preparation of their companies’ periodic reports and to the disclosure controls and procedures that generate the data from which they are prepared.”); John T. Bostelman, 2009 Sarbanes-Oxley Deskbook, § 4.2, § 4.2.1, at 4-15 (“One effect, and presumably purpose, of the management certification requirement is . . . to require that the CEO and CFO become sufficiently personally involved in the preparation of SEC annual and quarterly reports that their personal liability under the securities laws for material misstatements or materially misleading statements can be readily established . . .”).

\textsuperscript{11} PCAOB Open Meeting, July 28, 2009 (statement of Charles D. Niemeier).

\textsuperscript{12} Concept Release at 5.
engagement partners necessarily have final decision-making authority in applying the firm's policies, procedures, and methodologies, an audit necessarily represents a collaborative effort that involves many individuals and relies upon various elements of the firm's system of quality control.

Moreover, it is unclear exactly what an investor will learn from public disclosure of the name of the individual who signs the audit report. In virtually all cases, an engagement partner will not otherwise be known to the investing public and his or her sole identifying characteristic will be nothing more than that he or she is a partner of the firm. The provision of the engagement partner's signature, or identity, would not provide any useful information regarding "an engagement partner’s experience on a particular type of audit" or "his or her track record." \(^{13}\)

Worse, given that the only information to be provided to an investor is the name of one individual, a signature requirement could have negative implications. It could result in the creation of databases or other clearinghouses that attempt to create a "box score" of the skills and qualifications of individual auditors—resulting in what is likely to be incomplete and misleading information. It is likely such "scorecards" would not appropriately consider the importance of the firm's system of quality control to audit quality and could potentially lead to investors' making unwarranted conclusions about the qualifications of individual auditors or their firms. For example, such databases could produce misleading statistical analyses based on the number of audits performed by an engagement partner or they could level unfair criticism or create adverse publicity for the individual auditor simply because he or she was named as an engagement partner for an audit of a controversial company. Proliferation of these types of databases, in turn, could interfere with an audit firm’s or audit committee’s informed judgment with respect to, for example, auditor rotations or partner assignments.

A more reliable resource to an investor regarding the qualifications and skills of an engagement partner is the issuer’s audit committee. In the Sarbanes-Oxley Act, Congress mandated that an issuer’s audit committee “shall be directly responsible for the appointment, compensation, and oversight of the work of any registered public accounting firm employed by that issuer . . .” \(^{14}\) Investors in a public company appropriately rely on the judgment of the audit committee to engage the appropriate independent accounting firm for the company, to oversee and communicate with the engagement team regarding important aspects of the audit, and to evaluate the accounting firm’s performance. The audit committee’s responsibilities with respect to the company’s independent auditor necessarily includes informing itself, on behalf of investors, about the qualifications, experience, skills and performance of the engagement partner. Indeed, the New York Stock Exchange’s corporate governance rules require that the audit committee’s written charter include in its purpose that the audit committee will assist in board oversight of the independent auditor’s qualifications. The commentary to that rule states that, “After reviewing the [audit] report and the independent auditor’s work throughout the year, the audit committee will be in a position to evaluate the auditor’s qualifications, performance and independence. This evaluation should include the review and evaluation of the lead partner of the independent

\(^{13}\) *Id.* at 9.

Although this requirement applies only to NYSE-listed companies, it reflects best practice that we believe is followed by most audit committees. Once engaged, audit committee members interact regularly with the engagement partner throughout the course of their oversight of the company’s audit process. As such, they are best positioned to assess the qualifications and performance of the engagement partner on behalf of financial statement users.

The Proposal Will Create Unintended Consequences

Not only would the proposed signature requirement not, in our view, achieve the stated goals of improving audit quality through increased accountability and transparency, it could lead to behavior that detracts from the stated goals.

As previously discussed, an engagement partner signature requirement is not consistent with the fundamental reality that the entire firm stands behind the audit report. Requiring an engagement partner to individually sign the audit report could create the perception that engagement partners are following a “go-it-alone” approach rather than engaging in meaningful consultation and collaboration with others. Further, heightened concerns about personal liability may cause engagement partners to be less willing to make the professional judgments imperative to the execution of timely and cost effective, high quality audits. Such hesitancy could result in increased audit costs without a corresponding improvement in audit quality and demand for more "bright lines" in auditing standards—similar to the issues the Board addressed when it replaced Auditing Standard No. 2 with Auditing Standard No. 5 to address concerns regarding the cost effectiveness and degree of professional judgment applied in audits of internal control over financial reporting.

Finally, it would be difficult to implement this proposal. In certain circumstances, such as a reissuance of an audit report or after an engagement partner rotation, an audit report might contain financial statements for periods in which the current engagement partner may not have been involved. This could require multiple engagement partner signatures and/or an explanation as to what part of the report each individual signature relates. These potential practical complexities underscore that this proposal fosters the incorrect assumption that the engagement partner, rather than the firm as whole, is ultimately responsible for the particular years that he or she serves as engagement partner.

The Proposal Could Expose Engagement Partners to Unwarranted Lawsuits and Claims of Personal Liability under the Federal Securities Laws

Although PwC believes that a signature requirement would not enhance audit quality in any meaningful respect, the proposal might be less problematic if it did not raise the very real possibility of significantly increasing the exposure of the engagement partner to claims of personal liability. The statement in the Concept Release that, “[t]he Board’s intent with any

---

signature requirement would not be to increase the liability of engagement partners\textsuperscript{16} correctly acknowledges that it would be unfair to impose special liability on one partner in an accounting firm on the basis of an audit that is the work of the firm as a whole. Similarly, merely the increased possibility of being named as a defendant in a private lawsuit brought under the federal securities laws would have unjustifiable consequences for the partner—including the personal and reputational consequences of being named as a defendant, the potential distractions of having to separately defend oneself in the lawsuit, and the potential negative consequences in such circumstances of a partner having to consider his or her interests as opposed to those of the firm and its other partners.

We appreciate that the EU's Eighth Company Law Directive requires the adoption of a requirement that an engagement partner sign the audit report. However, the EU nations and other countries do not have the unique litigation environment that exists in the United States. For example, UK law does not allow shareholder class actions to be brought against auditors based on a drop in share price.\textsuperscript{17} Thus, we believe that there are good reasons why a signature requirement will be more problematic in the United States than it would be in other countries.

As discussed below, we believe that there is a significant risk that requiring an engagement partner signature on audit reports would result in an unwarranted increase in purported claims asserted against the signing partner, with potentially inconsistent results from the courts. These risks and attendant costs clearly outweigh any possible benefits that might be obtained from an engagement partner signature requirement.

\textit{Section 10(b)/Rule 10b-5 Claims}

Section 10(b) of the Securities Exchange Act of 1934,\textsuperscript{18} and Rule 10b-5 promulgated thereunder,\textsuperscript{19} permit private plaintiffs to bring suit for damages against persons alleged to have made materially false or misleading statements in connection with the purchase or sale of securities. Under the \textit{Central Bank} decision, only “primary” actors can be liable under Section 10(b).\textsuperscript{20} As the Board notes on pages 11-12 of the Concept Release, under current law there are different standards in different federal appeals courts about when a person who did not make a statement that is alleged to be false or misleading can nonetheless be deemed a primary actor for purposes of Section 10(b) liability. Some circuits follow a “bright line” approach to primary liability for secondary actors, holding that a secondary actor cannot be held liable unless he or

---

\textsuperscript{16} Concept Release at 11. The Release also cites language from the ACAP report, which states, “the signature requirement should not impose on any signing partner any duties, obligations, or liability that are greater than the duties obligations and liability imposed on such person as a member of an auditing firm.” ACAP Final Report at VII.20.

\textsuperscript{17} \textit{See Caparo Indus. Plc v. Dickman}, [1990] 2 A.C. 605 (holding that auditors are only liable to individual shareholders for economic loss due to negligent misstatements if the auditor had directly assumed responsibility to the shareholder for the accuracy of particular information for its use by the shareholder for a particular known purpose).

\textsuperscript{18} 15 U.S.C. § 78(b).

\textsuperscript{19} 17 C.F.R. § 240.10b-5.

she actually makes a publicly attributable false or misleading statement. Other circuits apply other tests, each of which holds that secondary actor can be held liable, depending on the facts, for the statements of others and/or for statements that are not publicly attributable to that actor. In these circuits the determination of whether a person can be considered to have made a “statement” for the purposes of Section 10(b) liability depends on the facts and circumstances of each case.21

The Board suggests that in certain of these jurisdictions, individual accountants might already be subject to primary liability, even without having signed the audit report in their own names.22 Putting aside its legal merit, this suggestion simply misses the point. It is entirely foreseeable that a plaintiff would seek to use an engagement partner’s signature on the audit in an attempt to cut through all of the law regarding when secondary actors may or may not be deemed to be primarily liable. As the Board correctly notes in the Concept Release, “when the firm signs the audit report it makes the statements within it and may be held liable for them” under Section 10(b).23 While there would be strong legal (and likely factual) arguments to the contrary, plaintiffs are very likely to allege that the engagement partner who signs the report in his or her name is making a “statement.” Obviously, there is no assurance that some courts would not be persuaded by plaintiffs’ allegations, resulting in potentially inconsistent outcomes in the courts. It seems certain, therefore, that firms and their partners, as individuals, would likely be subjected to many years of expensive litigation in various trial and appellate courts to resolve this question.

“Expert” Liability

Sections 7 and 11 of the Securities Act of 1933 impose “expert” liability on an “accountant . . . who has with his consent been named as having . . . certified any part of the registration statement.”24 An engagement partner who signs the audit report on financial statements in a registration statement could well be deemed to have been “named” as having “certified” those financials. Section 7 requires an issuer to obtain the consent of named experts.25 Thus, the engagement partner would be required to consent to the use of his or her name in the registration statement. A plaintiff could then claim that the engagement partner is subject to Section 11 liability for any materially false or misleading statement in the audit report, without regard to the engagement partner’s state of mind and subject only to a due diligence defense. While an engagement partner would have legal and factual defenses, including arguing that signing on behalf of the firm in his or her own name does not amount to being named personally as an expert, one can reasonably anticipate substantial litigation over this question as well.

22 Concept Release at 12.

"Safe Harbor"

In the Concept Release, the Board notes that ACAP, when recommending that the PCAOB undertake the current standard-setting initiative, stated that the requirement "should not impose on any signing partner any duties, obligations or liability that are greater than the duties, obligations and liability imposed on such person as a member of an auditing firm."²⁶ The Concept Release also cites ACAP’s assertion that “[t]his language is similar to safe harbor language the SEC promulgated in its rulemaking pursuant to Sarbanes-Oxley’s Section 407 for audit committee financial experts.”²⁷ The inclusion of these excerpts from the ACAP report in the Concept Release implies that the Board and ACAP think that the Securities and Exchange Commission might be amenable to creating a similar safe harbor provision to avoid imputing any additional liability to the engagement partner who signs an audit report. We think there are significant questions as to whether an effective safe harbor could be designed to shield engagement partners from liability to which they might otherwise be subject under the federal securities laws because they signed an audit report.

With respect to Section 10(b), it is not at all clear that the SEC would be inclined to create a safe harbor provision to exempt a class of potential defendants from liability under the antifraud provisions of the securities laws. For the SEC to do so would seem to run against its own recent arguments urging courts to adopt a broad construction of primary liability for secondary actors under Section 10(b) and Rule 10b-5.²⁸ While the SEC has from time to time adopted rules deeming certain information not to be "filed" for purposes of liability under Section 18 of the Exchange Act, it typically emphasizes that such exemptions do not excuse an actor from 10b-5 liability.²⁹

With respect to potential liability under Section 11, the SEC’s rationale for adopting a safe harbor for audit committee financial experts under Section 407 would, if anything, cut against creating a safe harbor for engagement partners who sign audit reports in their own names. The SEC explained that the purpose of the Item 407 safe harbor provision was to:

clarify that any information in a registration statement reviewed by the audit committee financial expert is not "expertised" unless such person is acting in the capacity of some other type of traditionally recognized expert. Similarly, because

²⁶ Concept Release at 4.

²⁷ Id. at 4 n.10.

²⁸ In its Amicus Brief in a pending case in the Second Circuit, Pacific Management Company v. Mayer Brown LLP, No. 09-1619-cv (2d Cir. August 7, 2009), the SEC stated, “In the Commission’s view, a person . . . creates a statement in this context if the statement is written or spoken by him, or if he provides the false or misleading information that another person then puts in the statement, or if he allows the statement to be attributed to him.” Id. at 7. In addition, the SEC argued that “[a]n attribution requirement, by allowing a person who created a false or misleading statement to escape primary liability because that person acted anonymously or in another person’s name, would shield significant misconduct from liability.” Id. at 14. In this case, plaintiffs purchased bonds and stocks issued by Refco and are suing Refco’s law firm and an individual partner at that firm under Section 10(b) for allegedly false and misleading statements contained in company documents.

²⁹ See e.g., Regulation S-K, Item 407(d), Instructions to Item 407(d), 17 C.F.R. § 229.407(d); Regulation S-K, Item 407(e), Instructions to Item 407(e)(5), 17 C.F.R. § 229.407(e); Regulation S-T, Rule 406T(b), 17 C.F.R. § 232.406T(b).
the audit committee financial expert is not an expert for purposes of Section 11, he or she is not subject to a higher level of due diligence with respect to any portion of the registration statement as a result of his or her designation or identification as an audit committee financial expert.\textsuperscript{30}

The SEC also stated, “We find no support in the Sarbanes-Oxley Act or in related legislative history that Congress intended to change the duties, obligations or liability of any audit committee member, including the audit committee financial expert, through [Section 407].”\textsuperscript{31} Unlike the audit committee financial expert, accountants are expressly identified as experts under Section 11 with respect to audited financial statements contained in a registration statement.

\textbf{Conclusion}

PwC respectfully submits that a requirement that an engagement partner sign the audit report in his or her name in addition to the name of the firm will not achieve its stated objective of improved audit quality. It will not increase individual accountability or transparency beyond already existing professional standards and mechanisms for ensuring that auditors abide by those standards, and the requirement could have unintended consequences. Without any corresponding benefit to audit quality, this proposal creates an unacceptable risk of subjecting engagement partners to substantially increased litigation risk. Therefore, PricewaterhouseCoopers does not support an engagement partner signature requirement.

We appreciate the opportunity to express our views and would be pleased to discuss our comments or answer any questions that the PCAOB staff or Board may have. Please contact Mike Gallagher (973-236-4328) regarding our submission.

Sincerely,

Our ref: ICAEW Rep XX/09

Office of the Secretary
PCAOB
1666 K Street,
N.W.
Washington
D. C. 20006-2803.  By email: PCAOB Rulemaking Docket No. 029

Dear Sir

PCAOB RELEASE NO 2009 - 005: CONCEPT RELEASE ON REQUIRING THE ENGAGEMENT PARTNER TO SIGN THE AUDIT REPORT

The Institute of Chartered Accountants in England and Wales (the ‘Institute’) welcomes the opportunity to comment on the PCAOB’s Concept Release on requiring the engagement partner to sign the audit report.

The Institute operates under a Royal Charter, working in the public interest. Its regulation of its members, in particular its responsibilities in respect of auditors, is overseen by the Financial Reporting Council. As a world leading professional accountancy body, the Institute provides leadership and practical support to over 132,000 members in more than 140 countries, working with governments, regulators and industry in order to ensure the highest standards are maintained. The Institute is a founding member of the Global Accounting Alliance with over 700,000 members worldwide.

Our comments have been prepared with the help of our many members working around the world who have detailed knowledge and practical experience of US, EU and other regulatory regimes.

When changes were proposed in the UK requiring audit engagement partners to sign audit reports in their own name on behalf of the firm, auditors and others expressed considerable concern, not least about the possibility of unintended consequences, and we echo PCAOB member Goelzer’s sentiments regarding the need for caution for that reason.

It is early days for the new signing regime in the UK¹ under which an audit cycle has yet to be completed; it is therefore still too early to draw conclusions about the actual and perceived impact that the regime has had on audit quality. To date, most of the issues have been logistical in nature; for example, some smaller firms of UK auditors have experienced challenges in implementing the regime arising from the death, incapacity or unavailability of engagement partners to sign the audit report.

¹ the regime applies to financial years beginning on or after 6 April 2008
Only time will tell if some of the more significant misgivings expressed are well-founded. These include concerns that the change might be misunderstood as representing a change in the liability regime, that inappropriate conclusions might be drawn about audit quality on the basis of the identity of the audit partner alone, and that the regime might make it difficult for high risk businesses to find good auditors.

Our work in this area shows that while regulatory reports show audit quality in the UK to be fundamentally sound, UK investors and others clearly believe that audit quality will be improved by the new regime. While these perceptions matter, measuring improvements in audit quality is not easy and UK opinions continue to differ markedly as to whether audit quality is in fact likely to be improved as a result of the regime change. Firms only appear to be issuing new guidance to deal with logistical challenges associated with the new signing regime rather than their overall audit approach. Thus while auditors may feel differently when required to sign in their own names on behalf of the firm, they admit to no significant changes to the audit procedures conducted. A perception among users that quality has been improved through the partner signature requirement that is not matched by actual changes in auditor behaviour risks widening the expectation gap, particularly if the expectation is that auditors will be making significant changes to their audit approach to address this requirement in a similar manner to the significant changes made by many companies when the CEO and CFO certification requirements were introduced by Section 302 of the Sarbanes Oxley Act 2002.

We are not experts in the vexed area of US auditor liability. The UK auditor liability regime, and the regime in other European countries differs significantly to that in the US. We do not therefore presume to opine on that issue, and we look forward to reading the comments of those better placed than us to do so.

Comment by the PCAOB on the liability issue in any standard exposed would carry some weight, but we find it difficult to envisage how any proposals that admit to the possibility that the liability of engagement partners will be altered as a result of their signing the audit report, are likely to gain acceptance. A linch pin of the UK approach is the safe harbour provided in the legislation requiring the identification of the engagement partner. If no such safe harbour can be provided, the PCAOB may have to to find other methods of improving audit quality and transparency. Such methods might include developing some other mechanism for identifying the engagement partner without requiring him or her to sign the audit report.

We are encouraged that the PCAOB is addressing engagement partner signatures on audit reports and we consider a Concept Release to be the right starting point. The ICAEW has been at the forefront of this debate in the UK, through the work of the Audit Quality Forum and its publication *Identifying the Audit Partner*, and we are grateful for the PCAOB’s recognition of this work.
We are pleased to provide answers to the PCAOB’s questions below and I am happy to discuss any of the points raised in this response.

Yours faithfully

Questions and Answers

1. Would requiring the engagement partner to sign the audit report enhance audit quality and investor protection?

and

2. Would such a requirement improve the engagement partner's focus on his or her existing responsibilities? The Board is particularly interested in any empirical data or other research that commenters can provide.

Common sense suggests that some may pay more attention to detail and underlying documentation when their own names appear on a document. But we have no evidence, anecdotal or otherwise, to suggest that the conduct of audits has changed or will change as a result of the introduction of the regime requiring audit partners to sign audit reports in their own names on behalf of the firm in the UK. Other than dealing with logistical matters associated with the new regime, audit firms do not appear to have issued new guidance on the conduct of audits.

Requiring the engagement partner to sign the audit report may enhance the perception of audit quality and investor protection in the eyes of some, particularly investors, which is important, although this perception may widen the expectation gap. Certainly an expectation that auditors will undertake significant additional procedures as a result of the change in the same way that companies implemented new procedures following the introduction of the CEO and CFO certification requirement under Section 302 of the Sarbanes Oxley Act would be undesirable.

3. Would disclosure of the engagement partner's name in the report serve the same purpose as a signature requirement, or is the act of signing itself important to promote accountability?

Disclosure of the engagement partner’s name in the report, or elsewhere, would serve the same purpose as a signature requirement, but probably not as well. The act of signing is likely to promote a greater sense and appearance of accountability, particularly to investors. Disclosure of the engagement partner’s name might be helpful if signatures were not deemed possible as a result of the liability regime.

4. Would increased transparency about the identity of the engagement partner be useful to investors, audit committees, and others?

and

5. Would such information allow users of audit reports to better evaluate or predict the quality of a particular audit? Could increased transparency lead to inaccurate conclusions about audit quality under some circumstances? We are particularly interested in any empirical data or other research that commenters can provide.

Increased transparency about the identity of the engagement partner is certainly desired by investors and others (although we would be alarmed if audit committees were not aware of the identity of engagement partners) but it is critical (certainly in
the UK) that all concerned understand that the engagement partner is signing for and on behalf of the firm, not in a personal capacity, and that the liability regime is unchanged. While users may believe that knowing the identity of the audit engagement partner may help them evaluate or predict the quality of an audit, this information alone may lead them to draw erroneous conclusions. Users’ expectations regarding the performance of a particular engagement partner are not always going to be met.

6. Are there potential unintended consequences of requiring the engagement partner to sign the audit report that the Board should be aware of?

Yes. Some smaller firms of UK auditors have experienced challenges in implementing the regime arising from the death, incapacity or unavailability of engagement partners to sign the audit report. Such issues might be addressed as FAQs or similar in any exposure draft.

Other potential consequences include:

- the change being misunderstood as representing a change in the liability regime
- inappropriate conclusions being drawn about audit quality on the basis of the identity of the audit partner alone
- making it difficult for high risk businesses to find good auditors
- signatures exposing partners and their families to unacceptable personal risks
- bright young people being deterred from entering the profession in the first place, and
- creating an expectation amongst users that one individual is responsible for the audit opinion and the decisions on the audit whereas in practice audit quality is not solely the responsibility of the lead partner, but that of everyone who works on the audit and, more importantly, the firm.

7. The EU's Eighth Directive requires a natural person to sign the audit report, but provides that "[i]n exceptional circumstances, Member States may provide that this signature does not need to be disclosed to the public if such disclosure could lead to an imminent, significant threat to the personal security of any person." If the Board adopts an engagement partner signature requirement, is a similar exception necessary? If so, under what circumstances should it be available?

The purpose of this exception is largely to protect the engagement partner and his or her family from threats of violence or intimidation that occasionally emanate from extremists associated with some single interest pressure groups. A recent example in the UK involved Huntingdon Life Sciences where animal rights activists carried out an aggressive campaign against the company and its advisors, including partners and employees of the company’s audit firm.
It is important to note that this legislation has been enacted in the UK such that a strong case has to be made for the exception to apply, the mere possibility of a threat to personal security will not generally suffice because the risk needs to be serious, and a resolution authorising non-publication needs to be passed by the company.

8. What effect, if any, would a signature requirement have on an engagement partner’s potential liability in private litigation? Would it lead to an unwarranted increase in private liability? Would it affect an engagement partner’s potential liability under provisions of the federal securities laws other than Section 10(b) of the Securities Exchange Act, such as Section 11 of the Securities Act of 1933? Would it affect an engagement partner’s potential liability under state law?

and

9. Are there steps the Board could or should take to mitigate the likelihood of increasing an engagement partner’s potential liability in private litigation?

We do not presume to comment on this complex area of US legislation and we look forward to reading the comments of those better placed than us to do so but we offer the following observations:

- S504 (3) of the Companies Act 1985 provides some protection to UK auditors against personal civil liability with the use of the following form of words which contain a term of art commonly used in UK legislation

  The senior statutory auditor is not, by reason of being named or identified as senior statutory auditor or by reason of his having signed the auditor’s report, subject to any civil liability to which he would not otherwise be subject.

- the liability regime in many continental European countries is such that the auditor’s liability is determined or capped by statute in any case.

10. Some commenters on the ACAP Report who expressed concern about liability suggested that a safe harbor provision accompany any signature requirement. While the Board has no authority to create a safe harbour from private liability, it could, for example, undertake to define the engagement partner’s responsibilities more clearly in PCAOB standards. Would such a standard-setting project be appropriate?

The responsibilities of the engagement partner are broad, not easy to define, scattered throughout auditing standards and definitions are in any case double edged. If the purpose of the exercise were to provide some comfort or protection to engagement partners in the place of safe harbour, we think it unlikely to succeed. While defining or describing the engagement partner’s responsibility in standards might help in defending an engagement partner once litigation has commenced, it is inevitable that litigants would seek, sometimes successfully, to interpret that definition aggressively against engagement partners.
11. If the Board adopts an engagement partner signature requirement, would other PCAOB standards, outside of AU sec. 508 and Auditing Standard No. 5, need to be amended?

We believe that changes should be made to paragraph 9 of AU 311 Planning and Supervision to make it clear that the engagement letter should explain the consultation process that the firm has in place, including the internal consultation that firms may undertake in arriving at their audit judgement. The engagement letter should also clarify that claims can only be brought against the firm, as that is the entity making the report, not the audit engagement partner.

12. Should the Board only require the engagement partner's signature as it relates to the current year's audit? If so, how should the Board do so? For example, should firms be permitted to add an explanatory paragraph in the report that states that the engagement partner's signature relates only to the current year?

and

13. If a signature requirement is adopted, should a principal auditor that makes reference to another auditor also be required to make reference to the other engagement partner? Would an engagement partner at the principal auditor be less willing to assume responsibility for work performed by another firm under AU sec. 543?

These complex areas are not addressed in the UK as the situations described do not arise. However, we observe that simplicity and consistency are virtues when introducing potentially contentious changes, but that they sometimes conflict and have unintended consequences. We look forward to the PCAOB’s proposals in these areas.

Only requiring the engagement partner’s signature as it relates to the current year's audit is simple but inconsistent with reporting requirements where the audit report covers all periods presented. This may lead to confusion for users. If the requirement is extended to all periods presented then transitional arrangements are likely to be necessary.

Consistency in references to other auditors in audit reports is desirable but forcing such disclosure when the other auditor operates in a regime which does not have similar disclosure requirements may cause conflict.

14. Auditors are not required to issue a report on a review of interim financial information, though AU sec. 722, Interim Financial Information, imposes requirements on the form of such a report in the event one is issued. Should the engagement partner be required to sign a report on interim financial information if the firm issues one?

The PCAOB may wish to consider deferring this question in order to ensure that the main objective of identifying the audit partner in the audit report is achieved without delay. The issue of interims can be revisited at a later date.
15. Would requiring the engagement partner to sign the audit report make other changes to the standard audit report necessary?

We are not aware that auditors in Europe have found it necessary to insert caveats, disclaimers or other modifications to the standard audit report as a result of identifying the audit partner in the audit report. Any additional wording is likely to amount to an unhelpful (boilerplate) distraction.

16. If the Board adopts a signature requirement, should it specify a form of the engagement partner's signature? For example, should the engagement partner sign on behalf of the firm and then “by” the engagement partner?

The engagement partner should sign for and on behalf of the firm. Another signature would imply that the responsibility for the audit opinion is somehow divided between the firm and the engagement partner. If there is no intention to change the liability of the engagement partner this is critical.
September 11, 2009

Mr. J. Gordon Seymour
Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, NW
Washington, DC 20006-2803

RE: PCAOB Rulemaking Docket No. 029 – Concept Release on Requiring the Engagement Partner to Sign the Audit Report

Dear Mr. Seymour:

This letter is in response to the Public Company Accounting Oversight Board's release to solicit public comment on whether it should require the auditor with final responsibility for the audit to sign the audit report as set forth in the PCAOB Rulemaking Docket No. 029 – Concept Release on Requiring the Engagement Partner to Sign the Audit Report.

Background

UHY LLP is a firm of certified public accountants that has 112 partners that utilizes staff and administrative resources of approximately 1100 individuals through an alternative practice structure arrangement with an associated entity, UHY Advisors, Inc. and its operating subsidiaries. Our audit clients currently include 73 issuer audit clients.

Overall Comments

Quite frankly, we find the notion of requiring the engagement partner's signature on the audit report to be an ill-considered proposal that is lacking in underlying research. The idea apparently came from an individual in the investment community who testified at the Treasury Department's hearings. His testimony has been taken to underlie the view that having the engagement partner sign the report will somehow "... foster greater accountability ... increase transparency, and ... improve audit quality. ..." In its report, the Treasury Department quoted both the views of the individual who testified and that individual's same views in a paper he authored. The individual cited no research to support his views—classic argument by assertion. Others who have commented including Board
members seem to agree with the unsupported analogy to CEO and CFO certifications required by SOX legislation but again confirm that there has been absolutely no research on the issue the Board has chosen to address.

We fear the PCAOB members are confusing "certifications" of facts—which can be done by responsible individuals—with "opinions" on financial statements—which can only be expressed by accounting firms. If the proposal were as simple as the Board seems to think it is, it would not be worth comment. However, underlying this proposal is a basic issue—practice as a firm vs. practice as an individual.

Long ago, as quality control standards emerged, audits were identified as being the type of engagement that individuals could not perform as individuals but, indeed, required resources and support of a firm to accomplish. (Those few remaining sole practitioners who perform audits must nevertheless identify themselves as a firm and obtain firm permits to practice in most jurisdictions.)

Today, engagement teams are made up of a team or teams of firm personnel with diverse backgrounds and experience—all under the ultimate direction of the engagement partner. Everyone on the audit engagement team understands that it is the engagement partner who has the ultimate responsibility—on behalf of the firm—to ensure that the audit has been performed according to the appropriate auditing standards and that the financial statements upon which the firm is expressing an opinion have been prepared in accordance with the generally accepted accounting principles so identified in the report. Many others have responsibilities—concurring review partner and other partners and staff who have contributed to the engagement—but it is the engagement partner with the ultimate responsibility to ensure that a high quality audit has been performed. Signing to that effect is already part of the review and approval documentation process that is mandated by auditing standards for public and nonpublic companies in the US and internationally.

Major Concern

So why is there so much concern about a signature of the engagement partner? We will explain this below in a series of questions that the PCAOB must answer, now or as they develop in practice. All of these questions will have to be answered by the PCAOB if the proposed requirement comes to fruition:

Situation 1

The financial statements present balance sheets for two years and income statements for three years as is the general requirement for public companies. The firm and the engagement partner have not changed for four years.
Is the engagement partner required to sign the financial statements only for the current year or for all years presented?

In this instance, since the engagement partner has been the same for all years, it really does not matter because that engagement partner would be in a position to sign both on behalf of the firm and as the engagement partner for all years presented.

Situation 2

The facts are the same except that the engagement partner is new this year.

Is the engagement partner required to sign the financial statements only for the current year or for all years presented?

In this instance, the engagement partner could sign on behalf of the firm for all periods presented but could only sign as engagement partner for the most current year.

Would that suffice or would those who were engagement partners in prior years be required to sign the currently issued financial statements?

If engagement partner signatures for prior years are required, many obstacles are present:

What if the former engagement partner is unavailable to sign because that individual is:

- On vacation in a remote location
- Retired from the firm and no longer practicing public accounting
- Retired from the firm, no longer practicing public accounting, and no longer maintaining a valid CPA license in any jurisdiction
- No longer with the firm, having joined another PCAOB registered firm that refuses to allow that partner to associate his name with his former firm
- No longer with the firm and now practicing with a firm that is not PCAOB registered and not insured for public company practice
- No longer with the firm and currently employed by the SEC or the PCAOB
- Incapacitated
- Deceased

Who will sign as engagement partner for those earlier years?
Situation 3

The facts are the same except that it is a first year engagement for the firm and, as a consequence, the engagement partner's first year on the engagement.

Is the engagement partner required to sign the financial statements only for the current year or for all years presented?

In this instance, the engagement partner could sign on behalf of the firm and as engagement partner for only the current year. Assuming that the predecessor firm had no reason to object, the current audit firm's opinion would refer to the other firm as the predecessor auditor and characterize the nature of its opinion.

• Who would sign as the engagement partner on behalf of the predecessor firm for those prior years? Would it be the former engagement partner of the former firm?
• What if there are restatements that the former firm agrees with but the former engagement partner does not?
• What if the predecessor firm merges or disbands and the former engagement partner is no longer with the surviving firm?
• What if the former engagement partner with the other firm is no longer available for any one of the reasons previously cited in Situation 2?

Before imposing a signing requirement, the PCAOB needs to address the issues in Situations 2 and 3 and have solutions so as not to cause audit firms to withhold reports until these questions are answered.

We fear that in answering the above questions and the endless permutations of such questions, the PCAOB will be misdirecting engagement partner attention from the quality of the audit performed to understanding what will become a new rule book of who must sign as engagement partner under the endless variety of circumstances likely to develop.

Response to PCAOB'S QUESTIONS

In the following section we have responded to the questions posed in the PCAOB's request for information.
1. Would requiring the engagement partner to sign the audit report enhance audit quality and investor protection?

We do not believe that such a requirement will have any impact whatsoever on audit quality or investor protection. Rather, it could become an administrative burden that could serve as a distraction from achieving high audit quality by imposing a logistical burden on the engagement team.

We believe that current requirements established by the Sarbanes Oxley Act of 2002 are far better designed to increase an auditor’s sense of accountability to users. The PCAOB’s current inspection process of routinely inspecting the work of registered accounting firms does far more toward establishing this goal, has already weeded out some auditors and firms that do not provide quality audits, and will continue to do so.

2. Would such a requirement improve the engagement partner’s focus on his or her existing responsibilities? The Board is particularly interested in any empirical data or other research that commentators can provide.

Engagement partners are well aware of their existing responsibilities on an audit of a public company. No requirement for a signature or signatures should have any effect on the partner’s focus. Unquestionably, issuing a report on a public company is the most critical responsibility of an engagement partner in a PCAOB registered accounting firm. Engagement partners know their responsibilities and take those responsibilities very seriously.

We are unaware of any studies that have addressed engagement partners adding personal signatures to audit reports signed by the audit firm.

We would caution that a personal signature by an audit partner on an opinion of that partner’s firm is quite different than a CEO or CFO’s certification of facts. In the former case, you are adding a mere signature to an opinion of a firm. In the latter, you are holding the CEO or CFO responsible for knowledge of facts. Also, keep in mind that the CEO/CFO certification became an element of the SOX legislation to correct a problem that the SEC enforcement personnel encountered regularly—CEO and CFO denial of responsibility and/or participation in the financial reporting process. No such problem has emerged with engagement partners denying that role and seeking to evade responsibility.
Everyone who needs to know the engagement partner knows who he or she is. Very often, the engagement partner attends the annual meeting of shareholders. The engagement partner's role is not a secret. Is there anyone who has read anything about Enron who does not know of David Duncan's role as engagement partner? Would Enron's investors have been served better had he signed his name along with his firm's name?

3. **Would disclosure of the engagement partner's name in the report serve the same purpose as a signature requirement, or is the act of signing itself important to promote accountability?**

Neither the signature nor the disclosure should have any effect on the accountability of the engagement partner. The engagement partner is known to all in the firm, to all at the client and to its audit committee and to its board of directors. Again, very often, the engagement partner is introduced at the shareholders' meeting.

4. **Would increased transparency about the identity of the engagement partner be useful to investors, audit committees, and others?**

If the audit committee does not know the identity of the engagement partner, the committee has failed in its purpose and no amount of disclosure can remediate that condition. Investors and other users will invariably state that they would like that information and somehow would make use of it. However, those so responding fail to realize that state confidentiality laws, ethics requirements, and federal securities laws preclude the engagement partner and the team from having free dialogue with anyone who might call with a question about a client's audit. Any engagement partner who engaged in such conversation other than in the most general of terms would be guilty at a minimum of violating client confidentiality and worse could be guilty of providing insider information.

With regard to Audit Committees, more questions are in order. For example, would audit committee members be more or less likely to approve the appointment of an independent CPA firm if the partner assigned to the engagement rarely issued an adverse or qualified opinion? What about opinions with explanatory paragraphs, such as a going concern paragraph? Would an engagement partner who only issued unqualified audit reports be perceived as "easier" or "less than thorough"?
5. Would such information allow users of audit reports to better evaluate or predict the quality of a particular audit? Could increased transparency lead to inaccurate conclusions about audit quality under some circumstances? We are particularly interested in any empirical data or other research that commenters can provide.

With time, some would assemble statistics on engagement partners and attempt to interpret their meaning. While we doubt partners statistics would be followed like major league baseball players, there would be some who would draw conclusions from those that became available. The concern we would have is that knowing the number or type of reports that an engagement partner has issued over time means little without interpretation.

A partner that has issued 20 opinions on 20 shell companies has not amassed the same experience as one who has issued 20 opinions on 20 operating companies; yet, the statistics would be identical.

A partner that has issued only clean opinions may appear to be beyond reproach as one who has only pristine clients. Or, is that a signal that the partner may not subject clients to the healthy skepticism required? Should a partner have some “going concern” opinions in the record book to maintain credibility?

Is a company seeking a new auditor going to ask for the engagement partner with only clean opinions in the record book? Is an engagement partner with a record of “going concern” opinion modifications going to be asked not to be the engagement partner on new engagements or at partner rotation time? Is having once issued a “going concern” report going to eliminate the engagement partner from ever being assigned to another major public company engagement?

Section 303 of SOX makes it unlawful for management and others to attempt to unduly influence the audit firm and the engagement team—especially when it involves the assignments of audit partners. Will providing management and others with the wherewithal to calculate the engagement partner’s statistics tempt some to exert such influence when it comes to obtaining the new engagement partner—favoring the one with only “clean” opinions over the one with “going concern” modifications? How will the PCAOB be able to police Section 303 to insure that the statistics are not used as the mere excuse to exercise undue influence and avoid those engagement partners viewed to be “tough markers?”
6. Are there potential unintended consequences of requiring the engagement partner to sign the audit report that the Board should be aware of?

Might the same behavioral forces, as is postulated, that would cause an engagement partner to feel "more responsible" for audit report also potentially cause the partners best suited for difficult audits to, instead, shy away from the same for fear of besmirching their names and records?

Another unintended consequence is the high probability of the press or of a user's calling the engagement partner directly to obtain confidential or protected insider information. Providing any information beyond that contained in the audit opinion would be tantamount to providing insider information. When an engagement partner states the prohibition on providing additional information, the media and the investing public generally see this as "no comment." This will only adversely affect the public's views of the auditing profession.

7. The EU's Eight Directive requires a natural person to sign the audit report, but provides that "[i]n exceptional circumstances, Member States may provide that this signature does not need to be disclosed to the public if such disclosure could lead to imminent, significant threat to the personal security of any person." If the Board adopts an engagement partner signature requirement, is a similar exception necessary? If so, under what circumstances should it be available?

We have no direct knowledge of the reasons leading the EU to conclude as it did about an exemption for personal security of any person. We would however, suggest that the PCAOB contact that international body in Brussels to obtain details of its legislative intent in making the rule as it did.

On the anniversary of the attack on the World Trade Center, it is not difficult to postulate how anyone with a perceived important role in world finance and a detailed knowledge of a large international corporation, especially one with defense department or homeland security contracts, could become a target. An audit engagement partner who is identified to all by a PCAOB mandated signature on the audit report could become the target for those bent on domestic or international terrorism.
Mandated disclosure of the name of the engagement partner coupled with on-line license look up features of the various state boards of accountancy would very often provide all the necessary information—name, address, and phone number—for any domestic or international terrorist bent on doing harm in the form of assassination or kidnapping to the engagement partner and that partner's family.

While kidnapping of senior executives and their family members is not yet commonplace in the United States, we need only look to our southern border where it has become commonplace. We only need to look to the Rubicon and Young advertising executive who was killed outside his New Jersey home a few years ago.

8. What effect, if any, would a signature requirement have on an engagement partner's potential liability in private litigation? Would it lead to an unwarranted increase in private liability? Would it affect an engagement partner's potential liability under provisions of the federal securities laws other than Section 10(b) of the Securities Exchange Act, such as Section 11 of the Securities Act of 1933? Would it affect an engagement partner's potential liability under state law?

See Number 10 below.

9. Are there steps the Board could or should take to mitigate the likelihood of increasing an engagement partner's potential liability in private litigation?

See Number 10 below.

10. Some commenters on the ACAP Report who expressed concern about liability suggested that a safe harbor provision accompany any signature requirement. While the Board has no authority to create a safe harbor from private liability, it could, for example, undertake to define the engagement partner's responsibilities more clearly in the PCAOB standards. Would such a standard-setting project be appropriate?

We do not practice law and, therefore, have no internal expertise to enable us to express a professional view on questions 8, 9, and 10. That said, we do believe that the PCAOB could not impose a personal signature requirement where there was none before without there being a myriad of new legal issues that arise from that very action. And, we would expect that questions 8, 9, and 10 simply do not have crisp answers—even from the experts in accountants' legal liability.
We do believe that the signature or disclosure requirement you propose would increase the litigation exposure to individuals in ways that only members of the litigation bar can evaluate properly.

11. If the Board adopts an engagement partner signature requirement, would other PCAOB standards, outside AU sec. 508 and Auditing Standard No. 5, need to be amended?

This depends entirely on what the Board decides to require in the way of signature and/or disclosure.

12. Should the Board only require the engagement partner's signature as it relates to the current year's audit? If so, how should the Board do so? For example, should firms be permitted to add an explanatory paragraph in the report that states the engagement partner's signature relates only to current year?

See the discussion on under “Major Concern” beginning on page 2.

13. If a signature requirement is adopted, should a principal auditor that makes reference to another auditor also be required to make reference to the other engagement partner? Would an engagement partner at the principal auditor be less willing to assume responsibility for work performed by another firm under AU sec. 543?

This is but another area of complexity that the PCAOB will have to address in detail, and with increasing detailed requirements come additional audit costs and reasons for report delays. We would suggest that there are literally dozens of such questions that have no correct answer and will simply require a rules-based approach. Once you separate the firm responsibility from that of the engagement partner, no end of questions arise and as with any arbitrary rules they only have arbitrary answers.
14. Auditors are not required to issue a report on a review of interim financial information, though AU sec. 722, Interim Financial Information, imposes requirements on the form of such a report in the event one is issued. Should the engagement partner be required to sign a report on interim financial information if the firm issues one?

We believe the proposed requirement to be unnecessary for the reasons stated. Should the board require engagement partner signature, in those rare situations where reports are issued on interim reviews, we would see no reason for different signing requirements at interim from those at year end.

15. Would requiring the engagement partner to sign the audit report make other changes to the standard audit report necessary?

We believe the proposed requirement to be unnecessary for the reasons stated. That said, we believe the Board can make this as simple or as complex as it chooses. We do not believe that the existing audit report variations that currently exist should be altered in any way. However, complexities that make obtaining prior year engagement partner signatures impossible will inevitably lead to report modifications for those conditions. This will neither enhance user understanding nor the usefulness of the audit report. Rather, it will add unnecessary complexity and decrease user understanding.

16. If the Board adopts a signature requirement, should it specify a form of the engagement partner’s signature? For example, should the engagement partner sign on behalf of the firm and then “by” the engagement partner?

Should there be an engagement partner signature requirement, it should be as simple as possible—for example:

UHY LLP
by /s/ Paul Rohan
If there is a need for the partner to sign as well as the firm, would it not also be useful for the many users who crave this information to identify that the engagement partner is a CPA (or other appropriate designation such as CA or FCA with foreign firms) and identify the individual’s license jurisdiction and number. This would enable a user to check current status with state board online services and, in some jurisdictions, be able to identify whether there has been any past disciplinary actions taken by the state board or others. Thus, it might appear as follows:

UHY LLP  
by /s/ Paul Rohan, CPA (Connecticut License Number 2870)

Historical Note

Such signature practices were commonplace through the 1940’s before all accounting firms were required to be made up of CPA’s. This was a subtle but allowed bit of advertising that the report was being signed by a CPA when that was not yet a universal requirement. The State of Connecticut required such a signature on audit reports on municipalities into the mid 1970’s. Then it abandoned the requirement as an archaic practice. A similar requirement existed in New York State for professional corporations until the State legislature changed the law in the 1970’s having concluded that it was an unnecessary ministerial practice. (One of our partners in our Albany office still have the pen Governor Cuomo used to sign that bill.)

Final Comment

If the PCAOB truly believes that the engagement partner signature will “foster greater accountability,...increase transparency, and ... improve audit quality” of the reports issued by registered accounting firms on public company audit clients, we suggest that the PCAOB apply similar logic to its inspection reports and have the individual inspection leaders personally sign the PCAOB inspection reports on the firms that they inspect. We would suggest all arguments for and against signature apply equally to both situations.

Should you have any questions, please feel free to contact me at (203) 401-2101.

Very truly yours,

Paul Rohan  
Partner  
Director of Financial Reporting & Quality Control
To the PCAOB,

In regard to PCAOB Rulemaking Docket Matter No. 29, the Concept Release on Requiring the Engagement Partner to Sign the Audit Report, I attach a copy of the letter I wrote to the Advisory Committee on the Auditing Profession on June 25, 2008, in which I strongly endorsed such a move. It is long overdue.

Kind regards.

Stephen Zeff.
June 25, 2008

Advisory Committee on the Auditing Profession
Office of Financial Institutions Policy
Room 1418
Department of the Treasury
1500 Pennsylvania Avenue, N.W.
Washington, D.C. 20220

Dear Committee Members:

I have been arguing for years, to no avail, that the audit engagement partner should sign the audit report with his or her own name. As you say on pages 4-5 in the Addendum to VI. Firm Structure and Finances of your draft report, this has long been the practice in Germany. It has also long been the practice in Australia.

With the identity of the engagement partner known, it is possible for interested parties to correspond with the signatory on particular auditing questions. Recently, I have conducted such correspondence in Australia and have received useful replies from engagement partners.

There is no justification for the anonymity that shrouds the identity of the engagement partner in the United States.

The association of the engagement partner by name with the audit report should serve to lift his or her standard of professionalism and dedication to principle.

I note the recommendation on page VII:14 of the Committee’s draft report that “the name(s) of the senior auditing partner(s) staffed on the engagement” should be disclosed in the company proxy statement. I urge the Advisory Committee to recommend that the name(s) be disclosed in the signature to the audit report in the company annual report to shareholders, which has long been the practice in Germany and Australia. This disclosure should be made widely known to readers of the company annual report and not be confined to the proxy statement.

Sincerely,

SAZ/dj

Dear Board Members:

The Auditing Standards Committee of the Auditing Section of the American Accounting Association is pleased to provide comments on the PCAOB Rulemaking Docket Matter No. 029; PCAOB Release No. 2011-007: Proposed Rule on Improving the Transparency of Disclosure of Engagement Partner and Certain Other Participants in Audits.

The views expressed in this letter are those of the members of the Auditing Standards Committee and do not reflect an official position of the American Accounting Association. In addition, the comments reflect the overall consensus view of the Committee, not necessarily the views of every individual member.

We hope that our attached comments and suggestions are helpful and will assist the Board. If the Board has any questions about our input, please feel free to contact our committee chair for any follow-up.

Respectfully submitted,

Auditing Standards Committee
Auditing Section - American Accounting Association

General Comments

The Committee commends the PCAOB (“the Board”) for addressing the issue of including partner signatures on the audit report. The following section presents a number of specific comments or suggestions, organized along the lines of the questions posed by the Board in the proposed rule.

Here are comments to selected questions in the propose rule:

1. Would disclosure of the engagement partner’s name in the audit report enhance investor protection? If so, how? If not, why not?

Based on existing research, there is reason to believe that disclosure of the engagement partner’s name in the audit report would enhance investor protection. Some countries already (e.g., Australia, Taiwan, Sweden, China) require disclosure of engagement partner names. Using this data, academic researchers conclude that engagement partner characteristics matter to audit quality. For example, Chi et al. (2011) find that an audit partner’s pre-client and client-specific experience is associated with higher earnings quality and creditors’ perception of higher audit quality. Knechel et al. (2011) show that partner compensation policies affect audit quality in Swedish clients. Hence, investors may find this information useful. Ceteris paribus, investors would prefer more experienced partners whose personal incentives are aligned with those of shareholders.

We note that given the size of the audit market in the United States the disclosure of engagement partner’s name may not have as dramatic effect as shown in studies in smaller markets. However, requiring disclosure would provide market participants with potentially useful information as well as data for researchers to assess its usefulness.

2. Would disclosing the name of the engagement partner in the audit report increase the engagement partner’s sense of accountability? If not, would requiring signature by the engagement partner increase the sense of accountability?

We believe that both disclosure of the partner’s name and his/her signature would be useful. Disclosing the partner’s name allows investors to track partner behavior more efficiently over time. Requiring a signature should also have a positive effect on audit quality since it should foster a partner’s sense of personal accountability for the audit. Requiring audit partner signature on the audit report is analogous to the SOX 302 requirement that CEOs/CFOs sign the 10-K report. Prior research has established that CEO reputation is a strong disciplining mechanism when it comes to corporate malfeasance. CEO turnover is much more likely in presence of accounting irregularities (Hennes et al. 2006) or restatements (Desai et al. 2006). Job prospects of executives as a result of accounting restatements are much worse due to reputational effects. Similar arguments should apply to audit partners who do sub-par work.

3. Does the proposed approach reflect the appropriate balance between the engagement partner’s role in the audit and the firm’s responsibility for the audit? Are there other approaches that the Board should consider?
We believe that both the audit partner’s name and his/her signature are useful in increasing the audit partner’s accountability to the audit. While disclosure of the engagement partner’s name is informative, it does not clearly bind the engagement partner to the audit work or attest to the quality of the audit. Requiring the engagement partner to sign the audit report enhances accountability and ensures that the engagement partner certify that the audit was performed in accordance with PCAOB standards and to the best of his/her abilities.

6. **Would the proposed amendments to the auditing standards create particular security risks that warrant treating auditors differently from others involved in the financial reporting process?**

Security risks arising out of increased transparency and individual liability can most likely be negated by some form of insurance for audit partners similar to directors and officers (D&O) liability insurance. One possible problem would be the number of direct calls and correspondence an engagement partner may get from shareholders, investors, analysts, or other interested parties. It raises concerns about what the engagement partner may or may not disclose about a company’s performance, plans, and financial health outside what is required in the audit report.

7. **Would the proposed amendments to the auditing standards lead to an increase in private liability of the engagement partner?**

We are not experts in this area. However, it seems likely that partners would be subject to frivolous personal lawsuits as a result of their personal association with problematic audits. In addition, the proposed amendments may lead to privacy and security issues for engagement partners. Thus, we do recommend that the Board give consideration to potential negative consequences in these regards.

12. **If the Board adopts the proposed requirement that audit reports disclose the name of the engagement partner, should the Board also require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2?**

Since Form 2 summarizes all information for a convenient review by investors, we think it is useful to also require disclosure of engagement partner names in Form 2. Behavioral research in accounting suggests that easily accessible information is more effectively and efficiently used by consumers of accounting information.

13. **If the Board does not adopt the proposed requirement that audit reports disclose the name of the engagement partner, should the Board nonetheless require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2?**

We recommend disclosing audit partner names, whether it is in audit reports or Form 2, preferably in both. In addition, if the Board does this, it will certainly facilitate research into individual engagement partner quality.
14. Disclosure in the audit report and on Form 2 would provide notice of a change in engagement partner only after the most recent period's audit is completed. Would more timely information about auditor changes be more useful? Should the Board require the firm to file a special report on Form 3 whenever there is a change in engagement partners?

Shareholders prefer more timely information. Bryant-Kutcher et al. (2011) find that SOX’s requirement of accelerated 10-K filing deadlines increase the value relevance of financial reporting. A similar argument can be applied here. Shareholders need to be notified of any material changes in the company. Audit partner turnover is important information. Studies have shown that the stock market reacts significantly to audit firm turnover. For example, both Dunn (1999) and Eichenseher et al. (1989) find that switching from Big N to non-Big N auditors raise a “red flag” to investors. Knechel et al. (2007) find that firms switching between Big 4 auditors experience significant positive abnormal returns when the successor auditor is an industry specialist and they experience significant negative abnormal returns when the successor auditor is not a specialist. We expect that the market would react similarly to audit partner turnover if the audit partner’s identity is publically available. Consistent with our expectation, Fried and Schiff (1981) show that market reacts negatively to CPA switches. Immediate reporting will be particularly useful if an engagement partner resigns or steps down from a particular audit. This would highlight whether the change in engagement partner was due to differences with company officials or disagreements within the audit firm.

20. Would disclosure of off-shoring arrangements (as defined in the release) or any other types of arrangements to perform audit procedures provide useful information to investors and other users of the audit report? If yes, what information about such arrangements should be disclosed?

We believe that such disclosure may provide benefits. We recommend additional research on the quality “offshored” audit work. The extent of work as measured by hours (proposed later in the release) would be appropriate.

21. Would disclosure in the audit report of other participants in the audit provide useful information to investors and other users of the audit report? Why or why not?

We believe investors would like to know who participated in the audit besides the engagement partner. The individuals who perform the work largely determine the quality of the work. If investors know the names of the participants, they are better informed to make a judgment regarding the quality of the overall audit. It is also important to know the percentage of hours attributed to other participants so investors can form a judgment regarding the quality of the overall audit. The requirement is particularly relevant for multinational audits where the main auditor relies on other audit firms or their branch offices to conduct a part of the audit process.

In addition, a requirement to disclose other participants in the audit would lead to more research in this area that would inform investors and regulators about the quality of work provided by “other participants.”
22. Are the proposed requirements sufficiently clear and appropriate with respect to identifying other participants in the audit? If not, how should the proposed requirements be revised?

We believe the proposal is clear in stating the requirement.

23. Are the proposed requirements sufficiently clear as to when the name of a public accounting firm or a person would be required to be named in the audit report? Is it appropriate that the name of the firm or person that is disclosed is based on whom the auditor has the contractual relationship?

We believe the proposed requirements are sufficiently clear. The example is very helpful in describing the requirement. We think it is appropriate to disclose the name of the firm (person) based on contractual relationship because it (he/she) is the entity that is legally liable for the work performed.

24. Would disclosure in the audit report of other participants in the audit have an impact on the ability of independent public accounting firms to compete in the marketplace? If so, how would the proposed requirement impact a firm's ability to compete in the marketplace?

Disclosing other participants in the audit would help the audit firms establish and maintain a reputation of audit quality if the firms consistently use other similarly competent firms to help complete the work. Greater disclosure of other participants in the audit improves investor confidence in the audit firm and also creates a mechanism to promote high quality firms.

31. Should disclosure of the names of all other participants in the audit be required, or should the Board only require disclosing the names of those whose participation is 3% or greater? Would another threshold be more appropriate?

We do not think that disclosing all participants in the audit is necessary. However, investors do not want information overload. The focus should be key participants. We recommend disclosure of names who participate more than 10%. A 10% threshold reflects a balance of supply of sufficient information while avoiding information overload.

32. Is the proposed manner in which other participants in the audit whose individual extent of participation is less than 3% of total hours would be aggregated appropriate?

Again, we would recommend the 10% threshold, but the manner proposed is appropriate.

33. Are the requirements to disclose the name and country of headquarters' office location of the referred-to firm sufficiently clear and appropriate?

We believe the requirement to disclose the name and country of headquarters’ office location of the referred-to firm is sufficiently clear and appropriate.
35. In situations in which the audit report discloses both the referred-to firm and other participants in the audit, would using different disclosure metrics (e.g., revenue for the referred-to firm and percentage of the total hours in the most recent period's audit for the other firms and persons) create confusion? If so, what should the disclosure requirements be in such situations?

We do not believe the different disclosure metrics would cause any confusion.

The Office of the Secretary  
PCAOB  
1666 K Street, NW  
Washington, D.C. 20006-2803  
UNITED STATES OF AMERICA

Dear Sirs

PCAOB RULEMAKING DOCKET MATTER NO. 29

AngloGold Ashanti Limited is pleased to provide comments to the Public Company Accounting Oversight Board ("PCAOB") on its proposed rules to implement certain disclosures with respect to improving transparency of public company audits.

AngloGold Ashanti Limited, head quartered in Johannesburg, South Africa, is a global gold company with a portfolio of long life, relatively low cost assets and differing ore body types in key gold producing regions. The company’s twenty mining operations are located in ten countries (Argentina, Australia, Brazil, Ghana, Guinea, Mali, Namibia, South Africa, Tanzania and the United States of America) and are supported by extensive exploration activities in a number of countries around the world.

AngloGold Ashanti is listed on the Johannesburg Stock Exchange, the London Stock Exchange, the Australian Stock Exchange, the Ghanaian Stock Exchange, Euronext Paris, Euronext Brussels and the NYSE. As at December 31, 2010, the geographic distribution of our shareholders constituted:

| United States | 52.60% |
| South Africa  | 22.54% |
| United Kingdom| 11.73% |
| Ghana         | 2.95%  |
| France        | 2.35%  |
| Rest of Europe| 2.56%  |
| Rest of Americas| 1.20% |
| Rest of the world | 4.07% |

AngloGold Ashanti Limited prepares primary financial statements utilizing International Financial Reporting Standards, as approved in the English language, by the International Accounting Standards Board for all countries in which it operates, except the United States of America, where it reports in terms of US Generally Accepted Accounting Practice.
AngloGold Ashanti’s American depository shares are listed on the NYSE under the symbol “AU”. As a well-known seasoned issuer and a foreign private issuer, AngloGold Ashanti files annual reports with the Securities and Exchange Commission on Form 20F and furnishes its home jurisdiction periodic reports with the Securities and Exchange Commission on Form 6K.

AngloGold Ashanti fully supports initiatives which improve communication with investors and provide investors with relevant and reliable information on the company for which they have established an investment or are proposing to enter into an investment.

Although AngloGold Ashanti supports the PCAOB’s intentions, we are concerned that audit reports are generally established in home countries in accordance with local laws and jurisdictions and accordingly, amending or prescribing narrative to be used in an audit report may cause confusion amongst investors rather than providing for the transparency with regard to the information.

AngloGold Ashanti believes that it is the company that is responsible for preparing the annual report and the financial statements. It is the company’s views that are wanted by and should be reported to investors and other users. Therefore, the company through its board of directors and management should provide information with respect to the auditors and not the auditors.

AngloGold Ashanti believes that the role of the audit committee is to oversee on behalf of the whole board of directors, the integrity of the company’s financial affairs. It is also responsible for assessing the independence and effectiveness of the external auditors or for making recommendations on the external auditors to be appointed for the forthcoming year.

AngloGold Ashanti believes that the responsibility for communicating key information to shareholders lies with the company’s directors and executive management. The role of an auditor is to review a company’s annual report, including its financial statements and provide “a second” opinion on whether they have been properly prepared. The first opinion is provided by the management and directors of the company. AngloGold Ashanti is therefore keen to avoid any reporting structure that undermines directors and management’s responsibility for providing key information. AngloGold Ashanti does not believe therefore, that auditors should be placed in a position where they could be perceived to be performing a management role.

Further, AngloGold Ashanti believes that the company is best placed to know what users of annual reports and financial statements are interested in – because it is the directors and management that have direct contact with investors, analysts and other users of the annual report and the financial statements. Auditors do not have such equivalent access to these users. If the company were to provide the information recommended in terms of the proposed rule, rather than the auditors, AngloGold Ashanti believes that this provides a better forum for this information.

Item 16 of Form 20F already requires certain information with respect to audit committees and the principal accountant. AngloGold Ashanti believes that the disclosures that are recommended in terms of the rule would be better placed in the item 16 section of Form 20F or its equivalent in Form 10K rather than in an audit report. The information as disclosed supported by narrative prepared by the audit committee would show that the audit committee has provided effective stewardship of its role with regard to the external auditors that have been appointed.
AngloGold Ashanti therefore proposes that annual reports prepared in accordance with Form 20F or Form 10K, rather than narrative included within an audit report, should include a report by the audit committee setting out the approach they have taken to the discharge of their responsibilities, describing in such terms as they consider appropriate and having regard to the commercial interest of the company concerned. These should include:

- The steps they took and the judgments they made to assess the effectiveness of the audit.
- The policies that they adopted to avoid the independence of the company’s auditors being compromised.
- The process by which they reached their recommendation to appoint or re-appoint as the case may be, the company’s external auditors and the reasons for the recommendations thereof.

We provide below our responses to the PCAOB’s specific requests for comments. For ease of reference we have re-produced the text of PCAOB’s requests for comments, in bold face typed below, followed by our comments:

1. **Would disclosure of the engagement partner’s name in the audit report enhance investor protection? If so, how? If not, why not?**

   It is debatable whether disclosure of the engagement partner’s name in the audit report enhances investor protection but such disclosure is already mandatory in South Africa in terms of our Stock Exchange Listing Regulations, as well as other international jurisdictions.

2. **Would disclosing the name of the engagement partner in the audit report increase the engagement partner’s sense of accountability? If not, would requiring signature by the engagement partner increase the sense of accountability?**

   Disclosing the name of the engagement partner may appear to investors an increase in the engagement partner’s sense of accountability.

   Requiring the engagement partner’s signature instead of the name of the firm would detract from the position that the audit firm has been appointed by the Audit Committee to undertake the external independent accountant’s review of the financial statements and thus would not necessarily increase the sense of the accountability.

3. **Does the proposed approach reflect the appropriate balance between the engagement partner’s role in the audit and the firm’s responsibility for the audit? Are there other approaches that the Board should consider?**

   An approach to reflect the name of the firm responsible for the audit and signed as such provides the correct description of the appointment of a firm rather than an individual by the audit committee. Naming the individual assigned by the firm is already required in many international jurisdictions. It follows a similar format that the financial statements have been approved by a board of directors but in the South African context are signed specifically on behalf of the board of directors by designated directors that have been approved to sign as such by the board.
4. Would the proposed disclosure clearly describe the engagement partner’s responsibilities regarding the most recent reporting period’s audit? If not, how could it be improved?

The proposed disclosure by adding a sentence to the audit report stating “the engagement partner responsible for the audit for the period ended” is irrelevant and only adds to confusion in an audit report. The name of the audit partner should be included in the signature area in a format as set out below.

Name of Firm:
Name of Partner:
Qualification:
Town:
Date:

5. Would the proposed disclosure clearly describe the engagement partner’s responsibilities when the audit report is dual-dated? If not, how could it be improved?

As stated above, additional sentences in an audit report detract from the audit report’s intention which is to opine on the preparation of the financial statements by management. Thus, the proposed disclosure is not an adequate description. When opinions are dual-dated, then the initial date would maintain the original partner’s name and the second date should state the alternate to the second partner’s name as set out below.

Name of Firm: Name of Firm:
Name of Partner: Name of Partner:
Qualification: Qualification:
Town: Town:
Date: Date:

6. Would the proposed amendments to the auditing standards create particular security risks that warrant treating auditors differently from others involved in the financial reporting process?

The proposed amendments may create particular security risks depending on the jurisdiction that the audit firm and the audit partner reside. It has for several years been a requirement in South Africa to state partner details as well as personal information concerning directors. It is also a requirement in the United States in terms of compensation disclosures to name specific directors and their level of compensation which initially was thought would increase a security risk for those individuals.

Any area which increases transparency for individuals who operate in a corporate role will always have a potential consequential increase in security risks but as such this should be considered in a specific jurisdiction where a home country rule may exempt or disallow such disclosure.
7. Would the proposed amendments to the auditing standards lead to an increase in private liability of the engagement partner?

AngloGold Ashanti does not comment on this question as it relates specifically to an audit firm.

8. What are the implications of the proposed disclosure rule for private liability under Section 10(b)?

AngloGold Ashanti does not comment on this question as it relates specifically to an audit firm.

9. Would the disclosure of the engagement partner’s identity affect Section 11 liability? If so, what should the Board’s approach be?

AngloGold Ashanti does not comment on this question as it relates specifically to an audit firm.

10. Would the disclosure of the engagement partner’s identity have any other liability consequences (such as under state or foreign laws) that the Board should consider?

AngloGold Ashanti does not comment on this question as it relates specifically to an audit firm.

11. Would a different formulation of the disclosure of the engagement partner ameliorate any effect on liability?

AngloGold Ashanti does not comment on this question as it relates specifically to an audit firm.

12. If the Board adopts the proposed requirement that the audit reports disclose the name of the engagement partner, should the Board also require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2?

AngloGold Ashanti does not comment on this question as it relates specifically to an audit firm.

13. If the Board does not adopt the proposed requirement that audit reports disclose the name of the engagement partner, should the Board nonetheless require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2?

AngloGold Ashanti does not comment on this question as it relates specifically to an audit firm.
14. Disclosure in the audit report and on Form 2 would provide notice of a change in engagement partner only after the most recent period's audit is completed. Would more timely information about auditor changes be more useful? Should the Board require the firm to file a special report on Form 3 whenever there is a change in engagement partners?

AngloGold Ashanti does not comment on this question as it relates specifically to an audit firm.

15. A change in engagement partner prior to the end of the rotation period could be information that investors may want to consider before the most recent period's audit is completed. Should the Board require the firm to file a special report on Form 3 when it replaces an engagement partner for reasons other than mandatory rotation to provide an explanation of the reasons for the change?

AngloGold Ashanti does not comment on this question as it relates specifically to an audit firm.

16. Is it sufficiently clear who the disclosure would apply to? If not, how could this be made clear?

AngloGold Ashanti does not comment on this question as it relates specifically to an audit firm.

17. Is it appropriate not to require disclosure of the individual who performed the EQR? If not, should disclosure of the engagement quality reviewer be required when the EQR is performed by an individual outside the accounting firm issuing the audit report or should the disclosure be required in all cases?

AngloGold Ashanti does not comment on this question as it relates specifically to an audit firm.

18. Is it appropriate not to require disclosure of the person that performed the Appendix K review?

AngloGold Ashanti does not comment on this question as it relates specifically to an audit firm.

19. Is it appropriate not to require disclosure of persons with specialized skill or knowledge in a particular field other than accounting and auditing not employed by the auditor or persons employed or engaged by the company who provided direct assistance to the auditor?

If it is deemed relevant to users of financial statements, this information would be more appropriately referred to in a report of the audit committee specifying the matters they considered when confirming or otherwise determining the independent public accountants appointed to perform the audit.
20. **Would disclosure of off-shoring arrangements (as defined in the release) or any other types of arrangements to perform audit procedures provide useful information to investors and other users of the audit report?** If yes, what information about such arrangement should be disclosed?

It is the responsibility of the audit committee to determine, to select and approve the appointment of the independent accountant tasked with auditing the financial statements of the company. Accordingly it is the audit committee’s role to determine the level of work and to approve the other audit firms that the lead engagement firm may select in assisting them to review certain work.

This role of the audit committee exists regardless as to whether they are an independent public accountant firm for whom the lead engagement firm assumes responsibility pursuant to AU Sec.543 or whether it is an independent public accounting firm not implied by the lead engagement firm that performed audit procedures on the most recent financial statements.

Accordingly disclosure of off-shore arrangements should not be made within the realms of the audit report but could be within an audit committee report covered within Form 10K or Form 20F.

21. **Would disclosure in the audit report of other participants in the audit provide useful information to investors and other users of the audit report?**

Disclosure in the audit report of other participants in the audit does not provide useful information to investors and users of the audit report.

The selection of auditors to participate in an audit falls within the domain of the audit committee and accordingly requiring auditors to report on the other participants in an audit falls within the realms of an audit committee’s responsibilities and accordingly could be perceived as the auditor performing the duty of management or the board of directors.

Accordingly AngloGold Ashanti believes that the disclosure in the audit report of the other participants does not add to the useful information to investors. AngloGold Ashanti recommends that such information if deemed useful to investors and users should be disclosed elsewhere within the annual report or proxy statements and neither within the annual reporting of the entity nor within the audit report.

22. **Are the proposed requirements sufficiently clear and appropriate with respect to identifying other participants in the audit?** If not, how should the proposed requirements be revised?

It is AngloGold Ashanti’s assertion that the proposed requirements should be revised and should not form part of the audit report as stated above.

AngloGold Ashanti supports the premise included in International Standards on Auditing ("ISA 600") that a group auditor is responsible for the direction, supervision and performance of the group audit engagement and for the group audit opinion. The ISA 600 model depends, however, on the group auditor being able to use the work of other auditors responsible for subsidiary and other component parts of the group, especially when that entity is multinational as current jurisdictional laws do not generally allow for one audit firm to take responsibility across jurisdictions in separate countries.
ISA 600 does specify the level of involvement group auditors are expected to have in the work of other auditors in order to obtain sufficient appropriate audit evidence on which to base the opinion on the group financial statements. We note that audit firm networks help this process because the group auditor is using the same methodology as other audit firms that operate within the same network.

It is a function of the audit committee in approving and selecting the independent public accountants to audit the company to review and understand the level of involvement that other auditors may have in the audit process in developing the group audit opinion and accordingly should take responsibility for the selection of the group auditors as well as those assisting auditors.

23. Are the proposed requirements sufficiently clear as to when the name of a public accounting firm or a person would be required to be named in the audit report? Is it appropriate that the name of the firm or person that is disclosed is based on whom the auditor has the contractual relationship?

AngloGold Ashanti does not support the disclosures as stated but would support such disclosures within other areas of the Form 20F or Form 10K reporting requirements.

24. Would disclosure in the audit report of other participants in the audit have an impact on the ability of independent public accounting firms to compete in the marketplace? If so, how would the proposed requirement’s impact a firm’s ability to compete in the marketplace?

AngloGold Ashanti does not comment on this question as it relates specifically to an audit firm.

25. Are there any challenges in implementing a requirement regarding the disclosure of other participants in the audit? If so, what are the challenges and how can the Board address them in the requirements?

The naming of other auditors within an audit report may have consequential impact on the necessity of the entity to obtain consents in accordance with other sections of the Securities Exchange Commission Rules.

Accordingly our recommendation that such disclosures, if deemed relevant to investors and users of financial statements be made elsewhere within the Form 10K or Form 20F, would ensure that an entity does not need to obtain multiple consents at the time it is preparing any regulatory filing where consents for the use of the name of the auditor in its financial statements are required.

26. Is the percentage of the total hours in the most recent period’s audit, excluding EQR and Appendix K review, a reasonable measure of the extent of other participants’ participation in the audit? If not, what other alternatives would provide meaningful information about the extent of participation in the audit of other participants?

Percentage of total hours in the most recent period’s audit is not a reasonable measure of the extent of other audit firm’s participation in the audit. A more reasonable measure would be the extent to which the lead engagement firm was responsible for auditing the asset base and revenue of the entity and the participation of the other
firms, by firm, in these metrics.

27. What challenges, if any, would requiring the percentage of audit hours as the measure of the other participants' participation present?

Audit hours are not a representative measure of other participant's participation in the audit as these can be impacted by locational and jurisdictional issues. Some of an entities locations may not have computerized or other similar systems and although not material to the entire operation using financial metrics, may require substantially more audit hours to complete an independent audit. Further, the scale rates of audit firms may differ materially across jurisdictions due to country specific circumstances and thus in some circumstances a substantive based audit maybe more efficient and effective than other types of audit approaches.

28. Should the Board require discussion of the nature of the work performed by other participants in the audit in addition to the extent of participation as part of the disclosure? If so, what should be the scope of such additional disclosures?

Any discussion with respect to the nature of the work performed by other participants in the audit are more correctly disclosed in an audit committee report rather than as extended reporting by an independent accounting firm. The nature of work performed in an audit is developed via discussions with the audit committee and is not, necessarily, determined by any lead engagement firm or the respective participant firms acting alone.

29. Would the proposed disclosure of the percentage of hours attributable to the work performed subsequent to the original report date in situations in which an audit report is dual-dated be useful to users of the audit report?

As stated above, audit hours are not a useful measure in determining actual participation in an audit.

30. Is the example disclosure in the proposed amendments helpful? Would additional examples be helpful? If so, what kind?

As stated above, audit hours are not a useful example of participation in an audit and as such, the example disclosure in the proposed amendments is not helpful.

31. Should disclosure of the names of all other participants in the audit be required, or should the Board only require disclosing the names of those whose participation is 3% greater? Would another threshold be more appropriate?

Should investors and other users of financial reports believe that the disclosure of all of the names of the audit firms involved in the determination of the group audit's opinion is relevant and necessary then a minimum percentage threshold should be included. AngloGold Ashanti believes that this should be linked to the size of assets of the entity rather than any number of hours or some other arbitrary measurement.

32. Is the proposed manner in which other participants in the audit whose individual extent of participation is less than 3% of total hours would be aggregated appropriate?

As stated above, audit hours are not a suitable measure.
33. Are the requirements to disclose the name and country of headquarters' office location of the referred-to firm sufficiently clear and appropriate?

Should the disclosure of the firms that have assisted the lead engagement firm in determining its group audit opinion be deemed relevant and necessary by investors and users of financial statements, AngloGold Ashanti would recommend that the name and office location and country of the respective firms be disclosed.

34. Are there any challenges associated with removing the requirement to obtain express permission of the referred-to firm for disclosing its name in the audit report? If so, what are the challenges and how could they be overcome?

In determining whether express permission is required, would be dependent on separate country specific legislation. In a multinational audit a specific country law may not allow the auditor's name to be referred to elsewhere within financial statements and accordingly how this information is disclosed, would be a challenge.

35. In situations in which the audit report discloses both the referred-to firm and other participants in the audit, would using different disclosure metrics (e.g., revenue for the referred-to firm and percentage of the total hours in the most recent period's audit for the other firms and persons) create confusion?

AngloGold Ashanti believes that using audit hours creates confusion using the arguments as set out above and accordingly other metrics should be considered, if investors and users of financial statements believe the information relevant.

Yours faithfully

S. VENKATAKRISHAN
EXECUTIVE DIRECTOR and CHIEF FINANCIAL OFFICER
Public Company Accounting Oversight Board  
1666 K Street, N.W. 
Washington, D.C. 20006-2803 
United States  

Chris Barnard  
Actuary  

17 October 2011  

- Release No. 2011-007  
- PCAOB Rulemaking Docket Matter No. 029  
- Improving the Transparency of Audits: Proposed Amendments  
  to PCAOB Auditing Standards and Form 2  

Dear Sir.

Thank you for giving us the opportunity to comment on your release on Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2. You are proposing amendments to your standards that would improve the transparency of public company audits. The proposed amendments would: (1) require registered public accounting firms to disclose the name of the engagement partner in the audit report, (2) amend the PCAOB's Annual Report Form to require registered firms to disclose the name of the engagement partner for each audit report already required to be reported on the form, and (3) require disclosure in the audit report of other independent public accounting firms and other persons that took part in the audit.

I strongly support the proposed amendments. These will definitely increase transparency and accountability, and should therefore act to improve the engagement partner’s standard of professionalism, due care and professional scepticism. It is interesting to consider the alternative, or current situation. What are the advantages of not disclosing the engagement partner in the audit report? Why should the engagement partner, who leads and is largely
responsible for the audit, be anonymous? The release provides some arguments against
disclosure here, but these seem mostly spurious and / or specious. For example “some
auditors suggested that the identity of the engagement partner would not be useful to
investors”.1 This is flatly refuted by the investors themselves,2 and we should give more
credence to the actual views of investors, rather than auditors’ perceptions thereon.

I have some specific comments, which I will address in answer to your specific questions.

Answers to specific questions raised by the PCAOB

1. Would disclosure of the engagement partner’s name in the audit report enhance investor
protection? If so, how? If not, why not?

Yes. It would be more transparent, and easier for investors to contact the engagement
partner. The engagement partner would be more accountable, and this should act to improve
the engagement partner’s standard of professionalism, due care and professional scepticism.

2. Would disclosing the name of the engagement partner in the audit report increase the
engagement partner’s sense of accountability? If not, would requiring signature by the
engagement partner increase the sense of accountability?

Disclosing the name of the engagement partner should increase accountability. Requiring a
signature should increase accountability even more. This is human nature.

3. Does the proposed approach reflect the appropriate balance between the engagement
partner’s role in the audit and the firm’s responsibility for the audit? Are there other
approaches that the Board should consider?

I believe that the proposed approach provides the right balance here. The name of the
engagement partner would be disclosed, and the audit firm would sign the report.

4. Would the proposed disclosure clearly describe the engagement partner’s responsibilities
regarding the most recent reporting period’s audit? If not, how could it be improved?

Yes. The proposed disclosure is quite clear.

---

1 See release, page 9.
2 See release, page 4: “Investor members of the SAG generally supported a signature requirement”; and
“most IAG members expressed support for such a requirement”. See also page 21: “Investors
have requested greater transparency about who is performing the audit and how much of the audit
they have performed”. There are other examples in the release.
5. Would the proposed disclosure clearly describe the engagement partner's responsibilities when the audit report is dual-dated? If not, how could it be improved?

Yes. The proposed disclosure is quite clear.

6. Would the proposed amendments to the auditing standards create particular security risks that warrant treating auditors differently from others involved in the financial reporting process?

Many professionals, such as doctors, lawyers, accountants and actuaries have to sign reports containing findings, opinions and judgements, which may be controversial. I am not aware of any unusual security risks in this regard.

21. Would disclosure in the audit report of other participants in the audit provide useful information to investors and other users of the audit report? Why or why not?

Yes. Investors have stated a preference for disclosing this information. Again, there is no reason not to disclose the information.

22. Are the proposed requirements sufficiently clear and appropriate with respect to identifying other participants in the audit? If not, how should the proposed requirements be revised?

The proposed requirements are quite clear.

23. Are the proposed requirements sufficiently clear as to when the name of a public accounting firm or a person would be required to be named in the audit report? Is it appropriate that the name of the firm or person that is disclosed is based on whom the auditor has the contractual relationship?

Yes, the proposed requirements are sufficiently clear. I agree that the name of the firm or person that is disclosed should be based on whom the auditor has the contractual relationship. This is reasonable, and clearly appropriate.

24. Would disclosure in the audit report of other participants in the audit have an impact on the ability of independent public accounting firms to compete in the marketplace? If so, how would the proposed requirement impact a firm's ability to compete in the marketplace?

I do not believe that there will be any adverse impact on competition. We are only disclosing the practical realities here.

---

3 See release, comments at page 21.
25. Are there any challenges in implementing a requirement regarding the disclosure of other participants in the audit? If so, what are the challenges and how can the Board address them in the requirements?

*I do not foresee major challenges in this regard.*

26. Is the percentage of the total hours in the most recent period’s audit, excluding EQR and Appendix K review, a reasonable measure of the extent of other participants’ participation in the audit? If not, what other alternatives would provide meaningful information about the extent of participation in the audit of other participants?

*Yes, I support the total hours approach. This best represents the quantum of work actually done, and is a superior measure compared with monetary apportionment.*

27. What challenges, if any, would requiring the percentage of audit hours as the measure of the other participants’ participation present?

*No insurmountable challenges. Recording hours is common practice worldwide.*

28. Should the Board require discussion of the nature of the work performed by other participants in the audit in addition to the extent of participation as part of the disclosure? If so, what should be the scope of such additional disclosures?

*I would generally support such discussion as part of the disclosure, but only at the discretion of the audit firm.*

Yours faithfully

Battelle & Battelle LLP appreciates the opportunity to comment on the PCAOB’s proposed rule *Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2* (the Proposed Rule). We are a registered public accounting firm serving middle-market issuers.

**Overall Comments on the Proposed Audit Report Disclosure**

We do not support disclosure of the engagement partner’s name in the audit report because the report is issued upon the authority of the firm and not the authority of the individual engagement partner. In fact the PCAOB’s own standards prohibit the engagement partner from signing the firm’s report until he or she has obtained concurring approval of issuance from the engagement quality reviewer assigned by the firm. While it is true that a firm could not issue an audit report that is inconsistent with the views of the engagement partner, the engagement partner also could not issue an audit report that is inconsistent with the views of the engagement quality reviewer or certain other firm consultants. We do not accept the argument that disclosing the engagement partner’s name in the audit report personally would cause the engagement partner to exercise greater care in performing the audit. The consequences to an engagement partner of failing to exercise due care in the performance of an audit are significant, and they would be no more or less significant if the engagement partner were named in the audit report.

We also do not believe that disclosing the identity of the engagement partner within the audit report would provide an incentive for the firm to improve the quality of their engagement partners. The firm is responsible for assigning the engagement partner and the balance of the engagement team as well as the engagement quality reviewer. The issuer’s audit committee, and not the investors, is responsible for engaging the audit firm. If the audit committee has concerns about the integrity, objectivity, independence or competency of the engagement partner, they would address those concerns with the firm. If they were not satisfied with the firm’s response, they would likely consider engaging another audit firm. These types of decisions are appropriately left with the audit committee and not with the individual shareholders. Providing greater transparency to shareholders would serve no useful purpose because it is not their responsibility to assess the qualifications of the audit firm or the engagement partner.
Naming the engagement partner in the audit report may lead to a misconception by investors in terms of who is responsible for the audit and the issuance of the audit opinion. Audits are accomplished because of all of the resources of a firm. Therefore, in addition to the engagement quality reviewer and firm consultants, there can be other partners supporting the firm’s signature on an engagement, and the lead engagement partner justifiably relies on them.

The framework that supports a registered public accounting firm’s ability to perform high-quality audits is the firm’s system of quality control over its accounting and auditing practice. A quality control system is structured to provide reasonable assurance that firm personnel comply with applicable professional standards and applicable regulatory and legal requirements, and that the firm issues reports that are appropriate in the circumstances.

The PCAOB’s auditing and quality control standards require firms to assign engagement partners with the integrity, objectivity, independence and competence to discharge their responsibility. One element of a firm’s quality control system is the establishment of policies and procedures designed to provide reasonable assurance that a firm has skilled professionals to perform engagements in accordance with professional standards and regulatory and legal requirements and to enable a firm to issue reports that are appropriate in the circumstances. Although the skill and expertise of the engagement partner undoubtedly contribute to audit quality, even an engagement partner who possesses high levels of intelligence, integrity, honesty, motivation, and aptitude for the profession cannot fulfill this element of quality control alone. It takes the extensive resources of a firm to ensure that the capabilities and competence of its professionals are developed through professional education, continuing professional development, work experience, and mentoring by more experienced personnel.

To maintain quality audits, it is critical that all quality control elements be addressed by the firm. Many of these elements cannot be addressed by and are not the sole responsibility of the engagement partner, such as establishing policies and procedures designed to provide reasonable assurance that personnel comply with independence, integrity, objectivity, and other relevant ethical requirements. In addition, some elements of quality control, such as the acceptance and continuance of engagements, require the approval of professionals outside of the engagement team.

Thus, we do not believe that requiring the engagement partner to be named in the audit report would enhance audit quality as it is not the engagement partner alone who signs an audit opinion, but rather the firm, which represents the collective efforts of many seasoned professionals.

The Proposed Rule indicates that the disclosure requirement would increase transparency about who is responsible for performing the audit, which could provide useful information to investors. The audit committee is directly responsible for the appointment, compensation, and oversight of the work of the auditor, and the auditor reports directly to the audit committee. Audit committees therefore represent the investors in this important role. This role has been reinforced by various SEC rules and regulations resulting from the Sarbanes-Oxley Act, as well as stock exchange listing requirements.

To ensure that the audit committee chooses its independent auditor on an informed basis, the audit committee usually develops a list of criteria and expectations that they believe the independent auditor should meet. These criteria include, among others, evaluating the partners who will be assigned to the client service team. During the proposal process the audit committee generally inquires about the SEC and relevant industry experience of the client service team, including the engagement partner.
After an audit committee selects an auditing firm, two-way communication becomes a natural part of an auditor's relationship with the audit committee. Audit committees receive regular partner-level attention during every phase of the audit, as necessary. In addition, throughout the year, the engagement partner communicates with the audit committee during the performance of quarterly reviews of interim financial information. The audit committee generally asks probing questions of management, the internal auditor, and the independent auditors, which allows it the opportunity to continually assess the competency of the engagement partner.

We believe there is currently significant transparency regarding the engagement partner's involvement in the audit. This transparency is achieved through the supervision by the audit committee, which is charged with the responsibility for the appointment and oversight of the work of the auditor on behalf of the investors. Therefore, we do not believe that increased transparency about the identity of the engagement partner would be useful to investors. One potential unintended consequence may be that investors could second guess an audit committee on the selection of an audit firm and the engagement partner. This potentially could result from situations where the engagement partner is associated with another current or former audit client experiencing difficulties (such as bankruptcy, a going concern uncertainty, adverse publicity, etc.) that may not relate to audit quality.

Overall Comments on the Proposed Amendment to Form 2

Based on our above response to the proposed audit report disclosure of the engagement partner's name, we do not support the proposed amendment to Form 2.

Overall Comments on the Disclosure of Other Participants in the Audit

We believe this issue to be separate from the above discussion and believe it merits its own separate proposed rule. However, we do support the disclosure of other participants in the audit. The proposed rule changes will provide investors and other users of the audit report with greater transparency into the other participants in the audit. Currently, when the lead auditor reports and assumes responsibility for work performed by other auditors, the users of the audit report cannot identify other participants in the audit in order to evaluate the other auditors. As such, we support the proposed rule to require additional disclosure of other participants in the audit.

Conclusion

We appreciate the opportunity to provide our comments to the PCAOB for further consideration.

Sincerely,

Battelle & Battelle LLP

Washington, DC 20006-2803

Re: PCAOB Release No. 2011-007, Rulemaking Docket Matter No. 029,

Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2

Dear Members and Staff of the Public Company Accounting Oversight Board:

BDO USA, LLP welcomes the opportunity to comment on the Public Company Accounting Oversight Board’s (the PCAOB or Board) Release No. 2011-007, Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2 (the Release). We recognize the need to increase transparency about the audit process, particularly as it relates to promoting the performance of high quality audits, and we are committed to actively participating in efforts to enhance audit performance. We believe that many of the recent efforts initiated by the PCAOB, including changes to the auditor’s report and enhanced audit committee communications, support such transparency.

The Board explains in the Release that inspections show that there is still significant room for improvement in complying with PCAOB auditing standards and that disclosing the name of the engagement partner may be one means of promoting better performance. As noted in our comment letter dated December 14, 2011, regarding PCAOB Release No. 2011-006, Auditor Independence and Audit Firm Rotation, we share the Board’s concern regarding the frequency and types of audit deficiencies found during inspections. However, while we are committed to the performance of high quality audits, we believe that understanding the root causes of these deficiencies and addressing them with targeted responses is the best way to improve audit quality. In contrast, we do not believe that disclosing the name of the engagement partner will achieve this objective and may carry with it certain unintended consequences.

We also have continuing concerns about the potential impact of the Release on the liability of the engagement partner under the Securities laws and other legal regimes. We are also concerned about any incremental liability that may be taken on by identification in the audit report of other firms/participants in the audit. Accordingly, we believe it is important for the PCAOB to perform a complete analysis of these implications.

With respect to disclosure of other firms/participants in the audit, while we understand that more information about the composition of the cadre of audit resources may be useful to investors, we are concerned that it could detract from the perception of the principal auditor’s primary responsibility for the overall audit. If this part of the Release is adopted,
however, we suggest alternative disclosure thresholds that we believe are more practical than those proposed, but which should still satisfy investor needs.

Our views on the main areas covered by the Release are provided within the sections below, with a reference to the relevant questions posed by the Release shown parenthetically, where applicable.

Disclosure of the Name of the Engagement Partner

We do not believe that audit quality would be improved in a meaningful way through disclosure of the name of the engagement partner. We understand that some stakeholders believe that such disclosure would improve audit quality by increasing the engagement partner’s sense of accountability so that greater care would be taken in performing the audit. As described below, we believe that there is already a sufficient level of accountability in the existing environment, obviating the need for engagement partner identification. Moreover, any such disclosure in the audit report could have unintended consequences.

Engagement Partner Accountability
(questions 1-3)

As stated in our comment letter to the 2009 PCAOB request for public comment on the Concept Release on Requiring the Engagement Partner to Sign the Audit Report, we believe that engagement partners are already keenly aware of their responsibilities and accountability. In our view, disclosure of the name of the engagement partner would not have an impact on engagement partners’ accountability because, as described below, they are already held accountable to multiple external parties, including regulators, investors, and audit committees, in addition to the audit firm.

(a) PCAOB and SEC

The PCAOB performs inspections to evaluate the sufficiency of a firm’s quality control system and the performance on individual audit engagements. Further, engagement partners are also subject to enforcement actions by the PCAOB and SEC, which can significantly impact the careers of engagement partners and are visible to the public. Determinations of improper professional conduct can lead to various penalties, including barring an individual from practicing before those bodies.

(b) Investors

There are various mechanisms under the law for investors to bring legal action against engagement partners if there is a perceived audit failure. The potential for litigation is a substantial incentive to maintain audit quality and a clear and strong reminder to engagement partners of their accountability.
(c) Audit committees

Acting on behalf of investors and other stakeholders, audit committees provide oversight over the audit process. Under the Sarbanes-Oxley Act of 2002, audit committees are responsible for the appointment, compensation and oversight of the auditor, and for pre-approving all audit and non-audit services provided by the audit firm. Engagement partners have frequent interactions with audit committees on substantive audit issues where they may be subject to probing questions and ultimately to evaluation by the audit committee, which is indicative of this line of accountability.

(d) The audit firm

Through their systems of quality control, audit firms are required to monitor and evaluate the quality of engagement partners, as follows:

- Development of engagement partner competence and authority to perform the role;
- Performance evaluations and compensation structures that appropriately recognize and reward technical competence, professionalism, and commitment to ethical principles and take action when performance is lacking. Any PCAOB inspection findings would ordinarily be an important part of the evaluation process;
- Engagement quality reviews to evaluate the significant judgments made and conclusions reached in forming an overall conclusion on the engagement; and
- National office oversight of engagement performance through technical consultations or otherwise.

This direct line of accountability of the partner to the firm is embedded in day to day activities of the partner.

Potential Liability
(questions 7-9)

We appreciate the Board’s change from the Concept Release in no longer providing for the signature of the engagement partner in the audit report. However, we believe that even disclosure of the name of the engagement partner in the audit report has the potential to increase liability risk under Section 11 of the Securities Act of 1933 (Section 11) and Section 10(b) and Rule 10-b(5) of the Securities Exchange Act of 1934 (Section 10). Accordingly, we believe that the Board should perform a full assessment of the impact of these proposed amendments on engagement partner liability before concluding on the appropriateness of the proposals.

We are concerned that disclosing the name of the engagement partner within the audit report may require the engagement partner to file a consent pursuant to Section 7 of the Securities Act of 1933 and Rule 436, which would trigger Section 11 liability. Accordingly, we suggest that the PCAOB work with the SEC to clarify that any disclosure requirement
would meet the objective of the Release of not increasing the engagement partner’s liability under Section 11 and that consent pursuant to Section 7 and Rule 436 for engagement partners is not required.

With respect to Section 10(b) liability, while we understand that the United States Supreme Court has clarified what must be shown to prove that an individual or firm made an untrue statement of a material fact in violation of Section 10(b) and 17 C.F.R. § 240.10b-5 (Rule 10b-5)\(^1\), it is uncertain how lower courts will apply the Court’s ruling to engagement partners, so claims under Section 11 may nevertheless be asserted against them. The costs to defend against any such claims, even meritless ones, are potentially significant and defending such personal lawsuits would be highly disruptive to the daily business of engagement partners. Taking a partner out of the practice while defending a lawsuit would be extremely expensive and ultimately increase the costs of providing audits.

In addition to our concerns about increased liability risk as it relates to disclosure of the name of the engagement partner, we are also concerned about increased liability risk as it relates to disclosure of other participants in the audit.

For these reasons, we recommend that the Board conduct a thorough legal analysis before considering adoption of any of the proposed amendments relating to identification of the engagement partner.

**Proposed Amendment to Form 2 to Disclose Name of Engagement Partner**

(questions 11-13, and 15)

As discussed above, we do not believe that disclosure of the name of the engagement partner will increase the partner’s sense of accountability and resulting audit quality. However, if the Board nevertheless concludes that such identification will be required, we believe that disclosure within Form 2 is preferable to disclosure within the audit report. Disclosure of the engagement partner name in both the audit report and Form 2 would be redundant and, therefore, unnecessary. As noted in the Release, the use of Form 2 provides a convenient mechanism to retrieve information about a firm’s engagement partners for all of its audits. Additionally, such an approach provides for consistency in the manner of reporting such that investors can easily ascertain the names of the engagement partners for any audit reports issued during the reporting period. Further, disclosing the name of the engagement partner solely in Form 2 may help to alleviate the concerns we noted above relating to engagement partner liability.

In addition to disclosure of the name of the engagement partner on Form 2, the Release requests comment on whether firms should be required to file a special report on Form 3 whenever there is a change in engagement partners before the end of the mandatory

---

\(^1\) The U.S. Supreme Court issued its decision in Janus Capital Group, Inc. v. First Derivative Traders in June 2011. This decision addressed what it meant to “make any untrue statement of material fact” under Section 10(b) and Rule 10b-5(b), which was held to mean, for the purposes of Rule 10b-5, that the maker of a statement is the person or entity with ultimate authority over the statement, including its content and whether and how to communicate it.
rotation period, to explain the reasons for the change. We do not believe that such additional reporting would be necessary given the proposed amendments to Form 2 that provide for disclosure of the name of the engagement partner for each audit performed by a firm during the annual reporting period. Moreover, disclosure of such changes without disclosing the reasons could create market uncertainty, while disclosure of changes precipitated by personal matters unrelated to audit quality would be overly intrusive.

Disclosure of Other Participants in the Audit (questions 16-21)

The Release would require disclosure in the audit report of the names, locations, and extent of participation of other independent public accounting firms, and other persons not employed by the auditor, that took part in the most recent period’s audit when the auditor assumes responsibility for or supervises their work. As previously stated in our letter, while we understand that more information about the composition of the cadre of audit resources may be useful to investors, we are concerned that it could detract from the investors’ perception of the principal auditor’s responsibility for overseeing the audit. However, we have provided our views on this element of the Release in the event that the Board decides to proceed with the recommendations.

We agree that it is appropriate to not require disclosure of (1) individuals performing the engagement quality review, (2) persons with specialized skill or knowledge in a field other than accounting or auditing, (3) persons employed or engaged by the company who provided direct assistance to the auditor, or (4) off-shore arrangements to the extent that that work is performed by another office of the same accounting firm (even though that office may be located in a country different from the country where the firm is headquartered).

Our concerns regarding the increased liability risk as it relates to other participants are included within the preceding section entitled Potential Liability, beginning on page 3.

Measurement Criteria for Disclosure and Nature of Disclosure (questions 25-28)

The Release suggests that the most appropriate quantitative measure of the other participants’ relative participation in the audit is the percentage of total hours in the most recent period’s audit, excluding the hours for engagement quality and Appendix K reviews. While this measurement criterion is likely the most appropriate and the data easily obtainable by engagement teams, we believe there are certain implementation issues that should be considered before establishing such a requirement. This includes determining the appropriate audit hours to use when audit work serves two purposes (e.g., when there is some overlap between work performed on statutory audits of subsidiaries pursuant to foreign laws and that used in connection with the group audit of the issuer).

The Release also asks if a discussion of the nature of the work performed by other participants in the audit should be required. We do not believe that such disclosure would be helpful without providing the context within which such work was performed, which would be difficult to summarize in a meaningful way. To put such description in the proper
context would require significant amount of background and other information pertinent to the conduct of an audit, and would generally not be well understood by users of the financial statements not expert in the performance of an audit. Providing such information would therefore run the risk of being extremely lengthy and potentially misleading.

Threshold for Disclosure
(question 31)

The Release explains that the Board’s intention in proposing a 3% threshold for disclosing other participants in the audit is to provide investors and other users of the financial statements with the most meaningful information about participants in the audit. However, we believe that a 3% threshold is too low and, in that regard, suggest that it instead be set at 10% or 20%, as these percentages are consistent with disclosures for material matters required by other regulatory and standard setting bodies, such as those relating to segment reporting (10%) and for determining what constitutes a “substantial role” under the PCAOB registration rules (20%). A higher than 3% threshold would also be consistent with views mentioned by some investor and issuer members of the Standing Advisory Group at its November 2011 meeting.

Once an appropriate threshold is established, we also believe it would be appropriate to provide such disclosures within ranges (e.g., firms between 10%-20%, 20%-40%, etc.). The use of ranges would simplify reporting and alleviate any concerns about the precision of estimates that would need to be made in determining the extent of participation.

*****

We appreciate the opportunity to comment on the Release and are available to answer any questions you may have regarding our views. Please direct any questions to Chris Smith, Audit and Accounting Professional Practice Leader, at 310-557-8549 (chsmith@bdo.com) or Susan Lister, National Director of Auditing, at 212-885-8375 (slister@bdo.com).

Very truly yours,

/s/ BDO USA, LLP

Re: PCAOB Rulemaking Docket Matter No. 29, Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2

Dear Office of the Secretary:

We appreciate the opportunity to respond to the Public Company Accounting Oversight Board’s (“PCAOB” or “Board”) Release No. 2011-007 on Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2 (“Release”). We are supportive of the Board’s continuous efforts to improve transparency to investors and other financial statement users. This letter includes our views and observations on engagement partner identification and identification of other participants in the audit as set forth in the Release.

Engagement Partner Identification

We do not support engagement partner identification in audit reports, as we do not believe it will serve to advance the Board’s goal of improving audit quality. We have concerns that the impact of such a mandate would result in unintended consequences. We believe that identifying the audit partner places undue emphasis on that individual in the public’s eye rather than all of the elements of the quality control system that lead to expression of a firm’s opinion, such as the engagement quality reviewer.

Currently, an engagement partner is accountable to numerous individuals. They are accountable directly to members of a firm’s quality control structure who conduct internal inspections of audit engagements and evaluate partners, and to their fellow partners in their firm. Engagement partners are held accountable by clients’ audit committees, management and investors. In addition, engagement partners are held accountable by regulators of the PCAOB, the SEC and indirectly to various other industry regulators of our clients. We do not believe that identifying an engagement partner in the audit report will increase the accountability they already feel or incentivize those partners to conduct higher quality audits than they already perform now.

While we acknowledge that identifying the engagement partner in the audit report would increase transparency of that information, we question whether that information is valuable to
investors, and it is unclear how that information can be used by investors to better understand the audit or audit process. What information about an audit partner will investors have and use to make any meaningful evaluation about the audit? Audits are performed by teams of individuals, many of whom perform critically important functions, like staff performing critical audit steps, subject matter experts, technical reviewers, third party specialists, etc. Will any evaluation based upon limited information about the audit partner alone really be appropriate without evaluating the entire audit team and, for that matter, the conduct of the audit?

We also have concerns that identifying an engagement partner in the audit report could increase their liability exposure in litigation. While we understand it is not the intent of the PCAOB to increase the liability of the engagement partner, it could be an unintended consequence of the Release.

However, we would not object to the identification of the engagement partner in Form 2 if the Board believes that information is responsive to investors’ requests for increased transparency.

**Identification of Other Participants in the Audit**

We support the Board’s efforts to increase transparency and enhance users understanding of the audit process. However, we have concerns that providing the names of other independent accounting firms and others not employed by the auditor, when the auditor assumes responsibility for or supervises the work of those participants, would appear to diminish or change the overall responsibility of the principal auditor. Investors may place undue reliance on other participants listed in the report or misinterpret their actual participation in audit. We also believe this requirement may undermine the supervisory and review concept built into our quality control standards and doesn’t speak to the principal auditor’s role in planning, supervising or reviewing the work performed by the other participants. We do not believe it is possible for investors to make any informed decision about the impact on audit quality simply by naming other participants without also evaluating the materiality and complexity of the information being tested, nature of the work performed, the qualifications of the participants who perform that work, the extent of the planning, supervision and review performed by the principal auditor, etc.

We also have concerns that the identification of other participants could be a competitive disadvantage for smaller firms when compared to larger firms who have similar branding of their network firms, *i.e.*, use of a common name. Investors may make incorrect assumptions about the quality of network firms based on similarity of their names to the detriment of smaller firms that lack a similar network structure.

If the Board feels the current quality control standards on supervision of other participants used in an audit is unsatisfactory, we respectfully propose the Board tackle those issues by
amending current quality control standards or proposing additional quality control standards to address those issues.

*****

We appreciate the opportunity to express our views for the Board’s consideration. If you have any questions or would like to discuss these matters further, please contact Steve Rafferty or Jennifer George at 417.831.7283, or by email at srafferty@bkd.com or jgeorge@bkd.com.

Sincerely,

BKD, LLP

BKD, LLP
Comments of the Black Economic Council, Latino Business Chamber of Greater Los Angeles and the National Asian American Coalition on Need for Greater Transparency Regarding Public Audits

The Black Economic Council, the Latino Business Chamber of Greater Los Angeles and the National Asian American Coalition are highly interested in providing in-depth comments regarding Docket Matter No.29 to improve the transparency of public company audits. These audits are generally neither transparent nor understandable to the public and often are not understandable to the regulators who rely upon their transparency.

Due to our being informed about this rulemaking matter on January 6\textsuperscript{th}, 2012, we are initially providing very abbreviated comments. But, we will seek, within the next few weeks, leave to amend, so that more comprehensive comments can be made.

The Black Economic Council, the Latino Business Chamber of Greater Los Angeles and the National Asian American Coalition are all minority based business organizations that serve the nation’s 120 million minorities, as well as our nation’s six million minority-owned businesses. Historically, minority groups have played a very limited, if not negligible, role before the PCAOB. It is our intention, given our DC regulatory and congressional liaison office, headed by Deputy Director Mia Martinez, to play a greater role in the future.
Although the purpose of audits is to provide a specialized type of transparency and integrity, the public as a whole, and particularly 120 million minorities, have very little knowledge of this process and often even less confidence in this process. In part, the lack of minority confidence may be attributable to the historic role that discrimination has played on who becomes a CPA at a large law firm, particularly at a Big Four CPA firm.

To date, the Big Four remain virtually all white and disproportionately male. All three organizations herein, in 2010, sought information from each of the Big Four firms relating to the diversity of their workforce. This information was to be submitted to the California Public Utilities Commission in regard to its diversity oversight of Sempra Energy, Southern California Edison, Pacific Gas and Electric, Verizon and AT&T. Each of the four CPA firms refused to provide such information, apparently on the ground that this would harm their reputation before the CPUC, the regulator of the five companies they audited.

As a result of the general lack of transparency in audits, minority investors, who are disproportionately small, are at a very special disadvantage in their ability to analyze audit reports.

Initially, we will briefly comment on the three amendments to PCAOB standards set forth in Docket Matter No. 29. But, we do not concur with the unnecessarily narrow focus of the amendments which fail to address key elements of transparency. The audit report should be in plain English and easily understandable by unsophisticated small investors. Further, the audit report should have a one page simple description of its most salient points.

It should be noted that the new Consumer Financial Protection Bureau has begun its efforts to do so regarding credit cards and mortgage originations. Each form is required to have a simple one page on rights and responsibilities. Further, the Pew Charitable Trusts, headquartered in DC, has proposed a very commendable one page consumer format for checking accounts.

All three minority groups are working closely with both Pew and the CFPB on these matters. As a result, we offered to the PCAOB our modest expertise, if it wishes such. The groups’ deputy director in DC, Mia Martinez, is prepared to play such an initial role and is presently attempting to do so for the Federal Communications Commission in her role on the FCC’s Consumer Advisory Council. (mmartinez@naacoalition.com)
The three minority groups are also deeply involved in the contentious Volcker rule attempting to bring transparency and order to unnecessary risk taking. Our initial position filed before the Securities and Exchange Commission, Federal Reserve, Federal Deposit Insurance Corporation and Office of the Comptroller of the Currency is consistent with former Federal Reserve Chairman Mr. Volcker's own position on simplicity and clarity.\(^1\) The three groups, for example, stated in their initial Volcker rule comments that the Ten Commandments and the Gettysburg Address were both less than 400 words. Yet, both are well remembered and are fully understandable by the public at large.

**Specific Initial Observations**

Firstly, we support requiring the audit report to state the name of the engagement partner responsible for the most recent period’s audit. Our groups have found substantial difficulty in securing such information and activities relating, for example, to Deloitte & Touche, in our pending Sempra Energy rate case involving a $2.4 billion rate increase dependent on the accuracy of the Deloitte & Touche report.

Similarly, we agree with the second requirement for CPA firms to disclose on Form 2 the name of the engagement partner for each audit report required to be reported on Form 2.

Lastly, we support disclosure in the audit report of other independent accounting firms that took part in the most recent period’s audit.

Our experience in dealing with Deloitte & Touche in the pending $2.4 billion Sempra rate case, where the Black Economic Council, National Asian American Coalition and Latino Business Chamber of Greater LA are the only minority business representatives, bears out these problems, albeit not directly. Deloitte & Touche despite being the auditor for more than fifty continuous years of Sempra has refused to allow itself to be subject to cross-examination regarding its 2007-2010 audit reports prepared for Sempra as it seeks to justify the accuracy of its $2.4 billion proposed rate increase that will be imposed upon millions of consumers in their service area. (Sempra is seeking to

\(^1\) The opening statement in our comments was “it is inappropriate to trivialize the Volcker rule, the most significant bank enforcement legislation since the New Deal, by producing a document almost one thousand times longer than either the Gettysburg Address or the Ten Commandments.”
require the ratepayers to incur $2.4 billion in additional rates during the period 2012-2015).

Further, based on our January 4th and 5th conversations with CalPERS senior management, it appears that major shareholders, such as CalPERS, may be having difficulty in securing information relating to large CPA firm audits. In addition, the California Public Utilities Commission has so far been unable to secure any reliable, definitive information from either the issuer company (Sempra) or Deloitte & Touche on the above referenced matter.

In conclusion, as we set forth in our Volcker Rule comments to the Federal Reserve, FDIC, OCC and the SEC, transparency is a great virtue, but it is even more of a virtue when it is short, simple and understandable.

Fuller comments will be provided at a subsequent date.

We thank the PCAOB for its extraordinary job in setting forth the problems the public and investors have in relying on the accuracy and integrity of large CPA firms, with particular reference to Deloitte & Touche (New York Times, 10/17/11, “Accounting Board Criticizes Deloitte’s Auditing System,” Wall Street Journal, 10/18/11, “Audit Watchdog Criticized Deloitte Quality Controls in ’08,” Wall Street Journal, 12/21/11, “Accounting Board Finds Faults in Deloitte Audits.”)

Most respectfully submitted,

Len Canty

Washington, D.C. 20006-2803

IMPROVING THE TRANSPARENCY OF AUDITS:
PROPOSED AMENDMENTS TO PCAOB AUDITING STANDARDS AND FORM 2
PCAOB Release No. 2011-007
October 11, 2011
PCAOB Rulemaking Docket Matter No. 29

The Accounting Principles and Auditing Standards Committee ("the Committee" or "We") of the California Society of Certified Public Accountants ("CalCPA") is grateful for the opportunity to comment on the proposed amendments referenced above. The Committee is the senior technical committee of CalCPA. CalCPA has approximately 35,000 members. The Committee is comprised of 43 members, of whom 56 percent are from local or regional firms, 12 percent are sole practitioners in public practice, 9 percent are in academia and 2 percent are in an international firm.

The Committee strongly opposes any requirement to require that the engagement partner be identified in public reports. The reasons for this are explained in the answers to the PCAOB’s questions.

I. Introduction

II. Disclosure of the Engagement Partner

The Committee strongly opposes any requirement to require the engagement partner to sign the audit report or be identified as the engagement partner in public reports.
A. The Proposed Audit Report Disclosure

1. Would disclosure of the engagement partner's name in the audit report enhance investor protection? If so, how? If not, why not?

No. There is already sufficient incentive under Sarbanes Oxley, PCAOB inspections and legal exposure to achieve audit quality.

The Proposed Amendments (the "Proposal"), on page 9, after citing the need for improvement based on its inspections, says that "Disclosing the name of the engagement partner may be one means of promoting performance." We believe that this is not valid. The identity of engagements and engagement personnel where there is alleged non-compliance with PCAOB standards is not disclosed, so disclosure of the name of the engagement partner in connection with the audit report would have no relationship to results of the inspection program.

The Proposal, on page 9, mentions the effect of disclosure of the name of the engagement partner on "transparency." It goes on to cite assignment of more experienced and capable engagement partners, allowing investors to consider whether the engagement partner was replaced sooner than required, and discouraging clients from pressuring the firm to remove an engagement partner. The Committee believes the PCAOB's perceived benefit of additional transparency is invalid. The Committee is not aware that there is any empirical data on this issue, and notes that views supporting the naming requirement cite benefits that "may," "could," or "might" be achieved. As such, they are largely conjecture, and as such do not provide an adequate basis for such a requirement.

For "transparency" to be meaningful, it must provide a view of something meaningful. The name of the engagement partner is not meaningful information to investors. The name of the engagement partner in most cases will be no more than the name of an unknown person of unknown qualifications to investors and others outside the entity, and requiring the identity of the engagement partner therefore hardly increases transparency in any meaningful way.

It is hard to see how the name of the engagement partner is of any use in predicting the quality of a particular audit. An audit typically involves a host of resources of the audit firm, and the quality of a particular audit is more dependent on the availability and skill of those resources than on the engagement partner. Further, the best assessment of the engagement partner is made by the audit committee and management, and this is unrelated to whether the name of the engagement partner is disclosed in the audit firm's report.

2. Would disclosing the name of the engagement partner in the audit report increase the engagement partner's sense of accountability? If not, would requiring signature by the engagement partner increase the sense of accountability?

No. For the reasons stated in response to Question 1, the engagement partner is already very well focused on his or her responsibilities. The Committee does not believe the engagement partner's sense of accountability is affected by disclosure of his or her name or whether a signature is required.
3. Does the proposed approach reflect the appropriate balance between the engagement partner's role in the audit and the firm's responsibility for the audit? Are there other approaches that the Board should consider?

No. It would cloud the responsibility of the firm for the audit. It is the firm, with its broad resources, that is responsible for the audit; the audit is not the work of a single engagement partner, and the engagement partner in most firms cannot operate autonomously. Adding the engagement partner's name to the audit report is simply not relevant to the user's ability to rely on the report of the firm. In addition, the Committee does not believe there is a meaningful difference between naming the engagement partner and adding the engagement partner's signature.

The PCAOB should not require the disclosure of the name of the engagement partner.

4. Would the proposed disclosure clearly describe the engagement partner's responsibilities regarding the most recent reporting period's audit? If not, how could it be improved?

No. The proposed disclosure is "The engagement partner responsible for the audit . . . ." This grossly mischaracterizes the role of the engagement partner. It is the firm that is responsible for the audit. The engagement partner's responsibility is to the firm.

5. Would the proposed disclosure clearly describe the engagement partner's responsibilities when the audit report is dual-dated? If not, how could it be improved?

Naming an engagement partner when there is a subsequent issuance of a report naming a different engagement partner raises some special concerns as to the responsibility of the first engagement partner. If an engagement partner is named, he or she will likely want an opportunity to review the new report being issued. In many cases, the first engagement partner will still be with the firm, can perform the review and have no objections. However, there are situations where the first engagement partner will not be able to do such a review, for example, departure from the firm, illness or other unavailability; in these cases, it is, in the Committee's view, inappropriate to use the name of the first engagement partner. There may also be cases where the first auditor has significant questions or reservations about use of his name; this could be because of litigation or other circumstances. The firm may be satisfied it can re-issue its report, but unable to satisfy the first partner as to his or her reservations; this hardly warrants disclosure from the firm's perspective, creating a very awkward situation.

6. Would the proposed amendments to the auditing standards create particular security risks that warrant treating auditors differently from others involved in the financial reporting process?

The Committee submitted the following comment on the PCAOB's previously released Concept Release dealing with this question:
The Committee is concerned that naming the engagement partner could lead to harassment or personal danger to the individual; aberrational behavior is an unfortunate fact of life, and it is sometimes difficult to protect individuals from it. As stated below, the Committee is also concerned about possible litigation exposures.

The Committee is opposed to a requirement to name the engagement partner. It is difficult to imagine all circumstances where there could be a threat to the personal security of the engagement partner, particularly if events causing the threat arise after he or she has already been named.

The Committee continues to have these concerns. One only has to look at recent demonstrations held at the residences of CEOs to see that aberrational behavior is real. Directors and officers named in periodic reports have direct and primary responsibility for the information in the company's reports. Auditors do not have such responsibility, and they should not be added to those subject to security risks.

Providing an exemption for an anticipated threat to personal security is problematic. It may be difficult to get a person to be willing to be an engagement partner in this circumstance. In addition, a missing signature is bound to raise questions among users of the audit report.

In addition, there is the risk of adverse publicity for the engagement partner if the client company's financial statements become a subject of press coverage. We are all aware of sensationalism of press coverage and the damage it can do, and how ineffective later clarifications by the press or the victim of adverse publicity can be. The engagement partner is far less likely to be a victim of unwarranted adverse publicity if his or her name is not in the audit report.

7. Would the proposed amendments to the auditing standards lead to an increase in private liability of the engagement partner?

The Committee submitted the following comment on the PCAOB’s previously released Concept Release dealing with this question:

As the Concept Release points out, naming the engagement partner or having the engagement partner sign the report may, in the views of some, open up the engagement partner to additional legal liability. Unfortunately, the legal determination may well depend on the outcome of litigation, which is expensive, and the results may be inconsistent from state to state and among federal circuits.

There is nothing in the current proposed amendments that ameliorates the Committee's concerns. Even if the engagement partner technically has no additional liability if named, in the litigious environment in the U.S., it is more likely that the engagement partner would be named in a suit if his name appears as part of the audit report. This would cause an increase in costs, especially if the engagement partner decides to engage his or her own individual counsel.
Not discussed in the proposed amendments is the potential litigation exposure of other firms or persons named as participants in the audit even though the firm signing the audit report takes responsibility for that firm's or person's work. The issues are very similar to those related to the naming of the engagement partner.

The answer to this question requires a legal determination, but the Committee doubts that there is a clear answer since it is a new issue with no law directly on point. This legal determination is beyond the expertise of many accountants and auditors, state CPA societies, academics and investors who can be expected to comment on the Proposal. The PCAOB should reach out to the legal community for information on this question, but it is one that definitely needs to be answered before any aspect of the proposal is implemented.

8. What are the implications of the proposed disclosure rule for private liability under Section 10(b)?

See response to No. 7

9. Would the disclosure of the engagement partner's identity affect Section 11 liability? If so, what should the Board's approach be?

See response to No. 7. In addition, it is unclear whether including the engagement partner's name will cause that partner to be considered an "expert" for the purposes of Section 11 liability.

10. Would the disclosure of the engagement partner's identity have any other liability consequences (such as under state or foreign laws) that the Board should consider?

See response to No. 7.

11. Would a different formulation of the disclosure of the engagement partner ameliorate any effect on liability?

The Committee is unable to suggest a different formulation of the disclosure that would ameliorate any effect on liability, and continues to urge the PCAOB to drop its proposed requirement to name the audit partner.

**B. The Proposed Amendment to Form 2**

12. If the Board adopts the proposed requirement that audit reports disclose the name of the engagement partner, should the Board also require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2?

No. The Committee believes that the PCAOB should not require disclosure of the name of the engagement partner in the audit report or any other public document.
13. If the Board does not adopt the proposed requirement that audit reports disclose the name of the engagement partner, should the Board nonetheless require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2?

No. The PCAOB needs to conclude not to require that audit reports disclose the name of the engagement partner. Requiring disclosure of the name of the engagement partner in Form 2, in the face of a conclusion to not require its disclosure in the audit report, would inappropriately subvert that conclusion.

14. Disclosure in the audit report and on Form 2 would provide notice of a change in engagement partner only after the most recent period's audit is completed. Would more timely information about auditor changes be more useful? Should the Board require the firm to file a special report on Form 3 whenever there is a change in engagement partners?

No. The Committee believes that the PCAOB should not require disclosure of the name of the engagement partner in the audit report or any other public document. Moreover, even if such disclosure is required, the Committee sees no merit to require any notice of change in an engagement partner. This would further tend to confuse the role of the firm engaged to perform the audit and the engagement partner. There is already extensive disclosure around any change in an audit firm. A change in the engagement partner is required every five years, so reporting that mandatory rotation would serve no purpose. Since the firm is responsible for the audit, the name of the engagement partner and any change in the engagement partner, either at the time of rotation or sooner, is of little significance; the engagement partner is just one of many resources in the audit firm that has responsibilities for performance of an audit. The engagement partner can change for many reasons of no consequence to investors, including preference of the engagement partner, changes in assignments, relocation and illness.

15. A change in engagement partner prior to the end of the rotation period could be information that investors may want to consider before the most recent period's audit is completed. Should the Board require the firm to file a special report on Form 3 when it replaces an engagement partner for reasons other than mandatory rotation to provide an explanation of the reasons for the change?

No. The Committee believes that the PCAOB should not require disclosure of the name of the engagement partner in the audit report or any other public document. See response to Question 14.

III. Disclosure of Other Participants in the Audit and Referred-to Accounting Firms

A. Disclosure When Assuming Responsibility or Supervising

1. Applicability of the Proposed Disclosure
16. Is it sufficiently clear who the disclosure would apply to? If not, how could this be made clear?

The disclosure requirements seem clear. However, the Committee believes that the PCAOB should not require disclosure of the name of the engagement partner in the audit report or any other public document. As described below, the Committee should not require disclosure of other participants in the audit, except when the primary auditor is expressing reliance on the other participant.

17. Is it appropriate not to require disclosure of the individual who performed the EQR? If not, should disclosure of the engagement quality reviewer be required when the EQR is performed by an individual outside the accounting firm issuing the audit report or should the disclosure be required in all cases?

The PCAOB should not require disclosure of the individual who performed the EQR. The Committee believes that the PCAOB should not require disclosure of the name of the engagement partner in the audit report or any other public document. This belief extends to not disclosing the name of the individual who performs the EQR. That person has only limited responsibility for the conduct of the audit, so the disclosure would serve no purpose. As for disclosure if the EQR is an individual outside of the firm, this would potentially lead to confusion as to the degree of responsibility of the firm issuing the audit report for that report. Further, it may cause additional potential legal liability for the individual performing the EQR under federal and state securities statutes.

18. Is it appropriate not to require disclosure of the person that performed the Appendix K review?

Yes.

19. Is it appropriate not to require disclosure of persons with specialized skill or knowledge in a particular field other than accounting and auditing not employed by the auditor or persons employed or engaged by the company who provided direct assistance to the auditor?

Yes. See response to Question 17.

20. Would disclosure of off-shoring arrangements (as defined in the release) or any other types of arrangements to perform audit procedures provide useful information to investors and other users of the audit report? If yes, what information about such arrangements should be disclosed?

No. The reason for the proposed amendments is unclear. The PCAOB has expressed concern about the practice of "off-shoring," which is very poorly defined. The definition is "a practice whereby certain portions of the audit are performed by offices in a country different than the country where the firm is headquartered," and implies that this practice has begun recently. In fact, U.S. headquartered auditing firms have been engaging offices from countries other than the
U.S. for many generations. The Committee is aware from media reports that the PCAOB has had difficulty in carrying out its inspection program of offices of U.S. headquartered firms in certain of those countries, but this is not, per se, indicative of any problems with the quality of those audits. The Committee is also aware from media reports of instances where quality concerns have recently been raised about the quality of a small fraction of the overall audits performed by offices in certain other countries. However, the Committee does not believe those instances are sufficiently pervasive as to provide a basis for the extensive disclosures proposed by the PCAOB. Most of the audits performed by offices in a country different than the country where the firm is headquartered have a long history of adequate quality. Disclosure of when the auditor assumes responsibility for or supervises the work of another independent public accounting firm or supervises the work of a person that performed audit procedures on the audit would imply that there is something sub-standard about that work, which is certainly not in the best interests of the firms or investors.

The scope of the definition "off-shoring arrangements" in the release is very confusing. While the context of the discussion in the release is firms in other countries, the actual proposed disclosure requirement would run to any firm used by the firm issuing the audit report, even those in the headquarters country.

It is not unusual for the firm issuing the audit report to engage another firm to perform part of an audit and take responsibility for that firm's work. This is particularly common for smaller audit firms that do not have national coverage, and may be done under varying forms of arrangements ranging from formal affiliation to single engagements. Firms auditing international companies have for many years used offices in other countries to audit operations outside the firm's headquarters country. Some of these are part of an affiliated network, and are treated as part of the firm issuing the audit report. The offices in other countries are usually separate legal entities for local reasons. These arrangements are all subject to specific audit standards, whether or not the firm issuing the audit report assumes responsibility for the work of the other firm or divides responsibility for the work.

If the firm issuing the audit report assumes responsibility for the work of the other firm or other persons, the Committee believes that none of the proposed disclosures should be required. It would potentially cause confusion about the degree of responsibility undertaken by the firm issuing the audit report. In addition, companies engaging auditors are often reluctant to engage an auditor who will refer to other auditors in its report, and can be equally reluctant to tolerate the proposed disclosures where there is no divided responsibility. This would be particularly deleterious to smaller registered accounting firms who do not have national coverage.

If the firm issuing the audit report divides responsibility by making reference in its audit report to another auditor, there are already specific disclosure requirements in AU sec 543 and Rule 2-05 of Regulation S-X. The Committee has no objection to disclosure of the name and location of the other independent public accounting firms; however, since their report must be filed pursuant to Rule 2-05 of Regulation S-X except in annual reports under the Securities Exchange Act of 1934, it may be more expeditious for the Securities and Exchange Commission to amend its rules to require that the reports of the other independent public accounting firms be filed as an exhibit to the Annual Report.
The Committee is aware from media reports that there have been questions about the quality of audits done by independent public accounting firms headquartered in countries other than the U.S. The Committee is also aware from media reports that the PCAOB has had difficulty in carrying out its inspection program in some of those instances. These cases are too isolated to warrant the broad disclosures that the PCAOB is proposing. The Committee suggests that the solution is to continue negotiate extension of its inspection program outside of the U.S., and to consider appropriate action if the accounting firm issuing the audit report cannot demonstrate that has taken required steps under auditing standards to assure the quality of audit work done by other firms or other persons.

2. Details of the Disclosure Requirements

21. Would disclosure in the audit report of other participants in the audit provide useful information to investors and other users of the audit report? Why or why not?

No. See response to Question 20.

22. Are the proposed requirements sufficiently clear and appropriate with respect to identifying other participants in the audit? If not, how should the proposed requirements be revised?

The Committee does not have any specific response to this question. However, if the firm issuing the audit report assumes responsibility for the work of the other firm or other persons, the Committee believes that none of the proposed disclosures should be required.

23. Are the proposed requirements sufficiently clear as to when the name of a public accounting firm or a person would be required to be named in the audit report? Is it appropriate that the name of the firm or person that is disclosed is based on whom the auditor has the contractual relationship?

The Committee does not have any specific response to this question. However, if the firm issuing the audit report assumes responsibility for the work of the other firm or other persons, the Committee believes that none of the proposed disclosures should be required.

24. Would disclosure in the audit report of other participants in the audit have an impact on the ability of independent public accounting firms to compete in the marketplace? If so, how would the proposed requirement impact a firm's ability to compete in the marketplace?

As pointed out in the Committee's response to Question 20, companies engaging auditors are often reluctant to engage an auditor who will refer to other auditors in its report, and can be equally reluctant to tolerate the proposed disclosures where there is no divided responsibility. This would be particularly deleterious to smaller registered accounting firms who do not have national coverage.
25. Are there any challenges in implementing a requirement regarding the disclosure of other participants in the audit? If so, what are the challenges and how can the Board address them in the requirements?

The other firms or individuals participating in the audit may object to disclosure of their name when they have not performed sufficient procedures constituting a basis to issue their own audit report. In addition, naming the other firms or individuals may subject them to being named in litigation, along with concomitant expense regardless of the merit (or lack thereof) of the litigation. Further, other firms or individuals, especially those headquartered in countries other than the U.S. may be unwilling to permit use of their name if they have not performed an audit.

If the firm issuing the audit report assumes responsibility for the work of the other firm or other persons, the Committee believes that none of the PCAOB's proposed disclosures should be required.

3. Disclosure of Percentage of the Total Hours in the Most Recent Period's Audit, Excluding EQR and Appendix K review

26. Is the percentage of the total hours in the most recent period's audit, excluding EQR and Appendix K review, a reasonable measure of the extent of other participants' participation in the audit? If not, what other alternatives would provide meaningful information about the extent of participation in the audit of other participants?

The Committee questions why EQR hours are proposed to be excluded, as they are part of the audit. While the reviewer is not performing substantive procedures or obtaining audit evidence, the reviewer does not work in a vacuum. The reviewer usually interacts with the engagement team and may raise matters that require additional audit procedures and/or audit evidence. As such, they are usually considered part of the audit effort, albeit technically not part of the "team."

The Committee also questions the mechanics of excluding EQR hours; is it all EQR hours at all locations, or EQR hours at locations other than those incurred directly by the headquarters audit firm? These hours are included in the proxy statement fee disclosure, so it may be easier to not exclude them for the PCAOB proposed disclosure.

Using hours as a measure of other participant's participation in the audit may not be the best measure of that participation, particularly if they are for locations outside the U.S. Hourly audit rates vary widely around the world, and audit hours are often disproportionately higher in countries where rates are low. In addition, normal annual rotation of locations where audit procedures are performed, and changes in the scope of audit procedures, can cause variations in hours from year-to-year. Both of these can distort the meaningfulness of the disclosure using hours.

In addition, other firms and individuals may be reluctant to disclose audit hours, especially if they do not disclose them to the client locally or the headquarters audit firm.
The Committee suggests that a better way to measure the extent of other participants' participation would be audit fees. While no measure is perfect, this measure would reduce the potential distortion that use of hours would cause. Further, the Committee suggests that audit fees be based on the same data that is currently used in the disclosure of audit fees under the SEC proxy rules with the addition of fees for participants other than the principal accountant. This would avoid duplication of effort that would occur if hours were used, and would utilize data that is already understood and likely more available, eliminating unforeseen questions that might arise if hours were used.

Whatever measure is used, consideration needs to be given to procedures performed by other participants beyond those required by the headquarters auditor. These are most commonly additional procedures to render a local audit report at the request of local management or a statutory audit report. The Committee questions whether information (hours or fees) related to these procedures should be included in the disclosures proposed by the PCAOB. The information may be easily isolated if performed after procedures required by the headquarters auditor, but isolation of the information if the additional procedures are performed simultaneously may be problematic.

Notwithstanding the foregoing comments, the Committee believes that if the firm issuing the audit report assumes responsibility for the work of the other firm or other persons, none of the proposed disclosures should be required as to the other firms or individuals and under whatever measure is used (hours, fees or something else), and the data for the participation of such other firm or individual should be included with data for the headquarters firm.

27. What challenges, if any, would requiring the percentage of audit hours as the measure of the other participants' participation present?

See response to Question No. 26. Audit hours may not be the best measure and use of hours coupled with changes in scope of audit procedures can be distorting. There may be difficulty in getting the data as to hours. Use of audit fees would avoid most of these challenges.

Notwithstanding the foregoing comments, the Committee believes that if the firm issuing the audit report assumes responsibility for the work of the other firm or other persons, none of the proposed disclosures should be required as to the other firms or individuals and under whatever measure is used (hours, fees or something else), and the data for the participation of such other firm or individual should be included with data for the headquarters firm.

28. Should the Board require discussion of the nature of the work performed by other participants in the audit in addition to the extent of participation as part of the disclosure? If so, what should be the scope of such additional disclosures?

No. Auditors are currently not required to disclose any information as to audit scope and procedures and the Committee does not believe any such disclosures should be required. Any disclosure as to work performed by other participants, which would be for a fraction of the audit, would be of no use to investors and would call into question the responsibility of the headquarters firm for its opinion on the financial statements resulting from the audit.
29. Would the proposed disclosure of the percentage of hours attributable to the work performed subsequent to the original report date in situations in which an audit report is dual-dated be useful to users of the audit report?

No. The hours or fees attributable to the work performed subsequent to the original report date is usually minor in relation to total audit hours or fees. With a reasonable de minimus provision, which the Committee recommends be part of any such disclosure, it does not seem to the Committee that any such disclosure would often be required.

30. Is the example disclosure in the proposed amendments helpful? Would additional examples be helpful? If so, what kind?

The Committee believes that if disclosure is required of information for other firms or individuals for which the headquarters firm assumes responsibility, that information should be presented separately from information for individuals and firms for which the headquarters firm does not assume responsibility.

Notwithstanding the foregoing comment, the Committee believes that if the firm issuing the audit report assumes responsibility for the work of the other firm or other persons, none of the proposed disclosures should be required as to the other firms or individuals and under whatever measure is used (hours, fees or something else), and the data for the participation of such other firm or individual should be included with data for the headquarters firm.

4. Thresholds

31. Should disclosure of the names of all other participants in the audit be required, or should the Board only require disclosing the names of those whose participation is 3% or greater? Would another threshold be more appropriate?

The Committee believes a de minimus provision to eliminate disclosure of small participants is necessary. The Committee would prefer a higher threshold, for example 5%. In addition, if the total of all other participation is below a certain de minimus amount, for example 10% of total hours or fees, no disclosure of the other participation should be required.

Notwithstanding the foregoing comments, the Committee believes that if the firm issuing the audit report assumes responsibility for the work of the other firm or other persons, none of the proposed disclosures should be required as to the other firms or individuals and under whatever measure is used (hours, fees or something else), and the data for the participation of such other firm or individual should be included with data for the headquarters firm.

32. Is the proposed manner in which other participants in the audit whose individual extent of participation is less than 3% of total hours would be aggregated appropriate?

The Committee takes no exception to the aggregation.
Notwithstanding the foregoing comments, the Committee believes that if the firm issuing the audit report assumes responsibility for the work of the other firm or other persons, none of the proposed disclosures should be required as to the other firms or individuals and under whatever measure is used (hours, fees or something else), and the data for the participation of such other firm or individual should be included with data for the headquarters firm.

**B. Disclosure When Dividing Responsibility**

33. Are the requirements to disclose the name and country of headquarters' office location of the referred-to firm sufficiently clear and appropriate?

They are clear, but not appropriate. See response to Question No. 30 as to presenting separately information for other participants in the audit for which the headquarters firm assumes responsibility vs. other participants.

34. Are there any challenges associated with removing the requirement to obtain express permission of the referred-to firm for disclosing its name in the audit report? If so, what are the challenges and how could they be overcome?

The Committee believes that permission should be obtained in all cases. First, it is a matter of common courtesy. Second, it will avoid issues around getting permission at a later date if it is required.

35. In situations in which the audit report discloses both the referred-to firm and other participants in the audit, would using different disclosure metrics (e.g., revenue for the referred-to firm and percentage of the total hours in the most recent period's audit for the other firms and persons) create confusion? If so, what should the disclosure requirements be in such situations?

The Committee believes that if the firm issuing the audit report assumes responsibility for the work of the other firm or other persons, none of the proposed disclosures should be required as to the other firms or individuals and data for the other participants should be included with data for the headquarters firm.

The Committee does not believe use of different metrics would cause much confusion.

We would be glad to discuss our opinions with you further should you have any questions or require additional information.

Sincerely,

Howard Sibelman

USA

Dear Sir:

Request for Comment: Improving Transparency Through Disclosure of Engagement Partner and Certain Other Participants in Audits  
PCAOB Rulemaking Docket Matter No. 29

The Canadian Public Accountability Board (CPAB) is pleased to comment on the Public Company Accounting Oversight Board (PCAOB) Release No. 2011-007 entitled Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2 (the “Proposed Amendments”). Investors and other financial statement users are calling for more transparency from the audit process and we commend the PCAOB for proposing amendments to their auditing standards that will provide disclosure of other participants in the audit.

CPAB is Canada’s independent audit regulator and is responsible for overseeing firms that audit Canadian reporting issuers. Our mandate is to promote high quality independent auditing that contributes to public confidence in the integrity of reporting issuers’ financial reporting. We accomplish our mandate by inspecting audit firms and audit working paper files which provides us with insights into the application of auditing standards and how they might be improved.

Disclosure of the Engagement Partner

While we understand the basis for the PCAOB’s proposals to require disclosure of the name of the engagement partner in the audit report, we encourage a more holistic approach to better understand the root causes of lapses in audit quality in developing solutions to improve accountability for the audit. Greater focus needs to be given to the organizational structure of audit firms and how this can be improved to enhance audit quality. Consideration needs to be given to how accountability can be strengthened for audit firms at the engagement level, office level and national level. A more holistic approach should also consider the role of the audit committee and explore ways in which audit committees can more effectively evaluate the quality of the audit. In this respect we believe
mandatory audit firm review performed with appropriate rigour by the audit committee with reporting to shareholders will improve transparency for investors and other financial statement users.

Disclosure of Other Participants in the Audit and Referred-to Accounting Firms

We believe that disclosure of the participants in the audit would provide investors greater transparency with respect to who, other than the principal auditor, was involved in the audit and to what extent. As an audit regulator, CPAB has a shared concern with the PCAOB regarding the extent of reliance by the principal auditor on work performed by other auditors as those other participants may not be registered firms or there may be legal or other regulatory barriers to them being inspected by a foreign audit regulator. As discussed in the Release, disclosure of the other participants would enable investors and other users of the audit report to determine the degree of oversight the participants are subject to and the extent to which there is publicly available disciplinary history.

The percentage of hours attributable to the audit work performed by the other participants in the audit in relation to the total hours for the audit represents a reasonable basis for the disclosures in the Proposed Amendments. However, there may also be merit in disclosing the relative percentages of the total revenues or assets that other participants were primarily responsible for auditing. Such matrix reporting would give stakeholders a broader perspective on the involvement of the other participants and would help alleviate concerns that hours alone could give an incorrect picture of the relative significance of the work of a participant to the overall audit.

We support additional disclosure requirements for “off-shoring” arrangements and encourage reconsideration of the scope out for off-shore work performed in a foreign location by another office of the same accounting firm. We believe it is important for investors to be made aware of significant audit work performed off-shore even if the offshore office is legally part of the accounting firm that signs the audit opinion. Reliance strictly on legal structure to dictate disclosure would seem contrary to the spirit of the Proposed Amendments and could negatively impact the comparability of the disclosures between accounting firms.

We appreciate the opportunity to respond to the Proposed Amendments, and would be pleased to discuss any of the above comments with you at your request.

Yours very truly,

Brian Hunt, FCA

Re: Request for Public Comment: Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2, PCAOB Rulemaking Docket Matter No. 29

Dear Office of the Secretary:

The Center for Audit Quality (CAQ) is an autonomous public policy organization dedicated to enhancing investor confidence and public trust in the global capital markets. The CAQ fosters high quality performance by public company auditors, convenes and collaborates with other stakeholders to advance the discussion of critical issues requiring action and intervention, and advocates policies and standards that promote public company auditors’ objectivity, effectiveness, and responsiveness to dynamic market conditions. Based in Washington, D.C., the CAQ is affiliated with the American Institute of Certified Public Accountants (AICPA).

The CAQ appreciates the opportunity to respond to the Public Company Accounting Oversight Board (PCAOB or the Board) on its release, Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2 (the Proposal). This letter represents the observations of the CAQ, but not necessarily the views of any specific firm, individual, or CAQ Governing Board member. We are pleased to submit for the Board’s consideration our observations on the identification of the engagement partner and other participants in the audit.

I. Engagement Partner Identification

The CAQ appreciates the PCAOB’s efforts to be responsive to calls from investors and other financial statement users for further transparency into the audit. However, we do not believe that identification of the engagement partner will result in any incremental engagement partner accountability, as engagement partners are already held accountable to multiple parties as detailed below. Additionally, while we recognize that it is not the PCAOB’s intent to increase an individual engagement partner’s liability, and appreciate the Board’s request for comment on specific liability concerns, we believe the PCAOB should itself pursue a further understanding of related liability implications and seek necessary clarification from the U.S. Securities and Exchange Commission (SEC) on
resulting consent requirements. Should the Board proceed with the Proposal, we believe engagement partner identification in Form 2, rather than the audit report, would be a more appropriate approach, as discussed more fully below.

a. Request for Perspectives on Accountability

The Proposal requests comment on whether engagement partner identification would increase the engagement partner’s sense of accountability. PCAOB standards require the independent auditor to exercise due professional care in the planning and performance of the audit and preparation of the audit report. Engagement partners are held accountable to their firm, audit committees, regulators, and investors. As described below, these multiple layers of accountability provide a significant incentive for engagement partners to conduct high quality audits in accordance with professional standards.1

Accountability to the Firm and Partners within the Firm – Engagement partners are held accountable to the firm partnership through various quality control processes2 which provide that the firm and its personnel, including the engagement partner, comply with applicable professional standards and the firm’s standards of quality. In complying with quality control requirements, firms maintain policies and procedures that:

- Promote an appropriate “tone at the top” and culture at the firm such as codes of conduct and related training;
- Foster and monitor compliance with relevant ethics requirements and independence standards set out by the PCAOB, the SEC, and others;
- Reduce the likelihood of the firm accepting or continuing an engagement with a public company whose management lacks integrity;
- Appropriately assign engagement team personnel based on their skill and experience, including provision for appropriate supervision within the team; and
- Provide that the design and execution of the audit engagement meets applicable professional standards, regulatory requirements, and the firm's standards of quality, for example, policies that set forth requirements related to consultations inside or outside the firm, use of specialists, and coordination and supervision of work performed by other offices and firms.

Importantly, compliance with these policies and procedures is monitored3 through internal firm inspection programs and other firm monitoring processes. Engagement partner accountability for the conduct of the audit is also reinforced through the engagement quality review4 and performance evaluation processes.

Accountability to Audit Committees – The audit committee is responsible, under the Sarbanes-Oxley Act of 2002, for appointing, compensating, and overseeing the auditor, and pre-approving all audit and non-audit services provided by the audit firm. In addition, the auditor is required to communicate certain significant matters to the audit committee.5 This authority provides the audit committee with the ability to hold the engagement partner directly accountable for the performance and conduct of the audit.

---

1 See also CAQ comment letter in response to PCAOB Concept Release on Requiring the Engagement Partner to Sign the Audit Report for further views regarding engagement partner accountability: http://www.thecaq.org/newsroom/pdfs/CAQCommentLetter-EngagementPartnerSignature.pdf
2 See PCAOB Interim Quality Control Standards.
3 See PCAOB QC Section 30, Monitoring a CPA Firm’s Accounting and Auditing Practice.
4 See PCAOB Auditing Standard No. 7, Engagement Quality Review.
5 See PCAOB Interim Auditing Standard, AU 380, Communication with Audit Committees and PCAOB Proposed Auditing Standard on Communications with Audit Committees and Related Amendments to PCAOB Standards.
Accountability to Regulators – PCAOB professional standards clearly articulate the engagement partner’s accountability for the conduct and quality of the audit as well as the critical importance of meeting professional responsibilities. In this regard, partners are accountable for the quality of their audits to the PCAOB through inspections, disciplinary and enforcement proceedings, the SEC through enforcement proceedings, State Boards of Accountancy through licensing authority, and other state and federal regulators. Determinations of improper professional conduct can lead to the censure, suspension, or bar of an engagement partner’s ability to appear or practice before the SEC or to be associated with a registered public accounting firm, and result in monetary penalties. Findings of misconduct by State Boards of Accountancy can result in the suspension or revocation of an engagement partner’s license, which would prevent a partner from practicing as a certified public accountant.

Accountability to Investors – Investors have a number of ways to hold audit firms and engagement partners accountable. For example, the engagement partner is often present at the annual shareholder meeting to respond to questions. At this meeting, investors often have the ability to ratify the appointment of a registered public accounting firm as a public company’s auditor. In addition, investors can influence the composition of an issuer’s board of directors, which, in turn, affects the composition of the audit committee responsible for oversight of the external auditor in carrying out its fiduciary duty to investors. Finally, investors have a number of avenues under federal and state securities laws to initiate civil litigation against audit firms related to the audit of an issuer’s financial statements.

b. Request for Perspectives on Liability

The Proposal seeks comment specifically regarding the implications of engagement partner identification on liability under Section 10(b) and Rule 10-b(5) of the Securities Exchange Act of 1934 (Section 10(b)) and Section 11 of the Securities Act of 1933 (Section 11). We agree with the Board that a further assessment of the legal implications of this Proposal is important, and urge the Board to resolve this issue before moving forward.

In its 2009 Concept Release on Requiring the Engagement Partner to Sign the Audit Report (Concept Release), the Board stated that its “intent with any signature requirement would not be to increase the liability of engagement partners.” This was reiterated in the Proposal which states “the intent…was ….not to increase the liability of engagement partners.” We have concerns regarding the uncertainty of liability implications of the Proposal, most importantly under Section 11. The CAQ believes the Board should perform a liability assessment under Section 10(b), Section 11 and state law, including consideration of legal costs associated with the proposed benefits of additional transparency. Most importantly, the Board should also coordinate with the SEC to clarify the implications of the proposed requirements on Section 11 liability.

Section 11 - As the PCAOB notes in its Proposal, commenters raised concerns that the proposed signature requirement in the Concept Release would increase liability for engagement partners in actions brought pursuant to Section 11, which allows for claims against “every accountant” who “has with his consent been named” as “having prepared or certified” any part of a registration statement or any report or valuation used in a registration statement. Liability under Section 11 can arise not only where the accountant signs the report, but also where the accountant consents to being named in it. Significantly, Section 7 of the Securities Act of 1933 requires issuers to file the consent of any accountant who is named as having prepared or

7 Compare § 77k(a)(1) (imposing liability on “every person who signed the registration statement”) with § 77k(a)(4) (imposing liability on every accountant who consented).
certified any part of the registration statement. Therefore, even if the engagement partner does not sign the report, there would be an increase in liability if it is determined that engagement partners must file a consent pursuant to Section 7 and Rule 436 based on the disclosure of his or her name. If the Board determines to require identification of the engagement partner in the audit report, the SEC should, prior to approving the PCAOB standard, make it clear by rule that any disclosure requirement would not increase liability under Section 11 and that consent pursuant to Section 7 and Rule 436 for engagement partners is not required. We believe that without further clarification from the SEC, liability risk may increase should engagement partners be required to consent under Section 7 and Rule 436 based on his or her identification in the audit report, which would be inconsistent with the Board’s stated intent of the Proposal.

Section 10(b) - As the Board notes in the Proposal, a number of commenters raised concerns that the proposed engagement partner signature requirement in the Concept Release would result in increased liability for engagement partners under Section 10(b). Since that time, the Supreme Court has clarified what must be shown to prove that an individual or firm made an untrue statement of a material fact in violation of Section 10(b) and 17 C.F.R. § 240.10b-5 (Rule 10b-5). The Court held that the maker of a statement is the “person or entity with ultimate authority over the statement, including its content and how to communicate it. Without control, a person or entity can merely suggest what to say, not “make” a statement in its own right. One who prepares or publishes a statement on behalf of another is not its maker. … Attribution within a statement or implicit from surrounding circumstances is strong evidence that a statement was made by—and only by—the party to whom it is attributed.” It is conceivable that some courts will read Janus in such a way that merely naming an engagement partner in an audit report will be sufficient to conclude that the engagement partner made the statements in the audit report. In addition, plaintiffs can be expected to assert claims against named engagement partners despite the Janus decision. The cost to defend against such claims until the case law becomes settled on these issues could be significant.

State Law – The Proposal notes that in response to the Concept Release, commenters raised concerns that the proposed engagement partner signature requirement could result in increased liability under state law. The CAQ believes that legal implications under state law are also an important consideration. If the Board adopts the Proposal, a state court may reach the conclusion that a named engagement partner or participating firm in the audit report is liable under the state’s blue sky laws. Additionally, unlike federal securities laws, a number of states’ blue sky laws recognize causes of action by a holder of securities who claims to have relied on false statements. Plaintiffs also could seek to assert state common law claims against named engagement partners despite the Janus decision. The cost to defend against such claims until the case law becomes settled on these issues could be significant.

8 15 U.S.C. § 77g(a); see also 17 C.F.R. 230.436(b) (Rule 436(b)). Rule 436(b) provides that, “[i]f it is stated that any information contained in the registration statement has been reviewed or passed upon by any persons and that such information is set forth in the registration statement upon the authority of or in reliance upon such persons as experts, the written consents of such persons shall be filed as exhibits to the registration statement.”
10 Id. at 2302.
11 A proper application of the Supreme Court’s decision in Stoneridge Investment Partners, LLC v. Scientific-Atlanta, Inc. (Stoneridge), 552 U.S. 148 (2008), could preclude what some courts refer to as “scheme liability” or “associational liability” under Rule 10b-5(a) and (c) for engagement partners disclosed in the audit report pursuant the Board’s Proposal. In Stoneridge, the Court observed that reliance by a plaintiff on the allegedly deceptive acts is an essential element of private claims under Section 10(b), and held that there is no reliance, and hence no liability, when the link between that third party’s actions and the issuer’s misrepresentation is too remote or attenuated. See id. at 159-62. However, it is possible that some courts will read Stoneridge in such a way that disclosure will expose engagement partners to more associational liability litigation whenever there is any doubt involving the issuer’s financial statements. “[E]xtensive discovery and the potential for uncertainty and disruption in a lawsuit allow plaintiffs with weak claims to extort settlements from innocent companies. . . . [C]ontracting parties might find it necessary to protect against these threats, raising the costs of doing business. Overseas firms with no other exposure to our securities laws could be deterred from doing business here.” Id. at 163-64.
engagement partner and participating firms could increase the number of state law claims brought against partners and firms.

For these reasons, and the Board’s stated intention of not increasing the liability of engagement partners, the CAQ believes it is incumbent upon the PCAOB to analyze the legal implications of the requirement and perform an appropriate cost-benefit analysis as part of its deliberative process on the Proposal.

c. **Form 2 Reporting**

If the PCAOB determines that the name of the engagement partner should be provided, we believe that reporting only in Form 2 is more appropriate than reporting in the audit report. As the Board notes in its Proposal, Form 2 is a more convenient and accessible form of reporting as compared to the audit report. Identification in only Form 2 could also mitigate concerns noted above regarding engagement partner liability under Section 11, Section 10(b), and state law. In addition, because Form 2 is a periodic administrative filing, identification only in Form 2 could reduce the likelihood of investors misunderstanding the role of the engagement partner compared to that of the audit firm in issuing the audit report.

d. **Form 3 Reporting**

The Proposal notes that a change in engagement partner before the end of the rotation period could be information that investors may want to consider before the most recent period’s audit is completed and asks whether the firm should be required to file a special report on Form 3 in these instances, and possibly disclose the reason(s) for the rotation. The CAQ believes that requiring Form 3 reporting in these circumstances may present practical challenges and is unnecessary. This is consistent with views expressed by certain PCAOB Standing Advisory Group (SAG) members at the November 2011 meeting.\(^{12}\) Filing a Form 3, without a description of the reason for the change, as suggested in the Proposal, may result in unproductive market speculation. However, we also believe it would be inappropriate in certain cases due to privacy laws, to describe the reason for an early rotation resulting from health concerns or termination of a partner for reasons other than audit quality.

e. **Other Considerations**

In evaluating whether to require the identification of the engagement partner in the audit report or in Form 2, the Board should also consider the risk that users may reach inappropriate conclusions about the engagement partner, or the quality of the audit without appropriate consideration of other relevant factors. For example, inappropriate inferences may be drawn based on circumstances about a company that may not be within the control of the engagement partner or directly relate to the performance of that engagement partner or the quality of the audit, such as bankruptcy filings, going concern uncertainty, adverse analyst coverage, etc. Additionally, users may also draw inappropriate inferences about the expertise and experience of the engagement partner without proper consideration of the important contributions of others involved in the audit (e.g., participation of other partners, consultations, use of specialists) or consideration of the partners’ experience gained outside the public company audit context that would not be subject to disclosure. We believe that possible reputational risk resulting from engagement partner identification may result in partner reluctance to serve on the audits of certain issuers (e.g., high risk issuers). This effect may be more pronounced at firms that derive a larger percentage of revenue from private company audits (i.e., some

\(^{12}\) See November 10, 2011 SAG transcript excerpt related to the Proposal:

smaller firms) or smaller, regional offices of larger firms that have fewer partners available to serve on audits of public companies, which may impact their ability to compete for audits of public companies.

II. Identification of Other Participants in the Audit

The Proposal contemplates requiring disclosure of the name, location and extent of participation of certain other independent accounting firms and other persons not employed by the auditor, when the auditor assumes responsibility for or supervises the work of those who took part in the most recent period’s audit. The CAQ supports providing additional information to investors to enhance user understanding of the auditor’s role and responsibilities and the audit process, including certain disclosure regarding the use of other firms in the audit, however we are concerned that the proposed approach could diminish investor confidence in the role of the principal audit firm in supervising and assuming responsibility for the work performed by other participants in the audit and achieving a high quality audit. Should the Board move forward with this Proposal, we set forth our views regarding potential implementation challenges, suggest other approaches for disclosure of participation that mitigate potential unintended consequences of the Proposal, and discuss important liability considerations.

a. Use of a Metric

The Proposal would require the auditor to state the percentage of hours attributable to audits or audit procedures performed by certain other participants in the audit in relation to the total hours incurred for the most recent period’s audit. The Proposal identifies total hours in the most recent period’s audit as “the most appropriate quantitative measure of the other participants’ relative participation in the audit.” While we understand the reasoning behind using a metric to signify to investors the level of participation in the audit, we believe there are implementation challenges associated with any metric intended to convey participation. Therefore, we set forth below other possible disclosure approaches should the Board pursue utilizing hours as a metric.

Possible implementation challenges associated with the use of audit hours as a metric include accounting for audit hours incurred performing multi-purpose testing (e.g., statutory audits of subsidiaries performed abroad where the same work is also utilized for the consolidated issuer audit), and calculating precise participation percentages for other audit participants at the audit completion stage.

The Proposal questions whether a discussion of the nature of the work performed by other participants in the audit, in addition to the extent of participation, should be a required part of the disclosure. The CAQ does not believe the nature of work performed by other audit participants should be disclosed for the following reasons:

• It would be difficult to describe the nature of work performed succinctly without further context derived from dialogue with the auditor,
• Succinct descriptions of the nature of work would not adequately convey significant and often complex audit procedures, and
• More thorough descriptions of the nature of work performed could contribute to “disclosure overload” and detract from the objective of providing useful information to investors.

CENTER FOR AUDIT QUALITY
1155 F Street NW, Suite 450, Washington, DC 20004, (202) 609-8120 www.thecaq.org
The CAQ agrees it is appropriate to exclude from identification individuals performing the engagement quality review, Appendix K review, persons with specialized skill or knowledge in a particular field other than auditing, and persons employed or engaged by the company who provided direct assistance to the auditor (e.g., internal auditors) for the reasons set forth in the Proposal.

b. Threshold & Participation Rate

The Proposal sets forth a three percent disclosure threshold for the identification of other participants in the audit based on total hours in the most recent period’s audit. The name of those participants with a participation rate of three percent or more would be individually disclosed along with their respective participation rate. Those not meeting the three percent threshold could be disclosed either individually with their respective participation rate, or collectively, with the participation rate for the entire group disclosed. In the Proposal, the Board noted the intent of this requirement is to provide the most meaningful information about participants in the audit to investors and other users of the financial statements.

The CAQ provides suggestions below for the Board’s consideration that are consistent with the intent of the Proposal to provide transparency into other participants and their involvement in the audit while minimizing possible unintended consequences of the proposed approach. The CAQ believes it would be beneficial, regardless of the approach followed to identify other audit participants in the audit report, to require additional disclosure in the audit report related to the principal auditor’s responsibility, other audit participant’s responsibility, and a description of the accounting firm network structure (if applicable), as recommended in the CAQ’s September 30, 2011 comment letter to the Board.14

Higher Threshold for Disclosure – We believe a threshold above three percent (e.g., 10 or 20 percent) would be more consistent with the Board’s intent to provide the most meaningful information about participants in the audit to investors. This is consistent with views expressed by investor and preparer representatives during the November 2011 PCAOB SAG meeting discussion on this Proposal.15 A higher threshold also would be consistent with existing U.S. Generally Accepted Accounting Principles as well as SEC regulations intended to guide meaningful disclosure to investors regarding relevant financial reporting matters and PCAOB rules which set a threshold for the level of audit work deemed significant enough to require PCAOB registration and inspection.

SEC Regulation S-K Item 101(d) and FASB Accounting Standards Codification (ASC) 280, Segment Reporting, require disclosure of information, if material, about both assets and revenue by geographic area, including revenues from an individual foreign country. For purposes of assessing materiality to comply with this disclosure requirement, registrants and auditors often utilize a quantitative threshold of 10 percent of consolidated external revenues or long-lived assets as well as any qualitative considerations, if applicable. ASC 280 also sets forth a 10 percent threshold to guide disclosure of separate information about an operating segment. Additionally, FASB ASC 932, Extractive Activities – Oil and Gas utilizes a similar approach for the determination of whether an entity is regarded as having significant oil and gas producing activities. Furthermore, PCAOB rules require registration of any firm that plays a “substantial role”16 in the preparation or furnishing of an audit report with respect to any issuer. “Substantial role” is defined as any firm that: 1)

---

16 See PCAOB Rule 2100, Registration Requirements for Public Accounting Firms and PCAOB Rule 1001(p)(ii) Definitions of Terms Employed in Rule, Play a Substantial Role in the Preparation or Furnishing of an Audit Report.
performs material services (i.e., services for which the engagement hours or fees constitute 20 percent or more of the total engagement hours or fees) that an accounting firm uses or relies on in issuing all or part of its audit report with respect to any issuer, or 2) to perform the majority of the audit procedures with respect to a subsidiary or component of any issuer the assets or revenues of which constitute 20 percent or more of the consolidated assets or revenues of such issuer necessary for the principal accountant to issue an audit report on the issuer.

Ranges to Indicate Participation – For those participants meeting the disclosure threshold, the CAQ believes the extent of participation in the audit should be indicated through inclusion in a range (e.g. 10-20 percent, or 20-30 percent) as opposed to disclosure of a precise participation percentage by participant. This approach also provides transparency but mitigates the administrative burden that the proposed approach could impose on the audit engagement team by requiring precise calculations and related reporting of participation rates for each audit participant during the critical stage of audit completion.

c. Liability Considerations

The CAQ believes that the proposed requirement to disclose other participants in the audit report carries with it a potential increase in liability risk under Section 11, Section 10(b), and state law.

Section 11 - The CAQ has concerns regarding the liability implications of the Proposal under Section 11 which extend to the identification of participating firms. Prior to moving forward with this Proposal, the CAQ believes the Board should coordinate with the SEC to clarify that consent pursuant to Section 7 and Rule 436 for participating firms is not required.

Section 10(b) - As with engagement partners, the CAQ believes that some courts may read Janus in such a way that merely naming a participating firm or accountant in an audit report will be sufficient to attribute the statements made in the audit to that firm or accountant. It also is conceivable that some courts will read Stoneridge in such a manner that the increased visibility brought on by the disclosure of other participating firms in audit reports will expose those firms to more associational liability litigation. Requiring the disclosure of the names of other participating firms could result in those firms becoming the subject of litigation and regulatory actions whenever there is any doubt involving the issuer’s financial statements. Firms are likely to incur increased costs associated with such proceedings.

State Law – The CAQ believes that legal implications under state law resulting from the identification of other participating firms are also an important consideration. Under a state’s blue sky laws, a state court may determine a named participating firm is liable. Additionally, unlike federal securities laws, a number of states’ blue sky laws recognize causes of action by a holder of securities who claims to have relied on false statements. Similar to named engagement partners, plaintiffs also could seek to assert state common law claims against participating firms. As a result, even without reference to ultimate liability, identification of participating firms could increase the number of state law claims brought against partners and firms.

The CAQ believes that uncertainty regarding potential liability resulting from the identification of participating firms could result in the reluctance by firms to participate in the audits of public companies. While this could occur at a larger firm level, we believe this effect would be more pronounced in the smaller firm environment where such firms may be unable to leverage a network or affiliate relationship, impacting the ability of smaller firms to compete for audits of public companies. This adverse effect on competition could be exacerbated should investors prefer, and exert pressure on audit committees to engage auditors that can leverage the work of other network firms in the conduct of the audit (i.e., larger firms) over those that cannot.
The CAQ reiterates its belief that the PCAOB should conduct a thorough legal analysis and appropriate cost-benefit analysis as part of further deliberations related to this Proposal.

****

The CAQ acknowledges the Board’s efforts to be responsive to calls from investors and other financial statement users for further transparency into the audit through this Proposal. However, we do not believe identification of the engagement partner in the audit report will improve accountability. Further we believe liability implications of the Proposal, most importantly under Section 11, must be carefully considered. Should the Board move forward with this Proposal, we believe engagement partner identification in only Form 2, rather than the audit report, would be a more appropriate approach.

We support providing additional information to investors to enhance the understanding of the auditor’s role and responsibilities and the audit process, including certain information regarding the use of other firms in the audit. Should the Board move forward with identifying other participants in the audit report, we believe the Board should consider the other possible approaches that mitigate potential unintended consequences of the Proposal, and carefully analyze the liability considerations associated with the Proposal.

The CAQ appreciates the opportunity to comment on the Proposal and welcomes the opportunity to respond to any questions regarding the views expressed in this letter.

Sincerely,

Cynthia M. Fornelli
Executive Director
Center for Audit Quality

Comments on Transparency and Ethical Disclosure in all Reporting Models before PCAOB

1. Summary
PCAOB is proposing an amendment to the Audit Practice standards which will mandate and allow for the following

- Disclosure of signing partner within the firm. We would propose extending that to include a disclosure as to all key personnel in the Audit Team in the Audit by role and responsibility
- Functional Statement of Responsibility at the Managing or Audit Partner Level – a specific affidavit not from the Audit Firm itself, but its Audit Partner signing for that Audit would also be in order.

Why this is becoming necessary is in instances where an Audit Company refuses to produce documents or disclose who its personnel were in any specific audit, their roles, or in obtaining untainted copies of the work product produced. To date SEC and FINRA rely on the retention requirements in professional services issued through industry certifications including but not limited to CPE, CFE, CISM, CISA, CISSP, CIFI, as well as a myriad of others.

1.1. Firm-level refusal to provide FINRA or SEC documents makes it necessary to identify the parties involved with the Audit
That means when they (FINRA and through them the US Courts) cannot identify the specific auditors and responsible parties for attestations their only targets are the corporate shields of the Audit Companies themselves and as the D&T matter in China has proven PCAOB needs to be able to fully control all aspects of all regulated practices it is the regulating authority for, or it simply cannot fulfill its charter therein.
2. Our finding

As a credentialed trust expert I find these are key disclosure points for any and all filings. That in all matters before FINRA, all parties involved must be identified fully. Their roles documented and their access to key client data also managed to prevent ‘leakage’. We believe that the changes are necessary and will provide the public and investors with more transparency. We believe that they could also be extended to include more access to Audit Practice materials and Work Product.

The same should expand past FINRA controlled matters to that of all SEC controlled entities and the reason is for creating a complete evidence record of the Audit Practice, its Architects, and their Work-Papers and Design Notes on that Audit and Policy Compliance Model.

As to why these are necessary the next section will talk to the issues of trust in a mechanical sense but it all boils down to economics and properly empowering the Investor’s to make educated decisions. For instance there are top-tier audit companies which provide a superior grade of information practice and governance for their clients. This is an important asset and value-add for that investor, but it also is an important aspect of the larger/longer term investments and especially those of Institutional Investors who are ‘in for the long haul’ as it were.

These entities need to know who the people underwriting the mechanical credibility of the operating entity are and why they should believe what the entity’s officers are saying to them in the investment prospectus.

Since these aspects of investment were previously all done by mouth and among the wall-street insiders it is now appropriate that all filing disclosures including where appropriate all FINRA mandated (or other EDGAR) Filings pursuant to any regulatory practice should include a registration statement as to who is attesting to the statement.

3. AS-15 brings new requirements into this as well

It is in closing this commentary that AS-15 requires evidence control of all aspects of the Audit and that would include this new level of disclosure one would think for the following reasons:

1. Auditing is the Trust-Anchor for the Work Processes it certifies

The practice of external review is key to providing integrity in all operating practices. It is a new level of commodity which Investors have come to rely on and now want more resolution into the Audit Practice and what is being done internally to protect and streamline internal practices. These become not only statements of integrity in operations but also statements in how the larger transparency practice is enforced. AS-15 means that the Trust Factors of the Audit, its content and its implementation staff must be fully disclosed as part of the Evidence Statement for any Audit Practice under that framework.
2. Auditors and their Certifications form a formal contract with the Audit Clients for Attestations of Fact from the Auditor

Most all credentialed auditors hold a contract with their certification provider, generally a fraternal or industry oversight association like the AICPA. Likewise other professional organizations like ISA, ISACA, and ISC2 as well as others in the Fraud Management and Detection Areas all provide key credentialed professionals for specific roles within the Governance and Regulatory Reporting Reviews required for PCAOB impacted entities.

These contracts include NDA’s which allow the certified professional access to the client’s data properly protected as well as an oath to uphold the standards and ethical mandates the credentials award requires. Because of the exposure to this data it is reasonable that to PCAOB all team members be disclosed in an internal filing. It is important for PCAOB to understand where the customers data is and who has had access to it as part of the Audit. This information is already readily available on the 'underground' as it were so that is not a reasonable excuse for not providing it to the people who would need to rely on that auditors credential or trust assertion.

Possibly for security reasons it may make sense to not disclose that individual-participation data except to PCAOB known entities, like Industry Analysts but that is a decision for another round of reviews and not this matter.

Many of these credentials are based on experience and education as well to include accounting, forensic analysis, law enforcement and other backgrounds as a point of diversity in the audit practice as well, so for these reasons herein, it is a key important value-add to disclose all aspects of the Audits being performed and their staff members.

3. What and How “Fact” is disclosed is a key issue in building audit pro formas’

Today the scope of the Audit and what was actually brought into the Audit as well as what is planned for remediation or policy changes is important in judging the stability and integrity of an investment target. We need to provide mechanical assurance to investors that their review was properly done and that internal diligence is proven out by the reports issued. Who attests to this is key and while many firms have stood behind the idea that their name and license is what is on-line it is at the individual level as well as the firm level that FINRA discipline is issued and as such disclosure of that same level of granularity is key in the Audit Filing itself.

4. Complete Internal Disclosure

As a supporting concept, Internal Disclosure is a new part of Transparency in the Financial Context. That’s a lot of capped words and what it means is that through technology and practice, where and how information gets to us is important. We need to understand things as a black box when we want that level of information and with full transparency in all other instances. It is through a transparency process policy such as the one proposed that this will be put into place.
5. Conceptually Audit Project Managers are equivalent to Fund Managers in the realm of Fund operations.

The Audit Practice itself adds value to the entities they audit. We have discussed this previously but its an important concept since it also pertains then to the idea that the Auditor brings value – almost a celebrity to the process and while that is not the exact term we would settle on, the idea is that some Auditors are better than others and that the Auditor themselves has an impact on the entity.

4. Finally in closing this letter

Audit and what it provides is a key part of transparent business. Auditors provide key mid-course corrections to certain business practices and so which corrector is applying business-twist to the CFO’s or COO’s operating practices is important as well. The same will be true for instances where one Auditor has been found to be deficient or guilty of some fraud in the audit or practice therein. The ability to tie that party to other audits is of key importance to investors and is a part of the transparency they deserve.

Reference: PCAOB Rulemaking Docket Matter No. 29, Concept Release on Requiring the Engagement Partner to Sign the Audit Report

CFA Institute\(^1\), in consultation with its Corporate Disclosure Policy Council ("CDPC")\(^2\), appreciates the opportunity to comment on the Public Company Accounting Oversight Board’s (PCAOB) Concept Release on Requiring the Engagement Partner to Sign the Audit Report.

CFA Institute is comprised of more than 100,000 investment professional members, including portfolio managers, investment analysts, and advisors, worldwide. CFA Institute seeks to promote fair and transparent global capital markets and to advocate for investor protections. An integral part of our efforts toward meeting those goals is ensuring that the quality of corporate financial reporting and disclosures provided to investors and other end users is of high quality.

**CFA Institute Strongly Supports PCAOB Efforts To Improve Auditing Standards**

CFA Institute supports the efforts of the PCAOB to improve the integrity and transparency of the audit of financial reports. Improvements in auditing standards are essential to restoring and maintaining confidence in the financial statements used by investors to make capital allocation decisions. We strongly support the proposed rule to require disclosure of the engagement partner and the PCAOB initiative to improve the auditor’s standard reporting model. We view these steps as positive for investor protection.

Furthermore, we encourage the PCAOB to require disclosure of the extent to which the financial statements are audited by auditing firms other than the primary auditor so that investors have a better understanding of the role of auditors that may not be subject to PCAOB review. Disclosure should be required when other auditors are responsible for subsidiaries accounting for more than 10% of gross assets, equity, revenue, or net income.

---

\(^1\) With offices in Charlottesville, VA, New York, Hong Kong, and London, CFA Institute is a global, not-for-profit professional association of more than 100,000 investment analysts, portfolio managers, investment advisors, and other investment professionals in 133 countries, of whom nearly 83,000 hold the Chartered Financial Analyst® (CFA®) designation. The CFA Institute membership also includes 135 member societies in 57 countries and territories.

\(^2\) The objective of the CDPC is to foster the integrity of financial markets through its efforts to address issues affecting the quality of financial reporting and disclosure worldwide. The CDPC is comprised of investment professionals with extensive expertise and experience in the global capital markets, some of whom are also CFA Institute member volunteers. In this capacity, the CDPC provides the practitioners’ perspective in the promotion of high-quality financial reporting and disclosures that meet the needs of investors.
Audit Firms Should Lead Rather Than Oppose Efforts to Improve Their Public Image

The audit profession has a public perception problem, most notably in the eyes of investors, as a result of well-publicized audit failures and ongoing concerns regarding auditors’ role in firms affected by the financial crisis. Substantial surprise losses, frauds, and the lack of transparency have diluted investor confidence in the independent audit in recent years and investors increasingly question auditor independence, objectivity and professional skepticism. Bold actions have been proposed and need to be taken by the PCAOB, ideally with the support of the audit profession, to restore confidence in the independent audit. Auditors should lead the effort by urging the PCAOB to make reasonable and necessary changes to improve the quality of audits and the public’s perception of their quality. Leading the effort rather than resisting reasonable proposals would send a strong signal to the user community that the audit profession recognizes the problem and wants to play a constructive role in a comprehensive solution. Substantial changes to the standard auditor’s report, not mere tweaks, and disclosure of the engagement partner will help restore investor trust in the profession. We emphasize that investors ultimately pay for audits with scarce resources and, therefore, the needs of investors should be preeminent in the PCAOB decision to require disclosure of the engagement partner signature.

We also believe that, given the audit problems noted above, the PCAOB (in cooperation with the United States Securities and Exchange Commission) should continue to enhance its enforcement efforts in addition to strengthening auditing standards. The combination of better standards and stronger enforcement should serve to protect investors.

Disclosure of Engagement Partner Should Improve Actual and Perceived Quality of Audits

We disagree with the stated view of audit firms that identification of the engagement partner will not enhance audit quality. This is not simply a matter of enhancing audit quality, which we believe will indeed occur, but rather one of improving transparency and enhancing personal professional accountability; we believe that disclosure of the engagement partner will do both. Engagement partner signatures are already required in some countries outside of the United States, and we believe that requirement enhances transparency and personal accountability for the audits conducted in those jurisdictions.

Disclosure of the engagement partner as the individual with the primary responsibility for the audit distinguishes him or her from the client service partner who may exert influence regarding technical audit matters to preserve client relationships. We believe that disclosure of the engagement partner will strengthen that partner’s ability to prevent pressures from others within the audit firm who may otherwise inappropriately influence the outcome of key audit related decisions.

We also believe that the engagement partner, as the primary individual responsible for the audit, should be held to the same level of personal accountability as senior executive officials at the company, such as the Chief Executive Officer and Chief Financial Officer. Disclosing the engagement partner in the public domain as the principal individual with responsibility for the audit will bolster investor confidence in the financial statements and the audit. Conversely, when a company audit turns out to be deficient, investors may view other audits for which that partner is responsible with more skepticism.
Comment on Actual Signature vs. Disclosure
We do not object to the proposed approach of simply disclosing the engagement partner in lieu of the actual signature since we believe that simple disclosure would provide the same benefits of improving transparency and enhancing professional accountability.

Disclosure of Other Participants in the Audit
In March 2010, CFA Institute asked investors whether they would like to have more information about who is performing the audit and how much of the audit they performed. An overwhelming majority (91 percent) agreed that, in cases where there is more than one auditor, the identities and specific roles of other auditors should be disclosed. Disclosure should be required when other auditors are responsible for subsidiaries accounting for more than 10% of gross assets, equity, revenue, or net income. Required disclosure should include the name and location of the subsidiary and the name of the auditor. Separate disclosure should be required for each case meeting the significance test.

We believe that these disclosures are necessary to make clear to investors which audit firm (or firms) bears responsibility for the audit of the financial statements on which investment decisions are based.

Closing Remarks
We thank the PCAOB for the opportunity to express our views on this proposal. If the PCAOB has questions or seek furthers elaboration of our views, please contact Matthew M. Waldron by phone at +1.212.705.1733, or by e-mail at matthew.waldron@cfainstitute.org.

Sincerely,

Re:  *Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2 (PCAOB Rulemaking Docket Matter No. 29)*

Dear Office of the Secretary:

I am writing on behalf of the Council of Institutional Investors (Council), a nonprofit association of public, corporate, and union employee benefit plans with combined assets of over $3 trillion. Member funds are major shareowners with a duty to protect the retirement of millions of American workers. The Council appreciates the opportunity to provide input to the Public Company Accounting Oversight Board’s (PCAOB or Board) Rulemaking Docket Matter No. 29 on *Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2 (Release).*

**Disclosure of the Engagement Partner**

The Council wishes to thank the PCAOB for its responsiveness to our September 19, 2011 letter (September Letter). As you are aware, the September Letter requested that the Board promptly make a decision about whether to pursue a rulemaking proposal addressing the 2008 recommendation of the Department of the Treasury’s Advisory Committee on the Auditing Profession (ACAP) that the PCAOB “undertake a standard-setting initiative to consider mandating the engagement partner’s signature on the auditor’s report.”

---

1 For more information about the Council of Institutional Investors (Council) and its members, please visit the Council’s website at [http://www.cii.org/about](http://www.cii.org/about).

3 Letter from Jeff Mahoney, General Counsel, Council of Institutional Investors, to Office of the Secretary, PCAOB 4 (Sept. 19, 2011), [http://pcaobus.org/Rules/Rulemaking/Docket034/015_CII.pdf](http://pcaobus.org/Rules/Rulemaking/Docket034/015_CII.pdf) (“We would respectfully request that the Board either promptly release a timeline for issuing a proposed rule, or provide investors and the public with an explanation as to why this important improvement is no longer under active consideration.”).

As we indicated in the September Letter:

[The Council strongly supports.] consistent with the recommendation of the [ACAP] and the existing requirements of the European Union's Eight Directive, . . . requiring the engagement partner’s signature on the auditor’s report. We continue to endorse the findings of the [ACAP] that the ‘engagement partner’s signature on the auditor’s report would increase transparency and accountability.’

The Council’s continued backing of a final standard requiring the signature of the engagement partner in the audit report is derived, in part, from two membership approved policies: (1) our Statement on Financial Gatekeepers (Gatekeepers Statement); and (2) our Statement on Independence of Accounting and Auditing Standard Setters (Independence Statement).

The Gatekeepers Statement reflects our members' views that, in light of the global financial crisis and other recent financial scandals, continued reforms of rules and oversight of financial gatekeepers, including auditors, should be actively examined.

The Independence Statement indicates that any such reforms should focus on ensuring that the “pillars of transparency . . . and accountability are solidly in place.”

The Independence Statement reflects our members’ views about the criteria that a domestic or international auditing or accounting standard setter should possess. Our members generally believe that the adoption of those criteria would make it more likely that a standard setter would develop and issue standards that produce high quality audited financial statements that would be useful to institutional investors in making investment decisions and that would benefit the overall efficiency of the global markets. Those criteria, importantly, include a requirement that the standard setter demonstrate a clear recognition that its primary role is to satisfy in a timely manner the “information needs” of the key customer of audited financial reports—investors.

---

5 Letter from Jeff Mahoney at 4 (footnotes omitted).
8 Gatekeepers Statement, supra note 6, at 1-2.
9 Id. at 1.
10 Independence Statement, supra note 7, at 2.
The Council, consistent with the conclusion of many investors, the ACAP, and many other market participants, believes that requiring the signature of the engagement partner in the audit report would be responsive to the information needs of investors and would provide for greater transparency and accountability enhancing the real and perceived quality of audited financial statements. As we explained in our September 4, 2009, comment letter in response to the Board’s related Concept Release on Requiring the Engagement Partner to Sign the Audit Report:11

Armed with valuable information provided by the lead auditor’s signature, investors and boards will demand skilled engagement partners. The Council consequently believes that enhanced focus on the performance of the lead auditor will motivate audit firms to strengthen the quality, expertise, and oversight of their engagement partners. By more explicitly tying the lead auditor’s professional reputation to audit quality, requiring engagement partners to sign the audit report will further result in better supervision of the audit team and the entire audit process.12

While our strong support for requiring the signature of the engagement partner in the audit report has not wavered, we acknowledge that the Release’s proposed approach of disclosing the name of the engagement partner “has most of the same potential benefits as a signature requirement.”13 We, therefore, would not object to a final standard requiring disclosure of the engagement partner’s name, rather than signature, in the audit report.

Disclosure of Other Firms and Individuals that Took Part in the Audit

We also support, for similar reasons, the Board’s proposed disclosure of off-shoring arrangements and other types of arrangements whereby the auditing firm that issues the opinion relies on other firms or individuals to perform audit procedures. As an initial matter, we agree with the Board’s conclusion that investors need “greater transparency about who is performing the audit and how much of the audit they have performed.”14 That need was confirmed by the March 2010 survey results of the CFA Institute, finding that 91 percent of respondents generally support greater transparency about the “identities and specific roles” of other participants in the audit.15

13 Release, supra note 2, at 10.
14 Id. at 21.
It should not be surprising to anyone that investors need and are demanding more transparency about off-shoring and similar arrangements by audit firms, particularly in the case of the audits of multi-national companies. For those audits, the Board has acknowledged that investors “generally do not know the identities of other participants in the audit” and, in some cases, those participants:

- May not be subject to inspections by the PCAOB or other regulators;
- May have a disciplinary history with the PCAOB or other regulators; or
- May be subject to different, and potentially conflicting, legal and regulatory requirements than the firm issuing the audit opinion.\(^{16}\)

PCAOB Chairman James Doty has stated that the Release’s proposed disclosures “[e]nhanc[ing] transparency into the composition of cross-border audits should help investors gain a better understanding of how an audit was conducted and make more informed decisions about how to use the audit report.”\(^{17}\) We wholeheartedly agree.

The Council again appreciates the opportunity to comment on the Release. We thank you for considering our views. Please feel free to contact me at 202.261.7081 or jeff@cii.org with any questions regarding the content of this letter.

Sincerely,

Jeff Mahoney
General Counsel

\(^{16}\) See Release, supra note 2, at 20 (“[T]he proposed disclosure would enable investors and other users of the audit report to determine whether a disclosed independent public accounting firm is registered with the Board and has been subject to PCAOB inspection, and whether a disclosed independent public accounting firm or another person has had any publicly available disciplinary history with the Board or other regulators.”); see also Jay D. Hanson, Board Member, PCAOB, Statement on Proposed Amendments to Improve Transparency Through Disclosure of Engagement Partner and Certain Other Participants in Audits 2 (Oct. 11, 2011), http://pcaobus.org/News/Speech/Pages/10112011_HansonStatement.aspx (“[E]ven where the other firm is a member of the international network of the firm issuing the report, the network affiliate firm may be subject to different, and potentially conflicting, legal and regulatory requirements that investors may want to consider in evaluating the overall audit.”).

Re: Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2 (PCAOB Rulemaking Docket Matter No. 29)

Dear Madam Secretary:

I am writing on behalf of the Council of Institutional Investors (“CII”). CII is a nonprofit, nonpartisan association of public, corporate, and union employee benefit funds, and other employee benefit plans, foundations and endowments. Our members are long-term shareowners with combined assets that exceed $3 trillion.¹

The purpose of this letter is to supplement our January 5, 2012 comment letter (“Comment Letter”)² expressing strong support for the Public Company Accounting Oversight Board (“PCAOB”) promptly issuing a final standard in connection with its project on Proposed Amendments to PCAOB Auditing Standards and Form 2 (“Proposal”).³ Since the issuance of the Comment Letter, at least three significant events have occurred that we believe provide further support to requiring the disclosure of the signature or name of the audit engagement partner in the auditor’s report.

1. Revision to CII’s Policies

At the meeting of CII’s general membership last month, the members approved revisions to our existing corporate governance policies on “Auditor Independence.”⁴ Those revisions were the result of an extensive due process, including solicitation and careful consideration of input from a broad range of market participants from both within and outside of our general membership.

¹ For more information about the Council of Institutional Investors (“CII”) and its members, please visit CII’s website at http://www.cii.org/members.
⁴ CII Corporate Governance Policies, § 2.13 Auditor Independence (updated 2013), http://www.cii.org/corp_gov_policies#BOD.
The revisions to the Auditor Independence policy contain a number of factors that our general members believe audit committees should consider when exercising their “authority to hire, compensate, oversee and, if necessary, terminate the company’s independent auditor.”\(^5\) One of those factors, particularly relevant to the Proposal, is the audit committee’s evaluation of the “track record of the lead partners and the extent of their professional commitments . . . . ”\(^6\) In describing that factor, the new policy language explicitly reflects our members’ view that one efficient tool for collecting information about the lead audit partner is “through disclosure or signature of the lead partner on the auditor’s report.” That view appears to confirm the validity of the view described in the Proposal that many believe “providing financial statement users, audit committees, and others with the name of the engagement partner [in the audit report] might provide them the opportunity to evaluate, to a degree, an engagement partner’s experience and track record.”\(^7\)

2. The London Incident

As you are aware, on April 9, 2013, KPMG LLP (“KPMG”) issued a public statement indicating that an unnamed audit partner was separated from the firm for his involvement in providing non-public client information to a third party in exchange for cash.\(^8\) While investors and the general public learned within one day of the KPMG statement that Scott London was the unnamed partner and that Mr. London was the audit partner on Herbalife and Skechers,\(^9\) it was not until three days later that investors and the general public learned of the existence of three other audit clients of Mr. London—Deckers Outdoor Corp., RSC Holdings and Pacific Capital.\(^10\)

Unfortunately, questions about Mr. London’s involvement with other audit clients remains. In an April 23, 2013 article in the Financial Times, Michael Andrew, the chairman of KPMG, indicated that he was “prevented by confidentiality requirements from revealing what other companies’ audits were led by Mr. London.”\(^11\)

---

\(^{5}\) § 2.13a Audit Committee Responsibilities Regarding Independent Auditors.

\(^{6}\) Id.

\(^{7}\) Proposal at 6.

\(^{9}\) Id.

The delay and continued uncertainty surrounding which companies’ audits were led by Mr. London is of concern to investors and shareowners. Commenting on those concerns, a former enforcement attorney with the U.S. Securities and Exchange Commission and the Financial Industry Regulatory Authority recently stated:

> Even once the name of the auditor partner was disclosed, you had no idea what other audits he may have been leading. And as an investor, it would have been very interesting to know what other audits he was leading because they were likely to have implications as well, so it wouldn’t just be Herbalife and Skechers, but maybe others.\(^{12}\)

Moreover, the London incident occurred during proxy season when over a period of a just few weeks literally millions of American shareowners are voting proxies at thousands of U.S. public companies. One of the more consequential votes that shareowners cast annually at most of those companies, consistent with CII membership approved policies,\(^{13}\) is a vote on the ratification of the independent, external auditor.\(^{14}\) Recent empirical evidence indicates that shareowner voting on auditor ratification increases audit quality.\(^{15}\)

In our view, as soon as news about Mr. London’s conduct had been reported publicly, every shareowner in America should have had the ability to immediately access information to determine whether Mr. London was the audit engagement partner at the company they own. That information would certainly have had some relevance for some shareowners in determining how to vote on management’s proposal to ratify the choice of outside auditor. We believe that adoption of the Proposal would provide the means for shareowners to more efficiently obtain that information.

3. **Empirical Evidence Supporting the Proposal**

In February 2013 a paper was accepted for publishing by the American Accounting Association providing empirical evidence in support of the Proposal.

---

\(^{12}\) Cohen article at 1.

\(^{13}\) § 2.13f Shareowner Votes on the Board's Choice of Outside Auditor ("Audit Committee charters should provide for annual shareowner votes on the board’s choice of independent, external auditor.").

\(^{14}\) A review of Institutional Shareholder Services Inc. Voting Data by CII staff reveals that 2,739 companies in the Russell 3,000 had management proposals asking shareowners to vote on whether to ratify the company’s choice of independent external auditors in calendar year 2012.

\(^{15}\) Mai Dao et al., *Shareholder Voting on Auditor Section, Audit Fees, and Audit Quality*, 87 Acct. Review 149 (Jan. 2012), [http://aaaajournals.org/doi/abs/10.2308/accr-10159](http://aaaajournals.org/doi/abs/10.2308/accr-10159) (subscription required) (finding “that in firms with shareholder voting on auditor selection (1) subsequent restatements are less likely and (2) abnormal accruals are lower”).
More specifically, the paper investigated the conclusion of the U.S. Department of the Treasury’s Advisory Committee on the Auditing Profession (“ACAP”) that “the engagement partner’s signature on the auditor’s report would increase transparency and accountability.”\(^{16}\) Prepared by Joseph V. Carcello, Professor, University of Tennessee and Chan Li, Assistant Professor, University of Pittsburgh, the paper examined whether financial reporting outcomes changed in the United Kingdom after their introduction of the partner signature requirement in 2009.\(^{17}\)

The paper’s findings, generally confirming the conclusion of ACAP and one of the bases of CII’s support for the Proposal,\(^{18}\) include the following:

> Overall, our results indicate that the implementation of a partner signature requirement in the U.K. has offered benefits to investors and other financial statement users. First, earnings management has declined, whether measured by abnormal accruals or the propensity to meet an earnings threshold. In addition, the incidence of qualified audit opinions has increased. Perhaps because of this decline in earnings management and/or because of a greater willingness by auditors to issue qualified opinions, the informativeness of earnings has increased. Importantly, the results for both control samples – U.S. firms which have not implemented a signature requirement, and firms in other European Countries that adopted the partner signature requirement before the U.K. – suggest that the audit quality improvements experienced in the U.K. after the partner signature requirement are unlikely to be due to other changes in the audit or business environment not included in our model.

\(^{18}\) Letter from Jeff Mahoney at 2.

\(^{19}\) Joseph V. Carcello at 7 (emphasis added).
For all of the above reasons and those cited in the Comment Letter, CII continues to strongly support the prompt issuance of a final standard implementing the Proposal. We thank you for considering the views of long-term investors. Please feel free to contact me at 202.261.7081 or jeff@cii.org with any questions regarding the content of this letter.

Sincerely,

Jeff Mahoney
General Counsel

Re: Proposed Standard: Improving the Transparency of Audits
PCAOB Rulemaking Docket Matter No. 029

Deloitte & Touche LLP (“D&T”) is pleased to respond to the request for comments from the Public Company Accounting Oversight Board (the “PCAOB” or the “Board”) on its Proposed Standard: Improving the Transparency of Audits, PCAOB Release No. 2011-007; PCAOB Rulemaking Docket Matter No. 029 (October 11, 2011).

EXECUTIVE SUMMARY

We support transparency regarding the audit process and related quality controls in the interest of promoting the protection of investors and the effective functioning of the capital markets. D&T was one of the first accounting firms in the United States to provide a transparency report to the public describing its governance processes, ethical principles, and quality control procedures. In responding to the Board’s proposed standard from this perspective, we offer the following observations:

1. A variety of legal and regulatory provisions now in place are designed to ensure audit engagement partner accountability and the provision of information investors need to make decisions. Further, the Board currently has an agenda project to consider changes in the auditor’s report.

2. Should the Board decide that additional measures are called for, options are available to reinforce the functioning of the current system while avoiding unintended adverse effects:

   • Disclose the engagement partner’s name in Form 2 reports rather than in both Form 2 reports and audit reports.

   • Include additional language in the audit report that describes the overall level of participation of other firms in the audit, including network member firms, rather than requiring individual disclosure for other participants.

   • If disclosure of other firms’ participation is required, adopt a 20 percent threshold rather than a 3 percent threshold, which is generally consistent with the PCAOB’s approach in defining whether a firm is playing a “substantial role.”
• Resolve the risk of increased liability exposure before imposing new disclosure requirements, for example by coordinating with the Securities and Exchange Commission (SEC) to issue rules designed to counter interpretations that would promote lawsuits and regulatory actions.

CURRENT MECHANISMS PROMOTING TRANSPARENCY
The current environment within which audit firms function contains a variety of mechanisms designed to ensure that audit partners are held appropriately accountable for their work and that investors receive the information they need to make informed decisions:

• PCAOB standards make it clear that the engagement partner is responsible for the audit engagement and the conduct of the audit in accordance with applicable standards.2

• Engagement partners are subject to multiple layers of internal quality controls, such as engagement quality reviews, internal inspections, and consultation requirements.

• They are also subject to external oversight, through audit committees, federal and state regulators, the PCAOB, and the threat of civil liability.3

• Firms themselves are highly motivated to assure accountability through these internal and external mechanisms, particularly with regard to the quality of engagement partner performance.4

• Investors have access to substantial information about public companies through the audit report, management’s discussion and analysis, earnings reports, and analyst reports.

• The Board is considering possible means for expanding the usefulness of the auditor’s report.5

DISCLOSURE OF LEAD ENGAGEMENT PARTNER’S NAME
The standard the Board has proposed would require that the engagement partner’s name be disclosed in the audit report and in Form 2 reports that registered public accounting firms file annually with the PCAOB. The features of the existing environment we have cited above address the objectives of the proposed standard concerning auditor accountability and investor information.

Should the Board decide that additional action is required, the most appropriate step would be using Form 2 as the means for disclosure, as opposed to also requiring disclosure in the audit report, for the following reasons:

• As the Board notes in its release,6 Form 2 can be a more convenient and accessible form of reporting.

• There is less risk of fostering a misperception about how an audit is conducted; although the engagement partner is responsible overall, the performance of the audit requires the work of many professionals and involves the quality control systems of the firm.
• It avoids the potential issue regarding the engagement partner providing a consent, as discussed below.

We are not aware of evidence showing that disclosing an engagement partner’s name in the audit report would increase the partner’s sense of accountability or that it would cause the engagement partner to exercise greater care in performing the audit.

With respect to providing useful information to investors, knowing the engagement partner’s name would be of limited use in making investment decisions. In terms of evaluating the quality of a particular partner’s work, the number of issuer audits for which an individual may be the engagement partner, and for which his or her name is disclosed, would represent only a portion of the person’s relevant audit engagement experience, other professional experience, education, and training.

For these reasons we suggest that the Board’s current agenda project on the auditor’s report be the immediate focus for considering potential steps to change the content of that document. Should the Board determine that it should take action at this time on disclosure of the engagement partner’s name the more appropriate means would be Form 2.

**DISCLOSURE OF OTHER INDEPENDENT ACCOUNTING FIRMS AND PERSONS**

The proposal sets forth a 3 percent threshold for the disclosure of other independent firms and participants in the audit based on total hours in the audit for the most recent period, assuming the principal auditor is not dividing responsibility with the participant. As discussed above, the current system provides substantial information for investors, and we suggest that changes in the content of the auditor’s report be considered as part of the Board’s agenda project on that subject.

*Additional explanation on audit participation*

Given that the Board is separately considering possible modifications in the auditor’s report, there is the opportunity to prescribe the addition of report language that describes the overall level of other firms’ participation, including network member firms. An example of how this could be achieved is provided in the letter to the PCAOB from the Center for Audit Quality, submitted in connection with the PCAOB’s project to consider additional changes to the auditor’s report.7

This approach would be of greater value to investors and other users of the report, less likely to cause confusion regarding responsibility for the audit, more readily understandable, and consistent with the Board’s objective and other requirements of the Board when the auditor divides responsibility.

*Disclosure of other participants*

Should the Board decide to require some form of disclosure of other participants in the audit, a 20 percent threshold would be more meaningful to investors and other readers of the financial statements. Firms with participation at that level are those that would be playing a more significant role in the audit. They are generally already defined as playing a “substantial role” by the PCAOB.8

At this level of participation it is more likely that the information would be of interest and significance to investors and other readers of the audit report. In addition, the process to calculate the extent of their participation would be significantly less burdensome and distracting from the completion of the audit.
Our concern is that, especially if the 3 percent threshold is applied, disclosing other firms and persons participating in the audit creates the potential for confusing audit report readers. For example, the disclosure of the names of the other auditors may be misinterpreted as indicating the principal auditor has divided responsibility with these auditors or that a joint audit was conducted. With respect to the 3 percent threshold, the following considerations are important:

- The threshold is very low in relation to the significance of the audit work of the participants relative to the overall audit, and the information is likely of limited utility to investors.

- The proposed approach requires a calculation to arrive at a precise participation rate at the report issuance date for each audit participant. Although the PCAOB Staff and the release have indicated that an estimate may be used, the language in the proposed standard does not state this.\(^9\)

- Further, some audit hours will be incurred after the report issuance date. For example, PCAOB Auditing Standard No. 3 Audit Documentation allows 45 days from the report issuance date for the audit documentation to be assembled. Thus, some estimation would necessarily be required.

- The lower the threshold, the more time will be taken away from completing the audit to perform the calculations, and the more necessary it will be to use estimates.

**Disclosure of certain participating firms having a relationship with the signing auditor**

Registered public accounting firms are structured in various ways; some have affiliated firms that are separate legal entities located in the same jurisdiction as that in which the registered firm is located. Their participation in an audit in which the registered firm is the signing auditor is subject to supervision by the registered firm, which takes responsibility for the work of participating firms. In this connection, it would be helpful if the Board were to clarify whether the following interpretations of the proposed standard are correct:

- The legal structure of the registered firm and its affiliates in these circumstances would not affect the application of the disclosure requirements of the proposed standard, and disclosure of the participation in the audit of the affiliates would not be required.

- The participation of a subsidiary controlled by the registered firm located in a different jurisdiction, supervised on the audit by the registered firm, also would not be required to be disclosed.

**Legal Liability**

The Board has made clear its intent that the proposed standard should not increase liability.\(^10\) Further, recent Supreme Court decisions have clarified or confirmed limitations on liability under Section 10(b). One involves what must be shown to prove that an individual or firm made an untrue statement of a material fact (the *Janus* decision).\(^11\) The other addresses what some courts refer to as “scheme liability” or “associational liability” (the *Stoneridge* decision).\(^12\) Proper application of *Janus* and *Stoneridge* to the proposed disclosure requirements should preclude an increase in the liability of the engagement partner or other participants in the audit under Section 10(b) as a result of the proposed disclosures.
Nevertheless, although unintended, the proposed standard would create the potential of an increase in liability or of being made a part of legal and regulatory proceedings for engagement partners and others who would be named as participants in audits. This risk should be resolved before the Board moves forward with the proposed standard.

For example, the Board and the SEC might coordinate to make clear by rule that the engagement partner should not be considered the maker of the statements in the audit report for purposes of liability under Section 10(b) or Rule 10b-5 as a result of his or her name being disclosed under the proposed standard,\textsuperscript{13} that any disclosure requirement would not increase liability under Section 11, and that a consent pursuant to Section 7 is not required.\textsuperscript{14}

More specifically, the following are the grounds for concern about unintended consequences:

- Plaintiffs can be expected to assert claims under Section 10(b) against named partners and firms notwithstanding the two Supreme Court decisions, and some courts could read them in such a way that merely naming an engagement partner in an audit report will be sufficient to attribute the statements made in the audit report to that engagement partner or provide a basis for “scheme” or “associational” liability.

- The Securities Act of 1933 requires that issuers file the consent of any person (including an accountant) named as having prepared or certified any part of a registration statement (Section 7). It allows claims against such parties (Section 11).\textsuperscript{15} Liability under Section 11 does not depend on whether the accountant signed the report. Thus there would be a significant risk if it is determined that engagement partners and other participating firms must file a consent pursuant to Section 7 based on the disclosure of their names.

- Several states either adopted or patterned their securities laws after the Uniform Securities Act, which includes a section modeled after Rule 10b-5(b). Some state courts could, for example, conclude that audit partners and participating firms who are named in an audit report make statements contained in that report and, thus, are liable under state securities laws, even though such a conclusion would be in tension with the \textit{Janus} interpretation of Section 10(b).

- Some states recognize causes of action not merely by buyers and sellers of securities, but also by holders of securities who claim to have relied on false statements. Plaintiffs also could seek to assert claims against named engagement partners and firms under state common law.

- Regardless of how courts rule, simply providing more names to plaintiffs and their counsel would increase the number of claims asserted against engagement partners and other participants who are named. Firms would incur additional costs and experience disruption from such litigation, and from regulatory scrutiny and action.

The potential for unintended consequences underscores the need for the Board to conduct a thorough analysis of the proposal’s costs and benefits, and resolve these issues before its adoption.
D&T appreciates this opportunity to provide our perspectives on this important topic. Our comments are intended to assist the PCAOB in analyzing the relevant issues and potential impacts. We encourage the PCAOB to engage in active and transparent dialogue with commenters as the proposed standard is evaluated and changes are considered. If you have any questions or would like to discuss these issues further, please contact Robert Kueppers at 212-492-4241 or William Platt at (203) 761-3755.

Very truly yours,

/s/ Deloitte & Touche LLP

2 See, for instance, PCAOB Auditing Standard No. 9, *Audit Planning*, paragraph 3: “The engagement partner is responsible for the engagement and its performance.”

3 See further discussion of the internal and external oversight processes in the Deloitte & Touche September 11, 2009 letter to the PCAOB.

4 There are also significant concerns regarding safety and security issues resulting from disclosing individual names, as discussed in our September 11, 2009 letter to the Board. We continue to believe the proposed standard would present significant security concerns for individual partners and their families, and could trigger a reluctance to accept particular audit engagements, e.g., high risk engagements, and further challenge the profession’s ability to attract and retain talented professionals. These concerns will also likely involve additional costs in relation to performing certain audits, e.g., arising from the assessment of risks, and putting measures in place to respond to them. We have experienced direct threats to our people as a result of the nature of a client’s business operations and of audit findings during the performance of our work.

6 See PCAOB release, page 17.

7 Refer to page 1 of Example A in the Center for Audit Quality’s letter available at [http://www.thecaq.org/newsroom/pdfs/CAQ_June28Letter_PCAOBRulemakingDocketMatterNo.34.pdf](http://www.thecaq.org/newsroom/pdfs/CAQ_June28Letter_PCAOBRulemakingDocketMatterNo.34.pdf).

8 As defined in PCAOB Rule 1001, the phrase "play a substantial role in the preparation or furnishing of an audit report" means: (1) to perform material services, i.e., services for which the engagement hours or fees constitute 20 percent or more of the total engagement hours or fees, that an accounting firm uses or relies on in issuing all or part of its audit report with respect to any issuer, or (2) to perform the majority of the audit procedures with respect to a subsidiary or component of any issuer the assets or revenues of which constitute 20 percent or more of the consolidated assets or revenues of such issuer necessary for the principal accountant to issue an audit report on the issuer.

9 During the open Board meeting on October 11, 2011, it was indicated that firms would be able to use an estimate to arrive at the percentages. Although the release states the auditor may estimate the total hour, it appears limited to “when the actual number of hours have not been reported” by the other participating firms. Significantly, the language in the proposed standard itself does not state that estimates are permitted. See PCAOB release, at C-2 “… (3) the percentage of hours attributable to audits or audit procedures performed by the firm(s) or person(s) in relation to the total hours in the most recent period’s audit.”

10 See PCAOB release, pp. 14-16.

13 Additionally, there should be consideration of whether safe harbor protection can be afforded to provide that engagement partners, as a result of being named under the proposed standard, must not be considered to have made the statements within the audit report for the purpose of imposing liability under Section 17(a) of the Securities Act of 1933. Such a clear and definitive rule is of heightened importance in light of the unsettled nature of the impact of *Janus* on Section 17 claims. Compare SEC v. *Daifotis*, No. C 11-00137 WHA, 2011 WL 3295139 (N.D. Cal. Aug. 1, 2011) (holding that the reasoning of *Janus* cannot be extended to Section 17(a)(2) because that section does not contain the word “make”) with SEC v. *Kelly*, No. 08-CV-4612, 2011 WL 4431161 (S.D.N.Y. Sept. 22, 2011) (extending the reasoning of *Janus* to a claim under Section...

14 A requirement that engagement partners provide consents in certain filings based on the disclosure of their names in audit reports could also pose several practical difficulties, including: (1) what to do after a partner retires or otherwise leaves the firm; (2) what to do once a partner rotates off the audit engagement, i.e., would that partner have to perform additional procedures prior to agreeing to consent; and (3) what to do if the issuer switches audit firms. Disclosure of other participants in the auditor’s report presents comparable issues – e.g., a requirement that registrants include consents from other participants in connection with certain filings based on disclosure of their names in audit reports would significantly complicate the issuance of a report incorporated by reference into a registration statement and may require several firms to perform subsequent event procedures in order to provide such consents.

15 See also 17 C.F.R. 230.436(b) (“Rule 436(b)”). Rule 436(b) provides that, “[i]f it is stated that any information contained in the registration statement has been reviewed or passed upon by any persons and that such information is set forth in the registration statement upon the authority of or in reliance upon such persons as experts, the written consents of such persons shall be filed as exhibits to the registration statement.”

Re: PCAOB Rulemaking docket matter No. 29: Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2

Dear Board Members:

Eli Lilly and Company (“Lilly”) appreciates the opportunity to comment to the Public Company Accounting Oversight Board (“PCAOB”) on the PCAOB Release No. 2011-007 on Improving the Transparency of Audits. Lilly is a large, multinational pharmaceutical company, with presence in over 50 country jurisdictions, and creates and delivers innovative medicines that enable people to live longer, healthier, and more active lives.

Lilly commends the PCAOB for working to provide more transparency within the existing audit report framework by providing investors with information regarding certain key participants in the audit process. We support the amendments that the PCAOB is proposing that would require (1) the audit report to disclose the name of the engagement partner responsible for the most recent period’s audit; (2) registered firms to disclose in their PCAOB annual report on Form 2 the name of the engagement partner for each audit report already required to be reported on the form; and (3) disclosure in the audit report about the other persons and independent public accounting firms that took part in the most recent period’s audit. However, we disagree with the 3% threshold that the PCAOB has proposed to use to determine the persons and/or accounting firms that would be required to be disclosed under the 3rd proposed amendment. In our response, we give a brief summary of our opinions in response to each of the PCAOB’s three proposed amendments.

Amendment 1: The Proposed Audit Report Disclosure

We are supportive of the PCAOB’s proposal which would require the audit report to disclose the name of the engagement partner responsible for the most recent period’s audit while retaining the signature of the firm issuing the report as the only signature within the audit report. While we do not feel that disclosure of the engagement partner’s name in the audit report would increase the engagement partner’s sense of accountability because we believe in most circumstances a partner’s professionalism, reputation and responsibility to financial statement users is a stronger driver than attaching their name to the audit report, we do not believe that this rule would have negative consequences. Therefore, we are supportive of the proposal if the PCAOB and financial statement users believe that the disclosure would significantly enhance transparency.
Additionally, we believe that the proposed approach reflects the appropriate balance between the engagement partner’s role in the audit and the firm’s responsibility for the audit.

Amendment 2: The Proposed Amendment to Form 2

We are supportive of the PCAOB’s proposal to add a requirement under Item 4.1 of Form 2 to require firms to also disclose the name of the engagement partner. As noted above, we do not believe that adding the name of the engagement partner to the Form 2 disclosure is necessary to drive accountability of the engagement partners but do agree that it may enhance transparency with financial statement users. Also, we also do not oppose the requirement of the name of the engagement partner regardless of whether or not Amendment 1 is adopted for investor transparency purposes.

Amendment 3: Disclosure of Other Participants in the Audit and Referred-to Accounting Firms

We are also supportive of this proposed amendment which would require the auditor to disclose in an explanatory paragraph to the audit report: (1) Names of the other participants in the audit; (2) The location of other participants in the audit; and (3) The percentage of hours attributable to the audits or audit procedures performed by the other participants in the audit in relation to the total hours in the most recent period’s audit (excluding Engagement Quality Review and Appendix K review). We believe that this disclosure could provide useful information to investors and other users of financial statements by providing greater transparency which would allow users the ability to evaluate the other participants in the audit.

While we are supportive of requiring disclosure of other participants in the audit, we are strongly opposed to the 3% threshold that the board has proposed as the threshold for disclosing other participants in the audit. The proposal that the PCAOB has outlined would require participants whose individual extent of participation is 3% or more of total hours to be disclosed individually along with their percentage of total hours in the audit. Those participants whose extent of participation is less than 3% of total hours in the audit would need to be disclosed either individually with their respective percentage of total hours or as a group titled “other participants” with the percentage of total hours attributable to the audit procedures performed by the group. We strongly suggest that the PCAOB raise the threshold for participants to be listed individually or in the aggregate to 10% as we believe this is a more appropriate level that better aligns with the potential risks and materiality levels and would provide more meaningful information to financial statement users. We believe that a 10% threshold is more consistent with risks within an engagement and thus could provide more meaningful data to a financial statement user when other auditors are involved, while a 3% threshold is so low that the information could potentially be confusing or not meaningful to the user.

We do not believe that aggregating participants that fall below the designated threshold is meaningful.
Conclusion

Again, Lilly supports the PCAOB’s efforts to provide more transparency within the existing audit report framework by providing investors with information regarding certain key participants in the audit process. We feel that the three proposed amendments that the PCAOB has outlined could enhance transparency, and we are therefore supportive of the amendments. However, we are concerned that the 3% threshold that the PCAOB has proposed to use to determine which persons and/or accounting firms to disclose under Amendment 3 is too low and could lead to information being provided to financial statement users that is cumbersome to evaluate and not meaningful or significant to the audit. We again urge the PCAOB to carefully consider and evaluate raising the disclosure threshold to 10% which we believe is more appropriate level at which meaningful and useful information could be provided to financial statement users.

We appreciate the opportunity to express our views and concerns regarding the concept release. If you have any questions regarding our response, or would like to discuss our comments further, please call me at (317) 276-2024.

Sincerely,

ELI LILLY AND COMPANY

PCAOB Rulemaking Docket Matter No. 29
Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2

Dear Mr. Seymour:

Ernst & Young LLP (EY) is pleased to comment on the Public Company Accounting Oversight Board’s (PCAOB or Board) above referenced proposal (the Proposed Standard) aimed at improving the transparency of audits.

I. Summary of our positions on the Proposed Standard

We agree with the PCAOB’s goal of providing greater transparency about the auditor’s responsibilities. Indeed, EY was significantly involved in developing a set of recommendations relating to possible changes to the audit report that was submitted to the PCAOB by the Center for Audit Quality on 9 June 2011. These recommendations included a proposal that the audit report be revised to “describe the accounting firm network structure, the responsibility of the member firm signing the audit report, and the participation of other member firms in the audits.” We are pleased that the Proposed Standard incorporates this concept, which would provide meaningful information to investors and others who rely on audited financial statements. However, as discussed below, we suggest some modifications to the Proposed Standard to improve the usefulness of the disclosure and permit the information to be compiled in a way that is not disruptive to the audit process.

We also appreciate that the PCAOB has not gone forward with a proposal, described in the earlier Concept Release, that the partner sign the audit report. Nonetheless, we cannot support the proposal that the engagement partner’s name be otherwise identified in the audit report or in Form 2. The purpose of such disclosures, according to the PCAOB’s release, is two-fold: to enhance audit quality and to provide useful information to investors. As for the first point, we believe that such a disclosure would not alter a partner’s existing strong sense of accountability to the investing public and would send the wrong signal to investors and the market about the nature of an audit and the role of the firm in supporting its execution. As for the goal of providing useful information, we do not believe that a partner’s name would add anything useful to the total mix of information relied upon by investors and will likely cause some persons to make incorrect inferences about audit partners and audits. Moreover, we have substantial concerns that naming the partner in the audit report who is “responsible” for
the audit would result in more litigation being brought directly against the individual partner (in addition to the firm); even if such claims are ultimately unsuccessful they would have a devastating personal and professional impact. Accordingly, we urge the PCAOB not to adopt the proposal to disclose the engagement partner’s name in either the audit report or in Form 2.

Below we provide additional details of our views on the two concepts included in the Proposed Standard.

II. We believe disclosing other participants in the audit will provide investors with meaningful information, and we support the PCAOB’s concept in this regard

We support disclosing information in the audit report about the participation of other independent registered public accounting firms in audits. We believe this would provide meaningful and useful information to investors. We do, however, urge the Board to make two modifications to the Proposed Standard.

First, we recommend that the Proposed Standard be expanded to adequately acknowledge the signing firm’s oversight, supervision and review responsibilities over those other participants in the audit. We believe investors would benefit from gaining a general understanding of the relationship between the signing firm and other participants in the audit and the signing firm’s professional responsibilities for the work performed by the other participants. Some firms are part of a loose network of legal entities, while other firms (such as EY) are members of a global organization that requires all members to follow a consistent audit methodology and adhere to a similar system of quality control. In other circumstances, such as in situations where a non-network firm’s work is relied upon by the signing firm, the participating firm is outside of the signing firm’s organizational structure and does not follow a similar methodology. We believe investors should be provided information so they can understand the relationship and commonalities, or lack thereof, between the other participants and the signing firm.

Second, we encourage the PCAOB to reconsider the proposed use of an exact audit hour percentage for the disclosure of participating firms’ involvement in the audit, and recommend that the Board consider requiring firms to estimate and disclose other participants’ efforts by range of percentage, which we believe will be easier to prepare while providing meaningful information to investors.

We urge this change because, while we believe it is important for financial statement users to have a basis to understand the level of involvement by other firms, there are some practical difficulties to determining a precise percentage of other participants’ involvement in an audit, and to do so timely. Developing a process to gather the relevant data and determine the precise percentages of other participant involvement through the date of the audit report would be challenging, and may take attention away from other more important matters during the busiest phase of the audit. An example of this is that in many countries, a local audit team will often execute audit procedures for a subsidiary company to permit the signing firm to conclude on the parent company’s consolidated financial statements as well as a
statutory audit of the subsidiary’s financial statements simultaneously. In these cases, the same audit work will be used to support both audit opinions but, for example, may be performed with a lower planning materiality than necessary for the consolidated audit in order to meet the needs of the statutory audit. As a result, local teams are often unable to provide the signing firm with accurate information on total hours incurred related only to the audit of the consolidated financial statements. Therefore, an estimation process using various assumptions would be necessary for the signing firm to disclose the exact percentage as required under the Proposed Standard. Because of the inherent uncertainty associated with this, we believe the PCAOB should modify the proposed information to be included in the audit report, as well as recognize and allow firms to develop a reasonable process to estimate time incurred by the various participants in the audit. A firm’s estimation process would likely include, at a minimum, a process to estimate (i) hours needed to complete the audit (including post report issuance work paper archiving and other internal procedures) (ii) the effect of statutory audit procedures as described above and (iii) other matters affecting the disclosures. We are concerned that a lack of acknowledgement of the necessity of an estimation process, combined with a precise percentage threshold for disclosure, would result in significant efforts to obtain a level of precision (and communicating that such precision, in fact, exists) without translating into significantly more useful information to investors.

We believe disclosing individual firm participants in the audit by their approximate level of involvement within a range would provide more useful information to investors while at the same time facilitate a more efficient process to gather information for such a disclosure. When considering the ranges to be used for describing relative auditor involvement, we believe it is important to consider that if the ranges are defined too narrowly (e.g., in 3% or 5% increments), many audit teams may run into challenges given the estimation uncertainty associated with the effort as previously described. By assigning the percentage effort of others involved in the audit to broader ranges, engagement teams will be able to provide the necessary transparency to investors (regarding how significantly other participants were involved in the audit), while allowing the auditor to make reasonable estimates at the time the audit report is filed. Additionally, presenting an estimated aggregate percentage of other participants’ involvement in the audit will provide the users of the financial statements with visibility into the magnitude of the total work performed by firms other than the signing firm.

Accordingly, we propose an alternative to modify the audit report as follows:

I. Explain the responsibility of the signing firm, the responsibility of the other firm participants, and acknowledge the signing firm’s responsibility for supervising and reviewing the work of the other firm participants, which may include a combination of procedures performed by the engagement team and reliance on a consistent global audit methodology and system of quality control.

II. Disclose the approximate aggregate involvement of other firm participants based on an estimate of audit hours incurred.
III. Include, as an appendix to the audit report, a listing of individual firm participants in the audit (segregated by their participation within or outside a firm’s global network) organized by their approximate level of involvement within a specified range. We believe the ranges of 10% to 20% of estimated total audit hours, 21% to 50% of estimated total audit hours, 51% to 80% of estimated total audit hours and greater than 80% of estimated total audit hours would provide investors with useful information about the relative effort of firms other than the firm signing the audit opinion. Specific percentages attributable to each individual participant would not be listed and individual firm participants with involvement of less than 10% of estimated total audit hours would not be separately identified because we do not believe the disclosure of individual auditor involvement below this level would provide a benefit to investors.

IV. Identify individual firm participants listed in the appendix to the audit report that are located in jurisdictions in which the PCAOB, as of the date of the audit report, is unable to perform inspections.

We present in an attachment to this letter an example of the recommended disclosure to be included in the audit report (or as an appendix to the audit report), that incorporates the concepts discussed above.

III. We do not support the proposal regarding disclosure of the names of engagement partners

On its face, the proposal to publicly identify audit engagement partners by name might appear to be relatively innocuous. However, we believe it is necessary to consider how such information might be utilized, whether by the trial bar in litigation or by others who would associate the name with other publicly available information. We conclude the long-term implications of the proposal do not serve the public interest and urge the PCAOB to reconsider the proposal.

a. Identifying the engagement partner by name, either in the audit report or in Form 2, would not provide meaningful or useful information to investors

There are a number of reasons why disclosure of the individual partner’s name in either the audit report or in Form 2 would not provide information that is useful to investors and, in fact, could lead to incorrect assumptions or conclusions about the quality of the audit and the skills of the individual auditor.

The partner’s name, by itself, is not useful information: The Proposed Standard states that disclosure of the engagement partner’s name “could provide investors with useful information.” While we support and previously have proposed changes we believe will improve the usefulness of the audit report to investors, those changes are centered around increasing the discussion of certain elements of the audit and highlighting, through an emphasis of matter paragraph approach, those issues in the financial statements that were most important to the auditor. We do not believe that the disclosure of an engagement partner’s
name would add anything to the total mix of information that is used by an investor in making an investment decision.

**Inappropriate emphasis will be placed on the partner, as opposed to the firm:** Attaching the partner's name to the report would place a disproportionate emphasis on the role of the partner. It is certainly true, as the Proposed Standard notes, that the engagement partner is ultimately responsible for the performance of the audit. But, as was emphasized in many of the responses to the 2009 concept release, an audit opinion is issued by the firm, not an individual partner. While the engagement partner has a significant role in the audit, there are many others involved in the engagement, such as the engagement quality reviewer, technical resources and other specialists, and many non-partner level auditors. Additionally, there are aspects of the audit that are managed at a firm-level, such as the audit methodology employed, training, consultation policies, etc. We are concerned that the Proposed Standard, if adopted, would create confusion in an area where we don’t believe any currently exists.

**Inappropriate use of this information could be harmful to audit partners:** With regard to the proposed Form 2 disclosure, the PCAOB states that the purpose is to provide investors with a “convenient mechanism to retrieve information about a firm's engagement partners for all of its audits.” Moreover, at the 11 October 2011 open meeting to consider this Release, the PCAOB staff indicated that, should this proposal be adopted, the PCAOB would likely enhance its website function to ensure that such information would be easily searchable. It is difficult to understand how this proposed disclosure would be used in a responsible manner (aimed at promoting audit quality) rather than for purposes that could be harmful to individual partners both professionally and personally.

For instance, it is likely that databases will be created to track the names of engagement partners and associate them with publicly available information regarding companies where they currently or previously have served as the engagement partner. Such information could include the identification of material weaknesses in internal controls over financial reporting, the issuance of audit reports with going concern emphasis paragraphs, corporate bankruptcies, restatements of financial results, disclosure of corporate financial improprieties or corporate failures. While this information may sound useful, it would generally be misleading to link the audit report and the individual audit partner to such events. The existence of such events could occur in the context of, or in some cases even result from, an auditor performing his or her job at the highest skill level. Accordingly, the attempted linkage of an individual audit partner’s name to certain company events or occurrences would likely yield incorrect inferences for both the partner and the companies they audit and thus potentially provide misleading information to investors.

**Use of this information might result in inappropriate inferences about partner changes:** The Proposed Standard states, “Once in effect for at least five years, the additional transparency could also allow investors to consider whether the engagement partner was replaced sooner than is required under the partner rotation requirements in the Act and SEC rules.” The Proposed Standard then asks, “Could that additional transparency, in turn, promote auditor independence by discouraging audit clients from inappropriately pressuring the firm to remove an engagement partner?” There are numerous reasons why a partner may leave an
engagement before the mandatory rotation date, such as through reassessments by the firm of partners' workloads, retirement timing/planning, different responsibilities for the partner within the firm or for health or personal reasons. In view of the question posed in the Proposed Standard, we are concerned that investors might start to infer that early rotation is due to an audit firm’s inability to stand up to a client on an accounting or auditing matter or otherwise conclude that some type of audit problem exists.

The proposal overlooks the role of the audit committee in approving the audit partner: The assumption that investors need to have the name of the audit partner overlooks the key role of the audit committee in overseeing the conduct of the audit, a role given to the audit committee under Section 301 of the Sarbanes-Oxley Act. The audit committee, acting on behalf of shareholders, is given extensive information about the engagement partner’s qualifications and experiences and will typically interview a number of partners before approving the selection of the audit partner. Based on that information, the audit committee determines whether the partner is capable of leading a high quality audit team. Financial statement users are not in a position to perform a similar evaluation by only using the partner name.

b. Identifying the engagement partner by name, either in the audit report or in Form 2, would not improve audit quality

The Proposed Standard offers another rationale for partner identification: that audit quality will be improved by the enhanced accountability felt by an engagement partner upon disclosure of his or her name and that the greater transparency will incentivize audit firms to assign more experienced and capable partners to engagements. Again, we respectfully disagree.

Making public the audit partner’s name would not increase the partner’s sense of responsibility. That sense of accountability and professional responsibility exists now. Partners today feel a strong sense of accountability when they authorize the use of a firm’s signature on an audit report. This accountability is based on the partner's professional responsibilities to the audit committee, investors and regulators. The firm's system of quality control, which promotes audit quality and provides reasonable assurance that the firm and its personnel at all levels comply with the applicable professional standards, is a key contributor to a partner's sense of personal accountability.

Partners responsible for audits of public companies today are subject to PCAOB inspections, firm internal quality reviews, SEC and PCAOB enforcement proceedings, peer reviews, state accountancy board disciplinary proceedings, as well as the threat of litigation in which the partner’s performance will be challenged. We know of nothing comparable in any other profession – lawyers, doctors, architects, and others are of course subject to regulatory scrutiny but we believe that the level and diversity of review of an auditor’s performance is unique.
In the Proposed Standard, the Board suggests that the transparency provided to investors about the engagement partner could “further incentivize firms to assign more experienced and capable engagement partners to engagements.” We agree that investors are best served when the most challenging audits are matched with engagement partners possessing the appropriate knowledge, experience and temperament for the circumstances. However, audit firms currently understand these factors and are in the best position to make these assignments, as approved by the audit committees.

c. Disclosure of the audit partner’s name in the audit report would increase the likelihood that partners would be named in private litigation and increase liability exposure to partners

We are concerned that the proposal would expose audit partners to substantial liability. This is an issue which is specifically raised in the Proposed Standard and was the subject of much discussion at the PCAOB’s public meeting on 11 October 2011.

Identifying partners in the audit opinion would likely lead to more litigation directly against audit partners: Partners today are generally not named individually as defendants in lawsuits. Typically, plaintiffs’ lawyers name the accounting firm itself, but not individuals involved in the audit. We have reviewed our caseload for recent years and found only a handful of cases in which a plaintiff named an individual partner as a defendant.

Although we do not have access to the plaintiff bar’s decision-making calculus, we believe there are reasons for this practice. At the time a complaint is filed, a plaintiff frequently does not know the name of the engagement partner; that information is learned through discovery. A plaintiff could, of course, seek to amend his/her complaint after learning the partner’s name, but plaintiffs’ lawyers with whom we have spoken have expressed a view that individual partners are not generally named because an individual partner is not a “deep pocket” for recovery of damages. The firm itself, at least in the case of the large firms, will satisfy a judgment. In addition, in federal securities litigation, the partner would likely seek dismissal of the lawsuit based on the *Central Bank* “primary liability” line of cases (which we discuss further below) because the firm is generally viewed as the “maker of the statement” as opposed to the individual partner. Therefore, from a plaintiff’s perspective, naming the individual partner may be viewed as a pointless exercise.

However, we believe that linking the partner’s name specifically to the audit report, as the PCAOB’s proposal would do, would change this analysis substantially. If the Proposed Standard were adopted, the report would state, “[t]he engagement partner responsible for the audit resulting in this report was [name].” Plaintiffs and their counsel will find it easy, and likely desirable, to name as a defendant the person identified as having been “responsible” for an allegedly misleading audit opinion. The plaintiff may also conclude that naming the
individual partner would provide additional leverage for purposes of settlement, would make it easier to obtain discovery from the partner, and may provide other tactical advantages.¹

We have, in fact, had experience with plaintiffs seeking tactical advantages by naming individuals as defendants. For example, in a recent case, plaintiff's counsel named a former EY audit manager as a defendant in a lawsuit, along with EY. The plaintiff's lawyer then wrote a letter to counsel, who (as is typical) was representing EY and the former manager, and told him that the plaintiff would be willing to drop the individual from the lawsuit if she would agree to be interviewed by plaintiff's counsel, without EY counsel present, to answer detailed questions about the underlying audit work – in other words, the lawyer offered the former manager dismissal from the lawsuit in exchange for her cooperation with the plaintiff. Plaintiff's counsel even insisted that the individual would need to retain separate legal counsel because his proposal had created a conflict of interest between EY and the former manager. The former manager declined the offer – but the experience demonstrates the complications in litigation that can result from naming of individual audit partners.

We also believe litigation expenses would likely increase if partners are individually named in lawsuits on a more frequent basis (which we expect would result if the Proposed Standard is adopted). An accounting firm may find it necessary to hire separate counsel for the individual partner to ensure that his/her interests are adequately protected. And a partner defendant may believe it important to his personal and professional life that a case is settled quickly, thereby potentially increasing the cost of settlement. Over time, this increased cost structure would likely result in higher audit costs.

 Naming partners in lawsuits causes substantial personal harm: When a partner is named in a lawsuit, it is likely to have a devastating personal impact. A partner who is named as a defendant in a multi-million or multi-billion dollar lawsuit may be reassured by partnership colleagues that his personal assets are not at risk, but his or her friends, neighbors, relatives and business acquaintances may not know that. The ability of a partner to obtain a mortgage loan, to get his or her accounting license renewed, or to engage in other activities may be impaired while the litigation is pending. And the impact may be long-lasting. In an age of immediate internet search capability, the ability to put the personal impacts of litigation (including frivolous suits and cases won by the defendant auditor) behind an individual partner, whose livelihood depends upon his or her professional reputation, can be

¹ At the PCAOB’s public meeting on 11 October 2011, Chairman Doty noted that auditors of issuers in the EU are required to personally sign the audit opinions, and he questioned why the rules in the U.S. should be different. But we submit that the litigation environments between the U.S. and Europe are completely different. Lawsuits against auditors are brought in the U.S. with much more regularity.

In this regard, we asked our global firm for information on claims that have been filed since April 2008, when the EU adopted the partner signature requirement. We determined that member firms of the EY global network located in the EU had have had five claims brought against them that relate to audit reports issued after April 2008. The individual partner was named in three of these cases, and not named in two; prior to the signature requirement, we understand that individual partners were not frequently named.
challenging. We believe the Proposed Standard would make this environment even more challenging.

As an example, one of our partners was personally sued, along with EY, in a state court action several years ago. This suit occurred in a relatively small city, where our partner’s spouse ran her own small accounting business. Both our partner and his spouse were significantly impacted by the lawsuit. Her clients soon questioned whether they could continue to do business with her, given the multi-million dollar claim pending against her allegedly negligent husband. In this matter, the partner spent months defending himself through a five-week trial (which he and EY won), all the while worried about his future career, his livelihood and the impact of the litigation on his family.

Similarly, we heard from a partner who left our firm after a lawsuit had been filed against him (and against EY) to join private industry. The former partner told us that the job opportunities at his new company were limited because of the lawsuit. Years after the lawsuit had been dismissed, he believed the lawsuit (relating to a purported major fraud) still inhibited his job prospects at his new company. We also understand that some partners have experienced difficulties with respect to their service on non-profit or charitable boards as a result of being named in an audit litigation matter. It is perhaps not surprising then that individual partner liability exposure and resulting reputational damage may cause some auditors to question whether it makes sense to remain in public accounting.

**Under existing case law, the liability of individual partners is unsettled:** It might be said that plaintiffs are unlikely to name individual partners as defendants because, as noted above, such claims are prone to nearly certain early dismissal on the pleadings. But this is not so clear-cut.

There are two major areas of litigation brought against accounting firms such as ours. The first consists mostly of state law fraud and negligence claims asserted by bankruptcy trustees, litigation trustees, and (less frequently) former audit clients. The negligence theory is typically based on purported professional malpractice by the accountant, failure to inform the client of information discovered by the accountant, or negligent misrepresentation by the accountant.

We try to obtain dismissal of individuals named in such state court actions, but we are not always successful. This was true in a recent case. In an arbitration that took place in mid-2011, a bankruptcy administrator named a partner, a senior manager, and a manager, along with EY itself, as respondents in an action asserting negligent misrepresentation and breach of contract as to the bankrupt company. Our motion papers seeking dismissal asserted that the EY firm, not the individuals, made the purported misrepresentations to the company, and hence the negligent misrepresentation claims against the individuals should be dismissed. We stated, “The audit opinion issued by EY for the [company’s] financial statements is signed by the firm as a whole and *not* by any member of the firm.” Further, our brief noted, “[n]one of these three audit team members is in a management position at the firm.” But the arbitration panel denied the motion.
A second major area of litigation is securities class action litigation under the federal securities laws. These cases are typically brought under Section 10(b) of the Exchange Act and Section 11 of the Securities Act.

As the Board noted in its proposal, the Supreme Court decision in *Janus Capital Group, Inc. v. First Derivative Traders*, 564 U.S. __, 131 S. Ct. 2296 (2011), established that a person cannot be liable under Section 10(b) and Rule 10b-5 unless he or she has “ultimate authority over the statement, including its content and how to communicate it.” Thus, based on the *Central Bank* line of cases, a person does not “make” a statement unless the person has “control” over the statement. Further, the Court stated that “in the ordinary case, attribution within a statement or implicit from surrounding circumstances is strong evidence that a statement was made by – and only by – the party to whom it is attributed.”

Although this standard should be helpful to individual auditor defendants, the case law under *Janus* is just now developing. If the PCAOB’s rule were adopted, a plaintiff could cite the audit report’s assertion that a particular audit partner was “responsible” for the issuance of the audit report and, hence, he or she had “ultimate authority” or “control” over the report – possibly sufficient to survive a motion to dismiss under *Janus* as a “maker” of a false or misleading statement. This has happened already. In *Munoz v. China Expert Tech., Inc.*, No. 07 Civ. 10531, 2011 U.S. Dist. LEXIS 128539 (S.D. N.Y. Nov. 4, 2011), the court held that although the accounting firm PKF Hong Kong signed the opinion on a purportedly misleading set of financial statements, there was a genuine issue of fact as to whether PKF’s New York affiliate “controlled sufficiently – and thus ‘made’ – the statements in question” by virtue of the PKF New York firm having had “final approval” over the issuance of the audit opinion. Thus, even though the PKF New York firm did not sign the audit opinion, the court refused to dismiss a Rule 10b-5 claim against it. The status of the PKF New York firm, and its alleged control over the issuance of the audit opinion, might be comparable to that of an audit partner’s control over the issuance of an opinion. Cases such as this one make clear the risk to individual partners who might be sued for securities fraud.

Risks also would exist under Section 11, which provides for claims against “every accountant” who “has with his consent been named” as “having prepared or certified” any part of a registration statement or any report used in a registration. The SEC has not yet taken a position as to whether the proposed auditor disclosure requirement would mean that an individual engagement partner would be required to file a consent pursuant to Section 7 of the Securities Act; the issue has not yet been addressed by the SEC in any public fashion. If such a consent were required, there would be substantial additional liability exposure for the individual partner. At the very least, the legal obligations under Section 7 should be established prior to the adoption of the Proposed Standard.

In view of the uncertainty inherent in the present legal landscape, we are very concerned with the Board moving ahead with the Proposed Standard.

* * * * * *
In summary, we support providing additional disclosure regarding the participation of other firms in the audit report and more information on the overall responsibility of the signing firm as providing meaningful and useful information to investors. We believe the enhancements we outline above would enhance the value of such a disclosure.

We do not support inclusion of the engagement partner’s name in either the audit report or in Form 2. Such disclosure would not enhance audit quality or improve investors’ decision-making ability. Instead, it would likely have a detrimental effect on auditor liability and audit cost, and have the unintended consequence of providing a blow against the attractiveness of the profession.

We would be pleased to discuss our comments with members of the Public Company Accounting Oversight Board or its staff.

Sincerely,

Ernst & Young LLP
Attachment

Recommended disclosure to be included in the audit report

We are responsible for our opinion on the consolidated financial statements of ABC Company. In conducting our audit of the consolidated financial statements, we used the services of other independent registered public accounting firms that may or may not be affiliated with us through our global network. [Each member firm that is part of the network is a separate legal entity; however, all member firms follow a consistent audit methodology and are subject to a similar system of quality control.]² We, as the signing firm, take responsibility for the audit procedures performed by the other independent registered public accounting firms and, accordingly, have supervised or performed procedures to assume responsibility for their work in accordance with PCAOB standards. We requested the other participants, either included within our global network or outside our global network (as listed in the Appendix to this report) to conduct certain audit procedures in support of the audit of the consolidated financial statements [and effectiveness of internal control over financial reporting]. The audit procedures performed by other participants represented approximately xx% of total estimated hours involved in our audit of the consolidated financial statements on ABC Company as of and for the year ended December 31, 20xx.

APPENDIX:

In our audit of the consolidated financial statements of ABC Company as of and for the year ended December 31, 20xx, the other independent registered public accounting firms listed below were involved in the performance of our audit and subject to our supervision. Those firms indicated with a “*” are located in jurisdictions in which the PCAOB, as of the date of this report, cannot perform inspections.

<table>

Dear Sir or Madam,

Re: FEE Comments on PCAOB Rulemaking Docket Matter No. 029, Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2

FEE (the Federation of European Accountants) is pleased to provide you with its comments on the PCAOB Rulemaking Docket Matter No. 029, Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2.

We have not expressed views on issues that focus on purely national US matters. Our general comments to the issues raised in the PCAOB proposed rulemaking that are relevant from a European or international perspective are set out below and can be summarised as follows:

1. FEE fully supports the aim of improving transparency of audits and believes that including the name and the signature of the engagement partner responsible for the audit will contribute to achieve this. The disclosure requirements should clearly state that only the names of those that have responsibility for the audit should be disclosed in the audit report in order not to give the perception of dilution of responsibility for the audit.

2. FEE does not believe that the proposal to disclose “…the percentage of hours attributable to the audits or audit procedures performed by the other participants in the audit…” will help to improve audit quality and strongly urges the PCAOB not to go down this route.

Engagement partner’s signature on the audit report – Questions 1 – 11

FEE fully supports the aim of improving transparency of audits and has expressed this view in our recent response to the PCOAB consultation on Reports on Audited Financial Statements.

In Europe, the signature of the audit partner on audit reports is required by the 2006 Statutory Audit Directive. European Member States may allow the signature not to be disclosed in exceptional circumstances, namely if the inclusion of it could lead to an imminent and significant threat to the personal security of that person.

FEE agrees that the name of the engagement partner, as proposed in questions 1-3, adds to the transparency of the audit. The perception is that the explicit signature does enhance the
accountability of the signing party and therefore implicitly contributes to audit quality. The requirement to include the name of the engagement partner in the audit report is therefore from our viewpoint an appropriate approach.

Although the disclosure of the name of the engagement partner is a step in the right direction, FEE believes that such disclosure would more appropriately improve transparency for users if the signature itself would be required. The signature should therefore clearly appear at the bottom of the audit report in connection with the name of the audit firm on behalf of which the audit is carried out. In Europe, the signature is not perceived as diminishing the role of the audit firm as it is commonly understood that the engagement partner is carrying out the audit on behalf of the audit firm that is normally the party appointed by the shareholders.

The signature required in Europe is given under the provisions of the various European liability regimes for auditors and/or audit firms at national level, as also mentioned in Questions 7-11, and does not diminish the responsibility of the audit firm to establish appropriate quality control systems. The ISAs also underline this point with ISQC 1 establishing quality control requirements for the audit firms and ISA 220 setting out the quality control requirements for the engagement partner at the engagement level. In addition, ISA 700 requires the auditor or the audit firm, depending on national laws, to sign the audit report. Inclusion of the signature is therefore the most appropriate way to increase transparency in this regard.

The proposal in Questions 4-5 to make the signing auditor responsible for only the current year’s audit contradicts the financial reporting requirements as, at least under IFRS, the financial reporting framework requires disclosures of comparative information. The scope of the audit requirement is normally "the financial statements as a whole", and thus includes any comparative information required by the financial reporting framework. Whether or not the engagement partner was the same for the previous year should not matter as the signing auditor should be responsible for the full financial statements. Not including such statements about who is responsible for subsections and who is not responsible would avoid inclusion of boilerplate information in an already lengthy audit report as well as avoiding giving the impression that the signing auditor is not responsible for the whole audit. Additional information about the audit team can be given outside the audit report, if found relevant.

Disclosures on percentage of hours by other participants in the audit – Questions 26-30

FEE does not believe that the proposal in Questions 26-30 to disclose "...the percentage of hours attributable to the audits or audit procedures performed by the other participants in the audit..." will help to improve audit quality and strongly urges the PCAOB not to go down this route. Although percentages in general are a comparable measure, the criteria for calculating such a percentage will be difficult to define and therefore the information will not always be comparable.

1 ISQC 1 Quality Control for Firms that Perform Audits and Reviews of Financial Statements, and Other Assurance and Related Services Engagements
2 ISA 220 Quality Control for an Audit of Financial Statements
3 ISA 700 Forming an Opinion and Reporting on Financial Statements
Even within the same industry sector, the number of hours spent by "other participants in the audit" will differ from audit engagement to audit engagement and will depend on:

- Whether or not the audit firm has members in the engagement team that have additional competences in specialised areas;
- The structure of the engagement teams;
- The business model of the audited entity and its complexity; and
- The location and number of subsidiaries of the audited entity.

Therefore, FEE cannot see how such a disclosure can be of value to the users as it will not be possible to design the criteria for the calculation of the percentages.

**Disclosure when Assuming Responsibility – Questions 16 - 25**

PCAOB proposes to disclose "Other Participants in the Audit and Referred-to Accounting Firms". The proposal is to disclose “… other independent public accounting firms and other persons not employed by the auditor that took part in the most recent period’s audit (emphasis added)”, as referred to in Question 16.

If this requirement is only to apply in an environment where divided responsibility between two or more auditors is possible, the proposal should be fully aligned with the proposal for the engagement partner to sign the audit report as discussed above.

The European requirements explicitly require sole responsibility of the group auditor of consolidated financial statements. Whether it is in an environment of sole or divided responsibility, the disclosure should clearly distinguish between those that have responsibility for the audit and those that took part in the audit (as members of the engagement team, whether employed or not by the audit firm). Only names of those that have responsibility for the audit should be disclosed through the signature in the audit report in order not to give the perception of a dilution of responsibility. Such an approach with signatures of more than one auditor on the same audit report is seen in practice, where more than one auditor is appointed to perform the audit jointly under the requirement of sole (and therefore joint) responsibility.

For multinational audits, disclosures of those that took part in the audit, but are not employed by the audit firm, could amount to hundreds of names even if “experts” need not be disclosed. Such disclosure would in our view be clearly counterproductive to the aim of improving transparency of audits and is likely to blur the key messages that the audit report is to convey to its users.

FEE agrees with the proposal not to include names of experts in the audit report, as referred to in Question 19. Such disclosure will undermine and contradict the sole responsibility of the engagement partner that signs the audit report on behalf of the audit firm. Each audit engagement will vary and require a different mix of skills and expertise, on matters such as taxation, pensions, investment and asset valuations, etc. The composition of the engagement team needs therefore to

---

4 As per PCAOB proposal in Appendix C, AU sec. 508 Reports on Audited Financial Statements, paragraph. 11
be a key judgment for the engagement partner, but should not be explicitly mentioned in the audit report.

With reference to Question 21, we do not believe that the disclosure in the audit report of the number of subsidiaries the auditor is responsible for would add any value to transparency. This is dependent on the structure and geographical reach of the group and under the concept of sole responsibility the group auditor is responsible for the audit of the entire consolidated financial statements.

For further information on this FEE letter, please contact Hilde Blomme at +32 2 285 40 77 or via email at hilde.blomme@fee.be or Lotte Andersen at +32 2 285 40 80 or via email at lotte.andersen@fee.be from the FEE Secretariat.

Yours sincerely,

Philip Johnson
President

5 FEE is the Fédération des Experts comptables Européens (Federation of European Accountants). It represents 45 professional institutes of accountants and auditors from 33 European countries, including all of the 27 European Union (EU) Member States. In representing the European accountancy profession, FEE recognises the public interest. It has a combined membership of more than 500,000 professional accountants, working in different capacities in public practice, small and big firms, government and education, who all contribute to a more efficient, transparent and sustainable European economy.

FEE's objectives are:

- To promote and advance the interests of the European accountancy profession in the broadest sense recognising the public interest in the work of the profession;
- To work towards the enhancement, harmonisation and liberalisation of the practice and regulation of accountancy, statutory audit and financial reporting in Europe in both the public and private sector, taking account of developments at a worldwide level and, where necessary, promoting and defending specific European interests;
- To promote co-operation among the professional accountancy bodies in Europe in relation to issues of common interest in both the public and private sector;
- To identify developments that may have an impact on the practice of accountancy, statutory audit and financial reporting at an early stage, to advise Member Bodies of such developments and, in conjunction with Member Bodies, to seek to influence the outcome;
- To be the sole representative and consultative organisation of the European accountancy profession in relation to the EU institutions;
- To represent the European accountancy profession at the international level.

RE: Rulemaking Docket Matter No. 29
Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2

Members of the Board,

I appreciate the opportunity to submit my comments to the Board with respect to the Proposed Amendments “Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2” (the Proposed Amendments). I retired from public accounting in 2007 after 27 years at Deloitte & Touche LLP and am currently a full-time faculty member at the University of Notre Dame teaching undergraduate and graduate courses in accounting and auditing.

The Proposed Amendments appear to reflect the notion that the investment community should grade the audit in the same way rating agencies grade securities. The Board should not expect individual investors to grade auditors. We already have a process in place to evaluate auditors and audit firms and that process falls directly under the responsibility of the registrant’s audit committee. That committee is directly charged under the Sarbanes-Oxley Act with responsibility for “the appointment, compensation and oversight of the work of any registered public accounting firm employed by that issuer…”. Audit committees are charged with evaluating and selecting auditors. The Proposed Amendments would undermine that process.

The Proposed Amendments place too much emphasis on the role of one individual. Audits are conducted by teams of individuals; the largest audits have numerous partners, managers and staff comprising the audit team. While the signing partner has overall responsibility and signs the opinion on behalf of the firm, it’s not an individual project with technical support. In many cases that lead partner is not the only key player in the conduct of the audit. For example, a partner supervising the audit of a major corporation with highly material exposure for asbestos related claims or supervising the audit of an insurance company would rely extensively on the work of the actuarial specialists who are part of those audit teams. The lead partner on the audit of a...
financial institution engaged in loan originations and securitizations would depend on the work of financial instrument specialists in the valuation of individual deals. Lead partners must rely on specialists in many areas including business valuation, international taxation, management information systems, government contracting, medical claims evaluation, appraisal of real estate, translation from other languages into English, computer system security, engineering and a host of others. Many engagements use multiple specialists and no one on the Board would expect the lead partner to be a specialist in all areas. Evaluation of the quality of the firm’s performance as the auditor includes evaluation of its capabilities in all of the many areas of specialization that pertain to the registrant’s business. That evaluation is not captured in the disclosure of a single name or in the disclosure of the countries of origin of offices participating in the conduct of the audit. However, all of that information and more is routinely considered by audit committees as they fulfill their responsibility to oversee the independent auditor.

Should the Board somehow conclude that disclosure of lead partner names and participating office locations is important to investors, I do not believe the auditors’ opinion is the appropriate venue to accomplish this disclosure. Accordingly, I submit the following recommendation:

**Recommendation**

The Board should present its case to the Securities and Exchange Commission and request the SEC consider expanding the proxy disclosure requirements in Item 9 of §240.14a-101 to require the audit committee to disclose its consideration of the quality of the audit firm’s practice and its personnel. Such disclosure would include the committee’s consideration of the firm’s worldwide service capabilities listing the firm’s offices in key or critical locations, other participating firms’ offices in key locations, as well as its consideration of the quality of the engagement team personnel under the leadership of “J. Doe, Lead Audit Partner”. The disclosures proposed by the Board would therefore be made in the context of the audit committee’s fulfillment of its responsibilities to oversee the independent auditor and allow it to inform its shareholders and other users of the financial statements of the basis for its satisfaction with the appointment of the firm as the registrant’s auditor for the current year.

My responses to the Board’s specific questions are as follows:

1. **Would disclosure of the engagement partner’s name in the audit report enhance investor protection? If so, how? If not, why not?**

“The objective of financial reporting is to provide financial information about the reporting entity that is useful to existing and potential investors, lenders and other creditors in making decisions about providing resources to the entity.” Auditors are an important part of that process but the key part of that process is the company’s management and its people. Adding an individual auditor’s name does not improve financial statement disclosure or the quality of that information. The premise of this question rests on a view of the partner as the sole decision maker in the audit. This view has been perpetuated by much academic research that addresses auditor decision making as if it’s done by a lone rational individual rather than a group. For large clients, audit work performed by others is likely 98% of the effort; inserting an individual name distorts that. Finally, having been an audit partner on public companies I attended many annual shareholder meetings where I was introduced; attending shareholders not only had my name but could see my face. I don’t believe that gave them any more protection or assurance; and none of them ever asserted as much.

2. **Would disclosing the name of the engagement partner in the audit report increase the engagement partner’s sense of accountability? If not, would requiring signature by the engagement partner increase the sense of accountability?**

As one who has been a signing partner, having my name in the opinion would not have increased my level of accountability. First, having to report to an audit committee multiple times per year where one is known not just
by name, but personally, gives one a great sense of accountability. Occasionally appearing before a full board of directors is also accountability enhancing. While my signings pre-date the PCAOB’s existence, I can say that the prospect today of inspection by a PCAOB Inspection Team is a real accountability enhancer.

3. Does the proposed approach reflect the appropriate balance between the engagement partner’s role in the audit and the firm’s responsibility for the audit? Are there other approaches that the Board should consider?

On a major international corporation there are a dozen or more partners and 100,000 hours or more of audit effort. One person accounting for less than 2% of that having his or her name in an opinion does not do justice to the overall effort of the firm. Casual users don’t appreciate the amount of work that goes into the multi-million dollar fees and likely associate that number with the wealth of the individual partner; they have no appreciation that a $30 million fee is more than 100,000 hours of work by scores of auditors.

4. Would the proposed disclosure clearly describe the engagement partner’s responsibilities regarding the most recent reporting period’s audit? If not, how could it be improved?

The premise of the question is that this disclosure is useful in the first place. While the disclosure might be interesting, it is not useful and cannot be improved to be made useful. However, as noted above under “Recommendation” if the proposed disclosures are determined to be necessary, they should be made in the proxy statement in the context of audit committee oversight of the independent auditor.

5. Would the proposed disclosure clearly describe the engagement partner's responsibilities when the audit report is dual-dated? If not, how could it be improved?

While it would certainly point out that two different individuals signed the opinions, such information would be misleading because the only key individuals who’ve changed roles are likely those two partners.

6. Would the proposed amendments to the auditing standards create particular security risks that warrant treating auditors differently from others involved in the financial reporting process?

CEOs and CFOs are well known to all: their names and compensation have been publically known for decades. Auditor identities are also known by those who attend annual meetings and in my personal experience I never felt that my safety or privacy was at risk because of that. However, I do confess that my time as an audit partner appearing at annual shareholder meetings predates Facebook, Twitter, iPhones and the like. I never had analysts phone me in my office or at my home after an annual meeting to ask questions. Given PCAOB adopted professional standards surrounding client confidentiality, if investors think they will be able to phone the signing partner, ask questions and get answers, they are sadly mistaken. Other than the nuisance that will arise from attempts to “mine” the audit partner for confidential information, I don’t believe there are any particular safety risks involved.

7. Would the proposed amendments to the auditing standards lead to an increase in private liability of the engagement partner?

This is a legal question and therefore outside my expertise. However, I believe answering that question now is not possible as the individual partner’s name is not disclosed in the manner proposed by the Board. While many legal minds may speculate as to the likelihood of an increase or decrease in individual exposure, my personal observation as a non-attorney is that one can neither predict how common law will develop over time nor how our court system will react to this change ten years hence.

8. What are the implications of the proposed disclosure rule for private liability under Section 10(b)?

See 7, above.
9. Would the disclosure of the engagement partner’s identity affect Section 11 liability? If so, what should the Board’s approach be?

See 7, above. The Board should consult with the SEC on this matter as well.

10. Would the disclosure of the engagement partner’s identity have any other liability consequences (such as under state or foreign laws) that the Board should consider?

See 7, above. The Board cannot predict or anticipate changes in laws that could result from such disclosure; legal systems have a way of “morphing”. Given the number of states and the imaginations of attorneys, I don’t think the Board is in any position to predict how an engagement partner’s liability exposure might change.

11. Would a different formulation of the disclosure of the engagement partner ameliorate any effect on liability?

See 7, above. Certainly if the SEC were to adopt the changes suggested in my Recommendation, above, individual and firm legal liability would still need to be evaluated.

12. If the Board adopts the proposed requirement that audit reports disclose the name of the engagement partner, should the Board also require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2?

I see no benefit accruing to financial statement users from such a requirement. It’s not costless; there are hundreds of pages for the largest firms’ Forms 2 and the time involved to load that information, check it, and update it is real time. Firms have already built infrastructure just to deal with PCAOB oversight and this requirement would add to that. Investors interested enough in the registrant to attend the annual meeting likely know the name of the lead audit partner. If this disclosure is really necessary, then add it to the proxy as suggested above. Those users who really want to know about the individual firms they follow will have that information; academic researchers interested in individual partner names because they believe they’ll be able to get some paper published using that information will ultimately be able to gather it from Audit Analytics or another database the same way they currently obtain information about audit fees. Gathering this information is little more than setting up a site to allow speculative data mining. If the Board determines the information is necessary, then those who are users of the registrant’s financial statements will have that information either through the Proposed Amendments or via the Proxy Statement as recommended above.

13. If the Board does not adopt the proposed requirement that audit reports disclose the name of the engagement partner, should the Board nonetheless require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2?

If the Board does not adopt because the information is not considered important enough to warrant disclosure then I fail to see the purpose in adding the information to Form 2 and thus forcing its disclosure. Undertaking to gather the names of all signing partners in one place would not be done for users of registrant’s financial statements but would be for use by others who are not shareholders, capital providers or analysts for a particular registrant. This strikes me as gathering information for the sake of doing so or for researchers, not for the purpose outlined by the Board in the Introduction to the Proposed Amendments.

14. Disclosure in the audit report and on Form 2 would provide notice of a change in engagement partner only after the most recent period’s audit is completed. Would more timely information about auditor changes be more useful? Should the Board require the firm to file a special report on Form 3 whenever there is a change in engagement partners?

For all the reasons cited above I do not believe this is a necessary disclosure. Partners retire, get transferred to other audit engagements, become office managing partners – in short there are a host of reasons for changes in the signing partner just as there are a host of reasons for changes in the many other individuals who comprise a
particular audit engagement team. Again, focusing on this individual distorts the partner’s role and gives this person too much importance in the conduct of an audit.

15. A change in engagement partner prior to the end of the rotation period could be information that investors may want to consider before the most recent period’s audit is completed. Should the Board require the firm to file a special report on Form 3 when it replaces an engagement partner for reasons other than mandatory rotation to provide an explanation of the reasons for the change?

What would investors do with this information? Would they buy or sell securities based on a change in the signing partner on an audit? Does the Board believe that investors change their holdings now based on who or who is not appointed as the auditor for one of their investments or based on the results of PCAOB inspections? If so, then this is a direct reflection on the audit committee and its fulfillment of its oversight responsibilities not the quality of the auditor.

16. Is it sufficiently clear who the disclosure [foreign auditors by country and firm name, other participants in the audit] would apply to? If not, how could this be made clear?

The premise of the question is that this is useful information. Will investors really form their portfolios based on the offices involved in an audit? If so, this is a reflection on the audit committee’s performance not the quality of the audit firm.

Instituting a process to gather office identity is little more than a process to allow researchers to attempt to evaluate “audit quality” which is just as misleading as attempting to assign audit quality to an individual partner. The audit committee has the responsibility to oversee the performance of the auditor. Wholesale disclosures of this nature are unwarranted and undermine the audit committee’s authority. As noted in the Recommendation above, if disclosure of this information is truly necessary it should be done by the audit committee in the proxy statement in the context of the audit committee’s fulfillment of its oversight responsibilities.

17. Is it appropriate not to require disclosure of the individual who performed the EQR? If not, should disclosure of the engagement quality reviewer be required when the EQR is performed by an individual outside the accounting firm issuing the audit report or should the disclosure be required in all cases?

I agree with the Board’s determination that this is not an appropriate disclosure because the partner performing the EQR is not a part of the engagement team. In my own experience as a partner performing an EQR, I was not routinely known to the audit committee or to management; when I was so known, I made sure it was clear to all that I was not part of the engagement team and did not answer to the lead audit partner; I did not attend audit committee meetings or annual shareholder meetings in my role as the EQR partner. The partner performing an EQR is one part of a firm’s quality control process and, while a key part, is not the only part. In my personal experience, in difficult situations, the EQR partner is not the critical individual involved.

18. Is it appropriate not to require disclosure of the person that performed the Appendix K review?

This is even less relevant than the name of the partner performing the EQR.

19. Is it appropriate not to require disclosure of persons with specialized skill or knowledge in a particular field other than accounting and auditing not employed by the auditor or persons employed or engaged by the company who provided direct assistance to the auditor?

Not requiring such disclosure is appropriate. Disclosing identities serves to divide the responsibility for the audit among numerous firms and/or individuals rather than leaving it with the lead audit firm where it should reside. The audit is the responsibility of the lead firm as a firm; where that responsibility is permitted to be divided under present professional standards, current reporting standards are sufficient. The assessment of the propriety of such an arrangement is, again, the responsibility of the audit committee.
20. Would disclosure of off-shoring arrangements (as defined in the release) or any other types of arrangements to perform audit procedures provide useful information to investors and other users of the audit report? If yes, what information about such arrangements should be disclosed?

All this does is distinguish between those situations where a firm opens a branch office of its US firm (making that a US office and its employees US employees) and where it does not. We may have exactly the same professional situation only the form would be different. Again, assessment of the impact of these sorts of arrangements is the responsibility of the audit committee, not the marketplace.

21. Would disclosure in the audit report of other participants in the audit provide useful information to investors and other users of the audit report? Why or why not?

Again, this is the purview of the audit committee not of the investment community. This level of detail undermines the audit committee’s effectiveness.

22. Are the proposed requirements sufficiently clear and appropriate with respect to identifying other participants in the audit? If not, how should the proposed requirements be revised?

See the Recommendation above regarding proxy disclosure.

23. Are the proposed requirements sufficiently clear as to when the name of a public accounting firm or a person would be required to be named in the audit report? Is it appropriate that the name of the firm or person that is disclosed is based on whom the auditor has the contractual relationship?

When an audit firm refers to the fact that there are other auditors who participated in the audit but for whose work the lead auditor does not assume responsibility, SEC Regulation S-X in §210.2-05 already requires the opinions and consents of those other auditors be filed with Forms 10-K and/or registration statements. Adding their names to the lead audit firm’s opinion is therefore unnecessary. If the audit firm has assumed responsibility for the work of other firms, then disclosure of the identities of those firms is counter-productive and distorts the responsibility of the lead audit firm. As stated above, the analysis of this sort of information is the responsibility of the audit committee.

24. Would disclosure in the audit report of other participants in the audit have an impact on the ability of independent public accounting firms to compete in the marketplace? If so, how would the proposed requirement impact a firm’s ability to compete in the marketplace?

I see no reason why this should impact any firm’s ability to compete. As noted above, the selection of an audit firm is the responsibility of the audit committee. The disclosure of this sort of information is already made to the audit committee and if it’s not, then the committee is not fulfilling its oversight responsibilities. If the Board is suggesting that such is the case, it should work with the SEC and seek ways in which to help audit committees improve, not ways to circumvent them.

25. Are there any challenges in implementing a requirement regarding the disclosure of other participants in the audit? If so, what are the challenges and how can the Board address them in the requirements?

I’m sure there are other challenges (such as the need for consents) that will be raised in other comment letters.

26. Is the percentage of the total hours in the most recent period’s audit, excluding EQR and Appendix K review, a reasonable measure of the extent of other participants' participation in the audit? If not, what other alternatives would provide meaningful information about the extent of participation in the audit of other participants?
How would capital providers use this information? Would they buy and sell securities or call a loan based on the auditors’ hours? How would users distinguish changes in hours as stemming from efficiency vs. inefficiency? From changes in audit team personnel vs. changes in registrant personnel? From institution of new GAAP compliance checklists vs. PCAOB inspection preparation checklists? As noted above, this sort of information should be provided to audit committees for their use in exercising their oversight responsibilities. It should not be for public consumption.

27. What challenges, if any, would requiring the percentage of audit hours as the measure of the other participants’ participation present?

Even for audit committee reporting, getting other participants to timely provide this information is often a challenge. While this sort of information is provided to audit committees it is normally not gathered in the rush of year end reporting as doing so would be a distraction for all involved.

28. Should the Board require discussion of the nature of the work performed by other participants in the audit in addition to the extent of participation as part of the disclosure? If so, what should be the scope of such additional disclosures?

No. This is all under the purview of the audit committee and should remain there.

29. Would the proposed disclosure of the percentage of hours attributable to the work performed subsequent to the original report date in situations in which an audit report is dual-dated be useful to users of the audit report?

Again, this level of detail is of the nature of information to be provided to the audit committee and in my personal experience such information is regularly provided to audit committees. If the Board has reason to believe that audit committees are not fulfilling their responsibilities it should approach the SEC.

30. Is the example disclosure in the proposed amendments helpful? Would additional examples be helpful? If so, what kind?

As noted in the Recommendation above, if this disclosure is provided the audit committee should do so in the proxy statement.

31. Should disclosure of the names of all other participants in the audit be required, or should the Board only require disclosing the names of those whose participation is 3% or greater? Would another threshold be more appropriate?

Again, this level of disclosure is inappropriate and undermines the credibility and authority of the audit committee.

32. Is the proposed manner in which other participants in the audit whose individual extent of participation is less than 3% of total hours would be aggregated appropriate?

Again, this is the job of the audit committee and disclosure is inappropriate.

33. Are the requirements to disclose the name and country of headquarters’ office location of the referred-to firm sufficiently clear and appropriate?

As noted above, when an audit firm refers to the fact that there are other auditors who participated in the audit but for whose work the lead audit firm does not assume responsibility, SEC Regulation S-X in §210.2-05 already requires the opinions and consents of those other auditors be filed with Forms 10-K and/or registration statements. Adding their names and other information to the lead audit firm’s opinion is redundant.
34. Are there any challenges associated with removing the requirement to obtain express permission of the referred-to firm for disclosing its name in the audit report? If so, what are the challenges and how could they be overcome?

Any discussion of disclosing the name of a “referred to firm” in the opinion is moot; such disclosure would not provide investors with any new information since the opinion and consent of a “referred to firm” must be filed with the SEC as pointed out above. The express permission of a participating firm is not something for which the lead audit firm bargains; the participating firm is notified that it will be relied on and its opinion and consent will be required. If it is unwilling or unable to comply, it can’t be the auditor for that subsidiary and the lead audit firm must conduct the audit itself with its own member firms despite the preference of the registrant that another firm be used.

35. In situations in which the audit report discloses both the referred-to firm and other participants in the audit, would using different disclosure metrics (e.g., revenue for the referred-to firm and percentage of the total hours in the most recent period's audit for the other firms and persons) create confusion? If so, what should the disclosure requirements be in such situations?

Again, this assessment is the job of the audit committee not the investment community.

I appreciate the opportunity to offer my comments.

Sincerely,

s/ James L. Fuehrmeyer, Jr.

Re: PCAOB Rulemaking Docket Matter No. 29, Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2

Dear Board Members and Staff:

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board’s (PCAOB or Board) Proposed Amendments to PCAOB Auditing Standards and Form 2, and we respectfully submit our comments and recommendations thereon. Overall, we support the Board’s initiative to evaluate the transparency of audits and the accountability of auditors and to consider possible changes that might provide value to the marketplace. Nevertheless, we have several reservations regarding the proposed amendments. We do not agree with the premise that transparency in the form of identifying the engagement partner and other audit participants in the audit report or in Form 2 will accomplish the goal of increasing accountability or improving audit quality. Further, we are concerned that investors, issuers, and auditors might suffer unintended negative consequences if such disclosures become required.

To enhance investor protection, we believe that a focus on continual improvements to the system of oversight and quality control should be the primary method of achieving the goals of ensuring accountability and improving audit quality. Such improvements should focus on audit firm and regulatory supervision of both firms and engagement partners. In that regard, we also believe that the expansion of the PCAOB’s inspections of non-U.S. firms will increase the accountability and transparency for those firms. In addition, the efforts being made by the accounting and auditing profession and each of the firms individually to enhance and develop root cause analyses should prove to be a powerful tool in identifying potential audit quality issues, particularly for specific individuals. Finally, we would note the significant changes in standards related to the execution of the audit that have recently become effective or are currently being contemplated. In consideration of all of these activities, we believe that further actions such as those in the proposed amendments are not necessary or beneficial.

Our specific comments and concerns, which align with the specific proposals in the PCAOB’s release, are provided below.
Disclosure of the engagement partner

We previously indicated in our letter, dated September 11, 2009, in response to the Board's Concept Release on Requiring the Engagement Partner to Sign the Audit Report that we support the overall goal of increasing transparency. Effective audit transparency provides investors with information that helps them understand (1) how the audit was conducted, and (2) whether the audit firm conducts audits with an appropriate level of quality. The goal in providing such information is to enhance investors' ability to make investing decisions that fit within their risk tolerances. It is critical, therefore, that the information disclosed be of such a nature that it is unlikely that it could be misconstrued, thus leading investors to make decisions they would not otherwise make because the information paints an incomplete picture of the audit or audit quality. In the current financial reporting process, the audit committee is ascribed primary responsibility for assessing the completeness of the auditor's proposed audit approach and response to audit findings as well as assessing the quality of the audit team and audit firm.

Beyond providing investors with valuable information, the Board's proposal contemplates that increasing transparency by disclosing the engagement partner's name will also increase partner accountability. We continue to reject the notion that disclosing partners' names will somehow make them feel more accountable than they do today. Engagement partners, especially public company audit partners, are held accountable through a wide array of oversight mechanisms. Additionally, each partner wakes up every day knowing that their audit work will be subject to scrutiny by others—sometimes intense scrutiny. Such oversight includes the engagement quality reviewer, the firm's national office consultation requirements, the firm's domestic internal inspection program, the firm's global inspection program (for global firms like ours that have such programs), PCAOB inspections, peer review inspections (for non-public audit work), and Department of Labor inspections (for audits of employee benefit plans). Further, every engagement partner knows that their public clients' financial statements are subject to mandatory periodic SEC review, which could lead to questions related to the audit. Even further, audit documentation is regularly subpoenaed in connection with regulatory examinations or litigation. Whenever a partner signs an audit report, the partner knows their reputation, their compensation, and possibly, their careers are on the line. It is not conceivable for the disclosure of their name to enhance that sense of responsibility. It is possible, however, for the disclosure of the engagement partner's name to harm partners, investors, and issuers.

Having addressed the issue of engagement partner accountability, the only remaining potential benefit of disclosing engagement partner names is improvement to the information investors use to make decisions. It is here that we find our greatest concerns about the proposed amendments. In order for disclosure of the partner's name to enhance investor decision making, it must tell them something they need to know to make an informed decision, and it must be complete and accurate. Using those criteria, we ask what value investors could gain by knowing the engagement partner's name? The Board's release suggests that identifying the engagement partner in the audit report might afford users “the opportunity to evaluate, to a degree, an engagement partner's experience and track record.” One might suggest that investors could link a partner's name to the audit of another company that had restated its financial statements due to error or fraud, thus drawing some inference about that partner's quality; but such an inference would be wildly incomplete. It would not, and could not, take
into account other factors outside of the partner's performance on the engagement; factors such as the root cause of the restatement, the details of the client’s internal control system, the role the audit committee, management, and internal audit played in the restatement, the extent of consultation with others in the firm, the fact that the audit teams beneath the engagement partner could be entirely different on both engagements, and so forth. Drawing a conclusion about potential audit quality simply through the name of the engagement partner is analogous in some respects to judging a book by its cover. It is one small data point in a vast array of information relevant to the conduct and oversight of an audit. That is why the auditing profession has the far reaching accountability structure described earlier. By the time an engagement partner’s name rightly becomes associated with low quality audit work – enough of a risk to influence an investor’s decision – that partner’s work will already be under intense scrutiny by others, including the PCAOB.

It is not possible for investors, by knowing a partner’s name, to make a truly informed investing decision. It is, however, entirely possible for investors to use the partner’s name, in the absence of complete information, to make uninformed decisions that they would not otherwise make. Doing so will bring unintended harm to engagement partners, issuers, and ultimately to the investors these proposed amendments are seeking to help.

The Board’s release seeks to support the notion of disclosing partner names by drawing an analogy to the certification and assertion requirements of a public company chief executive officer (CEO) and chief financial officer (CFO). However, CEO and CFO certifications and assertions are only associated with a single company. Assume Company A has a restatement due to error or fraud. Investors in Company B, C, and D, which may be in the same geographic area or industry, are not likely to suffer stock price declines because Company A’s CEO and CFO signed public certifications and assertions. Alternatively, assume all four companies have the same engagement partner and that partner’s name is disclosed. It is entirely possible for Companies B, C, and D to suffer stock price declines merely by the association of the same engagement partner – even though investors in those companies do not and cannot have complete information about the audit quality related to their specific investees. Accordingly, inappropriate third party inferences may negatively affect other market participants.

Additionally, the identification of the engagement partner could personally affect that partner. If there was an existing issue involving the issuer, including the name of the engagement partner could result in severe negative consequences to that partner without due process. As we previously communicated to the Board, engagement partners and their families could be subject to unwarranted or unwelcome communications from disgruntled shareholders and others. At a minimum, audit committees of other clients served by that partner may feel compelled to force prematurely a change in engagement partners merely for public perception reasons. For these reasons, and the potential for increased litigation described below, we believe that it is likely that high-quality audit professionals will choose either to leave the profession or refuse to serve as engagement partners on issuer audits if the proposed amendment is adopted.
Proposed audit report disclosure

If the Board were to adopt an approach whereby the engagement partner’s name is disclosed in the audit report, we believe that the Board must first collaborate with the U.S. Securities and Exchange Commission (SEC) so as to further consider and evaluate the potential liability implications. Although it may be possible that such disclosure may not increase liability under Section 10(b) of the Securities and Exchange Act of 1934, we share the concerns expressed by others as to increased liability under Section 11 of the Securities Act of 1933. We also question the potential partner liability implications related to consents under Section 7 of the Securities Act of 1933 with respect to being named in the SEC filing; that is, whether the engagement partner must file a consent based on the name disclosure and, if so, the related liability implications. As the Board does not intend to increase an engagement partner’s liability, it would be prudent for the PCAOB to obtain the SEC’s views and clarifications with respect to these matters prior to adopting a final standard, specifically the SEC’s conclusions that the name identification would not increase liability under the Securities Act of 1933 or the Securities and Exchange Act of 1934 and that a consent is not required.

Regardless of any PCAOB or SEC clarifications with respect to a partner’s liability under the Securities Act of 1933 or the Securities Exchange Act of 1934, we have little doubt that more engagement partners would be named in private litigation. Even though an engagement partner may ultimately be found to have fully complied with all professional standards and regulatory requirements, being named in litigation seriously affects a partner’s life for many years, including both personally (such as the inability to obtain or refinance a loan) and professionally (such as the refusal by audit committees to accept the individual as the engagement partner).

With respect to the proposed name disclosure itself, the Board requested comments as to whether the disclosure clearly describes the engagement partner’s responsibilities. We believe that to clearly describe such responsibilities, an extensive narrative would be necessary. Nonetheless, we recognize that the Board is limiting the disclosure of the engagement partner to the most recent period to address certain practical issues raised in comments received on the Concept Release. We continue to believe that the firm is responsible for all periods on which it is reporting and that disclosing the engagement partner’s name for the current period can imply that there is a difference in the balance of responsibility between the firm and the partner from year-to-year. This issue can seem compounded with the proposed differences in reporting when there are changes in the engagement partner and when the engagement partner was responsible for all periods presented. With respect to the specific proposed amendments to AU section 508, Reports on Audited Financial Statements, we request that the Board also consider the following should this proposal be adopted final:

- Reconsidering the dual-dating disclosure requirements. Although this may seem to provide more transparency, we are concerned that the engagement partner reporting on the event resulting in the dual-dated audit report may be inappropriately associated with that event. For instance, if the dual date resulted from a restatement to correct an error and a partner other than the original engagement partner audited the restatement, the partner dual-dating the audit report could be inappropriately associated with the restatement.
• Addressing other report reissuances. The proposed standard does not clearly indicate that when a predecessor auditor reissues the audit report for comparative purposes, the reissued report can eliminate the reference to the engagement partner responsible for the audit. We assume this would be appropriate since the engagement partner need only be disclosed for the most current period, rather than the most current period audited by the firm. Also, when an audit report is reissued and dual-dating is not an option, it is not clear what a firm is expected to do when the report is re-dated as of a later date and a different partner was responsible for bringing the report date current. We cannot envision a practical solution to address this particular situation.

• Modifying the proposed language in the standard disclaimer of opinion. Although this is expected to be rare for issuers, it may not be as rare for non-issuer broker-dealers. As such, we propose eliminating the notion that an audit was completed by using language similar to the following: “The engagement partner responsible for this report (on the 20XX financial statements) was [name].”

Proposed amendment to Form 2
Although disclosure in Form 2 would allow investors, audit committees, and other third parties that seek the name of the engagement partner and other audit participants to obtain such information from one location, we reiterate our reservations with respect to the potential for inappropriate investor inferences from one audit or company to another and for other negative consequences that are discussed herein and in our previous letter to the Board.

Utilization of Form 3
When there is a change in the engagement partner, we do not support a requirement to file a Form 3, whether the change pertains to rotation or otherwise. In our view, a Form 3 disclosure has a high potential for causing more confusion than benefit, especially if no explanation for the change or for the related quality control procedures that are in place to address the change is provided. We believe that, in some case, it may not be reasonably possible to disclose the reason for the change due to, for example, privacy laws and restrictions. From a different perspective, however, a Form 3 disclosure would further promote the responsibility of the engagement partner and minimize the role of the firm. The disclosure may also potentially alarm investors that a change has occurred outside of the normal rotation period, indirectly inferring that the quality of the audit or the auditor’s independence may be affected. To enhance investor protection, we would support the development of standards that address firm quality control procedures in situations in which an engagement partner has unexpectedly changed during the course of an audit engagement. Such standards could include discussions with the audit committee regarding the qualifications of the new engagement partner and the related firm quality control measures.

Disclosure of other participants in the audit and referred-to firms
We can understand the need for transparency regarding other participants in the audit. Yet, we have certain fundamental concerns with disclosing such participants in the audit report. First, without providing extensive information, any such disclosure could create a high level of confusion as to the role of those other participants. We believe that the illustrative examples
provided by the Board point out the confusion that could arise as to the responsibility of the principal (group) auditor and the lack of information about the nature of the work performed by each participant. For instance, confusion may result with respect to the differences between assuming responsibility and making reference. Currently, when assuming responsibility for another auditor’s work, the audit report does not mention the use of these other auditors so as not to detract from the group auditor’s overall responsibilities. We believe that the proposed disclosure may have this effect, especially combined with the disclosure of the percentage of hours attributable to the other participants in the engagement.

Second, we have significant concerns with the belief that the proposed disclosure would enable investors and other report users to consider disciplinary history and whether the other audit participants are subject to PCAOB inspection and the belief that providing such transparency is warranted because the quality of services provided by other firms may vary. These beliefs would seem to undermine the overall credibility of the audit report. In that respect, one may infer through the statements in the Board’s release that an audit report is less reliable if an audit firm used another firm that, for example, has had some disciplinary history even though the firm signing the report will have considered that history and put appropriate oversight procedures in place. Promoting a marketplace whereby the level of assurance provided by an audit report is determined based on limited knowledge of the use of other audit participants (absent relevant information about quality control processes in place to assume responsibility) does not seem to be in the best interests of the marketplace. To enhance investor protection, we would support the development of standards that more fully address the use of other audit participants and the relevant considerations related to PCAOB inspections or lack thereof.

We would like to point out that, in many cases when assuming responsibility, the other audit participants are members of an international network of firms that generally maintain the same or similar quality control processes. We are concerned that investors and other report users may not fully understand the relationship of these member firms to the firm signing the audit report. The Board may need to consider the ability of an audit firm to clarify, within the audit report, the relationship with its network firms, consistent with their network firm agreements. For instance, an audit firm may be required to describe the legal relationship and the separate and distinct responsibilities of member firms within the network. That said, however, it is possible that such a description may cause additional confusion as to the group auditor’s overall responsibilities. The disclosure of other audit participants could also affect the willingness of firms, regardless of whether they are member firms, to participate in certain audit engagements.

We are also concerned with adopting changes to the standard audit report in advance of finalizing the Board’s more comprehensive project regarding the auditor’s reporting model, as well as the Board’s project on audits performed by other auditors. We do not view this transparency matter as a separate, standalone issue and believe that the Board should consider these proposals concurrently.

Disclosure when assuming responsibility or supervising
Should the Board adopt the proposal, we generally agree with the scope of the requirement to limit the disclosure to other participants performing audits and audit procedures whereby the
audit firm assumes responsibility for the work performed, while excluding engagement quality reviewers, specialists, and those performing Appendix K reviews. It should be noted, however, that some firms, like ours, may have adopted, in addition to all relevant PCAOB standards, the general principles for group audits under International Standards on Auditing (ISA). Accordingly, prior to adopting the proposal, we suggest that the Board consider its other standard-setting activities related to audits performed by other auditors. The ISAs provide guidance with regard to the work to be performed on significant components and other insignificant components. In this regard, should the Board adopt a similar approach, the requirements for when disclosure is made in the audit report could be linked to the significance of the component. In addition, we believe that the Board should consider our comments above related to dual-dating and other report reissuances and their potential effect on the disclosures related to other audit participants. That said, we do not believe that the disclosures would need to be updated for report reissuances.

**Percentage of hours and disclosure thresholds**

We strongly believe that the percentage of total hours would not accurately portray the relevance of the work performed, particularly with a low threshold of three percent. Since investors have expressed a strong interest in knowing whether those participating in the audit are subject to PCAOB inspection, we believe that, should the Board adopt the proposal, using the “substantial role” criteria as the relevant benchmark for separate disclosure of the names and locations of each of these participants would be a much better approach. We would expect those participants that play a substantial role to be similar to those that perform an audit, adapted as necessary, for significant components, as contemplated by the ISAs (see previous discussion). In this case, disclosure of the specific percentage of hours for each participant need not be provided, as it would be clear that their role was substantial. Form 2 could then be used to disclose all other audit participants that do not play a substantial role based on their PCAOB registration and inspection status.

Should the Board adopt the amendments as proposed, it is likely that the final hours may be different than those used in the calculation of the percentage of total hours as of the report date. Accordingly, we believe that the Board would need to be cautious regarding inspection findings in this area. Significant judgments would need to be made with regard to whether the audit firm technically failed to comply with PCAOB standards, including whether the firm’s audit report would need to be reissued to correct any inaccuracies. It would not be pragmatic nor in the public interest for an audit report to be reissued for this purpose outside of the requirements related to financial statement reissuances.

**Disclosure when dividing responsibility**

Because the SEC requires the audit report of a referred-to firm to be included in the relevant SEC filing, we believe that the disclosure of a referred-to firm’s name and location in an audit report that makes reference to another auditor is not necessary. Since this information is currently transparent, it seems to us that the PCAOB could eliminate this disclosure.
We understand the Board’s responsibility to respond to investor needs and enhance investor protection. However, we believe that the perceived problem related to engagement partner accountability and audit quality would not be addressed by merely providing more transparency regarding the name of the engagement partner and other audit participants. An informed judgment about audit quality cannot and should not be based solely on such information. In addition, we believe that the negative consequences related to providing such transparency, including those pertaining to SEC filings, partner privacy matters, and the marketplace in general, would be greater than any perceived benefits. Continued improvements in firm quality control mechanisms and regulatory oversight, including the PCAOB’s inspection initiatives overseas, their development of standards to address areas requiring additional attention, and their issuance of specific and robust procedural guidance where improvements in executing PCAOB standards are needed, will promote partner accountability and audit quality, while enhancing investor protection.

We would be pleased to discuss our letter with you. If you have any questions, please contact Karin A. French, National Managing Partner of Professional Standards, at (312) 602-9160.

Sincerely,

[Signature]
Your proposals for mandatory rotation and identification of the signing partner both strike me as solutions looking for a problem to solve. Neither proposal appears to be based on empirical evidence that the current state is broken and would be improved by either proposal.

I was an audit partner in Arthur Andersen, retiring in 2000 after 34 years. Since then I am serving or have served as an audit committee chair for over one dozen public companies. Rotation of partners has not led to any improvement in audit quality. Without audit team members having several years of experience the newly rotated partner would be less able to fulfill the requisite responsibilities. Firm rotation would cause a deterioration of quality given the length of time an auditor and audit team require to become truly knowledgeable about the client and its business.

Mandatory rotation would be impractical for major companies. Most use several of the Big 4 firms. One does the audit and the other(s) perform the nonaudit prohibited services, thus rendering them not independent and therefore ineligible to propose on becoming the auditor.

I have experienced no evidence of a lack of independence. To the contrary, auditors are even reluctant to provide advice to clients as issues arise. If the board uncovers lack of independence it is more likely that it is behavior by a rogue partner.

Identifying a signing partner is contrary to the way audits are performed. They are done by teams and the teams include more than a single partner. Major decisions are made by national offices, not signing partners.

Dear Board Members:

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board’s proposals to Improving the Transparency of Audits by amending PCAOB Auditing Standards and Form 2, dated October 11, 2011.

By way of background, Hermes is a leading asset manager in the City of London. As part of our Equity Ownership Service (Hermes EOS), we also respond to consultations on behalf of many clients from across the world, including (only those clients which have expressly given their support to this response are listed here). In all, EOS advises clients with regard to assets worth more than $140 billion.

We firmly welcome the PCAOB’s attention to this important area, and are generally supportive of the proposals. In particular we welcome the proposal with regard to the disclosure of other firms involved in the audit. We believe that this is an important innovation, and it is one which we will seek to promote internationally. It is of especial importance in the context of accounting scandals where subsidiary auditors apparently resigned over concerns about some elements of the audit, something which only came to light for investors after the wider accounting issue was revealed. Having disclosure of the auditors of subsidiaries (and by implication, disclosure of when these auditors change) might prove a potential window on such emerging issues.

We answer the PCAOB’s specific questions below.

Yours faithfully

Paul Lee
Director
Disclosure of the Engagement Partner

A. The Proposed Audit Report Disclosure

1. Would disclosure of the engagement partner's name in the audit report enhance investor protection? If so, how? If not, why not?

We believe that this proposed disclosure would be a significant positive step. It would enhance transparency and accountability of the key individual involved in the audit, leading over time to more attentive audit behaviours and higher quality audits as a result. We believe that it would therefore enhance investor protection.

2. Would disclosing the name of the engagement partner in the audit report increase the engagement partner's sense of accountability? If not, would requiring the signature by the engagement partner increase the sense of accountability?

As noted above, we believe that there would be an enhanced degree of accountability from a disclosure of the engagement partner's name. We are of the view that requiring a signature would increase that degree of accountability still further, by making the individual partner reflect directly at the end of the audit about physically agreeing to the publication of the accounts.

3. Does the proposed approach reflect the appropriate balance between the engagement partner's role in the audit and the firm's responsibility for the audit? Are there other approaches that the Board should consider?

We would favour requiring the audit partner to sign the accounts. As indicated above, we believe that requiring a signature would drive a higher degree of accountability than just requiring the individual to be named. We do not believe that either route would in any way undermine the clear responsibility of the firm as a whole for the audit, and so do not believe that this need be a concern to the PCAOB in this respect.

4. Would the proposed disclosure clearly describe the engagement partner's responsibilities regarding the most recent reporting period's audit? If not, how could it be improved?

5. Would the proposed disclosure clearly describe the engagement partner's responsibilities when the audit report is dual-dated? If not, how could it be improved?

We believe that the proposed disclosures adequately and clearly describe the responsibilities, and address the concerns highlighted in the discussion. We have no suggested improvements.

6. Would the proposed amendments to the auditing standards create particular security risks that warrant treating auditors differently from others involved in the financial reporting process?

We do not believe that there are specific circumstances in relation to the auditors which warrant treating them differently from others involved in the process. However, we are conscious of the particular circumstances which led to the exception allowing non-disclosure in the UK and EU, and were supportive of this exception being available in such rare and extreme circumstances.

7. Would the proposed amendments to the auditing standards lead to an increase in private liability of the engagement partner?

8. What are the implications of the proposed disclosure rule for private liability under Section 10(b)?

9. Would the disclosure of the engagement partner's identity have any other liability consequences (such as under state or foreign laws) that the Board should consider?

10. Would a different formulation of the disclosure of the engagement partner ameliorate any effect on liability?

We are inevitably not fully informed as to the details of US law and litigation practices – and it is for this reason that we do not attempt a response to question 9, which seems to depend on a
detailed reading of the legislation on which we believe we can add little value. On the broader questions and the policy approach, we are clearly of the view that naming the engagement partner, or requiring his or her signature to the audit report, should not affect the personal liability situation. The individual responsible for the audit report should be liable for fraudulent statements or omissions from it, whether or not his or her name or signature is appended to it. In our experience, litigation against the audit firm usually sees the names of the individual senior auditors attached as parties to the litigation. We believe that a naming or signing requirement would not alter this, nor increase the likelihood of action against individuals.

B. The Proposed Amendment to Form 2

12. If the Board adopts the proposed requirement that audit reports disclose the name of the engagement partner, should the Board also require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2?

13. If the Board does not adopt the proposed requirement that audit reports disclose the name of the engagement partner, should the Board nonetheless require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2?

We believe that this disclosure requirement would be useful whether or not the proposal to require the disclosure of the engagement partner in audit reports is taken forward, and so we would support the proposed change to Form 2 whatever the broader conclusion of the PCAOB is.

14. Disclosure in the audit report and on Form 2 would provide notice of a change in engagement partner only after the most recent period’s audit is completed. Would more timely information about auditor changes be more useful? Should the Board require the firm to file a special report on Form 3 whenever there is a change in engagement partners?

15. A change in engagement partner prior to the end of the rotation period could be information that investors may want to consider before the most recent period’s audit is completed. Should the Board require the firm to file a special report on Form 3 when it replaces an engagement partner for reasons other than mandatory rotation to provide an explanation of the reasons for the change?

One of the challenges with requiring reporting is to identify those disclosures which should be of concern from those which occur merely as a matter of course. We are concerned that a requirement to file a special report whenever the engagement partner changes risks falling on the wrong side of this balance, and generating a burden of irrelevant disclosures. We believe rather that the proposal to require a special report when an engagement partner is changed for reasons other than mandatory rotation strikes a happier balance, of potentially flagging an issue which may need to be of concern while avoiding needless reporting. While the level of filing will still be high, at least the burden under this proposal would be reduced.

Disclosure of Other Participants in the Audit and Referred-to Accounting Firms

A. Disclosure When Assuming Responsibility or Supervising

16. Is it sufficiently clear who the disclosure would apply to? If not, how could this be made clear?

We believe that the proposals are sufficiently clear.

17. Is it appropriate not to require disclosure of the individual who performed the EQR? If not, should disclosure of the engagement quality reviewer be required when the EQR is performed by an individual outside the accounting firm issuing the audit report or should the disclosure be required in all cases?

We believe that it is essential that the identity of the individual performing the EQR should remain private, and so firmly agree that it is appropriate for this individual not to be disclosed. To do otherwise might risk the independence and effectiveness of the review process.
18. Is it appropriate not to require disclosure of the person that performed the Appendix K review?

For similar reasons, we agree that it is appropriate not to require such disclosure.

19. Is it appropriate not to require disclosure of persons with specialized skill or knowledge in a particular field other than accounting and auditing not employed by the auditor or persons employed or engaged by the company who provided direct assistance to the auditor?

We agree with the proposal not to require such disclosure.

20. Would disclosure of off-shoring arrangements (as defined in the release) or any other types of arrangements to perform audit procedures provide useful information to investors and other users of the audit report? If yes, what information about such arrangements should be disclosed?

We do not believe that there is useful information for investors from any disclosure of off-shoring arrangements as such. We have become concerned about targets which certain audit firms have set for off-shoring, which we do not believe is appropriate in audits which are seeking audit quality as their aim rather than just cost-effectiveness. We would expect audit committees and audit regulatory authorities to ensure that there is no diminution in quality arising from any such off-shoring activities, and would welcome disclosure of the process by which these parties carry out this responsibility – in the case of the audit committee, in the annual proxy statement – but we do not believe that disclosure in the way that the PCAOB is currently considering is required in this respect.

2. Details of the Disclosure Requirements

21. Would disclosure in the audit report of other participants in the audit provide useful information to investors and other users of the audit report? Why or why not?

We believe that this would provide investors with highly useful information, by giving an insight into the scope and process of the audit overall, and the relationships between the different audit firms cooperating to fulfill the audit. Given that some recent accounting scandals have seen subsidiary auditors apparently resign in relation to issues which only subsequently came to light, having disclosure of the auditors of subsidiaries (and by implication, disclosure of when these auditors change) would be a potential window on emerging issues.

22. Are the proposed requirements sufficiently clear and appropriate with respect to identifying other participants in the audit? If not, how should the proposed requirements be revised?

23. Are the proposed requirements sufficiently clear as to when the name of a public accounting firm or a person would be required to be named in the audit report? Is it appropriate that the name of the firm or person that is disclosed is based on whom the auditor has the contractual relationship?

We believe the proposals are sufficiently clear and appropriate.

24. Would disclosure in the audit report of other participants in the audit have an impact on the ability of independent public accounting firms to compete in the marketplace? If so, how would the proposed requirement impact a firm’s ability to compete in the marketplace?

We believe that this proposal could have two helpful effects in terms of enhancing competition, both in effect removing some of the mystique which surrounds the Big 4 firms. First, by revealing the level of large-scale and high quality audit work already carried out by firms other than the Big 4, it would reduce the perception that only Big 4 firms are capable of carrying forward sizeable audits. And second, the disclosure of a list of different affiliated firms which are part of the Big 4 networks would emphasise that these entities are not single firms but networks with different
levels of quality and effectiveness. Again, this would make clear the degree of management required of multiple firm contributions to an audit even where that audit is carried out solely within a Big 4 network, and would thereby reduce the impression that only the Big 4 networks are capable of carrying forward large audits. By reducing the mystique around the Big 4 this proposal should over time lead to a greater willingness to use rival firms and so to enhanced competition.

25. Are there any challenges in implementing a requirement regarding the disclosure of other participants in the audit? If so, what are the challenges and how can the Board address them in the requirements?

The one substantive challenge that we would identify is the need to include some materiality requirement, such that a firm responsible for carrying out less than say 1% of the audit work (probably by hours, not by fees to avoid differential pay levels in different jurisdictions affecting the materiality calculation) would not need to be disclosed. This is discussed further below.

3. Disclosure of Percentage of the Total Hours in the Most Recent Period's Audit, Excluding EQR and Appendix K review

26. Is the percentage of the total hours in the most recent period's audit, excluding EQR and Appendix K review, a reasonable measure of the extent of other participants' participation in the audit? If not, what other alternatives would provide meaningful information about the extent of participation in the audit of other participants?

27. What challenges, if any, would requiring the percentage of audit hours as the measure of the other participants' participation present?

As indicated above, we believe that the percentage of the total hours in the audit is the best measure of a firm's contribution to the audit, as the only measure which is roughly comparable across borders. We do not believe that it would present major challenges; as the PCAOB indicates, this is information which is gathered routinely.

28. Should the Board require discussion of the nature of the work performed by other participants in the audit in addition to the extent of participation as part of the disclosure? If so, what should be the scope of such additional disclosures?

We would favour not setting any such requirements at the moment, and allowing firms to develop practice as they feel appropriate to aid user understanding of the information that they disclose.

29. Would the proposed disclosure of the percentage of hours attributable to the work performed subsequent to the original report date in situations in which an audit report is dual-dated be useful to users of the audit report?

We support the proposals in this regard.

30. Is the example disclosure in the proposed amendments helpful? Would additional examples be helpful? If so, what kind?

We believe that the example is helpful and that no other examples are needed.

4. Thresholds

31. Should disclosure of the names of all other participants in the audit be required, or should the Board only require disclosing the names of those whose participation is 3% or greater? Would another threshold be more appropriate?

We agree that a materiality threshold is required. As we have indicated in our response to Question 25, we believe that a threshold of 1% would be more appropriate, providing fuller information but still not overburdening the reports with excessive information. A threshold of 3% could enable much of the work in an audit not to be included in the relevant disclosures.
32. Is the proposed manner in which other participants in the audit whose individual extent of participation is less than 3% of total hours would be aggregated appropriate?

We believe that the proposed approach to those participants which are aggregated is appropriate, with the caveat that we believe the threshold should be 1% rather than 3%.

B. Disclosure When Dividing Responsibility

33. Are the requirements to disclose the name and country of headquarters' office location of the referred-to firm sufficiently clear and appropriate?

We believe that the proposals are sufficiently clear and appropriate.

34. Are there any challenges associated with removing the requirement to obtain express permission of the referred-to firm for disclosing its name in the audit report? If so, what are the challenges and how could they be overcome?

We are not aware of substantive challenges associated with this proposal.

35. In situations in which the audit report discloses both the referred-to firm and other participants in the audit, would using different disclosure metrics (e.g., revenue for the referred-to firm and percentage of the total hours in the most recent period's audit for the other firms and persons) create confusion? If so, what should the disclosure requirements be in such situations?

We believe that disclosures in different forms would not create significant confusion, and we have confidence that investors would be able to navigate the proposed information effectively, even if there is more than one disclosure metric.

Re: Rule Making Docket 029: Improving Transparency Through Disclosure of Engagement Partner and Certain Other Participants in Audits

Dear Mr. Seymour:

I am an attorney practicing in Washington, D.C., in the fields of securities regulation and professional liability. Over the years, I have represented a number of auditors. I respectfully submit these comments on my own behalf and not on behalf of any current or former client.

Question: Would disclosure of the engagement partner’s name in the audit report enhance investor protection? If so, how? If not, why not?

The disclosure of the identity of the engagement partner or other participants in the audit process will not serve to protect the interests of investors or further the public interest in the preparation of informative, accurate, and independent audit reports.

The value of an audit report to the investing public resides in confidence that a defined process has been applied by a professional organization with the staff, know-how, and resources to discharge that process in a professional manner. No individual should be singled out either to add or detract from the imprimatur of the audit firm. Naming the engagement partner and other participants in the audit would be like having Rosencrantz and Guildenstern push Hamlet off the stage.

An audit firm is not marketing a pair of blue jeans where a star’s signature adds to the perceived value of such a product. Having George Washington or a former high
government official identified as the engagement partner will not promote the protection of investors. What happens when a registrant’s investor relations department touts the fact that a former high government official serves as the audit engagement partner? I would think that fact irrelevant to audit quality. No one, however, will be able to convince the public that a George Washington audit report doesn’t have a special added luster.

Another fundamental problem arising from the identification of audit engagement personnel is the addition of more information to an investment process already groaning under an excess of information. As part of its “plain English” initiative, data gathered for the SEC indicated: “Most participants said they do not utilize annual reports as a tool in their investment decision-making.” Abt SRBI Final Report for the SEC, Focus Groups about Plain English Documents at p. 7 (May 2008) http://www.sec.gov/pdf/finalrptplainenglish052008.pdf Adding the names of audit engagement partners to the information mix will not likely improve the ability of the investing public to use and digest existing disclosures.

Most recently, in another context, the Federal Reserve Board has been examining the desirability of reducing and simplifying disclosure in the face of information overload. “While additional content helps comprehension in some cases, sometimes less is more. Too much information can overwhelm consumers or distract their attention from key content. It may be better to focus on a handful of elements rather than ‘full disclosure.’” Designing Disclosures to Inform Consumer Financial Decisionmaking: Lessons Learned from Consumer Testing, 97 Federal Reserve Bulletin No. 3 at p. 21 (August 2011) http://www.federalreserve.gov/pubs/bulletin/2011/pdf/designingdisclosures2011.pdf I submit that identifying audit engagement personnel would be a further distraction from the key content of existing disclosures.

Question: 7. Would the proposed amendments to the auditing standards lead to an increase in private liability of the engagement partner?

In describing the potential liability issues, PCAOB Release No. 2011-007 noted that the Supreme Court in Janus Capital Group, Inc. v. First Derivative Traders, 131 S.Ct. 2296, 2302 (2011), held that “[f]or purposes of Rule 10b-5, the maker of a statement is the person or entity with ultimate authority over the statement, including its content and

whether and how to communicate it." Whether or not the Janus decision would eventually limit liability of disclosed audit engagement personnel, the essential point identified in Release No. 2011-007 is: "Few lower courts have yet had occasion to apply the Court’s ruling in Janus and its ultimate implications will not be known for some time." Assuredly, the rule as proposed would generate litigation to test the Janus issue with its attendant costs and uncertainties. Where the ultimate benefit for investors, if any, is uncertain, and the litigation costs are sure, the brief against the rule proposal is strong.

Moreover, refraining from regulation that would encourage additional litigation would be consistent with the dominant legislative and judicial trends in securities law. The Supreme Court in Merrill Lynch, Pierce, Fenner & Smith, Inc. v. Dabit, 547 U.S. 71, 80 (2006) reiterated the lesson of the risks it identified in Blue Chip Stamps v. Manor Drug Stores, 421 U.S. 723, 739 (1975), that "[e]ven weak cases brought under the Rule [10b-5] may have substantial settlement value . . ." The same policy considerations generated the Private Securities Litigation Reform Act of 1995: "[N]uisance filings, targeting of deep-pocket defendants, vexatious discovery requests, and ‘manipulation by class action lawyers of the clients whom they purportedly represent’ had become rampant in recent years. [H. R. Conf. Rep. No. 104-369, p. 31 (1995)]. Proponents of the Reform Act argued that these abuses resulted in extortionate settlements, chilled any discussion of issuers’ future prospects, and deterred qualified individuals from serving on boards of directors. [H. R. Conf. Rep. No. 104-369, pp. 31-32 (1995)]." Merrill Lynch, Pierce, Fenner & Smith, Inc. v. Dabit, 547 U.S. at 81. Consistent with these policy considerations, the Board should reject the proposed rule.

I thank you for the opportunity to submit the foregoing comments, reflecting my personal views on Rule Making Docket 029.

Respectfully submitted,

The Law Office of

Office of the Secretary
PCAOB
1666 K Street, N.W.
Washington, D.C. 20006-2803

Dear Board Members:

The Audit and Assurance Services Committee of the Illinois CPA Society (“Committee”) is pleased to comment on the Proposed Rule on Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2 (Docket Matter No. 29) dated October 11, 2011. The organization and operating procedures of the Committee are reflected in the attached Appendix A to this letter. These comments and recommendations represent the position of the Illinois CPA Society rather than any members of the Committee or of the organizations with which such members are associated.

The Board is soliciting comments on a series of amendment to PCAOB standards that would:

- Require the audit report to disclose the name of the Engagement Partner responsible for the most recent period’s audit,
- Require registered firms to disclose in their PCAOB annual report on Form 2 the name of the engagement partner for each audit report already required to be reported on the form, and
- Require disclosure in the audit report about other persons and independent public accounting firms that took part in the most recent period’s audit.

First and foremost, we agree with the Board’s goal and intentions to provide additional transparency to investors about the audit process requiring only modest changes to the audit report. There is also an underlying assumption that this additional transparency would increase investor protection by increasing accountability of the audit profession (engagement partner and audit firm) for the preparation and issuance of audit reports.

In proposing these amendments, the Board states that its inspections show that there is significant room for improvement by auditors in compliance with PCAOB standards including those that require auditors to perform the audit with due care and professional skepticism. While the Committee does not take issue with respect to these conclusions, we do not believe that lack of accountability by either the audit firm or the engagement partner for the quality of work performed is a significant cause of noted non-compliance. Survey after survey has demonstrated that auditors are among the most trusted professionals. Independence, objectivity, and professional skepticism are qualities that audit firms require in their engagement partners on all issuer engagements and non-public engagements and these qualities are routinely evaluated through internal inspections, peer reviews, PCAOB inspections and other quality control practices within those firms. Accordingly, we believe that audit firms and engagement partners already feel themselves highly
accountable for the quality of the work they control, perform and supervise and therefore, identification of the engagement partner in the audit report will not meaningfully heighten the accountability or provide additional investor protection. In fact, as indicated in our responses below, we believe the proposed changes may diminish investor protection by distorting the role of the engagement partner and that of the primary audit firm.

Similarly, we believe that audit firms, particularly due to the litigation and reputational exposure they incur if audit work is found to be sub-standard, already assign more experienced and capable partners to public and private company engagements. As such, we do not believe that identification of the engagement partner in the audit report will meaningfully impact such assignments.

In regards to whether identifying the engagement partner in the audit report would promote auditor independence by discouraging audit clients from inappropriately pressuring the firm to remove an engagement partner, the Committee believes that audit firms are only rarely pressured by clients to remove an engagement partner. Accordingly, public identification of the engagement partner would not have a meaningful impact. We also note that engagement partner changes occur for a variety of reasons, including mandatory rotation, retirement and relocation. Any public identification of engagement partner changes should not allow for misunderstanding that the change was due to client pressures.

As further described below, we do not believe it is necessary to report engagement partner’s names on Forms 2 or 3.

Because the inclusion in the audit report of all participants in the audit process may tend to reduce the perceived responsibility of the accounting firm issuing the audit report or the perceived overall quality of the audit, we do not believe that such disclosure should be mandated.

The Committee is pleased to answer the 35 specific questions the Board has posed:

**Disclosure of the Engagement Partner**

1. *Would disclosure of the engagement partner’s name in the audit report enhance investor protection? If so, how? If not, why not?*

   As described above, we believe that the engagement partner already feels highly accountable for the quality of the audit and therefore, that disclosure of his/her name in the audit report will not meaningfully enhance investor protection. The proposed requirement may mislead the public into thinking the individual partner acted alone, when in fact; every audit requires the coordinated effort of several individuals within the firm. The name of the engagement partner would provide no more protection to investors than the names of the chief of drilling operators of oil companies could protect the Gulf of Mexico from oil spills. Auditing firms are responsible for the proper management of an audit engagement and for implementing and maintaining quality control processes and procedures and managing its partners, employees and associates. The individual engagement partner, while having the
responsibility for overseeing the audit, is acting as a representative of his/her firm and not as an individual. We additionally note that the mandatory engagement partner rotation requirements provide an internal mechanism for additional accountability within each audit firm.

2. *Would disclosing the name of the engagement partner in the audit report increase the engagement partner's sense of accountability? If not, would requiring signature by the engagement partner increase the sense of accountability?*

As described above, we believe that the engagement partner already feels highly accountable for the quality of the audit and therefore, that disclosure of his/her name in the audit report will not meaningfully enhance his/her accountability. Each audit firm should already have a system of quality controls, including internal and external engagement inspections, to reasonably ensure that each engagement partner has such accountability. It is the audit firm’s responsibility to evaluate the partner’s capabilities, experience and integrity and determine that he or she has the appropriate sense of accountability to protect the public interest. Additionally, if the engagement partner’s sense of accountability is not present and auditing firms do not follow their responsibilities, neither disclosing the name of the engagement partner, nor requiring his/her signature, will impact accountability.

3. *Does the proposed approach reflect the appropriate balance between the engagement partner’s role in the audit and the firm’s responsibility for the audit? Are there other approaches that the Board should consider?*

As indicated above, the individual partner already bears a heavy responsibility in protecting the reputation of his/her firm and ensuring that the firm’s engagements comply with professional standards. An individual partner’s responsibilities with respect to review and approval of the audit engagement are already outlined in great detail in the firm’s quality control documents. The audit report is issued in the name of the firm and the audit firm bears the ultimate responsibility for the quality of the work performed, not the individual partner who supervised the engagement. Disclosing the name of the engagement partner may actually distort the public perspective of the responsibility between the audit firm and that partner and serve to diminish the role of the engagement quality control reviewer and other personnel contributing to the overall quality of the engagement.

4. *Would the proposed disclosure clearly describe the engagement partner’s responsibilities regarding the most recent reporting period's audit? If not, how could it be improved?*

In the event that the proposal to disclose the name of the engagement partner is adopted, the proposal is adequate to publicly disclose that individual. However, additional language might be considered valuable to clearly indicate that, while the engagement partner has overall responsibility for the audit, others within the audit firm also participate in the audit and are similarly responsible.
5. *Would the proposed disclosure clearly describe the engagement partner's responsibilities when the audit report is dual-dated? If not, how could it be improved?*

In the event that the proposal to disclose the name of the engagement partner is adopted, the proposed disclosure is adequate.

6. *Would the proposed amendments to the auditing standards create particular security risks that warrant treating auditors differently from others involved in the financial reporting process?*

While others, such as company management and the audit committee are much more responsible for the financial results and financial reporting than the auditor, we do not believe there is reason to treat auditors any differently than others involved in the financial reporting process.

7. *Would the proposed amendments to the auditing standards lead to an increase in private liability of the engagement partner?*

8. *What are the implications of the proposed disclosure rule for private liability under Section 10 (b)?*

9. *Would the disclosure of the engagement partner’s identity affect Section 11 liability? If so, what should the Board’s approach be?*

10. *Would the disclosure of the engagement partner’s identity have any other liability consequences (such as under state or foreign laws) that the Board should consider?*

11. *Would a different formulation of the disclosure of the engagement partner ameliorate any effect on liability?*

We believe that an engagement partner who signs the firm’s name to an audit report of a public company currently has a tremendous amount of personal liability. We do not believe that the proposed disclosure requirement of the engagement partner’s name will increase this liability, particularly because the identity of that partner is easily ascertainable in any legal proceeding. Yet we are not attorneys or legal experts, and as such, we concur with several of the Board members conclusions that the Board needs to hear from attorneys or legal experts on whether these proposals will have a meaningful impact on the engagement partner’s personal liability prior to finalizing these proposals. Similarly, attorneys and legal experts should comment on the potential for increased liability for other parties named in the audit report. That legal opinion however, cannot be the final determinant but rather additional information necessary to reach a rational conclusion.
The Proposed Amendment to Form 2

12. If the Board adopts the proposed requirement that audit reports disclose the name of the engagement partner, should the Board also require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2?

No. Having this information so easily available to investors could allow them to scrutinize individual partners based on information that will likely be very incomplete and lead to inappropriate reductions in investor’s confidence of the audit report. For example, an engagement partner might be associated with companies that have entered Chapter 11 and investors might inappropriately question the suitability of audit reports signed by that partner.

13. If the Board does not adopt the proposed requirement that audit reports disclose the name of the engagement partner, should the Board nonetheless require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2?

No, as described above.

14. Disclosure in the audit report and on Form 2 would provide notice of a change in engagement partner only after the most recent period's audit is completed. Would more timely information about auditor changes be more useful? Should the Board require the firm to file a special report on Form 3 whenever there is a change in engagement partners?

No to both, since we believe that public disclosure of the name of the engagement partner would not provide any meaningful additional investor protection.

15. A change in engagement partner prior to the end of the rotation period could be information that investors may want to consider before the most recent period's audit is completed. Should the Board require the firm to file a special report on Form 3 when it replaces an engagement partner for reasons other than mandatory rotation to provide an explanation of the reasons for the change?

We would support this reporting of engagement partner changes if it were limited to identifying that a change occurred and why (e.g., partner retirement, partner relocation, partner workload adjustment) – as opposed to also disclosing the partners’ names.

Disclosure of Other Participants in the Audit and Referred-to Accounting Firms

Disclosures When Assuming Responsibility or Supervising
16. Is it sufficiently clear who the disclosure would apply to? If not, how could this be made clear?

Yes.

17. Is it appropriate not to require disclosure of the individual who performed the EQR? If not, should disclosure of the engagement quality reviewer be required when the EQR is performed by an individual outside the accounting firm issuing the audit report or should the disclosure be required in all cases?

As stated previously, we do not believe that the name of the engagement partner should be disclosed in the audit report. Similarly, we do not support the disclosure of the EQR, even if that person is outside the accounting firm issuing the report.

18. Is it appropriate not to require disclosure of the person that performed the Appendix K review?

Even if the engagement partner is identified in the audit report, we agree that with the Appendix K reviewer should not be identified.

19. Is it appropriate not to require disclosure of persons with specialized skill or knowledge in a particular field other than accounting and auditing not employed by the auditor or persons employed or engaged by the company who provided direct assistance to the auditor?

Even if the engagement partner is identified in the audit report, we agree that persons with specialized skill or knowledge should not be identified.

20. Would disclosure of off-shoring arrangements (as defined in the release) or any other types of arrangements to perform audit procedures provide useful information to investors and other users of the audit report? If yes, what information about such arrangements should be disclosed?

No.

Details of the Disclosure Requirements

21. Would disclosure in the audit report of other participants in the audit provide useful information to investors and other users of the audit report? Why or why not?

The survey of investors cited in the Proposal would seem to indicate that this information is useful to them. However, given the current requirement under AU 543 for the principal auditor to perform sufficient procedures to place reliance on the work of other auditors, we question the value of these proposed disclosures. Such disclosures will likely result in inappropriate conclusions by readers that audits with higher usage of other firms and non-
employees are of a lower quality than audits with lower percentage usage of others. The proposed disclosures might also be perceived to suggest that there is shared responsibility for the audit.

22. Are the proposed requirements sufficiently clear and appropriate with respect to identifying other participants in the audit? If not, how should the proposed requirements be revised?

Yes, the requirements are clear.

23. Are the proposed requirements sufficiently clear as to when the name of a public accounting firm or a person would be required to be named in the audit report? Is it appropriate that the name of the firm or person that is disclosed is based on whom the auditor has the contractual relationship?

Yes, the requirements are clear.

24. Would disclosure in the audit report of other participants in the audit have an impact on the ability of independent public accounting firms to compete in the marketplace? If so, how would the proposed requirement impact a firm's ability to compete in the marketplace?

Yes, the proposed requirements will result in a perception that a higher usage of other firms and non-employees is an indication of a lower quality audit. The requirement to disclose may also prompt some audit firms or non-employees to stop providing the services, which in turn, may become a disadvantage to smaller firms who cannot as readily obtain the internal resources to do the work.

25. Are there any challenges in implementing a requirement regarding the disclosure of other participants in the audit? If so, what are the challenges and how can the Board address them in the requirements?

None, other than those already noted and described below.

Disclosure of Percentage of the Total Hours in the Most Recent Period’s Audit, Excluding EQCR and Appendix K review

26. Is the percentage of the total hours in the most recent period's audit, excluding EQR and Appendix K review, a reasonable measure of the extent of other participants' participation in the audit? If not, what other alternatives would provide meaningful information about the extent of participation in the audit of other participants?

The percentage of hours is not a reasonable measure which could be obtained without incurring tremendous administrative burden since other firms and non-employees typically do not provide this information and may even resist doing so. Although we do not agree with the disclosure proposal, the disclosure should be limited to the nature of the procedures
performed – such as “audited Sub X which represents A% and B% of revenues and assets” or “observed an inventory count at one location” or “performed internal control testing at two locations”.

27. **What challenges, if any, would requiring the percentage of audit hours as the measure of the other participants' participation present?**

One challenge would be timely receipt of this information from associated firms and non-employees, since some of them may not have systems in place that would allow them to produce this information as readily as the larger American firms. There would also be the challenge of the additional costs with obtaining this information, especially for smaller firms. Additionally, it is not clear which hours should be accumulated. For example, would hours incurred doing quarterly reviews, acquisition opening balance sheet audits, reviewing of predecessor auditor’s work papers, client acceptance and retention be included or excluded from the “hours attributable to the current period’s audit”?

28. **Should the Board require discussion of the nature of the work performed by other participants in the audit in addition to the extent of participation as part of the disclosure? If so, what should be the scope of such additional disclosures?**

The disclosure should be limited to the nature of the procedures performed – such as “audited Sub X which represents A% and B% of revenues and assets”. However, there may be some difficulties in describing the nature of the procedures performed in such a way that it would be adequately understood by a financial statement user without an accounting or auditing background.

29. **Would the proposed disclosure of the percentage of hours attributable to the work performed subsequent to the original report date in situations in which an audit report is dual-dated be useful to users of the audit report?**

If other participant disclosures are required, the distinction between the hours worked either before or after the original report date does not appear to be worth the effort it would take to accumulate and disclose that information. If instead, only the nature of the procedures performed were to be disclosed, such disclosure could more easily accommodate the distinction, if it were deemed necessary, between procedures performed before or after the original report date.

30. **Is the example disclosure in the proposed amendments helpful? Would additional examples be helpful? If so, what kind?**

We note that the examples provided exclude the primary audit firm. Accordingly, the percentages do not add up to 100%, which could cause confusion. As noted above, we do not support disclosure of relative hours in any case.
Thresholds

31. Should disclosure of the names of all other participants in the audit be required, or should the Board only require disclosing the names of those whose participation is 3% or greater? Would another threshold be more appropriate?

Disclosing the names of all firms utilized could become cumbersome and unnecessary – consider situations where there are inventory counts observed by different auditors in many locations. There could be one firm per location, leading to a lengthy disclosure adding no meaningful information to the reader. While the 3% in the Proposal appears to be an arbitrary level, there should be a minimum threshold below which individual listing would not be required. Note that disclosure of firms and non-employees, both in the reporting and in the appendix, must be clear as to the responsibilities of all involved in the overall audit opinion. As an alternative, the Board should consider allowing the decision to individually list firms or non-employees up to the discretion of the primary auditor – with appropriate guidance to make such a decision included in the Final Standard.

32. Is the proposed manner in which other participants in the audit whose individual extent of participation is less than 3% of total hours would be aggregated appropriate?

As noted above, we believe that the disclosure of the hours performed by other firms and non-employees should be replaced by the nature of the procedures performed. Should the primary auditor not list every other participant, a general statement can be made that others had insignificant participation in the audit and the nature of the work they performed.

Disclosure When Dividing Responsibility

33. Are the requirements to disclose the name and country of headquarters’ office location of the referred to firm sufficiently clear and appropriate?

While the requirement should be clear and open to ready interpretation and implementation, it is noted that the requirement is to disclose the other firm’s headquarters’ office location. This may not provide useful information to the reader as often the headquarters is not the location that performs the work referred to in the opinion. We recommend that only the office doing the work be disclosed instead of the firm’s headquarters.

34. Are there any challenges associated with removing the requirement to obtain express permission of the referred-to firm for disclosing its name in the audit report? If so, what are the challenges and how could they be overcome?

Auditors should be explicitly informed of the use of their reports and name in other, publicly available documents. Thus, eliminating the obtaining of express permission should not be part of this proposal. It should be noted that this permission often can be obtained during the engagement letter process, thus ensuring that there would not be a delay in processing the
financial statements. As an alternative, the Board should consider implementing a rule that would require the primary auditor to inform the other party in writing that they will be disclosed in the audit report.

35. In situations in which the audit report discloses both the refer-to firm and other participants in the audit, would using different disclosure metrics (e.g. revenue for the refer-to firm and percentage of total hours in the most recent period’s audit for the other firms and persons) create confusion? If so, what should the disclosure requirements be in such situations?

Different disclosure metrics may cause some confusion; however, we do not believe that confusion would be substantial. However, by instead only disclosing the nature of the procedures performed for any other named party, this confusion would be entirely avoided.

The Illinois CPA Society appreciates the opportunity to express its opinion on this matter. We would be pleased to discuss our comments in greater detail if requested.

Sincerely,

Kevin V. Wydra, CPA

APPENDIX A

AUDIT AND ASSURANCE SERVICES COMMITTEE
ORGANIZATION AND OPERATING PROCEDURES
2011 – 2012

The Audit and Assurance Services Committee of the Illinois CPA Society (Committee) is composed of the following technically qualified, experienced members. The Committee seeks representation from members within industry, education and public practice. These members have Committee service ranging from newly appointed to more than 20 years. The Committee is an appointed senior technical committee of the Society and has been delegated the authority to issue written positions representing the Society on matters regarding the setting of audit and attestation standards. The Committee’s comments reflect solely the views of the Committee, and do not purport to represent the views of their business affiliations.

The Committee usually operates by assigning Subcommittees of its members to study and discuss fully exposure documents proposing additions to or revisions of audit and attestation standards. The Subcommittee develops a proposed response that is considered, discussed and voted on by the full Committee. Support by the full Committee then results in the issuance of a formal response, which at times includes a minority viewpoint. Current members of the Committee and their business affiliations are as follows:

Public Accounting Firms:

**Large: (national & regional)**

- James J. Gerace, CPA
- William P. Graf, CPA
- Howard L. Gold, CPA
- Jeremy L. Hadley, CPA
- Jon R. Hoffmeister, CPA
- James R. Javorcic, CPA
- Michael J. Pierce, CPA
- Elizabeth J. Sloan, CPA
- Kevin V. Wydra, CPA

Large:

Rulemaking Docket No. 29

Dear Members of the Board:

The Financial Reporting Committee (FRC) of the Institute of Management Accountants (IMA) is pleased to comment on the PCAOB’s proposed amendments to auditing standards and Form 2 covering disclosure in the audit report and Form 2 of the name of the audit partner and disclosure in the audit report of other firms and persons that took part in the audit.

The FRC is the financial reporting technical committee of the IMA. The FRC includes preparers of financial statements for some of the largest companies, representatives from the largest accounting firms, valuation experts, accounting consultants, academics, and analysts. The FRC reviews and responds to research studies, statements, pronouncements, pending legislation, proposals and other documents issued by domestic and international agencies and organizations.

In general, we support the second part of the proposal: to require disclosure of the name, headquarters location, and measure of involvement of other independent public accounting firms and other persons that took part in the audit. Generally, investors are unaware of this information and its inclusion will improve users’ understanding of how auditors conducted the audit.

However, requiring disclosure of the name of the engagement partner would not improve audit quality or provide sufficient other value to audited financial statements. For reasons explained below, we do not favor adopting this requirement. Rather, we are in Board Member Dan Goelzer’s camp per his statement at the October 11th public meeting, “In my view, the Board would need more evidence than it has now to conclude that partner identification would improve audit quality.”

1 Additional information about the IMA Financial Reporting Committee can be found at www.imafrc.org.
Information about other accounting firms, etc.

An important aspect of this part of the proposal is how it applies to international accounting firms or associations. As we understand the proposal, an international accounting firm performing the audit for a multi-national corporate entity with operations in many parts of the world would have to disclose that parts of the engagement were performed by its affiliated firms in, say, China, England, Argentina, Mexico, and Australia, assuming each met the materiality threshold. While firms with international associations have active quality control programs and may perform similar audit approaches worldwide, they are still separate legal entities and investors may consider that to be important information.

We agree with the statements made by Chairman Doty and Board Member Hanson when announcing the proposal:

Doty

I am concerned about investor awareness. I have been surprised to encounter many savvy business people and senior policy makers who are unaware of the fact that an audit report that is signed by a large U.S. firm may be based, in large part, on the work of affiliated firms. Such firms are generally completely separate legal entities in other countries.

Enhanced transparency into the composition of cross-border audits should help investors gain a better understanding of how an audit was conducted and make more informed decisions about how to use the audit report.

Hanson

Moreover, even where the other firm is a member of the international network of the firm issuing the audit report, the network affiliate firm may be subject to different, and potentially conflicting, legal and regulatory requirements that investors may want to consider in evaluating the overall audit.

There is also the question of the lack of PCAOB inspection access to auditors in certain countries, most notably China at present. This disclosure would inform users that a firm’s affiliate not subject to PCAOB inspection has performed some portion of the overall audit.

Given these considerations, it is reasonable for the PCAOB to require disclosure of the percentage of audit hours performed by each separate legal entity within the signing firm, subject to a materiality threshold.

Our comments on a few of the questions raised in the proposal follow.

26 What is the best measure of the extent of other participants’ involvement in the audit? – Almost any measure of the extent of other participants’ involvement will be somewhat arbitrary
so the estimated hours seem as reasonable as anything else short of trying to figure out a measure of the relative risks involved, which would not be practical.

27 What challenges would there be in acquiring other participants’ audit hours? – There are many implementation questions such as: Will the other participants have to provide some sort of certification for their audit hours in order for the signing audit firm to be able to rely on them in making the percentage calculation? Would the signing auditor be able to obtain an interim actual number of hours and then extrapolate it to determine an estimate rather than waiting for a final actual? We think auditors would figure these things out on their own but some guidance in the final release might be helpful.

31 What should be the minimum threshold for disclosing another auditor’s participation? The 3% threshold strikes us as too low although any number picked will be arbitrary. Based on the example in your Appendix, we suspect that investors would not have a much different impression of the situation if the threshold were 5% rather than 3%. Disclosing three different firms and over 20 percent audited by other firms would still indicate a great deal of spreading of the audit responsibility. About the only thing that might be gained in the case of a lower threshold in this example would be if the 3% and 4% countries were ones where the PCAOB was unable to inspect auditors. However, (1) the proposal does not require disclosure of whether the PCAOB can inspect auditors in the headquarters country or (2) you do not require disclosure of whether the PCAOB has inspected the firm. These factors seem to argue for a somewhat higher threshold and we think 5% would be adequate. Or perhaps there should be required disclosure in all cases when an other than de minimus part of the overall examination has been performed in a country not subject to PCAOB inspection, with a somewhat higher threshold for other countries.

Disclosure of name of engagement partner

As mentioned above, we do not believe that requiring disclosure of the name of the engagement partner in the auditor’s report would improve audit quality or provide sufficient other value to audited financial statements.

From the proposal, it appears that the PCAOB is not convinced either. The words “could” and “might” appear often in the section explaining the Board’s reasoning for proposing this requirement. For example, “The Board is, by this proposal, considering whether additional transparency about the identity of the person responsible for the engagement could provide investors with useful information and could further incentivize firms to assign more experienced and capable engagement partners to engagements.” And, “As discussed above, disclosure of the name of the partner responsible for the audit might increase the partner’s sense of accountability and might provide useful transparency.”

In fairness, the proposal does quote a few comment letters on the earlier concept release that support the disclosure. However, we believe that in a formal proposal to amend auditing standards, the Board should express more conviction for its position based on the evidence gathered over the six years the project has been under study. If such equivocal language is indicative of Board members’ real uncertainty about this matter, it is unclear what you will learn from comments on this draft beyond repeating earlier views.
Some might argue that knowing the engagement partner’s name could help investors in cases where the partner was associated with repeated instances of poor reporting practices. However, these situations likely would be rare. Audit committees generally scrutinize partners’ qualifications during the rotation process and are reluctant to accept weak or tainted partners. So too, accounting firms’ quality control processes closely monitor partner performance for client service, firm reputation and litigation exposure. The vetting process is particularly strong for engagement partners on the largest corporations.

We are also concerned with unintended consequences such as the market unfairly tainting an engagement partner without cause or due to misunderstanding. For example, a restatement for error could occur even though the named partner had overseen acceptable audit work (or relied on the work of another firm where the problem occurred). Or, the market could be confused about which partner presided over restatement for error. This could occur, for example, when a new partner discovers a problem resulting in restatement even though a partner from a previous year’s audit (unnamed in the report) might have missed the problem.

The release notes that investors and investor advocates who commented on the concept release generally agreed that a signature requirement would enhance accountability and transparency and, in turn, investor protection. We do not agree the notion that naming an individual would somehow cause greater accountability. When authorizing issuance of audit reports or certifications or sub-certifications of financial reports in the case of corporate accountants, there is already full, personal responsibility for that information. Including individual names in the audit report does not increase the already high burden of responsibility for quality financial reporting and audit work.

We also note that the issuance of the audit report is very much a “team effort.” Depending on the size of the reporting company, this can involve anywhere from a few other individuals to hundreds. While the engagement partner plays a very important role in coordinating the overall audit, she or he depends on many others. To name a single individual is to imply that one person accepts responsibility rather than the firm, which we believe is the wrong representation. Thus, we strongly believe the name of the engagement partner should not be a required disclosure.

We note that the European Commission recently proposed a new auditor’s report that would include the names of all members of the audit team. That would clearly be overkill but it would at least be more reflective of the team effort that pervades any engagement.

We would be pleased to respond to any questions you have about our comments. You can reach me at 212 664-1733.

PCAOB Rulemaking Docket Matter No. 029

Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2

Dear Mr. Secretary:

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board’s (PCAOB or the Board) Release No. 2011-007, “Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2” (the Release).

The Board has requested public comment on amendments to its standards that are designed to improve transparency of public company audits. The proposed amendments would: (1) require registered public accounting firms to disclose the name of the engagement partner in the audit report, (2) amend the Board’s Annual Report Form (Form 2) to require registered firms to disclose the name of the engagement partner for each audit report already required to be reported on the form, and (3) require disclosure in the audit report of other independent public accounting firms and other persons that took part in the audit.

In addition, the Board requested input on certain additional considerations not specifically included within the proposed amendments.

Overview

The Board is considering whether additional transparency about the identity of the person responsible for the engagement could provide investors with useful information, encourage auditing firms to assign more experienced and capable engagement partners to engagements and further increase the engagement partner’s sense of personal accountability. In addition, the intent of the proposed disclosure of other participants in the audit includes enabling investors and other audit report users to determine whether participating firms are registered with the PCAOB, have been subject to its inspection and the results of any inspections.
We do not believe that the proposed disclosure of the name of the engagement partner, either in the audit report or in Form 2, would increase the engagement partner’s sense of accountability, improve audit quality or result in registered public accounting firms enhancing their system of quality control (e.g., through changes to the assignment protocols for an engagement partner), and may create certain adverse unintended consequences.

The Board has indicated that the disclosure of the engagement partner’s name would not increase or otherwise affect the duties and obligations of the engagement partner under PCAOB standards in performing the audit and that it is not intended to increase the liability of engagement partners. As further described below, we believe that in certain circumstances, a possible unintended consequence of these proposed amendments is increased liability risk for engagement partners. Furthermore, should the Securities and Exchange Commission (SEC) require issuers to file the consent of an engagement partner disclosed within the audit report as having certified any part of a registration statement, even if the engagement partner did not sign the audit report, significant increased liability for engagement partners may result.

Given the uncertainty with regard to whether this disclosure would result in increased liability, before proceeding with these proposed amendments, we believe the Board should perform its own liability assessment and cost benefit analysis and coordinate with the SEC to clarify the implications of the proposed amendments under Section 11 of the Securities Act of 1933.

If the Board proceeds to require disclosure of the name of the engagement partner, we believe the preferable alternative is disclosure only in Form 2. We believe this alternative would eliminate unnecessary redundancy between the audit report and Form 2 and is less likely to be subject to the unintended consequences we have identified relative to disclosing the engagement partner’s name in the audit report. Most importantly, we believe disclosure of the engagement partner’s name only in Form 2 would eliminate the question of whether an issuer is required to file the consent of the engagement partner and therefore eliminate a potential increase in auditor liability (which result is wholly consistent with the Board’s intent).

We support the Board’s proposed disclosure of other key participants in the audit, however we believe that the three percent threshold for requiring disclosure individually may be inconsistent with the intent of the Release, which is to increase transparency by providing investors with information regarding certain key participants in the audit process. Our interpretation of key participants in the audit are those firms or individuals that participated in more than 10 percent of the audit hours and as described further below, believe that this threshold is more closely correlated to certain disclosure requirements within generally accepted accounting principles (GAAP) and SEC rules and regulations.
Furthermore, should the SEC determine it necessary for issuers to file the consent of another participant disclosed in the audit report, a significant change in the liability associated with such participation may result. Accordingly, we believe it is critical for the Board to coordinate its efforts with the SEC to ensure that the appropriate, concurrent rulemaking occurs to provide protection from any potential increased liability for other accounting firms or persons disclosed in the audit report solely as a result of the proposed amendments.

**Disclosure of the name of the engagement partner in the audit report and Form 2**

*Impact of proposed disclosure on engagement partner accountability*

The proposed amendments to disclose the name of the engagement partner in the audit report builds on the Board’s July 28, 2009 Concept Release to which we submitted our response letter on September 11, 2009.¹ For reasons consistent with those described within that letter, we recognize that the proposed disclosure will increase transparency about the engagement partner with primary responsibility for the conduct of the audit, however do not believe this proposed requirement would improve audit quality.

Although the engagement partner has primary responsibility for the conduct of the audit, he or she operates within the framework of the firm’s system of quality control so that the audit is conducted in accordance with professional standards.

Engagement partners possess a deep understanding of their accountability to capital market stakeholders, audit committees, regulators and the firm and its partners and of the potentially significant consequences of failing to perform audits with integrity and in accordance with professional standards. Engagement partners also are subject to internal inspection reviews and inspection by the PCAOB. Each of these factors creates significant accountability for engagement partners to the users of the audit report. We do not believe that disclosing the engagement partner’s name in the audit report or Form 2 would enhance his or her sense of accountability.

Because the proposed requirement to disclose the name of the engagement partner does not change the standards related to the conduct of the audit, there does not appear to be any correlation of such disclosure with needed changes in a firm’s system of quality control.

¹ Refer to our September 11, 2009 comment letter response to the Board’s Release No. 2009-005 that includes a Concept Release on Requiring the Engagement Partner to Sign the Audit Report at

Furthermore, the audit committee has primary responsibility for the appointment, compensation and oversight of the auditor. This responsibility, combined with existing requirements for the audit firm to communicate significant matters to the audit committee, results in significant interaction throughout the year between the audit committee and the engagement partner. This interaction enhances the audit committee’s ability to oversee the auditor, and reinforces the engagement partner’s direct accountability for the performance and conduct of the audit.

Potential unintended consequences of disclosing the engagement partner’s name

Disclosing the engagement partner’s name rather than requiring the engagement partner to individually sign the audit report, as suggested within the July 28, 2009 Concept Release, could help mitigate certain concerns described within our September 11, 2009 comment letter, although would not fully alleviate those concerns. Our primary concern relates to a potential increase in engagement partner liability that is further described below.

In addition, we believe that disclosing the name of the engagement partner with primary responsibility for the conduct of the audit may create a misunderstanding of the role and responsibility of the firm in issuing the audit report. Specifically, an inappropriate inference may be drawn by the marketplace that the engagement partner is responsible for the effective operation of firm-level quality controls.

The Release identifies the question of potential security risks to engagement partners as a result of the disclosure, as well as noting some concerns raised in the comment letters to the July 28, 2009 Concept Release relative to investors contacting and seeking information from the partner that simply cannot be communicated under the auditor confidentiality requirements for registered public accounting firms. KPMG takes security risks of its professionals seriously, and acknowledges the Board’s statement in the Release that it also takes concerns about personal security seriously. We believe that the Board should address both of these issues in its cost benefit analysis prepared in adopting a final standard.

These unintended consequences may be only partially overcome by identifying the engagement partner only within Form 2. Challenges related to the recruitment and retention of the most qualified professionals could be exacerbated by the perception of increased personal security concerns.

---

2 We note that Footnote 27 of the Release states “…the partner could simply decline to comment.” We believe under auditor confidentiality requirements, the auditor must decline to comment.
Potential implications on personal liability

The Board indicated that it did not intend to increase the liability of engagement partners as a consequence of the proposed disclosure. We believe, based on our evaluation of the provisions of Section 10(b) and Rule 10b-5 of the Securities Exchange Act of 1934 and Section 11 of the Securities Act of 1933 (the ’33 Act), and relevant case law, that an unintended consequence of the proposed amendments could be a significant increase in engagement partner liability.

Under Rule 10b-5, “it is unlawful for ‘any person, directly or indirectly, [t]o make any untrue statement of material fact’ in connection with the purchase or sale of securities”. The United States Supreme Court has held that, “for purposes of Rule 10b-5, the maker of the statement is the person or entity with ultimate authority over the statement, including its content and whether and how to communicate it”. As described within the Release, in June 2011, the Supreme Court considered what it means to “make any untrue statement of material fact” under Section 10(b) and Rule 10b-5 in Janus Capital Group, Inc. v. First Derivate Traders, 131 S.Ct.2296 (2011). We believe that a proper application of this case law to the Board’s proposed decision to disclose the engagement partner’s name should not result in an increase in the liability of the engagement partner. However, to date no court has considered this argument and we believe it is conceivable that some courts may read this case law differently. Furthermore, plaintiffs can be expected to assert claims against named engagement partners despite the Janus decision. Until case law becomes settled on these matters, we believe that the cost to defend such claims could be significant.

Section 11 of the ’33 Act allows for claims against “every accountant” who “has with his consent been named” as “having prepared or certified” any part of a registration statement or any report or valuation used in a registration statement. Liability under this section is not dependent on whether the accountant signed the report, but rather on whether the accountant consented to being named in it. Section 7 of the ’33 Act requires issuers to file the consent of any accountant who is named as having prepared or certified any part of the registration statement. Should it be determined that issuers are required to file the consent of an engagement partner whose name is disclosed in the audit report, significant increased liability for engagement partners may result.

We believe that the Board should defer deciding whether to adopt the proposed amendments until the SEC makes clear by rule that any disclosure requirement would not increase liability under Section 11 and that a consent pursuant to Section 7 and Rule 436 would not be required.
Increase in personal liability would not only increase costs but will also exacerbate the retention and recruitment, as well as potentially decrease the willingness, of the best qualified partners to oversee higher risk audit engagements.

Preferred alternative – Identification in Form 2 only

If the Board proceeds to require disclosure of the name of the engagement partner, we believe the preferable alternative is disclosure only in Form 2. This approach would provide investors with a convenient mechanism to retrieve information about a firm’s engagement partners on its issuer audits while potentially avoiding unnecessary redundancy between the audit report and Form 2 and certain unintended consequences associated with identification in the audit report.

Specifically, we believe that disclosing the name of the engagement partner within Form 2 would not require the engagement partner to consent as having certified any part of the registration statement and accordingly, we believe that this alternative would avoid additional liability exposure under Section 11.

Other implementation issue

Disclosure about engagement partner changes. The Release requests input on whether the Board should require registered public accounting firms to file a special report on PCAOB Form 3 that provides an explanation surrounding any change of an engagement partner for reasons other than mandatory partner rotation. We do not support a requirement to provide an explanation of the reasons for the change as these reasons often are not related to the audit or audit quality, may result in the potential for inappropriate inferences by investors and provide investors with little informational value about the issuer, its financial statements or the audit.

A change in the engagement partner prior to the end of the mandatory rotation period can occur for many reasons. We believe that audit committees are in the best position to determine and monitor the specific facts and circumstances surrounding the change, as well as the qualifications of the successor engagement partner. Additionally, we note that the change will be reflected in Form 2 if the Board adopts that proposed change. Accordingly, we would not support a requirement for a registered accounting firm to file a special report on Form 3 when it replaces an engagement partner for reasons other than mandatory rotation.

Disclosure of other participants when assuming responsibility or supervising

The proposed amendments would require certain disclosures when the auditor assumes responsibility for, or supervises the work of, another independent public accounting firm or
supervises the work of other persons not employed by the auditor that performed audit procedures on the audit. These disclosures include the name of the other participants, the location where the other participants are headquartered or reside and the percentage of hours attributable to the audit or procedures performed by the other audit participants in relation to the total hours for the most recent fiscal year’s audit.

As noted in the Overview section above, should the SEC determine it necessary for issuers to file the consent of another participant disclosed in the audit report, a significant change in the liability associated with such participant may result. Accordingly, we believe it is critical for the Board to coordinate its efforts with the SEC to ensure that the appropriate, concurrent rulemaking occurs to provide protection from any increased liability to other accounting firms or persons disclosed in the audit report solely as a result of the proposed amendments.

Subject to the discussion in the immediately preceding paragraph, we support the Board’s proposed disclosure of other key participants in the audit and agree that the percentage of audit hours is the most practical metric of the extent of other participants’ participation in the audit.

**Threshold for disclosure.** The proposal requires that other participants in the audit whose individual extent of participation is three percent or more of total hours in the most recent period’s audit be disclosed individually. We believe that this threshold may be inconsistent with the intent of the Release, which is to increase transparency by providing investors with information regarding certain key participants in the audit process. For example, assuming a correlation between audit hours and total assets or revenues, the proposed amendments may require specific disclosure of a particular location in the audit report that does not require disclosure within the financial statements.

Our interpretation of key participants in the audit are those firms or individuals that participated in more than 10 percent of the audit hours and believe that this threshold is more closely correlated to certain disclosure requirements within GAAP and SEC rules and regulations. FASB ASC 280, *Segment Reporting*, requires the disclosure of separate information about an operating segment with reported revenue or reported profit or loss in excess of 10 percent of the respective combined amounts (as adjusted in certain circumstances) and together with Regulation S-K Item 101(d) requires disclosure of information about both revenue and assets by geographic area, including revenues from an individual foreign country, if material. While the guidance does not define “material” for purposes of the individual disclosure requirement, a reasonable approach often applied by registrants is if operations in an individual country represent external revenues or long-lived assets greater than 10 percent of the consolidated totals, the presumption is such country’s
operations are material and should be disclosed separately. A similar 10 percent threshold is applied within the provisions of FASB ASC 932, *Extractive Activities – Oil and Gas*, for determining whether an entity is regarded as having significant oil and gas producing activities. Furthermore, for those entities with significant oil and gas producing activities, SEC rules and regulations require additional disclosure of oil and gas reserve information for each country containing 15 percent or more of the entity’s proved reserves.

In addition, the PCAOB has defined a threshold with respect to other participants that play a substantial role in preparing or furnishing the audit report. This definition includes those other participants that (1) perform material services that a public accounting firm uses or relies on in issuing all or part of its audit report, 3 or (2) perform the majority of the audit procedures with respect to a component with assets or revenues that constitute 20 percent or more of the consolidated assets or revenues. We believe that a 10 percent threshold strikes the right balance between the GAAP disclosure requirements and the need for transparency, while at the same time allowing for increased transparency when compared to a 20 percent threshold (i.e., substantial role definition).

“Other offices” of the firm. Some audit firms currently use off-shore locations to perform certain audit procedures in a cost efficient manner and such operations are typically located in a country different from where the firm is headquartered. The proposed amendments would not require disclosure of such arrangements to the extent that the off-shored work is performed by another office of the same accounting firm (even though that office may be located in a country different from the country where the firm is headquartered). The proposed amendments are not clear how to make the determination whether an off-shore location should be considered another office of the firm.

For legal, tax or business reasons, firms may structure their operations in separate legal entities based on functional (audit, tax, advisory) or geographic distinctions. These separate legal structures often are wholly-owned and controlled by the registered public accounting firm and its partners. Apart from the form of organization, such wholly-owned and controlled subsidiary entities function in virtually all other respects as ‘other offices of the firm’ and the disclosure of their participation in the audit would not serve the intent of the Release and could be confusing. Furthermore, the alternative legal structures of these arrangements may result in a lack of comparability between similar audits performed by different firms purely as a result of a different legal structure.

3 "Material services" means services, for which the engagement hours or fees constitute 20% or more of the total engagement hours or fees, respectively, provided by the principal accountant in connection with the issuance of all or part of its audit report with respect to any issuer.
We believe that the required disclosure of work performed through such an arrangement would not provide further transparency into the audit but may rather create additional confusion. Accordingly, we believe that the determination of whether off-shoring arrangements should be disclosed as “participating firms” should be based on different criteria than those proposed in the Release. For example, if the off-shored work met the following criteria, we believe the work should not be separately disclosed, regardless of the legal form of the off-shoring arrangement:

- The work performed at the off-shore location is subject to the direct supervision and review of the principal auditor, and
- Details of the work performed is retained within the principal auditor’s documentation in accordance with PCAOB Auditing Standard No. 3, and therefore is subject to PCAOB inspection in the home country of the principal auditor.

Furthermore, certain firms may share ownership of their off-shoring arrangements with other member firms in a network. Provided that the above criteria are still met, we believe that such work should also not be separately disclosed.

Other implementation considerations

Clarification of the percentage of total audit hours. We encourage the Board to include in the final standard an illustrative example of the calculation of the percentage of the total audit hours that clearly demonstrates the impact of other participants where the firm assumes responsibility or supervises the participants’ work, divides responsibility with another firm and performs only statutory audits at certain locations. This example should clarify that the calculation of total hours in the most recent period’s audit would exclude those hours related to statutory audits that are not a part of the principal auditor’s scope when completing the consolidated audit opinion.

The Board also should clarify the disclosure requirements in instances where participating firms in the audit obtain assistance from other firms in performing audit procedures at components within other jurisdictions. For example, a U.S. accounting firm may assume responsibility for the work performed by a member firm headquartered in the United Kingdom. If the United Kingdom member firm engages another member firm headquartered in Germany to perform certain audit procedures over a component in Germany, it is unclear how the German member firm should be considered for disclosure.

The final standard should also specifically indicate that the measure of engagement hours is an estimation of total expected hours based on available information at the report release date.
Multiple legal entities within a network firm in a particular country. The proposed amendments require disclosure of other participants with whom the auditor has a contractual relationship. Certain member firms in an international network may deliver audit services through several separate legal entities in a particular country. These individual entities are generally under the control of the member firm and are subject to the same system of quality control, however are structured as separate legal entities. We believe that the Board should clarify in the final standard that audit procedures performed by separate legal entities within a particular country should be measured and presented on a combined basis to the extent that these entities belong to the same member firm with which the auditor has a contractual relationship.

Clarification of the auditor’s responsibility within the audit report. We are supportive of the proposed amendments that require the inclusion of a statement in the audit report that the auditor is responsible for the audits or audit procedures performed by other participants in the audit and has supervised the work of other participants in the audit or performed procedures to assume responsibility for the work of other participants in accordance with PCAOB standards.

Discussion of the nature of the work performed by other participants in the audit. The Release questions whether the Board should require a discussion of the nature of the work performed by other participants in the audit in addition to the extent of participation as part of the proposed disclosure. We do not support such disclosure as we question whether it will be possible to sufficiently describe the nature of the work performed in a concise manner appropriate for the audit report without creating disclosure overload and detract from the purpose of providing useful information to investors.

Dual-dated audit reports. We do not believe the proposed disclosure of the percentage of hours attributable to the work performed subsequent to the original report date in situations in which an audit report is dual-dated would be useful to users of the audit report. A dual-dated audit report already highlights those financial statement disclosures that were added or revised subsequent to the original report date and we question the benefit of disclosing to investors the extent of audit effort dedicated to certain specific disclosures.
We appreciate the Board’s careful consideration of our comments, and support the Board’s efforts to increase the transparency of audits. We would be pleased to answer any questions regarding this comment letter.

Very truly yours,

KPMG LLP

Re: PCAOB Docket No. 029

We are young auditing scholars who are in the process of developing a three-link model that explores the potential impact of engagement partner identity disclosure on auditor independence. While we greatly applaud the PCAOB’s efforts to implement changes to the audit process aimed at increasing audit quality, we urge caution with respect to this particular proposal. We do not dispute the notion that such a requirement might lead to increased feelings of accountability in engagement partners and increased transparency for investors. However, we feel that potential negative ramifications for auditor independence have not yet been fully explored.

Specifically, we contend that partner disclosure may lead to an unintended transfer of potentially biased information from one reporting entity to other reporting entities. In other words, we expect, and find in our testing, that negative information disclosed related to one audit engagement will bias investor perceptions related to other engagements that are conducted with the same audit partner in the lead role. We contend that this information transfer will alter audit partner’s incentives as they seek to minimize reputational costs. We further contend that this, in turn, may align partner incentives more closely with those of management, thereby potentially impairing auditor independence.

As evidence, we have performed an experiment to substantiate the potential for accounting information transfer (i.e., the first link of our model). The purpose of our paper (which we expect to make publicly available on ssrn.com this week) and this comment letter is not meant to be overly critical of the proposed standard. That is, it may be that the potential for increased accountability and/or transparency outweigh any costs related to the potential for impaired independence. However, we feel that the potential for independence impairment has not been adequately examined or addressed in the debate over this proposal thus far. We hope that you will consider our arguments, which are more fully developed in our paper. However, we recognize and caution that the paper we will be posting is a very early draft that has not yet been subject to the peer review process. As alluded to earlier, we are currently putting the finishing touches on this draft so that we can begin seeking criticism from our peers and colleagues this week.

Thank you for your time and all of your work aimed at improving the audit and financial information environment.

Sincerely,

Tamara A. Lambert, Ph.D.
Benjamin L. Luippold, Ph.D.
Chad M. Stefaniak, CPA, Ph.D.

Re: PCAOB Rulemaking Docket Matter No. 29
Improving the Transparency of Audits

Mayer Hoffman McCann P.C. (MHM) appreciates the opportunity to provide the Public Company Oversight Board (PCAOB or Board) our thoughts on the referenced docket matter.

Disclosure of the Engagement Partner

MHM does not believe disclosure of the engagement partner’s name in the independent registered public accounting firm’s report would enhance audit quality nor provide any additional investor protection. We believe that engagement partners are acutely aware of the responsibility undertaken in signing the audit report as a representative of the firm.

Engagement partners are constantly reminded of the significant risk borne by both the firm for which they are a partner as well as individually. The accounting profession in the United States is committed to maintaining its place as a significant contributor to the effective functioning of the capital markets we serve. We believe the constant focus on audit quality, as monitored by the profession itself as well as the standards and oversight of the PCAOB, provides a significant focus and incentive for each partner to uphold high standards of audit quality. We do not believe the addition of the name of the individual responsible for signing the auditors’ report will meaningfully increase each individual partner’s sense of responsibility to the profession and capital markets or to the overall quality of the audit process. The Sarbanes-Oxley Act was the result of high profile audit failures, which led to the demise of one of the largest international accounting and audit firms and impacted all members of the public accounting profession. These events, coupled with the creation of the PCAOB, have changed the accounting profession and instilled audit quality as a central focus for accounting firms. Engagement partners understand the need to perform the highest quality work possible to protect both their firm and individual reputations.

We understand signing by the individual partner is a common practice in Europe, however, as noted above, MHM does not believe this practice would be effective in the US. Additionally, we believe the inclusion of the individual partner’s name will potentially create unnecessary and unwarranted results in the US marketplace due to the different legal structure and practices that have evolved in the US. The Board should carefully consider the potential ramifications that exist in today’s current environment including potential damage or harm which could befall engagement partners with the use of social media combined with aggressive activism. As is the case with any professional involved in an unfavorable situation, the media and social activism can, and often do, misconstrue the facts and circumstances to achieve a desired result. This is often the result of a misunderstanding of the roles and responsibilities of the professional. Many times the mainstream media do not understand the difference between a business failure and an audit failure. Large accounting firms are forced to spend millions of dollars responding to these situations, many of which are without merit. It would be unfair to potentially shift this responsibility to defend oneself to the individual partner particularly as several individual members of the audit firm are typically involved in the audit and consulted on significant decisions and judgments, which is a process we would not want to be hindered by this proposal. In light of the US marketplace, we are particularly concerned with the potential impact this proposal could have on the reputation of individual partners in matters in which the partner and firm are unjustly accused of wrongdoing. This could have potentially catastrophic results for that individual, particularly in firms without the resources to respond or vigorously defend the individual.
In addition, audit firms are engaged to perform audits of entities whose business models include activities which may be objectionable to certain segments of our society. Activism efforts have targeted the key personnel employed by these entities and their families. We have concerns that a requirement to disclose the engagement partner could subject the engagement partner assigned by the audit firm and his or her family to unwarranted activism efforts.

As noted above, we believe these risks are introduced without any measurable improvement in overall audit quality.

The proposal's requirement that the engagement partner sign the audit report does not recognize that the engagement partner signs the report only as an agent for the firm. This is important since many critical decisions regarding the audit are determined only through consultation with the firms' technical experts and in compliance with the firm's system of quality control. The decision to sign the audit report is a firm decision rather than that of the engagement partner.

We also note that the Board and other regulators issue inspection reports only under the name of the body that conducts the inspection. It is evidently not considered beneficial or a particular improvement in the quality of the inspection to also disclose the name of the team captain in issuing the report.

**Proposed Amendment to Form 2**

MHM does not support the Board's proposal to list the engagement partner in Form 2. Our objection is based on the belief that while the engagement partner is an integral part of the audit process, responsibility for audit quality transcends the engagement partner, and is dependent on the entire structure of the engagement team and the organization. We believe this is evident by the substantial investment that firms make in human resources, recruiting, training and quality improvement efforts. MHM does not believe that the investing public would benefit from this information since the investing public's main driver of confidence in the audit process is the reputation of the Firm itself and not the individual partners. The investing public's belief is that consistent audit quality is achieved regardless of the individual partner. This is reinforced through the marketplace, where firms reinforce their national resources and often mandate the use of their respective national offices in matters of high risk or significant judgment.

**Disclosure of Other Participants in the Audit and Referred to Accounting Firms**

The proposed rule would require that each individual who performs attest work but is not employed directly by the audit firm be disclosed. Currently in the US, there are a number of alternative practice structure firms that have been participating in the PCAOB's inspection process since its inception. In alternative practice structures, an employee sharing or employee leasing agreement often exists between the CPA Firm and a secondary party. In these situations, the quality control policies and procedures of the CPA Firm govern the activities of the shared or leased personnel, including a view of the CPA Firm and the secondary party as one entity in evaluating the CPA Firm's independence. This proposal could result in unintended consequences as these alternate practice firms that have been strong supporters of the PCAOB's audit quality initiatives and inspection processes, could be viewed negatively if a large number of individuals on audit engagement teams are disclosed as non-employees of the audit firm. MHM does not believe the Board has contemplated this unintended consequence, particularly in light of the fact that the Securities and Exchange Commission considers the audit firm and the entity that employs the engagement team members to be a single entity when considering independence issues. MHM believes the proposed rule would have a significant negative impact on alternative practice firms and their ability to compete with traditional firms and therefore lead to further restriction of auditor choice in the attest market.

MHM understands that the proposal would require disclosure of the names of all separate legal entities participating in an audit that may be closely associated and publicly described as a single international firm. We understand that this would consistently apply to all national and international networks of firms. If that is correct both for when the audit firm is assuming responsibility and dividing responsibility for the work performed, we support that proposal. However, we do not support the proposed exemption from disclosure for the practice defined as "off-shoring" in the proposal. We particularly
believe that disclosure of the fact that a firm is reducing audit cost by engaging individuals in foreign countries who are not US licensed CPAs would be much more relevant to investors than the fact that a US firm may practice under an alternative structure and lease its US licensed CPAs from a separate entity.

MHM agrees that the disclosure of the Engagement Quality Reviewer (EQR) is not necessary, for many of the same reasons cited above. We believe this is true whether the individual is an employee of the firm or outside the firm. We believe that the requirements of Auditing Standard No. 7 clearly define their responsibilities and disclosure would not increase audit quality nor investor confidence. Again, MHM believes that disclosure is not necessary since the investing public places their confidence in the respective firm and not the individuals assigned to the engagement.

MHM does not support the disclosure of the Appendix K review. The appendix K review is a separate review outside of the core engagement team and EQR. This disclosure could lead to potential confusion of the responsibilities of the appendix K reviewer and potentially subject the reviewer to increased liability.

**Details of the Disclosure Requirements**

MHM does not believe that an explanatory paragraph in the auditors’ report is the appropriate means to provide the suggested disclosure items. We believe that the best way to inform investors is not through disclosure of hours for “other participants” in the audit report but rather, to supplement the required attestation fee disclosure found in the proxy with the desired information.

**Closing Remarks**

MHM is grateful for the opportunity to provide our comments to the Board, and we believe that through the inspection process and the work of the Board audit quality has improved since the implementation of the Sarbanes Oxley Act. We have concerns that release 2011-07 will not measurably improve the quality of the audit and could further restrict auditor choice. However, we believe it will unnecessarily and significantly increase professional risk and possibly limit the future number of CPAs interested in a career serving as an engagement partner for public filers. Many of the ideas are borrowed from or have been fostered in other jurisdictions where there are not the regulatory or litigation environments faced by attestation firms in the United States.

We support the Board in their goal of improving investor confidence. We realize the tremendous responsibility that the public accounting profession plays in our capital markets. We believe that maintaining high investor confidence involves not only auditors but management and financial regulators.

Re: PCAOB Rulemaking Docket Matter No. 29

McGladrey & Pullen, LLP appreciates the opportunity to offer our comments on PCAOB Rulemaking Docket Matter No. 29, Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2. Our comments are organized so as to respond to the amendments in the order proposed in PCAOB Release No. 2011-007.

The Proposed Audit Report Disclosure

Transparency

We believe disclosure of the engagement partner’s name in the auditor’s report would not enhance audit quality, auditor accountability, or investor protection. It is the audit committee who represents investors in the important role of appointing and overseeing the work of the auditor. To ensure that the audit committee chooses its independent auditor on an informed basis, the audit committee develops a list of criteria and expectations they believe the independent auditor should meet. These criteria include, among others, evaluating the partners who will be assigned to the client service team.

After an audit committee selects a registered public accounting firm, two-way communication becomes a natural part of an auditor’s relationship with the audit committee. Audit committees receive regular partner-level attention during every phase of the audit. In addition, throughout the year, the engagement partner communicates with the audit committee during the performance of quarterly reviews of interim financial information. As a part of these communications, the audit committee generally asks probing questions of the independent auditors, which allows it the opportunity to continually assess the competency of the engagement partner.

If at any point members of the audit committee have concerns about the integrity, objectivity, independence, or competency of the engagement partner, they would address those concerns with the registered public accounting firm. If they were not satisfied with the firm’s response, they would likely consider engaging another registered public accounting firm. These types of decisions are appropriately left with the audit committee and not with individual shareholders. To further enhance the relevance and effectiveness of the communications between the auditor and the audit committee, the PCAOB has re-proposed its auditing standard related to communications with the audit committee, which, when finalized, will place even greater emphasis on the importance of effective, two-way communication between the auditor and the audit committee.

We believe a company’s audit committee is in a better position to evaluate information about the qualifications of an engagement partner and sufficiently represents investors’ interests, making widespread disclosure of the engagement partner’s identity unnecessary. Therefore, we do not believe
that increased transparency about the identity of the engagement partner would enhance audit quality, auditor accountability, or investor protection.

**The Engagement Partner’s Sense of Accountability**

We do not accept the argument that disclosing the name of the engagement partner in the auditor’s report would increase the engagement partner’s sense of accountability. We believe engagement partners already have reasons to feel highly accountable for their work. Under PCAOB standards, the engagement partner is responsible for the engagement and its performance. Engagement partners are accountable to audit committees, to investors, to their firm, to other partners within their firm, and to regulators.

Engagement partners realize that a lack of professional accountability can have dire consequences, not only for their firm, but also for them personally. Auditors are subject to state laws that generally require CPA firms be owned by individual CPAs. Therefore personal financial resources of partners are at stake with each auditor’s report issued. Also, a state board of accountancy can suspend or revoke a license to practice if a complaint regarding the auditor’s professional conduct is received and found to be valid. Further, engagement partners may be held liable in PCAOB and SEC enforcement actions without regard to whether their name is disclosed in the audit report or whether they sign the audit report. The consequences to an engagement partner of failing to exercise due care in the performance of an audit are significant, and they would be no more or less significant if the engagement partner’s name were disclosed in the audit report.

We also believe that requiring the disclosure of the engagement partner’s name in the auditor’s report could result in users reaching inappropriate conclusions about the engagement partner, or the quality of the audit without appropriate consideration of other relevant factors. For example, certain circumstances about a company are not within the control of the engagement partner and may not directly relate to the performance of that engagement partner or the quality of the audit (e.g., bankruptcy, going concern uncertainty, adverse analyst coverage, certain material weaknesses in internal control over financial reporting, or restatements to the financial statements, etc.). The creation and use of “engagement partner scorecards” by investors and other stakeholders based on such factors outside of the control of the engagement partner would inevitably develop but be misguided in attempts to evaluate the performance of engagement partners.

**The Appropriate Balance between the Engagement Partner’s Role in the Audit and the Firm’s Responsibility for the Audit**

We do not support disclosure of the engagement partner’s name in the auditor’s report because, among other reasons, the report is issued upon the authority of the firm and not the authority of the individual engagement partner. The PCAOB’s own standards prohibit the engagement partner from issuing the firm’s report until he or she has obtained concurring approval of issuance from the engagement quality reviewer assigned by the firm. While it is true that a firm could not issue an audit report that is inconsistent with the views of the engagement partner, the engagement partner also could not issue an audit report that is inconsistent with the views of the engagement quality reviewer or certain other firm consultants.

Disclosure of the engagement partner’s name in the auditor’s report may lead to a misconception by investors about who is responsible for the audit and the issuance of the auditor’s report. Quality audits are accomplished through the use of all of the resources of a firm. The engagement partner is not expected to fulfill his or her responsibilities alone. Rather, the engagement partner may and does seek assistance from appropriate engagement team members. In multi-location and complex audits, the lead engagement
partner often relies on the work of other partners, such as those in other locations or those with a certain professional specialty, such as tax partners. Therefore, in addition to the engagement quality reviewer and firm consultants, there can be other partners supporting the firm’s audit, and the lead engagement partner justifiably relies on them.

Other professionals, including other members of the engagement team and national office partners, play an important role in performing a quality audit and in the firm’s quality control system. One element of a firm’s quality control system is the establishment of policies and procedures designed to provide reasonable assurance that a firm has skilled professionals to perform engagements in accordance with professional standards and regulatory and legal requirements and to enable a firm to issue reports that are appropriate in the circumstances. Although the skill and expertise of the engagement partner undoubtedly contribute to audit quality, even an engagement partner who possesses high levels of competency, integrity, honesty, motivation, and aptitude for the profession cannot fulfill this element of quality control alone.

It takes the extensive resources of a firm to ensure that the capabilities and competence of its professionals are developed through professional education, continuing professional development, work experience, and mentoring by more experienced personnel. To maintain quality audits, it is critical that all quality control elements be addressed by the firm. Many of these elements cannot be addressed by and are not the sole responsibility of the engagement partner, such as establishing policies and procedures designed to provide reasonable assurance that personnel comply with independence, integrity, objectivity, and other relevant ethical requirements. In addition, some elements of quality control, such as the acceptance and continuance of engagements, require the approval of professionals outside of the engagement team.

Thus, we do not believe disclosure of the engagement partner’s name in the auditor’s report would reflect the appropriate balance between the engagement partner’s role in the audit and the firm’s responsibility for the audit as it is not the engagement partner alone who issues an auditor’s report, but rather the firm, which represents the collective efforts of many seasoned professionals. Our firm carefully selects all members of the engagement team including, but not limited to, the engagement partner. We therefore have concerns about minimizing the role of the firm or suggesting that the engagement partner is solely responsible for the audit engagement.

**Increase in Private Liability of the Engagement Partner**

We agree that a further assessment of the legal implications of this Proposal is important, and urge the Board to resolve this issue before moving forward. In its 2009 *Concept Release on Requiring the Engagement Partner to Sign the Audit Report*, the Board stated that its “intent with any signature requirement would not be to increase the liability of engagement partners.” This was reiterated in the Proposal which states “the intent…was …not to increase the liability of engagement partners.” We have concerns regarding the uncertainty of liability implications of the Proposal, most importantly under Section 11 of the Securities Act of 1933 (Section 11). We also believe the Board should perform a liability assessment under Section 10(b) of the Securities Act of 1934 (Section 10), Section 11 and state law, including consideration of legal costs associated with the proposed benefits of additional transparency.

With respect to specific concerns regarding additional liability under Section 10 and Section 11, we refer you to the Center for Audit Quality’s (CAQ) comment letter on this Docket Matter No. 29, specifically to Section I.b. of the CAQ’s comment letter, “Requests for Perspectives on Liability.”
We believe that legal implications under state law are also an important consideration. If the Board adopts the Proposal, a state court may reach the conclusion that a named engagement partner or participating firm in the audit report is liable under the state’s blue sky laws. Additionally, unlike federal securities laws, a number of states’ blue sky laws recognize causes of action by a holder of securities who claims to have relied on false statements. Plaintiffs also could seek to assert state common law claims against named engagement partners and participating firms. As a result, even without reference to ultimate liability, identification of the engagement partner and participating firms could increase the number of state law claims brought against partners and firms.

In summary, we have significant concerns that naming the engagement partner in the auditor's report possibly could increase the number of unwarranted claims brought against partners solely by providing that information to plaintiffs and plaintiffs’ counsel. As a result, the Board’s proposal runs the unintended risk of increasing litigation costs and disrupting client services provided by engagement partners and firms without enhancing audit quality (that is, an increase in the cost of providing audit services without a commensurate increase in audit quality).

Also, an increased risk of litigation could impact an engagement partner’s behavior, such as by reducing his or her willingness to participate in audits of public companies. This effect may be more pronounced at firms that derive a larger percentage of revenue from private company audits (i.e., some smaller firms) or smaller, regional offices of larger firms that have fewer partners available to serve on audits of public companies, which may impact their ability to compete for audits of public companies. Further, increased personal litigation against engagement partners could serve as a disincentive for college students to enter the public accounting profession.

The Proposed Amendment to Form 2 Regarding Disclosure of the Engagement Partner

For all of the reasons stated above, we do not believe disclosure of the name of the engagement partner on Form 2 (or filing a special report on Form 3 whenever there is a change in engagement partners) would be meaningful to investors, nor would it enhance audit quality. Also, the proposed requirement to file a special report on Form 3 whenever there is a change in engagement partners may present practical implementation challenges as there could be many different reasons for a change in the engagement partner, including private health-related issues, none of which may be related to audit quality.

Disclosure of Other Participants in the Audit and Referred-to Accounting Firms

We believe it could be beneficial to require additional relevant and useful clarifying language in the audit report related to the principal auditor’s responsibility and other audit participant’s responsibility for the audit engagement. The Board should consider, however, the potential reaction from other firms participating in the audit regarding the proposed requirement to be named in the auditor’s report. Other firms participating in the audit, including network firms, might be reluctant to participate in audits of issuers due to concerns over additional liability resulting from being named in the auditor’s report. This type of reaction may carry the unintended consequence of the principal auditor (especially non-Big 4 firms) needing to use other firms from outside of its network to conduct audit work thereby potentially adversely impacting audit quality as the advantages of using global methodologies, policies and procedures would be eroded. The Board should consider whether transparency with regard to other firms used in the audit could adequately be addressed by indicating on a no-name basis other audit firms used, some metric indicating the extent of substantial participation of each firm, and whether the other firm is subject to inspection by the PCAOB.
With respect to metrics that might be used to indicate the extent of participation of each firm, we believe a threshold above three percent (e.g., 10 or 20 percent) would be more consistent with the Board’s intent to provide to investors the most meaningful information about participants in the audit. This is consistent with views expressed by investor and preparer representatives during the November 2011 PCAOB SAG discussion on this Proposal. A higher threshold is also consistent with existing U.S. Generally Accepted Accounting Principles as well as SEC regulations intended to guide meaningful disclosure to investors regarding relevant financial reporting matters, and PCAOB rules which set a threshold for the level of audit work deemed significant enough to require PCAOB registration and inspection. For example, PCAOB rules require registration of any firm that plays a “substantial role” in the preparation or furnishing of an audit report with respect to any issuer. “Substantial role” is defined as any firm that: 1) performs material services (i.e., services for which the engagement hours or fees constitute 20 percent or more of the total engagement hours or fees) that an accounting firm uses or relies on in issuing all or part of its audit report with respect to any issuer, or 2) performs the majority of the audit procedures with respect to a subsidiary or component of any issuer the assets or revenues of which constitute 20 percent or more of the consolidated assets or revenues of such issuer necessary for the principal accountant to issue an audit report on the issuer.

We agree that it would not be appropriate to require disclosure of the individual who performed the engagement quality review or the person who performed the Appendix K review. Also, we agree that it would not be appropriate to require disclosure of persons with specialized skill or knowledge in a particular field other than accounting and auditing not employed by the auditor or persons employed or engaged by the company who provided direct assistance to the auditor.

We would be pleased to respond to any questions the Board or its staff may have about these comments. Please direct any questions to Bob Dohrer, National Director of Assurance Services, at 919-645-6819.

Sincerely,

McGladrey & Pullen, LLP
Dear Public Company Accounting Oversight Board:

I just read your Press Release announcing that on Tuesday you will be considering issuing for public comment standards that would bring greater transparency to the audit by disclosing the name of the engagement partner.

As an investor who has invested considerable amounts of money in China, and in the process helped to identify Chinese frauds traded on US exchanges, I support your initiative. However, I believe that engagement partners should not only be identified, but should also be required to sign the audit reports.

I believe that identification of the audit engagement partner - particularly with his or her signature - will decrease investors' future losses to fraud and gimmicky accounting by billions of dollars.

Even the most reputable auditors in China seem to be in a race to the bottom. We believe that there are particularly egregious situations in which some Big Four partners in China offices have actually conspired with their clients to defraud investors. Further, it is a reasonable proposition that the conflict of interest inherent in the Chinese auditors' business model also affects the quality of US company audits.

What we're seeing across many industries - including audit - is that institutional sanctions are far less effective than ones applied to individuals. Engagement partners will undoubtedly be more sensitive about risking their personal credibility than they are to risking the credibility of their employers. The more public an engagement partner's ownership of an audit is, the more he or she is incentivized to be diligent. It is my belief, which is hopefully not over optimistic, that by putting engagement partners' credibility on the line, we will provide them with the leverage to push back against institutional pressures to bill, and thereby ultimately put an end to this race to the bottom.

I look forward to following your initiative closely and applaud your efforts to provide greater transparency to investors.

Sincerely,

Carson Block

PCAOB Release No. 2011-007—Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2

We are pleased to respond to the Public Company Accounting Oversight Board’s (“PCAOB”) Release 2011-007—Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2 (the “Release”). We understand that the PCAOB’s objective in issuing this Release is to improve auditing standards and the quality of audits, and at the same time provide stakeholders with additional information to improve transparency. This release would:

- Require the audit report to disclose the name of the engagement partner responsible for the most recent period’s audit,
- Require registered firms to disclose the name of the engagement partner for each audit report already required to be reported in their PCAOB annual report on Form 2, and
- Require disclosure in the audit report about other persons and independent public accounting firms that took part in the most recent period’s audit.

Overall Comments:

We do not agree with the PCOAB’s premise that audit quality will improve through disclosure of the name of the engagement partner or other participants on the audit. The Release implies that inclusion of the engagement partner’s name will result in improved audit quality because of its visibility in the audit report. In addition, there is an unsupported implication that audits of financial statements by accounting firms that perform less than 100 percent of the audit procedures themselves are of a lesser quality than audits in which an accounting firm performs 100 percent of the audit procedures. Further, the Release would require disclosure of the other participants and their audit hours in relation to total audit hours. The typical financial statement reader is likely to reach the inappropriate conclusion, without any other available information, that as the number of other participants in the audit increase, the lower the quality of the audit.

Specific Comments:

Firm Structure and Other Matters

Our comments in this section are predicated on the overriding principles that a registered audit firm is engaged in its entirety as an “audit firm” as opposed to individuals (including the engagement partner) who will participate in the audit.
It is the firm that the audit committee engages that conducts the audit and it is the firm that develops the audit methodology, processes and procedures which are consistent with PCAOB auditing standards. Moreover, the firm:

- Trains its personnel so that a consistent approach is followed,
- Decides which partner will serve as the engagement partner,
- Assigns the engagement team, which may consist of many other partners, managers and staff,
- Establishes review procedures consistent with, and perhaps more expansive than, the PCAOB’s engagement review requirements,
- Establishes consultation requirements and procedures for resolution of differences of opinions, and
- Assumes the risks associated with the engagement through client acceptance and retention.

The background and experience of the engagement partner is important, but it is the firm that is retained. The entire concept of the performance of an audit is predicated on an audit performed by a firm, not just the engagement partner, and the efforts of the entire engagement team (including, but not limited to, other partners and professional staff, engagement quality reviewers and various firm specialists) representing a cohesive unit performing audit procedures in accordance with the methodology established by the firm. This concept is critical to the completion of a sound audit.

The Release mentions that there are auditing standards and procedures that relate to the use of other participants in an audit, and that those standards and procedures are incorporated into the firm’s quality control standards. This critical point would not be communicated to readers of the audit report as proposed, and the readers would have no concept of the firm policies in this circumstance that would include quality review procedures employed to ensure that the efforts of all participants in the audit, including associated firms and other persons, are properly planned, supervised and reviewed. As proposed, all the reader would see is the involvement of other participants in the audit and their effort in terms of audit hours only.

It is difficult to conceive how transparency is achieved when stakeholders have less than all of the facts, and are not aware of or provided with an understanding of the related required audit procedures that are being performed.

**Disclosing the Name of the Engagement Partner Responsible for the Most Recent Audit**

Transparency, which the Release is attempting to address, implies that providing information will enlighten or provide information useful to making decisions. The PCAOB proposal states that the audit report “...tells the reader little about the key participants in the audit.” The proposal would require the audit report to contain the name of the engagement partner “...who is at the center of the [audit] effort. He or she ‘is responsible for the engagement and its performance,’ and must, therefore, make sure that the work and those who perform it are appropriately supervised and coordinated.” We agree with this statement of engagement partner responsibilities. However, we question the usefulness of providing the engagement partner’s
name in the audit report. It is unlikely that investors, analysts, creditors and other users of financial statements are familiar with the hundreds or perhaps thousands of engagement partners of public companies. Even if a few users recognize the name of a particular engagement partner, it is unclear how disclosing the name alone provides useful information about the individual capability of the engagement partner to supervise and coordinate a particular audit. The disclosure of the name will not provide information on the education, experience or the ability of the engagement partner to deal with specialized industry issues, complex accounting questions or unique control environment considerations of a particular audit client.

The Release states that, once in effect for at least five years, the additional transparency provided through disclosure of the engagement partner’s name could also allow investors to consider whether the engagement partner was replaced sooner than required under the partner rotation requirements in the Sarbanes Oxley Act of 2002 and Securities and Exchange Commission (“SEC”) rules. One would need to know the reasons for the change to have useful, transparent information. It could be that the previous engagement partner assumed other responsibilities within the firm, transferred to another office, retired or resigned from the partnership, or became ill.

Further, we believe that the inclusion of the engagement partner’s name in the audit report understates the responsibility of the audit firm for the conduct of the audit. We refer to our comments above on the importance of the firm.

Audits of public companies are frequently complex undertakings involving numerous professional staff and partners from the audit firm and, in some instances, associated firms. The engagement partner is primarily responsible to his or her client and the firm for the conduct and management of the audit and the expression of the audit opinion. In this regard, the engagement partner plans and executes the audit to comply with the standards of the PCAOB. However, the engagement partner will do so utilizing the audit firm’s audit methodology, including its own system of quality control. This enables all firm personnel to have a common understanding of how the engagement will be conducted.

The engagement partner remains primarily responsible for the supervision and review of the audit. Nevertheless, he or she may be assisted by other partners on audits of larger entities, including partners with specialized knowledge (e.g., taxation, information technology, or certain industries). The audit firm will have consultation standards with which the engagement partner must comply. This could include the engagement quality reviewer as well as others within the firm’s quality control, industry, and regional and national office structures.

Large audit engagements may require large engagement teams to deal with specific business units, diverse locations (within the United States (U.S.) and internationally), specific subject matter expertise or specialized industry issues. While the role of the engagement partner is a key element, other members of the team also have significant roles in the engagement. For example, the partner overseeing the auditing procedures performed at a company’s major subsidiary may have more hours and, arguably, a similar impact on the performance of the engagement compared to the impact of the engagement partner. Also, the role of the engagement quality reviewer has become more significant with respect to the achievement of the
audit objectives. It is the combined efforts of the entire team that results in a well executed audit performed in compliance with PCAOB standards. The name of the engagement partner alone leaves the impression that this role, while key, is the only one that critically matters.

Disclosing the name of the engagement partner implies a different level of authority for conduct of the audit than is actually the case. There is a shared responsibility that a firm has entrusted to the engagement partner, the other partners and consultative resources used during an audit. It also does not take into consideration the fact that notwithstanding obligations to the public – a bedrock of the auditing profession – the firm’s client are the shareholders represented by the issuer’s board of directors, generally through the audit committee. As we will comment later, the audit committee has the ability to evaluate the competency of the audit firm’s personnel to perform the audit.

The Release asserts that a sense of personal accountability may be increased resulting in exercising greater care. We disagree. Partners, as professionals, have embraced high ethical standards which require the highest level of due care, recognizing that the professional has a responsibility to the public, the client and the audit firm. As previously discussed, the audit firm has accepted responsibility to train, supervise and evaluate all of its professional personnel, including partners. The firm has established a quality control system that includes policies and procedures for client acceptance and continuance, assigning engagement personnel, engagement performance, monitoring and oversight, documentation, and other areas. Failure to carry out its responsibilities, evidenced, for example, by a deficient audit, subjects the audit firm to grave risks to its reputation and its capital that has contributed to the collapse of entire firms. Further, those partners responsible for the conduct of a particular audit have personal economic and professional risks beyond that of the capital base of the audit firm. We do not believe that the institution of a requirement to name the engagement partner would heighten a sense of accountability. Partners already are operating at the highest level of ethical and professional responsibility.

To our knowledge, there is no research or empirical evidence that directly or indirectly links the use of the audit partner’s name in the audit report to an enhanced accountability or higher quality audit. Such linkage is supposition. We believe that litigation against the engagement partner would be encouraged by the proposed requirement, and that the courts could decide that specifically including the name of the engagement partner in the audit report and Form 2 extends the limits of civil liabilities. Furthermore, if this type of disclosure were to become a requirement, it could create the potential unintended consequence of subjecting the engagement partner to harassment or unwarranted and inappropriate attention by disgruntled stakeholders. We are concerned these potential risks would discourage highly qualified people from entering the profession and ultimately taking on the role of engagement partner.

The Release further states that identifying the engagement partner would increase transparency about who is responsible for performing the audit. As stated previously, we believe that it is the audit firm that is responsible for the audit. We recognize that it is the collective efforts of the engagement partner and the other partners and staff that assist in or consult on the audit which enables the firm to express its opinion on the financial statements, and the audit team is a cohesive unit of the firm’s personnel. This is a shared responsibility in which the firm that
has entrusted and delegated the responsibility to the engagement partner and the others participating on the audit. To require that the name of the engagement partner, ostensibly signifying individual responsibility, be set forth in the audit report and Form 2, would diminish the emphasis on the responsibility of the firm as a whole and would effectively create an incorrect perception that greater transparency will be achieved.

Also, the representatives of the shareholders (the board of directors through the audit committee) would have met with and be familiar with the qualifications of the engagement partner and other key members of the audit team. Typically, when a new engagement partner is introduced to an audit committee, the committee is presented with the qualifications of the engagement partner, including experience with audits of similarly complex entities and specialized industries. Similar information is typically provided for other key members of the audit team.

Therefore, we believe that audit committees already receive sufficient information about the engagement partner’s qualifications, and they have the ability to interview the engagement partner to satisfy the committee’s due diligence obligation. In addition, the audit committee, at a minimum, is in frequent communication with the responsible engagement partner due to the required communications before every filing of Forms 10-K and 10-Q and registration statements filed with the SEC. We believe emphasizing improved audit committee oversight and strongly encouraging audit committees to become more deeply engaged in the audit process would maximize audit quality and auditor accountability and address any actual or perceived shortcomings in the audits of public companies.

Further, there are several pitfalls likely to develop by disclosing the engagement partner’s name. It is a well known practice of the investment banking industry to require a “Big Four” auditor in connection with various registration statements. This practice preceded the creation of the PCAOB by many years. Under the proposed rule, underwriters might eventually develop a sub-set of “approved engagement partners” or partners with specialized industry knowledge, despite the fact that industry expertise might be provided by other than the engagement partner, and in some engagements in some firms, by an individual below the level of partner. Rather than increase competition as the Release suggests, we believe the opposite may happen, and would hinder transparency.

Disclosure in the Audit Report about Other Persons and Independent Public Accounting Firms that Took Part in the Most Recent Period’s Audit

The Release indicates that there is strong preference among stakeholders and other users to disclose the extent of work and location of other firms (and persons) for which the firm has accepted responsibility for their work pursuant to AU Section 543, Part of Audit Performed by Other Independent Auditors.

The issue of disclosing other independent public accounting firms and other persons not employed by the auditor is a complex one. We believe the key issue is the degree of responsibility assumed by the principal firm.

5
Networks of firms vary significantly in the degree of uniformity of audit procedures, training, etc. Further, internationally, questions arise as to the knowledge of foreign firm personnel in dealing with the auditing standards of the PCAOB, generally accepted auditing standards in the U.S., and with U.S. generally accepted accounting standards and SEC reporting standards and guidance.

The specific activities of the principal audit firm to oversee their affiliated firms would need to be defined to make disclosures in this area meaningful. Some international networks of legally independent firms apply uniform audit methodologies, processes and procedures across all firms. Reassignment of U.S. personnel to international locations, and vice versa, are frequently undertaken to provide cross-training opportunities.

We believe that this area needs further study to identify and distinguish the various forms of organizations that exist. The key should be the level of responsibility assumed by the principal firm, and the level of involvement of the engagement partner and others from the principal audit firm in overseeing the work performed on the principal firm’s behalf by the affiliated firms.

Where an audit firm does not take responsibility for the work of other audit firms involved in the audit, the principal auditor makes reference to the other firm or firms involved. The SEC requires a registrant to include in its public filings the audit opinion of the other auditors. The principal auditor’s opinion discloses the level of assets and revenue audited by the other firm. These audit opinions are available to stakeholders for them to evaluate the level of responsibility they have taken for the audit.

If the issue is one of foreign sovereignty that curtails PCAOB’s ability to inspect some foreign registered firms which may assist in the audit performed by a U.S.-based registered firm, we recommend that the PCAOB focus instead on providing guidance on the documentation that the principal auditor should be required to obtain from the affiliated firms and maintain in its working papers in the U.S.

A listing of all or some of the significant firms that participate in the audit on behalf of the principal audit firm provides information that may be of little use unless the users of the financial statements have some understanding of the degree of the responsibility assumed by the principal audit firm, the knowledge level of the affiliated firms, and the coordination and supervision exercised over the affiliated firms.

Evaluating the significance of work performed by other auditors involves much more than information on where they are located and the number of audit hours. The Release does not make this clear. There are numerous other factors that should be considered. Separate disclosure seems to imply that the audit firm (principal auditor) does not have complete responsibility for the entire audit. We feel it is imperative that the role of the principal auditor not be compromised. There are very specific requirements with which an audit firm must comply in order for that firm to be the principal auditor, and the average reader of the financial statements is unlikely to be aware of what they are or of their significance.
The use of other auditors, including their scope and procedures, is subject to the judgment and quality review oversight of the principal auditors in conjunction with that of the company’s audit committee. If the audit firm either lacks the ability to supervise the other firms involved in the audit process or determines the other audit firms cannot comply with professional standards, then it is left to the company’s board through its audit committee, to make the appropriate changes. As described in the previous section, having the audit committee deeply engaged in its oversight role is critical to the improvement of audit quality.
MEMORANDUM

To: PCAOB Docket 029: Improving Transparency Through Disclosure of Engagement Partner and Certain Other Participants in Audits

From: Lisa A. Calandriello
Office of the Chief Auditor

Date: June 5, 2012

Subject: Conference Call Meeting with Mayer Hoffman McCann, P.C. and CBIZ, Inc.

On June 4, 2013, staff from the Public Company Accounting Oversight Board ("PCAOB") participated in a conference call with representatives from Mayer Hoffman McCann, P.C. ("MHM") and CBIZ, Inc. ("CBIZ") in connection with the attached slides, submitted by MHM, regarding the proposed amendments regarding disclosure of other independent public accounting firms and other persons not employed by the auditor in the audit report (PCAOB Release No. 2011-007).

The individuals participating in the conference call were as follows:

- PCAOB staff - Martin F. Baumann, Chief Auditor, Jennifer Rand, Deputy Chief Auditor, Jake Lesser, Associate General Counsel, and Lisa A. Calandriello, Assistant Chief Auditor;

- MHM - Ernest F. Baugh Jr., National Director of Professional Standards, Mayer Hoffman McCann, P.C., William Hancock, Chairman and President, Mayer Hoffman McCann, P.C., William Mann, Esq., General Counsel, Mayer Hoffman McCann, P.C.; and

- CBIZ - Michael Gleespen, Esq., General Counsel.
MAYER HOFFMAN McCANN P.C.

Conference Call With
Public Company Accounting Oversight Board Staff
Regarding the Transparency Proposal
June 4, 2013
PARTICIPANTS

• Mayer Hoffman McCann P.C.
  – Ernest F. Baugh, Jr., National Director of Professional Standards
  – William Hancock, Chairman and President
  – William Mann, Esq., General Counsel

• CBIZ, Inc.
  – Michael Gleespen, Esq., General Counsel

• Staff of the Public Company Accounting Oversight Board
AGENDA

• MHM is grateful for the opportunity to provide our comments to the Staff of the PCAOB, and we believe that through the inspection process and the work of the Board, audit quality has improved since the implementation of the Sarbanes Oxley Act.

• History
  – October 11, 2011 – PCAOB Issues Proposed Rule Regarding Transparency
  – May 16, 2013 – Discussion during PCAOB Standing Advisory Group Meeting
  – June 4, 2013 – Conference Call
AGENDA (Continued)

• MHM requested this conference call to gain an understanding of the current status of the Transparency Proposal
  – MHM is the only remaining alternate practice structure (APS) that includes a public company (CBIZ) in the APS
  – MHM provided its views on the proposed standard in January 2012

• MHM is concerned about unintended consequences of the Transparency Proposal that could negatively impact audit quality

• MHM is seeking information to assist us in evaluating if and/or when we should consider changes to our organizational structure and/or practice focus
AGENDA (Continued)

• The proposed rule would require the following -

  “Disclosure when assuming responsibility or supervising – The auditor would be required to disclose the name, location, and extent of participation in the audit of (i) independent public accounting firms for whose audit the auditor assumed responsibility pursuant to AU sec. 543, Part of Audit Performed by Other Independent Auditors, and (ii) independent public accounting firms or other persons not employed by the auditor that performed audit procedures on the most recent period's audit and whose work the auditor was required to supervise pursuant to Auditing Standard No. 10, Supervision of the Audit Engagement (collectively, "other participants in the audit" for purposes of Section III of this release)...”

• Our discussion will be focused on the application of this proposed rule as it applies to an alternative practice structure (APS)

• We do not plan to discuss the identification of the engagement partner name
ALTERNATIVE PRACTICE STRUCTURE

MAYER HOFFMAN McCANN P.C.

&

CBIZ INC.
MAYER HOFFMAN McCANN P.C. (MHM)

- National firm providing attest services
- Roots date back to 1954; spun off tax and consulting services to CBIZ in 1998
- 283 shareholders in over 30 offices
- Licensed or permitted to practice in all 50 states
- Registered with the PCAOB
- Member of AICPA's Center for Audit Quality, Employee Benefit Plan Audit Quality Center, Governmental Audit Quality Center
- Registered with Canadian Public Accountability Board
MAYER HOFFMAN McCANN P.C.

- MHM is a Missouri Professional Corporation
  - It is a separate and distinct legal entity
  - CBIZ is not a shareholder of MHM and is not a licensed accounting firm
  - Shareholders are all licensed CPAs. There are no outside shareholders
- By-Laws provide for Board of Directors:
  - Not less than 3 nor more than 9
  - Each director must be a licensed CPA
  - Staggered terms of directors so each director has a term of three years before being subject to re-election
  - Annual Meeting of Shareholders required to elect directors
MHM SHAREHOLDERS

• Governed by a Stockholders Agreement
  – Shareholder must be a licensed CPA
  – Each Shareholder purchases 1,000 Shares
  – MHM has 283 Shareholders (as of April 30, 2013)
  – Upon termination of Shareholder for any reason, MHM has the right and obligation to repurchase the Shares
  – Each Shareholder agrees to a covenant not to solicit clients of MHM following termination, and agrees to liquidated damages in the event of a breach by the Shareholder
ALTERNATIVE PRACTICE STRUCTURE

- AICPA Ethics Interpretation 101-14 sets forth conditions for valid alternative practice structure:
  - Attest practice must be in separate and distinct legal entity
  - Attest practice must comply with state accounting laws and regulations
  - Non-attest entity (and the persons controlling the non-attest entity) cannot control the governance and policies of the attest entity

- MHM and CBIZ strictly adhere to principles of 101-14
ALTERNATIVE PRACTICE STRUCTURE

Licensed CPAs

100% ownership by CPAs

ATTEST CPA FIRM – Mayer Hoffman McCann P.C.

Non-Licensed Investors

Majority ownership by non-CPAs

NON-ATTEST PUBLIC COMPANY - CBIZ, Inc.

Administrative Services Agreement

Non Attest Sub – CBIZ MHM, LLC
Non Attest Sub
Non Attest Sub
MHM & CBIZ ALTERNATIVE PRACTICE STRUCTURE

• Administrative Services Agreement
  – CBIZ entities to provide administrative services
  – CBIZ entities to provide personnel, including “licensed CPAs” to MHM to enable MHM to perform services for its clients
  – Clear statement that services rendered for MHM by CPAs, “shall be under the direction, control and supervision of one of the members of [MHM], and will be rendered in accordance with [MHM]’s Manual and other policies and procedures of [MHM] established from time to time.”
MHM & CBIZ ALTERNATIVE PRACTICE STRUCTURE

• Administrative Services Agreement (continued)
  – Clear statement that CBIZ will not provide any attest services
  – Clear statement that work required to be performed by a licensed CPA will be performed by MHM, not CBIZ
  – MHM and individual CPAs responsible for licensing
  – MHM responsible for costs of peer reviews and continuing professional education, professional memberships
GOVERNANCE OF MHM

• MHM governance structure satisfies requirements of 101-14 and state laws:
  – Each director is a licensed CPA and shareholder of MHM
  – 101-14 contemplates that substantially all owners of the attest firm will also be employees of the non-attest firm; therefore, the Board of MHM will include CBIZ employees
  – MHM Board is distinct from CBIZ Board
  – CBIZ employees on MHM Board are not directors, executive officers or senior management of CBIZ, Inc.
GOVERNANCE OF MHM

• MHM is independently managed:
  – President of MHM reports to MHM Board
  – The promotion to or removal of an MHM shareholder is the decision of MHM
  – ASA provides that CBIZ does not control the governance, structure or operations of MHM.
INDEPENDENCE PROCEDURES -- SEC CLIENTS

• MHM ‘s policies implement SEC standards for independence with respect to SEC Clients and broker-dealers

• MHM understands that the SEC views CBIZ and MHM as one entity for independence purposes
INDEPENDENCE PROCEDURES -- SEC CLIENTS

• SEC Restricted Entity list on intranet, available to all MHM and CBIZ employees
• Updated independence checks circulated to MHM personnel and CBIZ Financial Services personnel
  – Monthly--attest client (includes Restricted Entity) list sent
  – Annually --independence confirmation letters
  – For each potential SEC client
  – For each new office / acquisition
  – Includes description of potential sources of impairment (e.g., financial interest, non-attest service, contingent fee, director/officer, employment, joint investment)
MHM’s PCAOB BACKGROUND INFORMATION

• PCAOB Annual Report on Form 2 for year ended June 30, 2012:
  – 6% of MHM fees attributable to issuer audit clients
  – 52 issuer audit clients

• PCAOB Inspection Report issued September 2011:
  – Report notes alternative practice structure with CBIZ
  – Report refers to employees leased from CBIZ
  – No deficiencies reported as a result of the alternative practice structure

• Most recent PCAOB inspection fieldwork completed in April 2013
  – No comment forms as a result of the alternative practice structure
  – 58 issuer audit clients
PROPOSED TRANSPARENCY RULES
DISCLOSURE OF OTHER PARTICIPANTS IN THE AUDIT

• We understand the proposed rule would require that each person who performs attest work but is not employed directly by the audit firm be disclosed.

• Currently in the US, there are a number of alternative practice structure firms that have been participating in the PCAOB’s inspection process since its inception. In alternative practice structures, an employee sharing or employee leasing agreement often exists between the CPA Firm and a secondary party. In these situations, the quality control policies and procedures of the CPA Firm govern the activities of the shared or leased personnel, including a view of the CPA Firm and the secondary party as one entity in evaluating the CPA Firm’s independence.
We believe that this proposal could have unintended negative consequences for firms in alternative practice structures. The disclosure of a large number of individuals on audit engagement teams as non-employees could cast APS firms in a negative light, for financial statement users not familiar with alternative practice structures.

We believe that the proposal as drafted could have a significant negative impact on the ability of alternative practice firms to compete with traditional firms and therefore lead to further restriction of auditor choice.
Additionally, we note that the SEC disregards the alternative practice structure and looks at both the attest firm and the entity that employs the engagement team members to be one entity. The transparency proposal would cause alternative practice firms to be subject to inconsistent treatment: under SEC rules, APS firms are subject to restrictions because the SEC views both firms in the APS as one entity, and under the proposed transparency rule, APS firms would be required to make additional disclosures on the basis that they are not one entity.

While we understand the rationale behind the transparency proposal, we believe that applying it to the alternative practice structure would have negative effects on the firms themselves and on the attest provider market generally and is unrelated to investors’ concerns regarding transparency, such as differences in audit quality between accounting firms, the involvement of multiple audit teams, etc.
PROPOSED EXEMPTION FOR “OFF-SHORING”

• MHM understands that the proposal would require disclosure of the names of all separate legal entities participating in an audit even if those entities are closely associated and described publicly as a single international firm.
• We understand that this would consistently apply to all national and international networks of firms. If that is correct both for when the audit firm is assuming responsibility and dividing responsibility for the work performed, we support that proposal.
• However, we do not support the proposed exemption from disclosure for the practice defined as “off-shoring” in the proposal. We particularly believe that disclosure of the fact that a firm is reducing costs by engaging individuals in foreign countries who are not US licensed CPAs would be much more relevant to investors than the fact that a US firm may practice under an alternative structure and lease its US licensed CPAs from a separate entity.
MHM REQUESTS

• MHM requests that the PCAOB consider the potential unintended consequences of the Transparency Proposal impacting alternative practice structure firms. Possible consequences include –
  – Further restriction of auditor choice
  – Greater concentration of public company audits in the Big Four
  – Auditor changes driven by disclosures of other participants in the audit, rather than an evaluation of audit quality
MHM REQUESTS (Continued)

• In the event the PCAOB decides to issue a Final Standard that incorporates the disclosure requirements for other persons not employed by auditor as proposed in the PCAOB Release No. 2011-007, MHM requests that an effective date be selected to allow those Registered Firms that have operated in an alternative practice structure to evaluate changes to their organizational structure and/or practice focus.
  – The fact that MHM operates in an alternative practice structure has been fully disclosed in all of MHM’s PCAOB Inspection reports dating back to 2005
  – In addition, MHM’s most recent PCAOB Inspection Report also discloses the fact that MHM leases personnel from CBIZ
CONCLUDING COMMENTS
Mayer Hoffman McCann P.C. supports the Board in its efforts to oversee the audits of public companies in order to protect investors and the public interest by promoting informative, accurate, and independent audit reports.

We sincerely appreciate the opportunity to provide our views in the interest of promoting audit quality.

Re: PCAOB Rulemaking Docket Matter No. 029

We appreciate the opportunity to respond to the proposed rule, “Improving Transparency Through Disclosure of Engagement Partner and Certain Other Participants in Audits” that is contained in Release No. 2011-006 dated August 16, 2011 (the Release), of the Public Company Accounting Oversight Board (the PCAOB or the Board). We note that many of our concerns that we believe warrant the Board’s continuing serious consideration are already mentioned in the Release and in the commentary of others.

We previously commented in response to the related Concept Release No. 2009-005, Docket Matter No. 029, dated July 28, 2009 (the 2009 Release). However, we note that the scope of the Release is broader than the 2009 Release, and in that regard, it muddies what we view as two separate and unrelated issues. The first issue addresses disclosure of the name of the engagement partner (or partners) in the audit report and/or in periodic reports to the PCAOB. The second deals with disclosures regarding the participation of other audit firms in the audit (currently the subject of AU 543), which was barely mentioned in the 2009 Release. In our opinion, these two should be dealt with in separate proposed standards, and we have chosen only to comment on the first issue at this time.

In summary, we are firmly opposed to including engagement partners’ names in audit reports based on our belief that doing so will afford no discernible benefit to investors, but we do not object to including them in periodic reports to the PCAOB.

We present details of, and support for, our overriding concerns and reservations in Part 1 of the attachment. In Part 2, we respond briefly to the 15 specific questions posed in the Release. To reduce the need for redundancies in this regard, our responses to the questions in Part 2 include cross-references to relevant numbered paragraphs in Part 1.

Thank you for this opportunity to comment. We hope the Board finds our comments useful as it continues its deliberations on this matter. Please contact the undersigned at hlevy@pbtk.com or 702/384-1120 if there are any questions about these comments.

Very truly yours,

Percy Bowler Taylor & Kern, Certified Public Accountants

Howard B. Levy, Sr. Principal and Director, Technical Services

Attachment
Part 1 — Overriding Concerns and Reservations

1. For reasons that we hope will become clear in the paragraphs that follow, we challenge the underlying premise implicit in the first paragraph of Part I of the Release that suggests that more information about “key participants” in the audit (i.e., beyond that which is readily available outside an audit report about the firm taking responsibility by signing the report) would be useful to investors. Accordingly, consistent with our earlier letter (no. 15) dated September 11, 2009, in response to the 2009 Release, we are firmly against any proposal for naming individual partners in audit reports as entirely unnecessary and without any discernible benefit to investors or other users.

2. We believe the best way to address our concerns about the Release is to address the reasons given by others and presented in Part 11A of the Release in support of the proposal regarding the naming of partners in reports that are effectively brought forward from the 2009 Release. The perceived benefits of naming partners presented to the Board by others are, in our opinion, virtually imaginary and speculative, unsupported by any reliable empirical evidence. They are, in our view, groundless opinions likely to be held only by those who do not understand the professional reality of the environment in which audits are conducted and who, based on observations relative to the highly insignificant minority of inevitable “bad apples” among us, fail to appreciate and, thus, unfairly underrate the typical level of professionalism, integrity and other ethical values that overwhelmingly dominates the auditing profession in the United States. Each of the following examples of unsupported, speculative claims that are cited in the Release\(^2\) assert that a requirement for naming engagement partners in audit reports would be beneficial because it:

- “might provide …[users] the opportunity to evaluate, to a degree, an engagement partner’s experience and track record” (see paragraph 4, below),

- “may increase that individual’s sense of personal accountability for the work performed and the opinion expressed, which could, in turn, have a positive effect on his or her behavior,”

- “may increase an engagement partner’s sense of responsibility for the quality of the audit,”

- “would increase transparency about who is responsible for performing the audit, which could provide useful information to investors and, in turn, provide an additional incentive to firms to improve the quality of all of their engagement partners,”

- “is likely to have a number of positive effects, including a change in partner behavior that would positively influence audit quality, and an increase in transparency for audit and financial statement users,”

- “would enhance accountability and transparency and, in turn, investor protection,”

- “will motivate audit firms to strengthen the quality, expertise, and oversight of their engagement partners,” or

- “should serve to lift his or her standard of professionalism.”

---

1 The Release, p. 1.

2 Ibid., pp. 6-7.
Moreover, it is totally false to suggest (as it does on p. 6 of the Release) that audit committees would not otherwise have access to the names of engagement partners unless they are named in audit reports.

3. First, with rare exceptions, we believe that audit partners in the United States who sign off on audit reports for issuers fully understand the formidable risks and responsibilities undertaken by them in such activities. They function not only in the face of risks of damage to their professional reputation or more seriously, loss of employment and their rights to engage in professional practice, but of severe monetary loss and even possible imprisonment. In addition, the quality control policies and procedures in place in most audit firms, which in the United States undergo frequent scrutiny by regulators and de facto regulators, general allow for little or no significant, unbridled discretion on the part of individual engagement partners especially in SEC audit practice that is governed in large part by PCAOB AS 7. Accordingly, we believe that the rare individual whose attitude and behavior are not now sufficiently influenced by the applicable quality control, ethical and other professional standards, the regulatory oversight provided by the PCAOB’s rigorous inspection program, and the other powerful constraints and deterrents that are already in place in the United States, would not likely be moved to alter his or her behavior as consequence of such an additional requirement as is now proposed. In other words, in our opinion, it would not be any more than remotely likely that a requirement to name engagement partners in audit reports would afford any significant incremental incentive for them to exercise greater care or to perform higher quality audits than is now generally the case, or for their firms to take any meaningful steps to improve the performance of all of their engagement partners as a group.

4. We believe the weak reasons offered by proponents for a naming requirement run directly counter to a statement that is attributed in the 2009 Release to the 2008 report of the Advisory Committee on the Auditing Profession (with which we concur) that such a requirement "should not impose on any signing partner any duties, obligations or liability that are greater than the duties, obligations and liability imposed on such person as a member of an auditing firm." Knowledge of this fact already affords the overwhelming majority of engagement partners with a sense of accountability and professionalism not likely to be significantly heightened by any requirement to be named in audit reports.

5. Among the thousands of audit engagement partners now signing their firm’s names to audit reports, virtually none of their names are household words. On the contrary, such names are almost universally unknown and, therefore, mean nothing to investors. Moreover, even if such names were known to investors, it would be impossible for them to be able to assess the relative capabilities, integrity and other ethical values thereof, even with access to their brief professional biographical summaries that are used primarily for promotional purposes (generally, only their firm’s management is in a position to make such evaluations) or the extent of discretion exercisable by the partner within the constraints of the quality control environment in which he or she functions. Accordingly, we believe it is not reasonable and without basis to suggest that public disclosure of their names could be “useful to investors” in any meaningful way. In fact, the only parties for whom such information could be useful are private litigants and regulators who can obtain such information, for example, in discovery proceedings, with little or no cost or trouble.

6. It is the audit firms that develop the partners and provide them with the cultural environments in which they grow and operate. Such development and cultures afford leadership, technical training, firm-specific audit methodologies, performance monitoring and evaluation and many other quality control policies and procedures, including the tone-at-the-top that nurtures their ethical values, all of which typically go way beyond the professional standards and regulatory requirements. And it is the firms that determine which partners should be assigned to which engagements. Under such circumstances, perhaps with the exception of the smallest firms that perform audits for only a handful of issuers, the degree of responsibility for audit performance to be reasonably ascribed to individual engagement partners is dwarfed in relation to that properly borne by the audit firms. We have traditionally defined materiality in terms of what would make a difference to users in making investment decisions. In our opinion, it would be almost universally irrational for any financial statement user
to allow disclosure of the name of the engagement partner to influence any investment decision. To name the engagement partners in audit reports might likely mislead investors by unduly elevating the perceived significance of such immaterial information and unduly minimize the audit firm’s role. Moreover, to name several partners would likely be confusing to users who, no matter how much additional language encumbered the report (and in our opinion, would likely make it more difficult for users to assess the relative importance on matters contained therein) would necessarily still be ill-equipped to assess the relative significance of each partner’s contribution and responsibility.

7. As we previously stated in our letter dated September 11, 2009, in response to the 2009 Release, it appears that the proposal to name engagement partners in audit reports was likely motivated by an overzealous obsession with convergence for its own sake. We object to the “copycat” behavior that results from an irrational belief that if it is done in the international arena, we should do it here, too. Maybe such a requirement is meaningful in Europe, but we believe it would not be so here because of the legal, regulatory and other operational and effective disincentives in this country discussed above.

8. Despite our overriding belief that naming partners in audit reports is at best, of no value and at worst, misleading, to investors and other users, in the interests of transparency, we do not believe such information should be kept secret from those who seek it out. In fact, it has always been possible, with some effort, to obtain such information, but we would not be opposed to making it more readily available to the public by requiring its inclusion in periodic reports to the PCAOB such as Forms 2 and 3, as suggested in the Release as an additional or alternative requirement to including it in audit reports.

---

3 On pp. 5 and 8 of the Release, the Board cites as its principal reason for not proposing an individual partner’s signature (such as explored in the 2009 Release) its desire not to minimize the firm’s role. We see the undesirable effect of naming partners as not significantly diminished from that of requiring a partner’s signature.
Part 2 — Responses to Specific Questions Presented in the Release

Although we have expressed our most significant views in the foregoing comments (Part 1), our direct responses to the 15 specific questions presented in the Release (and below). To facilitate analysis and summary by the PCAOB staff of the comments received, in some cases, we have included parenthetical cross-references to our relevant comments in Part 1 and between overlapping questions wherever we believe they provide useful additional information as to the basis for our responses to these questions.

Q1. Would disclosure of the engagement partner’s name in the audit report enhance investor protection? If so, how? If not, why not?

We do not believe that any reasonable proposal intended to improve transparency would likely afford investors sufficient information about any engagement partner (with the possible rare exception of one who has received negative publicity about a high profile audit failure) to enable them to make any meaningful judgments about the partner’s capabilities, his or her integrity and other ethical values or the quality control environment in which he or she functions. (4, 5 and 6)

Q2. Would disclosing the name of the engagement partner in the audit report increase the engagement partner’s sense of accountability? If not, would requiring signature by the engagement partner increase the sense of accountability?

No and no. (2 and 3)

Q3. Does the proposed approach reflect the appropriate balance between the engagement partner’s role in the audit and the firm’s responsibility for the audit? Are there other approaches that the Board should consider?

No and no. (6)

Q4. Would the proposed disclosure clearly describe the engagement partner’s responsibilities regarding the most recent reporting period’s audit? If not, how could it be improved?

We believe it is a practical impossibility to adequately describe an engagement partner’s level of responsibility in relation to that of the audit firm in any way that would be accurate, meaningful and useful to investors. (5 and 6)

Q5. Would the proposed disclosure clearly describe the engagement partner’s responsibilities when the audit report is dual-dated? If not, how could it be improved?

We see dual-dating as relatively rare occurrence in view of the change in resent years in the way audit reports are dating. Moreover, in view of our position on the lack of utility in the proposed naming of partners in audit reports, we believe this question does not warrant the devotion of our energy (or the Board’s) at this time.

Q6. Would the proposed amendments to the auditing standards create particular security risks that warrant treating auditors differently from others involved in the financial reporting process?

We do not see ourselves as competent to address this this question.

Q7. Would the proposed amendments to the auditing standards lead to an increase in private liability of the engagement partner?

We believe this is a question for lawyers, not accountants. Our layman’s view, however, is that the individual
engagement partner’s litigation risk and ultimate liability would not be affected by including his or her name in an audit report. Accordingly, liability is not among the reasons for our concerns with this proposal. (4)

Q8. What are the implications of the proposed disclosure rule for private liability under Section 10(b)?

See our response to Q7. (4)

Q9. Would the disclosure of the engagement partner’s identity affect Section 11 liability? If so, what should the Board’s approach be?

See our response to Q7. (4)

Q10. Would the disclosure of the engagement partner’s identity have any other liability consequences (such as under state or foreign laws) that the Board should consider?

See our response to Q7. (4)

Q11. Would a different formulation of the disclosure of the engagement partner ameliorate any effect on liability?

See our response to Q7. (4)

Q12. If the Board adopts the proposed requirement that audit reports disclose the name of the engagement partner, should the Board also require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2?

See our response to Q13. (8)

Q13. If the Board does not adopt the proposed requirement that audit reports disclose the name of the engagement partner, should the Board nonetheless require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2?

Although we do not see any benefit to investors of disclosing the name of the engagement partner, we see no reason it should be kept secret or not readily available to those who want to know. Accordingly, we believe disclosure in Form 2 and/or Form 3 reports to be a practical alternative in compromise between those, like us, who believe the disclosure should not be made in audit reports and those who seek this information, and we do not object to such a compromise requirement. (8)

Q14. Disclosure in the audit report and on Form 2 would provide notice of a change in engagement partner only after the most recent period's audit is completed. Would more timely information about auditor changes be more useful? Should the Board require the firm to file a special report on Form 3 whenever there is a change in engagement partners?

See our response to Q13. (8)

Q15. A change in engagement partner prior to the end of the rotation period could be information that investors may want to consider before the most recent period's audit is completed. Should the Board require the firm to file a special report on Form 3 when it replaces an engagement partner for reasons other than mandatory rotation to provide an explanation of the reasons for the change?

See our response to Q13. (8)
9 January 2012

RE: PCAOB Rulemaking Docket Matter No. 29, Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2

Dear Sir:

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board’s (“PCAOB” or “Board”) proposed rule, Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2 (“Proposing Release”). The Proposing Release would amend the Board’s standards and rules to require (1) disclosure of the name of the engagement partner responsible for the audit in the body of the audit report itself and in the firm’s annual report on Form 2, and (2) disclosure in each audit report about independent public accounting firms and other persons that perform 3 percent or more of the total hours (defined to exclude certain items) incurred in the audit ("Audit Participants"). We continue to support the Board’s standard-setting objectives of enhancing the relevance, credibility and transparency of audits. We also believe the overarching principle of any standard-setting project should be to enhance audit quality. Further, we believe it is important that the benefits derived from any proposal outweigh the additional costs that are likely to be incurred by capital market participants.

In this spirit, we support the Board’s goal of promoting transparency and providing users of financial statements with appropriate information to enable them to assess the qualifications and capabilities of the registered public accounting firm that attests to an issuer’s financial statements. The Sarbanes-Oxley Act and PCAOB rules require firms to disclose in registration applications and periodic and special reports, which are filed with the Board and are publicly available, significant information about themselves, their associated persons and their audits. In addition, the Board’s reports on its inspections of registered public accounting firms provide users with valuable information about matters identified by the Board that it considers relevant to the firm’s performance in audits. The reporting and inspection processes focus principally on the audit firm, which is responsible for performing the audit in accordance with PCAOB standards.

Although we are supportive of the Board’s objective, we are not convinced that these proposals will in fact provide meaningful information to investors and other users of audit reports and enhance audit quality. We also believe that concerns remain about the potential litigation impact on the persons identified in the report. Nonetheless, we recognize that many members of the investor community, including members of the Board’s Investor Advisory Group, ascribe value to information regarding the identity of the engagement partner. Accordingly, in the interests of promoting transparency in audits, we support the identification of the engagement partner in Form 2. To alleviate any misimpressions that the audit report is a product of the engagement partner, rather than the firm, we also recommend that a member or members of firm leadership are also identified in Form 2. Examples could include the firm’s audit/assurance leader and/or CEO/senior partner.
However, if the Board continues to pursue the identification of the engagement partner in the audit report we suggest a naming requirement that includes the following elements:

- Provisional adoption of the requirement for a period of five years, to allow the Board to monitor the development of the law regarding possible personal liability for the engagement partner.

- Identification of a member or members of firm leadership in the audit report.

- Defer effectiveness until the SEC has taken action to assure that partners named in the audit report will not be considered experts and subject to expert liability under Sections 7 and 11 of the Securities Act.

These thoughts are further described below. If the Board pursues the identification of other Audit Participants we have also included alternatives to the proposed disclosures.

**DISCLOSURE OF THE NAME OF THE ENGAGEMENT PARTNER**

We continue to believe, as we did in 2009, that there is little added benefit in naming the engagement partner in the audit report, in view of the substantial existing accountability mechanisms applicable to engagement partners that currently exist. That said, engagement partners’ principal concerns about being named in an audit report stem from the possibility of increased personal exposure to private litigation and personal liability. As discussed below, we do not know how courts will apply the Supreme Court’s recent Janus decision to engagement partners named in the audit report. However, if the Board elects to proceed with identification of the engagement partner in the audit report, our alternative to the Board proposal, which is described below, addresses the current legal uncertainty. It also may alleviate the concern that solely naming the engagement partner may unintentionally create misunderstanding about the respective roles of the firm and the engagement partner in the audit.

**Impact of Naming the Engagement Partner on Accountability and Transparency**

We remain skeptical that naming the engagement partner in the audit report will provide meaningful benefits to investors and other users of financial statements. In support of the proposal, the Board posits that naming the engagement partner “could increase the partner’s sense of personal accountability.” Yet there already exist substantial accountability mechanisms, controls and incentives to ensure that the engagement partner — along with all other members of the engagement team and the firm as a whole — conduct the audit with the necessary due care and professional skepticism. Those mechanisms include: the existing requirements under PCAOB auditing and quality control standards, as well as the firm’s internal quality control systems, impelling the engagement partner to exercise due professional care and otherwise act in accordance with professional standards; strong regulatory oversight by the PCAOB through its inspection and disciplinary processes, as well as Securities and Exchange Commission (SEC) enforcement powers; and other tangible and intangible factors that strongly motivate engagement partners to determine that audits are conducted with due professional care, including the partner’s sense of personal responsibility to the firm and his or her partners and to investors, the partner’s desire to

---

1. See Letter from PricewaterhouseCoopers LLP, PCAOB Rulemaking Docket No. 29 (Sept. 11, 2009).
maintain his or her personal reputation within the firm and the profession and the importance of audit quality to the partner’s compensation.

The Proposing Release does not explain why these mechanisms are not sufficient to motivate engagement partners to strive to meet their professional responsibilities and achieve high-quality audits. The Board refers to results of its inspections showing there is still significant room for improvement in compliance with PCAOB standards, including those that require the auditor to perform the audit with due care and professional skepticism. But the Board does not explain how naming the engagement partner will address these concerns, other than speculating that “[d]isclosing the name of the engagement partner may be one means of promoting better performance.”

The Board also suggests that naming the engagement partner in the audit report will provide useful information to investors and incentivize firms to assign more experienced and capable partners to engagements. We believe the most relevant and useful information for investors in assessing the quality and reliability of an audit is the identity of the firm itself, not the name of the individual engagement partner who is unlikely to be known to the public. To the extent investors need information to assess the quality of the firm and its audits, investors have available to them the information contained in the firm’s public filings with the PCAOB and the PCAOB’s inspection reports. Many firms also make public their own quality control reports pursuant to NYSE rules. The rationale that investors will, over time, be able to assess the qualifications of individual engagement partners and thus be better equipped to evaluate the audit reports issued under a particular engagement partner’s supervision highlights the degree to which the proposal unduly elevates the significance of engagement partners and downplays the importance of other critical aspects of the audit process.

The Proposing Release does not provide any evidence to support the suggestion that firms do not now assign experienced and capable engagement partners to engagements. Nor does it attempt to explain why firms currently have any incentive to do anything other than assign the most qualified personnel to audits. Even if there were evidence showing the existence of a systemic problem of inexperienced or unqualified engagement partners being assigned to engagements, it is unclear why naming the engagement partner would address that problem.

Finally, a naming requirement could have an unintended consequence of encouraging investors to make decisions based on an undefined, highly subjective engagement partner ranking or scaling system to be developed informally over time. Such partner ranking information would not be guided by uniform auditing standards subject to PCAOB input and oversight and could lead investors to evaluate differently two audits conducted by the same firm, even though both of them were performed in accordance with PCAOB standards.

Potential Liability For Engagement Partners Named In The Audit Report

While we believe the naming requirement would not significantly enhance audit accountability or transparency, engagement partners have a legitimate concern that being named in the audit report could expose them to incremental private civil litigation and personal liability. As the Board has consistently recognized, a signature or naming requirement should be imposed only if it would not “impose on [the engagement partner] any duties, obligations or liability that are greater than the duties, obligations and

3 Proposing Release at 9.
liability imposed on such person as a member of an auditing firm.”

At this point in time, there exists substantial uncertainty in the law about whether an engagement partner would be subject to expanded personal liability by virtue of being named in the audit report.

Securities Exchange Act Section 10(b) and Rule 10b-5

Private litigants in misstatement-based actions under Section 10(b) of the Securities Exchange Act and Rule 10b-5 can bring suit only against a person who makes an actionable misstatement or omission (a “primary” actor). In its June 2011 Janus decision, the U.S. Supreme Court addressed who “makes” a statement for the purposes of Rule 10b-5. The Court held that, for purposes of Rule 10b-5, “the maker of a statement is the person or entity with ultimate authority over the statement, including its content and whether and how to communicate it.” The Court noted that “in the ordinary case, attribution within a statement or implicit from surrounding circumstances is strong evidence that a statement was made by—and only by—the party to whom it is attributed.”

Janus arose in the context of a claim against a separate legal entity for statements explicitly attributed to another legal entity. The Court explained that there were no allegations that the defendant had in fact filed the prospectuses and nothing on the face of the prospectuses indicated that any statement came from the defendant. It noted that such attribution is “necessary,” but not necessarily “sufficient,” to find that a person or entity made a statement indirectly. It thus had no need to “define precisely what it means to communicate a ‘made’ statement indirectly because none of the statements in the prospectuses were attributed, explicitly or implicitly, to [the defendant].” Given its context, there is also no discussion in Janus regarding how one should evaluate whether an individual within a single corporate entity had ultimate authority over a particular statement, including its content and whether and how to communicate it. Several post-Janus decisions have held that individual corporate officers can be subject to Rule 10b-5 liability because they may have exercised “ultimate authority” over the statements.

Commentators have noted that unresolved issues remain after Janus about whether an individual can be deemed the maker of a statement that is issued by an entity. For example, one recent article summarizing post-Janus decisions discusses a pair of cases in the Southern District of New York that showed “some elasticity in applying Janus,” focusing “on language in Janus about ‘surrounding circumstances’ sufficient

4 Proposing Release at 14, fn. 28 (quoting the 2008 Final Report of the Advisory Committee on the Auditing Profession to the U.S. Department of the Treasury).
7 Id. at 2305 n.11.
9 City of Roseville Employees’ Ret. Sys. v. Energy Solutions, Inc., 2011 U.S. Dist. LEXIS 113630 *54 (S.D.N.Y. Sept. 30, 2011) (plaintiffs’ allegations that a sole shareholder had “direct control over all corporate transactions” and “authority to determine when and whether to sell the shares being sold” was sufficient to state a 10b-5 claim for primary liability; explicit attribution to the issuer of the relevant registration statements did not “preclude attribution to [the shareholder] as well”); SEC v. Landberg, 2011 WL 5116512, *4 (S.D.N.Y. Oct. 26, 2011) (statements could be implicitly attributed to corporate office; “the SEC allege[d] adequate surrounding circumstances for a reasonable fact finder to conclude that the statements alleged to be fraudulent were implicitly attributed to [the CFO defendant], which is ‘strong evidence’ that [he] was the ‘maker’ of those statements, thereby satisfying Janus.”).
for implicit attribution to hold defendants potentially liable.”

The authors concluded, “Courts’ willingness to implicitly attribute misstatements to defendants based upon surrounding circumstances means that room still exists for plaintiffs to seek to hold liable additional parties beyond the most obvious statement ‘makers.’”

Given the unsettled nature of the post-Janus case law and the “elasticity” shown by some courts in interpreting Janus, it is easy to imagine that identifying the engagement partner in the audit report would be cited by plaintiffs as a “surrounding circumstance” indicating, in their view, that the engagement partner is a “maker” of the statements in the report. One can easily envision complaints that allege that (1) naming the engagement partner as “responsible for the audit resulting in this report” implicitly, if not explicitly, attributes the statements in the report to the engagement partner and (2) the engagement partner has “ultimate authority” over the audit report, in light of the engagement partner’s central role in the planning, oversight and execution of the audit. While we believe that such arguments ultimately will not prevail, the very fact of being named individually in a complaint can have serious reputational and other collateral consequences for engagement partners.

Naming the engagement partner in the audit report also increases the potential that the partner could be individually named in state causes of action. While we believe that in the long run such claims are unlikely to prevail as a matter of law, it may be some time before that question is resolved in the courts.

**Securities Act Section 11**

It also is uncertain whether including the name of the engagement partner in the audit report could expose the engagement partner to claims in his personal capacity under Sections 7 and 11 of the Securities Act of 1933. Those sections provide for “expert” liability for certain persons, including accountants, “whose profession gives authority to a statement made by him.” Section 7(a) provides, in pertinent part, that “[i]f any accountant . . . is named as having . . . certified any part of the registration statement,” he must consent to his being so named and the consent must be filed with the registration statement. Under Section 11(a)(4), any person who so consents may be held liable, subject to certain defenses, “with respect to the statement in such registration statement, . . . which purports to have been . . . certified by him.”

While there appear to be no published decisions on point, it could be asserted that if the Board’s proposal were adopted, the engagement partner would be an expert within the literal language of Sections 7 and 11. Accountants are expressly covered by those sections. The engagement partner would, by definition, be “named” in the audit report. Plaintiffs could argue that an engagement partner who was “named” in the audit report had “certified” the financial statements included in a registration statement.

**Proposed Alternative**

As mentioned above, we are supportive of the identification of the engagement partner and a member or members of firm leadership in Form 2. These disclosures would be responsive to the requests of investors but also make clear that the engagement partner alone is not responsible for the issuance of the report.

---

If the Board nevertheless believes it is appropriate to adopt a requirement that engagement partners also be named in the audit report, we suggest the Board consider a naming requirement that includes the following elements:

- **Provisional Requirement.** The requirement to name the engagement partner in the audit report would be “provisional” — it would be in effect for a limited period of five years. This would provide time for the law to develop under *Janus* and/or relevant state law. If, after five years, there are binding appellate precedents establishing that an engagement partner named in an audit report is not a “maker” of the statements in the report, and that naming the engagement partner has not expanded a partner’s liability under state law, then the Board could decide to make the naming requirement permanent.

- **Naming Member or Members of Firm Leadership.** In addition to naming the engagement partner responsible for the audit, a member or members of firm leadership should also be named in the audit report. Examples could include the firm’s audit/assurance leader and/or CEO/senior partner. Including the name and/or names of firm leadership will convey to the users of the financial statements that the accounting firm as a whole takes responsibility for the audit and alleviate any misimpressions that the audit report is the product of the engagement partner rather than the firm.

- **SEC Effectiveness.** The Board should defer effectiveness of the naming requirement until the SEC has taken action to assure that partners named in the audit report will not be considered experts and subject to expert liability under sections 7 and 11 of the Securities Act. The SEC could do this by an amendment of Rule 436 or by providing guidance that it will not condition effectiveness of a registration statement on the named partners being expertised.

As it relates to Form 3, we believe it is unnecessary to require that changes in engagement partners be disclosed. Changes in engagement partners can occur for a number of reasons and do not themselves raise questions about the ability of the firm to perform the audit effectively.

**DISCLOSURE IN AUDIT REPORT OF INDEPENDENT PUBLIC ACCOUNTING FIRMS AND OTHER PERSONS THAT PARTICIPATED IN THE AUDIT**

The Board also proposes to amend its interim auditing standards to require disclosure about Audit Participants who perform 3 percent or more of the total hours incurred in the audit (defined to exclude certain items and where the principal auditor is assuming responsibility or supervising the work of the Audit Participants). We think that disclosing the identity of Audit Participants in the audit report is unlikely to provide meaningful information to investors and would muddle the clear accountability of the principal auditor for the audit. We believe that this proposal also raises additional litigation concerns. If the Board nonetheless determines that disclosure about Audit Participants is appropriate, we suggest alternative approaches that we believe can achieve the Board’s objectives without burdening the audit report with a large number of entities whose contributions to the audit may be relatively immaterial. We also believe the Board should make clear that off-shoring activities are not covered by the disclosure requirement.
Responsibility of the Principal Auditor

The proposal would require that the audit report include information about other audit firms that audited one or more subsidiaries, divisions, branches, components or investments included in the financial statements (a “component”). Under current standards, the principal auditor may elect to assume responsibility for the work of the other auditor insofar as that work relates to the principal auditor’s expression of an opinion taken as a whole. In order to assume responsibility for the other auditor’s work, the principal auditor is required to satisfy itself as to the independence and professional reputation of the other auditor and take specified steps to satisfy itself that it can express an opinion on the financial statements taken as a whole without making reference in the audit report of the other auditor. Auditors that rely on other accounting firms to perform work with respect to components of an issuer establish procedures and quality controls to provide assurances about the component audit. In that event, the standard specifically provides that the principal auditor “should not state in [its] report that part of the audit was made by another auditor because to do so may cause a reader to misinterpret the degree of responsibility being assumed.”

We believe that the current standard is preferable to the proposed changes. The current standard reflects that the audit report is issued by one audit firm that takes responsibility for the entire audit and that expresses an opinion about the financial statements taken as a whole. The existing standard places on the principal auditor the responsibility to determine whether and to what extent it may use the work of other auditors and to make the determination that the other auditor's work can be relied upon for purposes of the audit report. The issuance of one audit report by a single auditor sends a straightforward message to investors and other users that the issuing firm is responsible for and accountable for the audit report.

To add a potentially lengthy list of other named firms to the audit report will muddy the clear accountability created under the current standard. It could create a misimpression that the opinion is not solely that of the firm issuing the audit report. In other words, it will create the exact risk of misinterpretation identified in the current standard.

Litigation Considerations

Audit Participants have a genuine, and understandable, concern about the potential liability implications under the U.S. private litigation regime if they are identified in audit reports which they themselves did not prepare. Many Audit Participants, particularly those that are not themselves registered with the PCAOB, do not currently face any material risk of liability in U.S. private securities litigation, because they are not identified in any public document and the principal auditor takes responsibility for their work.

11 PCAOB AU 543, Part of Audit Performed by Other Independent Auditors. We have no issue with the proposal as it applies to audits where the principal auditor divides responsibility with another audit firm and refers to that firm’s work in its audit report.
12 AU 543.04.
13 We believe the Board’s proposed qualifying language in AU 508 do not eliminate these concerns. For example, when another firm audited a company's subsidiary under the proposal, the audit report would state that the firm issuing the report is responsible for the audit performed by the other firm “insofar as it relates to our expression of an opinion on the financial statements taken as a whole,” and that the issuing firm has “performed procedures to assume responsibility for their work in accordance with PCAOB standards.” (Proposing Release at C-5). We respectfully suggest that while these terms reflect the applicable auditing standards, their meaning and significance may not be clear to investors. The risk of misinterpretation will remain.
As a result of being publicly identified in an audit report, however, firms that support an audit by another firm could become embroiled in U.S. private securities litigation. It is foreseeable that plaintiffs will seek to name these firms as parties in litigation based on a faulty audit report.\textsuperscript{14} While we believe that the courts will ultimately reject Rule 10b-5 claims against Audit Participants, in the meantime, plaintiffs may nonetheless see a tactical advantage in naming them as defendants. In that event, Audit Participants named as defendants will at a minimum have to engage counsel and will otherwise become subject to the costs and burdens of defending against the claim. Naming non-U.S. firms as defendants might also increase the plaintiffs’ leverage in settlement negotiations.

Besides potential 10b-5 claims, it is also conceivable that Audit Participants might be treated as experts for purposes of Sections 7 and 11 of the Securities Act. As discussed above, an accountant can be subject to “expert” liability for his report if he is named as having . . . certified any part of the registration statement,” and has consented to be named as an expert in the registration statement.\textsuperscript{15} As with the engagement partner, it could be asserted that an audit firm identified in the audit report was “named” as having “certified” the audit report to the extent that the report relates to a component whose financial statements were incorporated into the financial statements that were the subject of the audit report. As with naming the engagement partner, this concern could be alleviated by SEC action. Therefore, we also recommend that the effective date of any standard requiring that Audit Participants be named be deferred until the SEC issues guidance or rules confirming that the Audit Participants are not experts.

\textit{Proposed Alternative}

In the event the Board decides that additional information should be provided in the audit report about participants in the audit besides the principal auditor, we believe the Board should modify the proposal as follows:

\begin{itemize}
  \item \textit{Threshold for Disclosure}. The Board should adopt a higher percentage threshold for disclosure. We believe that the proposed threshold for disclosure — 3 percent or more of total audit hours (as defined in the proposal to exclude certain items) is much too low. It will likely sweep in a number of firms in smaller countries who audit smaller operations of the issuer and whose work is unlikely to be material to the financial statements or the audit taken as a whole. It could result in a long list, which is unlikely to provide helpful information to users. We believe the appropriate threshold should be one that identifies participants whose work can reasonably be deemed to have significance to the audit. In our view, an appropriate level would be 10 percent of total audit hours, rather than 3 percent. That will result in a shorter list of Audit Participants and enable users of the financial statements to focus on those firms that audited larger components of the issuer being reported on. Firms that individually account for less than 10 percent of total hours would be aggregated, as in the current proposal.
\end{itemize

\begin{footnotes}
\item[14] See \textit{Munoz v. China Expert Tech., Inc.}, 2011 U.S. Dist. LEXIS 128539, *5 (S.D.N.Y. Nov. 4, 2011) (genuine issue of fact exists as to whether affiliate US affiliate of Hong Kong accounting firm “explicitly or implicitly controlled sufficiently—and thus ‘made’” the statements in the Hong Kong firm’s audit report, by virtue, among other things of US firm’s managing director giving final approval of the audit opinions prior to their being signed, and his being tasked with reviewing the entire filing for compliance).
\end{footnotes}
• **Disclosure in Ranges.** Rather than requiring disclosure of a specific percentage for each identified Audit Participant, provide that the disclosures be provided in tiers, e.g.:

  - Firms providing 10%-15% of total hours incurred
  - Firms providing 16%-20% of total hours incurred
  - Firms providing more than 20% of total hours incurred

This approach would simplify the process of developing and reporting the relevant information. It would help avoid the difficulty of determining precise percentages during “crunch time” immediately prior to conclusion of the audit. Providing information within bands will still give investors and other users of the audit report information about the relative degree of participation of significant Audit Participants in the audit.

• **Explanatory Language.** Any disclosure regarding Audit Participants should also include explanatory language to the effect that the Audit Participants are separate legal entities and, if they are members of the same network as the principal auditor, that the network firms follow a common audit methodology and consistent quality controls.

**“Off-Shoring”**

As the Board recognizes, certain portions of the audit are “performed by offices in a country different than the country where the firm is headquartered.”\(^{16}\) The Board indicates that the proposed amendments would not result in disclosure of such arrangements if the work is performed by “another office of the same accounting firm.”\(^{17}\) We agree with this approach. Where the registered firm is performing the work itself, just through a non-U.S. office, separate disclosure about the off-shoring does not provide any additional information for investors.

We believe that the exclusion for off-shoring may be too narrow. Some firms may, for legal reasons, carry on the off-shored activities through a wholly-or majority-owned subsidiary. Firms may also establish joint ventures with other firms in their networks, pursuant to which the venture provides personnel to network firms to perform certain audit-related tasks. These joint ventures are not engaged in the practice of public accounting. The personnel perform the audit-related tasks under the direction and control of the engagement team that is performing the audit. Because the personnel are acting, in effect, as part of the principal auditor engagement team, it is unnecessary to separately break out the entities that provide the personnel. We recommend that the Board clarify that the standard does not require disclosure of audit-related tasks performed by personnel supplied by subsidiaries of the registered firm or joint ventures, where the personnel perform audit-related tasks under the direction and control of the principal auditor.

**CONCLUSION**

As discussed above, we strongly support the general objective of providing useful information to investors and other users of audit reports. However, we have concerns whether the proposals will serve that objective or enhance audit quality. Nevertheless, to be responsive to the requests of investors, we are supportive of identifying the engagement partner in Form 2, but to alleviate concerns about who is

\(^{16}\) Proposing Release at 18.

\(^{17}\) Proposing Release at 24.
responsible for issuing the audit report we also believe member or members of firm leadership should also be disclosed. If the Board decides to pursue other aspects of the proposals, we request that it consider the proposed modifications and alternatives outlined above. These modifications will address some of our concerns while still providing additional information about the audit to investors.

* * * * *

We appreciate the opportunity to express our views and would be pleased to discuss our comments or answer any questions that the PCAOB staff or the Board may have.

Sincerely,

Bob Moritz  
US Chairman and Senior Partner  
PricewaterhouseCoopers LLP

Tim Ryan  
Vice Chairman, US Assurance Leader

To promote more transparency and accountability accounting firms should identify the partner in charge of the audits, not only should firms disclose the name of each other accounting firms and other people who assisted in the company's audit according to WSJ article by Michael Rapoport. Accounting firms should also disclose the segment and information within the financial statement that was audited by other accounting firms. Providing information on what was being audited by other firms will promote more transparency and accountability.

Subject: Proposed naming of Partner in Audit Report

This, in my opinion, serves no useful purpose, for the following reasons:

1. The firm is the entity at risk & whos' name is of importance to users- not that of the individual partners. Users will know "Pricewaterhousecoopers". They won't know- or care about- Joe Jones, CPA.

2. Just because something is being done in other jurisdictions does not mean we need to follow.

3. This just adds wording at a time we should be looking to simplify & delete "mind-numbing boilerplate".

Sherman L. Rosenfield, CPA, P.A.

Where vast amounts of money are affected by an audit, I strongly believe that the lead partner of an audit should sign the audit.
Adrienne Stankard
PCAOB Open Comment
Senior at Rutgers-Camden

I can only think of one situation where the signatures would add value to the final report: miscommunication. When communication is unclear pertaining to the terms of the audit engagement, expectations among parties may not coincide. The initial proposal delivered by the CPA is a mission statement essentially intended to further develop a professional business relationship. A contract by definition is an agreement between two or more parties for the doing or not doing of something specified. Disclosure of the engagement partner’s name seems more appropriate in the engagement letter (where it usually appears). The specific location of the partner’s name shouldn’t alter the information to the client regarding who performed the audit.

Beginning stages of the audit are used for the partner and possible client to develop an understanding of each other. Topics for discussion would include: the scope, internal control, accounting procedures, audit team, related credentials, the responsibilities of both parties, along with standard Q&A. Let’s not forget that these external auditors have considerations of their own to address: transparency of engagement risk, uncollectible debts, possibility of law suits, etc.

Unfavorable risk factors are the pressure points used by the firm to help weigh out decisions. In all fairness, professional skepticism is and shall remain a priority not only in the accounting industry but in all business dealings. One would appear to be unacquainted with reality to not place emphasis over the matter. Other obvious economic
dispositions have proven that professional skepticism is something that must remain omnipresent within business as a whole. The burden which holds the state of the economy at ransom won’t possibly be relieved by issuing a duplicate credit statement.

Investors need to be a little more self-reliant and confident in the people they trust with their money. Certainly the psychology behind the proposal makes sense on paper, but these assumptions are mitigating real ethical dilemmas. Forming relationships face to face is a much more sincere or earnest attempt to fulfill whatever commitment was made. When people go out of their way to be made known it builds a healthy partner-client foundation. Typically the audit partner is responsible for bringing new clients into the firm and by default is considered the face of the business. Maintaining their public image at both an independent and company level is crucial for competitive industries.

Requiring an audit partner to sign a finalized report seems redundant in theory and purely bureaucratic. The need for a signature is more likely to be justified through a significant change to the structure of the audit, hence a different partner. The audit team won’t remain anonymous because they will be the ones conducting the fieldwork. The clients have opportunities throughout the engagement to meet and converse with the audit team. They also have the power to not accept an engagement unless they feel more comfortable with the information. Physically working in the same building/area and allowing for this type of interaction with the employees is a more sufficient way to gain credibility. The auditors have their clients to worry about, and those clients have their own responsibilities to fulfill in terms building trust.

RE: Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2

To Whom It May Concern:

One of the expressed goals of the Texas Society of Certified Public Accountants (TSCPA) is to speak on behalf of its members when such action is in the best interest of its members and serves the cause of Certified Public Accountants in Texas, as well as the public interest. The TSCPA has established a Professional Standards Committee (PSC) to represent those interests on accounting and auditing matters and the views expressed herein are written on behalf of the committee. The PSC has been authorized by the Texas Society of CPAs’ Board of Directors to submit comments on matters of interest to the PSC’s membership. The views expressed in this letter have not been approved by the Texas Society of CPAs’ Board of Directors or Executive Board and, therefore, should not be construed as representing the views or policy of the Texas Society of CPAs.

In our discussion of the above referenced exposure draft (ED), we considered each of the 35 questions posed by the PCAOB. Our response to each question is indicated in the body of our letter. However, prior to sharing our answers to the questions, we have some general comments for the Board’s consideration.

We believe this ED has many flaws in both the basis for its issuance and the guidance it proposes. The justification for this document seems to come from the views of the Council of Institutional Investors and inconclusive research provided by the academic community. The focus of the document seems to be on rectifying the inadequacies of those in charge of audit engagements by identifying them and publicizing the perception of their inappropriate performance. We believe this is a very poor basis for the development of an auditing standard!

We are certainly not so naïve as to believe that all audits are performed with the ultimate amount of competence on the part of every audit practitioner. However, this ED would lead a reader to believe that a majority of those audit partners in charge of audit engagements are incompetent, lazy, and/or unconcerned with their professional responsibilities.

We find this very hard to believe in light of the precautions that are currently in place in this profession to head off such inadequacies. We have established Codes of Professional Conduct for CPAs at both the national and state levels. We have peer review programs that are designed to identify the sub-standard performance in attestation engagements and implement steps designed to rectify such deficiencies. We have professional standards committees at both the national and state levels that are
focused on ethics and the ethical responsibilities of practitioners. Public accounting firms are required to develop quality control policies and procedures to which the firm’s professional staff is required to comply. These firms are required to design these standards to “promote an internal culture based on the recognition that quality is essential in performing engagements and should establish policies and procedures to support that culture. Such policies and procedures should require the firm’s leadership to assume ultimate responsibility of the firm’s system of quality control.” All of these efforts are designed to monitor performance and head off the issuance of unreliable information and the incompetent performance of professional engagements.

Our big question after reading and analyzing this proposed standard is, “Have all of those efforts failed to accomplish their objectives?” One could easily conclude upon reading this proposed standard that our profession has decided to outsource the performance and competence evaluation of individual public practitioners to investors and corporate boards. Such a decision has obvious ramifications that would invite chaos and the potential for untold legal problems.

One of the quotes from the Council of Institutional Investors that was used to justify the development of this ED is as follows:

"Armed with valuable information provided by the lead auditor’s signature, investors and boards will demand skilled engagement partners. The Council consequently believes that enhanced focus on the performance of the lead auditor will motivate audit firms to strengthen the quality, expertise, and oversight of the engagement partners. By more explicitly tying the lead auditor’s professional reputation to the audit quality, requiring engagement partners to sign the audit report will further result in better supervision of the audit team and the entire audit process."

We believe this quote raises a number of questions regarding the justification of the proposed standard. Are these investors and boards not currently demanding skilled engagement partners? What valuable information will the signature of the lead audit partner provide? Does the Council have information that indicates a lack of focus on the part of the lead audit partner in a significant number of audit engagements, or is this merely a convenient conclusion? How does it follow that enhanced focus on the part of a lead auditor will motivate audit firms to strengthen the quality, expertise, and oversight of the engagement partners? How will requiring engagement partners to sign the audit report, or disclosing engagement partners’ names, further result in better supervision of the audit team and the entire audit process?

We find the statements in this quote to be nothing more than self-serving comments designed to justify a requirement that has no logical support. It seems to us that having the firm as the guarantor of the competence with which the engagement was performed would be far more valuable to investors and boards than the name of an individual auditor. Also, the proposed standard constantly implies that the signature of an individual auditor will make the firm more responsible. We strongly believe that the signature of the firm makes the firm as well as the individuals who make up that firm more responsible!

Question 1: Would disclosure of the engagement partner’s name in the audit report enhance investor protection? If so, how? If not, why not?
Office of the Secretary
PCAOB
December 19, 2011
Page Three

We do not believe disclosure of the engagement partner’s name in the audit report would enhance investor protection. See our initial comments.

**Question 2:** Would disclosing the name of the engagement partner in the audit report increase the engagement partner’s sense of accountability? If not, would requiring signature by the engagement partner increase the sense of accountability?

We do not believe accountability is enhanced by either disclosing the partner’s name or requiring the partner to sign the audit report. See our initial comments.

**Question 3:** Does the proposed approach reflect the appropriate balance between the engagement partner’s role in the audit and the firm’s responsibility for the audit? Are there other approaches that the Board should consider?

Performing an audit in accordance with PCAOB standards is the responsibility of both the engagement partner and the audit firm. The firm has the overall responsibility to stand behind its professional staff and support their efforts, as well as the responsibility to take appropriate actions when the performance of the professional staff is found to be inadequate.

**Question 4:** Would the proposed disclosure clearly describe the engagement partner’s responsibilities regarding the most recent reporting period’s audit? If not, how could it be improved?

The answer to this question depends on the knowledge of the person observing the disclosure. If we assume that the person reading this disclosure understands the concept of “an engagement partner” and knows what an audit is and what it entails, then the answer is yes, the proposed disclosure is clear. However, if the reader understands the concept of “an engagement partner” and is knowledgeable about an audit, why would the disclosure be necessary? On the contrary, if the reader didn’t understand the concept of “an engagement partner” and was unfamiliar with an audit, then the disclosure would also be unnecessary. Thus, it appears to us that no matter what the situation, such a disclosure serves no real purpose.

**Question 5:** Would the proposed disclosure clearly describe the engagement partner’s responsibilities when the audit report is dual-dated? If not, how could it be improved?

See answer to question 4. This disclosure also serves no useful purpose no matter who the recipient happens to be.

**Question 6:** Would the proposed amendments to the auditing standards create particular security risks that warrant treating auditors differently from others involved in the financial reporting process?

The current responsibilities of auditors create a security risk that warrants treating auditors differently from others involved in the financial reporting process. The proposed amendments merely serve to enhance that security risk beyond a reasonable limit. Also, whether appropriate or not, the...
engagement partner is often seen as the sole "responsible" party. In such a case, how could security risk not be greater than others involved in the financial reporting process?

**Question 7: Would the proposed amendments to the auditing standards lead to an increase in private liability of the engagement partner?**

How could it possibly not lead to an increase in private liability? Upset investors and financial statement users currently begin their legal actions in an audit-related suit by bringing legal action against the audit firm and may or may not include the engagement partner. Under the proposed rules, the audit partner will always be named in the action, thus increasing his or her private liability. The ultimate impact on the auditor's guilt or innocence due to the proposed amendments would best be addressed by a qualified attorney.

**Question 8: What are the implications of the proposed disclosure rule for private liability under Section 10b?**

Like question 7, this question is best addressed by a qualified attorney.

**Question 9: Would the disclosure of the engagement partner's identity affect Section 11 liability? If so, what should the Board's approach be?**

We believe the Board should consider an approach whereby each accounting firm designates a contact person who is responsible for disseminating information to interested persons regarding the individuals involved in performing the engagement.

**Question 10: Would the disclosure of the engagement partner's identity have any other liability consequences (such as under state or foreign laws) that the Board should consider?**

We believe the Board should take the responsibility to research the answer to this question prior to continuing their pursuit of this proposed standard. This seems to be a question more related to the guidance in the standard rather than something that would be based on the input from those responding to the ED. Perhaps the Board should consult with qualified attorneys in gathering information on this issue.

**Question 11: Would a different formulation of the disclosure of the engagement partner ameliorate any effect on liability?**

Short of eliminating this proposal, we are hard pressed to suggest a formulation that would soften or decrease the likely effect on liability.

**Question 12: If the Board adopts the proposed requirement that audit reports disclose the name of the engagement partner, should the Board also require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2?**

Once you decide to require the disclosure, it doesn't seem to matter how often the disclosure is made.
Office of the Secretary
PCAOB
December 19, 2011
Page Five

Question 13: If the Board does not adopt the proposed requirement that audit reports disclose the name of the engagement partner, should the Board nonetheless require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2?

If the Board does not adopt the proposed requirement, we strongly encourage no further change in the disclosure of the name of engagement partners.

Question 14: Disclosure in the audit report and on Form 2 would provide notice of a change in engagement partner only after the most recent period’s audit is completed. Would more timely information about auditor changes be more useful? Should the Board require the firm to file a special report on Form 3 whenever there is a change in engagement partners?

We do not believe that more timely information about auditor changes would be more useful. Such information could easily be misinterpreted and is better left alone. We also are opposed to any special report on Form 3 regarding a change in engagement partner.

Question 15: A change in engagement partner prior to the end of the rotation period could be information that investors may want to consider before the most recent period’s audit is completed. Should the Board require the firm to file a special report on Form 3 when it replaces an engagement partner for reasons other than mandatory rotation to provide an explanation of the reasons for the change?

We strongly disagree with such a disclosure. There are numerous reasons for a change in an engagement partner other than mandatory rotation. We feel the potential for misinterpretation by financial statement users of the reason for a change in engagement partner far outweighs any advantage that can result from such disclosure.

Question 16: Is it sufficiently clear who the disclosure would apply to? If not, how could this be made clear?

We believe it is sufficiently clear as to whom the disclosure would apply.

Question 17: Is it appropriate not to require disclosure of the individual who performed the EQR? If not, should disclosure of the engagement quality reviewer be required when the EQR is performed by an individual outside the accounting firm issuing the audit report or should the disclosure be required in all cases?

We agree that it would be appropriate to not require disclosure of the individual who performed the EQR. The EQR represents an objective assessment of the work performed by the engagement team and does not constitute audit work on the client’s financial information.

Question 18: Is it appropriate not to require disclosure of the person that performed the Appendix K review?
We believe it is appropriate not to require disclosure of the person who performed the Appendix K review.

Question 19: Is it appropriate not to require disclosure of persons with specialized skill or knowledge in a particular field other than accounting and auditing not employed by the auditor or persons employed or engaged by the company who provided direct assistance to the auditor?

We find no useful purpose being served by such disclosure, especially in light of the fact that such information is already addressed in AU Section 336, Using the Work of a Specialist.

Question 20: Would disclosure of off-shoring arrangements (as defined in the release) or any other types or arrangements to perform audit procedures provide useful information to investors and other users of the audit report? If yes, what information about such arrangements should be disclosed?

We do not believe disclosure of off-shoring arrangements is necessary. It is the same firm, just a different office. We can’t imagine how disclosure of such a circumstance would be of benefit to users of the audit report.

Question 21: Would disclosure in the audit report of other participants in the audit provide useful information to investors and other users of the audit report? Why or why not?

We are not convinced that a significant benefit would result from such disclosures. There could be a benefit in multinational audits where investors and other users would have an opportunity to consider the quality of those other participants who actually performed the audit of the subsidiaries and/or branches of the entity.

Question 22: Are the proposed requirements sufficiently clear and appropriate with respect to identifying other participants in the audit? If not, how should the proposed requirements be revised?

We have a significant problem with this proposed requirement due to the lack of clarification that surrounds the 3% threshold and what is included in the computation of total hours. Do the total hours include the hours spent by a specialist who is also not required to be disclosed in the report? The proposed amendment does not require the disclosure of specialists or internal auditors. Does this mean that their hours should be excluded from the classification (other Participants, all individually less than 3% of total audit hours) found in Appendix C, page C-9 table? The current audit report is normally composed of three or four separate paragraphs. It appears to us that the report loses its relevant focus when an entire paragraph is included to mention the name of another firm when only one or two other participating firm’s total hours only account for 3% of the total hours.

Question 23: Are the proposed requirements sufficiently clear as to when the name of a public accounting firm or a person would be required to be named in the audit report? Is it appropriate that the name of the firm or person that is disclosed is based on whom the auditor has the contractual relationship?
The proposed requirements are clear and it appears appropriate that the name of the firm or person that is disclosed is based on whom the auditor has the contractual relationship.

**Question 24:** Would disclosure in the audit report of other participants in the audit have an impact on the ability of independent public accounting firms to compete in the marketplace? If so, how would the proposed requirement impact a firm's ability to compete in the marketplace?

We believe such disclosure would have an impact on a firm's ability to compete in the marketplace. This disclosure could draw the client's attention to the fact that they are paying audit fees based on a variety of billing rates from individual participants which may be based on geographical economic conditions.

**Question 25:** Are there any challenges in implementing a requirement regarding the disclosure of other participants in the audit? If so, what are the challenges and how can the Board address them in the requirements?

We find the new rule to be confusing to the financial statement users as it is fairly common knowledge that under the current rule, mentioning "other auditors" indicates a segregation of responsibility. It is misleading when the proposed amendment only requires the disclosure of total hours, but not the actual work and level of personnel who are involved in the audit. While disclosure of the hours contributed by other participants may benefit the financial statement users, it is not as useful when the users don't know the composition of those hours from staff level personnel to engagement partner hours. It apparently is different when 19% of the hours used by other participating firms is from an entry level staff member or is from an experienced manager. However, this kind of differentiation in disclosure would be cumbersome and would fail far short of satisfying the cost/benefit analysis. Also, the fact that different firms have different staff structures makes such disclosures even more difficult and potentially more confusing. Thus, the challenges are significant and would be most difficult, if not impossible, to overcome.

**Question 26:** Is the percentage of the total hours in the most recent period's audit, excluding EQR and Appendix K review, a reasonable measure of the extent of other participants' participation in the audit? If not, what other alternatives would provide meaningful information about the extent of participation in the audit of other participants?

If such a disclosure is required, the percentage of hours incurred by other participants may have some relevance. However, this factor alone should not form the basis to determine their involvement. Many factors can have an impact on the hours incurred and it is generally not practical for the signing firm to be involved in monitoring the hours incurred by other participating firms. In cases where other participating firms perform the audit of a subsidiary, the signing firm has little control over the actual hours spent auditing the subsidiary. A more meaningful disclosure in such situations would require an indication of the subsidiary, division, or component that was audited by the other participating firm(s). We believe users assess and evaluate financial statements and the audits of those financial statements in many different ways based on their particular needs. We further believe that the disclosure of the hours spent by the signing audit firm or any other participating firms would not provide meaningful information to users in assessing the financial statements or the audit. Further, disclosing a
quantitative component like hours applied or percentage of total hours could easily lead to unwarranted conclusions on the part of those users.

**Question 27:** What challenges, if any, would requiring the percentage of audit hours as the measure of the other participants’ participation present?

We believe many situations where other participating auditors are involved in the engagement are negotiated on a fixed fee basis. Therefore, the hours spent by other participants are most difficult to assess in terms of accuracy or relevance. In such situations, the signing firm would be required to assess the accuracy, relevance, and completeness of the time recorded by the other participant. In situations where the other participants are paid directly by the client based on a pre-determined fee arrangement, the burden on the signing firm to assess the reasonableness and accuracy of the hours incurred would create a significant burden. We feel the challenges, and the potential for erroneous data, in this area far outweigh any benefits that might accrue to the users.

**Question 28:** Should the Board require discussion of the nature of the work performed by the other participants in the audit in addition to the extent of participation as part of the disclosure? If so, what should be the scope of such additional disclosure?

We believe including such a discussion could open the door to even greater problems than the percentage of audit hours would cause. The fact that financial statement users vary considerably in their sophistication, experience, and desires would cause such a discussion to lead to greater frustration and anxiety on the part of those users. Such a discussion would lead to more concerns, a greater number of questions, and could easily be misinterpreted based on the way the nature of the work was described. This type of discussion will definitely raise many more questions than it answers. We find the guidance in AU 543 to be sufficient in this area as such information can be disclosed to the PCAOB as part of their inspection and reporting process, but modification of the audit report to include hours or the nature of work performed by other participants is not needed!

**Question 29:** Would the proposed disclosure of the percentage of hours attributable to the work performed subsequent to the original report date in situations in which an audit report is dual-dated be useful to users of the audit report?

We hold to our view that the disclosure of hours incurred by other participants would not be useful in any form. However, if disclosure of hours incurred by other participants is required, disclosure of the percentage of hours attributable to the work performed subsequent to the original report date would be necessary in order to keep the original disclosure relevant to the final dual-dated report. The guidance in AU 543 is sufficient.

**Question 30:** Is the example disclosure in the proposed amendments helpful? Would additional examples be helpful? If so, what kind?

Again, the example is sufficient, but we are not in favor of making this disclosure a requirement.
Office of the Secretary  
PCAOB

Page Nine

Question 31: Should disclosure of the names of all other participants in the audit be required, or should the Board only require disclosing the names of those whose participation is 3% or greater? Would another threshold be more appropriate?

We continue to oppose the disclosure of the names of individuals participating in the audit. We further believe that the 3% parameter, if disclosure ultimately comes to pass, is a bit low. We're not sure what percentage is appropriate, but the general conception of materiality may find 3% to be a very small percentage to require disclosure.

Question 32: Is the proposed manner in which other participants in the audit whose individual extent of participation is less than 3% of total hours would be aggregated appropriate?

We believe this disclosure is even more inappropriate. What useful purpose would such disclosure serve? We can't think of any such purpose.

Question 33: Are the requirements to disclose the name and country of headquarters office location of the referred-to firm sufficiently clear and appropriate?

The disclosure seems clear and appropriate.

Question 34: Are there any challenges associated with removing the requirement to obtain express permission of the referred-to firm for disclosing its name in the audit report? If so, what are the challenges and how could they be overcome?

We are not aware of any challenges that might arise. However, common courtesy would seem to require notification that such disclosure is being made.

Question 35: In situations in which the audit report discloses both the referred-to firm and other participants in the audit, would using different disclosure metrics (e.g., revenue of the referred-to firm and percentage of the total hours in the most recent period's audit for the other firms and persons) create confusion? If so, what should the disclosure requirements be in such situations?

These disclosures, along with the other disclosures required by this guidance, are going to result in a great deal of confusion. The interesting issue regarding that confusion is the ultimate breadth of confusion that will result if these disclosures become a requirement. We do not believe the Board or any responding practice unit or organization has any idea as to the breadth of the confusion that will result. We are convinced that these disclosures will generate many questions and concerns on the part of users and lead to numerous misunderstandings that will negatively impact the decisions users make as a result of their interpretation of these disclosures.

Sir / Madam,

PCAOB Rulemaking Docket Matter No. 29
IMPROVING THE TRANSPARENCY OF AUDITS:
PROPOSED AMENDMENTS TO PCAOB AUDITING STANDARDS AND FORM 2

The Institute of Chartered Accountants in Australia (Institute) is pleased to have the opportunity to respond to the above Rulemaking Docket. The Institute is Australia’s premier accounting body, and represents over 55,000 professional accountants. Our members work in diverse roles across public practice, commerce, industry, government and academia throughout Australia and internationally.

The Institute is a founding member of the Global Accounting Alliance (GAA), the international accounting coalition which provides reciprocal arrangements with ten other leading accounting bodies in the world. The GAA represents more than 780,000 members world-wide and includes leading professional accounting organisations from the USA, Canada, Hong Kong, England & Wales, Ireland, Scotland, Japan, Germany, New Zealand and South Africa. The Institute is the only Australian accounting body within the alliance.

As mentioned in previous submissions to the PCAOB we are of the view that, as a premier audit regulatory body, the PCAOB and its findings influence audit regulation globally and it is for this reason we offer our comments on this matter.

In summary we fully support efforts to improve audit quality. However, we have some reservations about the extent to which the proposed amendments to PCAOB auditing standards will actually contribute to these endeavours.

Audit partner name and signature

In Australia the requirement for audit reports to be signed in both the name of the firm and the engagement partner has been in place for many years now. Consequently these proposals would be considered to be relatively non controversial in this jurisdiction.

For the sake of clarity, the engagement partner is the individual who takes overall responsibility for the conduct of the audit in accordance with legislative requirements, auditing standards as well as the requirements of the firm.

We acknowledge that identification of the audit partner contributes to transparency and may be of some use to investors and other stakeholders. However, the extent to which this disclosure has changed firm and individual partner behaviour, and / or contributed to an improvement in audit quality, is unclear.
Indeed there is no empirical evidence of which we are aware that this has enhanced audit quality or reduced audit failure. The Australian experience in this regard is no different from other jurisdictions where the engagement partner is not named in the audit report. In our view, therefore, this step is peripheral to the development of audit quality.

As mentioned in previous submissions to the PCAOB, in our view the focus should continue to be on ongoing improvement in enhancing audit quality, by better understanding the drivers of audit quality and continuing to enhance the role of the audit committee.

Disclosure of other persons and firms involved in the audit

We do not support the proposal to disclose in the audit report the names of other accounting firms and persons that have taken part in the audit. We understand the PCAOB’s desire to improve transparency by means of this proposal. But we consider that, while well-intentioned, if the proposal is implemented it is more likely to add to confusion rather than enhance transparency.

In situations where the engagement partner uses the work of other accounting firms or experts, the auditing standards are quite clear that the partner has to satisfy himself or herself as to the competency of those to whom work is being assigned. The engagement partner is then required to monitor and review the work of the other party to ensure they have sufficient appropriate audit evidence of suitable quality to satisfy the requirements of that engagement partner and of their firm.

Responsibility for the quality of the audit is thus unequivocally that of the engagement partner.

In our view the auditor using the work of others is far better placed to make the assessment by direct processes of interrogation or inspection than the investing public or their advisers.

Adding a list of others involved in the conduct of the audit creates the risk of the lines of responsibility for the conduct of the audit becoming blurred and adding to stakeholder confusion, rather than enhancing transparency.

A better place for the discussion of the roles various parties play in the conduct of the audit is the audit committee, which has a major responsibility to shoulder in ensuring that the audit process is effective.

We would be happy to elaborate on the foregoing matters should you wish.

Yours sincerely

Lee White FCA

INTRODUCTION
1. ICAEW welcomes the opportunity to comment on the PCAOB’s proposals *Improving the Transparency of Audits: Proposed Amendments To PCAOB Auditing Standards and Form 2* published in on 11 October 2011 a copy of which is available from this [link](#).

WHO WE ARE
2. ICAEW is a world-leading professional accountancy body. We operate under a Royal Charter, working in the public interest. ICAEW’s regulation of its members, in particular its responsibilities in respect of auditors, is overseen by the UK Financial Reporting Council. We provide leadership and practical support to over 136,000 member chartered accountants in more than 160 countries, working with governments, regulators and industry in order to ensure that the highest standards are maintained.

3. ICAEW members operate across a wide range of areas in business, practice and the public sector. They provide financial expertise and guidance based on the highest professional, technical and ethical standards. They are trained to provide clarity and apply rigour, and so help create long-term sustainable economic value.

4. The Audit and Assurance Faculty is a leading authority on external audit and other assurance activities and is recognised internationally as a source of expertise on audit issues. It is responsible for technical audit and assurance submissions on behalf of ICAEW as a whole. The faculty membership consists of nearly 8,000 members drawn from practising firms and organisations of all sizes from both the private and public sectors. Members receive a range of services including the monthly Audit & Beyond newsletter.

MAJOR POINTS

Disclosure of Other Participants in the Audit

5. We support PCAOB’s desire to improve transparency in auditor reporting. We also understand the discomfort of investors concerned about a lack of clarity regarding who is responsible for large multi-national audits, who has performed them, and the extent to which reliance has been placed on the work of auditors in distant jurisdictions whose business practices and cultures may not be well-understood in the US.

6. Unfortunately, we believe that the PCAOB, with the best of intentions, risks creating a charter for more uncertainty, not less. Implementing these proposals could be seriously counterproductive. Providing a great deal of information about who has been involved with the audit in an attempt at improving transparency may well increase confusion about who is responsible for the audit, because there is an element of a trade-off between transparency and accountability. Excessive transparency in the form of information overload is not good for accountability. If everyone appears to be responsible, no-one is. There is a risk that investors will not be able to see the wood for the trees which would defeat the object of the proposals.

7. We believe that what investors really need to know is who is responsible for the audit. They have a right to know who has been involved in the audit but this information does not belong in the auditors’ report. If a long list of people involved in the audit appears in the auditors’ report, doubt will be cast, at best, on whether the engagement partner identified in the report, or indeed the firm, is actually responsible for the audit.

8. We do not believe that transparency is an end in itself, and we do not believe that of itself it will enhance investor protection. Having information is not the same as understanding it or putting it to good use and there is a risk that accountability will be lost in a sea of spurious transparency. A more appropriate home for this information would be with the audit committee, which should be in a good position to evaluate it and communicate salient points to the board and investors. It is likely that extensive public disclosures about firms involved in...
multinational audits will be tracked. Attempts will be made to equate poor audit quality with the extensive use of other firms, without proper consideration of the (usually very sound) reasons for using local auditors. It is possible that as a result, firms may inappropriately seek to restrict the performance of audits to members of network firms in the interests of appearance, regardless of the effect on audit quality, increasing audit costs, and quite possibly the cost of capital if the wrong messages are sent to the market.

9. While the proposals do not address the merits or otherwise of divided responsibility, we strongly believe that this continued practice is the root of many of the problems that the PCAOB is trying to remedy.

Auditor signature proposals

10. Proposals for disclosure of the identity of the engagement partner are uncontentious and satisfy a deep-seated need among investors to know who within the firm has responsibility for the engagement. When similar proposals in the UK were first put forward, firms were wary of the possible effects of identifying the engagement partner. They were also sceptical about the implicit expectation that auditor behaviour would change. As with any change, at first, the novelty value made people sit up and pay attention but the effect rapidly wore off and there is now little mention of the subject. We believe that the initial scepticism about the effects of identification on auditor behaviour has been borne out. The UK requirements, despite the additional requirement for a signature, do not appear to us to have resulted in much, or indeed any behavioural change. Identifying the engagement partner might have improved perceptions of transparency but we have yet to be convinced of a significant effect on audit partner, firm or engagement team behaviour, other than an increase in administrative requirements. Requiring a signature, as opposed to simply identifying the engagement partner probably makes little difference but on balance, we believe that a signature deflects attention, probably inappropriately, from the firm as a whole.

RESPONSES TO SPECIFIC QUESTIONS

Disclosure of the Engagement Partner

A: The Proposed Audit Report Disclosure

1. Would disclosure of the engagement partner’s name in the audit report enhance investor protection? If so, how? If not, why not?

11. Disclosure of the engagement partner’s name in the audit report may improve transparency but we do not believe it will of itself enhance investor protection.

2. Would disclosing the name of the engagement partner in the audit report increase the engagement partner’s sense of accountability? If not, would requiring signature by the engagement partner increase the sense of accountability?

12. We have yet to be convinced that disclosing the name of the engagement partner or indeed requiring signature by the engagement partner in the audit report increases the engagement partner’s sense of accountability in any of the jurisdictions in which the requirement is in place.

3. Does the proposed approach reflect the appropriate balance between the engagement partner’s role in the audit and the firm’s responsibility for the audit? Are there other approaches that the Board should consider?

13. There is a risk that the identification of the engagement partner deflects attention from the responsibility of the firm as a whole. In most jurisdictions, the US being a notable exception where the audit committee appoints the firm, the shareholders are responsible for approving the appointment of the firm, not the individual engagement partner.
4. Would the proposed disclosure clearly describe the engagement partner’s responsibilities regarding the most recent reporting period’s audit? If not, how could it be improved? and

5. Would the proposed disclosure clearly describe the engagement partner’s responsibilities when the audit report is dual-dated? If not, how could it be improved?

14. If a requirement to disclose the engagement partner name is introduced, it would be preferable not to have more than one name in the audit report. Distinguishing between the partners responsible for the current year audit and the prior period audits would inevitably lead to confusion. It is certainly possible to envisage a situation where three partners are named as being responsible for each of the years presented which would not be helpful to investors.

15. The issue of dual dating is more problematic given that the incremental audit work performed for the dual dating period may be limited. Accordingly, while dual dating is retained within PCAOB standards, the proposed disclosure is probably appropriate in such circumstances.

6. Would the proposed amendments to the auditing standards create particular security risks that warrant treating auditors differently from others involved in the financial reporting process?

16. The PCAOB notes ICAEW concerns about security risks to auditors in its proposals but does not deal with the issue. We note that with a few exceptions, other advisers are not identified personally in the financial reporting process. Those who are identified are generally individuals who occupy senior positions in the reporting entity and whose appointment in an individual capacity is approved by the shareholders. Audit firms, on the other hand, are appointed as the auditor and not individual engagement partners. The audit engagement partner stands alone as a third party professional under these proposals and while under European law there are limited exceptions to deal with security concerns, no such protection is afforded under the PCAOB’s proposals.

7. Would the proposed amendments to the auditing standards lead to an increase in private liability of the engagement partner? and

8. What are the implications of the proposed disclosure rule for private liability under Section 10(b)? and

9. Would the disclosure of the engagement partner’s identity affect Section 11 liability? If so, what should the Board’s approach be?

10. Would the disclosure of the engagement partner’s identity have any other liability consequences (such as under state or foreign laws) that the Board should consider? and

11. Would a different formulation of the disclosure of the engagement partner ameliorate any effect on liability?

17. We make no comment on those parts of these questions which, as a matter of US law, are outside our expertise. However, some protection to European auditors is afforded by European law, as noted in the proposals. Nevertheless, we would be concerned if in fact disclosure were to generate actions against partners in the US.

B: The Proposed Amendment to Form 2

12. If the Board adopts the proposed requirement that audit reports disclose the name of the engagement partner, should the Board also require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2? and
13. If the Board does not adopt the proposed requirement that audit reports disclose the name of the engagement partner, should the Board nonetheless require firms to identify the engagement partner with respect to each engagement that the firms are otherwise required to disclose in Form 2? and

14. Disclosure in the audit report and on Form 2 would provide notice of a change in engagement partner only after the most recent period's audit is completed. Would more timely information about auditor changes be more useful? Should the Board require the firm to file a special report on Form 3 whenever there is a change in engagement partners? and

15. A change in engagement partner prior to the end of the rotation period could be information that investors may want to consider before the most recent period's audit is completed. Should the Board require the firm to file a special report on Form 3 when it replaces an engagement partner for reasons other than mandatory rotation to provide an explanation of the reasons for the change?

18. If the identity of the engagement partner is disclosed in the audit report, it would appear to be a natural follow-on for the same information to appear in Form 2. Changes in engagement partner can often appear more significant than they actually are and the PCAOB needs to consider whether the administrative cost of collecting this information will be of any real benefit other than to satisfy curiosity.

Disclosure of Other Participants in the Audit and Referred-to Accounting Firms

A. Disclosure When Assuming Responsibility or Supervising

1. Applicability of the Proposed Disclosure

16. Is it sufficiently clear who the disclosure would apply to? If not, how could this be made clear? and

19. Yes

17. Is it appropriate not to require disclosure of the individual who performed the EQR? If not, should disclosure of the engagement quality reviewer be required when the EQR is performed by an individual outside the accounting firm issuing the audit report or should the disclosure be required in all cases? and

18. Is it appropriate not to require disclosure of the person that performed the Appendix K review? and

19. Is it appropriate not to require disclosure of persons with specialized skill or knowledge in a particular field other than accounting and auditing not employed by the auditor or persons employed or engaged by the company who provided direct assistance to the auditor?
20. We cannot see how investor protection will be genuinely enhanced by disclosure of the EQR, or the person that performed the Appendix K review, or the specialists described in Q19 in any circumstances. Such information is simply too low level and granular to have any significance to investors and may appear to further dilute the responsibility of the firm for the audit opinion. Furthermore, Appendix K is clear that the Appendix K reviewer, who may well be employed by another firm, is not responsible for the audit. Disclosing that individual’s name would likely give the misleading impression that they were in fact responsible for the audit.

2. Details of the Disclosure Requirements

20. Would disclosure of off-shoring arrangements (as defined in the release) or any other types of arrangements to perform audit procedures provide useful information to investors and other users of the audit report? If yes, what information about such arrangements should be disclosed? And

21. Would disclosure in the audit report of other participants in the audit provide useful information to investors and other users of the audit report? Why or why not?

22. Are the proposed requirements sufficiently clear and appropriate with respect to identifying other participants in the audit? If not, how should the proposed requirements be revised?

23. Are the proposed requirements sufficiently clear as to when the name of a public accounting firm or a person would be required to be named in the audit report? Is it appropriate that the name of the firm or person that is disclosed is based on whom the auditor has the contractual relationship?

24. Would disclosure in the audit report of other participants in the audit have an impact on the ability of independent public accounting firms to compete in the marketplace? If so, how would the proposed requirement impact a firm’s ability to compete in the marketplace?

25. Are there any challenges in implementing a requirement regarding the disclosure of other participants in the audit? If so, what are the challenges and how can the Board address them in the requirements?

21. It is important, as noted in our main points above, that transparency does not obscure accountability. It is likely that there will be inappropriate focus on the location of the relevant office at the expense of understanding how tightly the office is controlled, which is more important from an audit quality point of view. It is important that such disclosures are made in context. Investors are better served by an explanation that significant operations in India are audited by offices in India than a bald statement to the effect that a percentage of the audit was conducted by an office in India.

22. If PCAOB does require such disclosure, we suggest that the relevant participants be categorised as follows:

- Network firms registered with the PCAOB
- Non-network firms registered with the PCAOB
- Firms not registered with the PCAOB

23. It may also be appropriate to further identify within each category those firms in countries where the PCAOB is not currently able to conduct inspections.

3. Disclosure of Percentage of the Total Hours in the Most Recent Period’s Audit, Excluding EQR and Appendix K review
26. Is the percentage of the total hours in the most recent period's audit, excluding EQR and Appendix K review, a reasonable measure of the extent of other participants' participation in the audit? If not, what other alternatives would provide meaningful information about the extent of participation in the audit of other participants? and

27. What challenges, if any, would requiring the percentage of audit hours as the measure of the other participants' participation present? and

28. Should the Board require discussion of the nature of the work performed by other participants in the audit in addition to the extent of participation as part of the disclosure? If so, what should be the scope of such additional disclosures? and

29. Would the proposed disclosure of the percentage of hours attributable to the work performed subsequent to the original report date in situations in which an audit report is dual-dated be useful to users of the audit report?

30. Is the example disclosure in the proposed amendments helpful? Would additional examples be helpful? If so, what kind?

24. We do not believe that the percentage of total hours is either a reasonable measure of the extent of the other participants' participation, nor do we believe that its disclosure will be useful to investors or enhance investor protection. The percentage of hours expended does not necessarily correlate with audit risk or reflect the experience of the individual. Clearly, hours spent by the lead client service partner are more important to audit quality than those of a new associate employed by another participant in the audit.

25. Furthermore, where network firms are tightly controlled, such information will not reveal the extent to which one firm performed work for others within the network. While a description of the nature of the work performed would be necessary to make any sense of the figures, it would likely be lengthy, complex and boilerplate. It would risk being a de facto disclosure of the audit strategy to the auditee and the world at large, and indirectly disclosing information about the entity's operations that should properly be disclosed by management.

4. Thresholds

31. Should disclosure of the names of all other participants in the audit be required, or should the Board only require disclosing the names of those whose participation is 3% or greater? Would another threshold be more appropriate? and

32. Is the proposed manner in which other participants in the audit whose individual extent of participation is less than 3% of total hours would be aggregated appropriate?

26. We do not understand the rationale for the 3% threshold and believe it could lead to excessive disclosure if each individual firm were named. It may be more logical to use a 20% threshold consistent with the definition of ‘substantial role’ in the PCAOB’s rules.

B: Disclosure When Dividing Responsibility

33. Are the requirements to disclose the name and country of headquarters’ office location of the referred-to firm sufficiently clear and appropriate?

27. The proposed requirements are clear but we are not convinced that this level of detail will be helpful to investors.
34. Are there any challenges associated with removing the requirement to obtain express permission of the referred-to firm for disclosing its name in the audit report? If so, what are the challenges and how could they be overcome?

28. We do not comment on this issue which is a matter of US law and practice.

35. In situations in which the audit report discloses both the referred-to firm and other participants in the audit, would using different disclosure metrics (e.g., revenue for the referred-to firm and percentage of the total hours in the most recent period's audit for the other firms and persons) create confusion? If so, what should the disclosure requirements be in such situations?

29. It seems self-evident that two sets of metrics will cause confusion. The extant metrics are at least well-established.
January 9, 2012

Mr. J. Gordon Seymour
Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington, DC  20006-2803

Re: PCAOB Proposed Rulemaking on Improving the Transparency of Audits:
Proposed Amendments to PCAOB Auditing Standards and Form 2 (PCAOB
Release No. 2011-007, October 11, 2011 and PCAOB Rulemaking Docket
Matter No. 29)

Dear Mr. Seymour:

The U.S. Chamber of Commerce (the “Chamber”) is the world’s largest
federation of businesses and associations, representing the interests of more than
three million U.S. businesses and professional organizations of every size and in every
economic sector. These members are both users and preparers of financial
information. The Chamber created the Center for Capital Markets Competitiveness
(“CCMC”) to promote a modern and effective regulatory structure for capital markets
to fully function in a 21st century economy.

The CCMC believes that businesses must have a strong system of internal
controls and recognizes the vital role external audits play in capital formation. The
CCMC appreciates the opportunity to comment on the Public Company Accounting
Oversight Board’s ("PCAOB") Proposed Rulemaking on Improving the
Transparency of Audits: Proposed Amendments to PCAOB Auditing
Standards and Form 2 ("the Proposal").

The CCMC is concerned that the Proposal will undermine the foundation of
the audit process impairing transparency and accountability. The CCMC believes that
the Proposal in its current form will obfuscate essential responsibilities thereby
harming accountability. Because of these concerns and the lack of any tangible
demonstrated benefit, the CCMC believes that the Proposal should be reassessed through a public roundtable of all interested stakeholders and additional outreach such as field testing.

Rather than moving forward on this Proposal, the CCMC believes that the PCAOB should concentrate its efforts on updating its quality control standards that are long overdue for updating.

Discussion

The Proposal would amend the PCAOB standards and rules to require registered public accounting firms to make two new disclosures in the audit report:

1. The name of the engagement partner for the most recent period’s audit; and

2. Information on other independent public accounting firms and other persons that took part in the audit. In addition, the name of the engagement partner would also be required to be disclosed in Form 2 filed with the PCAOB for each audit report already required to be reported on the Form.

A foundational precept of independent audits is that the audit firm has ultimate responsibility for the audit report, while the opinion rendered represents the combined efforts of a team of individuals. Proposing disclosure requirements that could undermine and confuse this essential responsibility would impair transparency and accountability. It is also unclear what the objectives of the Proposal are, how the Proposal furthers the mission of the PCAOB, and what the consequences of the Proposal are in terms of its costs and benefits.

1. **Disclosing the Name of the Engagement Partner**

The proposal to disclose the name of the engagement partner for the most recent period’s audit evolved from the PCAOB’s *Concept Release on Requiring the Engagement Partner to Sign the Audit Report* issued on July 28, 2009. Among the concerns expressed by commenter’s on that Concept Release was that
partner signatures would suggest the engagement partner is responsible for the audit engagement and increase engagement partner legal liability.

The CCMC commends the PCAOB for responding to these concerns by not pursuing the original Concept Release. However, the CCMC believes that these fundamental concerns regarding the Concept Release hold equal weight with the current Proposal.

It is also problematic that the PCAOB continues to move in the direction of expecting engagement partners to somehow build their own individual reputations for audit quality, independent of their firm’s reputation, undermining accountability in the audit process and harming investor protection.

In reality, the firm’s quality control system, in accordance with the PCAOB’s "interim" quality control standards, provides the foundation for the efficacy of the work performed on the engagement by the team of individuals in rendering the audit opinion. The CCMC believes that the PCAOB’s quality control standards are long overdue for updating. Investors would likely be better served by the PCAOB focusing its efforts on updating these standards rather than diverting its time and resources on the Proposal.

a. Legal Liability

The potential for the disclosure of the name of the audit partner to increase engagement partner legal liability was recognized by Board Member Dan Goelzer in his Statement on the Proposal and his comments at the PCAOB’s open Board meeting on October 22, 2011. The duties and relationships established by federal securities laws, Securities Exchange Act Rule 10b-5 and Securities Act Section 11 are the basis of those concerns. The June 2011 decision of the U.S. Supreme Court in Janus Capital Group, Inc.1 has added to the uncertainty over legal liability under Rule 10b-5 in the context of this Proposal. In addition, it remains to be seen whether the Securities and Exchange Commission ("SEC") would require issuers to file not only the consent of the accounting firm that prepared the audit report but also a separate

---

1 See Janus Capital Group, Inc. v. First Derivative Traders, 131 S.Ct. 2296 (2011).
consent of the engagement partner whose name is disclosed in the audit report. If this requirement unfolds, this would subject the partner, along with the accounting firm, to potential Section 11 liability. Further, the CCMC understands liability issues could potentially extend to disclosure of the name of the engagement partner in PCAOB Form 2.

Given these legal uncertainties, the CCMC believes it would be premature of the PCAOB to proceed with this Proposal. The Board needs to fully understand the liability implications and have persuasive evidence that disclosure of the name of the engagement partner would be liability neutral. Neutrality is consistent with the recommendation of the Advisory Committee on the Auditing Profession (“ACAP”) that was the genesis for the Proposal. The ACAP recommendation was premised on the condition that the requirement not impose on the engagement partner “any duties, obligations or liability that are greater than the duties, obligations and liability imposed on such person as a member of an auditing firm.”

b. Objectives

The Proposal reiterates that the objectives from the Concept Release on partner signature—namely transparency and accountability—continue to be the objectives for disclosing the name of the engagement partner in the audit report and on PCAOB Form 2. Unfortunately, these objectives lack clarity in the context of this Proposal.

While the Proposal articulates the “means” of disclosing more information, it fails to state the “ends” it seeks to achieve. The Proposal fails to articulate the problem that needs to be addressed and how disclosing the name of the engagement partner will enhance financial reporting for investors.

---

2 If this scenario was to unfold, it is unclear if an issue of consent would be created for others participating in the audit.
3 ACAP recommended that the PCAOB “undertake a standard setting initiative to consider mandating the engagement partners’ signature on the auditor’s report” (Final Report of the Advisory Committee on the Auditing Profession to the U.S. Department of the Treasury, (2008), VII: 19, VII: 20).
4 Ibid at VII: 20. The ACAP Report also noted that this language is similar to safe harbor language the SEC promulgated in its rulemaking pursuant to The Sarbanes-Oxley Act of 2002 (“SOX”) for audit committee financial experts.
Such an articulation is important as the Proposal simply provides conjectures for some of which the Board seeks comments on. For example, the Board asks whether the additional transparency could promote auditor independence by discouraging audit clients from inappropriately pressuring the firm to remove an engagement partner sooner than is required under the partner rotation requirements in SOX and SEC rules. Yet, there are many substantive reasons for changes in engagement partners. And, without additional information disclosed about the reason for a change in the engagement partner an “inappropriate” partner change could not be discerned from a change in the name alone.

At the November 2011 meeting of the PCAOB’s Standing Advisory Group ("SAG"), PCAOB staff emphasized that no such additional disclosure regarding a change in engagement partners is proposed or planned. Indeed, current disclosure requirements on auditor change reside within the SEC’s jurisdiction and strongly suggest that any rulemaking along these lines would be better left to the SEC.

In the Proposal, accountability is described in terms of the original Concept Release with the added proviso that disclosure may make partners feel more accountable for the quality of the work and, therefore: “Disclosing the name of the engagement partner may be one means of promoting better performance”6. Not all agree with that statement and at the November 2011 SAG meeting, one SAG member took strong issue with this notion.

Reinforcing the speculative and likely illusory nature of any such improvements, the PCAOB has provided no evidence related to how this Proposal might improve audit quality. This is important because audit quality is the PCAOB’s mission. As Dan Goelzer stated at the PCAOB’s open Board meeting on October 11, 2011: “Unless engagement partner disclosure can be directly linked to improving audit quality, or to promoting understanding of the financial statement audit or of the Board’s inspection program, the issue would seem to fall in the SEC’s bailiwick.”7

---

6 Ibid.
7 See “Statement on Proposed Amendments to Improve Transparency Through Disclosure of Engagement Partner and Certain Other Participants in Audits” at the October 11, 2011 PCAOB Open Board Meeting by Daniel L. Goelzer, Board Member.
c. Improving Audit Quality

Evidence linking the Proposal with improvements to audit quality is a necessary condition for PCAOB rulemaking and for SEC approval of such rulemaking. The absence of any such evidence is likewise troublesome because the PCAOB considers collecting such evidence through its inspection process as one of its unique strengths. For example, the PCAOB’s Strategic Plan for 2011-2015 (the “Strategic Plan”) states: “We possess unique data and analysis related to audits based on eight years of inspections and enforcement experience, as well as a sophisticated research and analysis function”. Yet, there is no PCAOB data or analysis in evidence to support this Proposal and the Proposal makes no reference to the PCAOB having either collected or analyzed any relevant data.

Paradoxically, the objective for the disclosure of the name of the engagement partner, particularly the Form 2 disclosures, appears to be to facilitate analysis by others, not for the benefit of the PCAOB. For example, the Proposal states the purpose of the Form 2 disclosures is to compile this information in one place that could be easily accessed. This implies that meaningful analysis of this data is possible and useful, which in reality is problematic given the complex nature of audit quality. This also ignores the facts that a thorough analysis of any such data requires such data to be considered in conjunction with information that may not be available or relevant to investors.

Finally, it is worth noting that the PCAOB has not yet developed audit quality indicators—another ACAP recommendation. It would seem that the development of such indicators should occur in advance of any rulemaking on disclosing the name of the engagement partner as, at least implicitly, the Proposal is suggesting that the name of the engagement partner is somehow a quality indicator.

---

10 Additionally, the Proposal fails to take into account that various actors aggregate a variety of data from SEC filings that they find relevant.
d. Other Costs and Benefits

An additional motivation for disclosing the name of the engagement partner appears to be to provide useful information for audit committees. For example, the Proposal reiterates a point made in the Concept Release that “providing financial statement users, audit committees, and others with the name of the engagement partner might provide them the opportunity to evaluate, to a degree, an engagement partner’s experience and track record. If so, audit committees might increasingly seek out engagement partners who are viewed as performing consistently high quality audits, and the resulting competition could lead to an improvement in audit quality.”

However, this rationale cannot serve as a basis for rulemaking as audit committees already have access to this information and would need to use it in conjunction with a variety of other information, both public and private, for assessing quality on their audits.

As expressed in previous letters to the PCAOB, the CCMC continues to be concerned that this Proposal provides yet another illustration of the PCAOB’s skepticism regarding the role of audit committees and that this and other PCAOB proposals may actually interfere with the prerogatives, discretion and duties of audit committees. For example, with this Proposal, the PCAOB seems to be expecting investors to second guess the work of audit committees based on “one” data point – the name of the engagement partner.

2. Disclosing Information on Others Participating in the Audit

Somewhat ironically the Proposal combines a disclosure focused on one individual with a requirement to disclose more information about others participating in the engagement not employed by the auditor. The Proposal calls for disclosure, with limited exceptions, of other participants in the audit for whose audit the auditor takes responsibility or whose audit procedures the auditor supervises. The Proposal

---

would require the auditor to disclose in the audit report, the names, location, and percentage of hours attributable to the other participants for those whose participation is 3% or greater of total hours. Disclosures would also be required when the auditor divides responsibility with another independent public accounting firm.

The Proposal suggests that these disclosures would “enable investors and other users of the audit report to determine whether a disclosed independent public accounting firm is registered with the Board and has been subject to PCAOB inspection, and whether a disclosed independent public accounting firm or another person has had any publicly available disciplinary history with the Board or other regulators”\(^\text{13}\). However, this is information that the audit committee has access to and can consider in exercising its oversight responsibilities. Further, the auditor either takes responsibility for the work of others or divides responsibility. In the case of the later, current disclosures to investors do not appear wanting for assessing audit quality and the applicability of PCAOB inspection information.

Essentially the “new” information proposed to be disclosed involves work for which the auditor assumes responsibility. As such, the proposed disclosures are likely to only cause confusion over who has responsibility for the audit. The CCMC notes that avoiding such confusion is an important objective of current auditing standards. This suggests that investors would be better served with more targeted disclosures founded on some meaningful objective.

The potential for confusion is exacerbated by the low threshold for disclosure of 3% being proposed. The basis for this threshold is unclear as the Proposal provides no meaningful rationale for it. Further, a 3% threshold is much lower and in marked contrast to the 20% threshold already incorporated in PCAOB rules to determine others performing a substantial role in audits and thus subject to PCAOB registration and inspection. So, why should investors be interested in what the PCAOB is not?

Further, there is no indication that the PCAOB has field-tested the 3% threshold to determine the relevance of the information to be disclosed. For example,
the Proposal contains no useful illustrations based on real-world data. The absence of these data to inform stakeholders about the implications of the Proposal is surprising, given the PCAOB has access to the necessary data through its inspection process and, as previously noted, the PCAOB emphasizes this in its Strategic Plan as strength of the organization.\footnote{While the CCMC does not believe that it is in the best interests of financial reporting to move forward on this proposal, one alternative the PCAOB may wish to consider is that the Form 2 would be a more useful location for such disclosures, as the determination of information in SEC filings is more appropriately maintained within the SEC’s jurisdiction, Form 2 disclosures would not lengthen issuer and broker-dealer filings with tangential information, and Form 2 disclosures would not be subject to the estimation of hours necessitated by the short time constraints for SEC filings. In addition, disclosure in Form 2, instead of the audit report, might help mitigate potential liability issues and confusion over auditor responsibility, as previously discussed.}

**Conclusion**

The CCMC appreciates the opportunity to comment on the Proposal. However, the CCMC believes that the Proposal will disseminate information that is non-material, lacks relevance that could undermine the fundamental foundations of the audit function hampering the ability of investors to make informed decisions. Without a clear articulation of the problems to be solved and the benefits of the proposal, the CCMC does not believe that the proposal should move forward.

Furthermore, based on the statements and comments by Board members at the October 11, 2011 open Board meeting, it appears that the majority of Board members strongly support enacting the Proposal raising potential due process questions. The CCMC hopes that the PCAOB will take the concerns expressed in this letter under consideration when deliberating on the Proposal.

Thank you for your consideration and the CCMC stands ready to discuss these concerns in further detail.

Sincerely,

Tom Quaadman

RE: PCAOB Rulemaking Docket No. 29 on Disclosing Audit Engagement Partners

Dear Members of the Board:

The purpose of this letter is to express support for amendments proposed by the Public Company Accounting Oversight Board (PCAOB) to improve audit quality, transparency, and accountability by requiring registered public accounting firms to disclose the name of the lead engagement partner in each audit report and in the firm’s Annual Report Form as well as the name of any other independent public accounting firm or other person who took part in the audit.

**Strengthening Public Company Audits.** The U.S. Senate Permanent Subcommittee on Investigations, which I chair, has long had an interest in strengthening audits of publicly traded corporations to protect investors, prevent fraud, and provide a strong foundation for the American economy. Its investigations have included exposing the poor quality audits that contributed to the collapse of the Enron Corporation,1 the development and sale of financial products designed to help corporations hide debt on their financial statements,2 and the development and sale of abusive tax shelter and other schemes by accounting firms and other professionals to minimize corporate taxes and inflate corporate earnings.3 The Subcommittee’s work has contributed to legislative efforts to strengthen the auditing process, including the Sarbanes-Oxley reforms that created the PCAOB, imposed new requirements to ensure auditor independence, and strengthened corporate board oversight of auditing procedures.4

Poor quality audits of publicly traded corporations continue to plague the U.S. investment community, allowing misleading accounting, outright frauds, and substantial losses to occur. Egregious recent examples include Olympus Corp., where Japanese affiliates of KPMG and Ernst & Young approved financial statements in which the corporation shifted billions of dollars

---

in investment losses off its balance sheet while including other assets at inflated values;\(^5\) Satyam Computer Services Ltd., where an Indian affiliate of PricewaterhouseCoopers approved financial statements in which the company reported inflated assets and cash balances;\(^6\) and Parmalat, where Italian affiliates of Grant Thornton and Deloitte Touche approved financial statements in which the company reported over $5 billion in phantom assets and falsified earnings.\(^7\) Those are on top of older accounting scandals involving prominent public corporations like Enron, WorldCom, Xerox, and Adelphia.\(^8\) These prominent audit failures indicate that more needs to be done to encourage accurate and effective audits of public corporations and increase accountability for poor auditing practices.

**Proposed Amendments.** In 2009, in a bid to strengthen audit quality, transparency, and accountability, the PCAOB issued a Concept Release seeking comment on whether auditors should require the engagement partner with final responsibility for a particular audit to sign the audit report. The engagement partner is the key person within a registered public accounting firm who is “responsible for the engagement and its performance,” and who coordinates and oversees the audit work and issuance of the audit report.\(^9\) After receiving multiple comments, in 2011, the PCAOB issued the revised proposal currently under consideration. This proposal would require public auditors to disclose the name of the engagement partner in each audit report, but would not require the partner to sign the report; it would require each audit report listed in a public accounting firm’s Annual Report Form to identify the relevant engagement partner; and it would require each audit report to disclose the name of any independent public accounting firm or other person who took part in the audit. All three of these proposals are important reforms that would strengthen public company audits.

**Increased Public Disclosure.** The Board’s proposal to increase public disclosures about who actually conducts and is responsible for a particular audit is a welcome departure from a history of excessive secrecy and weak accountability for public company audits.

---

\(^9\) See paragraph 3 of Auditing Standard No. 9, “Audit Planning”; and paragraph 3 of Auditing Standard No. 10, “Supervision of the Audit Engagement.”
Most public company audits are now performed by a small number of large firms. The "Big Four" accounting firms, which reported $45 billion in revenue in 2011 alone,\(^6\) employ thousands of auditors with differing experience, qualifications, expertise, and work performance. Currently, these firms provide no routine public information about the engagement partner who is responsible for the audit of a particular company nor do they provide information about any third party contributor to their audits. Investors, lenders, regulators, and others currently have no means for tracking audit partners responsible for accurate audits, audit failures, or audits later found to have varying strengths and weaknesses.

Because auditing firms are paid by the companies whose financial statements they audit, inherent conflicts of interest make public accountability and transparency all the more important. An accounting firm that receives large auditing fees from a client becomes susceptible to pressures by that client to overlook problems or resolve auditing issues in ways that are overly favorable to the client, or risk losing fee revenue. Engagement partners that recommend advising a client to accept a disagreeable auditing result may receive little or no support from colleagues concerned about losing business. Public accountability, in which specific individuals are recognized for high quality audits, as well as audit failures, can be a powerful antidote to such internal pressures.

**Disclosing the Engagement Partner.** Multiple reasons support disclosing the name of the engagement partner responsible for a particular audit. First is the impact on audit quality. Publicly tying the lead auditor’s professional reputation to the audits for which that partner is responsible would encourage the partner to require better audit procedures, exercise better supervision of the audit team, and perform a more careful review of the audit results. It may also deter poor oversight, sloppy procedures, and high risk audit practices leading to unreliable audit opinions. Audit quality would improve, not only because engagement partners would want to protect their professional reputations, but also because public disclosure would expand the audience to which each partner would be routinely answerable, from the partner’s firm and the audit client, to the broader business community, including investors, lenders, regulators, policymakers, and fellow auditing professionals.

Second, disclosure of the engagement partner’s name would strengthen audit transparency by shedding light on the audit process and facilitating communications. Identifying the engagement partner would alert the audited corporation’s officers, directors, audit committee, and employees to the key person responsible for resolving audit issues and help corporate employees communicate any auditing concerns to the right person. It would also inform third parties, including investors, lenders, regulators, and others, of the right person to contact with

---

financial reporting interests or concerns. In addition, knowing the key person responsible for an audit could facilitate investigations, simplify research, and aid in evaluations of audit reports. Investigations examining financial misconduct would also be more efficient and effective if they had ready access to the names of the engagement partners responsible for particular audit reports.

Public disclosure would also facilitate evaluation of senior auditors and the audit reports for which they are responsible. Disclosure would enable not only the audit client, but also investors, lenders, regulators, and other financial statement users, to identify and evaluate an engagement partner’s experience, expertise, track record, and work for other clients that might present conflict of interest problems.

Third, disclosure of the engagement partner would strengthen both partner and firm accountability for audit failures. Right now, when a company is found to have engaged in misleading or fraudulent accounting, the identity of the engagement partner is not readily apparent; making that information publicly available would facilitate holding particular engagement partners accountable for the audits they oversee. Because both the engagement partner and the public accounting firm would be identified in the audit report, the current proposal intentionally and clearly signals that accountability is intended to attach to both. In addition, as engagement partners are often indemnified by their employers in the same manner as officers and directors of corporations, any lawsuit over inaccurate financial reporting would likely affect the firm as well as the partner, providing an added incentive for the firm to monitor the performance of its engagement partners.

A fourth reason to support the PCAOB proposal is that it would promote auditor independence by highlighting the occasions on which an engagement partner is replaced. The Permanent Subcommittee on Investigations conducted an examination into the collapse of Enron Corporation in 2002, and discovered that when an Arthur Anderson senior partner raised objections to certain Enron accounting practices, he was removed at Enron’s request, with no public notice. The Enron investigation demonstrates that even senior auditors can be removed at the request of a client displeased with their accounting advice. Disclosure of an engagement partner’s name and any replacement might discourage audit clients from inappropriately pressuring that partner or the audit firm to cooperate with its accounting requests, since any replacement would require public notice and, in turn, raise public questions about the reasons for the replacement. To further support auditor independence, the proposal could be strengthened by requiring registered public accounting firms to file a special report on Form 3 within a few days of replacing an engagement partner in charge of a public company audit.

Still another reason to support disclosure of the engagement partner is that it would bring U.S. audit professionals in line with other U.S. corporate professionals and their international counterparts. U.S. corporate officers already sign their names to a variety of opinions and reports filed with the SEC, including certifications regarding the accuracy of the corporation’s financial statements, while a majority of corporate directors sign their corporation’s Annual Form 10-K. Attorneys are required to sign a variety of documents filed with federal and state regulators and the courts. In addition, the Federal Reserve already requires bank holding

companies to provide the names of audit engagement partners. The European Union already requires its member states to compel audit reports to be “signed by at least the statutory auditor(s) carrying out the statutory audit on behalf of the audit firm.” The PCOAB would bring U.S. audit professionals into closer alignment with other public company professionals by requiring public auditors to identify their audit engagement partners in the documents which they make publicly available and which they intend to be relied upon by the investing public.

**Requiring A Signature.** The PCAOB proposal seeks comment on whether, in addition to disclosing the name, an engagement partner should be required to sign the audit report for which the partner is responsible. The proposal should require such signatures. Critics contend that requiring a signature would increase liability for individual audit partners, while decreasing the liability of the audit firm as a whole. Those criticisms fail to acknowledge, however, that through indemnification and insurance agreements, the liability of senior audit partners and their employers are already typically closely intertwined. In addition, professions such as public accounting have long nurtured trust and respect by placing the reputation of their senior professionals on the line in support of their work. An audit report that carries the personal signature of a financial professional would not only strengthen audit quality, transparency, and accountability, but also help restore the personal responsibility critical to a trustworthy and respected accounting profession.

**Disclosing Engagement Partners in Annual Reports.** Public accounting firms currently file with the PCAOB an Annual Report Form listing each of the audit reports they have issued during the covered year. The proposal would amend the Annual Report Form to also require public accounting firms to identify the engagement partner for each of their listed audits. This proposed disclosure offers an inexpensive, sensible, and effective means for further strengthening public audits.

The proposed disclosure would provide a convenient mechanism for financial statement users to retrieve information about the work assigned by a public accounting firm to its engagement partners over the course of a year. The information would appear in one location and would be easily accessible since the annual reports are posted by the PCAOB on its website. The proposal would facilitate auditor oversight by making it easy for audit clients, investors, lenders, regulators, and others to research the work of a particular engagement partner, including by identifying the other clients the partner serves, evaluating the partner’s workload, and making it easier to identify any conflict of interest or disciplinary issues. It would also facilitate oversight of audit firms as a whole by making all of the work assignments made to individual engagement partners available in one location.

---

14 See PCAOB Rule 2201; PCAOB Form 2 - Annual Report Form, http://pcaobus.org/Rules/PCAOBRules/Pages/Form_2.aspx; “Staff Questions and Answers Annual Reporting on Form 2,” PCAOB, at 1, 2 (June 17, 2011), http://pcaobus.org/Registration/rasr/Documents/Staff_QA-Annual_Reporting.pdf (stating “[e]ach registered firm must provide basic information once a year by filing an annual report on Form 2.”). The report must be filed by June 30 of each year.
Naming engagement partners in the Annual Report Form would further strengthen audit quality, transparency, and accountability by enabling more efficient and effective research into the work of individual partners and of audit firms as a whole. These disclosures would encourage engagement partners to provide consistent, high-quality work, because knowing that the public can obtain one's name only by inquiring about a particular audit is not the same as knowing that the public can easily associate one's name with every audit performed during the year. In addition, the disclosures would help ensure that public accounting firms assign audits to engagement partners with appropriate expertise and availability, and avoid conflicts of interest that might otherwise be hidden from public view. The disclosures could also promote auditor independence by highlighting any engagement partner replacements during the covered year.

**Disclosing Third Party Audit Participants.** In addition to disclosing engagement partner names, the PCAOB proposal contains an important provision that would require disclosure of third party participants in particular audits. This provision would shine needed sunlight on a little known and difficult to monitor area of auditing, while significantly strengthening audit quality, transparency, and accountability.

When investors see the name of a major auditing firm on an audit report, they may make certain assumptions about the quality of that audit based upon that company's reputation. It is often the case, however, that an accounting firm issuing an audit report has not performed 100% of the underlying audit work, but has instead delegated all or a portion of the work to one or more outside parties, including independent auditing firms or specialists in particular areas. In addition, the accounting firm may have supervised and taken responsibility for the work performed by the third party, or may have contracted to hold the outside party solely responsible for the work it performed. Audit clients, investors, lenders, regulators, and others may be unaware of the extent to which some or all of the work in a particular audit was outsourced to outside parties. They may also be unaware of the identity of the third parties that actually performed the audit work and the extent to which the firm issuing the audit report has relied upon and taken responsibility for that work. Since auditors vary significantly in their expertise, resources, and reputation, knowing which parts of an audit were outsourced and who performed what portions of the work may be critical to assessing audit quality.

The Permanent Subcommittee on Investigations has firsthand experience with the variability of audit work performed by different firms. For example, a year-long investigation conducted by the Subcommittee into illicit money flows involving banks in foreign jurisdictions uncovered a host of problems with foreign auditors, especially those operating in foreign jurisdictions with strong secrecy laws and weak anti-money laundering controls. A number of foreign accountants contacted during the investigation were uncooperative or even hostile when asked for information. A PricewaterhouseCoopers auditor in Antigua serving as a government-appointed liquidator for Caribbean American Bank (CAB), for example, refused to provide copies of its report on CAB's liquidation proceedings, even though the reports were filed in court, they were supposed to be publicly available, and the Antiguan government had asked the auditor to provide the information to the investigation. The investigation also came across evidence of conflicts of interest and incompetent or dishonest accounting practices. In one

---

15 See "Role of U.S. Correspondent Banking in International Money Laundering," S. Hrg. 107-84, March 1, 2001. This investigation took place prior to the establishment of the PCAOB.
instance, an accounting firm verified a $300 million item in a balance sheet for British Trade and Commerce Bank that, when challenged by Dominican government officials, was never substantiated. In another instance, an accounting firm approved an offshore bank’s financial statements which concealed indications of insolvency, insider dealing, and questionable transactions. While the above examples involved foreign auditors reviewing the records of local banks and not U.S. publicly traded corporations, this record of poor performance and poor cooperation with U.S. inquiries does not inspire confidence.

The recent auditing failures cited earlier also do not inspire confidence. Accounting scandals involving Olympus Corp., Satyam Computer Services Ltd, and Parmalat, for example, involve foreign auditors that share a common brand with one of the Big Four accounting firms, but may not use the same auditing standards, have the same familiarity with U.S. accounting requirements, or employ auditors with appropriate expertise. It is also not uncommon for a Big Four accounting firm to refuse to accept liability for faulty audit work performed by a foreign affiliate, even when sharing a common brand. Audit clients, investors, lenders, regulators, and others ought to be able to determine the extent to which affiliated or unaffiliated third parties are performing audit work, the extent to which the public accounting firm supervised that work, and the extent to which the public accounting firm shares liability for any problems arising from the audit work performed by a third party.

Another key issue is the extent to which a third party performing audit work falls under PCAOB jurisdiction, cooperates with PCAOB and SEC information requests, and undergoes PCAOB inspections to ensure audit quality. Auditors outside the United States may not have agreed to undergo PCAOB oversight, even if they audit a company that trades on a U.S. stock exchange or holds a U.S. license as a broker-dealer. Alternatively, the firm may have agreed to PCAOB oversight, but their governments may not permit PCAOB inspections or exchanges of information. In a recent investigation into alleged accounting fraud affecting U.S. investors of Longtop Financial Technologies, for example, China has apparently ordered the Shanghai affiliate of Deloitte & Touche not to provide documents to the PCAOB or SEC or to undergo PCAOB inspections. A 2007 PCAOB report also criticizes Deloitte’s quality controls and the manner in which it works with foreign affiliates operating under a common brand, noting that Deloitte partners often had no way to properly assess whether a foreign affiliate’s personnel were adequately familiar with American accounting and auditing rules. Audit clients, investors, lenders, regulators, and others should be able easily to determine whether audit work is being performed by auditors that operate outside of PCAOB oversight, have poor track records, or have a history of disciplinary problems or other misconduct.

The PCAOB proposal is to be commended for requiring the disclosure of the names of third party participants in an audit. The proposal should be further strengthened by requiring the public accounting firm issuing the audit report to disclose the nature and extent of the work

---

performed by each third party; whether it supervised and shares financial responsibility for the audit work performed by each such party; and whether each such third party is subject to PCAOB oversight and has undergone PCAOB inspection.

Thank you for the opportunity to comment on this matter.

Sincerely,

Carl Levin
Chairman
Permanent Subcommittee on Investigations

Docket 029: Improving Transparency through Disclosure of Engagement Partner and Certain Other Participants in Audits

Dear Mr. Seymour:

Board proceedings on Docket 029 raise a question about the objectives and effectiveness of any solution that may result. My concern is with the emphasis placed on protection of audit partners from liability, rather than what audit environment will produce correct financial statements.

The specific questions in the Docket refer to Section 11 of the Securities and Exchange Act of 1933, Section 10(b) and Rule 10b-5(b) of the Securities and Exchange Act of 1934 and to existing law in various states. Certainly no one, including me, suggests that your amendments to audit standards should violate any laws. However, your proposal seems to seek regulation that avoids the intent of existing law to hold people and firms responsible for their work. In following this path, you give up leverage that helps accomplish your mission.

Your mission is “...to oversee the audits of public companies in order to protect the interests of investors and further the public interest in the preparation of informative, accurate and independent audit reports...” Stick to the mission. You should certainly assure your standards do not force auditors to break existing laws. But, if you determine that audits will be significantly more effective if the audit partner and others are personally identified to investors, you should require it to be done. Why would you not? If you think the law and courts are wrong and auditors are too exposed, there is another forum for that to be considered.

I had not intended to respond to this docket. My own experience as an auditor, board member, audit committee chair and meager investor suggests that disclosure of personal names of audit partners or staff is not necessary and ranks far down the list of things that will help solve problems we have had this
past decade in getting correct financial statements. Many express a similar view. However, I see no harm in the proposal and looked forward to the responses of others.

But, I am troubled at the predisposition here toward protecting auditors. During the vast majority of time since the passage of the Securities and Exchange Acts, and the required audits of public company financial statements, permitting those audits to be done by private side auditors, the general partnership organization of auditors assured personal responsibility of every partner for their own work and the work of their partnership. That environment did not restrict growth of the profession or quality of college graduates who eagerly sought highly respected professional careers in the general partnerships.

When the environment changed in the latter part of the 1990’s, and audit firms were permitted to be limited liability entities, personal responsibility distorted to consideration of financial exposure, indiscernibly controllable by private LLP’s; some auditors, both individuals and firms, began measuring their limited financial risk against significant financial rewards of walking on the edge of correct financial statements and true independence. That new environment is a concern of many and should be for the Board.

We seem to be entering some new era similar to elementary T-ball where we don’t want to embarrass anyone with their strike out. Parents and kids love T-ball, just as audit firms and their partners love to have freedom from exposure, as their responses to Docket 029 show. But, this is the Majors.

Please consider these concerns in your deliberation of Docket 029 and in future proposals relating to audit quality and auditor objectivity. I urge you to focus on what makes financial statements right and audits effective, ignoring factors that should be argued in other forums.

I apologize for responding late to this proposed amendment, but I hope you will consider these thoughts. I notice following public response to Docket 037, a number of responses were accepted after the cutoff date, so it occurred to me you may accept this tardy response on Docket 029. If you cannot, I understand. In that case, I would appreciate your circulating this letter as general public correspondence to the members of the Board and appropriate Staff.

Thank you all for your efforts in this difficult search for the “best way to do it.”

Sincerely,

Gilbert F. Viets

Dear Board Members:

The Auditing Standards Committee of the Auditing Section of the American Accounting Association is pleased to provide comments on the PCAOB Rulemaking Docket Matter No. 029; PCAOB Release No. 2031-009: Proposed Rule on Improving the Transparency of Audit: Proposed Amendments to PCAOB Auditing Standards to Provide Disclosure in the Auditor’s Report of Certain Participants in the Audit.

The views expressed in this letter are those of the members of the Auditing Standards Committee and do not reflect an official position of the American Accounting Association. In addition, the comments reflect the overall consensus view of the Committee, not necessarily the views of every individual member.

We hope that our attached comments and suggestions are helpful and will assist the Board. If the Board has any questions about our input, please feel free to contact our committee chair for any follow-up.

Respectfully submitted,

Auditing Standards Committee
Auditing Section – American Accounting Association

General Comments

The Committee commends the PCAOB (“the Board”) for shifting the primary focus from ‘accountability’ (concept release 2009-005) to ‘transparency’. The Committee believes firm disclosure of the names, locations, and extent of participation of others has a far greater potential to be investor decision relevant than the disclosure of the name of the engagement partner. The following presents a number of specific comments or suggestions, organized along by the questions posed by the Board in concept release 2013-009.

Questions for Commenters (Responses to Selected Questions)

1. Would the reproposed requirements to disclose the engagement partner's name and information about other participants in the audit provide investors and other financial statement users with useful information? How might investors and other financial statement users use the information?

   **Engagement Partner's Name:** Although the Committee is not unanimous on this issue, the majority believed that the disclosure of the name of the engagement partner will be of limited use to investors, and may be potentially harmful, when making investment decisions sans extraordinary circumstances, both initially and over time.

   Audit committees evaluate carefully the qualities of current and potential engagement partners, firms monitor engagement partner history closely and utilize that information to manage risk to the firm, and the Board uses firm-provided historical information about individual partners to select audits to inspect. Metrics beyond the name of the engagement partner are needed to make such consequential decisions.

   Investors are currently privy to the identity of an engagement partner only by chance or through specific inquiry. Even if they were privy to the partner’s name, they are not privy to the additional metrics needed to assess a partner’s ability to deliver a quality audit. It is not obvious to Committee members that the additional relevant, consequential information about an engagement partner that would affect investor investment decisions is publicly available or will become publicly available without additional regulatory demands. Such additional regulatory demands appear unlikely. See response to question 3.

   The Committee is not aware of research that directly addresses firm disclosure of the name of the engagement partner in the U.S. market. Research on audit firm characteristics suggests firm size and firm industry specialization is used by U.S. market participants (Dunn 1999; DeFond and Subramanyam 1998; Eichenseher et al. 1989; Knechel et al. 2007; Menon and Williams 1993; Teoh and Wong 1993).

---

1 Addressing partner accountability through firm disclosure of the name of the engagement partner implies that existing mechanisms at level of the firm, the audit committee, the exchanges, the PCAOB, and the SEC are insufficient to motivate partner accountability. The Committee believes this is unlikely.
In non-U.S. markets, Chi et al. (2011, working paper) report that the ‘number of years as a signing partner’ is associated with a modest reduction of extreme negative discretionary accruals in the Taiwanese market. They also find the partner tenure with a client is negatively associated with bank loan pricing. Knechel et al. (2011, working paper) report that compensation policies that align partner incentives with shareholder incentives positively affect audit quality in the Swedish market. It is not clear how these modest results obtained in small markets inform policy for the U.S. market.

**Information about Other Participants.** For the most part we assume this would be other CPA firms or specialized experts. We believe that such disclosure, particularly when combined with an indication of the amount of effort they contribute to the audit would give investors potentially useful insight into the audit process and subsequently audit quality. Given these participants are likely to take part in a number of different audit engagements and potentially be used across audit firms the conclusions that could be drawn regarding reputation would be potentially less misleading than what could be inferred from information about a single partner who would be involved in a limited set of engagements over a couple of years or even over their career.

2. Would the name of the engagement partner or the extent of participation of other participants be useful to shareholders in deciding whether to ratify the company's choice of registered firm as its auditor? If so, how?

Audit firm reputation matters, both to shareholders and the audit committee that retains the firm. Given the pivotal role of the engagement partner in delivering quality professional services, any significant variance in audit quality among engagements within a firm would likely be attributable in part to the engagement partner. Hence the audit committee’s careful evaluation of the proposed engagement partner. Though the Committee is doubtful firm disclosure of the name of the engagement partner is investor decision relevant, should the Board conclude such disclosure is relevant for investor decision making one would infer its belief that value maximizing shareholders too would use such information when asked to ratify a company’s choice of audit firm. As noted above such use may or may not lead to better audit quality.

Likewise, information about other participants and the extent to which they participate would no doubt be used by shareholders. This may be particularly true when large portions of the effort is provided by other participants. To the extent that audit firm reputations drives how shareholders vote, for engagements with significant amount of other participants the percent voting for ratification would likely to drop. This might induce audit firms to use less outside participants which if outside participants were being used because of need expertise could reduce audit quality. If the use of outside participants is driven by cost, it might lead to an increase in audit fees, or if fees are constrained by market forces, to lowering audit quality by lessening the overall amount of effort.
3. Over time, would the reproposed requirement to disclose the engagement partner's name allow databases and other compilations to be developed in which investors and other financial statement users could track certain aspects of an individual engagement partner's history, including, for example, his or her industry expertise, restatement history, and involvement in disciplinary proceedings or other litigation?

   a. Would such databases or compilations be useful to investors and other financial statement users? If so, how?

      We believe developing such databases in some cases would provide useful information to investors. As is the case with any professional service provider, an audit partner’s reputation for the quality of his/her prior work matters. Specifically, a recent working paper Chi, Lisic, Myers, and Pevzner (2014) suggest that current and prospective audit clients care about the audit partner’s history of audit failures. An audit partner’s reputation for prior client misstatements is informative about current audit quality, and an audit partner’s reputation for past client misstatements is associated with a larger decline in the audit partner’s market share. Importantly, the informativeness of prior client misstatements about current audit quality is mitigated for partners with more overall audit experience and with more industry-specific experience. These findings suggest that 1) audit partner’s history (restatement history at least) provides useful information to the investors about the audit quality of the partner, and 2) this effect varies with the audit partner’s experience and hence, industry expertise (and other experience) information should be included in the database too. Similarly, we believe the partner’s involvement in disciplinary proceedings and other litigation would be informative about the partner’s audit quality.

      b. Would they provide investors and audit committees with relevant benchmarks against which the engagement partner could be compared? If so, how?

      We believe this database would provide audit committees with relevant benchmarks against which the engagement partner could be compared. A caveat is that the audit committees should keep in mind that auditors specialize in certain areas/industries. If an audit partner specializes in risky industries, he/she should be compared with the peers who also specialize in risky industries. Comparing him/her with the entire database could provide misleading information. However, developing such a database is a useful first step and further refinement will come later.

4. Over time, would the reproposed requirement to disclose the other participants in the audit allow investors and other financial statement users to track information about the firms that participate in the audit, such as their public company accounts, size of the firms, disciplinary proceedings, and litigation in which they have been involved? Would this information be useful to investors and if so, how?

      Similar to our comment on Question 3, we believe development a similar database about other participants in the audit would provide useful information to the investors about the quality of these participants. In fact this information might
ultimately be much more useful than that of the database about audit partners as it would be comparable across more engagements and has additional information about relative effort.

5. Is the ability to research publicly available information about the engagement partner or other participants in the audit important? If so, why, and under what circumstances?

For the reasons articulated in our comment to Questions 3 and 4, we believe the ability to research publicly available information about engagement partner or other participants in the audit is important, particularly publicly available information about other participants, because it could potentially provide useful information to the investors about the audit quality. In addition, with this publicly available database, independent academic researchers can conduct additional studies to validate or invalidate Chi et al.’s (2014) conclusions and obtain additional understanding of the audit process which could lead to improved audit quality.

8. Would the reproposed disclosure requirements mislead investors and other financial statement users or lead them to make unwarranted inferences about the engagement partner or the other participant in the audit? If so, how? Would there be other unintended consequences? If so, what are those consequences, and how could they be mitigated?

Audit partners are generally not the lead partner on a large number of engagements. Consequently, it is quite possible that incorrect inferences could be drawn about the quality of an individual audit based on the identity of the engagement partner. The existence of a myriad other factors that influence audit quality exacerbates the issue.

Other potential unintended consequences include:

- Disclosure might adversely affect attracting and retaining top talent in the profession.
- Disclosure might encourage defensive auditing, increasing the costs of audits.
- Partners might have an incentive to shed higher risk clients as a means of maintaining their 'audit quality profile'. This avoidance of risky clients is analogous to the under-investment problem when CEOs are evaluated solely on ROA; the CEO may forgo positive NPV projects because it brings down their overall ROA. Consequently, more senior partners may be unwilling to be the lead partner on a particular client when, in fact, it is precisely that type of client that would benefit most from that partner’s efforts.
- The release notes security risks and increase liability arising out of increased transparency are modest, likely affecting few partners. That is little comfort to the few.
- Disclosure might engender direct calls and correspondence from shareholders, investors, analysts, activists, journalists, and other interested parties. This raises concerns about what the engagement partner may disclose, if anything. There are also concerns about harassment and more
generally attempts to contact or interact with partners in ways that are not productive or appropriate.

A recent paper, Lambert, Luippold and Stefaniak (2012, working paper), examines the unintended consequence partner name disclosure could have on audit partners’ incentives and independence. They propose that partner name disclosure will result in a fusing of the individual partner’s reputation with the audit client. This fusing may then shift the partners’ (real or perceived) incentive structure, which in turn has implications for audit partner independence. In an experimental setting, the researchers find that investors are less likely to invest in a peer firm linked to a restating firm via partner disclosure, particularly in the case of investors less experienced working with or preparing financial statements.

12. Would the reproposed amendments increase the engagement partner's or the other participants' sense of accountability? If so, how? Would an increased sense of accountability for engagement partners or other participants have an impact on audit quality? If yes, please provide specifics.

The Committee is not aware of research that directly addresses firm disclosure of the name of an engagement partner on partners’ sense of accountability. That said, should such disclosure foster a partner’s sense of personal accountability for an audit, existing research suggests a resultant reduction in information biases and enhanced consensus, effort, attention, and perhaps quality of audit documentation (Johnson and Kaplan 1991; Kennedy 1993; Brazel et al. 2004; DeZoort et al. 2006).

17. Would increasing the threshold for individual disclosure of other participants to 5% from the originally proposed threshold of 3% improve the relevance of the disclosure? Would it reduce potential costs? Would another threshold, such as 10%, be more appropriate? If so, why?

In our committee’s response to the 2011 proposal, we argued for a 10% disclosure threshold because of concern with investors being overloaded with information. However, based on the Board’s staff analysis reported pages A3-17 to A3-18, we support a 5% threshold.

22. If the Board adopts the reproposed amendments for auditors to disclose the name of the engagement partner and certain information about other participants in the audit in the auditor's report, should the Board also require firms to disclose the same information on Form 2 or another PCAOB reporting form? Why or why not?

Should the Board mandate that firms disclose the name of an engagement partner in the auditor’s report, the Committee believes it is also useful require disclosure of the engagement partner name in Form 2. The convenience to investors of retrieving information about all of a firm’s engagement partners (to assess firm quality) and all engagements of a single partner speaks for itself.

Re: Rulemaking Docket Matter No. 029: Improving Transparency Through Disclosure of Engagement Partner and Certain Other Participants in Audits

Dear Ms. Brown:

On behalf of the American Federation of Labor and Congress of Industrial Organizations (the “AFL-CIO”), I appreciate the opportunity to comment to the Public Company Accounting Oversight Board (the “PCAOB”) regarding its proposed auditing standards on improving the transparency of audits, PCAOB release No. 2013-009 dated December 4, 2013. The proposed amendments will require disclosure in the auditor’s report of the name of the engagement partner and disclosure in the auditor’s report of the names, locations, and involvement of other entities that took part in the audit.

The AFL-CIO is the umbrella federation for U.S. labor unions, including 56 unions representing 12.5 million union members. Union-sponsored and Taft-Hartley pension plans hold more than $540 billion in assets. Union members also participate directly in the capital markets as individual investors and as participants in pension plans sponsored by corporate and public-sector employers. Like all investors, union members and their pension plans will benefit from receiving more information about audits and the auditors whose work is vital to preventing accounting fraud.

The AFL-CIO commends the PCAOB’s proposal to improve audit transparency by requiring disclosure of the names of audit engagement partners and the names and locations of independent audit firms and others who took part in the audit. This additional disclosure will help users of financial statements become better informed.
about the quality and reputation not only of the audit firm but also of the engagement partner and any third parties who are responsible for conducting the audit. In our view, these improvements to audit transparency are long overdue.

The disclosure of engagement partners and the names, locations, and involvement of other entities that took part in the audit will enhance proxy voting by shareholders on audit firm ratification votes. Shareholder ratification of the company’s selection of its auditor is an important corporate governance safeguard to help ensure effective audits. With the proposed disclosures, shareholders will be better able to evaluate whether engagement partners and any third parties participating in the audit have a history of financial restatements, disciplinary hearings, or litigation.

While we are pleased the PCAOB has proposed requiring the name of the engagement partner to be disclosed in audit reports, we believe the disclosure lacks the weight of requiring the engagement partner to sign his or her name on the auditor’s report in addition to the audit firm’s name. Other professions such as attorneys personally sign their work product. We find the absence of the engagement partner’s signature difficult to understand given that chief executive officers and chief financial officers must personally certify company financial statements.

In conclusion, the PCAOB’s proposed amendments will benefit investors by making audits more transparent. Disclosure of engagement partners and the role of third parties who take part in audits will provide valuable information to those who rely on financial statements. For example, these disclosures will aid the development of an information clearinghouse listing any sanctions, suspensions and litigation against engagement partners or other third parties involved in conducting audits. Investors can already obtain this type of information about brokers and investment advisers.

Thank you again for the opportunity to comment on the proposal. If you need any additional information, please contact me at 202-637-5152 or brees@aflcio.org.

Sincerely,

Brandon J. Rees

Improving the Transparency of Audits:
Proposed Amendments to PCAOB Auditing Standards to Provide Disclosure in the Auditor’s Report of Certain Participants in the Audit

Proposals issued for comment by the Public Company Accounting Oversight Board (PCAOB Rulemaking Docket Matter No. 029)

Comments from ACCA
3 February 2014

ACCA (the Association of Chartered Certified Accountants) is the global body for professional accountants. We aim to offer business-relevant, first-choice qualifications to people of application, ability and ambition around the world who seek a rewarding career in accountancy, finance and management.

We support our 162,000 members and 428,000 students in 173 countries, helping them to develop successful careers in accounting and business, with the skills needed by employers. We work through a network of over 89 offices and centres and 8,500 Approved Employers worldwide, who provide high standards of employee learning and development.

ACCA welcomes the opportunity to comment on the Proposed Amendments to PCAOB Auditing Standards to Provide Disclosures in the Auditor's Report of Certain Participants in the Audit (PCAOB Rulemaking Docket Matter No. 029).

Members of the ACCA Global Forum for Audit and Assurance\(^1\) have considered the matters raised in the proposals and their views are represented in the following.

Our comments draw upon our world-wide membership, which includes significant numbers of members working in all aspects of the financial reporting supply chain in a wide range of industries, the public sector and public practice.

---

**GENERAL COMMENTS**

Audit has a very important place in society. It provides public value through increasing confidence in financial reporting. For global capital markets this facilitates the efficient allocation and use of capital. The report of the auditor is the most visible output of the audit process.

Over the last five years, ACCA has participated in research and outreach events that have consistently confirmed the appetite of investors for additional disclosures from auditors.

We welcome, therefore, the initiative of the PCAOB to improve the auditor's report in terms of its usefulness and relevance to shareholders and investors. These reproposed amendments to PCAOB standards should be considered in the context of current wider efforts, not least of the PCAOB itself, to improve audit transparency and enhance the decision making of investors.

There is a tension between increasing the information in the auditor's report and the length of that report: the longer a report becomes, the greater is the likelihood that it contains information that is not significant for users.

It is the responsibility of the standard setter (if not laid down in legislation) to interpret the needs of a theoretical construct – the intended users of the auditor's report – and to set appropriate standards to meet a further theoretical construct – the reasonable needs – of the intended users. This judgement of the standard setter must also be informed by the societal value of meeting those needs and the estimated cost of doing so. This balancing of value against cost is not just in dollar terms; it must encompass all the wider factors relevant to financial reporting and the operation of capital markets.

The reasonable needs of the intended users of the auditor's report will change over time because the actual needs of actual users will change; making it necessary to re-evaluate the (operationalised) theoretical construct. Indeed the actual users may also change, making it necessary to re-evaluate that theoretical construct—the intended users of the auditor's report. The responsibility of the standard setter is to monitor factors relevant to determining the theoretical constructs that underpin the standard setting process and to adjust those constructs and the resulting standards as necessary.

ACCA believes that the events of recent years constitute a significant shift in actual needs of actual users. These are challenging times for standard setters and it must be recognised that, however much effort and expertise is employed, however much research is carried out and assessed, however much consultation and education is done, the standards produced may not always meet all the information needs of all stakeholders. And if this is the case today, it may be even more so tomorrow, because circumstances change faster than necessary due process can accommodate.

ACCA strongly supports the use of standards that are global and that are principles-based. The reasons for this that are relevant to the current consultation are set out below.

Concerning global standards—for significant capital markets the intended users of the auditor's report and their reasonable needs should be determined on a global basis. The current degree of globalisation of capital markets and the speed of communication have rendered other approaches obsolete.

Concerning principles-based standards— their flexibility ensures that, to some extent, the same standard can remain relevant as circumstances change. A standard full of bright line rules has a much shorter shelf life.

As we said in our recent response to Rulemaking Docket 034: Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments, 'recognising that the IAASB standards have to be written so that they may be applied in many jurisdictions and that the PCAOB standards reflect the requirements of the U.S. federal securities laws and rules, we nevertheless continue to recommend that the PCAOB develops standards with a view towards long-term convergence with those of the IAASB.'
In order to avoid differences being introduced when both PCAOB and the IAASB are proposing changes to auditor reporting standards, we support the inclusion in the PCAOB standards of a requirement to identify the engagement partner but we opposed disclosure of other participants in the audit.

Many of the other arguments, for or against the conclusions we reach, are well presented in the consultation document and the PCAOB is well aware of them and indeed the differences in view between, for example auditors and investors. We see little point in revisiting those arguments here.

We caution instead that recent work on audit quality has highlighted its many-faceted nature and the current fragmentation of our knowledge of the drivers of quality and their potential relevance to, for example intended users of the auditor's report (if there were to be associated transparency). The last few years have yielded an impressive number of relevant research papers.

We do not believe that at this time investors have developed their own thinking sufficiently to determine their needs for transparency of the auditor, the particular audit and the financial and non-financial reporting (seen through the auditor's lens). Standard setters should not endeavour to solve problems too precisely when the subject matter is relatively undeveloped. A debate about whether a threshold for disclosure is 3 per cent or 5 per cent is much less important than achieving a workable and globally consistent consensus.

SPECIFIC COMMENT

Section VII of the Release sets out 25 questions for commenters. In view of our general comments and the fact that some of the questions are best answered by other stakeholders we only answer question 1.

**Question 1** Would the reproposed requirements to disclose the engagement partner's name and information about other participants in the audit provide investors and other financial statement users with useful information?

For the reasons set out in our general comments we believe that disclosure of the engagement partner's identity would be useful but information about other participants would not.

- Release No. 2013-009
- PCAOB Rulemaking Docket Matter No. 029
- Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards to Provide Disclosure in the Auditor’s Report of Certain Participants in the Audit

Dear Sir,

Thank you for giving us the opportunity to comment on your release on Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards to Provide Disclosure in the Auditor’s Report of Certain Participants in the Audit. You are repposing amendments to your standards that would improve the transparency of public company audits. The amendments would require (1) disclosure in the auditor’s report of the name of the engagement partner and (2) disclosure in the auditor’s report of the names, locations, and extent of participation of other independent public accounting firms that took part in the audit and the locations and extent of participation of other persons not employed by the auditor that took part in the audit.

I strongly support the proposed amendments. These will definitely increase transparency and accountability, and should therefore act to improve the engagement partner’s standard of professionalism, due care and professional scepticism. Greater disclosure is the way forward, and there are no compelling arguments against this trend.\(^1\) My comments on this release are in principle the same as my comments on the previous version of the release. For completeness I enclose the comment letter that I submitted to you in October 2011 on the release on Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2.

\(^1\) For example the International Auditing and Assurance Standards Board (IAASB) recently proposed a requirement for firms to disclose the name of the engagement partner in the auditor’s report of a listed entity. See IAASB exposure draft, Reporting on Audited Financial Statements: Proposed New and Revised International Standards on Auditing, July 2013, and my comment letter thereon.
Please note that the comments expressed herein are solely my personal views.

Yours faithfully

C.R.B.

- Release No. 2011-007
- PCAOB Rulemaking Docket Matter No. 029
- Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2

Dear Sir,

Thank you for giving us the opportunity to comment on your release on Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2. You are proposing amendments to your standards that would improve the transparency of public company audits. The proposed amendments would: (1) require registered public accounting firms to disclose the name of the engagement partner in the audit report, (2) amend the PCAOB's Annual Report Form to require registered firms to disclose the name of the engagement partner for each audit report already required to be reported on the form, and (3) require disclosure in the audit report of other independent public accounting firms and other persons that took part in the audit.

I strongly support the proposed amendments. These will definitely increase transparency and accountability, and should therefore act to improve the engagement partner's standard of professionalism, due care and professional scepticism. It is interesting to consider the alternative, or current situation. What are the advantages of not disclosing the engagement partner in the audit report? Why should the engagement partner, who leads and is largely
Please note that the comments expressed herein are solely my personal views

Responsible for the audit, be anonymous? The release provides some arguments against disclosure here, but these seem mostly spurious and/or spurious. For example "some auditors suggested that the identity of the engagement partner would not be useful to investors".¹ This is flatly refuted by the investors themselves,² and we should give more credence to the actual views of investors, rather than auditors’ perceptions thereon.

I have some specific comments, which I will address in answer to your specific questions.

**Answers to specific questions raised by the PCAOB**

1. Would disclosure of the engagement partner’s name in the audit report enhance investor protection? If so, how? If not, why not?

   *Yes. It would be more transparent, and easier for investors to contact the engagement partner. The engagement partner would be more accountable, and this should act to improve the engagement partner’s standard of professionalism, due care and professional scepticism.*

2. Would disclosing the name of the engagement partner in the audit report increase the engagement partner’s sense of accountability? If not, would requiring signature by the engagement partner increase the sense of accountability?

   *Disclosing the name of the engagement partner should increase accountability. Requiring a signature should increase accountability even more. This is human nature.*

3. Does the proposed approach reflect the appropriate balance between the engagement partner’s role in the audit and the firm’s responsibility for the audit? Are there other approaches that the Board should consider?

   *I believe that the proposed approach provides the right balance here. The name of the engagement partner would be disclosed, and the audit firm would sign the report.*

4. Would the proposed disclosure clearly describe the engagement partner’s responsibilities regarding the most recent reporting period’s audit? If not, how could it be improved?

   *Yes. The proposed disclosure is quite clear.*

¹ See release, page 9.
² See release, page 4: “Investor members of the SAG generally supported a signature requirement”; and "most IAG members expressed support for such a requirement". See also page 21: “Investors have requested greater transparency about who is performing the audit and how much of the audit they have performed”. There are other examples in the release.
5. Would the proposed disclosure clearly describe the engagement partner’s responsibilities when the audit report is dual-dated? If not, how could it be improved?

Yes. The proposed disclosure is quite clear.

6. Would the proposed amendments to the auditing standards create particular security risks that warrant treating auditors differently from others involved in the financial reporting process?

Many professionals, such as doctors, lawyers, accountants and actuaries have to sign reports containing findings, opinions and judgements, which may be controversial. I am not aware of any unusual security risks in this regard.

21. Would disclosure in the audit report of other participants in the audit provide useful information to investors and other users of the audit report? Why or why not?

Yes. Investors have stated a preference for disclosing this information. Again, there is no reason not to disclose the information.

22. Are the proposed requirements sufficiently clear and appropriate with respect to identifying other participants in the audit? If not, how should the proposed requirements be revised?

The proposed requirements are quite clear.

23. Are the proposed requirements sufficiently clear as to when the name of a public accounting firm or a person would be required to be named in the audit report? Is it appropriate that the name of the firm or person that is disclosed is based on whom the auditor has the contractual relationship?

Yes, the proposed requirements are sufficiently clear. I agree that the name of the firm or person that is disclosed should be based on whom the auditor has the contractual relationship. This is reasonable, and clearly appropriate.

24. Would disclosure in the audit report of other participants in the audit have an impact on the ability of independent public accounting firms to compete in the marketplace? If so, how would the proposed requirement impact a firm’s ability to compete in the marketplace?

I do not believe that there will be any adverse impact on competition. We are only disclosing the practical realities here.

3 See release, comments at page 21.
25. Are there any challenges in implementing a requirement regarding the disclosure of other participants in the audit? If so, what are the challenges and how can the Board address them in the requirements?

I do not foresee major challenges in this regard.

26. Is the percentage of the total hours in the most recent period’s audit, excluding EQR and Appendix K review, a reasonable measure of the extent of other participants’ participation in the audit? If not, what other alternatives would provide meaningful information about the extent of participation in the audit of other participants?

Yes, I support the total hours approach. This best represents the quantum of work actually done, and is a superior measure compared with monetary apportionment.

27. What challenges, if any, would requiring the percentage of audit hours as the measure of the other participants’ participation present?

No insurmountable challenges. Recording hours is common practice worldwide.

28. Should the Board require discussion of the nature of the work performed by other participants in the audit in addition to the extent of participation as part of the disclosure? If so, what should be the scope of such additional disclosures?

I would generally support such discussion as part of the disclosure, but only at the discretion of the audit firm.

Yours faithfully

Rulemaking Docket No. 029

Board Members:

These are my comments on PCAOB Release No. 2013-009, “Improving the transparency of audits: proposed amendments to PCAOB auditing standards to provide disclosure in the auditor’s report of certain participants in the audit.” In summary, the Exposure Draft (ED) would require disclosure in the auditor’s report of (1) the name of the engagement partner, and (2) names, locations and extent of participation of other accounting firms and other persons that took part in the audit. My comments are derived primarily from perspectives gained from serving as chairman of the audit committee for five large public companies over the past twelve years, but also from my earlier 26 years in public accounting audit practice serving many SEC registrants.

In summary, I do not support naming the engagement partner in the auditor’s report. It is not meaningful information to users; the forthcoming work on Audit Quality Indicators promises to produce more useful data. Further, the notion that naming the engagement partner will somehow increase his/her accountability is simply wrong. I do support the disclosure of “other parties” although I believe the disclosure needs to be supplemented in order to clarify the signing firm’s oversight responsibilities. Otherwise, it could be more confusing than informative, particularly when the “other parties” share a common name with the signing firm.
My reasoning for these positions is presented in the following two major sections of this letter.

**Naming the Engagement Partner**

What is the real objective of naming the engagement partner and will it be achieved? - As noted in the description of the ED, the Board believes that naming the engagement partner in the auditor’s report will “improve the transparency of audits.” The Introduction goes on to say that the Board believes this information “would be useful to investors and other financial statement users and would be consistent with the Board’s mission to further the public interest in the preparation of ‘informative, accurate, and independent audit reports.’” The Release describes ways in which service providers might begin to gather information on engagement partners in the future that investors and other users could find helpful. Enhanced user information appears to be the principal reasoning for the Board’s conclusion that the engagement partner’s name should be required. In the words of Board member Jeanette M. Franzel, “Today’s release states that the primary benefits of the current proposal pertain to disclosure, or transparency.”

However, on page 5 the ED states, “The Board also recognizes that many investors as well as some other commenters believe that these measures would prompt engagement partners to perform their duties with a heightened sense of accountability to the various users of the auditor’s report.” Again quoting Ms. Franzel, “The release also suggests that such disclosure may create an incentive for auditors to voluntarily take steps that could result in improved audit quality.” Later she notes, “Today’s release does not explain why the Board has changed its objectives for the reproposal from accountability to disclosure of useful information for investment decisions (as names are collected over time and combined with other unspecified information). And, with those changed objectives, the Board is now in a position to surmise how, or hope that, such information may be compiled and made useful over time.”

This change in objective is even more troubling given concerns raised at an earlier date by then Board member Dan Goelzer regarding the appropriate role of the PCAOB. He questioned whether naming the engagement partner was more of an SEC proxy disclosure issue than a PCAOB auditing matter. In his statement at the meeting at which the earlier ED was adopted, Mr. Goelzer stated, “The partner’s name may be relevant to the shareholder vote on selection of the auditor. However, the disclosure requirements of the federal securities laws, including the proxy rules, are administered by the Securities and Exchange Commission. Unless
engagement partner disclosure can be directly linked to improving audit quality, or to promoting understanding of the financial statement audit or of the Board’s inspection program, the issue would seem to fall in the SEC’s bailiwick.”

Chairman Doty appeared not to emphasize a single objective for naming the engagement partner in his remarks at the AICPA National Conference on SEC and PCAOB Developments on December 9, 2013. While he began his comments on “audit transparency” by stating that “Investors have long asked for the names of engagement partners to be disclosed, in order to give them more information about the auditor,” the rest of his comments on that topic focused largely on the “quality improvement” objective. For example, “... it holds the promise of improving audit quality by sharpening the mind and reminding auditors of their responsibility to the public.” And, “In many fields, disclosure – Justice Louis Brandeis called it ‘sunlight’ – has given numerous fields and professions the information they need to see and then remedy a problem.”

I believe an astute assessment of the purpose of disclosing the name of the engagement partner was contained in the comment letter on the earlier ED of Professor James L. Fuehrmeyer, Jr. of the University of Notre Dame. Professor Fuehrmeyer, a former senior audit partner with Deloitte & Touche, included the following excellent analysis in his comment letter dated December 13, 2011, which I believe applies just as much to the current ED:

The Proposed Amendments appear to reflect the notion that the investment community should grade the audit in the same way rating agencies grade securities. The Board should not expect individual investors to grade auditors. We already have a process in place to evaluate auditors and audit firms and that process falls directly under the responsibility of the registrant’s audit committee. That committee is directly charged under the Sarbanes-Oxley Act with responsibility for “the appointment, compensation and oversight of the work of any registered public accounting firm employed by that issuer...” Audit committees are charged with evaluating and selecting auditors. The Proposed Amendments would undermine that process.

The Proposed Amendments place too much emphasis on the role of one individual. Audits are conducted by teams of individuals; the largest audits have numerous partners, managers and staff comprising the audit team. While the signing partner has overall responsibility and signs the opinion on
behalf of the firm, it’s not an individual project with technical support. In many cases that lead partner is not the only key player in the conduct of the audit. For example, a partner supervising the audit of a major corporation with highly material exposure for asbestos related claims or supervising the audit of an insurance company would rely extensively on the work of the actuarial specialists who are part of those audit teams. The lead partner on the audit of a financial institution engaged in loan originations and securitizations would depend on the work of financial instrument specialists in the valuation of individual deals. Lead partners must rely on specialists in many areas including business valuation, international taxation, management information systems, government contracting, medical claims evaluation, appraisal of real estate, translation from other languages into English, computer system security, engineering and a host of others. Many engagements use multiple specialists and no one on the Board would expect the lead partner to be a specialist in all areas. Evaluation of the quality of the firm’s performance as the auditor includes evaluation of its capabilities in all of the many areas of specialization that pertain to the registrant’s business. That evaluation is not captured in the disclosure of a single name or in the disclosure of the countries of origin of offices participating in the conduct of the audit. However, all of that information and more is routinely considered by audit committees as they fulfill their responsibility to oversee the independent auditor.

I fully agree with Professor Feuhrmeyer’s analysis and his point was reinforced by a January 9, 2012 letter from The Center for Capital Market Competitiveness on the earlier ED. Rather than improving audit quality, which is at least a secondary (if not implicit primary) objective for this new disclosure, the Center believed the disclosure could have the opposite effect. “It is also problematic that the PCAOB continues to move in the direction of expecting engagement partners to somehow build their own individual reputations for audit quality, independent of their firm’s reputation, undermining accountability in the audit process and harming investor protection.”

The PCAOB suggests that naming the engagement partner could provide valuable information to investors as third parties collect that information over time and collate it with information on restatements, going concern opinion modifications, enforcement actions, and individual-specific data such as education, awards, publications, etc. One question that might be asked is if that is such a great idea, why isn’t it being done now? For many years the identity of the engagement partner has been known by his or her appearance at the company’s annual
shareholders meeting. If gathering and analyzing these relationships were truly useful to investors, in today’s information age some enterprising businessperson probably should have already started gathering the data. Granted, it would be a lot easier to do so should the names simply be listed in the auditor’s report but there won’t really be any new information provided.

In thinking about how these data might be gathered and used, I urge the Board to consider the following. At least for the largest accounting firms serving public companies with the greatest market capitalizations in which there is the most investor interest, it would be unusual for an individual to become an audit partner before his or her early 30’s. And it probably would be unusual for such a person to immediately become an engagement partner upon being admitted to the partnership, at least for a client that has a large market capitalization. And given an approximate age 60 retirement date for these individuals, they would likely have only approximately five “rotation opportunities.” Of course, it is quite possible that many of them could serve more than one public audit client at the same time but those clients would generally then be smaller and of less investor interest. And the last rotation would be of no information consequence as the partner would retire after completing service on that engagement.

Thus, the data being gathered could reflect service on a relatively small number of clients for each partner over a twenty-year period – a fairly limited data base on which to draw any meaningful conclusions. Assuming none of the “negative factors” mentioned in the ED are present (see discussion below), there might be little information of consequence gathered about such individuals that would be of relevance to investors, except, perhaps, information about previous service for very specialized industry clients.

Rather than supposing that data gatherers would begin to accumulate this information over time and that it might be meaningful, wouldn’t it make sense to first ask some of the accounting firms to do a little “field testing” to see how much information could be accumulated for a sample of partners? (Perhaps the PCAOB already has that information in its own records and could do so – I’m not familiar with the Board’s records on engagement partners, etc.) If some data could be produced from such an experiment, it might then be shown to the users who claim they would find this to be meaningful in their investment decisions and they could be asked how it would actually be used.

Would audit committees find this information useful? – In addition to stating that some users have called for disclosure of the name of the engagement partner, the
PCAOB seems to think that some audit committee members would find this new disclosure useful. For example, on page 8 of the ED the Board states in its discussion of the comment letters on the earlier ED, “Others, such as some audit committee members and corporate officials, as well as an association of European auditors, shared the investors’ views and expressed the view that naming the engagement partner in the auditor’s report would be beneficial (my emphasis).” This led me to review the comment letters on the 2011 Release.

I found only two comment letters from individuals who identified themselves as having been audit committee chairs.

Letter No. 11 from Mr. Jack Henry stated in part: “Your proposals for mandatory rotation and identification of the signing partner both strike me as solutions looking for a problem to solve. Neither proposal appears to be based on empirical evidence that the current state is broken and would be improved by either proposal.” His letter goes on to state, “Identifying a signing partner is contrary to the way audits are performed. They are done by teams and the teams include more than a single partner. Major decisions are made by national offices, not signing partners.” Mr. Henry noted that he had been with Arthur Andersen for 34 years before retiring from that firm.

Letter No. 41 from Mr. Gilbert F. Viets stated in part, “My own experience as an auditor, board member, audit committee chair and meager investor suggests that disclosure of personal names of audit partners or staff is not necessary and ranks far down the list of things that will help solve problems we have had this past decade in getting correct financial statements. Many express a similar view. However, I see no harm in the proposal and looked (sic) forward to the responses of others.”

Frankly, it is disappointing that so few audit committee representatives commented on the earlier Release, and that motivated me to do so this time. But I find it very difficult to understand how the Board can represent that “some” audit committee members agreed that disclosing the name of the engagement partner would be beneficial based on the comment letters received on the earlier ED. Frankly, in the spirit of auditor skepticism, I would have expected Board members to have challenged and more carefully fact-checked such a counter-intuitive statement in the current ED.
In his remarks to the AICPA conference, Chairman Doty also suggested that audit committees would be direct beneficiaries of the new engagement partner information as it is gathered and analyzed over time:

Nor can the responsibility to select only the best engagement partner be placed at the feet of audit committees, unless we provide audit committees better information against which to benchmark. Diligent audit committees try to obtain information about, and pay careful attention to, a proposed engagement partner's history. But today most of that information must come from the very firm putting the partner forward. The lack of generally available information about engagement partners limits audit committees' ability to meaningfully assess and compare the partner's qualifications and experience.

I respectfully disagree with Chairman Doty. Based on my experience and discussions with scores, if not hundreds, of other audit committee chairs and members through various seminars and other meetings over the past few years, no one has suggested the need for public information in order to meaningfully assess qualifications and experience. In fact, it is just the opposite. We are able to dig deeply into the individuals' background and experience through confidential sources rather than relying on the type of limited public information that would be gathered under the PCAOB proposal and would often be out of date. Further, depending on the size and the nature of the engagement, there is usually more than one candidate for engagement partner rotation, and they are subject to in-depth interviews on a subjective basis. Also, it has become a general "best practice" to inquire of the audit committee chairs and CFOs with whom candidates previously worked to learn about past performance. This would include important matters such as:

- Did the partner inform management and the audit committee about accounting and auditing issues that arose on a timely basis rather than possibly allowing them to worsen into larger issues because of a failure to communicate promptly?
- Did the partner have an effective relationship with the audit committee chair that made clear the firm’s reporting relationship was to the committee and not to management?
- Was the partner successful in building good rapport and trust with all members of the audit committee and not just the chairman?
As an example, for one of my previous audit committee engagement partner rotation decisions, let me briefly describe some of our process. After reviewing resumes of several potential candidates identified by the firm, we selected three finalists for in-depth interviews by the audit committee and management. After initial interviews, one candidate was eliminated and our final decision came down to a choice between two individuals who the audit committee considered very well qualified. One candidate had more international experience, which was a plus. One had previously not served as an engagement partner on such a major audit but had been an assisting partner on an even larger audit – the other was rotating off being engagement partner on a major account. One was a female and one was a male, and our end customers were largely females. Neither had experience exactly the same as our industry, but our business was sufficiently general so that wasn’t considered to be a problem. One had more national office contacts through service on firm committees, thus giving us more comfort that we would receive prompt assistance at that level when needed. Both individuals were well known to and were considered excellent by our outgoing engagement partner, with whom we had developed a high degree of trust.

The point of the above is simply that our final decision was a thoughtful judgment after weighing all of the competing factors (I listed only a few). That is a significant responsibility assigned to audit committees under the Sarbanes-Oxley Act and it is taken very seriously. Most of the types of information mentioned above (as well as the type of information from interviews with other audit committees served) could never be captured in a public disclosure system. At best, disclosing the name of the engagement partner and accumulating some related information over time will only be piecemeal and perhaps even misleading.

My experience has been primarily with quite large public companies and it may well be the case that naming the audit partner could be more useful for audit committees of smaller public companies. However, if they are served by smaller accounting firms, they will have much less choice among engagement partners in the first place so having the information made public wouldn’t be meaningful to audit committees of those companies either. In short, I don’t agree with Chairman Doty’s remarks on this matter and believe the Board should challenge the assertion before accepting it as a possible reason for adopting a final rule.

AQR – A more promising approach - The PCAOB’s Audit Quality Indicators project, while in an early stage, shows great promise of providing meaningful information to investors and other users of audited financial statements about the quality of audits. Naming the engagement partner is at best a premature and small
part of the AQI package, and more likely not a meaningful indicator at all. I support the Board’s efforts to develop useful AQI’s and look forward to the forthcoming Concepts Release as the first public step in that process.

The proposal accentuates the negatives - I’m very concerned about the overly negative emphasis in the matters that the Board suggests might be gathered and disclosed about a named engagement partner. The types of matters related to the engagement partner that the Board thinks might be gathered in the future include association with restatements, going concern modifications, and enforcement actions – all quite negative matters. While some of the suggested personal information, such as previous industry experience and “awards,” are more positive, overall this seems to be an exercise to ferret out bad actors rather than identifying high quality performers. As noted below, I have reservations about each of the “negative indicators” suggested in the ED as to how they would be implemented in practice and whether they would, in fact, be meaningful to investors and other potential users of the information. I also am concerned that emphasizing the negatives could just add to the stress faced by so many audit partners in today’s world who already may feel that PCAOB inspectors are the enemy and are “out to get them.” I hear quite often about this unnecessarily adversarial attitude and the reality that many, well qualified individuals are being driven out of audit practice by what they perceive as a “gotcha” mentality of the inspections staff.

The Release suggests looking for association with restatements but which partner really has the principal responsibility? The one who signed the report when an error was first made? The one who signed the report when it was corrected? What if the correction was a change in understanding of the application of an accounting standard such as occurred for certain lease accounting issues several years ago that occasioned a couple of hundred restatements? There are so many questions involved here that users would almost have to have an FASB or SEC rule to know how to judge whether a restatement was or was not a black mark on an engagement partner’s record.

And the Release seems to equate a going concern modification with negative performance by the engagement partner. To the contrary, standing up to the client and insisting on such a position often takes great courage as it can have extremely damaging consequences to a company. This may actually be a positive rather than a black mark!

As for involvement with PCAOB or SEC enforcement actions, I am reasonably confident that accounting firms withdraw the offending partners from active
management of public audit engagements in most if not all cases, certainly for those with a significant market capitalization. In any event, it is impossible for me to imagine that an audit committee would accept a new engagement partner with such a blemish on his or her record. Thus, I don’t see the need for further user information or public protection beyond what is presently available with respect to enforcement matters.

Greater accountability? Not! - As noted by Ms. Franzel, “The release also suggests that such disclosure may create an incentive for auditors to voluntarily take steps that could result in improved audit quality.” Board member Steve Harris stated, “Investors and others have asserted that disclosure of the engagement partner’s name will produce a heightened sense of accountability for the audit on his or her part, which will lead to more robust audit behavior and higher quality audits. This is not surprising, given that personal accountability is a foundation of performance in all walks of life.” However, Board member Jay D. Hanson, who has actually “been there, done that,” accurately observes, “Accountability for audit engagement partners, in my experience, is already built into the system.” Mr. Hanson also noted that the Board had found no evidence that identifying audit partners will enhance the accountability of those partners and therefore enhance audit quality.

I fully agree with Mr. Hanson based both on my own auditing experience with a major accounting firm and in dealing with engagement partners with most of the largest accounting firms in my capacity as an audit committee chairman over the past twelve years. It is most disrespectful to engagement partners to suggest that they will somehow heighten their sense of accountability when named in the accountant’s report. Now, they sign their name in the firm’s review and approval forms in order to issue the auditor’s report, which is the point at which they accept full responsibility for that report. They also realize they are subject to inspection by the PCAOB and their career is at stake should the inspections team find serious fault with the work on their audit. And, of course, their various judgments and other audit work are all subject to the firm’s independent quality review, SEC review, civil litigation, etc. Further, they are continually challenged to do their best work by the audit committee. To suggest that somehow there is another level of quality to which they can rise as a result of being named in the auditor’s report is both naïve and almost insulting, in my opinion.

A modest suggestion - As noted earlier, I suggest that the Board give a lot more consideration as to how the engagement partner name might be gathered and analyzed. If Board members can’t think through what would be a reasonable way in which these data would be used, it isn’t appropriate to start forcing firms to
begin disclosing the information. Working with accounting firms to gather what a 
sample of engagement partners would actually have had reported about them 
would be a good place to start in working toward whether this could be meaningful 
information.

**Disclosing Certain Other Participants**

I am in general agreement with the proposed disclosure of other participants in the 
auditor’s report. And I support the changes to the earlier ED with respect to the 
minimum 5% cutoff for disclosure and the use of approximate percentage ranges. 
The ranges the Board has chosen seem appropriate.

I am, however, concerned about how investors will interpret disclosure of the fact 
that entities that are part of the global network of one of the major accounting firms 
are performing part of the audit. For example, without getting into confidential 
information, one of my former board companies was audited by Deloitte & Touche 
LLP in the United States. That firm, of course, was inspected by the PCAOB. But 
the company in question had extensive operations in Europe, Asia, Latin America, 
and Canada. In fact, approximately 50% of its revenues were from international 
sources. Deloitte performed statutory audits for most of the foreign locations and a 
material portion of them were included in the financial statements audit.

Using the example language beginning on page A2-6 of the ED, disclosure of that 
situation might be included in an Appendix along these lines (these countries and 
percentages are just made up by me for illustration purposes):

5% to 10%:
- Deloitte & Touche LLP (United Kingdom)
- Deloitte & Touche LLP (Hong Kong)

Other participants whose individual aggregate extent of participation was 
less than 5% - fourteen other firms (should we say these were all Deloitte 
firms?) whose individual extent of participation was less than 5% of the total 
audit hours, participated in the audit.

While it is possible that users can be educated as to the meaning of this disclosure 
over time, at least initially I think many will be confused rather than informed by a 
Deloitte report that says that Deloitte performed part of the audit! This, of course, 
is important to know if one is interested to check on the (material) parts of the 
overall audit that weren’t subject to inspection by the PCAOB. But it’s the audit
committee that is the first line of defense on this matter and that committee will have reviewed the accounting firm’s internal quality-control procedures, any material issues raised by the most recent internal quality-control or peer review, or any investigations of the firm. That committee will also have asked other, appropriate questions to be satisfied that the audit performed in all locations is of uniform quality.

I believe a disclosure along the lines of the sample I’ve suggested above needs to be supplemented with some language in the auditor’s report to eliminate the possibility of a reader assuming that the “other participants” named in the report are of significantly lower quality. This could be done with wording that covers the signing firm’s oversight, supervision, and review responsibilities over the other firms (including whether the other firms have been subject to the signing firm’s inspection program). Perhaps the audit committee will also feel obliged to say something in the future in its report to indicate its satisfaction with the quality control procedures applied by the signing firm.

I can understand why the disclosure of other participants may be even more obvious and important in situations where a global alliance (e.g., “CPA Firms R us Worldwide”) includes fully locally-owned and operated under different named firms. However, even there I would assume that further disclosure along the lines of what quality control procedures the signing firm has applied would be appropriate.

To be clear, while I generally support the proposed disclosure of other firms involved in the audit, I believe that absent accompanying explanations of the signing firm’s oversight, etc., this disclosure would be so incomplete that it should not be included in the auditor’s report. In that case, perhaps a discussion of the matter could be included in the audit committee report in the proxy statement or in material in the proxy statement related to a shareholder vote on auditor ratification.

With respect to the requirement for disclosure of Persons Not Employed by the Auditor, I understand the general reasoning for not naming all of the individuals or firms so included. However, it seems to me that if the percentage of the total hours performed by an individual is material to the overall audit, the reader should receive further information. I would assume that would be an unusual circumstance (perhaps it would never happen!) but if more than 5% of the total hours were performed by one of these individuals, I would suggest they should be identified by name and the nature of their services be stated.
I would be pleased to discuss any of the matters in this letter with you at your request.

Sincerely,

[Signature]

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, NW
Washington, DC 20006-2803

Dear Board Members and Staff:

BDO USA, LLP (“BDO”) is pleased to have the opportunity to comment on the Proposed Amendments to PCAOB Auditing Standards to Provide Disclosure in the Auditor’s Report of Certain Participants in the Audit (the “Proposed Amendments”). As noted in our prior comment letter on this topic\(^1\), we recognize the need to increase transparency about the audit process, particularly as it relates to promoting the performance of high quality audits, and we are committed to actively participating in efforts to enhance audit performance. We believe that many of the recent efforts undertaken by the PCAOB, including the proposal to provide for the discussion of critical audit matters in the audit report and the current project to identify and disclose certain audit quality indicators, support such efforts in increasing transparency about the audit.

We do not, however, believe the proposed amendment that would require identification of the engagement partner provides meaningful information to users or results in enhancements in audit quality. Moreover, beyond the potential for adverse unintended consequences on audit quality, we are concerned that identification of the engagement partner could result in practical implementation challenges, in particular as they relate to providing consents, and increased risk in litigation exposure, which are described more fully below under the section “Further Comments on Specific Proposals.” We encourage the Board to consider these matters in evaluating whether to move forward with this aspect of the proposal at this time. However, if, notwithstanding our concerns, the Board continues to move forward with this aspect of the Proposed Amendments, we believe identification of the engagement partner more appropriately belongs within Form 2 rather than within the auditor’s report. Providing this information within Form 2 would address calls from investors for such information while mitigating our concerns regarding consents and increased liability exposure.

Another proposed amendment described in the Release would require disclosure in the auditor’s report of information about certain other participants, including other independent public accounting firms. Consistent with our commitment to further meaningful transparency about the audit, we support providing information about certain other participants in the

\(^1\) See BDO comment letter to the PCAOB dated January 9, 2012.
audit, and consistent with our views regarding engagement partner identification, we believe a more appropriate approach to disclosure would be to disclose such information within Form 2. Furthermore, we believe the threshold for disclosure of other participants in the audit should be revised to reflect a minimum absolute hours disclosure threshold, such that when the aggregate extent of participation of all other persons from the same country not employed by the auditor or the individual extent of participation of other independent accounting firms is less than 5% or 50 hours in the most recent period’s audit, the other persons or firms would be disclosed as a group. We believe including a minimum absolute hour disclosure threshold would increase the usefulness of this information by focusing attention on those certain other participants with a more than limited role in the audit. This will improve the proposal by focusing on larger engagements where other firms may play an important role in the audit, as opposed to smaller engagements where other firms may perform less important services such as inventory observations or minimal other procedures.

Further Comments on Specific Proposals

Engagement Partner Identification

We are concerned that identification of the engagement partner, whether within or outside the auditor’s report, places undue emphasis on the role of the engagement partner without consideration of other more relevant factors that impact audit quality. As a result, we believe that incorrect inferences about engagement partners and audits may be made, particularly when the experience of an engagement partner is not publicly available (e.g., when the partner’s experience was previously with a non-issuer client or otherwise outside the public company audit environment). We believe a more appropriate and effective way to impact audit quality and provide relevant information to users is through the work currently underway by the PCAOB relating to audit quality indicators, and we support the PCAOB’s efforts in this regard.

Providing and Obtaining Consents

We understand, based on the discussion on pages 21 to 22 of the Release, that engagement partners and participating accounting firms named in an auditor’s report would be required to consent to the inclusion of their names in an auditor’s report filed with, or included by reference in, another document filed under the Securities Act with the Commission. However, we believe there are significant implementation challenges in obtaining consents from engagement partners and certain independent public accounting firms that may not have been previously contemplated. For instance, as it relates to engagement partners, a consent may be required from an engagement partner who is no longer associated with the issuer’s audit firm or may not be in a position to provide a consent (e.g., when a consent is required, there may be concerns about sharing confidential information with a partner who changes audit firms). Additionally, it may be inappropriate under current SEC independence rules for an engagement partner that rotated off an engagement after the five-year service period to perform any updating procedures on that engagement to be able to provide a consent.
With respect to certain independent public accounting firms who participated in the audit, such firms may deem it necessary to review a filing and perform updating procedures before providing consent, even in areas in which they may not have had responsibility, resulting in additional costs and possible delays in the filing of a registration statement. The issue would be further complicated when consents are required from non-network firms or there are unforeseen difficulties in obtaining all necessary consents from firms on the filing date.

**Liability Considerations**

We believe the Proposed Amendments have the potential to significantly increase the risk of litigation exposure, primarily as it relates to Section 11 of the Securities Act of 1933, as a result of naming the engagement partner or a participating accounting firm in the auditor’s report. While the Board explains in the Release that any possible increase in liability exposure for a named engagement partner or a participating accounting firm is limited, and that the potential risk of such an increase is justified by the potential benefits of greater transparency, we do not believe the potential increase in liability exposure is limited or insignificant or that the potential benefits set out in the Release are available only through naming the engagement partner or a participating accounting firm in the auditor’s report. We believe the benefits of transparency relating to participating accounting firms can be attained without significantly increasing liability exposure by including the required information in Form 2. Furthermore, if the Board decides to move forward with the proposal to identify the engagement partner, despite our concerns noted above, we believe disclosure in Form 2 is also a more appropriate reporting mechanism, for the reasons previously stated.

**Emerging Growth Companies (EGC) and Brokers and Dealers**

We believe the Proposed Amendments, when finalized to reflect comments received, should apply to audits of EGCs because of the benefits of transparency to all financial statement users. However, we do not support application of the Proposed Amendments to non-issuer brokers and dealers, because (1) the ownership of these brokers is primarily closely held and direct owners are generally part of management and (2) we believe this information would not be relevant to third parties.

******

We would be pleased to discuss our comments with you at your convenience. Please direct any questions to Chris Smith, Audit and Accounting Professional Practice Leader, at 310-557-8549 (chsmith@bdo.com) or Susan Lister, National Director of Auditing, at 212-885-8375 (slister@bdo.com).

Very truly yours,

/s/ BDO USA, LLP

Re: PCAOB Rulemaking Docket Matter No. 29, Improving the Transparency of Audits: Proposed Amendments to the PCAOB Auditing Standards to Provide Disclosure in the Auditor’s Report of Certain Participants in the Audit

Dear Office of the Secretary:

We appreciate the opportunity to respond to the Public Company Accounting Oversight Board’s (“PCAOB” or “Board”) Release No. 2013-009 on Improving the Transparency of Audits: Proposed Amendments to the PCAOB Auditing Standards to Provide Disclosure in the Auditor’s Report of Certain Participants in the Audit (“Release”). Overall, we support the Board’s efforts to improve transparency to investors and other financial statement users. However, we have several reservations regarding the proposed amendments. This letter includes our views and observations on engagement partner identification and identification of other participants in the audit as set forth in the Release.

Disclosure of the Name of the Engagement Partner

We do not support the identification of the engagement partner in the audit report, as we do not believe it will serve to advance the Board’s goal of improving audit quality. Further, we have concerns that investors, issuers and auditors would suffer unintended negative consequences.

We acknowledge that identifying the engagement partner in the audit report would increase transparency of that information but question how that information is valuable to investors or how that information can be used by investors to better understand the audit or audit process. Users, other than perhaps audit committees, lack the full context necessary to truly evaluate audit quality, and users of the audit reports may draw inappropriate inferences about the expertise or experience of the engagement partner. This limited information doesn’t take into account the unique circumstances applicable to engagement partner’s experiences with other public companies, nor their experiences outside the public company environment. It also doesn’t take into account the experience, expertise or relative roles of the engagement quality reviewer, subject matter experts or other firm specialists who play significant roles in the audit, especially in complex, higher risk areas. Audits are performed by teams of individuals who perform...
critically important functions. Therefore, we believe it is more appropriate that firms sign audit reports and not individuals.

For all the reasons and concerns mentioned above, we also do not support the identification of the engagement partner in the PCAOB Form 2.

**Disclosure About Certain Other Participants in the Audit**

We do not support the identification of other participants in the audit report, as we do not believe it will serve to advance the Board’s goal of improving audit quality. Further, we have concerns that providing that information when the primary audit firm assumes responsibility for or supervises the work of those participants would appear to change or diminish the overall responsibility of the primary auditor. We do not believe it is possible for users of the financial statements to make any informed decision about the impact on audit quality simply by naming other participants without also evaluating the materiality and complexity both of the information being tested, nature of the work performed, the qualifications of the participants who performed that work, the extent of planning, supervision and review performed by the principal auditor.

If the Board believes the current quality control standards on supervision of other participants used in an audit are unsatisfactory, we respectfully propose the Board tackle those issues by amending current auditing standards or proposing auditing standards to address those issues.

We also have concerns that the identification of other participants could be a competitive disadvantage for smaller firms when compared to larger firms who have common branding of their network firms, *i.e.*, use of a common name. Investors may make incorrect assumptions about the quality of network firms based on similarity of their names to the detriment of smaller firms that lack a similar network structure.

For all the reasons and concerns mentioned above, we also do not support the identification of other participants in the PCAOB Form 2.

**Liability Considerations**

The requirement for a consent pursuant to Section 7 from the engagement partner and other participants, if named in the auditor’s report, raises other concerns with legal liability and logistical challenges. Liability considerations are primarily related to an increase in Section 11 liability. We believe the increased litigation exposure to engagement partners and other participants would be an unintended consequence of the Release to increase transparency.

The logistics of obtaining consents from engagement partners who have since left the firm due to retirement, joined another firm or have been hired by a firm’s client could prove, in some cases,
to be an insurmountable challenge since a firm would have no legal rights or ability to force the former partner of the firm to provide their consent. There may be independence issues, as well, in these situations if a former engagement partner is required to consent during a cooling off period. It is unclear how these would be addressed in the Release.

The logistics of obtaining consents from other participants could prove to be even more challenging. Given the increase in liability, these other participants will have to perform other procedures around the filing before issuing a consent, thereby increasing their time and costs related to their use in audits.

**Scope of the Proposal**

We believe the scope of the proposal should include emerging growth companies (EGCs), as EGCs have the same characteristics as other public companies and the users of their financial statements would benefit from the same disclosures as other issuers. We do not believe the scope of the proposal should include nonissuer brokers and dealers, as the cost to provide the relevant information would not justify the incremental cost considering most brokers and dealers are so closely held.

*****

We appreciate the opportunity to express our views on this important topic for the Board’s consideration. If you have any questions or would like to discuss these matters further, please contact Jennifer George or Doug Bennett at 417.831.7283 or by email at jgeorge@bkd.com or dbennett@bkd.com.

Sincerely,

BKD, LLP

Mr. James R. Doty, Chairman
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington, D.C. 20006-2803

Dear Chairman Doty:

I wish to send this comment letter in support of the current Public Company Accounting Oversight Board ("PCAOB") issue of the engagement partner being identified in the audit report.

Early on in 1982, when I was beginning my 15-year term as Comptroller General of the United States and head of the General Accounting Office ("GAO"), we embarked on a major effort to improve the quality of our audit work and the final audit report.

One issue we considered and finally adopted was having the senior person who led the work and was responsible for writing the audit report be identified in the report.

We were very pleased with the result. This one change made a significant improvement in the audit work and the final report. We were also pleased that our professional staff became very proud to be identified in the report that they had worked so hard to produce.

In addition to my own thinking, I can vouch that my two Deputy Comptroller Generals, Mit Socolar and Jim Hinchman, and the Assistant Comptroller General in charge of our financial and accounting audit work, Don Chapin, CPA, and former Senior Partner of Arthur Young and Company, were all in agreement that this was one of the most significant changes that led to improved audit work and reports at the GAO. This change is still in effect at the GAO, which is now over 30 years ago, and the GAO issues several hundred reports each year.

I strongly urge the PCAOB to adopt the auditor identification proposal. It is just as much needed in the private sector audit work as it was in the government audit work.

Sincerely,

Charles A. Bowsher

Re: PCAOB Rulemaking Docket Matter No. 029, Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards to Provide Disclosure in the Auditor’s Report of Certain Participants in the Audit

Dear Ms. Brown:

I support the PCAOB’s efforts to enhance transparency about the auditor’s role and responsibilities. I also support the identification of any and all accounting firms that have a significant role in the execution of the audit, but believe this information should be provided outside of the auditor’s report. I also do not support identifying the engagement partner in the audit report. But if it is determined that a mandate for that exists, I suggest an alternative that can be made either in a 10Q, or proxy, or in a public filing with the PCAOB, that is similar to information already provided, in most cases, to Audit Committees at the outset of the audit engagement.

In my view, identifying the engagement partner will not provide meaningful additional information to investors. One observation in the PCAOB proposal is that identifying the specific senior audit partner might affect some educated investor's investment decision on a registered company. I apologize for my candor, but that seems ludicrous ("could be valuable to investors in making investment decisions"). The specific lead audit firm that is involved "might" impact an investment decision, perhaps because size and reputation and scope of operations vary, but even that would be unusual. Since audit partners rotate every 5 years or less, and are backed up by the resources and experience and depth of the firm, and since the PCAOB gets satisfied that National oversight and quality control by registered firms is adequate, I struggle to comprehend someone seriously suggesting that which audit partner for one of the Big 4 firms is assigned can affect an investment decision. And the follow-on suggestion in the proposal that the identification might impact someone's ratification vote for the following year's auditors also seems a
stretch. Since rotation is required every 5 years, the partner involved in "signing" the current year audit report will frequently not be the partner on the engagement assignment for the succeeding year being voted on. I suspect that the various jurisdictions that already require the partner to personally sign the audit report have done so in some historical or statutory context related to the audit profession in that country, vs. for the reasons suggested in the proposal. I would not think Croatia and Taiwan are leading the world in setting international trends and disclosure standards, yet are referenced.

The Proposal suggests that the identification of the signing partner will cause greater accountability on the part of the partner with respect to his/her attention to the audits and audit quality. Some may believe that, not knowing much about the profession or its history or its practices. As a former partner with a Big 4 Firm who signed reports on SEC registrants' financial statements for almost 25 years, I needed no further reminder of my responsibilities. As a CPA who completed challenging and comprehensive exams and is required to complete "continuing professional education (CPE)" annually, including professional ethics matters, I had a "Hippocratic Oath" of my own that framed my job. The Firm culture ingrained in me my responsibilities, as did its practices. I can only assume and hope that every Firm approved to audit SEC registrants has a similar culture and practices, and part of the PCAOB's job is to ensure that. Furthermore, I did sign an internal form at the conclusion of the audit enumerating my agreement regarding the completion and execution of my responsibilities. The lack of faith in the CPA profession by the PCAOB and some academics and some small cadre of investors is disheartening, considering the role we place on the profession in our capital markets.

The execution of an effective audit is a collective effort that can involve many individuals and depends on a variety of factors. The specialists (actuarial, tax, valuation, real estate, investment, information technology, e.g.) assisting the engagement team are frequently just as important as the lead engagement partner in completing the audit and targeting areas of highest risk. And the assisting audit partners in the field, if any, in various locations, are equally as important as the engagement partner. They are closer to the day-to-day work in directly supervising the remainder of the engagement team.

For every SEC registrant audit I have been involved in as an audit partner or as Chair or member of two public company Audit Committees, the audit firm presents annually a visual of the assigned audit team and its support specialists. Their role if not obvious by title or placement on a chart is explained. The change in personnel from the prior year is also explained. This is usually done at least orally and in summary at the time of approval of the Firm for the next year's audit, and, if the full engagement team is not presented then, it is done when audit scope is discussed. This information could be presented in an
attachment/exhibit to the next subsequent 10Q filing. The proxy section addressing audit fees could refer to that specific filing and address whether there was any change in that graphic at the higher levels throughout the execution and completion of the audit.

Information overload and the extent of disclosures in Annual Reports is a very real issue. If some few, and based on the letters you received on this issue it can only be a few (43 respondents in total), want the information, it can be made accessible but not distracting to the key messages in the audit report, the financial statements, the proxy, etc. Submitting the information, considering how inconsequential it is to the vast majority of report readers, in an exhibit to a less critical filing than the 10K or proxy seems the right place, if at all. The PCAOB presents several concerns about making the seeker of this information go to more than one source or one filing, yet part of the rationale for the requirement is the creation of databases by independent parties to compile and present analysis of this information for supposed use in investment decisions. So to make it useful, one would need to refer to several sources. And if those who care are so few, why distract the many for the narrow interests of the few?

Respectfully, this entire proposal should never have risen to this level of discussion based on the interests of so few. If the dialogue proceeds, please do not dilute the message of the audit report with distracting additional elements. Allow the information to be provided somewhere else.

Very truly yours,

G. Lawrence Buhl

Dear PCAOB

RE: Release # 2013-009, PCAOB Rulemaking Docket Matter # 029

Convergence ‘at all costs’ seems to be the reaction amongst professionals on several of the suggestions put forward in this Exposure Draft.

Dragons and kite flying are traditions on this day to celebrate the Chinese New Year. It is a shame that comments due in circa 32 hours from now smack of kite flying by the PCAOB staff, who are obviously being influenced by their cross Atlantic colleagues.

Cultures are different and the predisposition of the EU with its protective umbrella for investors and citizens, often arising from the cradle to grave care by some EU member countries, may not best serve the Public Interest of US Investors who operate in a less regulated, more market responsive environment. Also, as European companies are often dominated by “insider” shareholders, the public disclosures may be more appropriate in Europe.

This perhaps manifests the problem of ‘convergence’. One size does not fit all.

It should be noted that the UK Companies Act was altered in recent years to incorporate Lead auditor disclosure. More recently, Glaxo Smith Kline used a safe harbor provision of that Act to NOT disclose the lead auditor’s name. Was the spirit of the UK companies Act being circumvented for specious reasons? It seems that One size does not fit all in the UK! Will such an escape provision for public companies be included in any US standard?

Dr. Ralph Estes, CPA, Emeritus professor at American University, Washington DC, co-founder and vice president of The Center for Advancement of Public Policy, in his book “The Auditor’s Report and Investor Behavior” summarized the effect of audit reports on user behavior as:

Significant Effects were found in a few studies, but these were
In 2011 Francine McKenna, a Forbes contributor asked:

> What are audit firms hiding? Don’t investors, and Audit Committees, have a right to know everything about the men and women they’re counting on to provide multi-million dollar audit opinions?

> This is the question to resolve.

**OUR ANSWERS TO QUESTIONS FOR COMMENTERS**

1. **Would the (re)proposed requirements to disclose the engagement partner's name and information about other participants in the audit provide investors and other financial statement users with useful information? How might investors and other financial statement users use the information?**

   *The (re)proposed requirements, based upon prior studies, are unlikely to provide investors and other financial statement users with useful information.*

2. **Would the name of the engagement partner or the extent of participation of other participants be useful to shareholders in deciding whether to ratify the company’s choice of registered firm as its auditor? If so, how?**

   *Remote*

3. **Over time, would the (re)proposed requirement to disclose the engagement partner’s name allow databases and other compilations to be developed in which investors and other financial statement users could track certain aspects of an individual engagement partner's history, including, for example, his or her industry expertise, restatement history, and involvement in disciplinary proceedings or other litigation?**

   *Not likely*

4. **Likely to be unnecessary duplication of work currently being done by independent advisors. Could denigrate the value of the audit report.**

5. **Possible not probable**

6. **No**

7. **Would the (re)proposed requirements to disclose the engagement partner's name and information about other participants in the audit either promote or inhibit competition among audit firms or companies?**
In a pure market ‘yes’ but the providers of audit services are limited in number and thus the market for their services is distorted.

8. Would the (re)proposed disclosure requirements mislead investors and other financial statement users or lead them to make unwarranted inferences about the engagement partner or the other participant in the audit? If so, how? Would there be other unintended consequences? If so, what are those consequences, and how could they be mitigated?

Probably. However, PCs should prominently publish their AC minutes which identify the engagement partner.

9. What costs could be imposed on firms, issuers, or others by the (re)proposed requirement to disclose the name of the engagement partner in the auditor's report? Please provide any available empirical data. Will there be greater or lesser effects on EGCs or auditors of EGCs than on other issuers or auditors of other issuers?

Minimal

10. What costs could be imposed by the application of the consent requirement to an engagement partner who is named in the auditor's report? Please discuss both administrative costs to obtain and file consents with the SEC, as well as any indirect costs that might result. How could insurance or other private contracts affect these costs?

Courts could consider named engagement partners as co-defendants in any litigation. Should engagement partners be safe-harbored? Probably not.

11. Would application of the consent requirement to an engagement partner named in the auditor's report result in benefits, such as improved compliance with existing auditing requirements? Will there be greater or lesser effects on EGCs or auditors of EGCs than on other issuers or auditors of other issuers?

No. One size should fit all in this instance.

12. Would the (re)proposed amendments increase the engagement partner's or the other participants' sense of accountability? If so, how? Would an increased sense of accountability for engagement partners or other participants have an impact on audit quality? If yes, please provide specifics.

Possibly. However, the public display of the signing off on the audit report in front of the Annual meeting attendees would bring more accountability especially if it was web cammed and accessible on the company's web site for a period of years and providing accountability to all the investing public and those unable to attend the Annual meeting.

13. What costs could be imposed on firms, issuers, or others by the (re)proposed requirement to disclose the information about other participants in the auditor's report? Please provide any available empirical data. Will there be greater or lesser effects on EGCs or auditors of EGCs than on other issuers or auditors of other issuers?

Conjectural.
14. What costs could be imposed by the application of the consent requirement to other firms that are named in the auditor's report? Please discuss both administrative costs to obtain and file consents with the SEC, as well as any indirect costs that might result. How could insurance or other private contracts affect these costs?

Miniscule.

15. Would application of the consent requirement to other firms named in the auditor's report result in benefits, such as improved compliance with existing requirements? Will there be greater or lesser effects on EGCs or auditors of EGCs than on other issuers or auditors of other issuers?

No.

16. Would disclosure of the extent of other participants' participation, within a range rather than as a specific number, provide sufficiently useful information to investors and other financial statement users?

Probably.

Why or why not?

Speculative.

Would the (re)proposed requirement to disclose the extent of other participant participation within ranges impose fewer costs than a specifically identified percentage?

Not likely.

17. Would increasing the threshold for individual disclosure of other participants to 5% from the originally proposed threshold of 3% improve the relevance of the disclosure? Would it reduce potential costs? Would another threshold, such as 10%, be more appropriate? If so, why?

Keep 3%. Aggregation offsetting a concern.

18. Under the (re)proposed amendments disclosure would not be required when audit work is offshored to an office of the firm that issues the auditor's report (even though that office may be located in a country different from where the firm is headquartered), but disclosure would be required when audit work is performed by a foreign affiliate or other entities that are distinct from the accounting firm issuing the auditor's report.

a. Should all arrangements whether performed by an office of the firm issuing the auditor's report in a country different from where the firm is headquartered, a foreign affiliate or another entity that is distinct from the accounting firm issuing the auditor's report be disclosed as other participants in the audit? Why or why not?

No.

b. Is it sufficiently clear how the disclosure requirement would apply in the context of offshoring? If not, how could this be made clearer?
Overboard. Detail for the PCAOB staff.

19. Are there special considerations for alternative practice structures or other nontraditional practice structures that the Board should take into account regarding the (re)proposed requirement to disclose other participants in the audit?

No.

20. Under the (re)proposed amendments, the auditor would be required to include the extent of participation of persons engaged by the auditor with specialized skill or knowledge in a particular field other than accounting and auditing (“engaged specialists”) in the total audit hours and to disclose the location and extent of participation of such persons. The engaged specialists would not be identified by name, but would be disclosed as "other persons not employed by the auditor."

   a. Is it appropriate to require disclosure of the location and extent of participation of engaged specialists? If not, why?

Yes.

   b. Would there be any challenges in or costs associated with implementing this requirement for engaged specialists? If so, what are the challenges or costs?

Possibly, but value may outweigh cost.

21. In the case of other participants that are not public accounting firms (such as individuals, consulting firms, or specialists), is the participant's name a relevant or useful piece of information that should be disclosed? Does disclosure of the participant's location and the extent of the participant's participation provide sufficient information?

Yes.

22. If the Board adopts the (re)proposed amendments for auditors to disclose the name of the engagement partner and certain information about other participants in the audit in the auditor's report, should the Board also require firms to disclose the same information on Form 2 or another PCAOB reporting form? Why or why not?

Yes. Consistency and comparability.

23. Are the (re)proposed amendments to disclose the engagement partner's name and information about other participants in the audit appropriate for audits of brokers and dealers? If yes, are there any considerations that the Board should take into account with respect to audits of brokers and dealers?

All registrants should be treated alike.

24. Should the (re)proposed disclosure requirements be applicable for the audits of EGCs? Are there other considerations relating to efficiency, competition, and capital formation that the Board should take into account when determining whether to recommend that the Commission approve the (re)proposed amendments to disclose the engagement partner's name and information about other participants in the audit for application to audits of EGCs?
We are of the opinion that the disclosure requirements, if adopted, should apply equally to EGCs.

25. Are the disclosures that would be required under the (re)proposed amendments either more or less important in audits of EGCs than in audits of other public companies? Are there benefits of the (re)proposed amendments that are specific to the EGC context?

No

We conclude, as you do, that as the auditor's report is retrospective, and disclosure of an engagement partner's identity in the auditor's report provides information only about the most recent period's audit of the financial statements. You raise a valid point in that it does not provide information about the identity of the next period's engagement partner, which may be of interest to shareholders. Changes in the engagement partner could raise further questions about the identity and qualifications of the new engagement partner. We propose that questions and answers about engagement partners could be informed by additional public information or by the AC minutes being made publicly accessible.

You recognize that the engagement partner has the most direct relationship with the audit committee and senior management and serves as the primary interface between the audit firm and the audit committee and senior management and s/he reports to the stockholders!

A prime consideration should be the refusal of Chinese audit firms -- based on Chinese "law" -- to satisfy US regulators repeated requests for information directly related to audit quality (which are routinely answered by U. S. audit firms). We would tend to heavily discount the usefulness of material audit assurances given to lead auditors by correspondent "audit" firms located in jurisdictions which allow them to avoid oversight. Indeed, lead auditors should be specifically required to test and provide an opinion on the usefulness of assurances from such correspondent firms.

More transparency is advocated.

Please do not hesitate to email or phone if our responses require further elucidation.

Sincerely,

AW Burrowes

Re: PCAOB Rulemaking Docket Number 29

Dear Ms. Brown and PCAOB Members:

On behalf of the California Public Employees' Retirement System (CalPERS), thank you for the opportunity to provide our comments on PCAOB Rulemaking Docket No. 29 – Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards to Provide Disclosure in the Auditor’s Report of Certain Participants in the Audit.

CalPERS is the largest public pension fund in the United States with over $280 billion in global assets and equity holdings in over 9,000 companies. CalPERS provides retirement benefits to more than 1.6 million public workers, retirees, their families and beneficiaries and we rely on the quality and integrity of market information to allocate capital on behalf of our beneficiaries.

In its Global Principles of Accountable Corporate Governance, CalPERS articulated its views on the importance of role accounting and auditing play our capital markets. Principle IV provides:

Financial reporting plays an integral role in the capital markets by providing transparent and relevant information about the economic performance and condition of businesses. Effective financial reporting depends on high quality accounting standards, as well as consistent application, rigorous independent audit and enforcement of those standards. CalPERS is a strong advocate of reform that ensures the continual improvement and integrity of financial reporting.

In addition, CalPERS has voiced its view that requiring audit partners to sign the opinions they issue will enhance accountability and reliability in the audit process. During a recent PCAOB Investor Advisory Committee meeting, I echoed calls to require audit partner signatures on audit reports. “I'd like to fully support [the audit partner signature requirement]. When considering the question of transparency on the audit, it's hard to understand who would object to this. Who would not be willing to stand and be held accountable for their own work?”
Moreover, this common-sense proposition has been supported by empirical evidence. In a paper published in September 2013 volume of *The Accounting Review*, the peer-review journal of the American Accounting Association, Professors Joseph Carcello (University of Tennessee) and Chan Li (University of Pittsburg) confirm the conclusions of the US Department of the Treasury’s Advisory Committee on the Audit Profession (“ACAP”) which expressed the view that “the engagement partner’s signature on the auditor’s report would increase transparency and accountability.”

Professors Carcello and Li analyzed this statement in the context of the United Kingdom audit partner signature requirement. They concluded:

> Overall, our results indicate that the implementation of a partner signature requirement in the UK has offered benefits to investors and other financial statement users. First, earnings management has declined, whether measured by abnormal accruals or the propensity to meet an earnings threshold. In addition, the incidence of qualified audit opinions has increased. Perhaps because of this decline in earnings management and/or because of a greater willingness by auditors to issue qualified opinions, the informativeness of earnings has increased. Importantly, the results for both control samples – US firm which have not implemented a signature requirement, and firms in other European Countries that adopted the partner signature requirement before the UK – suggest that the audit quality improvements experienced in the UK after the partner signature requirement are unlikely to be due to other changes in the audit or business environment not included in our model….

> …. Our results are consistent with the argument that requiring an individual audit partner to sign a report improves audit quality by increasing the partner’s accountability and transparency of audit reporting….

We have addressed in the attachment certain questions in the proposal, but we applaud the work of the PCAOB and wholeheartedly support the approach set out in the proposed rule. We would also refer the PCAOB to two letters we previously submitted on the subject. The first relates to the PCAOB’s earlier concept release in 2009. The other was submitted to the Treasury Department’s Advisory Committee on the Accounting Profession. *(See [http://pcaobus.org/Rules/Rulemaking/Docket029/022_CalPERS.pdf](http://pcaobus.org/Rules/Rulemaking/Docket029/022_CalPERS.pdf))*

Thank you for your consideration. If you have any questions, please do not hesitate to contact me at (916) 795-9672 ([anne_simpson@calpers.ca.gov](mailto:anne_simpson@calpers.ca.gov)) or Don Marlais of Lussier, Gregor, Vienna & Associates - our federal representatives - at (703) 888-4522 ([dmarlais@lgva.net](mailto:dmarlais@lgva.net)).

Sincerely,

[Signature]

ANNE SIMPSON
Senior Portfolio Manager, Investments
1. Would the reproposed requirements to disclose the engagement partner’s name and information about other participants in the audit provide investors and other financial statement users with useful information? How might investors and other financial statement users use the information?

As noted in our comment letter, CalPERS believes requiring the engagement partner signature will enhance accountability in the audit process and believe it will improve audit quality. Predictably, investors or other users of financial statements will likely use information on audit partners and other personnel in making investment and/or engagement decisions based on the perceived quality of the work performed.

For example, if an issuer restates its earnings, financial statement users, corporate boards and firms themselves may take note of the audit team personnel and may request another audit partner or personnel be assigned to the audit going-forward.

2. Would the name of the engagement partner or the extent of participation of other participants be useful to shareholders in deciding whether to ratify the company's choice of registered firm as its auditor? If so, how?

Long-term shareowners such as CalPERS seek reliable financial information from its portfolio companies. If an audit firm is assigning personnel whose audits are subject to material restatements or similar inaccuracies, investors may engage audit committees and the issuer to review their audit contract, and discuss whether the engagement partner or firm should be changed, through an open bid selection process and/or chose to reallocate its investment assets.

3. Over time, would the reproposed requirement to disclose the engagement partner's name allow databases and other compilations to be developed in which investors and other financial statement users could track certain aspects of an individual engagement partner's history, including, for example, his or her industry expertise, restatement history, and involvement in disciplinary proceedings or other litigation?

We believe that this will be a likely market-based reaction to the disclosure of this information and may stimulate collection of comprehensive trend data, providing investors additional tools in determining the reliability and integrity of a company's financial reporting.

a. Would such databases or compilations be useful to investors and other financial statement users? If so, how?

Many investors will not have the resources to compile and compare audit personnel information, so it is logical that they would want to identify a vendor that would provide this information.
b. Would they provide investors and audit committees with relevant benchmarks against which the engagement partner could be compared? If so, how?

Over time, aggregate information on audit personnel could be used as an audit quality indicator. We also believe audit firms could utilize the data to evaluate and improve training, audit firm governance and overall process.

4. Over time, would the reproposed requirement to disclose the other participants in the audit allow investors and other financial statement users to track information about the firms that participate in the audit, such as their public company accounts, size of the firms, disciplinary proceedings, and litigation in which they have been involved? Would this information be useful to investors and if so, how?

For the reasons stated in our letter and in this document, we believe information on audit personnel at all levels will be useful to improve transparency and accountability. The broad inclusion of personnel will allow for a review of performance over an extended period of time, including performance with multiple firms and at differing levels of responsibility.

5. Is the ability to research publicly available information about the engagement partner or other participants in the audit important? If so, why, and under what circumstances?

Information without the ability to obtain it is not transparency. The information about audit personnel should be included as part of the audit report filed with the SEC and be publicly available.

6. Would the reproposed requirement to disclose the engagement partner’s name promote more effective capital allocation? If so, how? Can an engagement partner’s history provide a signal about the reliability of the audit and, in turn, the company’s financial statements? If so, under what circumstances?

For the reasons stated in our letter and in this document, we believe the disclosure of the engagement partner’s name could promote more effective capital allocation because investors may use that information to engage with audit committees along with issuers and or use to make allocation decisions. We expect that market participants will view an engagement partner’s history as a relevant indicator of audit quality. For example, if an audit partner issues opinion on issuers who frequently restate their earning, investors may view that partner as lacking sufficient professional skepticism or competence.

7. Would the reproposed requirements to disclose the engagement partner’s name and information about other participants in the audit either promote or inhibit competition among audit firms or companies? If so, how?

Yes, we believe market forces will influence competition. If investors are displeased with a firm’s assignment of an audit partner or audit personnel, they may seek to engage with the issuer client to seek reassignment of personnel, reallocate investment asset or similar actions. We believe that
issuers may look to include more regional audit firms in their tendering process if trend data provides evidence of quality issues with the larger firms.

8. Would the reproposed disclosure requirements mislead investors and other financial statement users or lead them to make unwarranted inferences about the engagement partner or the other participant in the audit? If so, how? Would there be other unintended consequences? If so, what are those consequences, and how could they be mitigated?

We would encourage firms to provide sufficient information or explanations relating to these disclosures to provide sufficient context for investors to make appropriate inferences.

9. What costs could be imposed on firms, issuers, or others by the reproposed requirement to disclose the name of the engagement partner in the auditor's report? Please provide any available empirical data. Will there be greater or lesser effects on Emerging Growth Companies (EGCs) or auditors of EGCs than on other issuers or auditors of other issuers?

As with other aspects of Emerging Growth Companies (EGC) financial disclosure, we believe the lack of comparable disclosure with other issuers will result in an increased cost of capital. By providing less information to investors, EGCs can expect investors to demand high risk premiums. As such, we would encourage that the SEC determine this information should be disclosed by the auditors of EGCs.

11. Would application of the consent requirement to an engagement partner named in the auditor’s report result in benefits, such as improved compliance with existing auditing requirements? Will there be greater or lesser effects on EGCs or auditors of EGCs than on other issuers or auditors of other issuers?

For the reasons stated in our letter and in this document, we believe the identification of the engagement partner and engagement team would improve audit quality, including professional skepticism and objectivity.

12. Would the reproposed amendments increase the engagement partner’s or the other participants’ sense of accountability? If so, how? Would an increased sense of accountability for engagement partners or other participants have an impact on audit quality? If yes, please provide specifics.

For the reasons stated in our letter and in this document, we believe the identification of the engagement partner and engagement team would not only improve audit quality, but also professional skepticism and objectivity.
15. Would application of the consent requirement to other firms named in the auditor's report result in benefits, such as improved compliance with existing requirements? Will there be greater or lesser effects on EGCs or auditors of EGCs than on other issuers or auditors of other issuers?

For the reasons stated in our letter and in this document, we believe the identification of the engagement partner and engagement team would improve audit quality, including professional skepticism and objectivity.

16. Would disclosure of the extent of other participants' participation, within a range rather than as a specific number, provide sufficiently useful information to investors and other financial statement users? Why or why not? Would the reproposed requirement to disclose the extent of other participant participation within ranges impose fewer costs than a specifically identified percentage?

We believe greater accountability will be achieved through the specific identification of everyone substantially contributing to the performance of the audit. Access to meaningful information about a public company allows investors to make informed judgments about the company's financial position and about the stewardship of the company's directors and management. CalPERS believes that more disclosure about certain aspects of the audit of a public company, including about the identity of the engagement partner and other firms associated with the audit, would add to the mix of information that investors and other financial statement users have about public companies, which they would find useful.

17. Would increasing the threshold for individual disclosure of other participants to 5% from the originally proposed threshold of 3% improve the relevance of the disclosure? Would it reduce potential costs? Would another threshold, such as 10%, be more appropriate? If so, why?

We believe greater accountability will be achieved through the specific identification of everyone substantially contributing to the performance of the audit. We believe a 5% threshold would provide a meaningful threshold for such contributions.

18. Under the reproposed amendments disclosure would not be required when audit work is offshored to an office of the firm that issues the auditor's report (even though that office may be located in a country different from where the firm is headquartered), but disclosure would be required when audit work is performed by a foreign affiliate or other entities that are distinct from the accounting firm issuing the auditor's report.

a. Should all arrangements whether performed by an office of the firm issuing the auditor's report in a country different from where the firm is headquartered, a foreign affiliate or another entity that is distinct from the accounting firm issuing the auditor's report be disclosed as other participants in the audit? Why or why not?

b. Is it sufficiently clear how the disclosure requirement would apply in the context of offshoring? If not, how could this be made clearer?

We believe disclosures should be required for offshore work and work by foreign affiliates. This is supported with the recent suspension of the Chinese units of the Big Four accounting firms.
20. Under the reproposed amendments, the auditor would be required to include the extent of participation of persons engaged by the auditor with specialized skill or knowledge in a particular field other than accounting and auditing ("engaged specialists") in the total audit hours and to disclose the location and extent of participation of such persons. The engaged specialists would not be identified by name, but would be disclosed as "other persons not employed by the auditor."

a. Is it appropriate to require disclosure of the location and extent of participation of engaged specialists? If not, why?

b. Would there be any challenges in or costs associated with implementing this requirement for engaged specialists? If so, what are the challenges or costs?

We believe greater accountability will be achieved through the specific identification of everyone substantially contributing to the performance of the audit.

21. In the case of other participants that are not public accounting firms (such as individuals, consulting firms, or specialists), is the participant's name a relevant or useful piece of information that should be disclosed? Does disclosure of the participant's location and the extent of the participant's participation provide sufficient information?

We believe greater accountability will be achieved through the specific identification of everyone substantially contributing to the performance of the audit. This is the same concept with requiring issuers to identify Compensation Consultants and the extent of their work, independence, etc.

22. If the Board adopts the reproposed amendments for auditors to disclose the name of the engagement partner and certain information about other participants in the audit in the auditor's report, should the Board also require firms to disclose the same information on Form 2 or another PCAOB reporting form? Why or why not?

Including those disclosures in Form 2 would seem to assist PCAOB in its compliance with this requirement, instead of obtaining that information from the SEC or a service provider.

23. Are the reproposed amendments to disclose the engagement partner's name and information about other participants in the audit appropriate for audits of brokers and dealers? If yes, are there any considerations that the Board should take into account with respect to audits of brokers and dealers?

CalPERS believes the disclosure requirements should apply to all issuers.

24. Should the reproposed disclosure requirements be applicable for the audits of EGCs? Are there other considerations relating to efficiency, competition, and capital formation that the Board should take into account when determining whether to recommend that the Commission approve the reproposed amendments to disclose the engagement partner's name and information about other participants in the audit for application to audits of EGCs?
CalPERS believes the disclosure requirements should apply to all issuers. To the extent EGCs are not required to comply with these requirements and do not make voluntary disclosure of this information, we expect that investors would consider the increased risk profile when making allocation decisions.

25. Are the disclosures that would be required under the reproposed amendments either more or less important in audits of EGCs than in audits of other public companies? Are there benefits of the reproposed amendments that are specific to the EGC context?

CalPERS believes the disclosure requirements should apply to all issuers and does not believe disclosures are more or less important for different classifications of issuers.

Re: PCAOB Release No. 2013-009
PCAOB Rulemaking Docket Matter No. 029, December 4, 2013
IMPROVING THE TRANSPARENCY OF AUDITS: PROPOSED AMENDMENTS TO PCAOB AUDITING STANDARDS TO PROVIDE DISCLOSURE IN THE AUDITOR’S REPORT OF CERTAIN PARTICIPANTS IN THE AUDIT

The Accounting Principles and Auditing Standards Committee (the “Committee”) of the California Society of Certified Public Accountants (“CalCPA”) respectfully submits its comments on the referenced proposal. The Committee is the senior technical committee of CalCPA. CalCPA has approximately 40,000 members. The Committee consists of 53 members, of whom 47 percent are from local or regional CPA firms, 27 percent are from large multi-office CPA firms, 12 percent are sole practitioners in public practice, 10 percent are in academia and 4 percent are in international CPA firms. Members of the Committee are with CPA firms serving a large number of public and nonpublic business entities, as well as many non-business entities such as not-for-profits, pension plans and governmental organizations.

The Committee’s Overall Comments

The Committee appreciates this opportunity to comment on the PCAOB’s reproposed amendments. While the Committee has provided its responses to the specific questions set forth in the reproposed amendments, we also want to address our reasons for strongly opposing its issuance.

The Committee believes that reproposed amendments to disclose the engagement partner’s name and information about other participants in the audit are seriously misguided and will be of little use to anyone. Investors and other users of financial statements want reliable financial data. Their purported interest in more "transparency" about auditors stems from concerns about reliability of financial data, and not from any interest, per se, in investigating auditors. Further, any research that they may be able to do based on the reproposed disclosures is likely to be inconclusive except as it might relate to certain foreign auditors (as explained below). Auditors are already extensively regulated through state licensing laws, SEC laws and regulations,
PCAOB
January 31, 2014
Page 2

PCAOB requirements and oversight by the SEC and the PCAOB. The basic reason cited for the repromised disclosures is to overcome the lack of transparency about those who conduct the audit and provide information useful to investors and other financial statement users but nowhere does the PCAOB provide any objective information as to how this might be useful to investors or other users or improve audit quality; in fact, there is no empirical data on the usefulness of this information, and the PCAOB provides nothing beyond opinions and conjecture about why such disclosures might be useful. Firms and individual auditors right now have every necessary incentive to improve audit quality where required; they are monitored by audit committees; they are extensively regulated; and, they are subject to potential litigation, including financial exposure and adverse publicity for the firm and the individuals involved in the audit. More disclosures and transparency are unlikely to have any effect on the engagement partner's or audit firm's incentive to do quality audits that is not already present, so they will not improve the reliability of financial data and therefore there is no point to the repromised disclosures.

And what are investors and other users to do if they do have questions or issues based on the repromised disclosures? Those disclosures would only be a part of the broad spectrum of information that is available, and since they do not directly affect financial data, are not likely to affect analysis of that financial data unless they point to potential questions about reliability of that financial data, and that is not likely to occur unless the named engagement partner has been the subject of adverse publicity, a firm relied upon by the primary auditor is felt to be unreliable, or other extreme and rare situations. But, the first and best line of defense in these situations is the entity's audit committee, which would have far greater access to relevant information than is available through the repromised disclosures. The repromised disclosures do not provide any information that is conclusive as to the reliability of financial data; they only allow inferences to be drawn, and those inferences may be favorable or unfavorable, depending on the nature of the disclosures, and the inferences may or may not be correct. Investors and users might seek more information from management, as they do concerning other disclosures; ability to get more information is limited by SEC disclosure rules and is therefore often limited. So, the disclosures, except in very rare circumstances, are likely to be of little use to investors and other users.

Publicly available adverse information about engagement partners is rare, and it is even rarer for the same person to be the subject of publicly available adverse information a second time on a different engagement. So, it is unlikely that attempting to link an engagement partner's name with prior adverse information will be fruitful. Trying to make inferences about an engagement partner's qualifications based on other engagements in which he/she may have been involved is done in the first instance by the firms as part of its assignment processes, and in the second instance by the audit committee before accepting assignment of the engagement partner. To now provide a third avenue through public disclosure of the engagement partner's name is a waste of time.

There is one aspect of the disclosure about other participants in the audit that has merit, but requires further study. The Committee is aware of the publicity concerning the quality of certain audits by auditors located in foreign countries, be they foreign offices of U.S. firms, foreign affiliates of U.S. firms, or firms not affiliated with the primary U.S. auditor. The Committee is also aware that the PCAOB has had difficulty in including those audits and the related auditors in its inspection program. The PCAOB inspection problem has led to increased confidence in
registered firms subject to inspection. Use of offices, firms or individuals not subject to PCAOB inspection may appropriately be of interest to investors and other users of financial data, and we recommend that the PCAOB consider rules to require disclosure of the extent of their participation in an audit.

For these reasons, and the additional reasons cited in our responses to the Questions, the Committee recommends that the reproposed amendments be withdrawn.

Questions for Commenters

1. Would the reproposed requirements to disclose the engagement partner’s name and information about other participants in the audit provide investors and other financial statement users with useful information? How might investors and other financial statement users use the information?

The reproposed requirements will not provide investors and other financial statement users with useful information. See The Committee’s Overall Comments above.

See responses to Questions 4, 13, 14, 18 and 22 concerning our recommendation for disclosure about other participants in the audit in certain circumstances.

The Committee believes that the audit committee or those charged with corporate governance, who are directly involved in the hiring and retention of the audit firm, should have direct access to the names of the engagement partner(s) and other participants in the audit. Those parties have the direct responsibility to evaluate the qualifications of the audit engagement team, and to propose the audit firm to a vote of the shareholders. To assume that a specific investor group, institutional investor or other financial statement user would necessarily need the information in the reproposed disclosures and how they might use it to make an informed decision regarding the audited entity is not supported by any clear empirical studies provided by the PCAOB. Therefore, the Committee does not believe that the disclosure of these parties in the auditor’s report is necessary or useful.

2. Would the name of the engagement partner or the extent of participation of other participants be useful to shareholders in deciding whether to ratify the company’s choice of registered firm as its auditor? If so, how?

The Committee does not believe such information would be useful. See the Committee’s response to question 1 above.

It is unlikely to have any effect on a decision to ratify an entity’s choice of a registered firm; the firm is likely to have dealt with any adverse information about the engagement partner or other participants. The adverse information might have an impact on the firm’s reputation, but that is independent from the reproposed disclosures, so the reproposed disclosures would have no effect. The only exception to this might be in the unusual case a smaller firm that does not have the depth to make necessary reassignments of engagement partners or other participants in the audit, but it is likely that a responsible audit committee would seriously consider the information before proposing ratification of a firm in such circumstances.
3. Over time, would the re-proposed requirement to disclose the engagement partner's name allow databases and other compilations to be developed in which investors and other financial statement users could track certain aspects of an individual engagement partner's history, including, for example, his or her industry expertise, restatement history, and involvement in disciplinary proceedings or other litigation?

The re-proposed requirement to disclose the engagement partner's name by itself provides no information about the individual engagement partner's history, so by itself is virtually useless for any of the purposes apparently intended by the PCAOB. To relate the partner's name to the partner's history would require researching a number of different sources, some of which are centralized such as SEC filings, and others of which, such as involvement in disciplinary proceedings, are not centralized and some may not even be publicly available. And, the information may be inconclusive; for example, lack of prior experience as an engagement partner does not indicate lack of industry expertise. And, involvement in disciplinary proceedings or other litigation does not necessarily bear on the competence of the engagement partner, especially if there has not been any conclusive adverse determination.

So, the name of the engagement partner would only provide a starting point for other research that might be done to establish the databases or other compilations suggested by the PCAOB in this Question. The time to do this research and cost of it could be significant. This could lead to calls for expanded disclosures or some other method to mitigate the need for research, and that consequence would be preposterous.

What quite possibly could happen is that the information would spawn a new industry which accumulates and analyzes the data and takes it upon itself to make recommendations, similar to the activities of proxy advisory firms which have sprung up over the past several decades. But, this information may be subject to errors, and there would need to be some mechanism for the engagement partner or the related firm to vet the information. We question whether a feasible mechanism to accomplish all of this in a timely manner could ever be established.

And instead of investors or other users performing their own analyses, they will default to the recommendations of those firms, similar to what is currently happening with advice from proxy advisory firms. Analysis then would be in the hands of a relatively few entities, with a serious question of whether the recommendations of those firms serve any public interest. Of course, they will charge subscribers for use of their information, and those charges will eventually work their way into the economy as additional costs to consumers.

a. Would such databases or compilations be useful to investors and other financial statement users? If so, how?

No, for the reasons stated in the Committee’s response to Questions 1, 2 and 3 above.

b. Would they provide investors and audit committees with relevant benchmarks against which the engagement partner could be compared? If so, how?

No, for the reasons stated in the Committee’s response to questions 1, 2 and 3. above.
4. Over time, would the reploposed requirement to disclose the other participants in the audit allow investors and other financial statement users to track information about the firms that participate in the audit, such as their public company accounts, size of the firms, disciplinary proceedings, and litigation in which they have been involved? Would this information be useful to investors and if so, how?

See the Committee’s response to Question 3. This requirement, as reploposed, is of even less use than disclosure of the name of the engagement partner, which the Committee considers to be useless. Most of the information that might be tracked for firms headquartered in the U.S. is already available periodically from the financial press. Any disclosure of affiliated firms upon which the primary auditor relies will be largely repetitious, especially considering that about 90% of registrants are reportedly audited by the four largest international firms. Further, the Committee believes there is some validity to disclosing the names of other firms participating in the audit in certain circumstances, but that disclosure should be based on the requirements of AU 543. Otherwise, the Committee is not in favor of disclosing such information, for the reasons stated in the Committee’s response to Question 1.

The Committee is aware of the publicity concerning the quality of audits performed by auditors located in foreign countries, be they foreign offices of U.S. firms, foreign affiliates of U.S. firms, or firms not affiliated with the primary U.S. auditor. The Committee is also aware that the PCAOB has had difficulty in including those audits and the related auditors in its inspection program. The PCAOB inspection problem has led to increased confidence in registered firms subject to inspection. Use of offices, firms or individuals not subject to PCAOB inspection may appropriately be of interest to investors and other users of financial data, and we recommend that the PCAOB consider rules to require the extent of their participation in an audit.

The Committee does not see any merit to the disclosure of firms to which the primary auditor does not make reference unless such firms are excluded from the PCAOB’s inspection program and their participation is above a specified threshold. If the primary auditor already makes reference to the other firm, disclosure of that firm’s name should be required, as it already is. If no reference is made and the firm is subject to the primary firm’s quality control policies and procedures, including timely review of their work as appropriate, there is no merit to disclosing the firm’s name.
Disclosure of the names of other participants to which the primary auditor does not make reference and therefore take responsibility for their work would potentially cause confusion about the degree of responsibility undertaken by the firm issuing the audit report. In addition, companies engaging auditors are often reluctant to engage an auditor who will refer to other auditors in its report, and can be equally reluctant to tolerate the proposed disclosures where there is no divided responsibility. This would be particularly troublesome to smaller registered accounting firms who do not have national or international coverage.

5. Is the ability to research publicly available information about the engagement partner or other participants in the audit important? If so, why, and under what circumstances?

No, for the reasons stated in the Committee's response to Questions 1 and 3.

6. Would the proposed requirement to disclose the engagement partner's name promote more effective capital allocation? If so, how? Can an engagement partner's history provide a signal about the reliability of the audit and, in turn, the company's financial statements? If so, under what circumstances?

As stated in the Committee's response to Questions 1 and 2 above we are unaware of any empirical evidence to support the proposition that disclosure of the name of the engagement partner (as opposed to the obvious disclosure of the audit firm, or firms) would clearly produce a higher quality of information enabling a user of the financial statements to make a more informed decision about the overall quality of the audit, and thus promote more effective capital allocation. Any statement about more efficient capital allocation at this time would seem to the Committee to be pure conjecture. Users of financial statements can access the PCAOB's publicly available records of registered public accounting firm's annual reports and inspection reports. Such information can readily speak to the overall quality of the firm's audit practice through the inspection report, and identify the names of the firm's public clients (which can lead to an understanding of industry specializations, etc.) through the annual report.

7. Would the proposed requirements to disclose the engagement partner's name and information about other participants in the audit either promote or inhibit competition among audit firms or companies? If so, how?

The Committee believes the qualitative aspects that providing information about the engagement partner, and the depth of the engagement team's experience, including those of other participants, is already being made available and considered by those in corporate governance responsible to engage the audit firm. Therefore, such information is already a significant factor in promoting competition among audit firms. The PCAOB's current proposal with have no meaningful impact on either promoting or inhibiting competition among audit firms, except, as pointed out in our response to Question 4, companies engaging auditors are often reluctant to engage an auditor who will refer to other auditors in its report, and can be equally reluctant to tolerate the proposed disclosures where there is no divided responsibility. This would be particularly troublesome to smaller registered accounting firms who do not have national or international coverage.
8. Would the reproposed disclosure requirements mislead investors and other financial statement users or lead them to make unwarranted inferences about the engagement partner or the other participant in the audit? If so, how? Would there be other unintended consequences? If so, what are those consequences, and how could they be mitigated?

In the simplest engagements where one engagement partner is truly involved and responsible for the entire audit, the name the engagement partner may be of some interest (although we question its value). In more complex engagements, even though one individual is ultimately designated “engagement partner” the reality is quite different and no really valid conclusions can be drawn about that one individual as that person is forced to rely on the work of perhaps many other partners and other participants.

9. What costs could be imposed on firms, issuers, or others by the reproposed requirement to disclose the name of the engagement partner in the auditor's report? Please provide any available empirical data. Will there be greater or lesser effects on EGCs or auditors of EGCs than on other issuers or auditors of other issuers?

While the Committee does not support the proposed required disclosure of the engagement partner, it does not see the imposition of any significant additional direct costs to the audit firm or the audited entity, regardless of whether they are an EGC. However, see the Committee’s response to Questions 3 and 10.

10. What costs could be imposed by the application of the consent requirement to an engagement partner who is named in the auditor's report? Please discuss both administrative costs to obtain and file consents with the SEC, as well as any indirect costs that might result. How could insurance or other private contracts affect these costs?

The Committee believes it is wholly inappropriate for the PCAOB to open the door to the innumerable legal issues concerning the application of the Securities Laws, especially Section 11 Securities Act liability which arises if the individual engagement partner is named in the auditor’s report, and Section 10(b) and Rule 10b-5 of the Exchange Act liability for materially untrue statements deemed to be made by the individual engagement partner in the auditor’s report. The Committee questions whether the PCAOB fully appreciates the legal and litigation aspects of its proposal, especially after seeing statements such as the following in the PCAOB Release:

“The fact that the engagement partner would be subject to Section 11 liability, however, might provide investors with some additional comfort about the engagement partner’s work on the audit.”

“Because an engagement partner’s liability would be, at most, coextensive with that of the firm, adding the engagement partner as a defendant should not increase the amount a court could award to investors. A court might hold the engagement partner liable, jointly or severally with the firm, for those same damages, but in most cases the accounting firm will have greater resources to satisfy a judgment than will any individual partner.”
"For one thing, consents from engagement partners in an audit should not increase the number of lawsuits filed, though it may increase the number of defendants in any lawsuit that would have been filed anyway."

And finally:

"If the reproposed amendments are adopted, the Board would also monitor the rule for some time after it became effective, if the repurposed disclosure requirement leads to an increase in litigation against either engagement partners or other participants in the audit that results in negative effects on audits of public companies, the board can revisit it."

While the Committee has no securities lawyers among its members, it is clear to those Committee members with public clients the Board appears willing to "experiment" on the named engagement partners and is uncertain of the impact. The United States is the most litigious country in the world, and it is clear that substantial costs, both to the firm and the individual engagement partners is unpredictable, difficult to control or mitigate through increased insurance or other means.

In our letter of December 21, 2011, we submitted the following comment dealing with this question on the PCAOB’s Concept Release No. 2011-007:

As the Concept Release points out, naming the engagement partner or having the engagement partner sign the report may, in the views of some, open up the engagement partner to additional legal liability. Unfortunately, the legal determination may well depend on the outcome of litigation, which is expensive, and the results may be inconsistent from state to state and among federal circuits.

There is nothing in the current proposed amendments that ameliorates the Committee’s concerns. Even if the engagement partner technically has no additional liability if named, in the litigious environment in the U.S., it is more likely that the engagement partner would be named in a suit if his name appears as part of the audit report. This would cause an increase in costs, especially if the engagement partner decides to engage his or her own individual counsel.

Not discussed in the proposed amendments is the potential litigation exposure of other firms or persons named as participants in the audit even though the firm signing the audit report takes responsibility for that firm’s or person’s work. The issues are very similar to those related to the naming of the engagement partner.

The answer to this question requires a legal determination, but the Committee doubts that there is a clear answer since it is a new issue with no law directly on point. This legal determination is beyond the expertise of many accountants and auditors, state CPA societies, academics and investors who can be expected to comment on the Proposal. The PCAOB should reach out to its legal advisors for information on this question, but it is one that definitely needs to be answered before any aspect of the proposal is implemented.
PCAOB
January 31, 2014
Page 9

It is not apparent that the PCAOB has resolved the question cited in our earlier comment, and until it is resolved, the Committee believes it is totally inappropriate to enact the reproposed requirements. We recognize there may be no clear answer, in which case, this is yet another reason why the reproposed amendments should be withdrawn.

As to costs, while it may be difficult to gauge the effect of the reproposed disclosures on auditor liability, the uncertainty is likely to affect insurance costs for the firms, as they normally indemnify partners. Firms can be expected to pass any such costs on to clients through increased fees.

The Committee suggests that if the PCAOB concludes, contrary to the Committee's recommendations, that the engagement partner be identified, that it be done in the Form 2 filed with the PCAOB. While a legal determination might be necessary, we believe this form of disclosure may avoid the need for the engagement partner to consent to the use of his name in the registrant's filings with the SEC., and thereby partially mitigate our concerns.

11. Would application of the consent requirement to an engagement partner named in the auditor's report result in benefits, such as improved compliance with existing auditing requirements? Will there be greater or lesser effects on EGCs or auditors of EGCs than on other issuers or auditors of other issuers?

No. The Committee sees no incremental benefit arising from the consent requirement, as the engagement partner and his team are already ethically responsible for conducting the audit in accordance with the existing audit requirements and there are already sufficient incentives to comply with those requirements. If the PCAOB feels there are inherent inadequacies within the existing PCAOB auditing standards and interim auditing standards, it should seek to remedy those deficiencies.

The Committee believes that the there may be a perception of greater risk in relation to EGCs to the extent that they are unproven entities.

12. Would the reproposed amendments increase the engagement partner's or the other participants' sense of accountability? If so, how? Would an increased sense of accountability for engagement partners or other participants have an impact on audit quality? If yes, please provide specifics.

The Committee does not believe the reproposed amendments will increase the engagement partner's sense of accountability. The engagement partner is just as liable for his/her actions whether or not his/her name is in the audit report. See our response to prior Questions, especially Questions 1 and 11.

There is a potential and insidious side effect of naming the engagement partner. Audit partners are already subject to a high level of regulatory scrutiny; some liken it to "walking around with a target on my back." This is already discouraging smaller firms from auditing public entities, and causing some of the best personnel in larger audit firms to seek careers in taxes, consulting and other non-audit alternatives, or to leave public accounting entirely. If this continues, audit quality could very possibly suffer if the audit practice is no longer able to attract and retain the best individuals.
13. What costs could be imposed on firms, issuers, or others by the reproposed requirement to disclose the information about other participants in the auditor’s report? Please provide any available empirical data. Will there be greater or lesser effects on EGCs or auditors of EGCs than on other issuers or auditors of other issuers?

As discussed in the Committee’s response to Question 4, the PCAOB should address the issue of the significance of the use of other auditors by revisiting AU Section 543, instead of imposing the rather arbitrary percentages for determining the materiality of the other participants. Notwithstanding this overall comment, the only significant incremental costs that the Committee sees concern costs related to securing consents from other participants and potential insurance costs. This disclosure should not have any different cost impact to EGC’s or their auditors.

14. What costs could be imposed by the application of the consent requirement to other firms that are named in the auditor's report? Please discuss both administrative costs to obtain and file consents with the SEC, as well as any indirect costs that might result. How could insurance or other private contracts affect these costs?

See the Committee's response to Question 10; the potential legal and litigation issues are basically the same for other firms as they are for engagement partners.

Assuming the PCAOB addressed the issue of significance of the use of other auditors by revisiting AU Section 543, instead of imposing the rather arbitrary percentages for determining the materiality of the other participants, if the other participant was a material contributor to the overall audit, they would have to bear the cost of dealing with the consent requirements and attendant legal risks under the Securities’ Laws.

Many of the firms to be named will be foreign. The Committee does not know whether foreign firms will be willing to be named and consent to their being named, and whether there are, or may be in the future, local statutory prohibitions against compliance with the PCAOB reproposed disclosures.

The naming of a foreign firm simply because they are foreign, which will be the case for international firm's affiliates, will likely be negatively viewed by foreign firms and foreign governments. If there is good reason, such as exclusion from PCAOB inspections or reference in the primary auditor's report, that may be acceptable. But, in an environment where greater "internationalization" is occurring, including in auditing standards, a blanket requirement to name all foreign firms could be very counter-productive.

It is reasonable to expect that those costs will be passed on to the audited entity. In addition, being named, with the related consent, will potentially subject those firms to securities acts liabilities to a greater extent than they are now. There will likely be insurance and other costs flowing from this and costs of that will likely be passed on to clients. Amounts of those costs are not known, and we suggest the PCAOB take meaningful steps to determine those costs as part of the cost-benefit analysis of the reproposed disclosures. The costs are likely to me more tangible that the perceived benefits of the reproposed disclosures.
15. Would application of the consent requirement to other firms named in the auditor's report result in benefits, such as improved compliance with existing requirements? Will there be greater or lesser effects on EGCs or auditors of EGCs than on other issuers or auditors of other issuers?

No, for the reasons stated in the response to Question 11.

16. Would disclosure of the extent of other participants' participation, within a range rather than as a specific number, provide sufficiently useful information to investors and other financial statement users? Why or why not? Would the reproposed requirement to disclose the extent of other participant participation within ranges impose fewer costs than a specifically identified percentage?

As discussed in the Committee’s response to Question 4, we recommend the PCAOB establish better criteria for determining the materiality of other participants in the audit by revisiting AU Section 543, instead of implementing a disclosure requirement based on a percentage evaluation of audit hours. In the event the PCAOB does not do as we suggest, we would recommend the use of a range, rather than as a specific number, be adopted. In either case, the nature of the disclosure should have no material impact on any costs incurred by the lead audit firm in preparing the audit report.

17. Would increasing the threshold for individual disclosure of other participants to 5% from the originally proposed threshold of 3% improve the relevance of the disclosure? Would it reduce potential costs? Would another threshold, such as 10%, be more appropriate? If so, why?

Please refer to the Committee’s response to Question 16 for our overall comments regarding the PCAOB’s proposed use of specific percentages, which we do not find to be relevant.

If specific percentages are used, we recommend a threshold of no less than 10%. Disclosures below that threshold would be for such a small part of the audit as to be meaningless.

18. Under the reproposed amendments disclosure would not be required when audit work is offshored to an office of the firm that issues the auditor's report (even though that office may be located in a country different from where the firm is headquartered), but disclosure would be required when audit work is performed by a foreign affiliate or other entities that are distinct from the accounting firm issuing the auditor's report.

a. Should all arrangements whether performed by an office of the firm issuing the auditor's report in a country different from where the firm is headquartered, a foreign affiliate or another entity that is distinct from the accounting firm issuing the auditor's report be disclosed as other participants in the audit? Why or why not?

No, Foreign offices of the primary audit firm are assumed to be operating under the same internal policies and procedures as the U.S.-based office; therefore, separate disclosure is irrelevant. Most foreign locations of primary auditors in the U.S. are
separate legal entities, so any relief that the PCAOB thinks it may be granting by permitting foreign offices to be considered part of the "firm" is not significant. In addition, if the primary auditor is taking responsibility for the work of a non-affiliated firm, there is no need to mention that.

b. Is it sufficiently clear how the disclosure requirement would apply in the context of offshoring? If not, how could this be made clearer?

See response to Question 18.a above. The reproposed requirement is stated clearly, but the Committee does not believe it is appropriate.

19. Are there special considerations for alternative practice structures or other nontraditional practice structures that the Board should take into account regarding the reproposed requirement to disclose other participants in the audit?

No. The same disclosure standards related to ownership structure and consistent application of internal policies and procedures should be applied in evaluating shared responsibilities among component members of an alternative practice structure.

20. Under the reproposed amendments, the auditor would be required to include the extent of participation of persons engaged by the auditor with specialized skill or knowledge in a particular field other than accounting and auditing ("engaged specialists") in the total audit hours and to disclose the location and extent of participation of such persons. The engaged specialists would not be identified by name, but would be disclosed as "other persons not employed by the auditor."

a. Is it appropriate to require disclosure of the location and extent of participation of engaged specialists? If not, why?

No. The Committee does not believe that disclosure of “engaged specialists” will provide investors and other users of financial statements with incrementally useful information, and such information should not be disclosed.

b. Would there be any challenges in or costs associated with implementing this requirement for engaged specialists? If so, what are the challenges or costs?

While cost considerations should not be significant, the Committee sees no value to this disclosure.

21. In the case of other participants that are not public accounting firms (such as individuals, consulting firms, or specialists), is the participant's name a relevant or useful piece of information that should be disclosed? Does disclosure of the participant's location and the extent of the participant's participation provide sufficient information?

No. Refer to the Committee’s response to Question 20 a.
22. If the Board adopts the reproposed amendments for auditors to disclose the name of the engagement partner and certain information about other participants in the audit in the auditor's report, should the Board also require firms to disclose the same information on Form 2 or another PCAOB reporting form? Why or why not?

As stated in our responses to the above questions, the Committee is strongly opposed to the disclosure of the engagement partner and certain information about other participants as being irrelevant to investors and other users of the financial statements. However, if notwithstanding the Committee's recommendations, the PCAOB decides to require disclosure of the name of the engagement partner, the Committee would support disclosure of the name of the engagement partner on Form 2 or other PCAOB reporting form. The Committee would not support the disclosure of the other participants in any manner on Form 2 or other PCAOB reporting form based on the reproposed requirements. The Committee believes that any disclosure of other participants be based on a comprehensive review of AU 543; further, the Committee sees merit to the PCAOB considering rules to require disclosure of the extent of participation in an audit of offices, firms or individuals not subject (i.e., excluded from) the PCAOB inspection program.

23. Are the reproposed amendments to disclose the engagement partner's name and information about other participants in the audit appropriate for audits of brokers and dealers? If yes, are there any considerations that the Board should take into account with respect to audits of brokers and dealers?

The Committee sees no basis for differentiation between brokers and dealers and other registrants. The Committee opposes the disclosure of this information for the audits of brokers and dealers for the same reasons set forth in our responses to the other questions.

24. Should the reproposed disclosure requirements be applicable for the audits of EGCs? Are there other considerations relating to efficiency, competition, and capital formation that the Board should take into account when determining whether to recommend that the Commission approve the reproposed amendments to disclose the engagement partner's name and information about other participants in the audit for application to audits of EGCs?

The Committee sees no basis for differentiation between EGCs and other registrants. The Committee does not support the application of the reproposed disclosure requirements to non-EGCs as well as EGCs.

25. Are the disclosures that would be required under the reproposed amendments either more or less important in audits of EGCs than in audits of other public companies? Are there benefits of the reproposed amendments that are specific to the EGC context?

Please refer to the Committee's response to Question 24 above.

Accounting Principles and Auditing Standards Committee
California Society of Certified Public Accountants
Dear PCAOB:

Docket No. 029 Comments Submitted – Feb. 3rd, 2014

Good afternoon and we made the deadline, although it wasn’t easy…..but we won’t bore you with the grimy details, at this point in time…

Please Note: The following is only intended to help you all along on your efforts to improve a rather remarkable industry.

For Example: Terms Used or Not Within PCAOB Docket No. 029, Feb. 3rd, 2014......:

- Use Case - 0
- COSO - 0
- COBIT - 0
- Fines - 0
- Penalties - 0
- Sample Test - 0
- Best Practices - 0
- Fraud - 4 or 5 (with 3 being referenced citations)
- Risk Assessment - 0
- Risk Analysis - 0
- Governance - 0

Section VII Response:

Questions 1 thru 25

Yes when the solution comes down on the side of the investor community and No when it does not favor the Investor community (in all instances) and how this would be accomplished is via a series of quantitative analysis, peer review and independent testing available for a three month 'Comments' window, followed by a Six month trial period using volunteer entities who can see the value in this effort.
Lastly, two notes, one regarding Libor:

Thank gaud both the internal & external auditors uncovered this on-going and massive fraud involving the following (and growing list) of entities:

- ICAP
- RBS
- JP Morgan
- Deustche Bank
- Societe Generale
- UBS
- Citigroup
- Rabobank.....et al......

We appreciate your efforts in providing a more level playing field for the investor community, and in the same vein of sharing, please note the following view of the Dodd-Frank Volker Rule analysis:

Dodd-Frank Act / Volker Rule_2014

References Made to the Following Terms or Not - Within The Volker Rule, 2014:

- PCAOB - 0
- COSO - 0
- COBIT - 0
- Fraud - 12 (give or take a few)
- Audit - 45 (with caveats)
- Exemption - 10,000 instances and counting....big enough to satisfy anyone with a dark heart....

and reasons provided were comprised of the Dark Triad of;

- Higher Costs,
- Negative Economic Impact and our favorite
- Liability

rather than those associated with the ole fashioned psychological Dark Triad comprised of;

- Narcissistic,
- Machiavellian,
- Psychopath

Please Note: Never, ever go on a date with the latter Dark Triad.......never.
The reference to “audit” does not mean that the independent testing must be performed by a designated auditor, whether internal or external.

Page 777

The Agencies believe it would be unnecessarily burdensome to require particular licensing and registration processes for internal auditors that are specific to section 13 of the BHC Act.

Page 805

Accordingly, the information contained in these metrics is retained in the final rule while the burden associated with computing, auditing and reporting these additional metrics on an ongoing basis has been eliminated.

Page 844

(4) Independent testing and audit of the effectiveness of the compliance program conducted periodically by qualified personnel of the banking entity or by a qualified outside party;

Page 914

Subject the effectiveness of the compliance program to periodic independent review and testing, and ensure that the entity’s internal audit, corporate compliance and internal control functions involved in review and testing are effective and independent;

Page 954

The proposed definition of material conflict of interest did not address instances in which a banking entity has made a material misrepresentation to its client, customer, or counterparty in connection with a transaction, class of transactions, or activity, as such transactions or activity appears to involve fraud rather than a conflict of interest. This is because such misrepresentations are generally illegal under a variety of Federal and State regulatory schemes (e.g., the Federal securities laws). 1554 In addition, the Agencies noted that any activity involving a material misrepresentation to, or other fraudulent conduct with respect to, a client, customer, or counterparty would not be permitted under the proposed rule in the first instance.

Page 951

That’s about it for now….do keep up the good effort as it can only improve a system deserving of your attention….

In closing, our best wishes, too….

Respectfully yours,

Pw Carey
In the land of the Rogue Trader's, Shadow Banks, & Black Money.....There is no disconnect.....

In the land of the Rogue Trader's, Shadow Banks, & Black Money.....There is no disconnect.....its quite simple really....

- Based upon 8,121.6 referenced citations regarding lack of follow-up and prosecution in documented cases of fraud, which you all are free to look up, if, you so choose. However, since we're a professional, we don't have to.

**Please Note:**

1. Nothing suspicious here: After five (5) IT C-Suite Financial Investment blokes committed suicide during the first quarter of 2014, according to the police..."nothing suspicious here....." So....

The boss man needs the product to ship by close of business tonight....

You tell boss man that the product isn't ready to ship....there's several bugs that need to be fixed first, bugs that are causing the battery to overheat and sometimes explode....for no apparent reason......

After listening to your story in a very somber and professional listener silence....the boss man says.....to meet our numbers for the quarter, this product must ship by COB tonight.....and walks away.....

- So, what was just said to the head of the development team.....?
  - Please feel free to fill in the blanks

- The same dual-messages that have been part and parcel of the regulatory landscape since God invented Whiskey.....

Say one thing publically, do another privately....(aka: based upon a couple of minutes of research, the words don't match up with the actions, either real or imagined)...

2. As a result, with a burn rate of hundreds of thousands of dollars an hour per entity, the windows for fraud will always remain unlocked and wide open for those who understand they're operating in a world with two sets of books....

3. (aka: an off-book GL (General Ledger), what is really being said in-line with party line....

4. if you're a perp you just need to understand the rules of these Shadow Regulations. Fines & Penalties make good copy---jail time don't.....
5. and for heaven’s sake pay attention to The Shadow Rules & Regulations.....
6. be polite,
7. always supportive, and
8. always, always acquiesce then return to what you’ve always done before, just don’t get caught, and
9. since you’re operating in a George Orwellian world of 1984...a token here, a token there....just enough to be reasonably defensible, just don’t rock the boat, too much and we'll all be able to just get along famously......don’t you agree?
10. or in a relativistic world filled with Unsicherheit (uncertainty)...there is no black-n-white and there will always be just one rogue cockroach in the financial kitchen...and never ever will you see the following two rules:

If you do do the following; (e.g. lie, cheat and/or steal) you will forfeit all personal assets linked to the frauds you perpetrated....
If you don’t do this (e.g. lie, cheat & steal) you will not be obliged to face personal financial ruin for the next ten years of your life....(e.g. the meter begins at year zero and ends after year ten, without interruption and/or modification).

**Summary**

In conclusion....there is no such thing as fraud....fraud does not exist....never did, never will....there are only bad business decisions, sorta like the official police pronouncements whenever faced with a bit of a rough patch....nothing suspicious here, eh...

- Oh yes, and Happy Saint Patrick's Day, too....

**Official Professional Disclaimer**

The previous crumpled up diatribe was found somewhere within an executive’s office suite or some such place and we just thought it might be food for thought, when initial first steps go a tad further. However, this in no way represents anyone’s professional advice and or guidance. Anyone interested in further discussions should definitely seek professional help---from a true professional, in such matters.

Respectfully yours,

Pw Carey

Senior IT Auditor (GRC), CISA, CISSP

Ballyronan

(County Londonderry)
Summary: The Public Company Accounting Oversight Board ("PCAOB" or "Board") is reproposing amendments to its standards that would improve the transparency of public company audits. The amendments would require (1) disclosure in the auditor's report of the name of the engagement partner and (2) disclosure in the auditor's report of the names, locations, and extent of participation of other independent public accounting firms that took part in the audit and the locations and extent of participation of other persons not employed by the auditor that took part in the audit.

Public Comment: Interested persons may submit written comments to the Board. Such comments should be sent to the Office of the Secretary, PCAOB, 1666 K Street, NW, Washington, D.C. 20006-2803. Comments also may be submitted by e-mail to comments@pcaobus.org or through the Board's website at www.pcaobus.org. All comments should refer to PCAOB Rulemaking Docket Matter No. 029 in the subject or reference line. Comments should be received by the Board no later than 5:00 p.m. EST on February 3, 2014.

Board Contacts: Jennifer Rand, Deputy Chief Auditor (202/207-9206, randj@pcaobus.org); Jessica Watts, Associate Chief Auditor (202/207-9376, wattsj@pcaobus.org); Lisa Calandriello, Assistant Chief Auditor (202/207-9337, calandriellol@pcaobus.org); and Ekaterina Dizna, Assistant Chief Auditor (202/591-4125, diznae@pcaobus.org).

* * *
Dear PCAOB:

Good morning, and thank you for this opportunity to share with you some minor comments regarding the transparency and disclosure upgrades within an audit and the audit report...as we appreciate all your efforts in attempting to apply a greater emphasis on (fair play) within our market economies, as opposed to today's long term adherence to The Dark Triad's corporate culture that defines success today...

Please Note: Your (guidance, outreach & advisory efforts) directly supporting these standards and proposals must be increased to have any meaningful value to the various investment communities....at least, that's our opinion....more or less.....caveat, caveat, & caveat.....Respectfully yours, Pw Carey, Senior IT Auditor (GRC), CISA, CISSP, Compliance Partners, LLC, Barrington, IL 60010 USA

See Appendix A: For supporting reference citations...
I. Introduction

The Board is reproposing amendments to its auditing standards that would require the accounting firm issuing an auditor's report ("auditor") to disclose in the auditor's report (1) the name of the engagement partner on the most recent period's audit and (2) the names, locations, and extent of participation of other public accounting firms1/ that took part in the audit and the locations and extent of participation of other persons (whether an individual or a company)2/ not employed by the auditor who performed procedures on the audit ("other participants in the audit"). These are disclosure requirements and, except for the disclosure obligations they would impose, would not change the performance obligations of the auditor in conducting the audit. The Board believes that providing information about the engagement partner and the other participants in the audit in the auditor's report would be useful to investors and other financial statement users and would be consistent with the Board's mission to further the public interest in the preparation of "informative, accurate, and independent audit reports."3/

Robust disclosure is the cornerstone of the U.S. federal securities regulatory regime and is essential to efficient capital formation and allocation. Access to meaningful information about a public company allows investors to make informed judgments about the company's financial position and about the stewardship of the company's directors and management. The Board believes that more disclosure about certain aspects of the audit of a public company, including about the identity of the engagement partner and other firms associated with the audit, would add to the mix of information that investors and other financial statement users have about public companies, which they would find useful.

Auditors perform a crucial public function in financial markets. Their very designation as independent public accountants recognizes that their duties transcend their responsibilities to the companies they audit. The salutation of the auditor's report

1/ PCAOB Rule 1001(p)(iii) defines the term "public accounting firm" to mean "a proprietorship, partnership, incorporated association, corporation, limited liability company, limited liability partnership, or other legal entity that is engaged in the practice of public accounting or preparing or issuing audit reports."

2/ PCAOB Rule 1001(p)(iv) defines the term "person" to mean any natural person or any business, legal or governmental entity or association.

3/ Section 101(a) of the Sarbanes-Oxley Act of 2002.

Since 87.654321% of all detected frauds, across all industries, geographical locations and jurisdictions take place within a window of between 4 years, 7 years thru 15 years...this requirement must be increased to have any meaningful value to the investment community...at least, that's our opinion...more or less...caveat, caveat, & caveat.....Respectfully yours, Pw Carey, Senior IT Auditor (GRC), CISA, CISSP, Compliance Partners, LLC, Barrington, IL 60010 USA

Please include a more robust F&P/P&P Section (Fines & Penalties/Protection & Publication) specifying the costs of bad behavior including jail time for such offenses without the benefit of hiding behind Contract Law/Non-Disclosures, et al, when convicted of committing fraud, with FP/PP ameliorations available (we hardly ever get to use this word) if the perps are forth coming during a forensic audit (slash) investigation (slash) Inspection.....this requirement must be increased to have any meaningful value to the investment community....at least, that's our opinion....more or less....caveat, caveat, & caveat.....Respectfully yours, Pw Carey, Senior IT Auditor (GRC), CISA, CISSP, Compliance Partners, LLC, Barrington, IL 60010 USA

***End of Caveats*****

Their duties transcend their responsibilities to the companies they audit as well as their boss, (aka: their employer, who hired them to conduct audits in the first place). at least, that's our opinion....more or less....caveat, caveat, & caveat.....Respectfully yours, Pw Carey, Senior IT Auditor (GRC), CISA, CISSP, Compliance Partners, LLC, Barrington, IL 60010 USA
itself, when it is addressed to the shareholders, emphasizes the public nature of the auditor's responsibility. The public, however, has had little or no information about the participants in the audit, including those who serve in the role of engagement partner or the identity of other firms and individuals who participated in the audit. Generally, in the United States, only the name of the firm that issued the opinion is disclosed in the auditor's report.

An audit firm's reputation matters, both to investors and to the audit committee of the company that retains it. But firms are comprised of individuals who conduct the audit, and investors in U.S. securities generally have not had access to information about the engagement partner responsible for the audit for the firm or whether, and to what extent, other firms played a role in the audit. This information could be valuable to investors in making investment decisions as well as if they are asked to vote to ratify the company's choice of registered firm as its auditor.

While the present lack of transparency about the persons who conduct the audit is not unique to the United States, a number of other jurisdictions with highly developed capital markets follow a different practice. For example, the European Union's ("EU's") Eighth Company Law Directive requires "at least the statutory auditor(s) carrying out the statutory audit on behalf of the audit firm" to sign the auditor's report. This directive requires all EU members to enact conforming legislation. For example, one EU member, the United Kingdom, requires the auditor's report to "state the name of the

---

4/ Based on the PCAOB staff's review of 125 Form 10-K filings for fiscal year 2011, approximately 95% of auditors' reports were addressed to shareholders or other investors in the company; approximately 5% were not. To promote consistency in the addressees included in the auditor's report, under the Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments, PCAOB Release 2013-005 (August 13, 2013) available at http://pcaobus.org/Rules/Rulemaking/Docket034/Release_2013-005_ARM.pdf, the auditor would be required to address the auditor's report to investors in the company, such as shareholders, as well as the board of directors or equivalent body.

6/ As of November 2013, 27 of the 28 EU members have enacted conforming legislation. Croatia, which joined the EU in 2013, has until 2015 to enact conforming legislation. A list of countries which have enacted conforming legislation is available at http://ec.europa.eu/internal_market/auditing/directives/index_en.htm.
auditor and be signed" and, "where the auditor is a firm, the report must be signed by
the senior statutory auditor in his own name, for and on behalf of the auditor." Other
countries have similar requirements. For example, Taiwan requires audit partners to
sign the auditor's report, in addition to the audit firm. Australia mandates by statute that
the auditor's report be signed in the name of the person responsible for the audit, as
well as in the name of the audit firm. The International Auditing and Assurance
Standards Board ("IAASB") also recently proposed a requirement for firms to disclose
the name of the engagement partner in the auditor's report of a listed entity. If
the IAASB's proposal is adopted, disclosure of the engagement partner's name in the
auditor's report of a listed entity will become the norm in those jurisdictions that follow
IAASB standards. While practice in other countries is not dispositive, it is indicative of a
global trend toward greater transparency about audits and those who conduct them.

From its Investor Advisory Group ("IAG") and Standing Advisory Group ("SAG"),
as well as from meetings with investors and other financial statement users, the Board
has heard repeatedly that many people, particularly investors, want more information
about the independent audit, such as information about those who conduct it. The
Board believes that there are benefits to greater transparency about the audit and has
attempted to respond through several initiatives, including the recently proposed
standards dealing with changes to the auditor's reporting model as well as these

 Companies Act 2006, Chapter 46, as amended, Chapter 3, section 503,
"Signature of auditor's report" (June 4, 2008). The Companies Act requires a signed
auditor's report be maintained by the company, although published copies of the
auditor's report state the name of the engagement partner and do not require signature.

 See Articles 2 and 6 of Regulations Governing Approval of Certified Public
Accountants to Audit and Attest to the Financial Reports of Public Companies (as
amended on May 16, 2008) available at

 Corporations Act 2001, Act No. 50 of 2001, as amended, section
324AB(3), "Effect of appointing firm as auditor—general" (May 16, 2012).

Proposed New and Revised International Standards on Auditing, at
https://www.ifac.org/publications-resources/reporting-audited-financial-statements-
proposed-new-and-revised-international.

 See Proposed Auditing Standards on the Auditor's Report and the
Auditor's Responsibilities Regarding Other Information and Related Amendments,
reproposed amendments. The Board believes that disclosure of the identity of the engagement partner, as well as enhanced transparency about other participants in the audit, would provide investors with information about the audits conducted for their benefit that they would find useful. The Board also recognizes that many investors as well as some other commenters believe that these measures would prompt engagement partners to perform their duties with a heightened sense of accountability to the various users of the auditor’s report.12/

After careful study and deliberation, the Board believes that disclosure of the engagement partner and other participants in the audit would provide investors in U.S. companies with important information about the audits conducted for their benefit. The Board reached the decision to repropose these amendments, not just based on the extensive public comment it has received as it explored this issue, but also based on what the Board has learned through its oversight activities and relevant empirical research.13/

The Board is reproposing the amendments to seek additional comment on matters such as the usefulness of the information that would be required to be disclosed, the potential costs the reproposed amendments might impose, whether the reproposed amendments would have any effect on competition, and any other aspects of the reproposal. The Board has also made technical changes to the originally proposed requirement that the auditor disclose information about other participants in the audit, such as changing the threshold for disclosure, and seeks commenters’ views on those revisions. Finally, the Board is soliciting commenters’ views regarding whether the reproposed amendments should apply to audits of emerging growth companies.

13/ See discussion of empirical research in Section V., Economic Considerations.
Is it true that no oversight is better than oversight.....?

perhaps on an animal farm, but not here when folks are making investment decisions based upon virtual ware....

not hardware, not software but imaginary ware.....

amazing, simply amazing...this requirement must be increased to have any meaningful value to the investment community....Respectfully yours, Pw Carey, Senior IT Auditor (GRC), CISA, CISSP, Compliance Partners, LLC, Barrington, IL 60010 USA
("EGCs”), as that term is defined in the Jumpstart Our Business Startups Act of 2012 ("JOBS Act"). In particular, the Board requests comments, including any available empirical data, on whether application of the reproposed amendments to audits of EGCs would protect investors, and on whether it would promote efficiency, competition, and capital formation. Specific questions appear at the end of this release.

II. Background of the Reproposed Amendments

A. Disclosure of the Name of the Engagement Partner

The Board began in 2005 to seek advice on and to explore a variety of alternatives to make the auditor's report more informative, including by requiring disclosure of the name of the engagement partner. In addition to the Board's efforts, in 2008, the ACAP issued its final report recommending, among other things, that "the PCAOB undertake a standard-setting initiative to consider mandating the engagement partner's signature on the audit report." The ACAP report stated that "[t]he Committee believes that the engagement partner's signature on the auditor's report would increase transparency and accountability."16/

Based on more than ten years of oversight, the Board knows that, even within a single firm and notwithstanding firm-wide or network-wide quality control systems, the quality of individual audit engagements varies. PCAOB inspectors have observed a wide variation in the quality of auditing by many engagement teams at each of the large accounting firms that audit the largest U.S. and multinational companies. Although such differences might be due to a number of factors, the role of the engagement partner, who is responsible for the engagement and its performance, is an important factor to consider.17/

14/ Pub. L. No. 112-106 (April 5, 2012).
16/ See ACAP report at VII:20.
17/ See paragraph 3 of Auditing Standard No. 9, Audit Planning, and paragraph 3 of Auditing Standard No. 10, Supervision of the Audit Engagement.
Through the Board's oversight process, it has obtained information related to engagement partner quality history through a firm's internal and external inspection processes, as well as a firm's internal processes to monitor its quality controls. The Board's inspection staff historically has used this information related to engagement partner quality history in its inspection processes. This information, among other factors, is considered to be useful in making risk-based selections of audit engagements. The Board's inspection staff also understands that individual firms monitor engagement partner quality history closely and utilize this information to manage risk to the firm. Information about individual audit partners has been useful to the Board in the Board's risk-based selection of audits to inspect. While the Board recognizes the reproposed amendments would not provide investors with all of the information the Board or a firm has regarding an engagement partner, the Board also believes that information about who engagement partners are would be valuable, and, as described below, would become more so over time.

On July 28, 2009, the PCAOB issued a concept release (the "2009 Release") seeking commenters' views on whether it would be advisable for the Board to require the engagement partner to sign his or her own name to the auditor's report.\(^{18}\) While many investors supported such a requirement, a number of other commenters were concerned that it would appear to minimize the role of the accounting firm in the audit and also could result in a potential increase in the engagement partner's liability.\(^{19}\)

After considering commenters' views and its own experience, the Board issued a proposing release on October 11, 2011 (the "2011 Release") that, among other things, proposed amendments to the Board's auditing standards that would have required disclosure of the name of the engagement partner in the auditor's report.\(^{20}\) In the

Board's view, this disclosure approach retains most of the potential benefits of a signature requirement, while mitigating some of the concerns, particularly liability concerns, expressed by commenters on the 2009 Release.\footnote{Id.}

The Board received 43 comment letters on the 2011 Release.\footnote{Comments on the 2011 Release and on the 2009 Release can be found at http://pcaobus.org/Rules/Rulemaking/Pages/Docket029Comments.aspx.} It was also discussed at the November 2011 and May 2013 meetings of the Board's SAG\footnote{Transcripts of the discussions are available on the Board's website at http://pcaobus.org/Rules/Rulemaking/Pages/Docket029.aspx. Archived webcasts are also available on the Board's website at http://pcaobus.org/News/Webcasts/Pages/11092011_SAGMeeting.aspx and http://pcaobus.org/News/Webcasts/Pages/05152013_SAG.aspx.} and the October 2013 meeting of the IAG.\footnote{See IAG meeting details, transcript, and webcast for October 16, 2013 available at http://pcaobus.org/News/Webcasts/Pages/10162013_IAGMeeting.aspx.} Commenters on the 2011 Release were divided and remained so over the course of the dialogue. Accounting firms generally opposed a requirement to disclose the name of the engagement partner in the auditor's report\footnote{While accounting firms generally opposed the disclosure of the name of the engagement partner in the auditor's report, one accounting firm expressed support for disclosure of the name of the engagement partner in the firm's annual report filed with the PCAOB on Form 2. Some other firms, which opposed the disclosure requirement, expressed a preference for disclosure in Form 2 if the Board were to proceed with a requirement. Disclosure in Form 2 is discussed in Section V.C., Economic Considerations, Alternatives Considered, Disclosure in Firms' Annual Reports Filed with the PCAOB on Form 2, of this release.}—whether by signature or only disclosure—and expressed concern that it would confuse readers of the auditor's report or lead to unintended consequences. Investors, on the other hand, argued in favor of more transparency throughout the Board's consideration of the issue. Others, such as some audit committee members and corporate officials, as well as an association of European auditors, shared the investors' views and expressed the view that naming the engagement partner in the auditor's report would be beneficial.

After considering the comment letters, the views expressed in SAG and IAG discussions, and relevant empirical research, the Board is reproposing amendments to
its auditing standards that would require disclosure in the auditor's report of the name of the engagement partner in the most recent period's audit.

Specifically, the Board is reproposing to amend the following: AU sec. 508, Reports on Audited Financial Statements, AU sec. 9508, Reports on Audited Financial Statements: Auditing Interpretations of Section 508, AU sec. 543, Part of Audit Performed by Other Independent Auditors, Auditing Standard No. 1, References in Auditors’ Reports to the Standards of the Public Company Accounting Oversight Board, and Auditing Standard No. 5, An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements.26/

B. Disclosure About Certain Other Participants in the Audit

Investors also have called for greater disclosure in the auditor's report of the names and locations of other participants in the audit. For instance, in a March 2010 survey by the Chartered Financial Analysts Institute, 91% of respondents agreed that "in cases where there is more than one auditor, the identities and specific roles of other auditors should be disclosed."27/ Additionally, a task force of the Board's IAG conducted a survey of investors affiliated with investment banks, mutual funds, pension funds, and hedge funds. Seventy percent of the investors surveyed who responded to a question about the desirability of disclosure of work on the audit performed by other audit firms said that they would like to know the degree of involvement in the audit of the firms that are not signing the auditor's report.28/

In many audit engagements, especially audits of companies with multiple locations and international operations, the auditor may perform only a portion of the audit. The remainder of the work may be performed by other affiliated accounting firms, non-affiliated accounting firms, and/or other persons not employed by the auditor, for example, consulting firms and individual accountants. The accounting firm issuing the

26/ The reproposed amendments to these standards can be found in Appendix 1.

28/ The IAG task force survey results were discussed in March 2011 in connection with a discussion of the auditor's reporting model. The response rate for the question regarding disclosing the work performed by other audit firms was approximately 67%. Event details and archived webcast for IAG meetings are available at http://pcaobus.org/About/Advisory/Pages/IAGMeetingArchive.aspx.
The auditor's report supervises the work of or assumes responsibility for the procedures performed by other participants in the audit. The Board has seen cases in which the extent of participation of other persons ranges from none to substantially all of the work. Although the portion of the audit work performed by other participants in the audit could be significant, under the current requirements, the auditor's report provides no information about the work performed by other participants in the audit. Instead, the auditor's report gives the impression that the work was performed solely by one firm—the signing firm.

In the 2011 Release, the Board proposed a series of amendments to its auditing standards that would have required, among other things, disclosure in the auditor's report about other accounting firms and other persons that participated in the audit.

Commenters supported, to varying degrees, the originally proposed requirement to disclose other participants in the audit. After considering the comment letters, the views expressed in SAG and IAG discussions, the Board's observations from its oversight activities, and relevant empirical research, the Board is reproposing amendments to its auditing standards relating to other participants in the audit but with certain modifications from the 2011 Release. The reproposed amendments would require the auditor to disclose in the auditor's report (1) the name, location, and the extent of participation (as a percentage of the total audit hours) of certain other independent public accounting firms and (2) the location and extent of participation of certain persons not employed by the auditor who took part in the most recent period's audit.

See Auditing Standard No. 10.

See AU sec. 543.

Under existing AU sec. 543.04, when other auditors participate in the audit, the principal auditor "should not state in his report that part of the audit was made by another auditor because to do so may cause a reader to misinterpret the degree of responsibility being assumed." The reproposed amendments, like the originally proposed amendments, would delete this requirement and add a new requirement that the auditor expressly state that the auditor has assumed responsibility for or supervised the work of the other accounting firms who are disclosed in the auditor's report. In the Board's view, this should avoid any potential misinterpretation of the new requirement.
Specifically, the Board is reproposing to amend the following auditing standards: AU sec. 508, AU sec. 543, and Auditing Standard No. 5.32/

III. Discussion of the Reproposed Amendments

This section describes the general requirements of the reproposed amendments and significant changes made to the originally proposed amendments. Appendix 3 of this release discusses in greater detail the requirements of the reproposed amendments, comments received, and the Board’s responses to those comments.

A. Disclosure of the Name of the Engagement Partner

The first part of the Board’s reproposal would require audit firms to disclose in the auditor’s report the name of the engagement partner for the most recent period’s audit. The Board is cognizant that, initially at least, disclosure of an engagement partner’s name, without more, might provide limited useful information because there may be little publicly available information about such individuals. Some commenters have suggested that over time with the reproposed disclosure requirements in place, a body of information about the engagement partner’s history will be developed that, when connected with other data, would be useful to investors and other financial statement users.33/

For example, the disclosure of the name of the engagement partner, combined with other information compiled over time, could enable investors and other financial statement users to research the number, size, and nature of companies and industries in which the partner served as engagement partner. Investors and other financial statement users also could determine whether the engagement partner for a particular audit has any U.S. Securities and Exchange Commission ("SEC" or "Commission") or PCAOB disciplinary history. Investors and other financial statement users also could

32/ The reproposed amendments to these standards can be found in Appendix 2.

33/ Such bodies of information are already being created, for example, in Taiwan where public companies are required to disclose the names of the engagement partners. As described in Daniel Aobdia, Chan-Jane Lin, and Reining Petacchi, Capital Market Consequences of Individual Audit Partners, Working paper (August 2013) available at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2321333, the Taiwan Economic Journal collects data that covers all public companies in Taiwan and includes, among other things, the names of the engagement partners, the accounting firm issuing the auditor’s report, the regulatory sanction history of the partners, and the audit opinions.
determine the identity of the engagement partner during periods involving a restatement or issuance of an audit opinion with a going concern modification. The reproposed amendments would allow investors and other financial statement users to combine information about the engagement partner with other information regarding the restatement or the going concern modification. Academic research suggests that investors and other financial statement users would respond to the facts and circumstances related to individual restatements or going concern modifications when forming their views regarding the engagement partner.34/ Investors do not treat all restatements and going concern opinions equally. Based on academic research, they appear to consider other factors in making judgments about restatements and going concern. The Board believes investors would be similarly discerning in considering information about the engagement partner.

Additional information also could become available in readily accessible formats about private litigation in which the individual was a defendant in his or her capacity as an engagement partner. Information also could become available about the engagement partner's education, honors, awards, service on professional and public bodies and publications. In some cases, such information is available today to audit committee members who ask for it and to whom it is given voluntarily (for example, in the course of interviewing a new engagement partner), but it is not readily available to the investing public or other financial statement users. The Board believes that despite the potential limited initial usefulness, public disclosure of the current engagement partner's name is a first and necessary step in the development of the type of robust information sources about engagement partners of public companies that would be useful to investors and other financial statement users.

The Board has heard concerns that public identification of the engagement partner could lead to a rating or "star" system resulting in particular individuals being in high demand to the unfair disadvantage of other equally qualified engagement partners. The Board is aware that, as a consequence of the proposed disclosures, certain individuals may develop public reputations based on their industry specializations, audit history and track records. The Board does not believe that such information would

Dear Folks:

"....is a first and necessary step in the development of the type of robust information sources..." would be easily available to the general public and the investment communities at large....and such a mechanism could be set up via a Big Data/Cloud Eco-system data base utilizing auto-associated memory, quantum analytics web-based common sense...with the results published on a regular schedule, say....once a week or twice a month.....which ever comes first....yep, that would be nice second step.....
necessarily be harmful and could, to the contrary, be useful to investors and other financial statement users.

In recent years, detailed information about the backgrounds, expertise and reputations among clients and peers has become commonly available for other skilled professionals, such as lawyers and physicians, and such information is widely available to consumers of those services. Indeed, it can be argued that the consumers of such services can make more informed decisions with more rather than less knowledge about the qualifications and professional reputations of those whose services they retain. The role of an auditor, including an engagement partner, differs from that of a lawyer or physician, but the underlying principle that consumers of professional services could make better decisions with more information still applies and the Board believes that investors and other financial statement users would benefit from more information about the identity of those who perform audits.

Because the financial statements and the auditor's report are retrospective, disclosure of an engagement partner's identity in the auditor's report provides information only about the most recent period's audit of the financial statements. It does not provide information about the identity of the next period's engagement partner, which may be of most interest to shareholders, such as in ratifying the company's choice of registered firm as its auditor. Nevertheless, such retrospective information provides a basis for analysts, investors, and others to ask a company's management whether last year's engagement partner is continuing on the engagement and, if not, why not. A change in the engagement partner could prompt further questions about the identity and qualifications of the new engagement partner. Those questions could of course be asked today, but such questions and answers could be informed by additional public information about engagement partners.

Further, concerns have been expressed by some commenters that identification of the engagement partner puts misleading emphasis on a single individual when an audit, particularly a large audit, is in fact a group effort. Such commenters have asserted that the disclosure could confuse rather than enlighten investors. It is true that in most cases an audit is a group effort and that a large audit often involves a very large team. It is also indisputably true that the engagement partner plays a unique role in the audit. The engagement partner has the most direct relationship with the audit committee and senior management and serves as the primary interface between the audit firm and the audit committee and senior management. It is not unusual, in large companies at least,

---

35/ Engagement partners may change for a variety of reasons, including the SEC's requirement for mandatory partner rotation. See Section 203 of the Sarbanes-Oxley Act; Rule 2-01(c)(6) of Regulation S-X, 17 C.F.R. § 210.2-01(c)(6).
Dear Folks:

What a great opportunity to set up a PCAOB Web-based Town Hall where on a weekly basis for the hoi-poli such as us...."....to ask a company’s management whether last year’s engagement partner is continuing on the engagement and, if not, why not.35/.....plus other questions of interest from the financial and investment communities.....such meetings (including archived meetings) is a truly magnificent idea.....wow....where’d this come from......?

Respectfully yours, Pw Carey, Senior IT Auditor (GRC), CISA, CISSP, Compliance Partners, LLC, Barrington, IL 60010 USA

Pity the poor stupid investor.....

Respectfully yours, Pw Carey, Senior IT Auditor (GRC), CISA, CISSP, Compliance Partners, LLC, Barrington, IL 60010 USA
for audit committees to interview several candidates for an engagement partner when a
new engagement partner is to be chosen because the qualifications and personal
characteristics of the engagement partner are viewed by the audit committee and senior
management as particularly important. Because of the engagement partner's key role in
the audit, the Board believes it is appropriate when shareholders are asked to ratify the
company's choice of the registered firm as its auditor to be as well informed as possible
about the leader of the team that will conduct the audit. Public identification of the
engagement partner would help serve that end.

B. Disclosure About Certain Other Participants in the Audit

The second part of the Board's reproposal would require inclusion of information
about certain other participants in the audit in a paragraph that would follow the opinion
in the auditor's report itself or in an appendix immediately following the auditor's report
that would be referenced in the auditor's report. The information to be disclosed would be:

- With respect to other independent public accounting firms, the name of the
  firm(s); with respect to persons not employed by the auditor, the phrase
  "persons not employed by our firm";

- The location of other participants in the audit (the country of headquarters'
  office location for a firm and the country of residence of a natural person
  or headquarters' office location of another person that is an entity); and

- The percentage of hours attributable to the audits or audit procedures
  performed by the other participants in the audit in relation to the total
  hours in the most recent period's audit ("the percentage of the total hours
  in the most recent period's audit").

1. Applicability of the Disclosure

The reproposed amendments would require the auditor to disclose information
about independent public accounting firms and other persons not employed by the
auditor that took part in the audit under arrangements pursuant to either AU sec. 54336/
or Auditing Standard No. 10, as applicable.

36/ See AU secs. 543.03-.05.
2. **Exclusions from the Disclosure**

The reproposed amendments would not require disclosure of information about the following participants in the audit:

- **Individuals performing the engagement quality review ("EQR")**, 37/
- Persons performing a review pursuant to Appendix K 38/ ("Appendix K review"); and
- Persons employed or engaged by the company who provided direct assistance to the auditor, including:
  - Internal auditors, other company personnel, or third parties working under the direction of management or the audit committee, who provided direct assistance in the audit of internal control over financial reporting; 39/ and
  - Internal auditors who provided direct assistance in the audit of the financial statements. 40/

These exclusions from the disclosure were retained from the 2011 Release.

The 2011 Release also excluded from the disclosure requirements persons engaged by the auditor with specialized skill or knowledge in a particular field other than accounting or auditing. After further considering the role of such persons in the audit, the Board is proposing to require, rather than exclude, disclosure in the auditor's report of persons engaged by the auditor with specialized skill or knowledge in a particular field other than accounting or auditing. As discussed below, persons engaged by the auditor with specialized skill or knowledge in a particular field other than accounting or auditing.

Hey....look at me.....we've got Special Skills......

we can hold our breath for six minutes.....

Can’t touch me...

Respectfully yours,
"persons not employed by our firm,"

hahahahahahah

Respectfully yours, Pw Carey, Senior IT Auditor (GRC), CISA, CISSP, Compliance Partners, LLC, Barrington, IL 60010 USA
auditing would be disclosed as other persons not employed by the auditor. The Board believes that disclosure about the location and extent of participation of these other participants would be as relevant to investors and other financial statement users as information about any other participants in the audit.

3. **Disclosing Names of Certain Other Participants in the Audit**

   In the 2011 Release, the Board proposed that the names of all other participants whose extent of participation exceeded the disclosure threshold would be included in the auditor's report. After considering comments raised regarding the applicability of the proposed disclosure to alternative practice structures and the impact on such structures, the Board is proposing to require only the names of other independent public accounting firms participating in the audit to be disclosed. Other persons not employed by the auditor, including persons employed by other entities in alternative practice structures and persons engaged by the auditor with specialized skill or knowledge in areas other than accounting or auditing, would be listed in the disclosure as "persons not employed by our firm," rather than identified by their names, including only the location and extent of participation of those persons.

4. **Affiliate Relationships, Including Offshoring Arrangements**

   In the 2011 Release, the Board proposed that the disclosure of the names of other participants in the audit would include the names of all independent public accounting firms that participated in the audit, which may or may not be affiliated with the accounting firm issuing the auditor's report. In the 2011 Release, the Board indicated that disclosure of any offshored work would not be required to the extent that the offshored work is performed by another office of the same accounting firm, even though that office may be located in a country different from the country where the firm is headquartered. The staff of such office is employed by the accounting firm issuing the auditor's report.

   After considering comments, the Board retained the proposed disclosure provisions from the 2011 Release. The Board understands that offshored work may be performed by another office of or by entities that are distinct from, but that may be affiliated with, the registered firm that issues the report. Disclosure of entities that are

---

41/ The Board's standards describe alternative practice structures as "nontraditional structures" whereby a substantial (the nonattest) portion of an accounting firm's practice is conducted under public or private ownership, and the attest portion of the practice is conducted through the accounting firm. ET section 101.16, 101.14—The effect of alternative practice structures on the applicability of independence rules.
distinct from the firm that issues the report in the audit would be consistent with the
overall objective of the amendments the Board is reproposing and is an application of
the requirement to disclose other participants in the audit notwithstanding any network
affiliation or other relationship.

5. Disclosure Threshold

Similar to the originally proposed amendments, the reproposed amendments
would require disclosures about other participants in the audit based on a percentage of
the total audit hours in the most recent period's audit. In the 2011 Release, the Board
proposed disclosure of information about other participants in the audit if the
contribution of those persons exceeded 3% of the total hours in the audit engagement.
Because a number of commenters suggested that the 3% threshold was too low and
would include information that was not meaningful, the Board is proposing to raise the
disclosure threshold to 5%. This approach has the advantages of limiting disclosure to
work that is a significant part of the audit, but would allow a user of the information to
gain a general understanding of the relative magnitude of each other participant's
contribution to the audit.

6. Presentation as a Single Number or as Ranges

In the 2011 Release, the Board originally proposed that the disclosures of the
work of other participants in the audit should be stated as a single number. After
considering the views of commenters, the Board is reproposing that the disclosure be
stated as a single number or within a series of ranges, beginning with narrower
ranges—less-than-5% and 5% to less-than-10%—and then in wider ranges—10% to
less-than-20%, 20% to less-than-30%, and so on up to a range of 90%-or-more.

In situations in which the extent of participation is less-than-5%, individually for
firms or in the aggregate for persons from the same country, the auditor would not be
required to disclose the names and locations of other accounting firms or the locations
of other persons not employed by the auditor. However, the auditor would be required to
group and disclose the aggregate percent of participation of the other accounting firms
or other persons not employed by the auditor. Examples of the application of these
requirements can be found in Appendix 3, Section II.D.2., Presentation as a Single
Number or as Ranges, of this release.

7. Discussion

Information about other participants in the audit could become increasingly
important as commercial activity becomes ever more global. Many companies with
substantial operations outside the United States are audited by U.S.-based, PCAOB-
'Aggregate'....what a great opportunity to obfuscate, hide, conceal, commit fraud-n-steal.....oops please delete that last one before publishing....

Respectfully yours,

Persons not employed by our firm

Respectfully yours, Pw Carey, Senior IT Auditor (GRC), CISA, CISSP, Compliance Partners, LLC, Barrington, IL 60010 USA
registered public accounting firms. In such cases, other firms from around the world—some PCAOB-registered, some not, but almost always separately established legal entities likely participated to varying degrees in the audits of such companies. In fact, the Board's inspection process has revealed that the extent of participation by firms other than the one that signs the auditor's report ranges from none to most of the audit work (or, in extreme cases, substantially all of the work). To investors in such companies who read today's auditor's report, however, these situations are indistinguishable. In each case, investors see only the name of the signing firm, notwithstanding the possible significance of other firms' roles or their location or identity.

In many situations, the signing firm uses another firm in a foreign country to audit the financial statements of a subsidiary in that foreign country. These arrangements can be an effective and cost-efficient way to audit today's multinational corporations. At the same time the quality of the audit is dependent, to some degree, on the competence and integrity of the participating accounting firms. This is especially true when the signing firm has not reviewed all the work done by the other firm. The Board

---

42/ See PCAOB’s Staff Audit Practice Alert No. 6, Auditor Considerations Regarding Using the Work of Other Auditors and Engaging Assistants from Outside the Firm, (July 12, 2010) discussing the trend of smaller U.S. firms auditing companies with operations in emerging markets and reminding auditors of their responsibilities in such audits. Audit Practice Alert No. 6 at 2 noted that "in a 27-month period ending March 31, 2010, at least 40 U.S. registered public accounting firms with fewer than five partners and fewer than ten professional staff issued audit reports on financial statements filed with the SEC by companies whose operations were substantially all in the China region." See also PCAOB Research Note No. 2011-P1, Activity Summary and Audit Implications for Reverse Mergers Involving Companies from the China Region: January 1, 2007 through March 31, 2010 (March 14, 2011) (discussing available information on the role of registered public accounting firms in auditing issuers in the China region).

43/ Firms that do not prepare or issue any auditor's report or play a substantial role in the preparation or furnishing of an auditor's report need not be registered with the Board. PCAOB Rule 2100, Registration Requirements for Public Accounting Firms.

44/ As previously noted, the accounting firm issuing the auditor's report supervises the work of or assumes responsibility for the procedures performed by other participants in the audit.

45/ See, e.g., AU sec. 543.
previously conveyed its concern about some practices it has seen in these arrangements.\textsuperscript{46/}

Knowing the names, locations, and extent of participation of the accounting firms involved in the audit would allow users of the auditor's report to research publicly available information about these participants. For example, information on the PCAOB website indicates whether a firm is registered with the Board and has been inspected or sanctioned by the Board or whether a firm is located in a country that does not allow PCAOB inspections. The disclosure of the location and extent of participation in the audit of other independent public accounting firms and other persons not employed by the auditor would allow users to understand whether the other participants are headquartered or reside in the auditor's home country or in other jurisdictions, as well as how much of the audit work they performed.

Through its inspections, the Board also has seen circumstances in which disclosure regarding other firms that participate in audits could have been particularly valuable to investors and other financial statement users. For example, through the Board's oversight activities, the Board observed that for some large, U.S.-based financial institutions, a significant portion of the audit work was performed outside the U.S. by a firm other than the firm that signed the auditor's report (typically, a member firm of the same network). In another case, a small U.S.-registered public accounting firm signed an auditor's report for an issuer based in China even though "the audit procedures performed by the other firm [based in China] constituted substantially all of the audit procedures on the issuer's financial statements."\textsuperscript{47/} Investors had no practical means of learning these facts, which the Board believes would be useful information.

\textsuperscript{46/} See PCAOB's Staff Audit Practice Alert No. 8, \textit{Audit Risk in Certain Emerging Markets}, at 19 (October 3, 2011) ("Through the Board's oversight activities, the Board's staff has observed instances in certain audits of companies in emerging markets in which the auditor did not properly coordinate the audit with another auditor."); see also In the Matter of Clancy and Co., P.L.L.C., Jennifer C. Nipp, CPA, and Judith J. Clancy, CPA, PCAOB Release No. 105-2009-001 (March 31, 2009) (imposing sanctions in a case in which a U.S. firm used a significant amount of audit work performed by a Hong Kong firm without adequately coordinating its work with that of the Hong Kong firm).

\textsuperscript{47/} See Staff Audit Practice Alert No. 6, at 3. The Board previously warned investors and auditors of the heightened fraud risk related to audits of companies based in certain emerging markets. See Staff Audit Practice Alert No. 8, at 1 ("Local business practices and cultural norms in emerging markets may differ from those in more
Transparency could discourage practices that would not withstand scrutiny to go unchallenged, at least until they are discovered by regulators. In one case, the Board's inspectors learned, for example, that a registered firm opined on the financial statements of a large, multinational company and reported having performed an audit in accordance with PCAOB standards, even though another firm in another country (albeit, a member firm of the same network) had performed the audit. In other circumstances, PCAOB inspections have revealed that some registered firms have allowed other firms that did not possess the requisite expertise or qualifications to play significant roles in audits of issuers. Disclosure about other firms participating in the audit could expose, and therefore discourage, such practices.

As with disclosure of the name of the engagement partner, over time, information sources likely would develop about the firms that participate in public company audits, such as lists of their public company accounts, size of the accounting firms, disciplinary proceedings and litigation in which they have been involved, and similar matters. Such information likely would be useful to audit committees, investors, and other financial statement users. In addition, over time, these disclosures would provide information that could prompt further useful inquiry about the audit. For example, if the percentage of contribution to the audit by a participating accounting firm or individual either increases or decreases over time (which can be determined since participation is disclosed in ranges), or if it spikes in a particular year, such facts may lead to questions about the underlying reasons.

C. Liability Considerations

A concern voiced frequently by commenters on the Board’s 2009 and 2011 Releases is that there could be an increase in the potential liability of persons named in the auditor’s report in litigation, particularly securities litigation. Since 2009, the Board has sought and carefully considered commenters’ views on the liability effects of its 2009 and 2011 Releases. While the Board has not sought to increase the risk that an engagement partner would be held liable in private litigation, it has recognized and, where it could, consistent with its policy objectives, tried to mitigate this possibility.\footnote{Most private litigation arising out of audits involves claims against accounting firms, which generally have significantly greater resources to satisfy any judgment than does any individual partner. The Board's reproposed amendments will not reduce an accounting firm's potential liability for deficient audit work.}

The Board takes seriously commenters’ concerns about the potential effects of the developed markets, and auditors should be alert to the effect of these differences on the risks of material misstatement”).
proposed amendments on auditor liability in private actions. The Board has sought, and now has considered, two rounds of public comment on these issues and has engaged in its own review of the relevant statutory provisions and case law. The Board has also kept the Commission staff advised of its thoughts on these issues, as commenters suggested.

As explained below, the Board believes that any possible increases in a named engagement partner's or participating accounting firm's exposure to liability should be limited and that the potential risk of such an increase would be justified by the potential benefits to investors and other financial statement users of greater transparency.

The Board has identified two main potential sources of liability: Section 11 of the Securities Act of 1933 ("Securities Act"); and Section 10(b) of the Securities Exchange Act of 1934 ("Exchange Act") and Rule 10b-5 promulgated under it.

1. **Section 11 of the Securities Act**

   Section 11 imposes liability for material misstatements or omissions in a registration statement, subject to a due diligence defense, on "every accountant . . . who has with his consent been named as having prepared or certified any report or valuation which is used in connection with the registration statement, with respect to the statement . . . which purports to have been prepared or certified by him." Section 7 requires issuers to file with the Commission the consent of any accountant who is named as having prepared or certified any part of the registration statement or any valuation or report included in the registration statement filed with the Commission.

   Auditors who issue an auditor's report that is filed with the Commission in connection with a registration statement meet the criteria in Section 7 and therefore must consent to inclusion of their names in a document filed with the Commission and be subject to liability under Section 11.49/ The Board has assumed that engagement partners and participating accounting firms named in an auditor's report would have to consent as well to the inclusion of their names in such an auditor's report filed with, or

---

49/ See Section 11 of the Securities Act; see also 17 C.F.R. § 230.405 ("The term 'certified,' when used in regard to financial statements, means examined or reported upon [with an opinion expressed by an independent or certified public accountant."). In most cases, the firm issuing the auditor's report assumes responsibility for the participating accounting firm's work and, as a result, the participating accounting firm does not issue an auditor's report or express any opinion on the issuer's financial statements. When the principal auditor does not assume responsibility for the other firm's work, the other firm's report must be filed with the SEC and a consent is required. The repurposed amendments would not change these requirements.
Is it possible to regulate away human nature and stupid.....?

Well, somebody must think so.....just not us...

Respectfully yours,

Pw Carey, Senior IT Auditor (GRC), CISA, CISSP, Compliance Partners, LLC, Barrington, IL 60010 USA
included by reference in, another document filed under the Securities Act with the Commission.

Requiring engagement partners to consent to inclusion of their names in a document filed with the Commission and be subject to Section 11 liability would not change the performance obligations of engagement partners, the firm issuing the auditor's report, or any other participant in the audit. The firm that issued the report would continue to file a consent and to be subject to liability under Section 11. The fact that the engagement partner would be subject to Section 11 liability, however, might provide investors with some additional comfort about the engagement partner's work on the audit.

In this context, the costs imposed by a consent requirement likely would be relatively low. Because an engagement partner's liability would be, at most, coextensive with that of the firm, adding the engagement partner as a defendant should not increase the amount a court could award to investors. A court might hold the engagement partner liable, jointly and severally with the firm, for those same damages, but in most cases the accounting firm will have greater resources to satisfy a judgment than will any individual partner. In any event, the Board seeks input as to the extent to which individual partners or firms may seek to mitigate any costs arising out of a claim under Section 11.50/

Under these circumstances, it seems likely that any increase in overall costs would be small. Such costs as might be incurred would include the administrative costs to obtain and file the additional consents as well as costs inherent in the litigation system. The administrative costs, in particular, should be insignificant. The Board understands that the engagement partner could simply be added to the consent that the accounting firm already provides and that the issuer already files with the Commission.

50/ The Board notes that Section 14 of the Securities Act provides that "[a]ny condition, stipulation, or provision binding any person acquiring any security to waive compliance with any provision of this title or of the rules and regulations of the Commission shall be void." The Board also notes certain positions by the Commission with respect to Section 11. For example, the Commission has stated that indemnification of directors, officers, and persons controlling the registrant for liabilities incurred pursuant to the Securities Act "is against public policy as expressed in the Act and is therefore unenforceable." Item 510 of Regulation S-K, 17 C.F.R. § 229.510; see also Item 508(g) of Regulation S-K, 17 C.F.R. § 229.508 (requiring a registrant to furnish a brief description of any provision in the underwriting agreement for indemnification by the registrant of the underwriters or their controlling persons against any liability arising under the Securities Act).
Litigation-related costs might be more significant than administrative costs but, in the Board's view, in this context should not be substantial. For one thing, consents from engagement partners in an audit should not increase the number of lawsuits filed, though it might increase the number of defendants in any lawsuit that would have been filed anyway. Because the engagement partner's liability would be based on the same facts that already subject the firm to liability, the filing of engagement partner consents should not make the filing of a Section 11 case any more likely than it is today.

In fact, Section 11 cases against accounting firms are relatively rare. Of the 152 federal securities class action cases filed in 2012, only four alleged a violation of Section 11 by an accounting firm. In 2011, 188 federal securities class action cases were filed, and thirteen included allegations that an accounting firm violated Section 11. Of those thirteen, nine involved audits of Chinese companies trading in the U.S. after a reverse merger. Eight of the 176 federal securities class action cases filed in 2010 alleged that an accounting firm violated Section 11.

The analysis of Section 11 liability risks in the case of participating accounting firms is somewhat different because of the more limited role of the participating accounting firms in the audit. By its terms, Section 7 requires issuers to file the consents of those experts that are "named as having prepared or certified" any part of the registration statement or a report for use in connection with the registration statement. Section 11, in turn, imposes liability on experts, but only "with respect to the statement . . . which purports to have been prepared or certified by him."

The Board assumes that the participating accounting firm would be liable only for those misstatements in the financial statements associated, in some way, with their own audit work—that is, a participating accounting firm should not be liable for misstatements unrelated to its own work. Any uncertainty about whether participating accounting firms could be liable for other misstatements in the financial statements, however, could act as a disincentive to providing the consent and consequently impose additional costs.

Although it has been asserted that participants in the audit would charge more for their work or refuse to participate in the audit if consents were required, commenters did not present any evidence that this would be the case. The requirement to file a consent

---

52/ Id.

53/ Id.
does not change the work the auditor must do. Raising the fee charged by a participant based on an unquantifiable assertion of increased risk is unlikely to be well received either by the accounting firm issuing the auditor’s report or the audit committee. Also, for firm network members refusing to participate in an audit because of the consent requirement may be incompatible with obligations as a member of the network. Uncertainty as to the forgoing does not, in the Board’s view, justify depriving investors of the benefits of the additional information that would be provided pursuant to the reproposed amendments. Even if costs were to increase the Board believes this information would be valuable.

The Board is reproposing the disclosure requirements because the greater transparency afforded by the required disclosures would, in the Board’s view, serve the public interest.

2. Section 10(b) and Rule 10b-5 of the Exchange Act

The second main potential source of liability from the Board’s reproposed amendments is under Section 10(b) of the Exchange Act and Rule 10b-5 promulgated under it. The concern is that engagement partners and other participants in the audit could become liable under Section 10(b) and Rule 10b-5 for materially untrue statements deemed to be made by them in the auditor’s report.

In its 2011 Release, the Board noted that the Supreme Court, in Janus Capital Group, Inc. v. First Derivative Traders, had decided what it means "[t]o make any untrue statement of a material fact" under Section 10(b) and Rule 10b-5. That case brought some clarity to an area of the law that had, as the 2009 Release had noted, been unclear. Specifically, the Court held that "[f]or purposes of Rule 10b-5, the maker of a statement is the person or entity with ultimate authority over the statement, including its content and whether and how to communicate it." The Court also explained that "attribution within a statement or implicit from surrounding circumstances

54/ Janus Capital Group, Inc. v. First Derivative Traders, 131 S.Ct. 2296, 2302 (2011). Pursuant to Rule 10b-5, it is unlawful for 'any person, directly or indirectly, [. . . ] to make any untrue statement of a material fact in connection with the purchase or sale of securities." See id. at 2301 (quoting Rule 10b-5). Because there is no private right of action under Section 10(b) against those who aid and abet a securities fraud, Central Bank of Denver, N.A. v. First Interstate Bank of Denver, N.A., 511 U.S. 164, 191 (1994), to be liable in a Section 10(b) private action for the making of the statement, the actor must be the maker of the statement. See Janus, 131 S.Ct. at 2302.

55/ Id.
is strong evidence that a statement was made by—and only by—the party to whom it is attributed.\textsuperscript{56/}

The Board solicited comment on the Section 10(b) liability implications of a disclosure approach, rather than a signature requirement, in light of Janus. Comments filed with the Board on the 2011 Release, after the Janus decision, generally reflected the same concerns expressed in response to the 2009 Release. Many of those who opposed the disclosure requirements suggested that the proposed requirements could increase the engagement partner's risk of personal liability under the Exchange Act. In the view of these commenters, this could raise audit costs, discourage good practitioners from auditing public companies, and encourage more lawsuits, even if they ultimately proved meritless.

Some commenters seemed to acknowledge that, in light of Janus, a disclosure approach, rather than requiring the engagement partner's signature, could mitigate concerns about private liability for fraud under Section 10(b). At the same time, however, these and other commenters noted that it was still uncertain how lower courts will apply the Supreme Court's decision. One such commenter suggested that if the Board adopted a disclosure requirement, it should impose a provisional rule that would be in effect for five years to allow the case law to develop. In this commenter's view, the Board could then decide to make the rule permanent once it becomes clear that concerns about liability were unfounded.

Because the future decisions of courts interpreting Janus cannot be known in advance, the Board cannot conclude with certainty whether its approach might increase liability under Section 10(b). The Board does believe, however, that a disclosure rule is unlikely to change the status quo regarding private liability for fraud under Section 10(b). The auditor's report would continue to be signed only by the firm. The engagement partner will gain no new authority for, nor make any new statement in, the auditor's report by virtue of the firm's disclosure of his or her name. Because of this, the Board also believes that the better argument is that liability should not be increased under the Janus decision.\textsuperscript{57/}

If the reproposed amendments are adopted, the Board would also monitor the rule for some time after it became effective. If the reproposed disclosure requirement

\textsuperscript{56/} See id.

\textsuperscript{57/} While disclosure of the engagement partner might, at least in some circuits, make it easier for a plaintiff to plead reliance, the plaintiff would still have to meet all the other elements of Section 10(b) liability, including that the engagement partner was the maker of the statement under the Janus standard.

The case law will evolve over five years, ten years or even.....

yes, twenty years....

regardless of whether or not it's a provisional rule.....

that's my thought and we're sticking to um.....both of um....

Respectfully yours, Pw Carey, Senior IT Auditor (GRC), CISA, CISSP, Compliance Partners, LLC, Barrington, IL 60010 USA
leads to an increase in litigation against either engagement partners or other participants in the audit that results in negative effects on audits of public companies, the Board can revisit it.

In response to comments, the Board also is making a minor change to the language that it proposed to add to the examples of reports that illustrate the reproposed disclosure requirements. Some commenters expressed concern that courts might misconstrue the statement that the engagement partner is "responsible for the audit" to mean that the engagement partner has "ultimate authority," as that term is used in Janus, over the opinion expressed by the firm. Because the phrase "responsible for the audit" is not necessary to make the disclosure clear, the reproposed amendments do not include this phrase.58/

IV. Audits of Brokers and Dealers

Section 982 of the Dodd-Frank Wall Street Reform and Consumer Protection Act ("Dodd-Frank Act")59/ gave the Board oversight of the audits of brokers and dealers registered with the SEC. On July 30, 2013, the SEC amended SEC Rule 17a-5 under the Exchange Act, to require, among other things, that audits of brokers' and dealers' financial statements be performed in accordance with the standards of the PCAOB for fiscal years ending on or after June 1, 2014.60/

The Board determined that the reproposed amendments would be appropriate for the audits of brokers and dealers for similar reasons as the audits of issuers. Commenters who mentioned brokers and dealers in their comment letters did not raise any specific concerns about the applicability of the amendments to the audits of brokers and dealers. Therefore, the reproposed amendments, if adopted by the Board and approved by the SEC, would be applicable to such audits.

Based on research conducted by the PCAOB's Office of Research and Analysis ("ORA"), ownership of brokers and dealers is primarily private, with individual owners generally being part of the management team. ORA's research indicates that there are

The engagement partner remains responsible for the audit and its performance, as described by Auditing Standard No. 10. As explained above, however, the auditor's report is issued and signed by the firm.

no issuers among the approximately 4,230 brokers and dealers that filed annual audited financial statements with the SEC for fiscal periods ended during 2012. Approximately 9% of the 4,230 brokers and dealers are subsidiaries of issuers. The remainder are not owned by issuers.

According to ORA's research, for the population of brokers and dealers that are not subsidiaries of issuers (1) approximately 90% are directly owned by an individual or an entity that owns more than 50% of the broker or dealer and (2) approximately 75% have five or fewer direct owners. A review of the title or status of the brokers' or dealers' direct owners who are individuals suggests that these owners are generally part of the broker's or dealer's management. Disclosure of the engagement partner or other participants may be of limited use to individual owners, but it may be useful to other financial statement users. The Board is seeking comment regarding the applicability of the reproposed amendments to audits of brokers and dealers.

V. Economic Considerations

A. Economic Rationale and Discussion of Benefits

The reproposed amendments are designed to provide investors and other financial statement users with information the Board believes could help them evaluate the quality of individual audits. Although the names of the engagement partner and certain other participants in the audit are known to company management, they are not known to investors and other financial statement users despite their potential value in making economic decisions, including investment decisions to buy, hold, or sell shares. The disclosed information may provide a signal about the quality of the audit of the financial statements that could reduce the level of information asymmetry between company management and investors.

Under the current regulatory baseline, in which only the firm name is disclosed, investors and other financial statement users are limited in what they know about the participants who actually perform an audit. PCAOB oversight activities show that audit quality varies among partners within the same firm, suggesting that, on its own, firm-level reputation is an imperfect signal of audit quality. Disclosure of the names of the engagement partner and certain other participants in the audit would allow investors and other users of financial statements to supplement the audit firm's name with more granular information when forming an opinion about the nature of the audit. This refinement may be of particular interest to investors and other financial statement users

61/ Economists often describe information asymmetry as an imbalance, where one party has more or better information than another party.
given that a relatively small number of audit firms conduct a relatively large number of public company audits. The reproposed disclosure requirements would allow investors to distinguish between audits beyond the name of the accounting firms.

The capacity to differentiate between alternative products is a fundamental requirement of competitive markets. Investors, for example, benefit from knowing the quality and reputation of not only the firm, but also of the engagement partner on the audit of the company in which they invest. By having information at this level of granularity – that which corresponds to their investment decision – the market for audit services is made more competitive and efficient because investors are better able to discern between audit firms.

By adding granularity to the information about who performed the audit of a particular company, the differentiated information clarifies distinctions between investment alternatives and can empower investors to pursue their investment strategies more effectively. Over time, this could promote competition in the audit industry and could lead to a more efficient allocation of capital.

The following sections describe the findings of several recent studies that provide empirical evidence related to disclosing the name of the engagement partner and certain other participants in the audit. The Board will review the academic literature again before taking further action on the reproposed amendments to identify any relevant new studies or changes to the working papers referenced below.

1. Research on the Disclosure of the Name of the Engagement Partner

Several studies examined whether engagement partner disclosure requirements affect the prices of securities leading to more efficient markets. Knechel et. al. found "considerable evidence that similar audit reporting failures persist for individual partners over time" and that in Sweden, where engagement partner's names are disclosed, "the market recognizes and prices differences in audit reporting style among engagement partners."62/ Although much of this analysis was conducted using data on private companies, many of the results continued to hold when the authors separately analyze

---

public companies. A similar study conducted by Aobdia et. al.\(^{63/}\) used data from Taiwan and also found that both debt and equity markets react to the performance characteristics of engagement partners.\(^{64/}\)

Lambert et. al. used an experimental framework to examine how investors react to disclosure of the engagement partner.\(^{65/}\) They found that prospective investors were less likely to invest in a company that has been linked via the disclosure of the name of the engagement partner to another company that had to restate its financials. While this could improve capital allocation, the findings were only statistically significant for less experienced investors. The authors went on to evaluate potential implications on audit partner reputation, accountability, incentives, and independence.

Although the primary benefits of the reproposed amendments pertain to the disclosure of the engagement partner and certain other audit participants, the disclosures may also create an incentive for auditors to voluntarily take steps that could result in improved audit quality. Research summarized below leaves open the question of other benefits. The Board is seeking additional comments and data regarding the disclosures’ potential effects on accountability.

Carcello and Li\(^{66/}\) examined the impact of the E.U.’s audit engagement partner signature requirement on audits in the U.K., and found improvements in several

---

\(^{64/}\) Aobdia et. al. acknowledge that their use of estimates of abnormal accruals as a proxy for engagement partner performance is subject to measurement error. They continue to find evidence that engagement partner histories matter to capital markets when they use regulatory sanctions history as an alternative measure of audit quality.

financial indicators of audit quality, as well as an increase in audit fees. It is worth highlighting that this study evaluated a policy alternative (signature requirement) that may have a more pronounced effect on accountability than the disclosure requirement being re-proposed since the engagement partner's signature goes one step beyond just disclosing the partner's name.

Two studies suggested that disclosure requirements could produce limited or no observable improvement in audit quality. Blay et al. analyzed data from Norway and were unable to document any statistically significant improvements in audit quality following the E.U. mandate for engagement partners to sign auditors' reports. In a qualitative analysis, King et al. argued that only under certain circumstances would increased accountability through engagement partner disclosure lead to better auditor performance—when the public's perception of audit quality is below the actual level of audit quality. Otherwise, they argued that disclosure could lead to over-auditing.

2. Research on the Disclosure of Certain Other Participants in the Audit

Dee et al. examined the impact on financial markets of current annual PCAOB Form 2 disclosures of other participants in the audit. Using the filing of the Form 2 as

67/ Specifically, Carcello and Li found a significant decline in abnormal accruals, a decrease in the propensity to meet an earnings threshold, an increase in the incidence of qualified auditors' reports, and an increase in a measure of earnings informativeness.

71/ PCAOB Form 2 requires independent public accounting firms that audited no issuers during the applicable reporting period to provide information on each issuer for which they "played a substantial role in the preparation or furnishing of an audit report" (as defined by PCAOB Rule 1001 (p)(i)).
the event date, they investigated "whether the market reacts to the disclosure of other participants in audits." For companies whose audits involved other participants disclosed in Form 2, they find a negative market reaction and a decrease in the information content of earnings surprises post disclosure. The authors concluded that the results of the study suggested "that PCAOB required disclosures by auditors of their significant participation in the audits of issuers provide new information, and investors behave as if they perceive audits in which other auditors participate negatively after the information is disclosed."

B. Discussion of Costs

Under the reproposed amendments and as discussed above in the liability section, audit firms would likely incur direct compliance costs to obtain consents and to calculate the relative levels of participation of the other participants. These direct costs are believed to be low due to the relatively simple nature of the tasks. In addition, these costs may decline over time as firms are able to automate these procedures.

The disclosure requirements could result in indirect costs related to liability. The liability section above describes in greater detail the potential sources and likelihood of such costs. As a general matter, the magnitude of damages would not change, but the number of defendants listed in the litigation may increase. As a result, there could be indirect costs to engagement partners and other audit participants related to obtaining representation in cases when they may not have been named before.

Investors may also incur costs to obtain the benefit of the disclosure. These costs—which should be interpreted as a reduction in the net benefits received—could include the cost of collecting disclosed information. Given the general availability of the auditor's report to investors and other users of the disclosed information, the costs to investors are expected to be relatively low. For investors choosing to aggregate disclosed information, the costs would be higher.

---

72/ Id. at 31-32. Of course, this negative perception might result from a lack of sufficient information available for investors to draw conclusions about the quality of audits in which other participants are involved. If so, the reproposed amendments could help address this issue by providing more information regarding participants in the audit than is currently available.

73/ See Section III.C., Liability Considerations, for further discussion of liability considerations.
C. Alternatives Considered

Over the past several years, the Board has considered a number of alternative approaches involving the issue of transparency. A threshold question was whether there was, in fact, a need for greater transparency about the participants in the audit and, if so, whether rulemaking was the appropriate vehicle to achieve it. On the question of need, through its outreach efforts, the Board became convinced that there was a strong desire among investors and other financial statement users to have more information about the audit, such as the identity of the individuals and firms that were doing the audit. Providing such information is consistent with the general approach of the U.S. securities laws favoring disclosure of information for investors' use. The degree of usefulness of the information discussed in this release likely would vary among investors and other financial statement users, but the Board believes that, overall, disclosure of the information would be useful and in the public interest.

The Board considered whether an informal approach rather than regulation would be a less costly means of achieving the desired end. The Board's usual vehicles for informal guidance such as staff audit practice alerts, research reports, answers to frequently asked questions, or summary reports under the Board's Rule 4010, did not seem suitable. Accounting firms also did not seem likely to change long established practices voluntarily and had not done so voluntarily in those jurisdictions where engagement partner signature on the auditor's report is now required by law or rule. Also, even if some auditors disclosed more information under a voluntary regime, practices among auditors likely would vary widely. That would defeat one of the Board's goals of achieving more robust and consistent disclosures about the auditors of all U.S. public companies. Thus, the Board did not pursue an informal or voluntary approach.

Once the Board concluded that rulemaking was appropriate in this matter, several alternatives were considered. A central consideration for the Board was to provide the information in a form that would be most easily accessible to investors and other financial statement users. That argued for providing the information in a document that was widely disseminated and commonly read by investors, such as the auditor's report that is included in the annual report filed with the SEC. It also argued for keeping the information in the same location as the audited financial statements. As discussed above, the Board believes disclosure in the auditor's report is the most appropriate alternative; however, other alternatives were considered, including the following:

1. Signing the Auditor's Report

In the 2009 Release, the Board considered a requirement for the engagement partner to sign the auditor's report in his or her own name in addition to the name of the audit firm. A number of commenters supported the signature requirement. However, many commenters opposed it, mainly because including the signature in the auditor's report, in their view, would appear to minimize the role of the audit firm in the audit and
could increase the engagement partner's liability. Some commenters believed that this alternative would increase both transparency and the engagement partner's sense of accountability. Other commenters believed that engagement partners already have a strong sense of accountability and that signing their own name on the audit opinion would not impact that. In the Board's view, the reproposed approach includes most of the potential benefits of a signature requirement, while mitigating some of the concerns expressed by commenters.

2. Disclosure in Firms' Annual Reports Filed with the PCAOB on Form 2

All PCAOB registered firms must file a report on Form 2 with the Board at least annually. Form 2 provides basic information about the firm and the firm's issuer-related practice over the most recent 12-month period.\textsuperscript{74} In the 2011 Release, the Board proposed, in addition to the requirement to disclose the name of the engagement partner in the auditor's report, to add to Form 2 a requirement to disclose the name of the engagement partner for each audit required to be reported on the form. As originally proposed, disclosure on Form 2 would supplement more timely disclosures in the auditor's report by providing a convenient mechanism to retrieve information about all of a firm's engagement partners for all of its audits.

Some commenters on the 2011 Release suggested that the names of the engagement partner and the other participants in the audit should be included, if they were to be disclosed at all, not in the auditor's report, but on Form 2 only. This would make the information publicly available but likely would obviate any requirement for a consent by the named parties under Section 7 of the Securities Act and might further lessen any potential risk of liability under Section 10(b) by not including the names in the auditor's report itself.

There are, however, a number of disadvantages to this approach. It would delay the disclosure of information useful to investors and other financial statement users from 3 to 15 months\textsuperscript{75} and would entail some additional costs for accounting firms to develop systems and to compile and report that information. It also would make the information

\textsuperscript{74} Under the Amendments to Conform PCAOB Rules and Forms to the Dodd-Frank Act and Make Certain Updates and Clarifications, PCAOB Release 2013-010 (December 4, 2013), the Board has adopted amendments to Form 2 to call for relevant information concerning a firm’s audits of brokers and dealers.

\textsuperscript{75} Form 2 must be filed no later than June 30 of each year, PCAOB Rule 2201, \textit{Time for Filing of Annual Report}, and covers the preceding 12-month period from April 1 to March 31; See Form 2, General Instruction 4. Special reports must be filed no later than 30 days after the triggering event. See PCAOB Rule 2203, \textit{Special Reports}. 
more difficult to find by investors interested only in the name of the engagement partner for a particular audit, rather than an aggregation of all of the firm’s engagement partners for a given year, because they would have to search for it in the midst of other unrelated information in Form 2.

While the Board could expend resources to develop systems to make the information more easily accessible, doing so would not address the disadvantages as to timing or the need for investors to look in several places for information that would be provided by the requirements of this reproposal. Therefore, the Board believes that adopting only a Form 2 requirement would seriously diminish the value of the disclosures. The Board remains interested, however, in commenters’ views about whether annual disclosure in Form 2 would be a useful supplement to the more timely disclosures that the reproposed amendments would require.

3. **A New, Targeted PCAOB Form**

The Board also considered creating a new PCAOB form—to be filed with the Board at the same time or shortly after the auditor’s report is filed with the SEC—that would identify the company, the date the auditor’s report was issued, the identity of the engagement partner and the other participants in the audit, but only that information. The information would be publicly available through the PCAOB’s website. This approach would have the same advantages as Form 2’s approach but would coordinate the timing of the disclosure with the release of the auditor’s report and would limit the information on each form to a single company. The disadvantage with this approach is that it still would require investors and other financial statement users to search two different places, at two different regulators (SEC and PCAOB) to see both the auditor’s report and the disclosures about the participants in the audit. It also would require audit firms to set up new reporting structures and the PCAOB to administer and police the filing of thousands of individual forms annually and to create a system to make the forms easily available.

Because of the effort and costs involved—for investors to locate relevant information and for the firms and the Board to administer the filing of a new form—the Board believes that the selected alternative is both more useful and cost effective.

4. **Disclosure of the Required Information Either in the Audit Committee Report or in the Auditor’s Report**

Under this approach, the Board would require disclosures to be made in the auditor’s report itself, unless the audit committee agreed to do so in the audit committee’s report filed with the proxy statement. This approach also poses several problems, however. There would not be a uniform source for the information among companies. In some cases, the information would be in the proxy statement, in others, in the auditor’s report included in the annual report. Investors and other financial
statement users would not readily know where the information was for any particular company. Another consideration is that the circumstance could arise where the auditor does not include the required disclosures in the auditor's report anticipating that the audit committee will include it in its report and, for whatever reason, the audit committee fails to do so. This would require the auditor to amend its auditor's report. Also, the timing of the filing of the proxy statement would pose the same problem as with the Form 2 approach. The proxy statement is almost always filed later than the auditor's report which must be included in the annual report filed with the SEC. Altogether this approach appeared to present risks of information dispersion and lack of uniformity of presentation that would defeat one of the Board's cardinal objectives in this project: ease of use.

VI. Considerations for Audits of Emerging Growth Companies

A. Background

Pursuant to Section 104 of the JOBS Act, any rules adopted by the Board subsequent to April 5, 2012, do not apply to the audits of EGCs (as defined in Section 3(a)(60) of the Exchange Act) unless the SEC "determines that the application of such additional requirements is necessary or appropriate in the public interest, after considering the protection of investors, and whether the action will promote efficiency, competition, and capital formation."76/ As a result of the JOBS Act, the amendments to PCAOB standards the Board is reproposing, if adopted by the Board, would be subject to a separate determination by the SEC regarding their applicability to audits of EGCs.

The PCAOB has been monitoring implementation of the JOBS Act in order to understand the characteristics of EGCs77/ and inform the Board's considerations

77/ In general terms, an issuer qualifies as an EGC if it has total annual gross revenue of less than $1 billion during its most recently completed fiscal year (and its first sale of common equity securities pursuant to an effective Securities Act registration statement did not occur on or before December 8, 2011). See JOBS Act Section 101(a), (b), and (d). Once an issuer is an EGC, the issuer retains its EGC status until the earliest of: (1) the first year after it has total annual gross revenue of $1 billion or more (as indexed for inflation every five years by the SEC); (2) the end of the fiscal year after the fifth anniversary of its first sale of common equity securities under an effective Securities Act registration statement; (3) the date on which the company issues more than $1 billion in non-convertible debt during the prior three-year period; or (4) the date
regarding whether it should request that the SEC apply the reproposed amendments to audits of EGCs, if adopted. To assist commenters, the Board is providing the following information regarding EGCs that it has compiled from public sources.\textsuperscript{78}{}

**B. Characteristics of Self-Identified EGCs**

As of October 1, 2013, based on the PCAOB’s research, 1,144 SEC registrants have identified themselves as EGCs in SEC filings.

These companies operate in diverse industries. The five most common Standard Industrial Classification ("SIC") codes applicable to these companies are: blank check companies; pharmaceutical preparations; real estate investment trusts; prepackaged software services; and computer processing/data preparations services.

Approximately 22% of the EGCs identified themselves in registration statements and were not previously reporting under the Exchange Act as of October 1, 2013. Approximately 61% of the companies that have identified themselves as EGCs began reporting under the Exchange Act in 2012 or later. The remaining 17% of these companies have been reporting under the Exchange Act since 2011 or earlier. Accordingly, a majority of the companies that have identified themselves as EGCs have begun reporting information under the securities laws since 2012.

Approximately 64% of the companies that have identified themselves as EGCs and filed an Exchange Act filing with information on smaller reporting company status indicated that they were smaller reporting companies.\textsuperscript{79}{}

\textsuperscript{78}{}To obtain data regarding EGCs, the PCAOB’s Office of Research and Analysis has reviewed registration statements and Exchange Act reports filed with the SEC with filing dates between April 5, 2012, and October 1, 2013, for disclosures by companies related to their EGC status. Companies with filings indicating they are no longer EGCs are not included in this analysis. Any filings subsequent to October 1, 2013 are not included in this analysis. The PCAOB has not validated these companies' self-identification as EGCs. The information presented also does not include data for companies that have filed confidential registration statements and have not subsequently made a public filing.
