So, to Joe Carcello's question to the profession, what's changed? I don't think anything has changed, Joe. We are for change. We think it has to happen, but it has to happen responsibly.

But to try to create a mechanism where we are providing subjective views and conversations and dialogues and impressions about a company's financial reporting matters without the ability of the audience to give and take with those impressions is really not going to be constructive.

MR. BAUMANN: Although, as Joe said, he was reading from a report of the GPPC, the partners of the major firms, who said that in the future, we'll be the ones to give insights and information because we have it. I'm not quoting you correctly, Joe, but it was something like that.

So I guess that's the question of it sounds like there are some in the profession who think it can be done and others are expressing this concern about because it isn't a two-way dialogue, it's going to be confusing, whereas the investors were speaking up saying, "I don't think I'll be confused. I want the information."

Any further thoughts on that or --

MR. REILLY: Well, Marty, I think, as was articulated in the letter that we sent back in June, I think there are ways that we can address some of the demands from the investors, and we are 100 percent behind that effort. It's just in the context of trying to convey and provide help and assistance or views via our subjective impressions is really not a healthy way to go in a format that involves a wide distribution report.

I can tell you, and I've had the experience of issuing a lot of due diligence reports throughout the years, and I've got to tell you that the report is issued. You then spend a day with the investor group or the users of that report going back in detail on "What do you mean by that?" "Provide some additional perspective or context on that finding." "What exactly am I supposed to do with that?"

And that type of interchange will not exist in the AD&A concept containing subjective views and impressions.

MR. BAUMANN: Thanks, Kevin.

Flerida?

MS. RIVERA-ALSING: Thank you.

First of all, thank you for the invite. And second of all, my opinion that I am going to express are my personal opinions and not of my employer.

I support the AD&A. I believe that the concern about having a boilerplate report moving forward is something that we should have asked ourselves like 20 years ago because in the past 40 to 50 years what we have been receiving is a boilerplate opinion page.

The disclosures I'm looking for from the auditors include what did you do to support the opinion you issued? We have investment in the private markets where the auditors will add an emphasis paragraph saying that 85 percent of the assets, the fair value of it is based on the estimate of management. But there's nothing there that tells me what did you do to be able to issue a clean opinion of that financial statement.

I would also want to see what the auditor -- or to know what the auditors did to assess the risk of fraud. That is not something that is disclosed or discussed in the financial statements. I would also want to see the corrected misstatements. What about the uncorrected misstatements?

These are just some of the things I would like to see. And I promise you and the audit firms that are represented here that the additional information you will provide to us will not confuse me.

Thank you.

MR. BAUMANN: That's what I am hearing the investors say. They won't be confused.

Paul Haaga, then I'm going to call on Sam Ranzilla, Pete Nachtwey, Mark LaMonte, and Lynn Turner.

MR. HAAGA: Okay. Thank you very much, Marty. And thank you particularly for reaching out to and including investors.

I think that if anybody has seen some of our comments on various accounting issues, we've often pointed out that investors are underrepresented, in our view, on the boards that set these -- the various groups that set these rules. And we're delighted to be included here.

I don't want to be redundant. So I'll just say that I agree with everything that's been said and everything that's going to be said.

[Laughter.]

MR. HAAGA: As I said, we are a buy-side firm that does deep research. We have many, hundreds of analysts who use financial statements, but we also issue hundreds of financial statements for our mutual funds, like the gentleman from BlackRock.

And by the way, Jack, if you're taking a survey, I would gladly trade my compensation for all our audit fees.

But anyway, when I did the survey, I got the information by survey, reaching out to both our accounting staffs and our -- many of whom were previously in private practice, and to our analysts. And there was a lot of passion on both sides, but the statement usually began, "This will be great," or "This will be a disaster." And everybody had a different "this" in mind. It was sort of blind man touching the elephant.

Really, this release just asks a lot of questions, and so I encouraged them not to focus on this, but to turn around and work the other way and say, "Okay, what can we do? What can we do better? What would you recommend?"

There was a very strong consensus from literally everyone, both sides, on the fact that we can do better by investors. So doing something would be our suggestion. I got a number of examples from the analysts, and it always centered around information that was uniquely known by the auditors. So nobody wants to replace anybody's role, substitute the auditors for management or interfere with the audit committee role, but there is some information known to auditors.

This should be modest, a modest cost for a modest amount of disclosure, which causes me to think that the emphasis paragraph is a better vehicle than an AD&A because an AD&A is a separate document, is likely to grow and be more comprehensive and not be modest. So we would prefer the emphasis paragraph.

I would suggest that the process here not be to sort of work forward from grand concepts of disclosure and matters that are to be commented upon, but just work backwards and take a couple examples. I don't want to fight the last war, but I think we can learn from previous examples of things that went wrong and say, okay, what would the auditors have known? What could the auditors have usefully pointed out without creating liability, cost, or interference with relationships?

And if we can identify that, then I think we can write rules around that. And some of the suggestions from my analyst colleagues about things they would have liked to have known included Chinese company structures and related party transactions, Citigroup's CDO assessments, Countrywide subprime loan securitizations, Lehman repos, Fannie Mae derivatives, Freddie Mac deferred tax assets, and AIG's credit default swap valuations, just to name a few, and I'm sure there are plenty more.

I also don't want to leave out something that's been mentioned here. It's probably not a mandate or specific role of the PCAOB, but we think it's important, and that's strengthening the hand of the auditors. The mere fact that there's more to say than pass or fail, we think, would give -- and there was broad consensus on this -- we think would give the auditors a stronger hand.

They would win more arguments, and we think that would be a good thing. And that could be a good thing even if they didn't say anything at all in the emphasis paragraphs. Simply the ability to say something there as an additional tool.

So thank you and, again, appreciate being here.

MR. BAUMANN. Good. And thank you for those very thoughtful comments.

Sam Ranzilla?

MR. RANZILLA: Thank you, Marty.

I guess where to begin? But I guess a day that I get a compliment from Joe Carcello, maybe I should just leave it at that.

[Laughter.]

MR. RANZILLA: But I'm not going to. As a profession, we have looked at this issue for over a year and read all the surveys. And I'm telling you, I think the basic issue that I have had the most difficulty in dealing with is, is that when you boil this all down, at least in my view, this comes as basically a situation where investors are basically saying we don't trust audit committees.

And as a result, they're looking for the same information that is provided to audit committees. And I don't know that simply looking at the auditor's report is going to deal with such a fundamental issue as a lack of trust of what audit committees are doing. So I'll leave that as sort of an overriding comment that I'm not certain that this Board can deal with this issue all on its own.

That said, when you get down to a different level of the issue, the common theme is, as an investor, I want to know more about those judgments and estimates that are critical to the financial statements and what is underlying them.

And you can slice that a number of different ways, and I think Ann had a list or somebody had a list of some things. And there might be some things on the periphery of that, but it comes down to most of what people are interested in financial reporting is where are the estimates, and what is the level of measurement uncertainty within those estimates? That's what drives the volatility and the ultimate reliability of a financial reporting.

So Marty tossed out for those that favor AD&A

how you overcome some of the downsides. I don't favor AD&A, for all the reasons that others have expressed that I won't go into today. But I would like to address, and getting a little bit ahead of myself, an alternative that simply does get to a potential root of the issue without an auditor's discussion and analysis.

And I refer you to the SEC financial reporting codification on critical accounting estimates. And I guess, Joe, this side of the room is going to do some reading today, based on a remedial reading class we had last night that you and I had to attend.

But if you look at existing literature today and what's required to be included in MD&A, the concept of a critical accounting estimate is any estimate or assumption is material due to the levels of subjectivity and judgment necessary to account for highly uncertain matters or the susceptibility of those matters to change, and the impact would be material.

If you fall into that category, this

particular reporting release asks the issuer to respond to a series of questions, such as what factors did you use in arriving at the estimate? How accurate has that estimate been in the past? How much has that estimate changed in the past? And whether the estimate is reasonably likely to change in the future and, if so, to provide some form of sensitivity analysis because of the highly uncertain nature.

Those are existing requirements. And as I've looked at surveys, quite frankly, if that's what you're asking the auditors, and I think that is a major piece of the proposed AD&A, that information is already required to be disclosed by issuers.

And one proposal would be for the auditors to attest to those disclosures, not all of MD&A, just a portion of MD&A to basically achieve two objectives. One, improve those disclosures and the compliance with those disclosures and, secondly, to provide investors with greater confidence around the disclosures around critical accounting estimates.

So my point is, is that I, too, support change. And I think there is a way to get to the root of the issue if you can overcome the basic lack of trust, which I don't think this Board can do on its own.

But as a means to try to improve that situation, there are superior alternatives, ones which will allow management to provide information and auditors to attest to it and allow us to provide objective assessments of otherwise very subjective information. And I think that that particular alternative is superior to an AD&A.

Thanks.

MR. BAUMANN: Thanks, Sam.

And we're going to have a thorough discussion later on, on the possibility of auditor reporting on MD&A or parts thereof, such as critical accounting estimates. Another way, Sam, of looking at the point you just raised of a lack of trust between investors and audit committees might be maybe a lack of compliance with existing MD&A requirements since they call for such information about estimates, including sensitivity analyses as to how these estimates were made and could change.

And I guess there's at least a question of compliance if investors are saying we don't have that information, and the rules are as specific as I have in front of me and you've read. So we'll explore that issue a little bit later.

Pete Nachtwey?

MR. NACHTWEY: Thanks, Marty.

And I'll just add my compliments to the group, the Board and the others who have done so much of what I think has been -- I know has been incredibly hard work and, I think, very thoughtful work. And it's clearly with the best interests of the investment community in mind.

I'm going to state at the beginning I agree with much of the direction that's being taken here and the fact that the audit report is several decades stale, if we want to refer to it that way. But I also have some concerns just in terms of unintended consequences and making sure that we're thinking this through. And I, again, would add to someone who said this earlier, compliment the process and just continue to encourage you to keep it open and very broad.

But I'd like to just state for the record, as others have, I don't speak for my organization, which currently is Legg Mason. But what I do speak with is kind of what I think is a bit of a unique perspective with wearing three hats. And while I've had the honor of serving on the Investor Advisory Group because I currently and have been working with several large investment firms for the last going on 5 years, I did spend 25 years in the profession as an audit partner and in other leadership roles.

Then the last 5 as an issuer and preparer of financial statements, including for public companies and, much like Steve mentioned, around the world under various regulatory regimes. And then, those CFO roles have kind of taken me into the investment territory with two large global investment firms that have about $800 billion under management of third-party money.

So, unlike my toughest critic is my wife, and she usually thinks my opinions aren't very well informed, I at least kind of feel I can bring a bit of a 360-degree view of the issues that we're talking about today.

So while I, again, agree with much of what's being talked about, I do have specific concerns, and they primarily relate to the first two topics. So, again, I'll stick to the topic here, Marty, of AD&A but stipulate that I have similar views around the emphasis paragraph.

And first is just the cost benefit of doing this. And as Mike said before, do no harm. We need to understand that the costs that certainly that I know we incur internally -- not just externally, which is disclosed, but internally as well -- to issue financial reports and comply with what, again, are appropriate regulations, but we need to recognize they're incredibly burdensome. And the cost to comply is enormous, and that ultimately is borne by our investors and our shareholders.

Second concern is just the practicality. You know, again, I think all of this is well meaning and well intentioned, but the practicality of it, I think we need to really be thoughtful about. And the questions that I ask myself, particularly on AD&A, are how would an auditor's AD&A differ from management's, first and foremost? And then if it doesn't differ, is the view worth the climb? I mean, why would we do it if it's not significantly different?

But then the catch-22 question, if it is different, then I think most of the folks around this table who are on audit committees or in audit firms or, like me, are CFOs are going to spend an enormous amount of time reconciling the differences, which I think just leads us, at the end of the day, to getting to boilerplate because we simply don't have the time to do a lot of creation of new work in the tight deadlines that we have to operate under.

And then also if they are different, the question is does that really help investors, or does it cause them more confusion? Because they then need to reconcile the differences, and they won't be able to sit down, as others have said, across from the auditors as the audit committee could or other users of financial statements. I also wonder how this again ends up being something that's new information at the end of the day and not just boilerplate.

So, lastly, just to provide a perspective, because I've been asked to do that, and I'll try to be very balanced. Hopefully, Joe recognizes that, and I've worked with Joe on this. And again, I compliment you and the rest of the committee that's been working on it.

So I've spoken with many of the senior investment people, not just the analysts, because we've got a horde of analysts inside of Legg Mason, a horde of deal people that are inside of Carlyle where I previously served. And yes, they will always say any additional piece of info -- you know, even if it's on a scrap of paper I pick up off the floor, it's like, you know, jeez, maybe that gives me the one edge that I'm looking for to look really smart to my boss.

But when I go talk to the guys that run our funds and run our affiliates, and these are very, very seasoned guys and gals who've been around for decades, they're not clamoring for a change in the auditor's report. It's, "Yes, it would be nice to have."

What they're clamoring for, they'd love to get more prospective financial information from management, and that's a whole different topic we won't explore today. And of course, the question of should auditors be involved in that? But that's what they like to have, what actually they would say they must have is that prospective information.

They're always looking for what's around the corner, not just what's historical. They do value the audit opinion. They value reputable firms being involved with issuer financial statements to know that's solid base on which to build the rest of the pyramid of how they're doing an analysis of companies they're invested in.

So, at the end of the day, when I press them on this issue, it's much more, "Well, okay, it would be nice to have if we can get it, but it's not a must have." And so, does that get over the cost-benefit hurdle?

So I'd just say in summary, we need to be very careful on how we're approaching this and be very thoughtful. I'm not saying that, again, I'd be against change, wearing any one of my three hats. But just making sure we don't do any harm.

Thanks again for inviting me.

MR. BAUMANN: Thank you for coming and for your comments, Pete.

Mark LaMonte?

MR. LAMONTE: Thank you. And thank you for the opportunity to be here today.

Let me start with some of Peter's comments because I found that very interesting in terms of the value and the "nice to have" versus the "need to have," and how investors and other users of financial statements think about auditor reports today and an audit.

I do think we find audits extremely valuable. When we get a 10-K, there is an expectation that those numbers have been audited, and we can place a level of reliance on the accuracy and completeness of the information that is very critical to the decisions we're making.

The audit opinion itself holds very little value to us in terms of what's written. This concept that the numbers are audited certainly is valuable. The opinion itself is essentially a commodity. It really doesn't matter which firm is auditing the numbers. As long as it's one of the large, reputable firms, we're just happy the numbers are audited.

So from the perspective of is the profession delivering the greatest value, it certainly is delivering a lot of value by providing us with numbers that are audited, but it's not providing us much insight above and beyond that. So I view this as a nice opportunity to provide more.

Going to Pete's comments, is it something that we're clamoring for? Not necessarily. Our analysts get a set of financial statements today, presume they're audited, and start doing their work. Could the auditor give us something that would be helpful to the work we're trying to do? Absolutely.

I think the audit discussion and analysis would be an opportunity to do that, would be an opportunity for the firms to decommoditize their product a bit and make it something that actually has differentiated value amongst the firms.

Sam raised a very interesting idea about the discussion of critical accounting policies. That was a terrific idea when that was introduced, I guess, what, 7, 8, 9 years ago now. It's become largely boilerplate and another disclosure that's largely ignored by investors today. It says the same thing every year. It really doesn't say much anymore.

Having an auditor provide that with their objective view or participate in the delivery of those three to five critical areas of judgment or uncertainty that the investor needs to understand to really make the best decisions with the financial statements would be extremely valuable.

Having auditor views on those very difficult decisions that come up or those areas where a decision management has made could have been very different would be valuable. Let me just use a real-time example that would not be a U.S. example, but might emphasize the importance of this should we continue down the path and start incorporating IFRS into our financial reporting.

When you were looking at second quarter numbers for several European banks recently, you saw wildly different outcomes for the numbers that were being reported related to losses on holdings in Greek sovereign paper, just wildly different. Having auditor insight into how those ranges of potential outcome were evaluated and where, to use a golf analogy, a firm was hitting the ball in that fairway of acceptable outcomes and how the conclusion was supported and was okay I think could be just incredibly valuable to investors as they look at the numbers and think about how we want to adjust or how we want to view the numbers differently in our analysis.

It's always critically important to realize that endless -- and investors are not just taking what's reported. They're taking what's reported and providing their own perspective on it. They're making adjustments. They're making projections. They're thinking about the numbers differently than what's presented.

And having more insight into those from the audit community, I think, with the objective view of the audit committee could be very helpful to us. And AD&A is one of those opportunities to do so.

Thank you.

MR. BAUMANN: So, Mark, as you spoke, you sounded like you were a lot more supportive of the AD&A because you talked about how valuable it would be to understand how the judgments were made around estimates that were so different from company to company and as opposed to I think early on, I thought you said it was a nice to have, but not necessary?

MR. LAMONTE: I'm very supportive of it. Could we live without it? Sure. If you want to make an audit valuable beyond just having a commoditized assurance over the numbers, then I think it would be a terrific thing to have.

MR. BAUMANN: Okay. Thanks.

I've got Lynn Turner next, and then we'll call on Steve Kozeracki, Alan Beller, and Wayne Kolins.

MR. TURNER: Thank you, Marty.

It's interesting to listen to this conversation around the table. I've heard the phrase "do no harm," "unintended consequences," and "let's not get overly high on the cost." I can't think of any other city in the country where I hear those three phrases said more and yet, at the end of the day, more damage is done to the investing American public than any other place.

So I think those are all synonymous with just saying "do nothing," which is pretty much what has happened in this profession with this report since this issue first really got a lot of attention back, as Mike said, when he was on the Auditing

Standards Board. Unfortunately, at that point in time, they pretty much did nothing and didn't do a whole lot with the report.

It didn't change much. There were some changes around the fringes, and so here we find ourselves three to four decades later with the same problem.

Rather than do no harm, I think, for once, the Board ought to look at doing something that's right, something that actually provides some value, some information to the investing public. I don't think the issue is raised because people don't trust the audit committees. I think the issue is raised because investors see reports like they've seen at Lehman, at AIG, the judgments on the Greek debt. And not only does the Greek debt look impaired, it looks like the judgment of the auditors has been impaired as much.

Adelphia, Xerox, you can go through it. That's why people are asking for this information. It isn't that they don't trust audit committees. There may be a lack of trust. People don't trust the auditors because they get that same clean report from everyone, and yet, all of a sudden, there is a blow-up and there was no red flags.

And when we get into the court cases, then all of a sudden, in the court cases, we actually find the auditors did know a lot. Some of it may have been conveyed to the audit committee, but in a lot of times, it isn't conveyed to the audit committee.

So that's what one court case after another shows. And I think Paul had some very astute comments in that the Board needs to go look at those cases and take a look at what it was that the auditor knew. What was their perspective on the numbers that they never told the investors about that would have been useful and helpful information?

We are not looking for original information from the companies. I agree with that. The company has obligation to turn around and disclose those. Those need to be improved. The CFA Institute, others told us at the Treasury Committee that those disclosures are deficit and need to be improved, especially with respect to significant judgments and estimates. That's the FASB's job.

But what we are looking for is the knowledge that the auditor has and their perspective on the information. That information that they have should come from them. It shouldn't come from the audit committee. It shouldn't come from management. They're the independent body, supposedly the independent body. Yet in so many of these cases, you just wonder if they were ever independent at all.

So that's what we're looking for is that independent, unbiased perspective on some of those significant things. I do think there is some value to the standard report, but when we keep having these blow-ups, you wonder if it's worth paying for.

You know, you look at a Sino-Forest, where someone, an individual outside could go look at just publicly available information and find the problem, but the auditors couldn't? And that with an audit committee with three chartered accountants on it, you know, it does raise a serious question.

So the auditors did have valuable information, the court documents show, at Adelphia, at Xerox, at Waste Management, at AIG, at Lehman, that I think, unquestionably, any auditor doing basic, fundamental research would have liked to have heard and would have liked to have heard it from the auditor.

I favor an AD&A. But at the end of the day, I really don't care whether you put it in an AD&A or an emphasis paragraph. I just want the information. So whether you print it on page 13 or print it on page 33 in the filing, I really don't care, as much as I care about getting the basic, fundamental information.

The concern with the use of an emphasis paragraph is it does tag on to the current paragraph, and it might be just easier if you just give me the yes or no, pass/fail, and then give me a separate report on what you think. I think that actually will be easier for investors to deal with and read and comprehend.

The other concern with the emphasis paragraph is if you make it optional at all, then I'll guarantee you, you will do harm because you will have not done anything. Because the profession has been able to use emphasis paragraphs for two, three decades now and just never use them. Just never use them. So this is not something that can be made optional.

In regards, as far as boilerplate, I think that's something certainly to be looked at. I think Paul's notion of maybe field testing a little bit here would be helpful in that respect. But we do have MD&As that are very specific to each company, and they are able to do MD&As. And what you're telling me here is the audit partners in these firms are so undertalented that they can't do what the company is doing.

The company seems to be able to write that MD&A. Gary and Larry and others turn around and work on that MD&A. Larry was an audit partner, but you're telling me, as an audit partner, he couldn't write that type of specific company information? I don't buy it. I think these are very talented partners. I think they're very up to it.

The difference is you've got to pull the attorneys out of it. The audit committee reports have become -- despite encouragement from the SEC not to do it, the audit committee reports have basically been turned over to the attorneys and, viola, of course, we're going to get something boilerplate out of the legal profession. It's what they do.

So I think you'd want to do something to make sure that you don't end up with that, that you do end up with something specific, like MD&A, which you can already do.

As far as timing, I think Mr. Kueppers raised the question about timing. In each of these audits, at the end of the audit before we sign off on the audit report, before the partner signs off, they have to write -- it's mandated by the PCAOB's own standards -- a completion memo. And if there is one thing that investors ever would want to see, it would be that completion memo because that completion memo is your own standards highlight, tells you you've got to discuss what the big ticket risks were, what the significant items were, and your perspective on those.

That is unequivocally, anyone that's written those, anyone that's seen those would know that's the one thing that investors would really like to -- all you have to do is take those on some of these audits and put it out there publicly and ask investors if they'd like to see it. I guarantee you, they would love to see those memos.

So by the time you get down to writing -- signing off and writing the report, you'd already have some of this drafted because you have to do it as part of the audit. To say that you couldn't write this is incredible because you already have to have written it before you signed off on the audit report. And so, now it's just taking and dropping that down into the right type of language and something that is plain English that the investors could understand, and I see no reason why these talented partners couldn't do that.

I think investors have been very succinct in what they've been asking for. In fact, in their 2006 white papers, the CEOs of these exact large firms turned around and said users of financial information may demand from public companies the ability to receive more finely nuanced opinions from auditors about the degree of a company's compliance with a given set of standards or the relative conservatism of judgments compared to peer groups, or more boldly, investors even may want an auditor's view about the overall health and future prospects of the company they audit.

The CEOs, as Joe aptly noted out before, the very CEOs of these firms, the guys running these firms, have said investors are looking for this type of information. And to the extent we can get information that will enhance the performance in our portfolio because we've done a better job of allocation, we're more than willing to pay that cost because we get tremendous benefit back from it. That's the real benefit.

I can guarantee anyone had had the information that the auditors did on Adelphia, on a Xerox, on an AIG, on a Lehman, would undoubtedly have significantly enhanced their performance, and the cost would be a drop in the bucket compared to what it did to the returns on those entities.

As far as the auditors reporting on critical accounting policies, I've recently had the chance to go back and look at some critical accounting policy disclosure by companies. And quite frankly, there is not a whole lot more in those than what you already get in the footnotes.

They probably, in a lot of cases, don't comply with what the SEC was looking for in terms of the robustness. So I understand the benefit of getting something that says they've got in there what they need. But I don't see that as a performance enhancer to me as an investor.

If you want to have the auditor's report on the entire MD&A, I can see that. But there is legitimate arguments that we ought to make sure the auditors get the entire audit done on the financials right first before we go on to MD&A, and

I would probably share that view.

I'd like to see MD&A, but I'd like to get the financials right first. But just expanding it to critical accounting policies, I see absolutely zero, no benefit to that in terms of enhancing the performance of our portfolios where we need it.

So, with that, I think that's it, Marty.

MR. BAUMANN: Thanks, Lynn.

On your comment regarding emphasis paragraphs, the concept that was in the release dealt with a required and expanded use of emphasis paragraphs. So I do acknowledge that they're used very infrequently today, but if it were an alternative or at least the one presented in the concept release is one in which there would be standards written by us, which would require emphasis paragraphs in certain cases.

So, hopefully, that would at least improve that scenario. And as you said, you don't care if you get it from that way or from an AD&A, you want to get pointed to where the critical information is in the financial statements.

MR. TURNER: What I want, actually, I want the critical information that the auditor knows about what the company has already disclosed. I agree with the statements that the basic information about the company should come from management. The audit report is already required to disclose if information isn't there that should be there, and hopefully, they would uphold that standard.

But I want to know the auditor's perspective about the things like what we saw with the valuations at AIG, the Repo 105 transactions. You know, the Greek debt thing was just an abomination, to say the least. The Xerox, the Adelphia. The auditors in each of those cases, the court cases have shown new, very significant information that was very vital to the investors, and they didn't say anything about it.

And when that occurs, that's when, and very rightfully so, investors lose trust and faith in the auditors. And that's what needs to be fixed. And you talk about the emphasis paragraph. I guess my real concern, Marty, is you'll do incremental change. You'll tweak with the regular opinion some, and then you'll do a tweak on the emphasis paragraph.

If all we do here is incremental change, people will be -- different people will be in this room three to four decades from now, just as we're here three to four decades after the Cohen Commission report, and we'll be having the same debate/discussion again. I know that's pretty common in this city, but that ain't how to fix problems.

And if you want to just say we'll do no harm, that's where you're going to be. If you want to say let's go do something that's right, then you aren't going to have incremental change.

MR. BAUMANN: Thanks, Lynn.

Stephen?

MR. KOZERACKI: Thanks very much for this forum, and I do echo a lot of Lynn's comments and do think that and Vanguard believes that an AD&A would be very useful. And it's very important to get a better understanding of some of the judgments and assumptions that are made and how the auditors basically -- especially for some of the big issues, how the auditors got themselves comfortable with that.

And there may be some issues, we're dealing now with some of the liability for mortgage putbacks on financial institutions, and maybe those would be very tough for them to get comfortable with. But maybe they need to -- it would be important for them to highlight those that would be very difficult, and what are the big issues and what judgments were made. And like I said, how they got comfortable with it.

So, as I said, we're very comfortable as a firm and think investors deserve more, and the AD&A would be very helpful and an emphasis paragraph would be helpful as well.

The rest are sort of my just personal comments, and some of this is from listening to people speak. I've never attended an audit committee meeting, but I've heard numerous times from some of the preparers and the auditors about a two-way dialogue and a three-way dialogue and how difficult that would be to capture in an AD&A.

And, but just listening to it, it sounds like it's being approached by the parties involved as more some sort of negotiation, as opposed to, you know, are they going in there saying, "The audit committee want a clean opinion, the auditors want a clean opinion, and the company wants a clean opinion. And what's it going to take? And what are we going to talk about, and who's going to give what, and how do we all get comfortable with it?"

And that just doesn't feel like that's the way to be approaching this, if that is what happens. If the approach is more of how are we going to get the most accurate financial statements and how are we going to get the most appropriate information to investors, it seems like the parties would be coming and the discussion would be very different. And it wouldn't be a negotiation. It would be more about getting it right.

Another comment that came up several times, this talk of close calls. Close calls sort of goes back to this idea that the audit committee meetings have turned into negotiations. If the AD&A is there and it's present, maybe close calls go away. Maybe then people say this could get brought up in the AD&A. The auditor may disagree on it. It may be disclosed.

So maybe we're going to take a more conservative approach now, and then now you don't have the close calls. And maybe those stop, and maybe those should be stopped.

We've heard a lot also about that it's the responsibility of management on disclosure. But certainly in the financial institution area, we find disclosure is especially inadequate. Going back to one of the large institutions that failed, you can read in their footnotes about owning $40 billion plus in mortgage-backed securities, the average credit quality of which was AAA. Well, I guess that was an accurate statement, but it clearly, you know, was not adequate and in hindsight clearly not appropriate.

I think we found a lot of times also with financial institutions, management only provides the disclosure and the insight and their thought process and judgment when their stock drops dramatically or their bond spreads widen. It's certainly not something that they've shown in history that it's something they do, that they're forthcoming about unless it's actually being reflected in the pricing of their securities in the capital markets.

Another comment was also made about the MD&A and the AD&A could be very different. Maybe they could be different, but maybe that would be just for a period of time of a year or two where some of these differences need to be worked through. And when people start seeing that there are differences, then it would raise some questions about what management is doing, how they're reporting things, what their estimates are, and why is there a big difference with the auditor assessment of those?

Like I said, there may be this transition period. There may be a period of time where it would be tough to work through. But once you got through that, you might actually get much better behavior and much more accurate reporting from the issuers.

Just finally mentioning again, we're dealing with it right now, people were mentioning the sovereign debt issues, what's going on in the mortgage markets. These are issues that are impacting investors. We have seen market values across markets dropping tens of billions, hundreds of billions, in some cases with major selloffs, trillions of dollars.

Investors, who are ultimately the ones paying for the auditor's opinions, I think would be well served with more disclosure certainly on the big issues. And I think having the AD&A there, I said, we might see better behavior from management and more conservative reporting in general.

MR. BAUMANN: Stephen, thanks for those very thoughtful comments.

I'm going to turn to Alan Beller.

MR. BELLER: Marty, thanks very much and thank you for allowing me to participate today.

A couple of basic principles. Just my perspective on this. I was at the SEC when some of those rules, which we all would like to work better, were put into place, and some of them should work better.

I'm currently a partner at a Wall Street law firm. I do sit on an audit committee of a Dow Jones company, and so that's where I'm coming from.

I'd like to avoid not only unintended consequences, but intended consequences that are unfortunate. I am in favor of changing the pass/fail model. Don't get me wrong. I think there's value in the pass/fail model. We're all prisoners of our past, and I don't want to sit through Enron again. I don't want to sit through WorldCom again, and I don't want to sit through Tyco again.

But there is no question but that the regulators in the profession and the preparers can do better by investors. And there is no question but that investors are demanding that they do better.

Having said that, AD&A is as -- AD&A, I think, probably means something different to everybody around this table. But at least the way I'm hearing it, which is a fairly broad-gauged attempt by auditors to describe in their own words what they see about the company as a result of the audit process, I do not favor.

Lynn should not underestimate the ability of my profession to turn that into boilerplate.

[Laughter.]

MR. BELLER: It will become boilerplate. It actually will be less productive than some of the more modest targeted suggestions that have been made around the table.

Paul Haaga said let's be modest. I absolutely agree with him about that. I think there are some meaningful improvements that can be made in terms of asking auditors to tell investors more about the things they really know about that could help the process.

Is that a mini AD&A? Is that required

emphasis paragraphs? I'm not really sure I know, and frankly, like Lynn, I'm not really sure I care. But let's take an example that's been talked about a lot and just focus it on critical accounting estimates. That's actually a two-part exercise.

Sam and Marty both have in front of them the accounting release that was issued January '02?

MR. RANZILLA: Close.

MR. BELLER: December '01? There's been a lot of work done at the SEC since then, and there hasn't been any further codification. You really want better disclosure rules around critical accounting estimates, and you want better auditing standards around critical estimates. And I think if you did those two things, you would really be doing investors a service if you then said let's have the auditors tell us what they did to provide better assurance around those numbers and the identification of those estimates than you're getting today would be a huge win.

And Lynn, we might be here 30 years from now debating what else to do. But if you could promise me that at the end of today, I would be very happy. And I think investors would at least think they've gotten something out of the bargain.

Same issue around uncertainties and accruals and actuarial information and reserves. Some of those, the standards are actually not too bad. But some of them the standards really aren't very good. In almost all cases, the auditing standards could be sharpened, and you could accompany that with better disclosure. And if you did those couple of things, I really think you'd be on the right track.

Asking auditors to kind of go through the other information that management discloses, you want auditors to second-guess what the company thinks the competition is going to do? I don't. Do you want the auditors to second-guess what inflation rates are going to be in 2012 and '13? I don't particularly. So I'd leave that on the cutting room floor and take what I could constructively get.

Close calls is, I think, a little tricky because what some think of as close calls -- close calls. If by close calls, you mean what do people on audit committees spend a lot of time thinking about, those are not necessarily the close calls in the sense that management wants to pull one way and the auditors want to pull the other way. Those are the really super important numbers in somebody's financial statements, and they are going to get more attention at a well-run audit committee. And they are going to get more attention in a well-run company-auditor relationship, but they are not necessarily close calls.

And if we start focusing disclosure on "close calls," the issues where auditors and companies push and pull the most, I think you may be shooting at the wrong targets. And so, I don't really think close calls is where you want to go.

Disagreements. A lot of what we've heard around the table, I think is, and somebody said it earlier on, but it's implicit in a lot of what we heard -- especially I think what we just heard -- some of these kinds of disclosure requirements will provide auditors more leverage over management. At the end of the day, company disclosure will change. And indeed, company disclosure might change for the better.

And indeed, that's one of the reasons I kind of like the idea of pushing auditor disclosure around estimates and uncertainties. I think your MD&A disclosure on those subjects will get better over time.

But the flip side of that is what has been going on since Sarbanes-Oxley really is, in the majority of cases, I think, certainly the majority of cases I've seen -- I've seen dysfunctional boards. I've seen functional boards. In the majority of cases I've seen, you've really got audit committees trying to do the right thing already, and giving the auditors the ability to push audit committees in a particular direction, the upside is the auditors may get what they want. And I'm assuming that would be good for investors.

The downside is that auditors might get less information than they're getting now. And I think you have to be -- you have to be careful about that. You have to be careful about that dynamic.

But there are some really constructive things that can be done within the four corners of this concept release, and I hope that the Board continues on its very thoughtful course and gets us there.

MR. BAUMANN: We're getting lots of thoughtful comments to help get us there. Not along the same track, but a lot of helpful, thoughtful comments to help get us there.

December 2003, the release.

MR. BELLER: Oh, that's my -- I wrote that release.

[Laughter.]

MR. BAUMANN: It is. It's brilliant. I agree with that.

We have Wayne Kolins, Larry Salva. Then we better go to Professor Cox before the rest of his table collapses over there. So I want to get you before something else happens.

MR. KOLINS: Yes, thank you, Marty.

I'll be brief because many of the comments I was going to make, almost all of them, were just made, just 3 minutes ago by Alan Beller.

It's clear that the reporting model has to change, and in my view, the changes have to be meaningful, and they have to be practical. And I think the better approach to go in that direction is through looking at the alternates of the critical accounting estimates and the mandated emphasis of a matter paragraph. And I think much of what is in there could go a long way to fulfilling the investor needs for information about the sensitive areas of the financial statements.

It was also mentioned earlier on as an example of the kind of information, the information in a due diligent report. But it was mentioned subsequent to that initial mention of it was that the due diligent reports are subject to a significant amount of two-way dialogue in a very granular fashion and not the type of negotiation that was earlier described as possibly a way to describe what happens in a discussion at an audit committee level.

Those kinds of discussions are very granular. They're really to get an understanding of what the issues are and not to negotiate the issue, but to make sure all of the facts are considered and the best decision is arrived at.

Thank you.

MR. BAUMANN: Thanks, Wayne. Larry?

By the way, we're running a little bit over the schedule that was on the agenda. But the AD&A I think is one of the most important subjects and, clearly, one of the most critical topics we want to get input on. So I am going to try to get each of these cards that are still up, and we'll just cut into a little bit of what we cover in the afternoon.

But I think this is clearly a critical aspect of the meeting. So bear with me, and lunch will be about probably just 30 minutes later than was on the schedule.

Larry and then Jim, Professor.

MR. SALVA: Yes, thanks, Marty.

And to try to achieve that or facilitate achieving that objective, I'll also be brief because I guess the benefit of being late in the lineup is many of the comments that I would have otherwise made have been made by other participants.

But I do want to at least anchor mine in some of those prior comments, and that was the observation that it's been 10 years or less that we've had the SRO mandate of audit committees including financial experts and people with financial literacy.

And the other comment, that the idea of the governance structure that we have of the audit committee actually operating on behalf of the shareholders and investors and users of the financial statements. And so, the financial literacy and financial experts, at least my experience, I think that it was geared more mostly toward accounting knowledge, financial knowledge of accounting matters. It does extend into audit matters when necessary.

But I question whether, as Gary said earlier, the ordinary investor, who is the ordinary investor? And I think a lot of the calls for increased information is coming from investors that do maintain a fair level of financial literacy and, in some cases, may actually run to audit literacy besides just accounting literacy and accounting expertise.

So my concern, especially with an AD&A, if it were to get into areas of specific audit procedures and specific findings, I believe will serve to confuse rather than inform the "ordinary investor." It may help sophisticated investors that have audit knowledge and detailed accounting knowledge. But I'm concerned that it may, in fact, widen the expectation gap rather than serve to close it.

So Sam made the point before about the fundamental concern here may be that there's a distrust of either management or maybe it's certainly management, because if you don't trust the audit committee to do what it's supposed to do, then there must be a distrust of management doing what it's supposed to do, which is prepare accurate and timely financial information for the market.

I'm in favor of more modest change. I do absolutely believe that change -- that improvements can be made, but I believe the changes ought to be more modest, as have been suggested by some other commentators, and that they should be focused more on what appear to be the areas that were the concerns in like the critical accounting judgments and estimates.

Some of the companies that have been mentioned clearly were either business failures and/or audit failures. But the majority of what goes on in public reporting are neither of those. And I'm kind of against writing rules to try to prevent that 1 or 2 percent of kind of the bad reporting that occurs or the audit failure that occurs. It's going to burden a system that is, I believe, already burdened significantly in terms of time and cost.

I absolutely believe that audits have value, and I might even believe that -- and this is where I shouldn't get quoted -- that maybe they are cheap in comparison to some other things that companies pay for, especially legal fees, which I don't see negotiated quite the same way that audit rate per hour fees are negotiated.

But they add tremendous value. But to the average investor, it's very valuable, I believe, to have a pass/fail opinion. It can be supplemented and should be supplemented, as is suggested in the financial reporting or the codification. But I also believe that if you read those specifics, they are rarely complied with by registrants in terms of getting into ranges of estimates or sensitivities or what-ifs in the critical accounting judgments and estimates.

That would be a major improvement, I think, if auditors were involved in looking at that and required to report on it potentially in an emphasis paragraph.

MR. BAUMANN: Thanks, Larry.

Professor Cox?

MR. COX: I'm going to hang on to my microphone because I'm not sure Mark isn't going to stretch his legs one more time here. So I'll grab it.

I want to just echo the point that was made by a couple others. One, whatever we do, we should probably identify just particular areas. And whether that's going to be in the AD&A or emphasis paragraph may depend on the item, but I don't think it really matters at the end of the day.

But one item I was going to emphasize was something that Jack and Paul had mentioned earlier, and that is I think there is a lot of information, at least on the audit committees I've been on, where -- that's imparted where the auditor comes in and says this is the normal area of reporting on the audit risk. But in this environment we're in, we have a new one.

You can think about relational transactions. You can think about acquisitions that were carried out. You can think about volatility, and I think that, in and of itself, has a good deal of information associated with if it's shared with investors. And I don't think you have to go the next step and identify to investors the procedures that are going to be used necessarily to go at that. But I defer to others on that, but I think that just identifying those risks are enough.

And then I wanted to relate that to something that Stephen had mentioned earlier, and that is how the impact of disclosure on managerial and oversight decision-making, and that's from some personal experience. And that is I had the great professional pleasure of overseeing the investigation, internal investigation of the largest financial fraud that was carried out in the 1990s.

And one thing that was going on there, much to my surprise, was known by the auditors and known by the audit committee, each of the members of whom I investigated, but never shared with the investing public. And that is the fact that they had carried out a number of acquisitions in which the reporting systems were not compatible, and it enabled this company in a very short period of time, which had a global network of over 30,000 employees, to make sure that one out of every four paychecks that were sent out -- not just once, but repeatedly -- were the wrong paychecks for the wrong amounts. Okay, that's how bad the accounting system was.

And I always wondered that if there had been disclosure of the risks, which were identified by what was then a "big five" accounting firm going forward, whether that would have changed a lot of the behavior in the organization. I don't know. That's a jump ball.

But I can certainly say that individuals buying this Fortune 100 firm would have thought about it a lot differently if the information that was within the audit committee and in the accounting suites of that firm was made public.

MR. BAUMANN: Thank you.

We have Chris Spahr.

MR. SPAHR: Hi. Thank you.

I've been covering U.S. financial companies for over 10 years with Mike Mayo. We've had many public battles on accounting issues with some of the largest global financial firms. Not once have we looked at an audit report. We don't find them very helpful. We do appreciate the audit process and the stamp of approval of pass/fail, but we don't find the audit report itself as a useful tool whatsoever.

So we endorse what Lynn recommends with the AD&A, and I have some more specific suggestions I'll have for later panels.

Thank you.

MR. BAUMANN: Thank you.

Mike Gallagher, Doug Bennett, Joan Waggoner, and Mary Hartman Morris gets the final word.

MR. GALLAGHER: Thanks, Marty.

I want to thank Joe Carcello first. Out of all the quotes he might have chosen, he chose two PWC chairmen. So, Joe, thanks for that.

[Laughter.]

MR. GALLAGHER: In all seriousness, I think the comments of Sam and Dennis really demonstrate the mindset of the profession in wanting to be constructive, and I think that we clearly have an interest in doing that, and it gets to the relevance of what we do in the capital markets. And so, I think that quote and that comment could have come from any of the firms because I think that's the spirit with which we got into this dialogue.

I also think it's the spirit with which we responded in the June 28th response to Marty and team, and I'll echo the compliments of a very thoughtful process. We, as a profession, have been thinking about this and working pretty hard over the last year.

And again, the spirit with which we provided those comments were we realized that change needed to happen. We need, in order to be relevant, to better accommodate the needs of our ultimate users. And at the same time, it's got to be with the appropriate balance, looking at the end game, not just good intentions in terms of what might be good and what people are asking for necessarily.

Without looking through the lens based on what we know about what happens on the ground in terms of practicality. You know, what are the issues, and how can we do it? How can we move the ball in a positive direction without potentially doing damage? All good intentions aside.

So that was the spirit with which we provided our comments. We are learning. We continue to learn. I think the dialogue we're having today will continue to inform our views as they evolve. I think it's been a good dialogue.

I won't reiterate all the reasons why I believe the alternatives that we put forward are better than auditor discussion and analysis. I think Sam hit a few of them. I think Bob Guido's point about diverting effort towards as opposed to spending the time on meaningful auditing I think are a couple that really resonate with me.

Speaking of audit committees, I guess I would challenge the notion that an audit committee is a negotiation. I've been involved in a lot of audit committee meetings over the years, and I never viewed any of them as a negotiation. It's a great dialogue. It's a great discussion.

The audit committees have the responsibility for overseeing financial reporting. I think the quality of audit committee performance over the last -- since Sarbanes-Oxley has improved dramatically. Now that we have independent directors, I think they take their roles very seriously.

And I also agree with the point that some are certainly better than others. But the quality has improved dramatically, and I think undermining audit committees is a danger here and is part of the ways that we might do damage if we're not careful.

And if you look at what we've discussed with audit committee, there are very substantive issues around the quality of financial reporting, recognizing that in many cases there are alternatives, not necessarily one being better than the other. Many cases, you have multiple alternatives that two people could have very different views around preferability. And those are good discussions with audit committees.

And the last part about audit committees is one of the most valuable pieces of the audit committee in my mind, audit committee meetings, is the private session, where an auditor can have that discussion with the audit committee without management and have a real candid dialogue around what we think and hopefully informing the audit committee's mindset in terms of carrying out their responsibilities for oversight.

So, again, I appreciate debate. I think this is a great -- for the profession, this is a great thing. The fact that we're talking about the value that we can bring to the market. I appreciate Ann's comments acknowledging the value that can come out of the audit.

We will continue to look for ways that we can better meet the needs of investors and do it in a way that, hopefully, is balanced and really does achieve the outcome.

So thanks, Marty.

MR. BAUMANN: Thanks. And we appreciated very much the receipt of the letter that you worked on so hard, and others in the profession, from the CAQ that not everybody in this room would agree with your position on the AD&A, but the thoughtfulness of the letter and the timeliness of putting that out there as a strawman was very helpful, I think, for us. So we appreciate your participation in that.

I think I said Doug and Joan.

MR. BENNETT: Thank you, Marty.

And I'll be brief because many, if not most of the comments that I would make have already been made by my colleagues previously.

But I wanted to emphasize one or two of the points that have been touched on earlier and put this in the context of what troubles me most about AD&A. And that is the notion that -- and I certainly appreciate the fact that investors are looking for additional information. Auditors have information, and is there a way that that can be communicated so that it's meaningful and helpful to investors?

I think that there are ways to do that, and as many have pointed out, I think we'll get to those this afternoon. But in the context of an AD&A, I've heard discussion and a desire to just tell us how you get comfortable with those difficult estimates or those numbers that are the riskiest elements of the audit.

And one notion was that, well, we as auditors have to compose and draft an end of engagement completion document, which we do. And just give us that information and put it in a form and context that the investor could understand.

And I would find that extremely difficult to try to communicate what my audit team, as skilled professionals, trained professionals with years of experience and training, and try to condense that and communicate that in a document to investors that don't have -- and the comment has been made that there is a two-way communication and opportunities with audit committees to have that communication.

But without that ability to have some back and forth discussion and explain what was done, what the auditor views were, I think, it would, in my view, be nearly impossible to condense that into a document that could be made a public document.

Thank you.

MR. BAUMANN: Thank you. Joan?

MS. WAGGONER: Well, again, thanks, Marty, for the invitation today.

My firm has a practice in smaller issuers. I have been listening with great interest to the comments today and again will try not to duplicate other comments that have been said that I agree with.

But one of the things that has occurred to me as I've listened today is I've heard how important to investors are the unbiased viewpoints of the auditors. And one of the things that I worry about, should we move to a model of reporting that allows auditors' views to be introduced such as AD&A, that we would be introducing perhaps an element of bias.

And it would seem to me that in the financial statement process, there needs to be someone or a party, such as the auditors, that remain purely objective and unbiased and are truly the attesters, rather than moving into the preparer role.

I've also heard various examples of places in the statements covering estimates where auditors' insights would be especially helpful in terms of some context around those estimates. And it strikes me that management is really in the best place to put forward the public description of how those estimates were derived and whatever context is included in the required disclosures.

And should they do so, the auditor can then or could, as the model changes or doesn't change, could attest to those and stay, again, pure to the attest role that the auditor is in.

I do agree with Mr. Elson's remarks that I worry about the undermining of the audit committee, but also, even more than that, I worry about undermining the responsibilities that the preparers themselves have for the financial statements.

Thank you.

MR. BAUMANN: Thanks, Joan.

Gary, is your card still up?

MR. KABURECK: It was, but --

MR. BAUMANN: Since you -- why don't you go ahead, and then we'll turn to Mary Hartman Morris?

MR. KABURECK: Okay. Thank you. I'll be quick.

But I've been reflecting all morning on what I thought was a great discussion about I keep going back to the concept of close calls here and began thinking about how would you actually write the guidelines when an audit standard or how would the firms operationalize it?

Just give some really quick perspectives of it is I think the most the Board could perhaps do is write indicators of when a close call would be required. I'm assuming you would be required to disclose close calls in the MD&A. That's the premise of where I'm starting from.

I don't necessarily accept that we should be there, but assuming we are. How would you write boundaries or guidelines for the auditing firms to apply? I still think it would come down to a series of judgments, to judgment with some perhaps indicators, indicating when you should or should not consider it.

So I think that's the first thing you need to come up with. What is the boundaries of when a close call would be deemed to be a disclosable event in some capacity?

And then I started going through. I've been involved with a lot of close calls over the years, both as an auditor, as an audit committee member, and in my own company. And a lot of times, I think close calls come down to it's not all that necessarily close in the way that perhaps really seasoned financial regulators might see it. But it comes down to the experience and the skills of either the audit partner or the audit firm or the management of the company.

I mean, I've seen it go both ways, where stuff we thought was a close call and the auditing firms did not, and the reverse is, of course, through stuff we thought was a no-brainer to do it this way, and the auditing firms thought it wasn't quite so clear. So I just wanted to sort of keep that in mind that some of this stuff will down to the experience and skill sets of the players that are doing it, as opposed to really and truly being a close call.

My third point is that if you're going to write guidelines on close calls, recognize close calls do not always necessarily indicate high risk. And I think high risk is perhaps the more prevalent or perhaps the more important issue to be concerned with. Because a close call doesn't mean it's a wrong call. It just means it's a close call. But I think just don't lose sight of close calls and high risk are not necessarily synonymous.

And then, lastly, I would say close calls, one size does not fit all. So let me sort of explain what I mean by that. I mean, there is estimates and there is judgments where there is recurring estimates, say, your bad debt reserve. And a close call in there may be a range of estimates -- I mean, in theory you've got the critical accounting policies disclosures to handle something like that.

And then there's what I'll call a transactions close call, where there's a structured transaction. And anybody that works in real estate knows that minimum lease payments are 89.9 percent of the deal. You do not have a capital lease.

Well, you understand the rules, but you move 5 basis points on your assumed interest rate, all of a sudden, you're at 90.1 percent. So is that a close call or not? Maybe it is. Maybe it's not. But it's an established type of structure.

Then there's new structures no one else has ever seen before, the first time an investment banker created it or whatever. And again, maybe it's a different set of close call disclosure guidelines criteria.

So I'm just using those as examples that, basically, the point is one size does not fit all. So as you're trying to write guidelines and your future standards, just to sort of be mindful of that.

MR. BAUMANN: We are very thoughtful of the fact of writing whatever standards we write here will be a challenging task. And certainly, the chief auditor will need the talents that we have in this division to the greatest extent possible.

Mary Hartman Morris, you have the final word on this subject. So we'll listen very carefully.

MS. HARTMAN MORRIS: Thank you, Marty. I really appreciate being the closer today.

A couple of things. Thank you, Chairman Doty. Thank you, all the Board members. Thank you, Ann, for your thoughtful comments as well, and Steve Harris. I think many of the comments today from all of you were very important to all of us, as an investor.

I know, Kevin, you mentioned that 800-pound gorilla, I thought you were talking about CalPERS, but from that perspective --

MR. REILLY: Not specifically.

MS. HARTMAN MORRIS: But from that perspective, I am here to present CalPERS viewpoints. I think the big point that was brought up earlier was we are capital providers, and I think the audit report is for the customer. So we are the customer.

And so, I think there's a couple of things, just a couple of things I wanted to go through, and there was just five areas. Some of the things about why it is our view from why we want an AD&A. Again, who is the customer?

A little bit, some of the questions that you brought up, Sam, about the confusion. And then -- or maybe that wasn't you, but someone else from investors. And then the fiduciary responsibilities of audit committees and whether or not we trust or mistrust them. And then, of course, the strengthening of the role of the auditor.

So just really quickly, I think it was brought up by Joe earlier, too, the Investors Advisory Group, Anne Simpson, our senior portfolio manager sits on that, and we were talking about the financial institutions, and she quoted we lost something in the order of $70 billion because of the crisis. And those companies at the heart of it had clean accounts and auditor's reports.

Every year, the audit report was the same with an unqualified opinion. The opinion was the same, but, well, Jack, maybe they didn't increase as much. But the fees increased each year.

For a fund like CalPERS, the loss affects ordinary people's lives and the pensions they receive. So I think that is the reason why we support an AD&A. We think that there is some value.

I think someone mentioned, too, that we were looking for forward future statements, looking for statements. And we're not. I think the four keys areas even mentioned through the ACAP -- key financial statement and audit risk the auditor has considered when conducting the audit and the extent of how the auditor addressed those risks; the auditor's assessment of the key estimates and judgments made by management and how the auditor arrived at that assessment. What keeps him awake at night.

The quality of the accounting policies and practices adopted by management. So you do have the expertise there. And accounting applications and practices that are uncommon to the industry.

You have that viewpoint. You go across industry. We'd like to understand that.

And then, of course, unusual transactions and significant changes to accounting policies. Many more. I think I agree with Lynn. There are some other areas, but I think those are the top four.

I think that we really believe that it's an important -- there is some things on a -- it's about governance. It's about transparency. So I think, Professor Cox, you mentioned it was a breakdown of governance. So I think that asking auditors to step up to the plate is asking for better governance.

I think that it is a communication tool, and I don't necessarily agree with Mark. I don't think we can live without it. I think we've gotten at this point in our review, in our investments, I think that it is important that we move to an AD&A. And I don't think the common investor, the initial investor, the institutional investor, I don't think, and I agree with Flerida, I don't think will be confused.

I don't think that -- there was some issues. I think there was some question about does CalPERS have any -- a question about the inconsistencies, if there were competing viewpoints. And I don't think that there would be having inconsistent or competing information between the auditor and management is necessarily an issue.

Shareowners, which we are, are the owners of the company. And obtaining both management and the board's perspective, along with the independent auditor, a third-party, independent person or group, would provide a better understanding from different perspectives for the stewardship of the company. I think that's the important point. The stewardship of the company.

And I think that, one last point, and no one has really talked about it. But I think it's whether or not the auditors work for their owners, the investors, and how they're paid. I think that's something that's held for a different point. I mean, I know you can't bite the hand that feeds you.

But I think it's really important to know that an AD&A would help, I think, strengthen the role of the auditor, be able to work with management a little bit closer. And I think that the audit committee, we do believe that they do have fiduciary responsibility to the investors.

But again, it's not asking and it's not that it's mistrust. We speak through our engagement process at CalPERS. We talk to many audit committee members, and we respect and understand their viewpoints. But it's also respecting and understanding the viewpoints of the external auditor as the independent party.

So I think it will strengthen the role, and I appreciate the opportunity.

Thank you.

MR. BAUMANN: Thanks, Mary, very much.

And thanks to all of you for a very energetic and informative morning. We've received a wealth of information from you on your views about the auditor's discussion and analysis, its benefits, and the views of some, its potential shortcomings.

We'll study the transcript thoroughly and dig into your comments and continue our research in this area. And again, appreciate tremendously the quality of the comments we received this morning.

We're going to break now. Our lunch for the participants is out in the foyer. And we should try to return promptly by 1:15 p.m.

Thank you very much.

[Break at 12:21 p.m.]

[Reconvened at 1:21 p.m.]

MR. BAUMANN: Okay. Thank you. We will begin the afternoon session. Thanks again, everybody, for the level of energy and involvement this morning. And hopefully, we can keep it up for the next couple of hours.

We're going to turn our attention right now to the -- another alternative for improving the auditor's reporting model, discussed in the concept release. And that is the required and expanded use of emphasis paragraphs.

It was mentioned a number of times this morning, that -- that is, another possible approach could require auditors to point investors to the most important aspects or greatest areas of judgment and uncertainty in the financial statements, and some have said maybe not as good as the AD&A, from the investor's side. But maybe it has the potential to do that.

Some of the questions, again, we'll -- we'll want to address, but when anybody wants to comment on this, please feel free to look at the questions or -- or not, but what specific information should the required and expanded emphasis paragraphs include regarding the audit of the company's financial statements, regarding the audit or the company's financial statements?

What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?

And again, what are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?

As I mentioned earlier, we've asked a couple of participants to kick off this discussion, Joe

Carcello and Kevin Reilly. And I guess, from Joe's perspective -- and Joe you -- I'm sure you'll add whatever color you'd like.

But I was hoping you could touch on, as somebody who's a supporter, as you articulated this morning, a supporter of the AD&A as the tool to improve auditor reporting, could you see the emphasis paragraphs work? And -- and if so, how, or if not, why not?

Then, Kevin, in the letter that the CAQ sent to the PCAOB, in the comment letter, that did include some examples of emphasis paragraphs.

And I guess I'd wonder, from the profession's point of view, what your thoughts were in terms of how we could require those and what kind of boundaries we could put on those to -- so they wouldn't turn into a listing of boilerplate paragraphs, but -- but could actually work in a meaningful way, if you've given any thought to that.

But again, please feel free for your comments to go whichever direction you'd like them to, so let me kick it off with Joe Carcello.

MR. CARCELLO: Thanks, Marty. So Marty asked me to introduce this topic, so let me -- let me go ahead and do that.

One of the proposed changes to the standard audit report would require the use of emphasis paragraphs in all audit reports.

In addition, according to the Board's concept release, these emphasis paragraphs could be expanded to, one, highlight the most significant matters in the financial statements, including identifying where these matters are disclosed in the financial statements, two, discuss significant management judgments and estimates, areas with significant measurement uncertainty, and other areas that the auditor determines are important for a better understanding of the financial statement presentation, and three, with respect to those significant matters discussed in an emphasis paragraph, including judgment, and estimates, and areas with significant measurement uncertainty, the auditor could be required to comment on key audit procedures performed, pertaining to identified matters.

Before considering the potential merits of requiring an expanded version of emphasis paragraphs, let's take a brief look at how these emphasis paragraphs are being used today.

I examined the most recent audit report for every company in the S&P500, which represents a meaningful percentage of the total U.S. stock market capitalization. Only 5 of these 500 audit reports contained an emphasis of matter paragraph and 2 other companies had what I would consider an "other" paragraph, basically in -- explaining why they didn't audit equity-method investees.

More troubling than the base rate of inclusion of emphasis paragraphs, 1 to 1.5 percent, was the limited nature of these paragraphs, both in the substance of what was discussed and the lack of detail and transparency with -- with which these matters were discussed.

These five emphasis paragraphs discussed, which to give you something fun to do and that no good academic would come without, handouts, I've made copies of these five reports. And I've highlighted in yellow the emphasis paragraph, so you can kind of read along with me.

So these five emphasis paragraphs discussed, which are being distributed to you now, number one, the recapitalization of AIG by the Department of the Treasury, the Fed, and the AIG Credit Facility, this was one sentence, three lines.

Two, changes in Morgan Stanley's fiscal year-end, from November 30th to December 31st, this is one sentence, two lines.

Three, allocation of overhead costs from EW Scripps company to Scripps Networks may not be representative of actual costs that would have been incurred by Scripps Networks had it been operating as a standalone company. This was three sentences and seven lines.

Four, similar issue regarding the allocation of overhead costs for a former unit that has been spun off, two sentences, four lines.

It is interesting to note that the last two emphasis paragraphs were both issued by the same firm, and it is also worth noting that four of the five emphasis paragraphs were by one firm. And the report language, although similar, was not identical.

And the last emphasis paragraph was the announcement of a definitive agreement to acquire all of the outstanding shares of common stock of Marshall & Ilsley by the Bank of Montreal, one sentence, four lines.

If my friends at the PCAOB and at the firms view these as informative audit reports, we are using two radically different dictionaries. So to meet the needs of investors, emphasis paragraphs would have to be used very differently than they are now.

How might this be done? To meaningfully improve the audit report, emphasis paragraphs would have to provide the type of information needed by investors.

First, the emphasis paragraphs would need to discuss significant risks identified by the auditor and how the auditor's procedures and results of these procedures were responsive to the identified risks. AS number 12 provides the auditor a framework for identifying significant risks.

Second, at a minimum, the emphasis paragraphs would need to identify significant estimates and judgments in how the auditor evaluated the reasonableness of these estimates and judgments. SEC guidance exists to identify significant estimates and judgments.

Third, at a minimum, the emphasis paragraphs would need to discuss significant unusual transactions, how these transactions were audited, and the results of these procedures.

Notwithstanding what Sam said this morning about lack of compliments, here's my second compliment in one day. I was pleased to see that, in the CAQ's June 9th comment letter, on the second line of item two on page four, that unusual transactions would be discussed in a revised audit report with required emphasis of matter paragraphs.

Finally, the emphasis paragraphs would need to discuss alternative accounting treatments, discussed with management and the audit committee, the ramifications of selecting one alternative other -- over another and the treatment preferred by the auditor.

Again, there is SEC and PCAOB guidance on how the auditor currently discusses these matters internally.

From my perspective, although I prefer an AD&A, the key issue is providing investors with the additional information they need, whether that information -- whether that additional disclosure is in the form of an AD&A -- AD&A, required emphasis paragraphs, or in some other manner, because in my view, today's audit reports are clearly not informative, which is at odds with the PCAOB's mission statement, to provide informative audit reports to investors.

MR. BAUMANN: Thanks, Joe. Kevin?

MR. REILLY: Yeah. Thanks, thanks, Marty. And Joe, I do want to point out that, at lunch, I learned that today is Sam's 39th birthday, so I want to commend you for actually giving him two birthday gifts today, so happy birthday, Sam.

[Laughter.]

MR. REILLY: All right. Let me -- I just want to share a couple perspectives with you all on -- on the emphasis of matter approach and I am coming from the -- from the perspective of having been a member of the task force that the CAQ formed to take a look at this issue over the last 12 or 15 months.

But you know, in general, we believe the required -- key word there is required -- an expanded use of emphasis of matter paragraphs is a viable approach that will be helpful to investors and could be implemented by auditors on a practical and cost-effective basis.

As I mentioned, we -- we -- and as has been raised before, we suggested this type of approach back in June with our letter to the standards group, and we continue to support the approach articulated in that letter.

As outlined in the concept release, we think the approach could be used to highlight matters that, in the auditor's judgment, are the most significant matters in the financial statements, and identify where those matters appear in the financial statements and related disclosures.

In this way, the approach would draw attention to important items that may warrant further investigation by financial statement users and serve as a pointer to assist users in deciphering the often very lengthy and complicated financial statement packages.

We also think that audit report focus on these areas could also help preparers enhance the level of disclosures provided in those areas.

The approach is not perfect and I'm sure we'll hear a lot about that in a few minutes, but we think it could represent a meaningful improvement to the auditor's reporting model as it currently exists.

So let me just spend a couple minutes and go through the questions, Marty, that the concept released asks.  And question five is, what should be covered in the emphasis of matter paragraphs?

A couple thoughts here -- from a common sense perspective, we think the objective of the approach would be to have the auditor answer the following question. What, in your view, are the handful of most important matters impacting the financial statements this year? That was Steve Harris's thoughtful question that he raised first thing this morning.

Understand, developing a workable auditing standard that will answer that question is going to be a bit challenge -- challenging, but we think it can be done, and I know Marty and his team have been diligently kicking the tires on that front for some time.

But we suggest, perhaps, a two-part approach, and the first would be for the auditor to focus on the usual suspects, a significant accounting policy or practice, a subjective accounting estimate, an uncertainty, an unusual or infrequent transaction, or other event, but then give a highlight in the audit report to those types of usual suspects, only to the extent that the matter was a significant discussion with the audit committee, it involved some substantial audit challenges during the period, or underwent a significant change during the period.

Once again, there are other ways to slice the salami here, and I'm sure Marty and his group, with the help of others, could come up with other alternatives, but we thought that an approach like that would respond to what we heard from investors, as requiring additional focus in audit reports.

Question six relates to, what type of specific content should be reflected in the emphasis of matter paragraphs? And again, I'm going to sound like a broken record here, but I think the focus of our group is to have the auditor provide emphasis in the context of objective descriptions of the matter, as well as a direction to the reader, as to where those items are covered by the company, in the financial statements.

We don't think that having the auditor provide subjective user impressions on the matter in the audit report is really a constructive way forward.

We also don't think that the paragraphs need to give the discussion of the specific audit procedures that the auditor undertook relative to those matters. As you can appreciate, we find it really challenging to try to distill hundreds of hours of audit effort in a particular area into one, or two, or three sentences in a -- in a matter being emphasized in the audit report.

At the same time, if we went -- and I think, Jack, you raised this question -- whole hog and went through page and page of description of the various procedures undertaken by auditors in different areas, we don't really think that's going to be useful to investors.

So again, we don't think that the description of the specific procedures in each emphasis of matter paragraph makes sense.

However, as we suggested in our letter back in June, we do think that the auditor, at the conclusion of the emphasis of matter disclosure areas, could state and identify that including --

that the -- our audit work included performing specific procedures designed to address the risk of material misstatements associated with the individual emphasis matters, and that such procedures were designed in the context of the audit of the financial statements, taken as a whole, again, and try to connect the dots that way as opposed to a paragraph-by-paragraph description of the procedures performed.

So let me summarize. The net benefits of this approach -- we think -- we think it responds to some of the investor requests for more information and identification of the most significant matters by the auditors in the -- in the financial statements.

We think it may enhance, prepare as focus on these disclosure areas and improve them. We think it retains the established role of the auditor to attest to information provided by management. We think it will avoid some of the unintended consequences that we discussed this morning, relative to the AD&A approach. And we also think it could be likely implemented in a practical and cost-effective way.

Shortcomings and challenges -- as I mentioned, coming up with a framework that will be effective, that will help develop guidelines for an auditor in terms of what goes into the emphasis of matter paragraphs will be challenging. We recognize that.

But we want to make sure that the guidelines are sufficient so that it doesn't give rise to too many matters being emphasized, that really will not be helpful to investors.

I'll also tell you that, you know, we -- we spent some time looking at the French model, in which the concept released identifies has been out there since 2003. The French auditing body took a -- a review of that approach, and went out with some questionnaires, and -- and got some interesting feedback.

And the review was mixed. Some were very much in favor of it. Others raised issues with the approach. One of the key issues raised in the approach was, on the downside, was the excessive standardization of the disclosures, but we think that can be worked through, relative to the approach that is ultimately adopted if we move forward within this direction.

So again, long -- long story short, we think this is a constructive way forward. It's one of the -- one of the alternatives that the CAQ views as being viable.

And with that, Marty, I'll -- I'll turn it back to you.

MR. BAUMANN: Thanks, Kevin, and thanks, Joe, for your -- both of you for your very thoughtful comments to introduce this topic. Chairman Doty?

MR. DOTY: But, well, Kevin, first -- first, let me say that over -- over lunch, what I heard was a uniform compliment of the -- of the discussion that you all have given us here on all of these matters. The high quality of what you all have brought to the table is -- is not lost on any of us.

And this is -- this is really an informational point, Kevin. Is what -- as I listened to it, is this, what you have described -- is this really the French model? It -- if it is -- if it differs from the French model, which the firms have been following now for some time, in what respect does it differ? A pure informational point. It sounded to me as if it was largely the French model. Is it completely? What -- what's the difference?

MR. REILLY: Fair -- fair question, Jim, and it -- it does differ from the French model, which is a justification of assessments. And in that model, they will identify things that I have outlined, relative to significant estimates or uncertainties and the like.

The French model will also go into details relative to what the auditor has done to address the risk of material misstatement in those, in those matters, which as I said, is an area that we don't think, on a paragraph-by-paragraph basis, trying to distill the -- the level and effort of audit work on those areas into a crisp sentence or two really makes sense.

That's where it does, in fact, differ.

MR. BAUMANN: And in looking at the French model -- and I'd looked at a number of financial statements that -- that have -- that had disclosures under those justification of assessments. They typically were pretty much the same.

I could pick up every financial institution and it would say, "See the disclosure on fair values, see the allowance for loan losses," and see one or two other things, similar to off-balance sheet disclosures, which -- and we chatted with some people in our outreach who worked on these, some auditors in France.

And there was some concern that they were becoming rather boilerplate. How could we prevent that from happening, Kevin, or -- or Joe, or anybody?

MR. REILLY: Well, Marty, again -- again, if -- if what we've suggested, which is simply an identification of the -- in the auditor's judgment, the most important matters impacting the financial statements, I, for one, am less concerned about this boilerplate issue because it -- a judgment is involved in the actual identification on the matters, which we -- we think will be helpful in having investors sort through 200 pages of financial statement data. We're telling the investors -- and, Steve, to your point earlier this morning -- you know, what -- what keeps you up at night?

So I think the importance, Marty, of this approach is -- is in the actual identification of the matters and less so relative to what the auditor says about those matters, because most importantly, if it is a key, critical, important issue, then -- then we have a responsibility to make sure that the financial statements address the material disclosures relative to those matters.

MR. BAUMANN: And I think we could write requirements, as you indicated, or -- or Joe indicated as well, that would link the required emphasis paragraphs to what auditors are required to identify, significant risks in the audit. That's required under -- under our standards.

And to the extent there were significant risks that were identified in the audit, how were they addressed in the financial statements? That would be one way to -- to kind of get at that, and significant and unusual transactions have to be identified. That's another way Joe mentioned as well.

So it does seem to have the potential to -- to put some fences around it, as well as require certain areas. One area where you and Joe differed -- and I just keep this dialogue going just for one second longer. Joe did add that he thought that auditors should indicate, when they identify a significant risk, how they addressed that risk.

I'm just curious, because Joe is as aware as we all are, that the audit includes potentially hundreds of steps and thousands of hours in a particular complex area, like allowance for loan losses or fair value of financial instruments.

How might that be done in a meaningful way, rather than reducing it to some sentence, we tested fair values, which doesn't give investors much of anything.

So I don't know if you have a thought on that. Did Joe or --

MR. CARCELLO: Yeah, I -- I think it would be challenging, Marty. I'm actually working on something now with -- with another -- with a firm to try to do something like that.

And you know, I think it can be done, but it won't be easy. And, you know, at the end of the day, that would be something that, you know, the Board would have to decide. Could they?

If all you're going to end up with -- and I think Kevin's right -- is, in France, the language is so high level, and so general, and so common across different issuers that there's no real differentiation, no value.

And so unless you're going to get some specificity -- but it's going to obviously have to be summarized. It can't be 50 pages. Then it doesn't have value. But I think you probably could draft a standard that would require the auditor to summarize the key procedures they performed in different areas and, assuming it didn't devolve into boilerplate, you would find differences across firms and across clients.

Now, the firms would probably be uncomfortable with that because they don't really want that. But I think that level of transparency would be very useful to users.

MR. BAUMANN: Thanks. Bob Kueppers?

MR. KUEPPERS: Just before we get deeper into the question, I just -- you know, Joe, thank you for the examples. I'm proud to see that the market is thin, but we've got the major market share of -- of emphasis paragraphs.

I think one of the -- one of the -- one of the points you were making, though, is that this stuff is not all that meaningful. Now, it -- really, you can't tell that unless you see the footnote that's referred to because, if the footnote is fulsome, then you don't have to repeat the language in your -- in your opinion.

I will tell you one I can speak to. And that is, Morgan Stanley changed its year-end from

November to December, and we haven't had a single question about what that means. That one was pretty clear.

But I do think that what's important is, the EOM standard and the lack of, you know, deep practice, is not what we're talking about. We're talking about something where this would be customary. It would be necessary. It would be required, if you will, and you know, I think even using emphasis of matter as a term of -- piece of terminology is a little bit misleading because we all think of, you know, these kinds of examples.

But we're talking about, actually, moving things to the next level. And so we won't know what it really looks like until we begin to work with the Board on it, if -- if you go that way, how -- how it might actually be embodied in a standard.

MR. BAUMANN: Thanks. Sam Ranzilla?

MR. RANZILLA: To -- Marty, to try to address your question of the auditor response -- and over the last 15 months, we have tried to build some models out under an emphasis of matter paragraph or maybe even other approaches, where the -- where we would develop a framework where the auditor could describe its response to whatever the anchor is that causes you to have an emphasis of matter paragraph, whether that's significant risk, whether that's a critical accounting estimate.

Once you've determined what it is that the auditor is going to emphasize, we've -- we've tried to -- to develop models. And you know, I'll start off by first saying, I think when Kevin refers to the research note that was done out of France in the -- I think it was excessive boilerplate, I think that's pointed toward the auditor's response piece or the justification piece of -- of those paragraphs, because at least the ones I've looked at, generally, have -- have evolved to, we came, we saw, we conquered, and that's the auditor's response to the particular evaluation issue at hand.

But when -- when we tried to develop models, either the -- to try to get something succinct that didn't -- just didn't overcomment and take over the auditor's report, it didn't give justice to the level of work that -- that the auditor had done. And in fact, that will become boilerplate, no matter how hard we -- we try, or maybe -- maybe a better word, it will become more standardized over time.

We then took it and said, "Well, okay, if that's not fair to what the auditor did and it doesn't express the -- the absolute depth of what the auditor got into, let's write one that -- that goes into that."

And it was page, after page, after page of description of what the -- what the audit procedures were done, both from a control perspective as well as from a substantive perspective. At the end of the day, we just -- we concluded that neither one of those were -- were helpful.

Surely, though, the succinct model was not giving an appropriate impression. The longer the -- the longer model, people just aren't going to read it. And if you're not familiar and you haven't been down that journey on that audit, I'm not sure how meaningful it was.

So I understand, Joe, you're working with somebody. I -- you know, we're open to -- to continuing down that, but just to maybe give some background on what -- what we've been doing in trying to -- to develop that model, we've -- we've struggled with finding that, you know, the porridge that's -- that's just right.

MR. BAUMANN: There are some other cards up, but Joe, I assume, was responding back in this dialogue we've been having, so Joe, I'll give you the floor back.

MR. CARCELLO: Thanks. I would -- I would agree with Sam, that this is not easy. Just the little bit I've done so far, I would -- in working with the -- the -- one of the firms, it's -- it's not easy and I'm not sure we're going to be successful. So I'm not -- I'm not surprised that that's their -- the result you've had, Sam.

I think what would be, you know, useful -- and I've tried to encourage the firms to do this, but they -- they're going to obviously do what they think is in their best interests -- is if -- if when they have these projects on the way -- and they've clearly put a tremendous amount of effort into this in the last 15 months -- if they would pull into their little networks, you know, one or two investors, at a minimum, and then, Sam, when -- if you're reporting out and you're saying, "We did this and it's so high level, nobody can really get anything out of it," or, "We've did this and it's 75 pages, nobody will read it," I'm not saying I don't personally believe you, but it would more credibility, you know, if Mary was part of your group and Mary said that.

MR. RANZILLA: Well, it's always good to know where your credibility lies, but --

[Laughter.]

MR. CARCELLO: Yeah, yeah, well, just because it's a different perspective.

MR. RANZILLA: All right.

MR. CARCELLO: Yeah, it's -- you know, it's an investor perspective rather than an auditor perspective. Yeah, yeah.

MR. RANZILLA: I -- I think that that's good counsel. I will say that, before we got too far into the -- into the project, we did meet with a series of investors to try to get a better understanding of what -- what people were -- were concerned about, what were the -- the flashpoints, so that we could focus it.

But -- but you're right. We didn't take the results. We didn't take the 75 pages and three sentences and say, "What do you think? Could -- could you make this work?" And so --

MR. CARCELLO: And you could.

MR. RANZILLA: And -- and -- but Reilly will vouch for me that we actually did it.

MR. CARCELLO: Okay.

MR. REILLY: I -- I can guarantee that we did. And just -- also, just to add some additional color commentary, that the CAQ has also reached out to a number of investors via this future role of audit -- auditor project that they have underway. And I think the feedback that -- that we understand came out of those sessions was -- was that the investors were really not that fired up about hearing that much about what the auditor did.

They were really keyed into, what -- what's the risk, what's the area, and -- and what is it that, you know, keeps you up at night relative to the issues?

MR. CARCELLO: Kevin, I think, you know, if we go back to this morning -- and I, you know, did the best I could to take notes as people were talking, but obviously I don't have the transcript in front of me -- what I heard this morning was, clearly, some people, and some of the investors, clearly said exactly what you just said.

But I think, if I went back through my notes, there were other investors this morning who seemed to indicate they would find value in more granularity around what the auditor did.

So one of the problems is, you know, auditors are not homogenous and neither are investors, right?

MR. BAUMANN: So Joe and Kevin, I think, are least reasonably on common ground, as am -- as am I, that we could probably write some requirements that could require auditors to point investors to the most important aspects the -- of the financial statements, where there's the greatest judgment, the greatest uncertainty. And that might help investors as much as the AD&A that a lot of investors want, but it could go somewhere along the way.

And by the way, anytime I say anything like that, don't think that I'm espousing one -- one version or the other. I'm simply commenting that I agree that could possibly work, less -- les agreement on how you get the audit down to a couple of comments that are meaningful and -- versus a lengthy discussion.

So with that, a number of cards have been up and I look forward to your comments. We've got first three, Larry Salva, Bob Guido, and Lynn Turner.

MR. SALVA: Thanks, Marty, and just a -- just a brief comment, just to expand or clarify that the

-- the reference to the emphasis paragraph or whatever paragraph we end up calling it, directing people to where, in the financial statements, these items are discussed or disclosed, I think should be -- we should think broader than that and not limit it to the financial statements, because I think the MDNA is a much more effective communication tool in terms of management getting across certain points that you may not put into footnotes.

So that's the -- the only point is that it -- you know, the auditor does need to read the MDNA under other standards and look for material inconsistencies, etcetera. Management may choose to put a lot more information into the MDNA then into the -- into the footnotes.

And there is a, at least in some sections of the practice, a kind of a hesitancy to refer out of footnotes into MDNA, as opposed to the other way around. So if you just point to the footnotes, they may not get the whole picture.

MR. BAUMANN: Thanks. Bob Guido?

MR. GUIDO: You know, originally, when I read the information you all produced, I really wasn't warm to this idea. I lived through, 30 or 40 years ago, the boilerplate long form reports that we had in the profession and we blew those up.

But the more I read and the more I hear about this, I think there's a lot of possibilities here. One -- one word of caution, if you wait until you get this all right to get it out, you may never get it out.

So the only advice I'd have on that is that, whatever we produce here may not be 100 percent the right way to go, but it is something that we could do, and make changes, and modify as we go along.

I think the benefits of this approach -- we're really going back to what Alan Beller said before lunch. This could potentially increase the quality, I believe, of management's disclosures because of the specific references.

And when -- when I was an audit partner, a very famous investor, Warren Buffett, on the audit committee, used to ask me, "Bob, where's the road map? Where's the road map? Tell me the four, or five, or six items and this could be our road map."

So with that, there's going to be challenges. Identifying the most significant matters, I think, will be a challenge to some degree. There's going to be a lot of judgment and subjectivity in that. But I think the way the sample report was crafted probably would -- would take care of that.

I am a little concerned with some liability implications for the profession, but, you know, we could probably work through that, so thank you.

MR. BAUMANN: Thanks, Bob. One thing, you know, if I -- you -- we hopefully don't have to worry about is us not getting it out. I see Steve Harris every day, and can you imagine what would -- my life would be like if we didn't get something out on this?

[Laughter.]

MR. BAUMANN: So there's little risk of -- of that. And yeah, I think -- your other point you made, I'd like to comment on that, too. I think that is a valuable point to make. It's -- some people say, "Well, you're simply pointing to things in the financial statements."

But emphasizing that in the opinion, one does think that the auditors might do a better job of auditing, though, might do an improved job of auditing those high-risk areas if they're emphasizing that they're high-risk areas.

And one might think that the disclosure that management makes about those high-risk areas might be more robust if they're highlighted as well.

So there can be those other benefits in addition. I would -- I would like to -- sorry to -- to give -- to interrupt the -- the list of people with their cards up. But I wanted to go back with Kevin on one thing.

The -- the mock -- the model report that the CAQ sent in at least looks, to me, like it was more than just pointing somebody towards a particular footnote and not saying anything more about it.

You probably don't have it in front of you, but -- but tell me, Kevin. Am I right in how you approached this? And one example talks about goodwill of X dollars, and the company performed its impairment analysis, and -- and no impairment was recognized because they estimated the fair value exceeded the carrying value at that date.

However, the comparison was close. This -- that's a word like I heard investors say all day long like that. The comparison was close and a further decline in fair value of this reporting unit could give rise to an impairment of the goodwill balance in the future.

Boy, that sure sounds like stuff that people were talking about before they wanted. Were you expecting that, that was in the footnote, that? Or was that added by you in the mock report as additional color to the footnote?

MR. REILLY: No. The -- the -- I mean, that's a fair point, Marty. I think the take-away was that, that language would -- and that disclosure would -- would be in the footnotes of the financial statements.

So again, it is highlighting or giving emphasis to the goodwill and the related impairment evaluation as being a critical accounting estimate and an audit challenge. But the language in there was -- was essentially taken from what otherwise would be in the footnotes.

MR. BAUMANN: The company actually would -- said it was close.

MR. REILLY: Yeah, yeah.

MR. CARCELLO: Marty, can I ask Kevin a question? Because that's the one I -- I -- that was my first compliment this morning. And -- and Kevin, I think --

MR. REILLY: And now, you're going to take it away.

MR. CARCELLO: No, no, I'm not going to take it away.

[Laughter.]

MR. CARCELLO: I mean, yeah, I -- but I -- that's what I thought was really very, very strong in your letter, so let me understand, because I think Marty's question is an excellent question.

If a company didn't put that in the note, Kevin, and -- but you concluded, as the auditor, that it was close, you're going to stay silent? Because that's the problem. That's the essential problem.

MR. REILLY: Look, Joe, I don't -- please don't read too much into the -- to the examples that we -- we put into the letter. I think they were put -- put there for illustrative purposes. But I would tell you that, you know, as -- as we kicked around the issues as auditors, and -- and we were looking at a situation where a company was doing a goodwill impairment analysis, and they were on the rivet, relative to the comparison of book value and fair value, you know, we would scratch our heads saying, "Well, that -- that's something that we would expect that would find its way into the footnote disclosures.

MR. CARCELLO: Okay.

MR. BAUMANN: Thanks. Lynn Turner?

MR. TURNER: Thank you, Marty. I think you raised a good question with respect to the example. And again, I think it's the informational content here that is important, not whether it's in an emphasis or AD&A. What an investor needs, if we're going to pay for this, is additional information that will be useful and valuable to our bi-cell analysis as we try to actively manage a portfolio.

It's not so much important to the indexers, but for active managers, which I think is going to be a much more important role going forward in this economy, it's important that they get information that can actually add value and informational decision points in the active management.

What I heard Kevin say was, "The CAQ and the firms are proposing that they would give, in essence, investors a table of contents to what's in the financial statements and asterisk the points that they really want to make sure you read."

So we'll tell you, just as in the examples that Joe handed out, as described in note one to the consolidated financial statements, well, that doesn't add any informational content, to me, as I'm analyzing a company and financial statements.

And so the benefit of that would be zero. I don't need another table of content. I don't think the CAQ -- while they say they really want to make change, I think that's wordsmithing, because I really don't think they want to make change. I think they want more of the same with the current emphasis paragraphs.

I think we're looking for that additional informational content that you just highlighted with your question, Marty, with respect to what was in the example.

Not only do we want to know what were the -- the big ticket items, as Kevin said, Kevin said that when they met with investors, they wanted to know what keeps the auditors up at night. That's the informational content that can help us with investment decisions. That's what's in that completion memo.

That's not what's in a table of contents. A table of contents, the proposal that Kevin just described, would be of no value whatsoever. I can already just read the footnotes and get the information.

The only thing that he adds is an asterisk to a table of contents that says make sure you really read this footnote. So I see very little value, whatsoever, with respect to that proposal and see no value being added, in terms of information I need to make a better informed bi-cell decision.

MR. BAUMANN: Thanks, Lynn. We've got Mark LaMonte, Gary Kaburek, and Steve Buller.

MR. LAMONTE: Thanks. I'm going to agree with Lynn and disagree with Lynn in my remarks. I am enthused that the -- the firms seem to be getting behind this a little bit and I think this does have an opportunity to provide valuable value to the financial saving user.

I spoke earlier this week at the AICPA banking conference on loan loss disclosures. And one of the things I highlighted in my -- my slides was the proliferation of disclosures in recent years. If you look at the 10ks of the big four U.S. banks, they've gone from an -- on average, 141 pages in 2003 to 276 pages in 2010. And then you look at a firm like AIG, their 10k this year was 482 pages.

The only people actually reading these entire documents are some lawyers, some folks in the accounting policy shops at the companies themselves, and the auditors. Investors are getting out commentary on earnings or making decisions shortly after these annual reports come out and they have no ability to sift through all of this information.

We need that road map that Bob referred to. We need to know what the three or five key things that we need to read in those 300 or 400 pages are. And I think Larry's absolutely right. You can't stop at the footnotes. You also need to reference the MDNA.

I think you'd probably be referencing both the footnotes and the MDNA with an individual item. Where I think this could add value beyond just being an additional table of contents that Lynn was referring to is, you not only need to tell the investor what footnote to read, the auditor ought -- should also be saying why they think this is critically important to an investor's potential understanding of this entity, so not just pointing to where it is, but why you should read it, why this information is critical to your understanding.

To go to some of Joe's comments earlier, I don't think a lot of investors or financial saving users are going to be all that interested in audit procedures behind these critical areas. A lot of investors -- I mean, you have a lot of poets with MBAs and they're not all that interested in auditing procedures. You don't have a whole lot of former auditors or accountants out there in investing, so they're not kind of junkies of audit procedures or -- or what they mean.

There is one time where I think it would be very valuable to understand the audit procedures. And that is when there is a material weakness reported in the other reports that auditors are writing, and there's a reference to that material weakness in the audit opinion. I think it would be critically important for investors to understand what incremental audit procedures were performed for the auditor to get comfortable with that area where there was a breakdown in controls.

Beyond that, though, I wouldn't be all that excited about knowing about the audit procedures. Thanks.

MR. BAUMANN: Thanks, Mark. Thanks for those comments. Gary, if you don't mind, can I keep your card up for a second? I was going to ask, if you don't mind, if I defer to the SEC and let Brian Croteau -- Croteau put his card up.

MR. CROTEAU: Thanks -- thanks very much, Marty. I guess mine was really a -- a question. Again, without sort of passing judgment around any particular model, it -- it seems to me, from some of what I was hearing, perhaps the power in the emphasis of matter idea comes from the criteria that one would use in determining what to put in an emphasis of a matter.

So if it -- it were truly something that were just, you know, find the 10 largest numbers in the financial statements, anybody can do that and there's no magic to that. But I think what Kevin described in terms of the discussions with audit committees or the extent of procedures the auditor performed, if there's some amount of judgment in determining what to put in an emphasis of matter, which items to select, I -- I wonder if people find benefit in -- in that to some extent.

Certainly, there may still be limitations to the extent which -- which one finds that useful. But to me, sort of the question around what the right criteria would be to begin with in making the selection of the items to emphasize might be the important part of -- of this particular suggestion. So I guess --

MR. BAUMANN: I agree. The criteria, I think, is very essential. Thanks, Brian. Gary?

MR. KABUREK: Thanks, Marty. A couple of comments, just sort of listening to this dialogue, and I want to go back to one of the opening comments. I had made my remarks this morning, but I just listened to, you know, the relative merits of the French model versus one or two sentence saying, "We verified fair value," I think, was the example.

I think that just goes back to -- the point is, I think the Board needs to decide what level of what knowledge should be assumed by the -- the majority of the financial statement users, because if you assume they know very little, the French model looks pretty good. If you assume they're reasonably knowledgeable in accounting, and auditing, and the similar, well, maybe just saying, "We emphasized fair value testing," is sufficient. So I think -- I do think we need to wrestle that one to the ground.

I think, you know, a couple of corporate professional groups that I'm associated with, I think in general, are supporting the emphasis paragraph approach, you know, provided you keep it to, you know, objective stuff and focusing on accounting policies and the estimation process, you know, the important areas of audit focus. I think we can easily get our mind supportive of that.

I think I want to echo Larry and Mark's comments about -- that you should be -- MDNA should be available, you know, for reference in the auditor's report. If that's the direction you go, I'd probably take it further and go to the item one, you know, business description, or risk factors, or almost anything that's in the file document.

I will tell you, my experience trying to even have any footnote -- having a sentence say, "See the MDNA, this page, this paragraph for more details," has always been a problem with the audit firms I've been associated with. He said he got me auditing the MDNA. I says, "No, I think all your auditing is -- on that page in that paragraph, there's more information," you know.

So I think you need to wrestle, you know, linkage to the MDNA inside the audited statements. I think that's a narrow one that can be solved.

The -- I think -- and I don't know. Most of the time in these meetings, these usually -- I've usually -- when I've had a problem, I usually suggest an alternative. This one, I actually don't have one.

But when I think about the 10k process, I mean, it's -- you file your statements in, I don't know, say mid-February. Meanwhile, you're talking about events up to 14 months earlier. And to say, "Here's my audit processes in the critical areas," that's nice, but that's past news.

The question is, how do you keep that evergreen, you know, going forward? And just, when the audit emphasis areas change, I mean, should there be some sort of reporting mechanism to communicate that before 12 months later in the next MDNA or in the next 10k?

And I don't have a solution and I don't even know if it's a great idea. Well, of course, it is. I suggested it. But the -- but I think you should -- is there a way to, when audit emphasis changes significantly during the year for unobvious reasons -- it's one thing to make a big acquisition. I mean, I think the world understands you're doing something.

But how would you update that you're changing your emphasis? And again, maybe staff work, you'll conclude, is just not a good idea. But it's something that occurred to me.

And then so my last thought -- and I'm going to say it now; it's a little out of place, but I might not get a chance later -- is, I'm looking at the four areas of, you know, emphasis of matter, ATA, and so on. If I was project-managing this thing, I might almost break it into two projects, you know, or release, because

I think emphasis of a matter and clarification are going to be less contentious of issues. And you might be able to wrap them up quickly, get them out, make some improvements in the world recognizing the ATA and probably assurance outside of the financial statements will be more contentious, going to be more prolonged, and so on.

So you almost might want to consider doing a -- bifurcate the project. It's a thought, you know, and let the staff work however it goes.

MR. BAUMANN: Thanks, Gary. Steve?

MR. BULLER: Thank you. Well, we -- we do support the expanded use of the emphasis of matter paragraph, but think that the AD&A, the emphasis paragraph, and enhanced exposure all have their own responsibility, and actually, interconnectedness.

So I think that the AD&A is important to us because it does help define audit procedures on significant areas and provides some perspective on accounting principles. And I think, converse -- conversely to what Lynn said, our analysts believe that the emphasis of matter paragraph should point out the location of the financial statements of certain things that, in the accountant's opinion, are important for the reader to know.

And those are the, you know, the -- the new financial statement disclosures, significant transactions, and related-party transactions that are material, significant judgments and estimates with significant uncertainty, and also, significant information about acquisitions, or related financing, or -- and the reason they're important to our analysts is, they believe that -- that merely by having the auditor identify those in that paragraph points to them that they were important criteria in reaching the opinion.

So to the extent that they need additional information on the procedures that were performed, that should be in the AD&A. And the two we view as complimentary.

MR. BAUMANN: Good. Thank you. Next, we're going to Paul Haaga, Mike Santay, and Joan Waggoner.

MR. HAAGA: Thank you, Marty. Remarkably, I still agree with everything that's been said. My favorite -- as I was sitting here listening to this, I recall that my favorite movie title of all time is Snakes on a Plane. It tells you everything you need to know, nothing you don't need to know, and is unlikely to become boilerplate because it doesn't describe any other movie.

So following that, I do think shorter is better. I -- that's why I suggested that the emphasis paragraph is better than the AD&A approach. I think there are things that one can say, and we've gone back and forth on whether it's simply a road map to the largest numbers, or at the other extreme, it's the auditors giving their own financial statements and taking over the role of management.

I think you can strike a fine line between those two. I think it should focus on matters involving the audit and the audit process, but not be limited to that, and can actually comment on some numbers, and still be -- still be very useful to investors.

Just some of the areas -- these have been mentioned, but some of the areas that have been suggested is significant issues that arose in the audit, how they were addressed, areas of greatest risk, how those have changed over time, and where the audit emphasis was, significant estimates and judgments, uncertainties, unusual transactions, restatements, materiality standards.

Now, that sounds like an awful lot and I'm trying to get it down to Snakes on a Plane. But I think that, if you look back at the list of examples, including the examples we've given here, there are very few areas of concern that would have been extremely significant to investors. And I think pointing out those areas of concern and saying something in just a couple of sentences would have been very useful.

The challenge, of course, will be writing the rule that reflects what I think a lot of us understand or imagine a helpful emphasis paragraph would have looked like.

MR. BAUMANN: Thanks. And thanks for the colorful analogy. In particular, as actually, it works in another way because I think the things we want disclosed in emphasis paragraphs are the snakes on the plan. So I think we're right on target with that one. I wondered if Night of the Living Dead worked, but maybe that has more information than you need.

Mike Santay?

MR. SANTAY: Thanks, Marty. You know, as it relates to the -- to the emphasis paragraphs, we're supportive, along with others in the profession, for many of the reasons articulated.

One of the things, if the Board decides to move forward with this, is -- is going to be important to think about is transition. You know, as Joe pointed out, you know, well, there's -- then there's dearth of information. There's been nothing in -- in audit reports on emphasis, and all of a sudden, you know, there's going to be a new standard, which we wouldn't expect investors to read.

But you know, all of a sudden, there's going to be a lot of disclosures that are going to come popping in. And I think, you know, our view is, there -- there could be some -- you know, we want to make sure that there's a good understanding of what the -- what the framework for that's going to be, and what inspectors -- what investors should expect to see.

You know, that's not going to be operating risk. I mean, if -- if somebody's got a major contract with Wal-Mart that's disclosed, and you know, we're not going to make a judgment on operating risks or other types of risks. Those are, you know, supposed to be disclosed in the front part of the 10k, I think, in the risk factors.

So I think it's going to be important to frame what's being -- you know, we'll -- we, as auditors, will have a good understanding because we're going to, you know, beat the living daylights out of this, and train our people, and that. But I think it's -- it's going to be important for the readers to understand what's being presented.

One -- one comment on audit procedures. I think this one's difficult and I've heard discussions on both sides, as to whether or not it would be -- would be valuable. And you know, it's -- it strikes me that there's times when management does different things, depending on their view of, you know, what they need to do to -- to validate the assertion, you know.

Their -- if you've -- they've got a difficult fair value measure, they may go out and hire a valuation specialist. And that doesn't come through the financial statements, but we, as auditors, get comfort with that and we might think -- decide we need to get less audit evidence because we're vetting that specialist.

And so, you know, I don't know what the answer is here, but I think there's -- there's some aspects to what management's doing and -- and that might not be visible in the financial statements, and you know, the -- you know, all the work they're doing to support their assertion and -- and our response to that varies.

And so I think that's one of the challenges I see in trying to decide what procedures to talk about and what might be valuable, because if we just put our procedures in there, and somebody might look at it and say, "Well, they only did this, somebody else did all this," that could really be misconstrued. So --

MR. BAUMANN: Thanks. I was wondering if I could just ask you a question, since it was discussed by a couple of the other auditors. Getting to the concern that Lynn expressed before, that just pointing to the financial statements, the -- the riskiest areas may not be enough, the table of contents issue.

In the example that I read before, if the --

if the company had not disclosed that the calculation of impairment was close, and you concluded you could issue an unqualified opinion without that sentence, do you think that additional color is something that you could see auditors putting into the emphasis paragraphs?

MR. SANTAY: I think the devil's in the details on that one, Marty, I guess. And this kind of goes to what some people view -- might view as close, and versus not. And -- and so I think that, as it relates to why it's important, I think, you know, we -- one of my earlier comments today was, you know, the -- the need for management to discuss why it's important.

From an auditor perspective, I think I would have a hard time, you know, making -- you know, providing guidance to our folks as to what's close, what's not. But I think that -- you know, I think there should be sufficient disclosures in the footnotes for the -- for the reader to be able to determine that the -- you know, what methods were used, and what assumptions were used, and directionally, what -- you know, what -- why management was able to conclude on the veracity. So --

MR. BAUMANN: Jay, were you going to comment?

MR. HANSON: Yeah, Marty, I was just going to respond to you -- your question to Michael about -- about whether an auditor would actually put that language in -- they wish were in the footnote.

I'm suspecting that, if that threat was there, it's going to be in the footnote, which in and of itself, will improve reporting.

MR. BAUMANN: That, I think, is why some, such as Lynn, might say that additional color would be helpful. But I agree with your point, Jay. Joan?

MS. WAGGONER: Thank you, Marty. I would additionally agree with what Jay and Mr. Santay have said about this. It would be -- if it was important, sufficiently important, to be considered for EOM treatment, I think it would be one of those things that you can't disagree upon. I think management and the auditors would have to come to an agreement and you wouldn't be able to issue the financial statements without it being resolved, if it was of that nature.

I did want to make one other comment about the disclosure of audit procedures, building on what -- what Mike has said, that it might not be in the investor's best interests for audit procedures to -- to become too widely known.

Audit procedures are not supposed to be all that predictable, and if, as a matter of course, audit procedures are disclosed for these more interesting areas that will pop up in emphasis of matter paragraphs, it might be detrimental to the -- the interest of investors in the long term.

There is an element of surprise that is -- is supposed to be part of the whole audit plan that is put together. And I'm not saying that this is filled with mystical secrets or anything, but there -- there certainly is, perhaps, that factor to consider also, as we move forward.

MR. BAUMANN: Thanks, Joan. We have Flerida Rivera-Alsing, Wayne Kolins, and Alan Beller, and I think Kurt Schacht gets the final word.

MS. RIVERA-ALSING: Thank you. I just want to make sure that everybody understands that we value audit. And I am a firm believer that our -- the financial statements of our wholly owned entities and joint ventures are audited.

But how much time do we really spend in looking auditor's report, the opinion page itself? A few seconds. The first thing I tell my people is, "Are there three paragraphs?" "Yes." "Forget about it."

There's only one firm that, to this date, they still issue a one-paragraph audit report. We sampled 25 financial statements of the financial statements that we receive and only 1 firm issues an emphasis paragraph. And -- and that's to the firm represented to my left.

And in those instances, where paragraph -- emphasis paragraph is used, I felt like it is used to limit the auditor's liability. It is just my, you know, perception. I do not want to minimize what Kevin said earlier, advising the users of the financial statements for the significant matters are -- is a step forward.

But is it enough? I do not believe so. I look at the auditors to tell me why they believe those matters that they have identified are significant and how did they, the auditors, felt comfortable enough to have the name of their firm associated with those financial statements.

Do I have interesting reading for a 173-page report? Absolutely not. And that is the reason why we want you to cover only the significant matters.

My concern, however, if we go to the route of the emphasis paragraphs, how much information can you really give to the investors in a couple of paragraphs to make it meaningful?

Thank you.

MR. BAUMANN: And thank you. Jack, I hadn't seen your card up, so I will do Wayne, Alan Beller, Jack, and we'll still give Kurt his -- the last word, since I promised that before.

MR. KOLINS: Thanks, Marty. I'd like to focus on the audit procedures element and disclosures of it. And if -- if the objective of disclosure of audit procedures at the emphasis of matter paragraph is to provide a picture of the strength of the audit procedures around the particular area, I'm not sure even a 75-page description of what the audit procedures are is going to fulfill the objective because it won't say what procedure should have been done.

And audit's a very complex mechanism. There's a lot of interconnected parts here because you have to consider the risk of the area. You've got to consider the -- the validity of the evidence. You can describe a procedure that was performed, but if the evidence that the auditor is relying on shouldn't be relied on, that won't come across in terms of describing a procedure.

It also depends on what the controls are, and there could be one particular control that's missing, that would be a house of cards for the entire procedure to stunt.

So without knowing all of that, without entering into a dialogue between the auditor and --

and the investor, you really can't get a full understanding of what the procedures are in any event.

And one other element that seems to be missing, and hasn't been mentioned at all here, is the PCAOB inspections. Now, the financial statements at hand, that are just about to be issued, obviously haven't been inspected by the PCAOB. But it's possible that last year's engagement was inspected by the PCAOB. It's possible that, that particular engagement will be inspected in the subsequent year.

So I think the PCAOB inspection oversight provides an additional degree of comfort. I believe -- I should -- I believe it would be to the investors that the audit procedures are appropriate in the circumstances.

Thank you.

MR. BAUMANN: Good points. Thank you. Alan?

MR. BELLER: Sorry. Thanks, Marty. First of all, I guess I just want to, for purposes of the transcript, import what I said earlier about AD&A

into here, because I think, as I said, I don't much care. I'm not clever enough to know whether it's part one or part two. And I think, if you get what we were talking about, it's all the same.

I also think, though, that in thinking either about AD&A, which I am not a great fan of, or emphasis paragraphs, we all know investors want more information. We have heard, and I think we all know, that investors want more information from the auditors.

But I think there's a line, and it's somewhere -- it's -- sometimes, it's an easy line to draw, and sometimes, it's a harder line to draw, but I think, in continuing with this exercise, it's an important line to draw.

Where is it better to get information from the preparer and where is it better to get information from the auditor? And I want to go back to the goodwill example to kind of talk about that. The example in the -- in the CAQ emphasis paragraph is, they -- a segment was tested. No impairment was found. But it's close. And if value goes down further, there might be an impairment in the future.

I actually had it, the very same question, for Joe before lunch, that someone asked in this panel, which is, suppose the issuer, suppose the preparer, had said that in the financial statement footnote. And it wasn't an idle question, because I actually know of a preparer that said something like that.

And does it then go in the -- you still have an emphasis paragraph about the impairment because it's an important issue, but do you then go on? You got the information. I think that's the kind of information that's actually better from an issuer.

And the real value of the emphasis paragraph and the value of the process is, well, the auditor's going to put it in if the issuer does it. And I think the auditor has to put it in, in answer to that other question.

But the practical outcome here is, the issuer will put it in. And that's fine. And once the issuer puts it in, does the auditor also put it in?

I'm not sure I care and I'm not sure whether I care whether the standard says the auditor puts in or doesn't.

Let's take this -- let's take this issue one step further and let's stay with goodwill, even though we get a little bit into the weeds. Let's say that, if you do the kind of normal market value of the enterprise, and then you look at the market value of the segment as a portion of the market value of the enterprise, there's clear impairment, but the market just went down 67 percent in the last six months.

And we were there, guys, two years ago. This is not a -- this is not a hypothetical. And so you then do a discounted consent to search flow analysis to see whether, in fact, the market value of the segment supports or the -- or the discounted cash flow of the segment supports the market value, notwithstanding the fact that the market value of the enterprise is below what you get when you add all the segments up.

Do you put all -- does -- it seems to me that

that's important disclosure. It's in the footnote I'm thinking about. And it seems to me that, if it's not in the footnote that I'm thinking about, it goes in the emphasis paragraph.

That's getting pretty close to putting in audit procedures, right? So it's very hard. It's -- and again, if the issuer says it all in the footnote, do you need to do more than flag it in the emphasis paragraph?

Because the issue still is, it's close, and the answer is yes, you do. But do you put all that other stuff in? Don't much care. You want to get the disclosure.

But the second thing that comes out of this example is, sometimes you have to bounce a brush up against the audit procedures to get to the kind of disclosure that I think you're talking about.

The area where I think that actually -- that I'm familiar with, where it would be the most -- the most common is fair value accounting. It's very hard to talk about complicated fair value accounting questions without talking about auditing procedures in some -- in some cases, and so be it, which leads me to my penultimate point, which is, how do you, in a standard or in a set of disclosure rules, because -- again, I think this is a two-part exercise.

I think Brian's agency and this agency have got to go down this road together to talk about both issuer disclosure and auditing standards. I don't think either agency will be able to effectively write a black-letter rule around what's significant. What are those 10 things that have to be flagged in the emphasis paragraph?

I can almost promise you, you will not do that successfully. What you -- well, you're really in kind of a potter's story. You know it when you see it. You set out the principles. Where are the judgments hardest? Where is the estimation hardest? Where are the numbers biggest? And you put all three of those in a pot, and you stir it up, and out pop the five, or six, or 10 things that the investors care most about. And there really are no black-letter rules you can write that will produce that outcome.

The final point I would make, which has been talked about a couple of times here, who are the investors we're writing for? And what is their audit knowledge? It is one of the great myths of the U.S. disclosure system, that we are writing -- we are writing mutual fund disclosure for Aunt Martha. At least, we should be.

But we are not writing 10k, 20f, 10q, 8k disclosure for Aunt Martha and we haven't been for 25 years, at least. And you know, I'd love the answer to be different, but it's not. And -- and so what I think we really ought to be thinking about, if we're thinking about what's effective disclosure, think about fairly sophisticated institutional investors, who drive valuation in our market anyway, and Martha's a price taker. She's not a price maker.

Write for those institutions, and write rules for those institutions, and I think you're on the -- you're on the right track. Don't write them for me. I don't understand them.

MR. BAUMANN: Directors of corp fin give consistent advice, because John White, at our last discussion on the SAG on this similar topic, said, "If the auditor is going to put the calculation as close in the emphasis paragraph, it doesn't have to because the client will put it in the footnote." So we're getting consistent views, as -- as Jay just --

MR. BELLER: Now, you know what John and I do for a living.

MR. BAUMANN: Kurt -- Kurt, you're being delayed one further, I think. Matt Torrey?

MR. TORREY: Yes, thanks, first of all, to the PCAOB for the invitation to participate in this forum, but thank you also for including so many investors in the process. I think that's very, very, very healthy development.

I'd like to second the comments made by -- by Paul Haaga from -- from Capital earlier today, twice earlier today. I think we've got a very high level of consensus that -- that investors would benefit from improved disclosure on many issues, to ensure financial statements are as accurate as possible and as transparent as possible.

I furthermore believe the use of emphasis paragraphs would be an effective way to ensure that this happens, pointing areas -- investors to areas with the greatest financial statement risk, changes in reporting, and, perhaps, most importantly, most significant estimates and judgment.

So I think a lot of great points have already been made. I'll limit my comments to that.

MR. BAUMANN: Thanks. And there was concern that you were going to concur with Jack's comment that you agree with everything that was said today. And that was -- I've heard that twice. That was going to be troublesome.

Jack?

MR. CIESIELSKI: Thanks, Marty. Just two things, one thing to not worry about and maybe one thing to think about. I her a lot of auditors concerned that investors want to see audit procedures and worrying about putting out 75 pages of an emphasis paragraph that includes audit procedures.

And I really -- I have to second Mark's remarks earlier, that investors really don't want to see that. At least, that's my belief. That's what I've encountered in talking with lots of other investors.

They don't want to recalculate an audit. They don't want to re-audit something. They might want to recalculate a number that appears in greater detail in the footnotes, you know, details about assumptions about, I don't know, the black shoals option pricing model used in determining fair value of items, whether it be compensation or consideration.

They -- they might be interested in that, but I don't think they really want to take one audit report, and stack it up against another audit report, and see which audit firm was tougher, or something like that. That's just not within their ken and it's not within the time they have allotted to do their -- their jobs.

That said, I think that they don't care about, you know, the audit procedures as much as they care about the auditor's assessment of risks. What made an auditor decide to do more audit procedures in a particular area?

So I think, you know, the emphasis paragraphs should speak more to what is driving an auditor's decision in assessing risk in the audit of a misstatement.

Something to think about is that we have pages and pages of risk factors in the 10ks. And you know, somehow, I -- I don't see a link between that and the audit opinion. Those risk factors that have been identified by the client -- they should have some kind of an effect on the auditor's assessment of what kind of procedures need to be used in the audit.

So I think that it -- that might not be a bad starting place for trying to figure out how an auditor communicates the effective risks in an audit to the investor, because the auditor is supposed to be the eyes, ears, and nose of the investor within the company. And they should be doing some kind of risk assessment, and communicating that to the investor would give them a better idea of what kind of risks they take upon themselves by being an investor in that company.

So I hadn't heard anything about, you know, the risk factors section and trying to integrate that, maybe, with some of these emphasis paragraph issues that we're stumbling around on, so I just wanted to put that out there.

MR. BAUMANN: Thanks.

MR. CIESIELSKY: Sure.

MR. BAUMANN: While I conceptually agree with you on that, on the risk factors, Alan's profession has done a very good job on those risk factors in the 10ks that I read as well, that I don't think anything's omitted these days from those.

Kurt, you have the final word, and then we're going to take a break.

MR. SCHACHT: Thank you very much. Great job, Marty and staff. This is a very through consult and we appreciate the opportunity to -- to talk a little bit about it.

I just spent four days living like a pioneer up in New York because of Hurricane Irene. I think a lot of us in the New York area had the same experience. And I tried to get my kids to sort of see the romanticism in living like pioneers, and roughing it, and -- and they would have none of the -- none of the discussions. I heard words like, "I'm desperate," and, "Could you go out and get a small generator so we can at least run the Xbox?"

To show you how desperate I was, as I had a copy of the PCAOB handbook at home, and I had some -- some good reading time with -- with the handbook. And -- and I think we all sort of forget that a lot of people that are on the IAG and -- and on the SAG are not audit pros. They're not people with accounting backgrounds. And it's important for them to understand, really, how rigorous this auditing profession is, and all the rules, and the guidelines, and so forth that are there.

And I think the practice, generally speaking, has evolved, and it's adapted, and it's -- it's changed with the times, with the one notable exception of the communication between the auditor and the investor/shareholder. And that has not kept pace, in our view.

And you know, the interesting thing that we're hearing about some of these proposals in the comment letters is that this is a monumental change, if we were to do something, or that it changes the fundamental precepts of the auditor/investor relationship.

And the fact of the matter is that everything else in finance, in investment, and in markets has changed. And I'm not sure why this should be off limits, and why we shouldn't make some -- some pretty interesting and bold changes to how this -- this works.

Avoiding repetition, I -- I -- we agree with how Ann and Steve Harris have sort of outlined the investor concerns with respect to these issues. That's where a majority of our CFA institute respondents to surveys are, on three separate occasions.

I think we're sort of -- this -- so we're sort of at the point where this is a game of Clue. Do you remember that game, where you had to guess whether it was Colonel Mustard with the lead pipe in the -- in the living room?

So we're talking about how should be giving more information, what the information should be, and where that information should reside. And overwhelmingly, we hear from our investor members that they want to hear it from the auditor, that it needs to be from the independent expert, that, that is important, that they want to have information that's informative.

So if we're -- just again, I would agree with the other speakers, that if this is just a boilerplate description of the audit process, and what reasonable assurance means, and that -- and so forth, that that's really not what this discussion should be about.

It's about that informative, customized assessment of -- of the list. And I think we all sort of know what's on the list and what's been articulated in terms of risks, and judgments, and so forth.

Where it resides, again, I agree with the commentators that it's really less important about where it resides and it's more important about who and what is said. And I'm intrigued by this. Our view is that it should be more closely connected with the auditor's opinion, so there's no hunting and pecking around all of the documents associated with financial disclosure, so you see what the auditor thinks, and what the auditor views, and has judgments on in the opinion, either in these emphasis paragraphs, or with another appendix document, or however we might end up structuring it.

So those are -- are -- some of our basic comments. I'm intrigued by this -- this road map concept. I don't think that we have really focused on that as investors. I -- I do agree with Lynn Turner's concern that a simple highlighting by the auditor of where to look for more information and more discussion from management is not the -- is not enough.

But what Mark had -- what Mark LaMonte had suggested in terms of an iteration where you talk not just about where it is, but why you are specifically trying to emphasize investor's attention to that -- that location would be -- would be a step closer. Thank you.

MR. BAUMANN: Thank you, Kurt, and -- and thanks everyone for a lively, entertaining, and -- but most importantly, very informative discussion of the required and expanded use of emphasis paragraphs, as one of the alternatives to improving the auditor's reporting model. We'll -- we'll take a -- running a little bit behind schedule. Let's try to start again, if we can, at 2:55, and we'll be talking about auditor assurance on other information in the financial -- outside of the financial statements.

[Recessed at 2:43 p.m.]

[Reconvened at 2:55 p.m.]

MR. BAUMANN: The next session on our agenda, and I'm going to turn this over to Jessica in a minute to lead the discussion here, is "Auditor Assurance on Other Information Outside the

Financial Statements."

And that has come up a number of times today, and I think this is another important area for us to consider as to potential changes in the auditor's reporting model.

And again, I'm not indicating any preferences, because we don't have any at this point in time. But I do want to repeat what Sam Ranzilla said earlier today, that when you read what Alan Beller and team put out in 2003, and what's required by companies, even just the critical accounting estimates, so much of it sounds exactly like what I have been hearing throughout the day as to what investors want to hear: Companies should address material implications of uncertainties associated with the methods, assumptions, and estimates underlying the company's critical accounting measurements. Such disclosures should supplement, not duplicate, the description of accounting policies that are already disclosed in the notes to the financial statements. The disclosures should provide greater insight into the quality and variability of information regarding financial condition and operating performance. The companies should address specifically why its accounting estimates or assumptions bear the risk of change, so on and so forth, including a company should analyze their specific sensitivity to change for their significant estimates and assumptions.

One of the concerns I've heard is that this is turned into boilerplate today and the value of critical accounting estimates is not there. So at least one of the proposals would be auditor assurance on this, if we all believe audited financial statements are of a higher quality, because auditors audit them with the disclosure that we get on the MD&A, or critical accounting estimates, also achieve a higher level and the spirit of what is in here, which is pretty much what I've been hearing and what everybody wants is required already.

So in any event, our next topic, "Auditor Assurance on Other Information Outside the Financial Statements," and Jessica.

MS. WATTS: As Marty mentioned, one of the alternatives presented in the concept release is to require auditors to provide assurance on information outside the financial statements, such as the MD&A, portions of the MD&A, or other information; for example, non-GAAP information or earnings releases.

An auditor providing assurance on information outside the financial statements could improve the quality, completeness, and reliability of such information, providing users of financial statements with a higher level of confidence on information provided by management about the company.

This alternative would increase the scope of current auditor responsibilities, require the development of new auditing standards, and require coordination with the SEC.

So the questions for the concept release that we would like to focus on today are on what information should the auditor provide assurance: MD&A, earnings releases, non-GAAP information, or other matters? And then if the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why? Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? And then what are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?

So I will leave up a summary of these questions.

And for this topic, we've asked Mary Hartman Morris and Mike Cook to help kick off this section.

Mary?

MS. HARTMAN MORRIS: Thank you, Jessica.

Chairman Doty; board members Ferguson, Goelzer, Hanson, Harris; panelists, and guests, my name is Mary Hartman Morris. I am an investment officer with CalPERS, and I thank you for the opportunity to discuss specifically auditor assurance.

I'm here to represent CalPERS, the largest pension fund in the United States with approximately $220 billion in global assets in more than 9,000 public companies worldwide with 47 markets. CalPERS invests these assets on behalf of more than 1.6 million public workers, retirees, and their families, and beneficiaries, in order to fund retirement and health benefits.

We continue our commitment to the concept of global best practices that contribute to the efficiency and effectiveness of capital markets, including credible, high-quality financial reports, which serve the needs of investors and other users of financial information.

CalPERS is fundamentally a long-term fiduciary investor with a vested interest in the stability of the markets and integrity of financial reporting. We believe financial reporting should provide users the information needed to make informed capital allocation resource decisions. The integrity and quality of financial reports is supported and strengthened by robust external independent audit carried out objectively and undertaken with a good dose of professional skepticism on the part of the auditor.

As an independent expert, auditors provide an independent opinion to the quality of financial statements to instill confidence to providers of capital, such as CalPERS. Currently, auditor assurance is critical to investors' confidence in the integrity of financial reporting and its consistency based on U.S. GAAP.

You heard the robust discussion this morning on AD&A, and we support the need for change in the standard audit report, as we had said earlier. We believe the PCAOB has the opportunity to make substantive, robust changes that will improve auditor reporting and provide real value to investors and other users. And we support the resources and efforts being focused on AD&A; however, I know you have asked us to talk about the MD&A.

It has been long recognized that financial statements alone are not sufficient to communicate overall performance of an entity. In particular, MD&A has become, in our opinion, a core element of the communication package for external reporting purposes.

As underscored by many different individuals and also by the principles for ongoing disclosure material development reporting by listed entities by IAASCO, an issuer should provide all information that would be material to an investor's investment decision, including disclosures in an MD&A.

So you know that the MD&A is meant to cover four principal objectives, enables investors to see the company through the eyes of management; improves financial disclosures overall and provides the context with which financial statements should be analyzed; provides information about different components of earnings and cash flow, and the extent to which they are recurring elements; and provides information about the risks to a company's earnings and cash flow.

MD&A provides a context within which the financial results and financial position can be interpreted. Currently, auditors as part of their engagement review the MD&A and consider whether such information or the manner of its presentation is materially inconsistent with the financial restatements or represents a material misstatement of fact. We believe the auditor could provide a statement made on their current responsibilities as it relates to MD&A within the AD&A.

Although the auditor would not be providing assurance on future performance, CalPERS believes auditors could through an AD&A provide a statement of whether the MD&A is reasonable, whether assumptions and conclusions are rational based on the current work of the auditor and its review of a company's financial performance.

CalPERS would support a full discussion of the MD&A, specifically as a framework for integrated reporting as further developed. Many of you know the International Integrated Reporting Committee released a request for comment on the integrated reporting framework this week. So I think this should also be considered as we think through the MD&A.

Clearly, from the discussions today, investors like CalPERS would recommend that PCAOB focus on the AD&A and provide clarity within the AD&A on the responsibilities of the auditor on MD&A.

We agree if assurance on other information such as the MD&A is recommended that we defer to the current attestation engagement procedures and have the option to engage the auditor to attest on an MD&A.

This is a great opportunity to determine which issuers, if any, currently request their external auditors to attest to their MD&A.  And if an issuer requests an attestation, then the benefits and challenges should have already been outlined to the audit committee and discussion of the benefits will be well-articulated.

I think one of the questions you asked is the greatest benefit, or if audited, what is the effect if the auditor does provide an attestation.  So I think the greatest benefit of assurance would be a driver or the impetus for management to do a better job, because I think earlier you heard that MD&A --

management does not necessarily cover everything MD&As is reflected to present.

So with that, I thank you, and I look forward to hearing other people's views. Thanks.

MS. WATTS: Thank you, Mary.

Mike Cook?

MR. COOK: Thank you, Jessica. And thank you to Marty and Jessica for the invitation and the opportunity to express some views, which will not be traditional with respect to this subject, but are heartfelt, I guess.

The notion of auditor's assurance on other information, I'd like to say that I don't get all that concerned about the issue of assurance.

If I could involve the auditors in other information and other financial communications, whether or not that resulted in the expression of assurance or a public communication might be secondary to that. And I would use as an example of that the current level of auditor involvement with quarterly releases, which are much more significant than the annual report that we have been spending all this time talking about in terms of the importance to the investor community, market-moving information.

We have auditors involved with that, as required, sometimes in greater depth than even as required. There are no reports on that, that I am aware of. It is very rare for those reports to be made public. Probably a handful. They are sometimes given to the audit committees and sometimes not.

But what is important is the auditor's engagement on behalf of the audit committee and the company with respect to the quarterly reporting process and the content of what I would put at the front of the financial reporting train.

And if you can just take this as an illustration, I view this financial reporting train, and what we have been spending all of our time talking about and spend lots and lots of money on, and attention on, is the caboose of the financial reporting train. The annual audited financial statements coming out next March are the caboose of the financial reporting train. And from now until then, the remainder of the financial reporting train, including the engine, will be very, very important, will be what matters in the marketplace, what matters for investors, not what they will get next March after the year-end process is complete.

I think things like this AD&A and EOM and all these other things, or MOE, or whatever, EOM, all of that is of great interest, but it is polishing the caboose instead of paying attention to what is going on in the most important part of financial reporting.

And unfortunately, today, the auditors, at least in terms of their relationship with the outside world and the investing community, only ride in the caboose. They don't ride in the engine. The engine is driven by the management of the company, and the management of the company, with oversight and guidance from the audit committee and auditors, to some extent, are responsible for their earnings release.

The earnings release has good, real segment information in it, vastly different and far more extensive than the segment information you get in a set of GAAP financial statements, what tells investors what they need to know and what they want to know about the company and about the company's current results, and then use that information to project the future results. The information is timely.

Imagine a financial reporting world where we said, "We'll get back to you next March, and we'll have some AD&As and some MOEs and all that kind of stuff for you. But in the meantime, we're not going to have current financial information for you to use in the marketplace." Not in this world. That is not where it is.

In addition, the earnings releases include lots of valuable information that is just not part of the financial reporting process: the business performance metrics of the company, lots of different things about what goes on in the company that never shows up in the traditional regulation-based annual audited financial statements done once a year.

And I would suggest that for -- and I realize the limitations of the scope of the PCAOB by legislative mandate, the scope of the auditing profession. But if we don't find a way to get out of the caboose and start moving up toward the engine, and get engaged with what really matters in financial reporting to the investor community, we will be left behind. We will be obsolete. Whether we're obsolete in 5 years or 10 years, maybe beyond my lifetime, I don't know.

But we are increasingly obsolete spending all of our time and all of this money and all of this effort on the caboose of the financial reporting system.

I'd welcome you to disagree with that point of view, and that's okay. But ask the audit committees where they're spending their time, how they allocate their time between quarterly work and confirming the 10-K when they finally get around to the 10-K sometime the following year.

Ask the investors, any of the investors that you in the corporate world have communications with, or the investor community, give up something. Give up the quarterly release or give up the traditional regulatory financial filings. I don't know anybody who would say that the earnings release is not the most significant driving factor in the marketplace that is absolutely essential to investors. If I am missing that, the people I talk to and the people that I hear from are not representative of the investment community.

But I recognize that I really need to talk to colleagues at the SEC about this, because that is where this authority for change would have to come from, if there were to be some higher level of -- I hate the word "regulation" -- but oversight, let's call it, and assurance with respect to quarterly information.

Having made that case, let me then suggest a little bit about then non-GAAP information, the MD&A, and the other items that we are talking about. I would urge that we do whatever is reasonable to engage the auditing profession in financial information that really is important on a timely basis going to the financial community.

I would suggest that MD&A is the obvious place to start, logically included in the discussion that we have here. And I would urge that the auditors at a minimum get involved in the elements of MD&A that are comprehended by financial statements and financial reporting -- estimates, judgments, so on and so on.

And somebody might say, gee, they already have that. Mary said that they're already engaged with that at a standard of not including a material error, being materially inconsistent. Not good enough. In my opinion, they need to get much more engage gauged with MD&A.

And to Lynn's point, what you said earlier, it wouldn't make any difference. I will tell you, it will make a difference. I have seen it make a difference, because I've seen companies, and I sat on the audit committees of one -- not currently -- where management was very clear that it was management's discussion and analysis. It wasn't the auditor's discussion and analysis. Butt out, that's mine.

And to the point where we got to the stage where the MD&A wasn't even complete. And the auditors, without resorting to the audit committee, didn't have any freestanding authority or responsibility for the completeness of MD&A.

So I would suggest it won't matter in 95 percent of the cases, but engaging the auditors with the direct responsibility for MD&A would be a good idea, in my opinion. I'd like to see them involved in all of what's in MD&A, with appropriate protections for forward-looking information and management opinions and things of that kind.

I just think engaging the profession in the entire content of MD&A, and liquidity analysis and things of that kind that are there, would be a good thing, because I think the engagement will be an improvement, will lead to improvement in the quality of the information. Non-GAAP financial information, stuff that can't go in the 10-Q, can't go to 10-K, but goes into the earnings releases, more often more meaningful information in the headlines of the earnings releases, or at least an equally prominent position, things of that kind that are being reported that auditors have no engagement with -- who would be more logical to be involved with non-GAAP information than the people who understand better than anybody else what GAAP information is.

And it seems to me such a natural extension to have auditors engaged. And again, I don't care about public reporting, but engaged and perhaps reporting to audit committees about the non-GAAP presentations that the company is making, which are very important to the investor communities.

So I would put MD&A as the car closest to the caboose and non-GAAP information a little further up in the train, not too far away from the engine, which is the earnings release, and the information that is going out on a quarterly basis and the quarterly regulatory filings being one notch below that.

So with that, I'd say we'd have to move cautiously, and we will move deliberately in this, if you agree with the premise that the world of financial reporting would be greatly enhanced by having the professionals of the auditing profession engage with all of what really matters in financial reporting, not just the stewardship confirmation 15 months after the beginning of the year, which tells everybody about how the audit went and what was important long after the financial statements for four periods of the year have been in the marketplace and been used for trading purposes.

So I think that each of these things should be taken individually, and the marketplace should be the driving force behind most of what we have here, because if the market doesn't want it, and the market says thanks very much but keep the auditors back where they are, I really don't want either the cost or the other considerations that go with having them involved with the timely information that is, in my judgment, driving the investment process. That's a market decision to make.

But I think I would take the steps, MD&A first; non-GAAP financial information next; quarterlies are already being done, but never being reported on; and then take the earnings release and the content of the earnings release.

I can tell you from the perspective of an audit committee chairman, we engage -- I don't mean in the formal engagement, dollars and cents use of that word -- we engage our auditors every quarter in the earnings release, in other communications are going forward from the company on a timely basis, and we spend substantive time on it. We don't just double-back at the end of the year and ask how the quarters came out.

And I think that's where the profession needs to go, and the PCAOB needs to help them get there.

So I think those are the points that I was hoping to make. I guess one I would address was overall the question about costs and benefit. Costs here can be considerable, depending on which portion of this financial reporting process you engage auditors in that they have not been engaged previously. The benefits, I think, would be far greater than the costs, if we could enhance the quality and credibility of all financial reporting, not just the annual audited financial statement process.

MS. WATTS: Thanks, Mike.

Mark Newsome?

Mr. Newsome: Thank you.

This topic touches on, I think, one of the more critical areas that we deal with time and time again with companies. Routinely, we look at audited information, and we look at management information, if I could use those two topics.

I think management financial information would include the MD&A and other information that the management teams provide to investors. And so, one of the things we do routinely is we will look at the management financials on a quarterly and annual basis, and then we will go to the audit, since that is a third-party verification. And we will try to bridge the gap or reconcile between the two.

And in most cases -- I'm trying to think of cases where we have done this on our own. You can do it on your own occasionally, but in most cases, you've got to call the CFO and ask how do we get to the audit from what you provided us. And we do this all the time. And so it's important to us.

So when you think about the information that an auditor could provide in this area, it would be helpful to get some type of assurance about the information that management is providing, other information or valuation reports that management is using, such as an actuarial report or some other type of valuation consultant, not necessarily to opine on that work specifically, but to acknowledge management is using other information to develop these figures.

And that gets back to the AD&A to a degree, I suppose, and maybe it fits somewhere there or somewhere else. I'm not too particular on where it fits, but it would be very helpful.

And then coming back to the role of the auditor, I have heard a couple of comments. From my perspective and I think from most investors' perspective, it's not about mistrust of management or the audit committee, it's about getting third-party verification. And that's very important in our role as an investor. And again, it's routine. It's something that we do every year and with every case.

MS. WATTS: Thank you.

Bob Kueppers?

MR. KUEPPERS: Thanks, Jessica.

In this area, terminology is important. So I'm trying to remember in the last 8 years whether I have ever been part of a conversation with PCAOB and the folks here about something other than an audit, and I don't remember that. So let me just put out a couple of thoughts.

There are three levels of service we can perform as auditors: attestations, reviews, and compilations. And compilations are sort of off the table for public companies.

It's fair to say that, and I can only speak for our firm in this, we are open to doing more. But if we declare that we are open to doing more, someone will suggest that we're just commercially motivated, and I find that offensive, but is just what it is.

And the point is that if there is a call for it, the chances are that we have the skills and the mechanisms to meet that call.

Let me give you an example. Mary Morris had some really good comments about MD&A, and made the comment that we review that and maybe at some point we should express a conclusion as to whether it's reasonable. Under current standards, the requirement is we don't review it; we read it. We literally read it. And we are, by our standards, required to observe and look for inconsistencies between MD&A disclosures and the financial statements that we do audit, and bring those inconsistencies to the attention of management and possibly the audit committee.

We could not conclude that MD&A is reasonable unless we did a higher level service than what existing -- I keep going to SAS 8. Maybe it's something else. Or it's AU-something. But the point is that those standards haven't changed in many, many years.

And one thing I'll mention, it's a little sensitive, but maybe it's time we did take another look at those standards, because we literally read the document, look for things that are inconsistent, and raise the flag.

There is another level of service we perform all the time, but it's not in the standards for us to report on, and that's what we call agreed-upon procedures. So it reminds me of what Mike was saying about a press release. Press releases in GAAP, it's called a document, but there are no standards on which you could audit a press release. But you can look at the numbers. You can tie those numbers back to other financial information, the company's records. You can tie it back to a lot of things. You can recalculate percentages. This is the kind of work we do all the time if we're underwriters.

But if we were to do that kind of work and there was a call for public reporting, there's no standard under which we could issue that report. Today's standards say you have to be part of the crowd who agreed upon the procedures in order to get a copy of the report.

I'm raising it for two reasons. I think those standards at some point need to be dealt with, because I think there are things we could offer that are a lesser level of service but could give some -- I'll use the word comfort, and I'll use the word assurance, some information to investors or others.

But in order to do that, we really would have to ask our regulator here to take another look at both of those standards, in my view.

So a fascinating topic. We could to do it a lot easier if we don't have to publicly report. But if that's wanted, we have to do some work on the mechanism.

MR. BAUMANN: Does that include, for instance, in a press release, for instance, beyond going to tie the numbers into the company's records and things like that, potentially concluding something like: Based on your knowledge of the company and its environment, that you're not aware of anything misleading in the press release?

MR. KUEPPERS: And that would be what we would we call a form of negative assurance. In other words, "nothing came to our attention that."

And I think that there is something very similar in the work we do in the quarter. So certainly, that's a possibility.

MS. WATTS: Gary Walsh?

MR. WALSH: Thank you.

I work with a buy-side firm, and so I guess I'm here representing investors, but I have spent a few good years in my early career as an auditor, so I have a lot of sympathy for some of the issues that are taking place.

It strikes me that there is still an enormous gulf between what auditors think that investors use statements for and what investors think that auditors do. And I think that as I went through the choice of the four options that we have here, I've been struggling for ways that we can bring the two groups together.

I think if you talk to an investor, unless he had some auditing experience, and asked him about materiality, I think he'd be blown away to think that auditors were passing on audit adjustments that were more than that penny a share that he is selling the stock based on, you know, the earnings miss that quarter. And by the same token, I don't think that auditors have much of an appreciation for what in the world investors are doing. That's too strong, but I do think that there needs to be more of a tight alignment.

When I thought about, if you were to give someone a financial statement, and say you've got 15 minutes to determine whether you're going to invest in this company or not, I don't think that the audit report would even be in consideration for something that someone would look at. I think they would quickly go to other areas. And I think that you want to make sure that the audit report is top of mind and certainly being closely considered, or the audit process becomes somewhat irrelevant.

So when I look through the approaches, the first, the AD&A, I really think that the management is the right person to do most of the AD&A. When I look at emphasis reports, I do worry about boilerplate. I think that that has some interest, and if you could make it so that you provided some type of safe harbor for issues that were brought up in an emphasis paragraph, then maybe you have some carrot to have more open disclosure.

Going down the list again, I guess I would've said that MD&A is really not that interesting. But from Michael's discussion about the train, I really think that that is the right place to focus attention on being relevant. Quarterly earnings, I think that's an area that it's still kind of the Wild West in terms of things that were reported one quarter and then are changed the next quarter. I still think that that is too loose, and investors would really benefit from having more consistency and having the oversight of auditors being involved.

And so the last part, the last option, I think we can beef up the audit report to provide more clarity into what is going on.

But those are just some random thoughts. I really do like the idea of having them involved in the quarterly report.

MR. BAUMANN: If I could just follow-up, Gary, with a question, just to make sure I understood the point?

If a company reported a $1.50 a share in the quarter -- or for the year, either way, because the auditors do quarterly reviews, too. And the auditors had an adjustment which really would've brought it to a $1.49, but they passed on that penny adjustment there, are you suggesting to investors that's important always, or that's important only if the announced earning target for the quarter was a $1.50?

MR. WALSH: No, I think going back, I think it's very important for auditing to have materiality thresholds. That's very important.

I don't think that investors understand that enough. And I think to have more appreciation there, it would give investors a better sense of where they should focus their attention, and not purely on that penny. We tend to be pretty long-term-oriented investors, but even saying that, I think the quarterly reports are full of great information.

MR. BAUMANN: Because auditing standards do require -- materiality standards do require auditors to consider not just quantitative misstatements, but qualitative. And that is if the market would think that that penny was important because of what the company had announced, that could be qualitative material, even if it was a relatively small percentage.

But you're right, maybe investors and auditors aren't on the exact same plane with respect to that entire subject.

MR. WALSH: And just for the record, that penny isn't important to anybody. It's the fact that your revenue growth, your operating margins assumption, your competitive advantage period, you realize that all on the same day that they show the penny disappointment, and that's why you have such a large adjustment to the value that people place on the stock, not because it's a penny.

MR. BAUMANN: Thank you.

MR. WALSH: You bet.

MS. WATTS: Lynn Turner?

MR. TURNER: Interesting to hear the analogy to the caboose. I've heard some say that they ride the caboose and then get out at the end and bayonet the dead.

But I actually think the auditors aren't that far behind. I think they're probably more up in the diner or the dome car. I don't think they're all the way back at the caboose.

And in fact, auditors do have to do a full review of the 10-Q now, underneath the standards. There's not a report required to be issued and filed. I was there when we did those rules. The reason we didn't require it was because at the same time we were doing the audit committee rules and there was enough pushback not only from the business community, but one of the Big 6 at the time also opposed having a report be filed. And we went about as far as we thought we could.

I think that, certainly, audit committees, if they aren't, they should be, the chair should be requiring a report. They're fools if they aren't, and they aren't doing their jobs, if they aren't.

But I would certainly think that getting those reports in the filings would be very beneficial. I agree with Mike that getting full assurance on the earnings release would be very beneficial and good, and I'd do the same thing on the full MD&A. I think just the critical accounting policies is a waste of time and money.

However, having said that, we've seen in recent days in this city where legislation is being introduced to exclude probably 80 percent, 85 percent all public companies from SOX 404. And the reality is with the political climate in this country at this point in time, there is absolutely zero chance -- none, nada -- that those type of things could be implemented by this board or the SEC.

And having lived through that, I think it would be a total waste of this board's time and money, and investors' money, because ultimately we're paying the fees, to go down that path and waste your time on it. Because just politically, it's not going to happen at this point in time in this city.

It's unfortunate. I couldn't agree more with Mike. I think he's absolutely right. But in this city, you can only take on so many fights at a time. The board is already taken on a couple of major fights here, and so I would turn around -- while I think those are all great, and I'd love to see them all, I think at this point in time, it would be a waste of time and resources, because at the end of the day, you try going down there, you're going to have legislation introduced so quick, your head will spin, that will cut you off at the pass, especially with the legislation we're already seeing in recent days pop up.

So I'd love to see it, but you have to deal with practical reality in the city, and it just can't happen at this point in time. But it's unfortunate. It would greatly benefit investors. I think it would be well worth the money. But it's not a reality.

MS. WATTS: Jack?

MR. CIESIELSKI: Thanks.

I have a few thoughts along those lines of Lynn's, but a little different maybe.

First of all, I'm not sure what kind of form the assurance on an MD&A would take. That's kind of a free-writing prospectus sort of thing that the managements do. And unless you are going to be writing a whole MD&A yourself and comparing it to what the management would come up with, I'm not sure what you would say in an opinion on the MD&A. And that really did not jump out at me in the concept release.

But going back to what Mike said in the beginning about the train, the caboose, et cetera, you're right, absolutely right, that earnings releases are important because they move the market. But they move the market because they're the first new information after the end of the quarter. So what you're proposing is to put some kind of assurance on the MD&A, which comes out much later in the quarter. And the time you're going to take to put assurance on the MD&A, whatever form that might be, is going to push that Q filing closer to the deadline, farther away from the time that the earnings release is made.

So I find that further cheapening, or maybe not cheapening is the right word, but making the Q somewhat less useful for the investor, because it's going to come out later. Maybe it's got assurance, and maybe that compensates for the fact that it's later, but if you're going to be putting some kind of audit procedures or assurance procedures on it, you're going to have to spend some more time, unless it's just what you're doing now, reading and reviewing and then putting the assurance opinion on it.

I think that if you're going to do anything along these lines, you have to do the whole package at one time. You have to put assurance on the earnings release, which is maybe in conflict with GAAP, and have the GAAP numbers out at the same time. And I think the solution is really to do the whole thing at once, and not have companies, and I'm not sure how you legislate this, but not have companies file an earnings release, issue an earnings release, without the Q.

The whole package all at once is going to give everybody all the information they need with all the assurance. And I think if you piecemeal it by doing assurance on the Q later, then you're actually going to give management a reason to go out and put the earnings release out sooner or increase the gap between the two, and I think that that's not a good thing for investors.

So for what it's worth.

And I think that would be an enormous amount of rules overhauling that goes far beyond changing the auditor's opinion. I'm not sure how you could get that synchronization of the earnings release with the Q in this kind of climate. For what it's worth.

MR. BAUMANN: I guess that would be something that the SEC would have to take up, in terms of an earnings release would have to accompany -- the Q would have to accompany the earnings release and the SEC would also have take up whether or not to report that Lynn said auditors have to, for procedures right now, in connection with the quarter, but they're not required to issue a report. And I think Lynn suggested he thinks that report should be accompanying the quarterly financial statements, I think -- right, Lynn? -- which would require SEC action.

And I think those are all good points, and worthy of discussion.

In theory, that one doesn't have any extra cost at all involved. If the review is already being done, putting a report attached to it has no cost.

With respect to your comment, I just want to make sure I have it correctly. There are existing attestation standards for reporting on MD&A. There was an example of that in the concept release and in the mock report that the CAQ put out. It talked about, we have examined the critical accounting estimates, and it talks about what that means. And it gives, ''in our opinion, the presentation of the critical accounting estimates," and it goes on and talks about what that opinion means.

MR. CIESIELSKI: I'll have to go back.

MR. BAUMANN: So it's worth looking at that. There are some existing criteria for that.

MR. CIESIELSKI: I was thinking of it in terms of an audit opinion, just, "We have examined the financial statements, and it's in accordance with GAAP." We don't have a body of -- well, we do have the PCAOB standards, so okay.

MR. BAUMANN: But whether we amend that or not would be another factor, but there are existing standards there.

MS. WATTS: Mark LaMonte?

MR. LAMONTE: Thanks. Very interesting discussion. I very much agree with what Mike led off with, the train analogy, where we're talking about the caboose being the driver of what we're thinking about here.

One of the issues that we're dealing with -- and this may be something we might not be able to really solve in this context; it might be a much bigger issue -- is we're dealing with a very archaic form of financial reporting that doesn't necessarily reflect how investors make decisions or the information they use to make decisions.

It's really about data with investors and the flow of data to investors. You don't have a lot of investors necessarily staring at balance sheets. It's about data that's getting into models. That may be getting into models by someone in India rekeying it at $10 an hour, or it may be a junior person putting it in.

But it's not really about financial statements. It's about the data that drives decisions and whether there is assurance over that data. Some of that data may be extracted from financial statements or earnings releases and be your traditional balance sheet metrics, which are subject to audit, or would be subject to audit after the fact.

Other pieces of information, which may be absolutely critical, might be more nontraditional information. If you're looking at Wal-Mart, a key driver might be same-store sales, which is never subjected to audit but is absolutely critical to making a decision on whether or not to invest, to buy or sell their securities.

So I think at some point we may need to really refocus on the flow of data rather than the preparation and auditing of the financial statements. And this may be in part why the financial statement presentation that the FASB and IASB has been working on has gotten bogged down. It's just recasting this old, archaic view of financial reporting and not focusing on data flow and then assurance over that key data.

So this might be a much big issue than can be addressed in this project, but I think it's something that the PCAOB and the industry really need to begin to think about.

MR. BAUMANN: In that context, would you be supporting auditor association with XBRL?

The data that is probably being sent over to India for use in --

MR. LAMONTE: If anybody was actually using XBRL, absolutely.

[Laughter.]

MR. KABURECK: Don't assume anyone is using it.

MR. BAUMANN: Thank you.

MS. WATTS: Peter Nachtwey.

MR. NACHTWEY: Thanks, Jessica.

Well, the first thing I have to share is both Mike and Lynn are taking me back early in my career when I was told what the definition of an auditor was, which was somebody who comes in after the battle was lost and bayonets the wounded. But I was also told that by an attorney -- so, Lou, don't kick me -- who defined lawyers as those who come in after the accountants and strip the bodies.

[Laughter.]

MR. NACHTWEY: So on that ghoulish note, on this proposal, as I said earlier, I definitely would be supportive, but with some caveats, because I do think it makes clear to investors, more clear what the scope of the auditor's involvement has been outside of the basic financial statements. And it more or less, frankly, acknowledges facts on the ground, as far as my experience shows.

I also think that probably this may be one of the most important things that we're talking about today as a relates to non-GAAP information, because I spent a lot of time on the road with analysts and investors, and, frankly, they spend very little time grilling me about the GAAP information. They spend a lot of time drilling me about the non-GAAP information.

So I think it's especially important that, as I think Mike said, that the auditors, well, you say, gee, they're trained in GAAP, well, they're trained in numbers, they're trained in financial analytics, a lot of things that lend themselves to being involved with that information. And I do think it would be helpful. And frankly, it might cut down on the number of questions that I need to answer, because people don't think the auditors are involved with that information today.

So I also think the quality and consistency within industries would be enhanced if auditors were involved with that information, and by derivation, this group, the PCAOB.

Conversely, on the earnings release front, I don't think auditor reporting on these really gets you over the cost-benefit hurdle from what happens today, because auditors are heavily involved in the Qs, as several have said, and they ultimately report on these anyway, in terms of the footnote that is in the financials at the end of the year.

So I think that management and auditors stay pretty close already on the numbers. And where they don't, you see embarrassing situations where, after preliminary earnings release, the numbers are revised when the ultimate filings go in, and I think that's already a sign of the involvement that auditors have there.

I just have a little trouble imagining how an auditor report on an earnings release, and particularly the tight timeframes that the market gives us to get earnings out, how that would work.

So those are my views.

MS. WATTS: Larry Salva?

MR. SALVA: Thanks, Jessica.

To follow up on something that Mark mentioned, data assurance, or I would put it more association with, and maybe that follows up on the last comment as well, in that I think it would be important for investors to know that auditors are somehow involved with, not necessarily providing assurance on, because somehow that gets more difficult to get into places.

And I note within the concept release that it notes that there is no requirement for an auditor to provide assurance on earnings releases or non-GAAP information. Well, I'd also note that there's actually no requirement for them to even read it for material inconsistencies, because it's not included in the document that includes audited financial statements. But it's absolutely part of the financial reporting process and integral to it.

To my knowledge, there's no requirement for a public company to actually publish an earnings press release prior to the filing of their 10-Q, although that is practice for most companies. And I could easily see a standard being written that said, in the case where a public registrant publishes a press release as part of its financial reporting process, that the auditor must read it at a minimum. The baby step would be read it for material inconsistency. If you want to go past the baby step, there's not a standard for the preparation of earnings press releases as there is with MD&A, where you can provide an attest report.

But as the concept release also points out on page 24, there are three things that an auditor opines on when they attest to MD&A. The one that I think would be lacking for press release would be that it's complying with certain published rules or specified rules. But they could easily, I think, get to the second two points, which is historical information has been accurately derived out of historical records of the company, and that maybe negative assurance, possibly, on nothing came to their attention that the underlying information, the termination estimates, assumptions, that the entity provided are not reasonably supported or that there's not a reasonable basis for the disclosures contained.

Auditors do have experience in being involved with statistical data when they issue comfort letters to underwriters. They have the ability to make reasonable determinations and reporting as to whether things are misleading, including statistical data being used that could be misleading. And we could pursue auditors being associated with, or at least involved with, maybe not providing assurance on, but if the standard required involvement with that data, and that the public was then made aware that the auditors do include some procedures on that data, I think it might run to Mark's objective of having, maybe not assurance, maybe not direct assurance to the investor, but at least knowledge that there was involvement with the data that was published by the company, and that that data is much more timely than what is coming either in the 10-Q with or without a limited review report, because I would also point out that limited review report is boilerplate. It's not tell you anything.

And we all know that the limited review has to be done, so to me it's not important to publish a limited review report. You just know that if you are a registrant, you have had that review done.

So I just think that there is opportunity here to pursue involvement with, but I'm hesitant to go as far as trying to define assurance on press releases.

Obviously, this also gets into cost and time constraints. You're in a very constrained, tight closing cycle. But I think it's possible to have the auditors have involvement with the press releases that should not be inconsistent with the subsequently filed Qs or Ks.

MS. WATTS: Jay Hanson?

MR. HANSON: I want to react to a couple things that the two Garys have said, and Alan Beller mentioned it as well, and maybe just pose a question, and a little bit of a surprise.

Gary Kabureck opened up the day with the question of who are the financial statement preparers writing the financial statements for, and who are the auditors reports directed at. And Alan said succinctly that it's not for Aunt Mabel; it's for the sophisticated investors. And so we have to assume some level of knowledge.

And, Gary, when you mentioned a little bit ago about that one cent differential in the earnings and how much the markets move on that, if they're missed by a penny. And I know that is reality. That happens a lot.

But unless you're looking at Joe's Barbershop's financial statements, which there is probably not a lot of subjectivity in the numbers in those financial statements, almost every sophisticated business today, as well as the larger financial institutions, there's a lot of squish in almost every number on those financial statements. And it would surprise me if a sophisticated analyst wouldn't appreciate that.

And I realize that Larry Smith is here as a representative of the FASB. And they have been working really hard on trying to get that more transparent in the financial statement for years with the leveling of the fair value measurements, as well as the disclosure proposals about the sensitivity and the measurement uncertainty. But even without specific discussion of this given number could vary by this many dollars, given the substantial improvement in disclosures over the last couple years, I would think that it shouldn't be any surprise to any sophisticated investor that there's just a lot of latitude in a lot of the numbers, the larger the financial institution becomes, and the more fair value measurements are in the financial statements.

MS. WATTS: Brian Croteau?

MR. CROTEAU: Thanks.

Actually, Larry, I'm glad you raised the point about there not being a requirement around earnings releases. Really, the question to pose relative to that point, I guess one is whether we see problems today where companies are re-issuing earnings releases on a regular basis, such that there needs to be some mandate for auditor involvement. And then secondly, I guess there'd be some requirement, presumably, that the auditor finish their work on the earnings release before the press release could be issued.

And I won't sort of get into the points around authority and whether the SEC would take up that kind of project, but I guess I just wanted to understand sort of the impetus and whether we're seeing a problem with the quality of earnings releases today that people are trying to address with this point.

MS. WATTS: Chris Spahr?

MR. SPAHR: As a sell-side analyst, timeliness always matters the most to me. And so I would think anything that would push out the earnings release is actually detrimental to the investment process.

Secondly, how I view the auditor work is I want accuracy and quality, and I don't know if looking at the sufficiency or the accuracy of an earnings release is actually going to give me greater confidence in the underlying marks or the accuracy of the low-loss provision. So I'm afraid that if you focus on the earnings release, you're going to get away from what we want the auditor to do, which is look at the quality of the financial statements. And that kind of goes back to the first two points, not to this third point.

MR. BAUMANN: I just want to understand your comment on accuracy, because that's not a word that goes particularly well with a set of financial statements, in my view anyway. And I think it was the point Jay was making.

Financial statements are nothing but a mass amount of estimates and judgments, allocations of cost for periods.

And they're anything but accurate. They are based upon the assumptions and estimates used by a company, hopefully prepared consistently, such that that the numbers present reasonably.

Is there any difference of view on that point?

MR. SPAHR: No, actually. I think accuracy would be the granularity of the quality of disclosures and what the exposures are.

I cover financial institutions, so to the extent that I know what the puts are for mortgage-backed CDOs in November 2007, some of that didn't come to light in July of 2007 earnings release, and it wasn't in the Qs following that.

And again, so it wasn't in the Qs, which was in theory reviewed by the auditors. It wasn't in the earnings release. So it was more of a qualitative point on that. Do we have the full amount of information that we need to make a good investment decision?

So again, it comes back to, is there sufficiency in the audit review process, and making sure that investors have all the information they have.

I'd rather judge management on the earnings releases, and then judge auditors on the quality of the Qs and Ks.

MS. WATTS: Sam Ranzilla?

MR. RANZILLA: I think it's fairly clear, based on my comments earlier this morning, that as it relates to the attestation of a portion of MD&A, I think that is a short-term solution to the issues. And I note that others in the room have stated they don't.

I vehemently disagree with that position. And I think if you look at what the CAQ has crafted out for a sliver of MD&A, I think it addresses the kinds of issues that have been raised.

I also agree with the context that today a full attestation of MD&A is not cost-justified. That's what we heard when we talked with investors. I think others have said that as well.

But I do think, from a short-term perspective, critical accounting estimates is a place where this board should look for -- at least pursue further a potential solution.

I would also suggest that the rest of this section dealing with other information outside of the financial statements is better left to a second, separate project, because -- taking earnings releases as an example. I mean, just think about what we just heard is all the challenges are to an auditor association with earnings releases beyond what it is today.

So when I say association that means some form of reporting to somebody who's going to rely upon it beyond either management or the Audit Committee. So the challenges around earnings releases -- one, there's no framework for which an auditor to assert to.

Bob Kuepper's point of he maybe agreed upon procedures as a place where we could provide some value but today we'd have to rewrite the rules because agreed-upon procedures reports can only be shared with, in essence, internal people or people that signed our engagement letter that says, do those procedures.

Somewhere that would have to be something like the SEC would designate the agreed-upon procedures and then the report could be issued as a standard form.

The third piece, and the piece that I have struggled with on whether it's a quarterly earnings release or an annual earnings release, is maybe absent agreed-upon procedures effectively what the auditor would be doing is reporting on work in process.

We're not done the audit -- we're not done the quarter -- the interim review at the time the press release goes out. I think how does an auditor report on work in process -- something, quite frankly, that we've struggled with a bit on comfort letters where we're in the middle of -- you know, a deal gets done after the press release goes out but before the 10-Q is issued, and that has always been a challenge for us and that's just an agreed-upon procedures report.

So I think the whole area of non-GAAP and earnings releases are things where maybe the profession can place some value.

I just think you ought to carve those out and look at that as a different element of this project because I think the amount of time it would take and maybe to Lynn's point the willingness of the marketplace to absorb that additional cost is a longer-term project than the more immediate issue of improving the reporting model for the auditor today. Thanks.

MS. WATTS: Steve Buller.

MR. BULLER: Just a few brief comments. I just struggle with whether we're proposing a solution in search of a problem here, especially with respect to interim reporting. I mean, the auditor for us is involved in reviewing our significant transactions on an interim basis and reading our 10-Q and reads the earnings releases.

But they really are focusing on pieces of the entire operation, and certainly they're in no position to make any assertion on the overall quality of information or on the fairness of presentation. So although people would hate to have it characterized as such, it reacts as a detect type control for management, and I think they'd feel comfortable reporting upon anything -- any association with the financial statements other than perhaps a type of agreed-upon procedure.

With respect to the year-end reporting on the activities they perform with respect to the MD & A and other information contained in reports containing financial statements, I think that perhaps can be clarified, as we'll probably discuss next in the auditor's report, as opposed to requiring a further set of procedures over their function.

MS. WATTS: Flerida Rivera-Alsing.

MS. RIVERA-ALSING: Thank you. One thing -- assurance on certain information is not a matter of whether we trust the management or we trust the Audit Committee of the company. I think, as former President Reagan said, trust and verify, and we look at the auditors to do the verification on behalf of the investors.

Saying that the auditors are involved in the process is enough, I think, is incorrect because that will give us a false sense of security on those numbers that are being released quarterly under earnings.

And then discussions about who are the users of the financial statements. Some says -- some say only the sophisticated investors. I totally disagree. I think it should be the reasonable investors. Thank you.

MS. WATTS: Okay. We'll take Bill Clark and then Charles Elson. Bill?

MR. CLARK: Yeah. Just -- I think I basically agree with what Steve from BlackRock said. I mean, just from talking to other pension managers and being in groups that represent funds, I think in the abstract most investors would say everything up on that screen is fantastic and is something we should strive for.

But practically, I can't say I've ever talked to anyone who would put that near the top of a list of things that they would want to see in terms of improved governance in financial reporting.

And maybe it's because of the cost

justification. Maybe because there are just other issues that are more important. I just -- I just don't see this burning need or desire on the part of investors to make this a priority item.

And then you kind of link it back to Lynn's comments to the extent political capital would have to be used to get something like this done, I think I would probably agree we'd rather it be used elsewhere.

The other point on the earnings releases, I would say more often than not the things that move the market the most are the forward-looking statements which wouldn't be subject to review anyway.

So I'm not -- and again, maybe that just gets to the point in terms of how much value -- is it relative to the cost and the impact on time in this because I agree with that as well.

When you get to the fifth business day and Alcoa is not out there with their earnings results, I think you'll see some reactions from investors.

MS. WATTS: Charles Elson.

MR. ELSON: I think there are certainly portions of the MD & A that the auditors could give an assurance on. The problem is once you move beyond the financials and you move way beyond the financials, there's a real slippery slope, I think, involved that once they are asked to provide assurance outside of the financials into other areas there's the danger that they'll be called upon to begin to offer expertise or insurance on all kinds of things, once you go through that -- you break through that line, if you will.

I mean, I've always, you know, wanted to be a fighter pilot but I can't see beyond my nose and, you know, there are certain things that I'm not good at. I can't repair plumbing and, you know, I can read a law text but that's where I need to stick to my business.

And I think that if you take them outside of the area which they have traditionally had expertise and knowledge, even if it looks a little bit like outside of that area they have some expertise, it's a real slippery slope.

Once you do that, then there will be pressure then to go beyond that and they effectively become this sort of uber monitor of the corporation, and that's not what they were set up to do.

MR. BAUMANN: Thanks, Charles. Sam, I'm going to ask a question -- if you can't answer it or if Bob or one of the others from the firms want to take a shot or don't want to answer it -- but Lynn made a point before of what's politically possible in this -- at this particular point in time and was talking about this area of providing expanding auditor responsibility to cover, for instance, critical accounting estimates.

They may not politically feasible and I guess mainly because he was talking about cost, I think.

From your perspective -- and if you don't have a view, fine -- would the AD & A be -- what's the relative costs of auditor reporting in an AD & A format versus auditor reporting on critical accounting estimates?

MR. RANZILLA: Well, let me -- let me reply on behalf of Bob Kueppers and Deloitte & Touche.

Marty, this is just my view and this is something that we have talked about. I believe it is -- it will be more costly to do an attestation of critical accounting estimates than it will be to do some form -- a form of AD & A that is very close to what's included in the concept release.

So I do think it is. Others might have a different view. But I will tell you I think the risk of affecting filing deadlines is more significant for an AD & A than it is for an attestation of critical accounting estimates because while MD & A is usually prepared later in the reporting cycle, it's also something that we can continue to do work on over -- first of all, it's objective in terms of you've seen the report, does it comply with SEC standards, where an AD & A is going to go through multiple reviews internally -- it's going to go through multiple reviews at the company, at the company's counsel, at the Audit Committee, at the Audit Committee's counsel.

And I think an AD & A has a higher risk of slowing down financial reporting even though it is marginally less costly than an attestation of MD & A. That is one man's view.

MR. BAUMANN: All right. Thanks, Bob. Lynn, is your card up on this topic? Okay.

MR. TURNER: Yeah. Also speaking for Bob Kueppers, I'd probably beg to differ with Sam on the -- the critical accounting policies, when I've gone through and I've done this here recently, looked at them and compared them to what their auditor is already reporting on in terms of the accounting policies back in the financial statements, there just isn't that much difference these days, quite frankly, and in fact in some cases you actually see more and more robust disclosures back in the actual footnotes.

So I would be shocked or surprised if it cost me more to get an audit report and assurance on the critical accounting policies than it would be to do a separate AD & A.

Having gone through and done MD & As and knowing the process that we've gone through to do that, I think there would be levels of review.

It'd take you more time -- not a lot more time because keep in mind you have to have that completion memo done by the time you sign off on the financials and get to the report date, and most of what you're going to write about would be at least in that completion memo anyway, which the partner -- concurring partner -- and if it has to go up the ladder that already has to be signed off on -- and so I think the AD & A would have additional cost.

Do I think it would slow things down that much? No, since I don't believe we're asking the auditors to do any more audit work.

What we're telling -- asking them is to tell us what they know from the audit work they've already done and they already have to capture that in that completion memo.

I don't think it should be significant additional cost, and if you do it on a fairly limited basis along the lines of what Alan Beller was suggesting I think there should be some additional cost and reimbursement but I don't think they'll be that significant. But that's just talking for myself.

MR. BAUMANN: Thanks, Lynn. All right. I think we have Bill Clark, Sam Ranzilla -- still up, Sam? Bob Kueppers to probably speak for himself, and Mike Gallagher.

MR. KUEPPERS: I don't -- I don't agree with Bob Kueppers.

[Laughter.]

MR. KUEPPERS: Either one of them.

MR. BAUMANN: Does that often happen to you?

[Laughter.]

MR. KUEPPERS: Here's the truth. Sam's right. We talked about it. But what he said that I -- I just want to point out I think the critical accounting estimates -- you know, attestation -- that's going to be about the work, less about the report.

It just -- AD & A is all about the report and I think -- I think there are additional costs but it's because of the iterative process you're going to end up going through -- certain amounts of reviews.

But we don't have any data that would suggest one versus the other. You know, Sam said marginal. There's a cost but we have done no studies to determine with any reliability the distinction between the two.

MR. BAUMANN: Mike.

MR. GALLAGHER: Yeah, Marty. That's kind of where I'm at. I mean, I honestly don't know. It was interesting. Sam went one way, Lynn went the other way. I'll say I don't know.

But don't underestimate the cost associated with the level of review, and it's not as simple as taking that completion memo and just publishing it. At the levels of review that would be extensive. And I'll just add to it, the other option -- the emphasis of matter paragraph -- I would say out of the three that's the least costly or and I would say most cost effective, perhaps.

You could argue between whether MD & A or whether that, but in terms of being able to do something quickly and relatively inexpensively that strikes me as something that would be the lower cost alternative and maybe greatest value.

MR. BAUMANN: Mike, you began. You were one of the two that began this discussion and Dan, is your card up too? Oh, Flerida. So Flerida, why don't I give you the floor and then Mike, I'll give you the last word on this one before we turn to our next topic.

MS. RIVERA-ALSING: Thank you. I just want to agree with Lynn. I will be very shocked that the assurance and critical accounting policies would cost more than the AD & A. Currently, the audit firms are already disclosing that and giving that assurance to the Audit Committee.

MR. BAUMANN: Mike.

MR. COOK: Marty, I share that same view. I guess if I were talking to a group -- a room full of Audit Committee chairmen I would say to them have a conversation with your auditing firm, your lead partner, and ask them what it would cost to report to you, perhaps -- might be the external reporting -- we could think of that separately --

on MD & A, and if it's going to cost a lot then I would be asking myself why is it that that isn't being done today because this is critical accounting policies, estimates, and judgments that go into the preparation of the financial statement. This is not new territory for the auditors.

Why would it take a great deal of effort to give us a report on something that is so integral to the financial statements? And if the answer is it's going to cost a lot, maybe we ought to start spending it because auditors aren't spending the time with critical accounting policies, estimates and judgments that they should be. I don't -- I just don't know.

I just personally don't think this is a big add-on, and the form of reporting that has been suggested seems pretty reasonable to me.

Just a final thought on the overall discussion. I think there -- you know, again, there are things here that are a bit controversial -- provocative, maybe, but also just thought stimulating. But I do think we ought to -- and not perhaps as a part of this specific project -- I thought the notion of keeping these separate is a pretty sensible thing because they're quite complex and quite different.

But looking at the total financial reporting process and who uses the results of financial reporting and when is it used and how is it used and where is the audit effort going, I'd like to hear from the investor community.

What do they use to make investment decisions? If their particular firm made a hundred investment decisions or recommendations in a year, how many of those are based on the annual financial statements that we're going to do a lot potentially to change in terms of the auditor's reporting on them?

How many of the decisions are made based on those statements? How many decisions are made based on quarterly earnings releases or Qs?

Take your pick. And ask yourself if we have the cost of assurance attestation reasonably aligned with the decision making that is resulting from that. I'd kind of like to know because if they make a hundred decisions a year and 94 of them are made for reasons other than what's in the annual financial statements, and Mike's point I agree with -- the data which is driving that -- then are we spending all of what we're spending on 6 percent of the decisions that are being made and is that a wise allocation of limited resources, and maybe those resources should be reallocated.

The thing I think that comes up here is this question about quarterlies and does it really make sense not to have some form of auditor engagement that reaches third parties.

If you stood back and asked the question would the emphasis of matters make a whole lot more sense if it was done on a timely basis instead of emphasizing things next March that are relevant in the second quarter of this year, and maybe that ought to be integrated into the quarterly reporting process, not into the annual financial statements.

Again, I realize the jurisdictional problems of PCAOB and others and I realize the real-world limitations that Lynn refers to, and I'm just saying let's think about what matters, when people get it and if we're going to fix things would it be better to invest some of our resources in fixing the things that matter the most instead of continuing to shine the caboose. So I'll leave it at that. Thank you, Marty.

MR. BAUMANN: Thanks, Mike. Sam, is your card up again?

MR. RANZILLA: It is, if I might indulge you one last time. First of all, I'd like to -- there's a difference between critical accounting estimates and critical accounting policies. We, at the CAQ's recommendation, is very specific to critical accounting estimates.

The second point that I'd like to make for your consideration is when you go back and read what is required under the critical accounting estimates for disclosure, I ask you to then try and find those disclosures in today's MD & A.

And while I agree the auditor is all over critical accounting estimates in determining whether or not the financial statements taken as a whole are fairly stated, I don't think there is a significant amount of original work.

But the disclosures that are required under that financial reporting release are fairly extensive and will require additional work on -- if not being done today on both behalf of issuers and with auditors.

So I just ask you to look at that very closely when you assess what all that would take and what is the cost benefit around that approach.

MR. BAUMANN: Thanks, Sam. Lynn, is your card up again or -- thanks.

MR. TURNER: Just one quick comment on the issue of who are you doing these for, Marty, and the reasonable or whoever the investor is -- Aunt Martha or Uncle Lyle.

But another thing to think about there's a -- there's a study been completed by IBM by a person who's now at State Street, and in that study it demonstrates and finds that 85 percent of the portfolio investment managers in this country underperform just industry benchmark averages, which leads you to believe that if you're indexing with Fidelity or Vanguard you're probably well ahead.

But 85 percent of the portfolio managers are underperforming, and I'd have to think that there's some group of those people who are underperforming just because they don't know what they should know and aren't doing their homework.

But I also think that a piece of that underperformance is they aren't getting the pieces of information that they need, which is to Mark and Michael's point about the reporting model. And as you go and look through this, this is another example of a situation where investors are saying, we do need this additional piece of information.

And so if we're going to try to get it to where these portfolios, which are so important to Americans retiring now and to this country in that respect, then we ought to really look at trying to get those investors the information that they need because the studies show that they aren't getting it and they are seriously underperforming.

And if you got 85 percent underperforming, that’s a really serious problem. Eighty-five percent of these people aren’t dumb and aren’t incompetent. So I’d suggest you may want to go get that study out of IBM and see if -- and/or talk to the lady who did the study who’s now at State Street and see if there’s some additional information that came out of there that might give you some tidbits on information that you could require that would help improve that for American investors.

MR. BAUMANN: I think I’d like to turn to the very last subject. But Stephen, do you have one more word on this?

MR. KOZERACKI: Yes. I just -- I was listening to what Mike Cook was saying about, you know, the timeliness and the importance of the quarterlies and, I mean, I think he is correct and that probably a lot more decisions get made based on the quarterly information.

But I think one of the differences is that, you know, most large public companies, after they release quarterly information, you know, the analyst community and investors have, you know, access to management for anywhere from, you know, 45 minutes to a -- maybe up to an hour and a half and, you know, you have sort of an entire group of educated investors and analysts who are sort of able to pepper them with questions and ask them, you know, a lot of detailed questions about, you know, perhaps how some things -- businesses perform during it and maybe even get some outlook on, you know, what's happening in the current quarter.

And so I think, you know, investors get some -- more comfort from that, and then also there's transcripts from those calls that allow the investors to review that as well. And I'm not sure they would want to give that up or the timeliness they get from the earnings release with the follow-up call with the -- with management just to get, you know, something that says, you know, we reviewed the earnings release and it, you know, appears to be accurate.

So I think there are more decisions from the quarterly information but I think it's as much based on the follow-up conversations with management and the investor calls rather than, you know, what's being attested to that the quarterly release is accurate.

MR. BAUMANN: Thank you very much. Well, turning to the last subject, Jennifer Rand does a lot of extraordinary work in the Office of the Chief Auditor and she will miraculously cover the last hourly topic in the next 30 minutes. Jennifer?

MS. RAND: Thanks, Marty. Okay. We're in the last section of talking about alternatives in the -- to the audit -- changing the auditor's report. This section will cover both clarifying language in the standard auditor's report as well as other alternatives that weren't described in the concept release or could also be a combination of the alternatives.

Going to the clarification, when we did -- when we did our outreach -- and a lot has been talked about the outreach we performed, which really helped inform our views on the concept release -- we did hear that while the current report is boilerplate, there would be some benefit to enhancing that quote, unquote, ''boilerplate language'' to better describe what an audit is and what an audit represents.

Many in our outreach said that would be a cost effective way to making some changes and there could be some benefits to doing so because there is some confusion about the auditor's responsibility over certain information like other information and other matters.

So certain other topics, and this list is not all inclusive, but it would be describing what's meant by reasonable assurance, and an auditor's report provides reasonable assurance that the financial statements are fairly presented.

So some have said it'd be helpful if the report described what reasonable assurance means. Another area is the auditor's responsibility for fraud.  The auditor's report today does not describe what that responsibility is and some said it would be helpful if it did.

Another is the auditor’s responsibility for financial statement disclosures. The financial statements include balance sheet, income statement, cash flow as well as the notes to the financial statements, and some have suggested perhaps it would be helpful if that was mentioned in the report.

Another is management’s responsibility for the preparation of the financial statements. There’s a sentence in the report today that says the financial statements are the responsibility of management but some have said it would help if it -- if there was better clarification that management is determining estimates and judgments and then the auditor’s responsibility is to issue an opinion on those financial statements. So what goes into the preparation of the financial statements.

Another is the auditor’s responsibility for information outside the financial statements, so MD & A. For example, we just talked about should there be greater assurance and we've talked about that auditors read MD & A for material inconsistency.

But the auditor opinion doesn't tell you that, and from what I heard from comments in the last section some think that auditors do a lot and they're all over it, as one person said, and others indicated well, they do a lot but it is limited to reading and so forth.

It doesn't go into all the things that's in the attestation report that exists but currently many auditors are not engaged to do those type of assurance reports.

And another possible area is auditor independence. The title says it's the independent auditor's report but some have said it'd be helpful to know more about auditors' independence -- if there's any potential issues discussed with the Audit Committee and have that brought forward in the auditor's report.

So the questions we're asking in that area include would these potential clarifications serve to enhance the auditor’s report and help readers understand the report, the auditor’s responsibilities, why or why not; what other clarifications or improvements could be made to better communicate the nature of an audit.

I said that the list I just went over was not all inclusive. There’s others. And then what are the potential benefits and shortcomings to providing clarifications in the report.

And then also in this section I want to cover other alternatives. So what alternatives or are there any other alternatives that the Board should consider as far as changing the auditor’s report. Would a combination of the alternatives that we’ve discussed today or presented in the concept release be more effective, so are you supportive of emphasis plus reporting on MD & A or something like that, and which alternative is the most appropriate and why.

So with that, I’m going to open up the discussion to both talking about clarification and other alternatives and we will effectively do that in now 25 minutes. So I open the floor up for your comments.

MR. BAUMANN: Things we are particularly interested in, as well as the commentary on clarification, are the things that we haven't thought about that we're not yet -- that weren't put in the concept release that somebody here thinks this is another good way to deal with clarifying or improving the auditor's reporting model, as Jennifer said.

MS. YERGER: Well, it's hard to say you oppose a clarification because by its very nature, I mean, everyone wants things clarified. I think -- when I see the long laundry list I get concerned that one of the primary benefits of that -- the current pass/fail report is its brevity and you add a lot of legalese, which I think a lot of this would be.

I don't know if that's a good thing. So let me just comment on two clarification/enhancements that were part of the Treasury Department's Advisory Committee on the Auditing Profession --

the ACAP, as we lovingly called it -- I was on that committee -- and I think they should be considered.

One has to do with the auditor's responsibilities regarding fraud, and we talked a lot in that committee about that expectation gap and our feeling was that the biggest expectation gap was about what's the auditor's responsibility when it comes to detecting fraud.

I think it's shocking, in a way, that the auditor's report doesn't even mention fraud, and the auditing standards do currently require the auditor to plan and perform the engagement to detect material misstatements whether caused by error or fraud, and I think that does need to be explicitly placed into the auditor's report.

The second item, which might be dubbed in the more provocative area and it's certainly an enhancement and not a clarification -- is -- and it was something that was discussed quite a bit at the ACAP was the addition of the name/signature of the audit engagement partner on these reports.

I don't think anything sharpens the mind more than placing a name on something and we think that would be a very important and valuable addition to the current report.

MS. RAND: Thank you. We do -- just on the second point regarding the name, we do have a separate project looking in that -- at that. So that's very active. I'm involved in that one as well.

This audit report is looking at the content -- what should be in the report. That other separate project, which is actively moving forward, goes into who providing transparency and to who. Is that Charles Elson or -- no, totally wrong. Sorry.

MR. SANTAY: Mike Santay.

MS. RAND: Michael. Sorry.

MR. SANTAY: Yeah. That's okay. Just a couple of brief comments. Generally, we support the changes that are outlined and some of these, you know, I think there could be some alignment with some of the proposed standards. For example, the International Standards on Auditing have addressed some of these matters and I think would be helpful to look at that as part of these considerations.

And then just, you know, operationally -- for example, if we were to add something around other information -- you know, reports get reissued, consents get used -- the other information might change. Just so from an operational perspective just be careful with how much detail we get into or specificity in some of these additions if the Board decides to move forward with some of these recommendations.

MS. RAND: Thank you. Mark Newsome.

MR. NEWSOME: Thank you. You know, the first thing is, you know, if you're going to expand the form in a boilerplate fashion I'm not sure that would be all that helpful.

I would encourage auditors to differentiate themselves with the letter -- make it more like an opinion that you might see in other situations. But with regard to the audit opinion itself, I would encourage you to include a negative assurance clause.

We often ask that of auditors in private investment transactions where the auditor will actually send us a letter, we're not aware of any defaults or other things that might cause you to be concerned or might cause a default in your own investment structure. I think that would be very, very helpful and something that people often want to see.

MS. RAND: The auditor's opinion is reasonable assurance (inaudible) higher than negative assurance unless you're looking for a particular negative assurance on particular items because the opinion goes as a whole -- the financial statements as a whole.

So are you looking for certain specific --

MR. NEWSOME: Right. I'm not looking for a lower level of assurance and so what I'm talking about specifically is a statement, we are not aware or have not become aware of any defaults or fraud or other matters, you know, in the opinion itself. That's something that we ask for from auditors separately from their opinion.

MS. RAND: It looks like I have the order down in a row. So Gary Kabureck and then Mark LaMonte.

MR. KABURECK: Thank you, Jennifer. Just a couple of quick comments in here. In terms of other alternatives, one thing you might consider is in the auditor's end report the role -- their involvement with unaudited statements, and you got a unaudited quarterly data footnote. I mean, it -- you've got some other unaudited, you know, subsequent events footnotes.

Maybe there's some other special industry disclosures that are unaudited. So what -- so these are annual financial statements. I mean, they're -- when they're filed they're covering stuff at least 14 months earlier.

So what's their involvement or responsibility for the unaudited data in their -- I'm thinking quarterly or subsequent events but maybe there are some other things -- again, just clarifying responsibilities that your work extends to the annual statements and not to the interim.

Now, maybe you got to clarify and say we've done reasonable procedures or something that goes back to the rest of the stuff about what else would you opine on. So there's that on the unaudited and the interim.

I think if you're going to pick one thing off this list I would say it's the responsibility for fraud whether -- either what the current responsibility is or what the (inaudible) may choose that should be in the future.

And then lastly, you know, Ann's point -- I absolutely personally agree with putting the auditor's -- signing engagement partner's name in the report, and I know we've discussed it several times at SAG and the PCAOB has done many times and you've heard me say more than once in this forum.

We've spent a lot of time on it. It's time to just give it a thumbs up or thumbs down vote, in my view. But since my own name is the releasing officer's in there I see no reason, you know, why the firm couldn't be there too.

I do appreciate you've hired the firm, not an individual. But nonetheless, these are Xerox's financial statements, in my case, but they are going out under my signature so --

MR. BAUMANN: You're endorsing the signature concept. Thank you.

MS. RAND: Okay. Mark LaMonte.

MR. LAMONTE: Thanks. Looking at your laundry list, I do see value in an investor knowing more about many of those things and the auditor's various responsibilities and the limitations thereof.

The concern I have about this or the thought I have about this is that you're just going to probably get very standardized language that will be the same from report to report depending on who the signing firm is.

So an easy way to address this or a way to address this more efficiently where you're not, you know, just increasing the forest for the trees problem we already have with very long annual reports is just include a Web link in audit opinions. It takes you to the firm's website where all of these things are described.

Beyond that, the one that could be unique for --from company to company is the discussion of auditor independence and issues affecting auditor independence.

Quite honestly, I would be surprised if investors are ever making investment decisions based on a view of whether or not they think an auditor is more or slightly less independent. So I'm not sure adding much on that in an opinion really would add value for investors.

MR. BAUMANN: On the point that Mark just made, Mike, or someone else, maybe you could help me. The U.K., I think, has that requirement today, don't they, where there's the opinion but there's a link to some of this other information about the audit. Do you know if that's accurate or not?

MR. GALLAGHER: Yeah, I think that is. I think that's -- you know, we'd certainly be, you know, very interested in looking -- certainly would have no objection to looking at that, Marty.

MS. RAND: Mark, just to follow up on your point about independence, in our outreach one of the -- I guess another reason that was cited that it might be helpful just to at least have a statement in the opinion for the auditors to reaffirm their independence. The title says independent auditor's report but if they sign off every year, yes, and we are independent there might be -- some perceive there might be some benefit to that.

MR. LAMONTE: I don't think a brief statement would hurt. I think that'd be fine. An extensive discussion, however, would not add value.

MR. BAUMANN: Well, the auditors are also required to report to the Audit Committee of matters that might be thought to bear on independence, such as if they had an independence violation during the year what that was and why they believe that doesn't affect their independence.

Do you think investors would benefit hearing about the things that might be thought to bear on independence -- that is, we found out that our manager owns some shares of stock and we replaced him or her and reaudited the area they were responsible for, and therefore we believe we can continue to express an opinion. Would that type of information be of value?

MR. LAMONTE: Of all the things we talked about today, I think that would be one of the least influential on an investor's actual decision making.

MR. BAUMANN: Thanks for that clear answer. We got clarity around something today.

[Laughter.]

MS. RAND: Okay. Flerida.

MS. RIVERA-ALSING: Thank you. Of all the list that you have, there are three things that I do support. The auditor's responsibility for fraud -- I would like to know what auditors do to assess the risk of fraud in the entities that they are auditing, and then the auditor's responsibility for financial statement disclosures.

On opinion page of the auditor's, they referred to the financial statements as only the balance sheet, the income statements and the statement cash flows. Nothing is being said about the notes to the financial statements, but really the devil is in the details. If you read the notes to the financial statements you will learn more about the financials.

The third one is the -- is the auditor independence. We hired a lot of auditors in our organization and they do an extensive check on whether indeed the entire audit firm is independent, but I noticed that it is more exhaustive when the entity that they are auditing is a public entity.

But if it is a private entity they don't really do a lot of -- I don't know, it's just my impression. They do affirm to the Audit Committee their independence and I do know that there are discussions about it.

Whether that is valuable to the individual investors or not, I think it is important for us to know if there is a conflict of interest as far as the auditors are concerned because we are relying on their words but if there is a conflict of interest should we rely on their words.

The fourth item that I do support is the name of the engagement partner. I would like to know who did sign the financial statements. Why should it be a secret? It is known in the entire audit firm. It is known in the company. Why should it not be made public? That's all.

MS. RAND: Thank you. Jack Ciesielski.

MR. CIESIELSKI: Thank you. First of all, I'd just like to point out, and maybe it's stating the obvious, but this is a little different than the other three areas that we discussed in the proposal in that it's not really so much amplifying information about the audit -- it's more or less redefining the audit report.

Maybe I'm envisioning it wrong from the concept release but I'm thinking that this would be a revised standard opinion and the language probably wouldn't change much from one company to another or from one auditor to another.

But I think what we have heard today is that there are different levels of knowledge of what goes on in an audit by investors and there's different levels of what investors -- knowledge of what investors do by auditors.

But, you know, by having something out there that more clearly delineates responsibility for fraud, for disclosures, management's responsibility, a statement of independence other than just, you know, the one reference to independence that we already have I think it would be good.

You know, maybe it would be a standard rubber stamp opinion but I think it would be a way of educating some investors about what an audit does or doesn't do, and I think if you have the possibility of having to state something embarrassing like what happened with our independence during the year I think investors indirectly benefit because I think firms would be very much more on their toes about whether their independence is impaired or the appearance of independence is impaired.

So, you know, I don't view the clarification of language section of the concept release as anything that's, you know, earth shaking but more or less, you know, clarifying what we've already implied in the existing audit report. So that's it.

MS. RAND: Okay. Thank you, Jack. Steven Buller.

MR. BULLER: Thank you. We sat down with our analysts and walked through these criteria, and it was interesting because as you go through them one by one you say, is it a good idea to put in clarification on reasonable assurance and the answer is oh yeah, it's a good idea.

And you go down to responsibility for fraud and they said oh, that's a good idea too. And you go through all of them and one by one they say, you know, those are good ideas.

Well, then you say okay, so here's what the opinion looks like, and they say oh, that's a lot of opinion. And so you almost -- we sat down and said let's talk about a Mazlovian hierarchy of needs and what you think would be most important to a user of financial statements -- what's least clear right now -- and they said that probably the auditor responsibility for information outside the financial statements for them would be the one thing which will be useful for clarification and also the responsibility for fraud would be good clarifications.

They thought that, consistent with our earlier comments, auditor independence should be in an AD & A section where it talks about auditor -- or an auditor inputs being used, the procedures they're performing -- belongs in that section.

They thought it was a good idea but not necessary to include auditor responsibility for financial statement disclosures and for preparation of financial statements. They thought those were pretty self-apparent.

But they would not -- we wouldn't object, certainly, with support and inclusion of all these in clarification somewhere. We just think that if it's -- if these are all part of the ultimate solution they probably belong in a separate and subsequent paragraph or a long footnote somewhere in the opinion so it doesn't overwhelm and obfuscate the ultimate communication you're trying to make about the auditor's conclusion on the fairness and presentation.

MS. RAND: Thank you. Regarding clarification, just a couple of thoughts. I see clarification as having a couple potential benefits. One, it really would add -- it would -- while it would add language to the standard auditor's report, it could serve to help educate investors -- better inform investors and other users of the financial statements about what an audit is and what it represents.

And another benefit I potentially see is, when the auditors are signing that opinion, having the auditor's responsibility stated in there for fraud helps reaffirms that responsibility when they're issuing the report that the auditor has done those things, potentially. So I see those two potential benefits.

I am very -- I don't see any other tent cards up but I am very -- we haven't gone over my 30 minutes for this session. So I am interested if others have any suggestions, thoughts for other alternatives that we have not explored today.

I guess we -- oh. Is that -- oh, Joe Carcello. Sorry.

MR. CARCELLO: This isn't really another alternative, Jennifer, but it looks like we're winding down and I wanted to get this in before. I didn't know when you were going to kind of call time here.

So it struck me that, really, this afternoon was very different than this morning. I think the last hour, although not unimportant, is -- clearly is lesser importance than the three things we talked about earlier today, and I think our discussion about the MD & A -- I agree with Sam on this -- it's a worthwhile discussion but it's probably down the road.

I think the real issue for the Board is going to be an AD & A and/or in emphasis paragraphs and how those are implemented. And so I went back and I looked at who we had here today and I -- if I counted right there's approximately 32 folks here today, not counting the Board and not counting observers.

Sixteen of those people could be classified as either direct investors or indirect investors or investor advocates, and the other 16 would be auditors, Audit Committee members and preparers.

And although those 16 auditors, Audit Committee members and preparers are very bright and very articulate and very well informed, the mandate of the Board is very clear in the language that Congress create -- used to create the Board and that is to protect the interests of investors.

There's really no ambiguity about that.

And so with apologies to George Orwell, all stakeholders are created equal but some stakeholders are more equal than others, and I would say investors are more equal than others than the people here today.

So I tabulated where people stood on the AD &

A and versus an emphasis paragraph -- and I encourage you and I'm sure you will go back through the transcript and audit my representation here. And so I'm going to go through this very quickly and if I'm miscategorizing anybody I would ask that they speak up, and this is in no particular order.

Steven Buller from BlackRock -- and this is a direct quote -- ''AD & A could be useful'' and then he kind of fleshed it out in a number of ways where he thought it could be useful. Flerida from the Florida Board in favor of an AD & A; Steven from Vanguard, AD & A would be helpful; Chris from Credit Agricole endorse AD & A.

Lynn Turner favors AD & A; I favor the AD & A. Ann Yerger favors the AD & A. Mary from CALPERS wants an AD & A. Jack favors the AD & A. Kurt wants the information from the auditor whereas less important so I'm not sure how you classify him. Paul from Capital Research, Matt from Fidelity and Gary Walsh prefer the emphasis paragraphs.

Mark Newsome from ING, I couldn't tell -- he never really explicitly stated it or if he did I missed it. But he talked about due diligence reports and how useful they were and it sounded a whole lot more to me like an AD & A than an emphasis paragraph.

MR. NEWSOME: AD & A.

MR. CARCELLO: I'm sorry -- AD & A. Mark LaMonte from Moody's -- give firms an opportunity to decommoditize their product. Again, I don't know if he said it explicitly but I think they probably have a better shot of doing that with an AD & A than an emphasis, but that's my judgment. And William Clark from the Federal Reserve, I couldn't -- I couldn't find where he really expressed an opinion on this.

So if I'm even close to right, there's 10 votes for the AD & A, three for the emphasis, two no opinions and one no statement at all. If you got that kind of vote on almost anything else in today's society you'd have an overwhelming mandate.

MR. BAUMANN: Thank you and -- well, I was just about to acknowledge you, Chairman Doty, but I wanted to first thank the group for a tremendous energy and participation today and throughout the entire day.

I know it was a long day and throughout the entire day everybody stayed committed to the discussions and gave us a lot of important information, and for that I thank you all very much. And I would like to turn it over to our chairman, Jim Doty, for final comments.

MR. DOTY: It struck me today how much this resembled a real deliberation and not a polarized debate. It is what regulatory administrative -- quasi-administrative bodies have to have.

When we started off this morning saying it wasn't the last such discussion we're going to have it certainly -- we may not have another roundtable before the end of the year on this concept release and on this issue but there are going to be other discussions of this kind.

And I think you should be very proud of the way in which you conducted the deliberation by linking all of the important things you had to say about the auditor reporting model concept release to the bigger issues that relate to the future of the audit profession, the welfare of shareholders, the vitality of corporate governance in our economy.

Listening to it, I think anyone who was thinking about whether a process is moving in the right direction would have been heartened and we are deeply grateful for that and cannot conceive of a better panel of expert opinion and enlightened thought.

Lawyers always talk about leaving your client's interest at the door. It never really is possible.

But in this case, we're speaking with the people who have the direct immediate interest in the financial reporting model and its issues from one vantage point or another, and you have managed to articulate your own interest in it in an enlightened self-interest way and in a way that helps all of us get to a better understanding of what each of us has to worry about.

We are deeply grateful to Martin Baumann and the standards group of the PCAOB. They have worked tirelessly and over the spring. This has been a most arduous period for them.

Like the long gray line of Douglas MacArthur's remarks, they have not failed us. They have never failed us and they never will, and we thank you all again for the support you've given them. You will hear from all of us again. Thank you.

MR. BAUMANN: Thank you, and safe travels.

[Whereupon, at 4:59 p.m., the meeting was adjourned.]

**NOTICE:** This is an unofficial transcript of the portion of the Public Company Accounting Oversight Board's Standing Advisory Group meeting on November 9-10, 2011 that relates to the Board's concept release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards. The other topics discussed during the November 9-10, 2011 meeting are not included in this transcript excerpt.

The Public Company Accounting Oversight Board does not certify the accuracy of this unofficial transcript, which may contain typographical or other errors or omissions. JOHN WHITE

DENISE WRAY

MEGAN ZIETSMAN

MR. BAUMANN: Our final session, as I mentioned, is a discussion about our comment letters and then further follow-up on the auditor's reporting model, and I'd like to ask Dan Goelzer to share with us some thoughts to kick this off.

MR. GOELZER: Thanks very much, Marty.

As Marty has just indicated, the last topic on the agenda for this meeting is the Board's review of the auditor's reporting model. I don't suppose that project requires much explanation for this group since it's been discussed here previously.

The objective is to determine whether the

Board should expand what the auditor's report to financial statement users conveys. That is, whether the end product of the audit should be something other than the traditional standardized pass/fail report.

We have saved this as the last item on the agenda, but I will say that at least in my view, this initiative is the most significant item on the Board's docket. I think that it raises fundamental questions about the purpose and value of the audit, and expanding the contours of what auditors communicate could have profound impact on investors, auditors, public company financial reporting, management, and directors.

Just a bit of background. Again, I know it's relatively familiar to this group. This is not a new project for the Board. It originates, I think, with the suggestion in the ACAP report. In any event, the Board has been looking for almost 2 years now at how it can increase the relevance of the information that auditors provide to financial statement users.

That effort on our side has included public discussion with both this advisory group and with our Investor Advisory Group. In addition, during 2010 and early 2011, we had a series of focus group sessions with investors, preparers, auditors, others.

And then, in June, we issued the concept release that we're going to be talking about this morning, which contains some alternatives for expanding the auditor's reporting responsibilities. We also held a public roundtable in September of this year at which those alternatives were debated.

We're now at the stage where the staff is analyzing the comment letters that we received on the concept release. And certainly, at least by PCAOB standards, the comment file is very voluminous. The last count we have was 151 letters submitted, and I believe, although the comment period ended some time ago, submissions are actually still coming in. So that number will increase.

We've heard from a very wide range of

participants in the financial reporting process or those influenced by the financial reporting process. And Jennifer Rand is going to summarize the comments in just a minute.

Before she does that, I thought I would just highlight some of the issues that I think the letters suggest the Board will have to grapple with as this project moves ahead. Of course, my views are solely my own.

First, if the comment file makes one thing clear, it's that investors deeply believe that they deserve more from auditors than they're currently receiving. There is very strong support for requiring the auditor to provide insight into things like financial statement risk, audit risk, significant judgments and estimates that management has made in preparing the financial statements, and the quality of the accounting choices that management has made.

Certainly, clearly, if we were to treat the comment process as solely an investor plebiscite, it's clear that a broad auditor's discussion and analysis requirement would be the winning choice. However, I think it has to be added that we've also received some views and other comments that raise some warning flags. A couple of examples.

A theme expressed in many of the comments is that management, not the auditor, should remain the primary source of information and insight regarding company financial reporting. Certainly many managements and directors see a risk of investor confusion if there are competing analytical presentations from the company and its auditor.

Also, some commenters have told us that the audit committee's governance role in overseeing financial reporting could be undermined by a broad auditor reporting requirement. In particular, we've heard from some audit committee members who believe that the quality and candor of the information that they receive could be compromised if the kind of information about financial reporting risk and accounting judgments that the auditor provides to them today routinely becomes public.

Further, questions have been raised about whether the training and standards that traditionally currently define the auditing professional equip auditors to create and communicate new information, as opposed to providing assurance on information created by others.  Some auditors fear that the effect of that kind of responsibility could be to widen rather than narrow the expectations gap that has traditionally bedeviled the profession and perhaps ultimately to decrease public confidence in auditing.

I won't go on with those examples, but I think maybe it's important to emphasize that our mission is to protect the interests of investors and further the public interest in the preparation of informative audit reports.  In light of that mission, we obviously need to give considerable weight, great weight to the investor views that we've received.

We also need to test potential changes in the reporting model against the goal of promoting full and fair disclosure. While I'm not speaking for the other members of the Board, I think I can confidently say that we're all committed to increasing the usefulness and the relevance of the information that the auditor reports.

But at least in my view, despite the volume and sophistication of the comments that we've received, the solution to the issues raised in the concept release is not self-evident, and creating a workable new reporting model will require the Board to make some very difficult judgments.

I'm looking forward to the discussion this morning and to hearing any additional thoughts that SAG members may have on how the Board should modernize the reporting model. And with that, Jennifer, let me turn the floor over to you so you can give a more detailed presentation about what we've heard in the comments.

MS. RAND: Well, thank you very much,

Dan. And thank you for your very thoughtful remarks.

What I plan to do this morning is provide you with a high-level overview of the comments we received, who provided comment letters and the types of themes we're seeing in those comment letters, as well as provide you with an overview of where we're headed in the next steps.

First, key milestones. Dan talked about the concept release that was issued on June 21. That concept release was informed by a lot of work that we did and outreach to many of you all, including investors, auditors, preparers, audit committee members, academics, attorneys, previous and current other regulators, et cetera. So we had very robust outreach, which helped inform our concept release.

The concept release was seeking input on changes to the auditor's reporting model, asking a basic question -- should the model be changed? And also asking, as far as options for supplemental or additional reporting, and the options we presented in the concept release included auditor's discussion and analysis, emphasis -- required and expanded emphasis paragraphs. Should there be additional reporting on other information, such as MD&A, earnings releases, et cetera? And also whether the report should be clarified?

We held a roundtable toward the end of our open comment period. That roundtable was held on September 15th. We had 32 participants and 2 observers, and those included the SEC and FASB.

The comment period ended September 30th, and Dan mentioned 151 letters, but we just received an additional letter yesterday. So now we're up to 152, which gives me great excitement because I am -- I do think we've received a very robust comment letter file and quite appreciative of all the comments, very thoughtful comments that we've received.

I feel like in each letter that I've gone through, there is gems in there that we need to pay careful consideration to. So I appreciate particularly those of you that took the time to write comments. They're very much appreciated.

The next slide gives you an overview of who we received the comment letters from. As I said, it was very robust, and we're considering each of these comments. As you can see up here, it's kind of listed somewhat and who provided the most comments to the least, and then we have a category for other.

Preparers provided the majority, sent us the majority of comment letters, followed by accounting firms, and then investors. As I said, we are giving considerable comment -- consideration to each of these letters. I'm going to provide a high-level overview of the different categories, the themes that we're hearing from the different categories.

Overall, we heard pretty consistently was a desire to retain the pass/fail model. So that's what auditor reports currently are today. Some of you call it pass/fail opinion. We've heard kind of resoundingly that that should be retained, but really also resounding need for change, particularly in the area of supplemental reporting.

In that area of supplemental reporting, whether it be an AD&A type report or an emphasis type report or reporting on other information, we saw quite a range of support on the type of change or the amount of change, depending on the commenter -- the person or group that provided comments to us -- and I'll go through that over the next few slides in more detail.

Starting with investors. In reviewing the investor letters, we saw kind of different themes coming from investors, and we kind of saw two different category of investors.

The first we saw coming from investor associations, pension managers, and analysts. In that, we saw clear support for auditors reporting on their assessment of areas of high financial statement risk; significant judgments; quality, not just acceptability, of accounting principles; and disclosure of significant changes or events impacting the financial statements.

Commenters in this group said that it

could be -- the form of reporting could be an AD&A type report or emphasis type report, kind of that form didn't matter as much, but the type of information mattered.  So they're looking for more expansive, the auditor's assessment, more than just identification.

Investors in this category supported other disclosures by auditors, including audit procedures, so the procedures performed on those significant financial statement areas or areas of high audit risk.  Also in this category, as far as information about the audit included materiality. So information about the audit, unrecorded differences was another area of interest about the audit.

And really, regarding other information or reporting on other information, commenters indicated that they're really interested in telling us more to having the auditor say more about what they're doing today on the financial statement audit rather than necessarily a desire to have the auditor report on other information.  So the view was clearly, "Just tell us more about what auditors are doing today."

The next category investor we categorized as large investment companies and advisers. Here, clearly, some desire for information, but it's less in the area of auditor assessment and more toward identification or pointing to those areas of significant areas in the financial statements.

So looking more for -- we saw some comments about tell us what the five largest areas of risk are, and where are those disclosed in the financial statements? So it was more of pointing to than a discussion of merit of discussion from the other category.

This group of investors indicated a preference that management be the primary source of financial information. So that's why not looking for an assessment or description of themes, but rather a pointing to where that information is disclosed by management in the financial statement.

There was some interest in information regarding audit procedures, but not as much as we saw from the other category of investors. And as far as other information, just again like the other group, preferring information about financial statements rather than assurance on other information.

Moving on to then preparers, clear view from preparers that management should be the primary source of information. Did not get support for AD&A or expanded and required emphasis type reporting.

As far as assurance on other information, concerns about that costs would exceed any benefits on that type of reporting, preparers don't object to clarification of the report, but didn't see a strong need that that would be necessary.

I saw some similar, but different views from Board members, including audit committee members, similar to preparers believe that management should be the primary source of information, not supportive of AD&A type reporting. But we had some mixed views regarding expanded and required emphasis reports. Some support some other, some less supportive, but not overall opposed.

There was some support for assurance on other information, not real strong support, though. And there was some support for clarification of the report, if that was considered to be useful to investors and other users of the financial report.

As far as accounting firms, saw some overall themes with some differences based on the type of accounting firm that provided a comment letter. Overall consistency, though, that management should be the primary source of information. Overall support or opposition to AD&A type reporting.

And here, we start getting into differences based on the type of accounting firm. Large and regional firms were supportive of emphasis type reporting, emphasis required, expanded emphasis reports. Also supportive of attestation on critical accounting estimates of MD&A.

Smaller accounting firms really were not supportive of either of those, didn't think it was that additional type of reporting, either through emphasis reports or reporting on other information, was necessary. So not supportive of that type of change. And then as far as clarification, that was supported by all types of firms.

Just have a slide up here to highlight comments we received from academics, other regulators and standard setters, and other individuals. We couldn't really see how we could group them because we got different types of comments within these categories.

So, academics, we saw some different views from certain academics that may have been longstanding academics versus other academics we saw that had been retired partners in an accounting firm and then an academic. So some different themes among there.

The other regulators and standard setters also had different views, depending on their own particular perspective. And other individuals and organizations include, in that bucket, we had actuaries. We have law firms. We have retired CPAs. So just a real mix kind of within each category.

So we didn't think it would be appropriate to summarize those like investors, preparers, et cetera. But we certainly are giving consideration to all comment letters that we have received. And we'll continue to receive if any should come in.

I wanted to point to some other comments that came through, the other I talked about kind of views from investors, preparers, auditors, others on the types of reporting, like AD&A and emphasis reports, other information, clarification. But there were some other themes that came through that we thought were worth highlighting.

Some themes came through, particularly from preparers, auditors, audit committee members, about working with other regulators and standard setters, particularly FASB and the SEC. So, as far as comments were coming through, that if there's need for additional information on financial information, that we should have a coordinated approach with the FASB and the SEC on what that might be to not duplicate disclosures that are already provided by management.

Also support for working with the IAASB and ASB and others as they're considering changes to the auditor's reporting model. There is also some support for additional reporting by or some reporting by audit committees. There was noted efforts in the UK, for example, on audit committee reporting and thought that might be an area of consideration, although recognizing that's not within the PCAOB's purview. And some comment support for considered field testing of any changes to the report.

There was also -- in addition to overall themes or considerations, there were some concerns that were noted. And again, these principally came from preparers, auditors, audit committee members, others rather than investors. But certain concerns about changes to the report, such as dueling information between the preparer and auditor, such that if the auditor were to have expanded report either through emphasis type reporting or AD&A, that how would that be in line or could be out of line or dueling with what management has said in the financial statements?

There were some concerns about this additional communication and the report impacting the audit committee's governance role for the oversight of financial statements to how would that play in? Where would that be if there's additional disclosure by auditor?

Some concerns about just impacting the overall three-way communication between the auditor, management, and audit committee. Some expressed concern about just with an expanded report there could be more boilerplate information, and that would not be desired. So concerns about that coming into play.

A number of concerns about maintaining confidentiality of company information. Some concerns that if the auditor had expanded disclosures in the report whether any of that company information that's otherwise confidential could be disclosed.

Concerns about increased costs, the increased costs were mostly described in terms of additional audit cost. But there was also concerns about costs being incurred, additional costs by preparers and also audit committees in having discussions or review or what's being said or what then might management say in the report in their financial statements.

Also concern about increase, potential increase in auditor liability, potential adverse effect on auditor independence. If auditors are saying here is the preferred view of accounting, then whether management feels they need to default to that. And then whether or not if that's the view that, in fact, it becomes more auditors' financial statements than management's financial statements. So concerns in that light regarding independence.

And then comments we're talking about all this additional disclosure, while it may improve communication, it's not doing -- there's little incremental effort or benefit on audit quality.

Our next step, what we've provided to have some discussion with you today is an overall high-level analysis. As I said, there's many different gems that we see in the comment letters. It's impossible to include all of the additional thoughts in these slides. So we will continue our analysis and our discussion with our Board in connection with next steps forward.

We cannot -- we're still in the process of digesting that information and discussing with the Board. So aren't in a position today to say what that will be as far as that it would come through in a proposal.

As we move toward a proposal, we will also be considering related projects of other standard setters, such as the IAASB. We'll also be having discussions, continued discussions with the SEC, as we have throughout, and also have discussions with FASB and what they're doing in terms of disclosures.

Our plan is to issue a proposal in the second quarter of 2012. I think, as Dan mentioned, our overall objective is to improve communication to investors, but certainly, we'll be considering thoughtful comments from others in determining our way forward.

So, with that, I see Barbara Roper has raised her tent card. But I'll open the discussion not just to Barbara, but to all others for any questions or comments on the auditor's reporting model project and comments we've received to date.

So, Barbara, I'll start with you.

MS. ROPER: Well, first, when I put my tent card up, it was specifically in response to that last slide, which went through and listed a number of other concerns with not necessarily any concrete backing behind them that have been raised. It could hurt independence. Well, it could improve independence.

It could, you know, do this. But it could have exactly the opposite effect. And I would just say I would hope that there would be --

as an investor advocate, we face this all the time, that industry raises concerns and they are given a credibility that advocates' expressions of hope about positive effects aren't given the same attention.

So I would hope that we don't -- I mean, I would like to see us go through the letters and find the same type of list of possible benefits to the rules. So that was sort of my initial emotional response to that slide.

But beyond that, I think the presentation is quite useful in separating out what sort of groups made what kind of comments. And the thing that comes through loud and clear from that is that investors think the system is broken. And if the document is designed to communicate to investors, the fact that investors are fundamentally dissatisfied with the document ought to carry a fair amount of weight.

And then I would add to that just we spent a lot of time talking yesterday about how can we promote greater professional skepticism among auditors? And it seems to me that one way you can do that is by forcing auditors to speak directly to their clients, the investors, about their views about the financial statements and that that has the potential to, one, make them focus on who it is that they actually work for, other than management, and it makes it more likely that they might be less willing to just go along to get along if they have to actually make an assertion of views.

So I think there's in an environment where investors have clearly indicated that they don't think a document that's designed to communicate to them communicates effectively to them, we should be looking at not just tinkering around the edges, but significant changes to the auditor's report.

MS. RAND: Thank you, Barbara.

I just wanted to comment on what you were -- one of your comments initially on the listing of considerations or concerns about changing the report. Certainly, we are giving consideration if there is a negative, could there be a positive, and trying to weigh and balance all of that. And recognizing what have investors said for a need for change and how can we effect such a change?

So we are taking those points into consideration.

MS. ROPER: And I realize that. I just think it's fairly typical, as an investor advocate, in this process that you look at a long list of statements from industry about their concerns for which they aren't really required to offer any backing except their expression of opinion that it could have this effect. It could chill communication here. It could do whatever.

And yet an investor advocate who makes a comparable set of assertions about what they think the benefits would be is asked to come up with a 100-page document of cost-benefit analysis to -- not by you, but as a general matter, as an investor, to justify that the regulation might somehow not end capital formation process as we know it.

So it's just a frustrating feature, but I recognize that you are balanced in your consideration. So --

MS. RAND: Thank you.

Arnold Schilder?

MR. SCHILDER: Thank you, Jennifer.

I would like to give a brief update of our similar project at the IAASB. First of all, many compliments for your presentation. I thought it was very interesting to see this overview of all your comment letters. And actually, we issued a consultation paper in May that had a lot of similarity, I think, between the concept release and our paper.

We also received many more comments than we usually do. We are currently at 82 comment letters, and usually there will be 40 to 50.

Many of the messages that you have shared with us came also across in our comment letters. I would say that particularly users seem to place most value on supplementing the information in the auditor's report with a discussion about auditor's insights on matters that include risks and views on the quality of management's financial statements, et cetera.

I'll never forget a quote that I once got from an investor representative. "We want more about the soft stuff." And that's basically about the judgments and the uncertainties and the ranges and the estimates, and that's what I see coming back both in your comment letters and ours.

Some striking points in letters that we have seen. One, of course, is, and you have mentioned it also, that a number of respondents urged us and the PCAOB to work together to develop a common global solution to audit reporting. And maybe it's a bit symbolic that my fellow Board member Arch is seated amidst CalPERS and the CFA Institute, two examples who are very vocal on this, and of course, we agree to that.

And another one was BlackRock, also familiar. Just quoting, "It's critical that the IAASB work with the Public Company Accounting Oversight Board to minimize the confusion and expectation gap that may be created if different auditor reporting models are adopted."

So that's the important message. I received similar messages from our CAG and regulators and others.

Also, and maybe a bit more than I learned from your presentation, there's a great deal of importance placed on other information that accompany financial statements. There was strong support for clarifying and enhancing the auditor's role and responsibilities with regards to that other information.

We have a project on that, revising our Standard 720. Hopefully, agreeing to an exposure draft in March, but that was an important item as well.

And thirdly, there was one difference, I think, between concept release and our consultation paper in that we asked more explicitly comments also about announced corporate governance reporting model, role of audit committees, et cetera, illustrating that, among others, we have the FRC proposals in the UK.

And we noted that respondents generally expressed support for exploring ways to help enhance management and corporate governance reporting and including that, of course, the role of audit committee reporting. I think the comment from CalPERS about cooperation between the two of us was also in that area.

And also many respondents urged that increased audit communication requirements would likely require additional auditor guidance to ensure consistent and appropriate application, but also let's say education of users and readers of that information, if it will be different from now.

And of course, one example would be where now the case will be that if an auditor expresses an emphasis of matter, usually there's a bit of a reaction. "Oh, gosh, there's a problem." And if you would like to change that into a direction that it would be more normal, that auditors would express more EOMs, other matters, AD&A, whatever you call it, then it should also be received in an appropriate way.

I will not -- I have a list here, but as I said, there are other similarities in many of the specific comments. And of course, also difference of views, as was clear from your presentation. We see it as well how far can you go?

Some specific challenges that were also identified in addition to yours. How one is maintaining global consistency in auditor's reporting while at the same time providing additional customized information? And then, of course, avoiding that it will be boilerplate in the end.

Also the issuing of dueling information, the risk of blurring responsibilities. On the one hand, those charged with governance providing the information. On the other hand, auditors attesting to that or doing more. That's a key issue for further consideration.

Understanding impact of changes not only in terms of cost, but how would it be understood and how would it be appreciated and how would it be done? And then also how to allow for developments in different jurisdictions. So should it be all the same, or could it be different depending on developments in, for example, UK, France, here, Australia, et cetera?

So, all in all, we will discuss in our board meeting in December -- 5 through 9 December in Los Angeles. For those that are near to LA, if you want to attend, I mentioned it already to Mary, our meetings are fully open. The agenda papers will soon be published, and we will discuss this.

And there will be a project proposal from our task force, and I figure just a draft version. But the project objectives are here described, and that may change, but the direction is clear.

First, to determine whether and how the IAASB reporting ISAs and their design can be modified to accommodate evolving national financial reporting regimes while at the same time ensuring that common and essential content is being communicated. And second, appropriately enhance the communicative value and relevance of the auditor's report through proposed revisions to the

ISA requirements that address its structure and content.

So, basically, there is a need for change, and that would be in particular regarding ISA 700. And I think this is a great momentum to move into that direction, and I would be fully supportive to those that have urged us to cooperate in particular on this line between the PCAOB and us, but also if standard setters and regulators and I'm sure that we will come somewhere, although I realize that it will not be an easy process.

That's my summary of where we are. Thank you.

MS. RAND: Thank you, Arnold.

Joe Carcello?

MR. CARCELLO: Jennifer, I'd like to ask a question first, and then I'd like to make a couple of comments. Can you go to your second or third slide? Can you go back to your second or third slide?

MS. RAND: I'm not in charge of the clicker after my yesterday challenge.

[Laughter.]

MS. RAND: Which slide in particular? Was it on the investor overview?

MR. CARCELLO: Well, you had the buckets of who responded. The number --

MS. RAND: Okay. The overall number?

MR. CARCELLO: Yes. Okay. That one right there.

MS. RAND: There you go.

MR. CARCELLO: Here's my question before I make comments. When you classified the third bucket there, investors, including investor associations, pension managers, analysts, and large investment companies, and advisers. So when you got a comment -- and let's say for hypothetically, we'll use Vanguard -- did you put them in that bucket, or did you put them in the preparer bucket?

MS. RAND: What we looked at, there were some we had to read the overall comment letter, and sometimes just overall classification was not easy. Sometimes very straightforward, but sometimes not easy.

There were certain things that I picked up a letter that seemed like it may have been an investor, but recognizing the organization was signing it from it was more the preparer house, the CFO or their accounting function. So, in that case, we would have put them in the preparer if they were essentially issuing it as a preparer.

MR. CARCELLO: Okay.

MS. RAND: But other letters like that, other letters came through, they would say we took a poll of our investors and the people doing the investing in the company. So, therefore, we put that in the investor category.

MR. CARCELLO: Okay. Just, and I'm saying some of this for the public record. I realize that the staff knows this. In the case of Vanguard, it's user and preparer. In the case of Capital Research and Management, it's user and preparer. In the case of BlackRock, it's user and preparer.

In the case of Fidelity, it's explicitly for the preparer. And in the case of State Street, it's explicitly preparer. So it sounds like you've made that adjustment. But I think it's important to understand that in terms of some of these asset managers, it's at best -- it's two perspectives. It's not purely an investor perspective.

I think it's also important to understand that the resources that the corporate community and the accounting firms can throw at this issue vis-a-vis the investor community, particularly pension plans and analysts and so forth, are so uneven. Talk about a lack of a level playing field. It makes the U.S. versus Russia in 1980 hockey look like a pick 'em hockey game, okay? That's about the scale that we're talking here.

I think it's also important to look at the assets under management in terms of the comments that you received not just from the asset managers, but from the pension funds. It's very, very significant assets under management.

Can you go to the slide that Barbara asked about? Can you click forward to the slide that Barbara asked about?

MS. RAND: That would be cost, I'm assuming, right? I mean concerns.

MR. CARCELLO: Yes, concerns.

MS. RAND: Which included cost as one of them, among others.

MR. CARCELLO: Yes, at the risk of repeating some of what Barbara said, as I was sitting here, I thought exactly the same thing. She just beat me to the punch.

I don't think this was intentional, but it's clearly asymmetric. It's presenting the downside, but not the upside. And there is a lot of potential upside.

So I think in fairness, in future presentations, if you're going to present potential downsides, you also need to present potential upsides. And I'm not saying you're not considering those. But when you present it, it would be more balanced.

When you look at these comments, though, expanding the auditor's role and the possibility of dueling information, if you look at the investor comments to the extent that they commented on this almost without exception, they said this is something they can manage. This is not something they're troubled by.

Adversely impacting the audit committee's governance role and the three-way communication, again there was investor arguments that, in fact, it may enhance the alignment between the audit committee and investors. The fact that the audit committee's perspective almost exactly mirrors corporate management's perspective bothers me. As an investor, that bothers me.

I view the audit committee as they ought to represent me. Corporate management doesn't need additional representation.

Risk of additional boilerplate language. That's why you have an inspection division, and that's why you have an enforcement division.

Increased costs. Let's not lose sight of the fact that although the company writes the check, they're writing the check with our money. At the end of the day, even Fidelity and Vanguard, that's just 401(k) and 403(b) money. And so, if investors want this information, they are paying for it.

Potential increase in legal liability of accounting firms. There may be validity there. I think that's something that you need to work with with the SEC. There are potential ways of dealing with that that I think would protect the accounting firms from additional legal liability.

Every investor I've spoken with, I have not heard one investor say to me we want this as another way of grabbing for the pockets, the wallets of the accounting firms.

Little incremental improvement in audit quality. Again, if you look at the CalPERS letter, Jennifer, the Vanguard letter, the Capital Research and Management letter, they all argued, in fact, that this additional communication will give the auditor additional leverage with management and, in fact, will increase audit quality rather than decreasing audit quality.

So that's what I mean about kind of

showing both sides, and it's the same point that Barbara made.

MS. RAND: It's clearly our goal here -- the comment period ended not that long ago, a little over a month ago, September 30th, with comment letters coming in like yesterday, literally yesterday. I take the point that it's impossible to say everything, as I said early on, to put everything in a slide.

There were a number of -- this slide is capturing the frequency, the ones that came through a lot. Not to say that the points you mentioned, and even Arnold raised a point that we didn't highlight in there, but that came through as well as far as consistency or a type of framework. How do you, when you say "significant risk," how are we capturing, getting auditors to think of those risks on a consistent basis that we would expect to see in an audit report?

So a lot of those themes came through. So it can't be perfect, and so I recognize that. And we take all of those points into consideration.

But our desire today was to share with you kind of some of the things we saw coming through frequently, the type of comments that came through, but recognize that there's other points.

Even like clarification, there was concerns about even doing something that I may think would be the easier thing to do, just clarify language in the report. Some comment letters would talk about fraud is really most important, and that was really the one that came through in ACAP, and all the other types of clarifying language could have the effect or certain comment letters didn't want the effect to be minimizing the auditor's role in any way.

So there's no change that would be easy and a lot of careful consideration, and we did get a lot of good thoughts and comment letters, as you point out and Arnold mentioned. But anyway, I just wanted to highlight we're aware of all those things. So we haven't lost sight of them at all.

Let's see, who's next? Denny Beresford?

MR. BERESFORD: As long as that slide is

up, I'd like to make sure that you add one more item to it, and that is --

MS. RAND: Once again, it's not intention to be everything. But --

MR. BERESFORD: I understand.

MS. RAND: I'm going to switch off this slide after this.

MR. BERESFORD: No, no. Don't -- leave it. Because I'd just like to make sure that the Board members do consider one more thing, and it ties into Sam's point earlier on that I wanted to make sure that the Board members consider the effect of slowing down the closing process.

MS. RAND: I was thinking with increased cost, our thought was it's in addition to money, it's time. That came through kind of cost of the time.

MR. BERESFORD: Well, and the focus really of the engagement partner and the senior officials, senior people on the team that depending on the content, depending on what other decisions, obviously, are made -- if it's an auditor's discussion, analysis, if it's several emphasis paragraphs -- depending on the complexity of the report, depending on the procedures that an accounting firm would need to put in place, for example, almost certain approval through the national office of the firm. Every report would be lengthy and custom made.

Outside counsel of both the accounting firm most likely. Outside counsel or at least inside counsel, if not outside counsel, of the individual company. And this is going to be a very intensive process that's going to add time near the end of the examination, when we don't have a lot of time when we're dealing with 60 days past year end.

And there's not a whole lot of slack in those schedules right now. So we're talking now about having to back up several days from the extremely tight deadlines that we have right now in order to accommodate that, which is just going to eat into our you might say substantive procedure performance time. And I think that has some danger of taking our eye off the ball on the really important things that the audit partners need to be spending time on.

MS. RAND: Okay. Thank you.

Wayne Kolins?

MR. KOLINS: Thanks, Jennifer.

I have a comment that's less -- that's more granular and less contentious than most of the other ones. Just in the discussion yesterday about going concern, now this one and one of the elements here is the emphasis of a matter paragraph that's being considered. It may be that we just put a placeholder in when we look at the going concern because of the substance of the discussion yesterday was is the on/off switch the right thing, or is it a sliding-scale approach in terms of what the disclosure needs to be?

And if there is to be a mandated expanded emphasis of a matter paragraph going to more of a sliding-scale, qualitative discussion of the factors that could lead to going concern uncertainty may fit better into that kind of a section of the auditor's report rather than just the one blinking light on/off switch of a going concern by itself.

MS. RAND: Thank you, Wayne.

I seem to have a cluster of open comment cards to go. There could be others. I see some others coming up, but I have Arnie Hanish next on my list.

MR. HANISH: Thanks, Jennifer.

First of all, let me echo what Denny said. I think those are really important points that really should be heeded as far as the timeline.

MS. RAND: Can you move closer to the mike? I'm just not hearing you as clearly as I had earlier.

MR. HANISH: Okay.

MS. RAND: Thank you.

MR. HANISH: Is this better? Okay. I've never been told that I was so quiet.

So I want to echo Denny's comments. I think, having lived through these timelines, the accelerated timelines, to get documents filed with the SEC, the challenges that we have today with XBRL and all of those issues that are out there, I think this obviously would put significant additional pressures upon us, as well as the audit staffs of our auditors.

So let me sort of raise a couple of points. It seems to me, and we're definitely -- I mean, I and our company are definitely not in favor of the AD&A. I think that it would be, in my view, a terrible mistake to include this in any documents.

I think it is, as I think you articulated, it's management's responsibility to communicate. I think that it would be in direct conflict if we choose to keep the pass/fail for the audit because why have a pass/fail if you're then going to ask somebody to come in later and try to articulate the -- what are perceived to be judgments with regard to accounting within the overall framework of our financial statements?

We all know that GAAP is not black and white. There are lots of judgments and ranges of estimates and outcomes in coming up with accruals. The SEC attempted to deal with that, with the initiation of disclosure of critical accounting policies and requiring us to provide quantitative explanations as to what would a change in various assumptions result in.

So I think if you look at our -- if you look at most companies' critical accounting policies, if they're articulated in an appropriate way in accordance with the SEC rules, then you would see that there are already in those documents and in those paragraphs quantifications of the change in estimate. Whether it's a 10 percent change in various significant accruals or a 10 percent change in pension assumptions or whatever the case may be, if the disclosures are appropriate, there should be quite a bit of information in there to provide the investors with some assumptions and analysis as to what would a change in those estimates result in with regard to our financial statements.

But again, we've concluded that -- at

least maybe we've concluded, I hope we've concluded that we're going to retain the overarching pass/fail. And therefore, the financial statements are prepared in accordance with GAAP.

I certainly would be in favor, as are a number of preparers that I've spoken with, they are in favor of an expansion of the report. I don't necessarily think you've captured that. I haven't read all the letters, obviously, that have come in. But I certainly have had discussions with a number of preparers, and they are in favor of an expansion of the current report.

They are in favor of including additional paragraphs of emphasis where the audit is. We don't think it's absolutely necessary because we think if you look at the critical accounting policies and some other things that you can glean from that where the auditors have spent most of their time.

But if investors believe that that's important, then we're certainly happy to have that included in the expansion of the auditor's report to make it clearer that areas of emphasis would generally include those areas that are identified as critical accounting policies. They would include probably major acquisitions, divestitures, areas of impairment of goodwill, areas of emphasis around the current economic conditions, as we talked earlier this morning.

I would be shocked if any auditing firm didn't focus their efforts on those areas of emphasis. And so, there is certainly nothing to hide from my perspective as to where our auditors have spent their time auditing.

But going beyond that I think is a terrible mistake. Again, I don't believe the system is broken, as Barbara might suggest. But she's entitled to her opinion. I'm entitled to mine.

I think that if we enhance the disclosures and the paragraphs, but stopping short of trying to have some sort of an opinion as to whether our financial statements are either conservative or liberal based upon the assumptions that are inherent in numerous estimates I think is where it ought to stop. And if you're going to do that, then you need to change the pass/fail and do something other than a pass/fail because I think trying to provide any expansion through an AD&A undermines the pass/fail that we're suggesting that I think should be retained.

Thank you.

MS. RAND: Thanks, Arnie.

I just wanted to, at the outset of your remarks, you made a comment that I articulated. You said, as I articulated, it's management's responsibility to communicate information about the financial statements. I haven't stated a view. All I've been trying to say is what others have said.

So we're seeing that view reflected in comment letters, but that's not my view, necessarily.

MR. HANISH: I didn't intend it to be your view, I intended -- I believe that it's management's responsibility. And if I said the otherwise -- it is our clear responsibility to maintain and communicate. They're our financial statements, and auditors can provide some insights, but not to the level that was suggested in this concept statement.

MS. RAND: Okay. Thank you.

Damon Silvers, you're next on my list.

MR. SILVERS: I mean, I found Wayne and Arnie's statements very interesting. Particularly Wayne said something that I was going to say, and I'll say it again, which is that I think there is a deep connection between this conversation and the conversation about going concern and the role of emphasis of matter in relation to going concern.

The more -- and I think there's also a deep connection between this conversation and the larger drift over the life of this Board of the financial reporting system toward more of a fair value approach. Then this is what I mean by this.

By the way, I don't think it's a particularly controversial notion that the preparer prepares the financial statements. The auditor audits them. I don't think anyone would disagree. So I don't feel like staff is stepping into any kind of dangerous terrain in asserting that.

But the nature of the audit as a binary exercise was an easier piece of terrain to defend when the financial statement that was being audited was substantially -- where the balance of the financial statement tilted more toward historical cost accounting. You were having an inquiry at that point that -- again, these are matters of degree. It's not absolute.

But the inquiry at that point was more an inquiry into whether things were being -- into whether the financial state of the firm was being, I suppose, accurately reflected in the financial statements in a kind of binary way. Were they or were they not lying? These were kind of like WorldCom questions, right? Did somebody erase one number and put another number in?

As you move toward a fair value system and particularly where you're fair valuing items for which there is not a liquid market, you're very quickly getting into a whole set of difficult to assess judgments, and it's harder and harder to answer the question about the accuracy of the financial statements in a binary fashion. And investors, when presented with financial statements of this kind, are increasingly asking of auditors something more than a binary opinion.

Similarly, on the -- in relation to the going concern matter, you have this same issue. If auditors and firms are unhappy with the prospect of potentially broadening scope of going concern anxieties, there's a natural push toward wanting to have something else to say rather than to have to express what is in reality, in the real business world, a very destructive statement that a firm is not -- that there's a going concern issue.

I think that's what makes -- those are the considerations, I think, that are at a more profound level driving the Board's inquiry into this area, and I think there are reasons for the Board to push in this direction that are only tangentially related to the question of whether or not the system is broken.

I think we get the system we ask for. And we've asked for a system that has the -- we, meaning all of us, have asked for a system that has the features that I was just reviewing. So then the question is what could the Board seek in terms of an audit letter that would be appropriate in relationship to what the role of the auditor is and would actually convey additional real information?

I've been around long enough sadly now to have seen a number of disclosure initiatives turn into mush. And it's not worth anybody's time doing more of that.

In the comment letter that we filed with the Board on this matter, we said basically anything that's going to be real in this area is going to have some aspect of the forced curve in it. And it seems to me that where these comments, where you might find some consensus in the varied comments you've heard today is in the notion that there ought to be more -- that it's sort of what the mutual fund said that they wanted, that there is a desire here for auditors to be much clearer and much more precise about where -- in their audit letter -- about where the areas of concern are, where the focus was.

I think if that's left free form, I think it's going to be mush. But I think there is some reason to hope that properly structured, such a requirement could actually provide information that was useful to investors and the public, and that was responsive to the actual nature of the way the financial statements and the role of the auditor have evolved.

So that's what I hear in the conversation, and I can tell you that I think your summary of investor interest in these areas certainly reflects what I know of investor opinion, that we don't really live in a binary world and that auditors know a lot of really important stuff about the quality of financial statements that would seem appropriate that investors have some access to.

MR. BAUMANN: Thanks, Damon.

I think all of these comments are very helpful, and we'll get to the other commenters. I did just want to share that, to some extent, what we are hearing, and I did hear it -- at least I thought I heard it -- recently at a meeting over at the SEC in the financial reporting series is that current accounting rules aren't adequately dealing with the measurement uncertainty that you talked about that's pervasive in financial statements.

And especially as there are greater movements to fair value accounting, but measurement uncertainty can also exist with complex allowance for loan losses and other things that are not of fair value. But accounting rules are not adequately dealing with that measurement uncertainty and could require disclosure of not just the point on the financial statements, but the ranges in the footnotes and inputs and assumptions that went into that measurement and give greater insight to investors about that uncertainty to help them sort out how they might model a different value of the company, et cetera.

So, to a large degree, we're hearing that. I heard it quite a bit at that meeting I was at recently. I think then I'm also hearing that since that's not being resolved, then PCAOB, we need to have the auditors communicate that because we're not getting it in any other fashion. And the auditors do have insight into those measurements and uncertainties and difficult issues. And so, resolve this through the auditor's report.

But yet others are saying work together with the accounting standard setters and try to solve this together because it is both a disclosure issue and a reporting issue.

So a lot of things on our plate here. We're committed to trying to get a proposal out to improve this reporting in 2012, but I think we're also committed to trying to work with these accounting standard setters to improve the total framework. And I think that's an important message that we've heard.

Thanks.

MS. RAND: Okay. Barbara Roper?

MS. ROPER: So I'll be quick because between you, Marty, and Damon, you've actually made the primary point that I wanted to make. So I won't belabor that point.

But beyond that, reacting to two things. One, I had exactly the same reaction Joe did on the responses from the audit committee. And there is sort of this sense that those who are already sort of in the tent think everything's fine and we really don't need to change anything. And those who are outside of the tent are saying it's not giving us what we need.

And I think investors might have more confidence about the role of the audit committees in overseeing this process if they didn't seem so frequently to speak with the voice of management.

But I also had a reaction to this point, this concern that was raised about dueling information because I thought, well, what's the implication of that? We're concerned that we would have dueling information coming from management and auditors.

Is the suggestion that auditors are routinely signing off on financial statements where they have views that are so significantly different that there would be some sort of conflict raised between what auditors might say in their assessment and what management would say?

And if that's the case -- I mean, because that's dueling information, right? Dueling information is information that's in conflict. Are investors better off not knowing that auditors and management have differences so significant that they would result in dueling information? Or if there's that kind of dueling information, are investors better off if they're informed of that?

And I would suggest that ideally that situation would not arise, but if the situation exists, investors should know about it, or maybe they ought to get their differences resolved. And if they have to publicly comment on it, maybe they would get their differences resolved.

MS. RAND: I think regarding dueling information, I think -- and auditors and others can speak for themselves. But in coming through the letters, kind of the sense I got on that point was certainly any significant differences would have to be resolved. Otherwise, the auditor couldn't issue the report today.

Talking about any nuances to some extent, in light of that point, if there's any significant differences, the auditors wouldn't be issuing their opinion. They'd have to -- those would have to be resolved. So then what more additive are they saying because it's points below that line. You know, they have gotten comfortable. There may be certain things that are more minor and then kind of to highlight that wouldn't be fair to their opinion, if that's coming across clear?

So --

MS. ROPER: Right. But that's a fundamentally different issue. If there are nuances, if the auditor is adding a nuanced understanding of the information, that is different from dueling information. And so, you can't sort of -- the people who are making this argument can't have it both ways. Either we're having dueling information that's going to come out there and investors are going to be somehow harmed by that, or the process of doing this reporting is going to eliminate the conflicts that result in dueling information. And what I get is some slightly different versions of the same truth.

So, I mean, you just have to sort of chose your argument and go with it, but the argument that's out there that this results in dueling information I just don't think works. I mean, I don't think it's valid.

MS. RAND: I accept that.

Mary Hartman Morris?

MS. HARTMAN MORRIS: Thank you, Jennifer.

I just want to say hear, hear to Barbara and Joe and Damon and what they said. I think auditors are in a unique position, and of course, we are shareowners. CalPERS is a shareowner, and we use that. We emphasize that we're the owner of a company.

And I think that only in this situation

that auditors are trying to appear adversarial because in any other industry a customer would help dictate what they would like. And I think that this is an important point. Investors are speaking out and saying that.

CalPERS signed onto two different, separate letters. I don't know if that was -- I wanted to emphasize that. We signed on as a member of IAG, the Investor Advisory Group. We also sent a letter from CalPERS. We also sent a letter to the IAASB.

And I think that it's really important that your numbers, and I think the points I want to make is that it only shows 16 investors. I'm not sure how you categorized the IAG letter, 70 preparers, 35 auditors. But I think identifying assets under management, I think that's probably an important point, asset owners.

I think that one other point -- a couple other points I'd like to make on what, Arnie, you mentioned about the pass/fail. I think investors still want that. I mean, it's a quick way to look at, and I think from your perspective, you're a preparer at this point. And the pass/fail is important to just show quickly what the auditor's opinion on. But I think it's really important that auditors then develop and explain to investors as a customer that perspective. You know, what is the important issue? What are the risks?

I think that CalPERS and other people in this room participate, excuse me, in the global auditor-investor dialogue, and we've been talking about the auditor reporting. But I think I'll mention Steve Mazlin, but he's, like, "Mary!" But I think that he, from his perspective, is trying to understand and provide a better perspective, a more balanced end from the auditors and receiving our opinions more from a customer's perspective. And I think that there is a role for auditors to provide more additional information.

On the point about the audit committees, we definitely respect the audit committees. They're a fiduciary to us in their responsibility to shareowners. But I don't think that there's a problem with the audit committee saying some things and the auditors providing additional information. I mean, that's the stewardship of the company. That's providing information to investors, to the owners.

So, with that, I'll leave it at that. Thank you.

MS. RAND: Thank you, Mary.

Jeff Mahoney?

MR. MAHONEY: Thank you.

My analysis may be a little bit too simplistic, but that's the way I look at things.

I would start off saying that investors are the primary customer of the auditor's report. I think everyone would agree with that. They ultimately pay for that report.

Evidence indicates that they are dissatisfied -- I think you said that in your summary -- clearly dissatisfied with the contents of the standard auditor's report. I think the evidence also shows that they want more information, and I believe the evidence shows they want more information directly from the auditor that they're paying for.

And I think the evidence also shows that, at a minimum, what they would like to see is they would like to see that auditor, as an independent expert, provide their assessment of management's critical accounting estimates and judgments, at a minimum. That information would provide investors with some useful data points to analyze and price risks and make investment decisions.

And as a shareowner, it would also assist them in making their voting decisions, both with respect to the audit committee members as well as with respect to their annual vote on the external auditor.

I think the bottom line is if you continue to ignore your primary customer, the risk is that the customer is going to continue to devalue your product. And I think we can all agree that that's probably not a good result for the auditing profession.

Thank you.

MS. RAND: Just as far as the auditor letters, we certainly saw recognition from many auditors with support for change to the report, too. So if they want to speak for themselves, they're welcome to do that.

Lynn Turner?

MR. TURNER: Let me just start out by saying I give tremendous kudos to the five members of the Board and Marty for taking up these issues we've discussed today and yesterday. These are tough, tough issues. They've been around for a long time.

And as I listen to the arguments, the issues have been around a long time. The arguments have been around a long time. Not a whole lot has changed in the meantime. So I think it took a lot of courage to put these up on the agenda, and I give you all kudos for that.

Having said that, I think what we've just heard from the last few commenters on the investor side is correct. It's a simple question. It is are you going to give the customer what numerous surveys now have shown that they wanted? Are you going to build that product or not?

And it is a tough decision, but it's a tough decision for anyone in business as to whether or not you're going to build what the customer wants and satisfy them or not?

It's very natural for members of management -- I've been there myself. It's very natural to be hesitant to have someone from the outside come in and publicly comment on what you're doing. But we'd have them come in and do surveys of the quality of our product. We'd have them come in, and we'd have customers come in and survey us as members of management.

I've seen other companies do it. GE does it under the Six Sigma type notion. It's always queasy. You really don't like it because you can't control what's going to happen with it. So I think there is a very, very natural hesitancy here to push back and say let's not go there because we want to stay in our comfort zone.

But staying in our comfort zone is what

has got us in the trouble that we're in today. And Marty, you talk about the uncertainties on derivatives and loans and fair values. I worked on Wall Street in the early '80s. We had derivatives then. We had fair values. We had loans. It's not new. Again, it's just one of those things that people discuss.

But the reason those things keep coming up in the papers is we've never got standards that delivered the information to investors that they wanted, including the standards about risk and uncertainty that you've aptly mentioned a number of times. It's the fact that every time we make incremental changes on these issues. And so, instead of fixing the problem, we go incremental.

And I think the real challenge for the Board here, for the five of you, is, are you going to go incremental, in which case what Jeff just said was absolutely true. You're going to continue to get criticism. You should expect to continue to get criticism, and there will be further degradation of the confidence in the product.

Or are you going to go big, make that tough decision, and deliver a product that people want? These are tough decisions. But that's why the five of you are in these roles. If they were easy decisions, we could have anyone in those five seats.

But we aren't. We've got great people who I think you've shown great courage. And I'd encourage you on this one to swing for the homerun, and I think what you've heard from Mary and Barb and Damon and Jeff is where that homerun is.

MS. RAND: Thank you, Lynn.

And I just see one other card up. So I'll turn it over to you, Arnie Hanish.

MR. HANISH: I'll try not to be redundant here. But this issue of dueling perspectives that was raised, it's hard for me to have a full perspective on that because we don't have dueling perspectives at our company. We have issues, we get them resolved, and -- but I would expect that -- and I would expect my auditors, if there were contentious issues that were dueling perspectives, that they would communicate those to my audit committee. I would expect that those be brought up. I would expect that a discussion would ensue.

And I know at our company, ultimately, I believe the audit committee would have final say as to whether or not they were going to side with the auditors or side with us, as far as management was concerned, over an issue that was a "dueling perspective" on accounting issues. But I know that not all companies are like our company, and I can't speak for all those other registrants that are out there, thousands of them.

But again, it's our responsibility. And I would believe -- I believe that there is enough in the current literature, whether it's the SEC literature around critical accounting policies, around MD&A disclosure, that if something is "broken," if there needs to be more disclosure for the investor -- because you are the customer, you own us -- then, to me, that's where it should come out.

And you should be pushing us to have

better disclosures with respect to our critical accounting policies, highlighting those areas of risk around the inputs and the outputs with regard to financial instruments or whatever the material aspects are that are of concern to us as well, because they're the same concerns that we have that we have to wrestle with all the time.

But I believe that the current mechanism is there. If something is broken, then it should be dealt with through those existing mechanisms. I believe, as I've stated earlier, we certainly are supportive of an expansion of emphasis in the report. That certainly is not troubling to most of the people that I've spoken with from the preparer community.

Other issues I think with regard to changes and estimates and what are the various inputs that go into those material aspects of our financial statements I think can be dealt with through existing disclosures that should be evident to all of us.

MS. RAND: Yes. Thanks, Arnie.

I see two more cards that went up. Neri Bukspan and then Mike Gallagher.

MR. BUKSPAN: Thank you, Jennifer.

And then, again, apologies if it looks like I missed an important part of the discussion. But what strikes me from the presentation and some of the discussion now that there are certain elements and there is certain desire for information for some reason investors are not getting.

From looking at your slides, there is some discussion stating, you know, not necessarily objecting to this information but suggesting it's not really my role, it's their role. And if it's not their role, it's the audit committee role.

So I think it may be useful to think about it almost as a package and as a matrix, right, because things are moving from one side to another. And think about whose role to deliver what that, ultimately, this information will be presented. And to Arnie's point, nothing falls between the chairs. Because in the current environment, maybe it's there, but there's a lot of things that falls between the chair in moving between the responsibilities.

And one element would be maybe you need to think about not only changing the auditor report, but suggesting to think about changing some other things. Maybe there should be an audit committee report suggesting how the audit committee executed its responsibility with respect to the audit and what's the dialogue with the auditor itself. So there is not necessarily one thing that you need to solve for, but a broader issue to solve for.

Yes, there will be a change to the auditor report. It will suggest some elements worth some consideration. Whether it's in the auditor report or an auditor MD&A type, that's a packaging issue in my mind.

Then perhaps there is another room for companies to suggest what their view is on these same particular issues and, in fact, also for audit committee. So maybe there is a role for each element here to be ramped up or notched up rather than suggesting you must -- there is one silver bullet that resides necessarily either with the auditor report or elsewhere.

So I would suggest thinking about it together as a package and delivering this information, and whose role. Maybe it's a matrix thinking, and maybe there's a role for the SEC to think about it. But I clearly see another element, which is the role of the audit committee and how the audit committee executed and its role vis-a-vis the dialogue with the auditor.

So if it has been mentioned before, I apologize.

MS. RAND: Thank you. No need for apologies.

Mike?

MR. GALLAGHER: Thanks, Jennifer.

Neri hit a couple of points that I was going to mention. I'll reiterate them. We do take the comments and the views of investors extremely seriously, and I think we have challenged ourselves as a profession to come up with some alternatives and not fight for the status quo. We'll continue to do that.

I think we need to continue to push ourselves, and what else can we do to meet the needs of our ultimate customers? And so, that is important, and we'll continue to do that.

I think Neri's point around other players in the system is really important, particularly audit committees. And if I look at the communication that occurs today in the audit committee report to shareholders, it's not very helpful. And I understand that maybe there isn't the best appreciation for what audit committees actually do, if that's the only data point that people have. So I think that is an opportunity.

But that said, as a profession, we first wanted to look at what we can do differently. I think we've done that, and we will continue to do that.

But I think Neri's point about as we do that, because there are so many interdependencies here of other players, I think those should be concurrent projects as well, whether it's the SEC or FASB or whatever. I think looking at it and making sure investors are getting the information they need, and I think we can debate somewhat, a big part of this debate is who provides it, and I get that. I think we just have reasonable people just disagree on that.

But I think it is critical. I think we can agree on what the information is and how we get that information to investors, including what audit committees do on behalf of investors. And I do think that there's room for improvement there. But we will -- as I said, we're going to focus on ourselves as well and continue to look for alternatives even beyond some of the things we've proposed.

MS. RAND: Thanks, Mike.

Gaylen Hansen?

MR. HANSEN: I want to make sure that it's clear that I believe or I hope that the Board comes down weighting these letters and the views of investors more heavily than anyone because, as has been said many times, they are the customers.

But following up on Neri's comment, occasionally, we do have disagreements with management. I think that maybe they don't rise to the level of dueling, as Arnie pointed out, but they are disagreements. Maybe that could be looked at in the context of SAS 61 disagreements. You don't see those very often. And when you do see them, the only time that they really surface is in an 8-K filing on disagreements when there's a change in auditors.

To what extent are those looked at during inspections, to what extent could it be explored as to whether or not that needs to be taken further, I think, is worth maybe talking about, and I think that speaks to what Neri was -- where he was going.

Thank you.

MS. RAND: Thanks, Gaylen.

Steve, you had your card up. Did you want to have some thoughts, comments?

MR. HARRIS: I was thinking about it,

then I put my card down. But I wanted to first associate myself with Mike's comments, to the extent that whose role is it to deliver what? I mean, I think that is a fundamental issue in what we're considering. Denny mentioned taking the eye off the ball and kind of wonder what the ball is.

But, Arnold, I appreciated your update in terms of what you're considering. Because in Sarbanes-Oxley, we provided -- the Congress provided in the law greater independence for the audit committee, but the audit committee was viewed as a gatekeeper. But it was not viewed as the gatekeeper.

And I think the conversation, both abroad and to a certain extent here, is that the independent audit committee is the gatekeeper with respect to protecting investors. The act says, the very first words of the act are, "An act to protect investors." And then the mission of the PCAOB and the establishment of the PCAOB was to protect investors.

And so, I think what we're wrestling with here is what's the direct role for the auditor to investors? And I know that in terms of the European community, they're focused very directly on the audit committee and management, and a whole host of the comments here are directly focused on the role of the audit committee as a funnel.

How do we get information directly from the auditors to investors, and what should that information be? To me, that is probably the fundamental point.

Scott, we were discussing it a little bit. You mentioned earlier on that the audit committees are backsliding and that there's backsliding on the part of the audit committees. If that's the case, I think we ought to get some empirical data, some academic research on that issue because if there's backsliding, that goes to the point that they're a watchdog which may not be performing part of their function directly to investors.

But I think the role of the auditor directly to investors is really what we're talking about, both with respect to the audit report and in other issues. So, Mike, I think you put your finger right on it. And I do appreciate from my vantage point the fact that the profession is focusing on it, and Arnold, that you're focusing on it. But we're coming at it from slightly different perspectives.

But I wanted to direct my remarks primarily to you because in terms of the audit committee and the role of the audit committee, the role of the audit committee in the United States and the role of the audit committee in various jurisdictions, I think, in the European community is also different, as I heard from Paul George very recently in the context of IFIAR.

So I would encourage you in your deliberations not to put all your eggs in the basket of the audit committee. And I know you're going through a very deliberative process, and now you've heard from a wide variety of constituencies here.

To the extent that everybody can work

together, I think that's extremely positive. But to the extent that we have an obligation on the part of the PCAOB to come up with the best standards we possibly can.

MR. SCHILDER: May I just briefly respond, Jennifer?

MS. RAND: Sure.

MR. SCHILDER: Steve, thank you very much for your comments.

We certainly are not putting eggs in one basket. Actually, we have five categories of possible options going forward, and this is just one of them. So we will explore all of those. And as I said, I hope in much dialogue with yourself and many others here.

Thanks.

MS. RAND: Okay. Thank you, everyone, for your very thoughtful comments.

Before I turn it over to Marty, I just also want to acknowledge and thank my colleagues working with me on this project, Elena Buzhkova, who's sitting next to me, and then Denise Wray, who's sitting next to her. Also recognize the significant efforts of Jessica Watts, who has a prior commitment and couldn't be here but has been very actively engaged in this project.

So we have much work ahead of us, considering all your very thoughtful comments and the comment letters and discussions. But we will be -- we're committed to doing that and very engaged in working through all these issues.

So thanks to them and thanks to all of you.

So, with that, I'll turn it over to Marty Baumann to close up the SAG discussion.

MR. BAUMANN: Thanks, Jennifer.

It's hard to close up this kind of a discussion over the last day and a half. I gave some thought to some summary comments, and it's really too difficult to summarize the varied comments and the quality of the comments in a few minutes, and therefore, I won't, except to say the following.

I think what we heard from you in many

ways, starting with the presentation yesterday of our standard-setting agenda overall, is that we have the right issues on our standard-setting agenda from your view, that we're tackling some very important and very tough issues, as was clearly evidenced by the quality and depth of the discussions throughout yesterday and today on the different standard-setting matters in front of us.

So I appreciate that support that we have the right issues on our agenda and that we're tackling the tough issues. And to a question that Steve Homza asked yesterday, do we have the resources to do that? I'll answer that again and say not only the quantity of resources, but based upon the quality of resources of people that you've seen here today like Jennifer and team, and yesterday Keith and team, and Greg Scates and team, and we have a very talented group of people to support the Board and me in getting through these very tough issues.

And we also have a great Standing Advisory Group here to give us valuable input.

So thanks for all of that. I appreciate all your effort through these day and a half of meetings and look forward to working with you more.

[Whereupon, at 12:02 p.m., the meeting was adjourned.]

# Auditor's Reporting Model – Preliminary Overview of Comments

Jennifer Rand

*Deputy Chief Auditor and Deputy Division Director*

# Key Milestones to Date

- Concept release issued June 21, 2011
- Roundtable held September 15, 2011
  - 32 participants and 2 observers (SEC and FASB)
- Comment period ended September 30, 2011
  - 152 comment letters to date

# Comment Letters Received

| | |
|---|---|
| Preparers, internal auditors and preparer associations | 70 |
| Accounting firms and associations of accountants | 35 |
| Investors, including investor associations, pension managers, analysts, and large investment companies and advisers | 16 |
| Academics | 7 |
| Other regulators and standard setters | 7 |
| Board members, including audit committee members, and their associations | 6 |
| Other individuals and organizations | 11 |
| **Total** | **152** |

PCAOB
Public Company Accounting Oversight Board

# Overall Themes from Commenters and Roundtable Participants

- Retain the pass/fail opinion
- General support for change to auditor's reporting model
  - Range of support depends on the type of commenter (e.g., investor, preparer, accounting firm, etc.)

PCAOB
Public Company Accounting Oversight Board

# Overall Themes - Investor Associations, Pension Managers, and Analysts

- Support auditors' reporting on their assessments of:
  - Areas of high financial statement and audit risk
  - Significant judgments and estimates used in the financial statements, including sensitivity analysis
  - Quality, not just acceptability, of accounting policies and practices
  - Significant changes in or events impacting the financial statements
- Support other disclosures by auditors, including audit procedures
- Prefer more information from auditors regarding the financial statements and the audit rather than assurance on information outside the financial statements or clarification

PCAOB
Public Company Accounting Oversight Board

# Overall Themes - Large Investment Companies and Advisers

- Support auditor's identification of significant areas in the financial statements:
  - A reasonable number of significant areas that would be most helpful for investors' understanding of the financial statements, such as:
    - Significant management judgments, estimates, and areas of measurement uncertainty in the financial statements
    - Significant changes in or events impacting the financial statements
  - Location of disclosure in the financial statements
- Management should be the primary source of financial information
- Some interest in information regarding audit procedures
- Prefer more information from auditors regarding the financial statements rather than assurance on information outside the financial statements or clarification

PCAOB
Public Company Accounting Oversight Board

# Overall Themes - Preparers, Internal Auditors and Preparer Associations

- Management should be the primary source of financial information
- Oppose “AD&A” and “required and expanded emphasis paragraph” type reporting
- Costs outweigh benefits for assurance on information outside the financial statements
- No objection to clarification of language, but do not believe it is necessary

PCAOB
Public Company Accounting Oversight Board

# Overall Themes - Board Members, Including Audit Committee Members, and Their Associations

- Management should be the primary source of financial information
- Oppose "AD&A" type reporting
- Mixed views regarding "required and expanded emphasis paragraph" type reporting
- Some support for assurance on information outside the financial statements
- Support for certain clarification of language

PCAOB
Public Company Accounting Oversight Board

# Overall Themes - Accounting Firms and Associations of Accountants

- Management should be the primary source of financial information
- Oppose “AD&A” type reporting
- Large and regional accounting firms generally support:
  - Objective and factual “required and expanded emphasis paragraph” type reporting
  - Attestation on the Critical Accounting Estimates section of Management’s Discussion and Analysis
- Small accounting firms generally do not support additional reporting
- Wide support for clarification of language

PCAOB
Public Company Accounting Oversight Board

# Other Commenters

- Academics
- Other regulators and standard setters
- Other individuals and organizations

PCAOB
Public Company Accounting Oversight Board

# Additional Themes from Commenters and Roundtable Participants

- Work with other regulators and standard setters towards a coordinated solution:
  - FASB/SEC
  - IAASB/ASB/Others
- Support for additional audit committee reporting
- Consider field testing of contemplated changes to the auditor's reporting model

PCAOB
Public Company Accounting Oversight Board

# Frequently Mentioned Concerns about Changing the Auditor's Reporting Model

- Expanding the auditor's role and the possibility of "dueling information" between preparer and auditor
- Adversely impacting the audit committee's governance role
- Impairing the three-way communication between auditor, audit committee and management
- Risk of additional boilerplate language
- Maintaining confidentiality of company information
- Increased costs
- Potential increase in legal liability of accounting firms
- Possible adverse effect on auditor independence
- Little incremental improvement in audit quality

# Next Steps

- Complete analysis of comment letters
- Consider related projects by other standard-setters
- Issue a proposal in the second quarter of 2012
  - Objective is to improve auditor communications to investors

PCAOB
Public Company Accounting Oversight Board

**NOTICE:** This is an unofficial transcript of the portion of the Public Company Accounting Oversight Board's Standing Advisory Group meeting on November 15, 2012 that relates to the Board's concept release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards. The other topics discussed during the November 15, 2012 meeting are not included in this transcript excerpt.

The Public Company Accounting Oversight Board does not certify the accuracy of this unofficial transcript, which may contain typographical or other errors or omissions. An archive of the webcast of the entire meeting can be found on the Public Company Accounting Oversight Board's website at: http://pcaobus.org/News/Webcasts/Pages/11152012_SAG.aspx.

PUBLIC COMPANY ACCOUNTING OVERSIGHT BOARD
STANDING ADVISORY GROUP
MEETING
THURSDAY
NOVEMBER 15, 2012

(9:01 a.m.)

MR. BAUMANN:

(…)

After that, we will introduce the two main topics to be addressed at this SAG meeting, the first being the auditor's reporting model and consideration of a possible approach to that auditor's report. And there is a briefing paper discussing that.

We have discussed the auditor's reporting model a number of times at this meeting. Obviously, we have had roundtables and concept release, but here we are talking about a specific possible approach, and we want to get views on that approach at that breakout session.

(…)

So there will be a report back from Group A on the audit reporting model, Group B on the reporting model, and other members of the SAG who participated in those discussions will be encouraged to comment on those reports with respect to, you know, how we characterize the comments made and emphasize any points that you think need further emphasis.

MR. DOTY:

(…)

As we have discussed, the audit reporting model several times, as has been focused on in these meetings, it will be focused on again. It is a significant part of the program here, and there will be a lot of good information and good opinion coming out of this meeting, I am confident.

(…)

MR. BAUMANN:

(…)

The third project on here for the first half of 2013, we are going to spend more time this afternoon talking about, is the auditor's reporting model. Obviously, we have spent a lot of time talking about this matter at prior sessions of the SAG, at roundtables.

Of course, our concept release discussed a couple of possibilities for enhancing auditor reporting, including something that we called an auditor's discussion and analysis, required emphasis of matter paragraphs, auditor responsibilities, maybe auditing other aspects of financial information such as MD&A, as well as potentially clarifying certain aspects of the auditor's report.

As you know, we have received a lot of comments back on this. At the same time, you are going to hear today about what other standard setters are doing, IAASB and others, on their projects in this regard as well. So I think everybody believes that changing the auditor's report is an important project, but changing it appropriately is equally important.

And so we have obviously spent a lot of time thinking about approaches, and today we want to talk about at least a possible approach, and that would be the required use of emphasis paragraphs. But we want to hear from the SAG members in the breakout sessions about, if that were the approach used, how could that work to provide all the interested parties with a reasonable amount of information that they want while not yet making it impossible to achieve auditor reporting.

Some commenters feel that certain of the other projects, such as auditor association with other documents like MD&A, is -- there is not a demand for it, plus it would increase audit costs substantially. Sometimes we hear that the auditor's discussion and analysis, more of a free-flowing document, would need significantly more rulemaking on our part to describe how an auditor would do some of the things that are described in ADNA.

The document -- the Board has not made a conclusion yet on how we are going to amend the auditor's report. We are still working on a variety of approaches to look at this, but this is certainly one approach that we are taking a careful look at.

The IAASB -- and Dan Montgomery is here from the IAASB -- had a document they put out, Invitation to Comment, where they included something called "auditor commentary" and will look at how that concept relates to matters of emphasis and how we could possibly look at all of these ideas and come up with something that everybody feels achieves the right balance.

So we are looking for valuable input during this breakout session this afternoon about this one possible approach and how it could possibly work for all of the interested parties.

(…)

MR. RANZILLA: Thank you, Marty. I will be quick. On the going concern project, I, like Bill, applaud you and the FASB for taking this on collaboratively. And my only recommendation is, as you look at the FASB's timing, which I understood from Larry is first half of 2013, with a proposal, you might also consider whether the going concern project ought to be folded into the broader auditor's reporting model, because, again -- and I think your timing fits well, because I think once you go down those two processes, you are going to find a fair amount of intersection regardless of which way you go with respect to enhancing the overall auditor's reporting model, and I think the going concern, especially the portion if we end up in a model like FASB's where the more-likely-than-not trigger is additional disclosure, I think that will also trigger something in the auditor's report beyond a substantial doubt paragraph.

So just something for you to consider as you look at those two particular projects, because I do think you will find intersection.

MR. BAUMANN: Thanks, Sam. We have given thought to that, and we will continue to. But that is certainly on the reporting end of the going concern standard. We also think that the audit procedures end, which doesn't deal as closely with the FASB aspect, is something we are working on separately that may not fit as well into the reporting project. But we agree with your comment generally to think about them together potentially.

(…)

MS. RAND:

(…)

This next session we'll be talking about the auditor's reporting model which is a very important project for us. We will be spending over the next two days a significant amount of time on the auditor's reporting model project which is as Jim Doty mentioned, a very significant and important project of the PCAOB.

This morning, I plan to provide you with brief background on the project, as well as to describe what we'll be covering in more detail this afternoon, as well as tomorrow.

Getting into the project, the auditor's reporting model is a subject we've been considering for a number of years. The main objective of the project is to enhance the value of the auditor's report. Many have said that the current pass/fail audit report is valuable, but it provides only limited information about the significant matters in the financial statements and the audit.

Last year, we issued a concept release on possible changes to the auditor's report. The alternatives presented for changing the report included auditor's discussion and analysis, required and expanded use of emphasis paragraphs, auditor assurance on other information outside the financial statements, and clarification of the auditor's report. The Board also held a roundtable to entertain further insight on the alternatives.

Since then, we have been considering the feedback received and developing a proposal for public comment. Your input to us over the next couple of days will inform us greatly with respect to next steps regarding the proposal.

We plan to issue the proposal in the first half of 2013, so that's coming up soon.

As part of working on the project, we've also been monitoring the activities of others. Several other regulators and standard setters have been working on similar projects as the PCAOB. Our briefing paper provides some information about their approaches to auditors' reporting and I'll just highlight on that briefly.

In the European Union last year in November 2011, the European Commission introduced proposed legislation that relates to audits of public interest entities and includes specific requirements for the auditor's report. There are a number of changes included in that proposal.

In September of this year, a counter proposal was issued containing amendments to that November proposal. It was introduced at the committee level of the European Parliament. The EC's proposal is advancing through their legislative process, but as of this point, we have no indication of when that process will be finalized.

The IAASB also has an active project on auditor reporting. A comment period on their most recent invitation to comment document ended about a month ago. Dan Montgomery, who is here a couple seats from me, is an IAASB board member, but he's also the chair of the IAASB's Auditor's Reporting Task Force. He is here today and will provide a brief overview of the current status of the IAASB's project, including highlights of feedback received today.

Rather than stopping and getting back into the rest, I thought I would continue talking about what we plan to cover and the objectives this afternoon and then provide an opportunity for Dan to provide you more information to reflect on and then we'll open it up for questions regarding anything that we've discussed.

The other regulators that we've been monitoring is the Financial Reporting Council. In September, so just a couple of months ago, the UK's Financial Reporting Council concluded their consultation on the Effective Company Stewardship project and issued revised auditing standards intended to enhance auditor reporting. Under the revised auditing standards, the auditor is required to report, by exception, if a required statement in the annual report issued by the board is inconsistent with knowledge acquired by the auditor. So in that instance, the auditor would be commenting if there's an inconsistency with what has been communicated by the company's board.

The auditor would also report if matters discussed in the annual report by the audit committee do not appropriately address matters communicated by the auditor to the committee.

Regarding our approach and the focus of our discussions this afternoon, our approach this afternoon is focused on emphasis paragraphs, but at this point I'd like to stress that the board has not eliminated any of the alternatives described in the concept release. Based on comments received to date though, the staff believes that there is more support for an emphasis of matters approach.

Today, we'll be exploring the potential approach that considers matters communicated to the audit committee as possible areas for emphasis regarding the financial statements.

In August of this year, also as Marty described, the board adopted Auditing Standard 16, Communications with Audit Committees. AS 16 is designed to enhance the relevant and quality of the communications between the auditor and the audit committee. It requires to communicate to the audit committee many of the same matters that investors have most frequently suggested for additional auditor reporting such as areas of high risk to the financial statements in the audit, the most significant matters in the financial statements such as significant management judgments and estimates, and areas with significant management uncertainty and quality of the company's accounting policies and practices. And finally, significant changes or events affecting the financial statements, including unusual transactions.

In the briefing paper, we provide a list of the areas that are required communications by the auditor to the audit committee. We will use that list to start our discussion this afternoon about matters that might be appropriate for the auditor to communicate in the auditor's report through emphasis paragraphs about the financial statements.

I'd like to clarify that an emphasis paragraph, as currently used in the PCAOB auditing standards, is not required. It is only added solely at the auditor's discretion. The auditor may use emphasis paragraphs to emphasize a matter regarding financial statements. And several investors have commented to us in the comment letter process that emphasis paragraphs today seem infrequently used.

Although we are using that same term in our project, we envision the new emphasis paragraphs could be used in a very different way. As described in the concept release, we are considering required and expanded emphasis paragraphs for the auditor's report. This means that we are considering mandated use and expanded content for the emphasis paragraphs.

I'd like to briefly go over the nature of the questions for which we'll be seeking your input and we'll be going over these in much detail this afternoon. I want to make sure we're all on the same page as far as the questions and the type of input for which we're seeking.

There are five questions in the briefing paper. The first three questions relate to whether emphasis paragraphs should be required for certain matters communicated to the audit committee under AS 16. As I mentioned, AS 16 requires a number of matters to be communicated related to the audit and financial statements.

Our consideration of AS 16 is that it might be a source for the auditor to consider areas for possible emphasis. Not that necessarily the communication in the emphasis paragraph would be the same as that communicated to the audit committee.

Let me give you an example. One requirement under AS 16 is for the auditor to communicate disagreements with management. An emphasis paragraph might highlight the matter in the financial statements for which there was a disagreement, perhaps financial instrument valuation, but not that it was a disagreement. Any disagreement with management that the auditor has would have had to have been resolved if the auditor was able to issue an unqualified report, therefore the disagreement would have gone away. But the auditor may feel it's appropriate to highlight the matter that caused significant discussion of the audit committee.

We're seeking your input on whether AS 16 would be an appropriate source for considering matters of emphasis. If so, should any of those matters in AS 16 be required to be reported. So just mandated to be included in emphasis paragraphs or should the auditor have discretion for some or all of them as far as which items to highlight in the emphasis report. If certain things were left -- should be permitted to left to the auditor's discretion, should there be any factors that the auditor should consider in determining which matters are most important to the financial statement users? For instance, factors could include subjectivity, the level of subjectivity, measurement uncertainty, degree of interaction with the audit committee, or something else. Could be some of the above that the auditor would consider or none of the above. So we're interested in your input on that.

And finally, regarding emphasis paragraphs, we're interested in what's the appropriate level of detail that should be provided in the emphasis paragraph? What information is important to be included and why? For instance, should it describe the area and provide reference to the information and the notes to the financial statements or provide other information? If so, what information would be appropriate?

Moving on to question 4, question 4 asks whether there should be any special reporting considerations for audits of smaller and less complex companies, brokers and dealers, and emerging growth companies. As you are aware, the PCAOB writes standards for audits of issuers including emerging growth companies as well as for audits of brokers and dealers. We are interested in your input on whether a standard requiring emphasis paragraph should have special considerations for certain types of entities.

Finally, we're interested in whether there are specific elements of the projects of other regulators or standard-setters such as the activities of those of the

IAASB, that the PCAOB should consider for its auditor's reporting model project.

When we get together this afternoon, we will have breakout group discussions on these questions which are included in your paper and we're very much looking forward to your input. We will have four breakout sessions this afternoon, so this group will be divided into a fourth. Each one of you should have in your folder a note indicating which session you will be joining. And each breakout sessions will be led by PCAOB staff, and as I said, will include approximately a quarter of the group.

Tomorrow morning, the PCAOB staff that are at the breakout session will present a summary of each one of the breakout sessions so even though you weren't in the other three, you will certainly hear what happened in those other groups. But when that summary is presented for the group in which you're participating, you will have an opportunity to add any commentary that perhaps may have been left out or to emphasize any particular area and then also have an opportunity to comment on themes, issues that came up in the other groups, so we are very much looking forward to a robust discussion tomorrow as well.

With that overview of what we hope to accomplish, I will turn it over to Dan Montgomery so that he can provide you with information, further information about the IAASB's activities and then after Dan is finished, we'll open it up for any discussions about anything that we plan to continue or the PCAOB's projects or if you have any questions for Dan.

So with that, Dan, I'll turn it over to you.

MR. MONTGOMERY: Okay, well, thank you very much, Jennifer, and good morning, everyone. It's indeed my pleasure to be here and appreciate the opportunity to update you on the IAASB's auditor reporting project. In my capacity as IAASB deputy chair, as well as -- as Jennifer said, as the chair of the Auditor Reporting Task Force, Professor Arnold Schilder, the chair of the IAASB, ordinarily would be here. He had a previous commitment this week. He is attending the IFAC council meeting in South Africa, so was unable to be here, but expresses his best wishes to all of you.

I'd like to give you a very brief overview and current status of the auditor reporting project. And Jessica, if you could go to the next slide, focusing in particular on the IAASB's most recent consultation document. It was an invitation to comment that was issued in June of this year. It was the second consultation for the IAASB. There was a previous consultation paper issued in May of 2011. And that first consultation focused on obtaining views and input about some of the concerns that had been raised about auditor reporting as well as some very broad suggestions for types of changes that could be made.

The invitation to comment was much more focused on specific types of improvements to the auditor's report. So the ITC, as indicated here, sets out the indicative direction for a future auditor's report and it really represents an amalgam, if you will, of many different suggestions for possible improvements that were received from global stakeholders, as well as presents the IAASB's views on relative value and impediments, including costs.

The ITC served as a basis for three public roundtables. You see them there. Several of you either attended or in fact participated in our roundtable in New York and in fact, in Paul's case, in Kuala Lumpur. And we appreciate that input.

The IAASB has to date received 164 responses. That number is relevant to us, to the IAASB because it really is about three to four times the number of comment letters that we normally would receive on a project and it is double the number, exactly double, the number of comment letters that were received on the original consultation paper. I might add that the IAASB continues to monitor and be informed by the efforts of the PCAOB, the European Commission, and others as well.

So on the next slide, what have we heard so far through these public roundtables and in the very preliminary analysis of the comment letters. And I might add here that these points are representative of a very early analysis. IAASB staff is continuing to go through and digest the comment letters, but overall, I can tell you that there's broad support for change in the auditor's report, broad support for making the auditor's report more informative.

With respect to the specific suggested improvements in the ITC, broad support across stakeholder groups for various of these suggested changes, but not all of them, but clearly some divergent views in terms of how best to proceed. And these divergent views are in some cases very strongly held and the challenge for the IAASB will be to reconcile these divergent views.

Some of the very overarching comments that came through that the IAASB will need to consider, one that came through very clearly from all stakeholder groups was to preserve the separation of responsibility between management, those charged with governance, and the auditor. So make sure the auditor is not providing original information about the entity or the financial statements.

The second one is reflect back on Marty's earlier comment which is change is important, but changing things appropriately also is important. So identify changes that indeed will move the ball forward, will be viewed as serving the public interest, but with a thorough consideration of the relative benefits and impediments.

From an international perspective, making sure that there's flexibility to incorporate different types of reporting regimes in different jurisdictions. And then finally, an acknowledgment that changing the auditor's report alone is probably not the whole answer here. That there may be changes needed also in financial reporting, in governance, and also in education. So consider all of these elements as well.

Next slide, please, Jessica.

In terms of this suggested improvement on auditor commentary and the invitation to comment describe it as a new separate section of the auditor's report that would provide information that was based on the auditor's judgment relating to matters that the auditor deemed to be of most importance to users' understanding of the financial statements or the audit. And in that regard, mixed views on that particular objective. There was support for some kind of commentary, if you will, support for the auditor to provide certain additional information, but certain mixed views again, on the best way to do that.

I would say in this regard that there were probably four things that came up. One, acknowledging that there already is a mechanism, emphasis of matter that could be used, perhaps could be clarified and used more frequently, that was point number one.

Secondly, some said if you have a concept of auditor commentary or expanded emphasis of matter, that it should be more than just a reference to management's disclosures.

That's the reference to additional audit context here. So some said at least provide an indication of why the auditor believed this matter was important.

A third point of view here was support for this type of an approach, commentary of some kind, but perhaps also retaining the current concept of emphasis of matter. Those holding that view said there's a certain value attached to those matters of emphasis today, so perhaps keep that and have another category that highlights additional important matters.

And then finally, there were some that said the auditor shouldn't be providing any information about the financial statements, that the auditor should be providing more information about the audit, how the audit was conducted. Just some preliminary views on the letters.

Clearly, a need for robust guidance criteria to help inform the auditor's judgment in this regard, concerns expressed about having the right language here to indicate that this is information in the context of the audit of the financial statements as a whole to avoid any concerns about piecemeal opinions, hidden qualifications or separate assurance.

And then lastly, the very strong support in terms of applicability for applying this notion to listed entities and in that regard, I might say there were also some that said even for listed entities, perhaps a consideration of how the concept might be scalable or applied proportionately to smaller listed entities.

On the next slide, certain of the other suggested improvements in the ITC, a going concern was a key aspect because there were some very strong calls globally for the auditor to include explicit statements in the auditor's report about going concern. But in this regard, the letters have indicated support for that, but also an acknowledgment of the importance of this area and therefore also support for enhanced reporting and hence disclosures by management with perhaps then the auditor making some reference to those disclosures. Also some concerns about the lack of understanding, common understanding of terminology and encouraging the IAASB to work collaboratively with the IASB in having a look at guidance for both preparers and for auditors.

Across the board, support for some kind of a statement in the auditor's report relating to the auditor's responsibility for other information that is included with the audited financial statements including identifying the information read and the auditor's conclusion, if you will, on that.

And just yesterday, the IAASB released an exposure draft on an updated standard that includes some reporting language in that regard. Other auditors, basically, the involvement of other auditors, much concern expressed about that, specifically pointing to running counter to the sole responsibility principle in the international auditing standard on group audits.

Finally then on naming the audit partner, basically, there's support in many jurisdictions because it's already done today, but on balance, I think the message was maybe something that's best left for national standard setters to decide.

And then finally, the last slide here just quickly to point to timing and that is the IAASB, this is the number one priority project. It's on a very accelerated time table and the goal still is to have an exposure draft of a revised auditor reporting standard by next June with final standards a year after that.

So with that, I will stop and Jennifer, turn it back to you.

(…)

MR. HIRTH: Yes, a question for Dan, kind of given what our charge this afternoon is, in the context of your proposal and thinking, is there any linking to any existing or potential international standard on communications between the auditor and the audit committee or a similar type of governance oversight mechanism?

MR. MONTGOMERY: I would say in that case, clearly yes. Where it has come up is in the criteria for determining the matters to include in auditor commentary and aligning that as best as possible with matters that had been discussed to a significant degree with audit committees. So not dissimilar to I think what has been outlined in the PCAOB paper here.

MS. RAND: Okay, Jeff Mahoney.

MR. MAHONEY: Thank you. I actually had, I think, the same question. If I look at paragraphs 43 to 47 of your document, Dan, would you view that as similar to what's in the PCAOB paper of their proposed approach?

And second, you mentioned this term original information was on your slide. And I'm just curious about the definition of that. Would that include the auditor's reports on the financial statements? Would that be viewed as original information under that definition? Thank you.

MR. MONTGOMERY: Let me take the second one first, because there has been considerable discussion, I will say, at the task force level and the IAASB about what is meant by original information. And it's in the context of whatever the auditor -- whatever words the auditor uses in the auditor's report, not conflicting with what management has disclosed in the financial statements. So if it's related to the financial statements or the entity, if there's language there that is new information, it could be perceived as the auditor stepping over the boundary, providing original information about the entity and/or confusing readers of the financial statements and the auditor's report about the information that management has presented.

Having said that, there's still some questions about well, if the auditor would summarize some of the information in a note disclosure and include that in a section on auditor commentary or an emphasis of matter paragraph, does that represent original information? So there's still more discussion that needs to happen, at least at the IAASB level about the nature and content of these paragraphs and how that relates to this concept of original information.

With respect to your other point on paragraphs 43 through 47 of the ITC, I will say this. I think there are some definite parallels between what is being considered here and what the PCAOB has outlined and will be discussed in more detail, but the global stakeholders of the IAASB, I think, had indicated a desire for perhaps more information, more and different information. So while there are some parallels, there are also at least in the ITC, there were some differences that need to be reconciled going forward.

We might ask Marty or Jennifer to comment on how their proposals or an outlined approach might align with what is here.

MR. BAUMANN: We'll look forward to this afternoon in that regard.

(…)

MR. MURRAY: Thank you very much, Jennifer. A quick follow up on Jeff's question to help us understand this afternoon's discussion and how we can contribute. It may be an obvious one, I don't know to you or Dan. Has there been any work done thus far that reconciles the IAASB's original information position or at least as that has emerged in your work with the emphasis of matter of suggestion that we are to consider, given that there isn't anything that couldn't be gathered by management and reported out in management's disclosures that might otherwise come from an emphasis of matter issued by the auditor?

Has that dichotomy between putting the emphasis in the auditor's words as contrasted with those who think original information should not arise from the auditor, has that issue been reconciled or is that part of what we will be addressing today?

MR. BAUMANN: I think that is what we are addressing today. And I think that both our project and the IAASB's project at least insofar as we're thinking of either commentary or matters of emphasis, starting with the financial statements and what should be brought out. But the question then goes to okay, how far should it be brought out? What should the auditor be saying about it? How much detail about the matter?

Additional information that's not in the financial statements about financial information, many have said that's original information and that should come from management. So how to bring out additional information, how to make these paragraphs valuable and not just a roadmap, I think is what was said by Dan. And I think we've heard similar things, too. So that's really a subject for this afternoon's breakout sessions with that point about how to make these kind of paragraphs, if this is a solution, make them valuable.

MS. RAND: Well, I have a number of cards up which is very encouraging as far as our discussions this afternoon. I expect it to be quite robust. And we also want to cover fraud. I'm just going to turn to Marty real quick as far as timing. To my count, I have six cards up and then the fraud discussion.

MR. BAUMANN: Let's try to take the cards that are up and then move to the next topic, but I think what we're finding here is many of these questions are the questions we want to address this afternoon in the breakout sessions.

If it's a matter you think we're going to discuss in the breakout session, you think we can leave it until then, and remember we're coming back again tomorrow to talk about it again, maybe you don't need to have that point addressed now. But if it's spot on to something that Dan said and you just want to get clarification, maybe that's better.

MS. RAND: Okay, Kurt Schacht, your card went down.

Okay, Bob Guido. I don't see Bob right now. Is his card still up? Okay, right in front of me.

MR. GUIDO: Well, thank you very much. I would encourage as much convergence as possiblerepresenting the audit committee community. I would like to see that.

I really put my card up because I wanted to address Roman's question, okay? As an audit committee chair, I really don't want four other financial experts on my audit committee. And the reason I don't, and let me tell you that we work hard in educating all of our audit committee members on current topics and high-risk issues, et cetera, et cetera. So there's a lot going on. There's a lot that's happened since Sarbanes-Oxley and I would not underestimate the power of the audit committee and their knowledge.

I would add that I believe, personally, that's me speaking, that divergence of views on audit committees are very important. I find some of the best questions of my fellow audit committee members are those who are not financial experts and I really wouldn't want to stifle that at all. So I just wanted to make that observation.

MS. RAND: Thanks, Bob. Next is Harrison Greene.

MR. GREENE: Hi, I have a question for Dan. And if you could help me understand when you had on your slide a thing about the sole responsibility where there's inclusion in the IAASB standards about naming other auditors. I know in the U.S. we can split that responsibility within the opinion. And I guess my question is how does naming other audit firms that participated in the audit violate the IAASB's principle of the sole responsibility?

MR. MONTGOMERY: In that regard, the views that were expressed by many commenters related to the fact that the standard explicitly indicates that the group auditor has sole responsibility for the opinion and that any reference to other auditors might confuse that sole responsibility and raise questions about which auditor, in fact, was taking responsibility for the group audit opinion. That's why respondents are pointing to that sole responsibility principle because there is no vehicle under the international standards for a group auditor to divide responsibility.

MS. RAND: Thank you, Dan. I would just like to point out Dan's project in auditor reporting covers disclosure, naming of the engagement partner in other firms. And as I think you're aware, but just to point out, that that's a separate project for us. We had issued a proposal last year and Marty talked about the timing of it for 2013 regarding the engagement partner and other firms. So we won't plan on covering that aspect this afternoon, but both of those areas are active projects for us.

MR. BAUMANN: I think I would only add that I think we heard a lot of demand and support for naming of other auditors. I think at least as we understood it, that there was still clarification that the view the people understood was that there was a signing auditor that had principal responsibility and they were assuming responsibility for the work of those other auditors. But there's still valuable informational content in knowing who else participated in that audit, especially in situations where you had another auditor who did maybe 80 percent of the work in an emerging market.

So in any event, it's a subject that we're thinking about still.  And I know the IAASB is still thinking about it.

MS. RAND:  Okay, I have two cards left.  So Steve Buller, you're next.

MR. BULLER:  Just two things.  First, from Roman's comment, I don't remember if it was in the European Parliament proposed regulations regarding the statutory audits of PIEs, but I think there it may have actually suggested that you have a requirement to have one person who is a financial expert and one person with auditing expertise specifically.  So I'm very sensitive to Bob's comment, but they at least suggested that they need not all the auditors, but at least they have that balance on the committee.

A question for Dan.  I was surprised by your comment, Dan, on the people who asked for information on how the audit was conducted.  Because when I look through the invitation to comment on the improving the auditor's report by the IAASB, they don't really focus on that issue. I'd be curious as to whether the tenor of those comments was more about the specific procedures performed or the criteria that they used in performing those such as materiality or if it was information being requested on the evaluation process and conclusions that were used in determining how the audit was performed.

MR. MONTGOMERY: Steve, there was no clear indication of the type of information that some would be looking for with respect to the audit. I mentioned it came up in two or three different contexts. One was if the auditor is commenting on matters disclosed in the financial statements that it would be useful to have at least some audit context to that in terms of at a minimum why the auditor believed that matter was important to the audit.

And then also some that just say it's not the auditor's responsibility to provide information about the financial statements. That's management's responsibility.

I would say that's a smaller number of respondents. And it seemed to be more focused, European focused, I might add in terms of those that said that the auditor should provide more information about how the audit was conducted. Hopefully, that responds.

MS. RAND: Okay, Gaylen Hansen, you have the last word on this subject.

MR. HANSEN: Thanks, Dan, for doing this. I was at your New York roundtable and thank you for that invitation. I do have a question on auditor commentary. And it seems that in New York a lot of the discussion about auditor commentary was how do we know what is likely to be important to users' understandings of financial statements. And so my question is sort of a benchmarking question.

Certainly, that 164 letters and the surveys that have been done already, but from a benchmarking standpoint are we talking about a sole investor or are we talking a sophisticated investor? Is there an intermediary step here? Is more academic research required on that particular point before you're able to go forward and be comfortable about what investor are we talking about here on auditor commentary?

MR. MONTGOMERY: I think, Gaylen, I would just say at this point that there's more discussion that needs to take place. There were several respondents to the ITC that pointed to that particular issue. How does the auditor determine what is, in fact, most important to a user?

Because you could have different users having different needs, different views of what's important to them.

So I think there will be more discussion needed about the objective of this particular section and the types of matters that might be highlighted, and I believe that the discussion that we'll have this afternoon could be highly informative in that regard in terms of the types, the criteria, to help identify matters and then help frame an objective for this particular section or the use of these paragraphs.

MS. RAND: Gaylen, I would just like to add, in our staff thinking, at least, regarding the PCAOB project as far as investors, goes to the reasonable investor concept, which already exists in terms of the audit. The auditors, when they look at materiality and overall disclosures, that goes to the reasonable investor. So we're looking to that test and there's case law, et cetera, that kind of routes that concept in the United States. So that's our perspective, our staff thinking at this point.

(…)

**NOTICE:** This is an unofficial transcript of the portion of the Public Company Accounting Oversight Board's Standing Advisory Group meeting on November 16, 2012 that relates to the Board's concept release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards. The other topics discussed during the November 16, 2012 meeting are not included in this transcript excerpt.

The Public Company Accounting Oversight Board does not certify the accuracy of this unofficial transcript, which may contain typographical or other errors or omissions. An archive of the webcast of the entire meeting can be found on the Public Company Accounting Oversight Board's website at: http://pcaobus.org/News/Webcasts/Pages/11152012_SAG.aspx.

PUBLIC COMPANY ACCOUNTING OVERSIGHT BOARD
STANDING ADVISORY GROUP
MEETING
FRIDAY
NOVEMBER 16, 2012

MS. CEYNOWA: Good morning, everyone. I'd like to report that my group was very lively. We applied the street rules, as Marty had suggested yesterday, and I'm happy to report that there were no serious injuries after all the debates that we had. There were no fist fights, so everything turned out okay.

So, there was a considerable amount of discussion about the merits of the emphasis paragraph, or expanded auditor discussion in the report, and whether AS 16 should really be a starting point.

One issue that was mentioned was that starting with the auditor communications may cause a chilling effect between the auditor and the audit committee, and that was sort of cited as something to consider as an issue.

With regard to whether financial statement matters or auditing matters should be emphasized, the group generally favored financial statement matters, and did not favor auditing matters such as specific auditing procedures because describing this type of information could be extensive, may result in information overload, and may not appropriately reflect the amount of effort that went into an audit area.

And, of course, I just want to reiterate what Marty said. If anyone in our group, if I said anything wrong please, obviously, chime in, or if I left anything out, please chime in.

Participants generally believe that the emphasis of the audit process was not as important as the robustness of the disclosures in the financial statements.  With regard to financial statement matters to emphasize, it was recommended that the PCAOB look to what analysts look at in developing their models and their cash flows.

We heard that there was interest in knowing the following in emphasis paragraphs; that is, what has changed, areas subject to sensitivity, areas that are not apparent to users; for example, a disclosure that may be subtle, information that goes beyond what is required by GAAP to provide more valuable information to the user.

In terms of what should be communicated, there are certain matters communicated to the audit committee that are required to be included in the auditor's report. We had heard that investors want the following four things, which is insights on the quality and not just the acceptability of the accounting policies and practices, significant unusual transactions, high financial statement risk, the appropriateness of critical accounting estimates.

There was debate regarding the amount of insights with this regard -- the amount of insights that the auditor would provide to the audit committee that would be different information provided to users by management.

There were also factual matters, you know, in terms of what is not specifically required in AS 16 should be included in emphasis paragraphs. We heard that there are factual matters that should be emphasized. These include material fraud, violations of law, and instances where there's impaired independence.

A counter to that, there are also things that investors do not care about that is included in AS 16 and, therefore, should not be emphasized. Some examples of these are difficult or contentious matters, disagreements with management as these would be presumed that these would be resolved.

In terms of if things were left to the discretion of the auditor, what are the factors or the criteria that the auditor would use in determining those -- the things that they would highlight. It was suggested that auditors look at what investors demanded through the PCAOB's outreach, what we had heard, that the PCAOB should consider whether we use data points, such as audit effort or time spent discussing with the audit committee versus factors, such as impact on future cash flows.

If the PCAOB would provide specific topics that the auditor should emphasize and allow the auditor to use their judgment, we had heard some people, or one person say that this approach may result in firms competing via emphasis paragraphs by conveying the quality of their work.

In terms of what is the appropriate level of detail that should be provided in the emphasis paragraphs, we heard that it should include the description, it should include why it's important, and it should include the location.

We had a considerable amount of discussion in this area. The disclosures, we heard some believe that they should just point to disclosures in the financial statements serving as a roadmap for investor's attention to those areas. And as a consequence to that, we also heard that by emphasizing certain of these areas that these areas would most likely be the best written disclosures. Some did not think a roadmap was necessary. Instead, they prefer to receive specific detail from the auditor whether it was original or not. We also had heard communicated to us that investors will be disappointed if we only require a roadmap.

But others indicated that there would be concern about confusion between what management reports and what the auditor emphasizes, so the question was posed how are users supposed to reconcile the information when it's different. However, others believed again that this would not occur because management would probably not allow that and adjust their disclosures.

And to that point then the question was okay, so if management suggests their disclosures and we auditors have the emphasis paragraph, then there would be a repeat of information, the information would be shown twice.

We also heard are you driving GAAP through auditing, believes that the auditor should only attest to the information. Another challenge noted was that free writing would take negotiating the language in the emphasis paragraphs -- would cause negotiation of language in emphasis paragraphs, and that would add some more time causing constraints with trying to meet your reporting deadlines, your already tight reporting deadlines.

When asked whether there should be specific reasons to cite in the emphasis paragraphs as to why the auditor chose to emphasize a certain matter, we heard that the reasons should be self-evident because they would probably be related to matters that are volatile, material, subjective, and have an effect on the future.

With regard to the question on whether there should be special reporting considerations for auditors of smaller and less complex companies, brokers and dealers, and emerging growth companies we heard the following. We heard consider making it scalable, possibly consider a phase-in period starting with large accelerated filers. Investment companies should be excluded because they are simple and their infrastructures are outsourced, exclude wholly owned subsidiaries which brokers/dealers may fall into that. And in deciding what types of audits to exclude look to who the users of the financial statements are and the complexity of the organization.

And then a question was raised, what if you have a company that is not complex or doesn't really have anything significant to report, what should the auditor say in that situation?

With regard to the last question, are there specific elements of the project of other regulators that standard setters at the PCAOB should consider for its auditor's reporting model project? There were no specific elements noted. However, it was recommended that the PCAOB continue to monitor these activities of other regulators and standard setters.

There were also some other points that were made, and I'll go over those, as well, that were not specifically on point with the questions. We heard some want the auditor to indicate that the financial statements are presented fairly and not just that they are presented fairly in accordance with the accounting framework.

We heard that this project should not be viewed in a vacuum. When auditor partner identification becomes effective along with the required and expanded use emphasis paragraphs, the market or investors will start tracking disclosure of the emphasis paragraphs by partner to glean any trends associated with that partner.

We heard auditor liability concerns relative to emphasis paragraph, and then we heard some points regarding cost benefit, that the PCAOB should continue to issue standards that are in the best interest of investors and should not be fearful of cost benefit analysis, that auditors should do a better job articulating costs of what investors want in auditor's reports including impact on audit quality.

And then, lastly, we heard a recommendation or suggestion that we do a five-year Sunset provision for implementation of this with retrospective -- with a retrospective cost benefit analysis. Hopefully, I got that right.

MR. BAUMANN: I especially like the part about don't worry about a cost benefit analysis. Was that authoritative?

(Laughter.)

MS. CEYNOWA: I think Mike Gallagher has his card up.

MR. BAUMANN: Again, so thank you very much, Lillian. That group was led by Keith and Jeanette was in there, as well, and Lillian. Mike.

MR. GALLAGHER: Yes, thanks, Marty. Good summary, Lillian.

Marty, let me start by complimenting you on the format of yesterday. I think it was incredibly conducive to a substantive dialogue, and I would hope that we would take this forward to future discussions in having the break outs, because I think it really is conducive to a good back and forth where we can grab a lot of substance. I know we have to balance what we do in the public versus what we do privately, but I think that was a really good balance.

In terms of the subject, I think it was a really good session. I think it was a good dialogue. I think Lillian summarized it well. I do think it's important that the emphasis matters I think is the way to go. I think it's important, however, to stick with the principles. We laid out some principles both as a firm and as a CAQ particularly around the original information about the company and where that should come from, respecting roles, the different roles of management, audit committee, and the auditor, and at the same time making sure that investors and users get the information they need. And the role of the auditor is critical in making sure that that information is high quality. And we all know that the auditors play a significant role even in the financial statement footnotes that occur today in working side by side with management making sure they're as transparent and clear as they can be. And I think that this would move it even to a higher level. As you said, Lillian, anything that the auditor would emphasize, those are likely to be the best written footnotes in the document. I think there's definitely value there.

I just think the important part of sticking to the principles is to avoid the idea of moving to auditor discussion and analysis just by a different name, one paragraph at a time. And I think that those principles kind of stick to driving the value that you can get out of emphasis of matter. It's something that's practical, it's doable, and I think it provides significant value to investors.

So, thanks again. I thought it was a great session yesterday.

MR. BAUMANN: Thanks, Mike. Joe Carcello.

MR. CARCELLO: Let me start by saying I agree with

Mike that it was a great session yesterday. I think it was very productive. We may depart in terms of the second part of what we said.

I think if all you end up with, Marty, at the end of the day is the standard as currently written with some wording changes and reference to two, or three, or four paragraphs in the notes that the auditors emphasize and that's it, I think the Board really runs the risk of having this project viewed as an abject failure in the investor community.

I have rarely seen so much commonality in terms of feedback the Board has received both directly and indirectly in terms of multiple studies in terms of what investors want. Yesterday when we talked, and Steve Buller from Blackrock was very articulate, but if you go back and you look at the transcript of the roundtable on auditor reporting, Marty, I would say Blackrock, although supportive of changes among the investors who spoke at that meeting, were probably among the more cautious investors. The other investor groups and investor advocates wanted even more information than they seemed willing to accept. So, I think that's -- it's very important to keep in mind.

And the thing that keeps coming through to me in terms of three major areas, if at the end of the day investors don't know more about risks, if they don't know more about judgments and estimates, and if they don't know more about unusual transactions, there's going to be a significant percentage of the investor community that's going to say you have failed. I don't know how to be polite but more direct than that.

MR. BAUMANN: Jeff, your card was up. Are you -- did Joe speak for you?

MR. MAHONEY: Just to add  to what Joe just said. In developing the concept release that was issued last year, the PCAOB staff did extensive outreach to the investor community. And their conclusion was, and I'm quoting from the concept release, "There was consensus among investors that the auditor has significant insight into the company and that the auditor's report should provide additional information based on that insight to make it more relevant and useful."

So, if that view is correct, if that is the consensus of investors, and there seems to be some other surveys and studies that suggest that that is accurate, I think that raises the question, if you move forward and you're just pointing to other footnotes and you're not providing auditor insights, I think when you get to the cost benefit analysis that you have to perform, I think there's a question as what is the benefit if this change that you're making to the auditor's report is not responsive to the consensus from investor's, consensus view. Thank you.

MR. BAUMANN: Rick Murray's got his card up. I know, Rick, you weren't in that group, but did you want to --

MR. MURRAY: Marty, I think we need and deserve your guidance at this point for making the best use of this morning as to whether we're going to, in fact, run through the reporting cycle as you outlined, or take the deep dive into what's the right answer at this point of the discussion.

MR. BAUMANN: I think each group member here has had an opportunity in their group to make key points, as we heard an issue from Mike, and we've heard the other side of the equation from Joe and Jeff, and that group. So, I think we got a lot of benefit of hearing a summary from Lillian, but then maybe some emphasis from the others. So, I would like to keep with the path of going through the groups and letting people who were in that group comment on that.

We'll have more time after that to kind of delve into your point, which I think is get to a solution, but I think that would be -- if that's what you said, I think that would be a challenge in this room.

MR. MURRAY: I was hoping we weren't going to do that at this point.

MR. BAUMANN: I misunderstood your point, Rick.

MR. MURRAY: My concern was that we seem to be drifting quickly into searching for final summaries of position rather than going through the process you had outlined.

MR. BAUMANN: Okay. Well, we will try to go through the process I outlined, but as we said, after each team reports as to what they heard in their group, we did want to give people who were in that group an opportunity to say I think I have a little different color than maybe what you said in your summary. So, we'll try to stick with that and see how it works.

The second -- sorry, Steve, were you in that group?

MR. BULLER: Yes, thank you, Marty. So, I just wanted to clarify the one point you highlighted. I think that the group felt that the PCAOB should not feel constrained about cost when considering solutions initially so that they have the chance to come out with what they think is the best solution. But we agreed, I thought, that cost still is an important factor that needs to be considered at some step along the process. We just thought the initial process has to be free flowing, it has to be -- make sure all ideas are on the table.

And Lillian, by the way, did a wonderful job summarizing our group, and made us sound much better than we were, believe me.

MR. BAUMANN: Lillian has a way of doing that, so very good.

The next group is going to be summarized by Elena Bozhkova, which included Jennifer and Steve Harris. Thanks.

MS. BOZHKOVA: Good morning, everyone. The discussion in our group was a little bit different from that in Group A. It was a little bit more free flowing, so I will not necessarily be associating each one of the take aways from our group to a specific question. But the key take aways from the discussion in Group B are the following.

The majority of participants in Group B suggested staying away from the list of required communications in Auditing Standard 16, and instead focusing on a more narrow list of areas that could be considered for emphasis paragraphs in the auditor's report.

Some consensus seemed to emerge around a list of four items that would generally be of interest to investors, such as, one, how comparable are the financial statements to those of peer companies in the same industry? Is there any reason for them not to be comparable? Two, how different would the financial statements be if management used other reasonable estimates and judgments? Three, what are some of the unusual transactions and events? And, four, what is the auditor's view about whether there are any unusual risks related to the company?

It was recognized that there are a number of challenges with respect to this list, such as potential litigation. Upper discipline suggested a safe harbor for auditors in the case of expanded reporting. Another challenge that was discussed was the historical nature of the audited financial statements including the auditor's report versus the more current financial information such as earnings releases and quarterly reports that are often used in investment decision making. Another challenge that was mentioned was whether the auditor is motivated to make any of these disclosures.

A few SAG members in Group B thought that Auditing Standard 16 may be a source for determining the kinds of considerations and factors that would go into a framework for what should be disclosed in the auditor's report which should be based on the auditor's judgment, and not disclosing the actual communication with the audit committee.

It was further discussed that a reasonable investor might want to know those items that were contentious between the auditor and management. Many participants also thought it was very important not to chill the discussion with the audit committee as a result of any additional auditor reporting.

Some participants said that an argument can be made for management to provide information of interest to investors rather than the auditor. Other participants pointed out that there are reasons for auditors to be the source of that information, such as their independence.

A key point of discussion was whether any emphasis paragraphs should be focused on audit-related or accounting related matters, and many of the participants in our group supported a view that management should be providing any accounting-related information and the auditor should be focused just on audit-related matters.

While there was a general support that the auditor could provide audit-related information there was no consensus on what that information could actually be, but it was mentioned that it could be related to the four items described earlier.

The group discussed that the current reporting model does not give the auditor a voice. It was acknowledged that at the heart of this project is whether in order to serve investors better we should provide the auditor a voice and consider on which topics the auditor should provide information to benefit investors.

Auditor association with management discussion and analysis and with non-GAAP measures was deemed valuable by many participants as this type of information is typically used in investment decision making.

It was also noted that there will be some cost associated with anything of value that the auditor can provide, and there is also a time aspect to the auditor providing more information in the auditor's report.

A few participants believe that it would be worthwhile to combine the going concern project with this project due to the reporting of risk and uncertainty elements. And last but not least a participant thought that certain brokers and dealers should be exempted due to their ownership structure and nature of operations.

So with that, any comments from Group B? And I see Rick. No. Steve?

MR. BAUMANN: Wayne Kolins.

MS. BOZHKOVA: Oh, Wayne. I'm sorry.

MR. KOLINS: Yes, a good summary, Elena. One thing, in terms of the audit process and the focus being more on the audit rather than financial reporting was a view taken by some. But in terms of the audit process, I believe it was the results of the audit process, not the -- the results of the audit, not the process itself. In other words, no detailed listing of audit procedures that resulted in an auditor's view.

MS. BOZHKOVA: Thank you.

MR. BAUMANN: Bill Platt.

MR. PLATT: Thanks, Marty. First, I guess I would just compliment you also on the format of the meeting. I think it was very productive. I found both the breakouts I was in yesterday afternoon to be a very good dialogue that took I think each of the participants, evolved their thinking or views as a result of that dialogue. And I found it to be a more productive way to try to really tackle how do we best solve issues.

Also, Elena, I don't know how you took the chaos of our group and turned it into that nice organized summary, but congratulations. You made it sound like we were geniuses, but I would say that the point about focusing on -- and you mentioned four questions or four areas. And I would say in our group we didn't necessarily say that -- we didn't have a vision as to whether that was accomplishable or not, or how one might best accomplish best adding value in providing an auditor's voice on each of those items. They are aligned with what investors were asking for. If you look at page 3 of the summary, I think there's four bullets, and they're generally aligned with those four bullets. But we thought that rather than exploring hundreds of types of things that may be facetious by that comment but hundreds of types of things that might be considered, that maybe if we took a deeper dive on for and really tried to explore to say what's practicable, what's feasible, and what can add value at the same time and maybe value is a more important driver than I implied by the ordering of what I had that that would be a productive exercise to go through. But I think you did a great job summarizing what the group's discussion was.

MR. BAUMANN: Bill, I'm interested in -- or anybody else in your group in the context of the first group I thought I heard a lot of support for emphasis of matters paragraph, and then Joe made an editorial, emphasized that it needed to go further than just pointing to the footnotes. But the listing that Elena gave of matters that maybe would be discussed, and I don't know, Elena, if you could just summarize those one more time, it didn't sound necessarily like matters in the financial statements to be emphasized. It sounded -- it did sound more of I'll say AD&A like. Can you just say what those four or five items were that you thought there was some support around?

MS. BOZHKOVA: Sure. The first one is how comparable are the financial statements to those of peer companies in the same industry, and is there any reason for them not to be comparable? Second one is how different would the financial statements be if management used other reasonable estimates and judgments? Three, what are some of the unusual transactions and events? And, four, what is the auditor's view about whether there are any unusual risks related to the company?

MR. PLATT: Marty, I think that certainly some of those would be disclosures in the financial statements and are consistent with emphasizing that. One would think that the -- take estimates as an example, that the significant estimates and the ones that if estimates were different would have significant impact on financial statements should have robust disclosure in footnotes, and so the auditor's reporting I think would be complementary with the disclosure you would see in financial statements. I think significant unusual transactions would be the same aspect.

I think when you get to things like risk, and I think our discussion focused on financial statement risk, not risks to the entity, although some had some discussion about risks to the entity but I think there was a number of people in our group who felt that an auditor is not really the right person to talk about business risks, or environmental risks, but we are -- we do have a special area of expertise in some financial statement risk. That might be something that's not in the notes, that the companies aren't necessarily disclosing that. But I think part of looking at this would be to say what information is useful to investors, and then how best to convey that. And I think, ultimately, it probably is a combination of management reporting supplemented to some degree by auditor statements or auditor's views.

MR. BAUMANN: Thanks for that clarification. And the point you made about risks I think is a good one, too. That word is tossed out a lot, and you clarified that you thought that you were talking about risks are material in the statement of the financial statements.

Joe, you said before three things have to be included, otherwise we'll miss the boat. You said risks, significant usual transactions, and significant judgments and estimates. Is your context of risks the same thing, risks of material misstatement in the financial statement?

MR. MURRAY: Yes.

MR. BAUMANN: Thanks, Thanks a lot. Wayne.

MR. KOLINS: I just wanted to add one thing. In the context of the unusual items there was an idea thrown out about the auditor -- some kind of auditor association with non-GAAP information, with a non-GAAP earnings number which might then flesh out unusual items that are reported by management or unusual items that should be reported by management and called out by them.

MR. BAUMANN: Kevin Riley.

MR. RILEY: Yes, Marty.

MR. BAUMANN: You were in my group, Kevin. You forgot?

MR. RILEY: I have a question for Elena and maybe other members of the group. But one of -- and as Barb gives the debrief on our conversation, one of the thoughtful comments that was raised is we don't want to risk turning auditors into equity analysts. And when I hear the four issues that Elena raised as things that auditors might want to focus on, particularly things like what might the financial statements look like if management had used some other assumptions or issues, is that we're drifting away from auditor responsibility more into equity analyst land, and I just wanted to get some additional perspective or color commentary on that particular question.

MR. BAUMANN: I agree with your point. That's why I sort of went to that, as well. That sounded outside of the financial statements, including how does the accounting compare to a peer group. I think that was one of your points, too, so --

MS. BOZHKOVA: Well, I think the way this list was developed was really points that would be of interest to investors, and the discussion focused around that. And there were various points of view as to who may be in the best position to provide some of this information. And I wouldn't characterize the discussion as a consensus that all of this would come necessarily from the auditor, but there was general consensus that these types of matters would be of interest to investors, and so it's up to us to consider how to take that in consideration for purposes of this project.

MR. BAUMANN: Mike Cook.

MR. COOK: Marty, maybe just to add a little bit of flavor to that, as well. Our group was just wide ranging, very provocative kind of a discussion. I thought it was very good, and capturing it is an incredible task, and well done. But I think this discussion of the four items was not recommending that those four items are going to find their way into the auditor's report. I think it was in the context, and Greg should speak to this because he was the thought leader behind that particular discussion, was about the kinds of things that investors would be interested in and might, if practical, considerations could be or problems could be overcome, might be targets to be moving toward both by management and the auditor in reporting. And I thought there was very good discussion.

I don't think there was a consensus that we're ready to move to those items being included in the auditor's report other than in a transition basis. But I would like to just -- and Wayne picked up one of these items, follow a suggestion which again didn't necessarily garner great hordes of support, but it was suggested that there are existing disclosures and information outside the basic financial statements that you by auditing or by associating the auditor with them, MD&A, the risk factors that are disclosed and non-GAAP information could be dealing with and giving auditor assurance at some appropriate level to a number of the things that people tell us that they would be interested in. MD&A would take you to critical accounting policies, judgments and estimates, risk factors would deal obviously with that subject, and non-GAAP information would be particularly valuable because the message here is that GAAP isn't telling people what they need to know. And here's what you need to know to assess the results of this company. And the auditors are directly associated with what doesn't tell you enough, but are not associated with what you need to know. And that seemed to me, and perhaps others, to be a bit of anomaly when I think about how important the non-GAAP presentations are to investor communications, and audit committees. And the time that is spent on them, for the auditors to be detached from that seemed to be missing an opportunity. So, that was kind of where we were coming from, or at least my thought in those three items is instead of the almost impossible task of identifying all the things that people might emphasize in the future, or auditors might be reporting on in the future, that seems like almost a hopeless task. And I certainly, and I think our entire group almost to a person said AS 16 is not the right framework, and we should not be using AS 16 as a source for what auditors might report on. But I think if you can use existing frameworks that are there well understood, and all we need to do is wrap some part of the auditor around those disclosures, you could accomplish a high percentage of this without the, again, impossible task of trying to define what should be in and should be out.

So, I thought that was an important part of our discussion, but I don't think we should over-emphasize the four items. They were very thoughtful, but I don't think anybody was ready to sign on that we're going to have auditors doing those things in the near future, or maybe ever.

MR. BAUMANN: That's a good clarification, so thanks for sharing that. And I had a feeling it was an engine and caboose discussion coming down the path any moment, as well.

If there are no more cards up, the third group, Group C was Jessica, Greg Scates and Lou Ferguson from PCAOB.

MS. WATTS: I want to tell Lillian that I had a better group than she did, not as a general comparison, just better.

(Laughter.)

MS. WATTS: We did have some similar points to what Lillian pointed out, not as many similar to Elena's group. So, I felt like in our group we had some broad support for emphasis paragraphs, that I think everybody kind of thought that emphasis paragraphs was a good way to go for this project. And in discussing what should be included and what we should think about as a framework, we talked about AS 16, and there was really limited support for using AS 16 as a basis for what to communicate. However, maybe some of the items in AS 16 should be used as a consideration.

And we got into a little bit further about what types of things that are in AS 16 that might be used as a consideration. And, of course, it talks about critical accounting estimates and critical accounting policies and practices, as well as significant risks.

AS 16 also includes a lot of information about the audit. There was limited or no support really for including a lot of information about the audits, such as audit procedures or audit strategy. And partially the reason for that is because it would be very difficult to summarize the audit procedures into a concise paragraph that would be understandable to users of the financial statements.

We also talked about whether or not there should be certain matters that the PCAOB prescribes should be in an auditor's report, or if a lot of the matters should be up to the auditor's discretion. And there was really no support in our group for the PCAOB determining what should be in an emphasis paragraph; however, that maybe there are certain matters that we could point out in the standard that the auditor should really consider and think about these certain matters but maybe not make it a requirement.

So, we found in our group that there really was more consensus for the auditors to use  their discretion in determining what to emphasize using an established framework or some kind of framework, not one that's currently established. And so, we talked about what kind of things that the auditor should think about in determining what to emphasize.

And so, someone in our group suggested that the auditor should think about the greatest risk of the material misstatement to the financial statements, and about significant risks that the auditor identified in doing the risk assessment procedures. And then you have other matters such as the estimates, the critical accounting policies and practices, and the critical accounting estimates.

We also talked about what kind of details should be included in the auditor's report, and I think one of the things we talked about was, obviously, the matter should be identified, but really why the auditor is identifying it as opposed to just a roadmap that says go look at a certain financial statement disclosure, but why is the auditor identifying it? And one person gave an example in our group that presenting information to investors that might be calculable from the financial statements but maybe not readily apparent may aid investors in understanding why such matters are important from an audit perspective. In that instance, it was such as a percentage of Level 3 assets or the hard to value assets. And that would at least give information to the investors about why the auditor is highlighting it but without providing new information, because that information can come from the financial statements.

We also heard that the auditor should not be communicating matters that are not in the financial statements, so the auditor should be really pointing to things that are in the financial statements, and also maybe summarizing them in a manner that is easier for an investor to understand why the auditor is highlighting it.

There was a broad concern in our group. We think that these emphasis paragraphs could become boilerplate over time, and that the PCAOB needs to consider how to avoid boilerplate disclosures, the same disclosure every year, or the same disclosure for the different companies that have similar matters. It should be specific to the company and specific to the matter.

We also talked about whether there should be certain reporting considerations for different types of entities, smaller and less complex, brokers and dealers, and emerging growth companies, and what we got out of that is really we need to think about the standard as being scalable. As opposed to trying to eliminate or exempt certain companies, maybe we just need to consider that it should be scalable.

And then there are some other suggestions that came out of our group that the Board should perform field testing on the standard and that it should include the auditors, issuers, and investors in our field testing. And then we should also do a post implementation review after the standard has been implemented. So, we could do that through inspections or otherwise.

And then we did have one suggestion that perhaps we should make changes to the auditor's report gradually over time. We could start with a roadmap and then work towards maybe more disclosure in the emphasis paragraphs over a period of time. And then, ultimately, we had a suggestion that emphasis paragraphs or in changes to the auditor's report could increase the quality of the financial statement disclosures if you are pointing to it and could increase the audit quality. So, that was what we heard in Group C. Does anyone in Group C want to comment?

MR. SHOWALTER: Yes, good job of summarizing getting a diverse view. I had two points. I just want to emphasize, really not disagree but emphasize with your point. One was that, and it relates back to what, Lillian, you reported, as well; is we thought when auditors do include an emphasis paragraph it will clearly improve the disclosure in the financial statements. Particularly when we talked about adding the second piece to that disclosure, which, why the auditor thought it was important, would really focus the issue we're on making sure those disclosures are appropriate in that.

The other point you mentioned about liability, we were a little concerned that as this went forward, you could get over disclosure on behalf of the audit firms because they were trying to minimize their risk, as well. So, when we talked about that we were concerned about okay, if one firm has six risks and someone is talking about eight risks, then the next thing you the next firm next year will come out with eight risk because their attorneys have told them what happens if you don't get the risk disclosed in the emphasis matter, so we were concerned about driving those disclosures to the point where they don't become helpful because it's like the current risk disclosures in 10(k), not very helpful. Thank you.

MR. BAUMANN: Gary Kabureck.

MR. KABURECK: By the way, Jessica, very good summary of our meeting yesterday. Just one thing we did discuss, I don't know that we had a consensus on it but it was discussed in any event, not violently rejected, was should the audited financial statements and/or the auditor's report be amended to include critical accounting policies, that today is resonant in the MD&A. And I think a lot of the items that the investor community is asking for about auditor involvement with sensitivity, alternative accounting policy selections and stuff, that's what the critical accounting policy section is designed to do.

Now, there might be degrees of compliance with it out in the world, but I think what would happen is if the auditors were associated with it, I think the bar would be raised, perhaps better critical accounting policy disclosures more consistent with at least the spirit of which of the CAP rules were enacted, 10 years or so would help.

Again, there wasn't necessarily a consensus on it but by sweeping those inside the financial statements and underneath the audit report I think some of the concerns being addressed here about the criticality of accounting policy start to get to be addressed. Again, no consensus but I think something you could put in the work plan for consideration.

MR. BAUMANN: I assume it's recognized that that point, Gary, whether the opinion should be extended to cover critical accounting policies would be really probably outside the scope of -- I think outside the scope of what the PCAOB could do. What's in financial statements is based upon rules that are not ours so, therefore, auditors express an opinion on what's in the financial statements, so somebody else would have to make that determination to put that into the financial statements.

MR. KABURECK: Yes. No, we understand that, I mean, but as your organization, the SEC and the FASB work together. It's just part of the overall process.

MR. BAUMANN: Jerry De St. Paer.

MR. DE ST. PAER: Thank you, Marty. I'd agree also that the summary that you gave, Jessica, was right on the mark. And the one spin, and it was only that that I wanted to add, is that the idea that as we were looking -- going through this process with the auditor determine what was in and what was not in, it was going to be sort of a framework, that part of that framework would be something akin to, I'm not saying it would be the same as, but a SAD-99, what's important to the investor. So, the focus here is back on the user, and not just on the accounting and the numbers, because some numbers can move in material ways and not have a material impact on what investors are thinking. And others can move in less ways and have more impact, so the idea here was to try to get a focus on what would be important to the user.

MR. BAUMANN: Thanks, Jerry.

MS. PAQUETTE: Thank you. Jessica, very good summary. I just wanted to underscore one of the points from the group. We keep hearing comments about potential roadmaps, and I'm not sure all of us have the same idea of what a roadmap might look like. And I just wanted to highlight from a user's perspective that if an emphasis paragraph is included having some commentary on why it is important. Our group talked about whether we wanted a "War and Peace," or we wanted a third-grade reader in terms of the content of what was being added. And I take that point to heart, but I think from a user's perspective why the paragraph is being added is important. And I think the intention is to provide more information and more valuable information, and from my perspective if it becomes an indexing of information that's already provided in the financial statements, that will not be helpful.

MR. BAUMANN: Sam Ranzilla.

MR. RANZILLA: I just want to pick up on the point Gary made. And we had very limited discussion as a result of a very effective discussion leader on anything other than the five questions. But I do think, as I have for two and a half years now, that the answer here is somewhere embedded in the critical -- in an attestation by the auditor of critical accounting estimates, critical accounting policies. One very well could argue why do we need both of those terms and, Marty, I fully recognize that such an approach requires the Board to work with other organizations in order to effect such a change. But while I am a supporter of where you're headed, or where I think you're headed in terms of emphasize of matter paragraphs, I continue to believe that that is the second best option. And that an attestation of some limited portion around critical accounting estimates and using existing interpretations that the SEC has would really drive better disclosures and the auditor's association with those better disclosures I think hits the mark closer to what investors are asking for.

MR. BAUMANN: Sam, do you think there are sufficient rules around requirements and critical accounting estimates, and critical accounting policies that an auditor could attest to that today versus what I'll say is maybe interpretative guidance out of the SEC with respect to those areas?

MR. RANZILLA: I do. I mean, I think that if you look at the existing interpretation that the SEC has, especially -- I mean, my focus has been primarily around critical accounting estimates. And, again, I struggle a bit with why we need three different concepts around a company's accounting policies and estimates. Significant accounting policies, critical accounting policies, and critical accounting estimates, I mean, we ought to be able to come up with a definition of things that when you look at it you say what are the most important policies and practices of the company with respect to its financial reporting. And, as a result, we end up with I think complications that are unnecessary. But to your point, I think if others don't, I wouldn't object to additional interpretations, to additional frameworks that would help an auditor benchmark against that, but I think today an auditor could do that.

MR. BAUMANN: Thanks, Sam. I'm sorry. Dan Montgomery.

MR. MONTGOMERY: Thanks, Marty. And, first of all, I just wanted to express again my appreciation for allowing me to represent the IAASB at this meeting and in the breakout session yesterday. And, Jessica, great job, definitely a very good summary of the discussion of the group.

I did want to come back to one point, and that is it's been raised by a couple of the other folks on including in the emphasis paragraph at least something to indicate why the auditor believed the matter was of importantance to users. And this is something that the IAASB has heard from global stakeholders. And I think in part it speaks to some of the misperceptions about why this information is being asked for in the first place.

What we have heard, what the IAASB has heard internationally is that this is more related to the relevance and the value of the audit, and it's not about the accounting. So, while some believe that the auditor is being asked to provide information to fill gaps in terms of understanding the accounting or the complexity of the accounting, the global stakeholders that the IAASB has talked with have said that is not the case. They recognize that if there are issues with accounting that need to be fixed, that that is the role of the accounting standard setters. What's helpful, though, is to get a little more transparency into the audit, and by having the auditors identify those matters that were of the most importance or considered the most importance in the audit because they were matters of financial reporting complexity or matters of significant management judgment, or matters that had been discussed with those charged with governance, that that information is what is important to users to get a better understanding of where the auditors were focusing their effort. And then in turn by having at least a little bit of information about why that matter was considered important to the audit, that that provides at least a little bit of insight into the auditor's risk assessment process and the way the audit was approached.

MR. BAUMANN: Thanks, Dan. And I'm glad your sort of clarified I think further at the end about the audit, because on the other hand I do think we're hearing that people are not necessarily interested in some sort of brief summary of audit procedures. And I think you've acknowledged that's not the case here. It's about the audit, but why was this particular matter in the financial statements being emphasized because of its importance to the audit. And then why was it important to the audit as opposed to procedures. Thanks. Any cards up?

Okay. Then the final group Barbara Vanich is going to report on, and I was in that group with Jim Doty and Jay Harris, as well, from the PCAOB. I always mix up Steve Harris and Jay. I combine the two of you constantly.

MS. VANICH: Thanks, Marty, and good morning. At least I know I can't screw up worse than that.

(Laughter.)

MS. VANICH: It's always great going last once all the best jokes have been used, but honestly, Group D, take comfort in the fact that everyone knows we save the best for last.

(Laughter.)

MS. VANICH: Group D had a really constructive discussion. We didn't exactly stick to the discussion questions no matter how many times I kicked Marty under the table, but I believe at the end of the day we answered most of them. So, I tried to summarize the topics we discussed in that order, which I can just hope does justice to the thoughtful commentary that we had from our participants yesterday.

We also had some suggestions that were a little beyond the scope of the discussion paper but which, nonetheless, were very valuable so I'll try to add them on to the end. And in the interest of summarizing, I'm really going to take the first two discussion questions kind of at the same time because that's how we discussed them.

So, with respect to what matter is communicated to the audit committee under AS 16 should be in an emphasis paragraph and why, and what would not be appropriate and why, and whether financial statement in auditing matters should be emphasized or only should financial statement matters be emphasized. I think our group focused on what was important, and that it's important to have important matters included in an emphasis paragraph. And given the existing requirements for auditors to communicate important matters to the audit committee, there's likely going to be overlap. However, I didn't hear that we should use AS 16 as a checklist or as a kind of check the box on what should be included.

Our group was fairly supportive of including emphasis matters paragraphs, and focused I think more on financial reporting type matters such as significant accounting estimates and judgments, significant unusual transactions, transactions with related parties that are material, material uncertainties and other matters that affect the risk of material misstatements to the financial statements.

With respect to auditing matters, there wasn't as strong support. There wasn't a lot of dissent on perhaps some very high-level matters such as audit strategy or plan, but we didn't as a group seem to have a lot of value in communicating audit procedures at that level of detail.

Some participants thought that when you talked about what matters are important to an audit there would generally be overlap with significant accounting matters, so you might actually get to the same place.

With respect to what should not be included, I think our group was generally of the view not to include original material by the auditor, and that while the auditor should have judgment and discretion on what should be emphasized, they should not use judgment in the actual material that's being reported.

We spent quite a bit of time kind of starting with a model matter of emphasis paragraph that would include the matter, why the auditor chose to emphasize the matter, and where the matter is further discussed in the financial statements.

While our group suggested that we could go ahead and require the emphasis paragraph, they were definitely not as supportive of being prescriptive regarding the content. And we had a range I thought that was interesting of kind of at most having a rebuttable presumption that certain matters would be communicated while others at the other end of the range suggested it should be much more discretion based on the auditor's judgment.

With respect to if matters to emphasize were left to the auditor's discretion what factors should the auditor consider in determining what matters are most important to financial statement users. I think that we generally focused on items that were subject to measurement uncertainty, or that were otherwise significant to a user's understanding of the financial statements. You know, it all came down at the end of the day to where auditors spend their time, and what keeps the auditors up at night.

With respect to what the appropriate level of detail that should be provided in the emphasis paragraph, I think we spent quite a bit of time talking about the merits and the risks associated with various types of discussion that the auditor could have. And that generally, again, auditors would not include new information, but would rather reference where in the financial statement information is included. And while I think we did acknowledge that many investors might find more information valuable that the risks don't outweigh the rewards. And that you could potentially, if an auditor reported inaccurate or --inaccurate information or made the wrong judgment, you could have the auditor -- that paragraph changing the valuation of the company, and that would not be a good consequence to have.

When we talked about whether there would be any special reporting considerations for audit of smaller and less complex companies, broker/dealers, or emerging growth companies, I think we didn't hear that there would be any kind of carve-outs. And, in fact, several people mentioned that they thought it might be particularly important for emerging growth companies who because of a lack of a large accounting staff or focus might actually have more risk of material misstatements related to significant unusual accounting matters.

And with respect to whether there are specific elements of projects of other regulators or standard setters that we should consider, similar to Group A I believe, we didn't have any specific matters noted.

Some of the other things we heard that again our group, I think, was relatively supportive of matters of emphasis paragraphs, and that while it might seem like a small step, we thought that there would probably be a good change generated by having that small step, and whether it focused auditors more on what was most important, or if it improved the disclosures that are referenced to include more important information, that that would be, in general, a very good result, and a very good first step.

We did hear that it was important to strike the right balance of what was important without going overboard, so while there was the view that it shouldn't be limited to one paragraph, we also shouldn't encourage something that was so long that the important details got masked in the level of detail presented.

And another good comment was made regarding just the design and engineering of the opinion, in general, and that's something we could consider as we move forward with this project, that the auditor's opinion is still the most important opinion to investors, and to be careful that it didn't get clustered among other unnecessary information which could, in effect, diminish the value of the report.

With that, please, if there is anyone from Group D that would like to emphasize something they said that I didn't capture, please raise your tent card. Bob Herz.

MR. HERZ: Barb, you captured this, but it's a point that kind of building off of what Dan said about the international view. And I think some of that was in our discussion, too, as to really whether or not the auditor report, the emphasis should be based upon what the auditor viewed most significant to the conduct of the audit versus what the auditor thought was most significant to investors. And there might --hopefully, the two would overlap, but the issue of what was the point of departure in judging significance, whether it was the audit, or whether it was what the auditor thought investors might think most important, I think there were those little bit of back and forth, a little bit of -- in our group, you know, some people kind of I think framed it more from one point of view, and other people framed it from the other point of view. But listening to Dan, it seems to me that's something important to sort out.

MR. BAUMANN: Is that Kevin, Kevin Riley.

MR. RILEY: Yes, thanks, Marty, and great job, Barb.

The only other thing I just wanted to emphasize coming out of the group, it wasn't a total consensus but recognizing that this project will be a change, and we should perhaps focus on being more modest out of the gate with respect to the demands placed on the auditors to do things along these lines. See how things develop in practice, take a deep breath down the road and consistent with what I think came out of Jessica's group, then perhaps change on the fly after we've had a chance to take a look at how it's working. So, I thought that was an important concept.

MS. VANICH: Arnie.

MR. HANISH: Barbara, I thought you did a great job, also. I guess the only comment I would make is, I just want to make sure that we all understand that at least from the perspective I believe, and I think others believed in the room, I don't know if we had a total consensus, but that it would not necessarily be fully appropriate on the auditor's part to I'll call it opine or focus on the judgmental aspect of the accounting estimates. I think, you know, to try to stay focused on the emphasis of where the audit was being performed, the nature of the estimates, or the nature of the areas of most significance that would provide a reader with the understanding that these were the areas where there was significant time being spent.

This is where the areas of risk from a material financial statement misstatement existed, but to fall short of necessarily providing additional context around the nature of the judgments and accruals. Again, recognizing that the financial statements are made up of significant estimates with ranges, but it wouldn't necessarily be appropriate for the auditors to -- because they've already given an opinion on the financial statements, that they're in accordance with GAAP. And to go further to try to provide contextual aspects around the nature of those estimates, at least my view is that that would be one step too far.

MR. BAUMANN: Gaylen.

MR. HANSEN: Yes, just as a follow-up to -- and I don't know that we -- Barbara, I don't know that we necessarily discussed it in great detail yesterday in the breakout, but focus on what's important. And I raised that question yesterday, important to whom? And a reasonable investor, that -- and I appreciate your input on that, Jennifer, but we really need to think about who we're talking about here, because there's a wide range of investors. And I hope that wouldn't be overlooked.

MR. BAUMANN: It's very hard to summarize these comments, but I'm going to take a little bit of a shot. From what I heard, and maybe you all heard things differently, but the notes that I was taking down was there is a reasonable amount of support for an approach that used emphasis of matters paragraphs. There wasn't a lot of support for simply just pointing to those footnotes or those -- just saying what the matter was. There's a desire for some commentary as to why that matter is being emphasized, why it's a matter that was most important to the audit, maybe why it should be considered most important to investors, oftentimes maybe those two should overlap I think I've heard, but some commentary around that, the emphasis of matters not being tied to AS 16, specifically, but when I hear about the nature of the matters significant unusual transactions, related parties, matters with significant judgments and estimates, complex accounting, they're matters that are discussed with the audit committee. So, I think there's just some tonal aspect to that there about don't use the AS 16 necessarily as a checklist for this, but the types of things you would discuss with the audit committee are likely to be the types of things that you'd emphasize.

I guess in our group we did say could you imagine emphasizing something in the opinion that you had not discussed with the audit committee, and it was really hard to imagine that. You might do that. It's probably the last time you'd issue a report on that client, however.

Whether it's about matters in the financial statements or not in the financial statements, I think I heard more comments that it's emphasis of matters about matters that are in the financial statements versus matters that are not in the financial statements. And emphasizing matters about the financial statements, or about the audit, not about the audit procedures, but maybe why it's important to the audit, but really emphasizing the financial statements and what's in the financials, and not audit procedures.

Some other tangential benefits that seemed to be mentioned from a number of different groups were -- at least I heard it in a couple, that the emphasis of matters paragraphs will likely improve the audit of those critically important things that are being emphasized, and will likely improve the disclosures of those critically important things that are being emphasized. And those are benefits that are not necessarily directly related to meeting investor's needs with respect to some additional information, but I've heard a number of times that that probably is going to be an outcome of better auditing on the margin around these important matters, and on the margin maybe some better disclosures around these important items.

With respect to the point that Sam raised, and which I've heard a couple of times, that auditor -- and I think it came out of another group, as well, maybe it was the same group, but I know Mike was talking about it. Some type of auditor reporting on other matters outside the financial statements, or an attestation on critical accounting estimates or critical accounting policies. Don't think we've -- we haven't heard broad support for that certainly in the 150 or so letters, 155. There was not much support in the 155 letters for auditor reporting on other information outside the financial statements. And maybe, Jay Hanson, I'll give you the microphone. I do think I recall you attending a conference and coming back and saying you didn't hear that, as well.

MR. HANSON: A couple of us in the room here, Brian

Croteau and I attended a roundtable hosted by the Center for Audit Quality I think it was in January or so, early in 2012, and the point was to kind of tease out some of what investors wanted around the non-financial information, and there just wasn't a lot of support for it, which kind of surprised me because I came in with the paradigm they would want it. That was just one group that was pretty wide ranging group of investors, some preparers, some auditors.

MR. BAUMANN: So, hard to summarize. And, Joe, you made a very strong comment which I think you used the words "abject failure." I make note of words like that. But an emphasis of matter paragraph that described why it's being emphasized and the importance of it, and dealing with matters that are risks of material misstatement, significant unusual transactions, areas of particular judgment, is that directionally the types of things you think would be important to make this project successful?

MR. CARCELLO: It's hard to know, Marty, without seeing the detail of what the disclosures would have to be. I think the important thing is there needs to be meaningful new information around that either from management or from the auditor if all we get, as Jennifer said, is a roadmap. And as Jeff said, as well, I don't think the costs, I think the benefits are going to be less than the costs in that situation.

Let me briefly respond to what Jay said, because I think it's relevant. In this year's IAG meeting, Jay, we reached out to investors, as well, asking them about additional involvement for the auditors in some of these other spaces that you're talking about, and some of the feedback that came back, and the Board will remember this from the IAG meeting, was if auditors are not willing to communicate more to us now about what they know given the very significant amounts that are being paid in audit fees, we're not comfortable expanding their mandate. And, again, if I was an auditor I'd be really concerned about that. This is what customers are saying.

MR. BAUMANN: They were not necessarily saying, though, they wanted auditor association with other information. Right. Right. Can I just open the floor again for -- this is such an important topic to us, happy to at this point in time take additional comments from anybody on any subject on this auditor's reporting model. And I have, first of all, Denny Beresford.

MR. BERESFORD: Just a brief comment. Marty, in your summary you mentioned that emphasis paragraphs are likely to improve the auditing and disclosure of the items emphasized. And I think that's probably true, but keep in mind, too, that to the extent that there is going to be a lot of work that would go into the wording of emphasis paragraphs, and I think that that would involve both the senior level audit executives, senior lawyers on the side of both the company and the audit firms in many cases, that that is going to come at the cost of possibly taking away from some other aspects of the work and/or adding cost which, of course, is always a concern. So, there's always at least the possibility that these procedures are going to detract from other aspects of the engagement.

One of the concerns that I expressed in my comment letter on the invitation to comment was the fact that we already have engagement partners spending a great deal of their time on the wrapping up aspects of the engagement, and word-smithing and things of that nature, and to the extent that they have even more of this type of activity as opposed to the good old down and dirty auditing type aspects, that I think could be of great concern to a lot of people.

MR. BAUMANN: Thanks, Denny. Mike Cook.

MR. COOK: Marty, I'm just puzzled a bit. And I heard what Jay said, I heard what Joe said about investors don't want auditors necessarily to be involved with other information. But we've spent so much time talking about auditors should be addressing critical accounting policies, and estimates, and judgments, and that's what's in MD&A. It's not new. We don't need to reinvent the wheel. It's been there for, I don't know, 10 years, 15 years, John. I don't know how long it's been there. It can be improved, perhaps, but the same thing is true about risk factors. Well, we'd like auditors to be engaged with risk, and whether the disclosures of risk are appropriate. The disclosure of significant risk has been around for a long time, and it's part of the existing framework.

The one part that doesn't quite fit that, but I think is more telling, and I won't repeat what I said before, is non-GAAP information, because this is management saying notwithstanding this 70 pages of other stuff that we have given you to comply with one requirement or another, here are the things you really need to know about the operations of this company. So, take the stuff you got in the GAAP financial statements and add this, and subtract that, and add these other two things, and then you'll really know how we performed last year.

What would be more important to have the auditors associated with than information that takes what they live and die by, GAAP financial statements and translates it into what management believes investors need to know to assess the performance, the future cash flows and so on of the company. And if that is being done in a misleading way, or it's not being done fairly, the auditors are the best positioned to make judgments about that. So, we have these three things that are already there, and we're thrashing around trying to define new things that we ought to get people associated with. And AS 16 and all the stuff that's in there, and somebody said well, it's important enough to talk to the audit committee about, management is talking to the audit committee about those things, not the auditors. And the auditors are saying we agree, or if they don't agree they're standing up and saying so.

AS 16, again, perpetuates this myth of a two-way communication which is not the way the world works. And most of the communication is being done by the people who are supposed to do it, which is the management of the company. So, the auditors coming in at the end and saying we talked or didn't talk to the audit committee about something is almost irrelevant if management has done its job properly. And we hope they have.

But I'm just puzzled by this -- I don't -- do you know -- do all these people know what's in MD&A, and where it came from, and what it's intended to tell? And all you need to do is throw a saddle on that, put the auditor in the saddle, and you'll get them associated with management's having said notwithstanding 49 items in significant accounting policies in Note One, here are the four, or five, or six things you really need to know about to assess our financial reporting. What could be a better place to put the auditors?

MR. BAUMANN: Thanks, Mike. I think you're reacting to what I initially summarized, and I asked Jay because I knew Jay had attended a conference, but it was my summary. And it's just a matter of fact, in 155 comment letters we really didn't get any support for auditor association. We laid that out as an alternative so, therefore --

MR. COOK: Marty, if you don't ask the question in the right way and you don't know what you're asking about, you won't get the right answer. If you're asking the question of would investors like auditors to be associated with critical accounting policies judgments and estimates, and the answer is no, or they're not commenting I think you've asked the question in the wrong way, because that's exactly what people are saying they do want people to be associated with. And it's right there in MD&A and it has been for years.

MR. BAUMANN: Okay. Dan Slack, you had your card up for a while.

MR. SLACK: So, I just wanted to follow-up on what Jeff had said, Mahoney had said earlier. And I just think it's important that it should not be just a roadmap if emphasis of matter paragraphs is the path that the PCAOB goes down, that I think that it is important that there be some qualitative approach, some sort of why, into the process of why this matter is emphasized.

And I got a little distracted on my thoughts listening to Mike speak. It's sort of interesting about, you know, bringing the auditors into the non-GAAP pro forma estimates or whatever. And that is an interesting concept, maybe it's a little bit beyond this auditor's reporting model. I don't know, but I could see that that, in fact, could be useful to us as investors.

MR. BAUMANN: Thanks. No, it wasn't beyond the scope of this project. In our Concept Release we laid that out as one of the possibilities, auditor association with MD&A. And, in particular, we pointed out I think critical accounting estimates as being an aspect of that in the Concept Release. So, we did lay that out for investors. Jay, you want to --

MR. HANSON: Marty, I just want to make a clarifying comment on some of what I heard at this roundtable I attended a number of months ago, and that was there was acknowledgment of many of the people in the room talking about this auditor association with the press releases and the MD&A, that there already is involvement in most companies with the auditors actually reading the press release, and some of the context around the questions that were asked. And that setting was gee, since the press release often comes long before or at least weeks before the audit report is completed, the reporting that an auditor could do if there's actually a report being written wouldn't say a whole lot because it would say gee, we were engaged to do an audit. These numbers agree to the unaudited information. We're not done yet, and that would give limited value to investor as an additional report, but there is strong acknowledgment that there was already substantial auditor involvement in the process and additional reporting of what that involvement was wouldn't add a lot of value.

MR. BAUMANN: Thanks for that clarification. I think Mike pointed that out historically, too. And my experience is that's the case, as well, that there is auditor involvement in those things, but the question is reporting, as you point out. Let's hear from Brian Croteau from the SEC.

MR. CROTEAU: Thanks very much. I was actually just going to make a similar point in reporting back from what I recall hearing back in January, as well, at that meeting, and very similarly it wasn't -- what I wasn't hearing was that there was an interest in auditor involvement in that area of MD&A, but I think the starting point consideration was that auditors have a role relative to reading that information and considering material inconsistencies and material misstatement of fact today. So, the question was one more of the incremental.

Now, whether an audit of that information versus what's being done today would get better at completeness was a question that was put on the table, and I think that's a question people could continue to give consideration to. And I know that you all are giving consideration to whether any improvement or changes to the performance requirements would be appropriate relative to AU 550. But I don't think it was -- what I wasn't hearing was people saying we don't want any auditor involvement, or that we'd want to take away what auditors do today relative to that information, but there clearly at least in that particular group wasn't support for broadly expanding the auditor's role outside of auditing for financial statements and what they're required to do today under 550.

MR. BAUMANN: Yes, we didn't include this in the discussion materials and as part of yesterday's item but we are spending a lot of time on the existing standard on other information in audited documents, and maybe potentially clarifying in the auditor's report what that auditor's responsibility is, and maybe the auditor saying something about that if we can figure out the right tools and mechanism to do that. But we're definitely working on that aspect of other information accompanying the audited financial statements.

A lot of cards up here in the center of the room that I see, but let's start with John White, and then maybe over to Arnie, and Steve Rafferty. Arnie and Jerry De St. Paer.

MR. WHITE: I'm probably just repeating what Jay and Brian said. I was actually moderating that session, and we basically spent six hours with 30 investors in the room, and the real question we were asking was should there be expanded auditor association with MD&A and press releases. And I'll have to say very much to my surprise there was kind of a resounding no. Just to emphasize, I mean, it was just -- I was really quite -- I was very surprised.

I'll have to say just from my personal experience of being involved with MD&A and press releases and so on, and non-GAAP measures that when auditors are in the room and they're part of the dialogue, I think the disclosures get better, but they're just -- there was not -- I mean, there was certainly support for the existing association with those, with press releases and MD&A, but not that there should be an expanded association with them. I was very surprised.

MR. BAUMANN: We were equally surprised because we laid it out as one of the possibilities in the Concept Release, and were very surprised by the lack of support in the 155 comment letters. So, a resounding no is what we're hearing. Arnie, and then Steve, and then Jerry.

MR. HANISH: So, just a couple of comments maybe to build upon what Mike Cook was saying. I agree with Mike that -- and I know that document AS 16 talks about two-way communication, but I fully agree that it's really a three-way communication effort. And that I, as management, have that responsibility first and foremost to communicate with the audit committee as to the issues around my financial statements.

The auditors, they complement what I'm communicating, and certainly have every opportunity and every right to agree or disagree, provide additional color commentary, to expand upon my discussion and disclosures with the audit committee, but I don't think we need to -- we need to not lose sight of the fact that management has that responsibility first and foremost. And to infer that the auditor should be stepping into the shoes of management I think is -- and I know you're not saying that, but I --

MR. BAUMANN: Nobody is making that inference, and that's not what AS 16 says, Arnie.

MR. HANISH: I know you're not saying -- yes, I just think we need to keep that at the forefront. I think that the focus, again, should be on -- the focus should be on objective perspectives. I think if this is a matter of emphasis paragraph, which I do support the matter of emphasis paragraph, that it needs to be an emphasis on where the time is being spent, and areas within the audit. I think it needs to stay away from the qualitative assessments.

As I've said, I think that there are ways working with the SEC, if there are issues around the critical accounting policies, and people are not describing within their critical accounting policies the appropriate risks or the appropriate quantitative analysis for the reader to understand the changes in those estimates and what can cause those estimates to change based upon the risks assessment, the various assumptions that go into those, determination of the accounting accruals and other aspects of our financial statements, if we're not describing that appropriately with the required quantitative deviations that I believe are very clear and required within the scope of providing critical accounting policies, then I think the SEC has the responsibility to call us on the carpet, and provide and push us to have more appropriate disclosure within the critical accounting policies that I believe will make the investors, and provide the investors with reasonable and significant information around, again, the range of outcomes that can occur, and the impact that could occur if we've missed our estimates by 5 or 10 percent. At least sufficient analysis to determine what a different answer would be within our financial statements.

And I think a lot of it already exists, and to create something new other than maybe providing the reader with where is the auditor spending their time and the emphasis, and why they are spending their time there, and providing some context as to the framework for their scope and their audit plan, I think would be going too far. Thank you.

MR. BAUMANN: Thanks, Arnie. Steve.

MR. RAFFERTY: Yes, as I've listened to this discussion, I think we have to appreciate the fact that investors are telling us that they want and need additional information. And as I listened to all of the panels' report, there seemed to be something of a common theme on the kinds of information that they want, being identifying material estimates and why those estimates might change, to Arnie's point, other matters that might give rise to future volatility in financial statements, and what those uncertainties are, critical accounting estimates, material uncertainties, unusual transactions and events, perhaps even information about going concern. I would boil that down to investors wanting more information about the subjectivity and volatility in the financial statements potentially in the future.

So, I would -- it would be hard to disagree that there shouldn't be some kind of an emphasis of a matter paragraph around that kind of stuff, but if you -- I think one of the big struggles that we're going to have here if we stick to the principle that auditors shouldn't be providing original information is, that's going to be hard to do in an auditor's report. It's almost an emphasis of a matter paragraph or a footnote in the financial statement for that to be original information from management. And I think while you can argue that that information exists today, it's fragmented. Some of that information is in the financials, some of it's outside the financials, some of it's perhaps not required at all. But I think investors might be saying put that one place in the financial statements where I can read about the uncertainty and volatility of these financial statements. And I realize that maybe as a perfect world and requires standard setting beyond the scope of what the PCAOB can do, but I would encourage you to think about pursuing that if it is perhaps more of an ideal answer.

And then I appreciate the fact that investors might also want an auditor's evaluation of that, of those disclosures. And I wouldn't think there would perhaps be anything wrong with modifying the auditor's report to specify that the auditor has, in fact, evaluated the disclosures around uncertainty and volatility of financial statements and report that those disclosures are, in fact, adequate based upon the extent of the audit work performed.

MR. BAUMANN: Thanks, Steve. We have Jerry, and then Steve Homza, and Robyn Kravit, and I think after that we'll be due for a break.

MR. DE ST. PAER: Thank you, Marty. I just had two points that I think came out of our group, but one item was only mentioned by our group, and another that was mentioned in a couple that I think are worthy of your consideration for inclusion in your sort of summary, overall summary.

The first was the discussion that a couple of groups have talked to, and that is identifying the target of who we're trying to benefit with this. Who is the investor? And in our group -- and I think that's worthy of some consideration. Our group, I don't remember who it was. It may have been Gary who recommended using the FASB bar for that which is fairly high. It's a fairly sophisticated investor, but I do think it's useful for us in terms of trying to target where we're going to pitch this, to understand the audience that we're pitching it to. That's the first point.

The second point I thought really made a lot of sense was the idea of field testing. I have to say it was not my idea, so this isn't something I'm promoting, but it came up in our group, and I really think it's a good idea, to pick a few companies, go back, take a few years and see if you can kind of get a sense in a real way of what you would be looking at to inform the process, some field testing.

MR. BAUMANN: Great. Thanks, Jerry. Steve.

MR. HOMZA: Thanks, Marty. I just wanted to suggest that perhaps as I sit here and listen to this discussion there is a role for internal auditors to provide more assurance around information about risks in MD&A and so on and so forth. I hear a lot of gray through this discussion, so it may be appropriate, maybe kind of a compromise position between the investor world that is clamoring for more information and additional assurance, and auditors that may not be able to provide that, perhaps some responsibility could rest with internal auditors because they are inside the companies. They know the companies very well, and I think in the public company world, especially at that level, they're staffed with CPAs, Certified Internal Auditors, that have a deep background in business that come from major accounting firms, regulators, so on and so forth. So, I think that point is perhaps worthy of some consideration in this process.

MR. BAUMANN: How do you see that working, IIA coming up with a proposal, or companies voluntarily asking their auditors to do that, or what?

MR. HOMZA: That would be my suggestion for the PCAOB and the Institute of Internal Auditors to work together to come up with something around that. I understand that the IA, I have it in front of me, the comment letter to the Concept Release dated September 30th of last year, and it is one suggestion in that letter.

MR. BAUMANN: Thank you. Robyn, I think you get the last word.

MS. KRAVIT: Great. I know this is beyond -- I'm speaking to the PCAOB here, and this may be beyond scope, but in our breakout session I mentioned, and I think there was some support for the fact that really the audit committee's role -- I mean, I understand that investors are clamoring for more information, and I'm sympathetic to that, but maybe it's the audit committee's role to provide emphasis and additional information, because after all it's the audit committee that hears from an internal audit. It's the audit committee that has robust discussions with external auditors. And to decide where to point investors might be better placed in the audit committee scope working with the SEC, so I just throw that solution out as opposed to mandating certain information.

MR. BAUMANN: Thanks, Robyn. And, of course, as Jennifer commented yesterday, the FRC in the UK has gone down that route with expanded audit committee reporting. Their process and what they've done in the oversight of financial statements in the audit, and to make some commentary about financial statements and the audit, and then for the auditor to actually report on the fairness of the audit committee report. So, there is a model for that in the UK.

**NOTICE:** This is an unofficial transcript of the portion of the Public Company Accounting Oversight Board's Investor Advisory Group meeting on October 16, 2013 that relates to the Board's proposals (1) Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2 and (2) Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments. The other topics discussed during the October 16, 2013 meeting are not included in this transcript excerpt.

The Public Company Accounting Oversight Board does not certify the accuracy of this unofficial transcript, which may contain typographical or other errors or omissions. An archive of the webcast of the entire meeting can be found on the Public Company Accounting Oversight Board's website at:

PUBLIC COMPANY ACCOUNTING OVERSIGHT BOARD

+ + + + +

INVESTOR ADVISORY GROUP

+ + + + +

MEETING

+ + + + +

WEDNESDAY
OCTOBER 16, 2013

+ + + + +

CHAIRMAN HARRIS: In terms of this final general discussion session, I emailed all the Investor Advisory Group members, tasked them what topics they wanted us to discuss. And they indicated the auditors reporting model, audit transparency, the status of the PCAOB's work on the ACAP recommendations which is, I think everybody knows ACAP refers to the report of the Department of the Treasury's 2008 Advisory Committee on the Auditing Profession, the global agenda, which is something that

Anne Simpson raised, oversight of audit committees, and the possibility, although I think there was enough communication that we're probably not going to bring up a fair value accounting.

Since the first two topics are under consideration by the Board, we've made it clear that all comments will be transcribed as have the comments of this entire session. But those first two topics deal with the auditors reporting model and audit transparency.

And I should say that I anticipate that this last hour's discussion will be relatively free-flowing with members discussing issues as they see fit. And hopefully we'll have time before we break for everybody to bring to our attention what is most on his or her mind.

So having said that whether or not we want to start with audit transparency or the audit reporting model, whoever wants to start with that subject matter or either of those raise your tent card and we'll start, Ann, with you first, and then we'll just recognize people as they put up their tent cards. So Ann Yerger?

MEMBER YERGER: This is Ann Yerger, one of the two Anns named here. Well, yes, let me make one comment regarding just auditor report, and it sort of links on to our prior conversation.

I know we were talking a lot about audit committee disclosures to investors, but I do want to stress that certainly the council and personally I'm in favor of an enhanced auditor report to the public.

I appreciate the benefits of sort of that pass/fail model that's in place, but I think there's terrific, important information that the auditors have that I think should be disclosed to the public.

Second, let me comment on the issue of auditor transparency. I think that there is no simpler or less expensive reform that should and could be put in place than requiring the disclosure of the name of the partner on the engagement. I think nothing sharpens the mind more than a signature.

I know we all have to sign documents, public or not, and I pay a lot of attention to that. I think it's an incredibly important reform and I urge the Board to move forward with that. Thank you.

CHAIRMAN HARRIS: Anne Simpson?

MEMBER SIMPSON: Thank you. I'd like to fully support what Ann Yerger has just said. I think the question of transparency on the audit, it's hard to understand who would object to this. Who would not be willing to stand and be held accountable for their own work?

I recall us having similar discussions around boards of directors 20 years ago about knowing who the board were, what their background was and so forth. It seems to me just exactly as we were talking about, the accountability to shareholders which is in real need of being strengthened. That sense of personal accountability is extremely important. So we fully support this and we actually think it will sharpen the discussion in an extremely useful way.

On the auditors reporting model we'll be putting in comments. I think, you know, you will remember, I think it was the first meeting that I came to we looked at the auditor report, was one of the issues in the working group that I participated in.

And my party piece of the day was to illustrate the problem we had as shareholders by reading you the audit report from Bank of America before, during and immediately after the crisis. And there was not one dot or comma different.

So I think if we can't use the audit report to communicate on critical issues, and many of them are listed out in the consultation, then really this is becoming an exercise in pushing paper around. So accountability will be sharpened with transparency, and quality will most definitely be improved with this new scope to the audit.

DIRECTOR DOTY: With transparency there has been an issue raised in the comment process over the original proposal as to whether it was either useful or necessary or appropriate to have the engagement partner disclosed in the audit report, whether the same results could be achieved by having a separate form, a Form 2 filing or a special form that we would devise which would be filed either annually or within a certain period of time following the completion of the audit that would contain this information.

That raises also the question of whether you just stick with the auditor's name, the engagement partner's name, or whether you include more extensive information about his or her qualifications and the audit team. Are there any views you have on that?

MEMBER YERGER: I would strongly prefer that there not be a second or another filing. You know, the more you make folks hunt and peck for something, I think the less valuable it is. I don't know why you would add, you know, make something more complicated that really doesn't have to be.

I don't object, frankly, to having additional information disclosed regarding the background or expertise of the individual. I think that can be helpful as well. But I do think just having the name is a good data point. I think it sharpens the mind and I think it also can give the audit committee good information as well to compare.

MEMBER SIMPSON: Yes, I agree with that. I mean an auditor should be proud of the work they're doing. And in the same way that we know more now about the people who serve on the boards, it's entirely appropriate to have that sort of information about the auditor and the audit partner.

This is entirely complementary to the

improvements we'd like to see to the audit report itself. So if transparency is the watchword, you know, we hope the wind is in your sails. We certainly, as the users, the prime users of this information, fully support what the PCAOB's hoping to achieve.

MEMBER BUETTNER: And Steven, I would just say -- sorry, just to jump in on the back of that. I would say that if you are going to disclose additional information, the tenure, that particular engagement partner's tenure is actually relevant and important information and should be included.

CHAIRMAN HARRIS: Well, as I say, since this is the equivalent of a comment period as well, you're being transcribed, what are your views in terms of the identification of the engagement partner and the identification of other auditors involved in the engagement?

MEMBER BUETTNER: I would agree. I think the more information, frankly, the better, and I would think that to put that on a separate form probably complicates the issue as well. It should be relatively easy to find.

CHAIRMAN HARRIS: Norman?

MEMBER HARRISON: Very quickly on this question. First of all, I violently agree with everything that was just said on the other side of the room. But to take it a step further, as some may recall I was on the working group last year that dealt with the issues around the audit report, and of course we raised this issue at that time.

It's an important transparency issue, but it ties in as well to other things we've talked about today including this issue of whether there is or perhaps why there isn't competition for audit services that's based on quality.

I think that ownership and putting identities with work product, I think, moves us a step in that direction. And it may have some beneficial aspects for compensation issues as well. So I just wanted to point out, I think that it's an important issue for the reasons that both Anns provided but that it ties into a number of things we've talked about today.

CHAIRMAN HARRIS: It's extremely important that we get the temperature of investors on this issue because oftentimes the assertion is made that we only have comment letters from the profession.

I mean the profession's comment letters totally outnumber the comment letters that come from investors or representatives of investors or people who are associated with investors. So, you know, to the extent that you can flush out your arguments either pro or con on these issues, it's important to get it on the record.

Mike?

MEMBER HEAD: Mike Head. And as far as the additional auditors report, obviously I was on the similar subcommittee last time and still feel an auditor's discussion and analysis supplemental report would be very valuable.

And I guess based on what you just said I have no problem with a supplemental filing. I would just then require whoever the lead engagement partner is that is on the supplemental filing has to sign and be shown on the opinion in their name. I'd give them both instead of one or the other.

CHAIRMAN HARRIS: Lynn?

MEMBER TURNER: The getting the auditor's name, I think, would be very good. In fact, I'm shocked that this thing's been debated for 40 years and finally it looks like maybe someone will actually do something about it.

I agree, well, I mean put it this way, I don't think it matters whether you have a separate ADNA or you included in the filing the 10-k or whatever filing it is itself, what I'm concerned about is the information and getting the information that you need and I care less about, you know, which page it's printed on.

With respect to information that would be useful to and impact on someone voting on whether or not to retain the auditor, I think that stuff clearly ought to go into the proxy because that's when investors are most likely to be looking at it and where they're most likely to look at it when making that vote. So I think it probably ought to go in there. I wouldn't do a separate filing out beyond that.

As far as information like tenure and that as long as it's factual, I think that is good. I asked our CIO at Copara to survey all of her analysts and portfolio managers, and one concern that they came back and expressed was asking the auditor to provide information that would be perhaps turned into spin or hype. They were very concerned about that. They wanted it to be factual information and information that the PCAOB or someone at least periodically could test and see that it was actually accurate. So at least in that group they were very concerned about that at Copara.

So factual stuff like here's the tenure of the auditor, here's the experience the audit partner has in auditing that industry, that type of stuff is factual and it would be very helpful.

CHAIRMAN HARRIS: Damon Silvers?

MEMBER SILVERS: Yes, I again want to speak to this question of identifying the partner. Like Lynn, I mean I've been on many bodies that have advised doing this over a period of years and it just continues to surprise me it's not done, particularly against the context of, for example, the fact that individual attorneys sign SEC filings.

The fact that in general we demand a great deal of individual disclosure in disclosure systems generally. This is true with respect to boards of directors, to corporate executives. Corporate executives have to individually sign financial statements.

This is true in, to take a somewhat far-afield example but one which I'm somewhat familiar with, in the regulation of labor organizations. I mean a great deal of information is publicly available about me. I'm just an employee.

And so the idea of sort of some level of personal identification in relationship to important gatekeeper functions strikes me as just totally old hat, and I don't understand why this is controversial, and it's just long overdue.

And it ties to what we were discussing earlier. I mean throughout today in terms of the problem of commodification, the problem of audit committees not necessarily doing what they're supposed to do, the minimum that the PCAOB ought to be doing in this area is arming the various actors in this process so that if they choose to want to do their job seriously they have the basic information necessary to do it. And I would say the most basic information is knowing who's in charge of the audit.

Now I think there is, in addition, I think there is something that has not gotten a lot of attention here which is the question of who really is, whether we really have a consistent view of quote, who is in charge of the audit.

And the Big Four audit firms and now their global networks, is it truly meaningful, what does it mean to say that one of them is in charge of the audit without identifying specific human beings?

I think if we were talking about, you know, a Victorian partnership, you know, a handful of people sitting in an office together, you might be able to say, well, it's a meaningful thing to say that those five people or those ten people are in charge of an audit.

How many tens of thousands of people represent the institution of PwC or E&Y and is it meaningful to identify them as responsible collectively? I don't think it is.

And oddly enough, when we talk about auditor rotation currently we focus on partners. And the idea that we focus on partners there but then don't tell anyone who the partners are, it doesn't make any sense to me.

And so, you know, look, there's always going to be a certain amount of pushback here, but this seems sort of like a minimum thing for the PCAOB to move forward and adopt.

And then I'll make then a comment about the auditor reporting model for a moment and just a general piece which relates to what a number of people said about the danger of boilerplate in any revisions of the auditor reporting model.

Again, having seen a number or requirements for disclosure turn into meaningless mush, it seems to me that if you're going to try to get more information in a meaningful way out of the audit process that then again informs and potentially empowers a variety of actors that surround the, including the audit committee itself, but the actors surrounding the audit committee to try to improve audit quality, that those disclosures really have to either be specific, testable facts of the kind that I think people have discussed here already today, it was the subject, I think, of Ann's presentation, or they have to be kind of processes of requirements that for lack of a better word compel either the auditor or the audit committee to disclose sort of the things that essentially involve grading on a curve.

The example of, tell me the five hardest things you had to deal with in the audit process, the five toughest decisions, the five most marginal things, a process that doesn't allow you to say, oh, we don't have any. We're all fine here.

I can't help but just saying that, you know, the president of the AFL-CIO just came back from his first-ever trip to China. No president of the AFL-CIO has ever been to China since 1955 when the AFL-CIO was established. If you think about the dates involved you'll understand why.

And he had a great trip, but he was constantly in the process of asking people in various settings, so does anything ever go wrong here? Do you all ever have, you know, does the mine ever cave in? And the answer was always, oh no, no, no, no. Never, never, never.

Now we all understood that this was part of a ritual back and forth. We don't want to reproduce that kind of ritual back and forth in what we're doing here. And the way in which I think you avoid that is by not allowing, oh, there's no problem to be an answer.

MEMBER HANSON: Joe Carcello?

And let me ask the people who have commented to also respond to the liability issue associated with the partner identification.

MEMBER CARCELLO: Like the other people who've spoken, I also had a couple of comments about both of these. And in terms of the liability issue, I'm not an attorney so there's people in this room who are in a better position than I to talk about that.

But in terms of the audit report, let me just give you a very brief quote which I'm sure you've seen. "I believe the audit is at a tipping point. The audit report at present is hopeless."

Now that wasn't Damon, that wasn't Lynn, that wasn't either of the Anns. That wasn't me. That was Sir David Tweedie, okay, former Big Four audit partner, a former chairman of the IASB.

You know, this is as an establishment profession as you can get, and I could give you a bunch more quotes like that. So I think it's clear that there's a need.

I went back and I reviewed the transcript of the

September 2011 roundtable, and people who are opposed to your rules always pull out the bogeyman, right, Damon? Unintended consequences. If I've heard that once I've heard that dozens of times.

Here's a quote from Paul Haaga at the Capital Group. "The mere fact that there's more to say than pass or fail we think would give," and there was broad consensus on this within the Capital Group, "we think would give auditors a stronger hand. They would win more arguments and we think that would be a good thing." That's an unintended consequence. All unintended consequences aren't necessarily bad. In fact, that would be a good unintended consequence.

In terms of auditor transparency, there's a growing body of literature that finds that, in fact, identification or signature is helpful. Much of that literature the Board has seen.

As others have already said, CEOs, CFOs, chief accounting officers have certified Ks and other documents for years without huge problems. Most of the developed world require the partner to sign or be identified, virtually all of Europe, China, Australia. Has not been a problem.

And I'll close with another quote from a very bright person. "Common human experience suggests that when an individual is publicly identified with a particular activity that identification usually leads to a higher degree of care and focus." I agree.

CHAIRMAN HARRIS: Mercer Bullard?

MEMBER BULLARD: Sure, just a couple of comments on the, you know, on the liability issue. Often you hear liability risk used as if it is always a bad thing. The issue with liability risk is, is it a good liability risk, and then creating the liability is going to create net social benefits, but you always almost hear it as inherently negative.

I'm all for reducing liability risk that doesn't create net social benefits, but this is one I think you certainly would. And it also reflects a trend that you're probably aware of in that cohorts have been complaining about holding corporate entities liable and no individual's engaged in the contact for which they're being held liable.

Another problem has been true for quite some time. You have corporations in many cases paying damages. The corporation itself pays the damages to shareholders, who of course the shareholders of the corporation paying it, and no individuals are held liable.

You have the SEC now saying it's not going to take no-admit, no-deny settlements anymore and pointing out it's going to go after individuals. And this is precisely what we need to do.

We need to make individuals responsible, because in this sense corporations are not people. Corporations can't take action without an individual having taken that action. So I think that putting the name and the face on the action will have this behavioral modification effect, it also will be the kind of liability risk that you want.

And I think it also, to Anne's point, it really needs to be in the main source of information about the audit. You know, there's a general collective action problem that shareholders have in getting involved in anything. And a big part of the collective action is the information costs, and every time you increase the information costs you make it much less likely shareholders will engage and be active, because as a cost efficiency issue it's just not worth it.

And in talking to reporters this is constantly an issue. They will not write good stories if the information is not easily available.

And, you know, going further, this is an issue that I've been sort of arguing with the SEC about for more than a decade is, it's not clear to me why information is not provided in a way that when you go on useful websites it's provided where you can click a button and get all the combinations of information that you want that would be relevant.

And in the mutual fund world, for example, you should be able to compare ten funds and see their fees. In the context of issuers you should be able to compare the auditors. You should be able to compare who's been with what firm how long, who have been the auditors on different projects, what's the disclosure that is related to PCAOB inspections.

And you see the government using virtually none of that technology in order to make information really useful, and that is what would really make it actionable.

DIRECTOR DOTY: Mercer, you may have to write that to a legal argument on liability up in a comment letter. December the 4th, 60 days, it gives you until February. You'll have plenty of time to do this at the University of Mississippi. But we're going to need the comment, the legal argument on intended and unintended, good and bad litigation costs in the file.

CHAIRMAN HARRIS: That was not a set-up, Mercer.

Norman?

MEMBER HARRISON: Sorry to come back to it, but actually I had two things, one of which I think Mercer and Ann have eloquently described on the issue of liability.

I would second the notion that what the ideal and a probable outcome of engagement partner accountability for the content of an audit report and public visibility with respect to the conduct of the audit, I would think would be a risk mitigation tool not a risk aggravation tool.

Secondly, I'm not a litigator, but at the end of the day when an accounting firm is sued over an allegedly blown audit, I mean they're the deep pocket. I don't know that adding, the identity of the partner comes to life early in the litigation.

Any event through discovery, I don't get the whole thing, to be quite honest with you, about that adds anything of any material with respect to litigation risk or to risks of judgments or outcomes.

The other thing I wanted to mention briefly, and I was putting my board down when the thought popped into my head that when Damon gave so many good analogies I want to offer one more for everyone who's been or is a litigator.

I'm sorry the judge isn't here, but many of us in this room have at one point or another in our lives served as an expert witness in civil litigation. And it's not a perfect analogy but it's close, where we've been asked to examine a body of evidence and to apply judgment and experience to it and render an opinion on one or more issues.

And certainly under the Federal Rules of Evidence we sign the reports, we don't sign our firms' name to the reports. And then we are often challenged as to whether we possess the requisite expertise or not and a judge has to decide and we're deposed and there is sometimes an exhausting level of review and transparency disclosure on the contents of our report.

I'm not suggesting that same level of increase should apply here, but again it goes back to this notion of when someone holds themselves out as a professional it's hard to find many other examples where the individual's name isn't on it.

It really goes back to the issue we discussed earlier in our group's discussion of audit quality indicators where I made the point that we're in that context assessing or measuring or evaluating conduct. It's the same thing here.

The opinion was ultimately reached and rendered by a human being who had authority or responsibility for conducting an audit process. It was not reached and rendered by a limited liability partnership, a fictional legal entity.

Now I'll put my board down. Thank you.

CHAIRMAN HARRIS: Barbara Roper?

MEMBER ROPER: First of all, I agree with everything Mercer said and plan to cosign his letter when he writes it.

We were talking last night, we were kind of joking around about the fact that my sister and I have always said that fear of embarrassment has propelled us towards success. The fear of, you know, of embarrassment keeps us from ever having gone to class not prepared, you know, whatever.

I think it's sort of a frivolous example, but people behave differently when their name is on there. People speak differently when they're making an anonymous comment in the blogs or when their name is attached to a comment.

We know in a variety of context that this does affect people's conduct, and it affects people's conduct, I think, in this way precisely the way we want to affect it, which is to make them think more seriously about just exactly how comfortable they are with the opinion they're rendering.

And so I mean, I think the benefits of this proposal are self-evident. We've been talking about it for years, and I think, you know, I would strongly support the Board moving forward in that area.

CHAIRMAN HARRIS: Anne, I'm not going to recognize you now because I know that you want to talk about the global agenda, and we'll -- well, then if you don't we'll recognize you now and then you can talk about the global agenda. But that was one of the items in the email correspondence that you put on there. But talk about whatever and then we'll --

MEMBER SIMPSON: True enough, but I'm a nonresident alien so I'm honor bound to talk about other places. No, this was, you said, Steve, that you wanted people who had spoke in favor of transparency to address the question of liability, so I'm briefly going to do that.

I agree with what's been said that these corporate forms, be they joint stock companies or partnerships, the corporate forms have a lot of purposes. But these are not moral agents and cannot be held.

So whichever Lord Chief Justice, way back when, said, you know, corporations have neither a body to kick nor a soul to condemn to eternal damnation, at that point we're then back to people. And whatever has been said about political donations and political speech about corporations being persons is nonsense.

So if we want to change behavior, the corporation is not something that will behave differently. It's people that will behave differently, and behavior does change under observation.

If there are concerns about liability it is not to be addressed by drawing a veil over the people who are responsible. If there are issues around litigation and liability they need to be dealt with on their merit, but this would not be the channel I would suggest.

CHAIRMAN HARRIS: Okay, Lynn, then Damon.

MEMBER TURNER: Two points, one to your question of liability and then one back to the basic audit reporting model and your proposal that the staff have recently put out.

First, on the liability issue. In the state of Colorado, engineers and architects, you can add those to the list of people who have to sign in their own personal name, in addition to the CPAs who give expert reports, the boards and all those people.

In fact, when you come down it, the auditors signing these audit reports are about the only people that don't have to put their name down. Everyone else does. And they're the only ones, and there's no good reason why they should be given special privilege whatsoever.

And on liability, I chaired at the board of trustee committee at Copara that oversees our litigation. I can't fathom us deciding whether or not to sue a firm based upon who an individual partner is.

It's going to be based upon whether or not there was an audit report rendered when, in fact, the belief is that it was a failed audit and a clean opinion wasn't warranted.

And in every case I've ever seen go into litigation no one sued, first and foremost, the partner and left the firm off the thing. It's ridiculous to even propose that. It's always going to be the firm that gets sued.

You go into discovery and immediately upon discovery what's the first thing you find out? The partner's name. So the notion that there's audit risk associated here because of liability is a figment of someone's imagination and dreams. It just isn't supported by actual fact.

And in Colorado, and I've checked this with the state Board of Accountancy, you're liable as an individual whether you sign in the firm's name or your own name. So it doesn't affect liability in that respect in any way, fashion, shape or form. So there is no argument on liability on this that is factually based.

The second issue on the audit reporting model on the proposal that a comment, I guess, is due in December, and it's good that something's got out there that people can discuss and comment, I'd just say there has been an issue thrown up with respect to that proposal.

And depending upon how people look at it, and I've gotten different reads from different people, that proposal may or may not be fatally flawed. And the issue is whether or not that proposal as written would require disclosure of the items set forth, and there's some good items there that are set forth, but whether or not disclosure's required based upon the professional view of the auditor or is based upon what the auditing standards themselves would require to be identified as significant matters.

And when the ISB did the old ISB Standard Number 1, that standard was written and said you have to disclose to the audit committee, what, in the professional view of the auditor, is deemed to be something that the auditor would believe would impact on their independence wasn't required to be disclosed from an investor perspective or perspective of the standards.

And what we saw when the standard was written that way was the auditor's continued to violate black and white independence standards but didn't put it in the standards letter itself, and came back and always said, well, in our professional view.

So it became an unenforceable standard when it was written that way because auditors always came back and said, well, it doesn't matter what the standard said because it's what in our professional view was. And so the ISB Standard Number 1 turned out to be basically a fatally flawed and worthless standard.

Bill Allen is someone you might recall tried to fix it. He wrote a letter shortly after it was issued, after he and the other three members recognized the fatal flaw, but it never got it fixed and it's never worked.

There's been many, many instances of black and white violations that never were told to audit committees in that black and white letter.

So depending upon how you've written it, if you've written it to say in the professional view of the auditor this is what they would have to disclose, that document is fatally flawed and will never work. And we've got that experience behind us.

If it's written from the perspective of, here are the significant matters you would have to disclose if the auditing standards would deem those to be significant matters, then you're okay. And I've heard different interpretations of that standard.

DIRECTOR DOTY: This is a very valid point, and I think the limiting case you lay out, Lynn, is one that the proposal avoids. The proposal requires a discussion of what were the difficult auditor judgments, the difficult issues of supporting opinion, the complex issues.

It further goes forward to say if you decide there are none you must explain why. You must document how you got to the decision that there were none. And it goes further to say that it would be not expected that there would be many audits in which the auditor could conclude there were no critical accounting matters.

It directs the auditor to decide and to discuss what were the critical audit matters on the basis of, I think, a stated as well as implied assumption that almost any audit involves some critical audit matters.

And the documentation is required of the decision either way to exclude, if you exclude something that normally would have been reported to the audit committee you've got to explain why. You've got to document the reason why that would not be a critical audit matter in this case.

MEMBER TURNER: But are those critical audit matters determined in accordance with the standards, or critical audit matters determined in the professional view of the auditor? And that's the question.

MR. BAUMANN: Well, Lynn, you know, this is a lengthy discussion that we could have and it's probably beyond this room and we'll appreciate your comment letter when it comes in and we'll address it.

But clearly, as Jim just mentioned a moment ago, the critical audit matters we indicated would be things that the auditor documented under AS 3 requirements, for documentation requirements.

Would likely be things that the engagement quality review are under AS 7 had looked at as the most significant judgments in the audit. Would likely be things that the auditor communicated to the audit committee in connection with AS 16.

And went on to say as Jim indicated, if you have such matters that would appear to meet critical audit matters, and have those attributes of having been discussed with the engagement quality review and discussed with the audit committee, documented as a difficult matter, consulted on with the national office, and it's not disclosed as a critical audit matter, then the auditor has to document on the work papers what was the rationale why that was not a critical matter.

And that documentation, we believe, would be subject then to inspection to understand is that a reasonable rationale why that wasn't a critical audit matter. So I think it's somewhere in between where you're saying, is it directly driven by the audit standards or judgment?

There's definitely judgment involved, but that judgment is linked to existing auditing disclosure requirements in communications with audit committees, documentation requirements under AS 3 and things that are reviewed by the EQR under AS 7.

MEMBER TURNER: So are you saying, Marty, that if the auditing standards would deem whatever the matter was that it should have been a significant matter? For whatever reason the auditor decided not to make it a significant matter then that would be a deficiency in the report?

MR. BAUMANN: Yes. I am saying that once again if this is a matter that when somebody looks at it and sees the AS 3 required documentation of the most difficult matters, and there's a whole list of AS 3 of what has to be documented, the most difficult subjective matters in the audit, then looks at what was reviewed by the engagement quality reviewer, and the same matters that matter was a high priority for the engagement quality reviewer, what was discussed with the audit committee, the same matter was communicated and was a significant discussion matter with the audit committee, if that matter does not make it into a critical audit matter, I think it would be very difficult for an auditor to justify how they concluded that that was not a critical matter.

MEMBER TURNER: Yes, but I don't think that things will get to that point, Marty. We saw that with the ISB-1 thing. The bottom line was it didn't get to that point of being discussed with the audit committee and that was the problem.

MR. BAUMANN: Well, that would be a violation of AS 16 then, if things are missed and not discussed with the audit committee that should be, and I think that would be something we would inspect against as well.

So if people are omitting required disclosures to the audit committee, that itself is a problem and then we could have an inspection finding with respect to that also.

CHAIRMAN HARRIS: Lynn, let me jump in for a second. Two things. First, we do look forward to your comment letter. Second, I do think you raise a very valid question with respect to the objectivity of the standard and to the extent that there's judgment and whether or not there could be tightened.  You have five Board members with five different viewpoints on it, so I think you ought to reduce your comments to writing which I think we'll review very carefully.

Damon, you know, go ahead, and then Mercer.  And then I would like to, because, you know, we're going to be approaching the end of the session, I did raise other issues that were brought to the attention of the Board in terms of what other people might want to bring up.

But to the extent that anybody has an issue that they want to bring to our attention, I want to go right the way around the room and spend the last 15 minutes, you know, for you to tell us what you want us to hear, and to the SEC as well.

I'm sorry.  Brian, your card is up so we'll recognize you and then we'll go to Mercer.

MR. CROTEAU:  Well, thanks, and it does relate to the point we were just talking about, so I'll take the opportunity.  I think it's a great discussion we're having relative to what would be a critical matter, and certainly there's an open comment period.

I think one of the important questions to think about, really, is the criteria for what is a critical audit matter sufficiently objective or should it be any more objective than it is? And I think the PCAOB's asked some thoughtful questions in the release around that.

Certainly Marty's described the documentation and others have described the documentation requirements, you know, the question can be asked to whether documentation requirements are enough to overcome what some might view as a more subjective definition to begin with.

So very interested in comments as to whether there's improvement that can or should be made to the definition of a critical audit matter in the first instance, but I think the PCAOB's at least been very thoughtful in trying to put forth an initial proposal in that regard. But I think it's an area that could benefit from some focus and public comment.

MEMBER HANSON: Mercer?

MEMBER BULLARD: I'm just trying to figure out the dynamics here. So it sounds like there are scenarios in which the auditor will be exercising discretion, and whichever way they go is going to determine whether they have to disclose something as a significant issue.

And if that's true, why wouldn't the disclosure requirement give them a very strong incentive not to take those steps?  In other words, decide differently, not bring something to the committee precisely because that will trigger a different requirement where they don't want disclosure.

Or is it objections, there's no discretion for them to make those because it sounds like they're taking it up the chain was one thing you mentioned.  If I'm the auditor I'm not going to take it up the chain if it means I'm going to get public disclosure out of that.  So how does that dynamic work?

MR. BAUMANN:  Well, again I think it's rather than getting into a lengthy discussion about this item, I think it's important to read the proposal, read the standards and raise questions if you think that the way that it's crafted leaves the ability for an auditor to not disclose things and to not meet the spirit of what we're trying to get at here.

So I'll support what Brian said, and that is we worked really hard to get a standard that we think would improve disclosures to investors about what's critical in the audit. It's hard to mandate those things that were most difficult to the auditor because it's whatever was most difficult to the auditor in those particular circumstances. So you can't say what they'd be, it was what was difficult in that particular audit.

So as Damon said before, name the five things that were most difficult. Well, we could put a number five on it. We actually thought about that and we asked questions, should we have a minimum number? So that actually was a question in the release that would help.

Should there be any situations where you would not have critical audit matters? That's another situation, another question we asked. So there's lots of ways in which people can comment to us that listen, you can make this tighter in your final document by doing X, Y, or Z. And I think that's very valuable comment to get that.

But that's sort of the way it's structured. And we had a conversation way back when, Damon, you and I together and at the SAG also about, Marty, just have them disclose the five toughest matters. And that's sort of what this is.

But we are looking for valuable comment about how to make this crisp and tight so that this really does achieve the objectives and that matters aren't avoided by, well, I'm not going to communicate this to the audit committee because then it will look like it's too critical.

So you're right. We want to avoid those consequences, but we want to think about all those things. And if in the proposal, if there are ways in which people think that it can be fixed and made even better, we're looking forward to those comments and we'll move forward on that. We certainly want to have a strong standard here that greatly improves the audit report.

MEMBER HANSON: Damon, did your card go back up or --

MEMBER SILVERS: It was up before.

MEMBER HANSON: Oh, I'm sorry. Oh, I thought I heard you before. By all means, go ahead.

MEMBER SILVERS: Well, I had two things. Now after Marty spoke I've got three. Look, at first it was in response to your question about liability. I want to just even intensify what Lynn said.

I don't understand the argument about liability from the auditing firms. As Lynn pointed out it is a trivial matter in litigation to get the name of the partner. And the notion that somehow the lack of disclosure of the name in non-litigation situations is going to promote, that that's somehow protection against litigation, I think is not a serious argument.

And I would urge the PCAOB to the extent that auditors are making a litigation argument, and this doesn't even get into Mercer's point, I'm just saying I don't get what the argument is. And I think the PCAOB needs to sort of insist people who make this argument be specific as to what they think exactly is going to happen. But I think if you follow the thread of that logic through a little bit you get to a deeper issue.

So if litigation's not the point, what is the point? Why do investors want to see this name? And the reason is precisely because you want to be able to engage in types of accountability that don't rise to litigation, and you want to facilitate that on the part of investors who may not have the muscle to get it on their own.

Because I think, in addition to the fact that litigation can get that name, okay, if you hold three percent of a company's stock you can probably get that name. It's probably not that hard, in fact, to get that name.

What's absent though is in this regime, the existing regime we have, is the sense of a level playing field in the securities markets that is what, in fact, the audit report is all about in the first place.

I mean why, you know, we've had this conversation today and people have talked about what is an audit report for? Well, increasingly, I think, and I think Joe said this earlier that there's a real danger here of the diminishment of the value of the audit report in general.

And what's going on right now, and it's visible to me in terms of at least what is now, you know, ten years of this body's existence and going back to the period before this body was created, this body being the PCAOB, that what has increasingly happened, I think, is that the securities markets have become for a variety of different reasons, and a lot of people have talked about high-speed trading as part of this but that's not the only driver of this, the securities markets have become increasingly hostile to the involvement of investors who lack enormous scale and enormous resources.

If you have enormous scale and enormous resources, there's a sense in which maybe you don't need an audit report. You can send your own team of financial experts in to talk to a public company.

You've got a variety of ways, if you've got that kind of scale. You know, if you're at Black Rock you can have that conversation, closed doors, demand whatever metrics you want to get whatever you get and make your own conclusions.

Maybe for any given public company there are 20 investors who can do that. Everybody else is kind of left in the dark. As financial statements have become more complex, as the ability of firms to essentially play games with financial statements has grown, and in parallel, as trading processes have become less friendly to smaller investors, you have an overall drift away from a level playing field in the markets. Identifying auditors by name is by no means a solution to this problem broadly writ, but it pushes back on it a little bit.

DIRECTOR DOTY: I've got to ask you, is this about making small investors feel good about large, complex and impersonal markets or is it about having them think they have information that other people have and feel better about it that way, or is there something of use to them?

Of what utility is it for them to have the information given the situation they're in, which you and Ann have so articulated?

MEMBER SILVERS: I think it's a very fair question, and I think that there are two answers that go beyond feel-goodism here. I think the first is, is that it will be possible for a wide variety of actors, academic actors, providers of public, the press and other sort of providers of public analysis to look at the pay-driven individual partners across companies that is, and tell investors things that are meaningful.

The second thing I think is possible is, is that I think there is a landscape between, really, the small investor, the individual investor, there's a landscape between that party and the very largest players who have the resources and the market leverage to extract information sort of willy-nilly from companies.

And those, if you look at the history of corporate governance reform in the United States, it's often been those investors who have pushed the envelope on things and, you know, using publicly available data as opposed to what they can extract as a private party.

I think that was certainly true in the initial push for auditor independence, in the push around Board independence. A number of those funds are ones, this is certainly true of a lot of funds that are collectively bargained in one or another. I don't think this is a transformative move in relation to any of these dynamics, but I think it pushes it the right way. And I think it's not feel-goodism.

CHAIRMAN HARRIS: Well, I want to begin the wrap-up period here and just start, Brandon, with you and just go right the way around in terms of any final parting shots that you would like to leave the Board with in terms of what we should be doing to improve audit quality and protect investors.

MEMBER BECKER: Well, I do think that the signature makes a lot of sense, the same way we do it with mutual fund portfolio managers and the like where the SEC has been much more aggressive. I discount the liability issues for the various and other sundry reasons.

The context of the discussion today though, I think, really goes to the audit quality indicators in the morning, getting those built into the governance process. Because as Curt highlighted and as various have referred, basically the relevancy of the audit, getting more of that quality and ultimately going to the quality of earnings so that there is more value extracted rather than check the box from the audit would be valuable.

I should say, however, that while greater transparency to the audit is important, we would be worried if we lost the pass/fail. We think that we would not want to see the greater transparency degrade the pass/fail. I don't think it needs to, but I did want to at least highlight our concern along those lines.

CHAIRMAN HARRIS: Curt?

MEMBER BUSER: So I think the audit quality initiatives are key. I think that, you know, what I'd like to see happen is the PCAOB start to get in a position where it can comment on, you know, what we see in improvements in audit quality and what's the state of the profession and be able to answer a lot of the questions that are unknown about the quality of the people that are carrying this out. So I think we need to know, kind of, is the profession having the right people in place or not?

CHAIRMAN HARRIS: Grant?

MEMBER CALLERY: I think I'd like to see the Board take a further look into some of the issues, the governance issues that we talked about where you do have access to information. Because I think a lot of the sort of presumptive reactions that people have were based on very surface level knowledge and that you really ought to delve into it and see whether there's "there" there, and then move accordingly from there.

CHAIRMAN HARRIS: Grant, we certainly welcome you to the Investor Advisory Group.

MEMBER WALSH: Yes, I've been trying to think about how investors will react to a lot of what we've talked about today, and I think it's hard to imagine a situation where investors go in and short stocks of companies whose audit partners have shown mistakes in the past and buy really strong audit companies.

I don't know that that's going to happen, and before we get to that point we'll see trading cards with auditors on the face, and I think at that point you really do end the worry about commoditization.

But I really do have a sense that we need to get to more information, and I don't know how the market will use what we've talked about with audit quality indicators or how they're going to use identification of the partners responsible for the audit, perhaps the identification of the audit committee chairman.

I don't know how it will be used, but I think that there's an invisible hand that will ferret that information out and it's a process and we'll get better at this, and maybe we have 70 indicators that we disclose Round 1, it turns out that there 35 that are helpful. The market will figure that out and migrate towards those indicators.

And so I'm all in favor of more information rather than less, even if we don't know how it'll be used or which ones are going to be the most helpful. But I'm very encouraged by what we're talking about today.

CHAIRMAN HARRIS: Thank you.

Damon?

MEMBER SILVERS: Since the chairman caught me in my train of thought I left out my comment from Marty. I'm just going to make that. I think it's quite dangerous to have even with the caveat that you don't expect to see very many of them, I think, in the reporting model, it's very dangerous to have an option of saying no, we don't have any serious issues.

I think it raises this issue of then all of sudden auditors are, it becomes tricky to push issues in the internal process, I think, if you do that. I stand by what I said to you when however long ago that you were citing, which is put a number on it, one, two, three, five, whatever that number is and everyone has to disclose what that is. Every audit has an issue. It's not possible to have an audit without an issue.

CHAIRMAN HARRIS: Norman?

MEMBER HARRISON: Nothing new to add other than to thank you all for having us and for inviting us to be participants. And I'll say only we've covered a lot of ground today, not only in the panel-specific discussions but certainly here at the end.

And, you know, I think when you take a step back you realize that the issue of quality is the silver thread that connects it all and then the need to define it, to measure it, to report it and to use it as a tool for improving or providing safeguards around audit quality, I think there's further work to be done.

So by way of parting comment I'll say that rather than show up again next year, you know, see where we are, I'm happy to continue  being supportive in any way I can as the staff moves forward.

CHAIRMAN HARRIS: Thank you very much.

Tony? Tony Sondhi?

MEMBER SONDHI: Thank you. I'd like to simply emphasize what I thought was the two main things I said this morning. One is that as Norman just said, audit quality is the critical issue.

But if you develop indicators that are based on audit firm quality and audit process and not focus on audit quality, I think we're going to miss very significant opportunity. I think it's absolutely critical that we focus on audit quality.

The second point I want to make is that what the discussion today showed is that there are concerns. I understand that the sort of the nexus where the output based indicators meet, financial reporting quality and some of the other issues that Lynn and some other people have raised, and Joe, I think, I think that although that nexus is a difficult one, I think that should not get in the way of developing really good audit quality indicators. And being very firm, the complexity shouldn't get in the way.

CHAIRMAN HARRIS: Bob?

MEMBER BUETTNER: I hope this is not off-topic, but as you said you were hoping to get what was on our minds at this time. My question are something that I think at some point I'd like more explanation on was the issue around the Chinese reverse merger issues.

And most specifically, in fact, this might just go to harmonization of global accounting standards, but the differentials that existed between the Chinese accounts and the accounts that were ultimately reported here, I think the collapse that we saw and the investor losses that we saw across a wide range of those companies was really a black mark on the U.S. capital markets.

And so, really, my questions are more around, one, how was this allowed to happen? In other words, that these companies were able to, sort of, from an accounting and audit perspective slip under the radar? And then secondarily, are there processes that we can put in place to ensure that situations like that do not recur again?

DIRECTOR DOTY: Audits were ostensibly performed where we have reason to believe now there was no work done. In some cases by registered firms within China, in some cases by registered firms in the United States which were relying on firms in China.

That situation has received a lot of attention both in the area of enforcement, which will continue as an interest that we have, but also in our relations with the People's Republic we are continuing to press for a joint inspection regime.

I think that unless we could get to a position in which our division of inspections can go to China and can satisfy themselves about the quality of the audits that are being used to issue securities or trade securities in the secondary market here, we will have to move toward deregistration of firms and that will have, of course, implications for markets. It'll be something that we will have to work out with our colleagues at the SEC.

CHAIRMAN HARRIS: Anne Simpson?

MEMBER SIMPSON: Yes, I had two points, one of which I think Robert has referred to. So CalPERS invests in 47 markets worldwide and regulation is a global game. It's not just of account audits, it's accounting, securities law, capital adequacy for banks, you name it.

And what struck, although there are the multiplicity of regulators, the core of the regulatee is the Big Four, maybe plus two. So the work that you're doing to cooperate and coordinate is really important, but I hope it's also a weather eye to the fact that these public agencies are stumbling over themselves and each other dealing with four business networks.

And I don't know what the solution to that is, but that is something I would have talked about. So I really encourage that work that you're doing and thank you very much for it. If there's anything more we on the investor side can do to support you please let me know.

And the other thing, my closing comment is that with regard to audit, shareholders are weak and ill-informed. And you can do something about the ill-informed part and our friends at the SEC can do something about the weak part.

So I hope that we can make progress on this, because all this good work on quality and disclosure and all the rest of it, if we can't, you know, both speak softly but carry the big stick, if there's no stick, if we can't move in as the shareholders, it would be Teddy Roosevelt in style, it won't work.

But thank you for what you're doing. We greatly appreciate it. I think the PCAOB is doing tremendous work. We very much value what you do. Thank you.

CHAIRMAN HARRIS: Ann Yerger?

MEMBER YERGER: Well, let me echo the thank you. This is an energized Board and we really appreciate it. You've been bold, I think, recommending and proposing reforms, and I think on behalf of investors and the

Council we really appreciate it.

I would urge you to maybe get one easy or seemingly easy win and that's the auditor or the engagement partner transparency. I think it just seems like that's not a complicated reform and it would be great to push that across the finish line.

I think the second point is as everyone else has said, this is all about audit quality. I think the work that you're doing on audit quality indicators is profoundly important so I commend you to move forward with that, but also to not let the perfect be the enemy of the good.

I don't know that there's one perfect prescription for how to do this and this could get analyzed forever without a resolution. I think it's important to move along. I do believe public disclosure of audit quality indicators is very important.

I do think it's an interim step issuing some guidance, additional guidance to audit committees so they have a better arsenal of questions to be asking on audit quality, I think could be very helpful as well.

CHAIRMAN HARRIS: Mercer?

MEMBER BULLARD: I just would probably emphasize that the way I see the quality issue is really something bigger. It's more of a value-added issue. It's not so much quality to prevent fraud, it's to make the case for public companies. Because from the securities law perspective, you know, what I see is, 15 years ago there was twice as many companies on the New York Stock Exchange as there are now.

Over the last couple of years more money was raised in private markets in IPOs -- than in IPOs. You see Facebook trading on private markets millions of shares a day, so liquidity is not going out the window is a reason to an IPO.

You have the JOBS Act that's now eliminated, and this is the first meeting since the SEC adopted rules, eliminated the general solicitation in advertising which, I think, will have a geometric effect on the advantageousness of private offerings.

JOBS Act has also expanded the number of investors that require you to go public and also excluded certain investors from being counted, and the SEC takes a very liberal view as to how you count pass-through entities toward that and that will also another reason you'll have fewer public companies.

It's hard to know where this is all going to go. The trend is pretty clear, but I think the brand that is the public company, especially with steps that have essentially made what it means to be a public company be different things for different companies, 404 here, 404 not there, has really put the public company brand at risk.

And if you want to look at a specific threat to the importance of honest accounting, look at the filing of confidential registration statements, where I looked at about the last ten that have been done and you see three to eight confidential filings. And these were prompted, this rule was prompted by a company that you all recall went public and had repeatedly to go back to its registration and correct what were pretty blatant accounting abuses.

If you were to go into those confidential filings and you did a lot of work you'd probably find the same thing. And that is, you know, this is a market that is becoming more and more for retail investors only.

If you are going to go public now, it seems to me the biggest reason to do so is to sell to the least sophisticated group, because you will have gotten all the money you needed out of institutional investors and accredited investors before you go public. Because, you know, one of the key classes I teach is the pros and cons of an IPO, and most of the pros are disappearing.

CHAIRMAN HARRIS: Pete?

MEMBER NACHTWEY: Thanks Steve, and thanks to the Board for putting this group together and reaching out to us for input, and more importantly, maybe the staff for doing all the hard work to pull it off, so much appreciated.

Maybe three quick comments I'll canter through. One, I do agree audit quality indicators is a key thing coming out of the discussion today, but I think it has to be married up with heightened expectations for audit committees because there's got to be two levels of this.

One that I think the PCAOB is ideally suited for of looking at firm level quality, but where the rubber meets the road is individual audits and audit committees are going to be in the best position to really judge, are they getting quality, both people, the scope and the work plan that's put in place?

And then hat in hand with that has to come kind of heightened focus on what's a financial expert particularly for saying the auditors, the external auditors and the internal auditors are reporting to the audit committee, making sure we have somebody who is able to, on those audit committees, really manage that work.

Second topic, and I'm mindful of something. Curt will know the author of this statement, but everything's been said just not everybody's said it, but I'll jump in on the audit opinion, audit reporting model.

One, I do agree around the transparency on having audit partners. I don't why that would be any different than the professions that Lynn listed or responsibilities that people like I have to certify financial statements that we submit to the SEC.

On the other hand I think we've got to also be mindful of the dichotomy that we can't be aghast when we see marketing material with firms saying well, the individual signing partner has responsibility. So we've got to be careful a little bit of what we wish for, and

I think at the end of the day be mindful of the fact that we are, when we're buying an audit from a firm we're buying the firm and that's what we want. But I do agree it crystallizes the focus of that partner who ultimately has the signing pen.

But there were a couple other aspects of the reporting model. The critical accounting matters I do think can be an interesting expansion, but I think we've got to be practical about it. So how does that marry up with management's disclosure on critical accounting policies and estimates?

I would envision there would be a pretty parallel set of disclosures there, so if it's just duplicative do we get anything or do we just put more cost and time into the process of getting audits and financial statements prepared?

So, you know, whether we kind of road test that or find some way to say what's the practical aspects of it, then how do we make sure it doesn't end up being heavily lawyered, and no disservice to the legal profession but they're going to represent their clients, in this case the Big Four.

If we end up with 50 pages of boilerplate in their audit opinions and we can't find the pass/fail, which I think when I think I talk to our portfolio managers and analysts who are managing $650 billion of investor money, the thing they want to know at the end of the day, did they pass or did they fail? Because I don't have enough time to go through all the rest of the aspects.

And then last but not least, being the author of the fair value accounting, and I won't spend a lot of time on it, Steve, because I know it's an issue we could we spend eons on, but just to be clear on what I think the issue is there, which is the procyclicality of fair value accounting combined with the false precision that when you take numbers out to two decimal places and it's fair value and it's judgments and estimates on top of judgments and estimates it's important that, I think, somehow we have investors understand a), that level of imprecision, and b) the procyclicality that's just as bad in an environment that's being fueled by quantitative easing as it was in '09 and '10 when there was a dramatic cycle down. So enough said. Thank you.

CHAIRMAN HARRIS: Barbara Roper?

MEMBER ROPER: I think at some point in all of these meetings I say that the audit only has value to investors if it's conducted with an appropriate degree of professional skepticism. And we have seen a persistent problem with insufficient professional skepticism which, I think, is arguably the main driver of low audit quality.

So I would sort of review each of these issues we've talked about today through that lens of to what degree is there potential through whether it's audit quality indicators or whatever, to drive a higher degree of professional skepticism in the conduct of audits?

And toward that end, I actually think it's the issues that Grant's subcommittee was working on in terms of incentives and governance where there's rather a largely unexplored potential for further progress in terms of driving toward a more independent and skeptical audit.

CHAIRMAN HARRIS: Bob Tarola?

MEMBER TAROLA: Yes, thanks Steve. I guess I want to say I hope that you don't marginalize the audit committee. They're the primary body responsible to the shareholders. And I'm going to also be in favor of a pass/fail model, an auditor report for that very reason, is that if there are difficulties in auditing and enterprise let the audit committee explain those difficulties. The management of the enterprise has an obligation to do good accounting and disclose how they did it.

So if an auditor just comes behind them and says they did good accounting, we audited it and we're happy with it, I'm not sure what the benefit of that is. But if you have the audit committee explain how they monitored that audit with respect to those difficult issues, I think the investors, I think the system works better. Let me just say that.

I am in favor of transparency of the signer of the audit opinion. I think that there should be no difference between that signature and that of a CFO on the financial statements. And also I think if you're going to support the audit committee's role then you also have to look at the qualification question.

CHAIRMAN HARRIS: Thank you Bob.

Joe Carcello?

MEMBER CARCELLO: Yes. In the interest of time I think we're talking about the right things. I think the Board's looking at the right issues. I just would second what Ann Yerger said, let's get some things across the goal line.

CHAIRMAN HARRIS: Judge Sporkin, we've just gone around the table concluding and we've asked everybody for their final comment in terms of what they would most like the Board to address in terms of improving audit quality and investor protection.

I know you've mentioned 10A in the past but whatever you want to wrap this up with would be most appreciated, as long as you keep it under five minutes.

JUDGE SPORKIN: No, I've just got a few seconds. I agree with Chairman Doty's view on the signature on the audit. I think that the person who has done it has got to sign it. I think that should be a no-brainer.

The only other thing I think you, I didn't hear what whether there was much discussion, but 10A of the Securities Exchange Act is an extremely important provision, and I would like to see some emphasis on that provision. Because I do believe that it is not being followed the way the drafters of the provision want it to be followed. So I would hope that you would put that on your agenda. Thank you.

CHAIRMAN HARRIS: Judge, in terms of the transparency, since there are transcript, this is, you know, an open release, why do you support it?

JUDGE SPORKIN: Well, when I say it's a no-brainer is why shouldn't the person who has been involved sign it? I don't understand why there should be any question. It seems to me that if he knows he's got to sign it he knows it's got to be credible.

I'll tell you this as a lawyer that when I sign a pleading in court I want to make sure that it has what I wanted. There have been pleadings that I have, even though I've been co-counsel in cases, there have been pleadings that I have refused to sign because it didn't have what I thought it should have.

And it seems to me the accountant will have to make sure that he believes in it before he puts his signature. He's not going to put his signature on something that he has any question with. He's just not going to sign it.

CHAIRMAN HARRIS: Are there any final closing comments that Board members would like to make, then I'll just make a very brief one? No? Well, in that case I want to thank everybody for what I considered to be an excellent meeting.

We very much appreciate the leadership of the working group members, all the members on the working group, the entire membership of the Investor Advisory Group, and I personally especially want to thank Nina Mojiri-Azad and Tope Folarin.

Pete, you hit a home run. You mentioned that this is not possible without really extraordinary staff support. And I'm very lucky because I've had that support. And so Nina, wherever you are I want to thank you. And Tope, I want to thank you.

And Joann, you set the marker and I can think we're carrying the ball forward with respect to our Investor Advisory Group. So thank everybody for participating.

(Whereupon, the foregoing matter was concluded at 5:06 p.m.)

**NOTICE:** This is an unofficial transcript of the portion of the Public Company Accounting Oversight Board's Standing Advisory Group meeting on November 13, 2013 that relates to the Board's Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments. The other topics discussed during the November 13, 2013 meeting are not included in this transcript excerpt.

The Public Company Accounting Oversight Board does not certify the accuracy of this unofficial transcript, which may contain typographical or other errors or omissions. An archive of the webcast of the entire meeting can be found on the Public Company Accounting Oversight Board's website at: http://pcaobus.org/News/Webcasts/Pages/11132013_SAG.aspx.

STANDING ADVISORY GROUP

+ + + + +

MEETING

+ + + + +

WEDNESDAY
NOVEMBER 13, 2013

+ + + + +

MR. BAUMANN: All good points also, Scott. So I want to thank SAG members for very good, valuable feedback from the comments made by the members of the PCAOB, the SEC and our distinguished academics. And thank you all on the panel for an excellent job done.

Well, this is the beginning of our discussion about our proposal on the auditor's reporting model. We'll continue this into tomorrow morning but there was a lot to cover and we wanted to discuss it starting this evening.

As I said, we'll probably go one hour on this and then our dinner reception begins at 6:30.

So joining me up here are Jennifer Rand to my left, Lillian Ceynowa to my left, Jessica Watts to my right and

Elena Bozhkova to my right. And who's kicking it off, Jennifer?

MS. RAND: I am. Good afternoon, everyone.

MR. BAUMANN: I'll let you get settled.

MS. RAND: Anything else? All right, we'd like to get into the auditor's reporting model.

The PCAOB issued a proposal a few months ago, August 13th. We've been working extremely hard on the auditor's reporting model, conducting a lot of outreach. Really this proposal leads up to three years of work, including a concept release that we had issued.

In front of you, you have the slides for this session and we had intended to provide background of how we got here, how we got to the board's proposals, what types of issues came into our thinking in developing the proposals as well as the summary.

Oh, pressing the wrong buttons. The disclaimer I think Marty's already covered this morning.

MR. BAUMANN: Right.

MS. RAND: As far as the slides in front of you, given that we have limited time in our remaining session today and given that we're very much interested in hearing from you rather than us speaking, we don't plan to cover the slides in any detail. We trust that you've read the proposals.

We had also provided you with a fact sheet, two/three-page summary of the key elements in the proposals as well as illustrative examples of the critical audit matters.

So you may want to refer to those in connection with the discussion, but we plan to just cover a few things in just very high level and then just open up the floor for discussion.

And our focus today will be on critical audit matters and tomorrow we'll talk about new elements in the report as well as other information.

So with that, I'm going to turn it over to Jessica so she'll provide a high-level overview.

MS. WATTS: All right, so I'm going to just in the interest of time talk about two slides.

The first slide is an overview of the auditor's reporting model standard. The proposed standard retains the pass/fail model of the current auditor's report. We heard from many commenters that they like this form of reporting and wanted us to retain it.

One of the major changes of the auditor's report relates to the communication of critical audit matters specific to each audit.

The communication of critical audit matters in the auditor's report is intended to make the auditor's report more informative, thus increasing its relevance and usefulness to investors and other financial statement users.

Additionally the proposal adds new elements to the auditor's report to provide investors and other financial statement users with information about the audit and the auditor. These include auditor independence and auditor tenure.

The proposed audit reporting standard further describes some of the auditor's existing responsibilities, such as the auditor responsibilities for financial statement notes and the risk of material misstatement due to fraud.

The proposed standard retains the existing requirements related to explanatory paragraphs and also retains the auditor's ability to emphasize a matter in the financial statement.

So the next slide I want to go over is the definition of critical audit matters.

As defined in the proposed standard, the critical audit matters are those matters addressed during the audit that involve the most difficult subjective or complex auditor judgments, pose the most difficulty to the auditor in obtaining sufficient appropriate evidence or pose the most difficulty to the auditor in forming an opinion on the financial statements.

The auditor's communication of critical audit matters would be based on information known to the auditor and procedures that the auditor has already performed as part of the audit.

Thus, the communication of critical audit matters does not modify the objective of the audit or impose new audit performance requirements, other than the determination, communication and documentation of the critical audit matters.

So with that, I'd like to turn it back to Jennifer to start the discussion.

MS. RAND: Critical audit matters is a significant

--

MS. WATTS: You need --

MS. RAND: Sorry. Turn the mic on. That might help. Critical audit matters is really a very significant aspect of the board's proposal. It's where the auditor would be communicating those matters that were the most significant, the most difficult to the auditor, the issues that kept the auditor up at night, communicate those in the report.

So for the rest of the day today we'd like to focus specifically on critical audit matters.

And I mentioned tomorrow we'll get into new elements so that's independence and tenure, other information and anything else that SAG members may have an interest in and want to discuss.

So with critical audit matters, we have this broken into four different areas where we're interested in your feedback.

First is on the definition and Jessica just covered that. And then next, usefulness of reporting, the determination, communication and the documentation requirements.

So I see some cards up ready to go. I appreciate that, so we'll get into it. So Denny Beresford.

MR. BERESFORD: Well, I've already written a comment letter but I'll summarize my views.

In fact, I also participated in the development of a comment letter by the Institute of Management Accountants and I think it was actually said a little bit better in that letter. My thinking evolved a little bit I guess.

My concern about the critical audit matters, in addition to just adding lots and lots of paragraphs possibly to the report and sort of losing the forest for the trees in some cases, obscuring the pass/fail key paragraph, is that the notion of reporting the critical audit matters, the things that involve the most difficult audit judgments, et cetera, the proposal itself doesn't actually call for the reporting of the auditing procedures.

So instead of actually reporting auditing matters, the proposal calls for a description of the company's reporting of key accounting objective estimates and things of that nature.

So for all practical -- I think they've cut me off on purpose here. For all practical purposes, this is really an indirect way of identifying important matters in the company's financial reporting, for example where significant estimates were made, et cetera, rather than the company, which they're already doing in their MD&A and so forth or a few companies have had road maps to their financial statements and things of that nature.

In fact, as I said, as I read the document, it's silent in the standards section with respect to reporting the procedures.

In the basis for conclusions, it said we're not going to actually require the auditors to report the procedures when they give the CAMs.

And then in the three or four examples that are given, they actually put in the procedures, which is kind of an interesting inconsistency I guess you might say about how those procedures are handled.

So it seems rather inconsistent that the approach that the PCAOB is using is to focus on auditing matters and yet not discuss any of the auditing, frankly, which I support.

I think that getting into discussing auditing on a piecemeal basis raises separate questions about what would be the opinion on each of those issues.

But as I said, it then becomes one of is this the auditor's responsibility to be listing all of these things or is it management's responsibility?

And in the letter that I wrote, I identified what I thought would have been the types of items that would have been reported by two of the boards on which I've previously, fairly recently served.

And those items are very well spelled out right now in both MD&A and financial statement footnotes so the reporting of those end CAMs would be a duplication.

In addition, of course, there would be the administrative, I hesitate to use this but I'll use it, nightmare of the auditors and the company having to negotiate what goes in the CAMs in the audit report versus what does the company put in its own disclosures and having to negotiate those among the auditors' legal counsel, auditors' national offices, et cetera, et cetera, et cetera.

And all things considered, I just don't see this as a major step forward. It seems like it's just repeating information that's in the financial statements already.

If there's a need to have these things better highlighted, I think that's management's responsibility and, as you can probably guess, I am not in favor.

MR. BAUMANN: Denny, I'll just make a very brief comment. There's a lot of cards up so we'll come back maybe to the comments later and I know Jennifer and others will want to react as well.

And she didn't go over, Jennifer did not go over the background but in the concept release we asked, many people talked about the auditor talking about the financial statements or the auditor talking about the audit.

And there was a lot more support for the auditor talking about the audit than about the financial statements, that the financial statements were the prerogative of management.

And so what we elected here was that option of the auditor talking about the audit and those matters that were most difficult and challenging to the auditor.

Now, whether they're similar matters that management's reported on in the financial statements, they might be.

On the other hand, it could be that there was a particular systems problem that forced the auditor to get a very difficult time getting audit evidence because of the breakdown in systems.

Whether management intended to talk about that or not, who knows. Maybe they will after the auditor says they're going to talk about it.

But in any event, we approached this from what were the most difficult things to the auditor, the most difficult judgments the auditor had to face?

And this is not information necessarily in the financials. This is what the auditor found to be difficult and challenging.

But we'll take your comments up further about should procedures be in there or not, but there's so many cards up, let's turn to Barbara Roper.

MS. ROPER: Thanks, Marty. And I appreciate your scheduling part of this discussion today because, my apologies in advance, I will not be able to join tomorrow's discussion.

I think there are a couple of things about this. You know, I have a son. I'm sure he would have loved over the years to tell me, you know, each grading semester, mom, I passed all my courses. I personally found it useful to get a little more information than that.

I think the same, and not to be flippant, but I think the same is true here. The current report with pass/fail does not adequately distinguish between the volume of companies, the vast majority of whom pass.

Investors have been saying for years that they want more information, you know, that the auditor is supposed to be working for them, reporting to them.

And they want more information from the auditor about issues related to the audit that would help them make more informed decisions about the companies in which they invest.

In an ideal world that would be enough. Investors want the information. It's reasonably cost-effective for auditors to provide the information. We should be talking just about how we do it and move on. Obviously it's more complicated than that.

I was talking at lunch today a little bit about the fact that I think in this new world of everything has to be economic analysis it's very important to think up front about the problems that you're trying to solve through a regulation.

And clearly one of the problems that you're trying to solve is that investors don't think they're getting enough information out of the current audit report.

But I would argue that this proposal is relevant to a number of other important issues that this board is addressing.

In the current system, pass/fail and no other information, you know, so what are the incentives in that system?

And for the companies that we're worried about, not the good, aboveboard, strong financial reporting companies but the companies we're worried about, the current incentive is to get as aggressive as possible in their accounting consistent with a clean opinion.

If you require the auditor to report about critical issues, some of that may surface in that context, that they may find a way to give a clean opinion.

But they may raise in the context of this reporting about critical issues elements that would point to certain aggressive practices.

That could change the incentives for issuers to get less aggressive. That would be an overall good thing that this could achieve.

You know, there's also a concern we talk about a lot, is that auditors are not sufficiently focused on the fact that they're working for investors and not management.

And requiring them to think more clearly in their auditor's report about what they think they should be communicating to investors about the key critical issues in the audit, what made this audit tough, might help to focus them a little more on their obligations to investors, you know, in a more concrete way.

You know, to the degree that they have to report out about these things and make a public record about what they thought were critical issues, they might be a little tougher in standing up to management in areas where they need, frankly, to be tougher in standing up to management.

And so I think when you look at this issue it's not just that investors would find this information useful, and I thought the examples that you provide were good. It proved to me that this can be done in a way that's not just boilerplate. This could provide interesting, valuable information to investors.

But beyond that, there are regulatory issues that you all struggle with, how do you improve professional skepticism, how do you improve auditor independence, that this proposal could help to address. It's not a silver bullet, but it could help to address.

One other point, I would just say procedurally when you think about economic analysis and you look at the court decision that has driven the SEC further in this direction, one of the key functions of that, one of the key issues that they focus on, is the need to assess reasonable regulatory alternatives that have been suggested.

And I know there are a number of suggestions that investors have made about information that they would like to see in the audit report that are not reflected in the board's proposal.

And I would encourage you as you analyze this issue and do the economic analysis that one of the things you do as part of that is analyze the various proposals that have been forward and have a good reason, have a good explanation, a reasonable basis for the decision not to adopt some of these other proposals because it shouldn't, frankly, be enough that some issuers don't want the auditor talking to investors or that some auditors are uncomfortable in that role. There ought to be a good regulatory analysis of why that is or isn't valuable information to have in this report. Thanks.

MS. RAND: Thank you, Barbara. Bob Herz.

MR. HERZ: Yes, I also thank you, like Barbara, for spending some time today because I also will not be here tomorrow and, because of that, I had actually sent Marty a couple much more technical-type questions I had.

I'm generally supportive of the approach you seem to be taking. I'm also glad that it seems to be, at least at this stage, pretty similar to the IAASB's approach. Of course, they call it key audit matters, also KAM, but, you know, got to be divided by the same language so to speak.

But my two questions were, one, it seemed like the requirement to communicate CAM was only in the context of an unqualified audit.

And I could think of circumstances like we have a qualification on a specific accounting matter and it would still be relevant to talk about CAM. That not right? That's just the way it reads to me.

MR. BAUMANN: In a qualified opinion, you'd also report critical audit matters. It is in the amendments.

MR. HERZ: Okay, then I must have read it wrong because the lead-in says in an unqualified audit the following requirements --

MR. BAUMANN: Not that there are many qualified opinions filed at the SEC, but it would apply.

MR. HERZ: Okay, good. And then secondly, just in reading some of the examples there, particularly the first two, the allowance for sales returns and the deferred tax assets, and maybe I'm too much of a nerd and an auditor but it kind of left me a little unsatisfied or it wasn't clear to me -- yes, I knew that clearly, because the auditor gave a clean opinion overall, that they must have concluded satisfactorily on this.

But it kind of says here's the issue, here's the problem, blah, blah, blah, and by the way the company's accounting's in Note 6. There needs some better overall contextual thing to lead into the whole CAM.

MS. RAND: Did you have anything specific in mind? We recognize it in the audit opinions and the financial statements as a whole. We didn't think it was appropriate to have piecemeal opinions on each thing.

MR. HERZ: I understood that problem so --

MS. RAND: So was there, kind of in that context --

MR. HERZ: I would just kind of, you know, a lead-in, something that, you know, the context of our overall audit which we above concluded, blah, blah, blah, the following critical matters arose.

So at least you alert the, I think an uneducated, average reader would kind of say, oh my God, this is the sales returns. They couldn't get happy with that.

MR. BAUMANN: We do say in the body of the opinion that the critical audit matters communicated below do not alter in any way our opinion of the financial statements taken as a whole.

But your point is well taken and it's somewhat similar to Denny's point, that should there be the procedures that were performed or something else, but then you do run into the problem of piecemeal opinions.

So both good comments that we'll figure out how to deal with, but thank you and thanks for the support on what we've done.

MS. RAND: Okay. Roman Weil.

MR. WEIL: Okay. Is it working? Can you hear me?

MS. RAND: Yes.

MR. WEIL: I sent you folks some comments. That's not what I'm going to talk about now. You have that.

I'm talking now as a member of an audit committee, sometimes audit committee, financial expert, sometimes not.

And I'm sitting there in an audit committee meeting and the auditor says to me, quote, "The PCAOB requires that I report to you," dot, dot, dot, and everybody's eyes glass over with boredom.

And the piece of paper he's got in front of me goes on for five or six pages of clear stuff they've taken from some template that they have at their audit firm and they reproduce and give it to us.

And absolutely nothing useful ever happens after "The PCAOB requires that we report to you" on X. Let's get through that. Let's get through that and get on to the discussion of what's important.

Now, what I hear here is we're going to have even more of that. "The PCAOB, in addition to what we've already told you about, has required that we tell you about these other things."

And I'm not saying these things aren't important, but you guys have got audit committee overload.

The audit committee does not get to schedule the length of its meetings in the board meetings I go to. The chairman of the board sets the overall agenda for two or three days and the audit committee gets some time and the auditor speaks.

And I do not believe that putting this on the plate is going to increase the amount of time available for real discussion.

So I'm urging you to think about what in other context people call regulatory overload. If you're going to put this one in, think about taking something else out.

Denny wants to get rid of it altogether and maybe that's the right way to go, but I'm just telling you that from being in an audit committee "The PCAOB requires us to report to you on" X is mind numbing.

MR. BAUMANN: Just a comment on that. When you said then they went on to talk about a lot of important stuff, I'm sure the PCAOB requires that the auditor talk about all those important things that you just referred to.

And maybe in some areas the requirements aren't as important at a particular company and, therefore, the auditor certainly has the flexibility, hopefully, to put the important things up front and then say, in addition, there are other communications and here they are and say but at your particular company this year these were not particularly important matters.

But that's another area. That's the audit committee report. This is about what investors are saying for years and commissions have been saying for years.

The single pass/fail audit report is not serving the needs and how can we improve the audit report, so that's our goal here.

You know, this certainly would have to be discussed with the audit committee but we believe these would be the important matters that were in that audit committee discussion that would wind up in this critical audit matter discussion. Who was next?

MS. RAND: Scott Showalter.

MR. SHOWALTER: Thank you. This semester I gave my graduate students assignment to compare your proposal to the IAASB, so I had to do a deep dive on both and read them.

And comments were made and, Bob, you mentioned about proposal. What concerned me was how similar they actually were but how different they were and the concern about a user understanding the difference when they're reading reports.

It's not just difference between key audit matters versus critical and it seems like you could come to agreement about that.

But the way you start, they start at governance, you start at lower border definitions, so several comments have been made about working with IAASB already today.

I would just encourage you to try to reconcile that because I think the user of these reports may lose out in the end because of the differences and not actually understand that they actually came from different things.

They may think because one is the key audit matter versus another one is critical they're the same thing. I don't think they are. I think they're developed differently and I'm not sure they would really understand that.

You said you're on the group, Marty. I would encourage you to do that. From a minor technical thing --

MR. BAUMANN: And Dan Montgomery, who's the chair of the IAASB's task force on their reporting model, is here today as well.

MR. SHOWALTER: So who should I talk to on this, you or Dan? Okay, so --

MR. BAUMANN: You're talking to both of us, so that's good.

MR. SHOWALTER: Okay. But I think it is important to the user. You talk about the user. We ought to probably not encourage that.

One technical thing is that if you go to Paragraph 7, and this is the difference between International and PCAOB version, International I think gives the impression that you could actually issue an opinion with no key audit matters.

Your Paragraph 7, you actually say in most you will. Well, I would suggest in Paragraph 9 the fact that it says you will always have to talk about the most difficult audit judgment, the most difficult evidence and the most difficult thing means you will always have a critical because it's the most difficult. So if I have ten things it's the most difficult in each one of those. So you've got an inconsistency between Paragraph 7 and 9.

MS. RAND: Okay, thank you. Steve Buller.

MR. BULLER: Thank you. So we also submitted letters to the IAASB and FASB and both are on the website, so. And as part of our letter submission, we generally talk to our analysts.

We have, you know, roughly 100 analysts throughout the organization and we try to talk to roughly 15 or so and get their thoughts on what their teams think about this proposal, and this one actually was a fairly spirited discussion.

But the analysts generally were supportive of the proposal. Their conclusion was that they think it's useful to have the critical audit matters disclosed. They did favor brevity.

I think that it was important to them that they understand what the matter was, why it was a critical audit matter, where it is in the financial statements so they at least are informed that there is an issue there where the auditor spent time and they then can have additional substantive discussions with management if they need to to understand why it was and how it was dealt with.

There are certain entities which have, I think, an inherently less business model, less complex business model, and, as a result, there will be routine matters that should not require identification, or if they do require identification, they're infrequent.

I think it's important people don't confuse the fact that someone spends a substantial amount of time with the fact that an issue is a complex issue or a critical issue.

In our case we have a lot of investment companies that are 34 registrants that would qualify.

I think that one thing we were concerned about, and this is as a preparer now, is we potentially have a lot of matters which could be considered critical audit matters and we're worried a bit about the fear auditors may have to over-document why a matter is not disclosed as a critical audit matter just because they spent audit time in the area.

So as a result, we thought there was some use in the IAASB model where they at least start determining which matters are critical audit matters or key audit matters by identifying those which were communicated with those charged with governance or basically the audit committee as a starting point for the matters which they would identify for potential disclosure.

We also did not support including the audit procedures in the opinion. We think that it's possible to take those out of context.

We already provide enough information for somebody to really understand what was done. It probably would overwhelm the audit report and we do worry a bit about people misinterpreting those and having it look a bit like a piecemeal opinion.

I think though, however, there are cases where an auditor may need to provide disclosure and I can't think of many examples but perhaps where there is a disclosure of a significant control weakness, it's not a material weakness, that somehow had an impact upon the determination of a financial result outcome.

The PCAOB probably should provide additional guidance on when the auditor should disclose information that is not in the financial statements if they're going to include it as part of the audit procedures performed.

But so, overall, we were in favor of the communication of critical audit matters and key audit matters also.

MS. RAND: Steve, just interested in, wanted to explore one of the -- You had a lot of good points. You make -- One of them was, kind of the source of the communications being limited eventually to the audit committees.

And in the PCAOB's proposal we don't limit it to that. But we say, likely the matters in the report we would expect would be discussed with the audit committee. Nonetheless, we also direct auditors to look at what was documented in their engagement completion memo, which would include summaries of significant issues and findings in the audit, as well as the matters that were reviewed by the engagement quality reviewer.

One question I personally have, so this is my own view, is if it was limited to just the audit committee, could that potentially, could there be an unintended consequence that auditors may be concerned about including something, or communicating something to the audit committee, for fear that that's now the target list of things that could potentially be in the report?

So, you know, it places greater emphasis on those communications. And could that have an effect? So, just interested in your reactions, since you did mention that suggestion.

MR. BULLER: Well, so our general impression is, and this is in part our experience and from our analysts, is that auditors tend to over communicate to audit committees matters.

And as a result, we find it hard to believe there would be something disclosed in an opinion that would not be disclosed to the audit committee. I think it's just hard to understand why they would ever do that.

First of all, if it's in the opinion, it's of such importance. And to not disclose that to the audit committee, I think would raise issues as to the intent and competency of the auditor.

MS. RAND: Okay. Thank you. Next on the list is Loretta Cangialosi.

MS. CANGIALOSI: Okay. Actually I'm going to talk about, I think I'm going to talk about three things on your list there. The first of which is definition.

And, you know, before I came into this meeting I had some concerns about how critical audit matters would be interpreted by investors and others.

And sitting here now, I've heard people talk about, you know, aggressive practices, and, you know, they're thinking about, well why was it critical? And they would discuss it with management, and how they dealt with it.

One of my real concerns here is, there's an awful lot of very subjective things that go on as a result of the accounting policies that we must follow. I'll take something that's, I'll say simple but complex, which is a Level 3 fair value measurement, okay.

And if I have to do a 20 year forecast, okay, you can be sure that that is going to be difficult. It's going to be difficult to audit. It's a 20 year forecast. So to the extent that these are like normal things. Are they hard to do? They're hard for me to do, let alone hard for the auditors to audit.

So I think my concern here is really that people come in with a mindset that there's something going on here when a critical audit matter is flagged. It means it's hard to do. It doesn't mean it's wrong or aggressive.

And so, I think there needs to be some education around some of these things, that investors should expect to see these. I mean, they are what they are. You've written out what you would determine, and the degree of subjectivity.

If you're doing a forecast, let me say it's subjective, right. We all agree that different people will come up with different forecasts, you know, the amount of audit effort to address the matter.

So a lot of these things, my concern is that if the definition is kind of being, people are interpreting it to mean something funny is going on, or something aggressive, or something that needs to be fixed. I don't if that's exactly what's written here. So that was my first thing on the definition.

My second is on the determination and the communication. And I do have some concerns with that of, in some cases, I'll say overload of critical matters being put in, with people rising to a level of looking at these, and deciding, you know what, I'm not taking any risks. I'll put everything in. In which case it becomes less and less valuable, I would think, to an investor.

Because they'll have to wade through a whole bunch of things that maybe aren't so big. But, you know, and we see this all the time with the SEC, when they come back and go, why did you disclose that? And people say, because I didn't want to get a comment.

I can see the similar thing happening here. And it will dilute the effectiveness of the communication if that occurs.

My other thing is, with respect to some of these factors, and it's not that I don't like the factors. It's really going to be within the implementation, and how this gets looked at within an inspection.

So, is an inspector going to be looking at every one of these factors, and expect a paper on what was considered, why was it considered, every single thing, you know? So you will actually drive how effective the communication is by how much they dig in and ask for in all of this documentation.

So, you know, I do have some concerns about litigation as well. We have a lot of very clever lawyers in the room. And, you know, I can easily see audit firms having more litigation as a result of this. And I'm not saying that's a reason not to do it.

But we should just be aware of the potential consequences with somebody saying, well, you know, didn't you think an investor would be, would want to know that? Well, I don't know. I'm not in the head of an investor, you know. I'm following the rules.

And you've set out rules. But I do think that this could potentially lead to a lot more litigation. I'm not sure what you do with that. Other than, probably it's in the implementation that I would caution and kind of take a measured approach.

MR. BAUMANN: Loretta, thanks for all those comments. I have a question, and maybe one or two comments. Barbara Roper talked before about, from an economic analysis perspective, we have to think about, what's the problem?

And the problem is that investors clearly have articulated, and a number of commission have articulated over the years, that the auditor's report just doesn't communicate enough about what the auditor did and found. And we're trying to solve that problem.

And some said, and wanted us to go really far, and say have the auditor really talk about the financial statements, and give some analysis of the financial statements. And from looking at alternatives, we looked at this and said, we think, really, the auditors should stay in the attest role and talk about, stay with their audit, and what they did in their audit. So that's how we selected that.

And one thing we did stay away from, though, you said maybe an investor would care about one thing versus the other. We didn't write this from the perspective of a report on those things in your audit that investors would care about, or a report on those things that were the most difficult things to you to try to avoid that problem.

Now, the lawyers may say, there's still an issue there. And so we're looking for solutions. But we didn't go to, what do you think a mind of the investor that would be the most important thing in the audit? But what was the most difficult issues for you, the most subjective and tough issues for you?

So we did try to think about a lot of those points that you're raising. I guess my question to you, and if you don't have an answer that's fine. But I hope preparers of financials, like you, Loretta, and thoughtful ones, also point out their concerns about this. But also maybe have other ideas for solutions.

Because this is a problem in need of a solution. And if you think there's some aspects of this that raise concerns, like being too many matters reported, et cetera. Are there ways in which we can improve this? And that's what we're looking for very much in your comment letters. So whether you have a comment now, or you want to think about that.

MS. CANGIALOSI: Yes, you know, and I -- One of the things that I know, there's a pilot that someone is going to run with the audit firms, I think. And to look at exactly how you would go about this, and what kinds of things would go in.

And I think it's really through that that we're going to learn kind of what those solutions might be. There's nothing like doing it to inform you of, you know, what the difficulties are.

MR. BAUMANN: Yes, we did, that was discussed at the open meeting when we proposed this with the Board. And some of the Board Members felt it would be a good idea. And I agree with that.

If auditors were working with their clients and audit committees today, and said, let's take a look at last year's financial statements, and last year's audit. What might we have reported as a critical audit matter? And try to see what different parties think about that. So, we do think that's a valuable idea. Wally Cooney. We have another preparer.

MR. COONEY: Yes. I think everyone here appreciates the balancing act that you all have had to go, in terms of formulating this proposal, and all the outreach you've done over the last few years. I guess, I had a few comments.

And, you know, to your point, Marty, I think as we work on comment letters, I think you hopefully will get a lot of practical suggestions.

As we were first going through this, I think people are focusing on some of the concerns that they have. And then, you know, and hopefully we'll have time, before we send letters, to step back and think about, you know, what alternatives we have.

Because if you just hear about concerns, without some resolutions, then, you know, it may not be that helpful. I think in general, you know, I supported some type of matter of emphasis proposal.

And in reading through the proposal, I think the overall framing and the objectives appear to be, you know, read fairly well. They appeared reasonable to me. But when I got to the examples I became a little bit concerned that perhaps there's just too much information that might be considered to be appropriate level of detail.

And two things I would mention. In the tax example there was a fair amount of information in there about lines of business that I'm not sure would necessarily be in an MD&A. Wouldn't really be necessarily anywhere in the, from a management standpoint.

And it just appeared that that could be new information that was being reported in the auditor opinion, that wasn't anywhere else in the financials.

The other example was what appeared to be a description of a significant deficiency, which as you know, is not required currently to be included in 10-K filings. And so the example appeared to be reporting a significant deficiency in the auditor opinion, which is at odds with what the current requirements are.

I guess, somebody made a point about perhaps limiting the audit matters to the audit committee, reported items. And I think, in general, I'd probably be in favor of that approach. Partly because, to simplify the job of figuring out what needs to potentially be considered.

And to limit it to becoming potentially a really onerous exercise, with the idea that anything that could potentially go in an audit opinion would almost surely have to have been communicated to an audit committee before.

I guess just another general comment. And it was that, you could be highlighting items that aren't particularly important. And Loretta got to this when she talked about things that are hard.

And there are some really important things that are in the financial statements that perhaps, you know, wouldn't be mentioned. And I guess a general concern that we've had is that people look at the audit opinion. And they look at it as a shortcut to identify the items that might be particularly important that an investor should look at.

And investors really need to look at the financial statements, the footnotes, the MD&A, the critical accounting policies, the entire Annual Report, not just a few bullet points that the auditor mentions.

And I think there's some danger that that could be a shortcut to people, to investors looking at the Annual Report and the financials.

MS. RAND: Thanks, Wally. Lisa Roth.

MR. BAUMANN: I just wanted to make a comment if I could, just with respect to one or two of those things. And, Wally, those are really good comments. You're a very good reader. We did point out in some of these examples that there could be things --

We structured them in a way that there could be something that wasn't otherwise in the financial statements. There could be a significant deficiency that was the most difficult matter, that required the auditor to really extend their audit procedures. And it was very difficult to get evidence because of that.

But only a material weakness has to be disclosed by management, and not a significant deficiency. So therefore, we wanted to point out that there could be things disclosed through these CAMs that may not otherwise be required to be disclosed.

So we intentionally did that to bring out that issue, and make sure people addressed it. And commented pro or con with respect to that. So thanks for pointing that out. But that was done intentionally to get feedback in that area. Lisa Roth.

MS. ROTH: Thanks. So I'm a regulatory compliance auditor, not a financial auditor. So when I look at the critical audit matters and those questions, I find them to be really thoughtful and meaningful. And I'm sure you work out the technical semantics, and so on, to make it a really great addition to the audit program.

But I also recognize that the incorporation of the reporting in that manner greatly expands the scope of the audit, if not the liability to the auditor. And I fear the next impact will be a heightened fee, higher fees.

I would imagine those of you who are financial auditors are going to charge more for that kind of audit. So I think it's important to recognize that about 3,000 broker-dealers that are subject to PCAOB audits are nonpublic, privately held, nonpublic, non-custodial firms. And they'll be subject to those audits.

And as Barbara mentioned, the auditor's working for the investors, meaning the shareholders, not the firm. But in those instances firms don't have investors. And 1,000 of those broker dealers are not only nonpublic, non custodial, but they have less than a million dollars in annual revenues, and two or fewer business lines in what are deemed to be generally low risk areas.

So for those firms in particular, the imposition of audit standards of this scope, I anticipate will be financially burdensome, with none of the impact that you've set out to accomplish. Because these firms don't have public investors. Their customers won't ever see the audits or the reports because they're privately held. And the impact is lost.

So I would encourage the Board to consider limiting the scope, or limiting the audience for this type of reporting, to those firms that will benefit, or those investors that will benefit from it the most.

MS. WATTS: Lisa, I'd like to address two points in your question. First, we don't plan on actually increasing the scope of the audit. This would be based on what the auditor has already done throughout the audit.

So we do recognize that liability or fees could increase. But it's based on what the auditor has already done. So the costs should be related to communication, determination and documentation. So that was one point.

And then the other one was, on brokers and dealers, we did recognize that in the release that brokers and dealers have a different ownership structure than issuers. And we put in some examples of how we understand that. And asked questions on whether or not this should apply to brokers and dealers.

MS. ROTH: Yes, thanks. And I will respond to that in a written comment letter. And I thought that the example that you used applies very well to a custodial broker dealer. And I'll comment in writing with respect to the rest of the community. Thanks.

MR. BAUMANN: Thanks, Lisa. And Gaylen Hansen.

MR. HANSEN: Yes, Marty, I think what this is all about is balance. And I think you've framed it very well, the responsibility management and the auditor.

But I can tell you, you know, over the years I've been to a lot of these audit committee meetings. And the auditor comes in and says, we didn't have any difficulties. And that's just nonsense. I've lost a lot of sleep over the years, laying awake at night worrying about things, as I'm sure many people here have. And those are the things, those few things is what has to be communicated.

But if I go to Paragraph 8, and we've had, I've heard a number of people talk about it. Critical audit matters ordinarily are those ordinarily required to be in the engagement completion document, the engagement quality review discussion, or in the discussions with the audit committee.

I don't like limiting it to even those. I think it's anything that has that auditor laying awake at night worrying about it. So while I'm in favor of this, and I think you've struck a good balance, and you're going to, with all the comments that are going to come back, I'm sure that you, I believe that you're on the right direction here.

I think, you know, to Jennifer's comment though, that you could get some unintended consequences if you start limiting things when it comes to critical audit matters. So that's basically how I feel about it.

MS. RAND: Thank you, Gaylen. Wayne Kolins.

MR. KOLINS: Thank you, Jennifer. A couple of comments, one narrow, one a little broader. A couple of times it was mentioned about the significant deficiencies, and one of the possible items that might lead you to a critical audit matter.

Aside from the question of whether that's other information, or additional information over and above what's in the financial statements, there's another potential consequence is that absence of any characterization of a critical audit matter attributable to a significant deficiency, and could imply that it's a positive opinion on the effectiveness of internal control. So it's one thing to consider.

And the other one is, the FRC in the UK has a standard that it's already been issued, it's already in implementation now. There's been a handful of reports issued under it. I think it was for years, beginning after October 1st, 2012. There'll be a lot more issued after the year end.

To what extent are you going to be reviewing the feedback from those, or any -- It would be great if a pilot test could be done on those. Because those would be reflective of live situations, versus a retrospective pilot done on engagements that were conducted in 2012.

MS. RAND: I think I heard one question regarding the FRC. And I wasn't sure if I missed a second question. Did you have a second question there?

MR. KOLINS: Well, the first question was about the significant deficiency. That wasn't a question. That was just a comment. And it was a question on the FRC, to what extent could you think about, you know, some kind of a pilot being developed to look at that, even though it is in a different environment?

It's in the UK environment. But the standard is relatively similar to that of the PCAOB. It's probably closer to the IAASB proposal. And they do have a requirement to indicate what the, how the audit approach has been reflective of the critical audit matter. So there are auditing procedures on a high level that could be in there.

MS. RAND: We have been actively monitoring the FRC's project, as well as certainly the IAASB developments in France, which happened several years ago. You're correct, the FRC --

And I'm not sure if everyone's aware of it. But in the UK the FRC issued a new audit report. Those are standards that are currently effective. And I think at the beginning of this year we'll be seeing a lot of those reports come out. I think, as you've rightly pointed out, there's just a handful right now.

But they are, they're a different approach. They talk about there are some differences. So I think it's useful to have different approaches, at least as we're in a development period.

Because to the extent commoners can review different approaches by the PCAOB and others, I think we can benefit in trying to develop an approach that would be suitable. So I think it's helpful to have other examples.

We'll certainly be looking at that, as well as monitoring comments that come in on the IAASB, and comments that come in to us, as far as our next steps. But we're certainly aware of that, and considering it.

MR. BAUMANN: Thanks. In the interest of making sure we don't keep you here all night, and we appreciate the amount of attention you've given to all of these matters today. I see, I think only four cards up. If I'm missing any, let me know

But I see Mike Gallagher's, Bob Guido, Barbara Roper, and Jeff Mahoney. If there's any others, please raise your hand. So maybe we can take those four, and then call it a day and get back to business tomorrow morning. So, Mike.

MR. GALLAGHER: So, Marty, your point about maybe being provocative in the examples, about showing a case where it's information not otherwise disclosed, I think is helpful.

And I think it will be mission accomplished in terms of your objective, in eliciting feedback. So that's definitely one of the areas that I hear a lot. And it's kind of connected also, you know, being the original source of information.

And Jennifer's point about potentially chilling the dialogue, you know, with audit committees. I know, Jennifer, that comment was in the context, if the audit committee information was the sole source, would that potentially make an auditor cautious about putting something on the agenda with an audit committee? That fear is there.

By the way, I am for narrowing it. Because I can't imagine a case where an auditor, based upon information not communicated to the audit committee, came up with something that he or she put in CAM. I think that auditor would have a major problem with the audit committee in that case. That, you know, you --

MR. BAUMANN: Just to comment on that one. It's really the opposite that we're concerned about. And that is, therefore, CAM doesn't get reported, because it was kept out of the audit committee report.

MR. GALLAGHER: Okay.

MR. BAUMANN: So that's the risk that we're concerned about. We also can't see a case where you wouldn't report a CAM that didn't get reported to the committee. But if you're limited to only things that were reported to the committee, then potentially there's something that would not be reported as a CAM. That was the thinking there, anyway.

MR. GALLAGHER: Fair enough. But, Marty, I guess what I would --

MR. BAUMANN: Again, just to be controversial, to provoke --

MR. GALLAGHER: What I would say is, that's operator error in my mind. You know, just because the auditor chose not to communicate something to an audit committee, doesn't mean he or she shouldn't have, okay.

And so, you know, the point being that, you know, there's an expectation that the most critical matters that, you know, come up during an audit must be reported to an audit committee. And I can't imagine a case where an auditor would say, okay, I've got to communicate something in CAM.

And that's outside the universe of things that I've communicated with an audit committee. And so, you know, having a more narrow focus in the spirit of not having CAMs go on forever, number one. And in the spirit of an auditor being comfortable of limiting, you know, the numbers to a manageable number.

You know, it seems to me narrowing that universe is helpful. But the two issues that I think you're going to need a lot of feedback on, the original source of information, you know.

And is this a back door way of requiring registrants to disclose things otherwise not required through the auditor's report? And then the chilling of the dialogue.

MS. RAND: Mike, I have a follow up question regarding the issue, which is an important issue, and one we did flag in our proposal, is something like significant deficiencies that might, would not be communicated.

But let's say it is a critical audit matter in auditing a particular area. And the auditor, you know, should the auditor then leave that out of the list of a critical audit matter, because it's not otherwise communicated?

You know, what would be the resolution for those type of things that otherwise are the types of things that kept the auditor up at night?

MR. GALLAGHER: Yes. And I think it's a fair point. And the two issues that I hear, that are of concern. One is, have we lowered the bar in terms of requirements for communicating things below material weakness to significant deficiency?

And I do take your point. How do you communicate that issue with respect to the audit, and how the auditor got comfortable, and what kept the auditor up at night?

The other thing is potential litigation, you know, where there's discussion at an audit committee around a matter of litigation. And whether or not it should be disclosed or not.

And if the answer was no, not required under the standards, could this be a back door way of requiring disclosure in the CAMs?

And obviously, to Marty's point earlier, if an auditor is going to disclose something in the CAMs, you better believe management's going to disclose it in the financial statements.

MR. BAUMANN: Thanks, Mike. Bob Guido.

MR. GUIDO: Mike just summarized a lot of my comments and observations. So thank you. I would like to just drop back for a second though. The last 12 years, I want to go on record as saying, that the audit firms report to the audit committees. So I want everyone to fully appreciate that that's happened in the capital markets.

Audit firms understand they report to audit committees. So with that in mind, I also say that good audit committees, and most audit committees that I'm familiar with, do talk about the qualitative aspects of management judgments, estimates and accounting policies.

And I'll tell you, if they get close to the line there's a lot of problems by the audit committees. So I just want everyone, you know, to know that there is pushback there. We're not just letting the audit firms or management do their thing.

There is a lot of checks and balances that are happening every day. And I can't overemphasize that. I like conservative accounting. I like conservative reporting. And the firms that work with me know that. And so does management, that I sit on Boards of Directors.

So there are a lot of checks and balances that have happened since Sarbanes. And there were probably a lot before Sarbanes. Having said that, I was -- if the critical audit matters live, I really like the idea of narrowing.

I'm one for a lot of communications. And I believe, very strongly, there ought to be a lot of communications at the audit committee level. And there ought to be a lot of things, probably in that closing document, or whatever we call it now, that don't go into a CAM. And I think that's fine.

If we say that there's indicators that they have to be, then I think that the CAMs, or excuse me, the closing documents and the communications with audit committees, you know, will be shortened. And that's an unintended consequence. I would encourage, if we do pilot testing, that, Marty, you mentioned, you know, the preparers, and the firms, and the audit committees.

I would get users involved. I think somehow users got to get involved in pilot testing too, to get feedback from users. And then last, but not least, I don't know what the issue is on this significant deficiency.

I would agree with you, if I were a registrant, and someone brought a significant deficiency in the CAM, I'd have a disclosure somehow. But again, that's backdooring what Sarbanes-Oxley requires on material weaknesses.

So, anyway, but I'm for more limiting if we go with -- If CAMs stand, I would rather see less, and really focus on those, and have users focus on those, are the more significant matters. Thank you.

MR. BAUMANN: Thanks, Bob. And again, thanks for the comments on the fact that we were transparent in this document about including certain things, so we could get input back on those kind of things. Barbara.

MS. ROPER: Right. One thing I want to clarify, and then I want to add one thing. First of all, when I was, in my initial comments it strikes me that there are two different things you need to do in your analysis.

One is, that there is this central point of what information investors want in the audit report, that's relevant to their investment decisions. The other is how this proposal relates to other priorities of the Board.

So when I talk about things like changing the incentives with regard to regressive accounting, that's not as the primary goal of this proposal. It's a way to think about the other positive impacts that it could have.

But in response to that, we get the issue about there are certain things that are hard, and there are certain things that are very subjective. And it is very different, as an investor, if you're looking at an audit report where you're talking about, well the financial statements were pretty straightforward.

There was very little subjectivity. The issues were pretty, you know, I mean, that's a different report than one that there's a lot of stuff here that's really hard. And there's a lot of stuff here that's really subjective.

And as an investor I would think you would look at those financial reports differently. And you should. And the audit report, by reporting critical matters, could help you do that.

You know, on this issue of the population of things that might be CAMs. I too find it virtually impossible to imagine that an auditor would communicate to investors something they wouldn't communicate to audit committees. And I would find that very troubling if they did.

But beyond that, I also think that there is, that we don't want -- If you look at different areas, you look at disclosures about risks in mutual funds. You get 20 boilerplate disclosures that tell you absolutely nothing about risks in mutual funds. And I think, you know, or anything that you would care about as an investor in choosing that fund over a different fund.

And I think in your examples you've done a good job of writing these in a way that are, you know, provide useful information. They're robust enough to be there. And they don't go on for 20 pages. We don't want, I don't think, I don't think most of us want 20 pages of boilerplate discussion.

So I don't necessarily disagree with the comments from people who say, you want to keep this focused on the really critical issues, and not just sort of go -- You don't want to create an incentive to report everything that might come up. I don't think you've done that.

But just the point being, I don't necessarily disagree with the comments of those who say, keep this focused on the really critical issues.

MR. BAUMANN: Yes, that's been good counsel for us. So thanks for pointing that out again. And, Jeff Mahoney, you get to have the final word. Or, you're the last person to keep us away from the reception.

MR. MAHONEY: Okay. In that case, I'll be very brief, extra brief.

MR. BAUMANN: No, that was not the point.

MR. MAHONEY: I just want to commend the Board and staff. And I personally believe that this was a very important recommendation of the Treasury Advisory Committee. So I just want to commend you for sticking with this, and getting to the point of issuing a proposal, and having a full due process around this important recommendation.

Just two brief points. One, I share the concern about having an overload of disclosure regarding critical audit matters. There's too many. We end up having a phone book that's not going to be helpful to investors, or anyone else.

But I'm also concerned on the other end that there would be a significant number of companies where the auditor, in their judgment, would decide that there should be no disclosure at all. If that ends up being the case, I think that's also going to be a real problem, in that it's going to undercut the basic objective of the project.

Second, my reading of the input from investors, and a lot of the surveys and studies, one of the common themes was that they wanted more insights from the auditor, focused on some of the key estimates and judgments. And so to the extent that through the auditor's judgment, they disclose critical audit matters, that are something other than some of the key estimates and judgments, and that ends up being a common practice.

I think many of the investors who were supportive of this project are going to be disappointed, since that's what many thought they were going to get out of this project. Thank you.

MR. BAUMANN: Okay. Thanks, Jeff. And thank you, all of the members of the SAG, and all observers here, for very valuable input on all of our discussions today, and particularly right now on the audit reporting model, one of our most important priorities.

**NOTICE:** This is an unofficial transcript of the portion of the Public Company Accounting Oversight Board's Standing Advisory Group meeting on November 14, 2013 that relates to the Board's Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments. The other topics discussed during the November 14, 2013 meeting are not included in this transcript excerpt.

The Public Company Accounting Oversight Board does not certify the accuracy of this unofficial transcript, which may contain typographical or other errors or omissions. An archive of the webcast of the entire meeting can be found on the Public Company Accounting Oversight Board's website at: http://pcaobus.org/News/Webcasts/Pages/11132013_SAG.aspx.

STANDING ADVISORY GROUP

+ + + + +

MEETING

+ + + + +

THURSDAY
NOVEMBER 14, 2013

+ + + + +

MS. RAND: Thank you, Marty. Good morning, everyone. As Marty said, we will continue our discussion on the auditor's reporting model.

Before we do that, though, I want to remind you of our disclaimer, which is the views expressed by each of the presenters are our own personal views and not necessarily those of the PCAOB, Members of the Board or other PCAOB staff.

So, getting into our discussion, yesterday we spent our time, and our time had been abbreviated, but we did discuss critical audit matters. Your feedback was very helpful. I think we may have time today if anybody has any further comments regarding that toward the end of this session.

But our focus, to start off with, is on the new elements of the report and the other information standard that is included in the PCAOB's proposals.

Since we are back on schedule and we have time, we thought that it would be helpful before we just open up the floor for discussion to provide an overview of the standards. And then we will get into the discussion. And then, of course, I expect we will have time at the end if there is anything else that wasn't covered that is of interest, certainly we would like to hear your views on that as well.

So, with that, I will turn it over to Jessica.

MS. WATTS: Thank you. As I mentioned yesterday, the proposed standard, in addition to critical audit matters, includes new elements. Specifically, independence and auditor tenure.

Related to independence, the proposed standard would require the auditor to include a statement in the auditor's report that the auditor is a public accounting firm registered with the PCAOB and is required to be independent with respect to the company, in accordance with the United States federal securities laws and the applicable rules and regulations of the SEC and the PCAOB. Under PCAOB and SEC rules, the auditor is required to be independent of the company.

This statement in the auditor's report is intended to enhance investors' understanding about the auditors' obligations to be independent and to serve as a reminder to auditors of these obligations.

Related to tenure, the proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year that the auditor began serving as the company's auditor.

Currently, this information is not required to be communicated by the auditor, management, or the audit committee to investors or other financial statement users.

Auditor tenure has been the subject of discussion for decades and investors and others have indicated strong interest in this information. In light of the public interest, we've proposed auditor tenure as a data point in the auditor's report. The intent of the proposed requirement is to disclose the duration of the auditor's relationship with the company.

And then the next thing we will talk about is the other information standard. So, during the Board's outreach process, some commenters had indicated that they would support changes to the auditor's report that describe the auditor's responsibilities related to other information and the auditor's conclusions related to the other information.

And in order to provide a basis to better explain to investors the auditor's responsibilities related to that other information, and the auditor's conclusions, we determined that changes to the existing other information standard were appropriate to provide a specific basis for this description in the auditor's report.

As a result of this link between the proposed auditor reporting standard and the proposed other information standard, the financial statement user would obtain useful information, such as the nature and scope of the auditor's responsibilities with respect to other information, clarification of what other information was evaluated by the auditor, and a description of the results of the auditor's evaluation of the other information.

The other information standard specifically applies to a company's annual reports filed with the SEC under the Exchange Act that contain the company's audited financial statements and the related auditor's report.

The proposed other information standard would require the auditor to evaluate whether the other information contains a material inconsistency, a material misstatement of fact, or both, based on relevant audit evidence obtained and conclusions reached during the audit.

In addition to reading this other information, the auditor's evaluation of the proposed other information standard would include performing procedures intended to help the auditor identify whether the other information contains a material misstatement of fact or a material inconsistency. The proposed other information standard provides specific responses when the auditor identifies a material inconsistency, or a material misstatement of fact, or both, such as communication with management and further procedures as necessary.

So, now I will turn it back to Jennifer to start our discussion.

MS. RAND: Okay, thank you. So, to start off, we would like to talk about the new elements in the report, specifically the element regarding independence, a statement from the auditor about independence, and also on auditor tenure.

I see Loretta. Loretta, go ahead.

MS. CANGIALOSI: Good morning. On the independence, I don't have an issue. On the auditor tenure, I guess my question is, as I read this, it seems to be far reaching backwards, particularly with predecessor firms, because, as we know, audit firms have merged over the years. And one of the things I really would like to hear from investors is how relevant all of that is.

Because if you have been audited by the same firm for 15 years, 20 years, 30 years, I mean, when does that really strike them as a hot button? Because going all the way back, you have a different management, different partner, different firm. Having previously been with Main Hurdman and then KMG, I can tell you that when they merged with KPMG it was a different auditing set of processes.

So, I'm not sure how relevant the predecessor firm is. And also, you know, the fact is that if we are looking for independence, when you have different management teams and different auditors and audit firms, again, I don't think you have that independence issue as striking. But I am interested to know if there is a cutoff by which investors believe that it would be satisfactory to say they've been our auditors for over 25 years, rather than going all the way back.

MS. RAND: Okay, thank you. I think it would be helpful to get some other views on this topic and we can go back and respond. But, Gaylen Hansen.

MR. HANSEN: Yes, if I could comment on both of these. Auditor independence. So, certainly the audit report is titled, "Report of Independent Registered Public Accounting Firm." So, there is sort of an implied conclusion that the firm is independent.

It's interesting the way the paragraph is written. It says that the auditors are required to be independent. It doesn't actually say they are independent. And I understand the argument that there is violations, a lot of times very minor, that are resolved with the SEC, or with actions as taken, so that the firm can be independent during the course of the audit. But, for me, it's sort of a disconnect.

If the auditor can't say affirmatively that they are independent, I think there's an expectations gap problem with that in the report itself. So, I would like to see a stronger statement here. And I'm not sure exactly -- I don't know that I have the solution for that, but we have to make it clear that the auditor is independent in the way that it's communicated to users.

And then on tenure, I don't particularly have any problem at all with the disclosure of that. It seems to me that -- and the issue has been raised with me by others. It may be important as to any implications as to tenure on independence, and the placement of that in the report could be important. If it's next to the discussion of independence, maybe there is an implication that if there is some period of time that you have been the auditor that you are raising issues about independence. So I think we need to be careful about the placement and the manner in which it is disclosed. Thanks.

MS. RAND: Gaylen, did you have any thoughts about placement? It sounded like you thought an alternative might be preferable. I just didn't hear if you had made a suggestion or had any thoughts.

MR. HANSEN: The suggestion that has been made to me was that if it could be -- if the statement about tenure is not in the independence paragraph, it would be preferred. And maybe right near the end of the report, somewhere near the auditor's signature line.

MS. RAND: Thank you. Bob Hirth.

MR. HIRTH: Thanks, Jennifer. To pile on on the tenure comment, I had polled a number of CFOs and audit committee members and I got some consistent comments around tenure. And let me just kind of read you the sense of one. "I don't like the proposal to disclose audit tenure. It would be or is out of context being placed directly in the auditor's report, and for long-serving auditors, implies a taint on their independence, which I believe is unfair. We have independence rules. And either the auditor complies or not, irrespective of the tenure."

To add on to that, one option around placement would be to put it in the proxy, where there is discussion about the auditor and approval of the auditor. And you could put it there.

Now, Bob and I were talking about whether that is voluntary and suggested and companies just decide to do that or it's a requirement. So, that is a comment on tenure.

MS. RAND: Okay, thank you. Elizabeth Mooney.

MS. MOONEY: Thanks. I didn't get a chance to make some comments yesterday. So, I have a couple as well that might relate to yesterday's discussion, a couple comments.

Just on the tenure, from my discussions with analysts, they are interested in knowing how long the auditor has been in place on an engagement with the company, but I can't say there's a consensus around how many years. But they are very interested in that time frame.

And I wouldn't make a blanket statement that it's a taint. I just think it is helping to educate the investors. But it is something that they like to know.

And we have gone back and tried to piece it together with annual reports we can get our hands on. The analysts have asked me to do that.

So, I would just say it is relevant and I don't see why -- you know, it's a fact. It is a discernable fact, and where it is, I mean, I don't see why it would be a problem in the auditor's report.

Just another general comment. We talked a little bit about IAASB's proposal yesterday, and I just would encourage PCAOB not to wait. Convergence has been a slow process, and just be a leader and do what the Board thinks is the best thing. And, hopefully, convergence will happen naturally.

In terms of what information would be especially useful, you know, I think one important piece is the risk assessment and how it changed during this year, or this audit, from the prior period or periods. And, you know, the biggest risks and how the risk auditors responded to them, how much time is spent on them, how they got comfortable with them, any significant adjustments to the work they did. That is the kind of thing that would be really useful. And, again, it is about the audit.

And in terms of reporting the critical matters, I would just encourage you to make sure that the standards are strong enough. It should be really based on what's required, what is significant, according to the audit standards. I think this came up in your IAG meeting, but I think that's really important so that you can have some consistency and that it will be actually an enforceable standard.

And on the other information, you know, outside of the financial statements, I think if auditors know that investors are getting certain bad information, it's their responsibility to say something. So I think to fix it or do something, that makes a ton of sense.

Thanks.

MR. BAUMANN: So, before we take -- there is a lot of other cards up -- I thought we would pause just for a second because a lot of comments were made. Maybe I will add some color and see if it helps or not.

So, the thought on the tenure, because a lot of points have been made that it's not relevant and firms have merged and different partners change every so many years, and therefore to some it's not meaningful or some said it taints.

When we had hearings around the concept release on auditor independence, objectivity, and professional skepticism, including rotation, there were a lot of people who testified at those hearings and talked about concerns about long tenure. But at the same time, there were some people that testified and said they're concerned about rotation because they think the riskiest audits are in year one. So there was a lot of points that came out of those hearings about pro and con rotation with risks in both directions.

So the thought on putting in tenure was, well, for those investors who think it's very risky in year one of a new audit, of an audit, for an auditor that really isn't up to speed, potentially, on all the issues in the company, that's a valuable data point for that investor that has that concern.

And there are those others that have that concern that 120-year relationships, even though partners do change and firms merge, firms tend to value in a certain way their 100-year relationship clients or long-term clients. And there is probably some pressure on the audit partner, besides just doing a good audit, to not be the partner that loses that client that has been a client of the firm and a crown jewel of the firm for 100 years.

So, there is enough pressure doing the audit itself. But to be the partner who is going to make tough calls that might cause losing the client puts extra pressure on him. So maybe investors want to know about those relationships, because they feel those partners are under a unique kind of pressure.

So, tenure really is thought to be a data point of value, whether it's the first year of an audit or the hundredth year of the relationship or somewhere in between.

But the comments you're making, I think, are some of the comments we have heard across the board. Some people think it is not valuable and other investors have said we think it's a valuable data point.

So, I thought I would just add a little color. We're not just pointing out the lengthier tenure. It's whatever it is that could be potentially of value.

With respect to the comment on independence and the fact that we are "required to," as opposed to "we are independent," I think, Gaylen, you touched on the exact issue, and that is some firms have violations of independence rules during the audit. And if they have a violation, that might affect -- they violated the rules that year. So, the statement is written in a certain context.

I think we will continue to explore that, because I think your reaction is a fair one and I think others have that. But I think it's something we have to work through.

So, I thought I would just add those points as we take the rest of the comments.

Jennifer, did you have any other additional reactions?

MS. RAND: No.

MR. BAUMANN: Okay, thanks.

MS. RAND: Okay, next on my list is Steve Buller.

MR. BULLER: Thank you. Just thought, a couple thoughts, again as a user. So, we rely upon the audit firm to tell us if they are independent. It's hard for a user to understand if an audit firm is or is not independent. And additional disclosure is not really meaningful information which is actionable for us, as an investor, merely stating that they are independent.

I guess while we have the SEC in the room, the thing

I would encourage, actually which is probably of more benefit to us, is to have a full review of the auditor independence rules. Because between the investment company complex rules, the 21010 over-under rules, the former partner pension rules, they are difficult for the audit firms. They are difficult for users also. We have two full-time people who spend all their time, 100 percent, monitoring auditor independence with contracts and relationships and former personnel.

But, also, it's apparent to us, at least, that there is going to be a higher degree of auditor rotation. Now, whether that is one percent or 20 percent, I don't know. But unless someone goes back and just looks at the issue of former partner pension plans and unfunded pensions, you know, as we have more and more former partners who serve on boards, including our board, if there are rotations we're going to see more required changes because of partner pension plans and taints as they bring in new audit firms. So, I just encourage the SEC to look at that as part of this longer term project.

With respect to audit tenure, we don't object to disclosure of the number of years in which the firm as served as the auditor. Again, the question is what is actionable for us.

So, for us, we think it probably makes more sense to have that disclosure in a proxy in the auditor opinion and here is why. If we think that there is a problem with the auditor independence or the number of years they've served, the way we take action is by voting in a proxy to not reappoint the auditor.

It is hard for us to take action when we review financial statements to understand what it means and the impact upon financial statements if they have been an auditor for one year or 50 years. It's just not something that goes into our analysis of the integrity of those financial statements. It probably belongs in our decisionmaking of whether or not to retain the auditor.

So, those are a few comments.

MR. BAUMANN: Thanks for those comments, Steve. They're very helpful. I think actually a couple of them though are really for the SEC more than us.

And somebody else also had mentioned earlier that they had thought, maybe it was Bob Hirth who mentioned that he thought if tenure is going to be disclosed, it should be disclosed in the proxy, rather than in the audit report. So, that is outside the scope of our authority, again, but we take that point and appreciate that. So, the SEC has heard your views.

MS. RAND: Okay, Professor Cox.

MR. COX: So, it was my pleasure, although it interrupted a vacation, to testify, give some testimony at the Roundtable on Auditor Rotation in San Francisco a couple of years ago. And my actually eagerness to do that was informed by the fact that before I even had the opportunity to do that, I had started looking at the literature about what the implications were on the question of independence and tenure. And I was astounded. It was sort of like a Goldilocks situation. And that testimony is all a matter of record. People could look at the studies that have been done, which I think I tried to correctly summarize.

But really it's a Goldilocks moment because it's like the question about it's either too short or it's too long and how the empiricists have been able to document the problems that arose from this. And the studies all indicate the following, that it's very hard to figure out what is just right. Okay?

And we moved past the question of mandatory rotation of audit firms, at least at this moment in time. But it does make me think that what we would like to do is shine a light on this problem, because the problems are not only at too short a tenure, but the problems also exist, again, with some statistical significance, with too long a tenure.

And the whole function of what we are talking about starting yesterday afternoon and continuing this morning is where is an appropriate place to shine a light on this. And some things probably need to be centralized and located in one place. We all know that when you change an auditor, that's an 8-K filing that you have to make with the SEC. But there are some other things we may want to think as well, and that there is a central location of this very ever-growing set of financial statements where we would like to have some things just highlighted. And I think auditor tenure is one of those.

So, I think that just specifying what the length of the tenure is in the audit statement, in a very crisp statement, can at least shine a light on it and let investors do what they want with it. Some have staffs of two people who do nothing more than that. I'm going to suggest that a lot of investors don't fall into that category. But by being able to highlight it, maybe they can dig into the question more likely and figure out what to make of the question about too short or too long a tenure.

MS. RAND: Thank you. Rick Murray?

MR. MURRAY: Thank you, Jennifer. I think there is a terminological problem that requires some further attention. The concept of being independent really is two separate thoughts. One is the condition of being independent, which is, generally speaking, capable of objective identification and explanation. The other is the way of doing things, which is a process, a state of mind, and a far more subjective and nuanced issue.

I don't think it's clear in the materials whether one or both of those uses of the word are clearly intended. It seems to me there are places where you would imply one thought attaching to the way independence is used and other places where it seems more to be the other.

So, I would encourage a review of the drafting process, so that whichever of those the Board intends to be the purpose of independence for this purpose is clearly specified.

Second, and a briefer comment, there is a catch-22 here in that, for 40 years, there has been a debate about whether it is possible, at least theoretically, to be independent when being compensated by the client. And there are, clearly, many voices who continue to believe that it's not and that it is a misrepresentation, if you will, for an audit firm to declare itself to be independent in the current context of the way compensation is arranged.

For those voices, some in academia, some in a variety of other communities, the use of litigation as a tool to challenge that alleged misrepresentation, and to use this new element of the audit report to accuse the firm of overtly misrepresenting their status as independent, if that is the way that the Board elects to use the word, is an unintended consequence that I think needs some attention. It can be clarified by defining a little more closely what the standards are that are being used for that purpose.

But when you ask the auditor to make a self-declaration of that, it ought to be clear whether the declaration is one status or of process and how that can be recognized by the regulator as an accurate statement, in light of the compensation of auditors.

MR. BAUMANN: I would like to explore that a little bit, Rick, if we can. That's a very interesting comment.

I think the first thought is, by including a statement in the audit report that we are required to be independent, according to the rules of the SEC and the PCAOB, our intent in drafting that and putting it in the report was we thought that that had a chance of increasing the auditors' thinking about their decisions that they had to be independent of mind and had that objectivity in the decisions they were making as they were coming to their conclusion on the financial statements. It might have that intangible benefit of increasing that independent state of mind that you talked about that's one of the couple of aspects of independence. I think that is the main reason for putting that there.

We would also like to put in the statement "we are independent," to Gaylen's point, but there are some other technical issues with that.

But I would like to explore what you meant by this has a liability and litigation issue and overtly misrepresenting the auditor's position. So maybe you could share with me a little bit more your thoughts in that regard.

MR. MURRAY: First and most simply, Marty, if it is clearly the intent of the Board that the reference in the audit report is to the state of mind, the process, rather than the independence, that goes a long way. If that is clarified, that goes a long way to take both of my comments out of play.

MR. BAUMANN: Well, it didn't mean to say it ignores the fact that we had to comply with rules as well and that we are required to comply with rules. But, certainly, there are the two aspects. There is the rules and the state of mind.

MR. MURRAY: I may be wrong factually on this. But it is my impression that neither the SEC nor the PCAOB have ever overtly said we have examined the nature of the compensation of auditors in this system of financial reporting and we have concluded that that does not impair the auditor's ability to function independently.

If that were to be clarified and the declaration in the audit report were to fit into that model saying we have functioned independently, I think that reconciles the problem. It's the overhang of a historical and not formally resolved question about the effect of compensation, coupled with asking the auditor to make a self-declaration that, if claimed to be materially misleading, which is certainly within the reach of trial lawyers these days, that creates the concern.

MR. BAUMANN: Thanks. I would be interested in others' reactions to that, but I understand the point you are saying, that potentially the client pays model creates a conflict that inherently affects independence and therefore making that declaration raises the point that you are concerned about. I don't know if anybody has a reaction to that, but if they do, I hope to hear from them as part of the discussion.

MS. RAND: Okay, thank you. Jeff Mahoney.

MR. MAHONEY: Thank you. I just wanted to agree with the staff statement that there is strong investor interest in the tenure information. That's reflected in our corporate governance policies in at least two ways. First, with respect to shareowners' oversight of the audit committee, our policies related to audit committees indicate that tenure should be a factor that the audit committee looks at with respect to the retention issue.

MS. RAND: Jeff, I'm sorry. We were getting -- obviously, you are hearing that noise, but I was missing some of what you were saying. It was quite distracting. It seems like it has subsided. If you could just repeat that again. I apologize. I don't want to miss your point.

MR. MAHONEY: Sure. I wanted to express my agreement with the staff statement that there is a strong interest by investors in the tenure information. That's reflected in our corporate governance policies in two different areas. First, with respect to shareholders' oversight of the audit committee, in our policies related to the audit committee, we do say that the audit committee should look at auditor's tenure as one of many factors when considering auditor retention issues.

In addition, we ask for disclosure by the audit committee. When the auditor has been retained for ten consecutive years or more, that there be some additional disclosure by the committee about that decision to retain the same auditor beyond the tenure period.

It also has relevance with respect to our policies which many public companies have adopted with respect to the annual shareowner vote on the ratification of the external auditor, where we believe that the tenure of the auditor should be one factor. Again, not necessarily the most important factor, but one factor that shareowners should look at when making that retention vote, which, as I indicated, is a very common at a large number of public companies.

With respect to where the information is disclosed, we do not have a policy saying that the tenure information should be disclosed in the auditor's report or in the proxy statement. I can see the argument that it be disclosed in the proxy but I'm not aware of anyone in our membership who would be upset if that information was disclosed in the auditor's report, which is the main vehicle of communication between the external auditor and shareowners, rather than in the proxy statement.

In addition, I think if you asked them if it's disclosed in the auditor's report, you may get this information in a shorter period of time -- you may get this information in a few years. If it's disclosed in the proxy, it may be a long time before you ever get that information. If you add that to the conversation, I think a number of our members would agree or support the idea of having tenure disclosed in the auditor's report if they think they are more likely to get that information sooner rather than later.

Thank you.

MS. RAND: Thank you, Jeff. Bob Guido.

MR. GUIDO: Thank you. I just wanted to pick up on a couple of points, especially -- there goes the hammer.

But what Steve Buller said about independence, and not to dwell on this issue too much, but go back to the premise that we on the committee spend a lot of time in this area, and we do challenge. And I would like to just remind everyone that tenure, from an audit committee's perspective, is one year at a time, which means the firms have to prove themselves, not only in performance on an annual basis but in the independence, objectivity, et cetera. Fact and state of mind.

Therefore, if something -- and I really believe that disclosing this in the auditor's report is out of context. Put it in the proxy where, if we want to, make it voluntary. I will bet you if you do best practices, there will be a lot of registrants that will follow suit. But it could be couched within the audit committee's report, where we, in effect, challenge performance and reappointment.

However, if that doesn't fly, I have another suggestion. Ten years ago, we used to file with the PCAOB all of our registrant information. I don't know if that is still being done but I assume that it is. Why don't we just have the firms put in there how long they, in effect, have been a client? And that has access -- it used to be public information maybe it isn't anymore. But any investor that is interested could access that public information in a few seconds.

So anyway, just a thought.

MR. BAUMANN: Do you have a reaction to the comment that Jeff made that to the extent investors think that this is important, this is a proposal that we get this out to investors potentially in the near term. Whereas, if your argument is, maybe it belongs more in the proxy, there is no action taking place right now or no proposals on the plate to put that information in the proxy, other than voluntary. And there are some companies that are voluntarily disclosing that but there is no action underway, as far as I know, to put it required in the proxy.

MR. GUIDO: Well yes, I don't know of any action either. I do know that some registrants already put it in the proxy. And working with NACD and others, we could get this going, if that is so important to investors.

But again, I will go back to what I said before. For audit committees to opine on independence and performance, we do represent shareholders. And therefore, we have already concluded on that issue.

However, if we want to have it in the sunshine, put it in these reports and the firms file them annually, I believe. They still do, I hope.

MR. BAUMANN: They do. That is a form 2E you are referring to and that is available. Of course, an investor would have to do some searching to find not only the firm but then the issuer and so on and so forth. But it is an option, I am glad you pointed that possibility out.

MS. RAND: Okay, Jerry de St. Paer.

MR. DE ST. PAER: Thank you. I guess this is going to feel like piling on but I think my perception of it, while consistent with the views, for example, that Bob just expressed and others, it has a twist to it.

I chair one audit committee. I am on another audit committee. In every one of the audit committee meetings, we take pains to confirm with the auditors that they understand that they report to us, the audit committee. They don't report to management. We make that very clear. We make it very clear that they have access.

But the other thing that is very clear is that the responsibility for taking -- I thought the comment by Professor Cox was very interesting -- too short, too long. The audit committee is where the buck stops in deciding whether it is too short or too long or what the other factors are. It is not the auditor.

I mean with all due respect, the auditor can have their views of it but who actually decides whether you are going to recommend the appointment of that auditor for another year, as Bob says, one year at a time? It falls to the audit committee.

So, I hear the point about the issue about timing, that if you put it into the auditor's report you are going to get something sooner. But it absolutely is out of context because it doesn't include the judgment of the people who are actually making the decision whether the independence is adequate for reappointment or not. That is the audit committee.

So, I guess I would urge -- we have got Brian sitting here. We could all go beat up on Brian to try to get something moving at the SEC or to get the NACD or others.

I think that what I am focused on here is what is right and not what is expedient. I can understand why investors find this information meaningful. I completely get that. I completely also understand and sympathize with the view of the PCAOB to try to do something about that. I just think that we have got the ball in the wrong place.

I think to have an auditor to say they think they are independent is fine but I think it misses the fact.

The second thing that I wanted to express, and it has to do with this auditor independence when I read the proposal, and it goes to a little bit the concern I had yesterday. You can't get away from your roots. Having been CFO of an insurance company that does auditor liability insurance, the fact is here what will happen -- and then if you sit on the audit committee and lawyers come in and they say okay, we have got these new rules -- what will happen I am afraid, and this is the thing I would urge that -- and I don't know how you deal with this because I understand what you are trying to get on the CAM. I understand what you are trying to get on auditor independence but the pressure toward boilerplate is going to be so strong.

I mean can you imagine that this new thing comes out. We have got the new CAM. We have got this, and then there ends up being a problem. It is like a roadmap to litigation.

So what is going to happen, I predict, is that it will go overboard. There actually is no incentive for anybody to do anything other than to throw the kitchen sink in and call it material.

So, unfortunately, you should never make a suggestion. On the first instance, my suggestion is put it in the proxy. On this one, unfortunately, I don't have any helpful guidance, except that I could just see this thing blowing out the auditor's report significantly into a big document, which will be almost unfathomable for the average investor to be able to understand.

MR. BAUMANN: That is a risk certainly we are concerned about. We are concerned about boilerplate. So the things that you brought up are good points that could risk the value that we are trying to bring. So, we will carefully think about those issues.

Brian's card promptly went up when you talked about the SEC. So, we will give the floor to Brian Croteau.

MR. CROTEAU: Thanks, Marty, and good morning.

I guess first I just wanted to say I don't feel beat up upon at all. I think it is really important that we all hear these comments. And again, my disclaimer from yesterday still applies as well.

But certainly geography can be extremely important and we do appreciate the comments in that regard and particularly when we are talking about matters that may have to do with whether you are evaluating the engagement of the auditor, versus the report and the completion of the audit. We certainly can appreciate, or I can appreciate, the differences between the two. And so I don't think people should feel restrained in offering whatever feedback they think is appropriate about either the nature of the disclosure or the appropriateness of the location. And certainly me and my staff are here and others are listening to take good notes on that. So, I appreciate the feedback.

MS. RAND: Okay, thank you. Oh, sorry. A number of cards are up and then I would like to try to get to other information.

But next on my list is Walt Conn.

MR. CONN: This may also feel like piling on at this point, but I will take Brian's invitation.

In the interest of transparency, I fully support the disclosure of auditor tenure in a place that is easy for investors to find. I would argue, though, that including it in the auditor's report, just to echo some of the other comments that have been made, implies a correlation between tenure, a sweet spot for tenure from shortly after first year, second year, whatever that may be, to whatever a long tenure is, a sweet spot between that and audit quality that I don't think is known today. And therefore, I agree with the comments that have been made that it seems out of context to be in the auditor's report and it seems like to me the best place would be in the proxy or in the Form 2.

Thanks.

MS. RAND: Thank you. Bill Platt.

MR. PLATT: Thank you. The point has been made by several people that the consideration of tenure really is a question of reappointment of the auditor and the audit committee's responsibility and the audit committee's focus. And many people have observed that maybe it is better placed in a proxy, which discusses the audit committee's decision to reappoint the auditor. I would actually agree with that.

And then others have said then that well, but because the SEC doesn't have a project currently, therefore, it will take longer to get through proxy than possibly what the PCAOB can do through mandating through an auditor's report. It kind of reminds me if the only tool we have is a hammer, we are going to think that everything is a nail.

And I wonder, though, whether or not there might be a way to accomplish it through saying that if it has not already been disclosed in a proxy, then the auditor will include tenure in the report. But if the company and the audit committee has included auditor tenure in the proxy, then the auditor's report would be silent to that fact.

So, it might be a way for the PCAOB to take action, which sort of goes along the way of encouraging proxy disclosure and many companies then will probably jump on that, and therefore, one place or the other you would end up finding the disclosure of tenure information. So just a thought, in terms of saying, you know, can you use the hammer of the PCAOB to get disclosure either in proxies or in the report itself.

MS. RAND: So Bill, just to make sure I am thinking about it the say way as you are suggesting it, so you are suggesting -- because generally the proxy is filed after but you are talking the proxy that was filed before for the appointment of that year.

MR. PLATT: Yes, the proxy that was filed before. It would be a little different than now the incorporation by reference of compensation information, which is going to be in the next proxy, because you wouldn't necessarily know what was going to be in the next proxy.

But if it was in connection with the appointment for that year had been disclosed, then it wouldn't need to be repeated in the auditor's report.

MS. RAND: Okay, thank you. Dan Montgomery.

MR. MONTGOMERY: Thank you, Jennifer. And just a quick comment on independence to compare and contrast a bit with the IAASB proposal because I know that many in the room will be reviewing and commenting on both.

Like the PCAOB, the global stakeholders of the IAASB felt that there would be value in having a statement about independence in the auditor's report. However, the IAASB stakeholders, in particular global securities regulators, felt that there should be, along the point that Gaylen made earlier, an affirmative statement of independence. And so, the IAASB's proposal is to specifically indicate that we are independent of the company within the meaning of the relevant ethical requirements or applicable law or regulation and have fulfilled our other responsibilities under those ethical requirements. Also, it would be required to specifically identify the relevant ethical requirements.

And the IAASB, in formulating that language, also considered the notion of breaches. And maybe this is something that works in the international arena because there is a recent revision to the International Ethics Code that suggests that if there are any breaches of independence requirements, the auditor is required to communicate those with those charged with governance. And if the auditor believes that appropriate action can be taken and those charged with governance agree, then the auditor is able to affirm independence and issue an independent auditor's report. So the affirmative statement about independence, at least in the IAASB view, would work in that regard.

MS. RAND: Thank you, Dan. Roman Weil.

MR. WEIL: I have not necessarily been paying attention but I am confused about the auditor tenure and the disclosure that we have in mind here.

In the audit committees where I serve, we have got an audit partner. We have got an audit partner in waiting, the guy that is going to be the next audit partner. We have got the confirming partner. We have got the partner who resolves conflicts if something comes up. He is sort of in the background. And we have got the seniors and managers.

And in our audit committee reports, we have got a table where every one of these people, who they are, how long they have been serving, and when the audit company's, audit firm's rules will require that person to go off. Sometimes the audit company's rules are more stringent than the SEC rules or the regulator's rules. But they will tell us how long he has been there, when he has to go, and what the plan is for taking over.

Now, I can't tell from any of this discussion, when we are talking about auditor tenure, are we talking about one person or are we talking about the whole team? If it is the whole team, I think that is fine and we get it already. I just don't see what the big deal is.

MS. RAND: Tenure would be the firm relationship. So, there would be natural rotation of the partner, for example. But to Marty's example he used earlier, the firm may have been auditing a company for 100 years. There is rotation of the individual partners every five years, but the question is, some perceive that the 100-year relationship, even though there is the individual rotation, may have added pressure for those firms.

MR. WEIL: So that word "auditor" means the firm, not the person.

MS. RAND: Auditor means the firm, yes. Right, firm.

MR. WEIL: The firm, okay.

MS. RAND: Okay, I don't see any further cards up, so I am going to move on to other information. And thank you for your comments on both of those points. I think it was very valuable. Some good questions and suggestions came out of that.

For other information included in the PCAOB's proposal, as Jessica described, there was a proposed standard regarding the auditor's responsibilities for other information regarding the annual report that is filed with the SEC. So, that would be the 1934 Act filings, generally, the 10-K.

So, interested in your views on the usefulness, including a statement in the auditor's report about the auditor's responsibilities for other information. The proposed language in the report would state that the auditor has read and evaluated the other information.

The auditor's responsibilities include looking for both material inconsistencies with the audited financial statements, so looking at amounts and disclosures in the audited financial statements. If revenue is stated at $100 million, is it $1 billion in the 10-K? That would be a material inconsistency. So, they are looking for consistency with the financial statements.

And the auditor also would have a responsibility to look for material misstatement of fact. They have both these responsibilities today but a material misstatement of fact could be the auditor knows through their audit that the company is a manufacturer of widgets. They are not the leading manufacturers. Say they are number three. But in the 10-K they have disclosed that they are the leading manufacturer of widgets. The auditor may believe that would be market moving information if the public believed that they were the leading manufacturer. But based on the auditor's audit, obtaining understanding of the company, they know that is incorrect.

So under our proposed standard, the auditor would have a responsibility to discuss that with the audit committee to have that be removed, clarified.

And the proposed standard also includes procedures to evaluate the other information. Today, the auditor's procedures are read and consider. That's it. It is whatever the auditor does in connection with consideration.

We have read and evaluate. And evaluation means four different types of procedures, such as comparing the amounts with the financial statements for consistency, looking at the disclosures, taking into consideration the other information the auditor knows, is there any material misstatements of fact, and looking at calculations that are presented in the other information.

So, I will just open that up generally for views on other information and you can feel free to touch on any or all of those points.

Ian Dingwall.

MR. DINGWALL: Thank you. As I read this report on other information, it presumes the other information is in fact presented. In other words, it is a report on that which is presented. It is not necessarily a report on things that might be required but are not presented. In other words, we do require in 11-K filings or in plan filings, that a lot of other information be presented.

The problem usually is that it is not presented. It is not there. So, I would think that this report on other information could be more valuable if it talked about the completeness of the information, or it made some reference to the fact that none of the required information has been omitted, something along those lines.

Just to say what is presented is fairly stated in relation to the financial statements taken as a whole is fine but it would be, I would think, more valuable if it suggested that the information that is required to be there is in fact there.

So opining that nothing has been omitted, I think, would add to the value of this report.

MR. BAUMANN: So let me just comment on that, Ian, just to clarify a couple of things.

So, the other information, of course, we are talking about is in connection with the '34 Act filing. And what has to be there is in accordance with the SEC rules in connection with that particular '34 Act filing for either a corporation, or a mutual fund, or whatever it might be in that '34 Act filing.

We did ask in the concept release on auditor reporting, should auditors have some further responsibility to examine the other information? And generally there was not support for that. To the extent that there was support, I think there was support for the auditors' continuing responsibility to read other information and consider whether it has any material inconsistencies with the audited financial statements or material misstatement of fact.

So, there is not a requirement in existing standards, and we are not proposing one, for the auditor to extend his or her responsibilities to ensure that the company has fully complied with all of the various aspects of the SEC rules as to what has to be in MD&A, what has to be in risk factors, what has to be in the various aspects of the '34 Act filing. That would be a separate engagement. Legal interpretations would be involved in terms of what would have to be included in that information.

And so that is not the extent of our proposal at this point. We have heard your view that you think that would be valuable to the auditor to do that. We haven't proposed that and we really hadn't heard a lot of support for that, but I will be interested to see if others do that.

The comment that something is fairly presented in all material respects went to something I discussed yesterday on supplemental information that is related to the financial statements that is required by SEC rules to be part of the financials. But it is supplemental.

With respect to the other information that we are talking about here like MD&A and risk factors, there is no opinion being expressed on that information. It is a matter of we have read and evaluated it and we are not aware of any material inconsistencies or material misstatements of fact. Now, that is some type of assurance but it is not an expression of an opinion.

I don't know. Hopefully that clarified it, if anybody had any confusion as to what the requirements were.

MS. RAND: Thank you, Marty. Denny Beresford.

MR. BERESFORD: I think this part of the proposal could be one of the more useful additions to the auditor's report. And in the concepts release I, and I think a lot of other people, supported it with the sort of implicit understanding that at the time the idea was simply to have the auditor report explicitly on what was already being done.

But the proposal, and looking at one of the earlier slides, indicates that this would enhance the auditor's responsibility with respect to other information and, these are the key words, "by adding procedures for the auditor to perform in evaluating the other information based on relevant audit evidence obtained and conclusions reached during the audit." Adding procedures, I guess, would be the key words.

And in looking at the releases that came out shortly after the proposal by at least two of the major firms, and I suspect the others agree at this point, they characterize this as substantial additional work that would have to be performed. At this point, it isn't clear what that exactly means but it sounds like a very major undertaking that the firms see. Reading the document, it is not clear exactly what the PCAOB has in mind. And it is not clear, of course, to me what the firms have in mind that they would have to do.

One obvious concern is that without a lot more specificity, this could turn into another PCAOB auditing standard number two versus five kind of situation where something is put out along the lines of what you have right now. The firms think again lots and lots, and lots, and lots of additional work. And then we find out that is not really what was necessary. But in the meantime, we have added, pick a percent, 10 percent, 20 percent or whatever to our audit fees and so forth for minimal additional benefit, if any, to the users.

Again, I think going back to my beginning point, if we were simply asking the auditors to report on what they were already doing, in other words, that they had, as part of existing standards, reviewed the other information in connection with the procedures that were already part of the audit and found it not to be inconsistent, and simply stated that with appropriate caveats in the report and so forth and not putting subheadings in and other information that would lead the users to believe that this was subject to a lot of additional auditing and so forth, I think that could be a major step forward.

I guess my major concern again is would it really be worth it to add a lot of additional procedures to create something that would not be fully audited in any event.

I guess my major suggestion here would be that I think that this is something that would really -- I would urge you to be very careful. And I'm not sure exactly how you do it but I think you need to do some field testing. And I don't know how you can field test something in advance but I urge Marty that you work with the accounting firms and get an understanding of what do they mean, what do they have in mind in terms of all these additional procedures that would have to be performed and compare that to what you believe are the added procedures that would be necessary to meet the requirements of the proposed standard and try to have a meeting of the minds in advance, as opposed to putting out a standard that would then be, in effect, not operational or be subject to a lot of ambiguity, again, like the unfortunate situation we had before.

Given the existing situation, given the uncertainty about what is going to be performed, I don't believe that it is supportable in its present form but if it can be, you might say, rolled back to just reporting on I think it is AU 550 approach, then I think that would be a very good step forward.

MS. RAND: I just want to react to a couple of points you made. Kind of what you are suggesting at the end, your recommendation that we just stay with the standard that we have. Our challenge in using the standard we have today and having the auditor's report on that is the auditor's responsibility is read and consider.

And there are no procedures about what does consider mean. So, one auditor may do all these procedures and more. And we heard a lot in our outreach because we did ask, that was one of the alternatives in the release, if the auditor should perform additional assurance. We received a lot of feedback that auditors do a lot today in connection with consideration. But what is not clear to users is what is meant by consideration. One auditor could do a lot.

Another may read and not do much with it. So, we are looking for consistency in how auditors are reviewing that information. We do consider it important information, that there is no material inconsistencies, material misstatements of fact because the auditor's report is included in it. So, they are associated with that document.

The evaluation, the procedures in there, you compared a significant amount of work. Interested in reaction from the firms, our experience in developing the standard, we thought it was reasonable procedures. Again, it was consistent with outreach that we had conducted that auditors are generally performing a lot of work, a lot of these types of procedures, checking consistency of amounts. Checking to make sure that disclosures, what is in the financial statements, is not inconsistent with how it is being presented.

So, interested in other views on that, but just wanted to react to some of your points.

And Marty, do you want to add on?

MR. BAUMANN: Well, no, I don't want to add on but I want to concur with Denny that we don't want to create an AS 2-type environment. So, that is the reason why we put out a proposal and have SAG discussions around it. And hopefully, we will get comment letters that will -- if there are concerns around the nature of this, that it is not understandable or it is ambiguous or there is too many procedures, we will get those comments and certainly react to that.

There is at least some of us who have audited large companies at the PCAOB who, when we looked at this, said this is basically what we thought was pretty much existing practice in major corporations, at least, that basically the auditors felt this was part of what they did to read and consider. And certainly the audit committees and a lot of companies said we want you to read this information and make sure it is consistent with the financials. And if there is anything materially inconsistent, material misstatements of fact, certainly bring those to our attention.

So, I think our view is that a lot of this and these four procedures, so there aren't an extensive amount, there is four procedures, we felt was pretty much maybe a best practice that was already happening today in a lot of corporations, although we thought that there was probably varying practice among the 10,000 audits in the country.

But your points are all well-made and we look for comment if it is creating confusion, ambiguity or more work than is necessary. So I am sure we will hear that from firms or others.

Thanks, Denny.

MS. RAND: Brian Croteau.

MR. CROTEAU: Thanks very much. And it relates to these points, I think.

And Denny mentioned these words, and I hate to get overly technical but I just want to be sure that we are all thinking of an aspect of this that I think is embedded in the comments that were just made.

But paragraph 4 contains the words that Denny was reading from a performance perspective that get at the auditor should read the other information. And "based on relevant audit evidence obtained and conclusions reached during the audit" perform certain procedures. Paragraph 13(c), which has the report, contains those same words.

And it occurs to me that users of the report may not necessarily know what all of the evidence was that the auditor obtained. And so there is a limiting principle here relative to the auditor's work that has to do with what evidence the auditor gained in conducting their audit work. They are not expected, per the standard, although they may for other reasons but not for the standard, to go further and obtain more evidence in conducting this aspect of the work.

So, I think there is a limiting principle built in. Whether that is the appropriate limiting principle might be a question for people to comment on. And then how users will interpret the report, given that they won't know necessarily as a user what evidence the auditor obtained, I think is an interesting question that I would certainly be interested in feedback on either today or through the comment process.

But I thought I would just highlight that because I think that is an important element of what is being described here, relative to the limitations and what stops this from being a full audit, another element of what stops this from being a full audit, or something that is more like AS-2 if people think of it that way.

MR. BAUMANN: That is a good point, Brian. And we intentionally, of course, put that limiting factor in, that the auditor who performs these procedures read and evaluate in the context of information based on relevant audit evidence obtained during the audit.  And the point is that the auditor is not now intended to, supposed to -- not required by the standard to perform additional procedures to learn something about whether or not some product in R&D is going to be launched next year or not, if that is the statement being made in the other information, if that wasn't part of what the auditor obtained as part of their evidence.

And again, the procedures then are tied to, the four procedures are tied to what the auditor learned as part of the audit and then comparing that to what is in the other information.

But I fully accept your point, Denny, that we want to make sure that it is clearly understood.

And Brian's point goes to another issue, though, that there could be an expectation gap with this statement in here that we have read this other information and evaluated it, et cetera, that someone might think they did perform other procedures, even though it says in the report we did not audit this other information, did not express an opinion on it, and it was based upon what we learned during our audit but it has that expectation gap risk, potentially. So we wanted to get comments on all of that.

MS. RAND: Thank you. Richard Breeden.

MR. BREEDEN: Thank you. I think the objectives here are understandable and worthwhile. And certainly, the notion, as a member of an audit committee, that the auditor, in considering their work, has developed a conclusion that there is a material misstatement of fact, it doesn't seem radical that they should communicate that.

But the way this is drafted, material inconsistency and material misstatement of fact, to me that sounds awfully much like a violation of Rule 10b-5. That is fraud.

And so, asking the auditor to report on a formulation that sounds like a legal conclusion of fraud and if it is material and it is a misstatement of fact, it is unlikely to be accidental. There is almost certainly going to be an element of scienter in there.

Anyway, to me, I think you need to work carefully to make sure we are not creating something that becomes a rival legal review for the issues of fraud. And I am worried that this would trigger something. It could either be meaningless because the standard is such that if you are not -- if you haven't reached a conclusion, if all the element of a material misstatement are there, you wouldn't report it. And yet, the obligation to make that statement, if it is formulated in a way that is essentially a judgment of fraud -- if you want to say that auditors should report on any signs of potential fraud they have seen, that is one thing. But this is a legal conclusion that you may want to work on the formulation.

MS. RAND: Well, you raise a very good point. In the standard, we do point the auditor to our fraud standard when they identify material inconsistencies, material misstatements of fact. I think we recognize there could be a difference between the audited financial statements and the 10-K could be just an error. But we do point the auditor to consider the nature, you know, discuss it with management, go back to the fraud standards to consider if it is something more than that.

The current standard, under our current framework, the auditor reporting standard would allow the auditor to issue an unqualified report, even if there is a material misstatement of fact. They could include a paragraph and say we believe the audited financial statements are okay but we have identified this material misstatement of fact.

We are asking questions about the auditor's responsibility when something is identified and not corrected in their continued association. Kind of along, I think those same lines.

Did you -- you look like you were going to react to that.

MR. BREEDEN: Just the further observation that auditors are not experts in general matters of fact. And so when you go beyond the financial statements and into the realm of any misstatement of fact without qualification, that really can -- and without very carefully delineating, as Denny and others have said, what you have in mind, I think it would not be helpful to investors if you moved down the road toward competing 10-Ks. And the whole world of facts about a company's business that may be included in its reports get far afield from the financial information that the auditors are expert in reviewing.

So, that also is a slight concern of where this evolves to and making sure it is quite clear at the outset because that is a path that might lead other directions.

MR. BAUMANN: Richard, thank you. Those are all good points and we really have to consider those, especially the auditors are not in a position to reach a conclusion, necessarily about violations of 10b-5.

I just will point out, however, that under existing standard AU 500, which is the read and consider other information, so there is an existing standard today which requires the auditor to read and consider the other information to see if there is a material inconsistency with the audited financial statements. And it does go on to say if while reading that other information the auditor becomes aware of a material misstatement of fact, the auditor should discuss that with the audit committee and consider other actions.

So, there is existing auditing literature already that has this. So, we have built on that. So but nevertheless, even though we are building on that, we will take into account the concerns and considerations that you have expressed.

MR. BREEDEN: You might be better off having something where if the auditor is aware of an apparent inconsistency, they should discuss that, as opposed to keying it off a legal conclusion. And if the auditor is worried that what they have read is inconsistent with what they have seen, that is worthy of a discussion with the audit committee, and they shouldn't sit back and be having their own lawyers trying to evaluate has this crossed the line into an actual material misstatement of fact.

MR. BAUMANN: Thanks.

MS. RAND: Okay, Jerry de St. Paer.

MR. DE ST. PAER: Thank you. I seem to be in the piling-on mode today. But I hope from a little different perspective than the perspective that has been expressed, even though it supports that.

From the perspective of a CFO of a New York Stock Exchange company, with auditors who -- I couldn't tell you -- clearly, from their procedures, they were required to take a look at the other information, but we would never have issued it without them taking a look at it. So, I am not really sure what the chicken and the egg was there.

But I watched the way in which that procedure was done, and it goes to what Dennis said. There is a great deal of difference between making an affirmative statement of this kind and simply following the procedures.

Again, one of those companies that I was the CFO of happened to be one who wrote a lot of auditor liability insurance. And I can tell you that will cause the kind of reaction that Dennis was concerned about, where to be able to make that kind of a positive assessment, to go to the 10b-5 or the SAB-99 issue, you are asking the auditor to take an additional step. So, I would just also argue the caution.

But I want to also make a second point that I think is really important, is that we heard in the presentation yesterday about the volatility of earnings based on release of earnings. From the experience, at least, in the companies I have been CFO of -- and when I was CFO, I was pretty interested in what the stock price did relative to the release of earnings -- that volatility is almost all related to the press release.

What happens when the K or the Q comes out is very little additional movement. And so the whole issue -- we also, by the way, had the auditors review the press release to make sure that there was no material inconsistency or misstatement of fact, just to make sure that we were okay.

But there is a lot of non-GAAP measures.

The things that drive the market -- which is one of the things I thought was missing in yesterday's presentation -- the things that drive the market, with all due respect to the SEC and the design of all of the reports, isn't actually materially driven. It is at least equally driven by the non-GAAP information, in most cases, as it is by the GAAP information.

So, I just want to say while the concern about the risk you are creating by forcing this affirmative representation, to what Mr. Breeden said, is a big issue, and I am not sure it has got the elephant in the room. Because the thing that really is creating the biggest movement of share prices for the investors that are concerned about this information, actually it doesn't come out of the MD&A. What I found astounding in meetings with investors is that the questions almost always come -- they actually come before we ever issued the K or the Q. They came from the press release.

So, I would just like to caution to keep our eye on the ball here, that we are acting as if this other information is really the stuff that is driving investors.

And I guess maybe everybody here, all the investors, are going to say, oh, well, we look at all that stuff. I can say from my side, in talking with all my investors, that is not where the questions came from.

So, just in terms of priority, this will, I'm sure, involve additional scope and expense and I am not sure about the cost and the return.

MR. BAUMANN: Those comments we have heard from others. And I look to the left of the room over here to Mike. We have often heard about what really drives the stock price and what investors are really concerned about is probably in much earlier releases than the 10-K. So, we have heard, certainly, that comment before.

To some extent we are limited, in terms of the auditor's responsibility, that they have to audit financial statements and report on financial statements and what's associated with the financial statements, you know, their responsibilities can go to that, too.

At least right now, under our authority, I don't believe, speaking for myself only, that we could require an auditor to perform procedures on that press release. But we've heard that from Mike and from others that that would be very valuable if auditors were required to do that. But at least speaking for myself, and only for myself, I don't think we could require auditors to do that under existing authority that we have.

But one thing I will add, many, maybe not all, but many of the -- much of the information that gets in that press release that drives the market at that time, and the non-GAAP measures, are also in that 10-K and are discussed in that 10-K. It's usually the same type of information around a non-GAAP measure or the performance that was previously discussed in a release is in the business section of the 10-K.

Management, knowing that the auditor is going to read and evaluate that 10-K, which includes probably those same non-GAAP which the auditor would have to, under these standards, see how they are reconciled to the financial statements to be not misleading and create a material inconsistency with the financial statements, I think has a deterring effect on management's behavior when they come out with that release, knowing that the auditor will be performing procedures on that information later on.

So, I fully acknowledge what drives it. But knowing that that same information is likely to be in the 10-K, to be read and evaluated at a later date, I think has a deterring effect in addition.

So, I'm interested in your comments on that. I wish we could have the auditors do more up-front. And I know you want to comment even further. You're anxious to say something here.

MR. DE ST. PAER: I am. Because of the legal environment, at least in our case, we didn't release the press release until we had virtually a complete draft of the 10-K and the MD&A done because you could not possibly have a situation occur -- well, at least I don't think a responsible person could put out a press release where a few weeks' later you are going to put out a 10-K. You virtually have to be almost at the point where they auditors are pens down by the time you issue the press release, or you're taking huge liability.

And, actually, I was surprised Brian's card didn't go up because the truth is what happens if you don't put a reconciliation of the non-GAAP measures in the back of that press release or the supplement information that you put out which reconciles to the audited information, the next call comes from the SEC. I mean, I have had the opportunity to have that conversation with them.

And rightly. That is not a criticism. That is as it should be. But there is a reconciliation and the audit's not done. So, people don't put out press releases hoping that they get within the range of the 10-K. Most companies have this stuff all come together at the same time.

MR. BAUMANN: Thanks for that additional color and valuable input. Walt Conn is next.

MR. CONN: Yeah, in my firm, we are still developing our views on parts of the standard and particularly our comfort with the words in the report.

But let me just circle back to Denny's question on the procedures that are in here. I think, in general, in my experience, these procedures are consistent with what we do today. However, there are a couple of words or phrases that give us pause and we're formulating our questions or recommendations on those. But we want to be sure there is clarity about whether the scope of our work should expand beyond what it is today and whether our responsibility should expand.

One of the changes that gives us pause is the change from "consider" to "evaluate," because if evaluate means "do these procedures that are listed," period, then maybe that is okay. If evaluate means "do these procedures and whatever else you need to do to conclude that you have performed an evaluation," then that probably lacks some specificity that is needed.

The other change that gives us pause is that the reference to consistency with the financial statements, in the proposal now adds consistency with the relevant audit evidence. And that seems to be a subtle expansion beyond where we are today.

MS. RAND: Walt, to respond to that, you asked about what does evaluate mean. The way it's phrased in the standard, we have evaluation based on the procedures in paragraph four.

So I don't know -- and continuing your thinking on that, if you are just concerned about how that may be perceived in the report, but at least the way it is proposed in the standard, it's based on those four procedures in paragraph four.

MR. CONN: Yeah, and we realize that, and are just struggling with that choice of words, whether it will be clear to all stakeholders that evaluate means "just perform these procedures." Because we think of evaluate as not being limited to specific procedures but going beyond that.

MR. BAUMANN: Good points and we'll think of that as we consider where to go with this. But it was interesting to hear your comment that you think largely these are the nature of the things you do today, but with a careful looking at each of the words to make sure that they are the same as what you do today.

MS. RAND: Thank you. Damon Silvers.

MR. SILVERS: I just wanted to comment on the issue of whether or not material inconsistency and material misstatement of fact are necessarily a legal conclusion.

I mean, I think that the issue that has been raised is an important one to get right. But that without a statement about scienter here, it's not a legal conclusion, at least with respect to 10b-5. And I can't see how you could even -- I can't see, if an auditor were aware of a material misstatement of fact under the current reporting rules, that an auditor could sign the letter certifying the financial statement.

So, it's not clear to me this even, at least as stated on this slide, that it necessarily even represents an expansion of the auditor's current duties. And as long as you don't add a scienter component to it, I don't think it represents a legal conclusion.

MR. BAUMANN: Thanks, Damon. Wally Cooney.

MR. COONEY: Most of the concerns that I had have been covered one way or the other. So, I'll just comment that I share the concerns about the expectation gap. While it's helpful that the opinion drafted clearly says that they did not audit this other information, I think that's important, the word evaluate, even in the context of specific procedures, I think could really cause a problem with respect to expectation gap.

And just in practice, now that the auditors will be commenting, at least providing negative assurance, on the other information, I think sometimes that has the practical effect of just taking on a life of its own, including getting into non-financial information, and a lot of work, a lot of discussion, a lot of higher and more experienced people spending significant time on going through all that information. And I think there could be a significant cost effect.

The only other concern is that to the extent that MD&A is supposed to be through the eyes of management, it really is supposed to be management's report. I have some concern that companies may want to limit disclosure, maybe water down some of the commentary that they might have otherwise felt was more transparent and comfortable saying, but not having it subjected to the scrutiny of a long, drawn-out review process and discussion.

MS. RAND: Thank you. Professor Cox?

MR. COX: I think it would be helpful if you could separate these two issues out into two things. One is the process. Exactly what are the documents that are to be looked at and what the procedures are to be by the outside auditors, what they are supposed to look at, in which they are going to formulate some sort of opinion.

And then the other question I would say, separate from that, is how and to whom you communicate that. Richard Breeden made the observation, and never underestimate the power of a modifier: appropriate. And I think that that's something worth thinking about.

But the other idea I would put out there to take also some of the steam out of the process and some of the angst out of the process, is to work this a little bit through the existing legal framework and think that maybe investors are not the group. That a big full-blown evaluation or reporting on the evaluation to all the investor community is not where you want to go. You would say add to your standard that conversations have been had. That your duties are to see if there are any apparent inconsistencies, and part of your obligation is to communicate those to the audit committee. In which case I would think that that then triggers the existing format for what happens to auditors in certain situations under 10(A) of the Exchange Act.

And that could be a way of at least making this initial step. I'm not sure where we are going to be ten years from now in terms of this process, but maybe this would be a somewhat more palatable process to going through.

But I do think it is going to be useful to you to unpack, first of all, what you want the auditors to do from the question about how that then gets communicated and to whom.

MS. RAND: Thank you. We have talked, just reflecting on the comments so far on this subject, talked a lot about the procedures, what does read and evaluate mean, the work effort. I haven't heard that much, though, on the point regarding usefulness of reporting.

In our outreach we had heard, in one of the alternatives presented in the concept release on whether or not the auditors should provide additional assurance, was not to provide additional assurance, was really just describe the responsibilities that the auditor does with respect to the annual report. So, that was our intent. It initiated from a reporting element, thinking that might be useful.

So, I'm interested in feedback on that. We did feel that the current version of the report, just the read and consider with no procedures, wasn't robust enough to support a reporting statement in the auditor's report. So, we felt we needed to make some enhancement, have some minimum set of procedures regarding what the auditor does, their procedures over the other information.

But interested very much in is having the auditor report on, whether it's consideration, evaluation, is it used in the auditor's findings, is that useful to investors. So, hopefully, any other comments or if anyone that has their comment cards up now has any reaction, I am interested in thoughts on that.

Next, is Gaylen Hansen.

MR. HANSEN: Jennifer, I absolutely think that it would be helpful to clarify this aspect of what auditors do. And I agree with what has been said. A lot is done now, and I think that what you have done here is responsive in large part to addressing that issue.

I will try to bring out just a couple of other things really quickly, though. Who does this? And it's not the firm. It's people within the firm. And I think for it to be meaningful it needs to be senior individuals on the engagement team. And all too often I have seen this delegated to lower level staff people.

And that tends to be a focus on the numerical aspects, as opposed to the qualitative, the nuance, and the spin and the tone. You read the financial statements and they have one tone. And you read the forepart of the 10-K and it is almost a completely -- it seems like it's written from a completely different perspective. And particularly when it comes to minimization and exaggeration and the wording in which you couch certain things I think does impact the way investors might approach things and consider the company.

To your example, making widgets and characterizing yourself as the leading manufacturer of the widgets when you know you are the third, well, a lot of times what I see is someone saying we are a leading manufacturer of the widget. And you know perfectly well that's not the case. It's a misstatement but it's not numerical. And for a lower level staff person to be able to pick up on that, I think, is asking a lot of them.

So, I think that who does this and the tone and the spin and focusing on the qualitative is just as important as the numerical.

MS. RAND: Thanks, Gaylen.

Steve Buller.

MR. BULLER: Thank you. First of all, just a couple clarifying comments. One is I thought there was the inference earlier that a material misstatement may be fraud. And, certainly, there are conditions where you may have errors or typographical issues that of course, you know, occur. And as long as there is not intent or knowledge of the misstatement, I don't think, as a non-attorney, that would be something I would classify as fraud.

And secondly is with respect to just the timing of press releases and 10-Ks. There are some companies that do produce a 10-K and a press release concurrently, but quite often it is because they material information that they need. Quite often it is codependent upon a third party and they can't obtain that in time to provide an earlier press release. But most companies do a press release two to three weeks after quarter-end or period-end. And so that does proceed to 10-K in most situations.

But they do, of course, make sure the information that is in the press release is, in fact, accurate because most of it does, as you said, Marty, appear in the 10-K.

So, the main question is we do support clarifying the responsibility for other information. I think it's a good idea. I think, generally, I am concerned it could be an expansion of scope, especially if the other information includes documents that are incorporated by reference. I know when I go through our 10-K and through others, incorporated by reference documents often are two or three pages long of listings. And our concern, of course, is that it would take auditors just time to read that listing, let alone to read the documents that are included in there, just to see if there is information that may in fact be relevant to the audit.

Then, lastly, is I think that as part of the auditor performing their work, even though I know they are supposed to consider and evaluate information that's based upon evidence that has already been obtained.  If I were an auditor and I saw, for example, information that had a number of factors, one of which was information that was based upon audit information that I had obtained to do my core financial statements, but there was other information I had not obtained, or did not have, I would make sure my audit planning included getting that information as part of my audit.

So it may in fact be that there would be an expansion of the scope just to CYA, in part, to make sure that where there is information presented with information that would not otherwise -- would only be obtained as part of an audit that now becomes part of the audit planning process and therefore is obtained as part of the audit.

So, again, it's probably just the discussion of the expansion of scope.  Thank you.

MS. RAND: Okay, thank you, Steve. Elizabeth Mooney.

MS. MOONEY: Okay, thanks. I think it would be great if the earnings release and the 10-Qs would come out at the same time. That would be fantastic. And some companies do do that.

Obviously, investors do respond. Marty, just to echo your comments, I mean, they do respond to the most recent information, whatever that is, and the earnings release is significant.

But my experience, I had the great fortune of working with the best and brightest. I believe, investors, analysts, and for the long-term, fundamental research is all we do. And they do read the 10-Qs extensively and the 10-Ks.

So, I think, in terms of the other information, I said this earlier, but the goal, and we're getting a little sidetracked with a lot of this, but the goal is if the auditors are aware in their work of material misstatements otherwise, like Gaylen mentioned, that there is some responsibility to fix it.

I mean, I think that's the end goal and not just be silent. And I think that is the spirit of the project and just I would encourage you not to lose sight of that.

MS. RAND: Thank you. Rick Murray.

MR. MURRAY: Jennifer, a question, and a brief explanation of why I ask. The question is is it correct to understand that if the additional information that's at issue is itself not material, then it is impossible for that information to produce a material inconsistency or a material misstatement?

And the reason for the question has to do with the rapidly emerging movement now called integrated reporting, which really has two prongs. One of which is the view of many, that there should be more attention to sustainability-related information included in financial reporting as a voluntary, non-material election by reporting entities. And the second prong, best illustrated by the work of the Sustainability Accounting Standards Board, suggests that all sustainability-related information should in fact be recognized as material.

And it's that duality of position at the moment, and what will be, I think, a very rapid evolution to sustainability reporting issues arising in the next few years, that I direct the question. Because those issues would be a great deal easier to deal with if there were two points of clarity. One is the answer to my question and the other is what standard of materiality will be applied in making the determination of what falls within the scope.

MR. BAUMANN: I don't think I have an answer to your first question, whether or not one could conclude that if there is no other -- if the information by itself is not material, could you have a material misstatement or a material inconsistency.

There is requirements of what has to be included in a 10-K under the Securities Act. And I don't think we've thought through whether that information, or some of that, is by definition not material and therefore it wouldn't be subject to a consideration of a material inconsistency or material misstatement of fact, or whether a company decided to put in other sustainability information and how that might fit into this equation.

I think you've raised some things for us to think about with respect to that, but I don't think we have really explored that thought as part of this proposal. So, I will just say we will take your comment and note it and give it some thought.

MS. RAND: Okay, Wayne Kolins.

MR. KOLINS: Yeah, thank you. With respect to the reporting and the relationship of that to the limited nature of the procedures. And the procedures are more than read and consider and probably is similar to what is done currently in practice. But the conclusion is the negative assurance that was mentioned before is something that you see in a review engagement.

These are not review procedures. I think they are probably something less than review procedures. And I wonder if a way around that would be to specify that these are limited procedures, describe what the auditor's responsibility is to see that the information is revised, and if it's not, to refer to it in his or her report. And the absence of any such revision would be implicitly that they auditor did not have an issue with it. That the auditor did not become aware of anything.

Just an approach to take care of the very limited nature of the procedures and the ultimate reporting on it.

MR. BAUMANN: We understand that point and understand the careful line between the nature of the type of assurance being expressed and whether or not the procedures are the right procedures in connection with that type of assurance.

So, we gave a lot of thought to that in putting this out, but we'll continue to do that based upon those kind of comments. Thank you.

Who was next? Bill Platt.

MR. PLATT: Thanks, Marty. Just as I listened to the discussion, I sort of have two observations around this. And this is one area of the proposal that we spent a lot of time thinking about.

One is the performance of the work. And I think largely I would say that the procedures that are laid out in paragraph four may in fact be fairly consistent with what people are doing today in read and consider for a portion of the other information.

And when I say that, you really think about the other information. There is other information that is derived from the company's accounting records, was subject to the company's internal controls, and has been the subject matter of the audit. The audit tests have been performed around it. But then there is other information that is not related at all to the company's accounting systems or systems of internal accounting control.

And I do think that in 4(C), I think, would be this characterization of other information not directly related to the financial statements. I don't know that it is clear enough for me to know what I would do as an auditor to that information.

And right now you sort of would say, well, if an underwriter asked me for comfort and started circling a bunch of items for me to give comfort on, I would give comfort on the items that are derived from the accounting records or subject to the internal accounting control, but I would say that the other information is outside the scope of my audit, it's outside of the areas of my expertise and I wouldn't give comfort on it.

So, I guess I worry a little bit about this other information and what the expectations are and are we changing kind of the performance expectations or standards around that information. And if we are, I think we need to be clearer than this simple reference that's in 4(C) right now. So, that would be the performance side of it.

The other side that I had is in the reporting now of what's been done. And we are creating maybe a new byproduct level of service called an evaluation. We evaluate it. And, to me, I think evaluation implies something more than I considered in relation to the information that I had as an auditor. And I wonder whether or not the report is actually being set up in a way that will create an expectation gap, notwithstanding what the standard requires, which is consideration of consistency, but evaluation getting to a point that one would say, well, that to evaluate then you just have drawn a conclusion, which might then go beyond and actually start having piecemeal opinions on pieces of information that are in the other.

And this might go a little bit to Rick's question about immaterial information. Say you had a $10 billion company that had no real estate at all, 10,000 square feet of office, it just happens to be a very virtual company, and it was misstated by 2,000 square feet. It's material to the square footage of office space but is it material to an investor as you sort of look at that?

So I think some of those questions about materiality may actually come into play here if there's going to be an explicit statement that there wasn't an identification of a material misstatement.

So, I think that those would be my two places that I would suggest further thought around. One, is what do we need to do around information that's not from the either accounting records or subject to the system of internal controls over financial reporting? And, secondly, to make sure that we don't create a reporting format that is creating an expectations gap but truly is providing informative information to users of financials.

MS. RAND: Bill, do you have the paragraph 4(C) which you referenced, which is other information not directly related to the financial statements? That could be the example I gave about the leading manufacturer of widgets and the company purports to be that but you know that they are not. They are the third.

MR. PLATT: So, what if --

MS. RAND: Do you have a view as far as should the auditor ignore that or, you know, kind of what should the responsibility be?

MR. PLATT: But what if we have two auditors that one happens to know that and the other doesn't? Is the inference that you always should know that? And what happens if, for example, there is a lot of different ways to measure leading?

So, they manufacture more widgets than anyone else in the world from a unit perspective but they are the third in revenue because they manufacture cheap widgets and other people manufacture premium widgets. Is that something that is a material misstatement of fact or not? There are two leaders, depending on what metric you use, if you use total revenue or you use total units.

I think it introduces a lot of interesting concepts. And I also don't know -- I mean, I might think that I know that they're third, but I really don't know from my audit. I only know from other public information that's out there that everybody else can see, too.

So, I think even though you have a simple example, I'm not sure it as simple in the real world when you really try to apply it.

MS. RAND: So I'm assuming, and I'm not sure if it's a correct assumption, that you may be more supportive of the responsibility today, just if the auditor becomes aware of something. But I think what I'm hearing is you are concerned about the reporting on that aspect, the material misstatement fact.

MR. PLATT: Or the pieces that go -- for the pieces of information that are not derived from accounting records or subject to internal controls. I think I would say yes.

MR. BAUMANN: So, of course, we do say -- so, these are in context of you should read this other information and, based on relevant audit evidence obtained and conclusions reached during the audit, evaluate things.

So, it's not requiring you to evaluate that other information not directly related to the systems, based upon some new procedures. It's whether or not, when you were reading the minute, understanding the company and its environment, as part of those risk assessment procedures, you became aware of aspects of the company and their position in the marketplace, et cetera, or the growth opportunities or other things that when you finally read the other information, based only on procedures you performed during the audit, the risk assessment procedures and all of that, you became aware of it.

So, we do have that limiting factor. It may not ameliorate your concern but that was the intent of those words. You don't perform additional procedures. It's based on what you know.

So, the answer to your question would be one auditor might know with respect to a statement management makes that that is an inconsistency or a misstatement of fact, and another auditor might not know that because they didn't come upon that in their risk assessment procedures. So, that is a possibility, because it would be based upon what you learned as part of risk assessment. So, that is a possibility.

But the other point, I think, and you've made a lot of good points there, Bill, is there is different ways to understand leading. We just hope that that would trigger a conversation. If the auditor thought there was a misstatement, it doesn't mean the auditor is going to report that. We just hope that would trigger a discussion. And I would hope it would trigger a discussion between the auditor and management about let me understand the context in which you've said that. I thought I understood something different. And maybe it would trigger a conversation. If that wasn't satisfying with the audit committee, et cetera. But hopefully that would be resolved before somebody reported something.

MR. PLATT: Yeah, and I think those conversations largely take place today, Marty.

Just on the point of the other information, though, you know, and I think sometimes, in terms of a layman, and to say that there is other information that I don't have anything in my knowledge base to know anything about and therefore I say, well, I don't know whether it's true or not true but because I don't have any information from my audit to evaluate it, I'm going to be okay it. And then to characterize that as you have evaluated, it seems to me it may be setting up what I described before as that expectation gap. It's sort of odd to say that is an evaluation just because you didn't know anything.

MR. BAUMANN: I completely understand your point. Thanks.

MS. RAND: Okay, Dan Montgomery.

MR. MONTGOMERY: Thank you, Jennifer. And just getting back to your earlier point on just some input on the usefulness of reporting on other information, and just to give a little bit of international perspective on that. The IAASB did consider the alternative of simply acknowledging in the auditor's report the auditor's responsibility for reading the other information, reading and consider, reading and evaluate, whatever the terminology, and perhaps indicating a responsibility to discuss any issues identified with the audit committee.

But the IAASB heard very strongly through two public consultations, three public roundtables, and a significant amount of outreach that there is value to an affirmative statement by the auditor in the auditor's report on the auditor's responsibility for other information and the outcome of the auditor's work effort.

So, just the point in terms of usefulness, the IAASB is firmly committed to moving forward with an affirmative statement on other information in the auditor's report. This was something that was supported not only by investors, but there was strong support from regulators, from national standard setters and from other stakeholders globally to move forward because of the value of that statement in their view.

However, I also would point out that the IAASB will continue to look at the wording of the reporting language so as to not create any confusion or misunderstanding or certainly not further expand the expectation gap, and will be doing so in connection with its further work on finalizing the revision to the IAASB other's information standard, ISA-720.

MS. RAND: Thank you, Dan. That's helpful.

I see a couple of other cards up and I don't know if they're just up from previously: Steve Buller and Wally Cooney. Okay.

I have according to my watch that it's 10:30, which is break time. We've got a 30-minute break scheduled. I wanted to see if there was interest, anybody had any other topics -- I see one card up -- on other matters. So I see a couple. I would like to take those because I think, even if we have a little bit shorter break, we would still be okay. So Mike Cook?

MR. COOK: Thank you, Jennifer. I just have a sort of overall observation about a lot of the things that have been talked about, sort of the question you haven't asked. And I guess I think it's okay to answer it if you didn't ask it, but it's not a definitive answer. But one of the questions to me, an important question, is cost-benefit. What are the costs that we're going to impose by whatever we end up doing? And what are the benefits going to be? I know the economists get involved, and a lot of other people get involved in that. But that is a very important issue. So I'd like to take the opportunity to comment on that.

Many of the people who offer comments say, "I appreciate the opportunity to talk about this subject." I have talked about this subject, the auditor's report, for so long I don't know for sure that I appreciate the opportunity anymore, but that doesn't keep me from offering a few thoughts.

And then I would like to give you one suggestion from the perspective of an audit committee chairman that might really produce a benefit with whatever you ultimately decide to do. And I'll save that for the last.

As I look at the cost-benefit of this, like a lot of things, the costs are more obvious than the benefits. If you accept, this will make investors better informed as an overriding consideration that drowns out any cost issues. You can get to that answer pretty quickly. I don't think of it that way, and I don't get to that point. But for me, the cost, the dollar cost, of implementing what we have here or some modified version of that is going to be significant. So the benefit has to be significant, and I can't quantify either one of those for you.

We will divert audit attention from things that matter in terms of audit quality. We may do it depending on how this gets implemented at a time of the year after the end of the year when we need all of the attention we can get to the critical things that need to be done to complete an audit. And doing this, critical audit matters, writing them up, getting them reviewed, talking to 14 different people, I don't think is going to meet a standard of adding to audit quality.

I think there is a real risk of obscuring the key messages that do need to be delivered. I happen to like the pass/fail. I don't think we are abandoning that. But if you have a hard time finding it or when you find it, you are not sure that you did pass because you got so many other things in there that might indicate that you really didn't or you barely passed, I think that is a serious issue.

I am quite concerned about the issue of original reporting, auditors reporting things that are not being reported through management, through the financial statement process. I am very concerned about some of the discussion about disclosure and essentially creating new disclosure standards through a requirement here, such as with respect to material weaknesses and significant deficiencies. I don't think that it is in the prerogative or the parameters of the PCAOB to be writing disclosure standards indirectly.

So I would point all of those things out as being costs that are of concern to me. Then I get the benefit. And I'll make a prediction, which I can't substantiate, but I think a lot of people might see it the same way. And I have heard it described.

I will predict that this will become lawyerized boilerplate. And what we are trying to achieve, like a free hand where the auditor gets to sit down and write how they did the audit of company X and what bothered them in doing that, will be totally overtaken by the need for uniformity, legal considerations. And what we will see two or three or five years from now, when we look at it, is going to be boilerplate that is not particularly informative. I might be wrong. That is my opinion of the way this will play out.

And I then put all of those points together and say, does it meet the cost-benefit test for you? For me, it does not. And so I just offer that. It's not quantitative conclusion. But I think the need to step back and really ask what costs we're imposing, financial costs and diversion costs and unnecessary information costs, the kitchen sink that we're going to get, which I happen to agree with, when you start adding all of those up, the benefits have got to be very clear and very direct.

I also would observe, however, that I think this train has left the station, meaning I think I've heard it said often enough in the last day or so "We have to do something." I'm not compelled to conclude that we have to do something if we're not doing something that meets the cost-benefit test and is the right thing to do. But there apparently is a conclusion that we've got to do something here. So if you have to do something, then I would just say, you know, think carefully about the implications of what you're doing.

This last discussion about other information is very much on point, I think, with that issue. I didn't really want to get into it because it was being well-said by others. But the word "leading" is not a fact. And if you're leading people, using that word, into challenging that as a statement of fact, there are many accounting firms in the United States who claim to be the leading firm. That is not a statement of fact. Largest is a statement of fact. That is quantitative and could be challenged. It is just an indication of the areas that you can be leading people into that are going to be very problematic. And I like to know about these things as an audit committee chairman.

I would like to go to one other phrase that is used by members of the Board and others. I want to know what keeps the auditors up at night. And this is now my request to you. As an audit committee chairman, I want to know what keeps the auditors up at night, but I don't want to find it out next February or next March. This is my standard pitch. I'm not going to give you the big story about timeliness. And for the auditors to be writing next February or March about what kept them up at night in this year, when it's relevant to know that, from an audit committee standpoint is not satisfactory.

So I would urge you please if you are going to go forward with this, either in this standard or by rewriting or amending the standard on required communications with audit committees provide for this information to be given to the auditing committee on a timely basis. I want to know today what is keeping the auditors up at night. I hope they don't have anything like that, but I really am not interested in finding that out next March. And I represent the investors in our company. And I need to know that information now. And I don't see any reason why you can't build a requirement to that effect into whatever conclusions are reached about critical audit matters, but timeliness is very important.

Thanks for the opportunity.

MR. BAUMANN: Thanks, Mike.

Obviously we will clearly explore the economic rationale behind all of this. We have done that and discussed that to some degree in the proposal itself and certainly as we think about next steps, whether it's a group proposal or adoption, we'll clearly have to articulate the economic rationale of the need for this, various alternatives you may have considered to solve whatever the need is and, you know, what are the costs and related benefits. So that is something that's, without a doubt, things that will -- we will definitely do that. And whatever we ultimately issue and adopt will certainly reflect a very thoughtful economic rationale behind it. That's part of our mantra to do that.

I don't want to cover too many -- you made a lot of good points. And certainly we'll think about all of them. To your point about hopefully no auditors would keep this from the audit committee until the time of the annual report being issued and the opinion, AS 16 has in it already the communications with audit committees a statement that communications with the audit committee should be done on a timely basis. We can always think of reemphasizing that and making requirements in a different way to ensure that they are timely if that is not occurring, but that is certainly built into AS 16. So this in no way contemplates that the audit committees wouldn't hear about the issues that keep an auditor up at night on anything other than a timely basis.

But thanks for the comments. They are the valuable things for us to think about.

MS. RAND: Okay. I see three cards up. So I'll take those, and then we'll go to break. So Bob Hirth?

MR. HIRTH: Thanks, Jennifer.

I had one comment on critical audit matters from yesterday. In the draft standard on page A1-8, item 10, it talks about when financial statements are presented on a comparative basis and talks about where critical audit matters from the prior period might be restated. It talks about for the first time that information is presented publicly and also where there's a prior period where the auditor's report could no longer be relied upon.

I think what is missing there and I think you might add as a third point, where there are meaningful or significant differences in critical audit matters between reporting periods. What I mean by that is financial statements are generally presented in pairs.

And if you only have the critical audit matters of the most recent opinion, you're going to ask me to go back and find last year's opinion, which was the current year's opinion, and look at those critical audit matters. So if I had five critical audit matters that were exactly the same between both years, fine. What if I had five in one year and six in the previous year or five and some of them were different? So I think you need to ask the question, where you have that, should that be considered in the standard?

My second point was we've had a great discussion over the last two days. And this is a really, really important change. And, to Mike's point I think on the costs and benefits, I would really encourage the Board to think about how you monitor this with, you know, multiple parties but clearly the investors, the filers, and the audit committees, and get some feedback but also think about whether or not this is so important that we go back and report back to the SAG in a year or two on what the findings were from those studies on the costs and the benefits because this could be a standard that either continues or gets revised or when you really sit down and look at it and look at all of the benefits, you know, they weren't there and that becomes superseded in some way.

MS. RAND: Thank you, Bob.

Elizabeth? Oh, go ahead.

MR. BAUMANN: Just one comment to Bob's. And that is we have already announced that after the comment period is over, which is December 11th, we'll analyze those comments. And they certainly have a SAG meeting next May, but we also have already announced that we plan to hold a roundtable, some type of forum to discuss the comments that were received and a focused meeting just on the auditor reporting model as well as probably a SAG discussion in May. So we intend to get continued outreach and reaction beyond the many comment letters we get to make sure that we get all of that kind of input you're talking about.

So those are valuable points, Bob, and we plan to do that.

MR. HIRTH: And maybe just one step further. So would the idea be because we have these different parties that have, you know, different viewpoints? Would you even think about seeing that a third party does some kind of study or engaging some third party to really look at the costs and the benefits, you know, a year out or two years out or three years out?

MR. BAUMANN: Well, as Jim mentioned yesterday -- well, first of all, we have economists on board. And we'll be thinking, as I clearly stated, I hope, that nothing would go forward until we did a thorough economic analysis of why we're doing what we're doing, what's the problem we're trying to solve, and making sure that we're solving it in an economical way.

But we're also building the capability in the Center for Economic Analysis at the PCAOB to look at ways in which after we issue standards, the effectiveness of the standards and the benefits of the standard vis-à-vis the cost. So we want to continue to build that capability at the Board.

So thanks a lot.

MS. RAND: Elizabeth, I had you next on my list.

MS. MOONEY: Yes. Okay. Thanks. I just wanted to go back to the point I made earlier just about the critical accounting matters and encourage you to be clear in defining that and use the existing standard that is required. So auditors should report the matters that are significant in accordance with the accounting rule. So it's already defined in the documentation standard. And that should be -- you know, so going back over what work has already been done, what has already been identified as significant, and then talking about that. Rather than introducing a significant amount of additional unnecessary judgment, we have, you know, lots of different perspectives, even in just this room.

And I think, with all due respect to, you know, auditors having lots of different views, I think if you introduce that into this, then it is just going to be a huge loophole that is unnecessary.

MS. RAND: I am not sure I fully understand your point because you made reference to the documentation standards. So in my mind, I was thinking about the engagement completion document, which auditors document significant issues and findings --

MS. MOONEY: Right.

MS. RAND: And in developing the proposed auditing standard, it would have the auditor look to that engagement completion memo, the matters discussed with the audit committee, any matters communicated to or reviewed by the engagement quality reviewer. And then we have a definition of critical audit matters, which would be helping the auditor to identify not that entire population but those that are most significant to be communicated to investors in the report, rather than have a lengthy list of everything that might have otherwise been communicated.

So I wasn't clear on if you're thinking that our definition as proposed may be sufficient for purposes of communication or if you're --

MS. MOONEY: No. I think the proposed definition is insufficient because it doesn't -- it should say, I believe, that what should be reported is what is significant in accordance with the current standards, now, not everything but the completion engagement memo to the extent that that talks about what is most important.

MS. RAND: Okay. Thank you. I understand.

And Arch?

MR. BAUMANN: Final word.

MR. ARCHAMBAULT: Thanks, Jennifer. There was an item on the slides yesterday we didn't get a chance to talk about in detail. And that is the documentation. And there was an aspect of that. And, again, my firm is still in the process of developing our letter, but one thing I have raised in connection with this documentation is that it seems like an extremely onerous requirement to document not only those matters that you have identified and believe are critical audit matters but those, and I think the words are, that appear to be a critical audit matter but are not treated as one. So you're trying to document the negative. And the current documentation standard of the Board in my view is very robust.

I am not aware of anything where we have to document the negative. In other words, we will do a risk assessment.

We document those areas that we feel have a higher risk material misstatement. We have to document how we respond to those risks. We don't have to document those areas that we don't feel have a higher risk of material misstatement. And that's what this standard is directing us to do from the way I read it. And to me, that is going to lead to a situation where I think auditors are going to get extremely cautious to avoid any second guessing.

So I ask you to take a careful look at that and really decide whether that kind of a requirement is necessary here.

MS. RAND: I am glad you raised the documentation requirement. In developing that requirement, we considered whether it should just be only document those in your work papers, where the auditor did report a critical audit matter.

Our concern was the determination of critical audit matters is judgmental. It's those that were most difficult in forming the opinion, most difficult obtaining evidence, just had subjectivity and difficulty. So that determination is judgmental. And so if the auditor just determines, leaves something critical off, then what would be the safeguard to prevent a matter from appearing in the report?

We thought that if there is an issue that would appear to an engagement quality reviewer, that would otherwise appear, which is an experienced auditor, to have met their criteria, then that would be -- and was not communicated in the report, then that matter or matters should be documented so that the engagement quality reviewer would understand the rationale.

So we thought having that, kind of requiring the auditor to document it, it may have been something that was discussed significant with the audit committee that an experienced auditor would otherwise say. That should have been in the report. Why wasn't it? We felt that was a safeguard. We didn't think that the nature of the list would be extensive in our view.

And I know Marty is jumping up. So I don't know if you have anything further to add.

MR. BAUMANN: Well, I just want to -- you raised a very good point. And we expected to hear commentary on that. So we're glad you brought it up. And I'm sure it's going to be in the letters.

I think Elizabeth's point was require specific things to be reported and have what's reported as critical audit matters based upon specific things that are mandated in our standards that you have to report on all of these things in the audit report. And that's one way to go.

And so her comment was standards-based, write rules, pretty much like AS-16, communications with audit committees, take a subset of that, and say these have to be communicated in the audit report. Then that's one route to go.

The other route was the way we went, which was what was in the auditor's view the most difficult, subjective matters that he or she faced. But the problem with that was that there is a risk that Jennifer pointed out. What is the safeguard that the auditor will not under pressure or whatever, decide that I'm not going to put this matter in because management and the audit committee don't really want me to. What is the safeguard around that risk?

And so we had to think about that risk, that that could occur. And, therefore, maybe a documentation standard, something that might appear to an experienced auditor, to meet this, the standard, has to be documented.

So we understand your point, that it gets to whether or not we keep this as a judgmental based upon what the auditor believes are the most difficult matters to be reported or really change our threshold to say it is mandated that these items have to be reported and go to what Elizabeth said. Just put it in the standards, "This has to be reported in the audit report."

So that is a threshold decision for us. And the way we put it out in the proposal was one way, but based on comments, we'll reflect on maybe what some others have said. Do this according to standards and rules.

PUBLIC COMPANY ACCOUNTING OVERSIGHT BOARD

PUBLIC MEETING

\+ + + + +

WEDNESDAY, APRIL 2, 2014

\+ + + + +

The public meeting convened in the National Ballroom in the Westin Hotel, 1400 M Street, N.W., Washington, D.C. at 9:00 a.m., James R. Doty, PCAOB Chairman, presiding.

PCAOB BOARD

JAMES R. DOTY, Chairman
LEWIS H. FERGUSON, Board Member
JEANETTE M. FRANZEL, Board Member
JAY D. HANSON, Board Member
STEVEN B. HARRIS, Board Member

WITNESSES

ALAN L. BELLER, Partner, Cleary Gottlieb Steen & Hamilton LLP; public company board member
W. ANDERSON (ANDY) BISHOP, Chief Financial Officer, Hallador Energy Company
ANN M. CAVANAUGH, Managing Director, Global Accounting Policy, BlackRock
WALLACE R. COONEY, Vice President - Finance, Chief Accounting Officer, Graham Holdings Company
CARTIER ESHAM, Executive Vice President, Emerging Companies, Biotechnology Industry Organization

SVEN GENTNER, Counselor, Economic and Financial Affairs Section, Delegation of the European Union to the United States
GAYLEN HANSEN, Immediate Past Chair, National Association of State Boards of Accountancy (NASBA); Audit Partner, EKS&H LLLP
NICK LAND, Chairman, Audit and Assurance Council, UK Financial Reporting Council; public company board member
JEFFREY P. MAHONEY, General Counsel, Council of Institutional Investors
THEODORE J. MOCK, Distinguished Professor of Audit & Assurance, University of California, Riverside
RICHARD H. MURRAY, CEO, Liability Dynamics Consulting LLC
AULANA L. PETERS, Former SEC Commissioner; public company board member
KEVIN B. REILLY, Americas Vice Chair, Professional Practice and Risk Management, Ernst & Young LLP
KURT N. SCHACHT, Managing Director, CFA Institute
ARNOLD SCHILDER, Chairman, International Auditing and Assurance Standards Board
DOUGLAS SKINNER, Eric J. Gleacher Distinguished Service Professor, Booth School of Business, University of Chicago
LYNN E. TURNER, Managing Director, LitiNomics; Former SEC Chief Accountant
SIR DAVID TWEEDIE, Former Chairman, International Accounting Standards Board; Chairman of the Board of Trustees, International Valuation Standards Council
JOSEPH B. UCUZOGLU, National Managing Partner, Regulatory and Professional Matters, Deloitte LLP
JOAN WAGGONER, Partner, Professional Standards, Plante & Moran, PLLC

OBSERVERS

BRIAN CROTEAU, Securities and Exchange Commission
JAMES KROEKER, Financial Accounting Standards Board

PCAOB STAFF

JENNIFER RAND
JESSICA WATTS
JENNIFER WILLIAMS

TABLE OF CONTENTS

P-R-O-C-E-E-D-I-N-G-S

9:03 a.m.

MR. DOTY: Good morning. This is an open meeting of the Public Company Accounting Oversight Board. We've assembled a distinguished set of participants to assist the Board over the next two days in an in-depth discussion of the PCAOB's proposed standard on the auditor's report and the auditor's responsibilities regarding other information in certain documents containing audited financial statements.

I want to begin by thanking the panelists for their contributions. All of us have many competing demands on time, they especially. And many of them have traveled a long way to be with us. I'm grateful for this extraordinary effort, and we want to assure all of these panelists over the next two days that their effort is appreciated and will be given very deep consideration.

I want to also thank the staff of the SEC for their counsel and support as we've advanced this standards setting project. In particular, Deputy Chief Accountant Brian Croteau is present as an observer, and, Brian, I want to invite you to participate any time as you see fit. Raise the flag, and you'll get the floor.

Former Chief Accountant Jim Kroeker is also here as an observer on behalf of the Financial Accounting Standards Board, FASB. It's always good to see Jim in these meetings. And I want to thank you for FASB's interest in this initiative and invite you to participate actively over the next two days.

Finally, I want to thank my fellow Board members and the PCAOB staff for being here today and for the immense preparation that I know they've all engaged in to analyze the issues before us.

The discussions we undertake during these two days will address important issues for our financial markets and the protection of investors. Eighty years ago, the Congress afforded a statutory franchise to the audit profession to protect the investing public's interest in accurate financial statements. The Congress' purpose in doing so was to regain and promote public confidence in the integrity of our capital markets.

The standard form audit report used to deliver on that mandate has not changed in any significant way in more than 70 years, although our capital markets, indisputably, have. This audit report continues to serve a critical purpose, but many call for it to be more relevant in our capital markets today and to better serve today's investors and other users.

As I said when the Board issued the proposed standards to enhance the auditor's reporting model, I believe this marks a watershed moment for auditing in the United States. But this is a global initiative. We've benefitted greatly from our cooperation and coordination with the International Auditing and Assurance Standards Board.

To arrive at an opinion as to whether the financial statements are fairly presented, the auditor amasses a great body of evidence and, based on that evidence, gains unique insights. Investors are calling for these insights to anear to their benefit: to make the auditor's report more relevant and useful.

Similar calls are coming from other important users. Earlier this week, the Basel Committee updated its supervisory guidance on bank audits. The Basel Committee calls for more robust communication channels between auditors and banking regulators and banking supervisors. The proposed standards are intended to make the audit report more relevant to investors by establishing criteria and a framework for the auditor to provide deeper insights from the audit based on information the auditor already knows from the audit.

The proposed standards emerged from an unanimous recommendation of the Treasury Department's Advisory Committee on the Audit Profession. They are also based on our own extensive outreach and public comment on both what would make the auditor's report more useful, as well as what auditors are in a position to deliver.

The hearings today and tomorrow are an important part and extension of that outreach. By requiring and providing a framework to report critical audit matters, the proposed standards would keep the auditor in its area of expertise: the audit. No one wants to return to the days before the pass/fail model was instituted when auditors' free writing could obscure disclaimer of assurance on misleading financial statements.

As many commenters have confirmed, there's real public interest in retaining the binary pass/fail model of opinion.

The proposed framework is intended to set forth concrete criteria to consider and apply in light of the specific audit at issue in order to limit both the discretion to avoid disclosure, as well as the opportunity to back into and fall back on boilerplate. The proposal would also require new elements in the auditor's report related to auditor independence, auditor tenure. It would include enhancements to existing language in the auditor's report related to the auditor's responsibility for fraud in notes in the financial statements.

The PCAOB's proposal would also require auditors to evaluate certain other information besides the financial statements, such as the company's annual report and management's discussion and analysis. And for the first time, the audit would describe this evaluation and its results.

Again, thank you for being here. I look forward to the discussion. And so we should commence with the first panel, and it's a distinguished panel. Let me point out a few of their qualifications.

Gaylen Hansen is the immediate past chair of the

National Association of State Boards of Accountancy, NASBA. He is an audit partner, EKS&H. He currently serves on the consultative advisory group to both the IAASB and the International Ethics Standards Board for Accountants. He serves on the International Auditing Standards Task Force for the AICPA. He's been a member of their Professional Ethics Executive Committee and on the PCAOB Standing Advisory Group. Gaylen, we appreciate your being here.

Richard Murray is the Chief Executive Officer of Liability Dynamics Consulting, a chairman emeritus of the Leadership Board of the Center for Capital Market Competitiveness. He serves on the board for the National Chamber Litigation Center. His current directorships include the Center for the Study of Financial Innovation and Oxford Analytica, both United Kingdom institutions. And he is a current member of the PCAOB Standing Advisory Group.

Lynn Turner is a managing director of LitiNomics, a firm that provides expert research, evaluation, analyses, and testimony in conflicts and commercial litigations. He served as the chief accountant in the

United States Securities and Exchange Commission from 1998 to 2001. He is a former member of the Technical Advisory Committee of the FASB, a former member of the PCAOB Standing Advisory Group, and a current member of the PCAOB's Investor Advisory Group.

Jeff Mahoney is the general counsel of the Council of Institutional Investors. He is responsible for developing and communicating the Council's public response to proposed regulations, rules, standards, and laws that may impact corporate governance practices of companies in which council members may invest. Prior to joining the Council, he was counsel to the chairman of FASB. He is currently chairman of the Investor Rights Committee of the Corporation Finance and Securities Law Section of the District of Columbia Bar Association and a member of the International Financial Reporting Standards Advisory Council. He serves on the NASDAQ Listing Qualifications Hearing Panel. He is also an adjunct professor at the Washington College of Law at American University and a current member of the PCAOB Standing Advisory Group.

The first panel takes us back to the Treasury's

Advisory Committee on the Audit Profession and its roots. And with that, I want to turn it over to Gaylen Hansen for your statement. Thank you.

MR. HANSEN: I'd like to thank the Board. Thank you, Chairman Doty, for the opportunity to express my views on your initiative today and to I guess go back in time to reflect on the ACAP recommendation that led to where we're at today.

I'm an audit partner and director of quality assurance with a Denver-based accounting practice. I've been an auditor for over, well, nearly 40 years and have signed many audit reports. I also have a regulatory background as a former chair and member of the Colorado State Board of Accountancy and the AICPA's Professional Executive Committee. I am the immediate past chair of NASBA, as you pointed out. I've been invited to share, as mentioned, some insight into ACAP's recommendation leading to this reporting initiative.

ACAP took place in the midst of the 2008 economic meltdown five years into the PCAOB. Among ACAP's many objectives was the opportunity to reflect upon the Sarbanes-Oxley Act and the PCAOB.

We met at the Treasury Building next door to the White House. I saw frenzied late night activity at Treasury and, as I walked the hallways, noticed an abundance of looseleaf binders curiously labeled "TARP." Later, we would all learn much more about TARP and the economic Armageddon that our country narrowly dodged.

So against that backdrop, the handpicked ACAP members, with very diverse backgrounds, hoped to wrestle with media issues, find common ground, and, in this city of grand bargains, come up with creative solutions designed to ensure the long-term sustainability of the auditing profession. We were dealing with matters that had been kicked around for decades, and this was a chance to do something meaningful, even historic.

While auditors were not being blamed for the economic meltdown, per se, there was a general sentiment that they could have done more and why didn't they. There was also serious concern about firm concentration and over-reliance on the remaining handful of firms auditing our largest companies.

At the same time, firms coveted civil litigation reform and were willing to consider some compromises.

On the table was greater firm transparency and governance, improvements in audit quality.

Our recommendations covered a broad range, from establishing a national center to combat fraud to enhancing independence. One led to the subject matter of this meeting, and I believe it to be among our most important.

ACAP wasn't interested in change for change's sake or just because the current audit report was 70 years old. We were interested in a substantive fix, increasing accountability and transparency with real teeth.

In retrospect, ACAP's recommendations remain as fitting today as it was in 2008. Investors continue to express dismay over reports offering limited, if any, value. Specifically, audit reports are noticeably silent about audit strategy and the overall audit approach, the extent of evidence obtained, and key audit judgments that are made.

During the crisis, there were numerous instances of clean opinions immediately followed by corporate collapse. Investors saw their capital vanishing overnight, while those in the know couldn't or wouldn't share untapped insight.

I don't believe that it's realistic that investors will begin expecting less of auditors any time soon. Consequently, raising the bar on the audit is inevitable. And for this reason, I support the PCAOB's proposal.

Generally, auditors don't take kindly to change, and some have objected to certain aspects of the audit reporting model, especially related to critical audit matters, or CAM, which I'll say a bit more about in a minute. Some objections are legitimate, but others simply because the ARM will take them out of their comfort zone, and that are understandable. What we are talking about won't necessarily be easy, so some convincing still needs to take place.

On the matter of that convincing, here's some ACAP testimony of Jules Muis, a former VP and controller of the World Bank, and I quote, (I have, on various occasions in the past, thrown out a less revolutionary teaser suggesting that we should ban clean audit opinions as an audit reporting instrument for at least ten years to come just to wean the audit profession off its addiction to clean opinions and to make it recognized a public interest in having the right opinion rather than a clean opinion.

I'm sure that Jules wasn't really serious about banning clean opinions, but his insight about the lack of communication and transparency resonates. And he goes on to say the problem is client confidentiality. Confidentiality has a long and important place in the profession. However, it doesn't serve investors when it prevents auditors from calling things as they see them.

The informational wants and needs of investors supersede all others in an efficient capital market. It doesn't escape notice that, of the 232 comment letters that PCAOB received, only nine percent came from investors. Hopefully, the weight of change will come down heavily on the side of that nine percent.

I'm going to sum up. There's a clarion call for many corridors today for greater auditor accountability and transparency. Other major players on the international scene are moving rapidly to require more informative audit reports, with or without the U.S. in tow.

The audit profession has a long and storied history of excessive secrecy. At times, this can even strain the imagination. My first four years in the profession were with a Big Eight firm in Los Angeles. The firm's office was a large standalone two-story red brick building without a single window. I was told this emphasized confidentiality. Outsiders would never know what was going on within those brick walls. On the other hand, we couldn't see out.

At the time, my first job, it seemed quite normal. I knew nothing better. In retrospect, it was just plain weird.

Today's reporting standard is akin to a windowless building. It just doesn't make sense. The world has changed, and we need to change the way we are doing things to stay relevant. We can do better, and doing it is long overdue. I look forward to it.

MR. MURRAY: Chairman Doty, Commissioners, I've had the fortunate opportunity to spend more than 40 years watching the process of audit firm performance in the public company sector, both from inside the firms and from critical positions outside the firms, critical in terms of having interests adverse to those of the profession.

I've also had the pleasure of participating in every assessment of audit performance, from Trueblood in 1973 to ACAP, and am very grateful for the opportunity to participate with you here today. And thank you, Chairman.

The judgments that have shaped my views from those experiences I think should be identified before I share them. I consider auditing to be the most challenging of the learned professions and callings of our era. I think it is a process that performs imperfectly at times, occasionally in an embarrassingly flawed way. But we live in an imperfect world of not uniformly perfect people, and I believe that the role and performance of audit generally equals or exceeds the performance standards of any of the comparable learned professions and callings that address our public sector interest.

I believe that the role of auditing in financial reporting, while not yet what it can be, is at the highest level of my period of experience, and much of the credit for that surely goes to the existence and the activities of the PCAOB and its commissioners, for which I thank you.

And, finally, I believe that the unfortunately litigious culture we enjoy here in America needs to be considered as one addresses all of the issues affecting auditing, not in terms of what's good for the welfare of the firms but in terms of what's good for the welfare of the American economy because litigation, a game that is played as a means of pursuing a variety of agendas in America, differs quite significantly from conditions in the US and the UK. It has impacts on audit quality, on the financial reporting environment. It impairs innovation and strains the ties of corporate governance.

I will deal with the issues that have been presented in the Board's proposal individually to save time. Regarding critical audit matters, I don't think there can be any question that the current form of the audit report is the longest-standing, least modified, most important, least informative, and most expensive and least understood form of commercial expression that man has ever created, or woman either.

The real question is is this like democracy, the worst choice, except for all others; or is there a better way? And it is clearly time to explore that better way, and I commend the Board for having done so in a very comprehensive and challenging proposal.

There were two ACAP recommendations addressed to what is called critical audit matters. The first was a strong call, as Gaylen has well expressed, to enhance the value of the audit report through narrative about the auditor's views, views that would enlighten on the understanding the public will have about the company, not the information that the public will have about the company, which is the company's privilege and obligation to disclose.

The critical audit matter proposal seems to me overly prescriptive and overly focused and not properly stimulative for the kind of narrative that ACAP had in mind, at least that is, in my personal impression, not an extension of the views of others on ACAP.

I think it also blurs objectives a bit. If the purpose is to gain insight about the company, there is an overlay of understanding that has grown around the CAM proposal that suggests that it also ought to enlighten about the quality of the audit performance, and I think that potential for confusion is unhelpful. And I would recommend that the CAM activity, as proposed, if it is to be pursued, be delivered through the audit committee rather than directly from auditor to the public. Nothing need be lost in content, but there would be a greater preservation of the growing and important role of audit committees as the nerve center of financial disclosure and corporate governance in all its aspects. I'm concerned that the proposal currently undermines much of the great work the Board has done in enlarging the responsibilities of the audit committee.

But ACAP had a second recommendation that there ought to be no harm done to the extreme value of the pass/fail model as the backbone of the capital markets. And we were concerned, not uniformly concerned but there was extensive concern about the extent of litigation risk to undermining the stability and clarity of the pass/fail model.

I do believe that that risk is a significant concern. I note just two respects. I believe the CAM proposal creates a new and more extensive risk of exposure to private rights of action. Its architecture is broader than Sections 10(b) and 11, and, as a process matter, it puts the auditor in a devilish position in the way the litigation process moves forward. The auditor can be questioned, if whatever went wrong happened to involve something you addressed in the CAM process, why didn't you carry through and recognize the consequences? If it did not involve something addressed in the CAM process, why did you address so many CAMs and not happen to find the right one? I think that's a dilemma that the profession and the companies they represent will find very difficult to deal with.

I'll address briefly fraud and independence together. I think they are aligned and embedded in the expectation gap, and I think neither is ripe for attention at this point.

ACAP recommended on fraud that the PCAOB establish a fraud center to study and facilitate collaboration in fraud detection and to study the subject in a way that for 50 years had never been fundamentally addressed as systemic risk. The PCAOB, I understand, does have a fraud project in planning. I am pleased and commend that. It may not be exactly what ACAP had in mind, but it surely must be a proper step forward. I suggest that the fraud proposals be deferred until that is completed.

The similarities of independence. ACAP had two recommendations here: That the PCAOB lead a compilation and rationalization of the requirements and standards for independence. There are multiple authority of guidelines on the subject that exist currently. They have conflicting interpretations. They don't even really agree upon whether independence is a noun, a condition to be independent, or is a verb, the way action is to be taken independently.

So long as we don't have a road map or even a common language to address the subject, there is concern, certainly in my view, that there is no way to get from here to there and it is time, after all these decades, to do the fundamental analyses of what qualities of judgment are really being sought here and what are the appropriate guidelines to measure those qualities?

We seem to have spent all those decades in rancorous debate based on non-concentric assumptions about what is the problem. Indeed, I wonder on both the fraud and the independent issues whether we've become so embracing of debate and controversy that we have forgotten that there is an opportunity to create understanding if we do a careful job of reassessing the fundamental assumptions on which we operate and put them at risk of being modified by listening to one another.

That is my recommendation as to both the fraud and independence studies. The acts of regulation follow on the acts of enlightenment that the Board is in the ideal position to bring to the profession and to the regulatory responsibilities. Thank you, Chairman, for the opportunity.

MR. DOTY: Thank you, Mr. Murray. Mr. Turner?

MR. TURNER: Thank you, Chairman Doty and all the Board members, for the invitation here today, as well as the staff. Thank you, Marty, as well. For the sake of time, I'll just ask that you include my written statement in the record, and I'll try to summarize it quickly before the red light goes on this time.

But I would echo everything that Gaylen had to say. I thought those were excellent comments. I would echo what Mr. Murray had to say about the profession being a very, very challenging job.

I would differ from Mr. Murray on the views of the subcommittee on the litigation issue. It was a fairly split committee as to whether there was an issue there on litigation or not. Those views were clearly set forth in the report. In fact, today, I think investors are very concerned about their ability to hold auditors accountable when, in fact, there have been failed audits, and they have suffered significant losses.

But the views I have today are based upon my experiences, almost four decades in this profession. It includes time as a preparer, as a CFO, audit partner. I've signed many, many audit reports, large, small, public, private companies. I've prepared, I can't fathom how many CAMs during that period of time and very well understand those. And I've served on the boards and chaired audit committees of public companies, as well.

And through all of that, I think it's clear that it's time to get something of value in the audit report.

The audit report today doesn't have value. That's something that I consistently hear from my fellow investors. In fact, in talking to a CIO where I sit on the board on one of the hundred largest investment funds in the world, the question was raised as to whether or not the portfolio managers even read the report because there's just nothing to be learned or gained from really reading it today.

So I would commend you all for taking on this project. It was a strong recommendation of ACAP. There are other recommendations which I wish you would also take up in short order, as well. But that's for another day.

As far as the approach, I think your approach is a good approach to tie it to the CAMs. I've sat at SAG meetings in the past that, if an investor ever saw those CAMs, if they were ever made transparent, they would understand that is what an investor really wants. It's what is critical, it's what significant to the auditor. That's why we prepared those CAMs. It lays out our strategy for dealing with them, how we dealt with them, how we resolved, and that's the type of information that investors are looking for today. That's what I hear time and time again that they want.

There are those that say, well, you should only disclose information management has. That's nonsensical. If management has already disclosed it, why does it need to be disclosed again by the auditor?

What the investors are looking for is what was the auditor's perspective on the audit? And one concern here is we've seen time and time again where the auditors were aware of very important information, information that, most typically, would have shown up in a CAM in a quality well-done audit report, and that information was hidden by the auditor from investors. And if investors had seen that information, it would have made them change, I think, their investment allocation decisions. It would have avoided costs and losses for investors and, I think, in many of those instances, would have avoided litigation and costs for the auditors, as well.

So I commend the CAM approach that you've come up with. I think, to Mr. Chairman Doty's point, I think boilerplate can be avoided. I've given some thoughts on that in my statement. I think you ought to lay out clearly your objectives, and I've given some other thoughts as to what I require in disclosure, and those are, in part, based upon what we do with similar type disclosures on related parties, which haven't worked all the time but have worked. So I think it's something to think about.

The one thing on the CAM approach that I would forewarn you about, and that is you can't leave it just to the discretion of the auditors. We did that when we did an independent standard in the past. It didn't work. It was fatally flawed, so leaving it solely to the discretion of the auditors would not be worth the time or money then because we'd get the same result. We've had that lesson once before. We shouldn't repeat it.

As far as some of your other recommendations, I think the recommendation on the auditor signing the report is very good. It's consistent with what ACAP recommended. There's no further liability to be had here. There is going to be the fact that, once you put your name out there as an audit partner, you're going to be concerned that have you got the job done right, and I think that's going to enhance, in the long run, audit quality. It's going to cause you to focus. I sign those reported, and when you're signing with your own name, you know if your name shows up in too many problematic audits, you're probably going to have a problem. And I think that's what the whole debate is about here as far as the audit partner signing the report, and so I think that goes without saying.

I think the points you make about tenure, disclosure of tenure and independence is good. I was there at the SEC when we went through the fight over the independence rules, and when those independence rules were adopted there was positive statements of support from five or six of the firms at the time in support of those standards. And the ACAP did not recommend any changes in those standards. It did suggest codification somewhat, which would be helpful.

Finally, if we've learned anything from China it's the fact that we really do need some transparency around who is doing the audit. And if a significant portion of this audit is not being done by the signing partner or is not subject to the typical examinations that you all do that have turned out to be beneficial, then certainly that needs to be disclosed, as well.

And I think, as Rich summarized about the audit report and his description of the current audit report being old and long in the tooth -- you know, it goes back now almost to the Model A, and we have had some things change in the country since the Model A came out, the assembly lines. So I suggest the time for change is now, and let's not let this get any longer in the tooth.

MR. DOTY: Thank you, Mr. Turner. Jeff Mahoney?

MR. MAHONEY: Good morning. Thank you, Chairman Doty and Board members and staff for hosting today's public meeting on the PCAOB's proposal to enhance the auditor's reporting model. The Council of Institutional Investors appreciate your leadership and willingness to pursue this important issue that has long been debated and remains controversial, particularly with some members of the auditing profession.

It was a real honor for me to have had the opportunity to serve on the Department of Treasury's Advisory Committee on the Auditing Profession on behalf of my executive director, Ann Yerger, and to participate on the Committee's Subcommittee on Firm Structure and

Finances with my three distinguished fellow panelists to my right.

As you may know the Subcommittee was ably chaired by Robert Glauber and, in addition to my fellow panelists, the Subcommittee included Timothy Flynn, the then chairman and CEO of KPMG; and William Travis, the director and former managing partner of McGladrey & Pullen. Others who devoted countless hours to the activities of the Subcommittee and, in my view, were instrumental in assisting in the development of the Subcommittee's findings and recommendations included Don Nicolaisen, who was co-chair of the Committee, along with Arthur Levitt; Alan Beller, the counselor to the co-chairs, who I understand will provide his perspectives this afternoon; and, last but not least, Kristen Jaconi, who was the senior policy advisor to the Undersecretary for Domestic Finance at the Department of Treasury at the time.

After reviewing extensive amounts of data provided from many sources, including from the audit firms, the Center for Audit Quality, and after receiving testimony and comment letters from a broad range of experts, the Subcommittee focused mainly on seven areas in need of improvement in the auditing profession and produced seven recommendations. In my opinion, perhaps the most compelling of the seven was recommendation number five, to urge the PCAOB to undertake a standard-setting initiative to consider improvements to the auditor's standard reporting model.

As the Committee final report indicated, the auditor's report is the primary means by which the auditor communicates to the users of financial statements regarding its audit of those statements. And despite the numerous instances over the years in which blue ribbon panels of experts recommended that the standard auditor's report be improved to provide more relevant information to users of financial statements, as we all know, material changes to the auditor's report were never implemented.

I believe it's also significant that the Committee's final report highlights the testimony of Richard Fleck, whose a global relationship partner for Herbert Smith. In that testimony, Mr. Fleck stated that institutional investors believe an expanded auditor's report would enhance investor confidence in financial reporting and recommended exploring a more narrative report in areas such as estimates and judgments, sufficiency of evidence, and uncertainties.

The substance of Mr. Fleck's testimony, in my view, has since been corroborated by multiple sources, including surveys at the CFA Institute and the PCAOB's Investor Advisory Group and the results of the PCAOB's own extensive outreach to investors and other users in connection with developing the proposed model.

Just a couple examples. Disclosure of the independent auditor's assessment of management's critical accounting judgments and estimates was supported by 79 percent of institutional investor respondents to a 2011 IEG survey and 86 percent of respondents to a 2011 CFA Institute survey. With respect to the latter survey, I understand Kurt Schacht will be on a panel this afternoon, and he can certainly provide more details and discuss other CFA Institute surveys and materials that may be relevant to the proposed model.

Based on those results, related findings and recommendation of ACAP, as well as the Council's own membership-approved corporate governance policies, we generally support the PCAOB's proposed audit reporting model. We would, however, revise the proposed model to provide that the auditor be required to communicate, at a minimum, an assessment of management's critical accounting judgments and estimates based on the audit procedures that have been performed.

In our view, this modest revision to the proposed model would result in an auditor's report that provides the kind of independent auditor insights that are reflected in our policies and, more importantly, are responsive to investors' information needs. In that regard, we would not support a proposed model that failed to provide independent auditor insights and simply repeated or referenced management disclosures that already are provided to investors.

We believe if our modest revision were adopted, the proposed model, as revised, would be far more likely to achieve the Board's worthy goal of increasing the relevance and the usefulness of the auditor's report to investors, who ultimately are the key customer of the auditor's report.

Thank you again for inviting me to participate in this important meeting. And I look forward to learning from my fellow panelists, the Board, and all of you here today. Thank you.

MR. DOTY: Thank you. The intention in these discussions is always to attempt to give everybody a chance and to have some structure but to preserve some spontaneity. And we now have about 15, a little more than 15 minutes to get in to that. My colleagues have permitted me to call on each of them for one question. If we have time, we'll go around again, and I want to be sure that both staff and observers have a chance to get on this.

But we'll begin. Mr. Harris, one question. Multiple parts not allowed.

MR. HARRIS: Well, you just took my multiple parts off the table. Under common guidance on economic analysis, when the Board undertakes a standard-setting project, it should identify the need and the problem. And while it may be self evident and obvious, because we're creating a record I'd like each of you to articulate the need and the problem with as much specificity as you can and why now?

MR. DOTY: Address to whom, Steve?

MR. HARRIS: The panel.

MR. DOTY: Gentlemen, should we just move down the line?

MR. HANSEN: That's fine. That's a great question. You know, I've heard over the course of my career every time there's a new standard that comes out, it layers on top of the others and that it's not going to take any significant additional time and nothing to worry about. I don't believe that. And I believe that, when it comes to the majority of the proposal, it will be pretty straightforward. It gets to the CAMs. You're talking about custom writing, custom thinking, and really thinking through the issues at the highest level of the talent within the audit organization, and I think it will take some additional time and it will involve some discussion with the audit committee. That shouldn't be overlooked.

Does that mean that it's going to be an overwhelming cost? No, because, as Lynn pointed out, I mean, those CAMs are part of the audit documentation already. It needs to be polished up. It needs to be articulated better, but I think the economic analysis is going to show that, while there's going to some increase in the cost, it's not going to be overwhelming.

MR. DOTY: Richard?

MR. MURRAY: The problem, to look at it from too high a height, is that we do not understand each other. We have continued to not understand each other on various aspects and perspectives on these issues for too many years. We've been focusing on sharpening the ability to dispute, rather than considering the possibility of agreement. And I believe why now is because we have the benefit and advantage of the established and growing importance of the PCAOB to take the leadership in exploring what can be accomplished by a search for agreement and a search conducted in a collaborative manner in which the regulator and the regulated operate in partnership, as well as in a regulatory relationship.

MR. DOTY: Lynn?

MR. TURNER: Chairman Doty, I think the crux of the issue is not one of understanding. I think the auditors understand it very well, and I think investors understand very well what they want. It's a difference over what product is going to be produced. Are you going to produce a product that the investors want, or are you going to produce a product that the auditors want?

As your own enforcement action on Medicis show and as I know full well from my time at the SEC in cases like Xerox, the auditors were fully informed about a fraud or a problem with the financial reporting, yet rolled out clean reports and remained silent and said nothing. And in those circumstances, silence is not golden. It's devastating.

And so that needs to change. The product needs to reflect what the customer wants. In this case, the customer is the consumer.

And to the question of why now, after 80 years that this report doesn't work, why not now?

MR. DOTY: Mr. Mahoney?

MR. MAHONEY: Similar to what Lynn said, we have a product that the major customers of that product are dissatisfied with it. And I think their dissatisfaction summarized in the PCAOB's staff's conclusions from their outreach, just reading from the concept release, the

PCAOB staff "observed that there was consensus among investors that the auditor has significant insight in the company and that the auditor's report should provide additional information based on that insight to make it more relevant and useful." I think that's where we need to head.

MR. DOTY: Mr. Ferguson?

MR. FERGUSON: Yes, I have a question for Jeff Mahoney on his suggestion that we have the auditor assess, that management's judgments on critical accounting estimates -- I can't exactly remember what you suggested. But if we were to do that, how would we do it? And would it be through a grading system, A to F, or like an honor's degree or magna cum laude or summa cum laude or, you know, they were conservative or they were aggressive? What would the criteria be, and how would we achieve comparability among audit reports so people looking at these judgments would be able to have a sense that there was a uniform standard being applied by the auditor?

MR. MAHONEY: With respect to the requirements, I think investors are not looking for anything new here.

The type of information, as Lynn has said earlier, is information that's already being provided to the audit committee. I think investors are just looking for some of that information to be provided in the main piece of communication with the auditor in the auditor's report.

As far as comparability, I don't think investors believe that this additional information needs to be comparable across all companies. I think, as I referenced earlier, what they're looking for is insights from the auditor. And if you look at the studies and surveys, a reoccurring theme is they want some insights with respect to significant estimates and judgments.

MR. DOTY: Mr. Hanson?

MR. HANSON: Thank you all for coming and your insightful comments. Just one question related to what investors think about our proposal that's on the table, and I'd ask you to each maybe comment about it to the extent you've had direct discussions with individuals responsible for making the investment decisions about what they think in the value of what we put on the table and any feedback you've gotten around that.

MR. DOTY: Is that a question for the panel or for --

MR. HANSON: A question for each of you on the panel.

MR. DOTY: Jeff, do you want to take it and then move left, right for you?

MR. MAHONEY: Sure. As I said in my prepared statement, it's very clear that investors are dissatisfied with the product and they want more information. And as I indicated, I believe and our policies reflect that what they want is some more insights from the auditor, so then it's a question of insights about what? And as I said earlier, if you look at the many studies and surveys, a common theme is that they want more insights about the key estimates and judgments.

MR. DOTY: Lynn?

MR. TURNER: Jay, as I was doing my remarks, drafting them, I did share them with a number of investors and I did get responses back I think from five investors, and these are people who are making investment decisions. And, universally, they came back, with one exception, and said they are exactly where those remarks were that I submitted in the written statement.

The one exception was one of the investors said he wanted further information, to Jeff's point, about changes in estimates, key estimates that the auditor had audited and changes in that estimate. So the feedback that I got from actual investors were my comments are exactly where they thought you should end up.

MR. DOTY: Mr. Murray, Mr. Murray, Richard?

MR. MURRAY: My perspective on the investment viewpoint comes primarily from involvement in the insurance industry, which is a major force. Insurers worldwide own 20 percent, 22 percent of global equities currently and remain a bastion of the investment stabilization of commerce.

To be overly quick and simplistic, my sense is the insurance industry is not opposed to things requested by groups of retail investors and some of the views that have made their way into active attention in the outreach reports of the PCAOB, but they don't consider them representative of their views and interests, as fixed long-term value-oriented investors. Their view, again simplistically put, is that there is a vast industry of intermediating advisors that can and do provide much of the insight and analysis that seems to be requested at the retail investor viewpoint. And the question that insurers would have is how can that value then be best aligned with anything that might additionally be done in the audit reporting process to produce a better net outcome?

MR. DOTY: Mr. Hansen?

MR. HANSEN: I must say that my interactions with actual investors is somewhat limited. I'm an investor myself. I don't see the critical audit matters as being a magic bullet. I don't see that it's going to solve all of the uncertainty that investors might like it to resolve. But I think it's going to contribute to them being able to make their own evaluations better.

That said, you know, there was a lot of discussion about who signs the audit report. Sometimes, I wonder whether we didn't spend enough time talking about who it's addressed to. You know, it's sort of legalistic, this addressing it to the board of directors and the stockholders. Maybe it should be addressed to the public interest or investors themselves. But those are just a couple of thoughts.

MR. DOTY: Ms. Franzel?

MS. FRANZEL: Thank you for being here today and sharing your insights. Going back to the recommendations of the ACAP and for expanding the information provided by auditors for the benefit of investors, in your view, does the CAM proposal meet those objectives based on the need that you all identified and the recommendation you made, along with everything we've learned since then? Does the current CAM proposal, as written, get us there? And if further refinements need to be made, in your view what would be the most important changes or revisions to the current proposal in order to meet the needs of investors?

MR. DOTY: To the panel, Jeanette?

MS. FRANZEL: It's to the whole panel, yes.

MR. DOTY: Gaylen, do you want to take it first?

MR. HANSEN: Sure. I believe they do meet the basic objectives of what we're trying to accomplish here. I think if the focus can be on, as it says, those few things that keep the auditor awake at night, those few things, not many things. That may be a different signal of a different problem, or, if there's no things that keep the auditor awake at night, maybe that's a completely different issue. But I think the objectives are met.

MR. MURRAY: I would go back to my brief and poorly-illustrated remarks earlier. I believe that, while Lynn and I may not have exactly the same recollections of the ACAP discussions, that the objectives we were identifying had to do with getting more insight about the company and not necessarily additional or different information about the company, and I think that is a distinction that isn't entirely well articulated in the current CAM proposal and creates some of the confusion of what is intended and how should it be performed.

And I also think that we had a focus on what can be learned through this process about the company, rather than a further standard and way to evaluate the performance of the audit. And I think that, too, could be clarified in the way this is articulated and presented.

MR. DOTY: Lynn?

MR. TURNER: The discussion at ACAP started out with the discussion, I think it might have even been Tim Flynn who brought up the issue with the pass/fail model and the shortcomings that some expressed with respect to the shortfalls in that model. And then it expanded to what about making sure that we tell investors exactly what the auditor is going to do to detect fraud and clarify that responsibility, which was an important part of the recommendation to be addressed.

And then, as we got into public hearings, then we started hearing from investors. Jeff has mentioned some. There was Tony Sondhi testifying on behalf of the CFA Institute and others. I'd urge you to go back and look through that testimony. There's binders of records of it -- I've still got them if you don't -- that lay out exactly what investors were looking for. And investors were looking not just for information about the company, if you look at that testimony, but, in fact, looking for an auditor's perspective of it.

When you look at the actual recommendation, the recommendation doesn't get to that detail. The recommendation says: Undertake a standard-setting process. This is your job, not our job at ACAP. It's your job to decide what should be done, so go through a thoughtful standard-setting process and go do it. And I think that's what was intended.

As far as does approach tied to disclosure of CAMs meet that? Based on my experience, having written many of those CAMs, done audits and, yet, been on the investment side, I actually think that's a good approach. It requires disclosure of all CAMs, though, and it requires that it not be discretionary. And there's been some question, as we've talked about at other meetings, about is there too much discretion or not and are the objectives around the CAMs clearly laid out?

But I think, in general, the CAM type approach is a good start and would respond, assuming you also deal with the fraud piece of that recommendation.

MR. DOTY: Mr. Mahoney?

MR. MAHONEY: Thank you. I, as well, agree the proposal can meet the objective. And as indicated in my comment letter and in my statement today, I believe it can be revised in such a way that it will get the auditor insights that our policies reflect and that investors have been asking for for many years.

And, again, we don't need to, we already have that information. We also already have rules related to that information in connection with communication. It's through the audit committee. So I think it's just a matter of refashioning those requirements to get that information into the auditor's report.

MR. DOTY: I want to ask a question back to Richard Murray because, as lawyers, we both share an interest in liability and litigation. And noting parenthetically that our re-proposal on transparency does not call for signature of the audit partner but naming of the audit partner, one of the issues that pervades all these discussions is a concern that, where we provide more disclosure, we think about the litigation and the liability issues.

And you made an arresting statement. You say that critical audit matters will lead to a new wave of litigation. If the disclosure of the CAMs appears in the context of the audit report and the audit report is good, it's a good audit, the auditor has his defenses even if the financial reporting is not good but the audit is good. That would seem to be not a problem for the CAMs in terms of what results from it.

But if the audit is not good or if there is, if there's frivolous litigation, I'm interested in getting to what you clearly see is a need for a constructive change. I'm wondering if, in fact, if we consider language both in the adopting release and in the standard to clarify the informational value of the CAMs, to clarify what I referred to in passing in my opening statement which is our intention that this be limited to what the auditor knows. Richard, you've also made a point as to communication of the audit committee and not the public, and I think that's a different issue. But do you think that by clarifying the value, the informational value of what the CAM is, that, at the same time, we diminish and really address the risk of litigation, of meritless litigation, frivolous litigation, with which we're all concerned?

MR. MURRAY: Chairman, first, I have to recognize that one of the things that's common to most lawyers is hyperbole, particularly in time pressure. My point was --

MR. DOTY: We've all done it.

MR. MURRAY: -- not to declare that this is clearly an unequivocally a problem to be accommodated but to urge the Board to pay more focused attention to explore whether the Board concludes that it is. Then at least it's apparent in the publically-disclosed materials.

In terms of what would help assist with the problem, if there is some degree of problem here, it seems to me there is a positive direction and it was explored by ACAP, not too agreement but it was explored, sometimes loudly. And that is whether or not there is some opportunity to create, by regulation or otherwise, a judgment privilege that surrounds the most sensitive and difficult judgment and expression forms.

We have a business judgment rule for the corporate sector that recognizes that you get into some gray zone issues that expose one to a double bind you're wrong if you do this, you're wrong if you do that. That doesn't exist in the audit environment in liability today. And with every more granular disclosure, whether it's the CAMs or any other formulation, that gray zone expands and deepens. And it seems to me the most promising solution would be to demand more of the auditors. But for the sake of the financial reporting process, not just the auditors, to allow that innovation to be addressed constructively and with enthusiasm, provide a degree, not full protection but a degree of accommodation to the judgment periphery on the edge of responsibility.

MR. DOTY: But do we at all, by speaking to the issue of what the CAM is and the value of it, do we, in any sense, ameliorate the risk of meritless litigation since the CAM is in the opinion and the opinion, as a whole, is what it is?

MR. MURRAY: You could, and you would, undoubtedly, have some influence. But if one considers the extent to which federal government agencies are having, generally speaking, are having their agendas rewritten and their interpretations ignored by judicial and private sector litigation, I think there's a real risk that your very best intentions, articulately expressed, would not survive the hassle of litigation.

MR. DOTY: You're not giving in on this point, and I respect it. One of the points of being chairman is I get to ask one more question before I go back to Jeanette Franzel, and it goes to Lynn Turner where you point out that neither the audit committee, nor management, knows what the auditor knows from the audit. How do you respond to Richard Murray's and others' comment that the appropriate place for what the auditor would otherwise say in a CAM is either in the proxy statement, as to which we have no real jurisdiction, or by more privileged communications directly with the audit committee, as Richard suggests.

Lynn, Jeff, do you all want to do a crisp one-minute? Isn't he right? Can't you do this by -- if the audit committee doesn't know this and this is such important information, don't you reduce the expectation gap by giving it to the audit committee and having rules expanding on the disclosures in the proxy statement and other documents?

MR. TURNER: The short answer is no. If you look at, again, the cases I mentioned, there's others that are out there, as well. In the WR Grace case that we have, the information didn't ever go from either the auditor to the audit committee.  Now, assuming it goes from the auditor to the audit committee, you still haven't delivered the product that the investor wants.  I've run a company, I've run a manufacturing company.  The key thing is to give a product to the customer that the customer wants, values, and pays for.  If you stop it at the audit committee, it doesn't go out to the investor.

This is simply a matter of are you going to give the customer what they're looking for, what they need to make sound capital allocations?  If that information doesn't get to the people making those investment decisions, and that's not the audit committee, it's not management, then you aren't giving them the information. And right now that information doesn't flow.

As to where you put it in the proxy or wherever, I really don't care, as I say in my statement, where the information is put out.  What I care about is the information investors want gets put in their hands in a timely and complete fashion and reflects the perspective of the auditors.

MR. DOTY:  Jeanette, you want to take one last shot?

MS. FRANZEL: Sure. I want to drill down a little bit on Mr. Mahoney's suggestion of a modest change to the proposal, and I think some might take issue with the characterization of that as modest. So I just want to drill down --

MR. MAHONEY: It is a little optimistic.

MS. FRANZEL: I just want to drill down a little bit. You are calling for an adjustment where a CAM would include an assessment of management's critical accounting judgments and estimates. What do you think that would look like and how would that be achieved under this current model? And then I'd be interested in the reaction of the other panel members, as well.

MR. MAHONEY: Here again, I'm looking at the communications that are currently being provided to the audit committee today. And looking at those communications related to significant estimates and judgments, I think those that the auditor thinks are most important in the CAM should be disclosed in the report.

Going back to the Chairman's last question, as Lynn said, the information is what's important. But right now the auditor's report is the main piece of communication between the auditor and investors. And investors want more communication from the independent expert. The audit report seems to be a logical place to put it since that's the only communication that we have between the two today.

MR. TURNER: Jeanette, I've served as chair of three public audit, chaired the audit committee of three public companies. In each of those three instances, each a different one of the Big Four, so three of the Big Four, came in and, consistent with the blue ribbon panel recommendations, had a discussion with us about not just the acceptability but the appropriateness of the judgments and estimates made by management. That's part of that report recommendation. It's not the first time it's come up. Jeff's recommendation is totally consistent with what's been recommended in the past.

In all three of those audit committees, the auditor would come in and, in part of their communication to us, they presented us a slide or two each time, giving us their estimate, their view, perspective on those estimates, and they would typically do it in a graph that had aggressive on one side and conservative on the other side, and they defined that in their graphs to us and said here's where we think it lays. So the information is there. It's being communicated. It's being communicated consistent with recommendations of very well known panels in the past. It's not new information.

MR. DOTY: Reluctant as I am, we're going to leave it at that. I'm going to make sure that we start with the next panel's question with Jeanette, run through Jay, and move up and end with Steve. And I will cede my time on the next question. So we're going to do justice.

I'm going to wait for flags to go up from the wings here. But when they go up, I'll call on them.

Thank you for taking us back to ACAP, for refreshing our recollection of what all this is about, and for some very meaty insights, trenchant insights on the current issues we face. Thank you all.

Well, where to begin? We next have one of the giants of the auditing profession with us, and Sir David Tweedie will be here until 10:40. He's making a special effort to do this.

He serves as the chairman of the International Evaluation Standards Council, which is looking into many of the key issues that come up in this audit reporting model question. From 2001 to '11, he was the first chairman of the International Accounting Standards Board, as well as the chief executive officer of the International Financial Reporting Standards Foundation.

It goes on. A fellow at the Judge Business School at the University of Cambridge; visiting professor of accounting in the University of Edinburgh Management School; honorary degrees from nine British universities; various honors and awards, in addition to knighthood, for his dedication and service to the accounting profession; president of the Institute for Chartered Accountants of Scotland from 2012 to 2013; chairs the Royal Household Audit Committee for the Sovereign Grant which funds the work of the British monarchy.

He's a current member of the PCAOB Standing Advisory Group. Mr. David, we're grateful for your presence. Please enlighten us.

MR. TWEEDIE: Well, thank you, Jim. And can I say what a pleasure it is to be here and see so many of my old friends. As several people in the room will know, as I've said before, it's always a privilege to come out here to the colonies and to continue my missionary work.

But this is a particularly interesting project. Everybody knows about a bad audit. It's splattered all over the press. Very good audits you actually don't hear anything about. They're hidden.

And audit, I think, is seen as a necessary commodity. It's what you have to pay for to get access to the capital markets, and the opinion, as we've discussed already, is an on/off switch. And when I first qualified as an accountant over 40 years ago, I could look at an audit report and know instantly if it was qualified because it was only three lines long. If it was more than that, it was something I ought to read. Otherwise, I just knew it was okay.

Since then, with the expectation gap, we've lost the crispness of the audit report in a whole lot of what now has become boilerplate language. And one of the things I'm slightly concerned about in the new proposals is a lot of that is still going to be in the audit report. Personally, I'd like to see that on a website or in an appendix. You might like to ask my UK colleagues about how they deal with it.

But the investor, quite clearly, as signaled from your own papers that they would like, is they would like additional audit reporting because they don't have access to or aware of many of the issues that the auditor has raised. And Lynn mentioned that a lot in the last session.

The audit report really, in my view, should be adding value. At the moment, it's more one of limitation. You know, how many auditors does it take to change a light bulb? None because they've formed a committee to say it's not their responsibility. And that's the sort of thing that we end up getting in the audit report.

But I think you've given the auditor a wonderful opportunity to start ending the notion of the audit being just a necessity and make it a vital part of investment analysis. Developments have already taken place elsewhere, notably the UK and Europe. And if you can get Europe to agree on these things, surely it can't be difficult to get the U.S. to agree on it.

But it would be a real help, too, I think, if PCAOB and the IAASB could get together and make sure the terminology was the same so audit reports throughout the world said the same sort of thing and we knew exactly what they all meant.

I would actually have liked the PCAOB to have gone further than it did. I would like to see the audit report based on the notion that investors want auditors to ask themselves what would they like to know if they were investing in the company and make sure that's what was in the report.

The critical audit matters I think is a real step forward. But that, again, I don't think goes far enough because it asks, you know, what are the matters and what did you do about it? What I feel it also has to do is and what were your findings?

I will draw your attention to the Rolls Royce audit report in the United Kingdom, which I'm sure my UK colleagues will talk about and certainly Tony Cates of KPMG because I found it quite excellent. It talks about the problems. The findings are that the company was slightly cautious in some areas, overly optimistic in others. But you get the picture that, on balance, this was actually a fair presentation, even though in certain areas there may be slight movements one way or the other.

And when you start looking at things such as valuations, Level 3 valuations, how do we know how far the auditor has gone in the range? Is this an aggressive company? It is it a pessimistic company? I think that's information that really should be out there in the public domain.

The genesis of this change, as we heard from the last panel, has been the financial crisis. And if anyone wants to argue that the audit report was fine in that crisis, they just have to look at some of the figures that you've got in your own papers about two or three years ago where it was pointed out that the 2008 and 2009 audits of a company receiving the TARP funding was actually, word-for-word, the same. And, yet, in 2008, the audit report costs $119 million, and in 2009 it cost $193 million. So what if you learned, as an investor, for your extra $74 million, nothing. It was still the switch was on, and that's all you heard.

And, yet, as we've seen when Enron and WorldCom blew up, if there's concern about the audit, then the markets start to tumble and confidence is lost. Going concern is always difficult for auditors. It can be a self-fulfilling prophecy if they give a growing concern qualification.

And when you look, though, at what happened, certainly in the UK -- let's take our biggest casualty or the first casualty, Northern Rock. It bought it from the wholesale markets in a very major way. Three months loans from the wholesale markets. It lent out 20 or 25 years, so it was all predicated, its business model, on that market staying open. Well, it didn't. It closed, and so did Northern Rock.

It was in the notes and, in a sense, you could see for yourself, looking at the liabilities, where they were coming from. But that was a key assumption. That company could only exist if the wholesale markets stayed open, and I think the auditor should draw attention to something like that.

What are the assumptions laying behind your view that this is a going concern? It may be that investors will look at that and think this is a bit risky and I want to get out, and that's the sort of thing I think they should do it.

And you can see from your own papers that eight of the top ten bankruptcies, there was no going concern qualification during the crisis. And the TARP, major TARP receivers also had no qualifications in there. I think giving some form of assumption why you've agreed that it is a going concern would be extremely helpful.

If you want to change the audit paradigm, I think what you've done at present is a necessary but not sufficient condition. I would like to see far more being done with the audit and making it far more helpful to users. And you can see the complaints and the pressures, certainly in Europe for mandatory rotation or at re-tendering. It's coming from the view that perhaps fresher eyes are needed, and that's the good reason. The bad reason is perhaps they're too cozy. And I think it is in the auditor's interest to make it far more obvious that he is reporting to the investor and not simply to the audit committee. So a repositioning I think would be very helpful for the audit and also for the investor.

I think there's things that can be done to assist the audit. I think the auditor is under too much pressure from companies these days. I would like to see the removal of the annual appointment and the company talk about re-tendering and then appoint the auditor until that re-tendering date and only allow them to be removed by a vote by the investors, if necessary.

And if tendering does take place, I would ban the companies, the audit firms, from putting a price in there. Let the audit committee choose on quality and then ask for a price. And if it shocks, let us tell the investors how much it saved by taking the second best audit and let's see if they agree that was a worthwhile investment.

And I think there's other things starting to happen in there that, after re-tendering, as your own figures have shown, audit fees are fallen. Well, there's limits to how far that can go. I think if audit committees think one of their major proposals or major jobs is to cut the audit fee, you're really starting to get into the question of are you starting seriously to damage the audit because, if the fees are driven down and if audit partners are not of the caliber of the people they're auditing, then we're going to have a major problem.

And how do the audit firms deal with that? You can probably ask some of them as they go through this, but are they taking part in a time out of the audit to try to make it pay? And I think that is a serious problem we're having. One disclosure I'd like to see in an audit report is how much partner time has been spent on it compared to those of managers and juniors.

As I've said before, I firmly believe the auditor should sign his own name on behalf of his firm. I think that concentrates the mind. In my own firm, when I was there as a national technical partner, I remember twice an audit partner getting away with something by signing the firm's name. We ended up in court. He was protected, and we weren't. I don't think he'd had had a second chance if his name had been on the first one.

It's not what you're dealing with at the moment, but I think there's also societal duty on the auditor to act as a whistleblower in certain situations. Lynn talked about various cases where the auditor knew things. I think it would have been very helpful if the securities regulator or the prudential regulator had been informed. So I would see the audit repositioning to be much more focused away from the company and onto the investor and also onto the regulator, where necessary.

Well, maybe that was a little bit like a sermon. I was in the church not so long ago listening to the minister banging on, and the old lady in front of me turned to her neighbor and said, (Is the minister not finished yet? and back in answer, (She just can't stop. Well, let me show you I can.

Advice. I'm always reluctant to give advice. When I moved into my present home near Edinburgh, there was a rather architecturally-unusual plant in the front garden, which looked like overgrown parsley. But the neighbors who didn't like the lifestyle of the previous occupants thought it was marijuana.

So I was a bit concerned, so I got a horticulturist in, and he gave me advice I never forgot. He said, (Look, if you're worried about this plant, he said, (pick it, dry it, and then smoke it. And if you're still worried about it, then it's parsley.

Well, the advice that I would like to give to the PCAOB is I would like to see audits in the U.S. the same as audits everywhere else. I'm delighted you've had the foresight and generosity to invite international observers to these panels, and I do hope it ends up with both the IAASB and the PCAOB putting out something extremely similar.

Audit, I think, is at a tipping point. Its worth to investors in society has been questioned, certainly by the crisis. Jay, in his recent speech, made it very clear that the auditor has a unique and indispensable position in the capital markets to help investor confidence, and I think that's something that you can really assist by the audit report.

And I'd like to see you go further. I remember when I left the IASB, the London Sunday Times talked about my time there and said, (When Tweedie came to the International Accounting Standards Board, financial reporting internationally stood at the age of a precipice looking into a chasm. Since he arrived, it's taken a big step forward. And I think you have taken a big step forward, so I'd like you to lengthen your stride a bit and do a bit more. Thank you.

MR. DOTY: Thank you. Jeanette?

MS. FRANZEL: Well, thanks for venturing out to the colonies for this important meeting. I appreciate your comments about not wanting large differences between the audit reports and the audit approaches between the U.S. and internationally. And I'm also intrigued by the UK approach in the audit report describing assessed risks of material misstatements that had the biggest impact on the audit. How far apart do you think our approaches are at this point, our proposal and the approach? And how do you think that they could come together?

MR. TWEEDIE: I think they're very similar. I would like to see a bit more about the findings. I don't necessarily think that is part of the UK approach, but I'm not an expert and you'd best ask Nick and his colleagues. But they are close. I think the Rolls Royce one went further and was an experiment, but I thought it was a highly successful experiment. I know you can ask about that later on.

But I think really we want to try and take the best. At the IASB, the idea was can we just take the best of whatever is out there? It doesn't have to be the international one. If the New Zealanders or even the Americans on rare occasions have the best accounting policy, we should have it. And that's what I think exactly PCAOB's line should be.

MR. DOTY: Jay Hanson?

MR. HANSON: I just wanted to thank you for being here and coming across the pond. Just a follow up to Jeanette's question relative to the IAASB proposal that's still on the table. If you think that a worthy goal is to have our ultimate standard align with their ultimate standard, if you think there are particular things in our proposal that theirs might be missing or particular things in their proposal that you think we should steer towards in our thinking, I'd appreciate to hear your thoughts on that.

One tongue-in-cheek follow on, have you concluded whether the plane you flew here on is on the balance sheet of the airline that you flew?

MR. TWEEDIE: Well, the one I was on yesterday has probably been written off by British Airways a long time ago, I think. But, certainly, on the issue of the IAASB, I think the main point is you move along with interaction, and it's really a question can we just get the terminology the same so that people know this is the same and it's not something that's got a variant on it.

There may be jurisdictional issues which you'd have to deal with in the U.S., and that is obviously up to yourselves. But I think the more you can get even the words the same, the happier people are going to be that this U.S. report is the same as a UK report and so on.

MR. FERGUSON: Yes, I just want to thank you for coming across the ocean to see us. But the question that I have and one of the things I've been very concerned about the CAM proposal we have is that it will deteriorate into boilerplate disclosures. I think that's happened in France where they already have certain kinds of disclosures like that, and they're not particularly meaningful.

And I'm particularly curious about your view of the KPMG opinion in the Rolls Royce matter because I read that, too, and it's really quite extraordinary. It appears to me, in many ways, to go further than the way I read what would be required under the British standards. And is this, in your view, is that simply an example of an auditor showing unusual courage, or do you think that's sort of a lamp into the future that, under these standards, that there will be auditors who actually feel comfortable in writing opinions like that?

MR. TWEEDIE: That's an interesting question, Lewis. I think, from what I gather, there was an arrangement with Rolls Royce that the firm would actually go further and experiment on that.

And I think the reaction from the investors in the UK has been highly positive, and I certainly would like to see that be made more mandatory because I think it does reflect, when you actually have to state that, okay, here's the problem, you've got a lot of Level 3 valuations, which wasn't the case in Rolls Royce, but you've got a lot of Level 3 valuations, how have they tackled it, we've tested it in the following manner, and, on balance, we feel that this is where they're positioned. And I think that is extremely helpful. It certainly gives the investor a view is this an aggressive management or it's within the bounds of acceptability but always at one end or are they somewhere down the middle? And Rolls Royce comes out I think pretty well down the middle. This little bit could be the liabilities perhaps understated. On the other hand, they're slightly overstated on balance. And I thought it was an excellent report. It taught me a lot more than I've ever learned from an audit report.

MR. HARRIS: How do you respond to those who would say that what you are recommending in your written statement would require the auditor to be the source of a significant amount of additional original information about an issuer and that is simply not the role of the auditor? We're going to hear that throughout the day.

MR. TWEEDIE: Well, you know, I was listening to the comments that this is the role of the audit committee. I really don't agree with that. I would like to see the auditor moving away from the company. He's representing the investor. He's going into the company. He's reporting to the investor in my book, and that's where he should be.

So the information that goes out there, that's what the auditor feels that the investor should know. And I feel very strongly that we should not have the audit committee giving that information and the auditor remaining quiet saying, yes, I agree. I would rather he did it, and I think that increases the value of the audit.

It's certainly interesting, listening to a few of the audit partners who have been involved in the audit report. I think it's energized the firms, and it's made those involved in the audit much more interested in it. They can see it's far more than just a tick. It's actually helping the markets. I think there's a lot more we can do. A lot more you can do. I'm out of this now.

MR. HARRIS: Well, I think that goes directly to the role and the future relevance of the profession, but you're cutting against the grain of significant amount of the testimony we're going to hear throughout today with respect to original information.

MR. TWEEDIE: Well, I'm quite used to doing that, I think. One beauty I found after 25 years of standard setting, I don't have to be polite anymore. I can just say what I think. You'll enjoy it, too.

MR. DOTY: Oh, the chief auditor.

MR. BAUMANN: Thanks very much. And, David, thanks very much for joining us today. I know you had a difficult trip over, so thanks again for doing that.

Similar to the question that Steve Harris asked, many of the objections that we've received in the comment letters are that, if additional information is needed by investors, then accounting standard setters should require new, different disclosures. If the information that investors are looking for is, well, what was, as Lynn Turner was talking about, where was the management on the range of reasonableness with respect to the estimates? Could accounting standard setters require management to disclose their ranges, their high and their low and where they came out on that?

So I guess the question is is this a, as an accounting standard setter in your great career, do you think this is something that can be solved through an accounting standard setting, as opposed to auditor reporting?

MR. TWEEDIE: You know, this is a great country, but I really despair of it at times. When you look at the quantum of accounting standards you have in the U.S., and this is no criticism of FASB who have been trying to cut it back, but it's almost you've got to get everything written down. Judgment disappears in that sense. And they're always worried. I heard at the last panel the concern about the lawyers. Well, if you had a panel of lawyers writing the Declaration of Independence, I'd suspect you'd still be paying homage to Her Majesty at the moment and trying to define liberty and happiness and things like that.

But I really would like just -- the auditor has actually got a range of experience, which, quite frankly, the company hasn't got. So if we want to find out, you know, where does this company stand, the auditor is in a much better position, having audited the industry or various companies in the industry, to be able to say, well, these guys are aggressive. I don't think the company itself could say or even would want to say that. So I suspect they might get boilerplate disclosure.

MR. HARRIS: If we've got five minutes to go --

MR. DOTY: We have five minutes, but Sir David has a 1:00 plane. So we do him a courtesy by springing him and by convincing our next panel on time. So, Sir David, with copious thanks from this board and from all of your many friends and associates here, God speed, safe travels, and we'll see you soon. Thank you.

We should commence the next panel as promptly as we can. If we could take a ten-minute break, ten minutes strict, that would get us started at 10:45, and it would be a good idea.

(Whereupon, the foregoing matter went off the record at 10:33 a.m. and went back on the record at 10:47 a.m.)

MR. DOTY: If we can resume. This of course, is the -- this is the international panel that will take us into the noon hour. This is truly a blue ribbon and distinguished panel of commenters from Europe. Sven Gentner is the counselor for Economic and Financial Affairs Section for the delegation of the European Union to the United States.

He's responsible for the coordination of the financial markets regulatory dialogue between the European Commission and the United States. Before joining the Commission, he has been working for Allianz Insurance, PLC, the Institute of Public Finance at the University of Muenster, Germany. He has a private sector and academic background, as well as his distinguished service in the EU.

Nick Land is the Chairman, Audit and Assurance Council of the UK Financial Reporting Council. He retired as chairman of Ernst & Young in 2006. He's a non-executive director and chairs the Audit and Risk Committees of Vodafone Group, Alliance Boots, BBA Aviation, and the Ashmore Group.

Nick is a director of the FRC. He's a member of the FRC's Codes and Standards Committee, and we're privileged to have him here for these proceedings.

Professor Arnold Schilder became chairman of the International Auditing and Assurance Standards Board, the IAASB in January 2009. Previously, he was a member of the managing board of the Dutch Central Bank, responsible in particular for banking regulation and supervision.

In addition, he served as the chair of the Basel Committee on Banking Supervision Accounting Task Force, and he's a member of the Public Interest Oversight Board. Arnold is also a frequent observer at meetings of the SAG, and we always benefit from his presence. Thank you all and please begin, Sven.

MR. GENTNER: Thank you. Good morning and thank you for inviting me to speak here on behalf of the

European Commission. I think this is another sign of the very good cooperation we've got between the PCAOB and the Commission, and we're very grateful for that, and we also fully support your process.

I've been invited to talk about audit reform in the European Union. I was actually looking forward to telling you that the European Parliament had just voted the reform in the EU, but unfortunately the vote has been postponed until tomorrow. It will nevertheless take place and I'm sure it will go well.

Let me just say a few words about the reform in the EU. As you know, our main objective, of course, was to increase the quality of statutory audit. The reform we are undertaking has got two pillars in EU law. We've got various legal instruments, one of which is a directive, which will be -- contain horizontal measures applicable to every audit unit and their regulation, which will contain stricter requirements for the audits of public interest entities, PIEs.

For example, credit institution, listed companies, insurance undertakings or other entities designated as such by member states, member states of the

European Union. Of course, the reasons behind that are that the consequences of misstatements for PIEs are much greater than for other types of companies.

Concerning the auditors' report, the new legal framework will only define a minimum. The EU member states have the right to impose further requirements, which is a tool for us to accommodate the specific needs of each concrete legal environment, which as you are aware, these environments differ across our 28 member states.

We don't impose a template or a model requirement in the new frameworks. It is up to the member states to define these models or templates.

Let me say a few words about what is new in our reform. All the initiatives we're taking are mostly motivated by the objective of achieving greater transparency. So we've introduced a requirement that the place of where the statutory auditor or audit firm is established be indicated.

We want a statement that indicates by whom or by which body the auditor was appointed. Typically, these are the shareholders at the annual meeting, but there are also other modalities possible in European law, as long as the independence is assured. But we want this to be made public.

We want a statement indicating the date of the appointment and the period of total uninterrupted engagement, including previous renewals and reappointments of the auditor. Again, this is to provide more information to the investors, and to allow investors to better assess the relationship between the auditor and the audited entity.

We also introduced an obligation to report on any material uncertainty related to events or conditions that may cause significant doubt about the entity's ability to continue as a going concern.

As you are aware and has been mentioned before, this is in particular a reaction to what happened during the financial crisis, where we've seen many cases where financial firms revealed huge losses just after they had received a clean audit report.

We think that the introduction of these requirements will help address these issues.

We are also introducing obligation to describe the most significant assessed risks of material misstatements, as well as a summary of the auditor's response to those risks, and finally and where relevant, key observations arising with respect to those risks. As you are aware, typical examples are the use of off balance sheet finance, changes in IT environment, et cetera.

Important is that there really is a description of the most significant risks of material misstatement in the new report, which again we hope will improve transparency in that respect.

Finally, we want that the audit report explains to what extent it was capable of detecting irregularities including fraud. This addresses the issue which has been there before, the expectation gap.

We're not proposing a model template. We're expecting the profession to develop a structure here, but we think this will be an important element to counterbalance the impression that auditors sometimes rely too heavily on management statements, and to make sure that auditors can show how they've checked the validity of these statements.

As you are probably aware, we are requiring in addition to the auditor's report, now also a more detailed additional report, which is to be made available to the audit committee of the audited entity. We expect that this additional report will enhance the flow of information between the auditor and the audit committee.

The report will not be public, but member states can allow the report to be made available to third parties when necessary, for example, courts.

Finally, we think that there is a lot of convergence and congruence between what has been proposed by the PCAOB and what is in the EU audit reform. I think we share the general principle of making the auditor's report more informative, and we share a concrete approach how to establish that.

In particular when it comes to including critical audit matters in the audit report, and also in relation to the reference to the year when the auditor began serving as the company's auditor, where you are aware that we've introduced mandatory rotation requirements.

Again, I would like to thank you for inviting me and the European Commission today, and we look forward to cooperating with the PCAOB. Thank you.

MR. DOTY: Thank you, and your work on this panel has just begun. Chairman Land, please proceed.

MR. LAND: Well good morning, and it really is a great pleasure to be here. It's actually a surprise to be here; it wasn't part of my career plan to find myself at a public hearing with such an august body. But it's a pleasure to be here.

Can I briefly start by describing the role of the UK's Financial Reporting Council, because I think it will help put into context some of the changes that have been made. The FRC is an independent regulation whose mission is to promote high quality corporate governance and reporting to foster investment, and in essence it has two legs.

The first is codes and standards. It sets the corporate governance code for publicly listed companies. It sets audit and ethical standards, and it sets accounting standards. It obviously sets those standards under the sort of general auspices of the international standard setters.

The second leg is conduct. It reviews companies' financial statements, inspects audits, oversees professional bodies and disciplines auditors and accountants. It's more or less a regulatory one-stop shop.

So what drove us to want to enhance the audit report in the UK? Well, a number of your speakers have already talked about the wider impact of the financial crisis in 2008, and of course we suffered from it very, very significantly. But just sort of narrow down one of the repercussions from that crisis.

We did see a significant increase in the intensity of focus on the effectiveness of company stewardship, and the adequacy of the communications to the market of both audit committees and auditors, and in that, I'm sure we weren't unique.

As part of this, we also detected that investors were becoming increasingly frustrated that the audit and auditors operated in a black box. They felt they had no visibility over the audit and no -- and very importantly, no hooks on which to ask questions about the audit.

As an aside, and as a number of your guests have said, it's always seemed strange to me that the audit report, which is the only truly independent voice in a set of accounts, is the one part of the financial statements that there's normally no point in reading, and you've referred to the fact that your audit report over here hasn't fundamentally changed for 80 years.

Well, you think you've got problems; it hasn't changed in the UK for about 150 years. So against this background, in the first half of 2013 the FRC, after very extensive consultations, made two significant interlinked changes.

First, it revised the UK corporate governance code to increase the disclosure in a company's annual report, about the work of the audit committee, including the significant issues that the committee considered in relation to financial statements, and how these issues were addressed.

It also required that the board should make a statement in the annual report that they consider the annual report and accounts, taken as a whole, is fair, balanced and understandable, and provides the information necessary for shareholders to assess the company's performance, business model and strategy.

Second, the FRC revised the audit standards governing audit reports in a number of areas. First, the auditor is now required to report by exception, if the board's fair, balanced, and understandable statement is inconsistent with the auditors' knowledge, or if the matters disclosed by the audit committee describing its work do not appropriately communicate the matters that the auditor communicated to the audit committee.

Second, the audit report is now required to describe those assessed risks, material misstatement identified by the auditor, and which have the greatest effect on the overall audit strategy, the allocation of resources to the audit and in directing the efforts of the engagement team.

Third, the report should also provide an explanation of how the auditor applied the concept and materiality in planning and performing the audit. Last, the report should provide a summary of the audit scope, including an explanation of how the scope was responsive to the risks of material misstatement, and the auditor's application of the concept of materiality.

I think it's very important to emphasize that these requirements in our new standard are set at a very high level. We want to encourage different approaches, and to discourage standard paragraphs and boilerplate.

So what has the experience been in the UK so far? The new standard applies primarily to companies having a primary premium listing on the London Stock Exchange, and it was effective for periods commencing on or after the 1st of October 2012. So we now have -- we're now seeing a significant number of new style audit reports.

The reactions from the audit firms, essentially the Big Six, has been positive, constructive and very supportive. Many front line audit partners, as Sir David referred to, are genuinely enthusiastic about these changes, and have embraced the new concepts.

And indeed, it appears to be enhancing their position with management and the audit committee, and giving them a chance to demonstrate their depth of thinking and management challenge. We've not yet seen any signs of boilerplate or legalese. It is, of course, early days.

We're seeing experimentation and Sir David referred to the Rolls Royce report, but there are others.

We're seeing experimentation and real attempts by the auditor to be frank and open about their discussions of the risk they focused on, and how they satisfied themselves, the application of materiality and the scope of the audit.

Finally, initial reaction from investors has been very positive. It's given them some insight into the auditor's world, and disclosure around scope materiality has begun to generate discussions amongst stakeholders. This must be a healthy development in respect to both good stewardship and increasing stakeholders' understanding of what an audit can and cannot do, therefore potentially narrowing the expectation gap, and we hope increasing the confidence in audit, which I suspect in the UK at least, is at an all-time low.

Thank you very much for listening to me.

MR. DOTY: Thank you, Chairman Land. Chairman Schilder.

MR. SCHILDER: Thank you, Chairman Doty, and thank you very much for the opportunity to speak here about the work of the IAASB on auditor reporting. We are an independent global standard setter, and an important aim of our work is therefore to facilitate adoption and convergence of national and international auditing standards.

So I really commend the PCAOB for arranging this global panel, and I note that our collaboration with the PCAOB has been a critical part of our work to date. I also note many positive comments on how far we have come already.

Why is the IAASB seeking to change the auditor's report? This topic has been on our radar screen for some time already. In 2006, we commissioned academic research jointly with the Auditing Standards Board of the AICPA, and Professor Ted Mock, a panelist this afternoon, and others, provided us with global input about user's perceptions of the auditor's report.

And then of course the financial crisis has heightened the demand for more communication from auditors, and has highlighted over-arching concerns about the value of an audit and the relevance of the accounting profession.

Well that sparked the IAASB and our work to consider how best to respond to the needs of users, and audit reporting has been our top priority for the past two years. We issued two public consultations on the topic, and note the continued support for moving forward to enhance the communicative value of the auditor's report.

In our most recent consultation and exposure draft package in July 2013, unanimously agreed by the IAASB, focused on audit reporting, on key audit matters, other information and going concern. It also included other initiatives to increase transparency about the audit and the auditor's responsibilities.

Overall, as we learned, there's strong global support for the IAASB finalizing its proposals this year, and we have determined to do that.

Now the topic we refer to as key audit matters or KAM, similar to your critical audit methods, also CAM; it's just a K or C so far as we have come already. That topic is viewed by many as the most significant enhancement to audit reporting, and we propose to require auditors of listed entities to communicate KAM in the auditor's report, and others of course are encouraged to review that on a voluntary basis.

We define key audit matters as those methods that in the auditor's professional judgment they're of most significance in the audit of the financial statements of the current period. KAMs are selected from methods communicated with those charged with governance, the audit committee, and thereby providing transparency about communications that investors have said are important to audit quality.

Looking now at the common levels, investors, regulators and auditors largely support what we have proposed. But they've asked for more guidance and more specificity on how auditors should apply the decision framework, and they've also urged us to take steps to ensure that both the methods identified and how they are described in the auditor's report results in meaningful communication to investors.

Robust application guidance in our standards, as well as revised examples of key audit matters, will give an indication of how the IAASB expects the concept of key audit matters to be applied in practice. Preparers and others who do not support the concept of KAM often cite concerns with the auditor providing original information, that is, information that is not otherwise required to be disclosed in the financial statements.

Auditors have asked for more guidance on how to deal with circumstances that might result in the auditor communicating about sensitive matters. So our Board is exploring how to find an appropriate balance between auditors providing useful information about the most significant methods in the audit that was performed, while at the same time respecting the important concepts of client confidentiality.

We are very pleased to support. We have heard from global groups like the International Corporate Governance Network, IOSCO, IFIAR, the Basel Committee, World Bank - for our concept of KAM, and including KAM in the auditor's report will be a significant change in practice.

So the IAASB will do all it can to support effective implementation to achieve its intended aims. Now similar to the PCAOB, we have also substantively revised our standard addressing the auditor's responsibilities for other information.

Investors and others have emphasized the importance of information included in MD&A and other areas of a company's annual report. While this information is not audited, the auditor's attention to it helps to increase user's confidence in such information.

Our proposals included required auditor reporting on other information, including identification of which information has been read by the auditor. We will re-expose this proposal in mid-April for a 90-day comment period.

Our project also addresses the topic of auditor reporting on going concern. Feedback to our proposals has highlighted the need for a holistic approach, that is, that changes in auditing standards need to be considered in tandem with changes or clarifications to accounting standards.

We know the PCAOB's separate project in the area is closely tied to the FASB, and we have had similar liaison with the IASB to understand how they addressed this topic and are following their developments with interest, as we seek to finalize our proposals.

In relation to other improvements, the Board supports requiring disclosure of the name of the engagement partner in the auditor's report for listed entity audits, and we note, of course, the PCAOB has a similar proposal in process, and we look forward to hearing about the Board's plans for a way forward.

We also, of course, are taking into account relevant developments in Europe. I think, simply said, Europe is a done deal with regard to audit reporting. You heard from Nick about the UK FRC, and there are now more and more examples of this new style of audit reporting.

They are coming into the market, providing it can be done, and does result in helpful information for investors and others. I must say in my own country, where it's not in law but on a voluntary basis, already almost half of listed entities' auditor's reports also show this new model with great enthusiasm.

Stakeholders, including bodies such as the CFA Institute and the Center for Audit Quality, have encouraged us to take every opportunity to seek to minimize differences among the various approaches to auditor reporting, and we heard it this morning again.

We take that, and you do as well, very seriously, recognizing that we all have a duty in the public interest to respond to what we have heard through our multiple consultation processes.

So in conclusion, through its work on audit reporting, the IAASB believes it has a unique opportunity to increase the relevance of the audit, and to trust in the profession. Not only will the auditor's report become more informative, but we expect that this increased reporting could change the behaviors of not only auditors, but also management and those charged with governance.

A renewed focus by the auditor on matters to be addressed in the auditor's report, together with the increased attention by management and those charged with governance on financial statement disclosures, stands to benefit investors, and have a corresponding effect on audit quality and the credibility of financial statements. Thank you very much.

MR. DOTY: Thank you. We have ample time in this panel for all the questions, and I want to therefore begin with one for the panel.

Whenever one proposes a change in the audit model that involves additional disclosure, additional information, whether it's the name of the engagement partner, critical audit matters, there are objections in addition to different litigation regimes, which we'll talk about later and which will occur.

There are objections made which are difficult, and for which we must take account, we have to think about. Your experience bears on this. The objections are message-mixing. If you include information in the audit report, the message that this is the firm's report, the message that the binary opinion conveys will be somehow mixed and confused and obliterated or obscured. Investors won't understand it.

You run the risk, if you include information of the kind that your regimes are doing and that we are contemplating, of mixing message.

The second is one that is less of a problem for you, with your legal regime, but is a problem for us, and that is mission creep. Who are you as an audit regulator to tell audit committees what they need to know about or what they need to worry about, in terms of additional information that you're asking the auditor to comment on, such as the CAM?

That really leads -- that collapses into a very important argument, that by doing any of these things that we propose in these disclosure releases, we are compromising the authority, the independence, the effectiveness of the audit committee. This is a very big issue for us.

What have you found about this? Has -- you have all got the regime now. You're doing it or you're outreaching to find out about it.

To what extent are you concerned and to what extent should we be concerned about message-mixing, obscuring the message of the binary opinion, putting pressure on audit committees that properly is within their business judgment, and essentially getting over the line into compromising the effectiveness of the audit committee?

Is this something that should block us from -- should keep us from modernizing an audit reform model? What's happened, and what does your experience tell you? I'm sorry for the sermonette, but you'll hear some other sermonettes from my colleagues as we go forward.

MR. LAND: Shall I kick off, Chairman? Of course in the UK we do have an advantage, as you are well aware, because we set the corporate governance code, which covers the responsibilities of audit committees, and we set guidance for audit committees. So we were able to do these two things in parallel.

The truth was we were changing the rules of engagement for audit committees about the transparency of their work, and then it suddenly, as far as I'm concerned at least, I suddenly realized this would be a great time to change the audit report, so there was a little bit of serendipity in all this. So we don't -- we don't have that fundamental problem that you're dealing with.

Having said that, I mean there is no doubt, and I've seen it to a limited extent on one of my boards, that the new auditor reporting in the UK can create some additional tensions between the auditor and management. I personally think that's a good thing in principle. I think that, you know, increasing in the right way.

I don't think we should be worried about tensions being increased, as long as they're done in a mature and sensible way, and as I said, I think it's given the auditors in a sense, if I can put it like this, more authority.

I suppose the naive answer to your question vis-a-vis the USA, which I'm not really very qualified to comment on, is of course there's nothing to stop an audit committee or board inverted commas responding to what's in a new form audit report in the UK.

I mean the logic to me, if I was chairing an audit committee in the USA, and I say this with very little knowledge, so forgive me, and your proposal, as I hope they are, are enacted, my response I think, hopefully not defensively, would be to consider what more I needed to say in my audit committee report. So it seems to me that there's a remedy there.

MR. DOTY: Other panelists? Sven?

MR. GENTNER: Yeah. I can't yet talk about the implementation, of course, of our reform because it's just about to be decided.

But I think what has come out of the negotiations in Europe we feel is a good compromise between a realistic view on what the audit report can convey, but at the same time also taking into account more the needs of investors, who are an important audience for the report, and of course also the needs of the audit committee.

I don't think we're worried about message-mixing when it comes to our reform. The things that I've mentioned in terms of the tenure, the length of the period of the auditor is active there. The issues about addressing the expectation gap and other things, if anything, will make it clearer and better understandable what an audit report can do and cannot do, which I think are two important elements for investors to understand.

There is a risk that you do too much and there's a risk that you do too little, and I think it's very important that the investors know exactly what they can get out of such a report.

Finally, I don't think that there is a risk the audit committee will lose in terms of its importance will be bypassed or whatever, because both the audit committee and the investors play an important role in this respect, and I think these roles will be preserved.

MR. DOTY: Thank you.

MR. SCHILDER: When you talked about message-mixing, Jim, what struck me most is the quote "investors won't understand it." I find that -- it's not your quote, of course -- I found that almost offending to investors. Maybe that was true long, long time ago, but nowadays, I think that will be a completely unfair argument.

Because investors, as we learned from all the consultations and dialogues, are very interested, and they are really willing to do a lot of exercise and effort to really understand.

That's behind -- I mentioned the examples in the Netherlands, which is on a voluntary basis, so companies have chosen to invite their auditor to already report this new style, and just that public report from senior partner from one of the large firms, and I, as did my clients, in this case, made that choice.

So it's not so much about international compatibility, because these reports will be very unique per company. But it's also very important to fulfill and to accommodate outspoken wishes of investors, and investors have been much engaged in this dialogue.

Last year, we saw that in many examples where auditors spoke publicly in the AGM, and then they got feedback, of course, from investors.

So I think we have to take investors' wishes, as they now have expressed over so many years in so many ways, to take very seriously, and therefore it will be very interesting to see the analysis that of course will come, as so many reports come into the marketplace, how investors, analysts and others will comment about that, what is most helpful, what is less helpful.

On the other point, on the audit committees, well a similar observation, that actually these experiences reinforce the dynamics, the positive dynamics between management, audit committees and the auditors.

It's not only a challenge to the auditors; it's the other way around as well. It may result in better and more informative disclosures from management and audit committees, and certainly the UK is a very interesting example.

So rather than compromising, it's I think respecting regarding the independence of each of these stakeholders, and as we learned from our work on audit quality, as additional published in our framework for audit quality, these interactions between the various stakeholders are very important, and the more we can stimulate it, the better.

MR. DOTY: Steve Harris.

MR. HARRIS: Well Chairman Schilder, first of all I want to commend you for making the audit report the top priority over the past two years for the IAASB, and I commend you for all the work you've done on that. I also encourage you to finalize the audit report and what you're doing at the IAASB if possible in 2014.

I know it's been a very aggressive schedule, but I think you've outreached. I applaud you for all the work that you're doing and have done. Before I get to the questions, since time does run out, I just want to make a point somewhat separate, but a point that Rick Murray brought up on the last panel, which I'd like you to think about, because I think we ought to think about it.

It's not directly related to the audit report. I will get to the question on the audit report. But Rick Murray encouraged, as has the ACAP, that the SEC and the

PCAOB should compile independence requirements into a single document, and make this document website-accessible.

So on this issue of independence, I wish you internationally would consider doing the same thing.

Now with respect to the question, in your remarks, you mentioned the IAASB as exploring how to address concerns raised by some commenters, about the auditors providing original information. So would you please clarify what type of information the IAASB would consider to be original information, and then for instance, would the auditors, the disclosure of key audit matters be considered original information, since it's not disclosed by management as such?

Additionally, would you please expand on how the Board plans to address this matter. Finally, in encouraging you as aggressively as I have, to complete your project in 2014, that's with the caveat that it has support from users and investors.

MR. SCHILDER: Thank you, Steve. Thanks for the compliments. It was hard work. I can only refer to Dan Montgomery, my deputy chair and many on the Board and staff that have worked so hard, but inspired by the many comments that we received.

The independence requirements is something that we are discussing at the moment, and in our proposals, we also proposed a statement about the auditor being independent, but then also referring to let's say the sources of these independence requirements.

Now for a multinational group that can be quite a lot, and the same is true in the public sector. So we're discussing what is the best way forward there, and certainly the suggestion from Rick is an interesting one, whether it would help that you would have somewhere a combination of all the many requirements.

But again, if you take that from a global perspective, it's not easy, because it will basically point to the many ethical requirements, not just in, let's say, the ethics code of the ethics board, but many national requirements and very specific ones.

So there's probably a bit in between, an option that we will be discussing, whether it would make sense to focus on the group engagement partner and which requirements are applicable to him and his team, rather than all the component auditors.

So that's basically where we are. So we have not a final answer yet, but it on one hand needs to be practical and not result in a long list of many pages. On the other hand, it needs to be informative.

But as we are thinking about the concept of using that size also for let's say the kind of boilerplate, relevant boilerplate about responsibilities, this might be another interesting option.

Original information. Maybe the simplest answer will be what is -- what the company is required to disclose by the applicable accounting standards. That's the original information that has to come from management and the board, and it may not just be accounting standards.

It could be more, national requirements, et cetera. So that is management's and the board's responsibility. Therefore, the focus on key audit matters is what the auditor can comment upon that, from the auditor's work. And as I mentioned, we start with what the auditor has reported and will report to let's say the audit committee.

It's quite clear if the auditor would come to the audit committee and tell them information, where they immediately say well, we expect that to come from management or we have already received from management, that's not what is expected from the auditor.

What is expected from the auditor is sharing significant judgments that the auditor had to make, and that may include many comments, how that, of course, relates to specific items in financial statements or whatever.

The point, of course, is that there can be a bit of a gray line there. If the auditor wants to explain why certain audit conclusions or certain significant auditor work was done, you may want indeed to explain a bit more than already at that point has been in the draft financial statements or MD&A, whatever.

That, we think, would just reinforce the dynamics between management, the audit committee and the auditor, and that's why we also think that this should not be something that is only discussed at the very end of your reports.

It should already be part of the beginning, and focus on what might be key audit matters, and how then is management disclosing about that, and how the auditors would help in deciding about it.

But again, it's a bit of an area now of starting experimentation. So I think it's difficult to have a very black and white response. At least that's how we approach it.

MR. DOTY: Lewis.

MR. FERGUSON: Thank you, and thank you all for coming here from Europe. I just want to re-ask a question that I asked Sir David Tweedie again, which has to do with the potential for these additional disclosures to generate -- to degenerate into a form of meaningless boilerplate.

Clearly, that does not seem to have happened in the early days in the United Kingdom. I mean it's almost like a thousand flowers, let the thousand flowers bloom and that seems to be what happened. Do you see that as a continuing trend, and how in the IAASB proposal did you consider that issue, and what have you done to try to guard against it?

MR. LAND: With regard to the UK, well I mean it's a lovely expression. I think we are at this moment seeing a thousand flowers or at least a hundred flowers sort of blossoming, and they're all a bit different. So I think we are very, very encouraged so far.

We are seeing, which I think is good, I think we are beginning to see some healthy competition. It's obviously it's new. I think we are seeing a bit of competition between the firms, who can come up with the most appropriate audit report.

You've heard Sir David refer to Rolls Royce, which I think is a shining example at the moment. So I think, you know, I think we are going to see some competition there, which I think is healthy.

I mean, the other thing that we were very conscious of is our amendment to our audit report standard, which obviously is based on Arnold's standard, but our amendment to encompass these new requirements. It was very short indeed.

I mean we really did not, you know, it's no more than a page. I mean we kept it at a very high level, you know. We've refused in the consultation process to define too much, and we've made it very clear that we, you know, we expect them to use, you know, use their judgment and not to revert to boilerplate.

I think in terms of managing expectations, one thing that is inevitably going to happen is you're not necessarily going to see next year's --

I mean if I just take the board I'm on, which is Vodafone, its key financial risks and therefore the critical audit matters have basically remained the same, ever since I've been on the board for seven years, impairment because the mobile phone industry in Europe has spent a lot of money and gets impaired.

It's tax risk, because we have big fights with jurisdictions, particularly in India, audits, deferred tax assets, because we have huge amounts of losses.

So next year's audit report from Deloitte, and Deloitte was the very first to do, to produce a new style report, isn't likely to look that much different, I would judge, from last year's report. So we have to manage expectations there. There's not going to be a new Vodafone plan necessarily next year.

But we've genuinely seen the firms, effectively the Big Four so far, embrace this, want to -- want to comply with the spirit underpinning our standard, and to date, I think, should feel very proud at the way they've tackled this, quite frankly.

So I think all that bodes well for the future. I mean time will tell is the honest answer. But so far, it's way ahead of our expectations.

MR. DOTY: Jay Hanson.

MR. HANSON: Echo the thanks to the panelists for coming today, and I've got another question for Mr. Land, and the requirements or the -- I think you hesitate to call them requirements -- but the guidance for auditors for what to put in the report includes some of the details about the conduct of the audit.

What were the risks assessed, what was the materiality level applied, how was the scope responsive to the risk? We've chosen at this point to not go that direction, to have the details of the holistic conduct of the audit included, and we've gotten mixed feedback on some of the outreach about whether investors would find that useful. So for now we've chosen to not go there.

I'm curious if you, in all your considerations for adopting what you put in place, if you had feedback from investors about what they would find useful, and if -- obviously you chose to go this path, but maybe the decision points that you're weighing and whether to go this route about the details of the audit versus some other route, it would be helpful to hear some insight about that.

MR. LAND: I could certainly do that, and I mean first, it seemed to me -- I mean I was an auditor 20 years ago, but things have changed a great deal. But it seemed pretty obvious to me that if you are going to reform the audit report, and it badly needs reforming, that getting some idea of what the input into the audit is what is the output seems to me very logical, which is not just me; which was our starting off point.

But in some very extensive consultation, we had a lot of extensive consultation. We had an open hearing, such as yours. To the best of my knowledge, the investors, and you'll be hearing from investor reps from the UK tomorrow, were pretty unanimous in saying they thought this would be helpful.

Certainly in discussions that we've had post the adoption of this new audit report, investors have continued to tell us they found it very helpful. It's quite interesting that there is already a debate that's started, not that I'm aware at a company level.

But there's already a debate started in the UK amongst investors, amongst stakeholders about the whole concept of materiality. That's been driven, I'm sure, by the disclosures that we require and is a requirement, but also because the FRC has produced a sort of thematic review on materiality.

But it has begun to generate that debate, and I think the truth of the matter is, and I'm not in any way being rude about investors, but you know, I suspect that investors were somewhat surprised when they read in the Vodafone audit report that materiality right at the very top is 500 million pounds. I mean that's a lot of money, as it were.

So I think that they've welcomed it. We got very little pushback from the firms. A little bit of reservation from the firms, but very little pushback from the firms, and I think it's led to this sort of debate, and I think it's a civilized debate.

It's not the sort of pointing of finger at a company. It's really raising questions about the whole concept of materiality. In opening this black box, which frankly the audit is in, has always been in, I think it's very, very healthy.

I would also say, and this was not scientific, as part of our consultation, one of our senior staff members, McMarrick, who spends a lot of time working with Arnold and his team, we informally -- he informally rang 13 U.S. investors that he had contacts with, just to see what their reaction was.

You know, it was pretty unscientific and he's not here to report. But the report back that he gave to us was yes to materiality, yes to scope and yes to critical audit matters. Now I'm not suggesting that in any way is that significant, but when we put it to them in our language, those 13 were, I'm told, positive.

MR. DOTY: Jeanette Franzel.

MS. FRANZEL: Thanks for being here today.

I'd like to ask to what extent did each of your organizations analyze costs and benefits of the proposal before, you know, during the development of the proposals, and then in particular in the UK, what kind of post-implementation analysis is also being done on costs and benefits, and what were the results of your various analyses, and if there are any really important things that came out of there that we should be considering as we go through our own analysis of costs and benefits?

MR. LAND: We did consider cost, of course. We will be doing an analysis at the end of the reporting season. We haven't done it yet. Our own -- my own view, and that of my counsel and indeed I think the feedback from the firm, was that -- it's not scientific because we haven't done the appraisal, was that the cost implications are pretty low.

I mean at the end of the day, what are they reporting on? Well you know, in the audit plan, the audit strategy document, at the beginning of the audit, they set out the critical audit matters they're going to focus on.

At their closing report, they will report on those critical audit matters and if those critical matters have changed will tell the audit committee and report on it. I'm not sure where the other costs should be.

I mean essentially, put very crudely, I'm afraid in my language is the new-style UK audit report is not -- I mean the part that has to be written a bit more carefully is basically what the executive report in the audit plan says update that the audit committee get.

So I just don't see the argument why, apart from a bit of cost, of a bit more sort of checks and balance within the firm on this new-style audit report, I don't really see where the costs, where the new costs should be.

I mean if -- you know, they should be focusing on these things, whether or not they're reporting on them. So I just don't buy the cost argument, and I don't think -- it was certainly nothing -- certainly none of the firms put it forward as a major impediment.

MR. DOTY: The wings have been very quiet, both from the staff and the observers.

MR. SCHILDER: Just adding a bit to what Nick said, the consultations he mentioned were of course part of ours as well, and in a way the various consultations and research was all the time about pros and cons, because all the time the question is why are you doing this? Certainly in the beginning, there was more hesitation than now, I think.

To some extent, of course, there is intangible benefit, the failure to use is not something that you can easily quantify. You can't think about costs. We thought like mixed standard usually that should not be too much of extra cost.

But one thing to help this would be the starting point of what you have communicated with the audit committee, because there you have the issues as a gross collection, and also how you have communicated that to them.

So they're deriving something about of that for external users. It could be not that complicated, and actually we're pleased to hear feedback from partners who have done this in practice, and also the results from field testing that we got and said well, the audit partners almost intuitively knew what they had to report about it and how --

There can be, of course, special circumstances, where there are very sensitive issues, difficult issues, which certainly will take more time. But then the argument could be that it's worthwhile to spend that time, because it's just a matter of reality, and again, relevant to users.

MR. DOTY: The dilemma we face coming out of the concept release stage and going into our proposal was that where other information was concerned and the CAMs were being suggested, along with the auditor obligation to evaluate and to discuss the evaluation of other information.

What I actually heard in these meetings was a very strong investor endorsement of where you were, and a suggestion that we were really coming in with less than investors would want and could use, and that investors might want more from us.

On the other hand, we had equally strong voices suggesting that this was going to be a real departure. "A significant departure in practice" was the term that I think you used, Arnold, in terms of getting into evaluation of other information and discussing or revealing what our evaluation was.

To some sitting here, it might seem with these two polar opposites of where we were, that we might have gotten it just about right, that we might be just where we need to be in terms of coming forth with an augmentation of the audit report, and new information.

But given where you are and what you're hearing and what you have described to us today, how would you reply to people who say look, once you cross that line and once there is other information contained in what the auditor says about his evaluation or its evaluation of other information in the audit report, you have really crossed the Rubicon. You've made a change that has a slippery slope implication and you won't stop.

Is this something we have to worry about, in terms of any sip of the cup of other information, is fatal? Leading the witness is something that lawyers have a bad habit of doing, and chairmen are especially prone to it. But my colleagues are going to pay me back later with other panelists.

MR. SCHILDER: Thanks. In a way, I'm in an easy position. I've mentioned in my introduction that we very soon will re-expose our revision of ISA 720, which deals with the other information, and it's a difficult subject.

You can very much simplify it; that's how we start with a standard already, and you have that as well, and that deals with the auditor's responsibilities. There's to be a certain amount of work to be done, and the only thing we would like to add is to make the conclusion of that work explicit to users, whereas nowadays it's implicit. Nobody knows about it.

But we have published and exposed the draft to revise the standard, and we got a lot of critical feedback, in all fairness, because what exactly is the other information that you're talking about? What is the kind of work effort that you're expected to do?

That all has been part of our deliberations before re-exposing. In my now six years as chairman, it's the first time that we re-exposed something. So it just illustrates how complicated that is.

I hope that we now have struck a reasonable balance between on one hand the need for transparency that we see here as well, so making explicit the conclusion of the auditor's work here, without on the other hand making it a complete new assurance engagement or so.

So basically, the construct is the intelligent read by the auditor of the other information, and that's just a matter of reality. You cannot just have the French statement, but you see the whole context, and you have to do that with all your knowledge of the company, and what you have learned during your audit, and then you have to see where there are inconsistencies or maybe misstatements, an item that has to be addressed appropriately by management or you have to make a comment about it.

So that's what we soon will be re-proposing, this basic concept of this intelligent read. I hope that by that we have struck a reasonable middle position.

MR. DOTY: I didn't mean to goad the wings into action.

MR. BAUMANN: I was just waiting for all of you to finish your questions, and take my turn. In our proposal for changes to the audit report here in the United States, and in the responses to it, there's wide support from investors for change.

The audit profession, like in the UK I think generally is largely supportive of change. Maybe some differences on the details, but largely supportive of change to the audit report. Academic research, I think, largely supports the need for change.

The one objection really coming through us is from preparers, who are throwing a lot of reasons up as to why changing the audit report is a bad idea and will have bad consequences. I'm just wondering if any of you can respond to that, but certainly in the UK, since you've already had the experience.

Was there opposition from management about the changes to the audit report, or in the EU when your proposals went out, and in the UK then, what's the reaction been since you got a report from management? So both was there opposition and how is the reaction now?

MR. LAND: There was no opposition to this from preparers. Now let me then -- that sounds great. The truth of the matter is that the preparers, whether to their credit or not, didn't actually choose to take a lot of interest in this standard.

So from memory of the sort of hundreds of responses we got, we only got two from preparers. So I can look you in the eye and say it hasn't been a problem. But I do have to put an auditor's caveat on that.

But reaction, I mean I think post, I can just talk about my four boards, and I appreciate it might be a little -- a little not exactly fair to the preparers, because they probably know or some at least know that I'm, you know, I'm involved in this.

But it hasn't created, in my experience, any problems. That's obviously very limited. I haven't heard of the 30 or 40 reports out there. I wouldn't obviously necessarily hear. But I haven't heard of big issues.

I mean it has -- you know, you can well see it will create some tensions, and on one of my boards, you know, the CEO was a bit sort of uppity about when he saw the audit planning document, and saw that they were worried about a particular area of judgment, which -- you know which was about revenue recognition, which his first reaction, he wasn't crazy about it.

But I think -- I mean that's a good and healthy tension, I think, as long as it's amongst mature people. So no. The short answer is we haven't had any problems with preparers and no problems have come through, and indeed I think the Rolls Royce one, which everybody is instancing, I mean you know, that style audit report in the real world would not have been produced in the way it has without, in effect, the agreement of the company, because it was pretty pioneering. So they were happy to live with it.

MR. BAUMANN: I wonder in the proposals in the EU, in comments that you received, did preparers weigh in on that and what type of -- and the IAASB, what kind of reaction did they have?

MR. GENTNER: As far as I'm aware, and we've had an extensive public consultation, and you know, we've had long negotiations in the European process, where all sorts of parties also contributed, it was not a major issue that preparers came up with concerns.

Obviously, there were some concerns from the audit industry. But I think we found a good solution. So my feeling is that no, this is not -- this is not a key issue, and we believe that the reform will actually help companies by receiving more information, better targeted information, and also in their dealings with investors.

MR. DOTY: Mr. Kroeker, former chief accountant, current FASB member.

MR. KROEKER: Thank you, Chairman Doty. I know you've mentioned it's early days and the number of reports is dozens, not hundreds or thousands yet. But have there been examples where investors have come back and said this is important market-moving information, or information that surprises us?

The one example that's been cited, that's been more forward-leaning, also tends to at least possibly put the company in a favorable light, and whether or not there's been other examples, that might put a company in not such a favorable light, and whether those are the types of opinions you're seeing in the early days.

MR. LAND: I find it very hard to answer that question, and I think if I could suggest perhaps leave that question to the panel tomorrow from the UK. Liz, who is here from a very big investor association, may have a better view.

I honestly couldn't answer that question at this stage. Certainly I'm not aware that anybody's share price has sort of plummeted, but it really does raise the question of when should the audit report appear? I mean at the moment, it appears in the published financial statements annual report. Maybe it should appear when the premier announcement is announced.

MR. DOTY: Any Board members have any other questions?

MR. HANSON: Professor Schilder, I'd like to ask you another question on the other information proposal that you've yet to come out with, and I noted in your statement that you I think said something to the effect that you're trying to better identify what information the auditor essentially looked at, or had the ability to consider against the audit evidence.

I know that that's a concern that I personally have, is investors won't know the information that's in an annual report, what was subject to the auditor doing something to. It might be the most important information that they -- that an investor might consider the auditor might not have done anything with, because it was forward-looking information.

I know we're going to hear -- he stepped out of the room now -- from the esteemed Alan Beller this afternoon about sharp concerns about investors won't know what information was really subject to some procedures by the auditor and what wasn't.

So I was intrigued by your comment that you're trying to identify what it was, and I'm just curious as to where you're heading on how you would do that? I think about in the context of a comfort letter, and those of us who have been involved with it, it's a very extensive process, of actually circling individual sentences and numbers that the auditor did something to, and just kind of --

How cumbersome that is for somebody to actually read and understand, and how it's probably not possible in this context of the audit report? But just thoughts on where you're headed with this.

MR. SCHILDER: In the previous exposure draft, we had wider concept of what possibly could constitute other information, including press release, website information and what have you. What we learned from the consultation and the feedback is that we should narrow that down in a more manageable concept.

So we have brought that back basically to what we call the annual report, recognizing that not in every jurisdiction that is just one booklet or one publication, but it can be comprising more and several. So that's why at least it might be better doable to identify it by starting with the concept of the annual report, but nevertheless pointing to various publications that would be constituting that definition of annual report.

That certainly would include, if you just take the MD&A as an example, forward-looking information. That's why it's also important to explain the work effort, and there we make a distinction between on one hand, the inconsistencies between the financial statements and the other information that of course the auditor has clearly audited that, and has to perform some limited procedures to be sure about no material inconsistencies.

But on the other hand, the intelligent read is more important here. At least you can, as an auditor, read the other information, even with a forward-looking nature, with all your understanding of the company that you have acquired during your audit.

Then if you're dealing with restatement, you would say well, I really can't reconcile that with my understanding or my assessment of this company. At least it would take a further discussion. So it's not an explicit assurance or an additional work to let's say specifically assure all forward-looking information.

But at least you cannot ignore it, and that's why you have to apply this intelligent read.

MR. DOTY: Steve Harris.

MR. HARRIS: Chairman Schilder, could you summarize for us what the key differences are between your key audit matters and our critical audit matters, and why you think yours are better in terms of the investor or the user benefits?

MR. SCHILDER: Well at least we like more the term "key" than "critical." But it is kind of a just little joke. I think in essence, we do think that both of us are aiming at providing investors with the most relevant information coming from the audit, and the PCAOB in-depth concept has defined it in a bit more detail.

We focus on, as I've mentioned, starting with what has been communicated to those charged with governance. You can discuss whether that includes everything. But this is just an example of some detail about how you define it.

But we are currently discussing how we should adjust the language that we have proposed, the exposure that have to do better justice to the comments that we have received, and to make it even more clear. Also, on Lou's earlier point, avoiding to every extent possible boilerplate language, to really focusing on what is of relevance to users.

I think, Steve, that's exactly what you are aiming at as well. So we really look forward to our further mutual discussions on how we are moving forward, and certainly having had our Board meeting in March with on one hand a lot of support; on the other hand, a need to further redefine and going forward to do, I think, some in May or so.

That's a matter for some in-depth discussion. But very much starting from -- well, what many have said to us. There is a lot of similarity, and I'm not aware of a serious difference of opinion in this matter. But I'm always a bit of an optimist.

MR. FERGUSON: I have a question. This grows out of a just a position I made as I listened to the comments here. One was Nick Land's comment, that he thought that in the UK, one of the things that might be happening is that the various forms of reports could be leading to a potential kind of competition among the firms, which might be useful.

Then Jim, Kroeker's comment, that the one he did read, which involved a forward-looking one, appeared to be, you know, to give a very favorable picture of the company.

Is there a risk here that an auditor who begins to write a lot finds this a way of sending a quite favorable message that, you know, these people really did a great job? They were very thoughtful. We had to look at all these areas, but they did a very great job.

There's a way of sending this kind of subtle message to not so much users as other potential clients that, you know, if you hire us, you're really going to get -- we can say some really good things about your report. Is there a risk inherent in this approach, that that's what could happen, particularly if there variability among them?

The short question is discuss the negatives and positives of the variability argument and competition.

MR. LAND: That's a very good question. I don't want to -- I don't want to, as I said earlier today, I don't want to overstate that sort of firms are going to hire a tong who can produce the sort of -- either the most explicit or longest or most granular audit report.

But I mean I do think the firms are very conscious of what everybody -- what their competitors are doing, and they're no doubt weighing that up and balancing it. I suppose, I mean it is a very good question, because I think if you took it to the extreme in the way you've described, I mean I think there is a potential risk there if you took it to that extreme.

I mean my own view is that that won't happen, that the auditor will be -- continue to be responsive to its obligations. I'm readily confident about that, and it was -- we don't have, I mean we do have pending litigation against sources in the UK, but we don't have class actions, thank goodness.

I mean, you know, the back of -- the dagger or the sword of litigation, I mean, is hanging over them. So I don't think we've seen anything, based on one's knowledge, that I would consider to be a sort of reckless or over-optimistic statement.

I mean the Rolls Royce one, I know we keep referring to it, but it is, you know, it is a bit of a sort of mini-landmark in this short period. I mean as Sir David, it did talk about -- a lot of it was about revenue recognition, because it's in the aircraft engine business.

You know, on one it said well, on balance we thought the view the company had taken was sort of marginally optimistic, and on another key financial risk, they thought they were being marginally conservative. I mean it's very early days, but that struck all the readers as sort of a very balanced view of an audit report that was pretty granular.

I think it's something where you obviously have to guard against, but I personally don't see there's a big risk.

MR. DOTY: We're going to first thank Chairman Land, Chairman Schilder and Councilman Gentner for one of the more illuminating panel discussions that you can imagine, given the task at hand. We greatly appreciate -- we're in your debt for what you have brought to this by way of perspective, and I'm sure it's not the last time we will hear from you.

MS. FRANZEL: Do we have time for one last follow-up question?

MR. DOTY: It has to be a very quick hit. You have the last hit.

MS. FRANZEL: Great. I just wanted to follow up on Steve Harris' question, on the differences. We seem to be moving in the same direction, but there seem to be some pretty important differences between the CAMs, the KAMs, you know, and the other approach of the assessed risk of misstatement and disclosure of those.

How important is it, in your minds, for us to try to minimize differences now at this point in the process, or is this something that can be done several years down the road, after several years' worth of experience?

MR. SCHILDER: The answer to that is very straightforward. Everything that we can do to minimize differences now is a response to what many have said to us and I know about to you as well. As I said, I don't think there are important difference in concepts, but for example of course, there's differences in style. We have high level principles based in the application material. You have to have straightforward requirements.

But if you combine that with a detailed analysis, that gives rise to optimism. Nevertheless, we are not there yet, and therefore I think what we can do in the next couple of months to further bring that together, respecting of course your confidentiality requirements, that will be very helpful.

MR. DOTY: We will reconvene at one o'clock. With that encouraging -- that's an encouraging note on which to close. We should not let the perfect be the enemy of the good is what you hear you saying.

Thank you all. We'll reconvene promptly at one here. We have a panel coming on that has a very high yield rate. So please come back quickly.

(Whereupon, the above-entitled matter went off the record at 12:01 p.m. and resumed at 1:01 p.m.)

A-F-T-E-R-N-O-O-N S-E-S-S-I-O-N

1:01 p.m.

MR. DOTY: Well, it is slightly after 1:00 p.m. PCAOB time. So it's with pleasure that I welcome a truly distinguished panel. We're moving now into academic opinion, legal advisory and firm policy matters.

Ted Mock is the Distinguished Professor of Audit and Assurance at the University of California-Riverside. Prior to joining the University of California-Riverside, Professor Mock served as a professor of Accounting at the University of Southern California, professor of Auditing Research at Maestricht University in the Netherlands, previously, the Arthur Andersen Alumni Professor at the University of Southern California.

In 1983, he helped found the University of Southern California Audit Judgment Symposium, now an international symposium on audit research. His interests lie primarily in the areas of audit judgment, assurance service, evidential reasoning.

Alan Beller, partner, Cleary, Gottlieb, Stein and Hamilton. He served as the Director of the Division of Corporate Finance at the United States Securities and Exchange Commission, and as senior counsel to the Commission, from January 2002 until February 2006.

But the years tell only half the story. Among the accomplishments of this extraordinary tenure and service were the implementation of corporate provisions of the Sarbanes-Oxley Act of 2002, the adoption of corporate governance standards for listed companies, the successful completion of comprehensive securities-altering reforms.

Alan is a frequent commenter and contributor to the PCAOB's thought process, and we are grateful for it.

Douglas Skinner is the Eric Gleacher Distinguished Service Professor of Accounting at the Booth School of Business, University of Chicago. Professor Skinner is a leading expert in corporate disclosure practices, corporate financial reporting, corporation finance with a focus on payout policy.

His research addresses topics such as the causes and capital market effects of managers' corporate disclosure choices; how the legal and regulatory environment affect managers' corporate disclosures; managers' incentives to use their discretion in the financial accounting and reporting process, to manage reported earnings.

Prior to his appointment at the University of Chicago, he was the KPMG Professor of Accounting at the Roth School of Business, University of Michigan, where he had been on the faculty since 1989.

Joseph Ucuzoglu, the national managing partner, Regulatory and Professional Matters at Deloitte in Washington, D.C. He's a member of the firm's Executive Committee. In his current role, Joseph Ucuzoglu participates actively in the management of the audit practice, serving on both the board of directors and executive committee of the firm's Audit and Enterprise Risk Services subsidiary, Deloitte and Touche.

Previously, he served as senior advisor to the chief accountant at the United States Securities and Exchange Commission. In that capacity, he advised the chief accountant on complex auditing and public policy matters, and interacted frequently with other government agencies and Congressional staff.

He serves on the executive committee of USC's SEC Financial Reporting Institute. So we have a group of truly heavy and thoughtful commentators, and with that, Professor Mock, welcome. Please continue. The floor is yours.

MR. MOCK: Okay. I thought I was third. Well Chairman Doty and the Board, thank you for the opportunity today, and you're welcome for bringing California sun to Washington yesterday when I came.

MR. DOTY: We'll grant you that. We'll give you that.

MR. MOCK: Okay. So my comments today are founded on research I conducted myself, and the citations are at the end of the formal comment. I have some PowerPoint here, if I get this to work and you can see my opening slide, with has my information.

My presentation is actually in four areas. There's five points listed there, but a little background, the objective of my comments today, some key findings in the research that I've tried to help synthesize, and then some limitations and conclusions of what I'm going to talk about today basically.

As far as background, and Arnold Schilder mentioned this, I've done research a long time, as you mentioned in your opening comments. But I started in this area most with a study that I helped do, that's sponsored by the AICPA and the IAASB, about ten years.

But more importantly, I've chaired a group, a team that the Triple A audit section put together, at the invitation of the PCAOB, to synthesize research. The team that has continued doing work on this project for a long time is listed there. So we have a team, originally six, but of five of us who put this together.

I'd like to, before I go into my discussion objectives, I'd like to commend and highlight the critical importance of the PCAOB in supporting the work of the academic community, by among other things, formally considering research and I think in most of your activities.

I think this actually is an example of divergence between what the IAASB is doing and you are doing. So that's one step forward, I suppose. Okay. As far as the next section is my primary objective and my comments.

My main goal today is to address today's main topic, which is to consider the need for change in the auditor's report. I was specifically asked to focus on the proposed changes to the auditor's report, based upon published or relevant economic research. So that's the focus of my research.

This objective has been addressed in the team, I'll say our basically, papers and comments that we have put together. Firstly, it is a synthesis report that was submitted to you and eventually published, and actually five other related instruments, including comments to the Board and also to the IAASB.

We organized our research in these three research areas, research questions that we tried to address, and everything we've done is kind of organized along those lines. What specific information do investors and other stakeholders want to be included in the auditor's report, based on research.

A second research question, how do investors and other stakeholders use proposed additional auditor communications in their decision-making, and third, to what extent can the proposed disclosure be expected to close the communication and information gaps.

The third research question was kind of a forecast, because research doesn't often lend much insight on that.

The research framework underlying our analysis is based on communication theory, and basically the expectation gap, looking at that, and particularly looking at it from the standpoint of an information gap and a communication gap. The end of my comment is our framework.

Over the time that we've reviewed research, we've looked at about 130 research studies. In addition to that, our synthesis built upon an earlier study that was done by Church, et al. So it's based upon a lot of research.

Key findings. These are findings based upon published research, and trying to abstract this is a challenge, but this is what I'd like to say. There are three overall findings I would like to highlight.

Number one, users of financial statements do not appear to carefully evaluate the current standard audit report, because it is such a standardized product. Of course, that's been said many times. The reports are basically viewed as being the same.

However, reports that augment the standard audit report with information, such as going concern, uncertainties or internal control weaknesses, do seem to contain additional relevant content.

Number two. Users do want -- do seem to want more information on risk materiality and other information surrounding the specific audit. In particular, information -- users are more interested in information about the audit, like risk and materiality, than information about the audit process. This is what research basically says.

Number three. While significant research exists in many areas, there are many areas where a research gap exists. That is, where there seems to be lack of sufficient research evidence. A lot of things talked about today are in that domain. For example, is there message-mixing? Well, you know, there's no direct research I've seen dealing with that issue.

Oh, okay. Before I go to limitations, I'll make a couple of comments. Well, limitations and conclusions. Similar to a financial statement, one should not draw solely from bottom line. I've given you kind of bottom line summaries here in this formal concept. But you have to consider the details provided in various research that we're looking at, and the comment letters.

The research synthesized has both research methods limitations and sampling limitations, and there's no generally accepted research synthesis methodology. Our group had a real challenge in doing this.

Lastly, as has been mentioned earlier, much of the research -- the topic's been mentioned -- does not explicitly account for litigation risk or cost versus benefits in general.

To conclude with perhaps the most important finding of our review, academic research is fairly consistent across different research methods, time periods and economic settings, and suggesting that an important way to improve the communicative value of the audit reporting model is if it is not boilerplate. Thank you for the time.

MR. DOTY: Thank you.

MR. BELLER: Chairman Doty and members of the Board, I'd like to thank you for -- the Board and the staff for the opportunity to participate in the Board's public hearing regarding the proposal to advance the Auditor's Reporting Model. I'd also like to thank the chairman for that kind introduction.

I would mention that in addition I did, as was I think mentioned this morning, also serve as a member and counsel to the co-chairs of the Treasury ACAP in 2007 and 2008, and I am a member of the board of directors and the audit committee of a public company.

Having said all of that, I'm going to of course speaking this afternoon only for myself, and not for any of my current or prior affiliations, and my remarks today are a distillation of a and summary of the views I presented in a paper for these hearings, that I think will be published on the PCAOB website after this session.

I'm a strong proponent of changes to the auditor reporting model, that will improve financial reporting or improve the understanding of financial disclosure by investors, other users and markets and, as was also mentioned this morning, the ACAP recommended that the Board undertake an initiative to address the auditor reporting model.

Preparers, auditors, advisors, users and regulators should all be striving for better disclosure and understanding, especially of the material aspects of financial reporting and financial disclosure. More information is not necessarily better. Indeed, where the more overly fact focuses on immaterial items or is confusing in nature, it is not only not an improvement, but it also distracts from the usefulness of the overall disclosure.

In my view, the Board's task was to achieve the better, and not just the more. Today's sessions focus primarily on the proposal that auditors report on critical audit matters or CAMs, and I'll concentrate my remarks on that subject.

I also included some observations on the other information standard in my written presentation, and will address questions on that subject if anyone is interested. I regret that in my view, the CAM standard as proposed would lead to uncertain improvement at best, in either financial reporting or investor understanding.

I have two principle concerns in reaching that conclusion. First, the audit is a means to an end. Procedures that in the case of unqualified opinion at least, provide reasonable assurances that will improve and increase investor confidence in financial statements, coupled with an audit report that improves investors' understanding and enhances that confidence.

But the CAM standard only gets at financial reporting indirectly, and targets material financial disclosure imperfectly. As proposed, the standard will require disclosure in the auditor's report regarding audit difficulties, but may not be material to financial reporting or its understanding.

Second, the proposed standard will necessarily lead to disclosure made, or at least dictated, not by the issuer but by the auditor. The standard is designed either to require auditors to disclose information about issuers, or effectively force issuers to disclose information that they do not consider material, and that need not be disclosed under the current securities law regulatory framework.

This hodgepodge approach runs a risk of confusing rather than informing. In one of the Board's own examples, an auditor reporting on a hypothetical CAM identifies and discusses an issuer's significant deficiency in internal control over financial reporting, that is not a material weakness.

Why is this helpful rather than potentially confusing to investors, where by definition it is less likely than reasonably likely, i.e. remote, that the significant deficiency will result in a material error in the financial statements.

Further, under the disclosure framework, significant deficiencies are not required to be disclosed to investors, but rather to auditors and audit committees, in order to avoid conflating the material and the immaterial.

The Cleary comment letters and my written presentation suggests an alternative approach, because I really would like to see an improvement in the reporting model. To summarize that approach, we recommend that the Board focus on the disclosure of critical accounting policies and estimates, which is directly applicable to and by definition material to the quality of financial reporting and investor understanding of that reporting.

Auditor attention could be applied through a standard regarding critical accounting policies and estimates, and a statement could be included in the audit report to the effect that (a), the correct critical accounting policies and estimates are disclosed and (b), the description of the critical accounting policies and estimates is accurate and complete in all material respects.

This approach directly addresses core material elements of financial reporting, rather than proceeding indirectly to address auditing matters that may or may not be material. It would leave disclosure to issuers, where it belongs, and have auditors report on issuer disclosures.

Auditors and issuers would in fact, I think under this proposal, discuss critical accounting matters and estimates, and there would be more attention and more robust disclosure about those items. Auditors would have to make disclosure if they disagreed with issuers about what the required disclosure was, but otherwise the disclosure would be issuer disclosure. Discussions between auditors and audit committees could be fostered around issuer disclosure, and unquestionably material matters.

On another point, I've also been asked to address the proposed new standards from a legal point of view. Both standards, CAM and other information, carry legal implications and impact legal costs. Legal costs and issues are not in themselves reasons not to adopt new standards.

Indeed, they are acceptable and often necessary consequence, where the resulting changes bring benefits. However, the Board should consider the proposed new standards do raise some significant legal issues that should be on the table.

First, under Section 10(b) of the Exchange Act, and Rule 10(b)(5) thereunder, an auditor can be liable if it makes a statement in its auditor's report included in an annual report of filing that is misleading, where the requisite scienter standard is met.

Both proposed standards would require those affirmative statements. The requirement of the proposed other information standard raises more novel issues here, because the auditor under the proposal must make affirmative statements about its evaluation of that information, where the scope of other information is extremely broad.

As I read the proposal, all information, other than audited financial statements and notes and some supplementary financial information, must be included or incorporated into the reports, and secondly, where the proposed quote-unquote "evaluation procedures" involve a significant volume of evidence obtained by the auditor during the course of its audit.

Under the Supreme Court's decision in Janus, the auditor's affirmative statements could be the subject of a private right of action under 10(b)(5), predicated on any material inaccuracy or incompleteness of those statements. The potential liability would be new, because it does not currently exist on AU 550, where statements by the auditor as to other information are made only to the issuer.

Under the proposed CAM standard, the auditor would similarly be required to make a number of additional affirmative statements, and those statements could similarly give rise to a private right of action.

I readily concede and agree that the affirmative statements made by an auditor under the proposal we have suggested, regarding critical accounting policies and estimates, would also give rise to that potential set of issues, and the real question is whether the current proposal or the other approach would provide greater benefits to evaluate against those legal issues.

A particular litigation concern is raised by the proposed requirements under the CAM standard, that the auditor retain audit documentation with respect to each non-reported matter that would appear to meet the definition of a CAM, but was not reported as a CAM.

While this may be useful to some, including the Board, it also creates and requires an auditor to retain an additional detailed documentary record. This may accomplish little benefit to investors, while providing a potentially discoverable road map in litigation, and should be considered in that light.

One last or a couple of last points or issues under the Securities Act. The proposing release explicitly notes that consistent with existing AU 550, the other information standard would not apply to documents filed with the Commission under the Securities Act, but rather existing standards would govern auditor responsibilities for those filings.

There are, of course, other provisions of the Commission's rules and the Board's standards that apply to Exchange Act filings and not Securities Act filings. Perhaps the most apposite example involves management's evaluation of and auditor's attestation of internal control over financial reporting, which is required in an annual report, but which is not required in a Securities Act registration statement.

But Section 11 of the Securities Act would apply to an Exchange Act filing incorporated by reference into a Securities Act registration statement. This anomaly does not seem to me to be one that should overly-concern the Board in its standard-setting exercise. There is precedent for it.

The proposing release does create and does not address certain implications for incremental auditor liability under Section 11 of the Securities Act. In particular, it's not clear whether the statements regarding CAMs would or should be viewed as statements of an expert under Section 11(e), which would make them subject to Section 11 liability.

It's even less clear whether statements regarding other information, based on a quote-unquote "evaluation" rather than quote-unquote "audit," would or should be viewed as statements of an expert.

In the absence of clear guidance by the Board and particularly by the Commission regarding these new statements about CAMs and particularly other information, Section 11 litigation uncertainty will persist upon the adoption of such standards, and settlement dynamics, which are absolutely key and particularly important in Section 11 cases, will be affected. That's another consideration that the Board should keep in mind.

MR. DOTY: Thank you. Professor Skinner.

MR. SKINNER: Thank you. First of all, I very much appreciate the invitation to contribute to the important discussion about the Board's proposal.

To begin, let me state that I think the Board is to be congratulated for investing significant resources to understand whether the current reporting model, which as the Board observes has been in place without significant modification since the 1940's, needs to be modified, given the extent to which our capital markets and economy have changed since that time.

Further, I think most will agree with the general proposition that expanding the amount of disclosure about the audit process is potentially beneficial to investors. My comparative advantage in these proceedings is perhaps to inform the Board and other interested parties about the academic literature on disclosure, and offer some words of caution about the general thrust of the current proposal, that significantly expands the disclosures required by, as well as the role of auditors.

By way of background, I'm a professor of Accounting at the University of Chicago, and have served as editor of the Journal of Accounting Research since 2006. Prior to that, I served as editor of the Journal of Accounting and Economics for seven years. JAR and JAE are generally considered, along with The Accounting Review to be the top academic accounting journals in the world.

So I mention this because I have extensive knowledge of the accounting literature. My research interests span financial accounting, auditing, disclosure and corporate finance, and I generally take a strong empirically-oriented economic space approach to problems in these areas.

I also have consulting experience in these areas, and have in the past provided input to policy deliberations at both the FASB and the SEC. I may also mention that I started my professional life as an auditor at Coopers and Lybrand in Sydney, so David mentioned this morning the Colonies. Australia, of course, was originally a penal colony, so I'm hoping that after my remarks this afternoon I'm not going to be sent back there.

There's a very large literature in economics, finance and accounting on disclosure, both mandated disclosure; that is required disclosures such as 10(k) filing requirements, and voluntary disclosures, such as managers' decisions to provide earnings guidance.

I'll focus my comments on what economists have to say about mandated disclosure, since that is what we're talking about here. As a general proposition, I think it's fair to say that economists agree that increasing disclosure has benefits.

As the proposal observes, there is much theoretical work that shows generally that increased disclosure of information, assuming that information is in some sense relevant and informative to investors, has benefits in terms of reducing information asymmetries in capital markets, and can result in improvements in market liquidity and pricing, including a lower cost of capital.

However, there are also costs of mandating additional disclosure, both direct costs, such as proprietary and litigation costs, and indirect costs, which we might refer collectively to as unintended consequences.

In the case of the current proposal, I think these costs, which are inherently hard to observe and quantify, could be very significant. Moreover, I have some skepticism about the potential benefits of these disclosures, which are perhaps even more difficult to quantify.

This makes it hard to assess the cost-benefit trade-off involved in making a decision about the proposals. Let me expand on these points, focusing on the benefits first. Professor Mock and his co-authors have prepared a very useful and thorough summary of a particular part of the auditing literature in accounting.

Given Professor Mock's participation here, I will not reiterate the conclusions of that research. However, I will observe that as the authors of these studies acknowledge, much of the evidence offered on the espoused benefits of the new disclosures is based on survey and experimental data, as opposed to empirical archival data.

There is not much we can do about this. It is exceedingly difficult to design studies using real world data, that is, non-experimental or archival data, to assess the costs and benefits of disclosure.

However, in my view, we should be very careful placing too much weight on survey evidence from investors, who say they want more disclosure. Given that there is no cost to them, what else would we expect them to say.

I'm not sure we learned very much about the benefits of disclosure from this type of evidence. The logical extension of this idea, that the world will be better with more disclosure, is sometimes known in economics as the nirvana fallacy.

I would also point out that there is perhaps reason why the audit report in its current form has survived largely unchanged for many decades, not only in the United States but essentially throughout the world. As the economics literature makes clear, auditing generally, including the traditional pass/fail model, plays a central role in validating the information in a firm's general purpose financials.

This role predates regulation that mandated the disclosure of audited financial statements. Audited financial statements have been used for hundreds of years, dating back to at least medieval times in England. This implies that the basic attestation role of auditors, which includes the pass/fail model, serves an important economic function as currently configured.

Thus while surveys may indicate that certain users claim not to use the audit report very much, we should take care in inferring from this that the report, in its current form, is not fulfilling an important economic role, given the very strong survival value of the current model.

I worry that tampering with a model that has survived for so long will have consequences that we cannot easily predict. Let me turn to some of the potential cost disclosures. First, it seems to me that the proposed requirement for auditors to report critical accounting matters or CAM could expand the set of information disclosed about firms beyond what is currently required under the securities laws.

This seems like a very significant change in the whole financial reporting model, because it means that the audit report would potentially become a disclosure mechanism in its own right, beyond what is currently disclosed by issuers in their financial statements and related disclosures.

Thus an important element of the current model that management takes responsibility for preparing financial statements and that auditors then attest to the reliability of that information would change, because now the auditors potentially would actually be disclosing information about the firm directly.

To the extent that the new auditor reporting model expands firm disclosures, it seems likely that proprietary costs come into play. These are the costs to firms of additional disclosures that provide information, that provide important competitive information about the firm's operations and strategies to competitors, suppliers, customers or other entities.

For example, a bank's risk management strategies and procedures are likely to be one source of its competitive advantage.

To the extent that the auditor now provides additional detailed and specific information about the financial instruments the bank uses to implement that strategy, other banks may be able to infer useful information about the bank's risk management program.

Auditor litigation costs are also a concern. There is an extensive academic auditing literature that examines the determinants of audit fees. It is clear from both the economic arguments and empirical data that expected litigation costs are a big driver of audit fees.

By expanding the auditor's role and disclosures in the manner envisioned in these proposals, I think we can confidently predict that the plaintiff's bar will not have to work very hard to expand both the extent to which auditors are held liable for client firm problems, and the magnitude of the associated damages claims.

These are the obvious costs. However, the more pernicious problems engendered by these proposals fall under the general label of what economists call the real effects of disclosure. The idea here is fairly straightforward.

By changing the mandated disclosure regime, the underlying actions of the affected economic agents are not held constant. That is, if agents know ex ante that the information they will have to disclose after the fact ex post has changed, it will change the way they play the game.

The implication here is also straightforward. Once auditors and client firm management and personnel know that the auditors will be reporting additional more detailed information about the auditors as CAMs, it will likely change their incentives going into the audit process, and may even change how managers make operating and financing decisions.

For example, if managers now know that auditors will be reporting detailed information about how they get comfort about certain of the entities' transactions, managers and their personnel may well be less open and forthcoming in providing information to the auditor about these transactions, and may even change the transactions themselves.

This in turn will change how auditors conduct their audits, as they find the need to find alternative audit approaches. Moreover, even if we assume that the actions of the firm and its personnel are held constant, it seems likely that auditors will extend additional effort to either avoid having to disclose a CAM, or to support the required CAM disclosures.

Without much doubt, the actions of firms and auditors will change under the new requirements in ways that are hard to predict, and that are likely to vary across firms. This leads me to a suggestion with which I will conclude.

As a reasonably sophisticated consumer of financial statements for a variety of purposes, one of the major improvements I have seen in financial reporting over the last decade has been the addition to the MD&A of the critical accounting policies discussion.

In the interest of minimizing the extent to which the new audit model expands disclosure, which as I have argued could have a number of potentially costly effects, I wonder if the CAM proposal could not be modified to require the auditors to comment just on the critical accounting policies discussed by management in the MD&A.

Presumably, the auditors are focusing attention and additional work on these already, so that the real effects problem, as well as the expanded disclosure problem I have identified above could be minimized. Thank you.

MR. DOTY: Thank you. Joe Ucuzoglu.

MR. UCUZOGLU: Thank you, Chairman Doty, members of the Board and the staff. You should be commended for the leadership role that you're playing in this important dialogue.

At Deloitte, we have been engaging with a variety of external parties, exploring the ways in which the auditor's report should evolve, to meet the information needs of the capital markets and we're of the perspective that there is a critical need for action.

The profession has been talking about the need to enhance the auditor's report for over a half century, yet every time the subject is raised, a myriad of challenges seem to stand in the way of progress. In the late 1960's, the AICPA's Committee on Auditing Procedures suggested that the prospect of revising the standard form audit report was much like Moses smashing the tablets containing the Lord's Commandments.

This is not an easy task, but we shouldn't need divine intervention to make modest changes to the auditor's report, in response to the information needs of investors. This can be done.

In fact, if one looks back far enough in time, there are examples of tailored audit reports to the stockholders of major U.S. corporations in the early 1900's that make specific reference to areas of the audit that were presumably important in the judgment of the auditor, one could say a primitive form of reporting CAMs.

Somehow during the past 100 years, we've managed to go backwards with respect to the information content in audit reports. Investors are now expressing concern that the standardized model currently in use is not meeting the information needs of the capital markets.

So in our perspective, the status quo is not an option. We need to combine the benefit of an unequivocal pass/fail opinion with the transparency associated with providing some additional color. Frankly, your project is a pivotal moment to reverse the trajectory of the past century away from boilerplate, and towards an era of informative, tailored, transparent communications from auditors to the capital markets.

Enhancing the auditor's report will play an instrumental role in ensuring a vibrant audit profession rooted in quality. We've heard several of the panelists this morning speak of the benefits of enhanced auditor communication, extending beyond the additional information content in the report. I would wholeheartedly echo that sentiment.

The very act of an auditor crafting a tailored communication to external constituencies stands to enhance the connection of the auditor to the user of the audit report, the investing public. Reinforcing the auditor's public interest responsibility and fostering the healthy exercise of independence, objectivity and skepticism, attributes that lie at the foundation of a high quality external audit.

As the proposal moves towards finalization, it is important to be sensitive to the concerns that have been raised by several stakeholders, as to the appropriate source of original information about a company. Management is and should remain the primary voice of a corporation's financial performance.

But the auditor must be the voice of the audit that was performed, and there is much that can and should be shared with investors about the performance of the audit, without infringing on the role of management and the audit committee in the financial reporting process.

Our field testing of the PCAOB's proposal to identify and report on CAMs indicated that with modest refinements, the exercise is relatively intuitive and capable of being exercised. The starting population for potential CAMs under the proposal is quite broad, and it could be narrowed to ensure the auditor is focused on the limited subset of items of greatest importance to investors.

We also did observe the possibility that some environmental forces could drive the reporting of CAMs in the direction of standardization. I would like to believe that the market forces that were discussed earlier would cause auditors to strive for informative crafted communications.

But I do believe it's also necessary for the PCAOB to make clear, in any final standard, that the information content is intended to be customized to the particular facts and circumstances of each engagement.

The focus today and tomorrow is appropriately on the currently proposed changes to the auditor's report. But I believe it's important to also begin exploring more fundamental changes that may be necessary to provide investors with the information they'll need in the future.

When one thinks of the changes in our capital markets in recent years, including technology, the way stocks are created, the size, complexity and geographical scale of corporations, and changes in the investor base itself, you can't help but think that more fundamental changes in the public company reporting model are on the horizon, along with corresponding changes in the performance and reporting of independent audits.

Perhaps auditor assurance on information will be demanded on closer to a real-time basis, and the focus of auditor reporting may shift away from a point in time opinion and towards the integrity of the processes and controls that govern the information that companies disclose.

The type of information that auditors are associated with will also likely need to expand, and the PCAOB's proposal has begun an important dialogue.

As other information outside the financial statements becomes increasingly important to investors, we need to explore the extent to which auditor assurance and related auditor reporting should be provided on market-moving information, such as earnings releases, key performance indicator, non-GAAP information and at some point even forward-looking information.

Now I recognize I've ventured into several areas well beyond the scope of the PCAOB's proposals, and this is not to imply that all of this can or should be accomplished in the context of the current auditor reporting project.

But if we can't get this project done, how are we possibly going to tackle some of the additional challenges that lie ahead? We need to make this successful, to set the profession on a positive trajectory towards an ever-expanding and valuable flow of information from auditors to the investing public. Thank you, Chairman Doty.

MR. DOTY: Well, question time. Mr. Harris?

MR. HARRIS: Well first of all, thank you for that extremely positive statement, in terms of moving this project ahead, and your enlightened vision of the future. I couldn't agree with you more, in terms of some of the other issues that you mentioned, which are not directly related to today's assignment. But I do think that those are issues that the profession's going to have to focus on as well.

You talk about a subset of items of greatest importance to investors, and I know you've done a lot of investor outreach. Could you talk a little about that investor outreach and what, in your opinion, are the subset of items of greatest importance to investors, and then getting back to a point that I think that all of us have raised in one context or another, how do you avoid creeping boilerplate?

MR. UCUZOGLU: With respect to the feedback from the investor community, I'd suggest that there are two broad themes, one of which is you the auditor shouldn't ever forget that we, the investing public, are the customer. You the auditor learn a great deal of information during the conduct of the audit.

Some of that information would likely be valuable, in terms of sort of what you thought was important, how you scoped your audit, what risks are most significant, where you spent your time, what you did in response to those risks.

We, the ultimate customer, ought to have access to some summary of that information, and it's a proposition that's sort of difficult to argue with.

The second major theme would be sort of a concern that the basic financial statements comprise a smaller proportion of the total mix of information that investors are using to make decisions, and I don't think we should lose sight of the fact that the basic financial statements and the auditors reporting on them still forms the building block for everything else.

If those are compromised and there's questions about their veracity, the foundation for everything else is impaired. But the basic financial statements and the reporting on them isn't enough, and that as a result, we need to explore the possibility of reporting on the broader set of information contained outside the financial statements, with the caveat and the concern from the investor community that having the auditors involved with that other set of information shouldn't lead to that disclosure for management becoming boilerplate, the concern that if the auditors are involved, it will drive management's disclosure towards standardization, which would be a bad outcome.

MR. FERGUSON: Yes. Thank you all for coming, and thank you for the very thoughtful papers you have presented to us. They were both interesting reading and very thought-provoking.

I want to ask the panel to -- you know, one of the things that makes this process interesting for us right now is we are doing this while other places in the world have actually moved beyond it and it's being tested. We are seeing how it works -- maybe not exactly the same proposals we have, but proposals that involve the auditor saying much, much more.

And I'd like to have your comments on how we should look at particularly the experience in the UK right now. I realize it's a different culture. I'm reminded of that a little bit in some of the objections that are made in this proposal of the French intellectual who was asked to assess an idea, and he said, (Well, you know, it may work in practice, but does it work in theory?

(Laughter.)

And, you know, the question here, you know, is the UK has an experience that appears to be positive. Investors do not appear to be confused by this individual, this extra information. What do we make of that? How should we take that into account? Anybody? I mean, all of you. All of you. Whoever.

MR. BELLER: I'll take a first crack at that. I guess I have two observations. One, and I have not read anywhere near all, but I have read a couple of the UK reports. I think the guidance that the standard provides is very high level, much more high level than the PCAOB proposal.

I think that gives scope for auditors who are trying to do what Joe suggested, to really write customized disclosure about the most important matters. I dare say those most important matters -- the couple of ones I have read, those most important matters do come down to, in many cases, critical accounting estimates and policies that we talk about in our somewhat different regulatory framework.

So I think the way they have gone at it is one of the explanations for why you've gotten what I think are pretty beneficial results.

The second thing I would say is more cautionary, which is I know how to run Compare Right. Every company in America knows how to run Compare Right. I dare say they know how to do it in the UK as well. And I do worry that Company A will see something that Companies B, C, D, and E and its industry have done, and they have disclosed a little less information or they have disclosed a little more information.

And my unfortunate -- I won't call it a prediction because I'm not -- I don't think it's fair, but my unfortunate concern is that over time -- and we've seen this with risk factors in the United States, and we've seen it with MD&A in the United States. The tendency is towards uniformity and boilerplate and away from customized and original disclosure.

You and I should have this conversation in three years, and we'll see how they did. That's my --

MR. SKINNER: Could I add a couple of things? This will -- I was very interested this morning to hear Mr. Land's comments, and one of the interesting things about what he said, based on the initial experience in the UK, including his own experience, he talked about what I had mentioned, you know, using this language of real effects. He actually mentioned that there was tension between management and the audit team as a result of the new disclosures.

And, you know, to follow on what Alan just said, I think looking at the first year's experience is actually not going to be representative of what we see going forward in the sense that I think going through this process once management will learn some things about what is going to be disclosed that they didn't think about the first time around. And it may be very interesting to see how this disclosure evolves in the next two or three years.

The other thing about the UK model that is different to the proposed model here, of course -- and Mr. Land also talked about that -- was that there was a corresponding change in the Audit Committee model of disclosure that was paired with the auditor model that is not going to occur here.

So in the U.S., under the current proposals, unless something happens at the SEC or the FASB in conjunction with this, there is going to be an expansion of disclosure by the auditors and through the audit report that we have not seen in the UK. And I think that's a pretty significant difference.

MR. DOTY: Ted Mock, you had a light on?

MR. MOCK: I think actually that school is out on many of these issues, and that is one of the difficulties, isn't it? In the synthesis we sent to the board, we identified research gaps basically, and there is lots of them. But we are slowly seeing some things happening, right? I mean, we have some experience in France as to what -- some commentary about auditors, what effects they may or may not have, basically.

As I learned this morning, what, half of the reports in Holland now have some sort of expanded disclosure. So we will slowly get evidence we need, but it takes time. And eventually we will see them published in JAR and JAE I think.

MR. DOTY: Jay Hanson?

MR. HANSON: Well, thank you all for coming, and I want to especially thank our two esteemed professors for all the hard work you do in shaping the young minds that will be sitting at this table years from now giving us their views on the projects or issues of the day, as well as the research that you do.

I think this is a unique opportunity to have two professors with very different views of what their research suggests about the need for additional information in an audit report. With Professor Mock's research and Professor Skinner's research and views -- kind of taking a little different view on that. And I realize that academics, when given the chance, will usually take up the opportunity to critique each other's views and positions.

And so since I've got the two of you sitting here, and you seem to be on kind of different pages, I'd like to hear your perspectives on each other's views and get a little discussion going about how we reconcile your two positions.

MR. MOCK: I should go first because Professor Skinner commented a bit on our study. I'm not sure we disagree so much. I think he said basically that required disclosure has positive effects potentially. I believe you said that basically, and so I think that's kind of confirming of the general results that we see in our research.

It is a tremendous challenge integrating mixed evidence over a bunch of studies. That's for sure. But I'm not sure -- I mean, I would agree with him that the data often we look at in terms of surveys, these kind of things, is not the strongest evidence you would like to have. You'd like to have stronger evidence in different ways.

But I think in general we have the same conclusion. Do you agree with that?

MR. SKINNER: Pretty much. So, I mean, I would make a couple of observations. One thing I think when you're looking at the benefits and costs of disclosure, and, you know, not just in the auditing context or even in the financial reporting context, but generally there is a huge literature in economics on disclosure and regulation.

You know, it's in the law literature, in the economics literature, and so, you know, I spoke to that literature as opposed to specifically the accounting literature. And I think one of the big problems is, it is very hard to get a -- to measure costs and benefits. It is basically impossible. And so, you know, one of the things we sort of know theoretically -- and, you know, it's pretty much got to be the case that if you put more disclosure out there and increase transparency, it can't be a bad thing. So there are clearly benefits. It is just very hard to actually quantify those benefits.

So to give you an example, there is a tremendous amount of research in the last 10áyears or so on the benefits of IFRS adoption. And if you look around the world -- and I couldn't tell you how many studies there has been on this and how much discussion there has been about it, cost of capital goes down with improved IFRS reporting. But the benefits are pretty small.

So, you know, there is going to be benefits in terms of cost of capital, how large are those benefits in the U.S. You know, that may be small. But the problem is, if you ask investors, you get the problem that I mentioned briefly which is you survey them, and, you know, what -- if you ask someone, "Do you want more information?" they are pretty much going to say, "Well, yeah, I'd like more information." So I'm not sure how much you learn about that.

And so then you've got to counterweight that against the cost. And like I said, the real effects' costs -- I don't know that we really understand those very well, and that's why I'm a little cautious about this proposal because, you know, I think we are even seeing a little bit of evidence from the UK about, you know, some of the dynamics between management and auditors changing. We don't really know much about that, so --

MR. DOTY: Jeanette Franzel?

MS. FRANZEL: Thanks to the panel for your insightful comments and views and research. I found this panel very helpful and interesting.

Alan, I want to go back to the principles that you set forth. I find them very intriguing, and I'd be interested in knowing more about how you developed these principles. And then I'd be interested in hearing the other panelists' views on these principles and where we might be out of line perhaps, or where you see a lot of additional work that we would need to do under some of these.

And then, finally, I'm thinking maybe we need an eighth principle to deal with the long-term view as we are looking at potential changes. So your comments on those principles would be appreciated from all the panel members. But, Alan, if you wouldn't mind starting off by letting us know, how did you develop these principles, or where did they come from?

MR. BELLER: Oh sorry. This is the audit as a means to an end principle or --

MS. FRANZEL: This is on page 5 of the written statement that I've gotten from you.

MR. BELLER: Ah, okay. Hang on. Let me -- I won't say they come -- I think -- I can't tell you that I've surveyed the academic literature and derived them. There are no sources for these. These are -- if you start with my kind of first principle, which is what we should be striving to do here, including with the changes to the auditor reporting model, is to enhance audit quality and to enhance investor understanding of what financial -- of what is being said in financial reporting.

These are for me the things that kind of fall out of that -- that fall out of that concept. And certainly the first five are -- or the first six are, but the second -- the seventh is really just cost -- benefits should exceed cost -- that's a truism, a difficult-to-apply truism, as Professor Skinner has pointed out, but a truism nonetheless.

I think the other six really are subsets of the -- we should be trying to improve financial reporting. We should be trying to enhance investor understanding. You know, to repeat myself, my concern about the CAM proposal is I think there is a more direct way to get to a better place. And I think -- I don't think that issuers should be the source of disclosure and auditors should be the source of attestation is a -- is something written on a stone tablet somewhere. I think if you depart from that principle, you risk confusion. And that is the reason I view that as a kind of guiding principle. I don't think it has any -- it doesn't have any value standing there by itself. It is because of the consequences of it that I am concerned about it.

MR. DOTY: One of the problems -- Jeanette, am I clear? One of the problems I have --

MS. FRANZEL: I wanted to see if any of the other panelists wanted to comment as well on the principles.

MR. DOTY: Joe, do you want to hit it first?

MR. UCUZOGLU: Sure. Many have observed that one of the overriding principles here ought to be that management is the source of original information. And often the conversation ends there, and we don't go the next layer down with respect to original information about what. If it's original information about the company's accounting policies, and original information about the company's controls, management ought to be the source of that original information.

But if it's the original information about the audit that was performed, the auditor may well appropriately be the source of that original information. And so the auditor shouldn't be introducing wholly new topics that don't fit within the various categories of what management has already disclosed.

But there is clearly an interest from investors to understand how the auditor went about approaching the task, scoping the audit, where they focused, what kept them up at night. And if that's the kind of original information we are talking about, it ought to come from the auditor.

The one other area that I would touch on -- and it has been hinted at throughout the morning -- is this subject of materiality. And it is not currently part of the proposal that was put out. But we're of the view that there would be a benefit along the lines of helping users understand how the auditor went about approaching the audit for the auditor to disclose materiality.

MR. DOTY: Brian, your flag is up.

MR. CROTEAU: Thank you very much. Joe, I think you might have just started to answer the question I was going to ask you, but I just wanted to be clear. When you described the CAMs maybe need relatively minor modification relative to the way they have been teed up in the proposal, I just wanted to be sure I understood, when you're talking about things like a going -- an ongoing concern or a material weakness or a disclosure that is otherwise not required, you would in some way scope those out or rewrite the definition of CAM to exclude those, is what I think I understand you to be saying. But I just wanted to be sure of that, because if that's the case I think some might think of that as more than a minor change, but I just want to be sure we're clear.

MR. UCUZOGLU: So if we took them one by one, with respect to the possibility of the auditor touching upon going concern, I actually think the likelihood of the auditor venturing into territory that management hasn't covered would be mitigated if the FASB -- when it moves forward with its work on going concern.

With respect to the possibility of the auditor touching upon a control weakness that was less severe than a material weakness, that would be the auditor venturing into an area of management's controls that the securities laws currently don't require management to disclose. And so one can have a debate about whether that is information that should or shouldn't be in the public domain, but that debate ought to take place in the confines of disclosure requirements imposed upon issuers. So I would scope out a requirement for the auditor to mention a controlled deficiency less severe than a material weakness.

MR. DOTY: Marty, your flag is up.

MR. BAUMANN: Thank you. I have a question for Professor Mock and Joe Ucuzoglu. Both Alan Beller and Professor Skinner have suggested a solution to improving the auditor reporting model via the auditor reporting on critical accounting estimates.

So there's a number of issues there potentially, aside from maybe suitable objective criteria upon which auditors could report on CAE.

I guess the question I have for you, Professor Mock, and for you, Joe, based upon your outreach and your research, which included that users want more information from the auditor on risk, materiality, and other information surrounding the audit, do you think that would meet investors' needs in any way, the additional reporting on critical accounting methods? And that is for Joe and Professor Mock.

MR. MOCK: I think the research would support that, but there is nothing -- there are very few specific studies that look at those particular issues. So the general conclusion was, yes, it would probably be viewed positively. Now whether it would be -- affect decisions, affect behavior, these kind of things are basically unanswered.

MR. UCUZOGLU: I think there are two broad objectives that the PCAOB proposals are trying to accomplish, one of which is, you know, captured in the form of reporting critical audit matters, giving users a better understanding of where the auditor assessed there to be risk; and, second, to have the auditor say something about what they did with respect to other information.

I would actually view the auditor making a statement about the propriety of management's disclosures in the area of critical accounting policies and estimates as being perhaps more responsive and relevant to the second of those objectives -- the auditor reporting on other information -- than the first.

And there is clearly some level of crossover. But as we work through how to come up with a subset of information outside the financial statements that is both within the competence of the auditor and has a close nexus to the audit that was performed, that critical accounting policy disclosure is a rich source that potentially lends itself to some direct targeted form of auditor reporting.

MR. DOTY: One of the problems which I have as an aging securities lawyer holding a job for which I am not qualified and get no -- is to try to get below, to get beneath the objections that we hear in these meetings to determine how serious do they go. I mean, we have heard the words pernicious and undermines and -- there have been a lot of the adjectival -- the usual adjectival advocacy that comes with strong opinions from strong minds.

So mindful of that, I am trying to be sure that I understand what people whom I consider to be my mentors mean. And I start with Alan Beller as one whom I consider to be my mentor.

And going back to your advice to the co-chairmen of ACAP, Alan, I do not understand your position to be that we can't have -- that we, at our peril, disclose anything new.

Going to Joe Ucuzoglu's comments, and picking up on your concern about risk factors and MD&A, there is nothing statutorily that keeps the auditor from saying more than they now say, transgressing this line of what is said by management and commented on by manager, and it makes me wonder, where would we be if we had not begun with risk factors and MD&A.

There has been some boilerplate that has vexed all of us, but I don't think you're saying that your proposal or your alternative formulation keeps the auditor out entirely of the area of saying something new.

MR. BELLER: I guess a couple of thoughts. One, I think if the auditor and the -- with respect to the specific proposal about critical accounting policies and estimates, I think if the auditor and the Audit Committee have the kind of conversation that I am used to having with an auditor as a member of an Audit Committee what you would ideally get is better critical accounting policy and estimate disclosure by preparers and some sort of affirmative statement by auditors as to the -- it's all there. They have identified all of them, and they have described them correctly.

Just to be clear with what Joe said, I don't think of this as just another -- as part of the other information standard. I think it is -- I think auditors do enough work around critical accounting policies and estimates that it is fair to ask auditors to -- I'm not the standard setter, but you can -- you can develop a standard that would support an affirmative statement. Maybe it's a statement of negative assurance, but some kind of affirmative statement around critical accounting policies and estimates.

So that would not lead to -- unless the issuer said, (No, I'm not going to do that, and the auditor says, (I have to do that, then it goes in the audit report.

With respect to CAMs, beyond that, I guess two thoughts for you. One, I really do think if you get the critical accounting policies and estimates right -- and I'm not sure they're right in the current disclosure regime. I don't think -- too much of it looks like Footnote 1 or Note 1 to the financial statements as opposed to what it should be.

But the answer to the question, what keeps the auditor awake at night ought to be in that list of critical accounting policies and estimates. It shouldn't be, "Oh, my goodness, I had to spend 60 more hours than I expected I would auditing the cash reconciliation of the intercompany accounts." And I'm honestly not sure that that is not a CAM under your current definition. So that's one thought.

Our comment letters have said this, my written presentation said it, the oral one did not -- if you're going to go the way of the auditor talking about the audit, one, Joe and I agree -- and I use the significant deficiency example just because it's so glaring to me, but it's not obviously the only issue. There shouldn't be auditor disclosure about issuer matters.

Secondly, there has to be -- in my view, there should be a much more powerful materiality filter than there is in the proposal to get to the stuff that really is important. And the final point I would make because, I'm sorry, but the UK idea of materiality is $500ámillion or 500 million pounds.

I understand that that is the way auditors begin their analysis, but I'll also tell you when I sat at Corpfin -- and I'm sure the SEC folks here today would agree -- the SEC is never and should never sign off on a quantitative materiality standard. You go down a very slippery slope if you start talking about, well, materiality for this company is $300ámillion, because SAB-99 tells us correctly that that's not the way to think about it.

MR. DOTY: Mr. Kroeker? Sir?

MR. KROEKER: Thank you. I had a followup, Alan, and Professor Skinner perhaps as well, on the critical accounting policies and estimates. It occurs to me that is certainly one area where there is a big -- a potential for overlap with what we do at the FASB.

And to be clear, the first piece of this -- I'm speaking only on my own behalf. I'm not representing the Board in this view. But it does intrigue me as to whether that means we ought to be thinking about perhaps folding critical accounting policies and estimates into a financial statement footnote requirement, which would then, by that very nature, require auditor direct association. They already have certainly association with those in the context of you need to know what those are in order to do your audit. But if you pulled that into direct obligations that we impose through GAAP standards, would that -- I guess what would be the pros and the cons of that? Would that address the auditor association?

And also perhaps might address, Alan, your issue of it looks today like Footnote 1, and maybe we could get rid of redundancy and focus those on what they are supposed to be focusing on.

MR. SKINNER: Yes. I mean, I would agree. I think that would be very helpful because my impression, similar to Alan's, is that that initial footnote, as it currently stands, is not very helpful. And I think the point I was generally trying to make was that having some form of consistency about what the issuer's disclosure requirements are, including the accounting standards and what the auditor was reporting on, having those things meshed together I think is pretty important. And, I mean, the UK example, we are seeing that in a different form, but we are seeing that same thing.

The thing that concerns me a little bit about the U.S. proposal right now is that the auditors, you know, in some situations I think would go beyond what the issuer is currently required to disclose, whether it's through the FASB or the SEC regulations. And that is -- we just don't know what that is going to do.

MR. DOTY: I have one more question, but I want to be sure my colleagues have a chance. Jay, do you have --

MR. HANSON: Yes, I've got one for Alan and one for Joe. So, Alan, you were heavily associated with ACAP, sat there during all of the discussions. And I thought it was interesting this morning on the panel, the opening panel, that most of the members here supported what we're doing relative to CAMs and the proposal, and, obviously, several wanted to go further than what we've done. And yet you're kind of in a different space than they are about this, and just your thoughts about not --

I know you can't speak for other ACAP members, but just your thoughts about maybe why you're in a different place than some of the others are.

And before you answer, I'll just give Joe a question to think about, which is if you can just talk a little bit more about the field testing that you've done and maybe some of the discussions you have had with management and audit committees about the proposal, because we have more than 200 comment letters from preparers saying we don't like this, and you've probably had discussions with about 25 percent of those people that sent us comment letters, and just your thoughts and discussions that you had with the preparers about your views versus their views being against it.

So I'll turn to Alan.

MR. BELLER: I heard the back end of that panel. So I think perhaps the principal reason I'm coming out at a -- and I'm not sure it's a hugely different place, because some of what Jeff Mahoney said sounds a little bit like what I was saying in terms of focusing on the critical stuff and the policies and estimates and not into the weeds of the audit.

I challenge the notion. I guess I have principally two answers for you. One, I challenge the notion that the details of the audit process are what -- and, look, I'm not going to say investors shouldn't have what they think they want, because they're the investors and -- but the details of the audit process just strike me as much less important in terms of both of my objectives of enhancing understanding and making the audit better than some of the things I have been talking about.

The second reason is I think just your experience -- my experiences formed me. I spent a lot of time with the preparer community. I spent a lot of time with audit committees. And I -- you know, I can't deny the fact that I come with a little bit of that perspective. And I think that probably somewhat shapes my views.

I honestly have not spoken to -- and I have talked to a fair number of preparers. I'd love to hear what Joe is going to say, because I haven't talked to a single preparer who is really enthusiastic about this. I am more enthusiastic about it than they are.

MR. DOTY: Lewis?

MR. UCUZOGLU: Well, you have found more preparers who are enthusiastic about this than I have. You had asked, Jay, about some of our experiences during the field testing process. I would say that the number one concern that has been articulated really relates to this possibility of the auditor disclosing original information about the company's financial accounting and controls.

And the subset of that broader set of concerns that is most often raised is this issue of the auditor disclosing a significant deficiency that management wasn't otherwise required to disclose. I suspect if the proposal were modified in such a way to alleviate that outcome that it would take a lot of noise out of the system. There have also been concerns raised about issues such as timing and the crunch to get the report out, concerns around or the effect on the dynamic in the board room with respect to auditor -- Audit Committee communications.

But, frankly, one can come up with a long list of the risks of doing something and moving forward. What I'm equally focused on is the risk of not doing something. And I was struck by sort of one particular piece of Professor Mock's research; 91 percent of users of audit reports don't read it.

So if you're sitting in my shoes, and 91 percent of your customers don't read your basic product, what is the risk to the viability and relevance of the profession of not evolving to meet the information needs of investors? And that ought to be every bit as much front in mind as the risks which I believe are manageable of crafting the proposal in such a way that it can be moved forward.

MR. DOTY: Lewis?

MR. FERGUSON: I guess the question I have grows out of some of the discussion here, and particularly the assumption that there seems to be that the proposal that Alan had and Professor Skinner had that instead of our proposal on CAMs that what the auditor do -- should do is really comment on whether the critical accounting policies are the right ones and whether the information about them is correctly stated.

It seems to me in many ways they are quite different approaches in certain cases. They wouldn't necessarily always be, and that's what I want to get to. But they are different approaches in the sense that we are asking the auditor to speak originally, but not about -- we are just asking the auditor to speak originally about what the auditor did, as Joe said. What did he do in the audit? And what were the critical matters?

And those may or may not intersect with the critical accounting policies. And it seems to me that we have at least come -- or at least I have come to believe, in listening to investors, that investors would like to hear about what the auditor did.

I mean, what I thought was interesting about the discussion about Footnote 1 is it strikes me that if the company is in fact adequately disclosing the critical accounting policies, in fact the auditor may do nothing but look at critical accounting policies. I mean, is that a fair statement? Does that reconcile things or not? Or are we in fact talking about two really quite different approaches here?

MR. BELLER: I think we are talking about two different approaches. I'm not sure they are completely different. I think they are related. And it goes back to the question that we sometimes use to frame what we are trying to get to here, which is, what keeps the auditor awake at night?

And as a lawyer who thinks about financial reporting and financial statements and financial disclosure, and talks a fair amount to auditors, I think what keeps auditors awake at night is principally, I blew the audit and the numbers are wrong.

And, you know, the individual items of that question really should be -- and if they're not, issuers and auditors are not doing their jobs currently -- should be what is listed in critical accounting policies and estimates. Those are the things that are the likely items that will lead to a blown audit.

And if I'm an investor, that is what I really want to know the most. I take the point that investors want to know how auditors conduct the audit and what they scoped out, and that is a different point. But it is not a completely unrelated point to my vision of what keeps auditors awake at night. And I think you've got to kind of think about the two of them together.

MR. DOTY: Joe? Steve? Is there another

comment? Sorry. Sorry, Doug.

MR. SKINNER: I just had one simple observation. Having read a number of the examples we now have from the UK, a lot of them actually do look quite similar to the critical accounting policies. I mean, if you look at the -- I've read the HSBC audit report that came out a few weeks ago, the Rolls Royce one. Some of the things are very similar, and the informative part is of course what the auditors did about this.

So I think there could be a fair bit of overlap between potential CAMs and what we are seeing in the UK.

MR. DOTY: Steve?

MR. HARRIS: I think I take the Sir Tweedie view that was expressed this morning about original information, I think, Alan, which is somewhat at odds with yours, and in terms of keeping the auditor awake at night, and more in lines of what, Joe, you were articulating. And nobody did more work on Sarbanes-Oxley and promoting the rules and regulations in a timely fashion or a more brilliant job than you did.

But I read Section 101 as giving the PCAOB considerable authority in this area and considerable liberal authority in terms of information provided by the auditor to the user, or in this case the investor. I mean, 101 says -- which defines the mission (to protect the interests of investors in the preparation of informative audit reports.

And so what informative audit reports? I think what I'm hearing from users or investors is it goes a little bit beyond enhancing investor understanding of financial reporting. So I think there is a disconnect, and I think that to the extent that we can either bridge that disconnect, I think that it's important that we continue to focus on it, because I think once again there is the expectation gap in terms of what is expected from the audit report.

And then I'd just ask the question, in terms of your analysis and your testimony, which once again I thought was typically excellent, you focus a lot on the Treadway Report. But I'm wondering, what is your original statutory authority with respect to supporting your view about the auditor not providing original information about the company, putting aside whether we should or we shouldn't? Is there any statutory authority along those lines, or is it just -- is it the --

MR. BELLER: I don't think -- I don't think this is -- let me be absolutely clear. I don't think this is a question of authority. I think 101 gives you the authority to make and adopt the proposal that you've made. I think the question is whether there is a better idea, but it's not -- do not misread me as saying you don't have the authority to do it. I don't think that's an issue. There may be others who disagree with me, but I don't think that's an issue.

MR. HARRIS: And then, how do you both -- we have asked this question of all the witnesses. How do you avoid the creeping boilerplate? And what do you put in the audit report? And what do you put in an appendix?

MR. UCUZOGLU: I will start, Steve. You know, this idea of an appendix has been raised at various times. And it is at least worthwhile to consider whether there is some important baseline information that doesn't change over time from year to year, and that folks ought to have access to sort of go back and refresh the basic confines of an audit, but that essentially clutters up the report and has the potential to obscure the really important stuff that does change from year to year.

And so I wouldn't necessarily be averse to at least exploring the idea of some basic information about sort of, what is an audit, in an easily retrievable form or linked to a report. It is worth exploring.

With respect to the issue of boilerplate, there are a host of reasons that we are all well aware of as to why pressures might exist to move in that direction. But I actually believe that the most powerful tool that you have within your disposal is to make clear in the standard that some form of standardized, you know, I pulled this off the shelf for this industry -- you know, while it might serve as a guidepost in terms of you ought to think about these particular matters, and here is some of the types of information that might be relevant, that at the end of the day it ought to be a tailored communication and that you mandate that through the standard, which would, again, sort of put the auditor in a position of meeting the professional standard that we are required to tailor something specific to the circumstances of the engagement.

MR. DOTY: Jeanette, you have a parting shot coming.

MS. FRANZEL: I'm struck a little bit by the hints of cynicism among the panel that the various players in the system will take this requirement and do the wrong thing with it. You know, they will quickly turn it into boilerplate. You know, auditors will stop communicating with audit committees, and management and auditor communications will be chilled.

And so I want to explore a little bit, because I think, Doug, you raised the issue about management and auditor communications and how that could deteriorate potentially with this type of a requirement. Alan, I think you raised the same concern. And, Joe, you thought that this is a manageable risk, so I'd like to hear all of your comments on that issue.

MR. SKINNER: Yes. I mean, I was just raising the general economic principle, which I think is pretty well established that whenever you change the disclosure regime, the mandated disclosure regime, whoever is subject to that disclosure are going to change their actions in some fashion. And I think, you know, it is likely this will happen.

Now, some people talked this morning about this happening in a positive way, that the auditors and the management had a more energetic discussion. So it may be a positive change rather than a negative change.

But, I mean, I don't think there is any doubt that, you know, some of -- the proposal, when you read it, says at some places things like, (Well, what the auditors are doing right now won't change. All we're doing is we are making that information available.

I think that is not the case. I think as soon as you disclose something you then are going to change economic behavior. And I think what I don't know and what is very hard to predict is how exactly that will change.

MR. DOTY: It has been a terrific panel. Ah, 50 seconds, Alan.

MR. BELLER: Sorry?

MR. DOTY: Fifty seconds.

MR. BELLER: Okay. Jeanette, the cynicism, to the extent you are detecting it, comes out of thirty-plus years of experience. And it's not unique to your proposal. The MD&A suffers from this problem. Note 1 suffers from this problem. Critical accounting policies and estimates suffer from this problem.

One thought I have is I think -- I mean, when I was at Corpfin, we -- comment letters, stop writing boilerplate. It's a long, slow struggle. One thing, aspirationally, I would suggest, not just what Joe was talking about but all three agencies take an initiative to try to encourage preparers, auditors, to do a better job of that kind of -- of that kind of disclosure.

On the cynicism about audit committees -- the red light is on, so I'm not going to say anything.

MR. DOTY: Eternal vigilance.

This has been an extraordinary panel. You all have made a great contribution to the dialogue. Thank you.

I am going to introduce the new panelists as you all vacate and as they come to the rostrum. We are on time and we are going to stay on time, but thank you all. This has been wonderful.

This panel -- we have -- we are now going to focus on -- this was a panel that showed the range of perspectives on this proposal. We are now going to talk about critical audit matters related to the audits of large companies, and we have an extraordinary panel.

Ann Cavanaugh has been a Managing Director and a global head of accounting policy at BlackRock since December 2011. She is a member of BlackRock's New Products Review Committee, which analyzes and approves new products offered to clients, and their Global Valuation Committee.

She is involved in the firm's project to assess IFRS implementation and is one of 35 women selected to participate in BlackRock's inaugural Global Women's Leadership Program. She served as the Director of Accounting Policy at BlackRock from July 2008 until December 2011. She previously served as the Director of Accounting Policy at Merrill Lynch from October '85 -- '95 until July 2008.

Wallace Cooney is Vice President of Finance and Chief Accounting Officer of Graham Holdings Company, where he is responsible for accounting, internal and external financial reporting, consolidated budgeting and forecasting and income taxes.

Previously, he was Director of Consolidation

Accounting and Financial Reporting at Gannet, where he directed internal and external financial reporting, and before joining Gannet he was an auditor at PriceWaterhouse.

He serves on the Committee on Corporate Reporting of Financial Executives International, a current member of our standing advisory group. And it is always good to see Wallace here.

Kevin Reilly, America's Vice Chair, Professional Practice and Risk Management, Ernst & Young. He is responsible for the national office accounting, auditing, and U.S. Securities and Exchange Commission reporting functions. He oversees the quality and the risk management activities of the firm's assurance practice. He has been with the firm for more than 30 years during which he served as a coordinating partner for major clients and the media and entertainment sector and for financial services, private equity industries.

He previously served on FASB's Financial Accounting Standards Advisory Council, a current member of the PCAOB's standing advisory group.

Aulana Peters, a former partner of the law firm of Gibson, Dunn & Crutcher from '84 to '88, a Commissioner of the SEC from 2001 to 2002. She was a member of the Public Oversight Board of the AICPA. She has also served as a member of the FASB's Steering Committee for its financial reporting project and is a member of the Public Oversight Board's Panel on Audit Effectiveness.

She serves also on the Comptroller General's Accountability Advisory Council and the Board of Trustees of the Mayo Clinic, a director of Northrop Grumman, 3M, and Deere & Company. And she also served on the board of Merrill Lynch during the past five years.

A panel extraordinarily well qualified to talk about this in terms of the impact on major companies.

Ann, would you please proceed? Thank you.

MS. CAVANAUGH: So thank you for the opportunity to be here today and share BlackRock's views regarding the proposed changes to the auditor's reporting model.

For most of you -- I'm going to assume they already know -- BlackRock is a global investment manager, overseeing approximately $4.3 trillion of assets under management at year-end 2013. BlackRock, together with its subsidiaries, manage approximately 3,400 investment vehicles, including registered investment companies, hedge funds, exchange traded funds, collective trusts, as well as separate accounts.

As an investment manager, we are in the unique position to provide commentary on the proposal from several different perspectives. One, that of a corporate preparer; two, that of an investment fund preparer; and, three, as a user. For purposes of my remarks today, my response primarily will reflect those of our research analysts as users of both financial statements and auditor opinions.

So overall we commend the PCAOB for undertaking a project to enhance auditor communications and provide information useful to users of financial statements. Overall, we support the concept of communicating critical audit matters and believe that much of the framework will provide useful information.

As users of financial statements, our analysts have expressed that they find value in identifying critical audit matters, particularly matters resulting from changes in principles or in areas that involve significant judgments, which therefore may require further analysis and discussion with management in order to be properly understood and reflected in their analyst models.

The additional information provided will be particularly useful to our analysts to the extent that it provides a better understanding of financial risks, including future cash flows of a company.

We are concerned, however, that some investors may misinterpret the communication of a critical audit matter as indicative of an issue with respect to the quality of financial statements. And, as a result, we would suggest additional language be added to the auditor's report to explain that critical audit matters are not necessarily indicative of a financial statement deficiency.

We wish to emphasize that certain entities, such as 1940 Act investment companies, have inherently less complex business models than traditional operating companies, and, therefore, may not warrant disclosure of critical audit matters.

Because mutual funds assets are primarily invested in securities, it is likely that the only fair valuation of investments would be deemed a critical audit matter. Given the extensive disclosures that are already required under the FASB's Accounting Standards Codification 820, we recommend clarifying that routine audit procedures, such as testing Levelá1 and Level 2 fair valuation inputs would not be deemed critical audit matters, absent significant judgments therewith.

Accordingly, we would suggest there should be a rebuttable presumption that the auditor's report on most investment companies state that there are no critical audit matters to communicate.

From a preparer's perspective, we do believe there will be additional time and expense associated with interacting with and providing information to auditors in connection with the required assessments and reporting of critical audit matters and their documentation of such matters.

We do not believe that the auditor should be required to document why all other possible critical audit matters were not included as critical audit matters in the auditor's report.

We continue to recommend that the description of critical audit matters in the auditor's report exclude audit procedures performed or an indication of the resolution. In order for the auditor to convey the context around such matters, it may be necessary to include expansive details that could overwhelm the auditor's report.

Additionally, inclusion of such information may lead a user to believe that the auditor is expressing a piecemeal opinion on individual matters, and any given -- and any audit procedures enumerated may be taken out of context or misunderstood, given their necessarily abbreviated descriptions.

Furthermore, we are concerned it may be difficult to succinctly convey the nature of an audit procedure in a manner that qualifies -- I'm sorry, in a manner that provides users with an understanding of the full scope of these procedures and the quantitative and qualitative factors that went into reaching their decision.

We recommend that the Board clarify that highlighting audit procedures should be infrequent. However, if included, only those most significant procedures should be identified and then only when it is important to understanding why the matter was identified as a critical audit matter.

With regard to the auditor's responsibilities for other information, BlackRock supports including a statement clarifying the auditor's responsibility for other information and documents containing financial statements. We do not, however, support changing the auditor's responsibility for other information to evaluate such information versus the current requirement to consider the information.

We believe that the scope of the audit procedures involved in evaluating the material inconsistency and material misstatement of fact criteria should be related solely to financial information included in the filing, such as MD&A and exhibits, and should not extend to documents incorporated by reference, some of which may have been superseded, and should not extend to other non-financial information.

Such procedures are not routinely performed today on documents incorporated by reference, contrary to the statements that were included in the proposal which states that the Board believes, in practice, some auditors currently perform procedures related to other information similar to procedures in the proposed other information standard.

However, if procedures are applied to other non-financial information, these criteria may require significant judgments given the complexity of many corporate agreements. We do not believe that the costs associated with such procedures, including preparation of related audit documentation, would justify the benefit received.

Many analysts and users of financial statements already assume that MD&A and exhibits are read by the auditors for consistency with the financial statements. And, therefore, we believe that reporting on those procedures performed would clarify the auditor's role and responsibility.

In closing, we support the Board's efforts for increased transparency and providing additional useful information to users of financial statements. As users of financial statements and auditors' reports, our analysts have stated that succinct disclosure of critical audit matters in the report is a step forward toward accomplishing that goal.

We encourage the PCAOB to work together with the IAASB to standardize, to the extent possible, the form and content of the auditor's reports in order to increase comparability and ease of use for users who may be readers of reports subject to both sets of standards.

Thank you for your time and attention to this matter.

MR. DOTY: Thank you.

Wallace Cooney?

MR. COONEY: Good afternoon. Thank you for hosting the public meeting and inviting me to participate on the panel. This project has been underway for many years now, and I commend the Board for all the outreach that has been undertaken during this time. The Board has shown great interest in hearing from all interested parties on this topic over a long period of time.

Management has a very distinct role, so I will offer my observations on the proposed reporting of CAMs from a financial statement preparer perspective. I believe that my observations are shared by many in the preparer community.

On several occasions, the Board has pointed out that the auditor's report has changed very little since the forties. Just from a personal standpoint, I don't really see it that way, since the opinion was expanded in 2004 to include a report on the internal control over financial reporting. And from a preparer's standpoint, that was a huge change, a major overhaul, that fundamentally expanded and changed the financial reporting process and the audit process. At many companies, audit fees doubled or tripled as a result of this new requirement.

My hope is that the Board will consider the implementation problems with ASá2 as they deliberate on the best approach for this project.

Another point I'd like to make is from a preparer perspective, receiving a clean opinion is a major accomplishment each and every year. A lot of effort is undertaken by management and auditors. It is substantial and costly from the more routine and material components to highly subjective, judgmental, and complex areas.

A clean opinion comes at the end of a very comprehensive and robust audit process and only once all important matters are resolved and many, many questions are answered and lots of dialogue and supporting documentation and discussion. And at the end of the day, the auditors need to be fully satisfied in terms of resolving all of those issues. So I believe a clean opinion should mean a lot to investors.

With respect to CAMs, overall, I have concerns about the proposal as drafted. The examples, quite frankly, are more troubling than some of the concepts. And so I believe it's imperative that the Board lead a comprehensive field test to assess whether the proposal will produce the information that investors are seeking at an acceptable cost.

With respect to the proposal, it does not include an AD&A, which was of great concern to the preparer community. The CAM approach, however, does have some elements that we have similar concerns with as follows. My primary concern relates to preserving and not confusing the distinct roles of management, auditors, and Audit Committee.

Management is responsible for financial statement preparation and the footnotes and ensuring full disclosure of important qualitative and quantitative financial information, including the MD&A. Open communication between auditors, management, and the Audit Committee is vital to this process.

The proposal, in certain cases, could require auditors to be the original source of new information as well as highlighting potentially items that aren't particularly important.

The audit report, in my view, should not be used as a vehicle to communicate new information. This will serve to inhibit a healthy and well-functioning financial reporting process. And if there are shortcomings in the financial reporting model currently, the FASB or the SEC should work to address these concerns. And management will take the lead on improving whatever shortcomings are of concern.

Written auditor communications, from my standpoint, are really the beginning part of a dialogue between auditors and audit committees. And the written reports have limited value without the important discussion that takes place between auditors and audit committees as well as management. Ideally, all important matters are discussed in detail, context is provided, there is an opportunity for a robust dialogue and followup on specific questions or concerns as necessary.

With CAMs included in audit report, there really would be no effective mechanism for any dialogue with investors. In certain cases, this could result in questions coming to issuers about an auditor's report, about what they might have meant in talking about a CAM, which would put issuers in a difficult position.

As I mentioned earlier, the CAM examples in the proposal are of significant concern. Disclosure by the auditor of a significant deficiency is not currently required, so this example is in direct conflict with existing rules. Discussion of an immaterial corrected error would not, in my view, seem appropriate for discussion as a critical audit matter. Since management isn't required to disclose these matters, I don't believe it is appropriate for the audit report to provide detail on them.

I am also concerned that auditors will err on the side of including too many CAMs, and they will spend too much time documenting why certain matters should not be included as CAMs. This could worsen the so-called disclosure overload problem that is subject -- by the SEC currently.

And from my personal experience, auditors, in my view, should spend more time performing audit work, less time documenting the work that they have done. Documentation requirements are overwhelming audits and could be an obstacle to auditors spending time on important issues.

Much of the work on CAMs is expected to be completed near the end of the audit -- another concern because it could be a distraction for auditors and management as they are wrapping up critical areas. The proposal is also unclear but seems to imply that a discussion of audit procedures with respect to critical audit matters is preferred. And, in my view, quite frankly, talking about audit procedures may be more appropriate than analysis of management's financial statements.

I am concerned about audit fees potentially rising and would encourage a robust cost-benefit analysis.

Lastly, there is no substitute for actually reading the financials, and I think there is some risk that an auditor's report that included CAMs could be used by a reader as a shortcut, a cheat sheet, that investors would rely on to dummy down the extensive and important disclosures that an investor gains from actually reading the entire financial statements and the 10-K.

MR. DOTY: Should we drop the project and forget about it?

(Laughter.)

You don't have to commend us if you think we should drop the project and forget about it. Is that --

MR. COONEY: I actually don't --

MR. DOTY: No change in the binary model?

MR. COONEY: I actually don't think you should drop the project. I had a few --

MR. DOTY: I'm waiting for the reason why.

MR. COONEY: I have a few other just overall general comments. I think that at the end of the day my personal opinion is the CAM approach has a lot of risks associated with it. The concept release talked about required emphasis of matter paragraphs. I think that approach would be preferred.

The other idea that has been discussed was some type of auditor association with critical accounting policies and estimates. And I think, again, that would be a preferred approach in general.

If the CAM approach is continued, I believe that the requirements should be tightened to avoid the unintended consequences and to make the process more efficient.

That concludes my remarks.

MR. DOTY: Kevin Reilly?

MR. REILLY: I thought the last panel solved all the CAM-related issues, so I'm a little uncertain as to what you want me to cover, Mr. Chairman. But I thank you and appreciate the opportunity to be with you today and talk about issues surrounding the projects, specifically as they may relate to critical audit matters or CAMs.

My firm, and the profession more broadly, has been supportive of exploring ways to improve the informational value of the auditor's report, and we commend the Board and the staff -- Marty tells me the staff does all the work around here -- for the many efforts on this project. And I certainly hope that the Board has found the many suggestions we have raised in our letters, our comment letters, including those from the Center for Audit Quality, to be constructive and helpful as you work through this challenging effort.

I also want to acknowledge and appreciate the work of Arnold Schilder and his team from the IAASB as they pursue and tackle the similar issues.

My firm, Ernst & Young, is supportive of the concept of CAM disclosure in the audit report, be it with a C or a K, and believe the concept, if it is properly developed, could help investors focus on aspects of the company's financial statements that were important or challenging in the audit.

But I think the real lightning rod on the CAM front doesn't so much involve the identification of the CAM; it really revolves around what the auditor should say about the CAM in the audit report.

The proposing release notes that the report should identify the CAM, describe the considerations that led the auditor to conclude that the matter is a CAM, and then reference where that matter is covered, where applicable, in the company's financial statements.

We understand these broad objectives, and we think this general framework makes sense. However, we do have some significant concerns with how the approach has been applied in crafting the specific examples that appear in the proposing release.

Wally touched on some of those concerns. You have heard them front and center relative to the many comment letters that we have seen, the original information issue that was covered in the last panel, the redundant, potentially lengthy repetitive disclosures that may appear in the audit report, a discussion about audit procedures and how that could lead some to conclude the auditor is issuing a piecemeal opinion.

And, last but not least, you know, the example language focused so much on the difficulties and challenges faced by the auditor in a particular area that it left me wondering whether we are serving to undermine the company's accounting and reporting for that very matter.

So, Mr. Chairman, you raised a good question at the last panel which is, okay, well, smart guy, what is really bothering you with respect to what is proposed? So let me give you some granularity with respect to that question.

So go to the deferred tax valuation allowance example that is contained in the proposing release. It has four paragraphs, runs for a page and a half, uses the term (difficult or (difficulty a half dozen times. And I get it; deferred taxes are challenging.

The example also highlights a number of very specific matters we thought would be company disclosure areas, such as the occurrence of an unexpected cost increase in an important component part that is expected to unfavorably impact future profitability.

The example also makes reference to various audit steps or actions, such as consultations with others outside the engagement team, that we don't really see as particularly relevant to the overall disclosure. We think the overall objective -- to inform financial statement users of those matters that were truly important or challenging in the audit -- can be met with a much more pragmatic approach.

This alternative would require a crisp, fact-based outline of the issue that does not compete with the company's disclosure or reflect original information about the entity, to an outline of the principal reason and not a checklist of any and all influences that may be in the mix, but the principal reason why the auditor believes the matter is a CAM. And, finally, a reference to where the matter is covered in the company's financial disclosures.

So let me boil that down to how this approach would differ from what is reflected in the proposing release. So we think this approach could distill the CAM in two or three sentences, and let me read the suggested format for you. "Our assessment of the company's evaluation of the realizability of deferred tax assets and the related determination of the valuation allowance required for such assets was a critical audit matter in the audit of the company's financial statements.

Deferred taxes are material to the financial statements. The company's realizability assessment involves many complex and subjective judgments, including those used to prepare forecasts of future taxable income, and this was a challenging audit area.

The company's accounting policy for deferred taxes and its valuation of the realizability of deferred tax assets are covered in Notes 2 and 12 to the financial statements."

We think this approach -- it's shorter and more to the point -- still accomplishes the objective -- telling investors what were the critical audit matters faced by the team in the execution of the audit.

I expect one reaction to the suggestion is that it will potentially drive some to have CAM disclosures take on a more standardized language format. It's clear boilerplate is now viewed as the new four-letter word in this discussion.

I fully appreciate that some are calling for this project to drive audit report disclosures of special insights, views, or impressions on a company's financial reporting. We think attempts to meet such objectives could lead to some harmful consequences.

In a more freeform writing world, two different auditors could have different views and perspectives on similar fact patterns. The resulting diversity in what might be said, and how matters might be characterized in the two instances, could lead to misinterpretations by financial statement users.

Do more details point to more problems with the company's account? Do more details or color commentary on the audit -- does it really point some towards a more thorough audit? I don't think so, and I think those are some of the harmful and unintended consequences that could be achieved if we head in this direction.

We think a concise articulation that is to the point, even if the description becomes somewhat standardized, would nonetheless be valuable to users of the financial statements. We also think that highlighting the CAM in the audit report will lead to improved financial reporting in those identified areas for the benefit of investors and other financial statement users.

So, to sum up, we support CAM. We have some significant indigestion relative to the examples in the proposing release. We are hopeful that the approach I have outlined could be considered by the Board and staff in terms of moving this ship forward. And I look forward to your questions on this area.

MR. DOTY: Thank you.

Aulana Peters?

MS. PETERS: Good afternoon, all. Thank you for this opportunity to share my views on the Board's Release Number 2013-005 on changes -- proposed changes to the auditor's report.

As you know from my written statement, I firmly believe that users of financial statements could benefit from an expanded audit report, and I support the PCAOB's efforts to improve the current form of auditor report.

The question is, of course -- and all of the panels today have tried to answer this question -- what should the auditor's report communicate? In my view, the contents of the report should relate directly to and illuminate the auditor's opinion. Therefore, it should include more information about the audit process, and also my friend Alan Beller is not going to be happy to hear me say that. Are you still here?

(Laughter.)

About the audit process and the approach, the audit approach, so that users of financial statements better understand the role and responsibilities of the auditor. In other words, I would focus on information designed to reduce the expectation gap, and that rather than to rebalance a lack of symmetry between information accessible and available to management and that available to investors.

I was going to -- but I am going to make a point now that I was going to save to the last, and that is about the investors about whom we should be concerned, that we are concerned about. These investors, I would like to emphasize, are institutions with -- and powerful institutions with considerable resources. I will only say that. And that the lack of symmetry I think is more perceived than real and actual.

That is not to say that they don't -- shouldn't get some of what they are asking for, but the Board should keep in mind that these are not uninformed and -- well, just uninformed individual investors.

The Board's proposed standards for audit reports that express an unqualified opinion would require the auditor to identify and address critical audit matters, CAMs, which are defined as -- and this is -- I paraphrase it, so you can pull me up short if I'm doing so inappropriately -- defined as (matters which the auditor found to be the most challenging and difficult to audit with respect to the complexity of the issue presented, the amount of effort required, and the ability of the auditor to obtain sufficient, appropriate evidence.

This definition, while it focuses most certainly on issues that auditors must and do address, does not seem, in my reading of the release and the standard, does not seem to take into account the notion of materiality or the fact that auditors apply a risk-based approach in performing their audits today, not only in planning them but in, also, executing them.

I would suggest that the factors that should be used to define CAM should be based on what the auditor determines presents the greatest audit risk and the greatest risk of material misstatements in the financials, whether due to error or fraud. In my view, such information would be much more useful to the user of financial statements and understanding the auditor's opinion on those statements.

Again, in my reading of the release and the language in the proposed standard, the focus on requiring the auditor to report problems and challenges encountered during the audit, rather than to outline the process through which the auditor reached his or her opinion in question. That is the focus. My concern about this approach is that matters which present the auditor with significant challenges and require a lot of effort to audit may not be material and may not present a risk of material misstatements in the financials, or they may be completely unrelated to management's financial condition.

As the Board knows, if auditors encounter difficulties, they are resolved during the course of the audit, thus requiring a detailed account of challenges and difficulties, all of which have been either eliminated or resolved before the unqualified opinion is issued, in my view is more likely to cloud the reader's view of a final audit result and might undermine the value of the auditor's pass-fail opinion.

For me -- this probably will reveal that I watch far too much television -- they are just sort of like asking the auditor to perform an autopsy on a living patient. If you've given a pass-fail, the patient is still alive. We should not be performing a post mortem in that respect.

I think that an audit report structured on a -- this is the lawyer coming out. If I didn't like the definition, I am going to suggest another one. So, but I think we get to the same place. I would recommend that the definition of "CAM" focus on identifying the most significant risks of misstatements and the specific financial misstatements, whether due to error or fraud, and the risk that the audit procedures selected and applied selectively might not uncover such misstatements. That approach would be, in my view, far more useful in understanding the auditor's opinion and the financial statements themselves.

Significantly, if the auditor's report focused on how the auditor planned and executed the audit with the greatest risks in mind, I believe that the most complex, the most subjective, and the most challenging matters should be revealed in any event in that process and discussed, albeit in a different context -- the context of what were the risks as opposed to what were the problems.

One final point, and I'm just going to say it because everybody else has pointed to significant deficiencies, which I believe the standard would require disclose, or at least that's what the panel seemed to indicate. And putting my Audit Committee hat on, I really do agree with the suggestions that that would not be beneficial necessarily to users of the financial statements.

In my experience as an audit committee, of course, these significant deficiencies are reported on an ongoing basis. But I can tell you that the two or three that might be reported in a quarter, most of the time there is something new in the second quarter and the third quarter and the fourth quarter. And frequently, of the significant deficiencies that are uncovered either internally by the Finance Department or the external auditor, they are resolved before they are even disclosed to the Audit Committee.

As I sit here -- and I am in favor of full disclosure -- I really do not see that it advances the goal of understanding the opinion on the financial statements to know that there were five or six significant deficiencies that were all resolved and that did not have a material effect on the final product.

Thank you very much.

MR. DOTY: Thank you.

Steve Harris, questions?

MR. HARRIS: Yes. I was struck on the last panel -- I'm not sure I remember who the panelist was. I think it may have been Joe Ucuzoglu who mentioned it, where he said that 91ápercent of the users do not read the product. I have heard that before; the percentage may differ.

But my feeling is that if we have a report, the report ought to be read and it ought to be informative. And so the question is, how do we get a report which is read and informative?

And then, Aulana, you know, getting back to you, you stressed, you know, by and large we are dealing with the BlackRocks of the world, although you mentioned BlackRock, but you used institutional investors -- no, no, you used the term (institutional investors. But I don't want to believe that the retail investor is dead and buried in this country. Hold on for a second. So what I want to do --

(Laughter.)

So what I want to do is I want to try and figure out, how do we get an audit report which is read and used not only by the institutional investor, who is plenty sophisticated, but the individual investor? And what do we do, and what's critically important?

But that was -- I wasn't addressing the comment. I was going to -- because you can all answer that. But I did have a question, and I --

MS. PETERS: I would defer to Kevin for your first question, and then I'm happy to address the second one if you'd like.

MR. HARRIS: The clock ticks. I wanted to ask Ms. Cavanaugh a question, because you indicate here that, (we recommend clarifying that routine audit procedures, such as Testing Level 1 or 2 fair valuation inputs would not be deemed critical audit matters, absent significant judgments therewith. I think everybody would agree with that.

MS. CAVANAUGH: Right.

MR. HARRIS: The question I have got is, what do we do about Level 3? And where should that be reported? And for all practical purposes, it can't be valued or it's very difficult to value. So does that have any place in the audit report, or where does that come up? And where should that be disclosed to the investor? So I know there are a lot of questions up there. Go for it.

MS. CAVANAUGH: We were -- I was intentionally silent when I put that paragraph together because I do think when it comes to Level 3 there may be, when you're talking about hard to -- difficult-to-value securities, that may be something that would warrant a CAM disclosure. And I think that's one of the reasons why -- there was a question in the proposal that said, (Should certain entities be completely scoped out, meaning investment companies, and we don't think they should be completely scoped out. We think you have to look at the nature of what the transactions are.

So for Level 3s, they may warrant CAM disclosure.

MR. REILLY: Steve, on your first question, the 91 percent, I would submit to you that I do think financial statement users do use the report. When you say, (Read the report, I think they focus in on one thing, which is the binary nature of pass-fail. And if it's a pass, move on. If it is not a pass, or there is an emphasis of matter paragraph being stressed in the report, I do think those reports get a lot of focus.

MS. PETERS: Steve, I can count on you for seizing the wrong end of my double-edged sword, in terms of the comment that I make. I did not -- I'm not going to back off my remarks that most -- 90 percent of the investors out there are institutional investors, but I also said they deserve the information that they need to make their investments.

However, my point is that there really -- I don't think there are any more investors like you and me. I don't rely on my own acumen, investment acumen in making investments. I turn to my financial planner to do that. Warren Buffet does that. So I really think that your focus needs to be on making a useful audit report that does not muddy the waters, that really gives information that illuminates and focuses on, what does this audit opinion mean?

And from my point of view, it would be requiring the auditor not to discuss problems and like -- and making his job seem more Sisyphus-like than it perhaps really is, but would discuss the actual audit and what the risks were and how they address those risks.

MR. COONEY: I would just make one comment.

MS. PETERS: And not many from Missoula will understand that.

MR. COONEY: With respect to level of knowledge, I think at the outset at least we had commented that it would seem reasonable that the Board would expect users to be reasonably well-educated. And I guess from my standpoint the audit report could certainly highlight areas, whether it's through a matter of emphasis or whether it's through some type of association with the critical accounting policies for users.

But, really, I think any reasonably well-educated investor should be able to look at an annual report, go through the MD&A and the financials, and there is a lot of information in there. And I'm not sure it's necessarily the auditor's job to go back and pull out all the pieces of information that someone might find important. That's really an investor's job to do that.

MR. DOTY: Jay? Oh, of course.

MS. CAVANAUGH: One other comment I wanted to add. I think, you know, from speaking to our analysts, their prime concern is they are interested in cash flows, companies, financial risks. And by at least highlighting the CAMs, without giving a lot of detail, it at least alerts them to discussions that they then may want to go back and discuss with management. It allows them -- pinpoints to them what particular areas are that they really need to get more information on.

So they don't expect everything to be in the auditor's report. I think that would be -- what we heard is disclosure overload. But what are those key points that they can then take back to management and drill deeper on?

MR. FERGUSON: Okay. I have a question that is directed I guess to the whole panel but primarily to Kevin as a preparer and to Ann as an investor, a user of financial statements. And it's a question I seem to keep asking and it may reflect --

MR. REILLY: I'm not a preparer. That would be a clear independent --

(Laughter.)

MR. FERGUSON: Whatever it is you are.

MR. REILLY: Let the record show --

(Laughter.)

MR. FERGUSON: I know you're relevant. I don't know what you are, but I know you're relevant to my question.

This question may reflect either my fixation or my lack of imagination. But, you know, we're doing this project in the midst of a lot of stuff that is happening in the world. And we are actually beginning to see some real examples of new models that are out there. The UK has one, the Netherlands is now doing it, Arnold Schilder has got a proposal that is very close to ours.

And as either a firm that has audited financial statements and has had to write audit opinions in the United Kingdom, or for you who I assume have investments in companies in the United Kingdom and in the Netherlands, where you have seen these new reports, do you find that what is coming out of there is confusing to you? Or is it useful?

And certainly in the UK I know the reports have not been standardized. They have been kind of all over the lot. Has that been a problem in auditing these things? Has it been a problem in preparing your report? So just -- I'd just like to get the panel's impression of what they have seen going on around the world.

MR. REILLY: Great question, and a fair question. I think, as Professor Skinner mentioned in the last panel, I think the UK experiment, which is now live and in color, we are still in the early days. As I said in my prepared remark, we think CAM, concept of CAM, is a good thing and will be helpful to users of financial statements, irrespective of geography.

The real issue is, how do you translate that into practice? And how is it made practical? And I'm hearing a whole lot of pie-in-the-sky concepts in the various interactions this morning and earlier this afternoon. And I'm just struggling with, how do we land the plane and bring this thing, you know, to fruition?

MR. FERGUSON: But it is happening in the UK. You're doing it. Are you able to do it? Is it impossible? What is the experience there?

MR. REILLY: It is most definitely not impossible. As you said, it is happening now. I will tell you, though, you know, we have seen it in other countries, and let me share with you a reaction that I found interesting relative to what has happened in France over the last 10-plus years.

So they adopted a justification of assessments approach for commentary in the audit report. They did that in I think 2003. They did a fairly comprehensive look-back in 2012 or '13 as to how is it going. They found a lot of movement towards standardization, not unexpected.

But one of the things in the report that I found fascinating is -- one of the observations, and that is things are moving towards standardization. But in an otherwise black and white audit report, the commentary is a helpful shade of gray.

So, again, I don't think we are going to be able to make this perfect. I think we need to make it practical. And I think by making it practical it will still be useful to investors.

MR. DOTY: Jay?

MR. HANSON: I've got a question primarily directed at Ms. Cavanaugh. I really appreciate that you, on this panel especially, and the one most directly connected to people that actually make investment decisions. And so I'm going to ask you to imagine what your analyst -- how your analyst would answer this question.

So Commissioner Peters suggested that instead of focusing on the most difficult matters at the end of the day that the auditors spent the most time on, kept them up at night, that the approach be a little bit more holistic around what were the risks that the auditor considered initially.

And that is very similar to this UK model that -- I don't think you were in the room this morning as we had the discussion about it, but it was their approach is focused on, what were the most important risks that were identified in the audit plan? What was the materiality level established? And then how did the scope of the audit address all the risks? And that's a very different model than, what were the most difficult areas of the audit, all things considered?

And I know we talked for a bit about the -- Steve's question about the Levelá1/Levelá2 securities, that routine procedures aren't necessary to include. And your comment letter also referenced that the audit procedures performed on a given CAM would not be helpful except would maybe tend towards a piecemeal opinion.

But what are your views on whether an approach more like what Commissioner Peters suggested, that holistically describing the most significant risks and what the plan was to address them as something -- an alternative to what we propose for CAMs, maybe how you think your analysts would react to that.

MS. CAVANAUGH: I mean, I think just based on the conversations that we have had with them, and based on what I'm hearing here, they would probably be more in line with that holistic financial risk type approach as opposed to what is currently in the document today, because I think financial risk and cash flows is what they are interested in. And what is going to give them that information is going to be most useful.

MS. FRANZEL: My comment is along the same line as Jay's. You know, all day here we have been listening to concerns about the CAM approach, but support for the concept and support for the notion of, you know, getting the right information to investors that they need.

And so I'm really struck by Aulana's suggestion here because it seems to just tie together a whole lot of what we have been hearing, you know, and that is really the suggestion that the CAM should be based on what the auditor determines to present the greatest audit risk and the greatest risk of material misstatements in the financials.

It is similar to the UK and EU approach, and we have been hearing that we need to somehow figure out how to bring our approaches closer together. We have heard concerns about materiality and the potential for disclosure of immaterial and irrelevant information, and I think that this type of a framework would help maybe mitigate some of that risk.

We have heard concerns about non-helpful information, you know, potentially irrelevant and confusing information. So I guess I would like each of the panelists to comment about your thoughts on, would this help mitigate some of your concerns? And would this be useful to investors if, in fact, the CAMs were based on a framework that really focused on those areas of the highest risk of misstatement in the financial statements?

And let's start with Ms. Cavanaugh.

MS. CAVANAUGH: I do. I do, because right now, the way the PCAOB proposal is written, it is -- as we mentioned, you could wind up with CAMs, which may not be very material to the company. In those instances, I don't think our analysts are going to find a lot of value from there.

Overall, their big picture view was, what are the risks to the company? You know, anything I can learn about that, I don't need it detailed within the auditor's report, but something that will pinpoint that and allow me to go back to management and further explore. That's what they are looking for. So I think what you are proposing is something that would likely be more amenable to them.

MR. COONEY: Yes. As I mentioned earlier, when management prepares the critical accounting policies and estimates, we focus on the significant items. They are generally material. They are generally going to be, in my view, similar at the end of the day. If we went through a CAM process, I would think there would be a fair amount of commonality.

So cutting to items that are material by definition, things that, you know, not including some of these other items that we have covered earlier, and focusing on critical accounting policies and estimates with potential changes as was discussed in the prior panel about ways to improve that and make that perhaps more of a collaborative process with the auditors I think would be the best approach in terms of getting to where -- getting to where you all are headed hopefully.

MR. REILLY: I think, as I understood your question, I think there is a lot of overlap in terms of the various buckets here. But in terms of what thoughts we have conveyed to the Board and the staff is, you know, we cover a lot of ground with the Audit Committee.

Under ASá16, we are required to raise the significant issues and cover a whole host of different matters with the Audit Committee, and we think what is missing, at least relative to the identification of CAMs, is, okay, you look at this big inventory of stuff, what were the most important things out of that inventory? And we think what would be helpful is building in an additional filter which covers, what were those things that you spent the most time with, the most interaction with, the Audit Committee in discussing.

And we found that that lines up with the way practice is running right now. You know, I remember an Audit Committee meeting on that. I'd go through the whole enchilada on ASá16, and the Audit Committee Chair looks at me and says, (Thanks for the warning, Kevin. But tell me, what were the handful of matters that really cause you some indigestion relative to the execution of the audit? We think it would be helpful to bring that practical approach into a final standard.

MS. FRANZEL: Aulana, did you want to comment on your own suggestion?

MS. PETERS: I'm not sure that you really needed to hear more from me, other than to say I don't disagree. In fact, I agree with the comments on my comments.

I would say that I intentionally did not focus on circumscribing the auditor's report solely within the parameters of auditing standard -- what is it now? I knew it when it was -- 16. 16. I think that that is important, but I think that the approach that I suggest gets you there anyway, and also makes sure that any new issues that crop up that change from quarter to quarter, from year to year, gets pulled into a more expanded auditor's approach as things change at the issuer themself.

So I agree, but I wouldn't leave it -- circumscribe it with audit -- communications between the auditor and the Audit Committee for that reason.

MR. DOTY: Marty?

MR. BAUMANN: Thanks. I have a question for Wally Cooney. Thanks for being here, Wally, and participating. And thanks for being in our SAG.

We have a long list of investors who have sent us comment letters, and we have surveys prepared for the Investor Advisory Group, all of which -- covering trillions of dollars of assets under management, and we have letters from BlackRock and Vanguard and the Council of Institutional Investors.

All of those letters indicate that investors are looking for much more from the audit report and from the auditor. The BlackRock letter says, What type of information? "The additional information provided will be particularly useful to our analysts to the extent it leads to a better understanding of financial risks, including future cash flows of the company."

Jeff Mahoney was here this morning and saying that our CAM is useful but only to the extent that it talked more about an assessment of the critical audit matter and, you know, management's estimates and subjective judgments, et cetera.

So many of these, I assume, are some of your owners in your company. So how do you respond to the owners of your company who say, (I want more information, and I want it from the auditors, about the critical aspects of the audit, about the difficult judgments in financial reporting, and about the information that will lead to better understanding of cash flows. And I want to hear that from the auditors. And how do you respond to your owners and say, (I don't think the auditor's report should include any of that?

MR. COONEY: Okay. Well, I mean, my experience may not be similar to everyone else's. But I've been to a lot of annual meetings and a lot of investor days at several companies I have worked for when I was an auditor. And in all those years, there has never been a single question, ever, in my career that has ever been directed to an auditor. Not once, at any annual meeting or investor day.

We are -- the company I work for is not widely traded. I'm not aware of a single question ever being posed by any investor about the audit or the auditor. Questions are directed to management.

I believe, you know, based on my experience that shareholders want -- generally want information from management, from the people who run the company and manage the business. Auditors certainly gain a lot of knowledge about the company, about the management team, et cetera, but, really, at the end of the day, the management really has far more knowledge and expertise about the company. They're in a much better position to answer questions effectively and provide information that I think is most useful to investors.

With respect to some of the surveys and the comment letters that I looked at from investors, I think someone mentioned earlier that they didn't find surveys particularly helpful because generally the question is, do you want more information and they say (yes. That's not necessarily a great barometer for what is actually valuable.

I didn't find many of the comment letters -- and I didn't read them all, so there may be some out there -- that were really that specific about specifically what they thought would be valuable. They just said, (We think discussion about CAMs would be valuable. We would like to know more information about the audit. But I didn't find anything in particular that I found compelling, this, you know, idea that there's a real desire or clamor for information.

And in my personal experience, I just haven't ever been asked a question or seen a question been asked at a meeting about the audit or the auditors.

MR. DOTY: You are drawing me out, Wally. Annual meetings have been structured often to discourage large attendance and questions from -- of the auditors. Aulana is nodding. I take that as a concurrence.

The knowledge about the audit has been limited. There is a proposal by the Basel Commission and the others that there be a vastly expanded discussion of the audit that go to the regulator, directly to the regulator.

I must say, speaking, again, as one unqualified for the job of judging auditors that it seems to me that that has been part of the problem that we have, that what you've got -- an MD&A is what you're going to get.

I think I hear Kevin as saying that in fact a more general -- if the proposal and the CAMs offered guidance at a more general level and avoided the detail, examples, stayed away from the more detailed examples, that that would be something that auditors might welcome, and that it might actually help management do a better job of communicating with its shareholders, such as BlackRock.

Doug Skinner, very important academician. I let him out of here without asking him whether we should simply wait to see if the market starts to price American equities at a disadvantage to European equities. I think this was involved in Lewis' comment. There is some Chicago research that suggests that is going to happen. So maybe 10 years from now we wake up and we find that, in fact, we are trading at a discount because we are conceived to be -- perceived to be a more retrograde disclosure regime.

I am leaning on you, but is it really in the interest of preparers to say, (We just don't want it when BlackRock wants it, when TIAA-CREF wants it, when people such as Aulana Peters say that there would have been -- the audit profession, which she advises would have been better off if there had been more interaction with shareholders at annual meetings.

When Kevin Reilly says that he thinks that in fact we can do it, are doing it in London, when Alan Beller says, you know, you might even go farther than just critical audit matters. You might even start having auditors make judgments about whether the companies -- and communicate whether they think the company's critical accounting policies are better. We seem to be coming in, as I said this morning, somewhere between what the most expansive view of what the auditors ought to say would be and what in fact others have done abroad.

How far -- this is Marty's -- this really is where Marty is going. How far are you willing to go in saying, (We just don't want anything anytime soon? And if you want something, if there is something more to do, if it's -- is it something that has to be -- that management influences, controls, and dictates? Is that the problem? You are concerned that you are losing control with the CAMs of something management has traditionally controlled? Because that's an independence issue.

MR. COONEY: I am not sure I have communicated my position well, because I am actually not opposed to this proposal. I have a lot of concerns that I think other people share.

In my comments, I talked about if you are going to go forward with a critical audit matter framework, which I don't have strong conceptual issues with, that I thought you should more tightly define the framework. And I had some ideas that I put in writing. They were also in the -- in some of the other prepared comment letters as well.

I personally think a matters of emphasis would be a better approach because I think it could a little bit more -- it could be a better framework to do that.

I actually think that Alan Beller's suggestion, and others -- one of the accounting firms talked about auditor association with critical accounting policies, which would be a significant change. So I think that all of these options should be looked at carefully.

I don't have strong opposition to critical audit matters in general. I just have some concerns about the way it would be applied, and it wouldn't be my first choice. But I believe that, based on all of the work that you've done, that this is an important project, and that you should go forward with some type of change. And what that is I think we are just here to talk about today, about what the best way would be to go forward. But I'm not personally opposed to that.

And as I said earlier -- I answered Marty's question directly -- my experiences at the companies I have worked for is just my experience. Just because I haven't heard a question ever about an audit or an auditor doesn't mean people from BlackRock and other companies who are in that profession, that maybe they hear it all the time, I just haven't personally.

He asked me, (How do I answer owners in our company? I have never had the opportunity to answer them because I have never gotten questioned.

MS. PETERS: May I address that? Because, Chairman Doty, I did nod when you described what the current situation is generally at annual shareholders' meeting, but I don't think, while I agree with that observation, that it really discounts Mr. Cooney's observation that rarely is there a question put to the auditor, who is at every annual meeting that I have attended in the past 23 years of serving on a total of seven different Fortune 500 boards -- I am not touting myself, but just sort of defining my experience.

Has there been a question put to the auditor about the balance sheet or the profit and loss statement, or anything that would go to understanding better that pass-fail opinion on the financial statements? And I have attended meetings where there have been 5,000 people, 5,000 shareholders there, down to currently people tend to try and winnow it down to 50 attendees and 15 minutes.

But that is not the universe. Sometimes these meetings last for three hours, and in those meetings the questions don't arise, and I won't bore you with the questions that do.

MR. HANSON: Aulana, I would like to just ask you a followup from your role as an Audit Committee Chair, Audit Committee member, and the large esteemed companies that you are associated with, and just a reflection that from the discussions I have had with some Audit Committee Chairs, their pushback or feedback comes very similar to what Wally has said, that they don't get questions from investors about what the auditor thinks. And their earnings calls or other direct interaction with investors, they don't see the swell from that side coming.

And just I wonder about what your experience has been relative to investors either directly talking to you, which I know is a challenge with a lot of committees, you know, the connection to investors, but on earnings calls or other situations where you have seen a manifestation of this demand that we -- we are talking about.

MS. PETERS: Well, first of all, for the record, I am currently not an Audit Chair. I have served in that capacity, but currently I am not. So, and because I am not and haven't been, say, for the past five or six years, I am usually not in the front line of communications with investors.

But I do know from my work on boards of directors and on audit committees and governance committees that most of the inquiries that come into us for more information are -- say over the past 10 years, are more related to governance issues rather than issues relating directly to the financial condition of the company or financial statements. Is that an answer? Is that -- did I get your question, Jay, or --

MR. HANSON: Yes. I think that's reasonable.

MS. PETERS: Okay.

MR. FERGUSON: I have a question.

MS. PETERS: We get a lot of them.

MR. FERGUSON: Given the fact that in this panel, and in the previous panel, when Alan Beller and Doug Skinner were on and talked about critical accounting policies and then approach on that, would it be a good idea for -- and given the fact that those two are related but not necessarily coextensive, would it be a good idea for us to require both of those? That the audit report include CAMs and include a statement that the critical audit policies are, in the auditor's opinion, in fact, the critical audit policies, and that what the company has said about them is complete information? That we do both, because they are not coextensive. What do you guys think about that?

MR. REILLY: Good question. But, you know, when we started talking about this issue in 2010, 2011, one of the suggestions the CAQ put forward was a separate attestation of the segment of MD&A that comprises the discussion of critical accounting policies.

MR. FERGUSON: I take it you were in favor of my suggestion.

MR. REILLY: We were. And we thought it -- there was a great deal of overlap. We heard from investors that these are the types of things that they have particular concerns about. Alan Beller mentioned in the last panel discussion that, you know, there is some degree of unevenness relative to the extent of the disclosure and discussions in this broader area. And we thought this would be one tool to employ that would help with providing information to investors.

MS. PETERS: I would like to be clear and at the same time respectful. Since I -- although CAMs are not coexistent with critical accounting policies, I have to reiterate the fact that since I don't like the way you have defined CAMs -- and I think you -- I would recommend and suggest that you take a different approach to your definition, you will get to where -- you will probably get to where the other panel was trying to lead you ultimately.

So I would say, no, I don't think it would be helpful to require both a discussion of critical accounting policies and CAMs, mainly because I don't think the way you defined (critical accounting -- audit matters that that will be particularly useful. With respect.

MS. FRANZEL: Let me take this one step further. And I want to address this question to Ms. Cavanaugh, since you are here representing investors. You know, today we have heard a lot about focusing on critical accounting policies, management estimates, and risk of material misstatements. And if we were to somehow mix all this up into the perfect solution, in the definition of a CAM or whatever we're going to call it, would those types of things be, you know, what your analysts look to when they're looking to make investment decisions?

Because in your statement, you know, you say that additional information would be particularly useful to the extent that analysts can use it to better understand financial risks and to -- including future cash flows, to have those conversations with the company.

So some of these things we have been talking about -- critical accounting policies, management estimates, material areas of risk. Are those the types of areas that would be helpful?

MS. CAVANAUGH: For the analysts --

MS. FRANZEL: Right.

MS. CAVANAUGH: -- you are asking? You know, I think it really varies. They didn't give us a lot of specifics, but I think, you know, for example, loss of a major customer relationship. That's something they may be interested in that may impact cash flows.

So items that might highlight, you know, issues with revenue recognition may lead them, then, to go back to management and say, (Well, why was that the case? Was it because of the loss of a customer relationship? And allow them to dig deeper, and that's not information I think you would normally obtain today in the financial statement.

So I think it varies, but some indication of where risks and changes have taken place ultimately will get them what they want, which is cash flows.

MR. DOTY: If there are no further questions, it may be that we have saved four and a half minutes for the next panel. But we shouldn't adjourn without telling you what a terrific job you have done in responding to the questions, to the dialogue, to the back and forth, and how valuable your written submissions are. This is a real contribution to the seriousness of what we have to do.

With that, I think we could move on to the next panel. Thank you.

We'll take a break now. We have 10 minutes -- 15. We have 15 minutes, so we're going to start -- we can start, instead of at 4:10, we can start at 4:05. We can start a little past 4:00. 4:05.

(Whereupon, the proceedings in the foregoing matter went off the record at 3:41 p.m. and went back on the record at 4:05 p.m.)

MR. DOTY: All right, the sixth panel, Critical Audit Matters Related to the Audits of Smaller Companies. Kurt Schacht, Managing Director of the Chartered Financial Analysts Institute, he heads the ethics and professional standards area there, leads advocacy and think tank functions. He is an attorney and the CFA charter holder. Previously, he spent 15 years in the investment management industry as a chief legal and compliance officer for a large public pension plan and later a hedge fund. He was Chief Operating Officer for a retail, mutual fund complex. He serves as a member of the SEC's Investor Advisory Committee. And he's also a member of the PCAOB's Standing Advisory Group.

Andy Bishop is the CFO and the Chief Accounting Officer of Hallador Energy Company. Previously, he was with PriceWaterhouse. He also served on the Audit Committee of SemGroup Energy, SemGroup Energy Partners, now Blueknight Energy Partners and we welcome Andy.

Dr. Cartier Esham serves as Executive Vice President for Emerging Companies at the Biotechnology

Industry Organization and in this role she manages and directs BIO's policy development, advocacy research, and educational activities, and initiatives for emerging companies which comprise approximately 90 percent of BIO's member. Prior to joining BIO, Dr. Esham was the Vice President and Director of Research at Dutko Worldwide, a private consulting firm based here in Washington. And she also has published papers in peer reviewed science journals.

Joan Waggoner, a partner in Professional Standards at Plante Moran, she specializes in accounting, auditing, ethics, professional liability and quality control issues. She has recently completed her service on the Professional Practice Executive Committee of the Center for Audit Quality. She has also served on various subcommittees and task forces of the CAQ and has participated in various roundtables of the U.S. Government Accountability Office, the SEC, and the PCAOB, so we welcome all of these panelists who have important views to share.

Kurt, you want to lead us?

MR. SCHACHT: Thank you, Chairman Doty and the rest of the PCAOB Commissioners and PCAOB staff. Thank you very much for including us in this discussion today.

I am Kurt Schacht. I'm from the CFA Institute. That's the Chartered Financial Analyst people. It's a global organization now of 120,000 professionally trained financial analysts around the world. We have another 250,000 or so people in our 3-year program. So it's growing tremendously and it's our next generation of financial analysts.

In that capacity and working for CFA as well as having the pleasure and the opportunity of being involved in the SAG for a number of years, our organization, I've been helping our organization and its members in talking about improved audit quality. For many months now, and as you know, some of these debates have been going on for decades, as a means to improve the audit process, its independence, its quality, particularly of things like outputs around the Auditor's Reporting Model.

We very much appreciate the PCAOB and its staff and the very interesting and challenging position that they find themselves in. Trying to change audit rules is a very slow process to begin with, but particularly when you're talking about anything that is a major regulatory change. And we've witnessed that time and again over the years as to how difficult it is, particularly when there's very deeply ingrained professional and commercial interest in not changing the practice. The road to reform is always very long. It's always more difficult. And it's always more acrimonious.

We certainly put the Auditor's Reporting Model change proposals in that category. We're very hopeful that we're getting closer to some changes there, but honestly I felt that in times past in a number of different settings, but I think now with the two proposals from the IAASB and from the PCAOB on the table around key and critical audit reporting matters, that maybe we're a little bit closer.

From an investor perspective, from the user of financial statements perspective, our very clear and consistent input from professional analysts and from investment manager members and you've heard reference today to several of our different surveys in this regard, is tell us more information. We like the pass/fail opinion, but tell us more information because the

Auditor's Reporting Model is now behind the times. It's been permitted to remain a bit of a remnant of the audit practice of decades gone by and it is no longer in keeping with the information demands of the marketplace in the 21st century. That's just sort of plain and simple how many of our investor members feel.

Having an auditor's signature is nice. Having a rotation of the firm is nice. Having more information, useful information from the Audit Committee or from the issuer, that's all fine and well, but in the view of many of our members, those are minor players in comparison to what would be a well-articulated discussion of the audit like we're proposing, like you're proposing with the critical audit matters discussion and coming from the auditor.

So that's our view. That's what we have communicated in this venue and other settings quite often. I certainly do understand the practitioner issue or concerns about this. The standard nature and the beauty of long-standing historical practice is important. I understand all of the opposition, the commercial issues associated with this issue and certainly appreciate the skill with which the practitioner and issuer community weigh in on this. But the fact of the matter is that everything else in the world of finance has changed dramatically in the last five years and over the last decade, rapidly changing around audit practice in terms of information, the speed, the quality, the transparency of it, and certainly the usefulness of information.

Let me address two real quick things that we come across in terms of this debate. We hear repeatedly that the financial analyst community is never satisfied. They never have enough information. It's never good enough. It is never of high enough quality. It's just another one of those requests from the financial analyst industry.

The other thing is that very few investors ever read the financial statements. A lot of our professionally-trained investors read financial statements, but very few investors read them, much less the footnotes, much less the audit opinion. So why on earth are we building up this very expensive rule book, regulatory rule book and the corresponding outputs that no one is apparently using?

I think you all know the answer to that. I think we've talked about it a number of different times. And the fact of the matter is that these practices and rules are so very fundamental to the integrity and quality of our markets. Investors know that they exist. They have to exist. They're required of those seeking public investment and if they violate those rules, there is some hell to pay in terms of having violated those. I think everybody gets that their existence is not a 100 percent guarantee on fraud or cheating or even 100 percent enforcement by PCAOB or SEC or that investors even understand or appreciate the complexity of the outputs.

What investors do know is that the rigorous nature of these is a condition to taking their investment money. It is a type of discipline and responsibility that is not optional in the U.S. publicly-traded markets.

That brings me very quickly to talk just a little bit about the smalls and mediums, whether the audit reporting model rules changes be waived for smaller issuers. We have never in our organization supported a variable system for publicly-traded companies based on market cap or size. If you want access to the public's money on the same terms as other public companies, we think the rules ought to be the same. We do get that being public is expensive. It's very complicated. It's complex. The regulations overlap sometimes and maybe they're even over broad. But if you understand that and you don't like that, then maybe you list on a lighter touch exchange or a lighter touch regulatory regime. That is your option. But if you want to access these markets and stand toe to toe with other seasoned issuers whose reputation and confidence level and standing in the marketplace are built on regulatory rigor, we don't expect there should be a free pass. We think that's the right approach from an investor protection standpoint. Thank you.

MR. DOTY: Andy Bishop. Thank you.

MR. BISHOP: I would like to extend my appreciation and thanks to the Board for including me in this panel discussion. Hallador is an underground and surface coal mining company serving Indiana and Florida electric utilities. Our mines are located in Indiana. We trade on the NASDAQ. It's HNRG. Get it, N-R-G. H for Hallador (R-G. We are a small reporting company as defined by the SEC rules and our public float June 30 was $75 million, although our market cap exceeds $240 million.

I started my career at PriceWaterhouse in 1975 in the Oklahoma City office after graduation from the University of Oklahoma, that's the team that trounced Alabama in the Sugar Bowl.

(Laughter.)

Thank you. In 1984, I transferred to the Denver office. Practically all my audit clients were SEC registrants. In 1990, I joined Hallador as the CFO, left in '93 and then came back again as CFO in 2009. From 1993 to March 2009 I was the Executive VP and CFO and a third owner of the SEC Institute. During those 16 years, I also assisted Hallador in preparing their SEC filings. In July of 2009, I sold my interest in the SEC Institute. I also served on the Audit Committee of SemGroup Energy Partners, now called Blueknight which is a NASDAQ company from July 2007 to July 2008.

Before I go further, I should tell you that the views I express today are my personal views and do not necessarily reflect the views of any of the officers and/or directors of Hallador.

So for the past 29 years, I've been intimately involved in this space and along with many others have noted that the auditor's report has not substantially changed. Now is the time for change. And nobody likes change but a wet baby.

I recall years ago in the self-regulation days when the Big Eight, now the Final Four, I picked the Gators, audited each other. I worked both sides of that fence. I firmly believe in less regulation than more, although I have to admit there were serious flaws in that system. We audited each other and I recall each firm received an A plus year after year. It's not unlike asking your mother if you're good looking.

The PCAOB system was a much-needed change. Other information in the auditor's report, I'm in favor of having the auditor's report on the other information disclosed in the 10-K. Also consider a mechanism where they also report on the earnings release. The earnings release moves the market more than the 10-K disclosures.

For smaller companies that don't have an audit of internal controls, I assume that other information includes management's representation that the internal and disclosure controls are effective. It is not clear to me how the auditors will report on the proxy statement that's incorporated by reference to the 10-K. The proposed standard states that this information is covered, but what will be the mechanism to make it clear to investors that the information was, in fact, read and evaluated by the auditor. Also, it's not clear to me that the XBRL data that is filed as an exhibit to the 10-K is covered by the proposed standard.

Critical audit matters. Rather than have the auditors include in their report the critical audit matters, I believe the Audit Committee Report should be expanded to include such matters. If the auditors are not in agreement with the report, they have the obligation to report such and include those critical audit matters that were excluded from the Audit Committee Report. Most likely, this would be a joint effort between the Audit Committee and the auditors. The CFO and/or the CAO have an intimate knowledge of these matters and such matters are included in management rep. letter to the auditors and also included in the auditor's communication to the Audit Committee.

This approach would also be more cost and time effective as we have strictly reporting deadlines and at times obtained the final wording from the auditor slows down the process. That being said, the rightful home for the Audit Committee Report is the 10-K, not the proxy statement.

Maybe this concept is a jurisdictional concern and we sure don't want Audit Committees regulated by the PCAOB. I'm sure the SEC and the PCAOB can come to an understanding if this approach was considered.

I would like to take advantage of this esteemed captive audience to touch on some other matters that I have observed over the years. Number one, referring to auditors as independent auditors could be misleading to the average investor. The issuer-pays model compromises objectivity and professional skepticism, always has, always will. For instance, GE, General Electric, pays KPMG over $100 million for their independent audit. Best I can tell, GE has been a client for over 100 years and probably will be for the next 100 years. For simplicity, let's just say the annual profit on the audit is $25 million. The present value of $25 million for the next 100 years approaches $500 million, depending on assumptions. Now that's an asset that would be safeguarded by any firm. What defies logic is if KPMG audit partners invest $25 to buy one share of GE stock, then KPMG is no longer independent. This might be heresy to some, but why not tweak the rules to allow some ownership by partners and staff. Certain partners and staff could be subject to Section 16 reporting, the same as D&Os and others.

Number two, another way to look at audit fees' independence is how significant the fees are to the firm as a whole or to that particular office. For instance, the KPMG Louisville, Kentucky office is the reporting office for the Yum! Brands engagement. The audit fees are about $7 million. Is $7 million significant to the firm? Doubtful, but how about that office? It could be. Now the point being that investors have no way of knowing. Maybe more transparency regarding these matters would assist investors in determining true independence.

I'm not picking on KPMG. The other firms have the same issues.

Number three. Being a smaller reporting company, we are exempt from the 404 audits of internal control, so are emerging growth companies. I thought the passage of SOX was great, especially the CEO and CFO certifications and creation of the PCAOB. That was good, common sense regulation. However, I think the cost of 404 internal controls audits far exceeds the benefits. I am not in the camp that if the regulation only saves one life is worth it. One would think other jurisdictions around the world would jump on the 404 audit bandwagon if it was such a good deal. But we might be the only country.

All CEOs and CFOs certify as to the effectiveness of the internal controls four times per year. That should be sufficient. As mentioned earlier, this management assertion would be subject to the auditor's obligation to report on other information in the 10-K.

Let the investors decide if they see value in the requirement. Make it an optional requirement subject to shareholder approval. Call it (Say on SOX. In the interim, the SEC could at least raise the public float from $75 million to $250 million or higher as recommended by the Advisory Committee on Small and Emerging Companies in their March 2013 letter.

Number four, another required cost that far outweighs the benefits is XBRL. At a minimum, small reporting companies and emerging growth companies should be exempt from this tedious and time-consuming project. For sure, the requirement to detail tag the footnotes of the financial statements is ludicrous. We are followed by three analysts. They seem to be oblivious to XBRL. I'm surprised Congress did not exempt the emerging growth companies from XBRL in the JOBS Act. Maybe they too were oblivious.

The only groups I know singing the praises of XBRL are the service providers. We have fewer public companies on the national exchanges than 17 years ago, 8,800 in 1997 compared to 5,000 or so today. XBRL might have made some sense years ago to assist the SEC in their mission to protect investors, but today it does not. EDGAR is a fabulous tool. XBRL is not.

Number five. In my opinion, either the CFO or the CAO, Chief Accounting Officer, or a member of the Audit Committee should be required to be a CPA.

Number six. I applaud the PCAOB for moving forward with the requirement to name the audit partner. For the last two years, we have named the audit partner and the concurring partner in our information statement filed with the SEC. We also include their ages and their tenure as auditors. We considered including biographical information for the partner not unlike that required for our own D&Os. I do believe that more than just the name of the partner is needed. Their age, years on engagement, industry experience, and any regulatory issues would also prove useful.

As has been said many times, a little something signed is the best disinfectant.

Number seven. We include the Auditor's Review Report in our firm 10-Q. Over 15 percent of the S&P 500 does the same. I'm surprised that the percentage is so low. Consider extending the other information standards of the quarterly review procedures and encourage or require the inclusion of the Review Report in the 10-Q.

Number eight. Final comment, kudos to the SEC for jumping off the IFRS bandwagon. Thank you for this opportunity to speak to you today.

MR. DOTY: Thank you. Cartier Esham.

MS. ESHAM: Good afternoon, Chairman Doty, members of the Board. My name is Cartier Esham and as stated I'm the Executive Vice President of Emerging Companies at BIO.

Roughly 90 percent of BIO's 1100 member companies are pre-revenue emerging businesses. Thus, product sales do not fund biotech research which can cost upwards of $1 billion. Instead, companies turn to external investors to finance their drug development programs. The capital markets play an important role in biotech capital formation and I want to thank you for the opportunity to speak with you today about ensuring that small public companies are given the opportunity to succeed on the market.

Because small biotechs do not have product revenue, burdensome regulations have an outsized effect on them. A one-size-fits all compliance requirements regime diverts funds from the lab and slows the development process. The JOBS Act has shown that a common sense regulatory approach helps biotech capital formation. In fact, nearly 80 biotechs have gone public in the last two years, a dramatic surge considering that two years prior the JOBS Act, we only saw 30 biotech IPOs. The reasoned regulatory approach prescribed by the JOBS Act has been a success. Bio is hopeful that the PCAOB will bear in mind the importance of right sized regulatory requirements as it considers changes to the Auditor's Reporting Model.

We agree with the GAO's finding that the proposed critical audit matters would for any science company not enhance the usefulness of the auditor's report or add value to the users.

As a representative of emerging growth companies, the proposal would only add significant cost burden on growing companies without providing a corresponding benefit to its investors. The PCAOB is proposing release notes that is virtually certain that an auditor would identify critical audit matter based on the proposed standard in any given audit report. Meaning, we can be similarly certain that the audit cost will go up. Quite simply, the new proposed standard would increase the scope of work necessary to complete an audit and these costs would be passed on to emerging growth companies and its investors which can ill afford such a substantial capital diversion.

Again, as stated by the GAO, these additional requirements they determined would not improve audit quality. Emerging growth companies in the biotech industry have few employees and a simple corporate structure, so it does not require an overly detailed analysis to understand the inner workings of their business. BIO fully supports strong investor protections, but the primary value of a biotech company is and will be based on its scientific disclosures and not additions such as proposed.

But I also believe that the provisions in the JOBS Act were designed to ensure that a one-size-fits all approach and increasing regulatory burdens on small companies should be actively discouraged, unless the SEC determines that any such additions are "necessary or appropriate in the public interest, after considering the protection of investors and whether the action will promote efficiency, competition, and capital formation." We believe the proposed standard would increase the auditor's scope of work and the audit fees for the company would not provide -- would not meet that test to providing additional value to investors and would divert valuable time and resources away from these small companies' core missions.

In the case of small biotechs, this would mean a diversion away from funding scientists and their efforts to research and develop the next generation of medicines, a result Congress clearly sought to avoid.

Bio urges the PCAOB not to apply the standard to emerging growth companies which have thrived under a common sense regulatory regime rather than the one-size-fits all burden. And we thank you for your time and I look forward to answering any questions you may have.

MR. DOTY: Thank you. Joan Waggoner.

MS. WAGGONER: Chairman Doty, Board, Chief Auditor and staff, thanks for inviting me to participate in the meeting. I am a partner in the Professional Standards Group of Plante Moran which is a regional public accounting firm in the Midwest. My previous firm, Blackman Kallick, merged into Plante Moran almost two years ago.

I've been asked to discuss CAMs, the CAMs aspect of the proposed model from the viewpoint of the smaller auditing firms.

First of all, I would like to thank the Board for all the work it has done to reconsider the Auditor's Report Model. This project is, I think, one of the most difficult that the Board has undertaken since its inception, given all the diverging points of view and interests that are involved, and to focus the auditor's voice on only audit matters has been a very interesting concept to contemplate.

My partners and I discuss the typical CAMs that we would expect to see in our practice. We would expect to see predominantly valuation allowances or impairment issues on asset accounts as the most common theme, although there are certainly others. I have included a list in an exhibit at the end of my statement that is more specific and complete. I have also highlighted those that we think are especially relevant to emerging growth companies. We do recognize though that the determination of CAMs is very specific to a particular issuer and requires significant judgment on the part of an auditor.

From reviewing the comment letters of the smaller accounting firms, there seems to be a reluctance to total embrace the inclusion of CAMs in the auditor's report. From discussing the issues with my partners, we also have some worries about certain aspects of CAMs, although we are supportive of the Board's objective to make the auditor's report more meaningful to investors.

Now I should warn you there will certainly be some similarities in my following remarks about these concerns with what you have already heard today, but I will be looking at them from a different perspective which is from the smaller accounting firm and smaller issuer companies.

I believe the concerns emanate from a couple of things. First, some of the reluctance may come from accounting firms' lack of history in disclosing original information. I believe that many of the CAMs would correlate with other disclosures already present in the 10-K or that arguably should be in the 10-K. However, we may end up with some instances where we are faced with the potential disclosure of original information.

This disclosure of original information is not natural to auditors. And since the beginning of recorded time, we have been following the model of management asserts, we attest. This model has been reinforced over time as auditors' responsibilities have changed, most recently with the Sarbanes-Oxley internal control work where again management asserts and we attest.

The force is strong within us that original information should be authored by management. And I should clarify that what I mean by original information in this context would be control deficiencies and other things like corrected or uncorrected misstatements. And so that is what we are thinking of as being original information.

It is important though that the auditor's report be relevant to investors. And so the big questions with many of the small firms is will the inclusion of CAMs and auditor's report benefit the investors in small companies? As my partners and I were thinking through the possible CAMs we would expect to see in our practice of smaller issuers, we were not sure how information would be used or interpreted by investors who do not fully understand the complete auditing process.

I understand that the Center for Audit Quality has initiated a field test of the proposed Auditor's Reporting Model and I am very interested in reviewing the results of that testing once it is completed to help us see more clearly the value of CAMs to the investors in small companies.

In addition, in the comment letters I saw a lot of commentary indicating the concern that the CAM paragraphs might be construed to be piecemeal opinions within the financial statements or otherwise diminish the value of the pass-fail model.

At this point, we do not have clear information about how investors in small companies would use or perceive that information and so it is hard to conclude one way or the other as to whether or not the opinion would be enhanced or diminished by the inclusion of CAMs. But I believe that it is very important that investors understand that the audit is of the financial statements taken as a whole and that the CAMs be presented in a manner such that they enhance, rather than diminish the opinion.

Also, I expect that the volume and the cost of CAMs will be proportionately greater for smaller issuers and especially for emerging growth company audits. Many smaller issuers have excellent controls and processes, some including some emerging growth companies have not yet built the necessary financial infrastructure because of spending priorities. I expect that this lack of financial infrastructure would most often result in a lot of CAMs or at least some lengthy ones, disproportionate to the larger filers.

Lastly, many of us have concerns regarding the availability of firm resources during a very busy time. We expect that significant firm resources in terms of our most senior and experienced people will be necessary at the end of an engagement to determine the CAMs and also the content of the additional paragraphs in the report, especially for some of the smaller and emerging growth company issuers.

We worry that this additional responsibility at the end of the engagement may strain resources so that attention would be diverted from other value-added audit responsibilities. I believe these factors are the primary ones that worry smaller auditing firms with respect to CAMs. The big unanswered question though in my view though still to come is whether or not investors in smaller companies will find CAMs useful. Once that question on the information available from these surveys and to the Board's satisfaction, then it will perhaps easier for the Board to be confident in its direction regarding CAMs.

I do have a couple of suggestions for the Board's consideration to address some of these above concerns which are included in my written statement which can be looked at at another time.

Lastly, one of the questions in the proposed guidance was whether or not the guidance should be applicable to emerging growth companies. On one hand, as I mentioned previously, I would expect that for the typical emerging growth company that there would be CAMs, maybe many CAMs to be considered for inclusion in the auditor's report. On the other hand, I would expect that the market place's primary interest in these companies at this stage of their development is whether or not the issuers has the potential to be successful in its mission or its product. And if this is so, then the cost-benefit may not be there for CAMs.

Again, thank you for the invitation for me to participate on this panel and I look forward to our discussion.

MR. DOTY: Thank you. Jeanette.

MS. FRANZEL: Thank you for being here today and sharing your perspectives with us regarding smaller companies and smaller audit firms. I'd like to ask each one of the panel members in your experience what do you see in terms of how investors communicate with the company and with the boards in the smaller company environment that maybe we should be considering as we are considering this standard.

And Cartier, if you could also add comments about EGCs as well. So we can just work our way down the panel and anyone who would like to start.

MR. DOTY: They're all looking at you, Andy.

MR. BISHOP: We have three analysts that follow us. Each quarter when we report our numbers, they come up with an update of their reports and they have never asked any questions about the accounting. They ask questions on why maybe costs went up, why margins went down, but no questions on accounting.

Personally, I don't have a problem with this approach. I would like to see it done by the Audit Committee as opposed to the auditors though. If we are doing what is called a non-D&O road show, we go out and talk to investors. Again, no questions. They're more interested is the coal business going to be around for a while? That was their concern.

MR. DOTY: Any other points of view on the panel to address Jeanette?

Cartier?

MS. ESHAM: I am going to provide an answer and again, I hope it's the answer you're looking for in the sense of small companies and investors and I'm talking institutional investors actually have a very prolonged, often, relationship in determining whether or not a small company is going to go public. In regards to -- one of the things I wanted to comment in regards to some of the comments I've been hearing this afternoon in the sense of more information is better, I think that's true. But in the case of certainly the biotech community, we worked for years with the passage of the JOBS Act on that more information sort of mantra and that was really carried out in the provision of testing the waters such as provisions of testing the waters which has allowed and I think been perceived by both investors and the small companies as a huge success with the ability to communicate more information. But again, it's really been, the conversation has really been focused about educating about their ability, of the science, and the ability to carry that science forward.

We have not heard a lot of questions in regards to auditing report content, although we have had a history of working with this Board and providing numerous comments on a variety of the excellent work that you're doing in looking for improvements.

MS. FRANZEL: And do you see differences between the EGCs and the other small companies that you deal with in terms of that communication?

MS. ESHAM: Well, the other small companies we deal with are private companies, so that's in the venture capital world.

MR. DOTY: Jay?

MR. HANSON: I've got another question along the governance theme and I'll pick on Andy first, but I'm interested to hear all of your views on this.

Andy, your suggestion is having the Audit Committee report the critical audit matters and I appreciate many people have that same view that may be an appealing way to go and we're doing much more interaction now in the last year or so with Audit Committee chairs and Audit Committee members and getting good sense of what the larger company Audit Committees are doing.

We have fairly significant, albeit anecdotal feedback, and the smaller the company, the less robust the Audit Committee discharges their responsibilities and part of it is the ability to track Audit Committees that have the skills to do and part of it is maybe just not knowing what to do.

And I'm not going to ask you to comment on your Audit Committee because that will put you in a tough spot, I know you and I have been around a lot and talked to lots of companies and lots of preparers. And just your sense as to with regard to the operationality of your suggestion for the smaller companies having the Audit Committees do it, whether today you think there's the skill set and the capability across the universe of the smaller companies, just from your experience? And appreciate any of the rest of your comments about your observations about the effectiveness and the ability of the audit committees of smaller companies to do more than they're doing now.

MR. BISHOP: The way I see it playing out is that I would sit down with the Audit Committee chairman and together I'd put together the bullet points. I'd say here's what we're going to talk about. And he says I think that's right. And the auditors would have given their report, too. And he would say, Andy, you draft it. That's probably how it would shake out. He would agree with the points.

MR. HANSON: Any comments from the rest of you on this?

MR. SCHACHT: I'm not sure, Jay, I fully understand your question, but big company, small company, medium company, there's plenty and plenty of resources out there in terms of how you properly empanel and engage in the activities of an audit committee. So it's not for lack of resources. Whether small issuers can attract the same level of competence and capability that the larger issuers do on the Audit Committee is clearly, they're clearly at a deficit to do that. So I would say, generally speaking, there is not the same level of experience and expertise on the smaller company boards and on the Audit Committee. I think we're getting there. I think there's certainly a heck of a lot more attention being paid to it than ever before. And I think people are waking up to the fact that if there is one key important check and balance on corporate governance for investors it is the Audit Committee that, in fact, is probably the king of all the corporate governance bells and whistles and protections.

MS. WAGGONER: In addition having the Audit Committee prepare a report of some sort that timely goes out along with the auditor's report has a great appeal to it. As I was listening and hearing about the UK model where the FRC is in that enviable place where they can both set corporate governance regulations and also the auditing standards. You know, that's like a perfect way to bring it all together which is to say you get an auditor's report that's very much complemented or complements the report from the Audit Committee and everything just works much more as everyone is collaborating to get good information out to investors.

MR. FERGUSON: I have a question, initially directed to Andy, but the rest of you pop in if you want to. As I heard you, you said that you thought critical audit matters, if they were disclosed at all, should be done by the Audit Committee rather than the auditors. Those are two different kinds. They're not identical proposals, so the kind of disclosure would not be identical, let's assume you're correct about that. Given the fact that we have no jurisdiction over that and that would have to be done by the Securities and Exchange Commission and I would defer to my colleagues from the SEC here, but my understanding is that the SEC has a really, really full docket now. And I would suspect that this might be pretty low on their list of priorities. If that were the case, is having the auditor do it such a bad idea, in your view, that we should simply drop this project?

MR. BISHOP: No, I don't think you should drop the project. Maybe SEC could rearrange their priorities and move this up to the top.

MR. FERGUSON: Assume they don't rearrange and I'm not speaking for my friends from the Commission here. They do what they want to, but let's just assume for purposes of this argument, they're not going to rearrange their priorities for this.

MR. BISHOP: Then we'll go with what you have, let the auditors do it. But for the Audit Committee to do it, the Audit Committee Report needs to move to the 10-K. It doesn't make any sense to get the 10-K out and then two months later the Audit Committee Report comes out in the proxy statement needs to go out and the 10-K and again, that's probably their jurisdiction. But that's how I look at it.

MR. DOTY: Steve Harris.

MR. HARRIS: Mr. Schacht, you heard what Ms. Waggoner said about the disclosure of original information. And my question is why you think it is important that auditors provide additional information directly to investors?

MR. SCHACHT: I think there's been a -- just to maybe reiterate some of my opening remarks, we've been talking about this now for decades about the quality of the information that's coming from the professional firm that's actually being voted on by investors and being paid for by investors, and the quality of what -- the usefulness of that information. And I'm not an expert on the history of original information coming from the Audit Committee versus the company, but I think the fact of the matter is that everything else is changing in the world of finance and around the process of being a public company.

And I don't think there's any reason why the audit profession and the profession that they are providing, the service that they are providing for investors should somehow be exempt from those changes and from the very dramatic differences at how markets operate and how markets trade and how people invest.

And so it may be long-standing, commercial, historical practice. I get that, but does that mean we never change it? I don't think so.

MR. DOTY: Mr. Baumann, Chief Auditor.

MR. BAUMANN: Thanks, I have a question for Joan and Cartier. Both of your comments, you indicated an expectation of increased costs as a result of this and maybe disproportionate costs on smaller companies. CAMs, as we've talked about them in the proposal, are based upon what the auditor has done. It's fundamental to their work, critical audit matters are documented in their work papers, discussed with the engagement quality reviewer. That's probably the critical audit matters that's contemplated are probably the topics that are most discussed between the auditor and the Audit Committee. So there's nothing new about developing a CAM. It is the fundamental things that are being discussed with the top management of the firm and the audit firm, the engagement team, the engagement quality review, the Audit Committee, et cetera. So we're talking about here about putting in the audit report what's probably already written in the Audit Committee Report, except maybe more succinctly.

In addition to that, we heard today from several people, most notably from the UK experience where they're actually having these enhanced disclosures. And Nick Land from the FRC indicated he didn't see any reason for increased costs as a result of this for similar reasons. So given the fact that all of these matters are just matters that are already addressed with the Audit Committee and it's really adapting something that's already written to the Audit Committee for consumption by the investor and there's some experience overseas that it doesn't have any cost, where do you have the expectation of significant costs?

MS. WAGGONER: Certainly one of the big factors for the smaller companies is the cost associated with transition in the very first year because of what we would expect to be a heavier volume of CAMs that would exist for certain of the smaller companies and the emerging growth companies.

On a recurring basis, one of the things we were trying to think through is what would cause that cost to continue to be higher than we would expect. And I think it's because you know where those systems, the systems of the smaller companies aren't necessarily geared up in the early part of their lives to capture all the information needed for accounting purposes and so forth and so on, that things will just pop up a little bit more. We would expect a little bit more of a volatile environment.

So even though I would expect from year to year there would be recurring CAMs of which perhaps the cost to process the auditor's report would not be excessively high. There is an associated cost with the volatility at the end of an audit which will take up a lot of time from folks disproportionate to the engagement. So I think that would be the continuing factor that we would see.

MR. BAUMANN: Just an observation again, even though there could be more issues in a smaller company, again all of those issues should still have been discussed by the engagement team, evaluated by the engagement team, discussed with the Audit Committee if there are important issues so again, even if there's more, they've already been communicated to the Audit Committee and now it's a matter of communicating them in some lesser format or some -- to the investor.

MS. WAGGONER: Arguably, quite true, but the crafting of new ones for purposes of public dissemination would still be a significant cost because it's not just correcting the spelling and put it out there, you know. It does go through a few levels of review and consideration and so forth and that is going to be taking the time of the most senior people in the firm to get those handled properly.

MS. ESHAM: Just to agree with several of the points that Joan raised and I think as we read the proposal, I think a couple of the concerns that we have are again, they're almost -- there was an implication that essentially every auditor would have a critical audit matter outside of the context of the audit report process which includes the dialogue between management, the Audit Committee and the auditor. So I think there were a lot of mays and coulds of what that might entail that is concerning and so the presumption is that it inevitably will require more work and thus more fees by the emerging companies.

And the price tag of paying for extra auditing fees is not the only cost to an emerging growth company. Again, when you have a company that has 25 employees, and again, their core mission is in our case research and developing medicines, it is perhaps a hiring of extra staff. It is a longer runway of paying for auditing fees that are diverting funds away from again their core mission which is of concern as proposed.

MR. DOTY: I think Kurt wanted to comment on that.

MR. SCHACHT: I think the interesting thing that's going on is that everybody is still very gun shy about SOX 404 and sort of early experience with that and maybe the miscalculation of the cost benefits of that and I don't think anybody wants to make that mistake again. But I would tend to see this similar to as you just laid it out that it's not a lot of additional work. It's not the same dynamic as we were experiencing with a brand new Sarbanes-Oxley and that when you look at the audit completion document or the report of the Audit Committee that most of the work is done, it's just a matter of how you would price the step of actually having to make a professional disclosure about that and I really don't know how that would happen.

MS. WAGGONER: If I can make one more point.

MR. DOTY: Please.

MS. WAGGONER: Thank you. There is in a lot of the smaller company audits, it is a kind of a rush to the finish. The deadline looms and everybody is very focused on getting the audit done and management is working to get the financial statements done. There's still a lot of stuff happening at the last minute because a lot of these audits are not the most efficient audits in the world just because of the way the data is gathered and so forth and so on.

So there's also not just a cost, but the rush to the finish is a real thing that exists for many, many audits of small companies.

MR. BAUMANN: That environment sounds like it's even more important for the investors, therefore to understand, there's critical audit matters in those companies. So that's my view.

MS. WAGGONER: And indeed, you may be quite correct, Marty, on that. I think the proof is actually going to be as we see things roll out and how the information is used, I still haven't heard anything definitive on exactly how the investors in smaller companies actually would utilize the information. And I think that is arguably a very important thing to be resolved before we move forward on this, simply because it is so important to the smaller companies and the emerging companies because of the cost.

MS. ESHAM: I did just want to respond to that to make sure I didn't leave that just hanging out there, but again, I think from our point of view, the value of small companies, again, I can speak most assuredly about the biotech industry again. In our conversations with investors and what we hear from our CEOs is the value of the company rises and falls on the product -- their ability to advance their product, the science that they're working on. That's the value of a small business of an emerging growth company. So I do just want to emphasize that.

Again, going back to the discussions that were held in both the House and Senate during the JOBS Act debate, that is why you see provisions specifically laid out in the law that recognize one, the importance of allowing these emerging growth companies to transition into the public market. That's why there are exemptions to certain things. That's why there is not a one-size-fits-all framework in that. And again, it's pertinent to this argument, the one that specifically talks about the supplemental information in the form of the AD&A proposal and determine that that is not appropriate to apply to emerging growth companies.

MR. DOTY: I want to follow up on this with both of you because I want to talk about, get your reaction to what I'll call the bonding principle. The JOBS Act didn't wall off the PCAOB from the audit report and it certainly didn't suggest it was out of the question to add further information. It did go, as Cartier points out, to the question of an AD&A which we've taken some pains to distinguish from.

But is there any concern on the part of either you, Cartier Esham or Joan Waggoner, about the precedent we have with what I will call blue light districts that have been launched with the best intention of creating more rapid capital formation? And I'm thinking of the London AIM market and sort of the American Stock Exchange's ill-fated excursion into a midcap market. The Nuevo Mercado and certain other areas.

Are you concerned or should we be concerned or should we be concerned that if we have a rule that requires some kind of amplified audit discussion, if we modify the audit reporting model at all for big companies, for other companies, everybody else but EGCs, that if we don't fashion a rule that can be applied by EGCs, we have -- and it's required to be applied by EGCs, that we have created the beginnings of a kind of blue light district for some of the companies that we're most interested in growing.

I do understand that audits are cost. Kurt makes the point that none of the reforms in Europe have really delayed the completion of the audit cycle, but I hear Joan point out that it's harder for smaller companies. It's a messier situation, but the fact that the smaller companies will perhaps have less in the way of critical mass on controls, more of the critical audit matters, including perhaps more related party transactions and other issues that auditors have to look hard at and that, in fact, they are less likely to be free of any concern for the auditor. Isn't that a reason why we should be concerned that whatever we say about the actual disclosures that it should apply to everybody? That we don't want to have a situation in which we're creating a class of second class companies that can go on the exchange and are we really doing no favor to emerging growth companies if we create the lowest expectations for their auditors in terms of what we want them to tell the public?

Discuss among yourselves, please.

(Laughter.)

MS. WAGGONER: Well, you know, I am in actual total agreement with Kurt, that if you enter the public markets, you accept the level of responsibility and accountability. But when we are considering changes to the auditor's process and the auditor's report, I think we need to distinguish between two things. Is the change being designed to protect the markets, to protect the marketplace? Or is it to enhance the information available to the marketplace?

I would suggest that if the goal is to protect the marketplace, certainly I think rules should get applied across the board or with a much higher level of cost-benefit analysis or a lower threshold, if you will.

If the goal is to enhance the information available in the marketplace, that might be a lesser standard. And so the cost-benefit analysis would go -- the threshold would be higher. And it is then for us to contemplate are the proposed changes to the auditor's report to protect the marketplace or to enhance the information available to the marketplace?

MR. DOTY: A choice the logicians always struggle against that opting from one or the other.

Cartier, how about it? Isn't the biotech industry one that needs to be worried about having the emergence of a blue light?

MS. ESHAM: One, I do not think that we are a lower class small business on the market today.

I did have a question and I apologize for my own ignorance, but in the London example that has been brought up today, are there exceptions to emerging growth, small companies within that system that's being applied?

MR. BAUMANN: Right now, that applies to the largest companies, the FTSE 350. So it's not just emerging growth companies. They applied it initially to the FTSE 350.

MS. ESHAM: Just to clarify, we don't have --

there's not an example then in London of how this would or would not affect emerging growth companies as of yet. I just wanted to clarify that.

So again, I think Joan raises a great way to put it is protect and inform and on the informed side, again, I think the question and again, very specifically focused, my comments are very specifically focused on the proposed CAM and in that sense I don't think that we agree that the added regulatory burden would equate to again as prescribed by the JOBS Act necessary and appropriate to protect or benefit the public.

Secondly, I do also want to make clear that in the greater context of are there ways to improve the auditing process or the auditing report as to how that may inform. We've certainly been engaged with your work since 2010, 2011 and I think, in fact, have been supportive of certain proposals such as one made in our comments in 2011 around clarifying language within the auditor's report. So I want to distinguish between a very specific issue that my comments were directed at today, the proposed CAM. But again, we are willing and have been working with this Committee on looking for improvements, to ensure that that doesn't happen, any blue light districts sort of situations, it's not --

MR. DOTY: I was impressed with Joan's paper because I think you, in fact, have five very pragmatic suggestions for CAMs and for the reporting level change which are quite specific. You do not seem to be concerned that any expansion of the information in the audit reporting model conjures up concerns about excessive liability.

You don't believe that any attempt to reform the audit reporting model necessarily involves devaluing the binary report. I may be misreading you, but your concerned about that, but you have you have suggestions to avoid it.

I come away with the sense that you think that on the whole, while there's some work to do on this proposal that it's time to expand the reporting model and that your firm can do it.

And you can do it on a cost-efficient basis for mid cap and small cap issuers. Am I wrong?

MS. WAGGONER: Chairman Doty, I must say that nobody reads between the lines better than you. Well, yes, I would say we think that the CAMs model is a reasonable one to apply and that it's workable as a thought process. We would not be worried about our ability to write the CAM. We certainly have plenty of talent in-house to do that.

The cost I don't know, but we did not actually develop any sort of estimates about what the add-on costs would be associated with it, so I cannot speak to that. We've already spoken about it a little bit.

On the litigation front, we're not in the same world as the large firms and I knock on wood when I say that. So I can't really speak to the litigation side of things because it's not the world we live in at this point.

MR. DOTY: You may feel it's ungentlemanly of me to try to create these differences between you and Cartier, but that's the kind of ruthless, mean regulator that I am. At this point, I'm going to pass the -- pass it on to Jeanette, to my colleagues?

MS. FRANZEL: We heard earlier today concerns from a number of panelists about the lack of sort of a materiality threshold or filter in the current CAM proposal. And I'm wondering if we were to address that issue, would that alleviate to any degree some of the concerns that you have with the current CAM proposal?

Joan, and whomever else would like to address that question?

MS. WAGGONER: I think it would be helpful to add a materiality factor to it just to make it absolutely clear. I rather think it was kind of implicit in the way it was written and I wasn't concerned that it wasn't there. But as I've listened to the comments, it strikes me why not be perfectly clear.

MS. FRANZEL: Would that help with some of the messiness and the small companies that you -- when I was listening to you talk about sometimes it's just difficult to pull data together, I guess I was interpreting that as sort of maybe deficiencies in internal controls, but not ones that would rise to material weaknesses, but that was one of the examples we heard earlier that gee, if that's a CAM, all of a sudden that may not be material and that may be original information being disclosed by the auditor.

MS. WAGGONER: One of the things as I was thinking through the CAMs definition was was it workable? And at first I began to believe that if we were just auditing something very inefficiently, that that might be something that qualified as a CAM. But then I realized as I continued to look at it and think about it, that I believe it wouldn't necessarily be that it was an inefficient audit area as long as the test was based upon good quality evidential matter that was clear.

And so for instance, I was thinking of the area of customer contracts and revenue recognition. And maybe the system of the issuer doesn't capture all the information that it should in order for us to be able to figure out, should it be 2014 revenue? Should it be 2013 revenue or whatever. And so perhaps the testing that we do is extended. But if the customer contract is very clear as to what the terms of sale are, then we have good and sufficient evidence supporting the revenue cutoff procedures as we call them.

And so I don't think that would end up being a CAM because it just doesn't seem to hit on the definition. If, however, the customer contract isn't clear, if the customer contract was pulled off the internet and used by the company because it didn't want to pay some legal fees right off the bat, which I don't recommend by the way, you have a lack of clarity and then you just might be in CAM country. Did that address?

MR. HARRIS: I am just wondering Joan, how do you avoid boilerplate? We've discussed that all day, but in terms of the CAM, how you constrain it to what's most important to the user?

MS. WAGGONER: The big risk, I think, in writing CAMs is the ones that recur year after year, pretty much the same thing. And in a way, if you have a heightened level of detail, the detail might change from year to year and that might keep them kind of fresh. But I worry about the recurring items, but for any particular year, those recurring items may still be very relevant and helpful to investors. So I'm hoping that the world continues to evolve and that we understand the increased importance of a fresh look at things every year. And I think we can do it. I think we can do it.

MR. HARRIS: And how about the others of you. Do you have any ideas in terms of how we streamline this to avoid boilerplate and what's most important to the investor or to the user?

MR. BISHOP:  Sitting here thinking about what's been discussed, just going through my mind, Hallador has always been a trendsetter in disclosures.  I thought well, maybe I'll just file the Audit Committee Report as an exhibit to my 10-K and see what comes out of that. I have to get the okay from my auditor.  They may not like that idea, but that would give you what you want.

MR. HARRIS:  Do you have a problem with that?

MR. BISHOP:  I'm just thinking, I wouldn't have a problem, the rest of the Board, auditors might have a problem with that, but that gets the answers what you guys are looking for.

MR. HARRIS:  Would anyone else have a problem with that?

MR. FERGUSON: One of the things several of you have mentioned is the fact that for smaller auditors and smaller audit firms having to identify CAMs and write them up would be a squeeze at the time you have to issue your report.  I'm not an auditor, so but it would have occurred to me that given that there are critical audit matters that they should have been identified in the first risk assessment meeting for the auditor. And that they then should, in fact, inform the audit work that you do because they are, after all, critical to the audit. And if that's the case, why can't these things be written up during and early on in the process so the most that has to happen in the end is simply a review of what's already been written. Because it strikes me if you find a critical audit matter right before you're about to issue the opinion, something has gone wildly wrong with the audit. Am I wrong?

MS. WAGGONER: One of my recommendations was in my letter is that the planning and Audit Committee standards of the PCAOB be amended to include the preliminary spade work on CAMs in the planning process, and in the early communications with the Audit Committee because I think we can really help the workload issue at the end if we know and can expect which are the -- well, we try to identify risk of material misstatement early on and so that kind of goes hand in glove with determining the critical audit matters.

And I believe that on a recurring basis they can be identified early on. I'm just saying we have a more volatile situation sometimes with certain of the small and emerging companies such that issues, new issues will pop toward the end of the audit. Those are the ones I was referring to on a recurring basis.

MR. BAUMANN: A follow up if I can. Andy, a comment, discussion on cost was primarily focused on Cartier and Joan, but you indicated earlier that you didn't have a disagreement with CAMs, that primarily you'd like to see them in the Audit Committee Report. Secondarily, if that didn't happen then continue our project for the audit report. But did you agree with my assessment of they shouldn't necessarily cost a lot given the fact --

MR. BISHOP: I agree with that. Where the costs will come in is the wordsmithing of how this is going to deal with the words. I think we all know what the issues are. How is -- do you put a comma here, do you capitalize that? That's what's going to --

MR. BAUMANN: So in other words, the bulk of the work has already been done on the CAMs.

MR. BISHOP: Yes.

MR. BAUMANN: I had one other follow up with you,

you did talk about the disclosure of the engagement partner's name in your information statement filed with the SEC. Any reaction from the engagement partner about disclosing the name and/or any costs involved with that?

MR. BISHOP: No. At first, I think they thought why are you doing that? Well, I think it's the right thing to do. And at the end of the day they agreed.

MR. HARRIS: Just out of curiosity so many people don't think it's the right thing to do. Why do you think it's the right thing to do? I mean the entire profession disagrees with that.

(Laughter.)

MR. BISHOP: I look at it, I have to disclose my name, my age, my bio, my compensation, what I've been doing the last ten years. And I'm paying these guys a lot of money, so what's wrong with disclosing their name? I don't see anything wrong with it at all. It's done in other countries, too.

MR. HARRIS: Does anyone on the panel have a problem with that?

(Laughter.)

With the auditor disclosing their name on the audit report? I take that everybody's saying they don't have a problem. Okay.

MR. DOTY: Your good humor and your -- throughout all of this, your good humor and your willingness to indulge us is, of course, appreciated and it relieves a long afternoon. But mainly we appreciate the kind of insight you brought from small companies, the care that's gone into the preparation of your written work which is really very good and which will be an important part of this record.

And your interest in this whole project.

Oh, Brian, my regulator.

MR. CROTEAU: Sorry, thanks. Before you wrap up, I just wanted to add not that I think -- hopefully people would not be confused by this, but Lew's comments about the SEC's workload and any considerations relative to the Audit Committee Report. Certainly, since there is now an open public comment period, if people do believe that we ought to be doing something with the Audit Committee Report, they should still continue to make those recommendations. We certainly do consider all the feedback and we will continue to think about those type things. Lew's hypothetical applied to the panel discussion here, just in the event people are listening and might be writing comments, I just wanted to make that clear.

MR. DOTY: Fair enough. You have given us insight into an important part of this whole picture that we cannot go forward without. And to get where we need to go, and to do something meaningful with the audit report, we need to take account of the things you've raised and the kind of intelligence and wisdom you've brought to us. Thank you. We adjourn. We will convene again in the morning. See you all then.

(Whereupon, at 5:13 p.m., the meeting was adjourned, to reconvene the following day, Thursday, April 3, 2014.)

PUBLIC MEETING

\+ + + + +

THURSDAY, APRIL 3, 2014

\+ + + + +

The public meeting convened in the National Ballroom in the Westin Hotel, 1400 M Street, N.W., Washington, D.C. at 9:00 a.m., James R. Doty, PCAOB Chairman, presiding.

PCAOB BOARD

JAMES R. DOTY, Chairman
LEWIS H. FERGUSON, Board Member
JEANETTE M. FRANZEL, Board Member
JAY D. HANSON, Board Member
STEVEN B. HARRIS, Board Member

WITNESSES

JOAN L. AMBLE, President, JCA Consulting; Member, Council of Audit Committee Chairs, NACD; Retired EVP and Principal Accounting Officer, American Express Company; public company board member
JEFFREY L. BURGESS, National Managing Partner of Professional Standards, Grant Thornton LLP
TONY CATES, UK Head of Audit, KPMG LLP (UK)
PETER CLAPMAN, Former Chief Investment Counsel, TIAA-CREF; public company board member

JOHN CORCORAN, Fund President, Senior Vice President, MFS Investment Management
E. MICHAEL FEHRMAN, Managing Director, Head of Accounting Policy and Advisory Group Americas, Deutsche Bank AG
MICHAEL J. GALLAGHER, Managing Partner, Assurance Quality, PwC
MONTY W. GARRETT, Vice President ▲ Finance, Verizon Communications, Inc.
PHILIP R. JOHNSON, Chairman of the Audit Committee, Yorkshire Building Society
JAMES P. LIDDY, US Vice Chair Audit, KPMG LLP; Regional Head of Audit, Americas
LIZ MURRALL, Director of Corporate Governance and Reporting, UK Investment Management Association
PETER H. NACHTWEY, Senior Executive Vice President, Chief Financial Officer, Legg Mason, Inc.
CHARLES J. PAGANO, Partner, WeiserMazars LLP
JEREMY PERLER, Director of Research, Schilit Forensics
WILLIAM TOUCHE, Partner, Deloitte LLP (UK)
MICHAEL R. YOUNG, Partner, Willkie Farr & Gallagher LLP; Chairman, Financial Reporting Committee, New York City Bar Association

OBSERVERS

BRIAN CROTEAU, Securities and Exchange Commission
JAMES KROEKER, Financial Accounting Standards Board

PCAOB STAFF

MARTIN F. BAUMANN, Chief Auditor and Director of Professional Standards
JENNIFER RAND

9:00 a.m.

MR. DOTY: Well, good morning. Good morning. We have a panel that is focused on the issues raised by the proposal of auditors responsibility for other information. And it's a highly qualified panel.

But before I introduce people, a bit of news from the front. We're advised by Natalie Berger of the EU that the European reform proposals, which were summarized so ably in Sven Gentner's materials yesterday in which he discussed in detail, were passed by the European Parliament this morning.

So they're now law in the EU with the overarching subject to the country and member state is for you to have a more restrictive, or a stronger policy.

The panel, as I said, has extraordinary qualifications. Jeremy Perler is the Director of Research at Schilit Forensics. And he's the co-author of Financial Shenanigans: How to Detect Accounting Gimmicks and Fraud in Financial Reports. It's gone through three editions in 2010.

Previously he served as the in-house forensic accounting analyst for Coatue Management, a long/short equity hedge fund. Director of Research for CFRA. Auditor of PricewaterhouseCoopers. He served on the FASB Financial Accounting Standards Advisory Council as a representative of the investor community.

Michael Young. Litigation partner at Willkie Farr & Gallagher. His practice concentrates on securities and financial reporting with a particular emphasis in accounting issues.

He's also chairman of the Financial Reporting Committee of the New York City Bar Association. He is chair of the firm's securities litigation and enforcement practice.

His trial work has included financial reporting matters in federal, state and bankruptcy courts throughout the United States. His experience includes the landmark jury verdict for the Defense in the first securities class action tried before a jury pursuant to the Private Securities Litigation Reform Act of 1996/1995.

He previously served as a member of the Financial Accounting Standards Advisory Counsel. He is the Chair of the Financial Reporting Committee of the New York City Bar. And he is counsel to the AICPA and the Center for Audit Quality.

Michael has a record -- a distinguished record in this area that is second to none. And he's going to have a lot to say.

Peter Nachtwey is Chief Financial Officer at Legg Mason. A member of the firm's Executive Committee. He's responsible for the areas of finance, investor relations, corporate communications, human resources, operations and technology.

Previously he was Managing Director and Chief Financial Officer of the Carlyle Group. Prior to joining Carlyle, he was a partner at Deloitte & Touche. Served as the Northeast Regional Managing Partner for the Investment Management Industry. He is a current member of our, the PCAOB's Investor Advisory Group.

Mike Gallagher. Manager Partner for Assurance Quality at PWC. He supervises national office efforts in the areas of accounting services, US Securities and Exchange Commission services, risk management, strategic fault leadership, auditing services, auditing methodology.

He's also responsible for PWC's audit transformation program, learning and development, regulatory relations and inspections groups. He currently serves as the Chair for the Center of Audit Qualities Professional Practice Executive Committee. He is a current member of the PCAOB standing advisory group.

Gentlemen, welcome. Jeremy, the floor is yours. Thank you.

MR. PERLER: Good morning. And thank you for having me on this distinguished panel. I am delighted to be here today.

It's a great honor to speak with you and share my perspectives on a topic as important as other information and the auditors role in financial reporting. Thank Chairman Doty for that nice introduction.

If I may, I'd like to add a little bit more context on my background as I believe it to be helpful in understanding how my perspectives as a financial statement user have been framed. I spent the last 17 years studying and analyzing companies who employ aggressive accounting and manipulative reporting tactics to embellish their financial performance.

My current role as an advisor to asset managers, is at a forensic accounting consultancy called Schilit Forensics. We advise well regarded investment firms that engage us to unravel complexities and uncover misrepresentations in the accounting and financial reporting of their portfolio companies.

Now over the years I've had the pleasure of working with and advising hundreds of asset managers on the accounting and reporting practices of their portfolio companies. So my perspectives today are based not just on being a power financial statement user myself, but on my daily conversations with these investors.

From these interactions, I gained a strong understanding of relevancy and how financial information is consumed and used in the investment decision making process. Now the topic of other information is an extremely important one. And I commend the Board of its efforts to increase auditor's scrutiny to areas beyond the financial statements.

It speaks to what is to me the biggest problem facing financial reporting today. The growing dissidence between audited financial results and the key performance metric showcased by management.

This is a weak spot in our financial reporting system that allows issuers to bypass the traditional audited financial statements and engage in an un-scrutinized parallel conversation with investors. By not participating in this conversation, the audit function is weakened and the investors are worse off.

Indeed the traditional audited financial statements are becoming less relevant as an investor communication tool. It has been commonplace for management to present self-made, non-GAAP metrics as more relevant proxies for earnings and cash flow performance.

These metrics are delivered to investors in earnings releases, PowerPoint presentations, as well as the MD&A and other places outside the financial statements. And it is usually the case that these metrics are the most important data points and disclosures to the investment community.

Often these metrics make sense and provide very helpful insight into a company's operations. For example same store sales for a retailer, organic growth for an acquirer or earnings excluding a large litigation settlement.

However in many cases they don't, like something called steady state free cash flow before special items. And the laughable adjusted cash EBITDA less one-time items.

However in all cases, regardless of their legitimacy, these metrics are unaudited and susceptible to the whims of management discretion and definition and disclosure. For example, when EBITDAs no longer flattering, it becomes adjusted EBITDA. And then adjusted cash EBITDA. And then finally adjusted cash EBITDA less one-time items.

And even in cases where the metrics seem commonplace and logical, they are easy to redefine as needed. For example determining which stores are included in same store sales is rife with discretion.

Relying on management to self-police these important metrics is insufficient just as it is insufficient for traditional GAAP measures. To be clear, the issue here is not whether a company is honest or disingenuous about these disclosures, rather it is that the supremely important disclosures and data points are not being scrutinized by auditors. A point which is generally lost on investors.

This is where I believe the Board's proposals on other information and helpful. The current financial reporting paradigm promotes this environment in which many of the most important metrics to investors are widely unchecked.

Enhancing auditor responsibility over this information by as the Board proposes, requiring evaluation of these disclosures with a focus on material inconsistencies and material in the statements is common sense and will no doubt strengthen and add robustness to our financial reporting system. And ultimately lead to fewer cases of willful or negligent misrepresentation.

I recognize that evaluated scrutiny likely means added procedures. However the benefits to investor protection and public disclosure far outweigh the costs.

The flow of information from companies to investors has changed. And so too should the auditor's responsibilities. Naturally I would like to see more steps taken to reign in the mass promotion and dissemination of un-scrutinized information. But I recognize that many of these efforts would be beyond this Board's jurisdiction.

However I believe this Board's proposal regarding other information shows leadership. And is a very positive step that will have a powerful impact with regard to protecting investors and promoting more reliable and representative financial disclosures.

Thank you for the opportunity to participate in this conversation. And I look forward to our discussion.

MR. DOTY: Thank you. Mr. Young.

MR. YOUNG: Well, I am exceedingly sympathetic to the desire of investors for better information. Like a lot of people in this room, I am reading 10Ks all the time and they have gotten to be as dry as dust.

And what is particularly frustrating as I think about it, is that it does not have to be like that. It is theoretically possible to write about things. To write about business things, even with all of the rules and the regulations and all of that, it is theoretically possible to write about things in a way that is understandable and informative and interesting.

And at the risk of sounding trite and saying the obvious, I would offer that perhaps the best illustration of that is the Annual Shareholder Letter of Warren Buffett. It is interesting, it is understandable. You get the sense of what's going on within his companies. The challenges, the triumphs, the failures.

And the question for me is how can we get people to write like Warren Buffett? Boiling it down.

My concern with the other information proposed standard is that it doesn't get us there. And in fact my concern is that it may take us in the opposite direction.

Now let me explain why. The Board has asked me to focus on how the standard will be interpreted and applied. And that is actually the root of my concern.

Under this standard, I would expect auditors to find themselves being held fully accountable for other information. They will be evaluating the information. They will be speaking to its truthfulness and if the information turns out to be false, they will have some explaining to do.

And even if they are able to point to the standard and to say, well we missed the false statement, but look at the standard, we complied with the standard. That to my way of thinking, does not satisfactorily mitigate the concern. Because historically where auditors have missed a false statement, insistence on in compliance with the applicable standard, has not sufficiently mitigated the appearance of professional failure.

So as I think through how this standard will work, my own reaction is that probably two things will happen. One is that the amount of work needed to be undertaken by the auditor will need to increase commensurate with the risk. Or the information will need to get easier to evaluate. Or both. And I would expect both.

So one consequence of the standard, as well intentioned as it is, is that it may create an incentive for management to draft other information in a way that is easier for the auditor to evaluate. That runs less of a risk of auditor recalcitrance.

And the concern is that we will end up building into financial reporting, still another incentive to favor objectively verifiable information of the sort that auditors are more comfortable with at the expense of the kind of subjective commentary that connects the dots and explains what the data means in very day words of the sort which may be harder for the auditor to evaluate.

And you know, to my way of thinking, that's the opposite of the direction in which we want to go. I mean when I think of it as an investor, I think about wanting management to connect the dots.

Don't just give me the data, but tell me what the data means. Tell me how you are looking at this data and what it's telling you management, as to what it means for your past performance, what it means for your future performance. What the data means for risk.

And I'm concerned that instead, under this standard, we would be headed more in the direction of disconnected, objectively verifiable data. And therefore the 10Ks, if this is possible, would even get less interesting.

And I would like the record to reflect that for the first time in the history of recorded civilization, an attorney has taken less than his allotted time.

MR. DOTY: We'll make up for it Mr. Young. We'll make up for it.

MR. GALLAGHER: Mr. Chairman I'd like to reserve that for my remarks.

MR. DOTY: But did you record the time? Mr. Nachtwey.

MR. NACHTWEY: Thank you Chairman Doty. And hopefully I won't you know, screw up the timing by using all the time he saved us. But first of all good morning to all of you. And thank you and the other members of the PCAOB for the opportunity to be here and speak with you today.

I think the proposed standard regarding auditors reporting on their involvement in other information is of great interest to me and to my organization. But this morning I'll speak from three very different perspectives.

So first as a former audit partner with Deloitte & Touche where I practiced for 25 years. Second as CFO of Legg Mason, an S&P 500 company and an issuer of public company financial statements. And then finally as a fiduciary for almost $700 billion of third-party assets under management by Legg Mason.

My remarks represent my own views and do not necessarily reflect those of Legg Mason or my colleagues. So with that bit of housekeeping out of the way, let me address the proposed reporting standard which I generally favor, but with some key caveats that I'll address in a moment.

I think it's important to recognize that with this proposal, we're talking about information auditors are already required to read and consider in auditing public company financials. So I believe it is a positive step to have auditors clarify what they are currently involved with, as users of financial information very often rely on numbers outside of the financial statements.

At a very high level, this proposal provides the audit profession with the opportunity to help investors and others understand what information outside of the financial statements the auditor has been involved with. And that is clearly a worthy objective.

But we should be careful to comprehend the real world implications of such changes and weigh the potential costs against benefits. In that regard we must be very clear-eyed in understanding the value of these benefits to investors, which easily could be overstated. And we need to be thoughtful about added costs, which are ultimately borne by investors and can easily be understated.

In my view, the public generally believes that auditors already verify information outside the audited financials. As a consequence, many investors have an imperfect understanding of what auditors actually do with that information.

They may believe auditors are involved with any and all numbers in a company's annual report or 10K, including numbers not derived from the books and records. And of course as all the auditors in this room will know, that is not true. But without a bit of a roadmap, how can investors be sure where the auditors have been involved?

So I'll give you an example of this from the asset management industry. For firms like Legg Mason, a key performance indicator is assets under management or AUM. AUM is generally a big number both quantitatively and qualitatively. And we often use it as shorthand to describe the size and scale of our firms as you may note that I just did in my intro about Legg Mason.

Consequently, AUM gets significant MD&A attention by asset managers. Yet the related numbers are not per se audited. However, our auditors do see our AUM numbers and perform significant work around them given their direct impact on our revenues. And I think investors would likely find value in knowing auditors have done work on these disclosures which would provide an important check on management.

The proposal also may provide the audit community at large with better leverage. Currently there is no recourse for audit firms if they disagree with management assertions outside the financials, other than the nuclear option of pulling their audit opinion and resigning from the client.

So I believe the proposal properly structured, could promote a more useful dialog between auditors and management. There could be other benefits as well.

In stock and debt offerings, underwrites require the company's auditors to review and report on information outside the financial statements, and provide them with comfort letters. If the other information is already reviewed and reported on, this could expedite and possibly lower the expense of public offerings.

While I like those aspects of the current proposal, it's critically important to determine now, in advance, whether the potential benefits truly justify making a change. Because history has shown that regulations are seldom, if ever, rolled back, owing to silly things like greater than anticipated costs.

I also believe other aspects of the proposal require further review and consideration. First and foremost, we must develop a common understanding of what the word evaluate means. Or eliminate it from the proposal. And this I refer to both in terms of how much work the audit firm should do and how much information they should provide in their reports.

If left in I feel evaluate will cause significant additional work by auditors. The resulting expense to issuers and investors would not add commensurate value in my view.

The PCAOB should make clear whether the proposal calls for auditors to do more work, or simply report on the work they have already done. And I strongly advocate the later.

Further it is unclear what other information is in scope. For example, annual reports often include a company's headcount. A disclosure of the auditor is generally not involved in.

Clarity around how auditors evaluate qualitative statements or assess materiality of non-financial data, is also very important. Examples of these include descriptors firms frequently use to reference their industry standings such as, we are one of the largest, or we are one of the fastest growing.

How can auditors validate those types of statements. Frankly, in my view, they can not and should not. To the extent that information outside the audited financials is deemed part of the auditor's scope, it becomes very important to clearly identify information not within an auditor's expertise, and thus not within their scope.

And then practically speaking, boilerplate language that would obviate the clarity of the PCAOB and the clarity that the PCAOB investors seek in this area. And I think it's important to recognize that we live in one of the most litigious societies on the plant. And like it or not, boilerplate will be part of the bargain in this proposal. We should acknowledge that up front and be careful to encourage as little of it as possible.

Finally, there's the cost of the reporting extension itself. Auditors will be doing more, even if it's just adding language and documentation based on existing requirements. Auditors will want to pass these costs onto their clients.

Clients will also have to deal with a higher level of questions and documentation auditors will needs for their files, which will require them to add headcount. Both of these are costs that our investors would ultimately bear.

The proposal however, need not become onerously expensive or another giant process creator. Thus I do not see any concerns -- any of my concerns here as fatal to its adoption. But I do believe the Board needs to exercise proper due diligence as it has with other initiatives to avoid the potential pitfalls I and others have noted.

I think this session is a great example of giving the regulatory community, the audit firms and their corporate clients, like Legg Mason, time and opportunity to work through these important issues together.

So I applaud the Board and the staff for making this event happen. And I think you for your kind attention.

MR. DOTY: Thank you. Mr. Gallagher.

MR. GALLAGHER: Thank you Chairman Doty and members of the Board and staff. I appreciate the opportunity to provide feedback today on the Board's proposed auditing standards related to the auditors reporting model and other information.

First let me recognize that these proposals represent the culmination of several years' work by the PCAOB what has taken place in a context of global reexamination of the auditor's reporting model with the objective of making the auditor's report more informative. I commend the PCAOB for this effort and applaud the continued outreach including this public meeting to seek feedback from all stakeholders.

As the Board has noted, the auditor's pass/fail model is still highly valued. Therefore it's extremely important for the Board to consider the feedback from all stakeholders to look for ways the audit report and the role of the auditor can continue to evolve to better meet the needs of stakeholders today and minimize unintended consequences.

Speaking on behalf of PWC, we support the changes to the auditor's report. Including reporting with respect to other information that will be responsive to the feedback, while maintaining or improving audit quality.

Avoiding the auditor becoming the original source of information about the company, I'll talk more about that in a second, insuring the benefits exceed the cost, and I believe these proposals represent a really strong step in how we can enhance the current auditor's reporting model.

In addition, we're challenging ourselves to continuously explore ways to enhance the role of the auditor, beyond what the profession does today in order to address the evolving needs and complexity of global capital markets. While we believe there is much in the Board's proposals that has merit, we also have concerns that some of the fundamental changes included in the proposals pose challenges.

Today I'll describe certain of these challenges and then offer suggestions that we believe will still achieve the intended outcomes of the proposals while mitigating unintended consequences. I'll briefly touch on critical audit matters and then focus my comments on other information.

With respect to critical audit matters, we understand that and support, including critical audit matters in the audit report, as a way of making it more valuable to investors. However we believe it should be limited to, or focuses on, matters that were material to the financial statements that resulted in the most significant interaction with the audit committee.

We believe these changes and others that we suggest in our common letter would add meaningful information to the audit report while not placing the auditor in the position of being the original source of information about the company. It will also minimize the potential that including critical audit matters in the audit report will chill the dialog between auditors and management, something which could have an adverse effect on quality.

Now in listening to the discussion yesterday, which I thought was outstanding, a couple of comments that I at least with respect to PWCs position on CAM, I think is worth some clarification.

There was the notion that if the auditor is not the original source of information about the company, then isn't the auditor just repeating what's in the financial statements. And at least our view of things is no.

That an example of what we would be concerned about is potentially a litigation matter that the auditor discusses with the audit committee. The culmination of that discussion was that no disclosure was required because it was remote.

Well theoretically under the proposal, there may be some pressure to record that or report it as a critical matter, thereby you know, driving disclosure that management is not required to make, through the audit report. And we would be against that.

However, that does not mean that the auditor can't and shouldn't say more about the matters that they are reporting on as CAM. And specifically, the issues that in the auditor's judgment, drove the CAM disclosure.

You know, whether it's the materiality of the matter, the judgment involved in coming up with the matter, the susceptibility to change. And talking about the audit response to why something was a CAM.

And you won't find that information in the financial statements. But that's information about the audit, and I think that that can be valuable to investors.

The other point I want to raise from the discussion yesterday was this notion of 91 percent. And that 91 percent of investors don't read the auditor's report as it exists today.

My own view is that's a very misleading statistic. We do substantial outreach to the investor community at PWC through our investor institute run by Kayla Gillan.

And the feedback we get from investors is, they may not read the reports word for word, it's a standard report, I wouldn't expect most to do that every time. But they look at every report. They look at every single one for who the auditor is, and was there something in the report that went beyond the standard.

So I go back to what Chairman Doty said when he opened up the meeting yesterday. The pass/fail report has value. I would say it has quite a bit of value. What we're talking about today is how do we enhance that value and make a good produce better?

So back to other information. We support the Board's intent to enhance the existing standard by requiring communication about the nature of the auditor's responsibility for other information to report. However, we believe the proposed standard as drafted, could potentially increase rather than decrease the expectation gap and risk increased execution -- or inconsistent execution by the use of language that's ambiguous and susceptible to varying interpretation.

In addition, we believe the proposed other information standard will result in a significant increase in audit effort. Particularly with respect to information not directly related to the audited financial statements, with a corresponding significant increase in costs that in our view could exceed the value or the benefit.

To be clear, we are not opposed to enhancing the performance standard beyond what it is today if there's a market demand for such an enhancement. However enhancing the performance standard will by definition require additional work, which will increase costs.

It's our understanding that the intent of the Board with this standard was to have the auditor report on the information generally based on the level of work performed under existing practice. If that's the objective, we believe certain changes should be made to the proposed standard which I'll describe.

As an example of language that's ambiguous and susceptible to vary interpretations, is the use of the term evaluate as the performance standard. We believe this term is more commonly associated with the auditor's responsibility in an audit to determine whether the evidence obtained is sufficient and appropriate to support the opinion to be expressed in the auditor's report.

We recommend replacing the proposed performance standard of read and evaluate with one that is more likely to result in consistent execution and more efficient in terms of the value provided for the effort involved. Specifically, we believe that proposed other information standard should include an overall requirement that the auditor read all other information regardless of whether that other information is directly related to the audited financial statements.

The auditor would then perform a prescriptive set of procedures similar to comfort letter procedures with respect to material other information directly related to the financial statements.

Finally, we recommend the language in the auditor report explicitly describe the limited procedures the auditor performed as opposed to a conclusion. Thereby decreasing the expectation gap and eliminating the practical challenges associated with a conclusion.

If the stakeholders would find value and demand exists for the auditor performed procedures on non-financial information, then perhaps a separate attestation engagement with separate reporting on other information could be considered. Good discussion yesterday about potentially an attestation standard with respect to MD&A or elements of MD&A. We would support that.

So in closing, I'd like to again thank you for the opportunity to provide the feedback on the proposals. The recommendations I've outlined today, and the others provided in our comment letter are intended for the proposals to meet their intended objectives while minimizing unintended consequences.

These proposals represent a strong step in how we can enhance the current auditor's reporting model. And I look forward to continuing the dialog as we evaluate how we can further enhance the role of the auditor in the capital markets beyond what we do today.

Thank you Mr. Chairman.

MR. DOTY: The panel has given us a lot to chew on. Mr. Harris.

MR. HARRIS: Well I think I agree with both Pete and Mike with respect to the term evaluation. And the need to develop a more common understanding of what the word evaluate means.

I'm not quite clear Mike in terms of what you're recommending other than described the procedures that were follows. So -- and Mike you're a lawyer, so between the three of you --

MR. YOUNG: I didn't come here to be insulted.

MR. HARRIS: It wasn't meant as an insult. Especially given your commentary, which is much appreciated.

But how would each of you -- what term would you use other than evaluate and other than describing the procedures that would presumably go to the word evaluate? Is there a term of art that you would prefer?

MR. GALLAGHER: Steve I guess my -- as I mentioned in my comments, I think the most plain way to communicate is just to share you know, in plain English, what we did.

And you know just to give you a flavor of what that would be, typically, as you're probably aware, in comfort letter situations, when companies are raising capital and the underwriters are doing due diligence, typically what the auditor does with information, an MD&A for example, where there's comparisons around revenue or other financial metrics, is the auditor would recalculate the numbers that are shown in MD&A.

They would compare it to information that's included in the audited financial statements to the extent that exists. To the extent that doesn't exist, you could tie things back to original books and records which are subject to a company's system of internal accounting control.

And so our view is the best way not to have an expectation gap, because I'm not sure there is a perfect term that would capture in a word or two, what we do is just -- let's lay it out. Let's explain you know, that if information is directly related to the financial statement and it's in there and it's potentially material, we do these you know, prescriptive -- this is what we do.

And with respect to the other information, you know, we do what we do today. We read it for consistency and look for material inconsistencies in the financial statements.

MR. HARRIS: And Mr. Young I think that you quoted Chair White in terms of the concern about information overload. And you talked very eloquently about being concise and understandable. So I think that I don't disagree with where Mike is coming from in terms of describing evaluation.

But you know, you could get into some pretty significant information overload just in the description. So how would you concisely deal with the term evaluate?

MR. YOUNG: I wish I had a good answer to that. And appearances notwithstanding, I really would like to be helpful. Let me tell you the challenge as I see it.

And that is I agree with the problem with the word evaluate. The challenge is not so much the verb, the challenge is the broader concept of the auditor speaking to the truthfulness of the information because users of the information are going to be inclined to boil it down very quickly.

And if they see the auditor speaking to the subject of the truthfulness of the information, they're not going to think about whether the word is evaluate or examine or inquire into or review. They are going to say to themselves, the auditor spoke to the truthfulness of the information. The information as we now know turned out to be false. And therefore, it sounds like the auditor didn't do its job.

And to illustrate, let me just -- let me describe a newspaper story that we have all seen many, many times. And that is the newspaper story says there was a fraud at XYZ Company. The auditor failed to detect the fraud. Where was the auditor?

How many times have we seen the newspaper story go on to say, however, under the applicable auditing standards, this fraud was conducted in such a way that the auditor would not be expected to detect it. I'm still waiting for that story after more than 30 years.

The challenge as I see it. Evaluate is a troublesome concept and a troublesome word. And I agree with that. And I wish I could say that that problem can be mitigated by choosing a different word. But I think the problems more deep rooted than that.

MR. DOTY: Mr. Ferguson.

MR. FERGUSON: Yes, I want to focus for a minute to see if I understand what was said correctly. And I want to focus particularly on the statements that Jeremy made and Mike Young, which seem to be in many ways polar opposites. And to present us with a binary choice here.

As I heard you Jeremy, you said that indications -- or that statements by management, things like key performance indicators, non-GAAP measures, are not subject to audit and are area because they're not looked, are potential areas for fraud or for manipulation or for management to tell a story that is not necessarily reflected in the audited financial statements.

You Mike on the other hand, seem to say that if we have the auditor start looking at these things, we will inevitably inhibit their use in such a way that they are effectively the only really clear communication management makes. That the audited financial statements are increasingly not relied on by investors. And that we will actually make disclosures by management less useful.

Those seem to me to pose a binary choice. You know, we're dammed if we do and we're dammed if we don't, under your two arguments together. Are they reconcilable? Am I mishearing?

MR. YOUNG: Lew, I actually think that they are. And let me try to reconcile them. Because first of all I'm a big fan of Jeremy and his firm. And I've got Howard Schilit's book on my selves. And he and I are in the same business, which are investigating problems.

I think they are reconcilable. And let me explain how. One is one of the things that Jeremy told was that these different ways of looking at things can be helpful. And that's true. They can be helpful.

Another thing is we did not hear from Jeremy that the information is not truthful. We just heard that it's not the best way of looking at it. And I give a lot of credit to the sophistication of investors.

I mean I think Jeremy's main point was that the information is being sliced and diced in a way that while it's truthful, creates an impression that you shouldn't have if you look at different ways.

Also, the information that Jeremy's talking about, I don't think would get included in other information. I mean the 10K isn't going to have that kind of non-GAAP information.

So the other information proposal wouldn't really reach it. You would have to even go further than other information. If in fact, well let me stop there.

So I don't think, I'm not hearing from Jeremy that this is misstated stuff. It's just looking at it in different ways, some of which is helpful, some of which may be less helpful.

That's not what I'm really speaking to. I'm really speaking to the concern that management will strip out sort of the dot connecting subjective information because of concern about auditor recalcitrance.

Is that helpful? I --

MR. FERGUSON: Yes, I mean that is sort of. I want to hear from Jeremy too though.

MR. PERLER: And what's most interesting to me, and I understand right now the scope of the proposal is very broad, all other information. But my comments are more focused on all detail and disclosures related to communicating the financial performance, or financial status of the company.

So anything like market share, or subjective comments like that I'm less concerned about. It's more here is our adjusted earnings. Or here is our non-GAAP revenue.

MR. FERGUSON: Statements that are based on the financials.

MR. PERLER: Based on the financials, arrived from or proxy for.

MR. FERGUSON: Just different from the connecting the dots information. Or can be different.

MR. YOUNG: Yes, but how would the auditor police that. I mean if it's true and if it's consistent with the financial statements, is the auditor going to say we don't think that's the best way of looking at it?

MR. PERLER: Well I do also want to say most of the time it is true, it's a way to communicate it. But many of the frauds and many of the you know, fraud with a lower case F if you will, ware rooted in these misstatements that are subjectively altered.

So I don't want to say there are not misstatements in there, but this is the area rife for discretion that I think is -- right now it's beyond the auditor's reach and stepping into that area will not just -- it's not just a matter of policing the metric, it's a matter of changing the overall behaviors.

Maybe auditors -- or maybe companies would not use some less relevant or manipulative metrics.

MR. DOTY: Mr. Hanson.

MR. HANSON: I've got a question and direct towards Pete, but I want everybody to weigh in.

In overall the feedback we've collective heard from you and others that the use of the word evaluate is problematic. The scope of what gets included is problematic, and that's what I want dig a little bit deeper on.

And also the fact that it's a game changer that the auditors actually report on the conclusions from that. And I'm kind of surprised that none of you touched on that one.

So I'll want overall reaction to the actual reporting of we did this stuff, evaluate or whatever the procedures are an didn't find anything. But on the scope.

And Pete you teed up that this is somewhat similar to what's accomplished in a comfort letter. And my experience with comfort letters, that underwriter's counsel starts with, they want every single number, including the page numbers, some sort of comfort given on it in this 200 page prospectus.

By the time you're all said and done, there's a lot on the cutting room floor that there's no comfort given on so that whatever's disclosed falls on the floor. And the hierarchy of what underwriter's counsel usually wants is, gee if you can trace it directly to the financial statements, that's the best.

The second best is to the general ledger. A third best is to a schedule which reconciles to the general ledger. And then fourth is to a management prepared schedule that doesn't tie to anything, which those sometimes fall on the cutting room floor.

But the exercise of doing the comfort letter is very precise in that the exact number that you're given comfort on is circled with the exact procedure identified as to what was done. And one of my concerns is an investor will never know what comfort was given on any given number within the other information because it's not distinguished.

In some numbers there will be some comfort given, so reconciled the financial statements are tied to the general ledger. In others, there's not a darn thing you can do about that number because the auditor doesn't have that information. And what we're doing in this proposal would not impose an obligation to go find the support for every number.

So Pete any ideas about how we could better identify to investors to make it more useful for them. And maybe your reaction how your team of analysts and investors would think about this with an unknown, we don't know what the auditor actually did. And whether they did anything to the numbers we find most important.

Is that even helpful if it's a well, I don't know what the auditors did, so I can't really take any comfort at all in it.

MR. DOTY: That's compelling testimony. Does Michael Gallagher agree that you're tending toward a comfort letter approach to this?

MR. GALLAGHER: Yes, I believe, yes. I think that we have to be careful not to have the perfect be the enemy of the improvement.

And I think regardless of what standard you put out there, whether it's evaluate or some other standard, because of the different nature of the information that's included in other information, you're going to have varying degrees of comfort if you will, for lack of a better word, in terms of what the auditor did and what the auditor was able to do.

Now I would hope that whether it's through technology or some way, that the numbers that can be traced back you know, to a system, something that ties to the general ledger or something that is covered by the system of internal control, perhaps that can be identified in some way. Okay, to give that reader better procession in terms of you know, at least some sense of what was done relative to that.

But in the meantime I think some if it will be intuitive. I would say maybe pick your percentage depending on the investor. You know clearly if it's a revenue number or something that's you know, directly related to the financial statements, it will be quite clear based on the articulation of the report, well that was something that was tied to the financial statements or ultimately something that came from the internal control system.

But in the spirit of making improvements and not having it be perfect before we make the improvement, is in the spirit of where we were going with our suggestion.

MR. NACHTWEY: And it's a great question. And I think first of all by referencing the comfort letter process, I think that's a somewhat imperfect process for the reasons you've mentioned. It's all about the investment banks throwing the risk football back and forth between the accounting firms.

And so the more they can get the accounting firms associated with every number including ridiculous things, you know the page number thing isn't too far off. Anything a monkey could do, and they could have their own staff, but they want to have the auditor on the hook.

So I don't think slavishly following the comfort letter approach is probably going to be workable here. I think something that's closer to read and consider, although I'm sure the lawyers in the room and at the table will say, well that's no less specific then evaluate. And I agree it's not.

But it is something that's exactly what the auditors do today. And I think we have to put some of the burden on this into how the standard is drafted itself. What does it mean when they say if we stuck with evaluate, which I hope we don't, but if we did, you know it's got to be very clear what that means.

If we say read and consider, what does that mean. Right now I think everyone in the accounting profession understands very clearly that means A, read it. B, consider whether it's inconsistent with anything that's in the financial statements you've audited. And C, make sure that if it comes out of the books and records, you've got even more certainty about it.

So I think there's a great understanding in the profession -- I don't think, you know fairly stated, and you know in current standard audit opinion, if we were subjecting that to the same level of scrutiny we're subjecting these words to, we'd have the same issues with fairly stated. But people have gotten used to that over many, many decades of reporting and again, what the standard says.

I also think we're in completely unbroken ground. When we're over many, many decades we're talking about a two paragraph opinion that we've sometimes some of the firms reverse the paragraphs, or the combine the paragraphs, but they pretty much all say the same thing.

And that's given investors and users a lot of comfort. Because they don't have to read a report and guess well, what's the auditor telling me? If it's pass/fail, I know if they've passed it, they've got a good understanding of what was done.

So I think a bunch of what's in scope comes from what are you going to ask the auditors to say. And then again, what should be in scope. I think non-GAAP financial measures, you know by in large virtually every number, I know certainly the ones that Legg Mason reports, of which we've got primarily three.

And frankly, I talk to investors that probably 40 percent of my life is spent either on earnings calls or in investors sessions with both sell side analysts, or buy side investors. And Legg Mason is a buy side, so our mutual funds are out investing in things every day. But they're relying on sell side analysts who mostly work for the Wall Street firms in terms of their diagnosis of our financials.

They're not only relying on that, but they heavily rely on it. And frankly 80 percent of the questions that I get, and I get all the numbers questions, my CEO gets all the fun ones to talk about strategy, et cetera, 80 percent of those questions are about the non-GAAP measures. Because GAAP unfortunately forces us to do some things in our financials that the analysts look and say that's not relevant.

I'll give you one example and then I'll pass the microphone on. But net revenues in our business. You know there's a lot of tension around wanting to make sure in accounting parlance we're reporting everything that's coming in. And then everything that's flowing out is an expense and what's left for the shareholders.

But in our business we have a huge amount of marketing costs that are referred to as 12b-1 fees that are highly regulated part of the mutual fund business. And 100 percent of those fees are passthroughs to the distribution partners that we have.

So nn one looks at that as revenue that comes to Legg Mason, because why in the world would you be in a business where you have 100 percent of your revenues going out as expense?

So the analysts want to understand in terms of are we running the business efficiently. What is the net revenue that's actually coming to you that you're managing. And what's the margin you have off of that.

So again, very few of the questions that I get go to the GAAP numbers. They go more to the non-GAAP.

MR. DOTY: Ms. Franzel.

MS. FRANZEL: Thanks for being here today. Assuming we get the verb right here, you know evaluate, consider, read. Or maybe we need more than one, you know sort of verb to apply to different categories of information. I'd be curious to hear your thoughts on that.

But what are the categories of information that you think would be most important to have some kind of explicit auditor involvement and conclusion on. Right now we've got a very broad you know, other information.

Are there certain categories where you would envision that we'd get most value from auditor involvement? And what level of auditor involvement would that be? And the question is for all the panelists who would like to respond. Start with Jeremy.

MR. PERLER: Yes, I think in my mind it's a no-brainer for there to be auditor involvement on anything used to communicate financial performance. Be it a number, be it a qualitative disclosure about why revenue grew ten percent this year.

I would say that area is the most important area. Everything else would be below it.

MR. YOUNG: I'm a listener on that one. So I'm going to defer.

MR. NACHTWEY: Ditto.

MR. GALLAGHER: Yes, I like the discussion that was held yesterday where we discussed and we supported the CAQ proposal of reporting the auditor involvment with critical accounting estimates. Because those are the things that if they're done right, are really the most important things that drive financial performance, or where financial performance could be effected most significantly.

And I think there is a real opportunity to up the game in terms of how well they are written. Right now there is not auditor involvement beyond the read and consider. I think if the auditor were to attest to that, I think the quality of compliance with SEC rules and the clarity with which it was written, I think would only improve.

So supportive there. And as I said, I do agree with Jeremy, I think things that are most significant and directly associated with the financial statements that really drive how a company's evaluated, is where the auditor involvement should be greatest.

MR. NACHTWEY: Again, it's a difficult issue. I think investors probably today assume anything has a dollar sign on it, or even if it's a number, that the auditors have done something with it.

You know frankly I think it's difficult for the audit profession to do much with things that don't come from -- directly from the books and records. And things that are subject to the internal control system, you know a lot of thought and theory that's been put into internal controls by a number of bodies including COSO.

But I think confining it to things that are you know, within the expertise of the auditor, mostly financial information, financial numbers. The things that are so often have been in these tense meetings with underwriters, that they want auditors to comfort.

And the same kind of things that I think Jeremy is talking about here. I agree they are important numbers. So things like square footage. So a firm that owns office buildings or regional malls, et cetera, is -- has square footage is a key, not so much performance indicator, but certainly a key statistic in their financial reporting.

Yet there's incredible amount of subjectivity as how you measure square footage. So I used to do some real estate work in a prior life. And in New York City, we always talked about the gross leasable area was how far you could throw your boss out the window. And then you've got to measure that distance onto the sidewalk.

And this was all a game of the real estate brokers and the owners and the tenants deciding how much they're going to pay in rent. And then what's leasable area? Do we count the restrooms? Do we count the elevator shafts, et cetera? Things that accountants clearly aren't capable of accessing.

The second one, proven reserves. Some of the resource, oil and gas, minerals business, et cetera.

Incredibly complex. Not something -- I can tell you, again I'm a CPA, I spent many, many years both in school studying for the exam. In practice and in no way shape -- I know what a proven reserve should be. But am I engineeringly capable of going out and verifying it? Absolutely not.

And then last but not least, in the valuation space. And there was a time in my prior life at Deloitte where I ran the valuation practice for the firm. Not because I was an NAI and knew really the first thing about the science of valuation, but the firm needed somebody back when FAS 141 and 142 came out, to connect the valuation folks to the auditing folks.

And it's a very different again, amount of rocket science that goes into valuing things. Whether it's hard assets or financial instruments.

So I know I haven't given you a clear answer to that. It's -- this is why I'm suggesting that we have to be very careful at constructing this thing. And making sure that we don't cause more confusion by people assuming once the auditors started reporting on information, if it's not clear exactly what they've done, on what numbers, we create some difficulty.

So the last point. In going back to this, we're breaking new ground on the reporting. Everybody's taking comfort in having this one page, two paragraph opinion. And then we may be in a land where you need an appendix to the opinion that describes exactly what's done.

You don't want to torture everybody to have to read that to get to the substance, but it might help with the litigation protection. And for the ones who really want to go deep on this, they'll have the information as an appendix to the report.

MR. DOTY: Brian Croteau.

MR. CROTEAU: I think Pete you started to actually answer the question I was going to ask. But I wanted to come back to the evidence point again.

I'm obviously again for the fairest amount. There will be a range of evidence that the auditor gathers and has in his files. And you know, some information will be covered -- would be covered under Jay's model and under the proposed standard.

And other -- for other information, there would be a range of relevance relative to the information in the auditor's file. And to the extent that we're talking about a report that is a paragraph or two versus describing for each specific element of the other information what was done.

My question was really is it more risky or more helpful to have that kind of report? And I'd be interested in other's thoughts on that. I think you just started to answer that question. I'd be interested to know what others think about that.

MR. YOUNG: Forgive me, I don't understand the question.

MR. CROTEAU: So in some cases, the auditor may not have any information from the financial statement audit in the file. And in other cases the information the auditor has may be relevant to some degree, or may be completely relevant to the other information that's being looked at. But yet the report we're talking about wouldn't necessarily identify what was done for each element.

And I guess my question is, is that kind of report that generally describes what the auditor has done, relative to the other information, the procedures performed, helpful? Or is that likely to be more confusing without what Peter was just sort of describing, sort of a tick mark legend if you will, of what was done for every element?

MR. YOUNG: Right. Here's the challenge. And that is let's say we want to take, I'll call it a comfort letter approach, because that really crystalizes it. You got a number, you circle it, the auditor looks at the number, very little ambiguity there.

The challenge is coming to that level of clarity, that level of crispness, that sort of line of demarcation when you're talking about other information more generally. Now sure if we could have the auditor circle numbers, well yes, okay, that would take care of it.

But in a sense, almost anything you say about the business, at some level ties to something in the financial statements. And let me give you an example which makes it perhaps a little bit more concrete.

And that is risk management, it's a big thing right now. Disclosure about risk management. And let's say that the company says, and speaking, you know speaking operational, we believe that we have effective risk management.

Well the auditor knows that the company has FAS 157 Level 3 assets. And let's say sure enough the value of those assets goes down. And then the contention is, auditor, how could you have allowed management to say they have effective risk management when you knew they had FAS 157 Level 3 assets, and look what's happened. The value has gone down. That's not effective risk management. How did you let them say that?

Now that's an example. You don't think of an operational statement about effective risk management as really tying to the financial information. But those dots are not difficult to connect.

How realistic is that hypothetical? Not only is it pretty realistic, it's not even very creative.

MR. DOTY: Mr. Baumann.

MR. HARRIS: What do you do in that situation where there's effective Level 3 assets?

MR. DOTY: Steve, let's hold it. Let's let Marty pursue the question and then we'll get back. You'll get another round.

MR. BAUMANN: Thanks. You've all made a great contribution to this important topic. And I really appreciate Mike's comment about don't let the perfect be the enemy of the good here.

I -- Jay asked a really good question. He talked about investors really don't know which level of assurance was given on different numbers because the auditor knows more or less about different number in the other information. And that's a good point, but still can't we still improve auditor reporting without getting perfect in this regard?

I'd be interested in Mike and Jeremy's reaction to a comment that was made by Pete in his remarks that, we are the fastest growing company in this industry, is something that he said cannot -- auditors cannot report on that type of information.

Now as part of the risk assessment standards, auditors are required to gain an understanding of the company and it's environment, which encompasses industry factors including a competitive environment. So auditors have to understand a company and it's environment as part of the risk assessment standards.

So if the auditor is doing that and is reading the company reports about its growth, its strategy, also minutes of the Board of Directors, and is aware of the fact that they believe that they have some problems in growth. And that they have competitors that are growing faster than them, and have better products than they do.

And the auditor reads that statement that says we are the fastest growing company in the industry, but the auditor knows that that's not what is reflected in management's own records in the board meetings that he attended, or audit committee meetings, is that not the type of information where the auditor could and should say to management, we think you have a material misstatement of fact here that we think has to be corrected.

So and isn't that the kind of information that otherwise could be very market moving in other information that might be at the heart of what we're trying to get at here?

MR. PERLER: Yes, I think that would be a material, and if the auditor saw that as a material misstatement of fact, that would be a great area for discussion and something that the auditor could speak about and communicate with management, absolutely.

I recognize the subjectivity of that particular statement, and what are you using to make that judgment? Growth in what measure? And you can pick any measure and say we're the fastest growing company. However I do think that would be a helpful area. Less important to me than actual financial reporting numbers, but helpful.

MR. GALLAGHER: So Marty, the way I think the auditor would approach it today, is ask management, hey you're making this statement, what is it based on. You know recognizing that it's a very ambiguous statement. There are so many ways you could measure you know, fastest growing.

So very ambiguous, and you'd want to get behind it in terms of what is your basis for making that claim. And if there wasn't a basis for making that claim, I think the auditor would likely raise it and say hey, this is problematic.

But it would be very difficult for the auditor to report on that because of the subjectivity of it. And there's probably some metric that they can find given the ambiguity of the measure that they might be able to support the claim. Whether you think that that measure was a reasonable measure would be another matter.

So those are -- that's the caution we would have as auditors in terms of reporting on information that's fundamentally not objective, it's subjective and potentially ambiguous.

MR. NACHTWEY: I was thinking Marty, I recognize as well that that's you know, an important area for investors to have a feel for. But it's a question of whether the auditor is the right place to get the information, or a standard that we can craft that everyone would agree objectively. First of all, how do you define industry.

And so there's many subsets and levels of SIC codes we could go through as to is it you know, a very finite example, Legg Mason, are we a financial services company? In which case you're going to compare us to insurance companies, banks, broker dealers, et cetera. Or are we an asset management company, and within that are we an active asset manager versus passive like a bank or et cetera.

And then getting into the unit of measure, is it, or what is fastest growing. Is it units of production? Right now most tech companies that are being sold for billions of dollars have you know, fast growing stuff, and they're not making any money.

So is it you know, growth and profitability, growth in units of sales, growth in revenues. I think is where the challenge is. But like Mike, my prior life, if I had a management that was consistently, you know it when you see it. And if they're consistently misstating things like that, those are the kind of clients you say, should we be associated with.

MR. BAUMANN: Or at a minimum, if they're making that kind of statement and you know it's factually wrong because in their minutes of the board meeting, they've asserted you know, we're the third fastest growing in our industry in every single category. You'd want them to, when you read and whatever the verb is, evaluate or consider, whatever, say maybe that's something I've just read, but I think either management has to correct, or my report would say we did read this and we found something to be materially inconsistent with our knowledge of the company, or a material misstatement of fact.

MR. DOTY: Steve Harris.

MR. HARRIS: Getting back to me.

MR. DOTY: Yes, go ahead Steve.

MR. HARRIS: The question on Level 3, what's the responsibility and role of the auditor to report on, in essence impossible to value assets?

MR. YOUNG: Well I mean I would think it is to come to a judgment as to whether management's judgment in trying to value the assets is fairly presented as of the date of the valuation. You know, it's -- I would not view the auditor as having a -- no, no, now I'm talking about auditing standards. Please correct me where I go astray.

But I would not view the auditor as having a responsibility for you know, thinking what the value's going to be next month. It's what is the value under Level 3 as of the date of the information.

MR. HARRIS: But there is no value. I mean Level 3 is from my understanding --

MR. YOUNG: Oh no, you -- no, there's a value, it's just hard to set the value.

MR. HARRIS: There's such a range. I mean from everything I gather, it's such a range that it's virtually impossible to value. So in essence what you do is to what is extent is the auditor responsible for reporting the difficulty in valuing the Level 3 asset. If at all.

MR. YOUNG: Well -- that actually is a very good point. Because it take us to what Mike Gallagher was talking about earlier about critical audit matters.

And that's one, if I may leave other information just for a moment. I mean that's actually something that would be useful for investors to see, that this is challenging number. You know, you've got a FAS 157 Level 3.

But you have to come to a value. I mean the FASB doesn't say, gee it's tough to value, so just leave it blank.

MR. DOTY: Lewis.

MR. FERGUSON: Yes. Alan Beller talked about this yesterday. And as I heard him, what he said was he had two concerns about it. One was the question that there did not appear to be any materiality standard in terms of what the auditor did. And number two, you didn't' really know what the auditor had done beyond evaluate this large body of other information.

Would it help for example if assuming we cure the problem with evaluate and come up with a definition of what the auditor, that is clear and understandable and people know what it means. Beyond that, that auditor has to say and in addition, we preformed procedures with respect to the following areas, so the reader knows more specifically in this body of other information, what areas the auditor thought were worthy of attention enough to do work on.

Does that help?

MR. GALLAGHER: So Lew I would break it down between other information and CAM. And I don't recall yesterday whether Alan's comments were focused on articulate -- potentially articulating procedures with respect to critical audit matters.

That I would be less enthusiastic about a litany of procedures that was performed, that may call into question whether you have a problem with that number or not. As opposed other information where again, if the purpose of the Board was to capture what practice does today with respect to other information. And we do things that go beyond what we're required to do in order to manager our risk.

So we're required to read and consider. Do we do more than that? Sure. We tie numbers out all the time. Whether it's in connection with a comfort letter, or just you know, just to get the 10K done. Every number in MD&A that's the key numbers for sure, are tied out.

So I think articulating procedures and what we do just being transparent about what we do today, recognizing the imperfections that from Jay's comment, which we recognize. And I think Brian's question is exactly the right one in terms of the consumer, would they find it to be more confusing, or would they find it to be helpful?

I think that would be a great thing to test in a field test.

MR. FERGUSON: Are you saying that you do think that would be helpful to do?

MR. GALLAGHER: I think in the context of other information, not CAM.

MR. FERGUSON: Yes, that's what I'm asking. I'm not asking about CAM. I meant other information.

MR. GALLAGHER: I do, but I would keep it limited to you know, a few categories. Not an endless articulation of individual procedures.

MR. DOTY: Jay.

MR. HANSON: A question mostly directly at Jeremy around the non-GAAP financial information. It seems to me that one of the problems is that there are no standards around how you present any particular non-GAAP measure. And I know that we can't solve that problem, the PCAOB.

And I'm looking at Mr. Kroeker, and I'm guessing that he would say gee, we're having enough problems with disclosures on GAAP matters, much less taking on non-GAAP measures. And Brian's colleagues in Corp Fin are the ones that tend to do some policing in the non-GAAP measures.

But it seems like there is a fundamental problem of there are no definitions behind it, nothing uniform. Even if something as on a simpler end of the scale as same store sales, that there are many ways to compute that.

But without solving that problem, which I don't know is even solvable, I think we're always going to have the problem of people saying whatever they want to say with whatever caveats being on it. And there will always be a schedule that describes how the number was computed.

But you made a -- I'm trying to figure out what my question is here. Because I -- do you have suggestions about getting at the core of that problem of it's a wild, wild west relative to non-GAAP measures. Or is it your message really that auditors paying more attention to that may curb just the use of some non-GAAP measures at all?

MR. PERLER: It's a great topic. And I think Pete illustrated it really well when he said that 80 percent of his investment community asks him about the non-GAAP metrics then the GAAP metrics.

And I'm not an advocate of banning non-GAAP metrics. Or turning them all to GAAP, or telling companies that you can't report this information, because I agree it would curb information flow.

And I recognize that this is a fundamental problem that the system has, that it could foster a wild west situation. But I think there are absolutely steps that could be taken. Particularly from the auditors perspective.

You know some easy ones include -- we all know for every company, what are their most important investor communication metrics? Pete just said at his company there were three non-GAAP metrics that they use. Every -- you go to open-ending earnings release, and you look in bold on page one, and you can see right there what they're communicating to investors.

For those metrics, at minimum, to not have any robust quality check or auditor scrutiny on them, I think is a problem that could be fixed with some procedures. I don't want to suggest everything and anything needs to come under the umbrella, but there is a way to pick off the most important investor communication metrics.

MR. HANSON: And just a commentary on that, which is -- which we've heard some feedback in different settings that auditor involvement in press releases. And actually Mike Cook, one of our standing advisor group members, talks a lot about the need for auditors to get on the train earlier than at the tail end when the audit report is issued.

But that in most companies, the auditors do have some involvement with the press release. But definitionally, since most major companies issue press releases long before the audit report is ready to be signed, it's an imperfect exercise. And the auditor is never going to be able to sign off because they're not done with their audit yet. So that is a real change.

MR. PERLER: I recognize that. I think many of these metrics do find their way through the MD&A. And just this overall scrutiny over what the most important metrics are will influence what metrics are used. And just to acknowledge, the audited financial reports are not the primary communication tool with investors. They're not secondary, they're not tertiary, they're what -- above that are the earnings releases, the conference calls, the PowerPoint presentations, the one on ones. This is how companies communicate with their investors.

And the audited financial statements are well below that. So I think it -- and I know it speaks to a grander change in the system, but I think some kind of involvement with the key measures reported in those other communication tools only makes sense from an auditor's perspective. That's where investor protection would be best served.

MR. GALLAGHER: If I could just add to that. I think that I agree with Jeremy. And I would certainly be supportive if the demand exists on the part of the stakeholders, investors and others, to have auditor involvement in press releases and others.

But I would also say that this notion that the audit is all the way at the back end, which from a time perspective it is, but I think when a press release comes out, there's the knowledge that an audit's being done. And God help the company that has numbers that are different in the audited financial statements from their press release.

Now you do have that. Sometimes you have a subsequent event which was beyond their control. And I think the market generally understands that. But if a company consistently, like more than once, has an issue that -- where there's a disconnect between those audited financial statements which come later, and those numbers are different than that press release, they're going to pay a pretty heavy price.

MR. DOTY: Jeanette.

MS. FRANZEL: I want to talk a little bit about the potential impact of whatever we do. Let's assume we can get it exactly right. The impact on perhaps increasing the expectations gap. Because to me that seems to be another factor that we need to worry about.

So if we define auditor's involvement and we define the scope of auditor's involvement, yet you do have some qualitative connecting of the dots and presentation matters that could potentially be misleading, even though the auditor has managed to get comfortable with the various numbers. What do you all see as potential risk here in terms of increasing expectation gap and what advice would you give for us to consider that?

Let's start with Jeremy. And I think Michael you touched on a lot of that.

MR. PERLER: I think the expectation gap is very large right now. I'm not too worried about increasing it. The question I get very frequently from investors when I point out some sort of misrepresentation, is why aren't the auditor's looking at this?

Whether it's in the press release, whether it's in the MD&A. I would say if you surveyed investors, the vast majority would think that the MD&A is audited. Maybe not the press release. But I think the expectation gap is so wide, I wouldn't fear implementing something just because it might increase.

MR. YOUNG: I think that in everyday language, this will be -- start to be referred to as auditing MD&A. Or auditing the 10K. And the distance between that articulation and the reality will be the expectation gap.

MR. NACHTWEY: And I actually agree with both what Jeremy and Mike have said here. And I think there is a huge expectation gap today. I do think that investors by and large believe that if auditors have signed off on an audited financial statement including in some other public filing, or in a public filing, that virtually all of the other information, particularly if it's a number, and if it's got a dollar sign even more. That the auditors have been involved with that.

And even the ones who have a better or more sophisticated knowledge, I think assume okay, I realize the auditor may not have subjected it to the same level of audit procedures, but it's a higher level than what auditors are capable of doing.

So I think this is a great opportunity to tighten that expectation gap. But depending on how we ultimately you know, articulate the proposal, it could cause -- it does have the risk of creating more confusion.

MR. GALLAGHER: I agree with Pete's comments. And I go back to Brian's question. I mean the true test here is if we can experiment. You know whether it's finding the perfect word or articulating the procedures, and get a reaction from those that use the financial statements. And look at the other information and get a reaction. Is this helpful, is this widening the expectation gap, or is it closing it.

MR. DOTY: I am concerned listening to Michael and to some extent the rest of the panel. With the notion that we have now auditors as a matter of practice, looking at other information. The concern that if the issuer knows they're going to have to say something where they find inconsistency, this will result in management leaning toward cooking the books. They will lean toward withholding information. They will lean toward trying to make it -- to neutralize the comment.

It seems to me that they do that at their peril. And the suggestion is what comes out of the suggestion is that the involvement -- some involvement as Jeremy is suggesting of the auditor and the audit process and other information and addressing inconsistencies, should correct, should produce management conduct that is better.

I understand the liability issue. But is the panel comfortable with the notion that we do not -- that we will not empower the auditor. We will not by virtue of directing the auditor to form judgments of some kind. That we've decided that what comes out of this panel discussion is there's a lack of uncertainty about evaluate.

But some -- requiring the auditor to form some judgment and communicate some judgment, is that consistent with best corporate practice and best disclosure? Do you really -- do you believe that that in facts leads us away from boilerplate?

So are you willing to say we're going to abandon the attempt to have the auditor perform some judgmental review. And then having done it, communicate that. Is that where you are? No involvement?

MR. YOUNG: Look, I know you guys have put a lot of work into this. But I'm afraid that's where I am. And let me -- and let me respond to.

Warren Buffet in his most recent shareholder letter says something about a write down. But the number is economically meaningless. If an auditor were reporting on that statement, that statement would not be in there.

And I remember an earlier shareholder letter -- but I do other things in life besides read his shareholder letters, just but -- an earlier shareholder letter I think we talked about a reserve. And he said the one thing we know about that number is it's wrong.

If an auditor had responsibility for reporting that sentence, it wouldn't be in there. And my concern -- I mean let me say it this way. The lawyers will take over. The lawyers will go over the disclosure and they will look at the risk, and they will say, fastest growing, maybe it's right, but there's evidence to the contrary, get that statement out of there. Economically meaningless, get that statement out of there.

And the thing -- I mean they have -- 10Ks have so little life now. I mean you know, maybe an argument is they're so unbearable now you can't make it any worse. But, you know, hope spring eternal.

And my concern is bluntly, the lawyers will take over.

MR. NACHTWEY: Chairman Doty, as I said in my comments, I generally favor the standard. And I think because going back to Jeanette's question, I think there's more risk and harm today in terms of the lack of understanding of what auditors are involved with and the other information, that we can close that expectation gap.

And I think to obviate the issue that Mike so wisely raises, you don't want to limit you know, what Warren Buffet could write. But those kind of subjective things, are not really the part, the purview of the audit firms. And we shouldn't be forcing the audit firms to get involved in that stuff.

Again I think it's much more about reporting and what they already do, to make it clear to investors where the auditor's been involved in other information. Or as Mike said, Mike Gallagher said before, and again from my experience of you know, 25 years at Deloitte, we were involved with a lot of the information. And we just have to come up with an appropriate way for them to report on what involvement they have. What the information is they're involved in and the level and scope of what they've done.

MR. DOTY: Well there's a real dichotomy that emerges. Because Jeremy began with a very profound statement that he says that he has an understanding in his career of how information is read and used, consumed. The whole panel I think fits that description.

You all have through your careers, a heightened understanding of how information is read and consumed. And I take it that along with Mike Gallagher's written materials, I thought there was not the same reluctance or the same concern about the critical audit matters, the CAMs.

That in fact in your view of some of the arguments made that the evidence concerned with involvement in other information, would in fact suggest that you think there is not a risk in having CAMs in the audit report. That's a different breed of cat. I know it's not your panel's subject.

And there are issues of naming the engagement partner and the tenure of the firms that were discussed yesterday and that are coming out of the European model, and that we are considering. I would like to know the panel's views as sua sponte as they are, on whether in fact we should proceed with CAMs, engagement partners, tenure.

Are these matters that are a different issue than the ambiguities and the dangers of other information? Jeremy?

MR. YOUNG: May I speak first to that?

MR. DOTY: Please, please.

MR. YOUNG: Let me speak to the CAM question. I actually think that at a -- I think there's a lot of benefit to the CAM disclosure if it's done right. I mean don't get me wrong. I think there's some issues.

But at a conceptual level, there are tough numbers. I mean Steve it goes to your point about FAS 157 Level 3 assets. You know the mere fact that FASB says you've got to come up with a number doesn't make it easy. And doesn't mean that there's not a range that takes you from A to Z.

And it's useful for investors to understand that. And that's good for investors. It's good for preparers. It's good for auditors. And by the way, in at a conceptual level, that helps you with regard to litigation risk. I mean you're talking about challenges, you're talking about risks. You're talking about problems.

The disclosure of problems doesn't get you into litigation trouble. It's the non-disclosure of problems that gets you into litigation trouble.

Now permit me to just insert here, I was in the room yesterday when Alan Beller was speaking, and I accept that when you get into the weeds, there are some real issues. But that's really on the implementation.

At a conceptual level, I would not suggest that you abandon the CAM project. Quite the contrary. I'm sort of cheering you on as a matter of concept.

MR. PERLER: I agree. There are benefits to the CAM, the auditor's name. I agree with all of that. I think all of those -- or I should say, the most important thing that can be done on the entire proposal is around these most important financial metrics I talk about. All of those are very helpful context as well.

But in my mind, strengthening the robustness of the system for communicating financial performance, is the most important thing that can be done.

MR. NACHTWEY: I appreciate having the opportunity to weigh in on those. Although again, having spent as much time studying them as we did this topic. But I have concerns about all three. Don't have to be fatal.

But in terms of the first, in terms of CAM, so management already does MD&A with massive disclosures and footnotes. If you go to some of the big banks, just critical accounting policy runs on for 20 pages.

So ours is a little less complex, but still runs to probably 10 pages just in the main footnotes. Get into MD&A, there's going to be even more.

So how do we make sure that we're not confusing investors by auditors saying one thing. Now presumably auditors would agree with our disclosures, or they wouldn't have signed off on the audit opinion. But now you get into words as opposed to numbers.

And so the time that it would take to make sure that we're consistent. And if we're not, the idea that either the company did something wrong, and therefore should have had a qualified opinion. Or the auditor's disclosing information that management should have been disclosing to begin with.

And I do have some tissue rejection about the idea that auditors should be the source of original disclosures from -- about the company. But again I think there could be workable things.

I do agree as Mike says, you know FASB, the Level 3 asset issue, and I've had clients -- audited clients and was the CFO for a firm that literally had 100 percent of their assets that were Level 3. And you know did -- the users of those financial statements really understand the challenges in valuing those.

And the risk, valuing them on any given day is tough enough. Trying to say what's going to happen between now and next quarter, virtually impossible.

On the engagement partner, that's a, it's a tough one. You know, from my view, I had audit clients, I had one of the largest audit clients in my former firm. I had 200 partners, audit partners around the world that worked on that client.

So, I mean, I can sign it, but, gee, I'm relying in large part on those other 200. Do we want a laundry list, but I accept the fact there were other professions that do, you know put the individual's name on it.

I just question whether -- does that have as much value as people might think? Or is it misleading that there's simply one, you know, one individual that's responsible for the audit.

And then on the tenure front, could be a good disclosure. We do it. We do it in response to a shareholder proposal. But quite frankly, my concern there is it's a data point that without some context to it, can be used by, you know, folks that want to make a point. Well we just should not have long tenured relationships.

Well I guarantee you, that audit whose name will remain nameless for the moment, but where I had 200 audit partners on it. Imagine trying to get 200 audit partners in the new firm up to speed, overnight, on an incredibly complex business.

So rotation is -- tenure in my mind is simply the camel's nose under the tent of forcing the rotation discussion, another step down the fairway. And I'm not sure it's the appropriate way to do that.

MR. GALLAGHER: So CAM, as the written comments suggest, and my oral comments, very supportive of CAM. As to tenure, very similar to what Pete just articulated. It's a data point. Certainly no issue about having it be somewhere, probably the proxy is the best place to put it to be able to provide that context.

The partner identification as we've communicated in our response letters to that proposal, we're supportive of transparency and letting everyone know who the partner is. Just logistical issues about whether it belongs in the report or if there's a way to do it and have that transparency without creating other issues.

MR. DOTY: Any last questions? Go.

MR. HARRIS: I had just one final question. And

Pete I wasn't exactly sure in your statement where you say a key performance indicator is assets under management. What's the auditor's role? What do you view as the auditor's role in that area?

MR. NACHTWEY: Again, it's not a number that actually comes out of the general ledger. But it's a number that general ledger numbers are derived from.

So assets under management, bottom line is, daily we calculate our revenues off the assets that we manage. So there's I don't know how many thousands of different fund products and separate accounts that all have different fee structures.

So every day we obviously have this in the system, but there's also some subjectivity to it, where my finance team has to effectively book revenues on a daily basis. So again the auditors can't ignore AUM, it's the first part of the equation. So asset times fee, equals revenue.

On the other hand, AUM isn't subject to the same kind of you know, double entry accounting system tension, or the same -- it's subject certainly to our internal control system, but in a different way.

But again, that's why I used it though as I think a good example, a little bit of what Jeremy's getting at is, you know that's a really important number. And it goes beyond the financials.

Every month the market waits with bated breath for all of -- for my firm and all of our peers, to announce what our AUM is. And it moves the stock immediately once it goes -- once that goes out.

So again, it's something that I think having the market understand clearly, what level of involvement the auditor has and doesn't have with that number is important.

MR. HARRIS: But what do you think the level of involvement of the auditor should be in that instance?

MR. NACHTWEY: Well I think it already is heavy. So I think you know, articulating what that involvement is, I think would be important.

MR. DOTY: We're at break. We're having a break. We have a great panel coming up.

Let's take 15 minutes. Let's be back here promptly at 10:45 if we can. Thank you all. And thanks to the panel. Extraordinary panel.

(Whereupon, the foregoing matter went off the record at 10:30 a.m. and resumed at 10:49 a.m.)

MR. DOTY: Good morning. The panel, whom we welcome, includes William Touche, the senior audit partner of Deloitte, in the London audit practice. He also leads Deloitte's UK Center for Corporate Governance.

And as a center leader, follows developments in the UK regulatory environment, the listing rules of the SSA, the FSA and the developments of the UK Financial Reporting Counsel.

William Touche is Deloitte's representative on the Audit and Assurance Faculty of the ICAEW and also serves on its corporate governance committee.

Philip Johnson, the Non-Executive Director of Yorkshire Building Society. Prior to joining that society, he was the head of Audit Quality and Risk Management at Deloitte, UK. During his 30 year tenure as a partner at Deloitte, he was a Board member, also served on the Structure and Risk Committee and Compensation Committee, and sat as the first Chairman of the Audit Committee.

Previously he was the President of the Federation of European Accountants, a member of the International Auditing and Assurance Standards Boards, and the International Ethics Standards Board Consultative Advisory Groups.

He serves on the scientific committee of the World Congress of Accountants of 2014. And he's a current member of the PCAOB Standing Advisory Group.

Tony Cates is head of audit for KPMG UK, and also for Europe, Middle East and Africa. He joined KPMG in 1987, qualified as a chartered accountant in 1990, was promoted to partner in 1998.

He spent a year on secondment to KPMG in Kuwait in the 1990s and has subsequently held a number of senior leadership roles in the firm, as well as serving a wide range of clients from owner managed businesses through to the FTSE listing across a number of sectors -- FTSE 100 clients across a number of sectors.

Liz Murrall. Director of Corporate Governance and Reporting at Investment Management Association, the trade body representing the UK asset management industry. She monitors the developments in corporate governance, companies' reporting requirements, assesses the implications for the industry, and where necessary, lobbies for change.

She represents the IMA on a number of committees including the Institutional Shareholders Committee, the CBI's Companies and Financial Reporting Committees, the Corporate Reporting Users Forum. She is the secretary to a cross industry group that liaises with the International Accounting Standards Board and the Main Accounting Practices on Reporting and Auditing.

Before IMA, Liz Murrall worked at a number of the main accounting practices providing consulting services to a variety of financial services consultants.

The experience and the expertise represented on this panel regarding changes in the auditor's report in the United Kingdom, have direct relevance for us and what we're trying to learn. And we appreciate your doing it.

Please begin Mr. Touche.

MR. TOUCHE: Well, thank you very much Chairman and members of the Board for inviting us here today.

And so I'm going to give you perspectives from the point of view of a practicing audit partner who issued one of the first audit reports under the new regime. And that was for British Sky Broadcasting and their satellite broadcaster.

I thought I'd touch on three areas. And first why I believe extended auditor reporting is so important for the future of the profession. Second I'll share some observations gained from signing last year in July, one of these first reports.

And third, based on that experience, just a few observations on what works in the UK and some perspectives on what I perceive the challenges will be for the second year of reporting. Because I think we're all very excited about the first. But actually the second is also - you need to have a view on.

So to start, I thought I'd mention that I wouldn't be here today unless I was a big fan of the new regime. However a lot of the success of the regime in the UK is because at the same time as introducing the new auditor reporting, the FRC also introduced new requirements for Boards and for audit committees.

For Boards, to make two statements, first of all that the annual report is fair, balanced and understandable. And second, that it contains sufficient information to explain the strategy, business model, and performance of the company.

So in addition to these, new requirements for the audit committee and its own reporting to shareholders, that they should examine the scope of the audit, and explain in their report to shareholders, the key issues that they considered and how they were resolved in respect to the financial statements.

So, and I know this is a hot topic here.  In my view, this quite properly puts the communication responsibility for financial statement judgments on the company rather than the auditor.

And it also highlights and reinforces the role of the audit committee in supervising on behalf of shareholders, the production of the financial statements, the supervision of the scope of the external audit, and the resolution of key issues raised by the auditors, and doing that on behalf of shareholders.

So second, just a few introductory contextual remarks about B Sky B.  It has a reputation as one of the most successful and innovative companies in the UK, well led by a management with a focus on its core mission.

And in common with many consumer-oriented companies, its focus and clarity is reflected already in its annual report.

So I was very pleased when the CFO and the CEO, Andrew Griffith and Martin Gilbert -- and Martin is a significant investor, he's the Chief Executive of Aberdeen Asset Management, a major institution investor -- agreed to take the lead in early adoption.

So first the importance of the new external audit report. So I've been a partner for about 18 years at Deloitte. We employ 15,000 people in the UK. And we recruit about 700 graduates into the audit practice. And all hugely talented people. And most of whom will use their training as a springboard for successful and fulfilling careers in finance and business.

Now for these people, the facts that the key matters we address in our audit work are now directly described in our public reporting, is actually rather inspiring for our new auditors. They're proud to see their work so directly described in an audit report. It underscores the public interest nature of our work at a time when the profession has had a pretty rough ride.

It invigorates their personal sense of responsibility and pride. And it underscores to them why quality is so important in everything that we do.

So from the perspective of Deloitte UK, we see the audit report as an opportunity to inform shareholders about the important work we do on their behalf. We're appointed by shareholders to form our view on the overall financial statements. The commenting now on the major areas of focus of our work actually seems quite natural in the public domain. Even just a few months of the new reporting regime.

So speaking as a member of the profession as a whole, thanks to the leadership of the FRC, and the good work of many others, I think we've been given an opportunity to reestablish the value of audit. And of course without being too sentimental, London's pretty proud that we've taken the lead out there.

And just as also we've taken a bit of the lead on our comply or explain governance model, which has helped the governance regimes' shape around the world, led by the FRC, the ICAEW and the EBRD as well. And that's an important part of the reporting structure.

So what were the experiences of the new extended auditor reporting? As I said Sky embraces it from the very first suggestion. The attitude of the company is very much if we can lead, then we will.

Now the new audit report drives auditors to describe the areas of focus that consume audit effort. And the matters that we chose to report on, record recognition, the recognition of programing costs when they're expensed, and the validity of capitalization of capital projects are those that do consume our audit effort. And are areas that are routinely discussed with the audit committee.

So the topics were already well aired. And there should really be no surprises for management or for the audit committee on any of the topics commented in audit reports. So from a communication perspective, there's a bit of a breakdown would have occurred if there are surprises at the 11th hour.

And the next question I thought would be of interest, if the topics are understood and well aired, were the words difficult to find to describe them. And that, in fact this proved to be uncontroversial as Sky's hugely respectful of the work of the external auditor and of the reporting that we have to make under the standards that we follow.

So we had very little discussion about the choice of words. But in some companies that perhaps may be less respectful of the audit, maybe the auditor's latitude that provides a much more potent voice now with the new form audit report, actually should engender greater respect for the role of the auditor and for the profession. And probably greater engagement with the auditor by management and the audit committee. And I expect this will be one of the positive outcomes from our new regime.

I thought one of the challenges would be to figure out how many issues to report and the level of detail. But again, this proved to be quite uncontroversial. We actually -- I have a keen focus on trying to keep comments succinct, and again with the focus on year two, I think succinctness will be a benefit.

I've had shareholder representatives comment to me that it would be very helpful to flag in year two what has changed. So following the less is more principle when describing the audit risks and responses would be a very good principle to adopt.

So to summarize, a few ingredients for success. Early discussion and communication. The company's robust governance that respects the role and work of the auditor. And remember that the audit report is about succinct communication with investors.

I think one challenge to be faced in the coming year is the proposed reporting on the internal controls. And you've obviously had internal control reporting here established for longer than we have. Under the proposed changes, it will be very interesting to see how our free form audit reporting develops.

So a few final lessons. One boilerplate disclosures are public enemy number one. Innovation and company specific tailoring could be stifled by requiring specific ordering or prescribing standardized language. And you can achieve comparability by achieving a limited number of defined headings, allowing freer form reporting under each.

And we're seeing in the UK a wide variety of practice emerging based between firms and between individual partners. I personally like our opinion, which is focused on the audit effort rather than -- and leaving the audit committee to explain the judgments. And our opinions on the statement as a whole whether they show a true and fair view, it's up to the audit committee to explain their scrutiny of management's judgments.

And I think there needs to be real care and attention in explaining audit procedures. I don't think we should be going into a long laundry list of audit procedures.

And finally, and perhaps the most important point, is we're very lucky to have the governance regime that we have. Where the audit committee itself and the Board has to make these statements, which if you like are auditor reporting regime compliments.

So I hope that's been a helpful commentary. And a scene-setter for the panel discussion.

MR. DOTY: Thank you. Mr. Johnson.

MR. JOHNSON: Thank you Chairman and thank you for -- sorry, technology. Thank you Chairman and thank you for your kind remarks. And also for inviting me to speak here today.

I am here in my capacity as an audit committee chair, thus representing a part of the non-executive director community. But I've also had great interest in seeing the audit profession move forward.

Having spent 30 years as an audit partner in a Big Four accounting firm, during which time I helped develop communication to audit committees. I had six years in Europe representing the accounting profession discussing changes to our profession and the auditor reporting model.

And now as a chair of one audit committee, and a member of another, at last I can say that we finally started to tackle the long standing information gap concerns, which so long has been described by stakeholders as an expectation gap.

You heard comments yesterday about how long it has been since there was a change in the auditor's report. 80 years was mentioned for the US and Nick Land commented about 150 years in the UK.

This 150 years goes back to the middle of the industrial revolution when trade expanded, companies got bigger and external capital was sought in ever increasing amounts. The owners were not the managers anymore. So the audit as we know it, was formulated to give assurance to the owners that the financial statements properly reflected the company's financial position.

So having said that, it is quite clear to me that the purpose of the audit is for the auditor to inform the investor. Thus the need to provide more than just a pass or fail. Recognize that the pass or fail model is fundamentally important to the investor.

I appreciate that the UK has a different legal system and a different litigation environment. We also have a set of principles based standards rather than the rules based approach. The new audit reporting standard is only 16 pages long including the application material.

And therefore the auditor can use his judgment as to how to report on the requirements in the standard. Quite different to what is normal here in the US.

We heard from Nick Land yesterday that the new auditor reporting model in the UK caused some tensions between auditors and management. When I was working in Brussels, it was stated at one point by the European commission, that they wanted to create some tension between the audit committee and management in order to create better corporate governance.

The question must be, is it tension or is it challenge? If it's the latter, then it can only be healthy. And for the audit, it can only result in a better quality audit.

So with this backdrop, let me focus a little bit on what happened in the UK. As we already mentioned, the FRC encouraged by Parliament and investor groups, first it looked at the corporate governance code for company reporting, focusing on the role of the audit committee and what it should cover in the audit committee report. And then as an audit standard center, look for changes to the audit report.

To give credit where credit is due, by looking at both audit committee reporting and auditor reporting, the FRC has addressed or moved a long way to addressing the shortcomings of two of the three legs of the corporate reporting stool. The third leg is the financial reporting framework, which also needs some changing. But two out of three is a good start.

This is why I think the SEC and FASB also have a role to play here in the US and not just leave change in this area in the hands of the PCAOB.

Turning to my personal experience of the changing environment in the UK, let me focus on the company where I chair the audit committee and what if any were the differences in reporting I've seen as a consequence of the changes.

By way of scene setting, we are a financial institution. The second largest building society in the UK with 55 billion dollars of assets. We are involved in savings and loans but also have a regulated financial advice business, have some complex financial instruments, undertook two significant mergers during the financial crisis and accounts under IFRS. As a consequence, we have a number of significant judgments to make each year, and also carry some significant risks.

So at December 31, what did our auditors report on? Well let me start by saying that their comments were merely on the risks, which could result in material misstatements in the financial statements relating to critical accounting policies and estimates and the judgments made by management.

Firstly, let it be said that the audit opinion, i.e. the pass or fail opinion, came right up front in the first paragraph. So no confusion there. Which was a concern expressed yesterday by some presenters.

They made specific comments about going concern and the work that they had undertaken. But also had to comment whether they had identified any material uncertainties that cast significant doubt on the group's ability to continue as a going concern.

They helped to define materiality and the level of audit differences that would be reported to the audit committee. That was covered yesterday, so no need to say more now.

The most significant change however, was the requirement to identify the areas of risk that our auditors consider could give rise to material misstatement in our financial statements. And how the audit scope responded to those risks.

Our audit, the risks identified were loan loss provisions, particularly important due to the change in economic levers; fair value adjustments, an important judgment as we set those provisions a few years ago when economic conditions were quite different; revenue recognition; provisions to customer remediation as a result of some legacy and current issues identified by the regulator where we had to make provision for future payments to our customers; and potential fines to the regulator.

Capitalization of costs. We're undertaking a very significant upgrade of all our business systems over the next years. With both internal and external experts, and totaling hundreds of millions of pounds.

Hedge accounting, treasury instruments where there is no active market and deferred taxation. Again, reasons articulated yesterday.

You can see from this list, the risks require the company and the auditor to exercise a high level of judgment. And all or a combination of any two or more could have a very significant impact on the report of profit and the financial position of the group. As a financial institution, those matters were seen to be useful to the understanding of our financial position.

In the Rolls Royce audit report mentioned so often in the submissions yesterday, the risks identified centered on revenue recognition, recoverability intangibles, accounting for subsidiaries and associates due to the many collaboration agreements, liabilities arising from sales financing arrangements, bribery and corruption, and presentation of underlying profit.

Very important to understanding the Rolls Royce position so tailored to that company's circumstances. But quite different from those disclosed in my financials.

So what about the audit committee and the auditor engagement? Was there any difference? Compared to previous years, there was certainly more engagement between the members of my audit committee and the auditor. This was partly due to the enhanced audit committee reporting. But also due to the changes in the audit report.

Both were new requirements in 2013. We had common interests to say what we had done and why we had done it. There was early engagement and improved dialog during the audit process. The audit committee were more engaged during the audit planning phase, focused heavily on key matters within the financial statements, and were far more engaged with management and the auditors to ensure appropriate judgments were being made and that the reporting of these judgments was appropriate.

There was more detail provided by the auditor to the audit committee as to how they had satisfied themselves on the key judgments. And there was more challenge to management.

As far as the audit team were concerned, the members were far more aware of what was important in the business. And they seemed to share a higher level of skepticism and overall challenge while doing their work.

So let me say some concluding remarks. From my experience across two audit committees with two different audit firms, I am certain that the quality of the audit was improved as a consequence of the changes brought in by the FRC. It also helped to move away from boilerplate reporting. Every company is different.

So the risks and significant matters identified need different disclosure. I don't subscribe to the notion that the auditor will revert to boilerplate. There will be refinements made in the future. But I think the auditors recognize the need to inform, not just comply.

Another added value as a result of better auditor reporting will be that across a number of years, stakeholders will be able to identify any changes in the risk profile within a company. Another helpful piece of information to all stakeholders.

Nick Land mentioned that he did not expect a change next year in the Vodafone audit report. But if there was a change and new risks were emerging, then that really is information worth having.

Another positive is in relation to identifying or helping identify sector issues. Analyzing audit reports across particular sectors can inform on emerging issues. We tend to focus on the concern of a company analysis of competitor-disclosed information. It could be that when you do the analysis, one company stands out as a outlier, thus prompting questions to be asked.

So let's focus on the positives coming out of enhanced reporting rather than have a fixation on the negatives. We need consistency however in auditor reporting irrespective of the jurisdiction where a company resides.

It would be better if we could have just one reporting model across all jurisdictions. But the current PCAOB proposals helped us move closer together. I think looking at the risks rather than looking at the effort should be considered by the PCAOB. But no one party will get everything right the first time. We will improve matters and regulation will evolve just like everything else. Darwin said evolution is a given. We should all take heed of this and evolve.

If the US does not embrace change, I'm sorry to say this, but in my view it would be nonsense if the largest capital market on earth, provided the least amount of information to the investor community on the key matters influencing the financial information on which those investors are making their decisions.

In the UK, in the rest of Europe and internationally through IAASB, the wind has changed. Let us sail in the same direction. And I would encourage the PCAB to move forward just as the rest of the world is moving forward.

MR. DOTY: Thank you. Tony Cates.

MR. CATES: Thank you Chairman. Chairman it's my guess that when Nick Land and now UK regulators chose an accelerated timetable for our review of audit reporting, that was because they wanted the UK experience to be something that others could benefit from.

So I'm very happy to be here today and to talk about what we've been doing in the UK. Let me start by saying, you know, why I think that reform was needed. The catalyst was obviously the financial crisis. But perhaps this just brought to the surface an issue that had been around for some time - a decline in shareholders' trust in companies and in audit.

Audit should have been playing a key role in creating trust between shareholders and their companies. But it became apparent that it wasn't delivering all that it could.

Now to me as an auditor, the value of an audit is very clear. But to the shareholder, the binary audit opinion, just wasn't delivering it.

So I think it was absolutely right that we needed to make a bold move on a long form audit report. To say what we thought the issues were and what we did about them. After all, auditors are for shareholders. So shouldn't we deliver more of the value that comes from our work directly to those shareholders, not just by the audit committee.

Now in terms of putting that into practice, it may be easier for the UK to do that. In UK law, our audit reports are for and addressed to shareholders as owners only, rather than as traders of shares. Using the audited accounts to hold directors to account. And that's not necessarily the case elsewhere.

Now in practice, my biggest worry was the short timetable and a very short auditing standard. Just five paragraphs. However, there was wide recognition that the regulator had laid down a challenge to use those few words to show the value of audit.

And with the UK's less fiercely litigious environment, it was easier for us than perhaps it may be here, to respond to that challenge on the basis of just five paragraphs. Essentially we did that by learning on the job on our September year-end reports. And converting that experience into firm-wide policy and guidance and rolling it out across the firm, with a central team to provide support and a measure of consistency in our approach.

So what was the critical deliverable for us? We saw that as the description of our work on the key risk areas. And it's this, not say the materiality figures which were also required, that really demonstrates the value of audit. By showing how we brought our experience and independent mindset and skepticism to bear.

That demands that we flag the key things that we have to test. So not just that we had to test the subjective assumptions in the risk area, but specifically which assumptions. And not just that you tested them, but how you applied your outsider's perspective with a bench marking against data, or against your own views of say growth potential in the sector or for the specific client.

When we did our KPMG survey of first movers, and at that point only 19 companies had reported in mid-January, this was the area where we found most variety. Not surprising for the most difficult aspect of the new UK reporting.

The UK's new reporting by describing some of our audit procedures, inevitably begs a question. What more can the report say about for example, what the auditor found in his testing? At KPMG in the UK we thought this question should not be left hanging, but should be tackled face on.

So in order to promote debate about that, about the value and about the challenges, we've tested out the idea in a very small number of reports and we've heard about that just earlier, by also giving the findings of our work in each risk area.

That debate has only just started and I'm not here today to promote any kind of position on that. But I do think that you and your stakeholders debate as you debate the way forward for the US, you might want to have one eye on the question of where it could lead in the future.

So back to the existing reporting model in the UK. Is it a challenge to do this kind of reporting? Yes, it is a challenge. Is it worth doing? Absolutely yes.

But at the same time, we shouldn't fool ourselves that better auditor reporting is the answer to preventing future financial crisis. It can only ever be part of the solution, and focusing on the adequacy of corporate reporting, of corporate governance and stewardship, are all fundamental prerequisites, without which improved auditor reporting will mean nothing.

Thank you.

MR. DOTY: Thank you. Liz Murrall.

MS. MURRALL: Thank you Chairman. And good morning. And thank you very much for inviting me here.

I very much welcome this opportunity to give an investor's perspective of the changes that the FRC introduced to audit reports in the UK, and the improved transparency around the audit process that we now have.

I'm here on behalf of the Investment Management Association, the trade body for the UK asset management industry. Our members include the asset management arms of the investment banks, the retail banks, the insurers, the managers of occupational pension schemes and independents.

We have around 220 members in total, and collectively, they have about 4.5 trillion of assets under management globally. 67 percent of those holdings however are held in companies listed outside the UK. They're held internationally.

This means that our members are major investors in companies. And they have an interest in the requirements governing the preparation and audit of these companies' accounts and the information disclosed to them as users.

So what do investors want from the annual reported accounts, and the assurance and audit of that information? Essentially the accounts are a confirmatory document published some time after the events to which they relate. They're about management's accountability to its investors. The shareholders who put up the risk capital and bear the residual risk.

Management is entrusted with shareholders' funds and corporate reports should show how those funds are put into use and performance derived from them. Accounts show the accountability with stewardship of management.

The fact that these accounts are subject to an audit is vital to investors' confidence in those companies, and the markets value the information and investors believe what they're told about their investee companies. If that presumption was exposed as faulty then the system could seize up.

Nevertheless, investors have had concerns about the quality of the audit, the auditor's accountability and transparency to investors for some time. Certainly well before the financial crisis. Many of these concerns were a product of the fact that investors felt excluded from the audit process and the real findings. They were largely invisible.

And whilst as we've heard, the binary opinion, pass or fail, is very important, the audit reports otherwise tended to focus very much on details of what the auditor did not do, rather than what they did.

It's been said that 91 percent of investors do not read audit reports. I don't think that's surprising given what's in them. But I would actually refute that. I think investors do look at the audit reports, but it's very quick. Just to see whether or not it's qualified or not and who did the audit.

All this did the profession a disservice and some investors were questioning the value of the audit. This needed to be changed and trust reestablished. Tony has mentioned trust in his opening statement.

The FRC's framework was a welcome part of that change in introducing a more enlightened audit report. This was a big leap forward. It is the most significant advance in auditor reporting in decades. And a challenge has been thrown down to auditors and a competitive edge, if you like almost, introduced into audit reporting.

And whilst the 30 or 40 examples of the new style reports are quite mixed, this is an evolving process, investors are very positive about the changes.

So what has changed? First the FRC requires auditors to disclose audit materiality. This should mean that investors are better able to assess the quality of those reports. Currently we have few indicators or no indicators of that.

Most importantly, the new audit report tells investors what the auditor assessed, as we've heard, the main risks of material misstatement. Effectively what the critical accounting policies and estimates were.

What is important here is that it's not a kitchen sink approach, but a risk-based approach. Investors don't want a laundry list of procedures. What they need to know is why something was a risk of material misstatement, what the auditor's response to that risk was, and also what the outcome was.

This information will help investors identify and understand the significant judgments in the accounts. It gives them a hook to further challenge executive management and hold the audit committee and external auditor to account.

This greater understanding should contribute to the relationship between management and investors, enhanced trust, and ultimately, in the long term, reduce the cost of capital and increase the value generated for investors and the end beneficiaries, their clients.

So what have we found? Well the requirements were effective for accounting periods starting on or after October, 2012. And I think it was commendable that certain companies adopted early. As William said, B Sky B did and also Ashmore and Vodafone. And I think Vodafone was producing annual reports in accordance with this while the ink was still drying on the revised standard.

Concerns were raised yesterday whether the information could be market sensitive. As I've said, the main role of accounts is as a confirmatory document to the market. They're historic and produced some time after the period to which they relate.

The information that is price sensitive has to be disclosed under the market abuse regime. And as for investor's decisions themselves, they're more likely to be made around the preliminary announcement or investor road shows than through the accounts.

But the key thing and the important thing is that all this information that is out there can be tied back to the accounts and that these accounts have been independently assured.

There were also concerns yesterday whether this reporting could result in mixed messaging. We don't believe that is the case and we haven't seen that to date. I think it's important to remember that the preparation of the accounts is the responsibility of the company and its Board and they should made the necessary disclosures about the company's position and performance.

As regards to the transparency we're discussing here, only the auditors can report on what they actually did and what they found. However one of the concerns that we did have is whilst the FRC's requirements tells investors of the key risks and how they were addressed in the scope, I think it's -- many of us are asking questions why it didn't go further. And ask what did you find. How aggressive or cautious did the auditor find the company's estimates or judgments.

This is something that's already subject to a dialog between the audit committee and the auditor. And investors would value this insight too. And I think we've heard that there are certain reports. And there are two that I can name, Rolls Royce and UL Resources that have actually gone that step further and reported what the auditor found.

Lastly, several standard setters are looking a proposals to change the audit report. As I said at the outset, 67 percent of all equities managed by our members are held internationally. Investors want harmonized international standards for audit reports.

And whilst we recognize there is some consistency in a number of the proposals, unintentional and unnecessary differences should be avoided. And as Philip has said, we would encourage the PCAOB to follow the steps that have been taken internationally.

To conclude, investors have had concerns about audit quality and the transparency of the audit process for some time.  Steps are being taken to address this and the FRC's package of reforms enjoys the support of the investment community - the real end client of the audit process.

Thank you.

MR. DOTY:  Before I recognize Jeanette Franzel, let me say that while delivered in a very understated British way, these four statements contain bombshells. They are in fact terrific statements.  Jeanette.

MS. FRANZEL:  Thanks for coming today and sharing your insights and experience.  This is very valuable to us.  A couple of you made comments about the need for international -- or for standards to sort of come together internationally.  And we've got KAMs, we've got CAMs, and we've got the UK approach.

And so I'd be interested on your views as to maybe the risks that we're currently facing and how can we bring all of these proposals closer together.  But also I'd like to hear about advantages and disadvantages that you've experienced from the UK approach that maybe we should think about as we move forward with our proposals. So start with Mr. Touche.

MR. TOUCHE: Looking forward to year two. I mean if you look back at year two and you've got a huge amount of variation across border, and we've got significant variation in the UK with companies or firms or partners doing different things, I think it could lead to some frustration.

So I would encourage standardization with the user in mind. And so anything you can do to harmonize and lead with all these various definitions and drive an international consensus would be very, very helpful, with the user in mind.

MS. FRANZEL: Any advantages or disadvantages from your experience that we should keep in mind?

MR. TOUCHE: I mean from the perspective of the dialog with companies which is you know, not the source of my invitation today, I think the primary responsibility for commenting on judgments, as I said earlier, should be with management.

Now as I said, we're blessed with a regime where the audit committee is required in the UK to report on judgments. And I think that regime does not exist in many parts of the world. Including perhaps as much as you would like here.

And so I would encourage some evolution of the responsibilities for audit committees to report on key judgments in relation to the financial statements as part of a package of measures.

MR. CATES: Just from my perspective, I think some commonality is a good thing. But actually we are operating in different environments. And having you know, learning from each other as we evolve, could also be seen to be a good thing.

So there would be some positive things about having slightly different approaches. I think in the UK, the short brief kind of overview standard, the five paragraphs I referred to, actually enabled us to be quite innovative in the way we were doing things. And so different partners and different firms have taken slightly different approaches. And I think that's benefitted all of us actually because it will help us evolve a much better product in the long run.

MS. MURRALL: I think in terms of trying to align the requirements internationally, I think what we've seen from the European Commission and we've seen from the IAASB and the FRC, is they're actually focusing on things like material misstatements, significant risks.

So it's getting away from ensuring that we have a sort of laundry list of issues. And I think that would be very helpful. And just the terminology itself is going to confuse -- could potentially confuse the international markets if that could be aligned.

As to the advantages and disadvantages as to what we've seen in the UK, and I think there have been a lot of advantages in terms of opening this Pandora opening this black box so that we can see what happens in the audit process. And I think that is going to help the dialog between auditors, management and investors going forward.

But the potential disadvantages is potentially as we heard yesterday, as to whether or not this could become boilerplate over time. And if it's not read, then it's not going to be any use to anybody if that does happen. I think there are various safeguards to prevent, to help that.

The fact that the standard itself is very high level and principles-based, and gives the firms a lot of flexibility in terms of what they're reporting. And also was saying a lot of sort of change in the audit process. There's been a lot of pressure and there's been sort of a regulatory proposals for mandatory rotation and tendering. So we're going to have more change of auditors. And I think that will bring a fresh pair of eyes to this reporting and change this.

And of course it is different in the UK in that we have a different sort of corporate governance regime. We operate very much with -- under company law with shareholders having certain rights to monitor and respond to what happens in companies. And a very strong role for our audit committees, which is not necessarily shared internationally.

MR. DOTY: Jay Hanson.

MR. JOHNSON: I was only just going to add a point. That when I, and Martin was also in the IAASB CAG and when they were talking about this project for ISA

700, they were coming up with all manner of things. And I think that there -- they took on board I think that the auditor can't second guess what all the stakeholders will want to see from the audit report.

And I think that is absolutely critical that what is reported is useful information. But doesn't lead people down the road through the financial statements and pinpoint certain things that you ought to look up. You have emphasis -- if something's so important, you have an emphasis matter paragraph.

But I think that you do have to be careful that you don't take away from the user, the ability to read and inquire. And that was a good move. And I think that evolved through the process.

So I would -- all I would say as far as the PCAOB is concerned, it is good not to be too prescriptive and good not to as the chairman was talking about yesterday, leading the witness.

MR. DOTY: Jay.

MR. HANSON: Question for the gentlemen that have actually had to do this one time now. It's a two part question.

One is my observation about the ability to describe the risks, the materiality and then the scope of the audit, how it addressed the risks. That for the well-organized, proactive engagement team, that could pretty much be done at the time you've completed your planning for the engagement. And look back at the end to say well gee, did anything new come up for new risk or anything unintended that we need to do to change how we describe the scope.

And so I just want your thoughts to do it -- did I get that right? That's effectively what, and setting aside maybe the first year of implementation challenges, but that's directionally what your new standard is suggesting.

But then also to connect to something that Ms. Murrall said. That that's one level of helpfulness for investors, but the more helpful thing is going to be so what? What did you find? And maybe your thoughts about the practical implications of how difficult that may be at the end of engagement, to then describe, what did you find?

MR. CATES: I think in terms of the actual risks, what we're really doing to some extent is describing the risks that we described to the audit committee at the outset of the audit. And we monitor them through the audit and we focus our attention on them. And we comment to the audit committee on them at the end of the audit.

And in some sense, it's a frustration, or has been a frustration that actually we have that focus and that debate. And really, you know focus on those risk areas through the audit. And then historically just come up with this binary audit opinion and no one really knows what we focused on.

So actually, it's been a release in a way to be able to say you know, actually these are the things that we did focus on. And ordinarily and for well-run businesses, you will find that you know what those risks you expect to be at the outset and you follow them through. But you're also ready to be flexible at the end and to be skeptical about what new risks might come up towards the end of the audit.

So I think that ties in very well with the audit committee reporting you know, for sure. Now the second part of your question related to the so what question.

And we've released -- KPMG has assigned two reports now, the Rolls Royce report and the New World Resources, which Liz mentioned, where we have put some additional commentary on.

It was with some trepidation that I authorized those approaches and it is one audit partner that has done that. And we spent a lot of time thinking about that. And I'm not really -- we didn't' do that with the intention of doing that in a more widespread way. We did that with the intention to really be bold and to start a debate.

So we haven't really decided where to go with that in the future. But clearly it has kicked off a debate. I think again, what we're doing in that situation is being even more open about the type of discussion that we have with the audit committee. Because we would always have that sort of discussion as to how you know, the level of judgment involved in provisioning and where the company sits on that.

I do feel that you know, it might be -- it will be difficult in the long -- it will be difficult in the short term should I say, to actually you know, do that with a wider number of companies. But I'm glad we've kicked off that debate at least.

MR. TOUCHE: So yes for sure in the transition year in particular. Most of our clients wanted to see what the audit report would look like before we had done the pass.

So yes, when you present your planning paper, the chances are most of our partners have also presented an outline of what it might look like. And that's just good communication. It allows the annual report to be constructed in a cohesive way.

It allows the audit committee to start thinking about how they're going to describe the key risks and judgments that they're responsible for making. So that they can start thinking about their language and so on.

So that up front communication is essential. And if there's fear in transition, that de-risks and removes quite a lot of that fear in that transition period.

Just coming back to the so what. And the commentary on individual judgments. And as Tony said, I think there is a debate to be had that's only just beginning. My -- and of course the fear is that by commenting on individual items in the financial statements, you take away from the true and fair view as a whole. It clearly provides color to that. Because there is a range of judgments that all add up.

And we were just talking with Liz earlier and you know, the problem is if you need to go down this path and you say oh, you could have done this, or you could have done that. Or it's a bit cautious, or a bit aggressive here. Investors of course will want to know well, supposing you added all that up, what would the impact be. And then you get an alternative set of numbers.

So this debate will run its course. And I hope that we'll end up with an opinion on the -- a view that reinforces the opinion on the financial statements as a whole rather than a whole list of individual opinions on individual judgment areas.

MR. JOHNSON: Can I just make one point from the audit committee experience. Certainly when we had the report from our auditors to the audit committee, they did, because of all the areas that they were covering, they did put us onto a spectrum.

So each individual item that I commented about before, whether it was loan loss provisioning, whether it was fair value, et cetera, et cetera. And certainly valuation methods and results. There was, all those were on a spectrum.

We found out as a board -- well as an audit committee and then subsequently that was taken to the board. We found that very useful to assess where we were compared to our peers. Because the auditors did have insight of what was happening in the market, what was happening in that class.

So we were much more comforted by the fact that we had that information available to us as a board. Now the question then is should that be rolled out. I am very much aligned with William, with having some caution about having a whole series of mini-opinions. The audit opinion is the financial statements as a whole.

So if we're actually -- if you, it depends how far it goes to what is described. Because I wouldn't like to be in the position where every major judgment area on my balance sheet had a mini-opinion on it.

But I think it is -- you know I think it is a debate that needs to take place. And I know that it is already started. And the interesting thing for me is that we're now only, we're six months in. That's all we are. Sixth months in. There's only been 40, 50, whatever number of reports that have taken place.

And already, the auditors are starting to talk about what more they can do. What more information that they can get, rather than go the other way around and saying well, after the first round perhaps we went a bit too far with this or a bit too far with that.

So I think that's an interesting dynamic as far as the audit firms are concerned. Is that they're looking to moving it forward even more. Whereas in the past there had been reticence to do anything.

And so I think that's encouraging. And certainly from an audit committee perspective, we like to know where we sit on that spectrum, and we don't want to be, you know we are a conservative financial institution. So we don't want to be having racy policies and racy judgments. And it does help us to ensure that we're not in that space.

MS. MURRALL: Thank you. I mean I think investors do want to know where management's judgments lie. And what the audit work was done on that and the assurance gained by it.

And if we look at the requirements as they stand, the audit committee is required to report on the significant issues on what they did. The auditor is required to report on the risks of material misstatement on what they did. But no one is required to report on what they found. Investors want that information.

MR. DOTY: Thank you. Lewis.

MR. FERGUSON: Yes, as I understand it at the present time, these requirements are limited to a subset of public companies, whether it's the FTSE 350 or whatever it is I don't know, but it's a subset.

So I have two questions. One, what do these new requirements do to audit costs and/or fees? And two, will it be and should the requirements be expanded beyond the original subset of companies? Should they be applied to all public companies for example? Or all audits?

MR. CATES: In terms of -- you're right, it's limited to companies actually that comply with the combined code which is largely the FTSE 350 and some others that comply voluntarily.

In terms of costs, I heard Nick Land say yesterday that they didn't think there was any cost. I mean I can ensure you there is some cost. The -- it's not so much getting the issues together. We've already got those issues together for the audit committee. But it's actually you know, drafting the statement and having some form of quality control over the audit opinion.

You know so at KPMG in the UK, we issued around 80 opinions in total. And some in the future. And actually we have a centralized process and we set aside not just our technical people, but some of our best client-facing partners to also review those opinions, so we could get some best practice.

So all of that costs. But it's not a huge cost.

MR. FERGUSON: Were those passed on in higher fees?

MR. CATES: And in most and many cases yes. They were passed on in higher fees. But not -- I wouldn't say that significant fees.

Should it be expanded to other companies? I think it covers the main companies that investors are invested in. It's probably more a question for Liz than me.

MS. MURRALL: Yes, I mean it covers all companies that are required to adhere to the UK corporate governance code. That is a premium listed segment in the UK. And that is the main UK listed companies.

I suppose one of the concerns that I do have is increasingly we're seeing overseas companies come to the UK to list. And they may have significant operations in countries that may not have the same auditing standards and it's how they're going to actually adhere to this going forward. I think that could be a difficulty for them. Because you need uniformity in the list.

As regards the costs themselves, as regards to investors. Auditors are scrutineers on behalf of the investor community. We don't have any issue with what it costs, although obviously we wouldn't want to see the costs should be any cost increases should be reasonable.

But I think in terms of that, particularly the increased tendering we're seeing, I think there is a concern to whether or not the audit tenders could compete on cost. And I think it's very important that that process is owned by the audit committee such that cost doesn't drive the decision and its quality. Thank you.

MR. TOUCHE: I echo what Tony has said. And I think it's worth just bearing in mind that the auditor reporting regime was introduced with a package of other measures for boards and audit committees. So that helped if you like in the whole company redesign of annual reports in the last six months, which also has been a modest additional fee. But as Tony said, not enormous.

MR. JOHNSON: Our fee went up really marginally. There was no significant increase in those costs certainly as far as the company was concerned. I don't know whether the auditors will be looking at their margins next year, having gone through the experience and how much time they did have to put into it.

But certainly from the first year that we experienced it, it didn't increase the costs. Whether it should go any broader, in the UK of course we -- there's a large number of companies other than the FTSE 350 that are subject to audit.

From a personal perspective, if you have stock listed on a stock exchange, then why shouldn't you have -- why shouldn't you give this -- why shouldn't the auditor give this information. You can easily lose money. The investor can easily lose money on small companies as they can with large companies.

So I think it's not necessarily a size - from my perspective, it's not necessarily a size issue. It's the fact that you have external shareholders investing in your company. And I think that you have to have that mindset. And a lot of the companies, if it goes down to private companies, which in the UK a number of private companies do have a foundation to have audits.

Then, when you've got management and owners, it's a small group. I don't think there is a need to do it across the whole spectrum.

MR. DOTY: Steve Harris.

MR. HARRIS: Well Mr. Touche, first of all, I commend you on your testimony. And when you say without becoming too sentimental, I don't think you were at all sentimental.

But I do think your testimony was extraordinarily powerful. Especially in light of the testimony that we've had the previous day. And the way that you grasped at the opportunity and the pride that you took in your profession. And the way that you relished the challenge to reestablish the value of the audit.

And the public interest nature of our work and how it invigorates their personal responsibility, the auditor. And how important it is what you're doing on behalf of shareholders, and if we can take the lead, we will. I think that view was shared by all of you.

But I just want to say that that is in juxtaposition to some of the comments that we've heard the previous day. And I for one very much appreciate the understated way that each of you communicated that message.

I guess I have two questions. One, you all speak about investor groups and the outreach to investor groups. And Liz let me take you out of this conversation for a moment because you are generally viewed among the investor constituency as an investor advocate. And I say that from my perspective in a very positive sense of the word.

In the United States, investors are often criticized as not having any idea really what they want. Not speaking with one voice, not having a bottom line.

And the profession being unable to glean what investors want.

Two parts of the question. One, could you describe a little bit of your investor outreach in the UK. Who are these investors and how much money do they have under management?

And second of all, do they speak with anything even remotely approaching a unified voice I terms of what they want and in terms of a bottom line.

MR. TOUCHE: First of all, thank you for your very kind comments. And I think we're all very pleased to be here to make a contribution to your debate.

Yes, we're very lucky. I mean London is you know, a very large capital market. All of us who are practicing there in London, head offices of the big four firms all located within you know probably half an hour's walk of most of the investor groups' offices. And there are probably only you know ten or a dozen people that we need to know. And we are in very regular contact with the representatives of the investor groups, of which you know, Liz is one.

So it's been very strong and open dialog both between the firms and the investors and the regulators and the investor groups. And that dialog has been not necessarily in plenary forum. It's been one-to-one. We've been exchanging messages and emails, and all the rest of it with people as this thing has evolved.

So it has encouraged an open dialog. And as far as our firm is concerned, two years ago we have -- we instituted an annual general meeting where we invite stakeholders, the public interest to come and hear what we're doing on audit quality and innovation and all those other things. We started that a couple of years ago.

That's gone down very well with the investor groups. And it's their opportunity to quiz us in the form of an annual general meeting, about what we're doing. So that's part of our public interest agenda.

As far as engagement with the companies is concerned, which I think is the other part of this question. I think this is all quite new. Liz mentioned earlier that we've had the remuneration and regulations all changed and investor groups have been very distracted by that's taking up an awful lot of time to form policy with companies.

And we are now waiting and companies are now waiting to see how investors will engage with this huge amount of additional information that they have now received. But we know in advance that for example, the corporate governance teams have been relocated in many instances to sit alongside the fund managers.

So then more integration in some of the investor houses so their joined up dialog, you know, is brought to bear with the companies.

And then the other feature about the UK regime is that we have, the FRC is also responsible for the investor code, which is the stewardship code. To encourage investor groups to reach out to their investee companies.

So we're fortunate that we have the one regulator responsible if you like for all angles in our little dynamic within our -- the city of London where we can walk to each other's offices.

MR. CATES: Just a couple of things to add for me. I mean I think things are changing. I hosted a round table of FTSE 100 audit committee chairs a couple of years ago with some investors. And actually to a person, they'd had -- no investor had ever talked to them about the audit. Where they said their remuneration committee chairs were always being asked to go and report on remuneration. They haven't had the discussions around audit.

Now that was a couple of years back. And I'm hearing now that that's changing. Part of that due to -- part about interest in audit reporting I think is changing that. And part of that is EU audit reform and rotation and tendering.

And so we're seeing investors, from my perspective at least getting much more interested in audit and what's happening in audit, which I think is a good thing. After all, it's the investors who we report to.

MR. JOHNSON: Can I just, I'd just like to pick up on, not to repeat what's been said, I'd like to pick up something that William said, and that was kind of dialog.

I think in the UK, what we have found is that over the last four or five years, perhaps even longer, that firms, investors, regulators, preparers, academics, have got together and started to talk -- and talk about the issues. And talk about resolution of issues.

And so -- and it may be because we're all in one place, i.e. in London, and we're all within half an hour's walking distance of each other. But there has to be a will for people to actually engage with each other.

And I think that in the UK we've been very fortunate that there's been that engagement. From my experience in Europe, that has not been the case in many parts of Europe. There hasn't been that dialog. There hasn't been that engagement.

And the things that have been happening as you mentioned Chairman this morning, the vote has taken place now. And so we've now got law in the European Union. On many matters relating to the audit firms and auditor reporting and even wider, that a lot of the comments that were being made during the early parts of that couldn't be made by the jurisdictions because they couldn't see the future. Because they hadn't had the dialog.

And I think it is so important that the groups do that, have that dialog. And so I would encourage as much dialog as possible in order to get all these groups facing in the same direction.

And I was also on -- and it goes wider than that, and it's looking to see what more you can deliver. What you can look at. And I was asked to be on a group, on Sir David Tweedie's institute, the ICAS. And there we were looking at assurance on management commentary.

And this was before any standards, it started two, two and a half, three years ago. And the Scottish Institute got the groups that I mentioned, but even further in the group, journalists, financial journalists. And a whole spectrum of -- and there was about 10 or 12. All from a different background. Whether you were an auditor, whether your were an investor, whether you're a journalist. Because they've got an interest and they've got an influence as well through financial journalism.

And it was really looking at where the future was and what things might change. And I think just getting people talking and having that dialog is so important if you want to get the right answer. Because there's all different groups, have different interests. And it's actually making sure that we try to take away some of the concerns, but also get to what, as much as possible, people do want from all the various different groups.

MR. HARRIS: And then Liz, I didn't want to keep you out. In the United States the fourth hitter in a baseball batting order is the power hitter. That's known as the cleanup. I want to get the three gentlemen on the record.

But if there's anything you'd like to add in terms of the, I guess the bottom line, one of the bottom line issues is do investors from your perspective know what they want in terms of the audit report and some of these issues we're dealing with?

MS. MURRALL: Investors covers quite a wide population. I mean it sometimes can be taken to include this little analyst population. Whereas the investors that I'm representing are the institutional long term investors, the people that put up the risk capital. And I think you will probably get a different perspective from long term investors to analysts preparing sort of research reports. I think it's a different focus as I think I outlined in my talk.

But also what I would highlight in terms of investors' interest and their engagement on these issues, William mentioned the stewardship code in the UK. This became -- this was introduced into what is now the FSA's rules in December, 2010. And we do, as an industry body, the monitoring on behalf of the FRC as to what adherence to the code actually means in practice.

And what I would highlight, is that in 2010, there were 80 signatures that had committed to stewardship and the code. And in 2013, there are just under about 300.

So investors are engaging on these issues and they are reaching out to companies and auditors to develop that dialog. Thank you.

MR. DOTY: The Chief Auditor has his flag up.

MR. BAUMANN: Thank you. I want to first of all share in the comments that the Board members have made about the quality and depth of your presentations and comments. So thank you very much for all of that.

Mr. Touche, in your commentary, you say a lot of the success of the regime in the UK is because at the same time, it's introducing a new regime for audit reporting. The FRC introduced new requirements for the board to report about judgments and estimates and other matters like that. No similar initiative is underway in the United States with respect to audit committee or board reporting.

So if I could ask you to speculate a little, all of you, the auditors certainly speculate. Since there's no similar initiative underway here, what, well if you didn't have a similar initiative in the UK, how would that have impacted your reports and your progress in terms of reporting, this extended auditing reporting.

And then maybe Ms. Murrall, from your perspective, what would be the perspective of the quality of the information you received if it was only the auditor report on the risk of material misstatement, but not commentary, at least from the audit committee on significant judgments and estimates in financial reporting.

So given that we don't have the two legs of this stool, how would you think it would be different?

MR. TOUCHE: I think it's quite tough and I'm sure that's why you're asking the question. I think it is quite tough. And I tried to draw that out in my commentary. I think the auditor can still comment on the areas of focus. And the real question is if the areas of focus are then commented on by the auditor in their report without findings, how are you going to get the findings presented.

And I suspect that you would find that behaviorally, if auditors do that, audit committees may well wish to comment on judgments in the MD&A, or other areas of the front half. So I suspect these things will happen naturally without the structure that we've been blessed with in the UK.

Because I -- and the questions around original information about the company and the company's conclusions. And I suspect most companies would say actually we want to earn the communications of those. And I think from my perspective, that's right and proper.

MR. CATES: Not much to add to what William said. I mean I absolutely agree with what he said.

I mean what we found in our initial survey was that by and large, the issues that the auditor raised in the audit report were the same issues that the audit committee had raised. There were one or two differences, but generally speaking, you know there was a commonality between what the audit committee said was really important and what they focused on and what the auditor said was important as well.

MR. JOHNSON: Martin, I did say in my submission that I thought it was very important that the audit committee report does move along. It's interesting, the audit committee, the report that we have, one, two, three, four, five, six pages long, and it covered the work that we'd done as an audit committee.

Interestingly, I signed it in my personal name as chairman of the audit committee. Just as William and Tony signed the audit opinion in their own name as auditors. And I think that it's all about you know, it's accountability and all the things that we talked about as I was saying.

And it would be interesting. I don't know what we would have done as an audit committee if the FRC hadn't said to us, you need to enhance the reporting. You need to do this, you need to do that. I get the sense actually, because given the amount of engagement that we have with the auditors, we actually might have wanted to write the story ourselves and put our perspective on it.

You know I can't say that that would be the case. But I just feel that you know certainly with -- I'm very fortunate, I have some very good audit committee members. But I think that the companies haven't come screaming to this table. They've actually embraced it.

And Tony mentioned that this was a collaborative approach as far as the reports that they issued. And you know, Deloitte was the first with Nick Land as chairman of the audit committee at Vodafone. And that went before it was mandated.

So I think that in the UK, there is a realization that more needs to be done in reporting. And it gave us a framework to work to from the FRC. But I actually think that we would have probably said more than we would have had to, even if it wasn't there. And I think that is useful.

MR. BAUMANN: And then from your perspective Ms. Murrall, what would be the value of the risks of material misstatements without the audit committee reporting on the judgments and estimates?

MS. MURRALL: Well I think if the auditors start to report on things that management has not reported on, I think ultimately it would drive management to report. Otherwise they'd be seen as being you know, dereliction of their own duties to set out their financial position and statement of performance.

So I think there's a strong likelihood it would actually start to drive management to disclose that whether or not the audit committee was disclosed elsewhere in the accounts.

MR. DOTY: I'm aware that I'm standing between this group and lunch. I want to observe that I was pleased to see in the ICGN letter to the IAASB, a ringing endorsement of the point that naming the engagement partner in the audit report improves transparency and provides additional accountability that you believe will foster audit quality.

One of the issues that we face and must wrestle with is how you know that investors will find information useful and why we think it's useful. Mr. Touche has I think written and spoken eloquently to the fact that the more information that is in the new FRC standard, one of the great benefits of that information being that it has improved a sense of professionalism and a sense of meaningful role for the auditor.

There are other statements shot through your -- that appear in various of your papers on this. We heard in one of the panels earlier, that there is a lot of information that investors may want. Investors always want more information. Information increases volatility.

And is it really information that protects investors, or is it merely information that gives them a desired or an imagined benefit? What I find striking about all four of your views of this subject is that first you do not seem to me to insist that investment -- that investors show that their protection requires a certain level of transparency and information.

On the other hand, you seem sure in your confidence that the information that is sought by the FRC proposal and the now European standards, will benefit investors. And it would be very helpful to our thinking if you could instruct the Board on how you know this is beneficial. And whether investors -- how will investors make good use of the information?

MR. TOUCHE: So let mention just the, go back to the one piece that the FRC and package that we haven't focused on. And that is that the company has to explain its business model and the risk inherent in the business model.

So from the very beginning of the annual report, you get a flow focused on what the core business is. What are the risks and challenges. And by the way, we've also had a very clear mandate from the FRC that the annual report is not a marketing document. It is a report about stewardship.

So it's supposed to have balance and be fair and understandable and all those other things. But you start with a business model. And then the accounting risks that we end up describing are those that flow from the company's business quite naturally.

And if you start with that framework in mind, that is the essence of what the investors would like to understand further.

MR. CATES: A couple of comments to add to that. I think the information through the audit report really has given the investor some kind of hook to discuss those risk areas with management, with the board, which it just never had before. So there is a wish, for the investor to have that type of discussion with management.

And secondly, just an observation is that in 20 odd years of auditing, I've never had so much kind of interest from investors in what I'm doing and sort of emails out of the blue from people saying this is a really positive thing.

And much more engagement with investors as a whole. Not on specific companies, but as a whole. And I can only see that as a real positive.

MS. MURRALL: I think it's disappointing if investors keep on asking for more. Because what we do want is accounts that tell a story of management stewardship of the business. And we need cohesion between the front half and the narrative reporting and the back half and the numbers.

And I think one of the requirements that the FRC introduced, which I think we very much welcomed, is the directors have to state that the accounts are fair, balanced and understandable.

And I think that that is a very good move.

Because I think in the past you could have taken a set of accounts. You could have ripped the front half away from the back half, you may have had trouble matching the two.

So I think you know, we want accounts that tell a story as to what management has done to resources entrusted to it and exercised its stewardship, and that story needs to be cohesive, not full of clutter.

So whereas there may be requirement, people may ask for other information, I think there is other information that could be disposed of in the accounts. Like do we really need to have the director's remuneration regulations in the accounts? Do we need to have all the accounting policies, where they're generally just a restatement of IFRS.

I think these things could be looked at and we could cut some of the clutter. Thank you.

MR. DOTY: Again with the profuse thanks of this Board, this institution for the distance you have traveled, and the thought you have given to helping us with what is perhaps the most challenging and the most important standard setting project that we have.

Thank you. Each of you, thank you again. And it's been wonderful to have you here.

We will adjourn for lunch and we will reconvene promptly at 1:00. Thank you.

(Whereupon, the above-entitled matter went off the record at 12:15 p.m. and resumed at 1:00 p.m.)

A-F-T-E-R-N-O-O-N S-E-S-S-I-O-N

(1:00 p.m.) Audit Tenure/Elements of Auditor's Report

MR. DOTY: Well, good afternoon.

Peter Clapman is formerly the senior vice president and chief investment officer for TIAA-CREF, chairman of the governance committee and a member of the audit committee of iPass today. He serves on the board of the National Association of Corporate Directors. He is also vice chairman of the Conference of Mutual Fund Leaders, and also a current member of the PCAOB's Standing Advisory Group.

Monty Garrett is vice president of finance at Verizon Communications. Previously, he was chief financial officer and chief accounting officer of Dooson Infracore International, the manufacturer of Bobcat construction equipment. He is currently a member of the Dooson board of directors and audit committee, and he began his career with Ernst & Young as a member of the audit practice.

Joan Amble is the president of JCA Consulting, a public company board member, NACD Council of Audit Committee Chairs at NACD, and retired executive vice president and principal accounting officer at American Express. Previously, she was with General Electric, as chief operating officer and chief financial officer for GE Capital Markets. She's a director of Booz Allen Hamilton Holding Corporation, Brown Foreman Corporation and Sirius XM Radio, Inc. She is also the co-founder and chairman of Women in America, an organization that focuses on the development of women professionals -- not chairman but chair of Women in America.

Jim Liddy is the US vice chair of audit at KPMG, where he is responsible for creating and executing the strategic vision for the US audit practice. In addition, he serves as the Regional Head of Audit, Americas, and chair of the Americas Audit Steering Committee for the firm. Prior to his current role, he served as national manager of audit for KPMG, and the national business leader of KPMG's financial services practice.

A panel that brings to bear omnicompetent experience and insight on the issues of auditor tenure and other basic elements of the audit report. Thank you all. Peter, if you will begin.

MR. CLAPMAN: Thank you very much, Mr. Chairman. And I hope I'm selected to be the keynoter of this esteemed panel on the premise that I can get things livened up after lunch, and I hope my remarks are taken in that spirit.

I'm very pleased that the PCAOB has convened this roundtable to examine very important issues that address the disclosures given to investors about the audit process. In my opinion, the disclosure system presently is flawed in material respects and improvements are necessary.

The PCAOB has advanced certain proposals that, while modest in tone and scope, would be beneficial and should be implemented. Just to complete the record, in addition to my written remarks, I note that I was -- I participated in a roundtable probably about a year and a half ago on the issue of a proposal at that time on whether mandatory auditor firm rotation was in the public interest.

My position at that time was that auditor rotation is a sound premise, should be implemented, at least to the point where companies and audit committees, after a period of years, should put out the audit assignment for rebidding, for further discussion, even allowing for the possibility that the company, the audit committee, would decide if the present auditor is the right choice, but at least make that consideration.

And my concern at that time, which is still a concern today, is that too many audit committees simply make this a routine matter, and do not, as they should, seriously consider the selection and tenure of their outside auditor. And, to me, this goes to the issue of independence.

I also applaud the PCAOB for inviting to this roundtable as many participants from other countries, in particular the UK. In terms of my own experience, as you noted, I was the chief investment lawyer for TIAA-CREF and head of its corporate governance program.

I also chaired the International Corporate Governance Network for four years between 2000 and 2004. And at that time, it was clear, and I think would generally be acknowledged by people in this field, that the governance structures and investor protections in the United States was superior to basic protections and governance practices abroad.

And I fear that this is no longer the case. And I think your participants from the UK hopefully made this clear, that they have advanced certain issues, in fact those including the audit process, which provide for greater investment protection in my view than currently exists in the United States. And, in particular, advancing the notion of whether auditor rotation is appropriate, auditor rebidding is appropriate. I'm talking about after a fair number of years, not to just be done sporadically but done consistently and with a view towards enhancing independence.

And I think including in this last panel this morning it was noted that, for example, if you do implement one of your proposals, which I strongly am in favor of, which is to have the audit report include the tenure, the number of years that the particular audit firm has audited a particular company, that that has generated in the UK, and I think it would in the United States as well, generate more interest on the part of audit committee members, and also create the impetus for investors to care more about this than they currently do.

And part of the problem, I think, for investors is that it is extremely hard or almost impractical for an investor to know for how long a particular audit firm has audited a particular company. And I think the record is clear, and it was clear a couple of years ago as well, that some audit firms have been the outside auditor for particular companies as long as decades. I heard in one case that it almost got to be close to 100 years.

So, that sort of disclosure, which I think would help generate greater interest on the part of both investors and audit committee members, I think, would be strongly beneficial and in the public interest and something that investors want.

I also particularly note that your two new proposals, first to include the tenure of the current audit firm, and then secondly to include the named lead engagement partner, involve no costs.

One of the issues always at stake on potential reforms or initiatives on the regulatory side is whether particular benefits to some parties will be overwhelmed or in some cases offset too significantly by cost to other investors. And, obviously, regulators have got to take that concern into consideration.

Again, my point about these two proposals is that they involve no costs. So, therefore, no investor is unduly burdened with costs affecting disclosures which would be extremely helpful and important to other investors that truly believe independence is a key issue, and that the current system ought to be enhanced in the favor of broader disclosures to protect investors on these audit concerns. Because currently it is very difficult with the disclosure system in place for investors to even find out how audit firms have been selected, how they are regarded in terms of continued tenure and the like, and I think these reforms would be extremely beneficial.

One final note, because I see the red light, is that in my former position at TIAA-CREF, we voluntarily did both. We both did rebidding at certain intervals, and at a certain point we did rotate audit firms. Our experience was that the costs were nominal, if any additional cost, and our audit process and the audit quality was enhanced.

And we believe that if the PCAOB adopted, first, these particular proposals and considered the broader questions, it would be both cost-worthy and protective of investors, in a way that's very much needed. And I support these proposals.

MR. DOTY: Thank you, Peter. Monty Garrett.

MR. GARRETT: Good afternoon. I appreciate the opportunity to come here today to represent Verizon on this panel. We obviously have a keen interest in matters related to auditor reporting. We also spend a great deal of time and effort communicating with existing and potential investors and finding ways to get them the information they need to make informed investment decisions.

To that end, we appreciate the efforts of the PCAOB to address investor needs, and we want to continue to work with the Board and the staff to accomplish this joint goal.

I was invited here today to provide Verizon's input on the proposal to add auditor tenure to the standard auditor's report. Our view on that specific concept is best understood in conjunction with our views on Docket No. 34 as a whole. As such, I'll discuss our view on tenure, and then expand a bit on the overall proposal.

Like many other public companies, Verizon discloses information about its audit firm, including tenure, in our annual proxy filing, where we ask shareholders to ratify the appointment of the auditors.

For the benefit of our shareholders, we also provide background on how the audit committee considers auditor tenure in connection with its evaluation of the auditor's independence, and, more broadly, auditor appointment.

In other words, we see audit firm tenure of one component of a robust governance process discussion in our proxy related to the evaluation of the auditor. Accordingly, we think that reporting of auditor tenure is most meaningful when presented within the governance context.

It's not completely clear to me what conclusion can be drawn from auditor tenure information, but if an investor finds it useful, there does not seem to be harm in providing the information in an appropriate context.

As mentioned in Appendix 5 of the proposal, the available research findings on correlation between auditor tenure and audit quality vary widely. Some researchers suggest that an auditor with a long tenure may have a higher likelihood of independence being impaired, while other researchers suggest an auditor with a short tenure may not have sufficient depth of understanding of a company to render a reliable opinion.

I believe the Board concluded that there was no analytical information to provide any really meaningful correlation. In all sincerity, I do hope to get insight today on how the tenure information is valuable, as we are always interested in transparency and a better understanding of how to anticipate our investors' needs.

To emphasize this point, we come to work every day knowing there are two groups of people that we cannot live without: our customers and our investors. We're fully committed to listening to our investors and caring for their needs, and that includes addressing concerns that have led to this proposal.

To that end, we have chosen to disclose our auditor's tenure information in our proxy statement, and we believe that's the proper home for such disclosure, rather than the auditor's report. Our view on this is a subset of our overall view that an auditor's critical role is to provide assurance that the GAAP financial statements provided by the issuer are materially accurate.

Some aspects of the proposal include discussion of critical audit matters and commentary on other information, may require the auditor to go beyond its very critical core responsibility of providing assurance. As stated in our comment letter, we're concerned with having auditors provide this commentary, as we feel that the first line of disclosure about the company should be provided by the issuer.

If the auditor deems the material misleading or inadequate, and the issuer does not rectify it, then the auditor has the means to opine accordingly. The current pass/fail opinion is clear and concise, and leaves no doubt as to the auditor's view. Free form language may not be as clear and may leave readers unsure of the audit result.

Alternatives were discussed yesterday that we think give investors the additional information on risk they're seeking while preserving the roles of issuer and auditor.

Specifically, the alternative of having the issuer expand the disclosure in Footnote 1 to cover CAM items in a more thorough fashion, along with an auditor-specific review of that disclosure, would seem to address many of our concerns.

Views on that matter were discussed at length in earlier panels. My only point is to extend our view on the issuer's and auditor's roles to the tenure information. Let the issuer provide the information to investors in the appropriate form and context. Investors will receive the information they desire, and the risk of misinterpreting auditor tenure without proper context will be avoided.

We have no issues with the other basic elements of the auditor's report included in the proposal. We're not sure if the additional wording on independence adds value, as the existing reporting format already includes reference to the auditor being independent, but we certainly see no harm in including it.

Again, thank you for the opportunity to participate in this very important process.

MR. DOTY: Thank you. Joan Amble.

MS. AMBLE: Okay, thank you. I appreciate the opportunity to participate today and for all of you taking the time to seek constituent views on these very important topics. The comments I offer are my own and do not necessarily represent the views of the organizations of which I am affiliated.

My background includes positions as an accounting instructor, an auditor, a standards-setter, and for most of my career, a senior financial officer of a major corporation. I presently serve on the boards of three public companies, and I believe you have invited me to participate because of that role.

Therefore, while my comments are informed by all of my experiences, they apply most specifically to those as audit committee chair and member. However, my perspective, similar to most, I assume, is to seek sound financial reporting with an unequivocal commitment to integrity, strong governance and transparency, as it relates to all parties involved. Company management, directors and auditors each have a role to play.

Although asked to comment on auditor tenure and other basic elements of the auditor's report, given the significance of the important topic of disclosure of critical audit matters, I feel compelled to note that I disagree with the direction the Board has taken on this proposal and do not support it as currently written.

Along with the vast majority of audit committee members with whom I've had the opportunity to discuss this matter, I believe including critical audit matters in auditor's reports would lead only to much longer but not necessarily more useful reports by including information already adequately provided by management in footnotes or MD&A.

I was pleased to see that many audit committee members, as well as the NACD, provided input to the Board to elaborate on the reasoning for this opposition.

The other subject not subject to this panel's discussion relates to the auditor's responsibility regarding other information, on which, time permitting, I will provide comment, as that too is an element of the proposed changes I do not support as currently written.

The specific areas to be addressed in my comments today are audit tenure, independence, and auditor's responsibility for financial statements and related notes and schedules and for fraud. While auditor tenure may be an interesting data point for some users of financial statements, I do not support its disclosure in the auditor's report.

Auditor tenure, when taken out of context, has the potential to unnecessarily obscure the question of audit quality and perhaps cause some to erroneously conclude a direct correlation between tenure and audit quality, which, to my knowledge, no verifiable correlation exists.

Further, I do not think auditor tenure negatively impacts audit quality or independence. People and actions do. My experience has been that the engagement team on the ground, and its ability to access specialized expertise within the firm, provides the basis for sound audit quality, not the number of years a firm has audited a company.

In addition, mandatory rotation limits the years senior members of the engagement team can audit, which provides a regular introduction of differing and fresh perspective to the audit engagement. If tenure were to be introduced as an element of governance, the placement seems better situated in the proxy statement as part of the audit committee report, or with the ratification of auditors.

I have no objection with the recommendation to expand the auditor's report regarding independence. However, having said this, I think it is important to underscore the significance of the ongoing review of audit quality by the audit committee, and the use of audit committee executive sessions and other interactions with auditors to understand the nature and the quality of the engagement, and to engage in dialogue about the independence, the integrity, the objectivity and competence of the engagement team and the firm in fulfilling its professional responsibility as the auditor.

This ongoing review of audit quality is a core responsibility of the audit committee, and provides a thoughtful basis of judgment regarding the audit quality we seek, and provides a firm foundation for continuous improvement in audit quality from the auditor.

I support the Board's proposal to enhance the auditor's report by identifying financial statements, including related notes and schedules as part of the financial statements that were audited. I also support the proposal to revise the auditor's report to recognize the auditor's responsibility to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatements, whether caused by error or fraud.

As noted at the onset, I would like to close with my brief perspective on auditor's responsibility regarding other information. As many have noted, clarification of work done by the auditors should be provided in the auditor's report.

If the Board determines it will move forward with this proposal in some form, I encourage the Board to accept Deloitte's offer of assistance in the development of a workable model for expanded auditor involvement with other information.

I further recommend that consideration be given, first, in a phased approach, to the auditor's responsibility regarding quantitative non-GAAP measures. There are many instances when a company feels quantitative non-GAAP measures are more meaningful to users of their financial statements than GAAP measures.

However, I would venture to say that auditor involvement, in terms of evaluating the rigor around the process, the controls and testing of those non-GAAP quantitative disclosures is varied and therein lays an opportunity to clarify what the auditor's responsibility for that information should be, and how this responsibility should manifest in terms of auditor reporting. Thank you for the opportunity to speak.

MR. DOTY: Thank you. Jim Liddy.

MR. LIDDY: Thank you. Chairman Doty, Members of the Board, Chief Auditor Baumann, and other representatives of the PCAOB, SEC and FASB, I appreciate the opportunity to meet with you and share some perspectives on the PCAOB's auditor reporting model project, and more specifically to address the topic of auditor tenure and other potential changes to the auditor's report.

Speaking on behalf of KPMG, we certainly support the Board's objective to improve the auditor's reporting model and increase its relevance to financial statement users, and we are in favor of constructive and practical changes to the auditor's reporting model.

However, as we have heard in certain of the panels, including the one just before us at lunch, stakeholders are not necessarily aligned regarding the nature and extent of such changes. Investors, audit committees, auditors and preparers have differing views on what information auditors should provide.

This is an important project of great interest to many different stakeholders, and one that requires careful deliberation to develop a solution that can be practically applied. We need to take our time to figure out what the markets need relative to what auditors are able to provide. We also need to be mindful of what's happening globally, and certainly over the last day and a half we've gotten some great commentary in that particular regard.

Moreover, we need to recognize and accept that no solution in this area will meet the desires of all stakeholders. In developing possible enhancements to the auditor's report, we have been guided by a set of principles including: one, auditors should not be the original source of information about the entity. Management's responsibilities should be preserved in this regard. A fundamental shift from the auditor attesting to information prepared by management to the auditor providing original information about the company could result in unintended consequences that are not in the best interest of investors.

Secondly, any changes to the auditor's reporting model should enhance or at least maintain audit quality. On behalf of the 7,000 folks in our audit practice in the United States, I can tell you that we're focused on audit quality each and every day, and our efforts of continuous improvement, together with that of the Board, have very positively contributed to an increase in audit quality over the last dozen years or so.

Third, any changes to the auditor's reporting model should narrow, or at least not expand, the expectation gap.

Fourth, any changes to the auditor's reporting model should add value, and not create investor misunderstanding. Specifically, any revision should not require investors to sort through what we refer to as “dueling information” provided by management, the audit committee and/or the independent auditors.

And lastly, auditor reporting should focus on the objective rather than the subjective. Financial reporting matters assessed by the auditor can be highly subjective. However, it's important that auditor communications provide objective information about these matters.

As it relates specifically the topics of independence and tenure, we agree with the addition of language on auditor independence explicitly stating that the auditor is required to be independent. This is consistent with the requirement that the auditor's report be titled "Report of Independent Registered Public Accounting Firm," and provides clarification of this within the auditor's report.

We do not believe, however, that the inclusion of a sentence about the auditor's tenure within the auditor's report is appropriate. As noted in the PCAOB release, no nexus has been established between an auditor's tenure and audit quality, and requiring such information in the auditor's report might give the false impression that a correlation between the two does in fact exist.

We do, however, acknowledge that the communication of an auditor's tenure may be an item of interest to some stakeholders, and we support the communication and transparency that disclosing this information may provide. Therefore, we recommend that this information be required to be disclosed through different means, such as in Form 2, or as our other panelists today have indicated, in the audit committee's report.

Finally, with respect to the topic of addressees of an auditor's report, we do not support addressing the auditor's report to parties other than shareholders and the board of directors, or an equivalent body.

We believe this would create additional litigation risk and would not improve the communicative value of the auditor's report. Adding addressees to the auditor's report will not affect those with access to it. The auditor's report is a general use report available to all capital market participants: shareholders, bondholders, rating agencies, analysts and others, that the issuer can distribute without restriction, and to which third parties have ready access via the issuer's SEC filings.

This concludes my prepared remarks. Thank you again for the opportunity to participate in today's discussion, and I look forward to addressing any questions the Board might have on this important topic.

MR. DOTY: Thank you. Mr. Harris?

MR. HARRIS: Well, I would just agree with Jim. I think it's important to focus on the objective, narrow the expectation gap, and be mindful of what is happening globally on the audit quality. I don't have any questions. I think that I heard from the previous panel what's happening in terms of globally on the audit quality. I think it's different from what's happening here. I think the trend outside the United States is considerably different from what's been going on in the United States. So I think we do have to keep that in mind.

I think the expectation gap is huge, and I think everything ought to be done to attempt to narrow it, because I think the focus of investors versus the profession is not narrowing, it's broadening.

So I was happy to hear from the last panel that there is increased dialogue, and I agree that there ought to be a focus on the objective. So I don't have any questions, Mr. Chairman.

MR. DOTY: Lewis.

MR. FERGUSON: Yeah. I have a question, essentially, for all of you, but may be directed mostly to Ms. Amble. Because it appears as I listened to you is that your view is that the auditor, at most, should be commenting on disclosures by management, and what the management talks about risks and audit policies in its footnotes or whatever should be the source of the disclosure rather than the auditor.

We just listened to a panel from the United

Kingdom, where their model has gone in a very different direction, and as far as I could tell, the investor response to that appears to have been overwhelmingly positive. That's point one.

Point two, it looks like the IAASB is about to adopt a standard that's very similar to ours and -- so there are two questions here, really. One, what should we make of the UK experience? Is it is anomalous because it's the UK?

Number two, do we run a risk as a nation if the international standard diverges significantly in terms of what auditors should do, that we have a standard that does not really comport with that at all?

So it's two questions, but if each of you could address it, I'd appreciate it.

MS. AMBLE: In terms of -- because you're speaking to the critical audit matters at this point, and as I think about that, there's a question about what is disclosed as having been done by the auditors. But, to me, the bigger question is is the concern that there is a view that the auditors are not doing enough? And I don't know how disclosure addresses that.

It would seem to me if the issue is, number one, we think that auditors are not performing the appropriate procedures, if we think that they are somehow the source of the issues that companies have had, whether it's financial failure or accounting misstatements, then I would address that issue. And I would address that in terms of the training, the audit requirements that out there, the protocols and how they are monitored.

But disclosing it only -- as I read, you know, I read through the -- one of the reports, I think it was the Rolls Royce report on critical audit matters, and I found it to be very interesting in terms of what they did. But, honestly, I didn't see anything that was astounding in terms of audit procedures that were done. It made sense for the areas that they were auditing.

So while I found it interesting, it wasn't necessarily that enlightening to me. I did see something that was interesting, because on one of their comments, they mentioned that -- they talked about a design of control having a weakness, which, to me, is now getting at their assertions and their comments with regards to internal controls over financial reporting.

But other than that, that was the only real substantive comment on that. And, honestly, I think that's an area, if they were going to be any discussion, is worthy of more discussion, in terms of what is done to ensure that the SOX processes are designed appropriately, the internal controls over financial reporting are designed appropriately, and that there's the right corporate culture to ensure that issues are appropriately raised, and when raised are appropriately addressed.

I don't know that critical audit matters get to that in itself. I would just get to the direct part of the issue.

The second point that I would say is if there's a concern with the core responsibility of the audit committee, which is to look at the audit quality on a continual basis, not just an annual basis, then I would look to the performance of the audit committees, and whether or not there needs to be more enlightening there.

So I hear your point. Whether there's a divergence of practice, that in and of itself does not create any substantial issues for me. There's divergence in how we account for matters. So, in terms of how auditors discuss their audits, that is not disturbing to me in any way.

I just don't know whether disclosure in and of itself will improve audit quality. And if that's the desired objective, I don't know how disclosing and discussing it achieves that objective.

MR. CLAPMAN: I would try to answer your question in rather broad terms, and drawing back to my earlier point that at one point -- at one stage back in the early part of the prior decade, the US was considered the leading country in the world in terms of investor protections, which I no longer think is the case.

And I think the UK, for example, experience, shows how investor interest on particular questions gets enhanced as regulation or, in some ways, soft regulation through the manner in which Great Britain encourages these developments, really does generate a better relationship between investors and companies, audit committees and audit firms.

I don't think, in response to the last comment, that it's an issue of concern in the UK about the audit committee. I think the point, and it was raised in basically the presentation of this roundtable, that there's currently an asymmetry in terms of regulation, in terms of what the company knows its audit committee deals with and what investors know. And, in the interest of investor protection, I think this asymmetry ought to be narrowed, and I think the proposals of the PCAOB go in that direction, and that's why I support them.

MR. LIDDY: I'm going to refer back to our comment letter, because if you think about the core objective of the project at hand, you know, we do have a responsibility at present, you know, relative to the information that's in MD&A, specifically as it relates to critical accounting estimates and such.

But the practical reporting in that regard is on an exception basis, meaning if there's information therein that's materially inconsistent with the information that we've gained in the performance of the audit. We believe, actually, one of the best ways to help achieve the objective that the Board has laid out is to require auditor association with that particular information in MD&A.

Now, that would require some changes, and what I mean by that is we have to -- the SEC would have to require that the critical accounting estimates section be clearly within MD&A; they'd have to review existing interpretive guidance to determine how it fits in within the context of Regulation S-K.

But then we'd also have to, from a PCAOB perspective, look at the existing attestation standard, and see what we could do therein to more formally associate the external auditor with the critical accounting estimates section within MD&A.

MR. GARRETT: Thank you. I guess the way I look at this as an issuer is -- and maybe I shouldn't, but if the auditor is being relied on to tell the investor so much, I almost feel like I've failed in my disclosure attempts as a preparer.

It seems, in a perfect world, I should be giving all the information that's needed to the investor on the estimates and the other more difficult things to account for an audit, which would leave the auditor almost rehashing what generally-accepted auditing standards are, which is, I know, not the point of all this.

So I feel like we've got to look, as issuers, internally at where are we failing, where we need an auditor to pick up for us. Maybe that's not the way we should look at it, but that's kind of the way I hear it.

As far as the UK comment, the only thing I can say is there are differences in the environment. The accounting is fundamentally different, as we all know, between with IFRS and US GAAP. As Peter pointed out, there's differences in the role of the audit committee and the audit committee chairman.

So I think it's almost unavoidable to have some differences, not to mention, as has been pointed out, we are in a litigious society in the United States. It seems inevitable there will be some differences. But I don't think we can just accept that there will be differences and go on. We should narrow the gap.

I think the last thing I'd say to Mr. Harris is I really take what you had to say to heart. I feel like you seem almost disappointed in us. So we, as issuers of financial statements, don't want to have the PCAOB kind of throwing their hands up and not being happy with what we're doing. So I really listen to what you have to say.

MR. HARRIS: Well, I appreciate that, and we obviously want to work very closely with you.

MR. DOTY: Jay?

MR. HANSON: One primary question that is based on something that, Joan, you had in your statement, but I'm going to direct it first to Jim, and then let the rest of you comment. And then separately I've got a different question for Peter.

So, on the point you made, Joan, about the independence assertion in the audit report, and the importance of the audit committee's role in the dialogue with the auditor about their independence, their objectivity, their skepticism, their competence, it just sparked kind of a tangential question that I'll start with Jim, about what -- at KPMG, what do you do to help educate audit committees and management about their role in making sure that the auditor is independent within the specific independence rules around scope of services and things like that? Which, as some of us know, is an incredibly complex book of rules that sometimes, at least in my view, are not always easy to figure out what the right answer is.

And I'm just curious about what you do to help educate effectively the possible buyer of the services, like you educate all of your professionals as the sellers of the services. And then, Joan and Monty, your experience with -- as preparers and audit committee members.

So I'll pause for a second to let you answer. But, Peter, my question for you is just slightly different from that in that on the auditor tenure question, your three co-panelists have each suggested that, while they don't object to tenure, but it's better placed in the audit committee report. And I'm just kind of curious as to your reaction to their positions on this.

So, I'll start with Jim.

MR. LIDDY: Well, that particular question, I think we've got to recognize that when you look across the spate of public companies that we are associated with, there's different levels of maturities within those companies themselves. And you tend to find, in the larger companies in particular, that there's a level of maturity there, not only with respect to the auditor independence rules, but there is a better and more comprehensive understanding of the roles and responsibilities of management, as well as the roles and responsibilities of the auditors per se.

Now, certainly, whether it be a mature company or one that is, I want to say, less mature, there's a fair amount of dialogue obviously at different points of year, presentation of the audit plan, a very specific discussion of our responsibilities, a compare and contrast to management's responsibilities.

So, I mean, the most fundamental way it gets achieved, quite frankly, is through regular and ongoing dialogue about the auditor's responsibilities, and making sure that there's absolute transparency from an audit committee perspective.

MS. AMBLE:  In terms of -- I'll speak to what approach we've taken on audit committees.  It's really no different than when you're working in a company as well, but there's a number of different things, and there are a lot of good opportunities.

One thing which I think is very helpful is continuing education, whatever form that is; being part of different professional organizations and currently having highlighted what the responsibilities are and best practices and what people are doing.

That is very, very helpful to keep that in front of you in terms of important things to think about, particularly looking how companies are growing and are so much more complex today, which means the audit of those companies is obviously going to be more complex.

So in terms, certainly what I do on my audit committees, is I really look very seriously at whether or not the auditors being assigned have grown with the company, and their skills match the skills that are requisite for the risks inherent within the company, just as you would look at the finance organization within the organization as well.

The other thing is to look very seriously, and not to allow it be reduced to five minutes, is how you engage in the executive sessions with the auditors. That's the time when people can just really talk very clearly and you can get into issues potentially in a more in-depth way, and taking advantage of that, and how the auditors respond gives you a very good indication of independence.

I know there are a lot of independence rules in terms of the investments and so on, and I assume the firm does that very, very well. What we will look to is the character of the individual, and do they understand the culture of the company well enough so that issues are being appropriately raised, and when they are being raised, they know how to deal with the difficult conversations, if you ever have any.

I mean, that is so important to be able to do that, just as it's important for management as well.

The other thing is really the offline discussions you have as well. Anybody knows, if they're not a committee chair, that your job goes well beyond the audit meetings. There's a lot that happens in the preparatory meetings, where you meet with management in advance of the meeting to go through the agenda and the particular topics that will be addressed. But then you also meet with the auditors as well.

And, again, those discussions give you what I call the ability to have the Ouija board test, to understand the talent of the team and how seriously they're looking at things, and if they're looking at the right things.

So those are some -- certainly not all, but some of the things that I think are pretty common with audit committees and audit committee chairs.

MR. GARRETT: I am fortunate to work at a company that does have a very strong focus on governance. We have a very strong audit committee, a very strong chairman of our audit committee, and a lot of the culture flows from that.

I think, similar to Joan, we have a very robust, more offline process of discussing issues with the audit committee and getting their reaction. I think there's a healthy amount of respect between the audit firm and the company and the audit committee that also helps.

There's, I would say -- I wouldn't use the word "tension," but there is healthy challenge that goes back and forth, and it never causes a problem. Part of that is the strong governance culture.

I think, in terms of the auditor getting involved in helping the company with governance, I kind of have a different perspective on that with the company for which I'm on the audit committee, which in some ways the opposite of Verizon. It's a small private company, and there it's almost indispensable, the work that the auditor performs in helping the company understand how to govern better.

MR. CLAPMAN: If I could go immediately the questions that you posed to me. First, I thought I was actually in agreement with Monty Garrett, that disclosure is appropriate. He puts it in the proxy statement, as opposed to the auditor report, which is the focus of this discussion.

I would note that that's voluntary, that there is no requirement that Verizon or any other company do that. And the reality for the investment world is very few companies do what Verizon does do. There are some that do.

So I'll then try to address the other comments from the two panelists that oppose, for example, the inclusion of the tenure of the particular auditor in the audit report.

Here I'll start, at the risk of what you can generalize from an anecdotal experience, when I was at TIAA-CREF, we shifted from one audit firm to another, and one of the benefits to us as an organization was that the second audit firm -- which the first audit firm was high quality; they did a terrific job.

The second audit firm took a second look at some of the questions that had been seemingly resolved with the first audit firm. And in retrospect now, as I view that experience, there were a couple of instances of that. It was a healthy development to go through as an organization, somebody that has a second look at issues that were resolved one way, and see how they might be resolved in another way.

Apart from that, I do take issue with the notion that inclusion of auditor tenure could be misleading. And basically I think that is -- to make that right, you'd have to believe that investors just don't know how to use the information that's disclosed to them, and I would challenge that notion.

I think if you surveyed some of the key institutional investors, they believe that auditor tenure going to the issue ultimately of auditor independence --

and it's not just technical independence. I think there are a few instances where auditor tenure might affect a situation where auditor independence was lacking in the past.

But there's auditor independence and there's auditor independence, and getting back to the second look aspect of it, I think that's extremely valuable. So I would say that there should be more trust that investors that think it's valuable will use it appropriately; investors that think it has no value could ignore it.

It's a disclosure that you could require that imposes no costs on the investors that don't care about auditor tenure. But I believe, just like in the British experience, that once these issues get onto the table, you will find more dialogue, more interest on the part of institutional investors and other investors, and you'll have examples of where a particular audit firm has been the auditor for a particular company for decades, and that will give investors the opportunity to at least ask questions about it. And right now they don't have the information. And that's why I would strongly support the PCAOB making that disclosure a requirement.

MR. HANSON: A couple of reactions. And when I posed my question, it was really in a context I didn't describe, which is in the imaginary world that the SEC would take up the issue of making it required in a proxy statement. So it wasn't just voluntary, which as Brian has observed, we have observed lots of things on the SEC's agenda, and we have no ability to impose that on the SEC, and there might be several things that might be worthy for them to take up.

Another just reflection and a little bit of a surprise at what you've said, is that for the analyst that wants to know how long a company's been -- an audit firm has been a company's auditor, at least I'm not an expert in using the SEC's online filing search system, but in any company I've tried to figure it out, I could figure it out in about two or three minutes, the auditor changes within the last 20 years on the EDGAR system.

So it's not hard to find. So it just kind of surprised me that those that want it can't find it.

MR. DOTY: Do you want to respond to that, Peter?

MR. CLAPMAN: Yeah. There's lots of things that could be required conveniently in the way of disclosure to make the information convenient without going into an elaborate process, even if it's doable.

Again, I come back to the question that this is a costless requirement to put in information of this sort, that some investors, and I would suggest that most of the institutional investors will find this information potentially important and interesting, to make that disclosure better for them is a positive thing the PCAOB could do.

MR. DOTY: Jeanette Franzel.

MS. FRANZEL: This has been a very interesting discussion. Many of the panelists here have touched on issues which we've been hearing throughout these two days, and it's really an issue of, gee, does some of this really belong in the auditor's report? Should the auditor be reporting on original disclosures or should management be doing it? Should the audit committee be putting some of this into the audit committee report or in the proxy statement, you know?

And, unfortunately, the reality is our system of regulation over financial reporting and governance and disclosure is fragmented. So here we are at the PCAOB identifying potential disclosures that might be helpful to investors, and the only thing we can do is require that it be thrown into the auditor's report.

So I think that, in some cases, we're hearing discussion or we're hearing disagreement on certain issues that would be of great value to some investors, but the real disagreement is putting it into the auditor's report.

You know, so I guess we can always just keep requiring more and more in the audit report. But at some point, you know, some of these issues of critical accounting policies and MD&A and tweaks that maybe need to be made on management's side, so that then the auditor can take a different role, would strengthen the system, you know, in its entirety.

So I have that concern, and I would like just to hear your comments in terms of how concerned are you about that. Maybe it's not a big concern. Maybe we can compensate, you know, for all of the problems in the disclosure system by putting it all into the auditor's report.

But I think at some point the fragmentation here will cause risk, and it will cause proposals that might not be the best solutions. I guess what really caused me to go down this line of thinking was Peter's comments that, in his opinion, the disclosure system presently is flawed in material respects.

Well, if that's the case, I'm not sure we can solve it all through the auditor's report. But I'd appreciate any comments or thoughts that you all have on that, how it relates to some of the things we've been talking about, and I see I just caused Brian to raise his name card as well.

MR. GARRETT: I think it is interesting the way you described that, that it's a bit fragmented. And, you know, you have your purview over the auditor's report, and is that really the best way to address some of these things? I think our opinion is maybe not, especially with the items like the CAMs.

Again, it just feels strange to have the auditor giving information other than just their basic audit steps, which, as I think about it, aren't those really available? I mean, you have steps -- everyone uses the same steps to audit certain things. It's prescribed.

So if there's a shortfall, it seems it's up to the company to beef up the disclosures on what things. Again, if it was hard to audit, it was also hard to account for. So if that's the problem we're trying to solve, then we do need to solve it if investors are concerned about it.

To me, it doesn't seem like the audit report is the way to do that.

MR. DOTY: Jim Kroeker had his flag up first.

MS. FRANZEL: Do any of the other panelists want to comment on that?

MR. LIDDY: I guess, if I may, I'll just make one anecdotal comment, and I think back to my many years in practice, when I'd go and I'd talk to the financial management people at a particular audit client, and we would -- I would discuss as it relates to a particular transaction or estimate or policy statement or whatever, and talk about disclosure in the underlying financial statements.

And someone would invariably say, well, that's in the 10-K. Well, it's in MD&A per se, but it's not in the financial statements and we think it's particularly important that it be included in there. And I think that's an important point, because at the end of the day, when we put an audit opinion on a set of financial statements, we've got to be satisfied that there is reasonable and appropriate disclosure of all those matters that are important from an investor perspective, in terms of understanding those financial statements taken as a whole.

I'm not commenting about the disclosure framework, you know, overall. But I am talking to that I think it's a pretty important part of our job to evaluate those financial statements, and to make sure that the discussions are appropriate in the context of the financials as a whole.

MS. AMBLE: Since you brought it up, which goes outside of the topics of the discussion today, I think it would be fabulous if the SEC and the FASB and the PCAOB could be in concert on a number of things.

And I think one area -- I mean, some of the discussions and push-back that you've heard is the volume of the financial statements just becomes very substantial, and they're already very substantial.

Part of the culprit for the volume of the financial statements is there is duplication, because you do have two different bodies, the SEC and the FASB, requiring information, and you cannot cross-reference in all cases for them to be complete.

So I think anything to take away the duplication and things that add no value, in the way in which they're presented today, would be a wonderful thing.

I also think having clear line of sight of responsibilities for each of the organizations being adhered to, so that you don't bring in things that are interesting and nice to know, but really not directly under that organization's purview. I think that would be, you know, something very positive.

I also think if you were to get the MD&A and the financials more consolidated, you may also have the opportunity to have SOX oversee more than just financial controls. One of the biggest concerns I have with non-GAAP measurements is they're not under SOX. And arguably if that is more important to investors, and that moves the needle on your stock price, it would seem to me that the standards required for GAAP measurement should be at a minimum what should be required for those.

Today, they're not under SOX. And I know that because it was something that was not determined to be part of the basic financial statements. And I would disagree with that. I would think that you should have it expand to that as well.

So that's kind of going beyond your question, but getting to would it be nice for all of us standard setters to kind of coalesce? I think that would be great if they were sitting here potentially, and not us.

MR. DOTY: Peter, I'm going to get back to you, but I want to give FASB and the SEC a chance.

MR. KROEKER: Actually, your remarks are a good segue to the question I had. One, I think we do have a fabric that works well together. You know, obviously our responsibility is much narrower than the SEC's comprehensive authority with respect to accounting standards that we have. I think we do work complimentary together, but just a personal view.

But, Jim, you mentioned earlier the issue of auditing assurance, or some type of attestation around critical accounting policies, critical accounting estimates. And it occurs to me, in the vein of duplication at least potentially, and there's a lot of complaint about Footnote 1 often and how does that correspond to critical accounting policies.

One way to address that, again, speaking for one person from the FASB, would be for us to consider bringing more directly the obligations that are existing in MD&A, and we'd have to deal with staff interpretations and other things, but to bring that into the financial statements.

That could accomplish two things. One, reduction, at least, of confusion about whether there's duplication, but also then bring in directly an auditor attestation requirement specifically to things that are already often covered in the context of an audit. But I wonder if you or others had reaction on that.

MR. LIDDY: My only reaction, quite frankly, is I think, you know, we're raising it in the context that a dialogue in this vein, you know, we think is both reasonable and appropriate when you think about the core objective of the reporting model standard here.

We'd welcome a dialogue about it to figure out the best way to provide the information that's of most value to investors, and potentially the least cost to the companies themselves.

MR. CLAPMAN: If I could just have one final crack at your question, it would be that we've going to deal with the situation that we've got to deal with. That's my perspective on it. I've urged the SEC to include disclosure about auditor tenure, as Verizon voluntarily does. We might be having a different conversation if the SEC had done it or will do it.

But from an investor perspective, I think it comes back -- and you made the point earlier -- that I think there's a material flaw in the disclosure system now, and there's something that PCAOB can do about it. There's something the SEC can do about it, and I'd encourage each to move on it. That's, I guess, where I come down on your broad question.

MR. DOTY: I'm not through with you yet, Peter. Brian.

MR. CROTEAU: Thank you. I just wanted to follow on from Jeanette's remarks, and actually, Peter, your remarks, and actually some of what Jim has now just said.

Now is probably a good time just to remind you that these are my own views.

But with respect to what the SEC can or can't do, I just want to comment that, you know, in the seven or eight years that I've been now involved in this, I've been involved in making recommendations to the Commission on nearly all of the PCAOB standards that they've developed thus far. And not once have we made a recommendation, so far, that says we recommend that the Commission adopt this because you're too busy to do something that would be better or more appropriate.

I certainly don't think we should start that now, is my own view. So to the extent that -- that was the basis for my comment yesterday.

To the extent that commenters still believe that there's something the SEC should be doing, or that a disclosure would be better placed in the audit committee report, I'm glad that we're still hearing those kinds of comments and I encourage those kinds of comments, because I don't think we should start with the presumption that the Commission wouldn't do something or couldn't do something.

So I really appreciate the feedback that we're getting in that regard, and we'll continue to listen to that.

MR. DOTY: I'm mystified a bit. There's been a lot of discussion in the panels to a matter that Lewis alluded to, and that's the fact that Europe is moving ahead, and the UK is moving ahead, and the concern that we might not be right there in the vanguard of disclosure.

Whether that will translate into different costs of capital for us in the long run, we don't know. But one of the things the Board, I think, must worry about is the potential that, after some years, it will translate into some differential in the premium which our equity markets enjoy, and the charges for which capital exacts -- sources of capital exact their funds.

And the confidence that they have in the completeness of the regimen or the regime of disclosure, and the enforcement of the regime of disclosure, seems to be, if we're reading the sources correctly, if we're reading the academic research correctly, that seems to be something that does translate into cost of capital.

Verizon discloses this tenure matter for some reason. If you put aside just the fact that other advanced capital centers are making the disclosures that we have asked you comment on, and if you look at just what we are doing or not doing, it would seem to me that preparers, directors, audit committee people, auditors, are all to be concerned that if there's something we can do here that gives investors information which they have been asking for for over a decade, in some cases decades, and if we can do that without increasing a great deal of the cost of obtaining and delivering that information, we ought to seriously consider doing it.

And I would be surprised if in Jim Liddy's long and distinguished career as an auditor, Jim, if you had never seen a case in which the desire of a young auditor not to lose or vex a promising or a valued client had never prejudiced that accountant's views.

The point being, I don't think it's possible to prove the negative here and to say that there is no relationship between tenure and independence, there's no relationship between tenure and skepticism.

Therefore, I am puzzled with how you deal with

Peter Clapman's position as an investor, and as a former CREF official, that this is something that investors want. How do you face your investors and say, we think you can't handle the information, we don't believe you can use it, we don't know that it's useful, we think it may confuse you, we think you may make precipitous judgments based on tenure?

You have the entire proxy statement. You've got a lot of things available, many megaphones available to management, megaphones available to audit firms that KPMG uses regularly in the reports that they issue, on why it is that, in fact, the retention and the choice of an auditor is a complicated matter.

Many things have to be valued. Many things have to be weighed. But why would it be that we would want to deny this information to investors now, when it is in many ways the easiest, the best-known and the cheapest kind of information to include in an audit report?

And it has the risk that if we don't do this, we're actually withholding something that looks to the investor, that is perceived by the capital markets as being something that diminishes the completeness of our disclosure regime and the enforceability of our disclosure regime.

We're putting ourselves at risk, possibly, on cost of capital. Why do you want to do that? Anybody.

MR. LIDDY: If I may, I'll start. I mean, just to make it clear, I mean, this information may very well be important to investors, and we're actually supportive of the idea of communication and transparency regarding the concept of auditor tenure.

I guess our objection relates to specifically including it in the auditor's report, and it relates to a specific correlation being made between the tenure number and whether that is reflective on audit quality or not.

MR. DOTY: But, Jim, that's your most immediate communication with your stakeholders, with your investing public, is your report.

MR. LIDDY: I don't disagree with that, but, again, I think, you know, from our vantage point, we're supportive of, you know, greater transparency about it. We see a growing, growing number of companies that are, as a normal practice, disclosing it in their audit committee reports. We also think that as a matter of convenience that could be done in the Form 2 as well.

MS. AMBLE: I've actually been on both sides of the fence on this one. My initial reaction when I read the proposal was what's the problem? Putting it in doesn't cost anything.

It was really after thinking about it further that I thought, you know, it really isn't, though, an audit matter per se. It's a governance issue. I mean, if I had my druthers, I'd rather have the auditor sign the report personally.

I mean, I know that's not a very popular position to take, but to me that's more important. The individual who was responsible for that audit engagement and ensuring that everything, all of the professional responsibilities have been discharged appropriately. That is much more important to me.

I think, from an audit committee perspective, it's important to look at the duration of the audit firm. But quite frankly, whether it's one year or 30 years, it still boils down to the people with the feet on the ground, the people that are there in the engagement and how they're responding to the needs and risks of the company.

So, like I said, I think if it's deemed important for everyone to disclose it from a governance perspective, put it in the proxy. Two of my three firms where I'm on the audit committee, we do disclose it. But it's not for the gallant reasons that you just described.

I mean, one disclosed it, but they're challenging whether they want to anymore, because they thought it was a good thing to say that we've had the same auditor for a number of years, and we've developed a very positive and thoughtful relationship in ensuring quality audits. Now that they're seeing that people are seeing that tenure might connote something negative, they're wondering, gee, I wonder if that wasn't a good disclosure.

The other one had it in because we had changed auditors, because we had merged firms, and one firm had one auditor and the other had another. So you had to pick one, and so it was required to be put in, and it was just kept over for the last couple of years. So my guess is there are probably other people in that same camp as well.

So, while, you know, I think it's an interesting disclosure, I think when you speak of it in the context of how the audit committee may evaluate that, I think that's very relevant. So putting it in the proxy, I'm not objecting to at all. But there are a lot of other interesting things that you could put in the audit report that we're not talking about, that I don't think are as high a priority, personally.

MR. CLAPMAN: If I could make, Jim, one further comment. The nature of prediction, that if there is disclosure of the tenure of audit firms, I think what you will do in this country is have a healthy debate, some of which has been aired at this panel, as to whether it's important, whether it serves the interest of investors and the public interest.

But I think it's a debate that is needed, and I think if you did have that disclosure, it would encourage more dialogue and I think this would be a healthy thing for the system.

MR. DOTY: I'm afraid that, at times, Ferguson and I both evidence frustration that we're not law professors. So I hope you will forgive me for trying to push the Socratic method a little on you on the law professorial note. I think Jay did a good job of arguing with the witness, Peter, and arguing with you on this issue.

So this is a panel in which there's been a lot of give and take. Steve, do you want one more give and take?

MR. HARRIS: Yeah. Mr. Garrett, just so you understand where I'm coming from, I didn't want to leave any misimpression. The mission of the PCAOB very specifically is defined in Section 101. It's unequivocal and it's in quotes, and that's the preparation of informative, accurate and independent reports, audit reports.

So my perspective is how can we make the audit report more informative? So I want to elicit from as many people as I can, you know, a marketplace of ideas for how we improve the audit report. That's my perspective. Thank you.

MR. DOTY: We have a panel waiting, but this one has been terrific. Thank you all, and we'll see you soon.

I'll introduce the next panel as they're coming in.

Charles Pagano is a partner at WeiserMazars, and his industry experience includes broker-dealers and financial services. He's currently a member of the AICPA and the Securities Industry and Financial Markets Association, in their compliance and legal division, as well as the financial management division. He's a current member of the NYSSCPA and the Stock Brokerage Committee. He chairs the Foundation of Accounting Education's annual technical conferences on audit issues for broker-dealers, and their annual conference on the securities industry.

Michael Fehrman is a managing director and head of the Accounting Policy and Advisory Group of the Americas at Deutsche Bank. In addition to providing transaction advisory services and financial statement review, he undertakes special projects throughout the bank and participates in various valuation and control oversight committees. Previously, Michael Fehrman was a member of the accounting policy team at Goldman Sachs, and held various positions at UBS.

John Corcoran is a former vice president of MFS Investment Management. He also serves as the fund president of the MFS Funds, and fund treasurer for the MFS Meridian Funds. In his role, he manages the financial reporting, tax fund administration, custody and accounting oversight and valuation functions of MFS. Previously, he was a senior vice president of State Street, where his roles included managing the integration of Investors Bank & Trust, holding senior positions in fund administration and serving as the managing director of State Street's office in Edinburgh.

Jeff Burgess is Grant Thornton's national managing partner of professional standards. Earlier, he was the partner in charge of the firm's National Professional Practice Director Group, and the National Professional Practice Director for the Southeast Region. At Grant Thornton, he's also served as the partner in charge of the Greensboro, North Carolina office, and as the professional standards partner for the Carolinas practice.

This panel is here to discuss considerations specific to investment companies and broker-dealers, and we appreciate it. Thank you. Charles?

MR. PAGANO: Thank you, Chairman Doty, and thank you for inviting me to participate in this PCAOB public meeting. As the leader of my firm's broker-dealer practice and former two-time chair of the New York State Society of CPA Stock Brokerage Committee, and current member of that committee, I welcome the opportunity to express views on the proposal.

The Mazars Group includes 14,000 professionals in 70 countries, and WeiserMazars LLP here in the US includes 100 partners and 650 professionals in six US offices. We are the auditor for small issuers with less than .5 billion in market cap, and broker-dealers which range from small to medium-sized firms, non-clearing firms, including retail, trading, investment banking and firms with net capital ranging from $20,000 to $3 billion; employees from three to several hundred.

For purposes of this discussion, I will define small broker-dealers as those which are noted in the proposal by the PCAOB's Office of Research and Analysis, specifically those BDs which comprise approximately 2,200 of the approximately 4,200 BDs in the US, and which have a minimum net capital of only $5,000.

Also noted by ORA, 1,700 have revenues of less than a million, and only nine percent of the BDs are subsidiaries of issuers, who presumably are audited under PCAOB standards as part of the parent-subsidiary consolidations.

Only 311 of the 4,200 broker-dealers are subject to the customer protection rule, SEC Rule 15c3-3. The vast majority hold no customer funds or securities. The purpose of the proposed rule is to allow investors to enhance their ability to make investment decisions and for other financial users, which, in the case of broker-dealers, would be the regulators.

As noted in the proposal, approximately 90 percent of the BDs are directly owned by an individual or an entity that owns more than 50 percent of the broker-dealer, and approximately 75 percent have five or fewer direct owners, who, the ORA suggests, and is my experience, are often active in the business.

Investors do not invest in the broker-dealer proper. When a broker-dealer attempts to attract capital, it will look to bring in other active shareholders or subordinated lenders who are generally existing shareholders. Therefore, we believe that investor would not benefit from the proposed change, as they are not investing in the broker-dealer.

The other financial users are the regulators. The BD industry is heavily regulated, with a robust surveillance system in place that includes FINRA, the SEC, the CFTC and state regulators. There will also be additional auditing oversight under PCAOB standards for years ending after June 1st, 2014, which will allow potential referral by the PCAOB to regulators.

If enacted, many BDs will have common critical audit matters that are already addressed in other reporting areas. Disclosure and information available to users, namely the regulators, is more than adequate in areas that are common to many BDs.

For example, valuation of securities and revenue recognition, which are both addressed in comprehensive footnote disclosures; the net capital computation, which is addressed in a required supplementary schedule and is extensively audited and disclosed; and compliance with the exemptive provisions of Rule 15c3-3, the customer protection rule.

The additional costs of applying PCAOB Auditing Standard No. 7, effective June 2014, along with the implementation of other PCAOB auditing standards, have already added incremental audit costs to the small broker-dealer. A small broker-dealer will be asked to absorb additional costs if the proposed auditing standards are enacted.

A mid-size auditing firm's additional manpower costs to comply with the proposed reporting requirements for critical audit matters would include incremental time incurred by a senior manager, a partner, an EQR, an engagement quality control reviewer, in-house and possibly outside counsel and other firm experts or specialists to issue a report.

The BD is asked to issue a report within 60 days of year-end. This existing time constraint, with the possibility of additional reporting requirements, if enacted and applied to broker-dealers, is a more stringent time frame for a more significant public company, which may have a 75 or a 90-day filing requirement.

There's a concern that additional reporting with these time constraints may affect audit quality in the race to get reports issued to meet existing deadlines.

Documentation of critical audit areas and compliance with the Auditing Standard No. 3 may be more burdensome and costly. Depending on the capabilities of the auditor, given a similar fact pattern, different auditors may produce different results.

Thus, the playing field may not be level for different sized accounting firms and their clients. The August 2013 SEC report on the progress of the interim inspection program noted that of 783 accounting firms that audited BDs for the 2012 audit year, 756 or 83 percent of those firms audited only one to five broker-dealers each, while 14 firms or two percent audited 51 or more BDs.

I suspect that this might be somewhat price-driven. Some BDs may, in the interest of saving dollars, look for those auditors who can perform less costly audits, and in some cases, quality may suffer.

Given the statistics already acknowledged by the

PCAOB, including the size of the majority of the BDs, the size of the accounting firms that audit them and the likelihood that no useful additional information may be gained by additional requirements, we believe broker-dealers should be excluded from the proposed standards.

Our lack of support for certain aspects of the proposed audit standards, including their effect on issuers, as noted in our December 9th, 2013 letter to the PCAOB, primarily relate to the conviction that we should not supplant the responsibilities of management or audit committees.

We remain committed to participating in future discussions with the Board and staff to further enhance audit quality. We thank you for today's opportunity to participate.

MR. DOTY: Thank you. Mr. Fehrman.

MR. FEHRMAN: Thank you very much for the opportunity to appear today and to present Deutsche Bank's views on this topic. Deutsche Bank is a global universal bank, and one of the largest financial institutions in the world. To facilitate the products and services we offer, we have a wholly-owned broker-dealer subsidiary in the United States, Deutsche Bank Securities, Incorporated, or DBSI.

Because Deutsche Bank is an SEC registrant, our auditors are subject to inspection by the PCAOB. As DBSI is a broker-dealer, the audits of its separate financial statements are also subject to inspection.

We support the goal of enhancing the information provided to users of financial statements, but believe the information should be presented by management.

In our view, any critical audit matter would most likely be a critical accounting matter as well, and therefore already discussed by the issuer. At best, therefore, a discussion of critical audit matters would seem to be redundant. Accordingly, we do not support this proposal in its current form.

I've been asked to comment on issues that this proposal would present to broker-dealers for their financial statements. While there are certain issues related specifically to broker-dealers, I believe many of the concerns we have with the proposal would be shared by other preparers of financial statements. But I will begin with the matters that are specific to broker-dealers.

As you know, many broker-dealers do not provide a complete set of financial statements to their customers, and instead provide only a balance sheet with limited disclosures. It is highly likely that an auditor would find that there are critical audit matters resulting from income statement or disclosure information that is not included in the information provided to customers by a preparer.

Similarly, auditor comments on responsibilities regarding other information would have little meaning to the user if the information itself is not included in the report. If those comments are to be included in the customer report, it will raise confusion for the user of the report.

Clearly, the intent of this proposal is to add clarity and not confusion for the reader, and we believe this matter should be addressed during this exposure stage. We see this matter as an indication that perhaps application of a proposal to broker-dealers may not have received the same attention as for other entities.

While I very much appreciate the opportunity to comment on matters relevant to a broker-dealer, I do not believe my appearance today can adequately address the concerns of the whole industry. Accordingly, I would respectfully suggest that an additional outreach effort be made, particularly to smaller broker-dealers who may not have had the regular practice of responding to matters such as this.

Since PCAOB standards have only recently been applied to audits of broker-dealers, and given the small size and closely-held nature of many broker-dealers, I'm concerned that there could be significant matters that may be brought to light only with a more targeted effort to solicit input from the industry across all its segments.

One other aspect directly affecting broker-dealers is that the industry is already subject to significant regulation and oversight in both business practices, maintenance of capital levels and financial statement presentation.

Coupling that with the fact that broker-dealer financial statements are more often used by customers of broker-dealers rather than investors, we question whether applying this proposal to broker-dealers will yield significant benefits that are not already addressed by existing regulations and oversight.

At a minimum, we would like to suggest that the PCAOB give further consideration to excluding broker-dealers from this proposal.

There are other concerns that apply to companies in general, but may be more acute for broker-dealers. For example, complex business activities, and the related management judgments applied, are more likely to result in critical audit matters than are simple business activities.

We are concerned that certain complex matters would almost always be cited by auditors as a critical audit matter. For example, hard to value securities, such as Level 3 securities, would likely be named as a critical audit matter for many broker-dealers.

As a result, rather than adding clarity for the user, there's a risk that such matters would come to be viewed as boilerplate disclosure and be ignored by the user.

On the other hand, a user of financial statements could react very negatively to all critical audit matters, and reach an incorrect conclusion that critical audit matters are indicators of problems in the broker-dealer's business.

Given the extent of discussion of Level 3 assets in both notes to financial statements and MD&A, there seems to be little information content to be gained from having them as a critical audit matter as well.

Further, a decision that something is a critical audit matter could be the result of the individual auditor's knowledge and comfort level, rather than an assessment of the matter itself. Of course, this concern is also applicable to financial institutions in general, and is not limited to broker-dealers. There may be other examples of critical audit matters that would become either false red flags or boilerplate language that would be ignored for both financial institutions and other industries as well.

We all know that the number of pages included in both quarterly and annual reports has steadily increased in recent years. Nowhere is this more true than for financial firms of all types. Adding to the sheer volume of the material is the fact that much of the information is very complex as well.

Both the complexity of the business itself and the increasing requirements of accounting standards contribute to this increase in length and complexity of financial reports. Companies spend very substantial resources in preparing and explaining information and trying to do so in the most understandable way possible.

The result, however, is a perennial call for simplification and elimination of disclosure overload. Adding an additional view or set of commentary will certainly not help this situation.

As noted at the beginning of these remarks, we support efforts for increased transparency in providing additional useful information to users of financial statements. We do not think it should be the role of auditors to do so, and we cannot support the proposal as it currently exists. Thank you for your time.

MR. DOTY: John Corcoran.

MR. CORCORAN: Well, I'd like to thank the PCAOB for having us here today and to hear our comments. I'd also like to thank you for saving what we think is the best panel for last.

Today I'm going to focus my comments on how the proposal impacts investment companies. And to put my role into perspective, at MFS, we have over 140 US mutual funds that we're issuing financial statements on, representing $170 billion in assets under management.

US investment companies as a whole are responsible for the investment of nearly $14 trillion in assets, and most of that being in mutual funds that have 92 million shareholders. And there's approximately 10,000 investment companies that are subject to annual audit requirement, and oversight by the PCAOB and the SEC.

As we stated in our letter, in our comment letter to the PCAOB, we do understand the PCAOB's overall objective to improve the value and relevance of the audit report, and support many of the proposed changes. But there are certain aspects of the changes proposed that we do have concerns with, especially as they relate to investment companies.

So, first, let's talk about where we support the changes. Under the proposal, the auditor's report will be modified to include a statement that the auditor is registered with the PCAOB and is required to be independent. It also recommends the auditor's report more specifically articulate the auditor's responsibility with regard to fraud in notes to the financial statements.

We think these enhancements provide better clarity to investors of what the auditor's role is. It can be done without expanding the scope of an audit, and we support that.

The area that we probably have the most concerns about and do not support is the proposed introduction of critical audit matters, or CAMs. Let me take a few minutes to explain why.

We feel that in the context of an investment company, the CAMs are going to be associated to be a red flag or a sign there could be something is wrong with a fund, when in fact judgments and estimates and assumptions are an inherent part of the financial statement process.

As an investment company, we make extensive financial disclosures and make certain judgments regarding disclosures on investment valuation. We'd expect the auditor to have to cull that out as a critical audit matter. But I think it's important to note that, even though those judgments are made, the auditor is certainly able to obtain enough information to give an unqualified opinion.

In these circumstances, calling this out as a red flag, we think, could raise a red flag to investors when no problem exists. Significant disclosure is already made and the financial statement opinion is unqualified.

Given the view that we would not expect to see an audit that doesn't have CAM, we think that's going to incent an auditor to identify more CAM to show the comprehensiveness of the work that they've done and their compliance with the PCAOB's directive.

Given our concern that these CAMs could be perceived as a red flag, it could have the unintended negative consequences that investors are going to use that as an objective yardstick in determining one fund's value versus another.

Let me explain how that could play out for us.

In a large complex like MFS, we employ more than one auditor. We have a two auditor model. So when this two auditor model, and it happens, we've got substantially similar funds audited by different audit firms, each of whom is going to have their own unique thoughts on what constitutes a CAM and how to document that within the auditor's report.

So we could have a fund with the same strategy, holdings, investment performance and disclosures, and still end up with having a different description of critical audit matters. And that would have the unintended consequence of putting one fund at a disadvantage over the other one because of subjective language in an auditor's report.

When you then take that and take it outside of just one complex and put it across the universe of investment companies, you can see that that expands our concern.

We also share the concerns raised over the last couple of days about CAM creating a piecemeal opinion and putting an auditor in a position to disclose information that management may not be required to disclose. I'm not going to add anything to that today. I did in my written comments. I won't in the verbal comments today, other than to suggest that, in our context, if our financial statements and presentation over something like investments and investment valuation is not sufficient, I don't understand how an auditor is going to be able to reach an unqualified opinion on our financial statements.

The last concern I'll raise about CAM, and it's probably the one that's going to have the most impact on myself and my staff, is additional cost and time it's going to take with auditor's reports.

One could argue the level of audit evidence and audit work required to reach a qualified or unqualified opinion wouldn't change. But there will be additional effort to document conclusions of why something is or isn't a CAM, and to put documentation and non-standard language into the audit report. When non-standard language is put into the audit report, it's going to require additional review within the audit firm and within the management company, and depending on what it is, it could involve others.

The people who are doing that review are not the low level, least expensive folks. So it's definitely going to add cost to review that language. That is also going to occur when a substantial amount of the audit work is complete. So it's going to be towards the end of a very compressed schedule for us. So we do have concerns with that.

Another aspect of the proposed standard that concerned us a bit is the inclusion of audit tenure in the auditor's report. I won't repeat what was said in the last panel, but our concern is just that the auditor's report is not impacted by audit tenure.

There's also a logistical problem with investment companies. For a company like ours, we have new funds starting and merging and changing every year. And there are some times that there's going to be reports with multiple funds being reported in one book and one set of audit opinions. Each has a different start date and therefore a different logistical audit tenure. So we think that would need to be addressed. We don't have a problem with disclosing audit tenure, but we think there's probably a more appropriate place to do it than the auditor's report.

The last area of the proposed standard I would like to comment on is the clarification of the auditor's responsibility for other information. We absolutely agree it could be helpful to clarify what components of other information we want the auditor to look at and what the expected level of auditor effort is here.

We do think some more work needs to be done to actually specify exactly which areas you would like the auditors to look at and what is the expected level of effort there.

This is particularly important with an investment company. If you put it in our context, whereas a financial company may have one set of financial statements that the annual auditor's doing every year, I have a set of funds being audited every month. We have over 35 different filings annually by trusts that have multiple financial statements within them, okay? So there's definitely going to be some costs associated with that, and there's definitely going to be some logistical issues associated with that.

So we want to make sure enough study is done on that what we have the auditors look at is something that they have the expertise to look at. And that it has the appropriate cost-benefit.

So, given that, we would encourage additional outreach to be done to determine what are the areas of additional information that are of most value to investors? Of those, which of those does the auditor have the expertise to take a look at? And then have the auditor do some field testing so we can just test that the level of benefit does exceed the level of cost to do that.

So, in concluding, we do support a number of the initiatives. We certainly support the intent of what the PCAOB is doing. We thank you for having us here today, but as it relates to investment companies, there's a few things we would ask you to consider.

First, we'd ask you to reconsider the inclusions of critical audit matters in our reports, given that we think it would increase the cost of the audit and also could introduce some other notable negative unintended consequences to our funds.

We'd also ask you to consider using other public documents in the auditor's report, if you want to disclose auditor tenure, and would ask for that additional outreach to be done on other information to clarify what other information might the auditor take a look at. Thank you.

MR. DOTY: Thank you. Jeff Burgess.

MR. BURGESS: Good afternoon, and thank you for the opportunity to provide my comments related to this important topic of auditor reporting. I commend the PCAOB for organizing this roundtable, and for its continued outreach. Grant Thornton supports the Board's effort to enhance the relevance and usefulness of the auditor's report.

My comments today are focused on the applicability of the proposed new rules to investment companies. And in doing so, I'll also provide some general comments about certain of the key aspects of the proposals, primarily CAMs and other information.

The application of the PCAOB's standards should, in most circumstances, be applied uniformly to all issuers. Although we understand the view that investment companies and broker-dealers could be scoped out of the proposal, we struggle with trying to define which issuers should be included, versus those that would be exempt. Where do you draw the line?

It's difficult to distinguish the circumstances in which an issuer or group of issuers might merit a discussion of CAMs from those that would not merit such disclosure.

Second, certain aspects of the proposals would likely need further evaluation, outreach and deliberation to be applicable to many investment companies, including consideration of the various fund structures and regulatory reporting constructs such as multi-fund filings.

With respect to CAMs, we believe that providing more insight into critical audit matters can give investors and other users of the financial statements information that could be useful in evaluating the underlying financial statements.

Grant Thornton's comment letter identifies suggestions for improvement with respect to the proposal scope, filtering mechanisms and form of communication. Our suggestions are intended to address concerns we have as to how the proposal aligns with current audit processes and documentation protocols.

Concentrating on issuer investment companies, we share what seems to be the general view of many other commenters that the primary focus of CAMs will be in the valuation of investment securities. Valuation has been a significant focus of the SEC and investors in recent years, so a CAM related to this complex audit area could be relevant.

It's been our experience that audit teams are spending considerable time evaluating the sufficiency of audit evidence relating to valuing the more complex Level 2 investments, as well as the Level 3 investments.

While we acknowledge that required financial disclosures in set forth in ASC 820, combined with additional management disclosures of portfolio risks and other details around investment portfolios, provide investors with a significant amount of information, it's possible that audit commentary for certain matters around a specific investment valuation that might be included in the CAM could be useful.

Most of the challenges relating to reporting CAMs for investment companies are ones that we believe also apply to the broader population of commercial entities. We've highlighted three concerns that we've noted, and on which we've seen others comment.

The first two have been discussed at length for the last couple of days: the comparability and the issuer boilerplate language, the disclosure of original information by the auditors. The third comment relates to the ability of the information to be operational to the investor, and not just in a negative way.

And along the lines of what John said, it's essential for investors to better understand the context for how the auditor determines CAMs, and how those matters relate to the underlying financial information.

We share concerns expressed by others that investors may inappropriately look at the auditor's reporting of a CAM or multiple CAMs as a negative indicator as it relates to a fund, resulting in misinformed investment decisions.

These aren't easy issues to solve, and we suggest that further discussion and outreach, including perhaps consideration of a phase-in approach, might be a prudent way forward.

One final point on CAMs related to investment companies is the expectation included in the proposal that the auditor will rarely not identify a matter as critical. We believe that this expectation may create pressure to identify a matter, or multiple matters, when they really aren't any.

For example, a mutual fund that has a very straightforward and non-complex investment portfolio may not have matters that really meet the definition of a CAM, but the auditor might feel compelled to call certain matters CAMs just in order to report something under the proposed standard. So, in that regard, we suggest the PCAOB reconsider its view that the auditor will rarely not identify a CAM.

In response to the proposal related to auditor's responsibility regarding other information, we agree with the Board's view that investors and other users of the financial statements would benefit from understanding the auditor's responsibility for information that accompanies the auditor's report and financial statements.

Consistent with our views on CAMs, we also believe that this proposal should apply to investment companies and broker-dealers that are issuers. However, we do not agree with the change in scope of the auditor's responsibility, or in the breadth of information subject to the proposed standard.

Current standards and practice provides for a read-and-consider model. The current PCAOB proposal increases the requirement to an evaluate-and-conclude model, which we believe would lengthen the time the auditor would need to spend on such efforts, thereby increasing the costs.

We do not perceive that these increased efforts will provide sufficient benefits to investors to justify the changes proposed in the release. Additionally, the annual filing requirements for investment companies differ from those of commercial entities.

Further analysis and outreach is important and could result in meaningful application guidance for investment companies to strike the right balance between enhancing the transparency of the auditor's involvement in information outside the financials and the additional cost in providing such information.

As the Board moves forward with its proposals, we support a post-implementation review separate from the Board's inspection process that includes an evaluation of the direct and indirect efforts, effects on financial markets, regulatory scrutiny and litigation matters.

We believe it's inevitable that auditor judgments across and within firms will differ with respect to determining and describing CAMs, and as a result, there will be diversity in practice. We also believe that users of financial statements would utilize and apply the additional information to be included in the auditor's report in diverse ways to suit their specific needs.

Accordingly, monitoring the effects of the new auditor's reporting model, and whether it is not only being applied appropriately by auditors, but also has met user expectations, will be essential to achieving the objective of the proposed standards.

We're committed to providing meaningful and transparent information that's useful to investors, and doing so in a manner that will provide the most benefit while not creating a significant burden to issuers and investors in the market in general. Thanks again for the opportunity to share our views.

MR. DOTY: Thank you. Jeanette Franzel?

MS. FRANZEL: My question deals specifically with brokers and dealers, and who's using those financial statements, those audited financial statements, customers versus investors in the broker-dealer itself, and how might this be different from the discussions we've been having about investors and issuers, and how should we consider that?

MR. PAGANO: Okay. Well, as I noted, approximately 300 firms, 300 broker-dealers, are clearing or carrying-type firms, which hold customer securities and funds. In those instances, you know, there is a reporting requirement to the customer.

But on all other BDs, the majority, there is no customer statement nor ordered report that's sent to those individuals. It's not required. The securities and the funds are held by the clearing broker.

Now, there is a SEC website where even the small, introducing-type firm has to put an audited financial statement on that through the SEC website, and somebody could see the -- usually, the confidential report is not on that. Well, in some cases it is. But usually it's just a balance sheet with footnotes.

MR. FEHRMAN: I think that's correct and consistent with my understanding as well, although I would just note that for a firm such as ours, our broker-dealer is wholly owned by the parent. So we have no outside investors at all, and it would really only be customers and regulators that would use the broker-dealer financial statements.

MR. HANSON: A question related to the funds. And we have suggested in our proposal that the application, especially around CAMs, is intended to be scalable. So not over-killing it, not under-killing it, but making it be the right size for the entity.

And I've heard the comments that you're making about, gee, are there really any CAMs for most straightforward funds that invest in traded securities where there aren't the Level 3 valuation issues? And I know we've put words in the proposal that suggest that most companies will have CAMs.

And I wonder if we have an opportunity here, because I don't like the idea of carve-outs. So if we could write something that would be applicable for all types of audits, but scalable so that it's hitting the right things for the right companies.

Do you think it's possible for us to craft language that would accomplish the objectives without making a specific carve-out for a fund that would get at the scalability aspects, that it might very well that in a given fund there might not be a CAM and that's okay? Thoughts?

MR. CORCORAN: I'll defer to the auditor on how they'll interpret it. My fear would be that the auditor is going to want to demonstrate, hey, we've done a good job and there are critical audit matters. It's hard to suggest that the valuation of investments in an investment company is not a critical audit step, if nothing else.

I'd also point out that on our funds, for which we have minimal Level 3 disclosures -- I think our highest concentration of Level 3 securities in our funds are less than half of one percent. I still have, generally, three pages of disclosure on how I valued the investments. And the auditor is, as part of their audit guide, they are looking at 100 percent of the valuation of my investments, okay?

So I'd be still fearful that they're going to want to cull that out as a critical audit matter. But it's not an issue. If it were an issue, they wouldn't be able to give me an unqualified opinion. That's my concern.

MR. BURGESS: I think John's concern is fair, but at the same time I do think that you could write the standard in such a way that this could be addressed. I think it's important that the standard be clear, that it is contemplated that it wouldn't be rare that a company might have no CAMs.

You know, in the terms of an investment company, like John described, where there are no Level 3 investments -- we even have some that have mostly Level 1 investments -- I have a hard time seeing that there would be a critical audit matter relative to investments in a fund that has primarily Level 1 investments.

But I do think there is some risk that auditors will feel the need to have at least one CAM. Or if I don't, you know, I run the risk of having not met the standard in the eyes of an inspector or somebody else.

So I think you just have to be mindful of each side of that coin.

MR. CORCORAN: I'm also not sure what a CAM could draw out about an example like investment valuation that I'm not already required to disclose.

MR. HANSON: In other words, how many times do you have to say "it's hard."

MR. FERGUSON: Yeah. I have a question. And I'm struck listening to you by, obviously, the enormous diversity among broker-dealers in this country. You talk about, Mr. Pagano, clients with capital ranging from $20,000 to $3 billion, and I assume Deutsche Bank is much, much larger than that.

So these are almost too different kinds of businesses. And the question I have is if we were to consider exemptions here, where we simply exempted certain businesses from these rules, what would be the line we should draw? I mean, they're clearing and introducing brokers. I mean, should it be introducing brokers that are excluded? Should there be a capital level below which you don't need to comply with these things? What would your advice be on that?

MR. PAGANO: Well, I would say, you know, if you're involved with customer funds, I think that's something that I could see having an interest in getting some confidence that those customer funds are in a good place.

So I would say that would be my biggest driver. You know, there are some broker-dealers that are part of a public filing as the holding company is a public entity, and presumably those are audited under PCAOB standards also.

So that would be important to us. I think those two things would be crucial. And I just -- I wanted to add -- Jeanette, you had a question before. Primarily with the smaller broker-dealers, it's the SEC and FINRA that are waiting for these audited statements to be filed within 60 days, and now SIPC this year. There was a recent change this past year where SIPC gets the full report clipping, the internal control report.

MR. FEHRMAN: I'm just sort of guessing here, but I would think that in a world where this proposal has come to fruition, a reader of Deutsche Bank's consolidated financials and related audit report would probably not get much different information than a reader of the broker-dealer financial statement separately.

So I see the appeal of Mr. Pagano's comment, that perhaps broker-dealers that are a subsidiary of a company that's otherwise audited and otherwise reporting under PCAOB standards might possibly be exempted.

I think you might think about an exemption also for audits of smaller broker-dealers that are very closely held. I don't think that people look to the financial statements for safety and soundness. I think they look to the regulators for that. So I'm not sure there's much to be gained by that. They're not investing in the broker-dealer per se.

MR. FERGUSON: Do you have any experience, for example, from your customers who are customers of your broker-dealer, whether when they look at Deutsche Bank's financial statements, do they only focus on the consolidated financial statements of the Bank itself? Or are they interested about the entity actually with which they're dealing? Or do you know?

MR. FEHRMAN: I don't know the answer to that. I do know that we are required to send customers of the broker-dealer broker-dealer financial statements, and we're not required to send them consolidated financial statements. But they are certainly available. But we have not made a study of that nature.

MR. HARRIS: Mr. Fehrman, you heard Mr. Corcoran tick off a number of items in the proposed standard that he supported. Is there anything in the proposed standard that you support?

MR. FEHRMAN: I think a great deal of what's in the standard, frankly, is already being done. It's just reported to the audit committee, rather than to the public at large. In as much as the audit committee is meant to be an independent body, and is in fact an independent body, I think that they are there also to protect the users of the financial statements.

So you have the company making an honest effort to provide good disclosure, in accordance with the requirements, in a way that's understandable. You have the auditors checking that. You have the audit committee checking the auditors.

So to answer your question, no. The thing I fear is this. The financial statements in and of themselves are already a summary. You know, we have millions and millions of transactions, and we could give anybody more information -- and I jokingly said to people in the green room, we could print a copy of our trial balance and mail that out, and I would say that would detract rather than add to the information content of our annual report.

So, you know, just because the information is available and low cost, as was discussed on the previous panel, that does not make it useful information. So I have to say quite honestly, sir, that, no, I do not support this proposal.

MR. PAGANO: I'd like to add just to the auditor's responsibilities on other information. The oath or affirmation that's attached to the report, was noted in the proposal, would be subject to this. And actually I do see benefit in that the order gives some comfort on that.

MR. DOTY: Well, here's the problem. We had a financial crisis. And I take it some of the entities that fell flat were substantial banks and broker-dealers. And we had an investment company that broke the buck as a result of a concentration in the securities of the broker-dealer. Holding itself out as a money market fund, it broke the buck.

And this attracted a lot of attention, and it resulted in us being charged with creating standards, audit standards for broker-dealers. The SEC reminded broker-dealers that they had to have audited financial statements, and that included some schedules and some fairly specific information. And I share here with Jay Hanson's concern over the carve-outs.

I think there's a well-trod, well-understood path for regulators creating guidance. And perhaps if you have funds for which the auditor has satisfied themselves there really is nothing in that fund portfolio but cash, money, high-quality government securities, maybe there are times in which the guidance could indicate that critical audit matters may in fact not be so rare in a particular area or segment, if we looked at it.

But right now, we're sitting here having looked at some broker-dealers, and having reluctantly determined that many of them, some of whom are carrying, don't have audits that are independent. We have a lot of errors that we see in the preparation of books and records by the auditors. The material is in our public report.

So how do we simply say, well, notwithstanding the financial collapse, notwithstanding the instructions of Dodd-Frank, notwithstanding the statute under which we operate, which says we have to foster the interests of the public in good financial reporting. And notwithstanding the fact that we know that the SEC also wants to know, for the audits that it has a primary interest in, or that FINRA has a primary interest in, they want to know that the audit has been well-performed.

How do we do our duty by a wholesale exemption of an entire industry, which, as John points out, now has trillions of American savings in it? I guess Mr. Fehrman's position has the beauty of saying you don't think we should do any of it for anybody.

But don't we have a problem with the general carve-out? And isn't it clear that we've got to get to some kind of a mechanism for scaling the wind to the shorn lamb and treating how these different companies' business model suggest themselves to an auditor? Don't we have to do something here to fine-tune?

MR. FEHRMAN: I fully agree that things need to be done. And things have been done, I think. We have Sarbanes-Oxley, of course, which I think actually predated the crisis. But we have the Volcker rule, we have Dodd-Frank, we have increasing levels of capital requirements.

We have substantial increase in regulatory oversight, all good and necessary things that I think are past due, and we're working hard every day to comply with all those things as well. I just question whether it's specific to broker-dealers, or much more broadly, whether this helps that situation.

If the auditor's doing a good job, he's doing a good job. I question whether the reader of the critical audit matters, the reader of the report on other information, will find that useful.

I think that they would rather know that there's a team of regulators, a team of auditors from the regulator that live in our building, that are there every single day, and are working very hard to make sure, as we are, that the institution is safe and sound and will be here, I hope, for another hundred years or more. I don't think this is the right way.

MR. DOTY: The comment from the United Kingdom yesterday and today was that they have managed it there. They've managed an expanded audit report, and they've done that without having undue delay in the delivery of the report and the reporting schedule, and without some kind of a hockey stick increase in costs.

So does your British -- you all have resources there. Does your UK experience suggest that perhaps this can be done?

MR. FEHRMAN: I'm not familiar with what's going on in the UK, quite honestly. I have read the IAASB proposal, which I think is very similar to this. I think we would have a similar reaction there.

You know, again, I just have to say that I think that the regulators are doing a very diligent job, and I think that that's the appropriate place to address many of the concerns you're listing.

MR. CORCORAN: I'm by no means an expert on what changes have happened in the UK. But my understanding is they are not -- the subset that they're applying to now does not include an OEIC, an open-end investment company, which would equate to our investment company.

I do think you need to consider, for lack of a better term, the simple nature of the operations of an investment company. Every investment company really has -- they may have different objectives in terms of what type of investments they're going to go into and what not, but all the more just in turn investing money in a portfolio that is 100 percent disclosed, 100 percent validated by the auditor, and pages of the disclosure on how those valuations take place.

MR. DOTY: John, it's a fair point, up to a point. To the extent you're talking about two-auditor funds, I think this is something that is of great interest. But when you're saying that you're concerned with critical audit matters, that there's going to be an assumption of something being wrong and a tendency to -- many of your objections to the proposal would go to the kind of issuers who have been subject to it in the UK.

So I think you have in some ways narrowed the concern, when you say investment companies are a unique animal. It's a narrower subset of concerns you have when you're focusing on the peculiarities of the investment fund, of the investment company industry, it would seem to me.

MR. CORCORAN: What I'm trying to suggest is the subjective nature of an auditor being able to cull out -- two different auditors may decide something different is a critical audit matter.

In a simplified structure like an investment company, that's going to have a much different impact than if I'm talking about a multinational corporation, where you would expect that sorts of things to be different.

MR. DOTY: And I do see that as a concern, lodged just as to how the proposal might affect investment companies. But I'm saying that on the broader attack which you make on the proposal, or the broader expression of disagreement with it, you are going to many of the issues which the UK seems to have successfully confronted and dealt with.

MR. CORCORAN: I think we can probably agree to disagree as it relates to an investment company context, which is all I'm speaking about.

MR. DOTY: Well, this has been helpful and informative and we thank you.

This concludes the first roundtable on the audit reporting model, and in some ways we did save the best to last. You all did a great job. Thank you.

(Whereupon, at 2:59 p.m., the meeting in the above-entitled matter was concluded.)

(...)

MR. BAUMANN:

The next item, or the last item actually on this page and the first item on the standard-setting agenda for March are the same and it deals with the auditor's reporting model. And we'll spend a little bit of time on this project over the next few minutes. This is really one of the Board's major initiatives, and it did come up before are we going to hear about this; I think it was Elizabeth that asked, and so I do want to spend some time.

So before this meeting, as part of the meeting materials sent out to SAG members -- materials related to the ARM project. And what we sent you was the Board proposed changes to the auditor's report in April -- August 13th, 2013. And the fact sheet of what we proposed is in front of you. Just as a reminder, that dealt with the requirement for the auditors to report on critical audit matters, those matters that are addressed during the audit that involve the most difficult subjective or complex auditor judgments, pose the most difficulty to the auditor in obtaining sufficient appropriate evidence and/or pose the most difficulty to the auditor in forming an opinion on the financial statements.

We also proposed changes to the responsibilities for auditors with respect to other information in an annual report filed with the SEC that's not part of the audited financial statement, but other information that management might present. The auditor has an existing responsibility to read and consider that information.

We expanded that to read and evaluate that information with specific procedures as to what we meant by evaluation and also proposed that the auditor would report if they found that there was a material misstatement of fact in the other information or if they found that the other information contained a material inconsistency with the audited financial statements.

We didn't require really additional audit evidence or evidence to be gathered around that other information, but those conclusions would be drawn based on reading it and evaluating it in the context of the audit work done and the audit of the financial statements taken as a whole.

We received 246 comment letters on the proposal during the year. We received comment at the last SAG meeting. A major portion of that was getting input from the SAG members. In addition, in April 2014; and that material is in front of you as well; and many of you here participated in that, there was a two-day public meeting on the auditor's reporting model and we covered various aspects of the various components of this, the critical audit matters, issues around other information, issues pertaining to larger firms, smaller firms, etcetera.

But we also looked at other developments that were occurring around the world. And as part of the materials that I've shared with you I've included excerpts of what's now a requirement in the United Kingdom that went into effect for financial statements filed after September 30, 2013 and periods after that. Is that right, Jessica?

MS. WATTS: Sounds right.

MR. BAUMANN: September 30th, 2013 and after that. And if you read the -- there was one page of that we took out from the U.K.'s standards was pretty principles-based. It said describe those assessed risks of material misstatements that were identified by the auditor and which had the greatest effect on the overall audit strategy, the allocation of resources in the audit and directing the efforts of the engagement team, provide an explanation of how the auditor applied the concept of materiality in performing and planning the audit and provide an overview of the scope of the audit, and few more words to that. And we've also included a couple of examples of reports that came out of the U.K. for your observation.

So as part of the meeting we had in April representatives from the United Kingdom who participated in some of these audits came over, as well as investment management professional came over, and it was a very positive report back in terms of the fact that the engagement teams felt, quote, "more engaged" in the audit and the fact that their reports were going to contain more useful information for investors.

The engagement partners felt that that was a positive impact on the audit taken as a whole and the investment management professionals who reported at that meeting felt that these more detailed reports gave the market more confidence in the work of the auditor as it spelled out some of the significant risks or critical audit matters, as we would call them here, that the auditor dealt with.

But the examples in front of you -- there's two companies. One of them is -- compared to the traditional couple-of-paragraph report we see here in the United States, there's a six-page opinion of the audit spelling out about 10 different risks of material misstatement and the auditor's responses to those risks that they found. The other one I think is about a four -- about a five-page report or so on similar type matters.

I think the main point in that and what we heard in the April meeting is from those who in the comment letter said this is a real big challenge and for a variety of reasons can't be done. It will slow down the audit, will have other negative consequences, you know, the world will come to an end. That didn't really happen in U.K. The reports were issued pretty much timely from what we observed in a sample we've looked at, pretty much issued on about the same date as they were the prior period. And we inquired about cost, and at least in general the comments that were made at the public meeting were that the additional costs were largely minor. I mean, I'm characterizing that in my own way.

I don't know, Jessica, would you say it was different? No? That's about what we heard. But that's year one, and we'll have to see how these reports come out in year two. This is just a couple of them that we shared with you just so you could see that this is occurring. Reports came out in a highly principles-based way, the standard.

Shortly after that -- just one other thing -- the European Union came out with requirements after that which have now become final and have included those requirements in just a short page as well, which is similar, that the audit opinion must now include a description of the most significant assessed risks of material misstatement including material misstatements due to fraud, risk of material misstatement due to fraud and a summary of the auditor's response to those risks. In both cases as well the auditor's reports would have to comment on other information accompanying the audited financial statements.

So we are continuing to proceed on our path with respect to reflecting on the comments on the proposal, comments from the public meeting, comments from SAG members and we're working with the Board on our next steps.

I thought I'd take -- there's a couple of cards up. But before I did that -- I see Mike Gallagher was up and Bob Herz. Before I did that, I've talked a little bit about our developments and other global developments, but clearly among those global developments are developments at the International Auditing and Assurance Standards Board, as they are also in the process of developing a new auditor's report -- and Arnold Schilder, a regular observer at our SAG meetings is here today, the Chairman of the IAASB.

And, Arnold, could you give us an update on where the IAASB is?

MR. SCHILDER: Yes, of course. Thank you very much, Marty.

We issued our third consultation audit report in July last year, and it was a very comprehensive exposure draft that included a number of new revised auditor reporting standards.

Comment period closed November 2013. A lot of reactions. And we've had some fulsome discussions with our advisory group and the National Auditing Standard Setters Liaison Group, and in both the PCAOB staff participated as well.

Our Board had a public meeting last week and I'm very pleased with the progress that we made. It was a full week. We spent over 60 percent of our time on that. And we had our first read through the suite of revised auditor reporting standards. We are track, as Jim also said, for finalizing them at our September meeting.

Our Board has 18 members, 9, as you said, practitioners, 9 including myself non-practitioners. And for approval we need at least 12 in favor.

We essentially closed off the discussions on our overarching reporting standards, ISA 700, and this now includes new requirements to make an explicit statement on independence, naming the engagement partner for listed entities, and also placing the auditor's opinion first as the overall conclusion that should be seen immediately.

A bit more specific on some key components. First, key audit matters. We've made excellent progress on this new standard, ISA 701, and that addresses the communication of key audit matters. Respondents to the exposure draft strongly supported the concept of KAM being based on matters communicated with those charged with governance, usually the audit committee, firstly focusing on matters of significant auditor attention.

However, findings from field testing and other feedback from auditors, standard setters and regulators suggested clarification was needed to ensure that there was a robust decision making framework to enhance consistency in auditor adjustment focused on topics that would likely be relevant to users. And users have told us that communications about individual methods should be as entity-specific as possible to enable them to understand key aspects of the audit.

And I should also mention that similar to the PCAOB feedback from preparers and audit committees has been less supportive regarding the concept of KAM. In their view it's their role to provide original information to users other than the auditors, and auditors and others including the IAASB itself agree to that. There's no discussion about that principle. But we found therefore the need to further clarify in the standard and in our outreach that the purpose of the auditor communicating KAM is to provide greater transparency about the audit.

We've now refined both the requirements relating to determining KAM and the application material which is guidance that is essential to the proper application of the requirements in the ISA. It has all set out conservations for the auditor in all cases focused on three areas.

First, areas of higher assessed risks of material misstatements or significant risks identified in accordance with ISA 315. And you hear of course bells ringing to what Marty just quoted. Second, significant audit adjustment relating to areas in the financial statements that involve the application of significant judgment or estimation by management. Third, the effect on the audit of significant events or transactions that occurred during the year.

We've also picked up many of the PCAOB's proposed required considerations in our guidance to help auditors focus on which of the methods that require significant auditor attention were of most significance in the audit and therefore the key audit matters.

And our most substantive Board debates to date relating to KAM have been on the possibility that the auditor might conclude in what we now call extremely rare circumstances not to communicate a matter that had been determined as a KAM in the auditor's report.

Your feedback to the exposure draft suggested this type of requirement was necessary for the Board's continuing to explore how this could best be done recognizing that it is necessary to put proper parameters around the decision not to communicate a matter and to promote disclosure in most cases.

Like you said, Marty, we have heard much positive feedback through the U.K. experience and we believe we should move forward as well recognizing that communicating KAM will require all of us to take a new and innovative approach to reporting. We are now already talking about implementation support and also post-implementation review.

Some key audit matters briefly on other information. We're also proposing auditor reporting on other information, which in our case is part of a separate project to revise that particular standard, but dealing with of course the information included in a company's in your report.

We received significant feedback to our first exposure draft and we found the need to re-deliberate the proposals to provide greater clarity on the auditor's work effort and the scope of information to be addressed. We also then had the opportunity to consider PCAOB's proposals on the topic. We re-exposed the standards April this year. Comments requested July 18, and we hope to finalize the standard 2014 or early next year.

Finally, going concern. Our exposure draft included auditor reporting on going concern. Like the PCAOB, we recognize the need to work closely with the accounting standard setters towards a more holistic approach to going concern, and we have been doing so in particular at the IASB. However, it's unlikely that changes will be made to the accounting standards of the IASB, so the IAASB has decided to revert to exception-based reporting in the auditor's report; i.e., including statements about going concern when a material uncertainty has been identified, which it will be now very close to the new legislation in Europe and I think as well where PCAOB currently is.

And our work continues to look at how it might increase auditor attention on going concern and response to calls arising from the financial crisis. And at our meeting last week we had some lively debates around the possibility of a new requirement aimed at enhancing the auditor's consideration of the adequacy of disclosures around going concern issues, including the need for and adequacy of disclosures about underlying events or conditions where a material uncertainty does not exist, the so-called close calls. And course that's of interest to the slides from the FASB in the area of significant doubt that had been alleviated by management plans.

Well, that's the area that we're discussing. We believe that it is important to help to drive behavioral changes in the way that both management and auditors approach the assessment of going concern, so it's important that we get it right.

Two closing comments: First, the IAASB started this project in 2006 with Independent Research Commission by us and the AICPA Auditing Standards Board. We then had two global rounds of consultations, 2011, 2012, and then the exposure draft in 2013. And I really would express how grateful we are for the dialogue that we had during this process with the PCAOB at various levels, the

Financial Reporting Council, but also the European Commission and European Parliament. And we appreciate that the PCAOB has to operate within confidentiality requirements, so we're very grateful for the dialogue that we could have.

And finally, in line also with what you said, Marty, does it work? Let me give you one quote from an investor from the U.K. who has often been very critical to the auditing profession, Iain Richards from Threadneedle Asset Management. Quote, "While we are clearly at a very early stage in the development of this enhanced reporting, we have been pleasantly surprised by the usefulness of some of the disclosures. There is a strong subjective element in how we as shareholders assess the stewardship of a business and the quality of its reporting and auditing and these reports provide an important medium that can contribute to that. In a world that is rarely black or white, they also help underpin the credibility and trust that needs to be inherent in the relationship between the leadership of a company and its shareholders."

Pleasantly surprised. I wonder how long ago it is that an investor was able to say that about an auditor's report. Thank you.

MR. BAUMANN: Arnold, thanks very much for that update. And as I said, there are a number of cards up. Mike Gallagher was first.

MR. GALLAGHER: Thank you, Marty. Marty, I wanted to share with this group that the Center for Audit Quality has updated its response to the project, specifically indicating the results of field tests that were recently completed with respect to the auditor's reporting model.

So the field tests focused on a couple of things: CAMs was primary focus and for the CAM field test nine audit firms participated. Fifty-one issuers participated. With respect to other information, it was a smaller size. Six firms and fifteen issuers.

Before I get into the details; and I won't get into much, I'll give a very quick high-level summary of what the field tests found, but there were clearly some limitations to the field tests, a couple of which -- and probably the most significant of which, given the desire on the part of issuers to remain confidential and not have the information go beyond the accounting firm that did the work, we were not able to get a reaction from investors.

So without getting the benefits, which is clearly what we would get from an investor perspective, you know, severe limitation, and we understand that.

The other limitation was it wasn't done under live conditions. So we looked at 2012 audits for purposes of developing the CAMs. So we didn't have the benefit of so-called game day conditions in terms of what it meant, in terms of time, when that time would occur and the impact on the audit.

That said, I think there were some useful findings that came out of the effort that should be considered as a data point. And I appreciate the time that we spent with, Marty, you and your team, and Jeanette participated from the Board perspective, a couple of weeks ago to listen to what we found in the field test.

And so at a very high level a couple of things: One, very similar to what I heard Arnold just say with respect to refining the population from what you would pick CAM, and as we talked about in previous SAG meetings we think it would be useful to refine it down from three maybe to one key source, which is information communicated to audit committees. We think that you'd capture things that are relevant there and without having to go through a larger population, which is largely redundant.

The other thing to consider there would be a materiality lens. I think materiality is implicit, but if there can be some more explicit recognition that, you know, the things that would end up in CAMs, to avoid too many CAMs, should be focused on things that are really meaningful and material. And recognizing that sometimes is in the eye of the beholder, many times in the eye of the beholder, but we make those decisions every day.

Two other things that related to documentation: One related to when auditors -- we found a pretty big range of documentation when auditors decided how many potential CAMs might there be and what's the documentation requirement. For the CAMs particularly, the CAMs are left on the cutting room floor. Making sure that we've got the right level of documentation. And even for the CAMs that go forward, how to document those going forward. Not looking for a cookie cutter, but maybe just a little bit more in terms of guidance, in terms of what the expectation would be from a documentation perspective.

And then the last item with respect to CAMs, again, a very broad range and diversity with respect to how the CAMs were written. Some in terms of the level of detail, the range of detail, just the volume. It was quite a range. And while you certainly want a certain range, you don't want these to be cookie cutter. We don't want them to be boilerplate. And that's one of the risks here. And so it's not a paint-by-numbers exercise, but perhaps there's an opportunity to put goal posts out there where you get an expected and a good range of outcomes, because I think there should be a range. And they all should not look the same, but is there an opportunity to kind of narrow the field from what we saw in the field tests.

With respect to other information, really one key finding; and again it's something we've talked about in previous SAG meetings, confusion over what "evaluate" means, and is that a higher standard than we're performing under today? Clearly, when you think about read and consider versus evaluate and report, it sure sounds like it's more. And so making sure we're capturing the intent of what the Board is trying to achieve and is "evaluate" the correct word or is there a better word that would create more clarity and consistency in terms of what the performance requirement would be.

But overall I'd go back and say -- you know, go back to the meetings that we had at the beginning of April. Very positive. I thought it was -- having the opportunity to participate, for which I was very grateful was -- I thought the meetings were terrific. I was there for the two days. And we're very supportive of the project and hopefully this is a useful data point that you can consider as it goes forward. Thank you.

MR. BAUMANN: Thanks, Mike. It is very useful, obviously any input like that that we receive to help us refine whatever our next step may be in terms of a re-proposal or whatever we do next. Hopefully we get it better. And as the IAASB has done, continue through the process of consultation, proposal, etcetera, to work through refinements to make sure we get the best product.

The auditor's report hasn't changed in the United States in about 75 years or so, so if we're going to change it, let's make sure we get as much information as we can and do it as well as we can. So thanks for that.

That letter from the CAQ I think is now up -- has been delivered to us and is available with other comment letters that we've received on our website.

The next card that I saw go up was Bob Herz.

MR. HERZ: Thank you. Again, this is on the auditor's reporting model, and for this purpose I will not include the evaluation of the other information, just the reporting on CAMs or key matters. One is an observation and one is more of a comment.

The observation is just to add to what Mike talked about, the CAQ, and this is a much less robust or scientific sample, but I had the opportunity to participate in two meetings, one in the U.S. and one in the U.K. of audit committee chairs and members.

The U.S. meeting, which was sponsored by the NACD, I think a lot of the concerns that you've been hearing about disclosure of original information potentially in the report, lack of clarity on certain things and all the other points that we discussed at a prior meeting were raised by audit committee members, or a number of audit committee members.

I was in the U.K. subsequent to that and at the point that they were -- had issued some of these reports or were working on them. And I'll reinforce that the reaction there among audit committee people there, particularly what I'll call the not-inside-baseball people, or maybe it should be not-inside football people; in other words, they didn't come from the profession, they hadn't been with one of the firms or whatever, they were people that had been in business or had been regulators or whatever, was extremely positive to the expanded reporting. And so they really started to get much better insight into what was looked at in the audit and what was found and the like.

In that regard -- and I guess kind of in the camp of you'd be disappointed if I didn't say this, Marty, but at one of the prior meetings I said when you guys had some -- a couple of examples of the kind of things that might be reported and how they might be reported, I made the observation that they kind of pointed to the area and the like, but then they didn't say, well, what did the auditor do and what did the auditor find?

And so when I read the U.K. examples; and we've got two of them here, Rolls Royce and HSBC, I thought it was very good the way they did that. It didn't leave you hanging there. It kind of wrapped it all up.

MR. BAUMANN: Yes, I think all of these experiences and field testing and IAASB's outreach and those kind of comments are helpful, which we did hear at the two-day meeting about not just what was the matter, but what happened to it. So that's come across as well, what was the auditor's response to this critical audit matter? We've heard that a number of times.

So we've gotten a lot of good input on this from a variety of -- from a lot of outreach on this project, from Jessica and team, who continue to move along on the development of our next proposal on this.

Elizabeth Mooney?

MS. MOONEY: So it sounds like the U.S. is pretty behind, I mean, 75 years, you mentioned in the U.S. And the U.K. that -- the discussion. So it's encouraging that we're continuing to look pretty hard at this. But I'm curious just on the Rolls Royce; and I don't know if there's anyone here who can speak for KPMG, but what is there response and when you've talked to them about how difficult it was for KPMG to go through this exercise for the Rolls Royce audit report, for instance? The challenges.

MR. BAUMANN: We had some people at the public meeting, but I don't think we -- do we have anybody from that firm?

Yes, Tony Cates. That's right. We had Tony Cates from that firm who talked about that experience, but we didn't have a representative of the company at the public meeting. If you're asking what the company's reaction was?

MS. MOONEY: No, I'm just asking how hard it was for KPMG to put together this audit report, if it was -- what their experience was in terms of it being -- how it was received, what challenges they faced, what they left out.

MR. BAUMANN: Jessica?

MS. WATTS: I think KPMG actually put out a survey on putting together these audit reports. And then there have been several articles about these particular KPMG audit reports. And there's this one particular auditor has done these more extended auditor's reports, Rolls Royce and then there's another that he has done. Anyway, they've -- KPMG has said that they had put out these two specific audit reports that went a little bit further than what the U.K. required. And they had done it to be provocative and try to get feedback, and the feedback had been very good about -- from investors, that they thought that this was really helpful to have the -- not only what the auditor did, but what the auditor found.

And so, the investors have liked it. And from what we understand from KPMG, it wasn't that difficult. But that was really from these articles is where we've learned it, and then from discussions with Tony Cates during the meeting.

MR. BAUMANN: What we did here during the public meetings was that -- again, I think I mentioned this, the teams were -- the engagement teams were motivated, they felt that their audit report was going to be more useful and the areas that they worked on could be more relevant potentially to investors. And the items that were disclosed, it's not as if they'd pop up at the last second. These were typically the items that were probably the most important items addressed throughout the audit, discussed probably a number of times with management and the audit committee.

So in terms of the extra effort, the extra effort seems to be in the writing of the matters, but not a matter of, well, what are we going to talk about as the critical matters? The engagement team, the company and the audit committee pretty much seems to have an idea that these are the issues we all talked about during the year. These were the real troublesome issues in terms of auditing. So not surprised at what was disclosed in the auditor's report.

Jeff Mahoney?

MR. MAHONEY: Thank you. I had a question and a comment. Elizabeth essentially took my question, but one add-on to that, to the extent that this group will have future discussions in connection with this project, I think it would be very useful to have Mr. Sikes or Mr. Tate or someone from the firm, someone from other firms that have issued these types of opinions to speak to this group so that we can ask them questions and get more insights from them. So that's my question.

My comment is that with respect to the Rolls Royce opinion, and in particular with respect to the findings paragraphs, and in particular the findings paragraph with respect to the measurement of revenue and profit in the civil aerospace business and the findings paragraph in connection with evaluation of Daimler AG's put option, that type of disclosure I think is very much in line with much of the input from the user community that was provided to the Treasury Committee a number of years ago. It's also very consistent with the Council's numerous letters on this project over the years and with many of the user investor surveys and studies, and with the PCAOB's own outreach to investors in connection with this project.

That's my comment. Thanks.

MR. BAUMANN: Yes, that finding is we found the resulting estimate was acceptable but mildly optimistic resulting in a somewhat lower liability being recorded than might otherwise have been the case, that type of language. So, interesting language. But certainly we have heard from the investor community that that type of assessment of estimates is what the investor community is interested in, in addition to a recitation of these were the most significant risks and here's how we audited it. So that's a consistent comment, Jeff, I think from the investor community over time.

Lew Ferguson, you had your card up a minute ago?

MR. FERGUSON: I just wanted to point out that one of the things that I felt was very interesting about the comments that Cates made when he said that these reports were very dramatic because they were different than anything that had ever been put out before. But he was concerned and he said in these particular companies it was likely that the companies would probably not change from year to year. So the next report might look exactly the same and people would begin to say, okay, well, here we are back to a new kind of boilerplate and this is not dramatic anymore and to sort of want ever more information.

MR. BAUMANN: Yes, that point was made and I think everybody acknowledged this is -- year one looked very interested in the U.K. and what is year two going to look like will be a very important experience.

Guy Jubb?

MR. JUBB: Speaking as a major U.K. investor, I wasn't so much pleasantly surprised by the enhanced auditor reporting, but I was certainly very encouraged by where we are going for many of the reasons that have already been discussed. But I would like to highlight in terms of feedback and therefore to help the PCAOB -- is the use of specificity in terms of the auditor reports that have been used. We have two very good examples in Rolls Royce and Barclays. I should add that the Rolls Royce one is generally regarded as the high bar in this and it wouldn't be suggested that all auditor reports in the U.K. have this transparency. But the willingness to refer to the Daimler option that Jeff mentioned earlier, that gives the investors of itself a degree of greater confidence in the audit approach that was taken.

Another example is the BP audit report where the auditor by name tells us that he went to Moscow three times to verify the accounting treatment that was used for the Rosneft interest in BP, and that enabled my firm, Standard Life, to go to the BP AGM and ask a question about that. If we had not had that disclosure, we would have not been able to ask that question and we would -- it enhances accountability.

We have also seen -- and I think we haven't referred to this here, but we have also seen a parallel improvement in audit committee reporting as well. This has been on the go for some time, but it has had a step up in terms of seeking to provide greater transparency. And when we as users are looking at the auditor report, we are also in -- on the one had have that. In the other hand we have the audit committee report. And the more that one can actually develop this framework of reporting between audit committees and auditors in a joined up way, I think that that will be valuable for investors and we'll also avoid some degree of inappropriate duplication.

Thirdly, it has enabled a dialogue to take place about audit issues. This year so far I have had discussions, face-to-face discussions with the chairman of seven FTSE 100 audit committees about their auditor report. That is seven more than I have had in my 20-year career at Standard Life in dealing with engagement. But importantly, I'm using the word "having a conversation," because this isn't about hard engagement at this stage. It's about having a conversation about what is being used.

What hasn't actually landed so well yet is disclosures about materiality. And I know that whether or not materiality should be disclosed is a sensitive issue. We have certainly found in principle it is a good disclosure. The terminology that is used has still got a high degree of technicality to it, but there's one number that keeps on resonating, and that's the number five. Everything is five percent of something. And I didn't know that until we had these auditor reports and I'm now starting in my conversations just to ask, well, -- why is it always five percent and what should it be five percent of, or what it should be of? So there's a whole dialogue that's taking place there.

Now having said all that, whilst I am having the conversations and no doubt other investors in this room are, I'm not entirely convinced that audit reports are being well communicated into the capital market system. They are not featuring in the slide decks that are used by investor relations programs in going out to see companies, and therefore I think it is a very narrow pool of people who are actually reading these auditor reports at this stage, and one of the encouragements that has to be given is how to broaden that. And I think in terms of the -- as time goes by and the engagement that the PCAOB has with audit committees it is to encourage audit committees, as I shall be, to actually get the executives to bring this into mainstream investor relations and not the narrow pool.

Two final points, if I may. It has increased interest among investors. I have been struck by the increasing number -- still quite small, but amongst the

U.K. institutional investor community. There are now more investors who are willing to step up to the plate to have a discussion about this. And when two becomes four, four becomes eight and I am confident that that will progress slowly.

And finally, the year-two issue which was being mentioned as to how this is going to be kept fresh, how it is going to be updated. I feel mildly optimistic that we'll get some useful reports coming through. It will require a little bit of hard work and to have -- the one area which I would like to see more transparency on that we have not seen referenced is the contextual factors such as any pressures that there might be on the management to meet market expectations, which should perhaps in exceptional situations sharpen the auditor's pencil or the impact of executive incentives if they are target-related and how the auditor perhaps has assessed those.

But this is part of the journey, to give this rather long comment, but while it's fresh in my mind I wanted to share it.

MR. BAUMANN: It was a long but very worthwhile comment, so thanks for that real live input from a user of these reports in the United Kingdom. That's very valuable, Guy.

Tom Selling and then Barbara Roper?

MR. SELLING: Thank you, Marty. I thought this would be an appropriate moment to make some quick observations about three topics we're talking about today, because I think they're highly interrelated. The auditor reporting model is one, revenue recognition is another, and also the root causes of the audit issues reported by IFIAR. I want to make three points and I want be extremely brief.

The first point is that one of the root causes of the problematic audits we're all concerned about may indeed be a lack of transparency about what an auditor actually does and the ARM project may help with that. I for one would be extremely pleased if the audit reports on critical audit matters would be along the lines of the samples that you gave us, Marty, even if they devolved into the boilerplate that we're speaking about or that we're concerned with.

My point is that CAM reporting is perhaps more important from a control perspective, even as important, as Guy points out, the informational perspective is. The old phrase about sunlight being the best disinfectants, I think this takes this actually to an additional degree where we're actually asking the auditor to shine the spotlight on them as they do this. And the remarks that I've heard so far seem to indicate that when an auditor does this that has an additional effect on, number one, the pride they take in the audit, as well as the quality of the audit.

My second point is that audit quality is directly related to the number of tough judgments that managers have to make and auditors have to somehow certify as reasonable. That seems to be the clear message from the IFIAR report that we'll be discussing and I found that virtually all of the audit flaws were driven by the auditor's inability to reliably state that management's estimates of future events appear reasonable.

We're going to be talking about revenue recognition, and I think it's clear from the materials we received in advance that revenue recognition will be increasing the number of judgments that auditors will be required to make. It's not clear what the PCAOB can do about this acting alone, but the question needs to be asked, and in answering we're discovering that another root cause of the flaws is our standard-setting infrastructure.

Revenue recognition as a project took 12 years, but yet today -- only today, it seems, the PCAOB is going to be asking what challenges to auditing the new judgments that will be required will present to auditors? The FASB has recently stated in Concept Statement No. 8 that cost-benefit analysis is a pervasive constraint. And when we are asking now after 12 years how auditors should respond to that new standard, I wonder and I hope we'll consider whether we're putting the cart before the horse.

My third point is that the auditor's reporting model should provide information about choices of accounting policies when non-authoritative GAAP is the source. One of the things I noticed about the Rolls Royce report is that the opinion paragraph is qualitatively different than what we have. The report separately states that the financial statements are true and fair. And separate from that the report states that the financial statements are in accordance with IFRS as adopted by the

EU.

We use the term "fairly presented" in context with the standard. In addition to that, we recently have a new codification that has changed the status of the financial statement accounting concepts and it's not clear to me that people actually know what GAAP means. Just last week I was at a meeting of the Accounting and Assurance Standards Committee of my state's CPA Society and they asked me to put together a one-hour presentation on what exactly does GAAP mean? I thought that's pretty interesting coming from a group of CPAs.

And so I think I would like to encourage us to consider when we talk about the audit reporting model what GAAP means within the context of a particular audit. When non-authoritative GAAP was relied on significantly, I think that that's part of the judgments that ought to be disclosed within the auditor's report. One of the reasons I bring that up now is because the Rolls Royce report doesn't have quite the same problem because the status of the conceptual framework within IFRS is different than it is under U.S. GAAP. Thank you.

MR. BAUMANN: Thanks, Tom. Thanks for all those comments.

We have a number of cards up. This session was scheduled to end at 2:45, then we begin discussion of audit quality indicators -- I'm sorry, audit quality initiatives. So we're going to continue for a few more minutes to try to answer -- get a few more cards up on this issue. And I have one or two more comments to make on the agenda, so we're going to try to do this in about 5 to 10 minutes, all of this, and then we're going to move on. That's going to shorten the break to about a -- maybe just grab a beverage or something as you head out to your break-out sessions. So we're taking time away from our break here, but I think the discussion is lively and worth it.

So, Barbara Roper?

MS. ROPER: So I'll be very quick. Add my voice to those who think this is very responsive to what investors have been saying for years they want to see in the audit report. I don't know that you have to be this prescriptive in how you would adopt the standard, but I found particularly useful the approach that says this is the risk, this was our response, these are our findings.

So in some ways I would hope that the standard would ensure that all of those points would be addressed in this kind of reporting. I think that in part drives the kind of specificity that makes this useful.

The risk was always that if you did this, went this route, that it would devolve into something that was so general or boilerplate as to be meaningless. I find these to be really -- I thought the samples that the Board prepared for an earlier SAG meeting were encouraging. I found these to be really very high quality useful for investors.

MR. BAUMANN: Thanks. We did, too.

Steve Buller and then Rick Murray.

MR. BULLER: Thanks, Marty. Just a couple brief comments as I also found the reports very useful and I'd encourage you to include additional examples as you find them, even between now and the next SAG meeting just because they're of great interest.

I actually found the Rolls Royce report fairly useful. The Barclays report seemed to have a lot of boilerplate and it looked a lot to me like a significant risk factors disclosure in MD&A. So if you look at some of the topics, provision for uncertain tax positions, IC systems and controls, risk of fraud and revenue, risk advancement, override of controller controls, litigation of regulatory claims, they read boilerplate. I'd be curious if when people did their examination of individual firms if those same paragraphs were recurring in reports issued by the same firm.

MR. BAUMANN: Yes, there's definitely variation in the reports, and that's -- we did put two reports in here that were I thought both interesting, but different characteristics as well in terms of the depth of one and focused more just on the significant risks in the other. But I agree with your observation.

I think we have on this subject three more cards and then we just -- you pointed to four more cards. Rick Murray, Doug Maine, Brandon Rees and Rachel Polson, and then we need to get on.

MR. MURRAY: Thank you, Marty, and just very briefly, just a quick observation. It's clear that there is considerable encouragement in the British experience with first-year exercise that needs to be pursued and understood. At the April event and subsequently we've also had a number of comments, both from the U.S. and the U.K. to be cautious about the enabling value in the U.K. of an integrated regulatory regime and a benign legal culture. I don't suggest that those would necessarily change the outcomes in the U.S., but we hadn't heard any comments about it in this discussion and they were the two most significant additional comments that came forward from April that hadn't made it to the floor and I just wanted to note that they should be considered going forward.

MR. BAUMANN: Valuable point and certainly made at the April meeting with the different legal environments.

MR. MAINE: I am an audit committee chairman and I'm generally supportive of this. Guy's point though about conversations with seven audit committee chairmen resonated with me, and I'm curious to know whether you're considering the practical consequences of this for audit committees, particularly in light of Regulation FD and where it's taboo to have selected disclosures. Does this end up with audit committee conference calls with investors I have interested in accounting and auditing issues? If so, don't know. Want to point that out.

MR. BAUMANN: Yes, I think that those are important questions. What we think is that it gives investors and audit -- investors, not audit committees, because these are things that are not new to the audit committee, we hope -- investors an idea of what were the most significant judgments the auditor had to make as part of the audit. That could trigger, I think, as in the case that Guy pointed out, investors talking to management as part of an earnings call or whatever that might have been, is to tell us a little bit more about the auditor's challenge in this area. But certainly all legal ramifications are -- all consequences are to be considered on our end as part of this, so thanks for that.

Brandon?

MR. REES: Thank you, Marty. I wanted to pick up on a comment you made in the introduction regarding the value of CAM disclosure and audit reports for proxy voting by investors, and I think this also speaks to the goal of encouraging investor audit committee dialogue.

I want to encourage the Board to think about the parallel of executive compensation disclosure, which of course we as investors get in great detail, and the adoption of say on pay advisory votes and the success of that process post Dodd-Frank in encouraging both improvements to the executive compensation process here in the United States as well as dialogues and responsiveness by compensation committees to investor concerns and contrast that with the lack of attention paid to audit firm ratification votes here in the United States.

Before this meeting I pulled the vote results from this year's proxy season for the Russell 3000, and the average vote, average ratification vote was at 99 percent, which was a largely meaningless -- in my mind, largely meaningless vote because investors have nothing to vote on. We have no information besides the level of fees and the ratio of audit to non-audit related fees to guide us on. And that's why I'm genuinely excited about the inclusion of CAMs in the audit report.

And I also want to encourage the Board to consider as a long-term goal the inclusion of audit quality indicators in the audit report or some other form of disclosure as being beneficial to that process, to use the audit vote as a mechanism to encourage both dialogue as well as accountability for effective audits.

MR. BAUMANN: I think that's very valuable input, but having said that, when I was an audit partner I took great excitement and pride in that 99 percent.

(Laughter.)

MR. BAUMANN: So now you've shattered me here. I thought it meant something about my work. Oh, well.

MR. REES: If I could just briefly respond to that. For the 50 companies that lost their say on pay vote, the sky did not fall, and in fact many of those companies have responded by improving their executive compensation process. And they are just advisory.

MR. BAUMANN: Last word on this topic, Rachel Polson.

MS. POLSON: One is a comment and one is a question. One relates to the proposed other information standard is definitely would appreciate from the auditor's perspective clarification on the steps related to evaluate what you specifically want us to do, because I can see auditors taking the approach of spending time actually doing a lot of additional audit procedures and there would be a lot of excess cost for the companies related to that.

And then the other one is more of a question. You know, we talked about the audit deficiencies reports that are out there that are being issued by the inspection reports, and is the thought that if these critical risk matters are included in the report, that that will have the auditor's reflect more closely on where the audit risks are to make sure that they do have the appropriate findings and the responses documented so that they aren't missing that information. Is that one of the outcomes you're hoping with this?

MR. BAUMANN: Yes, I think that's another benefit of the enhanced auditor reporting is by the auditor pointing out the most significant risks. I do think the auditor naturally will pay more attention to those matters, I believe, as part of their audit work. And maybe management will pay more attention to their related disclosures in those areas as well. So I think there's potential positive intended consequences that come out of enhanced auditor reporting.

**NOTICE:** This is an unofficial transcript of the portion of the Public Company Accounting Oversight Board's Standing Advisory Group meeting on June 25, 2014 that relates to the Board's Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments. The other topics discussed during the June 25, 2014 meeting are not included in this transcript excerpt.

MEETING

+ + + + +

WEDNESDAY
JUNE 25, 2014

+ + + + +

(...)

MR. TWEEDIE: I haven't read any IASB Board papers since the day I left office, and I certainly haven't read any FASB papers. I really want to keep the will to live at the moment.

(Laughter.)

The fact that I am ignorant of the fact doesn't stop me, like any good auditor, from giving an opinion.

Basically, what I think the problem really is, it is not so much accounting standards. IAS 1 is a very old one. It is probably the first one. Well, it must be, No. 1, the first one the IASC ever issued. And it exists since 1973. So, you know, I wouldn't put too much weight on that particular standard.

I think the real problem, though, was in the crisis it was so difficult for a going concern qualification; it killed the entity. And so, they didn't go on. And yet, you got terrific criticism about these companies that received the top funding, the ones that went bust, and no going concern qualification.

I am not sure that this is going to solve that problem for you. And when you look at the UK's situation, and the one that the bank that blew up first, Northern Rock, it had no going concern qualification.

And if you looked about Note 40-something, you could see the business model, which was to borrow from the wholesale markets at three months' notice and lend out for 25 years. And 75 percent of Northern Rock's liabilities were due within three months. And so, the minute the wholesale markets froze, Northern Rock was dead.

And, you know, there was a classic case. What had they based the going concern assumption on? And the going concern was based on the wholesale market staying open.

And I rather think you want to move more towards, what is it that makes us think this is okay, rather than sort of say, is there a doubt? Because there wasn't with Northern Rock until the crisis hit, and then, it came within two or three months. Bang. Gone.

So, I am not sure you are attacking it in the right way, to be honest. I think you are going to have to look at, give people details of why is this a going concern in your opinion.

People didn't criticize the auditor in Northern Rock. Well, they did, but once it was pointed out to them. Note 40-odd, it was there.

But your new auditing reporting is suggesting -- at least a lot of investors want it -- could you draw attention to significant items in the notes and things like that? And I think this is a classic. And this one actually could save the auditors from a lot of hassle.

MR. BAUMANN: You know, that's a great point, and I appreciate your making it.

We have had a lot of discussion about that because in terms of critical audit matters and the new auditor reporting, a critical audit matter could be whether or not this company has the ability to continue as a going concern. And the auditor would describe that risk and, then, their response to that potentially under our new auditor reporting.

That has been raised oftentimes as the key issue of concern by preparers and others of, well, management determined they didn't have to report that they don't have the ability to continue as a going concern, but, yet, the auditors are reporting something to investors which is now being called original information often, that the auditor is describing their thought process as to, you know, whether they were or whether they were not in a situation of having substantial doubt about a going concern.

So, I share your point very much, and it has been one of the issues we have been debating on critical audit matters, and getting a lot of pushback that, well, yes, but you can't raise an issue that wouldn't otherwise be required to be disclosed under the accounting framework.

Now we haven't concluded that is the case. There's no law that says that. I am just saying a lot of pushback from commenters about us requiring auditors to report on critical audit matters that would be information that wasn't otherwise required to be disclosed in the financial statements.

So, excellent point and one that we are debating a lot in this issue about enhanced auditor reporting.

(...)

MR. CROTEAU: Yes, thanks very much.

A few things, and I appreciate the comments Bob is making. I think in the first instance certainly we have been staying coordinated with the FASB as they proceed. I think there is a threshold question to be asked as to whether the definition of substantial doubt in the FASB standard would satisfy the obligation in securities law. So, I think that is an important threshold question.

I guess I would just say, from my own perspective, it is fair to say from a staff perspective that if we thought it didn't, we certainly would have informed the FASB of that. Now that doesn't mean that is all investors are looking for. If investors are looking for something more, including earlier warnings, that doesn't mean that that necessarily satisfies it.

But, from the perspective of whether the definition the FASB is looking to proceed with satisfies at least the requirements of the securities law, again, I think at least speaking for myself, we would have raised our hands and said, "Hey, I don't think it does," if we didn't think it did.

I do want to mention -- and, Marty, you raised the concern that some have raised relative to original information, and I think that is part of what some have raised relative to putting the auditor in the role perhaps of reporting at a different threshold. But I think it is beyond that in this case.

I think in some situations some are concerned that it may undermine accounting criteria, if you will. So, it is not just a question of whether it is original information. But if the accounting standards define a threshold, having the auditor report at a different threshold for the same definitional term some view might undermine the accounting criteria. And so, I think it was more than just whether or not it is original information.

So, I think there are multiple things to be thought about here. The threshold question is a fair one to be asked, and, then, whether there is additional information investors need or should have.

The last point I will just make is liquidity disclosures, risk factor disclosures. There are other places in a filing that one would expect disclosures that are relevant to investors in this space as well. And so, obviously, when we think of it, we need to think of it in the broader context than just this one aspect. So, I think it is important to recall that, too.

PUBLIC COMPANY ACCOUNTING OVERSIGHT BOARD

+ + + + +

INVESTOR ADVISORY GROUP

+ + + + +

MEETING

+ + + + +

MONDAY, OCTOBER 20, 2014

+ + + + +

The Advisory Group met in the Hamilton Ballroom of the Hamilton Crowne Plaza Hotel, 1001 Fourteenth Street, Northwest, Washington, D.C. at 9:00 a.m., Steve Harris, Chairman, presiding.

PRESENT

STEVE HARRIS, PCAOB staff, Chairman
BRANDON BECKER, TIAA-CREF
ROBERT T. BUETTNER, Newbrook Capital Advisors
MERCER E. BULLARD, University of Mississippi, Plancorp, LLC, and Fund Democracy, Inc.
CURTIS L. BUSER, The Carlyle Group
T. GRANT CALLERY, formerly of FINRA
JOSEPH V. CARCELLO, University of Tennessee
NORMAN J. HARRISON, FTI Consulting, Inc.
MICHAEL J. HEAD, Creighton University
PETER H. NACHTWEY, Legg Mason, Inc.
BARBARA L. ROPER, Consumer Federation of America
LAWRENCE M. SHOVER, Solutions Funds Group
DAMON A. SILVERS, AFL-CIO
TONY SONDHI, A.C. Sondhi & Associates, LLC
JUDGE STANLEY SPORKIN, U.S. District Court (Retired)
ROBERT M. TAROLA, Right Advisory, LLC
LYNN E. TURNER, LitiNomics
GARY G. WALSH, Luther King Capital Management
ANN L. YERGER, Council of Institutional Investors

ALSO PRESENT

JIM DOTY, PCAOB Director
BRIAN CROTEAU, Securities and Exchange Commission
MARTIN BAUMANN, PCAOB
LEWIS FERGUSON, PCAOB
JEANETTE FRANZEL, PCAOB
JAY HANSON, PCAOB
JAMES SCHNURR, Securities and Exchange Commission
MARY JO WHITE, Securities and Exchange Commission, Chair

MEMBER YERGER: Okay. Our first but final recommendation is urging an expanded audit report. I could almost repeat all the comments I made about the signature, this is not a new issue for the Board which is -- it's been considering the issue. It’s actually not a new issue for this committee, we have discussed it and I think supported it quite robustly. And it's not a new issue globally, as we've discussed, expanded reports are in place in other countries and as we've learned, I think the Rolls Royce example is a terrific one, actually it seems to be working in a really significant way.

So you know, the issue of the quality of the audit report really has been debated for decades and I think there is value from an investor standpoint in the current very blunt pass/fail model that's in the report. It's concise, it's clear, it's comparable. But I think it is clear today that the current auditor's report is just not satisfying the needs and interests of investors who really are the final and the ultimate customer of these products. As we surveyed the members of -- what was it -- of the investors two and a half, maybe, two years ago, three years ago, on this issue there was strong support for an enhanced audit report from the investor community. CFA Institute has similarly surveyed its members and found the same thing. So this is a space where I think investors' viewpoint is pretty consistent and clear, that they would like to know more from the auditors.

You know, we do believe there's going to be an enhancement of audit quality if the auditor's report would be expanded, but I think there are also some other real benefits for investors from an expanded report. First of all, I view auditors as independent experts who have knowledge about the company that, you know, most of us investors can't get at. I think there would be real value in gaining from some of their knowledge and expertise and it would help investors analyze and price risks and make investment decisions.

I think an expanded report would really heighten the perceived value of the audit firm work, something that Lynn discussed earlier, and I think it might give firms some leverage to effect change and enhance management's disclosures and practices. And I finally think that this expanded reporting would enhance the transparency and promote real confidence in audited financials.

In terms of cost, Steve, you brought this up earlier, I think a lot of the things that we would like to see in that expanded report, sort of what was in the

Rolls Royce report, is probably already being communicated to the audit committees, so I don't know that I see this as a really expensive undertaking in terms of disclosing to the public.

And I also note, I know that there's a lot of debate about who should this expanded information be coming from? Should it come from the audit committee? Should it come from the outside auditor? And my view is there's real value in getting the insights from the outside auditor, the independent expert that's been retained by the firm. I believe there could be better disclosures from the audit committee but I don't think that the audit committee should solely be responsible for this.

MEMBER SILVERS: First, my thanks to my colleagues for picking up after me. I was at lunch with my wife and didn't realize that I was up next. So now I've gathered my thoughts, I have a couple of things to say about this.

The first is to repeat what I guess has been -- actually what someone said earlier which is, in relation to the question of the expanded audit report, it only -- just to put a further gloss on the recommendations that are here, it only makes -- it's only going to work, I think, if there's a requirement to disclose something. Meaning that if basically the expanded audit report is a mandate to tell us, tell the public, tell investors if something is wrong. The audit firm will, of course, say nothing is wrong.

Now that requirement, that further requirement may give the audit firm some leverage in private negotiations with the issuer but it's not going to result in any new information. What will result in new information is the requirement to disclose, you know, for example, the most -- you know, every audit has matters that come up that are of concern to the auditor that are generally resolved in some fashion that's mutually acceptable. The requirement to disclose the most salient such matter, there's always one, right? And the notion that you can't say nothing seems to me to be something that would actually add value of the kind that the examples in our report outline.

MEMER CARCELLO:

And then in terms of the audit report based on some of the work that Ann and Norman and Gus Sauder, who used to be a member of this group, did a few years ago, basically what we heard from users is, although they found the audit useful, they didn't even look at the report because it had no information content. And there are other things we could come up with but at a minimum I think those three are indicative of the fact that there are issues with both audits and the communication of the audit results, that these recommendations are designed to try to be responsive to.

CHAIRMAN DOTY:

If you start thinking of what we do in terms of the disclosures that we can now implement to enhance confidence that the public is getting the facts about the audit, and certainly they are, the audit reporting model is the biggest project going in that regard, the practices in the firm that we can lobby for successfully in talking to the firms. And then the final ultima ratio of where we can say we think this responsibility comes to rest outside, those are three fairly important sticks that we have to wield. They are three fairly important devices we have for improving audit quality.

MEMBER CARCELLO:

If you look at comment letters on the expansion of the audit report, most, if not all of the institutional investors that have commented support that.

Audit committees seem to be almost unanimous in their opposition. So these are groups that are supposed to represent the interests of investors and on major policy issues are taking policy positions opposite that espoused by investors.

MR. BAUMANN:

So we've issued a proposal for the auditor to disclose critical audit matters in the audit report and also to describe what the auditor's responsibility was with respect to other information accompanying the financial statements. Some of the non-audited -- some of the non-GAAP measures and others which could be reported in the other information where the auditor has to read and consider that. But we were heightening some of the requirements there.

We also held public hearings on the expanded auditor report in April of 2014. So our plan now is to issue a reproposal on expanded auditor reporting requirements, taking into account the comments we received during the comment period as well as at the public meeting and to issue that reproposal probably in the first quarter of 2015. We are staying obviously very close to all of those global developments and have had many conversations with the IAASB and European Commission and others.

Just in terms of timing, somebody mentioned falling behind, hopefully we won't fall too far behind here. the IAASB expects to approve a standard on expanded auditor reporting at their December meeting. And that they expect to be effective for year's ending on or after December 15th, 2016 such that expanded auditor reporting would take place in 2017. So if we can get our reproposal out in the first quarter as I suggested, and hopefully move that along, maybe we can get on track.

By the way, that IAASB report that they expect to approve in December, the IAASB report, does include a requirement to disclose the name of the engagement partner in the audit report so that will be a requirement basically around the world for all those countries over 100 jurisdictions that follow international auditing standards. So again, please weigh in on that reproposal on expanded auditor reporting that we'll issue in the first quarter of 2015.

MEMBER NACHTWEY:

And then on this expanded audit report, that we get it right and that it's useful information and not just a lot of boilerplate at the end of the day, if we're going to have companies and the investors in those companies paying for that extra work.

MEMBER HARRISON:

I'll be brief because first of all some of the observations I would have offered have been covered already. I don't want to be repetitive. I'll end on the note or theme I mentioned in one of my comments earlier, and that is that I would strongly urge the Board, in everything you do, but in particular in the rulemaking in which you engage that pertains to the audit report and some of the other disclosure-oriented issues that we've mentioned today, to bear in mind that one of the things that the audit profession and audit firms can do where I think there is tremendous room for improvement is to be an additional source of valuable information that informs the investment process, as we discussed earlier.

**NOTICE:** This is an unofficial transcript of the portion of the Public Company Accounting Oversight Board's Standing Advisory Group meeting on May 18, 2016 that relates to the reproposal, *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards*. The other topics discussed during the May 18-19, 2016 meeting are not included in this transcript excerpt.

PCAOB STAFF

BRIAN DEGANO, Associate Chief Auditor
JENNIFER RAND, Deputy Chief Auditor
JESSICA WATTS, Associate Chief Auditor

MS. RAND: Good morning, everyone. This next session we'll be talking about the Auditor's Reporting Model. Specifically, the PCAOB issued a week ago today a reproposal on the Auditor's Report intended to make the Auditor's Report more relevant and informative to users.

This reproposal is hot off the presses. And today, even though we recognize it was only issued a week ago, when we're looking for comments August 15th. But even still, the Standing Advisory Group is a very important group to us and very interested in any initial reactions, comments you may have and happy to answer any questions, too.

Jessica Watts and I are going to spend a few minutes just to provide some background and overview, a little bit about the reproposal. But really we're interested in hearing from you and answering any questions you may have or providing any observations on the changes that have been made and if you think those changes are good which we're hoping we'll hear that. But again, it's up to you.

This project just for some brief background has been several years in the making. We started this back in 2010 and really some of the discussions with the

Standing Advisory Group were really informative to us and the direction of the project and looking to make some substantive changes to make the Auditor's Report more relevant and informative to users.

After we conducted a lot of outreach with the SAG, with investors, auditors, preparers and many others, the PCAOB issued a concept release, held a roundtable. Then in 2013, we issued a proposal. In 2014, had a public meeting.

There has been much academic research coming out which we've considered. Much of that is reflected in the reproposal the Board issued. And also we've been seeing changes that have been happening globally. So talking about an expanded Auditor's Report has become a reality around the world. It hasn't happened here in the United States, but we've seen changes go into effect and have been able to study how those changes have been. Have the investors found the changes helpful? What's been the effect of the audit? And so far, what we've been seeing is a lot of positive results.

As far as the proposal, as I said, the objective has been to make the report more relevant and informative to users. The audit of course involves a significant effort and auditors spend a significant amount of time in order to issue an opinion on the company's financial statements.

The report as it exists today in the United States is a pass/fail opinion. So all this work results in a pass/fail opinion which is very important. It's whether the company's financial statements are fairly presented or not.

But nonetheless investors have asked for more information from the auditor. They view the auditor as an independent third party and are interested in hearing what are really the issues that keep the auditor awake at night.

So that's what our reproposal has intended to do. What it does is it would require the auditor to communicate in the Auditor's Report critical audit matters arising from the audit that required especially challenging, subjective or complex auditor judgment and also how the auditor responded to those matters.

We believe that critical audit matters are likely to be identified in areas that investors have indicated would be of particular interest to them such as significant management estimates and judgments made in preparing the financial statements, areas of high financial statement and audit risk, unusual transactions and other significant changes in the financial statements.

The reproposed standard also includes additional improvements that are primarily intended to clarify the auditor's role and responsibilities related to the audit and to make the report easier to read.

Before I turn it over to Jessica, I'd just like to spend a couple of minutes on initiatives by the regulators and standard-setters. The IAASB, the European Union and the Financial Reporting Council in the UK have all adopted requirements for expanded auditor reporting that go beyond the pass/fail opinion. While their underlying requirements differ in the details, there is a common theme in these initiatives: communicating information about audit specific matters in the auditor's report.

We of course recognize that the regulatory market, environments and other jurisdictions are different from the United States. But even so, we carefully considered the efforts undertaken in these different jurisdictions and we think our reproposal is analogous in many respects to the requirements recently established in other jurisdictions.

We've also been monitoring quite carefully the experience in the UK. At our 2014 public meeting, we had several representatives from the UK talking about their experience. How are things going? Are investors finding this valuable? How are auditors adapting to these new requirements? Have they been able to issue their reports timely?

The FRC, that's the analogous to the PCAOB in the UK, the financial reporting. They're the audit regulator in the UK. They have published a couple of reports regarding implementation after year one and most recently year two. And they have noted that investors greatly value the information provided in expanded auditor reporting, and overall we find the experience in the UK -- and there are a couple of SAG members from the UK that may want to talk about their experience as well -- but we're finding their experience quite encouraging and we're hopeful that the changes to the report, if adopted by the PCAOB, would be well received here.

With that as an overview, I'll turn it over to Jessica just to walk through the requirements. And again we're happy and really interested in hearing your comments today. Thank you.

MS. WATTS: Thanks, Jennifer. Good morning. So as Jen has said, we are most interested in hearing from you. So I'm going to only spend a few minutes on the key aspects of the reproposal and some differences from the proposal.

As Marty did earlier, please feel free to ask questions throughout. Just put your tent card up and we will stop and call on you.

As Marty mentioned and Jen, last Wednesday the Board issued the reproposal for public comment and our comment period ends on August 15th.

I plan to describe a few key aspects of the reproposal including the requirements related to critical audit matters and key changes to these requirements from the 2013 proposal and briefly describe some additional improvements to the Auditor's Report including clarifications of the existing audit responsibilities, disclosure of the auditor tenure and some standardization of the Auditor's Report.

Most significantly, the reproposed standard would require communication of the Auditor's Report of any critical audit matters arising from the audit of the current period's financial statements. While the concept of critical audit matters has been carried forward from the 2013 proposal, the definition has been modified in a number of respects.

Under the reproposal, critical audit matters would be defined as any matter that was communicated or required to be communicated to the audit committee and that relates to accounts or disclosures that are material to the financial statements and involved especially challenging, subjective or complex auditor judgment.

The source of critical audit matters has been narrowed to matters communicated or required to be communicated to the audit committee from the matters in the 2013 proposal which were documented in the engagement completion document, reviewed by the engagement quality reviewer or communicated via the audit committee.

The reproposed standard also adds a materiality component to the definition of a critical audit matter because some commenters were concerned that the auditor otherwise may be required to communicate information that management is not required to disclose. By using relates to the critical audit matter which could be a element of an account or disclosure and does not necessarily need to be the entire account or disclosure, or could be a matter that has a pervasive effect on the financial statements.

The criteria by which to determine a matter as a critical audit matter was also narrowed from the 2013 proposal which used the criteria of involved the most difficult subjective or complex auditor judgment, posed the most difficulty to the auditor obtaining sufficient appropriate audit evidence or posed the most difficulty to the auditor in forming an opinion on the financial statements.

It was narrowed to those matters that involved especially challenging, subjective or complex auditor judgment. This change reflects some commenters' concerns that the original definition could lead to the reporting of unimportant matters or to misinterpretation by financial statement users that the auditor is uncomfortable with the related accounting or disclosures.

Under the reproposed standard, once the auditor identifies a matter communicated or required to be communicated to the audit committee that relates to accounts and disclosures that are material, the auditor would then take into account a series of nonexclusive lists of factors when determining whether a matter involved especially challenging, subjective or complex auditor judgments.

The list of factors in reproposal is similar to those in the proposal, but has been modified. The reproposed standard includes six factors to assist the auditor in determining critical audit matters. Determination should be made in the context of the particular audit with the aim of providing audit specific information rather than a discussion of generic risks. The reproposed factors provide a principles-based framework for the auditor to use in assessing whether a matter involved especially challenging, subjective or complex auditor judgment.

Depending on the matter, the auditor's determination that a matter is a critical audit matter might be based on only one factor, a combination of factors or other factors specific to the audit that were not in the list that we have provided.

The communication of a critical matter in an auditor's report would include identifying the critical audit matter, describing the principal considerations that led the auditor to determine that the matter is a critical audit matter, describing how it was addressed in the audit and referring to the relevant financial statement accounts and disclosures.

These are similar to the communication requirements of the proposal. However, in response to commenters' suggestions, the new requirement for the auditor to describe how the critical audit matter was addressed in the audit was added.

To meet this requirement, the auditor may describe the auditor's response or approach that was most relevant to the matter, a brief overview of procedures performed, an indication of the outcome of the auditor's procedures or key observations with respect to the matter. Many commenters also stated that the communication of critical audit matters in areas where the company had no current reporting obligation would result in the auditor being the source of original information. That is, disclosing confidential information about the company or effectively imposing a lower disclosure threshold than current management reporting requirements.

The reproposal includes a note that indicates that, when describing critical audit matters in the auditor's report, the auditors are not expected to provide information about the company that the company has not made publicly available unless such information is necessary to describe the principal considerations that led the auditor to determine the matter as a critical audit matter or describe how the matter was addressed in the audit. Additionally, if the auditor determines there are no critical audit matters, the auditor would also state that in the Auditor's Report.

Under the reproposal, auditors would be required to document whether matters that were communicated or required to be communicated to the audit committee and that related to accounts and disclosures that are material to the financial statements were critical audit matters. This documentation requirement has been narrowed from the 2013 proposal which would have required documentation for matters that appeared to meet the definition of a critical audit matter but were not reported.

Several commenters expressed concern that the documentation requirement for nonreported matters was broad and not aligned with current audit documentation requirements. The amount of documentation required would vary with the circumstances and the auditor could comply with the documentation in a variety of ways.

Under the 2013 proposal, the standard would have applied to all audits conducted under PCAOB standards. However, the reproposal contemplates that the communication of critical audit matters would not be required for audits of brokers and dealers, benefit plans or investment companies other than business development companies.

Overall, the Board considered that the communication of critical audit matters for these types of entities may not provide meaningful information in the same way as that for other issuers. However, auditors of these entities would not be precluded from including critical audit matters in the auditor's report voluntarily.

The next slide provides an overview of the key changes to critical audit matters. However, I've already gone through these throughout the other slides. So I'm not going to spend any time here.

The reproposed standard also includes additional improvements to the auditor's report such as clarifications of the existing auditor responsibilities which would enhance certain standardized language in the auditor's report. As Marty mentioned this morning, we would be adding "whether due to error or fraud" in the auditor's report that has not been there previously, although the auditor has had that responsibility.

Also another one would be tenure. We're going to add an element that would describe how long the auditor has had a relationship with the company and then a statement that the auditor is required to be independent. There is a standardized form of the auditor's report which would require the opinion be the first section of the auditor's report and then requires section titles to guide the reader throughout the auditor's report.

With that I would like to open the floor for discussion. And we are very interested in your thoughts on our new reproposal.

MS. RAND: Again, anything regarding -- you're first.

MS. MURRALL: Thank you very much. And also thank you very much for re-exposing this and pursuing the extended form audit report. It's something we've had in the UK for we're now in our third reporting cycle. And investors have been very appreciative of the moves that have been made.

I'd also thank you very much for the briefing on Friday. I think that was very helpful in advance of the meeting.

As regards the points I'd like to make about what is proposed, I suppose it comes down to the definition of critical audit matters. One of the key criteria for considering whether or not something is critical is that it's material to the financial statements.

However, the PCAOB has refrained from going that one step further and requiring the auditors to disclose that materiality. That is something that is required in the UK and it is something that we have very much welcomed. It allows us to set a sort of benchmark as to what is disclosed.

We also have a concern that the FASB I think has issued a release and it's actually putting materiality in more of a legislative and judicial context and taking away the issuer's judgment as to what users would find necessarily of value.

I also have a concern that the critical audit matters are defined in terms of context of matters that are reported to the audit committee. That, combined with materiality, we feel there is a risk that it could result in a slew of disclosures which really serve to obscure what is going on. We could be swamped by a laundry list.

What I think is very important in this is that auditors display their own judgment and that they've exercised professional skepticism and possibly addressed management's natural bias to present more favorable results.

The FRC-adopted proposals are very much a risk-based approach. We very much welcome this, the risk of material and misstatement and how the auditor addressed them. And we also particularly welcome the fact that a number of firms voluntarily -- they weren't required to do so -- went that one step further and actually described what they'd found as a result of those audit procedures.

I very much welcome what you're doing. But I just have some reservations as to how that may play out in future. Thank you.

MS. RAND: Liz, I'd just like to ask you a follow-up question. You first talked about -- I thought I heard you say two things regarding materiality. And I don't know if it was two things or one.

I know in the UK, the UK audit reports have an additional element that the PCAOB reproposal does not. So that is disclosure of the auditor's materiality.

We do talk about -- we didn't have -- I think we had one comment letter that came in on that point from our proposal. So the reproposal acknowledges that. But we don't have -- we didn't receive interest from that in the U.S. from the 2013 reproposal, the comments that came in.

I thought I heard you say an interest in a similar disclosure in the UK, or were you talking more about just the definition of the critical audit matter component? Or kind of both or -- I just wanted to clarify that point.

MS. MURRALL: In terms of determining what is a critical audit matter I think I had two concerns, A) the dependence on materiality and the fact that that is not disclosed, and B) the fact that the matter is reported to the audit committee and whether or not that could ultimately result in a laundry list and that it's not actually asking the auditor to stand back and say what in their judgment were critical audit matters and where they saw the risk of material misstatement. Does that clarify it?

MS. RAND: Yes, it does. Thank you.

MS. MURRALL: Okay.

MR. BAUMANN: I was wondering, to just maybe follow up. Could you expand a little bit because as Jennifer said we didn't get a lot of comment on the disclosure of what the auditor said as the materiality threshold and doing the audit? We didn't get a lot of comment here in the U.S. that that would be valuable input to the audit reporting model here.

You said you're finding that useful. Could you expand further in terms of that? It would be helpful to hear on the record how you find that to be useful and how you're using it.

MS. MURRALL: In the UK what we're finding is auditors are disclosing first of all how they determine materiality, whether it's percentage of turnover, pretax profit, etc., whether or not they made any adjustments to those figures when they actually determine materiality and also how materiality probably quite importantly had changed if it had changed from the prior year. This really gives investors a view on how detailed, how the auditor dived into those figures in the company, the extent of their testing, et cetera.

I think we found it exceedingly helpful particularly because we are now going into a phase in the UK where we're getting more tendering and rotation of audits to see if we can see whether that materiality changes as a consequence of that, because we think it's giving us a real indication as to the quality of the audit work that's undertaken.

MR. BAUMANN: Thanks. That's helpful and I'll be interested to see if your experience with that and the usefulness you find of that information spurs further comments from others here on our proposal about that. So thank you.

MS. WATTS: Arnold.

MR. SCHILDER: Thanks. I think I can speak for the other ways being not just for myself that we're really pleased with what you have achieved here. Delighted to see the outcome. We're very pleased with the dialogues that you could have.

I recall from the first proposal and the public comments that many noted that there was a lot of similarity between the CAMs with a C and the KAMs with a K. I think what we see now is that it has been much more close even. And I think that's in the very best interest of the users of financial statements and auditor's reports.

So we congratulate you with these efforts, Board and staff. And we thank you for the dialogue.

What we also intend to do to serve the public understanding is that, maybe on Monday, we issue a brief press release with some comments about, let's say, how close it is to what we have with the key audit matters in particular and to complement what you have done and to serve the many users.

Early this morning, Ken Goldman is not here, but he made an interesting point about auditors being proud of what they have been doing. And I thought that was exactly what we have been seeing now with the countries where there is already experience with this new-style auditor's report.

Whether it will be Jimmy Daboo in the UK or Zuleka Jaspera in South Africa that we heard last week in Paris in a panel that you attended as well or Winston Ngan in Singapore or Ron Clark in Australia, all of them express how proud they have been on their profession and what they have been able to do and how they can share it with the audience outside. These are the most complex methods, significance, judgmental, et cetera. And I think that's in the very best public interest.

We have agreed that the IAASB will a post-implementation review of these new auditing reporting standards in a couple of years' time, '18 or '19 or so. That certainly will include the topic of materiality. We have discussed it of course at length in the IAASB. We did not want to require disclosure of materiality because we didn't want to distract from the focus on relevance for users. So key audit matters or critical audit matters have to be the most relevant communications to outside users.

But what we've seen in the UK but also in my home country, the Netherlands, with materiality is quite interesting. So that's certainly something for follow-up.

And I had a brief chat with Maureen on speaking last week at an academic conference. I pointed to the research. I said, this is now a great opportunity for research, cross-border, global of what's happening and how it's going, how you can compare the reports, et cetera.

I'm particularly pleased to see how you have linked it now with the communication of the audit committee. I think that's fully in line with appropriate corporate governance. And it's a good starting point. And then also how you have linked that again with your documentation requirements. I think that is very helpful and responsive to concerns earlier expressed.

Finally, I would say what is most important and that's why it's good that Liz started is that, in particular users will get a lot of feedback on these new-style audit reports, what we have seen in the UK with the investors awards issued by your organization. I think it's very helpful. Now in a way the auditor is back in the public forum. So everybody can engage on this and that's just to encourage everybody to participate in that. So thank you very much.

MR. BAUMANN: Thanks for those comments, Arnold. And I think it goes back to a comment also, Liz, you made about the fact that we did tie our requirements to critical audit matters based upon or derived from matters that are communicated or required to be communicated to the audit committee. And I thought I heard you make a comment about that as well. If I'm wrong. I think you did.

We feel that's the right source. Certainly in the United States we feel that's the right source. And the PCAOB standards as our standard for audit committee communications is quite robust in terms of what is required by auditors to be communicated to audit committees.

So we think that critical audit matters as we envision them would certainly be within the content of what audit committees are required to hear from auditors. And I didn't know if you were expressing a concern about that scope or not in your comment.

MS. MURRALL: I can't say whether or not because it is a detailed list that you have in the AS-1301, whether or not that could actually result in a shopping-list approach to things that are disclosed. The really important thing is the auditor's judgment, not their reporting lines internally to management. But it's the auditor's judgment on the matters that they think should be communicated to investors that's really important.

MR. BAUMANN: Okay. We think that's there, but we would think that those same judgments would apply first of all to their primary responsibility to report to the audit committee, those charged with governance, about those significant matters that they addressed in the audit. So hopefully there's that same population there. That's how we see that. But thanks for that comment.

MS. WATTS: Elizabeth Mooney.

MS. MOONEY: Thanks. I have five recommendations here. Strong supporters of this proposal. And the first is to get rid of the materiality threshold, just echoing Liz's comment. And we gave feedback on some of this over the years.

But in terms of the new materiality threshold and also to get rid of that and also to state, regardless of how subjective a matter is, that if an auditor feels that an issue is important to the audit and it's documented in the memo that it be communicated to the audit committee as well as investors.

And number three, disclose how materiality is assessed. Again, that just seems like that's a must with this project. We have given direct feedback to staff, like I said, over the years with my colleagues. And we have -- the CFA Institute's commented. The IAG found overwhelming investor support for that.

We have the experience in the UK it is useful for gauging audit quality for adjustments and restatements. So I don't see how that can't be part of this proposal.

Number four, disclose whether the audits limit the ability for the audit committee or investors to recover losses. So in the engagement contract there are now alternative dispute resolution clauses being put in there. And investors really need to know if that's the case. It does impair independence by limiting their liability.

And fifth, require disclosure when, in the audit report, when the audit partner was rotated off before the mandatory rotation.

In general, I think it's really important for this proposal to be examined from the standpoint of looking at some of the Valeants, the Lending Clubs, the Chinese frauds, Chesapeake Energy. I mean the list goes on and on of recent examples where investors saw nothing ahead and see what would this audit reporting model have communicated.

I mean this is a communication piece with investors by the auditors. And they're really the real client, the real end customer of the audit report. We are very interested in this communication.

And I think it really reflects poorly on the profession to fight this transparency. So I just urge you to bring some of this to light in a conversation earlier than when the whistleblowers or the hedge funds surface things. And it's a big problem and I think these recommendations will help get us there.

MR. BAUMANN: Elizabeth, those are all interesting comments which we'll certainly take into account and I assume you'll expand on those in a written comment letter.

MS. MOONEY: Thank you.

MS. WATTS: Rick Murray.

MR. MURRAY: First, my appreciation to the staff for the extraordinary amount of effort lying behind the preparation of the proposal and the quality of the materials for the Board meeting.

Question to help put this in the context of the regulatory objective here. Assume that the proposal were to be adopted as currently presented and we are next then in subsequent inspection cycles under these terms. If the inspectors, who would then have the advantage of subsequent event insight, were to determine that the best judgment had not been made with respect to what should have been identified as CAMs but there is no evidence available to the inspectors to suggest that this was a bad-faith judgment even if severely mistaken, would that be deemed for inspection purposes to be an audit deficiency?

MR. BAUMANN: Our inspectors do not try to second guess the judgments of the auditors. They look for reasoned judgments made by auditors at the time based on the facts that they had in any audit area and evaluate the audits in that regard and not based upon hindsight looking after the fact and what they've learned later and not second guessing those judgments.

You've raised a hypothetical situation and we don't have all the facts and circumstances. But just from a principles basis, we're looking for the auditors to communicate the requirements to the audit committee under existing auditing communications standard to the audit committee, and to derive from those as defined in the new ARM proposal those matters that meet the definition of critical audit matters and disclose those and document those which they don't think met and based upon what they know at the time. I don't think that second guessing is an aspect of that.

MR. MURRAY: Marty, the proposal itself describes this as a principles-based suggestion and it may be, although it is far more prescriptive and detailed than the comparable European-based initiatives that are laid alongside this. And it has in reading it so many layers of soft terminology and required judgments that lie behind it. I totally agree with and appreciate your reply that it's not the regulatory purpose to criticize good-faith judgments made in this process.

Given the amount of prescriptive sensation that one gets in reading this, would it be appropriate and helpful if there were to be a statement in the nature, not necessarily a safe harbor, but the intention that you just described, Marty, of we aren't here to criticize good-faith judgments however regrettable they may later be seen to be?

MR. BAUMANN: Thanks for that comment and we'll take that into consideration. But the point is we agree with your point, but it's based upon the auditor's meeting the requirements based upon the facts and circumstances at the time. And it is principles-based standards. But we'll certainly take your comment into consideration. Thanks.

MS. WATTS: Philip Johnson.

MR. JOHNSON: Thank you. As you know I'm a great advocate of this, and my involvement goes back five years when I was president of the Federation of European Accountants. I was right in the middle of the debate with the European Commission with regard to the green paper looking at the auditing profession.

And almost to the week five years ago I gave a lecture in London which I entitled The Accounting Profession: Reinvent or Face Extinction. And the reason for the title was partly to get people there to listen because if it had been the future of assurance, I'm sure people wouldn't have turned up or many people would have turned up.

But more importantly what it was about was because, during that debate in Europe, it was felt by many that the auditing profession was becoming irrelevant. And we'll have this debate later on over the next few days with regard to some of the items on the agenda.

And what I'm pleased to see what happened was that the FRC in the UK did take up the initiative put down by the European Commission, and then subsequently the European Commission have brought it into legislation.

So we've heard the UK has had it for three years. The EU, it is mandated from June 2016. The Netherlands have brought it in. So I do see this as a very positive move. And I congratulate the PCAOB because I think, through the exposure and the comments that have been made and taken onboard, there are really three key areas -- the IAASB Standard FRC which is slightly different including the inclusion of the materiality and the PCAOB have come much closer together.

And I think that is to be commended because we're talking here about the global economy and reporting globally. So the fewer differences, the better.

I think that what will happen in the future is that Arnold mentioned about the post implementation review. Like I said with regard to the audit signature, I don't think it finishes with having a standard. I think these things will evolve and I would hope that matters will get closer together.

So I think we're in a good place, a much better place than probably 12 months or two years ago. So I think we're in a good place.

I was in the profession and I chair audit committees. Looking from the audit committee perspective, it's been very, very interesting to see the difference in engagement of audit committee members, the engagement of audit team members, because now there seems to be a more common purpose.

Audit committees are definitely getting more engaged on what they have to report particularly in the UK, but also what the auditors are reporting. And it comes back to the pride in the work that was mentioned before that the audit team is taking more pride. It's not just a boilerplate report. Their work is being appreciated. So I think that is a great move forward. With regard to the laundry list and whether auditors will disclose too much or too little, et cetera, et cetera, materiality has to come into this. What is important to the investor? I shared a platform with Olivia Kirtley, as you all know, who is the IFAC president, but also is chair of a number of audit committees in the U.S. And we were talking in Paris last week about the relationship between audit committees and auditors and how the role can be enhanced, the auditor's role and the audit committee's role.

Her view was -- and I'm not speaking for her. This is a known statement by her that there is nothing that would be reported that she wouldn't have expected over the years to have been discussed with audit committees. So we're not in new territory. The only new territory really is an external rather than internal focus.

Therefore, there is limited additional documentation that people have to worry about and additional cost, et cetera. I don't see that. We've not seen that in the UK because all that work has already been done. So it's not a great issue.

I and we in the UK do have the advantage as I've said before of having one regulator for governance, for financial reporting and for auditing. That's a great help because the strategic report, the new viability statement that companies have to put out and the audit committee report are mandated by the FRC on the company.

So the story has already been told about the risks within the business. The auditor report is just part of that development of better communication.

So I think, five years ago, I talked about extinction with regard to the audit profession. I think it's turned 180 degrees. Now people see, particularly the investor community, much more relevance to the auditor and the audit process. So I think this is an enormous leap forward, and I commend the PCAOB for making these changes.

MR. BAUMANN: Phil, thanks for those many comments. And I agree with you that what's really great to see as Arnold pointed out naming people, partners, around the world who stated their pride in their work and the importance of their work and providing more useful information to investors that the profession, certainly in those markets where this is already being required, a profession embracing the fact that they're adding increased value to investors through this expanded reporting.

It's great to hear, great to see. And hopefully it will be equally embraced here in the United States. Thanks for all those good comments.

MS. WATTS: Jon Lukomnik.

MR. LUKOMNIK: I wanted to add to the chorus of investors who are thanking you. So consider the chorus filled out with one more voice to the staff and the PCAOB for progressing this.

I do want to however revisit what Liz and Elizabeth said about materiality and address what you said about only getting one comment before. The 2013 release relied, as Liz said, on the professional judgment and of the auditor, as Arnold said, on the relevance judgment, which is why they did not require materiality to be disclosed.

You have now made materiality a gating issue. Once you make it a gating issue, I think we deserve to know how wide the gate is. It seems that there's a linkage that you have put here that, without knowing what the materiality is, it's hard to judge.

I also think, as Elizabeth said -- well, the other change since 2013 is we do have the UK experience. And taking away from the fact that it is a gating issue for the CAMs and therefore I do think there's an -- why would I comment on something that wasn't relevant to the proposal previously? It's now very relevant to what a CAM is. So it's not surprising that you wouldn't have gotten comments in 2013 about it.

However, I do think that the UK experience shows that there is value to disclosing the materiality standard irrespective of the linkage to CAMs. Indeed, I believe the very first investment bank report on the UK enhanced reporting by which I think was CitiCorp -- if it wasn't the first it was one of the first -- talked about how people were surprised by how large some of the materiality standards were. And it engendered a conversation in UK audit committees as to whether or not they had the right materiality standards.

I think that is very much an audit quality issue. So I see no reason not to have it disclosed. And indeed if you were going to make it a gating issue, I think this draft proposal increases the importance of having it disclosed.

MR. BAUMANN: So, Jon, thanks for the comments and we'll certainly take them into account. I do want to say there's a difference between the UK requirement for the auditor to disclose a number they have set for purposes of planning the audit for scoping and terming what is material in the planning of the audit and establishing their audit scope and doing work. That is different than, when looking at a set of financial statements and based on quantitative/qualitative assessments, determining whether matters in the financial statements are material.

There is a difference between those two. It's a subtle statement I'm making. And I think some heads are nodding yes and others maybe are looking at me questioningly.

But one is an auditor scoping decision about what is materiality threshold for trying to set tolerable misstatement and determining the scope of work they'll perform. The other is looking at looking at a set of financial statements and determining are the disclosures that are materially important there and made to the financial statements include all the necessary disclosures and then having critical audit matters pertain to matters in the financial statements that are material, i.e., material to accounts or disclosures.

So there are two different discussions almost taking place there. One is about a scope threshold and one is about linking this matter to items in the financial statements that are potentially qualitatively or quantitatively material.

Having said that, I understand the point that some of you are saying still, the disclosure of the auditor's assessment of scoping level of materiality is important in your understanding of the audit. And that's a critical additional factor you would like to see disclosed. But I do want to make the point that there is a distinction between what we're saying the auditor has to attest for a CAM versus this other point.

MR. LUKOMNIK: I accept that. Generally, the auditor's scoping materiality will be less than what is material in a financial statement. But it is a datapoint.

MR. BAUMANN: It's a datapoint. The materiality for the auditor is, set in the beginning of an audit, is a datapoint. I understand that and I understood the comment made earlier from Liz that that's an important datapoint to see how the audit is viewing that audit when they set their scope and do their plan. What are they setting as the quantitative thresholds for materiality, for scoping.

That doesn't take into account, of course -- it leaves out a big thing, though, what are many qualitative assessments and factors, and that can't really be disclosed by the auditor in that statement that's it's 2.5 percent of net income or something like that.

MR. LUKOMNIK: The fact that you find out that the CFO can't use a calculator cannot be put down. It's fact-specific, I grant you. But I think that to argue that because you can't list all the qualitative factors you shouldn't disclose the quantitative ones really is making best the enemy of better at least from my point of view.

MR. BAUMANN: Yes. I didn't mean to argue the point. We've heard a couple of people say that they'd like to see materiality threshold that the auditor sets disclosed. That's a comment you have and a number of you have made that. So thanks for that.

Brian wanted to comment on this. If I could just go to Brian.

MR. CROTEAU: Thanks. Actually, Marty, thanks for the clarification. I was actually going to make some similar remarks and just thought it would be helpful to reinforce that I think it would be beneficial in the feedback to know what materiality one is looking for for the disclosure. Is it the same materiality management the auditor looks to? And this isn't financial statement materiality which by the way is a legal framework today, looking to the Supreme Court. And nothing with FASB would do for public companies by the way, if they were to do anything, would change that. That's set by the Commission; that's longstanding relative to what the Commission looks to in thinking about materiality.

And then the audit concepts that Marty is describing relative to materiality and planning materiality are a different concept for planning and performing the audit. It would be helpful to understand any comments to the PCAOB I think what the exact recommendation would be and how it might relate to those concepts.

MR. BAUMANN: Sandy Peters.

MS. PETERS: Yes, I raised my hand back when Liz was talking about materiality and was going to echo her comments. But since then I've felt the need to add to that.

You know, I think that we as an organization have asked investors do they want materiality disclosed and the answer is resoundingly yes. But the conversation that's just happened here is one that, by not disclosing materiality, you don't even know these distinctions.

Investors don't know the subtleties of the distinction between planning and scoping and the financial statements and all of these nuances, and that disclosing the materiality in either of these several different ways facilitates that conversation.

Our fundamental problem with the lack of disclosing materiality is that the judgment is being made by people who never talk to investors. So it's being made by auditors who rarely talk to investors, who don't know how they decide whether something is material.

And certainly they can read reports of investors in the company and get a view on consensus earnings which are analyst earnings and the like.

I'm not certain how much that's actually done. But for us it's really about facilitating a conversation with respect to, do you really know what I as an investor think is material. And, oh, you have different views of materiality.

We published the results of our survey which we had done several years ago. We extracted it out in I don't know December or January in response to the FASB's materiality proposal to highlight that we think this is fundamentally a communication issue and that investors don't see it the way that auditors necessarily do.

And to our mind the disclosure of it facilitates communication and an understanding about in fact how people are making that judgment. And so we can come to a common understanding.

I think Philip's point is a good one: that that communication and all of these various communications -- to me, Liz's point is one of well you're communicating it to the audit committee, but the real issue is we want to hear directly from the auditor. And we understand that that may be exactly the same thing. And I understand that the audit is.

But it's a fundamental shift in what investors -- we're hiring management. We're hiring the auditors. We're hiring the audit committee. We want to hear from everybody separately to see if it all hangs together, I think is part of it.

But I think Philip's point of increasing the communication really does demonstrate to investors that there's relevance to the process. And I think shying away from making that communication is really detrimental to the profession because we don't want to give you any information. And I think that's the problem that investors have with the relevance of auditors right now.

MR. BAUMANN: Thanks for that additional clarification and the importance of materiality and how you would use it. Understanding why it's important to investors is very important to us as we consider comments on the reproposal and where we move forward on this particular release. And certainly I would be interested in hearing any other auditor reaction or preparer reaction to your comments and others' comments here about disclosure of materiality.

MS. WATTS: Bob Herz.

MR. HERZ: I've been a long-time supporter of this project and a great admirer of what's going on in the UK the last three years and their boldness in doing it and how I think it's really developed in a way that does help all the parties involved.

My specific comments and I think I made them on the first proposal was I think about two related points that I think Liz made. One was if I read this proposal of the description of the CAM it's kind of optional to include in that what the auditor found. I think it says you could do it. But if you do it, make sure you don't give any impression that you've giving separate assurance on that particular matter, a separate audit opinion on that particular matter.

I don't know. It just seems to me in the context of the discussion, okay, this was the issue. This is what you did. So what?

The second around that point that Liz made is the point about the color commentary and such things like management bias. I think as an audit committee member chair on those kind of matters, key questions, you ask those questions, whether management bias, the way they went about that estimate, is it consistent with how they've done it in prior periods.

I think that kind of color commentary certainly from an audit committee point of view is very important. I don't know whether if I read the proposal, since I asked it as an audit committee chair and the auditor said to me, yes, it's consistent, they're usually right in the middle of the fairway, whether that then would have to be, since it was communicated to the audit committee, would be required in the description of the CAMs?

It's more just a question. I would say my bias is it ought to just because I think that's important information also to the investors.

MR. BAUMANN: Your bias was to what, Bob?

MR. HERZ: My leanings are, if it's important to the audit committee and a good diligent audit committee who is asking those kind of questions and they're important from -- it might be important to compensation, to covenants, those kind of things, they just kind of change it from here in the fairway to here in the fairway. Those are important from an audit committee point of view.

But I could appreciate how reporting it publicly in our regime versus the Jimmy Daboo comment on the original Daimler audit report of KPMG. They said we found this estimate mildly optimistic which I'm sure was their way of signaling like yes, it was really at the fringe kind of thing.

Yet that kind of color commentary clearly, as an audit committee, is very important. I would imagine it's important to investors. I think that's what I heard Liz say. But I also recognize the challenges in our environment in being able to do that in a public report like that.

So I don't have a solution. Just the goal would be to somehow be able to do that or at least encourage it.

MR. BAUMANN: Those are all good comments. And maybe Jessica will comment in a minute. The proposal doesn't preclude the auditor from doing that. And you're precluded from giving a piecemeal opinion on the account or disclosure, or in your disclosure to give an inference that you're not giving assurance on the matter. But otherwise there are some broader words in the release that maybe you can summarize, Jessica.

MS. WATTS: So the release provides or the standard provides an ability or a requirement for the auditor to describe how the matter was addressed in the audit. And so the release goes on to say there are several ways that this could be done. And those would include the auditor's response or approach that was most relevant to the matter, a brief overview of procedures performed, an indication of the outcome of the auditor's procedures or key observations with respect to the matter.

And the critical audit matters, the example that we put into the release has a description of how the auditor responded. So in our case we put in some procedures.

(Off-microphone comment.)

Our examples did not include that. However the proposal does not preclude the auditor from doing that.

MR. BAUMANN: From making further observations, right.

MS. WATTS: Philip Johnson, I know you wanted to respond.

MR. JOHNSON: It's on this very point and this is a big issue because it's the so-what. And we do have to be very, very careful that we don't drive auditors to give a whole series of mini opinions on items on that balance sheet because that is dangerous because the opinion is on the financial statements as a whole.

I know KPMG did with the Rolls Royce example as you mentioned talked about findings. In the UK, that's not being picked up as much as perhaps we thought it might have been because auditors look for competitive advantage.

And the question was, if KPMG did that on Rolls Royce, would others be doing it on other. So you then get into almost a feeding frenzy on trying to find innovative ways of reporting, but I don't think that that has happened.

But it is something I think that we have to be mindful of. And if we give too much latitude, you could get a whole series of mini opinions which is definitely not the place we want to be.

MR. BAUMANN: Nor do we want the critical audit matter not to set piecemeal opinions or a variety of mini opinions, but we don't want it to undermine the overall opinion on the financial statements either. But nonetheless, your comments are understood and taken into account.

MS. WATTS: Sir David Tweedie.

MR. TWEEDIE: Thank you. Can I say that I'm really delighted that we've got to this stage now. I think this is most important project that PCAOB has probably ever done. Most of the others that you've done, if you like, are dealing with the mechanics of the audit. This one is the visible end of the audit. And when you talk about the audit report being the same for 75 years, I mean it's quite shocking really that it stayed that way for so long.

I'm delighted too that you've been very much aware of the international situation. I think it's very important that we take the best of what's out there and you're doing that. There are one or two issues possibly you want to investigate.

I very much agree with Bob and Philip that you looked to this area and what did you find. I thought the KPMG report was terrific and on balance, it only dealt with but five or six issues. But what it did do it gave you the impression that maybe they're overstated it slightly here or understated it there, but on balance, it's a fair presentation. And I thought that gave me great comfort in looking at that particular audit. You really got the feel of what happened in there.

I'm sorry you've had so much resistance to doing this. I remember when I first went to FASB before Bob was there and we're looking at the work program. And you had a pension standard and the timetable was eight years.

And I remember saying that I was a student at university in 1961 when President Kennedy said he'd put a man on the moon by the end of the decade. And I couldn't believe that was less important or less complicated than a pension standard. Experience proved me wrong as it turned out. Any fool can put a man on the moon but getting a pension standard out is something quite different.

So I do understand why you've been held up. But I'm glad you're pressing ahead.

I think the thing that I feel is so important is I think this is terrific for auditors. And I felt quite sorry for auditors in a way. The reason we're all here is because people didn't trust the audit.

So they put an inspection mechanism in, PCAOB, which has been copied around the world. And why was it there? Was it just that you wanted to gee them up? Was it the fact that they were getting a bit lackadaisical?

Or was it probably what people did think that they're too close to the client?

And when you look at Europe, we've had in the last few years the rotation issue. Now why is that there? Well, is it because people think a fresh pair of eyes would be useful or is it the fact that these guys are too close? And I suspect it was the latter. And that's just perception which is harder to change than fact.

And this I think is a great defense against it. Because when you're talking about I'm sorry that this great auditor which all the investors like has got to change you can see the resistance starting to come to that. The danger is if this doesn't get under way and you have another Enron, well why don't we start changing the auditors. And that's the sort of danger.

I think it's a great defense for the auditor. I don't think this is the end of it because I think -- and you heard from Liz and Elizabeth -- the things that they want to see in the audit report.

Well, that isn't a bad idea. If the auditor starts moving more towards the investors and away from the company, I think that's great.

And what do the auditors want to know? I was shocked in your papers when you really started this project to read about the audit report for a company that received a lot of the TARP funding. And the audit report if I remember right in 2008 cost -- Well, the audit cost $119,000 and it was $193,000 in 2009, $74 million. And the audit report was word for word the same.

This is going to be completely different. And I think that's why you want to know so what. You've always had a problem probably with the loan book in that case. And what did you find?

So I think this is terrific. This is changing the dynamics of the audits. And I would press on and as quickly as you can because I think this is something that is going to grow legs. And I would like to see the auditors and the investors getting closer and closer together.

And there's another aspect of this, too, which again is in the United Kingdom, the relationship between the auditor and the regulator, more on the prudential side than the securities regulators yet. But I don't know why it shouldn't be that way.

But it can be the regulator said, we're concerned about X. Make sure you have a good look at that. And that's the sort of thing that I can see the auditor's role in society getting more and more important. And this is the key to it all. And I'm delighted that you've copied the IAASB and the FRC in many aspects. More could be done, but this is a great start. Well done.

MR. BAUMANN: Thanks for that. We are going to pursue ahead very aggressively as we understand the importance of this to investors. So hopefully you'll see a final product before you fly on a plane that's on the balance sheet of the airline that you're flying on.

MR. TWEEDIE: And that took 20 years, the leasing standard.

MR. BAUMANN: Steve Harris.

MR. HARRIS: Sir David, you mentioned Enron. And there have been a number of accounting scandals, Enron, WorldCom, Savings and Loan, 2007, 2008. How would the audit reporting model and the CAMs and the key audit matters that are currently being considered have impacted, if at all, investor perceptions?

MR. TWEEDIE: I think that aspect or whatever it is when you look at an audit -- let's take I think it was

Ernest & Young one when they were dealing with BP. And one of the key issues was the relationship with a Russian joint ventures and that was something I think a lot of people were concerned about. So you know that the auditor is going in there.

Now are you happy with what he says he's done or what he's doing? I think that's the sort of thing, Steve, that can help. This is an area that the investors are concerned about or the regulators are concerned about. He's gone in and he's done this. What's he found? And do you think he's done enough? And that's an issue that can be taken up with the auditor afterwards.

I think that raises a level of the audit. It won't stop the crooks or the guys who are trying to sweep things. But it's a great help.

MS. WATTS: Tom Selling.

MR. SELLING: Like numerous others before me, I just want to start by saying that I think the proposal is a great start, that it will provide real information to users through the audit report, and if the standard is finalized, it will constitute a significant achievement by the Board.

I have two comments that are related. And this actually follows up a little bit on Steve's question. The first one is that I believe an area of CAMs that merits special attention in the standard is the selection of accounting treatments from non-authoritative GAAP.

My concern is partly in regard to the advent of the FASB GAAP codification which was a very good thing. But it changed the protocol that was formerly in auditing standards and that is now in the codification regarding the selection of accounting treatments from non-authoritative GAAP.

For example, it's more likely now that a selection of non-authoritative GAAP might not be consistent with statements of financial accounting concepts because the concepts statements no longer have a special status within that protocol. It would seem to me maybe that should be special consideration of this in the auditing standard, perhaps an illustrative example of when selection of non-authoritative GAAP becomes a CAM, how it should be discussed, and especially when there's a conflict between the accounting treatment and general concepts.

My second point is, my second comment, is that I understand why but nonetheless hoped that the changes made would be more comprehensive regarding other aspects of the auditor's report. I have in mind by this the fact that the Board chose not to reconsider the language in the opinion paragraph even though it needs to be clarified or preferably significantly revised.

I know I have limited time, but this one I'll just talk about five brief situations. Currently, situation 1, the PCAOB says that the audit report -- and I paraphrase -- opines that the financial statements are fairly presented in accordance with GAAP. That's example number one.

Example number two is that at times in the past some auditors used a different phrase. It was presented fairly and in accordance with GAAP. Steve Zeff of Rice reports that 70 years ago the leadership of Arthur Andersen decided that the firm had to straight shooters. Financial statements did not necessarily present fairly when they used accounting principles that were in his judgment not appropriate even if they were generally accepted.

Example number three. Currently, CEO/CFO certifications called for by SOX and SEC rules state that the financial statements are fairly presented in all material respects without a reference to GAAP.

Example number four. The AICPA standards on other comprehensive bases of accounting could state -- and I paraphrase -- that the financial statements are fairly presented in accordance with the modified cash basis of accounting or insert pretty much any so-called comprehensive basis even if that basis is designed by the user itself.

My fifth example. No competent economist would assert that financial data not adjusted for inflation could ever constitute a fair presentation of the data. Yet no matter how much inflation distorts financial statements, they are according to the auditor's report always somehow fairly presented.

So what does fairly presented in accordance with GAAP mean even as a term of art? I know the PCAOB has section 411 to explain fairly presented. But with all due respect, it sheds virtually no light on the investor-communications issue that I'm concerned with.

When speaking to investors, all the words used in the auditor's report should mean something. In all other respects, the PCAOB has done a commendable job in specifying requirements for an informative audit report capable of being expressed in standard English.

Yet in the key opinion paragraph, arguably the bottom line of the auditor's report, critical terms lack literal meaning and effectively construct the facade of gravitas that is inconsistent with protecting the public interest.

In conclusion, I very much commend -- I almost said condemn -- the PCAOB for the progress it's made. But I see it as incremental but important progress. But this is an area that I really feel strongly about and I hope the Board is going to revisit it sometime.

MS. WATTS: Thank you. Chuck Senatore.

MR. SENATORE: I see a number of tent cards and I know we're at lunch coming up. So let me sort of boil this down. One of the things that Elizabeth said that struck me when she talked about in essence, her second point, was if an auditor thinks something is important, let them talk about it.

My quick suggestion -- this is really on the margin, Marty, and this is something that may be very, very subtle

-- is sometimes rules have unintended consequences. And certainly a rule that could end up having an unintended consequence really should be hearing some feedback about the possibility of self-censoring because of a certain standard in a rule that would not be good thing. I'm not suggesting you haven't thought about it and I think this is a great idea.

But the only observation I would share with you -- and certainly this is probably a little bit more of a stark example -- is many times to the extent the more rules people are asked to follow that they tend to actually fit their behavior to the rule.

And the best example from my world in terms of financial services of the broker-dealer regulations you have a Code of Hammurabi of rules that people are footing to the rules, yet the outcomes aren't what they want. In fact you're seeing now kind of reversion to a notion of best practice and best interest of the investor.

So my only point is in thinking about the feedback -- and it may be just a twisted wrinkle -- to the extent that you find that there might be this unintended consequence of a self-censoring because of a gating factor. Just think carefully about it because you wouldn't want to frustrate the spirit of what an auditor could be doing in terms of the value that could be added by virtue of this opportunity with respect to this release.

MR. BAUMANN: Well, a lot of people, a number, have made that point, and I appreciate you echoing it and putting an exclamation point on it. And it is certainly something we think about a lot and we thought about a lot in connection with the reproposal. The concept that because you're required to communicate something, would that shield the communications to the audit committee such that you would avoid ultimately having to report it as a critical audit matter and all of that.

So, something we do think about a lot and we'll continue to think about those comments about self-censoring and make sure that we do achieve the goals that we intend to as part of this, ultimately, adoption when we get to that point. Thanks.

MS. WATTS: Zach Oleksuik.

MR. OLEKSUIK: Thank you. I'll be brief, given time. And first point, we submitted a comment letter in 2013 on this and I won't reiterate all the points here.

In particular, I would highlight -- well, first of all, we are very supportive of this initiative. We do believe, and I believe personally, that the reporting of critical audit matters will indeed be helpful for investors to better understand the financial statements. And this is a meaningful evolution of the audit reporting model, this market.

That said, I hope that the Board and auditors will be mindful of ensuring that the discussion of how the CAMs are addressed provides meaningful, yet not overwhelming, information to investors.

I would highlight a risk of potential boilerplate. We would imagine that there will be companies that will have recurring CAMs year over year. And so the audit report may actually begin to look very similar year over year, over time. So, thinking about ways to keep the report fresh.

But in particular I want to highlight my support, incremental to this discussion here, for the change in scope of the definition of CAM to be narrowly focused on those issues that are communicated to the audit committee. To answer one of the questions that, I think, Bob made about "so what?", as an investor, our first point of contact will be the CFO's office if we've got a question about the financial statements. But our escalation point, and I think our likely endpoint, in discussion of financial statements will be the audit committee.

I don't envision investors having meaningful engagement directly with auditors about any specific issuer. So I think that narrowing that definition is very, very helpful for investors. Thank you.

MS. WATTS: Thank you. Jeremy Perler.

MR. PERLER: Thanks. Let me also say I'm a big fan of this. And just as a bit of a tangible feedback, I work every day, I speak with large investors every day. And in showing them some of what's been coming out of the UK and the CAMs over there, it's been a really positive experience for them. They went in there and do, of course, read through the entire filing. But it was revealed to them there was definite incremental information to how they think about the risks involved or not involved with the company.

And I think that goes to Sir David's point about bringing the auditor closer to investor. I think this is an important topic.

Let me just touch briefly on materiality again. And I think of the challenge a little bit differently, and maybe I'm thinking of it inappropriately. But I understand the concept of materiality of a finite amount, or the difference between two finite amounts, when thinking about the scope of an audit.

Where the challenge in applying materiality to the CAMs arises is these are, by definition, the most complex and subjective judgments in going through the audit. So how do you assess whether a complex judgment or whether an issue that you had is material? Do you look at the entire spectrum of potential outcomes? Do you do several standard deviations away?

For example, if there is a question about applying a particular revenue recognition policy, and that's a complex issue and there are several different approaches that you could take, do you have to recalculate each? Do you think about the most aggressive versus the most conservative way in assessing materiality?

And that challenge, I think, presents itself if you make materiality a gating factor. And it makes, speaking to something like relevance, does the auditor think there's relevance, much easier to do and much more relevant.

MR. BAUMANN: Thanks, Jeremy.

MS. WATTS: Philip Santarelli.

MR. SANTARELLI: Thank you. I guess I'll somewhat timidly weigh into this materiality concept, from the auditor's viewpoint, at least, one auditor's viewpoint.

I think materiality is a datapoint. I don't think it's necessarily a high quality datapoint. I think the process that an auditor does, as you noted, Marty, for planning materiality, that is a number. It's generally a calculation. It's a benchmark. There are various methodologies that firms would use to come up with that first number.

But that's all that it is. It's the first number. And in point of fact, auditors, good auditors will go through the financial statements for individual accounts, transactions, etc., and frankly recalibrate the materiality at somewhat much lower levels, including zero materiality in particular transactions, which comes into the judgments that come around in the qualitative element.

I don't know how we can effectively communicate all of that thought process in an auditor's report without in fact in many ways perhaps losing the audience and what we're trying to communicate.

And I softly reject the concept, the statements that have been made, that lower scope or lower materiality equals a quality audit. I don't believe that. I think, through the process of evaluating audit quality indicators, there has been no empirical evidence that, in fact, that more hours, which is a surrogate or a proxy for that, in fact equals a quality audit. I think better quality hours equals a quality audit. But taking the materiality down to zero I don't think necessarily improves the audit process that much.

So I caution all that think that materiality is a really good datapoint. I'm not so sure without empirical evidence that it is.

MR. BAUMANN: Thanks for adding to that dialogue that alternative point of view.

MS. WATTS: Sri Ramamoorti.

MR. RAMAMOORTI: In the interest of full disclosure, I should say that this materiality thing is so close to me because I wrote my PhD dissertation on the topic of the psychology of auditors' materiality judgments. So I've been thinking about this for the longest time.

And all I can say to all of you is it's the heart and soul of auditing. It is equivalent of the statistical significance levels that statisticians use to make their judgments about what's important, what's significant, you know, that kind of thing, the same kind of idea.

But it is so complex that you go all the way from planning materiality to evaluating materiality to quantitative materiality to qualitative materiality to bandwidth materiality to fidelity materiality. You can keep on going. This is extremely complex.

And so any time you make a disclosure, and that, too, of a partial truth, which is this quantitative portion, I think you are likely to confuse the reader because they will not understand the complexity that is inherent. And in the interest of lunch, I'm going to stop there and leave you all hungry for more.

(Laughter.)

MR. BAUMANN: Just send around your thesis to all of us in due course and we'll look at that.

MS. WATTS: Thank you. Ken Goldman.

MR. GOLDMAN: Boy, now I'm really feeling at risk here with lunch and everything else after that comment. I don't have some of the perspectives that many in this room do. But I do have perspective of the CFO and watching this for many, many years.

And I'll start with since we just covered the materiality. That's a hard one. I see it over and over. It can change during the year given where the company is and its earnings and change in earnings. It can be different from the income statement versus the balance sheet.

I don't know how you could possibly put enough words so the investor could understand what it really means. And so I'm personally totally against putting that in the report.

I think it's one of these things where we're trying to boil the ocean here, which comes to my next point on critical audit matters and so forth. I was thinking about a good example. And to me, a simple example might be you refer to "See the material weakness on material controls relative to XYZ. It's in the report on page XYZ."

It's factual. It gets the reader to focus on that without putting a qualitative assessment as to, you know, how does the auditor feel or not feel about the weakness or whatever.

I think the more you try to put qualitative, the more we're going to be in this room for ten years arguing about this, which is the same thing we had arguing about putting the name of the auditor engagement partner on. I think the more you make it factual, practical, and get these things done, you get things done, as opposed to trying to what I said boiling the ocean and get everything in there, all the whats and ifs and so forth, which just makes it very complicated.

But I think if you can put enough to show the reader to focus on these four or five items and here's where you can find out more about it, that will get a lot accomplished. And it would be a good step.

MS. WATTS: Thank you. Liz Murrall.

MS. MURRALL: Thank you. I'll try and be quick. Neither the UK or the PCAOB have required the auditor to conclude on their findings when they're looking at critical audit areas. We've seen, in the UK, in the first year we had the new audit report, there were three audit reports that reported on the findings, the Jimmy Daboo audits, which we've heard about that.

But it's gone wider than that. The market has responded to investor demand and we saw many more firms in the second year of these audit reports. Deloitte included some conclusions on their findings. PwC did, although it was rather embedded in the work that they'd undertaken. And KPMG reported their findings on nine audit reports.

And I think, interestingly, from KPMG, we understand that they wrote to all their main audit clients. And there was pressure actually from the management of those audit clients not to take that extra step.

I think from an investor perspective that gives us rise for concern. We don't view the findings as a separate audit opinion. But the auditor does a lot of valuable work for investors and reports the report to the members, the investors. And only the auditor can really conclude on the measures that they take. But I don't think it undermines the audit report, you know, the true and fair view as itself.

In regards to the reporting materiality, we have reports from the AQRT, the review team in the UK from the FRC. And that with the increased tendering, they actually produced reports about three or four years ago now, that showed with increased tendering in response to market pressure the audit fees were being driven down and materiality up.

That was a concern. So by disclosing materiality it helps address that. And, yes, probably investors don't probably fully understand what it all means, but only if you disclose it does it give them a hook on which they can ask the questions and gain that understanding. Thank you.

MR. BAUMANN: Thanks. And it looks like, Philip, you have the -- lunch is waiting on your comments.

MR. JOHNSON: Sorry. I've got the lunch is waiting spot.

It's in regard to this -- there's been a lot of debate about materiality. I know in the UK, and we just heard Liz talk about materiality, and I do understand this issue with regard to tendering and driving audit fees down. That's a totality different debate, and I don't intend to get into that.

But from my perspective as an audit committee chair, I actually don't see materiality being disclosed as having much relevance. I mentioned, in my last intervention, when I was talking about the audit committee report, the audit committee report that we've produced basically says what did we spend our time on as an audit committee, what was our engagement with internal audit as well as external audit, what was our assessment of the effectiveness of the audit process and the auditor. But, importantly, what were the major judgments that we looked at in relation to the financial statements? And I think that's particularly important in this context.

And you would expect that there would be some similarity, in that context, between the audit committee report and the auditor's report when you're talking about what were the major judgments that were in there.

And so if we, as an audit committee, are saying what the major judgments were and what we did about them, we would expect the auditor to have a similar view ,and therefore report on what they did to satisfy themselves that those judgments were appropriate.

My audit committee did not for one moment consider materiality. They were looking at what were the key judgments. And I'm quite certain that the scope of the audit was determined through materiality by the auditors. But I don't think that that assessment of what they would report on came into the equation when they were making that report.

I don't think materiality was actually particularly relevant in the reporting process. It's relevant with regard to the scoping. But it's getting less relevant now because with data analytics, which we'll probably talk about later this afternoon, they're using materiality less in assessing that scope.

So I don't think materiality really comes into this. It might be number that investors would like to know. But I don't think it's relevant in relation to reporting.

MR. BAUMANN: Right. You've added to that distinction that I've pointed out before between scoping materiality and assessing materiality as part of the financial statements.

Well, thanks for the very lively and robust discussion of not only the audit reporting model but the other standard-setting matters that I discussed earlier, and the many items that Jim discussed earlier this morning.

So, a very lively discussion. We appreciate all the input. We heard a lot of support for the reproposal here, from those who spoke at least, and a lot of other comments for us to take into account.

With that, thanks very much, Jennifer and Jessica, as well, for the presentation, and for all the SAG members for the input. And lunch time.

**NOTICE:** This is an unofficial transcript of the portion of the Public Company Accounting Oversight Board's Investor Advisory Group meeting on October 27, 2016 that relates to the reproposal, *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards*. The other topics discussed during the October 27, 2016 meeting are not included in this transcript excerpt.

The Public Company Accounting Oversight Board does not certify the accuracy of this unofficial transcript, which may contain typographical or other errors or omissions. An archive of the webcast of the entire meeting can be found on the Public Company Accounting Oversight Board's website at:

INVESTOR ADVISORY GROUP

+ + + + +

MEETING

+ + + + +

THURSDAY, OCTOBER 27, 2016

The Advisory Group met in the Hamilton Ballroom of the Hamilton Crowne Plaza Hotel located at 1001 14th Street, N.W., Washington, D.C., at 9:00 a.m., Steven B. Harris, Chairman, presiding.

PRESENT

STEVEN B. HARRIS, Chairman

MR. HARRIS: And, Joe, that leads us to your working group presentation.

MS. DEANS: I think at this point Joe is going to hand it over to me to do some of the talking.

Joe is that --

MR. CARCELLO: Yes.

MS. DEANS: That's the plan. Right. Great. You can click.

MR. CARCELLO: You want me to click? That sounds good.

MS. DEANS: Okay, thank you. So I'm going to try and -- try to keep quite a brief presentation and hopefully that will allow plenty of time for discussion still at this stage in the afternoon.

So we were asked to report as a working group on the proposals about the new -- the auditor's report. So the PCAOB, just to recap, re-proposed in May a standard, the auditor's report, on an audit of financial statements when the auditor expresses a unqualified opinion. And that was an original proposal back in 2013. It's been re-proposed. And as a working group we submitted a comment letter to that back in August. And I'm going to briefly, briefly go through what we covered in our comment letter then.

So, summarize the proposals, the proposed auditing standard. The intention was to enhance the form and content of the report to make it more relevant and informative to investors and other financial statement users and include a description of critical audit matters. And that's mass communicated to the Audit Committee or required to be communicated that relates to accounts or disclosures that are material to the financial statements and involved especially challenging, subjective, or complex auditor judgments.

There were also some additional improvements to the auditor's report proposed. We haven't touched on those in detail, but obviously we can discuss those afterwards. And also a requirement to dispose auditors' tenure.

Given the relatively late stage in this project, as a working group we felt it best to base our comment letter and this presentation today on the issue of critical audit matters. So the proposed rule requirements summarized here, the proposed requested audit report, identify critical audit matters, describe why the auditor reviewed this issue, the principal considerations there, and indicate how the auditor addressed these critical audit matters and refer to the relevant line items and disclosures. That's a very brief summary there, just a recap for everyone.

So the working group very much supports this proposal. We believe that the proposed auditing standard does represent a meaningful improvement from the current standard audit report. And if I refer to the mission to protect the interests of investors and further the public interest in the preparation of informative, accurate, and independent audit reports, it seems to me that clearly reports are -- then the proposed standards would be more informative. To me that seems very clear-cut and I think the working group were quite unanimous in agreeing that point, so we think it's very much clear that this would be more informative and therefore very consistent with the mission of the Board.

We take no exceptions. We put here, we don't disagree with any of the four points that were mentioned on the previous slide. We think those requirements for the critical audit matters would be helpful.

One point that we really want to emphasize here is the requirement that the disclosed critical audit matters, the discussion should be -- to be most useful, must be highly bespoke to the company. If it becomes standard boilerplate language, that is not going to be helpful to investors and we certainly believe that there will be a direct correlation between how specific that information is and how valuable it will be to the users.

Just to elaborate here a bit on this UK experience which has been referred to quite a bit already today, on this matter we've had somewhat similar requirements in the UK now for three years. So for most companies listed on the London Stock Exchange we've had three years of these extended audit reports including a discussion, not quite identical wording, but very similar intent, on the risks of material misstatement, that we've had.

I think certainly my experience as a user accounts and for many of the investors I've spoken to, we've undoubtedly found the additional information useful in the auditor's report. And where it's been very highly bespoke to the company we've found it very useful typically. As I mentioned this morning, now it's one of the first things I look at. I'll pick up annual report and go and look at the auditor's report. And that is very different from the past. So it's straightaway going and look at that.

So we said that we strongly support the proposal, but we do ask or request here perhaps the Board to consider the possibility of doing a little bit more. So one thing the Board has not done is required discussion of what the auditor found when it addressed that critical audit matter and what were the results, the procedures, and simply a disclosure of the findings. That is not required.

Now, this is a matter where we understand requiring that information could clearly be problematic. We understand that. And instantly is not required. There are other international developments requirements here. It's not required in the IAASB standard, and in fact the existing UK Financial Council standard does not require the disclosure of findings. We understand that at this late stage in the project that could be very difficult. Mandating that disclosure may not be feasible.

However, we would like to ask the Board to consider the possibility of modifying a proposal with an additional sentence that we've put here, just to state that the inclusion of informative company-specific findings could be considered best practice in auditor reporting and that that could be encouraged, although it's not required in the auditing standard. Certainly we view specific findings would undoubtedly make audit reports more informative, and that would be consistent with the Board's mission.

So to give a little bit of justification for this argument, a few things on the side here. We do regard the disclosure of critical audit matters as undoubtedly useful but incomplete without going that step further to talk about findings. A survey by KPMG found approximately 80 percent of investors argue that they should include findings, that that would be helpful.

And the UK Financial Reporting Councilors in a review of the experience of the new auditor's report requirements that investors clearly valued the additional insight offered by extended auditor reporting, and certainly investors have been particularly -- found it helpful when that included findings. So although in the UK there hasn't been a requirement to include findings, that has occurred in some cases.

And if we move on, talk about that. Thank you. And just to illustrate a little bit of how well received this has been in the UK, and we mentioned here, the IMA, the Investment Management Association, is now sponsoring an annual award for the best auditor reports. We wouldn't have had that in the past. And an example of one that the IMA recommended is the KPMG Rolls-Royce audit report, and for any of you who are not familiar with this report in the room, I thoroughly recommend it. It's a fascinating example of how an audit report can give so much more information and as the IMA said there, provided a real value-add.

And one of the things that that audit report included was findings as to whether management's judgments were balanced, or in the words of the KPMG auditor, mildly optimistic or mildly pessimistic, so giving us theories as to where in the range those judgments came, and that is something that investors, many, many investors that I've spoken to really appreciated.

There has been discussion in the UK that -- and there's been an evolution over the three years. So in the first year there was quite a lot of boilerplate information that was not so helpful. There was then a discussion about -- amongst investors and the firms as to what was useful and certainly some of the firms now, three of the four big firms have included findings in some of their reports. So that has been a big development over the three years of evolving sort of best practices.

To come back to the point about company-specific information, it's really helpful to get proper information specific to the audit and for example not just have a statement that is something that is obvious anyway from the fact that it was an unmodified audit report. So for example, it's not helpful if the firm keeps repeating that something was within an acceptable range. That's not what we mean by findings.

It has to be something that's new information. And clearly we need to get sort of set of differentiation reports. Having the same standard sort of report for everything doesn't help us. We want to get new information and find out exactly something that's relevant to understanding the critical audit matters for that audit, for that company. And we've got a couple of -- a quote there from KPMG.

What are the arguments against doing this? I find this quite hard, in a way, because to me it's so clear-cut that including critical audit matters is important, and ideally findings would be very helpful to investors. So the first point I guess is that this is moving in exceeding the auditor's mandate. Yes, perhaps that could be argued, but in my view it's so clearly an improvement that I think the fact that it's such a significant improvement should outweigh that argument.

I'm certainly told that some, particularly in the audit committee community, are questioning what investors do with this information. Well, I'm quite disappointed in a way with that comment. And certainly if you look to the UK experience, many investors in UK companies support disclosure, support the new information. They've found it helpful. And there are plenty of examples, and I'm happy to answer afterwards, if people want a couple of sort of more specific points on the kind of thing we've learned and where it's been helpful, but I don't really feel -- I think that's a question to ask investors.

Now the third point I do have some sympathy with. I think as a working group we did, that potentially the concluding findings exposes auditors to incremental legal liability. And I'm also well aware the legal environment in the US is different from that in other countries where there have been such developments. So it is something that we understand.

And what we've put here is to say that we think the fact of encouraging disclosing findings leaves it then a choice for the audit firm to weigh up the benefit of a better report against that possible cost argument in terms of legal liability. And we also in our comment letter mention potentially supporting a legal safe harbor specific to this findings point, if that was included.

So to conclude, we do clearly -- I want to reiterate the fact that we support the proposal as a working group. I think there is strong investor support. I think the international precedents are very encouraging.

And although we've had this information in the UK for three years, but it's coming now across Europe next year. So we have more to look forward to in Europe. We do think the proposal, however, could be strengthened if it could be encouraged to include findings. And so if it's possible to go a little further, as we've suggested here, that would be greatly appreciated, I believe, by many investors.

MR. HARRIS: Joe?

MR. CARCELLO: Tremendous job by Sarah, as I knew it would be. Just, you know, maybe three things to emphasize very briefly that I think are certainly consonant with what we had up there.

The first would be if we end up in a regime regardless of findings where the CAMs either initially or over time become essentially boilerplate, don't do it. So if you're not willing, PCAOB and SEC, to inspect and enforce, don't do it, because what will happen is even if audit fees don't go up -- people's time is the most valuable thing they have in their life, maybe short of their family. And these reports now will be longer. There is a cost of reading this stuff. And so if it doesn't say anything, it's actually value-destroying.

The second thing that I would say is I think the evidence out of the United Kingdom, three years of data, is that it's clear -- I think it's overwhelmingly clear that investors find specific findings highly valuable. I don't know how -- you might be able to argue against this for other reasons, but I don't think you can argue against that it's valuable. I think we have -- I think the evidence is overwhelming that it's valuable.

So then the question is if it's valuable and you're not requiring it, you're only suggesting it's best practice, there has to I think be a very compelling argument for why you wouldn't suggest this is best practice when clearly the evidence would seem to suggest that it is.

And then I think the third thing that's important to understand is around the legal liability issue. I remember when this issue was teed up, and Marty and others remember this, and there was a series of round tables, there was a series of focus groups, and I remember at one point corralling some investor people, including some of the people in the room today. And I said is this a disguised attempt to get at the auditor's wallet? Is this just a -- kind of a crafty way to grab for the wallet? And they swore up and down that it wasn't.

And when we went -- when Sarah and I went to them and said would you support a limited legal safe harbor -- which I understand is complicated. You can't do it. Probably the SEC may not even be able to do it. I'm not sure. It may involve Congress. But at least in terms of the investor folks, to a person, at least the ones we talked to, were very much willing to say if we get this information at least as it relates to this information, not everything else, but this information, findings, we would be very supportive of a legal safe harbor.

So this is not some back door way to try to increase legal liability for accounting firms.

MR. HARRIS: Jay?

MR. HANSON: Well, thanks to the working group for the work you've done on this. It was a good discussion to have today.

I want to pick up on something that Sarah said, and Joe as well, about the value. And Sarah and I talked just briefly last night about this, but I'd like to hear more from the other investors in the room that might be invested in UK stocks, or at least evaluating, with some examples of how the information translates into value.

And what I think about in this way, and I want to be educated on this to see if I'm thinking wrong, the value to me could be a new area to explore more deeply in terms of the analysis or it might be information that wasn't known from something else in the publicly available filing information, and how maybe that new information translated into something different in the analysis, maybe a change in the model, a change in the assumptions, change in the discount rate to the multiple, which ultimately affected the decision itself. And then ultimately, does that manifest itself in changes in the price or volume and the observable in the marketplace?

And so I'd just kind of like to hear some examples of that, how the good information translates into something actionable, and what's been done. Or maybe if these aren't on the list of things I should be thinking about, maybe things that you do -- how you translate that into value.

MR. HARRIS: I was going to ask pretty much the exact same question, since you led with your chin and volunteered, and that is where has it been helpful? And if you could give us more examples.

MS. DEANS: Yes.

MR. HARRIS: So first you'd answer Jay's and then give us some examples as to exactly --

MS. DEANS: Yes I'm happy to give some examples.

So I think it's an area where just in the specific nuggets -- I'll give you a couple of specific examples.

So one quite small one, but I think it was quite telling. So a company with a big pension exposure, and it had always been using or had been using a pension discount rate that looked higher than norms. And the auditor's report actually talked about that being a critical audit matter, or key audit or risk material misstatement and actually talked about how the company calculated the discount rate.

And that they were adding on an arbitrary amount on top of the normally calculated discount rate apparently for, I think it was to do with the risk and that. So they were adding on an amount to the discount rate and that was bringing a higher than average discount rate. And this had got through, apparently the amount involved was not so big as to make the overall financial statements misleading, but it was an item that the auditor commented on.

And then that was something that clearly a lot of investors pick up pension deficit numbers in their evaluations of companies that can then be picked up on and discussed as to why that company was taking that approach. And funnily enough the following year, still an important area, still an area the auditor discussed, but the discount rate had become a little more normal, within the normal range, and that comment had been dropped.

And I'm sure that pension investors had gone to the company and asked about that calculation of the discount rate and why this additional amount had been added on, or at least that's my guess. So I may -- that may be a misconception, but that's how it seemed to me.

Another example, so -- and this is a little unfair, but say for example if you took one of the very big retailers in the UK three years ago the issue of supplier income wasn't really discussed in the financial statements. If you look at the auditor's report, that did flag up as a critical audit matter, supplier income. Not really discussed elsewhere. Well, I mean, in the company, but there was subsequently an issue in that area.

And of course then it does beg the question of why the auditors were raising it as a critical audit matter and then not talking to the company about getting better disclosure around that topic, but nevertheless it had been flagged up. It was a point that investors were warned about as a potential risk of material misstatement. So that actually was flagging up a very important issue.

So those are a couple of areas where sort of I've observed there's been particularly useful information, and there are many others. I'm not sure if anyone else in the room who's looked at UK stocks has any other suggestions to contribute.

And also just to come back to the famous KPMG example with Rolls-Royce, I think if you talk about in stock, a lot of those questions that were raised there have been really debated amongst investors. It's important to understand these risks. There's actually, for those of you who haven't seen it, several pages of discussion, and some quite important matters I think have come out through there, a discussion of risks around controls in one division and so forth. And those are really of interest to investors and I've been in many meetings where those points have been discussed.

MR. HARRIS: Linda?

MS. DE BEER: Thank you, Steve. I think just to add to Sarah's point in South Africa we use international standards in auditing, and obviously the equivalent ISA standard hasn't become effective yet, ISA 701, but very many listed companies have already pushed their auditors or the auditors started insisting on early adopting it. So we've seen quite a couple of those audit reports as well.

And the one other aspect or benefit, Jay, maybe just adding onto your question, that I've certainly seen is it keeps the audit committees honest as well. Because what's happening now -- and we don't have a requirement that you have in the UK that the audit committees must have sort of reflect or mirror some of the disclosure. As you know, that's not an ISA requirement. But what audit committees now do is in their reporting or in their financial statements they sort of take a proactive step to knowing what will be the key audit methods to explain further what the governance process is all around there.

So I think automatically if you look at the key audit methods and at the audit committee reporting, there is just firstly better governance, but also better disclosure for investors to give a more holistic picture of those specific areas.

MS. DEANS: One other point, if I could just add, I think the very fact of having the auditor talking about these areas makes it very helpful as the user accounts to engage with the company because it gives you a hook of information and also if the company doesn't want to talk about it, it's much easier when you can say but your auditor has identified this as a risk. So rather than sort of, well, why are you asking about that, to be able to say the auditors are talking about this, makes it harder for a company to close down and not want to talk about the issue. You're informed. You're a more informed investor or analyst.

MR. HARRIS: Sarah, in the UK how would you say it's influenced the behavior of the auditor?

MS. DEANS: This is -- it's a little harder to say as a user of the accounts rather than an auditor, but I think it's clearly promoted interest in what investors think and feel, because we have now more of a dialogue. I mean, certainly since these have been out there it's been easier to engage with audit firms and point them to where it's been helpful, you know, and I think it's incredibly important for the audit firms to see this as an opportunity because they're able to actually show the value to investors of all their knowledge.

So in the past up until now, auditors have all these masses of information, but we had -- as users of the accounts have seen no sight of that. They're actually able to prove their value a lot more and I think that's incredibly important when there is quite a lot of skepticism, at least amongst the investors I speak to often, about the value of the audit to them.

So in terms of has it changed behavior, I'm sure it has, but we don't get a great deal of insight into that. But certainly if I was an auditor and I knew I was going to be talking about this, I think it puts maybe, I would guess, a little extra pressure to be confident of what you're saying.

MS. SIMPSON: Sharpens accountability.

MS. DEANS: Sharpens accountability, that's the best --

(Off microphone comments.)

MS. DEANS: Yes, exactly. So I think I'm sure it has changed behavior. It's certainly prompted some useful dialogue between investors and the audit firms in the UK. So I really see it as a positive. And there has sort of been a bit of competition amongst the audit firms to be perceived to be being helpful here and to actually improve the standard, which has been very constructive, I think.

MR. HANSON: Sarah, just to clarify, as an investor you're dialoguing directly with the auditors about what's in the audit report?

MS. DEANS: Just to clarify, not typically specifically on companies, but on overall what we found helpful, yes, the audit firms have been quite open to having conversations.

And in those cases, you know, investors are often maybe bringing examples, obviously there's confidentiality that they are not going to give away to us obviously inappropriate information. But certainly company examples have come up in those conversations of what's been -- typically what's been particularly helpful.

MR. CARCELLO: And, Steve, let me add one thing in following up what Sarah said about the effect on auditors. As you know, I'm sure you're in contact with the folks at the FRC and Marek Grabowski and those folks, and they have done quite a bit on measuring what's changed inside audit firms.

And we alluded to this earlier, one of the unintended consequences, in this case a good unintended consequence, is the staff are more engaged in their work, they're more excited about their work, they feel like what they do every day actually matters more because they see the fruits of their labor in a report that people will read other than a three-paragraph report, as Sarah said I think earlier and others have said, that people typically in the past didn't even read.

MR. HARRIS: Mike, and then we'll just go around. I'm sorry. Well, wait a second. Jeanette? Let's recognize the Board first.

MS. FRANZEL: Thanks, Steve. Thanks for this. And I'm wondering, Sarah, can you elaborate a bit more on the very specific issue of company-specific findings?

And I can kind of see this going in two different directions and so if you have examples of both, that would be helpful. So in one case maybe it's a difficult audit area and the auditor finds that there's just a whole lot of uncertainty and there's nothing really that anybody does about it. And what kind of -- have you seen examples of that, whereas in other cases maybe the auditor found that something needed to be refined or a disclosure needed to be expanded. Management did that. How far do they go in discussing the findings? They say, you know, this was difficult and as a result of our work management expanded its disclosure, or do they say talk about the inadequacies first of the initial disclosure and then the subsequent changes.

So anyway, examples on both types of findings and results, if you have any.

MS. DEANS: Yes, so and I guess to caveat this a little bit, clearly most of the auditor's reports yet do not include findings. The majority do not. It's very much a minority yet. And those findings, again, vary enormously from the very, very detailed examples we have at Rolls-Royce, which I'm sure you've seen, right through to some of the less helpful, you know, blander, not very company-specific that was within a reasonable range type comment that doesn't really help us.

So this is based on not a huge number, but yes, we have seen cases where, for example, it's been commented that errors were found but those were then corrected. And after they'd been -- after an error had been corrected, then the auditor was happy. But that was an insight again that was new. Whereas in other areas there is a lot of just sort of, this is the work we did and this is a risk area without -- either no finding or no very specific finding other than there wasn't anything that required -- well, they didn't say that, but there was clearly nothing that kind of further seemed to be required at that point.

If you look at most of the findings, the PwC ones tend to just be of the it was within a reasonable range and there we left it, sort of thing. If you look at some of the others, one thing actually I should comment that I found quite helpful, at least in terms of presentation, was what I liked about this most recent year's reports from Ernst & Young, from EY, had the column, this is what we reported to the audit committee.

Now having said that, some of those comments then below that are quite bland and you think, well, that must have been a boringly thing.

(Laughter.)

MS. DEANS: You didn't tell them much, but at least I like that way of framing it, that then here is the result, this is what we presented and talked to the audit committee about.

I don't know how much that answers your question, but it is still relatively early days, at least for findings.

MS. FRANZEL: Thanks.

MR. HARRIS: Mike?

MR. HEAD: One, because I was on this committee I have the insights, and this was a topic that again I was very passionate about. But the first comment on findings and results that I wanted to emphasize. We as maybe auditors or accountants our self automatically go to a finding must be an exception, versus a finding can be, they did a great job in this area and we applaud or agree with management's judgments.

Now you're not going to see that kind of wording in this kind of report, but it should be balanced about positives and potentially negatives, if there are some, without assuming it's all going to be negative.

And I correlate what I think the value is here. I think all of us would agree when you're doing what I'll call a service center type audit where you're actually auditing and saying what the state should be, what your results were, if there was any exceptions, can it be relied on? And then that type of audit, which kind of relates to where we've went on the broker-dealers with the 17(a), you know, this isn't going there, but this is going that direction. You're trying to get more color on that -- the audit process and what the results of the audit process would be. And that starts moving you down, well, did it work the way you intended during the period, not just as of a point in time?

I guess the last thing to me is I'm big on transparency. Everything we're talking about that could be including findings or results have -- are being discussed in the audit committee meetings by management, by the auditors with the audit committee members and at times at the full board. So this is not something that's not already being done privately. It's just giving the investors or the shareholders or stakeholders transparency or insight to it. So those are my thoughts, my top of mind.

MR. HARRIS: Parveen?

MR. GUPTA: Sarah and Joe, I guess what I was wondering, maybe you covered this point and I missed it as I stepped out for a few minutes, for the first couple years certainly expanded disclosures in the audit report and the information that we are talking about would be new information and useful. Was there any conversation in your working group that what discipline can be put around the fact that maybe after two, three, four years it could become a boilerplate report? And if so, how do we handle that?

Because, you know, when you go in this direction, you want to make sure that you mandate something that's going to be useful to the capital markets for the longer term rather than just couple years and then the excitement kind of dies down and it's the same report like we've seen the risk disclosures in the 10-K in the US, at least.

MR. CARCELLO: Yes, I'll give some thoughts, Parveen, and then obviously I want to hear what Sarah has to say and what she has seen.

But to me, let's say Company ABC has six critical areas and actually presents findings in years one, two, three, four and so forth. The real important information is going to be change. And if you don't -- if all you end up getting is it's the same six every year and it's the same wording every year, then essentially what you're saying is absolutely nothing changed inside that company on those six areas. That's just not believable.

So if that's the case, what it's suggesting is that there's not that kind of disclosure around change, and that would be a problem if that was the case.

MS. DEANS: Yes, and this question's been sort of talked about quite a lot in the UK. Is there a danger of this? We've had it three years. Is it just going to come -- in fact, actually so far that hasn't happened because I think the process has been evolving so much anyway that things have changed and moved on.

But certainly one of the examples of sort of best practice which some of the firms are doing, at least some of the time, is to talk about exactly that, where things have changed. So for example, if something was a key risk last year and isn't in there now, to give some explanation of what's changed. Sometimes it's obvious. That division was sold, so we're not worried about it anymore. But other times it's not.

And also when new risks have evolved. And even again, and I hate having to always give the same sort of example of best practice, but if you look at how again the Rolls-Royce most recent auditor's report, actually gives a little chart of sort of where things have moved. So this risk is actually a bit bigger this or a bit more of a concern this year versus a previous year, and this one has sort of moved down the track a bit.

So not just which ones have come on and which ones are dropped off, but actually the evolution of we're a bit more worried about this and we're a bit less worried about this now, which is again very useful and I think is an indicator of the quality of what the auditor is doing is quite an interesting one. We know which ones we're actually talking about.

Those kind of processes that they're thinking through, this has become more important. Whereas exactly if an auditor's report is just -- and so far we haven't had it that much the same as last year's and the same as the year before's. Then I think you start worrying. Do you really believe that nothing has changed or is that simply the auditor not doing a great job? So again it's helpful insight into the quality of the auditor potentially. And it's still again early days, but I think that will be interesting as we go further down this track.

So I think, yes, of course I understand there is that risk there. And absolutely, to Joe's point, if this just becomes boilerplate language and doesn't tell us anything specific and so forth, it's hopeless and it is just more pages for no purpose. And that's not what we want.

But actually I think enough does move on and if it's really the auditor's going for best practice and helping the investors understand evolution of risks, that's helpful and that's actually a useful history then of how things have moved on. There was a problem with internal controls last year in this division. Has that improved this year and has it improved so much that this is no longer a risk or is it just evolving, or is there actually still worry or even worse?

So I think there's a lot we can learn from that, so long as the process is done well.

MR. HARRIS: Robert?

MR. TAROLA: Robert Tarola. I find this quite ironic that we're -- that there's resistance to this in the auditing profession, because as I'm listening to all the analysis, this could be the solution to a couple of the problems we talked about today. It appears to me it will raise the value of the work of the auditor to their ultimate customer. It would provide the transparency that folks believe is important in reporting to outside parties for an issuer.

It should make the profession more exciting, that you would want to join. In fact, the way I think about an auditor, it's just the front end of the analysis process. It's the same person on each end. The auditor is a front-end analyst and the investor rep is the back-end analyst. They have to have the same skills, the same insights, the same knowledge of the company and business models and how they all work.

So the public accounting profession really needs a makeover in terms of its marketing. And this may be the impetus for a makeover.

MR. HARRIS: Well, being an audit committee chair and an auditor and somebody who's well versed in the profession, those are very interesting comments.

MR. TAROLA: Well, I was going to start --

MR. HARRIS: But you wear so many different hats that it's interesting.

MR. TAROLA: Well, when I wear a preparer hat or an audit chair hat, it's a bit scary --

(Laughter.)

MR. TAROLA: -- to be frank, because you're really now -- your scorecard is going to be made public as a preparer and as a, you know, governance committee of the company. So that's a bit scary.

I think the other -- I think on the auditor side I'm sure they're nervous about added liability, and I think Joe's idea is a really good one. Maybe a safe harbor for audit committees, too.

(Laughter.)

MR. HARRIS: Only for you, Bob.

(Laughter.)

MR. HARRIS: Linda?

MS. DE BEER: Thank you. Just two comments, if I may, and it's more from my experience where we debated this as the advisory group with the IAASB. Jeanette, the comment or the question you asked about the entity-specific information just triggered the thought in my mind, and there were lots of discussions at that point in time really to try and avoid industry disclosure. And I think that is a really important point that must come through.

And, Sarah, you spoke about sometimes the entity-specific information might be a little bit more bland and the range is a little bit more general, but there was, especially at the initial stages of the debate, the real concern that instead of auditors drilling in to the specific critical audit methods or key audit methods within the entity, the role they sort of talk about industry-specific, you know, this is in the platinum industry and the market is distressed.

And, you know, that sort of becomes a critical audit method because that information would certainly not be useful at all. And I think it's very important that the wording must be tight enough to avoid that sort of general disclosure, critical areas for the industry as a whole versus that company specifically.

The other point that came through very clearly as well, and Mike, when you spoke it reminded me, was that a lot of the people around the table at that advisory group felt very strongly that they're not really interested in audit procedures. They sort of want to know what the issue was and what the finding is. They couldn't really care all that much what the auditor did to get the comfort that he needed, but more sort of what the ultimate outcome or finding is.

And I think there is a risk that if auditors start disclosing a lot of procedures, it will again become really boring reports that people won't read.

MR. HARRIS: Curt, I think you had your card up next.

MR. BUSER: Thanks, Steve. So like Bob, I think this has a lot of opportunity for the whole audit profession, and from an assurance standpoint I think it's potentially a very good product.

I have a couple questions though that I'm just curious in terms of how the working group thought about it. So first, if there are no findings or they're boilerplate-type answers, does that create a false sense of assurance?

Related to that, do the critical audit matters create kind of a piecemeal opinion approach with respect to the report on the financial statements otherwise taken as a whole? How do you think about materiality and disclosure requirements around that?

And then last, as it relates to internal controls, right now we have a criteria, as least as I understand it, that obviously the material control weaknesses, they need to be disclosed and talked about, significant deficiencies, obviously talked about with the audit committee and kind of resolved.

So does this change that standard? So does this kind of enforce significant deficiencies to be publicly disclosed as a critical audit matter, or how do you then kind of say no, no, no, you don't have to talk about that, but it's a significant matter? Thanks.

MR. CARCELLO: Yes, I'll start off, but again I certainly want to hear what Sarah has to say.

Curt, these are, as I would expect, excellent issues to raise. On the first if there's no findings or if the findings are boilerplate, does that give you a false sense of assurance -- and I think if the Board decided to do what we're suggesting that they might, which is to encourage findings but not require them, I think the reality is inside the United States, and we recognize this, that at least initially there's probably not going to be a whole lot of findings.

I mean, we're not finding a whole lot of findings right now in the United Kingdom. So I don't think there's going to be a global conclusion about an issuer if there aren't findings. Now maybe down the road 10 years, 15 years, 20 years, but let's worry about that 10 years from now.

On the second issue, the piecemeal opinion, and certainly this is a concern that's been expressed, it doesn't appear to me, but I want to hear what Sarah has to say, to have been a problem in the United Kingdom.

I think the marginal investor in most stocks today is pretty sophisticated and I think they're going to understand that it's not a piecemeal opinion, but I want to hear Sarah's explanation or experience in the United Kingdom.

The significant deficiencies is maybe not a fair thing to throw to her because I don't believe there's reporting on internal control over financial reporting in the United Kingdom. This is not something we talked about, Curt. I know it's a major concern of issuers and of audit committees and of auditors, so it's a fair point and I think it would have to be looked at further.

I think to -- not to move forward in encouraging findings because of that, I think that can be solved even if that's scoped out. That's not a strong enough reason not to do it.

MS. DEANS: Okay. So to add to that, is there a risk with a sort of piecemeal opinion? I just don't think that's been perceived as a problem in practice over the three years. We understand, or at least the professional investors I speak to understand the overall audit opinion. And then this is additional helpful information. And I just don't perceive it's a problem.

I think -- was there -- sorry, was there also a question about materiality that we didn't cover there?

MR. BUSER: Yes, and if you're going to talk kind of on a piecemeal basis or call that out, I mean, how does materiality kind of play into that especially as -- if a critical audit matter how would it affect your materiality assessments?

MR. CARCELLO: Again, that didn't come up, Curt. We didn't even talk about that. Id' have to think about it more, but it's a fair point.

MS. DEANS: I guess that does -- we'll say just maybe one tab one point, which is one area where the U.K. has also gone further is actually requiring disclosure about materiality and the calculation of materiality. And I know that that has sort of fallen by the wayside a bit here, but I -- personally actually I found it very interesting. And actually if I was to put my finger on where I think practice has most been affected or things appear to have changed most as a result of extending required information in the auditor's report, I'd actually look to that because first year we had a lot of outliers taking a pretty high percentage of pre-tax profit. So that's been changing.

MR. HARRIS: Judge, you're not allowed to put your card down.

MR. SPORKIN: The only thing that -- I've listened now for this whole day and I was thinking what are we talking about?

MR. HARRIS: Judge? Judge, hit your mic.

MR. SPORKIN: What we're talking about is what you need to do in this profession as it's been done in the legal profession, medical profession is branding. If an organization has a brand that it's known that you don't get their name on it unless you've done the greatest job in the world. I mean, you don't get a Sullivan & Cromwell's name on a report unless they believe it's the right thing to do. Not the client. Sullivan & Cromwell won't put their name on something, or Korvath, Wachtell & Lipton. It's a branding. You got to get a brand that says this accounting firm you're not going to get that name on that accounting firm unless it's the report that we want to go out. You won't get a Wells Fargo -- your name on Wells Fargo unless it's right.

And they know. I mean, how do these people know? They can read the report and they can know something's right or something's wrong. They could ask the right questions. Why is it? Or you never see them getting into the kinds of problems with some of the accounting firms you're getting into. Is it trying to get minimum standards or is it trying to get the best standards? I mean, you see the commercial, people go to BDO if they got a problem. I don't know whether it means they're the best, but what I'm saying is that you want to brand your organization, that nobody gets my name unless it's the way we want it, not the way the client wants it. You can't buy our name. I don't know if that means anything, but I'll tell you that's what I see here.

MR. HARRIS: Thank you. And, Lynn?

MR. TURNER: A couple things. As one of the people in the room that's actually written critical audit matter memos at the completion of an audit having to identify those, I think it's going to take some time just based on this conversation for the investor community to really understand. Probably have to be some education because some of these CAMs do stay the same year to year. They do not change in companies, especially industry-specific. So to expect things to see change time to time to time, that's probably -- maybe some cases that will occur, but it's certainly not going to occur.

And also as I listened to that discussion earlier, it tells me there's going to have to be some education of the investor community and they're still going to have to do their homework. In fact, your earlier conversation led me to believe that probably going to need to be a lot of education of the investor community if that's what the expectation was.

The second thing is on findings I actually think better than the Rolls-Royce report in this case is the Dutch report on Aegon. I think it's an excellent report because it does get into the findings and does I think a very good job of coming back. I forget which Board member asked about the value associated with the stuff, but the Aegon report to me laid out more of the information I'd want to know with respect to the risk in the company and where some of the things were going and what the auditors did to address those. So I thought that was a pretty thing -- pretty good disclosure.

But then with respect to your notion of a legal safe harbor, I find that to be most disturbing, because you've turned around and told me this is such critical information, I need to become informed and it needs to be very good and really tell me what the auditor thinks. But on the other hand, if they mislead me, I can't hold them accountable. So I would vehemently oppose any safe harbor.

I would rather not have the CAMs than to have the CAMs with the safe harbor. I think as we saw, as we've seen in the past with some of the things, when you provide those legal protections the accountability goes away and the quality goes down, so I think the safe harbor is a disaster in waiting.

MR. HARRIS: Tony?

MR. SONDHI: Thank you. I actually did -- wanted to address that last point that Lynn was making, and I really do think that the safe harbor would be a disaster. But I also at the same time believe that -- very strongly again, that saying such and such disclosure or something is encouraged is also a very big problem for a very simple reason: I served on a committee that helped write the International Accounting Standard on the cash flow statements and very narrowly lost the fight to get the direct method. And the IASC chair at that point, David Cairns, told me that he wanted -- he agreed with me that it should be direct method. He says but he was hoping to accomplish it by encouraging.

And if you look at both the U.S. GAAP on cash flow statements and the international, they both start with the same thing in the first paragraph: you -- the direct method is better. You are encouraged. But the problem is when you go to the glossary of terms, "encouraged" is defined as you don't have to do this. And that's the definition people are using. They're not looking at it in terms of what the language tells you. So using "encouraged" I think is a problem.

I think Lynn is also right that it may take us awhile as investors to learn that some of these CAMs are going to stick around, and there is a reason for them to stick around. But I have two responses to that: One is that I am willing to learn. I would like to find out. But I'm also tired of the kind of boilerplate information that I see.

I'll give you an example. A few years ago I had found a company that in its footnotes said -- what its footnotes were saying was that the basket of currencies that they operated in were weakening against the dollar, but when I turned to the stockholder's equity where they had the cumulative adjustment, that change suggested the opposite. And I couldn't reconcile those two, so I finally called the CFO and he -- when he got -- he said I'll figure it out and get back to you. And he called me back to say that he was disappointed that I didn't understand something that simple. He says we've just simply had that disclosure for the last 10 years. We like it and that's why it's sitting in there --

(Laughter.)

MR. SONDHI: -- which I think was his way of saying, sorry, we missed something.

But the point is that these boilerplate terms, these kinds of things that get into the disclosures and they don't go out -- so there is a danger when something sticks around for too long. So but I would sort of very, very strongly suggest not to have anything that's encouraged.

MR. HARRIS: Well, Joe and Sarah, thank you very much. I think your comment letter is self-explanatory, speaks for itself, and we very much appreciate your having gotten it to us in the timely fashion that you did.

| THE AUDITOR'S REPORT ON AN AUDIT OF FINANCIAL STATEMENTS WHEN THE AUDITOR EXPRESSES AN UNQUALIFIED OPINION<br><br>AND RELATED AMENDMENTS TO PCAOB STANDARDS | PCAOB Release No. 2017-001<br>June 1, 2017<br><br>PCAOB Rulemaking<br>Docket Matter No. 034 |

Summary: The Public Company Accounting Oversight Board ("PCAOB" or "Board") is adopting a new standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, that will replace portions of AS 3101, *Reports on Audited Financial Statements*. The remaining portions of AS 3101 will be redesignated as AS 3105, *Departures from Unqualified Opinions and Other Reporting Circumstances*. The Board is also adopting related amendments to PCAOB standards.

Board Contacts: Martin F. Baumann, Chief Auditor (202/207-9192, baumannm@pcaobus.org); Jennifer Rand, Deputy Chief Auditor (202/207-9206, randj@pcaobus.org); Jessica Watts, Associate Chief Auditor (202/207-9376, wattsj@pcaobus.org); Karen Wiedemann, Associate Counsel (202/591-4411, wiedemannk@pcaobus.org); Elena Bozhkova, Assistant Chief Auditor (202/207-9298, bozhkovae@pcaobus.org); Ekaterina Dizna, Assistant Chief Auditor (202/591-4125, diznae@pcaobus.org); and Andres Vinelli, Chief Economist (202/207-9291, vinellia@pcaobus.org).

**Contents**

## I. Summary

The Board is adopting a new auditor reporting standard, AS 3101, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the "final standard" or "AS 3101") and related amendments to its auditing standards that will require the auditor to provide new information about the audit and make the auditor's report more informative and relevant to investors and other financial statement users. The final standard retains the pass/fail opinion of the existing auditor's report but makes significant changes to the existing auditor's report, including the following:

- Communication of critical audit matters—matters communicated or required to be communicated to the audit committee and that: (1) relate to accounts or disclosures that are material to the financial statements; and (2) involved especially challenging, subjective, or complex auditor judgment;

- Disclosure of auditor tenure—the year in which the auditor began serving consecutively as the company's auditor; and

- Other improvements to the auditor's report—a number of other improvements to the auditor's report to clarify the auditor's role and responsibilities, and make the auditor's report easier to read.

The Board believes that adopting these requirements responds to the strong interest of investors for enhanced communication about the audit and is consistent with its mandate to "protect the interests of investors and further the public interest in the preparation of informative, accurate and independent audit reports."[1]

The Board is adopting the final standard after more than six years of outreach and public comment, including comments from members of the Board's Standing Advisory Group ("SAG") and Investor Advisory Group ("IAG"). The Board has taken into consideration all comments and believes its approach responds to investor requests for additional information about the financial statement audit without imposing requirements beyond the auditor's expertise or mandate.

Investors are the beneficiaries of the audit and the auditor's report is the primary means by which the auditor communicates with them. Currently, however, the auditor's report conveys little of the information obtained and evaluated by the auditor as part of

---

[1] Section 101(a) of the Sarbanes-Oxley Act of 2002 ("Sarbanes-Oxley"), 15 U.S.C. 7211(a).

the audit. And while the auditor's report has generally remained unchanged since the 1940s, companies' operations have become more complex and global, and the financial reporting frameworks have evolved toward an increasing use of estimates, including fair value measurements. As part of the audit, auditors often perform procedures involving challenging, subjective, or complex judgments, but the auditor's report does not communicate this information to investors. Stated differently, the auditor's report does little to address the information asymmetry between investors and auditors,[2] even though investors have consistently asked to hear more from the auditor, an independent third-party expert whose work is undertaken for their benefit.[3] The Board believes that reducing the information asymmetry between investors and auditors should, in turn, reduce the information asymmetry between investors and management. Outside the United States, other regulators and standard setters have already adopted expanded auditor reporting.

The communication of critical audit matters will inform investors and other financial statement users of matters arising from the audit that involved especially challenging, subjective, or complex auditor judgment, and how the auditor addressed these matters. The Board believes that these matters will likely be identified in areas that investors have indicated would be of particular interest to them, such as significant management estimates and judgments made in preparing the financial statements; areas of high financial statement and audit risk; significant unusual transactions; and other significant changes in the financial statements. The final standard is designed to elicit more information about the audit directly from the auditor. The Board believes that the critical audit matter requirements will respond to requests from investors for more information from the auditor while appropriately addressing concerns raised by other commenters.

---

[2] Economists often describe this imbalance, where one party has more or better information than another party, as "information asymmetry." As part of the system of financial reporting, the audit of the financial statements helps reduce the information asymmetry investors face by providing an independent opinion about whether the financial statements are presented fairly in all material respects.

[3] *See* PCAOB IAG survey, *Improving the Auditor's Report* (Mar. 16, 2011) ("IAG 2011 survey"). *See also* CFA Institute's *Usefulness of the Independent Auditor's Report Survey Results* (May 4, 2011), *Independent Auditor's Report Survey Results* (Mar. 31, 2010), and *Independent Auditor's Report Monthly Poll Results* (Mar. 12, 2008) ("CFA survey and poll results"). *See also* Board public meeting transcripts and participant statements (Apr. 2-3, 2014), available on the Board's website in Rulemaking Docket Matter No. 034, *Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments* ("Docket 034").

Investors and investor advocates have suggested a variety of ways in which investors can use the information provided in critical audit matters. In the view of some investors, critical audit matters will add to the total mix of information, providing insights relevant in analyzing and pricing risks in capital valuation and allocation, and contributing to their ability to make investment decisions. Investors also stated that critical audit matters will focus their attention on key financial reporting areas and identify areas that deserve more attention, enhancing the efficiency of investors and others in the consumption of financial information. Some investors believe that critical audit matters will highlight areas that they may wish to emphasize in their engagement with the company and provide important information that they can use in making proxy voting decisions, including ratification of the appointment of auditors.

The final standard also includes a new required statement in the auditor's report disclosing the year in which the auditor began serving consecutively as the company's auditor, as well as a number of other improvements to the auditor's report, such as a statement regarding the requirement for the auditor to be independent. Requiring disclosure of auditor tenure in the auditor's report will make this information readily accessible in a timely way for investors who find it useful. The other improvements to the auditor's report are intended to enhance the user's understanding of the auditor's role and responsibilities related to the audit of the financial statements, make the auditor's report easier to read, and provide a consistent format.

The final standard will generally apply to audits conducted under PCAOB standards. However, communication of critical audit matters is not required for audits of brokers and dealers reporting under the Securities Exchange Act of 1934 (the "Exchange Act") Rule 17a-5; investment companies other than business development companies; employee stock purchase, savings, and similar plans ("benefit plans"); and emerging growth companies ("EGCs"), as defined in Section 3(a)(80) of the Exchange Act. Auditors of these entities may choose to include critical audit matters in the auditor's report voluntarily. The other requirements of the final standard will apply to these audits.

Critical audit matters are determined using a principles-based framework and the Board anticipates that the level of auditor effort will depend on the nature and complexity of the audit.

The Board is adopting a phased approach to the effective dates for the new requirements to provide accounting firms, companies, and audit committees more time to prepare for implementation of the critical audit matter requirements, which are expected to require more effort to implement than the additional improvements to the auditor's report. Subject to approval by the Securities and Exchange Commission ("SEC"), the final standard and amendments will take effect as follows:

- All provisions other than those related to critical audit matters will take effect for audits of fiscal years ending on or after December 15, 2017; and

- Provisions related to critical audit matters will take effect for audits of fiscal years ending on or after June 30, 2019, for large accelerated filers; and for fiscal years ending on or after December 15, 2020, for all other companies to which the requirements apply.

Auditors may elect to comply before the effective date, at any point after SEC approval of the final standard.

## II. <u>Background</u>

### A. Rulemaking History

Changes to the auditor's report have been discussed by several commissions and committees, including the 2008 U.S. Department of the Treasury Advisory Committee on the Auditing Profession ("ACAP").[4] ACAP recommended that the PCAOB consider improvements to the auditor's report, noting that the increasing complexity of global business operations compels a growing use of judgments and estimates, including those related to fair value measurements, and contributes to greater complexity in financial reporting. ACAP said this complexity supported improving the content of the auditor's report beyond the current pass/fail model to include a more relevant discussion about the audit of the financial statements.

The PCAOB commenced its standard-setting project on the auditor's reporting model in 2010 with outreach to different stakeholders, including investors, financial statement preparers, and auditors. During that outreach, many investors expressed dissatisfaction with the content of the existing auditor's report because it provides investors little, if any, information specific to the audit of the company's financial statements. Generally, preparers, audit committee members, and auditors were not supportive of adding company-specific information to the auditor's report, arguing that the company, through its management or audit committee, should be the primary source of the company's financial information. Changes to the auditor's report were also

discussed at the March 2011 IAG meeting.[5] Some investors who participated in that meeting suggested that expanded auditor reporting would have been helpful before and during the 2008 financial crisis.[6] Later in March 2011, the Board held an open meeting to discuss findings from its outreach.[7]

In June 2011, the Board issued a concept release to solicit comment on a number of potential changes to the auditor's report.[8] The Board received 155 comment letters on the concept release. The Board also held a public roundtable in September 2011 to obtain additional insight on the alternatives presented in the concept release.[9] Changes to the auditor's report were also discussed at the November 2011 and 2012 meetings of the Board's SAG.[10]

After considering the results of its outreach and comments on its concept release, in August 2013, the Board proposed an auditing standard that included new requirements for auditors to communicate critical audit matters, as well as additional improvements to the auditor's report.[11] The Board received 248 comment letters on the

proposal. Most commenters generally supported the Board's objective to improve the auditor's report to make it more informative and relevant to financial statement users, but commenters' views varied on the nature and extent of such changes, particularly as to critical audit matters.[12] Investors, analysts, and larger accounting firms generally supported communication of critical audit matters with some modifications, while many smaller accounting firms were less supportive, and preparers and audit committee members generally opposed communication of critical audit matters. Commenters generally supported the additional improvements to the auditor's report other than the disclosure of auditor tenure in the auditor's report, which investors supported and some other commenters opposed or suggested should be provided in a different document, such as the proxy statement.

In April 2014, the Board held a public meeting to obtain further input on the proposal from a diverse group of investors and other financial statement users, preparers, audit committee members, auditors, and others.[13] The proposal was further discussed at the November 2013 and June 2014 SAG meetings, and the October 2013 and 2014 IAG meetings.[14]

In May 2016, the Board issued a reproposal of the auditor reporting standard that modified the proposal in several respects.[15] In particular, the reproposal modified the source, definition, and communication requirements for critical audit matters. The Board received 88 comment letters on the reproposal. The reproposal was discussed at the May 2016 SAG meeting and October 2016 IAG meeting.[16]

[15] *See Proposed Auditing Standard—The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and Related Amendments to PCAOB Standards*; PCAOB Release No. 2016-003 (May 11, 2016) ("reproposal").

[16] *See* SAG (May 18, 2016) and IAG (Oct. 27, 2016) meeting transcripts, available on the Board's website in Docket 034.

Several commenters on the reproposal suggested that the Board engage in further outreach, field testing, or further study before finalizing the standard. One commenter suggested deferral until the SEC completes any rulemaking on its "disclosure effectiveness" initiative. However, other commenters commended the Board on the extensive outreach already performed. The Board believes that its extensive outreach provides an adequate basis to adopt the final standard.

## B. Initiatives of Other Regulators and Standard Setters

### *1. Overview of the Requirements of the IAASB, the EU, and the FRC*

The form and content of the auditor's report have undergone change globally. In recent years, several international regulators and standard setters, including the International Auditing and Assurance Standards Board ("IAASB"), the European Union ("EU"), and the Financial Reporting Council in the United Kingdom ("FRC"), have adopted requirements for expanded auditor reporting that go beyond the binary pass/fail model. While their underlying requirements for expanded auditor reporting differ in the details, there is a common theme in these initiatives: communicating information about audit-specific matters in the auditor's report. In addition to expanded auditor reporting, many of these initiatives also include other changes to the form and content of the auditor's report.

Several commenters have urged the Board to align the final standard with the requirements of other regulators and standard setters. The Board recognizes that the regulatory environments in other jurisdictions are different from the environment in the United States; the Board must address unique U.S. requirements and characteristics in its standard-setting projects. Even so, the Board has considered carefully the efforts undertaken in other jurisdictions, and, as described in more detail below, the final requirements are analogous in many respects to auditor reporting requirements established in other jurisdictions.

*IAASB*. In September 2014, the IAASB adopted changes to the requirements for the auditor's report, including a new requirement for the auditor to communicate "key audit matters" for audits of listed companies.[17] Key audit matters are defined as those matters that, in the auditor's professional judgment, were of most significance in the audit of the financial statements of the current period.[18] Key audit matters are selected

---

[17] The IAASB changes to the auditor's report are effective for audits of financial statements for periods ending on or after December 15, 2016.

[18] *See* paragraph 8 of International Standard on Auditing ("ISA") 701, *Communicating Key Audit Matters in the Independent Auditor's Report*.

from matters communicated with those charged with governance and that required significant auditor attention in performing the audit.[19] The IAASB requires that the description of each key audit matter in the auditor's report include: (1) why the matter was considered to be a key audit matter, (2) how the matter was addressed in the audit, and (3) reference to the related disclosures, if any, in the financial statements.[20]

As part of its auditor reporting project, the IAASB also adopted additional changes to the form and content of the auditor's report. These include a statement that the auditor is independent of the entity in accordance with the relevant ethical requirements relating to the audit,[21] an enhanced description of the responsibilities of the auditor,[22] and requiring the auditor's opinion to be the first paragraph of the auditor's report.[23]

*EU*. In April 2014, the EU adopted legislation creating a number of new requirements, including expanded auditor reporting requirements, for audits of public-interest entities ("PIEs"), such as listed companies, credit institutions, and insurance companies.[24] Under the EU reforms, the auditor's report for a PIE is required to include a description of the most significant assessed risks of material misstatement, including assessed risks of material misstatement due to fraud, as well as a summary of the auditor's response to those risks and, where relevant, key observations arising with respect to those risks. In addition, the EU reforms require a statement that the auditor remained independent of the audited entity and disclosure of auditor tenure.

[20] *See* paragraph 13 of ISA 701.

[21] *See* paragraph 28(c) of ISA 700 (Revised), *Forming an Opinion and Reporting on Financial Statements*.

[22] *See* paragraph 37 of ISA 700.

[23] *See* paragraph 23 of ISA 700.

[24] *See* Article 10, *Audit Report*, of Regulation (EU) No 537/2014 of the European Parliament and of the Council ("Regulation (EU) No 537/2014") (Apr. 16, 2014). EU member states had until June 2016 to adopt the provisions of the EU legislation into their own national laws and rules. Information on member state implementation is available in the "Audit reform in the EU" section of the European Union's webpage.

*FRC*. In June 2013, the FRC revised its auditor reporting requirements for entities that apply the UK Corporate Governance Code.[25] The auditors of those entities were required, among other things, to describe the risks of material misstatement that had the greatest effect on: (1) the overall audit strategy; (2) the allocation of resources in the audit; and (3) directing the efforts of the engagement team. In addition, auditors were required to provide an explanation of how the scope of the audit addressed the risks.[26]

In April 2016, the FRC adopted a final rule, which applies to all listed entities, updating its 2013 auditor reporting requirements to incorporate the EU[27] and the IAASB requirements.[28] Under the final rule, the FRC adopted the IAASB's definition of key audit matters. In the application and other explanatory material on the definition of key audit matters, the FRC identified risks of material misstatement, as determined under both its existing requirements and those of the EU, as key audit matters under that definition. When the FRC proposed these rule changes in September 2015, it stated that it did not expect the incorporation of its own requirements and those of the EU to result in an increase in the number of key audit matters communicated in the auditor's report over what would be required by the IAASB standard alone.[29]

---

[25] These entities include companies with a premium listing of equity shares on the London Stock Exchange, regardless of whether they are incorporated in the U.K. or elsewhere. The changes made to the auditor's report were designed to complement other changes made to the UK Corporate Governance Code that require the audit committee to describe significant issues it considered relating to the financial statements. *See* Section C.3.8 of FRC UK Corporate Governance Code (Sept. 2012).

[26] *See* paragraphs 19A–B of ISA (UK and Ireland) 700 (Revised June 2013), *The Independent Auditor's Report on Financial Statements* ("UK ISA 700 (2013)"). The FRC 2013 requirements became effective for audits of financial statements for periods beginning on or after October 1, 2012.

[27] In response to questions about the implications of the June 2016 UK referendum decision to leave the EU, the FRC has stated: "Our regulatory framework is unchanged and we will continue to apply it." *See FRC statement following the referendum vote to leave the EU* (June 24, 2016).

[28] *See* the FRC's Final Draft, ISA (UK and Ireland) 701*, Communicating Key Audit Matters in the Independent Auditor's Report* (Apr. 2016). This rule is effective for audits of financial statements for periods beginning on or after June 17, 2016.

[29] *See* FRC, *Enhancing Confidence in Audit: Proposed Revisions to the Ethical Standard, Auditing Standards, UK Corporate Governance Code and Guidance*

*2. Comparison of the Board's Final Standard to Other Requirements*

Even though the underlying auditor reporting requirements of other regulators and standard setters are different in the details, in many respects, the initiatives are analogous to the Board's final standard. All of these initiatives result in expanding the auditor's report beyond the traditional pass/fail model to communicate information specific to the particular audit. Although the processes of identifying these matters vary across jurisdictions, there are commonalities in the underlying criteria regarding matters to be communicated and the communication requirements, such that expanded auditor reporting could result in the communication of many of the same matters under the various approaches.

Sections IV and V include descriptions of the IAASB, EU, and FRC requirements that are analogous to the key provisions of the final standard. In April 2016, the FRC adopted a final rule that updated its 2013 auditor reporting requirements to incorporate the EU and the IAASB requirements, but auditor reporting under that final rule has not occurred yet. Because the FRC 2013 requirements govern the expanded auditor reporting that has occurred in the United Kingdom to date and are the subject of the FRC reports and academic studies described elsewhere in this release, the FRC 2013 requirements are used as a basis for comparison.

The IAASB's standard is most similar to the Board's final standard. It requires the auditor to communicate "key audit matters" selected from matters communicated with those charged with governance. In May 2016, the IAASB published a comparison between its standard and the Board's reproposal, which noted many similarities between the requirements of key audit matters and critical audit matters, including the framework for determination of the matters to be communicated, the considerations underlying the determination requirement, and communication requirements.[30] Many commenters on the reproposal were supportive of the Board's closer alignment with the IAASB.

The FRC, under its 2013 requirements, and the EU start with the risks of material misstatement and contemplate a different process for determining matters to be communicated than the Board's final standard. The FRC has stated that key audit matters under the IAASB standard are broadly equivalent to the assessed risks of material misstatement included in the UK ISA 700 (2013).[31] Under the Board's final

---

*on Audit Committees* (Sept. 2015).

[30] *See* IAASB, *The New Auditor's Report: A Comparison between the ISAs and the US PCAOB Reproposal* (May 2016).

[31] *See* FRC, *Extended Auditor's Reports, A Further Review of Experience*

standard, the auditor's assessment of the risks of material misstatement is one of the factors for the auditor to consider in determining critical audit matters.

The IAASB and the FRC 2013 requirements are accompanied by application and other explanatory materials that provide further guidance on the standards. Because these materials are not part of the requirements, they are not addressed in the descriptions of the requirements of other regulators and standard setters presented in Sections IV and V.

## III. Overview of the Final Standard

The Board is adopting a new auditor reporting standard, which is attached as Appendix 1. The final standard retains the pass/fail opinion of the existing auditor's report but makes significant changes to the existing auditor's report, including the following:

- *Critical audit matters* (*see* chart on page 14)—requires the auditor to communicate in the auditor's report any critical audit matters arising from the current period's audit of the financial statements or state that the auditor determined that there are no critical audit matters:
    - A critical audit matter is defined as a matter that was communicated or required to be communicated to the audit committee and that: (1) relates to accounts or disclosures that are material to the financial statements and (2) involved especially challenging, subjective, or complex auditor judgment.
    - In determining whether a matter involved especially challenging, subjective, or complex auditor judgment, the auditor takes into account, alone or in combination, certain factors, including, but not limited to:
        - The auditor's assessment of the risks of material misstatement, including significant risks;
        - The degree of auditor judgment related to areas in the financial statements that involved the application of significant judgment or estimation by management, including estimates with significant measurement uncertainty;

---

(Jan. 2016) ("FRC 2016 Report") at 7.

        - The nature and timing of significant unusual transactions and the extent of audit effort and judgment related to these transactions;

        - The degree of auditor subjectivity in applying audit procedures to address the matter or in evaluating the results of those procedures;

        - The nature and extent of audit effort required to address the matter, including the extent of specialized skill or knowledge needed or the nature of consultations outside the engagement team regarding the matter; and

        - The nature of audit evidence obtained regarding the matter.

    - The communication of each critical audit matter includes:

        - Identifying the critical audit matter;

        - Describing the principal considerations that led the auditor to determine that the matter is a critical audit matter;

        - Describing how the critical audit matter was addressed in the audit; and

        - Referring to the relevant financial statement accounts or disclosures.

    - The documentation of critical audit matters requires that for each matter arising from the audit of the financial statements that (a) was communicated or required to be communicated to the audit committee, and (b) relates to accounts or disclosures that are material to the financial statements, the auditor documents whether or not the matter was determined to be a critical audit matter (i.e., involved especially challenging, subjective, or complex auditor judgment) and the basis for such determination.

- *Additional Improvements to the Auditor's Report*—the final standard also includes a number of other improvements to the auditor's report that are primarily intended to clarify the auditor's role and responsibilities related to the audit of the financial statements, provide additional information about the auditor, and make the auditor's report easier to read:

    - *Auditor tenure*—a statement disclosing the year in which the auditor began serving consecutively as the company's auditor;

- o *Independence*—a statement that the auditor is required to be independent;

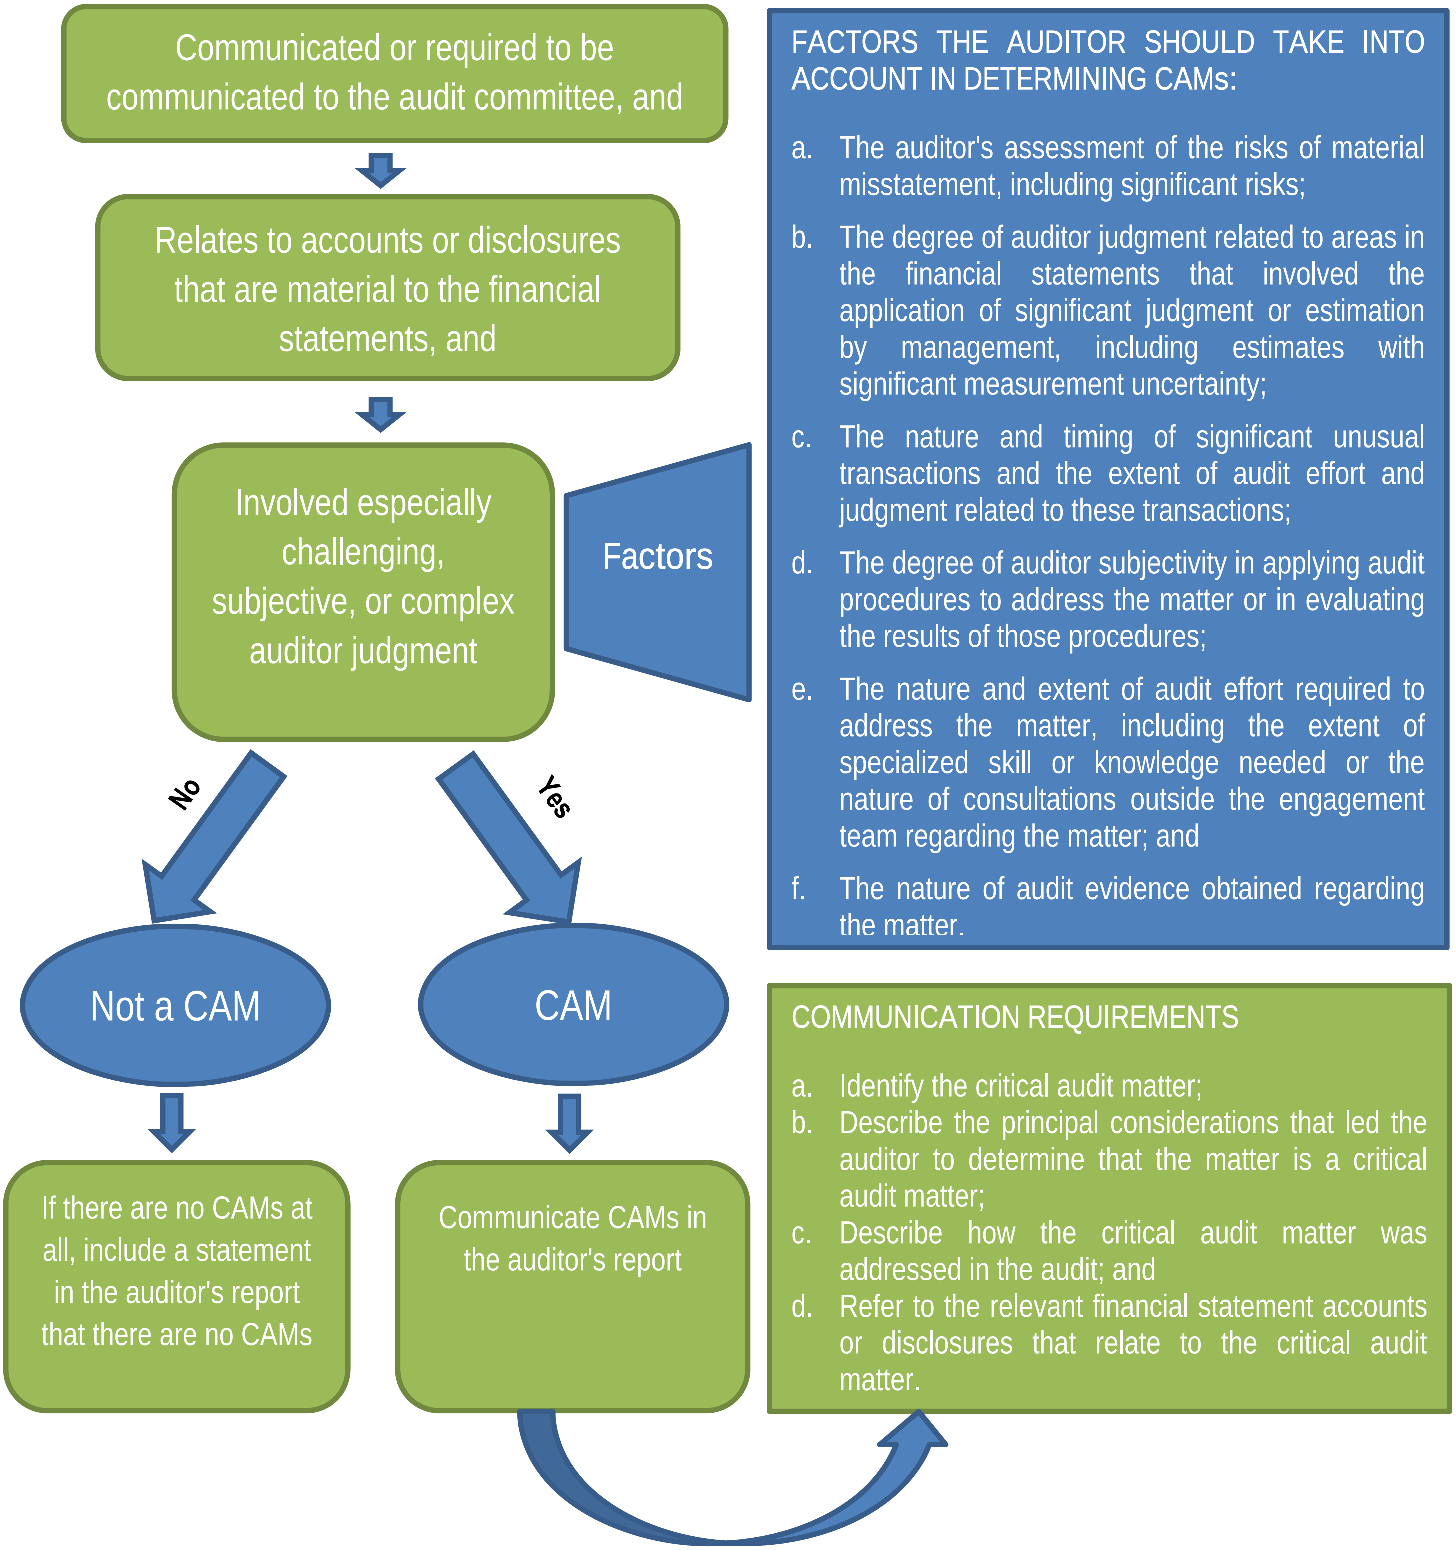
- o *Addressee*—the auditor's report will be addressed to the company's shareholders and board of directors or equivalents (additional addressees are also permitted);

- o *Enhancements to basic elements*—certain standardized language in the auditor's report has been changed, including adding the phrase *whether due to error or fraud*, when describing the auditor's responsibility under PCAOB standards to obtain reasonable assurance about whether the financial statements are free of material misstatements; and

- o *Standardized form of the auditor's report*—the opinion will appear in the first section of the auditor's report and section titles have been added to guide the reader.

The Board intends to monitor the results of implementation, including consideration of any unintended consequences.

**Determining and Communicating Critical Audit Matters ("CAMs")**



## IV. Discussion of the Final Standard

### A. Critical Audit Matters

Under the final standard, the auditor will be required to communicate critical audit matters in the auditor's report in order to provide more information about the audit and make the auditor's report more informative and relevant to investors and other financial statement users.

Investor, investor advocate, and analyst commenters generally supported the reproposed requirement to communicate critical audit matters. Some of them stated that the communication of critical audit matters would be relevant to investors and other financial statement users by informing them of issues identified in the audit that were significant to the auditor, focusing attention on issues that would be pertinent to understanding the financial statements, and enhancing investor confidence in the financial statements.

The larger and some smaller accounting firms generally supported including critical audit matters in the auditor's report with some modification of the reproposed requirements. Other commenters, including other smaller accounting firms, companies, and audit committee members, did not support the requirements. Some of these commenters asserted that critical audit matters would not provide relevant information to investors, may be duplicative of the company's disclosure, may result in disclosing information not otherwise required to be disclosed, could increase cost, or could delay completion of the audit.

Other commenters suggested that the Board align the definition of critical audit matters with the IAASB's definition of key audit matters to enhance overall consistency.

Consistent with the Board's statutory mandate under Section 101(a) of Sarbanes-Oxley and in response to the ACAP recommendation and continued investor support for expanded auditor reporting, the final standard includes the requirement to communicate critical audit matters substantially as reproposed. The Board has taken into consideration all comments, including concerns raised by some commenters, which are described in more detail below, and believes its approach responds to investor requests for additional information about the financial statement audit without imposing requirements beyond the auditor's expertise or mandate. The communication of critical audit matters will inform investors and other financial statement users of matters arising from the audit that involved especially challenging, subjective, or complex auditor judgment, and how the auditor addressed those matters.

Critical audit matters are determined using a principles-based framework and the Board anticipates that the level of auditor effort will depend on the nature and complexity of the audit. This would in turn depend on the complexity of the operations and accounting and control systems of the company.

### *1. Determination of Critical Audit Matters*

#### a. Definition of Critical Audit Matter

The reproposed standard defined a critical audit matter as any matter arising from the audit of the financial statements that was *communicated or required to be communicated to the audit committee* and that *relates to accounts or disclosures that are material to the financial statements* and *involved especially challenging, subjective, or complex auditor judgment*. For the reasons explained below, the Board is adopting the definition as reproposed.

##### i. Communicated or Required to be Communicated to the Audit Committee

Most commenters agreed that matters communicated or required to be communicated to the audit committee would be the appropriate source for critical audit matters. These commenters stated that matters communicated to the audit committee are the most meaningful to users of the financial statements and using them as the source of critical audit matters would assist the auditor in determining critical audit matters in the most efficient and effective manner.

PCAOB standards require the auditor to communicate to the audit committee, among other things:

- Significant risks identified by the auditor;
- Certain matters regarding the company's accounting policies, practices, and estimates;
- Significant unusual transactions;
- Certain matters regarding the auditor's evaluation of the company's relationships and transactions with related parties; and
- Other matters arising from the audit that are significant to the oversight of the company's financial reporting process.

Several commenters suggested revising the source of critical audit matters. Some suggested narrowing the source of critical audit matters only to matters required to be communicated to the audit committee, on the basis that this would avoid chilling communications regarding non-required matters and reduce the burden of documentation. Other commenters suggested that the Board consider, as an alternative, selecting critical audit matters only from critical accounting policies and estimates disclosed by management, which some said would eliminate the potential for the auditor to become the original source of information, as well as the potential for conflicting disclosures between the auditor and management. Some commenters also recommended not specifying the source for critical audit matters and leaving it up to auditor judgment. Other commenters suggested broadening the source of critical audit matters to include matters documented in the engagement completion document, reviewed by the engagement quality reviewer, or communicated with management and other members of the board of directors, as the Board had originally proposed in 2013.

The final standard retains the source of critical audit matters as reproposed. Critical audit matters will be drawn from matters required to be communicated to the audit committee (even if not actually communicated) and matters actually communicated (even if not required). The source will include auditor communication requirements under AS 1301, *Communications with Audit Committees*, other PCAOB rules and standards,[32] and applicable law,[33] as well as communications made to the audit committee that were not required. This approach scopes in the broadest population of audit committee communications and will not require the auditor to determine whether matters communicated to the audit committee were required to be communicated. However, it seems likely that matters that meet the definition of a critical audit matter will usually relate to areas that are required to be communicated to the audit committee, either under a specific communication requirement or the broad provisions of paragraph .24 of AS 1301, which requires communication of matters arising from the audit that are significant to audit committee oversight of the financial reporting process.

Required communications to the audit committee generally include the areas in which investors have expressed particular interest in obtaining information in the auditor's report, such as significant management estimates and judgments made in preparing the financial statements; areas of high financial statement and audit risk; significant unusual transactions; and other significant changes in the financial statements.

---

[32] *See* Appendix B of AS 1301, which identifies other PCAOB rules and standards that require audit committee communication, such as AS 2410, *Related Parties*, and AS 2502, *Auditing Fair Value Measurements and Disclosures*.

[33] *See, e.g.*, Section 10A(k) of the Exchange Act, 15 U.S.C. 78j-1(k); Rule 2-07 of Regulation S-X, 17 CFR 210.2-07; and Exchange Act Rule 10A-3, 17 CFR 240.10A-3.

The final standard does not limit the source of critical audit matters to critical accounting policies and estimates because the Board does not believe this would be an appropriate starting point in light of investor interest in a broader range of topics related to the audit. Additionally, the final standard does not broaden the source, as proposed in 2013, to also include matters documented in the engagement completion document and reviewed by the engagement quality reviewer because it is unlikely that a matter that is determined to be a critical audit matter would not have already been communicated to the audit committee.

Some commenters suggested that using audit committee communications as the source for critical audit matters could impair the relationship between auditor, management, and the audit committee (e.g., chill communications, give rise to conflict, or cause auditors to communicate more than they otherwise would). However, other commenters argued that critical audit matters would enhance, not impair, communications between auditors, investors, and those charged with governance (including audit committees). For matters required to be communicated to the audit committee, the Board believes there should not be a chilling effect or reduced communications to the audit committee because the requirements for such communications are not changing. It would seem that any chilling effect would more likely relate to matters that are not explicitly required to be communicated to the audit committee, although given the broad requirements of AS 1301 (particularly paragraph .24), the Board believes that there may be few, if any, relevant communications affected by that possibility.

Some commenters suggested excluding certain required audit committee communications from the source of critical audit matters, generally because these communications relate to sensitive areas and may result in the auditor communicating information not disclosed by management. Suggestions included: corrected and uncorrected misstatements, qualitative aspects of significant accounting policies and practices, alternative treatments within generally accepted accounting principles ("GAAP") for policies and practices related to material accounts, violations or possible violations of law or regulation, independence considerations, disagreements with management, other material written communications between the auditor and management, overall planned audit strategy, delays encountered in the audit, and competency issues of management. Other commenters argued that no audit committee communications should be specifically excluded from consideration as a source of potential critical audit matters.

The final standard does not exclude any required audit committee communications from the source of critical audit matters. To the extent that any such communication met the critical audit matter definition (including that it (1) relates to accounts or disclosures that are material to the financial statements and (2) involved especially challenging, subjective, or complex auditor judgment), the Board believes it will be an appropriate subject for an auditor to communicate as a critical audit matter.

ii. Relates to Accounts or Disclosures That Are Material to the Financial Statements

The materiality component of the reproposed definition of critical audit matters—that the matter "relates to accounts or disclosures that are material[34] to the financial statements"— was intended to respond to investor requests for informative and relevant auditor's reports while, at the same time, addressing other commenters' concerns regarding auditor communication of immaterial information that management is not required to disclose under the applicable financial reporting framework and SEC reporting requirements.

Some investor commenters suggested removing the materiality component of the reproposed definition of critical audit matters, arguing that it made the definition too narrow and would unnecessarily exclude relevant information. Some of these commenters observed that many cases of material accounting problems or fraud started as 'immaterial' to the financial statements and built over time, and that such matters may not meet the reproposed definition of a critical audit matter because of the materiality component.

Other commenters, primarily companies and accounting firms, argued that the reproposed definition was too broad and suggested modifying the materiality component such that a critical audit matter would itself have to be material to the financial statements as a whole, rather than relating to accounts or disclosures that are material to the financial statements. These commenters expressed concern that the phrase "relates to accounts or disclosures that are material to the financial statements" could apply to too many matters, resulting in the auditor disclosing immaterial matters that would not otherwise be disclosed by management, or give the impression of a piecemeal opinion.

---

[34] The definition of materiality is established under the U.S. federal securities laws. In interpreting those laws, the U.S. Supreme Court has held that a fact is material if there is "a substantial likelihood that the . . . fact would have been viewed by the reasonable investor as having significantly altered the 'total mix' of information made available." *See TSC Industries v. Northway, Inc.*, 426 U.S. 438, 449 (1976). *See also Basic, Inc. v. Levinson*, 485 U.S. 224, 231-32 (1988). As the Supreme Court has further explained, determinations of materiality require "delicate assessments of the inferences a 'reasonable shareholder' would draw from a given set of facts and the significance of those inferences to him . . ." *TSC Industries*, 426 U.S. at 450.

After consideration of comments, the Board has determined to adopt the materiality component in the final definition of critical audit matter as reproposed. In the Board's view, the purpose of the standard—making the auditor's report more useful and informative to investors—is better served by auditor communication of matters related to accounts or disclosures that are material to the financial statements. As one commenter noted, limiting the source of critical audit matters and adding a materiality component that directly relates to accounts and disclosures "would allow the auditor to emphasize the most important matters to users of the financial statements, and limit the inclusion of an overabundance of [critical audit matters] within the auditor's report that could deemphasize their importance."[35]

At the same time, in the Board's view, limiting critical audit matters to those that are, in and of themselves, material to the financial statements as a whole would not serve the intended purpose of the standard. If the auditor were required to determine that a critical audit matter itself is material, rather than related to an account or disclosure that is material, it is likely that fewer matters would meet the definition of a critical audit matter and, thus, investors would likely receive less, and less audit-specific, information than under the standard as adopted.

Accordingly, as in the reproposal, the final standard provides that each critical audit matter relates to accounts or disclosures that are material to the financial statements. Consistent with the reproposal, "relates to" clarifies that the critical audit matter could be a component of a material account or disclosure and does not necessarily need to correspond to the entire account or disclosure in the financial statements. For example, the auditor's evaluation of the company's goodwill impairment assessment could be a critical audit matter if goodwill was material to the financial statements, even if there was no impairment; it would relate to goodwill recorded on the balance sheet and the disclosure in the notes to the financial statements about the company's impairment policy and goodwill. In addition, a critical audit matter may not necessarily relate to a single account or disclosure but could have a pervasive effect on the financial statements if it relates to many accounts or disclosures. For example, the auditor's evaluation of the company's ability to continue as a going concern could also represent a critical audit matter depending on the circumstances of a particular audit.

On the other hand, a matter that does not relate to accounts or disclosures that are material to the financial statements cannot be a critical audit matter. For example, a potential loss contingency that was communicated to the audit committee, but that was

---

[35] *See* letter from Dixon Hughes Goodman, LLP (Aug. 15, 2016) at 2, available on the Board's website in Docket 034 (also noting that there is a continuing risk that the auditor could disclose information about the company that was not previously disclosed by the company).

determined to be remote and was not recorded in the financial statements or otherwise disclosed under the applicable financial reporting framework, would not meet the definition of a critical audit matter; it does not relate to an account or disclosure in the financial statements, even if it involved especially challenging auditor judgment. The same rationale would apply to a potential illegal act if an appropriate determination had been made that no disclosure of it was required in the financial statements; the matter would not relate to an account or disclosure that is material to the financial statements.

For the same reason, the determination that there is a significant deficiency in internal control over financial reporting, in and of itself, cannot be a critical audit matter; such determination, in and of itself, does not relate to an account or disclosure that is material to the financial statements as no disclosure of the determination is required. A significant deficiency could, however, be among the principal considerations that led the auditor to determine that a matter is a critical audit matter.[36]

iii. Involved Especially Challenging, Subjective, or Complex Auditor Judgment

Many commenters supported including "matters that involved especially challenging, subjective, or complex auditor judgment" in the reproposed definition of a critical audit matter. Other commenters argued that the phrase "especially challenging, subjective, or complex auditor judgment" is broad and subjective and would lead to inconsistent application of the reproposed definition. For example, some commenters said that critical audit matters would vary based on the experience and competence of the auditor, even if the underlying facts and circumstances were the same. One commenter urged disclosure of the auditor's perspective on material related party transactions. Another commenter suggested that the standard include a note stating that it is expected that in most audits, financial statement matters involving the application of significant judgment or estimation by management would involve especially challenging, subjective, or complex auditor judgment.

Several commenters suggested using the IAASB's definition of key audit matters, which includes those matters that were of most significance in the audit of the financial statements and that required significant auditor attention. One commenter argued that this would avoid reliance on the auditor's determination of whether a matter involved especially challenging, subjective, or complex auditor judgment, which the commenter said would give auditors too much discretion.

---

[36] *See* section IV.A.2.c.i for additional considerations related to auditor disclosure of original information.

After consideration of comments, the Board is adopting this component of the definition of critical audit matter as reproposed, namely "matters that involved especially challenging, subjective, or complex auditor judgment." This grounds the definition in the auditor's expertise and judgment, which is directly responsive to investor requests for information from the auditor's point of view. Thus, the Board believes that this definition will focus critical audit matters in areas where investors will particularly benefit from expanded reporting by the auditor.

The determination of critical audit matters is principles-based and the final standard does not specify any items that would always constitute critical audit matters. For example, the standard does not provide that all matters determined to be "significant risks" under PCAOB standards would be critical audit matters.[37] Some significant risks may be determined to be critical audit matters, but not every significant risk would involve especially challenging, subjective, or complex auditor judgment. To illustrate, improper revenue recognition is a presumed fraud risk and all fraud risks are significant risks;[38] however, if a matter related to revenue recognition does not involve especially challenging, subjective, or complex auditor judgment, it will not be a critical audit matter. Similarly, the final standard does not provide, as some commenters suggested, that material related party transactions or matters involving the application of significant judgment or estimation by management always constitute critical audit matters. The auditor must determine, in the context of the specific audit, that a matter involved especially challenging, subjective, or complex auditor judgment. In addition, focusing on auditor judgment should limit the extent to which expanded auditor reporting could become duplicative of management's reporting. To the extent that critical audit matters reflect differences in auditors' experience and competence, this in itself should also be informative.

b. Factors

The reproposal included the following nonexclusive list of factors for the auditor to take into account, together with audit-specific factors, when determining whether a matter involved especially challenging, subjective, or complex auditor judgment:

a. The auditor's assessment of the risks of material misstatement, including significant risks;

---

[37] A significant risk is a "risk of material misstatement that requires special audit consideration." Paragraph .A5 of AS 2110, *Identifying and Assessing Risks of Material Misstatement*.

[38] *See* AS 2110.71.

b. The degree of auditor subjectivity in determining or applying audit procedures to address the matter or in evaluating the results of those procedures;

c. The nature and extent of audit effort required to address the matter, including the extent of specialized skill or knowledge needed or the nature of consultations outside the engagement team regarding the matter;

d. The degree of auditor judgment related to areas in the financial statements that involved the application of significant judgment or estimation by management, including estimates with significant measurement uncertainty;

e. The nature and timing of significant unusual transactions and the extent of audit effort and judgment related to these transactions; and

f. The nature of audit evidence obtained regarding the matter.

Commenters in general agreed that including such factors would assist the auditor in determining critical audit matters.

Some commenters suggested changes to better align the factors with areas of complex management judgment, to reduce the risk that the auditor would be the source of original information, to clarify the linkage of procedures performed by the auditor and sufficient appropriate audit evidence obtained in performing those procedures, and to focus the auditor on the audit procedures executed to obtain sufficient and appropriate audit evidence rather than audit strategy decisions. Some commenters suggested harmonizing the factors with the IAASB's factors for determining key audit matters.

After considering the comments received, the Board has modified the factors by reordering them and revising the factor relating to the degree of auditor subjectivity (factor b above) to refer to the application (rather than determination) of audit procedures, which focuses it more clearly on the performance of the audit rather than audit strategy.

Some commenters suggested that the factor pertaining to the nature and extent of the audit effort (factor c) be revised to relate to the nature and extent of audit effort required to obtain sufficient appropriate audit evidence to address a matter and the factor pertaining to the nature of audit evidence (factor f) be deleted to clarify that obtaining audit evidence is a component of audit effort. The final standard does not change factor c as suggested because it would inappropriately narrow the factor exclusively to considerations related to obtaining audit evidence rather than the nature of the overall audit effort. Additionally, the Board determined to retain factor f as a stand-alone factor because, as stated in the reproposal, in the limited implementation trial conducted by several accounting firms, this factor appeared to be one of the most useful in determining critical audit matters.[39]

A commenter recommended including a factor based on the extent of interaction with the audit committee. The final standard does not include this factor because the extent of interaction might not be a meaningful indicator of the complexity or subjectivity of the matter and it could create incentives to limit communication between the auditor and the audit committee.

One commenter did not agree with elimination of two proposed factors that related to the severity of control deficiencies and corrected and uncorrected misstatements. These factors were eliminated from the reproposal in response to comments that the factors would lead the auditor to determine matters as critical audit matters in areas where the company has no existing reporting obligation, or where the company has determined that the matters are not material and therefore do not require disclosure under the financial reporting framework. For these reasons, the final standard does not include these factors.

Under the final standard, once the auditor identifies a matter communicated or required to be communicated to the audit committee that relates to accounts or disclosures that are material to the company's financial statements, the auditor should take into account the following nonexclusive list of factors, as well as other audit-specific factors, when determining whether a matter involved especially challenging, subjective, or complex auditor judgment:

a. The auditor's assessment of the risks of material misstatement, including significant risks;

b. The degree of auditor judgment related to areas in the financial statements that involved the application of significant judgment or estimation by management, including estimates with significant measurement uncertainty;

c. The nature and timing of significant unusual transactions and the extent of audit effort and judgment related to these transactions;

---

39 *See* letter from the Center for Audit Quality (June 19, 2014) at 5, available on the Board's website in Docket 034.

d. The degree of auditor subjectivity in applying audit procedures to address the matter or in evaluating the results of those procedures;

e. The nature and extent of audit effort required to address the matter, including the extent of specialized skill or knowledge needed or the nature of consultations outside the engagement team regarding the matter; and

f. The nature of audit evidence obtained regarding the matter.

The determination should be made in the context of the particular audit, with the aim of providing audit-specific information rather than a discussion of generic risks. The factors provide a principles-based framework for the auditor to use in assessing whether a matter involved especially challenging, subjective, or complex auditor judgment. Depending on the matter, the auditor's determination that a matter is a critical audit matter might be based on one or more of these factors, other factors specific to the audit, or a combination.

c. Audit Period Covered by Critical Audit Matters

The reproposal would have required the auditor to communicate critical audit matters for the audit of the current period's financial statements. Because the communication of critical audit matters for prior periods might also be useful to investors and other financial statement users in certain situations, the reproposed standard provided that the auditor may communicate critical audit matters relating to a prior period when: (1) the prior period's financial statements are made public for the first time, such as in an initial public offering, or (2) issuing an auditor's report on the prior period's financial statements because the previously issued auditor's report could no longer be relied upon.

Some commenters generally supported communicating critical audit matters for only the current period's financial statements or for all periods if audited financial statements have not been made public previously. Other commenters supported communication of critical audit matters for all periods presented along with an explanation if prior year critical audit matters are not repeated in the current year. Yet another commenter stated that the auditor should be encouraged to use judgment as to whether to include critical audit matters for prior periods and not limit the consideration only to the circumstances described in the reproposal.

The final standard retains the requirement to communicate critical audit matters only for the current audit period. While most companies' financial statements are presented on a comparative basis, and thus most auditor's reports cover a similar period, requiring auditors to communicate critical audit matters for the current period, rather than for all periods presented, will provide relevant information about the most recent audit and is intended to reflect a cost-sensitive approach to auditor reporting. In addition, investors and other financial statement users will be able to look at prior years' filings to analyze critical audit matters over time. However, the auditor could choose to include critical audit matters for prior periods. The final standard clarifies that the two situations relating to a prior period are examples rather than the only situations in which a critical audit matter for a prior period may be communicated.

As noted in the reproposal, if the auditor's report is dual-dated, the auditor will determine whether the new information for which the auditor's report is dual-dated gives rise to any additional critical audit matters.

In situations in which a predecessor auditor has been asked to reissue its auditor's report, the communication of critical audit matters for the prior period need not be repeated because it is only required for the current year. However, the predecessor auditor could choose to include prior year critical audit matters in the reissued auditor's report.

*Requirements of Other Regulators and Standard Setters*

*IAASB.* Under the IAASB's standard, "key audit matters" are defined as those matters that, in the auditor's professional judgment, were of most significance in the audit of the financial statements of the current period. Key audit matters are determined using a two-step process. First, the auditor identifies the matters communicated with those charged with governance[40] that required significant auditor attention in performing the audit, taking into account:

- Areas of higher assessed risks of material misstatement, or significant risks;
- Significant auditor judgments relating to areas in the financial statements that involved significant management judgment, including accounting estimates that have been identified as having high estimation uncertainty; and
- The effect on the audit of significant events or transactions that occurred during the period.[41]

---

[40] *See* paragraph 8 of ISA 701. *See also* ISA 260, *Communication with Those Charged with Governance*, which provides requirements for auditor communications with those charged with governance.

[41] *See* paragraph 9 of ISA 701.

Second, of the matters that required significant auditor attention, the auditor identifies those of most significance in the audit as the key audit matters.[42] The IAASB requires the communication of key audit matters for the current period only.[43]

*EU.* The EU requires the auditor to describe the most significant assessed risks of material misstatement, including assessed risks of material misstatement due to fraud.[44] The EU does not specify the period for which these need to be described.

*FRC*. The FRC requires the auditor to describe the risks of material misstatement that had the greatest effect on: (1) the overall audit strategy; (2) the allocation of resources in the audit; and (3) directing the efforts of the engagement team.[45] The FRC does not specify the period for which these need to be described.

*2. Communication of Critical Audit Matters*

Under the reproposal, the auditor would have been required to include introductory language in the auditor's report preceding the communication of critical audit matters and to communicate critical audit matters by identifying each matter, describing the auditor's principal considerations for determining that the matter was a critical audit matter, describing how the critical audit matter was addressed in the audit, and referring to the relevant financial statement accounts and disclosures.

Comments varied on the reproposed requirements for communication of critical audit matters and the level of detail the auditor should provide, including whether the auditor should be permitted to provide information about the company that has not been previously disclosed by the company (which commenters referred to as "original information"). Commenters generally agreed with identifying each critical audit matter and referring to the relevant financial statement accounts and disclosures. One commenter suggested removing the requirements to describe the considerations for determining that a matter was a critical audit matter and how the critical audit matter was addressed in the audit. While some commenters stated that the proposed requirements regarding auditor's communication of critical audit matters are sufficiently clear, many suggested improvements to some of the components of the communication

[43] *See* paragraphs 8 and 10 of ISA 701.

[44] *See* requirements in 2(c) of Article 10, *Audit Report*, of Regulation (EU) No 537/2014.

[45] *See* paragraph 19A of UK ISA 700 (2013).

requirements. After consideration of comments, the Board has made some enhancements to the communication requirements, as described below.

a. Introductory Language

The reproposed standard provided introductory language to be included in the "Critical Audit Matters" section of the auditor's report indicating that critical audit matters did not alter the opinion on the financial statements and that the auditor was not providing a separate opinion on the critical audit matters. Some commenters supported the introductory language on the basis that it could minimize users' potential misunderstanding of the critical audit matters.

Some commenters suggested additions to the introductory language to emphasize that critical audit matters are subjective and may not represent the most important aspects of the financial statements, to clarify that the description of procedures should not be taken as indicative of results of any individual procedure, or to limit reliance on critical audit matters by adding language similar to that used in a report on an audit of internal control over financial reporting ("ICFR").[46] The introductory language in the final standard does not include the suggested additions because such language could be interpreted as disclaiming or inappropriately minimizing the communication of critical audit matters.

Other commenters suggested minor revisions in the introductory language to refer to the "communication of critical audit matters" rather than the critical audit matters themselves. In response to this comment, the required introductory language in the final standard has been revised as follows (additions are <u>underlined</u> and deletions are struck through):

> The critical audit matters communicated below are matters arising from the current period audit <u>of the financial statements</u> that were communicated or required to be communicated to the audit committee and that: (1) relate to accounts or disclosures that are material to the financial statements and (2) involved our especially challenging, subjective, or complex judgments. <u>The</u>

[46] The auditor's report on the audit of internal control over financial reporting requires a paragraph stating that, "because of inherent limitations, internal control over financial reporting may not prevent or detect misstatements and that projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate." *See* paragraph .85j of AS 2201, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*.

communication of ~~C~~critical audit matters do<u>es</u> not alter in any way our opinion on the financial statements, taken as a whole, and we ~~do~~ <u>are</u> not, <u>by communicating the critical audit matters below</u>, ~~provide~~ <u>providing</u> separate opinions on the critical audit matters or on the accounts or disclosures to which they relate.

b. Communication Requirements

The reproposal required that, for each critical audit matter, the auditor would:

- Identify the critical audit matter;
- Describe the principal considerations that led the auditor to determine that the matter is a critical audit matter;
- Describe how the critical audit matter was addressed in the audit; and
- Refer to the relevant financial statement accounts and disclosures that relate to the critical audit matter.

As discussed in more detail below, these requirements have been adopted substantially as reproposed.[47]

*Identify the Critical Audit Matter and Describe the Principal Considerations that Led the Auditor to Determine that the Matter is a Critical Audit Matter*

Many commenters who addressed this topic supported the identification of the critical audit matter and limiting the description to "the principal considerations" that led the auditor to determine that the matter is a critical audit matter, and those aspects of the communication requirements are adopted as reproposed. The auditor's description of the principal considerations should be specific to the circumstances and provide a clear, concise, and understandable discussion of why the matter involved especially

[47] The reproposing release included two illustrative examples of the communication of critical audit matters. *See* PCAOB Release No. 2016-003, Section IV.A.2.b. Given the principles-based nature of the requirements for critical audit matters and the objective of providing tailored, audit-specific information, the examples were intended to function as illustrations of how critical audit matters could be communicated, and not as templates for how critical audit matters should be communicated. Comments received on these examples were taken into account in the Board’s consideration of the final standard. Illustrative examples do not appear in the adopting release because the Board believes auditors should provide tailored, audit-specific information when communicating critical audit matters in the auditor’s report.

challenging, subjective, or complex auditor judgment. It is expected that the communication will be tailored to the audit to avoid standardized language and to reflect the specific circumstances of the matter.

*Describe How the Critical Audit Matter was Addressed in the Audit*

The reproposed standard included a new requirement for the auditor to describe how the critical audit matter was addressed in the audit. While the standard did not specify how this should be done, the reproposing release provided four examples of potential approaches to such descriptions: (1) the auditor's response or approach that was most relevant to the matter; (2) a brief overview of the procedures performed; (3) an indication of the outcome of the auditor's procedures; and (4) key observations with respect to the matter, or some combination of these elements.[48]

Many commenters were supportive of a requirement to describe how each critical audit matter was addressed in the audit. Some commenters asserted that a description of how a critical audit matter was addressed would benefit investors by providing insights on how and on what basis the auditor developed the opinion or the rigor that underlies the audit procedures performed. For example, one investor commenter stated that including audit procedures in the description of a critical audit matter would make the auditor's report more informative and useful. Several investors suggested that the auditor should be required or encouraged to provide informative, company-specific findings when describing how the critical audit matter was addressed in the audit, such as whether management's significant accounting estimates and judgments were balanced, mildly optimistic, or mildly pessimistic.

One commenter suggested that the description of how the critical audit matter was addressed in the audit should be optional. Several commenters objected to the auditor including audit procedures in the description of critical audit matters because it would not provide any incremental value or actionable information to investors, investors may not have the expertise or context to understand audit procedures, or the description of audit procedures would become boilerplate. One commenter suggested adding a note to clarify that the purpose of describing audit procedures is to provide information about the audit but not specific details that would compromise the effectiveness of audit procedures. Other commenters suggested that only the principal audit procedures should be provided.

---

[48] These elements are similar to the IAASB's elements described in paragraph A46 of ISA 701. The EU also requires that the auditor describe key observations with respect to the most significant assessed risks of material misstatement.

The final standard includes the requirement for the auditor to describe how the critical audit matter was addressed in the audit because it is consistent with the Board's objective of providing more information about the audit and, if developed with an appropriate focus on the intended audience, should be of interest to users. Similar to the reproposal, the final standard does not prescribe a specific way to meet this requirement. Several commenters suggested that the four examples provided in the reproposing release be included in the standard because they provide helpful guidance on how the requirement could be met. The final standard includes a note incorporating these examples, which should clarify the Board's expectations while providing flexibility in describing how a critical audit matter was addressed in the audit.

While the description of how the critical audit matter was addressed in the audit will require judgment, the auditor should bear in mind that the intent of communicating critical audit matters is to provide information about the audit of the company's financial statements that will be useful to investors. A brief overview of the audit procedures performed is one of the alternatives for describing how the critical audit matter was addressed. If the auditor chooses to describe audit procedures, the descriptions are expected to be at a level that investors and other financial statement users would understand. In addition, as the four examples should make clear, the objective is to provide a useful summary, not to detail every aspect of how the matter was addressed in the audit. Limiting the use of highly technical accounting and auditing terms in the description of critical audit matters, particularly if the auditor chooses to describe audit procedures, may help financial statement users better understand these matters in relation to the audit of the financial statements.

In its comment letter, a working group of the IAG stressed the importance to investors of auditor findings, which they described as "the one item that [they] believe would provide the greatest value to investors."[49] Acknowledging the difficulty of mandating reporting of findings, the working group recommended that the Board encourage auditors to include them voluntarily. Under the final standard, communication of the auditor's findings is not required; however, in describing the audit response, the auditor may choose to include findings as an indication of the outcome of audit procedures or key observations about a matter. The Board shares the working group's view that the inclusion of informative, company-specific audit findings related to critical audit matters may, in appropriate circumstances, be valuable to investors and encourages auditors to consider including such findings in their auditor's reports. However, in describing findings, the language used should not imply that the auditor is

---

[49] Letter from the IAG's auditor's report working group (Aug. 15, 2016) at 1, available on the Board's website in Docket 034. The working group made a presentation regarding its comment letter at the IAG meeting in October 2016, available on the Board's website.

providing a separate opinion on the critical audit matter or on the accounts or disclosures to which they relate.

*Refer to the Relevant Financial Statement Accounts or Disclosures that Relate to the Critical Audit Matter*

The reproposed standard would have required the auditor to refer to the relevant financial statement accounts and disclosures that relate to the critical audit matter. There were few comments on this requirement. One commenter suggested that, to avoid duplication, reference should be made only to the disclosures and not the financial statement accounts. In response to this suggestion, the final standard clarifies that the auditor could refer to either the relevant account or disclosure, rather than both, to avoid potential duplication.

The reproposal also solicited comment on whether, in addition to referring to the relevant financial statement accounts and disclosures, the auditor should refer to relevant disclosures outside the financial statements. Commenters that addressed this question generally opposed the auditor referencing disclosures outside the financial statements when describing a critical audit matter because it may incorrectly suggest that such information is audited or cause readers to misinterpret the auditor's role in relation to such information. The final standard only requires the auditor to refer to the relevant financial statement accounts or disclosures.

c. Additional Considerations Related to the Communication Requirements

i. Auditor Disclosure of "Original Information" about the Company

The reproposed standard included a note to indicate that, when describing critical audit matters in the auditor's report, the auditor is not expected to provide original information unless it is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit.

Investor commenters, including the auditor's report working group of the IAG, argued that there should not be any limitation on the auditor providing original information and that the reproposal went too far in constraining the auditor from providing original information in response to concerns expressed by other commenters (which were primarily companies and accounting firms).

Other commenters expressed the view that auditors should not provide original information about the company or should be limited to providing information about the audit and not the company. These commenters stated that the auditor providing original information about the company would be inconsistent with the traditional U.S. regulatory framework, whereby management provides information about the company and the auditor attests to compliance with the applicable financial reporting framework. However, one investor commenter noted that auditor reporting should not be limited by "original information," a term that is undefined in auditing literature.

No PCAOB standard, SEC rule, or other financial reporting requirement prohibits auditor reporting of information that management has not previously disclosed. Rather, there are areas under current law and auditing standards that require auditor reporting that goes beyond attesting to the compliance of management disclosures (e.g., substantial doubt about a company's ability to continue as a going concern[50] or illegal acts[51]). As discussed in more detail below, auditors may have professional or state law obligations to maintain client confidentiality, but these obligations should not apply to, or should be preempted by, reporting obligations arising under federal law and regulations, including under PCAOB standards.[52] Accordingly, the requirement to communicate critical audit matters is not, as some commenters have suggested, inconsistent with the existing U.S. financial reporting framework and auditors' other obligations.

Commenters also said that the role of the audit committee or management would be undermined by requiring the auditor to disclose information about the company's financial statements, since in their view it is solely management's responsibility to determine what disclosure is appropriate. Several commenters stated that the communication of critical audit matters would give auditors leverage to encourage disclosure of information by management, and that management would likely modify its disclosure in response to the communication of critical audit matters in the auditor's report so the auditor would not be a source of original information. While some commenters said that this would improve management disclosures, others said it would be an inappropriate expansion of the auditor's role or would add significant costs. Other

---

[50] *See* AS 2415, *Consideration of an Entity's Ability to Continue as a Going Concern.* The auditor is required to include a going concern explanatory paragraph if the auditor concludes that substantial doubt exists about the entity's ability to continue as a going concern for a reasonable period of time (*see* AS 2415.12). If management's disclosure with respect to the company's ability to continue as a going concern is inadequate, the auditor's reporting responsibility regarding going concern remains and the report includes either a qualified or an adverse opinion (*see* AS 2415.14).

[51] Auditors may be required, under certain circumstances, pursuant to the Private Securities Litigation Reform Act of 1995 (codified in Section 10A(b)1 of the Exchange Act), to make a report to the SEC relating to an illegal act that has a material effect on the financial statements.

[52] For a more detailed discussion of liability considerations related to critical audit matters, *see* Section IV.A.4.

commenters stated that companies could be harmed by the disclosure of confidential or competitively sensitive information. Another commenter expressed concern that investors could be confused or misled if auditor reporting lacked context or appeared to conflict with management disclosures. One commenter suggested that the auditor should disclose original information only if a disclosure matter continues to be unresolved after discussion with management and the audit committee.

The Board acknowledges these concerns and, in developing the auditor's communication requirements, has sought to strike an appropriate balance between investor demands for expanded auditor reporting and the costs and potential unintended consequences associated with providing it. While auditor reporting of original information is not prohibited, it is limited to areas uniquely within the perspective of the auditor: describing the principal considerations that led the auditor to determine that the matter is a critical audit matter and how the matter was addressed in the audit. The objective of critical audit matters—helping investors to focus on identified areas of the audit and understand how the auditor addressed them—may not be accomplished if the auditor is prohibited from providing such information. Moreover, prohibiting the auditor from providing such information could make critical audit matter communications incomplete in a way that could be confusing to or misunderstood by investors.

It seems likely, as one commenter observed, that auditors will generally not have incentives to provide information about the company that the company has not already made public. Another commenter noted that, in current practice, disclosure is already guided by an iterative process between management and the auditor, and expected that a similar process would occur for critical audit matters, reducing the likelihood that the auditor would be a source of original information since critical audit matters would likely overlap with increased management disclosure.[53] To the extent that an auditor's decision to communicate a critical audit matter incents the company to expand or supplement its own disclosure, the Board believes this may improve the quality of public disclosures, which would be an indirect benefit of the standard. However, if the company does not provide additional disclosure, and the information is necessary to describe the principal considerations that led the auditor to determine that the matter is a critical audit matter or how it was addressed in the audit, the Board believes it is in the public interest for the auditor to include that information in the auditor's report. The final standard therefore retains the note from the reproposal explaining that the auditor is not expected to provide information about the company that has not been made publicly available by the company unless such information is necessary to describe the principal

[53] It should be noted, however, that critical audit matters are not a substitute for disclosures required of the company under the applicable financial reporting framework.

considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit.

Of course, any matter that will be communicated as a critical audit matter will already have been discussed with the audit committee, and the auditor will be required to provide a draft of the auditor's report to the audit committee and discuss the draft with them.[54] In addition, as the auditor determines how best to comply with the communication requirements, the auditor could discuss with management and the audit committee the treatment of any sensitive information.

Some commenters also stated that, in areas where there are specific reporting obligations under the applicable financial reporting framework or SEC reporting requirements but the matter falls below the disclosure threshold (for example, a significant deficiency), auditor communication could, in effect, impose a lower disclosure threshold. With regard to such areas, it is likely that the nature of a critical audit matter and its description would be broader than, for instance, focusing on a significant deficiency. In addition, while the auditor is required to describe the principal considerations that led the auditor to determine that the matter is a critical audit matter, (which may include, if relevant, information about the company's processes and controls) and how the overall matter was addressed, it is not necessary for the auditor's description to use the terminology of the other auditing standard, such as "significant deficiency" within the broader context of a critical audit matter. For example, if a significant deficiency was among the principal considerations in determining that revenue recognition was a critical audit matter, the auditor would describe the relevant control-related issues over revenue recognition in the broader context of the critical audit matter without using the term "significant deficiency."[55]

Some commenters suggested that any expanded disclosure requirements should come from the SEC and the Financial Accounting Standards Board ("FASB"), in the form of additional management disclosures, rather than from the Board expanding requirements for auditor reporting. However, investors have consistently asked to hear more from the auditor, an independent third-party expert whose work is undertaken for the investor's benefit. As one commenter noted, the auditor is best suited to provide insights on how and on what basis the auditor developed its opinion. The final standard is designed to elicit information about the audit directly from the auditor's perspective.

---

[54] *See* AS 1301.21, as amended.

[55] It should be noted that the determination that a matter was a significant deficiency in internal control over financial reporting, on its own, could not be a critical audit matter. *See* Section IV.A.1.a.ii.

If auditors can adequately convey to investors the principal considerations and how the auditor addressed the matter without including previously undisclosed information, it is expected that they will. However, the standard provides that even when management has not disclosed information, the auditor is not constrained from providing such information if it is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit.

The Board intends to monitor implementation of the critical audit matter requirements to determine if additional guidance is needed in this area.

ii. Potential Compliance Issues Related to Critical Audit Matters

Some commenters suggested that the reporting of critical audit matters could create compliance challenges for companies.

Two commenters expressed concern that companies' SEC filings may have to be amended because of changes in the description or reporting of critical audit matters. In principle, auditors should approach errors and misstatements in the communication of critical audit matters in the same way they would approach any other error or misstatement in the auditor's report that does not affect the auditor's opinion or the ability of market participants to rely on the opinion.[56] It appears that under current practice, SEC filings have been amended solely to correct errors in auditor's reports, such as incorrect auditor's report dates or missing explanatory paragraphs.

Another commenter expressed concern that management may be asked to respond to investor questions regarding issues described in critical audit matters and may not be in a position to do so, particularly in light of their responsibilities under Regulation FD. Given the auditor's responsibility to communicate with the audit committee, and the likelihood of extensive discussions between auditors and management regarding critical audit matters, it seems likely that management will be prepared to respond appropriately and in compliance with their legal obligations (including Regulation FD), as they would with regard to any other question about information included in an SEC filing.

d. Ability to Communicate No Critical Audit Matters

The reproposal provided that the auditor could determine there were no critical audit matters and provide a statement to that effect in the auditor's report. Commenters

---

[56] The final standard indicates that the auditor's communication of critical audit matters does not alter in any way the auditor's opinion on the financial statements, taken as a whole.

generally supported the auditor's ability to determine that there are no critical audit matters. Two commenters suggested that the auditor should not have to make a statement in the auditor's report that there were no critical audit matters because the absence of a critical audit matter should be sufficient without the definitive statement, similar to an emphasis paragraph. The final standard includes the possibility that the auditor could determine, and state in the auditor's report, that there are no critical audit matters.[57] The statement that there are no critical audit matters is required because unlike an emphasis paragraph, critical audit matters are a required element of the auditor's report.

The determination of critical audit matters is based on the facts and circumstances of each audit. The Board expects that, in most audits to which the requirement to communicate critical audit matters applies, the auditor will determine that at least one matter involved especially challenging, subjective, or complex auditor judgment. There may be critical audit matters even in an audit of a company with limited operations or activities. However, there may be circumstances in which the auditor determines there are no matters that meet the definition of a critical audit matter and, in those circumstances, the auditor will communicate that there were no critical audit matters.

*Requirements of Other Regulators and Standard Setters*

*IAASB.* For each key audit matter, the IAASB requires the auditor to reference the related disclosures, if any, in the financial statements and address: (1) why the matter was considered to be one of most significance in the audit and therefore determined to be a key audit matter and (2) how the matter was addressed in the audit.[58] The IAASB allows the auditor to determine that there are no key audit matters to communicate in the auditor's report and, if so, requires a statement to this effect.[59]

*EU.* The EU requires the auditor to include in the auditor's report: (1) a description of the most significant assessed risks of material misstatement, including assessed risks of material misstatement due to fraud; (2) a summary of the auditor's

---

[57] Since communication of critical audit matters will not be required for the audits of EGCs, brokers and dealers reporting under Exchange Act Rule 17a-5, 17 CFR 240.17a-5, investment companies other than business development companies, and benefit plans, the auditor's report for the audits of these entities will not be required to include the statement that there are no critical audit matters.

[58] *See* paragraph 13 of ISA 701.

[59] *See* paragraphs 14 and 16 of ISA 701.

response to the risks; and (3) where relevant, key observations arising with respect to the risks.[60]

*FRC.* The FRC requires the auditor, among other things, to: (1) describe those assessed risks of material misstatement that were identified by the auditor and (2) provide an overview of the scope of the audit, including an explanation of how the scope addressed the assessed risks of material misstatement.[61] The explanations of the matters set out in the auditor's report should be described in a way that: (1) enables a user to understand their significance in the context of the audit of the financial statements as a whole and not as discrete opinions on separate elements of the financial statements; (2) enables the matters to be related directly to the specific circumstances of the audited entity and are not therefore generic or abstract matters expressed in standardized language; and (3) complements the description of significant issues required to be made by the audit committee.[62]

*3. Documentation of Critical Audit Matters*

The reproposed standard required documentation of the basis for the auditor's determination whether each matter that both: (1) was communicated or required to be communicated to the audit committee and (2) relates to accounts or disclosures that are material to the financial statements, involved or did not involve especially challenging, subjective, or complex auditor judgment. Some commenters supported a documentation requirement only for matters that were determined to be critical audit matters. Some of these commenters asserted that documentation about matters determined not to be critical audit matters would add costs and primarily benefit PCAOB inspections rather than audit quality. Others stated that the requirement is not aligned with the IAASB's documentation requirement, which, in their view, focuses on rationale for inclusion as a key audit matter rather than exclusion. However, another commenter argued that the determination that a matter was not a critical audit matter would seem to be an important audit judgment that ought to be documented for review by the engagement quality reviewer. This commenter suggested that documentation be required only for matters required to be communicated to the audit committee (which would already have been documented) and not for those that are communicated otherwise. One auditor argued that the reproposed requirement would lead auditors to document all audit committee communications even if not required, and that this would disproportionately

---

[60] *See* requirements in 2(c) of Article 10, *Audit Report*, of Regulation (EU) No 537/2014.

[61] *See* paragraph 19A of UK ISA 700 (2013).

[62] *See* paragraph 19B of UK ISA 700 (2013).

affect smaller companies whose audit committees more commonly request information not required to be communicated under PCAOB standards.

The final standard substantially retains the approach from the reproposal of requiring the auditor to document the basis for determining critical audit matters.[63] The objective of the requirement is to document how the determination of critical audit matters (or the determination that there are no critical audit matters) was made from among the matters communicated or required to be communicated to the audit committee that relate to accounts or disclosures that are material to the financial statements. The documentation requirement will also facilitate review by the engagement quality reviewer.[64]

The amount of documentation required could vary with the circumstances. For example, the auditor's basis for the determination may be so clear for some matters that a single sentence will be sufficient. This situation may arise, for instance, when the auditor's documentation prepared in the course of the audit includes sufficient detail about whether or not the matter involved especially challenging, subjective, or complex auditor judgment. Other matters may require more extensive documentation.

As noted in the reproposing release, for matters determined to be critical audit matters, the description in the auditor's report (which, among other things, must describe the principal considerations that led the auditor to determine that it was a critical audit matter) will generally suffice as documentation.

The auditor could comply with the documentation requirement in a variety of different ways. For example, the auditor could start with the communications to the audit committee, which are already documented, identify which of those matters relate to accounts or disclosures that are material to the financial statements, and then document the basis for the auditor's determination of whether or not each matter involved especially challenging, subjective, or complex auditor judgment. In documenting the basis for the determination, the auditor may include the factors the auditor took into account. This documentation may be prepared as an extension to the audit committee documentation or the auditor may prepare separate documentation.

---

[63] The language of the documentation requirements has been redrafted to improve clarity, based on a commenter's suggestion.

[64] Under the existing audit documentation requirements, audit documentation facilitates the planning, performance, and supervision of the engagement, and is the basis for the review of the quality of the work because it provides the reviewer with written documentation of the evidence supporting the auditor's significant conclusions. *See* paragraph .02 of AS 1215, *Audit Documentation*.

*Requirements of Other Regulators and Standard Setters*

The IAASB requires the auditor to document the matters that required significant auditor attention and the rationale for the auditor's determination as to whether or not each of these matters is a key audit matter.[65] The EU does not include documentation requirements for expanded auditor reporting. The FRC does not include specific documentation requirements related to expanded auditor reporting.[66]

*4. Liability Considerations Related to Critical Audit Matters*

In both the proposal and the reproposal, the Board acknowledged that including critical audit matters would change the auditor's report in ways that could affect auditors' potential liability. As discussed in those releases, liability may be imposed on auditors under a number of different legal theories depending on the specific facts and circumstances of a particular case, including pursuant to Section 11 of the Securities Act of 1933, Section 10(b) of the Exchange Act, and various state law causes of action. The critical audit matters would themselves be new statements that could be the basis for asserted claims. In addition, information provided regarding critical audit matters could affect other aspects of securities fraud claims against either the issuer, the auditor, or both (for example, by being described in pleadings in an effort to plead fraud with particularity or as a basis to seek to undercut a claim of reliance). The Board specifically sought comment on what effect the communication of critical audit matters would have on private liability and whether there were any steps the Board could or should take to address any likelihood of an increase in potential liability in private litigation.

A number of companies and accountants responded to this request for comment. While several of these commenters noted that changes from the proposal had addressed certain of their liability concerns, most continued to express varying degrees of concern about the potential for increased liability, either for auditors or for both auditors and companies.

In particular, commenters expressed concern that investors who suffer a financial loss could assert legal claims against the auditor based on statements made in identifying and describing critical audit matters. As with the proposal, commenters expressed general concerns that communication of critical audit matters would encourage baseless litigation, would likely lead to increased audit fees, raise the

---

[65] *See* paragraph 18(a) of ISA 701.

[66] General documentation requirements appear in ISA (UK and Ireland) 230, *Audit Documentation*.

settlement value of spurious claims, or potentially undermine the stringent pleading standards of the Private Securities Litigation Reform Act of 1995, which were intended to curtail non-meritorious claims against auditors and avoid the costs and burdens associated with them. Some commenters argued that auditors, to avoid being second-guessed, would have the incentive to communicate matters to the audit committee that were not otherwise required or to identify too many critical audit matters in an effort to protect themselves from liability. Several commenters expressed concern that communicating critical audit matters might compromise their ability to argue that the statements in the audit report are opinions which, one commenter argued, were "less vulnerable to challenges that they are false or misleading."[67] However, at least one of these commenters noted that the revised definition of a critical audit matter in the reproposal mitigated their concern on that point. Other commenters argued that the information communicated in describing critical audit matters could potentially be used to attack the audit by challenging the procedures performed or the adequacy of audit evidence obtained by the auditor. On the other hand, one commenter noted that the communication of critical audit matters is about disclosure of risks and challenges and expressed the belief that non-communication of such matters would be more problematic from a litigation point of view.

Some commenters argued that the risk of liability would be heightened if the auditor were providing original information about the company. In particular, several commenters contended that doing so would conflict with accountants' professional obligation to maintain client information in confidence, which could give rise to claims by the company against the auditor under state law.

Some commenters argued that critical audit matters could increase litigation risk for companies as well as the auditor because the new statements required of the auditor could form a basis for new legal claims, could be misinterpreted as acts of negligence on the part of the company, or could be used by plaintiffs as a "road map" for litigation against the company. One commenter argued that, because the underlying work papers are subject to discovery, critical audit matters would be used as a source for potential litigation against both auditors and companies.

Some of the commenters that expressed concerns about the potential for increased auditor liability also suggested changes to the reproposal that they maintained would reduce the liability impact of determining and communicating critical audit matters. For example, as previously discussed, several commenters suggested substantially similar changes to modify the materiality component of the definition of

---

[67] Letter from PricewaterhouseCoopers LLP (Aug. 15, 2016) at 7, available on the Board's website in Docket 034.

critical audit matters and to prohibit or discourage auditor communication of original information.[68]

The Board has carefully considered commenters' concerns about potential liability throughout this standard-setting process, including the comments received on the reproposal. While mandating disclosure of critical audit matters will, by design, entail new statements in the auditor's report, the Board notes that any claim based on these new statements would have to establish all of the elements of the relevant cause of action (for example, when applicable, loss causation and reliance). Critical audit matters will not replace or alter the fundamental requirement that the auditor's report include the auditor's opinion that the financial statements are fairly presented in accordance with the applicable financial reporting framework, which has been, and the Board expects will continue to be, the primary statement at issue in most private securities litigation under federal law involving auditors.

Throughout this standard-setting process, the Board has carefully considered commenters' suggestions to alter the terms of its proposal to mitigate their concerns about potential liability for omitting a critical audit matter. As discussed in the reproposal, the Board limited and clarified the process for determining critical audit matters, including by narrowing the source of critical audit matters to matters communicated or required to be communicated to the audit committee, adding a materiality component to the critical audit matter definition, and refining the factors used to determine critical audit matters. Those changes, as well as the critical audit matter definition's focus on the auditor's judgment, should mitigate concerns about potential liability for omitting a critical audit matter. With respect to suggestions to further narrow the definition of critical audit matters and the related communication requirements, it is not clear, and commenters did not explain, how those changes would mitigate liability concerns other than by reducing the number and content of required communications of critical audit matters. As described above, the Board has determined not to incorporate those suggested changes because they appear likely to significantly reduce the number of potential critical audit matters and the informativeness of auditor communication of critical audit matters.

With respect to potential state law claims by companies against their auditors for disclosing original information, the Board notes that, as discussed above, it does not expect that, in general, critical audit matters will provide sensitive information that has not been disclosed by the company. With respect to the potential for a claim based on a situation in which the auditor found such disclosure necessary, the Board notes that auditors already have preexisting duties to disclose original information in certain

---

68 *See* discussion at Sections IV.A.1.a.ii and IV.A.2.c above.

circumstances.[69] Commenters did not cite any specific examples in which these requirements have resulted in unwarranted claims against auditors for disclosing client confidences. Because the auditor's obligations under PCAOB standards arise under federal law and regulations, professional or state law duties of client confidentiality should not apply to,[70] or should be preempted by,[71] the obligation to communicate critical audit matters.[72]

While the Board takes seriously the prospect of potential increases in auditors' or companies' liability, the Board believes it has appropriately addressed commenters' concerns regarding liability in a manner compatible with the objectives of this

---

69 For example, for at least the last 20 years, auditors have had duties to disclose in their auditor's reports when they have substantial doubt about the company's ability to continue as a going concern. *See* Section 10A of the Exchange Act and AS 2415. In addition, when in an audit of internal control over financial reporting, the auditor identifies a material weakness that has not been included in management's assessment, the auditor must modify its report to, among other things, "include a description of the material weakness, which should provide the users of the audit report with specific information about the nature of the material weakness and its actual and potential effect on the presentation of the company's financial statements . . .". *See* Note to paragraph .91 of AS 2201; *cf*. Statement of Gaylen R. Hansen, CPA, at the PCAOB public meeting (Apr. 2, 2014) ("Client confidentiality has a long-standing and important place in the accountancy profession. However, it doesn't serve investors well when it is parlayed to obfuscate the important obligation to call things as they are seen.").

70 For example, the relevant AICPA rule provides that auditors "shall not disclose any confidential client information without the specific consent of the client," but further provides that the confidentiality obligation shall not be construed "to prohibit … compliance with applicable laws and government regulations." *See* paragraphs .01 and .02 of 1.700.001 *Confidential Client Information Rule* of the AICPA Code of Professional Conduct (as of Dec. 15, 2014).

71 *See Crosby v. Nat'l Foreign Trade Council*, 530 U.S. 363, 372-73 (2000); *New York v. FCC*, 486 U.S. 57, 64 (1988).

72 Some commenters suggested that safe harbor rules be created to protect auditors and companies from liability for statements about critical audit matters. While, as noted above, the Board will monitor the effects of critical audit matters should the requirements be approved by the SEC, the Board is not convinced at this time that any such safe harbor is necessary and, in any event, such a safe harbor is beyond the Board's authority.

rulemaking, and in view of the rulemaking's anticipated benefits. Indeed, the Board notes that at least one of the commenters that expressed concern about potential liability, noted that those concerns "should not stand in the way of moving forward" on the reproposed standard.[73] At the same time, the Board acknowledges that a variety of claims can be raised related to the statements in the audit report and that litigation is inherently uncertain. If the final standard is approved by the SEC, the Board will monitor the standard after implementation for any unintended consequences.

## B. Additional Improvements to the Auditor's Report

The reproposal provided a list of basic elements to be included in every auditor's report. Some of these basic elements, such as auditor tenure, would be new elements in the auditor's report. Other basic elements, such as the auditor's opinion, identification of the financial statements audited, and management's and auditor's responsibilities, were drawn from the existing auditor reporting standard.[74] Yet other basic elements, such as the name of the company under audit and the date of the financial statements, were incorporated from existing illustrative auditor's reports.

### *1. Auditor Tenure*

The reproposal included a required statement in the auditor's report of the year the auditor began serving consecutively as the company's auditor. The Board also sought comment on whether auditor tenure should be disclosed in Form AP, *Auditor Reporting of Certain Audit Participants* ("Form AP"), rather than in the auditor's report.[75]

#### a. Disclosure of Tenure

Investor commenters stated that information regarding auditor tenure would be useful to financial statement users, for example, in deciding whether to vote to ratify the appointment of the auditor. Investors that expressed a preference supported tenure

---

[73] *See* letter from Deloitte & Touche LLP (Aug. 12, 2016) at 5, available on the Board's website in Docket 034.

[74] *See* existing AS 3101.06–.08.

[75] In December 2015, the Board adopted Form AP, which provides investors and other financial statement users with information about engagement partners and other accounting firms that participate in audits of issuers. *See Improving the Transparency of Audits: Rules to Require Disclosure of Certain Audit Participants on a New PCAOB Form and Related Amendments to Auditing Standards*, PCAOB Release No. 2015-008 (Dec. 15, 2015).

disclosure in the auditor's report, some on the basis of reducing investor search costs by ensuring a consistent location for the disclosure. One commenter representing a group of investors asserted that since the auditor's report is the primary means by which the auditor communicates with investors, it is appropriate for auditor tenure to be included in the auditor's report. This commenter further stated that disclosure of auditor tenure on Form AP would be an acceptable alternative to disclosure in the auditor's report only if the timeliness, accessibility, searchability, and overall functionality of the information disclosed on Form AP were at least equivalent to having the information disclosed in the auditor's report. Another commenter suggested that, if disclosure were required in the auditor's report, a specific location should be designated.

Currently, information about auditor tenure is not required to be communicated to investors by the auditor, management, or the audit committee.[76] However, there is a growing trend toward voluntary disclosure of auditor tenure. Recent analysis of corporate proxy statements for annual meetings of shareholders has found that a growing number of companies are disclosing auditor tenure,[77] presumably due to interest from investors. However, voluntary disclosure is not provided for a significant number of audits subject to the Board's jurisdiction. Additionally, if disclosed, such information may not be provided in the same location in the proxy statement; for

---

[76] In certain instances, investors may be able to manually calculate tenure by reviewing company filings on the SEC's Electronic Data Gathering, Analysis and Retrieval system ("EDGAR") to determine when a company changed auditors. However, the information is not available prior to 1994 and may not be available for certain entities, such as investment companies and brokers and dealers, that are not required to file Form 8-K. *See* 17 CFR 249.308, Item 4.01 *Changes in Registrant's Certifying Accountant*. Accordingly, currently available information is neither complete nor a readily accessible alternative to auditor tenure disclosure.

[77] The Center for Audit Quality, together with Audit Analytics, reviewed corporate proxies filed through the end of June 2016, 2015, and 2014 of 1,500 Standard and Poor's ("S&P") Composite companies. Their analysis identified that in 2016, 2015, and 2014 auditor tenure was disclosed in the annual proxy statements of 59, 54, and 47 percent of the S&P 500 large-cap companies, respectively, 45, 44, and 42 percent of the S&P MidCap 400 companies, respectively, and 48, 46, and 50 percent of the S&P SmallCap 600 companies, respectively. *See* Center for Audit Quality and Audit Analytics, *2016 Audit Committee Transparency Barometer* (Nov. 2016). Separately, during their review of proxy statements of Fortune 100 companies, Ernst & Young identified that 63 percent of the companies reviewed voluntarily disclosed auditor tenure in 2016 compared to 62 percent in 2015, 51 percent in 2014, 29 percent in 2013, and 24 percent in 2012. *See* Ernst & Young, *Audit Committee Reporting to Shareholders in 2016* (Sept. 2016).

instance, some disclosures are in the audit committee report while others are in another section of the proxy.[78] Further, the proxy rules do not apply to all companies required to be audited under PCAOB standards; for example, foreign private issuers, many companies whose securities are not listed on a national securities exchange, and most investment companies are not required to prepare proxy statements.

Some commenters, primarily companies, did not support disclosure of auditor tenure in the auditor's report on the basis that such disclosure would not provide value to investors. Other companies and accounting firms raised a concern that tenure disclosure could result in inferences that, in their view, would be inappropriate about correlations between auditor tenure and audit quality, or between auditor tenure and auditor independence. Some commenters also suggested that auditor tenure is a corporate governance matter and that disclosure should be provided by management or the audit committee rather than the auditor. A few commenters suggested that tenure disclosure should be addressed by SEC rulemaking or provided only voluntarily. Some commenters, many of whom generally opposed auditor tenure disclosure, suggested that Form AP would be a preferable location for disclosing tenure if the Board proceeded with requiring the disclosure.

The SEC's Investor Advocate stated that he "strongly support[s] requirements for public disclosure of auditor tenure," recognizing that there were different opinions about the best party and location to make that disclosure.[79] Noting that the SEC had issued a concept release asking whether auditor tenure should be disclosed in the audit committee report,[80] the SEC's Investor Advocate stated that he believed the SEC should ultimately decide these questions. In light of these considerations, the SEC's Investor Advocate recommended that the PCAOB act to require disclosure of auditor tenure (either in the auditor's report or in Form AP), but also consider including a contingent sunset clause such that the auditor disclosure requirement would expire if and when the SEC imposed any form of a company disclosure requirement.

---

[78] *See* Center for Audit Quality and Audit Analytics, *2016 Audit Committee Transparency Barometer* (Nov. 2016).

[79] *See* letter from Rick A. Fleming, Investor Advocate, SEC (Aug. 15, 2016) at 4, available on the Board's website in Docket 034. The letter noted that the views of the Investor Advocate do not necessarily reflect the views of the SEC, the Commissioners, or staff of the SEC, and the SEC disclaims responsibility for the letter and all analyses, findings, and conclusions contained therein. Additional information about the Office of the Investor Advocate is available on the SEC's website.

[80] *See* SEC, *Possible Revisions to Audit Committee Disclosures*, Exchange Act Release No. 75344 (July 1, 2015), 80 FR 38995 (July 8, 2015).

The Board believes that public disclosure of auditor tenure is important and in the public interest, and that it is appropriate to require disclosure in the auditor's report because it is the primary means by which auditors communicate with investors. This will ensure that the disclosure is in a readily accessible and consistent location—the auditor's report—for all companies. It will make auditor tenure information immediately available to investors upon filing with the SEC of a document containing the auditor's report. Disclosure of auditor tenure in the auditor's report will also reduce search costs for investors who are interested in auditor tenure, relative to the current environment of voluntary reporting. Disclosure of auditor tenure in the auditor's report may also be more likely to encourage further discussion of auditor tenure by management and the audit committee and potential disclosure in company filings.

The Board is not persuaded by commenters' concerns that disclosure of auditor tenure in the auditor's report necessarily suggests a specific correlation between auditor tenure and audit quality, or between auditor tenure and auditor independence. In the Board's view, auditor tenure is another data point about the auditor, in addition to the firm name and the office issuing the auditor's report, for which there is demonstrable investor demand.

The standard does not specify a required location within the auditor's report for the statement on auditor tenure; auditors that are concerned about the inferences readers may draw based on the placement of the disclosure in the auditor's report have discretion to present auditor tenure in the part of the auditor's report they consider appropriate. Consistent with the reproposal, the illustrative auditor's report in the final standard includes the statement on auditor tenure at the end of the report.

The Board considered disclosure of auditor tenure in Form AP, which requires disclosure of the name of the engagement partner and of the names and percentage of participation of other accounting firms in the audit for all issuer audits. Form AP was developed primarily to respond to commenter concerns about the potential liability consequences of naming persons in the auditor's report, the potential need to obtain consents from those named persons in connection with registered securities offerings, and the additional time needed to compile information about the other accounting firms. The Board's determination to require disclosure in Form AP, rather than in the auditor's report, was a means to address these concerns. Disclosure of auditor tenure does not have the same potential liability or other consequences as disclosure of the name of the engagement partner or other accounting firms, so such an approach is unnecessary in this case.

The Board acknowledges that the SEC, given its broader authority and responsibility for the financial reporting process, could in the future determine that auditor tenure should be disclosed by some other party or in some other location, in addition to or instead of in the auditor's report. Accordingly, the Board is adopting its requirement for tenure disclosure in the auditor's report today. The Board anticipates that, if the SEC undertook rulemaking for disclosure of auditor tenure, the Board would work with the SEC to ensure that PCAOB standards coordinate appropriately with any new SEC requirements.[81]

b. Determination of Tenure

The reproposal contemplated that tenure would be calculated taking into account firm or company mergers, acquisitions, or changes in ownership structure, and it included a note providing that if the auditor is uncertain as to the year the auditor became the company's auditor, the auditor should so state and provide the earliest year of which the auditor has knowledge. Some commenters objected to this approach, saying that it could confuse investors and its relevance is unclear. The Board believes that the disclosure of tenure should reflect the entire relationship between the company and the auditor, including the tenure of predecessor accounting firms and engagement by predecessors of the company under audit. No changes have been made to the note in the final standard.

Additionally, if a company went public and maintained the same auditor, auditor tenure will include the years the auditor served as the company's auditor both before and after the company became subject to SEC reporting requirements.

Because of the unique structure of investment companies, which typically includes common accounting, internal control, and oversight functions at the group level, the reproposed standard required that, for an investment company that is part of a group of investment companies,[82] the auditor's statement regarding tenure will contain the year the auditor began serving consecutively as the auditor of any investment company in the group of investment companies.[83] For example, if Firm A has been

---

81 Of course, the SEC also has authority to abrogate or modify PCAOB rules at any time, to, among other things, further the purposes of the securities laws. Section 107(b)(5) of Sarbanes-Oxley, 15 U.S.C. 7217(b)(5).

82 A group of investment companies, as defined by Section 12(d)(1)(G)(ii) of the Investment Company Act of 1940 ("Investment Company Act"), means any two or more registered investment companies that hold themselves out to investors as related companies for purposes of investment and investor services. For purposes of determining auditor tenure, any tenure with other entities that may be part of an investment company complex, such as investment advisers or private investment companies, is not included.

83 The following is an example of such statement: "We have served as the auditor of one or more [Group Name] investment companies since [year]."

auditing investment companies in XYZ group of investment companies since 1980, the current auditor's report for XYZ fixed income fund, whose inception date was in 2010, will state that Firm A has served as the auditor of one or more XYZ investment companies since 1980.

A commenter asserted that measuring auditor tenure from the first year of service to the group of investment companies might confuse or even mislead the reader of the auditor's report for a new fund, especially if the auditor has served the group for several years. Another commenter supported the reproposed methodology for measuring tenure for investment companies stating that it is appropriate given the common accounting system, system of internal control over financial reporting, and board oversight for a group of investment companies.

After considering the comments received, the Board is adopting the requirement regarding auditor tenure for an investment company that is part of a group of investment companies as reproposed. The Board believes that the length of an auditor's relationship with the group is more relevant than the relationship with an individual fund, since funds can be started and merged over time but the auditor's relationship with the group continues.

*Requirements of Other Regulators and Standard Setters*

The EU requires a statement in the auditor's report that indicates the total uninterrupted engagement period, including previous renewals and reappointments of the statutory auditors or the audit firms.[84] The IAASB and the FRC do not include a similar requirement.

*2. Clarification of Existing Auditor's Responsibilities*

The reproposed standard included requirements that would enhance standardized language of the auditor's report by clarifying the nature and scope of the auditor's existing responsibilities, such as a new statement regarding auditor independence and the addition of the phrase "whether due to error or fraud," when describing the auditor's responsibility under PCAOB standards to obtain reasonable assurance about whether the financial statements are free of material misstatements. In addition, the reproposed standard included a requirement intended to promote uniformity with respect to the addressee of the report.

---

[84] *See* requirements in 2(b) of Article 10, *Audit Report*, of Regulation (EU) No 537/2014.

a. Auditor Independence

The reproposed standard included a required statement in the auditor's report that the auditor is a public accounting firm registered with the PCAOB and is required to be independent with respect to the company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the SEC[85] and the PCAOB.[86]

Commenters generally supported the required statement regarding auditor independence. Some said that the statement would reinforce financial statement users' understanding of the auditor's existing obligations to be independent and serve as a reminder to auditors of these obligations. Some commenters preferred a more definitive statement, such as stating that the auditor is in fact independent and in compliance with applicable independence rules. A few commenters questioned whether the statement will improve an investors' understanding of the auditor's independence responsibilities, yield any incremental benefits or insight to investors, or have any impact on auditor behavior. Some of these commenters pointed out that independence is already included in the title of the auditor's report and including an additional statement in the auditor's report is redundant and unnecessary.

After consideration of comments, the statement regarding auditor independence is adopted as reproposed. The Board believes that the independence statement in the auditor's report will both enhance investors' and other financial statement users' understanding of the auditor's existing obligations to be independent, and serve as a reminder to auditors of these obligations. The statement regarding auditor independence is not intended to, and will not, affect auditor independence requirements under the securities laws, SEC rules, or PCAOB rules.

*Requirements of Other Regulators and Standard Setters*

The IAASB requires that the auditor's report include a statement that the auditor is independent of the entity in accordance with the relevant ethical requirements relating to the audit and has fulfilled the auditor's other ethical responsibilities in accordance with these requirements.[87] The EU requires a statement in the auditor's report that the auditor remained independent of the audited entity in conducting the audit.[88] The FRC

---

85 *See* Regulation S-X Rule 2-01, 17 CFR 210.2-01.

86 *See* PCAOB Rule 3520, *et seq*.

87 *See* paragraph 28(c) of ISA 700.

88 *See* requirements in 2(f) of Article 10, *Audit Report*, of Regulation (EU) No 537/2014.

requires the auditor to state that the auditor is required to comply with the United Kingdom's ethical standards for auditors, which include requirements regarding auditor independence.[89]

b. Addressee

Under the existing standard, the auditor's report may be addressed to the company whose financial statements are being audited, its board of directors, or stockholders.[90] Under current practice, the auditor's report is generally addressed to one or more of the following: (1) the board of directors and stockholders/shareholders, or their equivalent for issuers that are not organized as corporations; (2) the plan administrator or plan participants for benefit plans; and (3) the directors or equity owners for brokers or dealers.[91]

To promote consistency in addressing the auditor's report to the company's investors, the reproposed standard included a requirement for the auditor's report to be addressed to the shareholders and the board of directors, or equivalents for companies not organized as corporations. The reproposed standard stated that the auditor's report may include additional addressees.

Commenters generally supported the addressee requirement as reproposed stating that it is appropriate and will create consistency in practice. A commenter suggested limiting the required addressees to the shareowners of corporations or equivalents for companies not organized as corporations because investors are the key customers of the auditor's report. A few commenters stated that the auditor's report is intended for general use and the requirement for the auditor's report to be addressed to a specific party is not necessary. A commenter expressed concern that retaining the option for the auditor's report to be addressed to third parties could inadvertently result in increased auditor liability and cost.

In response to comments, and to promote greater uniformity in the addressees of the auditor's report, the Board is adopting the addressee requirement as reproposed. Since inclusion of additional addressees is voluntary, auditors could assess, based on the individual circumstances, whether or not to include additional addressees in the auditor's report. In addition, the Board believes that it is appropriate for the auditor's

---

[89] *See* paragraph 15 of UK ISA 700 (2013).

[90] *See* existing AS 3101.09.

[91] This information is based on a review by PCAOB staff of a random sample of 2014 fiscal year-end auditor's reports for issuers and brokers and dealers.

report to be addressed to the board of directors and not just to the shareholders, because of the role of the board of directors in the governance of the company.

*Requirements of Other Regulators and Standard Setters*

The IAASB requires that the auditor's report be addressed as appropriate, based on the circumstances of the engagement.[92] The EU does not specify the addressee of the auditor's report. The FRC requires that the auditor's report be addressed as required by the circumstances of the engagement.[93] UK auditor's reports are typically addressed to either the members or the shareholders of the company.[94]

c. Other Enhancements to the Basic Elements

The reproposal would have changed the language for certain elements in the existing auditor's report. These elements included:

- *Financial statement notes*—The identification of the financial statements, including the related notes and, if applicable, schedules, as part of the financial statements that were audited.[95] Under the existing standard, the notes to the financial statements and the related schedules are not identified as part of the financial statements.

- *Error or fraud*—A description of the auditor's responsibility to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatements, whether caused

---

[92] *See* paragraph 22 of ISA 700.

[93] *See* paragraph 13 of UK ISA 700 (2013).

[94] *See* paragraph A5 of UK ISA 700 (2013).

[95] The final standard uses the term "financial statements" to include all notes to the statements and all related schedules, as used under SEC rules that apply to issuers. *See* Regulation S-X Section 1-01(b), 17 CFR 210.1-01(b), which states in part, "the term financial statements . . . shall be deemed to include all notes to the statements and all related schedules." The final standard will not apply to schedules included as supplemental information, as defined in AS 2701, *Auditing Supplemental Information Accompanying Audited Financial Statements*, because those schedules are not considered part of the financial statements. The auditor should continue to look to the requirements of AS 2701 for the auditor's reporting responsibilities regarding supplemental information accompanying audited financial statements.

by error or fraud.[96] The existing standard does not require the auditor's report to contain the phrase *whether due to error or fraud*.

- *Nature of the audit*—The description of the nature of the audit reflected the auditor's responsibilities in a risk-based audit and aligned the description with the language in the Board's risk assessment standards, including:
  - Performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks;
  - Examining, on a test basis, appropriate evidence regarding the amounts and disclosures in the financial statements;
  - Evaluating the accounting principles used and significant estimates made by management; and
  - Evaluating the overall presentation of the financial statements.

Commenters generally supported the reproposed language for these basic elements of the auditor's report. These elements are adopted as reproposed.

*3. Additional Basic Elements Suggested by Commenters*

In addition to the changes proposed by the Board, commenters on the reproposal suggested additional elements to be included in the auditor's report.

Several commenters suggested that the PCAOB consider additional standardized language in the auditor's report to describe the responsibilities of the auditor, management, and the audit committee. In doing so, some of these commenters suggested that the PCAOB consider additional language adopted by the IAASB, in order to promote consistency in reporting and to help users understand more fully the separate responsibilities of each of the parties with respect to the audited financial statements. In contrast, another commenter cautioned that a thorough description of everyone's roles and responsibilities would further add to repetitive boilerplate language. This commenter suggested instead that the auditor's report provide a cross reference to a more complete description of the roles and responsibilities of the auditor, management, and the audit committee. This commenter did not indicate where such cross-referenced material would appear. Given little interest from investors in such

---

[96] *See* paragraph .02 of AS 1001, *Responsibilities and Functions of the Independent Auditor*.

additional language during the Board's initial outreach and the risk that it would be boilerplate, the final standard does not include these additional elements.

Two accounting firms suggested describing the meaning of reasonable assurance. The final standard requires a statement in the "Basis for Opinion" section of the auditor's report that the auditor "plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement." The auditing standards describe reasonable assurance as a high level of assurance, although not absolute assurance.[97] During the Board's initial outreach such additional language was considered, but there was no investor demand for it. As a result, the final standard does not expand the description of reasonable assurance in the auditor's report.

Some commenters also suggested that the auditor's report should include disclosure of the materiality measures used by auditors in planning the audit. These commenters asserted that it could help inform investors' proxy voting process for auditor ratification, as such disclosure could be a valuable supplement to an audit fee analysis and used to compare materiality over time to trends in restatements and adjustments. These commenters also observed that materiality disclosures are provided in the auditor's reports in the U.K. Other commenters from the Board's initial outreach stated that disclosing materiality levels in the auditor's report could have negative implications on audit quality by reducing the element of surprise necessary in an audit.[98] One commenter opposed a disclosure of materiality on the basis that it may encourage disclosure of quantitative materiality levels and ignore qualitative aspects of materiality, which cannot be described in a meaningful way in the auditor's report. The Board has decided not to include this additional element in the auditor's report at this time because disclosure may reduce the element of surprise in the audit and overstate the importance of quantitative rather than qualitative factors in the auditor's overall consideration of materiality. However, the Board will monitor the implementation of the final standard, as well as the developments of expanded auditor reporting in other jurisdictions, to determine if future enhancements to the auditor's report may be warranted in this area.

Additionally, some commenters suggested that the auditor's report should define the auditor's responsibility for other information in documents containing audited financial statements so that financial statement users have a clear understanding. The Board's proposal included another new auditing standard, *The Auditor's Responsibilities*

---

[97] Paragraph .10 of AS 1015, *Due Professional Care in the Performance of Work.*

[98] *See* PCAOB Release No. 2011-003, Appendix C, for a detailed discussion of the staff's outreach regarding reporting materiality levels.

*Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*, regarding the auditor's responsibilities for other information outside the financial statements. The Board has not taken any further action since the proposal.

A few commenters suggested including other elements, such as the date when the auditor completed fieldwork, a statement that the auditor looked for material fraud, disclosure when alternative dispute resolution clauses are included in engagement letters, and disclosure of reasons for change in the engagement partner prior to mandatory rotation. The final standard does not include these elements because the Board believes they would not add meaningfully to the information already provided in the final standard or the elements go beyond what was considered in this standard-setting project and, thus, the Board is not including these elements at this time.

## C. Explanatory Language and Emphasis of a Matter

### *1. Explanatory Language Required by Other PCAOB Standards*

The reproposed standard, similar to the existing standard,[99] provided a list of circumstances in which the auditor is required to add explanatory language to the auditor's report and included references to other PCAOB standards in which these circumstances and related reporting requirements are described. These circumstances included when there is substantial doubt about the company's ability to continue as a going concern and a restatement of previously issued financial statements, among others.

The list of circumstances from the Board's reproposal did not attract much comment, although one commenter affirmed support for including the list. Commenters on the Board's proposal supported providing a list in the standard of the circumstances that require explanatory language in the auditor's report on the basis that keeping this information in a single place would facilitate consistency in execution. The final standard includes the list of explanatory paragraphs and related references as reproposed.

The reproposed standard included a requirement for the auditor to add explanatory language in cases where the company is required to report on ICFR but has determined that it is not required to obtain, and did not request the auditor to perform, an audit of ICFR.[100] The reproposed standard included a reference to a new

---

[99] *See* existing AS 3101.11.

[100] This may be the case for companies that are subject to Section 404(a) of Sarbanes-Oxley, which mandates management ICFR reporting, but not Section 404(b), which mandates auditor ICFR reporting. Section 404(a) generally applies to companies

proposed requirement in AS 3105, *Departures from Unqualified Opinions and Other Reporting Circumstances*, for the auditor to add such explanatory language. Some commenters were supportive of the reproposed requirement, while one commenter did not believe such a requirement was necessary but did not object to its inclusion.

The Board also sought comment on whether the requirement to include an explanatory paragraph in the auditor's report when the auditor did not perform an audit of ICFR should apply not only if company's management is required to report on ICFR, but also if management is not required to report, such as for investment companies. Several commenters supported expanding the requirement to all instances in which the auditor is not engaged to opine on ICFR, and not limit it to only when management is required to report on ICFR.

In the Board's view, it is appropriate to add explanatory language to the auditor's report when management has a reporting responsibility on ICFR but the auditor is not engaged to opine on ICFR, in order to clarify the auditor's responsibilities in this situation. For companies for which management is not required to report on ICFR, the Board does not believe that the auditor should have a separate reporting responsibility. Accordingly, the final standard retains the requirement as reproposed.[101] The auditor may, however, choose to include such a paragraph in the auditor's report voluntarily.

*Interaction between critical audit matters and explanatory paragraphs*. The reproposed standard clarified that critical audit matters are not a substitute for required explanatory paragraphs. However, there could be situations in which a matter meets the definition of a critical audit matter and also requires an explanatory paragraph, such as going concern. For these situations, the reproposal contemplated that both the explanatory paragraph and the required communication regarding the critical audit matter would be provided. The auditor could include the communication required for a critical audit matter in the explanatory paragraph, with a cross-reference in the critical audit matter section to the explanatory paragraph. Alternatively, the auditor could choose to provide both an explanatory paragraph and the critical audit matter communication separately in the auditor's report, with a cross-reference between the two sections.[102] While the information reported in a critical audit matter may overlap with

---

that are subject to the reporting requirements of the Exchange Act, other than registered investment companies. Certain categories of companies that are subject to Section 404(a), such as nonaccelerated filers and emerging growth companies, are not subject to Section 404(b).

[101] *See* amendments to AS 3105.59–.60.

[102] When both an explanatory paragraph and a critical audit matter communication are provided, the critical audit matter description should not include

some of the information already provided in the explanatory paragraph, the critical audit matter would provide incremental information, such as how the matter was addressed in the audit.

Commenters were generally supportive of the interaction between the communication of critical audit matters and required explanatory paragraphs as described in the reproposed standard. Some alternative views, however, were expressed. One commenter thought that if a required explanatory paragraph is also a critical audit matter, disclosure in the auditor's report should be limited to one place in the auditor' report. The commenter suggested that the communication requirements for both a critical audit matter and an explanatory paragraph be reported in the critical audit matter section of the auditor's report with a cross reference in the explanatory paragraph section. Another commenter suggested that the PCAOB harmonize its approach with that of the IAASB, which requires a reference in the key audit matter section but waives the requirements to describe the key audit matter and how it was addressed during the audit. Finally, another commenter thought that critical audit matter communications should not be permitted to be integrated with explanatory paragraphs, on the basis that explanatory paragraphs are about matters in the financial statements to which the auditor wants to draw the reader's attention and are not necessarily critical audit matters.

The final standard retains the interaction between critical audit matters and explanatory paragraphs as reproposed. The approach provides flexibility on auditor disclosure, yet also ensures that the communication requirements are met.

*2. Emphasis of a Matter*

The reproposed standard, similar to the existing standard, provided the ability for the auditor to add a paragraph to the auditor's report to emphasize a matter regarding the financial statements ("emphasis paragraph").[103] Emphasis paragraphs are not required, but may be used by auditors to draw the reader's attention to matters such as significant transactions with related parties and unusually important subsequent events.

The reproposed standard provided a list of potential matters that the auditor may emphasize in the auditor's report, although the auditor may also decide to emphasize other matters.

---

conditional language that would not be permissible in the explanatory paragraph. *See* footnote 5 of AS 2415.

[103] *See* existing AS 3101.19.

Commenters were supportive of emphasis paragraphs as described in the reproposed standard and did not suggest any additional matters to be included in the list of potential emphasis paragraphs. The final standard includes emphasis paragraphs as reproposed.

*Interaction between critical audit matters and emphasis paragraphs*. The reproposed standard stated that emphasis paragraphs are not a substitute for required critical audit matters. If a matter that the auditor considers emphasizing meets the definition of a critical audit matter, the auditor would provide the information required for critical audit matters, and would not be expected to include an emphasis paragraph in the auditor's report. Although this did not generate much comment, one commenter affirmed support for the interaction between critical audit matters and emphasis paragraphs. The final standard retains the interaction between critical audit matters and emphasis paragraphs as reproposed.

*Requirements of Other Regulators and Standard Setters*

Under the requirements of other regulators and standard setters, there are no analogous explanatory paragraphs, except for reporting on going concern. The Board's reproposed approach is similar to the IAASB's approach to the interaction between a paragraph regarding the company's ability to continue as a going concern and key audit matters, although the underlying requirements for auditor reporting on going concern vary.[104] Under the IAASB's approach, an emphasis of matter paragraph is not required for a matter that was determined to be a key audit matter.[105] The EU and the FRC have separate requirements related to going concern reporting that do not specifically address the interaction with their expanded auditor reporting.[106] The IAASB, FRC, and EU do not have requirements for reporting on ICFR.

## D. Information about Certain Audit Participants

On May 9, 2016, the SEC approved new rules and related amendments to the Board's auditing standards, including amendments to AS 3101, that will provide

---

104 *See* paragraph A1 of ISA 570, *Going Concern*, and paragraph 15 of ISA 701.

105 *See* paragraph 8 of ISA 706, *Emphasis of Matter Paragraphs and Other Matter Paragraphs in the Independent Auditor's Report*.

106 *See* ISA (UK and Ireland) 570, *Going Concern*, and *see* Article 28, *Audit Reporting*, of Directive 2014/56/EU of the European Parliament and of the Council (Apr. 16, 2014).

investors and other financial statement users with information about engagement partners and other accounting firms that participate in audits of issuers.[107] Firms will be required to file Form AP with the PCAOB for each issuer audit, disclosing this information. In addition to filing Form AP, firms will also have the choice to include this information in the auditor's report.[108] The final standard incorporates the adopted amendments to AS 3101 for situations in which the auditor decides to include information about certain audit participants in the auditor's report. The final standard requires the auditor to use an appropriate section title when providing this information in the auditor's report, but does not require a specific location in the auditor's report.

*Requirements of Other Regulators and Standard Setters*

The IAASB requires the auditor to include the name of the engagement partner in the auditor's report for audits of listed entities.[109] Under EU law, the engagement partner is required to sign the audit report in all EU countries, including the United Kingdom.[110] Unlike disclosure of the engagement partner's name, disclosure of other accounting firms that participated in the audit is not required by the IAASB, FRC, or the EU.

## E. Form of the Auditor's Report

The repropose standard required the "Opinion on the Financial Statements" section to be the first section of the auditor's report, immediately followed by the "Basis for Opinion" section. The reproposed standard did not specify an order for the remaining sections of the auditor's report, which would include explanatory paragraphs and critical audit matters. This approach allowed for consistency in the location of the opinion and basis for opinion sections, with flexibility for the other elements of the auditor's report. The reproposed standard also required titles for all sections of the auditor's report to provide consistency and assist users in identifying the individual sections of the auditor's report.

---

107 *See* PCAOB Release No. 2015-008.

108 When the auditor divides responsibility for the audit under AS 1205, *Part of the Audit Performed by Other Independent Auditors*, the auditor's report must acknowledge the involvement of the other auditor.

109 *See* paragraph 45 of ISA 700.

110 Directive 2006/43/EC of the European Parliament and of the Council, Article 28, *Audit Reporting* (May 17, 2006).

Commenters were generally supportive of the proposed changes to the form of the auditor's report, because the changes will:

- Enhance the clarity and comparability of disclosures;
- Make it easier for investors to find the opinion since it will be listed first;
- Help facilitate a comparison between auditor's reports; and
- Allow for an appropriate level of flexibility and ease of use without being overly prescriptive.

Some commenters suggested the PCAOB should be consistent with other standard setters in the ordering of section titles in the auditor's report. One commenter expressed concern that the ordering of the components of the opinion and the heading of the critical audit matter section of the report may be misunderstood to imply that critical audit matter communications are separate and distinct from the auditor's opinion, which could be misinterpreted as a piecemeal opinion. In light of the commenter support described above, the Board is adopting the form of the auditor's report as reproposed. As previously discussed, the final standard includes revised introductory language in the auditor's report to avoid the potential misperception that the communication of critical audit matters provides piecemeal opinions.

*Requirements of Other Regulators and Standard Setters*

The reproposed approach with respect to the order of the sections of the auditor's report is generally consistent with that of the IAASB.[111] The EU and FRC do not specify an order to the auditor's report.

## F. Application to Other Audits Performed Under PCAOB Standards

There are situations in which an auditor may be required by law or regulation, or voluntarily agrees, to perform an audit engagement in accordance with PCAOB standards for a company whose audit is not subject to PCAOB oversight.[112] For

---

111 *See* paragraphs 23–28 of ISA 700.

112 Under the Sarbanes-Oxley Act, as amended by the Dodd-Frank Wall Street Reform and Consumer Protection Act, the PCAOB oversees the audits of "issuers" and brokers and dealers reporting under Exchange Act Rule 17a-5. *See* Sarbanes-Oxley Act Section 101. An "issuer" under the Sarbanes-Oxley Act is an entity whose securities are registered under Section 12 of the Exchange Act, or that is required to file reports under Section 15(d) of the Exchange Act, or that files or has filed

example, SEC rules permit audits under PCAOB standards in connection with offerings under Regulation A and Regulation Crowdfunding.[113] In these situations, certain elements of the auditor's report required under the final standard, such as the use of "registered public accounting firm" in the title or the statement regarding independence requirements, may not apply. Additional guidance for these situations will be provided.

## V. Amendments to Other PCAOB Standards

The Board is adopting amendments to several of its existing auditing standards solely to conform to the final standard.[114] The Board is not adopting any further changes to these existing auditing standards at this time, although the Board recognizes that some of the existing auditing standards, such as the redesignated standard AS 3105, may need further updating. The Board may consider proposing further changes to these standards under separate standard-setting projects.

### A. AS 3105, *Departures from Unqualified Opinions and Other Reporting Circumstances*

Existing AS 3101.10 and .20-.76 address departures from the auditor's unqualified opinion, such as a qualified opinion, an adverse opinion, or a disclaimer of opinion, and other reporting circumstances, such as reporting on comparative financial statements. These paragraphs are redesignated as AS 3105.[115] Commenters who addressed this topic generally supported the reproposed amendments to AS 3105, including amending the example auditor's reports to conform with the example auditor's report in the final standard. The Board also received some comments suggesting further changes to AS 3105, such as updating descriptions of and references to accounting requirements that are no longer current[116] and updating certain terminology (e.g.,

---

a Securities Act registration statement that has not yet become effective and that it has not withdrawn. *See* Sarbanes-Oxley Section 2(a).

113 *See* Securities Act Form 1-A, Part F/S (b)(2) and (c)(1)(iii); Regulation Crowdfunding Rule 201(t) instruction 9, 17 CFR 227.201(t).

114 The amendments are included in Appendix 2.

115 AS 3101.01-.09 and .11-.19 are amended and restated as provided in Appendix 1.

116 The Board has issued guidance regarding the status of outdated descriptions of and references to U.S. GAAP in PCAOB standards. *See* PCAOB, *Staff Questions and Answers, References to Authoritative Accounting Guidance in PCAOB Standards* (Sept. 2, 2009). Among other things, this guidance provides that auditors

changing references from "entity" to "company"). The Board may consider such updates as part of a separate standard-setting project.

The Board is adopting final amendments to AS 3105 that are substantially similar to the reproposal. The amendments to AS 3105 are not intended to change the circumstances in which the auditor would depart from an unqualified opinion. The changes from the current standard will primarily: (1) require the communication of critical audit matters in certain circumstances; (2) revise certain terminology to align with the final standard; and (3) amend the illustrative reports for the basic elements of the final standard and the required order of certain sections of the auditor's report.

AS 3105 includes:

*Communication of Critical Audit Matters in Reports Containing Other than Unqualified Opinions*

a. *Qualified opinion*—Amendments to AS 3105 will require that when the auditor expresses a qualified opinion, the auditor's report also include communication of critical audit matters, if critical audit matter requirements apply.

b. *Adverse opinion*—The existing requirements related to an adverse opinion are not amended to require the auditor to communicate critical audit matters. In the Board's view, the most important matter to investors and other financial statement users in such circumstances would be the reason for the adverse opinion.

c. *Disclaimer of opinion*—The existing requirements related to a disclaimer of an opinion are not amended to require the auditor to communicate critical audit matters. In the Board's view, the most important matter to investors and other financial statement users in such circumstances would be the reason for the disclaimer of opinion.

*Requirements of Other Regulators and Standard Setters*

Under the IAASB's approach, a matter giving rise to a qualified, adverse, or disclaimer of opinion is by nature a key audit matter.[117] However, in such

---

should disregard descriptions of and references to accounting requirements in PCAOB standards that are inconsistent with the FASB Accounting Standards Codification ("ASC").

[117] *See* paragraph 15 of ISA 701.

circumstances: (1) the matter should not be described in the key audit matter section of the auditor's report, (2) the auditor should report on the matter in accordance with applicable standards, and (3) the auditor should include a reference in the key audit matter section to the basis for modified opinion section where the matter is reported.[118] The requirements to determine and communicate key audit matters, other than the matters giving rise to the modified opinion, would still apply when the auditor expresses a qualified or adverse opinion, but not when the auditor disclaims an opinion on the financial statements.[119] The FRC and the EU do not include specific requirements for expanded auditor reporting when the auditor's report contains other than an unqualified opinion.

## B. Other Amendments to PCAOB Standards

The amendments to other PCAOB standards are substantially as reproposed. These include:

- AS 1220, *Engagement Quality Review*—amending to require the engagement quality reviewer to evaluate the engagement team's determination, communication, and documentation of critical audit matters;

- AS 1301, *Communications with Audit Committees*—amending to require the auditor to provide to and discuss with the audit committee a draft of the auditor's report;

- AS 2201, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*—amending the example auditor's report to conform with the example auditor's report on the financial statements in the final standard;

- AS 2820, *Evaluating Consistency of Financial Statements*—amending to include the existing reporting requirements and illustrative explanatory language related to a change in accounting principle or a restatement that is currently in AS 3105; and

- AS 4105, *Reviews of Interim Financial Information*—amending to include the basic elements of the final standard, where applicable.

---

[118] *Id*.

[119] *See* paragraph A7 of ISA 701 and paragraph 29 of ISA 705, *Modifications to the Opinion in the Independent Auditor's Report*.

Conforming amendments were also made to every PCAOB standard that refers to the auditor's report. Commenters generally supported the amendments as reproposed.

A commenter suggested revising AS 3305, *Special Reports*, to conform to the example auditor's report in the final standard. Since reports pursuant to AS 3305 are rarely filed with the SEC, as noted by this commenter, the Board does not believe these reports should be updated at this time. As described above, the Board may consider updating this standard as part of a separate standard-setting project.

## VI. Economic Considerations

The Board is committed to analyzing the economic impacts of its standard setting. The following discussion addresses the potential economic impacts, including potential benefits and costs, considered by the Board. The Board has sought information relevant to economic consequences several times over the course of the rulemaking. Commenters provided views on a wide range of issues pertinent to economic considerations, including potential benefits and costs, but did not provide empirical data or quantified estimates of the costs or other potential impacts of the standard. The potential benefits and costs considered by the Board are inherently difficult to quantify, therefore the Board's economic discussion is primarily qualitative in nature.

Commenters who discussed the economic analysis in the Board's reproposal provided a wide range of views. Some commenters pointed to academic research for the Board to consider in support of their views. One commenter asserted that the Board's release did not provide a true economic analysis of the pros and cons of mandating the reporting of critical audit matters, but only referenced academic studies on the purported benefits of such reporting. Another argued that the changes described in the reproposal would lead to a significant increase in costs, and that no compelling case had been made that the benefits would exceed the costs. The SEC's Investor Advocate said that the Board's economic analysis made a compelling case as to why the required reporting of critical audit matters would reduce informational asymmetries and add to the total mix of information available to investors.[120] The Board has considered all comments received and has sought to develop an economic analysis that evaluates the potential benefits and costs of the final standard, as well as facilitates comparisons to alternative Board actions.

---

[120] *See* letter from Rick A. Fleming, Investor Advocate, SEC (Aug. 15, 2016) at 3, available on the Board's website in Docket 034.

## A. Need for the Rulemaking

### *1. Critical Audit Matters*

Generally, investors and other financial statement users know less about a company's financial performance than do others closer to the financial reporting process, particularly management. This information asymmetry[121] can result in situations where capital is allocated suboptimally. The system of financial reporting in the United States, which requires periodic reporting of information, including annual financial statements, helps address the information asymmetry between investors and management. Board of directors and audit committee oversight of the financial reporting process can further reduce this information asymmetry by enhancing the quality of the information disclosed to the public. As part of this system, the audit of the financial statements also helps reduce the information asymmetry investors face by providing an independent opinion about whether the financial statements are presented fairly in all material respects.

Companies' operations continue to become more complex and global. In addition, over the last decade, there have been changes in the financial reporting frameworks relating to accounting estimates and an increasing use of fair value as a measurement attribute, together with new related disclosure requirements.[122] These estimates and fair value measurements, which are important to a financial statement user's understanding of the company's financial position and results of operations, can be highly subjective, require significant judgment, and can result in increased measurement uncertainty in financial statements.[123] The increased complexity of financial reporting, including the growing use of complex accounting estimates and fair value measurements, may contribute to the information asymmetry between investors and management, despite the fact that management is required to provide significant disclosures to investors and other financial statement users. Some commenters on the reproposal have stated that investors would find information provided by the auditor, an independent third party, particularly relevant in this setting.

---

[121] Economists often describe "information asymmetry" as an imbalance, where one party has more or better information than another party.

[122] *See* PCAOB Staff Consultation Paper, *Auditing Accounting Estimates and Fair Value Measurements* (Aug. 19, 2014).

[123] *See* IAASB Project Proposal, Revision of ISA 540, *Auditing Accounting Estimates, Including Fair Value Accounting Estimates, and Related Disclosures* (Mar. 2016).

As part of the audit, auditors often perform procedures involving challenging, subjective, or complex judgments, such as evaluating calculations or models, the impact of unusual transactions, and areas of significant risk. Although the auditor is required to communicate with the audit committee regarding such matters, the auditor's report has not been expanded to provide this information to investors and generally provides only a standardized pass/fail opinion. Because the auditor's report generally does not contain audit-specific information, it provides very little of the information the auditor knows about the company, its financial reporting, and the challenges of the audit. Given the increased complexity of financial reporting, which requires the auditor to evaluate complex calculations or models and make challenging or subjective judgments, the current form of the auditor's report does little to address the information asymmetry between investors and auditors.

The Board believes that expanding the auditor's report to provide information about especially challenging, subjective, or complex auditor judgments will help investors and other financial statement users "consume" the information presented in management's financial statements more effectively. Stated in economic terms, in the Board's view, an expanded auditor's report will reduce the information asymmetry between investors and auditors, which should in turn reduce the information asymmetry between investors and management about the company's financial performance. Reducing information asymmetry about the company's financial reporting should lead to a more efficient allocation of capital.

Some commenters supported the reporting of critical audit matters as a means of reducing the information asymmetry between investors and auditors. Other commenters disagreed with the Board's approach and questioned whether the Board could or should attempt to reduce information asymmetry by requiring expanded auditor reporting. The Board believes that requiring expanded auditor reporting as a means of reducing the information asymmetry between investors and auditors is consistent with its statutory mandate to "protect the interests of investors and further the public interest in the preparation of informative, accurate and independent audit reports."[124] Investors are the intended beneficiaries of the audit, but investors do not receive information about specific work performed during the audit. The final standard seeks to enhance the form and content of the auditor's report to make it more relevant and informative to investors and other financial statement users.

---

[124] Section 101(a) of Sarbanes-Oxley.

a. Increasing the Informativeness of the Auditor's Report to Address Information Asymmetry

The communication of critical audit matters will reduce the information asymmetry between investors and auditors by informing investors and other financial statement users about areas of the audit that required especially challenging, subjective, or complex auditor judgment, including the principal considerations for determining the matters and how the matters were addressed in the audit. The Board believes that auditor reporting of critical audit matters will provide investors with audit-specific information that should facilitate their analysis of the financial statements and other related disclosures. The communication of critical audit matters in the auditor's report should also help investors and analysts who are interested in doing so to engage management and the audit committee with targeted questions about these issues.[125] Ultimately, while not every critical audit matter will be useful for every investor, broadly, the Board believes that having the auditor provide investors and other financial statements users with additional information about especially challenging, subjective, or complex auditor judgments should help reduce the information asymmetry that exists between investors and management by providing additional insights on the financial statements.

The communication of critical audit matters should also assist investors in assessing the credibility of the financial statements and, in at least some instances, audit quality.[126] For example, the description of how the auditor addressed the critical audit matter will help investors understand the types of issues that the auditor grappled with in addressing these challenging, subjective, or complex areas of the audit, which should allow a deeper and more nuanced understanding of the related financial statement accounts and disclosures. Furthermore, investors have consistently stated that having the auditor rather than the company, provide this type of information would

---

[125] The FRC observes that, in some instances, investors have begun to use the information provided in the expanded auditor's reports in the U.K. to engage with audit committees. *See* FRC 2016 Report.

[126] It is often not possible to observe the difference between financial reporting quality and audit quality. An academic study conceptually models the path through which the financial reporting and audit processes result in audited financial reporting outcomes. The authors postulate that although audit quality and pre-audit financial reporting quality are distinct constructs, the two processes are often inseparable in terms of observable financial reporting outcomes in archival research. *See* Lisa Milici Gaynor, Andrea Seaton Kelton, Molly Mercer, and Teri Lombardi Yohn, *Understanding the Relation between Financial Reporting Quality and Audit Quality*, 35 Auditing: A Journal of Practice & Theory 1, 1-22 (2016).

be of added value to investment decision making.[127] Commenting on the reproposal, the SEC's Investor Advocate noted that investors want to hear directly from the auditor and that this point is confirmed by surveys of professional investors, as well as by certain academic research.[128] This commenter agreed with the premise in the reproposal that, because the auditor is required to be independent, information provided by the auditor may be viewed by investors as having greater credibility than information provided by management alone.

Reporting of critical audit matters should provide insights that will add to the mix of information that could be used in investors' capital allocation decisions, for example, by:

- Highlighting the aspects of the financial statement audit that the auditor found to be especially challenging, subjective, or complex;

- Enabling comparison of these aspects of the audit across companies, for example audits of companies within the same industry; and

- Enabling comparison of these aspects of the audit for the same company over time.

Many companies commenting on the reproposal argued that the reporting of critical audit matters would not increase the informativeness of the auditor's report. For example, several of these commenters claimed that the reporting of critical audit matters would simply duplicate management disclosure without adding additional information, or that critical audit matters would not provide value-relevant information. Other commenters asserted that the reporting of critical audit matters would result in the auditor's report becoming a lengthy list of boilerplate disclosures, which would contribute to disclosure overload or run contrary to the SEC's disclosure effectiveness initiative. Several commenters said that critical audit matters could confuse investors if the information in the auditor's report was duplicative of management's disclosures but was presented in a different manner, or if the critical audit matter presented information without appropriate context.

---

[127] *See* IAG 2011 survey and CFA survey and poll results.

[128] *See* letter from Rick A. Fleming, Investor Advocate, SEC (Aug. 15, 2016) at 3, available on the Board's website in Docket 034 (citing Brant E. Christensen, Steven M. Glover, and Christopher J. Wolfe, *Do Critical Audit Matter Paragraphs in the Audit Report Change Nonprofessional Investors' Decision to Invest?* 33 Auditing: A Journal of Practice & Theory 71, 71–93 (2014)).

By contrast, investor commenters overwhelmingly agreed that the communication of critical audit matters would make the auditor's report more informative. One commenter said that, although critical audit matters in themselves would not provide investors with all the information needed in the face of growing financial complexity, critical audit matters would add to the total mix of information available to investors, and would contribute to their ability to analyze companies, form a multifaceted understanding of them, and make informed investment decisions. Another commenter noted that, in jurisdictions where the expanded auditor's report is available, it is one of the earliest elements of the company's annual report that they read because it typically highlights the more judgmental elements of the company's accounting, which often provides insights that form a basis for discussions with management.

b. Mandated Rather than Voluntary Reporting

Auditors have not developed a practice of providing information in the auditor's report beyond what is required, even though investors have consistently requested that the auditor's report become more informative. Current standards provide a framework for auditors to provide limited additional information through emphasis paragraphs,[129] but in general these only point to a disclosure in the company's financial statements without providing any additional description of the matter and, as noted below, emphasis paragraphs are infrequent in practice. Auditor reporting about matters significant to the audit is not prohibited in an emphasis paragraph, but current standards do not encourage auditors to include such information in their report and do not provide a framework for doing so.

There are many other potential reasons why auditors are not providing information voluntarily in the auditor's report, whether about the financial statements or the audit. For example, the historical model of management disclosing information and the auditor attesting to the information may lead companies to resist voluntary additional reporting by the auditor, either through emphasis paragraphs or with respect to information about the audit, which the auditor would be better positioned to communicate than management. Further, auditors may believe that providing additional information could potentially expose them to liability[130] or that doing so could be interpreted as a disclaimer of opinion or a partial opinion as to the identified matters. Finally, in general, there may be disincentives to voluntary reporting if the disclosing party is not able to fully capture the benefits of the disclosures,[131] and parties may also

---

[129] *See* existing AS 3101.19.

[130] Section IV.A.4 contains a discussion about potential auditor liability concerns stemming from expanded auditor reporting.

[131] Academic research finds that there are certain situations in which

exhibit a bias toward the *status quo.*[132] All of these factors disincentivize auditors from voluntarily providing further information about the audit, even if investors and other financial statement users would respond favorably to receiving additional information.

The Board believes that the required reporting of critical audit matters will promote more complete and consistent disclosure of audit-specific information to financial statement users who may be interested in it.[133] Mandatory disclosure can also improve the allocative efficiency of capital markets by decreasing the costs associated with gathering information, or by providing market participants with information that otherwise would have been difficult or impossible for them to gather.[134]

*2. Additional Improvements to the Auditor's Report*

The final standard requires auditors to disclose in the auditor's report the number of years they have served consecutively as the auditor for the company. Although some

---

disclosure may be socially optimal but not privately optimal. Auditors and companies may resist voluntary expanded auditor reporting because of concerns that certain types of spillover effects (or externalities) may create a competitive disadvantage. For a summary of this line of research, *see* Luigi Zingales, *The Future of Securities Regulation*, 47 Journal of Accounting Research 391, 394-395 (2009). Professor Zingales is the founding director of the PCAOB's Center for Economic Analysis, now known as the Office of Economic and Risk Analysis. The research cited above was published before he joined the PCAOB.

[132] Research in behavioral economics suggests that when facing a set of decisions, individuals are more likely to stick to the known outcome (*status quo*) than would be expected based on the theory of rational decision making under uncertainty. There are a variety of reasons why individuals may choose the status quo outcome in lieu of an unknown outcome, including aversion to the uncertainty inherent in moving from the status quo to another option. *See* William Samuelson and Richard Zeckhauser, *Status Quo Bias in Decision Making*, 1 Journal of Risk and Uncertainty 7, 7-59 (1988).

[133] Academic research on disclosure explores these types of positive externalities, as well as certain negative externalities. *See, e.g.*, Ronald A. Dye, *Mandatory versus Voluntary Disclosures: The Cases of Financial and Real Externalities,* 65 The Accounting Review 1, 1-24 (1990); or Anat R. Admati and Paul Pfleiderer, *Forcing Firms to Talk: Financial Disclosure Regulation and Externalities*, 13 The Review of Financial Studies 479, 479-519 (2000).

[134] *See, e.g.*, John C. Coffee, Jr., *Market Failure and the Economic Case for a Mandatory Disclosure System*, 70 Virginia Law Review 717, 717–753 (1984).

commenters dispute the value of this information, investor commenters have indicated that the length of the relationship between the auditor and the company would be a useful data point. The growing trend toward voluntary disclosure of this information by companies suggests that increasing numbers of companies believe that the market finds the disclosure useful.[135] Further, there is a line of academic research suggesting that there is an association between auditor tenure and increases or decreases in audit quality.[136]

Although investors may be able to determine auditor tenure by, for example, reviewing past auditor's reports, for many companies the information is not readily available even through a manual search process.[137] Furthermore, while some companies voluntarily provide information about auditor tenure in the proxy statement, many do not. Many companies are also not subject to the proxy rules (for example, most investment companies, foreign private issuers, and many companies whose securities are not listed on a national securities exchange). In cases where the information is provided voluntarily, it is not provided in a consistent location. The Board believes that these issues create unnecessary search costs for investors who wish to evaluate information about auditor tenure. Mandatory disclosure of auditor tenure in the auditor's report will provide a consistent location for this information and will reduce search costs relative to the current baseline for investors who are interested in auditor tenure, especially in the case of companies that do not voluntarily provide such information or for which the information is not available through the EDGAR system. Mandatory disclosure of auditor tenure in the auditor's report may also be more likely to encourage further discussion of auditor tenure by management and the audit committee and potential disclosure in company filings.

The existing auditor's report also does not describe important aspects of the auditor's responsibilities under existing auditing standards, such as the auditor's responsibility to detect material misstatements, whether due to error or fraud; the auditor's responsibility for the notes to the financial statements; and the auditor independence requirement. This may contribute to misperceptions by investors and other financial statement users about the auditor's role and responsibilities, including with respect to these matters. Academic research suggests that there are a number of

[136] *See* Section VI.D.2.f for a discussion of academic research regarding auditor tenure.

[137] *Supra* note 76.

ways in which investor perceptions of the role and responsibilities of the auditor may diverge from what current professional standards require.[138] In addition, the existing standards do not require a uniform approach to basic content, such as the addressee of the report and the form of the auditor's report, which may increase the time and costs of processing the information in the auditor's report. The final standard contains provisions requiring the basic elements in the auditor's report to be presented more uniformly.

Commenters generally supported the reproposed changes to these basic elements of the auditor's report. Some commenters noted that the enhanced descriptions of the auditor's responsibility to detect material misstatements would clarify the auditor's responsibilities for financial statement users, other commenters offered suggestions for refinement, such as aligning the requirements to the IAASB model or amending the description to more clearly define the auditor's role within the context of the financial reporting regulatory framework.

Commenters also generally supported including a statement on the auditor's independence requirement. For example, some commenters stated that adding a statement by the auditor on their independence would reinforce investors' understanding of the auditor's requirement to remain independent and objective in expressing the audit opinion. Other commenters said that the enhanced description of the independence requirement could provide a meaningful reminder of the importance of auditor independence. However, other commenters said that the enhanced description of auditor independence was either unnecessary, or would not have a significant impact on auditor behavior. Based on broad commenter support, the Board is adopting these additional improvements to the auditor's report as reproposed.

## B. Baseline

### *1. Critical Audit Matters*

The auditor's report in the United States today generally consists of three paragraphs that include limited audit-specific information. The existing auditor's report

---

[138] *See, e.g.,* Bryan K. Church, Shawn M. Davis, and Susan A. McCracken, *The Auditor's Reporting Model: A Literature Overview and Research Synthesis*, 22 Accounting Horizons 69, 69-90 (2008); Glen L. Gray, Jerry L. Turner, Paul J. Coram, and Theodore J. Mock, *Perceptions and Misperceptions Regarding the Unqualified Auditor's Report by Financial Statement Preparers, Users, and Auditors*, 25 Accounting Horizons 659, 675-676 (2011); or Theodore J. Mock, Jean Bédard, Paul J. Coram, Shawn M. Davis, Reza Espahbodi, and Rick C. Warne, *The Audit Reporting Model: Current Research Synthesis and Implications*, 32 Auditing: A Journal of Practice & Theory 323, 323-351 (2013).

identifies the company's financial statements that were audited, provides a standardized description about the nature of an audit, and provides an opinion on whether the company's financial statements are fairly presented, in all material respects, in conformity with the applicable financial reporting framework. The auditor's report is often described as a pass/fail model because the report only conveys the auditor's opinion on whether the financial statements are fairly presented (pass) or not (fail) and typically provides limited information about the nature of the work on which the opinion is based.

The Board's current standards also require that the auditor add explanatory paragraphs to the auditor's report under specific circumstances, such as when there is substantial doubt about the company's ability to continue as a going concern or a restatement of previously issued financial statements. When included, these paragraphs generally consist of standardized language that provides limited audit-specific information.

The auditor may also, at his or her discretion, include emphasis paragraphs in the auditor's report to emphasize a matter regarding the financial statements. Generally, an emphasis paragraph only points to a disclosure in the company's financial statements without providing any additional description. Under current practice, emphasis paragraphs are infrequent.[139] Auditors may also, at their discretion, include language in the auditor's report indicating that they were not engaged to examine management's assertion about the effectiveness of internal control over financial reporting.[140]

Academic research confirms the view of the Board and many commenters that the current form of the auditor's report conveys little of the audit-specific information obtained and evaluated by the auditor.[141] Academic research also finds that investors and other financial statement users refer to the existing auditor's report only to determine whether the opinion is unqualified because it does not provide much additional informational value about a particular audit.[142] These findings align with the

---

[139] In the audit reports of approximately 6,350 issuers with fiscal year 2014 filings, PCAOB staff identified audit reports containing explanatory paragraphs to emphasize matters in the financial statements in approximately 2 percent of the filings.

[140] *See* paragraph .10 of AI 20, *Other Information in Documents Containing Audited Financial Statements: Auditing Interpretations of AS 2710.*

[141] *See* Church et al., *The Auditor's Reporting Model: A Literature Overview and Research Synthesis* 69-90.

[142] *See* Gray et al., *Perceptions and Misperceptions Regarding the*

consistent call from investors, over the course of the Board's rulemaking process, for a more informative auditor's report.[143]

*2. Additional Improvements to the Auditor's Report*

The existing auditor's report is not required to have a specified addressee but it may be addressed to the company whose financial statements are being audited, its board of directors, or stockholders.[144] Under current practice, the auditor's report is generally addressed to one or more of the following: (1) the board of directors and stockholders/shareholders, or their equivalent for issuers that are not organized as corporations; (2) the plan administrator or plan participants for benefit plans; and (3) the directors or equity owners for brokers or dealers.[145]

The current auditor's report also includes the report title, the date, and the name and location of the accounting firm's office issuing the report. The auditor is not currently required to disclose in the auditor's report the number of years it has served as auditor for the company. However, as noted earlier, many larger companies have begun voluntarily disclosing auditor tenure in the proxy statement.

Currently, the title of the auditor's report, "Report of Independent Registered Public Accounting Firm," provides the only indication of the auditor's independence.

---

*Unqualified Auditor's Report by Financial Statement Preparers, Users, and Auditors* 659–684; Mock et al., *The Audit Reporting Model: Current Research Synthesis and Implications* 323–351.

[143] Academic research has found that, in some instances, the inclusion of explanatory language in the auditor's report may provide investors with additional value-relevant information. A recent academic study suggests that auditor's reports containing certain types of explanatory paragraphs required under existing standards may provide information about the likelihood that financial statements will be subsequently restated. The authors argue that the inclusion of such an explanatory paragraph in the auditor's report can provide a signal to investors about the risk of misstatement of the company's financial statements. *See* Keith Czerney, Jaime J. Schmidt, and Anne M. Thompson, *Does Auditor Explanatory Language in Unqualified Audit Reports Indicate Increased Financial Misstatement Risk?* 89 The Accounting Review 2115, 2115–2149 (2014).

[144] *See* existing AS 3101.09.

[145] This information is based on a review by PCAOB staff of a random sample of 2014 fiscal year-end auditor's reports for issuers, benefit plans, and brokers and dealers.

## C. Benefits

### *1. Critical Audit Matters*

Economic theory commonly attributes two benefits to mandatory disclosure. First, the disclosure of previously unknown, value-relevant information directly benefits the market because it allows market participants to make better-informed decisions. Second, the disclosure of such information may indirectly benefit the market because some parties may change their behavior in positive ways after information is disclosed.

a. Direct Benefit: More Informative and Useful Auditor's Report

The Board believes that auditor communication of critical audit matters will reduce the information asymmetry between investors and auditors, which should in turn reduce the information asymmetry between investors and management about the company's financial performance. Some commenters on the reproposal agreed that the information provided in critical audit matters would be used by various types of investors in a number of different ways that are consistent with the framework outlined in the reproposal:

- *Informing*—Identification of the matters arising from the audit that the auditor considered especially challenging, subjective, or complex, together with a description of how the auditor addressed those matters, which should provide valuable information. For example, some commenters said that:
    - Critical audit matters would add to the total mix of information available to investors, and would contribute to their ability to analyze companies and make investment decisions;
    - Investors would use critical audit matters in the same way that they use any other financial disclosure; critical audit matters would add an additional perspective to management's disclosures;
    - Insights on critical audit matters may be relevant in analyzing and pricing risks in capital valuation and allocation;
    - Critical audit matters would inform investor models of company financial performance;
    - Critical audit matters would augment and add more dimension to the information provided by the financial statements and the critical accounting policies and estimates; and

- o The communication of critical audit matters would lower the cost of acquiring information for financial statement users.

- *Framing*—Critical audit matters should provide investors with a new perspective on the financial statements and focus their attention on the related financial statement accounts and disclosures, which should facilitate their analysis of the financial statements, and help them assess financial performance, for example by highlighting potentially relevant information or by reducing the costs to process or search for the information. For example, some commenters said that:

  - o Critical audit matters would focus investors' attention on key financial reporting issues and identify areas that deserve more attention;

  - o In jurisdictions where expanded auditor reporting is available, it focuses users' attention on issues that would be pertinent to understanding a company as a long-term investor; and

  - o Information in critical audit matters would contribute to investor understanding and consumption of information in the financial statements.

- *Monitoring*—The ability to identify and evaluate the matters identified as critical audit matters should also help investors and analysts engage management with targeted questions about these issues and support investor decisions on ratification of the auditor. For example, some commenters said that:

  - o Critical audit matters would facilitate the ability of investors to monitor management's and the board of director's stewardship of the company by highlighting accounting and auditing issues and other matters that investors may wish to emphasize in their engagement with management; and

  - o Critical audit matters would provide important information on how the auditor has addressed an issue, which investors can use in evaluating the rigor of the audit and making proxy voting decisions, including ratification of the audit committee's choice of external auditor.

Critical audit matters may be used by different types of investors in different ways. For example, retail investors (or others who may act on their behalf, such as analysts, credit rating agencies, or the financial press) may use the additional information to help them identify and analyze important aspects of the financial statements. Larger investors, on the other hand, may also use critical audit matters as a basis for engagement with management.

The communication of critical audit matters aims to provide investors and financial statement users with specific information about the audit of a company's financial statements. Some commenters were concerned, however, that the communication of critical audit matters could lead to a reduction in comparability of auditor's reports. Although differences in critical audit matters from period to period and across companies may make auditor's reports less uniform, to the extent the information provided is useful in evaluating the financial performance, highlighting these differences should contribute to the overall mix of information. Further, some commenters on the proposal said that investors are interested in information that is specific to the audit of a company's financial statements, and therefore, would expect differences in auditor's reports across companies and reporting periods. Investors also have indicated that they are accustomed to analyzing company-specific information, such as information in financial statements or MD&A that is specific to a company or a reporting period.

A body of academic research regarding the possible effects of expanded auditor reporting is emerging.[146] The Board has been monitoring this research with a view towards assessing its potential relevance to this rulemaking. The Board is mindful of several issues that limit the extent to which this research can inform its decision making. Much of this research is unpublished and at a relatively early stage. The current conclusions may be subject to multiple interpretations and it is possible that results from this research may be revised during the peer review process. Moreover, it may be difficult to generalize results outside the context of specific studies. For example, in considering the implications of academic studies based on data from other jurisdictions, differences between the Board's final standard and the requirements in other jurisdictions must be taken into account. In addition, specific characteristics of the U.S.-issuer audit market may make it difficult to generalize observations made in other markets because of differences in baseline conditions (for example, market efficiency, affected parties, policy choices, legal environment, and regulatory oversight). As to experimental research in particular, it should be noted that the experimental setting may not provide study participants with information that is representative of the information environment in which market participants actually operate; for instance, if new information appeared more salient to study participants than it would to a market participant, the impact of expanded auditor reporting would be overstated in an

[146] For a review of relevant academic research, *see* Jean Bédard, Paul Coram, Reza Espahbodi, and Theodore J. Mock, *Does Recent Academic Research Support Changes to Audit Reporting Standards?* 30 Accounting Horizons 255, 255-275 (2016).

experimental setting. In addition, some of these studies were conducted based on earlier versions of rule text that differs from the final standard, which may affect the extent to which the results can inform the Board in evaluating potential effects of the final standard.

As discussed in more detail in the economic analysis contained in the reproposal, the results from early research analyzing the informational value of expanded auditor reporting are inconclusive.[147] Some studies found that expanded auditor reporting could provide investors with new and useful information, while other studies found that the benefits attributable to expanded auditor reporting were not statistically significant, but that it could produce unintended consequences. These limited findings may be due to the fact that the results of the studies represent averages for large samples of companies. On average, investors may already have access to a variety of information sources (such as annual reports, news media, and analyst research reports) which may contain similar information about a company. However, expanded auditor reporting may be relatively more informative for companies where alternative sources of information are less available (e.g., those companies with less analyst coverage).

In response to the reproposal, two commenters submitted studies suggesting that expanded auditor reporting has increased the informative value of the auditor's report. One experimental study tested the communicative value of expanded auditor reporting by analyzing how key audit matters affected investment professionals' assessment of a company's business economics, as well as their confidence in making that assessment.[148] The authors found that specific informational content of the key audit matter affected the study participants' perceived level of trust associated with the auditor's report, which then affected the perceived level of trust associated with the financial statements and their assessment of the company's business economics. Another study analyzed whether the communicative value of auditor's reports changed following the implementation of expanded auditor reporting in the United Kingdom.[149] The author found that the readability of auditor's reports increased in the post-implementation period, and that the use of negative and uncertain words in expanded

auditor's reports captured more client-specific audit risk.[150] In addition, the author found limited evidence that the dispersion of analysts' EPS forecasts decreased following the implementation of expanded auditor reporting, suggesting an improved information environment. The author argued that expanded auditor reporting was successful at increasing the communicative value of the auditor's report, and that analyst behavior changed accordingly. In contrast, another recent experimental study found that including critical audit matters reduced the readability of the auditor's report but did not incrementally inform nonprofessional investors' valuation judgments. However, the study suggested that the reporting of a critical audit matter lowers nonprofessional investors' perceptions of management's credibility when earnings just meet analysts' expectations. The study was designed and implemented using the definition of critical audit matters and related reporting requirements from the Board's proposal, which differ from the final standard.[151]

In addition, in reviewing the experience of expanded auditor reporting in the United Kingdom, the FRC observed that investors greatly value the information provided in expanded auditor reporting.[152] This view is confirmed by UK investors that commented on the reproposal. The FRC noted that, in the two years following the implementation of the new requirements, an association of investment managers has recognized in an annual awards ceremony those specific auditor's reports found to be most clear and most innovative in providing insight into the audit of the company's financial statements.[153] In addition, the FRC notes that users of the new auditor's reports identified certain descriptions of risks that they found to be more useful—such as descriptions that are specific to the entity being audited. Further, the FRC report noted that, in the second year of implementation, a much greater proportion of risks were set out in a more meaningful and transparent way.[154] As noted above, the FRC's requirements for expanded auditor reporting are different from the final standard, and

---

[150] The author uses several measures designed to assess the readability of texts which, the study notes, have been used in several other published academic studies addressing the readability of financial disclosure. *See id.* at 5.

[154] *Id.*

the baseline legal and regulatory environment is not the same as in the United States. Nevertheless, the Board believes that there are sufficient similarities for the UK experience to be generally informative in its decision-making.

While it is too early for the body of academic research on expanded auditor reporting to provide a conclusive answer, investors commenting during the Board's standard-setting process have consistently affirmed the usefulness of expanded auditor reporting and the FRC's observations on the early experience of investors in the United Kingdom are consistent with this view. Accordingly, the Board believes that auditor communication of critical audit matters will add to the mix of information that investors can use.

b. Indirect Benefit: Improved Audit and Financial Reporting Quality

In general, information asymmetry can lead to situations in which an agent (such as an auditor) takes actions that do not coincide with the best interests of the principal (such as an investor), if the agent's incentives are misaligned.[155] This type of problem is the result of the inability of the principal to observe or monitor the agent's behavior, which also inhibits the principal's ability to identify and reward optimal behavior, or punish sub-optimal behavior. Economic theory posits that the disclosure of information can have indirect effects that lead to changes in behavior.[156] In the context of expanded auditor reporting, the additional information provided in the auditor's report could be beneficial to investors by providing more information about the audit, which could affect their voting decisions. To the extent that this could influence the terms of the auditor's engagement, academic research suggests "any additional information about the agent's action, however imperfect, can be used to improve the welfare of both the principal and the agent."[157]

---

[155] Economists use principal-agent theory to analyze situations where one party (the principal) hires another party (the agent) to perform certain tasks and decision-making ability is delegated to the agent. For a general discussion of principal-agent theory, *see, e.g.*, Michael C. Jensen and William H. Meckling, *Theory of the Firm: Managerial Behavior, Agency Costs and Ownership Structure*, 3 Journal of Financial Economics 305, 305-360 (1976), or Bengt Holmstrom, *Moral Hazard and Observability*, 10 The Bell Journal of Economics 74, 74-91 (1979).

[156] *See, e.g.*, George Loewenstein, Cass R. Sunstein, and Russell Golman, *Disclosure: Psychology Changes Everything*, 6 Annual Review of Economics 391, 391-419 (2014).

[157] *See* Holmstrom, *Moral Hazard and Observability* at 75.

This suggests that making aspects of the audit more visible to investors through the communication of critical audit matters should provide some auditors, management, and audit committees with additional incentives to change their behavior in ways that may enhance audit quality and ultimately financial reporting quality. For instance, the communication of critical audit matters could lead:

- Auditors to focus more closely on the matters identified as critical audit matters;

- Audit committees to focus more closely on the matters identified as critical audit matters and to engage the auditor and management about the adequacy of the related disclosures; and

- Management to improve the quality of their disclosures because they know that investors and the auditor will be scrutinizing more closely the matters identified as critical audit matters.

The communication of critical audit matters could lead auditors to increase their focus on the matters identified in the auditor's report as critical audit matters. As suggested by commenters, the communication of critical audit matters could further incentivize auditors to demonstrate the level of professional skepticism necessary for high quality audits in the areas of the critical audit matters. Other commenters stated that the reporting of critical audit matters could result in increased audit quality. For example, auditors could feel that the potentially heightened scrutiny of the matters identified as critical audit matters may warrant additional effort to satisfy themselves that they have obtained an appropriate amount of audit evidence to support their opinion.

The communication of critical audit matters could also heighten management's attention to the relevant areas of financial statements and related disclosures. Several commenters stated that the reporting of critical audit matters would lead management to improve the quality of their disclosures or adopt more widely accepted financial reporting approaches in these areas.[158]

---

[158] To substantiate this point, one commenter cited a memo prepared for the clients of an international law firm that noted management should consider revising or supplementing their own disclosures relating to issues raised in expanded auditor's reports to ensure that the totality of disclosures around the issue are complete and accurate. *See* Sullivan & Cromwell LLP, *Audit Reports, PCAOB Releases Reproposal of Amendments to Its Audit Report Standard* (May 25, 2016).

An experimental study analyzed the joint effect of expanded auditor reporting and audit committee oversight on management disclosure choices.[159] The author found that the study participants, who were currently serving as public company financial executives, chose to provide the greatest level of disclosure when they knew that the auditor's report would provide a more detailed description of the accounting estimate, and the audit committee exhibited strong oversight. The author argued that, similar to what other academic research has found regarding the resolution of audit adjustments, information presented in critical audit matters would be the outcome of a negotiation process between the auditor and management.

Increased management attention to the related aspects of the financial statement accounts and disclosures described in the critical audit matters should, at least in some cases, lead to an incremental increase in the quality of the information presented. Academic research has shown that increased quality of information could result in a reduction in the average cost of capital.[160]

In addition, the communication of critical audit matters may enhance the audit committee's oversight efforts by providing an additional incentive for the audit committee to engage with the auditor and management about the matters identified as critical audit matters and the adequacy of the company's related disclosures. Although some commenters stated that the required communication of critical audit matters would "chill" communications between the auditor and the audit committee, others said that it would enhance communications between these parties. Further, it should be noted that the final standard does not change the Board's existing requirements on audit committee communications, other than requiring the auditor to provide the audit committee with a draft of the auditor's report.

To the extent changes in the behavior of auditors, audit committees, and management occur, they could lead to an incremental increase in audit quality and financial reporting quality, which should increase investors' confidence in the reliability of the financial statements. Some commenters stated that a more transparent and informative auditor's report could heighten user confidence in the audit and the audited

[160] *See, e.g.*, Richard A. Lambert, Christian Leuz, and Robert E. Verrecchia, *Information Asymmetry, Information Precision, and the Cost of Capital*, 16 Review of Finance 1, 1-29 (2012). Professor Leuz is an economic advisor at the PCAOB. The research cited above was published before he joined the PCAOB.

financial statements. Academic research suggests that an increase in investor confidence should decrease the average cost of capital.[161] As discussed in the economic analysis of the reproposal, some empirical studies conducted in other jurisdictions provide evidence that expanded auditor reporting increased audit quality, while other studies found that it did not have a measurable effect on audit quality.[162] The Board is not aware of any empirical studies indicating that expanded auditor reporting had a negative effect on audit quality.

c. Indirect Benefit: Differentiation among Auditor's Reports

If investors and other financial statement users perceive and respond to differences in the quality and usefulness of the information communicated by auditors regarding critical audit matters, expanded auditor reporting should serve as a potential means of greater differentiation among accounting firms and engagement partners.[163] One commenter stated that the reporting of critical audit matters would allow auditors to differentiate themselves, and that this differentiation would provide useful information to investors and other financial statement users. If expanded auditor reporting allows investors to differentiate among accounting firms and engagement partners, it should provide a more nuanced signal of audit quality and financial reporting reliability.

The FRC report also noted that there are clear differences among accounting firms in the approaches taken to implement the requirements.[164] For example, one firm went beyond the FRC's requirements by including audit findings for the risks of material misstatement in the majority of its auditor's reports in the second year of implementation, which other firms did far less frequently. The FRC's observations may

Professor Zingales is the Founding Director of the PCAOB's Center for Economic Analysis, now known as the Office of Economic and Risk Analysis. The research cited here was published before he joined the PCAOB.

162 *See* PCAOB Release No. 2016-003, Section VI.C.1.b, footnotes 154-156 and accompanying text.

163 On May 9, 2016, the SEC approved new rules and related amendments to the Board's auditing standards, including amendments to AS 3101, that will provide investors and other financial statement users with information about engagement partners and other accounting firms that participate in audits of issuers. *See* PCAOB Release No. 2015-008.

164 *See* FRC 2016 report.

suggest that accounting firms took different approaches to expanded auditor reporting as a means of distinguishing themselves based on the quality and usefulness of the information provided in their auditor's reports. Furthermore, as discussed in the economic analysis of the reproposal, an academic study argued that investors found the auditor's reports issued by some accounting firms to be more useful than others.[165] One commenter specifically noted that mandatory auditor rotation was introduced in the UK at the same time as expanded auditor reporting, and that this may have provided accounting firms with motivation to differentiate themselves.

In addition to relying on the audit committee (which, at least for exchange-listed companies, is charged with overseeing the external auditor), in the absence of differentiation based on the auditor's report, users of financial statements may rely on proxies such as the reputation of the accounting firm issuing the auditor's report, aggregated measures of auditor expertise (for example, dollar value of issuer market capitalization audited or audit fees charged), or information about the geographic location of the office where the auditor's report was signed as signals for audit quality. Academic research finds, however, that these are imperfect signals of audit quality.[166]

The identification and description of critical audit matters should permit differentiation among auditor's reports based on investor perceptions of their informativeness and usefulness. In some instances it may also provide a signal of audit quality. Because the determination and communication of critical audit matters may reflect a variety of considerations, however, critical audit matters may not bear directly on audit quality. For example, the choice of which critical audit matters to communicate or how to describe them may reflect considerations such as the company's business environment and financial reporting choices, accounting firm methodology, engagement partner characteristics, and legal advice. Thus, a more detailed description of critical audit matters may not necessarily reflect a higher quality audit than a less informative description of such matters.

Nevertheless, informative descriptions of how the audit addressed critical audit matters should provide insight into the extent and appropriateness of the auditor's work. Moreover, it is possible that thoughtful, audit-specific, and useful critical audit matters (or, conversely, generic and uninformative critical audit matters) could affect investor

[165] *See* PCAOB Release No. 2016-003, Section VI.C.1.b, footnote 161 and accompanying text.

[166] *See, e.g.*, Jere R. Francis, *A Framework for Understanding and Researching Audit Quality*, 30 Auditing: A Journal of Practice & Theory 125, 125–152 (2011) and Mark DeFond and Jieying Zhang, *A Review of Archival Auditing Research*, 58 Journal of Accounting and Economics 275, 275–326 (2014).

perceptions of the auditor's work and willingness to provide useful information. As a result, the communication of critical audit matters, potentially in conjunction with disclosures regarding the identity of the engagement partner and other accounting firms that participated in the audit,[167] and other relevant information should enable differentiation among engagement partners and accounting firms on that basis.

*2. Additional Improvements to the Auditor's Report*

The final standard will introduce new requirements regarding auditor tenure, the addressee of the auditor's report, and statements in the auditor's report related to auditor independence and the auditor's responsibility for reporting on ICFR.[168] In addition, the final standard contains other changes to the form of the auditor's report, which are intended to improve and clarify the language for certain elements, such as statements related to the auditor's responsibilities regarding the notes to the financial statements, and to promote a consistent presentation of this information across auditor's reports.

Investor commenters have consistently supported disclosing tenure in the auditor's report. In the Board's view, which is consistent with the views of some commenters,[169] disclosing information about auditor tenure in the auditor's report will provide a consistent location for this information and decrease the search costs, relative to the current environment of voluntary reporting, for some investors and other financial statement users who are interested in this information.

The statement regarding the auditor's existing obligation to be independent of the company is intended to enhance investors' and other financial statement users' understanding about the auditor's obligations related to independence and to serve as a reminder to auditors of these obligations. By requiring the auditor's report to be addressed to certain parties, the Board will be promoting uniformity in the addressees of the auditor's report.

Commenters were generally supportive of the reproposed changes to the form of the auditor's report. For example, some commenters stated these enhancements would

---

[167] *See* PCAOB Release No. 2015-008.

[168] In circumstances where management is required to report on ICFR but the auditor is not and has not performed an audit of ICFR, the final standard requires a statement to that effect in the auditor's report.

[169] *See also* Section VI.D.2.f for a discussion of academic research regarding auditor tenure.

make the auditor's report easier to read and would facilitate comparisons between auditor's reports for different companies by providing a consistent format.

## D. Costs and Potential Unintended Consequences

### *1. Costs*

Commenters on the reproposal raised concerns that the rule would impose various types of costs, but generally did not quantify those costs. Even those that, at an earlier stage of the rulemaking, conducted limited implementation testing of the proposal were unable to provide a quantified cost estimate. Given lack of data, the Board is unable to quantify costs, but provides a qualitative cost analysis.

As an additional means of assessing potential cost implications of the final standard, PCAOB staff has reviewed data from the first year of implementation of expanded auditor reporting in the United Kingdom.[170] As discussed below, staff analyzed a variety of data points that may be associated with potential costs, including audit fees, days required to issue the auditor's report, and the content of the expanded auditor's report. It should be noted that it may be difficult to generalize observations from the UK experience. For example, the reporting and documentation requirements relating to expanded auditor's reports in the United Kingdom differ from those in the final standard, the baseline legal environments are different, and the UK requirements apply only to companies with a premium listing on the London Stock Exchange and not, for example, to smaller companies that list on London's AIM market.

#### a. Critical Audit Matters

The Board anticipates that the final requirements regarding critical audit matters will have potential cost implications for auditors and companies, including their audit committees. Such costs will likely relate to additional time to prepare and review auditor's reports, including discussions with management and audit committees, as well as legal costs for review of the information provided in the critical audit matters. In addition, auditors may choose to perform more audit procedures related to areas reported as critical audit matters (even though performance requirements have not changed in those areas), with cost implications for both auditors and companies.

For auditors, costs might represent both one-time costs and recurring costs. One-time costs could be incurred as a result of: (1) updating accounting firm audit and

---

[170] *See* PCAOB, *White Paper on the Auditor's Reports of Certain UK Companies that Comply with International Auditing Standard (UK and Ireland) 700* ("PCAOB White Paper") (May 2016), available on the Board's website in Docket 034.

quality control methodologies to reflect the new reporting requirements; and (2) developing and conducting training of accounting firm personnel on the new reporting requirements. When updating methodologies, some accounting firms will likely also develop new quality control processes related to additional review or consultation on the determination, communication, and documentation of critical audit matters. One commenter suggested that the initial implementation costs could place a significant and possibly disproportionate burden on smaller accounting firms.

Recurring costs will primarily reflect additional effort expended in individual audits. The final standard does not impose new performance requirements other than the determination, communication, and documentation of critical audit matters, which will be based on work the auditor has already performed. However, there will be some additional recurring costs associated with drafting descriptions of critical audit matters and related documentation. It is likely that senior members of the engagement teams, such as partners and senior managers, will be involved in determining the critical audit matters and developing the language to be included in the auditor's report. In addition, reviews by others, such as the engagement quality reviewer and national office, will also result in recurring costs. Additional time might also be incurred by the auditor as a result of discussions with management or the audit committee regarding critical audit matters.

Companies, including audit committees, will likely also incur both one-time and recurring costs as a result of the final standard. One-time costs could be incurred, for example, in educating audit committee members about the requirements of the new standard and in developing management and audit committee processes for the review of draft descriptions of critical audit matters and the related interaction with auditors. Recurring costs will include the costs associated with carrying out those processes, as well as any increase in audit fees associated with the new reporting requirements or legal fees stemming from a review of critical audit matter communications.

If the drafting and review of critical audit matter reporting takes place towards the end of the audit, there will also be an opportunity cost associated with the time constraints on the parties involved (including, for example, management, the engagement partner, the audit committee, and the auditor's and company's respective legal counsel). The end of the audit is a busy period in which multiple issues may need to be resolved before the auditor's report can be issued. At the same time, companies and management may also be in the process of finalizing the annual report. Time spent drafting and reviewing the communication of critical audit matters could occur at the same time as other important work in the financial reporting and audit process, and would likely involve senior management that command relatively high annual salaries or experienced auditors and lawyers with relatively high hourly billing rates. In addition, the communication of critical audit matters could lead to changes in management's disclosures, which may result in more effort and cost in the financial reporting process.

Several commenters on the reproposal claimed that the required reporting of critical audit matters would lead to increased audit fees, but none provided data or estimates regarding the magnitude of the increases they expected. Commenters on the proposal had differing views about the likely magnitude of direct costs associated with auditor reporting of critical audit matters. Some commenters said that there would not be material additional costs for communication of critical audit matters, as these matters would already have been communicated to the audit committee. This may suggest that a substantial amount of the work required to communicate critical audit matters would already have been completed earlier in the audit.

One commenter argued that the changes described in the reproposal would lead to a significant increase in costs, and that no compelling case had been made that the benefits would exceed the costs. Some commenters noted that investors would be expected to ultimately bear the cost of the audit, and these commenters have voiced strong support for expanded auditor reporting since the project's inception. This suggests that they consider the benefits of expanded auditor reporting to justify the costs, and would support additional fees for additional useful information.

Audit fees do not fully reflect the cost of implementing expanded auditor reporting to the extent that accounting firms choose to absorb those additional costs and because audit fees do not reflect the impact of any additional demand on management's time associated with expanded auditor reporting. Subject to those limitations, in its review of the implementation of expanded auditor reporting in the United Kingdom, the PCAOB staff did not find evidence of statistically significant increases in audit fees following the first year of expanded auditor reporting.[171] For 53 percent of the companies analyzed, audit fees for the year of implementation remained the same or decreased as compared to the prior year's audit fees. Audit fees increased for the remaining companies. The PCAOB staff found that the average change in audit fees was an increase of approximately 5 percent, roughly consistent with the findings of academic research described in the economic analysis in the reproposal. However, the staff found that the median change in audit fees was zero. Collectively, these results seem to suggest that outlier companies with relatively large increases in audit fees drove the result for the average change in audit fees. It should be noted that the PCAOB staff's review did not analyze whether other factors, such as inflation, changes in the economic environment and corporate risk, corporate acquisitions, or the implementation of other regulatory changes, contributed to the documented increase in audit fees.

One commenter on the reproposal noted that the caveats described above are important because the inability to fully gauge the costs of expanded auditor reporting could lead the Board to underestimate the costs associated with the rule, which may

[171] *Id.*

bear disproportionately on smaller companies and their auditors. Another commenter also asserted that the costs of expanded auditor reporting are likely to be disproportionately borne by smaller companies because the reproposed rule had, in their estimation, limited scalability. The Board believes that the complexity and costs associated with determining, documenting, and communicating critical audit matters should generally depend on the nature and complexity of the audit. This would in turn depend on the complexity of the operations and accounting and control systems of the company.

b. Additional Improvements to the Auditor's Report

The changes adopted to the basic elements of the auditor's report do not represent a significant departure from the reproposal. Some of the enhanced basic elements will have cost implications for auditors, although these costs are not expected to be significant. One-time costs will primarily relate to updating methodology and training and the initial determination of the first year the auditor began serving consecutively as the company's auditor. Based on comments received, it does not appear that the changes adopted to the basic elements will impose significant recurring costs, because the year in which tenure began will not change and the other amendments involve standardized language that, once implemented, will be the same or very similar across different auditor's reports every year.

2. *Potential Unintended Consequences*

a. Time Needed to Issue the Auditor's Report

As a result of the additional effort required to determine, communicate, and document critical audit matters, some commenters said that it would take auditors longer to issue their reports. On this point, the PCAOB staff study did not find evidence that compliance with the United Kingdom's expanded auditor reporting requirements delayed the issuance of auditor's reports in the first year of implementation. Based on the study, for companies that had three years of financial statements, a new form auditor's report was issued, on average, in 63 days from the company's fiscal year end date in the year of implementation, as compared to 64 days in the prior year and 65 days two years earlier. Further, academic research cited in the economic analysis of the reproposal similarly did not find that the UK reporting requirements led to delays in financial reporting.[172]

---

[172] *See* PCAOB Release No. 2016-003, section VI.D.2.a, footnote 169 and accompanying text.

b. Number and Content of Critical Audit Matters

Some commenters indicated an expectation that the auditor's report would include a long list of critical audit matters or that auditors would have incentives to communicate an overly long list of critical audit matters. For example, some commenters said that this would occur because the auditor would be motivated to communicate as much as possible in an effort to mitigate any future liability for unidentified critical audit matters, or as a means to avoid potential consequences of being second-guessed by regulators or others. Other commenters asserted that such a development could make the auditor's report overly long, contributing to disclosure overload and conflicting with the SEC's disclosure effectiveness project. Other commenters indicated that expanded auditor reporting could lead to boilerplate language that would diminish the expected value of the critical audit matters and obscure the clarity of the auditor's opinion. If auditors fail to provide audit-specific information, the communication of critical audit matters will not decrease information asymmetry about the audit, and may obscure other important information included in the auditor's report and the audited financial statements.

The final requirements aim to provide investors with the auditor's unique perspective on the areas of the audit that involved the auditor's especially challenging, subjective, or complex judgments. Limiting critical audit matters to these areas should mitigate the extent to which expanded auditor reporting could become standardized. Focusing on auditor judgment should limit the extent to which expanded auditor reporting could become duplicative of management's reporting. Also, while some commenters argued that liability concerns would increase the number of critical audit matters auditors communicate, others suggested that liability concerns would minimize the additional statements auditors make.

The PCAOB staff study did not find evidence that expanded auditor reporting in the United Kingdom resulted in a very large number of risk topics or none at all in the first year of implementation.[173] On average, the auditor's reports in the first year of implementation included descriptions of four risk topics, with total risk topics ranging from one to eight. Additionally, the descriptions of the risks of material misstatement in the auditor's reports in the first year of implementation were not presented in standardized language, but included variations in content length, description, and presentation. The most frequently described risk topics related to revenue recognition, tax, and goodwill and intangible assets. The FRC report on the first two years of expanded auditor reporting in the United Kingdom finds a similar range and average number of risk topics disclosed in both the first and second year of implementation.[174]

---

173 *See* PCAOB White Paper.

174 *See* FRC 2016 Report.

The FRC report also finds disclosure of similar risk topics in the second year of implementation of expanded auditor reporting in the United Kingdom.[175]

Further, the FRC found that, in the second year of expanded auditor reporting in the United Kingdom, the discussion of risks has improved relative to the first year of implementation and that the majority of auditor's reports provided discussion of risks that were more tailored to the company under audit, thus avoiding generic or standardized wording.[176] These findings suggest that, thus far, expanded auditor reporting has not become standardized in the United Kingdom.[177]

c. Effects of Increased Attention to Critical Audit Matters

The communication of critical audit matters could lead auditors, company management, and the audit committee to spend additional time and resources on reviewing the adequacy of the work performed on the related financial statement accounts and disclosures. While this could lead to an incremental improvement in audit and financial reporting quality for the identified critical audit matters, it is also possible that there may be increased costs for auditors as a result of the requirements. For example, even though the final standard does not mandate the performance of additional audit procedures other than with respect to communication of critical audit matters, it is possible that some auditors may perform additional procedures. If that occurs, the associated costs may be passed on—in whole, in part, or not at all—to companies and their investors in the form of higher audit fees. Further, increased procedures may also require additional time from the company's management to deal with such procedures. Some commenters suggested that the increased attention on certain matters could also lead to a related decrease in audit and financial reporting quality if other material aspects of the financial statements and disclosures receive less attention.

Some commenters argued that including critical audit matters in the auditor's report would impair the relationship between auditors and management or auditors and the audit committee. Other commenters suggested that the required reporting of critical audit matters would inhibit communication among the auditor, management, and the audit committee because of concerns about what would be publicly communicated in

---

[175] *Id.*

[176] *Id*.

[177] The Board finds the UK experience instructive, although it is, of course, possible that differences between the UK and US litigation and regulatory environments may influence the extent to which these findings would generalize to the US market.

the auditor's report. One commenter also suggested that auditors may include additional matters in audit committee communications out of concern that an omission could lead to regulatory sanctions or liability. Other commenters have said that it would enhance communication among the participants in the financial reporting process.

An experimental study analyzed how the strength of audit committee oversight of the financial reporting process varied with the presence of sophisticated investors and knowledge of forthcoming expanded auditor reporting.[178] The author found that study participants, most of whom were experienced audit committee members, asked fewer probing questions if they knew that the auditor would be providing a discussion of the significant accounting estimate in the auditor's report. The author argued that by asking fewer probing questions audit committee members subconsciously insulated themselves from potential challenges mounted by investors regarding the appropriateness of the company's financial reporting. The Board is not aware of evidence this has occurred in the jurisdictions that have adopted expanded auditor reporting. Moreover, it may be difficult in an experimental setting to recreate the actual legal responsibility and potential liability that audit committee members face, which may limit the extent to which the experimental results would generalize to actual behavior in real-world settings.

Similarly, as described in the economic analysis of the reproposal and asserted by at least one commenter, management may have an incentive to withhold information from the auditor in order to prevent an issue from being described in the auditor's report. It seems unlikely, however, that management would or could withhold information from the auditor on the most critical issues in the audit because it could result in a scope limitation. On the contrary, it may be just as likely that management would communicate more information to the auditor as a means of demonstrating that an issue is not challenging, subjective, or complex, and, therefore, would not need to be described in the auditor's report.

Under the final standard, critical audit matters are determined from the matters communicated or required to be communicated to the audit committee. As noted earlier, with respect to any matters already required to be communicated to the audit committee, there should not be a chilling effect or reduced communications to the audit committee. Therefore, it would seem that any chilling effect would relate to matters that are not explicitly required to be communicated to the audit committee, although, as

[178] Yoon Ju Kang, *Are Audit Committees More Challenging Given a Sophisticated Investor Base? Does the Answer Change Given Anticipation of Additional Mandatory Audit Report Disclosure?* (working paper submitted as comment letter No. 17, available on the Board's website in Docket 034).

previously described, given the breadth of current communication requirements, the Board believes there will likely be few communications affected by that possibility.

d. Potential Impact on Management Disclosure

Several commenters stated that the communication of critical audit matters would give auditors leverage to encourage disclosure of information by management. While some commenters asserted that this would be beneficial, others claimed it would be an unintended negative consequence of requiring the communication of critical audit matters. Several commenters characterized this as inappropriately expanding the role of the auditor in the financial reporting process, while undermining the role of management and the audit committee. In their view, this would be especially problematic if the final standard permitted the auditor to communicate information that was not otherwise required to be disclosed (for example, because it did not meet a specified threshold for disclosure, such as a significant deficiency in internal control over financial reporting). Commenters claimed that auditor communication of this "original information" would cause a number of unintended consequences, including significant costs, disclosure of confidential or competitively sensitive information, and potentially misleading or incomplete information.[179]

Investors and other commenters pointed out that, although expanded auditor reporting would give the auditor additional leverage over management's disclosure choices, this could result in improvements in the usability of financial statements and increases in financial reporting quality. One of these commenters cited academic research noting that, in current practice, disclosure is already guided by an iterative process between management and the auditor. This commenter reasoned that concerns regarding "original information" were misplaced because the iterative process would reduce the likelihood that the auditor would be a source of original information since critical audit matters would likely overlap with increased management disclosure.

Another commenter pointed out that auditors would not have incentives to interpret the Board's rule to require disclosure of original information in most situations. For example, concerns about the limitations of their knowledge and expertise, potential liability implications, and friction in the relationship with the company are likely to discourage auditors from going beyond management disclosures. Nevertheless, the final standard contemplates that the auditor will do so only when it is necessary to describe the principal considerations that led the auditor to determine that a matter was especially challenging, subjective, or complex and how the matter was addressed in the audit. The Board believes that this provision is needed in order to ensure that the fact

[179] For a complete discussion of these concerns, *see* Section IV.A.2.c.i.

that management did not provide a disclosure would not prevent the auditor from communicating a critical audit matter.

Although the communication of critical audit matters may lead to changes in the incentives for the auditor, company management, and the audit committee to communicate with each other, initial anecdotal evidence from the Board's outreach activities suggests that the implementation of expanded auditor reporting in the United Kingdom has not chilled such communications.

e. Changes in Perceived Assurance on the Auditor's Report, Including Perceptions of Auditor Liability

The communication of critical audit matters could have liability implications for auditors. For a more detailed discussion of liability, *see* Section IV.A.4. In addition, because the communication of critical audit matters requires auditors to discuss aspects of the audit that they found to be especially challenging, subjective, or complex, it is possible that some investors and financial statement users may misconstrue the communications to mean that auditors were unable to obtain reasonable assurance about the matters identified as critical audit matters. Some commenters have said that the communication of critical audit matters could lead to changes in the way investors and financial statements users perceive the level of assurance provided by the auditor on matters identified as critical audit matters, including that it could undermine the basic pass/fail opinion. This could lead investors to erroneously conclude that there is a problem with the audit either in the areas identified in critical audit matters or other areas, or that auditors are providing separate assurance about the presentation of the financial statements, which may have implications for perceptions of auditor responsibility in the event of an audit failure.

As discussed in the economic analysis of the reproposal, several academic papers analyze certain risks associated with communicating critical audit matters, including perception of auditor responsibility.[180] If the communication of critical audit matters were to lead to a reduction in perceived auditor responsibility, as is suggested by some academic research, and this in turn reduced auditor liability, it is possible that auditors may feel that less audit work is needed on the matters identified as critical audit matters, which could adversely affect audit quality (although the Board's other auditing standards, reinforced through firm quality control and Board inspections and enforcement activity, should provide a disincentive for auditors to decrease the amount or quality of audit work performed). It is difficult to draw generalizable conclusions based on the findings of these studies. In part, this is because their results vary and are

---

[180] *See* PCAOB Release No. 2016-003, Section VI.D.2.d, footnotes 182-186 and accompanying text.

sometimes contradictory, with some studies finding that expanded auditor reporting increases perceived auditor responsibility and others finding that it decreases perceived auditor responsibility. This may suggest that the results are sensitive to the experimental design and the context in which information is presented to study participants. In addition, it is not clear how the findings would correlate with changes in auditor behavior, because perceptions of auditor responsibility may be a poor proxy for actual auditor responsibility or liability.

To address the risk that the communication of critical audit matters could result in the perception of separate assurance, the final standard requires the following statement in the auditor's report:

> The communication of critical audit matters does not alter in any way [the auditor's] opinion on the financial statements, taken as a whole, and [the auditor is not] by communicating the critical audit matters… providing separate opinions on the critical audit matters or on the accounts or disclosures to which they relate.

The purpose of this statement is to make clear that the communication of critical audit matters in an auditor's report should not be interpreted as altering the level of assurance on any aspect of the audit report, including the identified critical audit matters. In this regard, the Board also notes the view of some commenters that critical audit matters are likely to be used by institutional investors that are unlikely to misinterpret the information.

f. Auditor Tenure

Many commenters stated that information regarding the auditor's tenure included in the auditor's report could result in inappropriate and inconsistent assumptions about correlations between auditor tenure and/or independence and audit quality. Academic research on the relationship of tenure to audit quality has varied conclusions. For instance, some academic research indicates that engagements with short-term tenure are relatively riskier or that audit quality is improved when auditors have time to gain expertise in the company under audit and in the related industry.[181] Other academic research suggests that, at least prior to 2001, both short tenure (less than five years) and long tenure (greater than fifteen years) can have detrimental effects on audit

---

[181] *See, e.g.*, Joseph V. Carcello and Albert L. Nagy, *Audit Firm Tenure and Fraudulent Financial Reporting*, 23 Auditing: A Journal of Practice & Theory 55, 55–69 (2004) and Timothy B. Bell, Monika Causholli, and W. Robert Knechel, *Audit Firm Tenure, Non–Audit Services, and Internal Assessments of Audit Quality*, 53 Journal of Accounting Research 461, 461–509 (2015).

quality.[182] Still other academic research indicates that investors are more likely to vote against, or abstain from, auditor ratification as auditor tenure increases, which may suggest that investors view long-term auditor-company relationships as adversely affecting audit quality.[183]

The disclosure of auditor tenure is intended to add to the mix of information that investors can use. However, commenters other than investors did not support disclosure of auditor tenure in the auditor's report on the basis that such disclosure would not provide value to investors or could result in false conclusions about correlations between auditor tenure and audit quality or between auditor tenure and auditor independence. Many of these commenters recommended that, if the Board determined to require disclosure of auditor tenure, it should be disclosed in Form AP rather than in the auditor's report as a means of avoiding these inferences.

## E. Alternatives Considered, Including Policy Choices under the Final Standard

After considering the comments received, the Board is adopting a new auditor reporting standard, AS 3101 and related amendments to its standards. The final standard retains the pass/fail model while expanding auditor reporting to include the communication of critical audit matters. Investor commenters have consistently asked for additional information in the auditor's report to make it more informative about the audit of the company's financial statements.

As described below, the Board has considered a number of alternative approaches to achieve the potential benefits of enhanced auditor reporting.

### *1. Alternatives Raised by Commenters*

#### a. Only Cross-Reference to Management's Disclosures

Some commenters suggested that, instead of communicating critical audit matters as reproposed, auditors should only identify the critical audit matters and provide a cross-reference to management disclosures (i.e., not describe the principal considerations that led the auditor to determine a matter is a critical audit matter or how

---

[182] *See, e.g.*, Larry R. Davis, Billy S. Soo, and Gregory M. Trompeter, *Auditor Tenure and the Ability to Meet or Beat Earnings Forecasts*, 26 Contemporary Accounting Research 517, 517–548 (2009).

[183] *See, e.g.*, Mai Dao, Suchismita Mishra, and K. Raghunandan, *Auditor Tenure and Shareholder Ratification of the Auditor*, 22 Accounting Horizons 297, 297–314 (2008).

it was addressed in the audit), or refer to or list critical accounting policies and estimates as disclosed by management. The Board believes that communicating the principal considerations that led the auditor to determine that a matter is a critical audit matter and how it was addressed in the audit will provide useful information beyond simply referencing existing management disclosure, and is more responsive to investor requests for more information from the auditor's perspective.

b. Auditor Association with Other Company Disclosures

Other commenters suggested more specific auditor assurance on particular management disclosures, such as inclusion of a statement in the auditor's report that the audit included evaluation of the accounting policies and significant estimates, with a cross-reference to management's disclosures, or a statement of auditor concurrence with the critical accounting policies and estimates of the company. One commenter suggested that audit committees should disclose critical audit matters with a corresponding confirmation from the independent auditor.

Several commenters on the proposal also suggested that the Board should consider auditor association with, or attestation on, portions of MD&A, specifically management's critical accounting policies and estimates, as an alternative to expanded auditor reporting. These commenters have argued that such an association could increase the quality and reliability of the information subject to the procedures.

Some commenters on the concept release, including investors, said that they were not supportive of separate assurance by the auditor on information outside of the financial statements as an alternative to expanded auditor reporting, primarily because the related auditor reporting would have appeared in a standardized form and would not provide audit-specific information. Requiring such reporting might necessitate action by the SEC, as well as the PCAOB, to implement, including new SEC rules regarding management reporting and auditor attestation. In addition to reporting requirements, the PCAOB might have to develop new performance requirements and auditors would be required to undertake additional audit work in order to provide attestation in these areas.

Based on concerns about the complexity of such an approach, as well as the comments received as to its limited benefits, the Board determined not to pursue auditor association with portions of MD&A as an alternative to expanded auditor reporting at this time. The Board believes that this approach would fail to deliver the audit-specific information requested by investors, while also raising potential concerns about separate assurance on the identified matters.

c. No Change to Auditor Reporting Requirements

The Board considered whether changes to the existing auditor reporting requirements were needed. Auditor reporting under the current model has been criticized by many commenters as providing limited information. Auditors have not voluntarily provided more information in the auditor's report in response to investors' requests. A number of factors described above, such as potential costs and uncertainties related to voluntary auditor reporting and the potential for auditor status quo bias, may explain why voluntary reporting would not be expected to become prevalent. These factors suggest that voluntary reporting, with or without guidance to encourage it, could also create uncertainty about the content of auditor's reports because auditors would be able to choose whether to provide information about the audit, what information to provide, and the form in which to provide it. On that basis, the Board believes that standard setting is appropriate.

d. Consideration of Analogous Requirements of Other Regulators and Standard Setters

In developing the final standard, the Board took into account the requirements for expanded auditor reporting of other regulators and standard setters, such as the IAASB, the FRC, and the EU. Changes to the auditor's report that other regulators and standard setters have adopted include some commonality, such as communicating information about audit-specific matters in the auditor's report. Several commenters suggested that the Board align its requirements for expanded auditor reporting more closely with the requirements of the IAASB to provide more consistent global auditor reporting requirements.

However, the Board recognizes that the regulatory environments in other jurisdictions are different from the United States, requiring the Board to address unique U.S. requirements and characteristics in its standard-setting projects. Because the Board's standards have the force of law, the Board aims to make them as clear and easy to apply as it can. For example, the factors that the auditor considers in determining whether a matter involved especially challenging, subjective, or complex auditor judgment are included in the standard; by contrast, while the IAASB approach includes similar factors, they appear in the application and other explanatory material.

In addition, there are differences between requirements and terminology of the Board's auditing standards and those of other regulators and standard setters that may cause inconsistent application, even if the Board were to adopt the approach of another standard setter. For example, the Board's requirements for communications to the audit committee are not identical to the analogous requirements of the IAASB. Therefore, although both critical audit matters and the IAASB's key audit matters are derived from such communications, the matters ultimately discussed with the audit committee under each framework would not necessarily be the same, which could result in differences in which matters are reported even if the language in the auditor reporting standards were identical. Also, the component of the definition of critical audit matter in the final standard, namely "matters that involve especially challenging, subjective, or complex auditor judgment" grounds the definition in the auditor's expertise and judgment.

Although the processes of identifying these matters vary across jurisdictions, there are commonalities in the underlying criteria regarding matters to be communicated and the communication requirements, such that expanded auditor reporting could result in the communication of many of the same matters under the various approaches.

e. Auditor Assessment and Descriptions of Certain Financial Statement Areas

Several commenters on the concept release suggested that investors would be most interested in auditor reporting on the categories of information identified by investor respondents to the 2011 survey conducted by a working group of the IAG: (1) significant management estimates and judgments made in preparing the financial statements and the auditor's assessment of them; (2) areas of high financial statement and audit risk; (3) unusual transactions, restatements, and other significant changes in the financial statements; and (4) the quality, not just the acceptability, of the company's accounting practices and policies.[184] This request was reiterated by several commenters on the proposal, who continued to believe that this approach would provide the information investors want most. In a similar vein, other commenters on the reproposal have requested that the auditor provide a "grade" on management's significant accounting estimates and judgments.

The Board believes that the final critical audit matter definition will likely cover many of the topic areas requested by investors. For example, the auditor may communicate critical audit matters related to significant management estimates and judgments, highlight areas of high financial statement and audit risk, and discuss significant unusual transactions. However, the auditor will not be required to report on its assessment of management's significant estimates and judgments or on the quality (as opposed to merely the acceptability), of the company's accounting practices and policies or of the financial statements as a whole.

The final standard seeks to strike an appropriate balance between the value of the information being provided and the costs of providing it. Requiring auditors to report their qualitative assessments in a manner that appears very precise (for example, describing an estimate as "conservative" or "aggressive" or assigning the financial statements an "A" or a "B") may impose significantly greater costs and unintended consequences than the principles-based reporting of critical audit matters. For example, although the reporting of qualitative assessments would appear to be precise, these qualitative assessments are likely to be applied inconsistently because there is no framework for such assessments and the determinations are inherently subjective. In addition, such assessments may heighten concerns related to the perceived level of

---

[184] *See* IAG 2011 survey.

assurance provided by the audit or the perception that separate assurance is being provided as to the assessed areas. Also, the reporting of such qualitative assessments may subject auditors and companies to additional litigation risk beyond what may result from the principles-based reporting of critical audit matters because the apparent precision of the reporting may facilitate plaintiffs' claims.

*2. Policy Choices*

a. Definition of Critical Audit Matters

The Board considered a variety of possible approaches to the definition of critical audit matters suggested by commenters. *See* Section IV.A.1 for a discussion of the Board's considerations.

b. Communication of Critical Audit Matters

The Board considered a variety of possible approaches to the communication requirements for critical audit matters. *See* Section IV.A.2 for a discussion of the Board's considerations.

c. Auditor Tenure

The final standard retains the reproposed requirement to include a statement in the auditor's report about auditor tenure.

In the reproposal, the Board solicited comment on whether disclosure of auditor tenure should be made on Form AP instead of in the auditor's report. Form AP was developed as a means to address commenter concerns about the potential liability implications of naming persons in the auditor's report. Because the disclosure of auditor tenure does not have the same potential liability consequences, such an approach is unnecessary in this case. In addition, some commenters preferred tenure disclosure on Form AP because of a concern that disclosure in the auditor's report could result in inappropriate inferences about correlations between auditor tenure and audit quality, or between auditor tenure and auditor independence. The Board is not persuaded by such concerns. Further, the final standard allows the auditor flexibility in the location of the auditor tenure disclosure in the auditor's report.

The Board determined that disclosure will be better achieved through the auditor's report because the information will be more readily accessible upon the filing with the SEC of a document containing audited financial statements and poses lower search costs, particularly for those investors who may prefer to have the information provided in the auditor's primary means of communication. In addition, disclosing tenure in the auditor's report will make information available earlier to investors, which may assist in their voting on auditor ratification. However, disclosing auditor tenure in the auditor's report rather than Form AP could result in higher costs to investors that wish to accumulate tenure data for a large number of companies or compare data across companies because these investors will have to acquire tenure data from each company's auditor's report separately or from a data aggregator.

*See also* Section IV.B.1 for a discussion of the Board's considerations.

d. Additional Improvements to the Auditor's Report

The final standard includes a number of requirements that will enhance the standardized content of the auditor's report by clarifying the auditor's role and responsibilities related to the audit of the financial statements. These include, for example, statements regarding auditor independence requirements and the addition of the phrase "whether due to error or fraud," when describing the auditor's responsibility under PCAOB standards to obtain reasonable assurance about whether the financial statements are free of material misstatements. In addition, the final standard includes requirements intended to promote uniformity in the form of the auditor's report. These include requirements as to the addressee, a specific order of certain sections of the auditor's report, and required section headings.

Many commenters generally supported these enhancements and suggested that such enhancements will increase the usability of the auditor's report by improving financial statement users' understanding of the auditor's responsibilities, reducing search costs for information in the auditor's report, and facilitating comparisons across auditor's reports.

## VII. Applicability of Critical Audit Matter Requirements

### A. Brokers and Dealers, Investment Companies, and Benefit Plans

The reproposed standard did not require communication of critical audit matters for audits of brokers and dealers reporting under Exchange Act Rule 17a-5, investment companies other than business development companies ("BDCs"), and benefit plans. The reproposing release described the Board's rationale, including economic considerations, for such exclusions from the critical audit matter requirements and noted that auditors of these entities would not be precluded from including critical audit matters in the auditor's report voluntarily.

Commenters generally supported these exclusions, pointing to the same or similar reasons to those described by the Board in the reproposing release. Some commenters asserted that the communication of critical audit matters should apply to all companies. One commenter supported voluntary communication of critical audit matters for the exempted entities. Another commenter disagreed with providing auditors the ability to voluntarily communicate critical audit matters for brokers and dealers and investment companies. This commenter also suggested that all broker-dealers, including broker-dealers that are issuers, should be excluded from the requirement.

After considering the comments received and evaluating benefits and costs, the final standard excludes the audits of brokers and dealers that are reporting under Exchange Act Rule 17a-5, investment companies other than BDCs, and benefit plans, from the critical audit matter requirements as reproposed.[185] Auditors of these entities may choose to include critical audit matters in the auditor's report voluntarily.

The Board's rationales for these exclusions are described below.

*1. Brokers and Dealers Reporting under Exchange Act Rule 17a-5*

Pursuant to Exchange Act Rule 17a-5, the annual reports that brokers and dealers file with the SEC are public, except that if the statement of financial condition in the financial report is bound separately from the balance of the annual report, the balance of the annual report is deemed confidential and nonpublic.[186] In this situation, the auditor would generally issue two separate auditor's reports that would have different content: (1) an auditor's report on the statement of financial condition that would be available to the public and (2) an auditor's report on the complete financial report that, except as provided in paragraph (c)(2)(iv) of Exchange Act Rule 17a-5, would be confidential and not available to the public.[187] Research by the PCAOB's Office of Economic and Risk Analysis ("ERA")[188] indicates that, for approximately half of brokers and dealers, the complete financial report and the related auditor's report are confidential and not available to the public.

In 2013, the Board adopted new standards related to brokers and dealers that enhanced the auditor's performance and reporting responsibilities for financial

---

[185] The other requirements of the final standard will be applicable to audits of these entities.

[186] *See* Exchange Act Rule 17a-5(e), 17 CFR 240.17a-5(e).

[187] *See also* Exchange Act Rule 17a-5(c)(2), 17 CFR 240.17a-5(c)(2), regarding audited statements required to be provided to customers.

[188] ERA's research was conducted on brokers and dealers who filed financial statements through May 15, 2015, for fiscal years ended during 2014 that included audit reports issued by firms registered with the PCAOB.

statement audits, as well as engagements on compliance and exemption reports of brokers and dealers.[189]

Some commenters on the proposal asserted that the value of reporting critical audit matters for brokers and dealers would be significantly limited by the closely held nature of brokers and dealers; the limited number of users of their financial statements; and the fact that, in many cases, only the statement of financial condition is available publicly. Some commenters also recognized that both the SEC and PCAOB recently updated their rules to further enhance reporting by brokers and dealers and their auditors.

Research by ERA indicates that currently there are no brokers or dealers that are issuers. Rather, brokers and dealers are often owned by a holding company, an individual, or a group of individuals that holds a controlling interest. The owners of brokers and dealers are generally part of the management of the entity and therefore would have direct access to the auditor. Given that, in many cases, there is much less separation of ownership and control in brokers and dealers than in issuers, the communication of critical audit matters would provide little information about the audit that would otherwise be unobtainable by investors.

Although there may be circumstances in which other financial statement users may benefit from reduced information asymmetry about the audits of brokers and dealers, certain aspects of broker and dealer financial reporting may limit the benefits of requiring the communication of critical audit matters. For example, while other financial statement users, such as customers of brokers and dealers, may benefit from increased information about the audit, the ability for brokers and dealers to file certain financial statements and schedules confidentially would require the auditor to identify and communicate critical audit matters that apply only to the publicly available statement of financial condition. This may reduce the value of communicating critical audit matters for brokers and dealers relative to issuers. Moreover, customers of brokers and dealers may be interested in the overall financial position of the broker or dealer but may not benefit from audit-specific information in the same way as investors in an issuer.

The communication of critical audit matters may also impose additional costs on the auditors of brokers and dealers relative to the auditors of other types of companies,

---

[189] *See Attestation Standards for Engagements Related to Broker and Dealer Compliance or Exemption Reports Required by the U.S. Securities and Exchange Commission and Related Amendments to PCAOB Standards*, PCAOB Release No. 2013-007 (Oct. 10, 2013) and *Auditing Standard No. 17, Auditing Supplemental Information Accompanying Audited Financial Statements and Related Amendments to PCAOB Standards*, PCAOB Release No. 2013-008 (Oct. 10, 2013).

as they would have to identify critical audit matters that apply exclusively to the publicly available financial information, which may be difficult in some situations.

After consideration of the ownership and reporting characteristics of brokers and dealers, the comments received on the proposal and reproposal, and the Board's recent standard-setting activities related to brokers and dealers, the Board does not believe that reporting of critical audit matters for brokers and dealers will provide meaningful information in the same way as for issuers. Therefore, the communication of critical audit matters is not required for audits of brokers and dealers reporting under Exchange Act Rule 17a-5. If a broker or dealer were an issuer required to file audited financial statements under Section 13 or 15(d) of the Exchange Act, the requirements would apply.

2. *Investment Companies*

The Investment Company Act generally defines an investment company as any issuer that is engaged primarily in the business of investing, reinvesting, or trading in securities.[190] Most investment companies registered under the Investment Company Act are required to file with the SEC annual reports on Form N-CSR containing audited financial statements.[191] The Investment Company Act includes specific requirements for investment companies, intended to reduce investors' risks, in areas such as an investment company's portfolio diversification, liquidity, leverage, and custody of securities.[192]

In an SEC rulemaking, the SEC observed that commenters believed the key information that investors use in deciding to invest in an investment company includes an investment company's investment objectives, strategies, risks, costs, and performance.[193] The disclosure of information about these items appears in the annual prospectus that investment companies provide to current and future investors.[194]

---

[190] *See* Section 3(a)(1) of the Investment Company Act.

[191] *See* SEC Rules under Section 30(e) of the Investment Company Act.

[192] *See, e.g.,* Sections 12, 13, and 17 of the Investment Company Act.

[193] *See* SEC, *Enhanced Disclosure and New Prospectus Delivery Option for Registered Open-End Management Investment Companies*, Securities Act Release No. 8998, 74 FR 4546 (Jan. 26, 2009). *See also* Investment Company Institute, *Understanding Investor Preferences for Mutual Fund Information* (Aug. 2006) at 2–3.

[194] *See* SEC Rules under Section 30(e) of the Investment Company Act.

Changes to investment objectives and strategies require shareholder approval or disclosure.[195]

Several commenters on the proposal noted that an investor's decision to invest in an investment company is primarily based on the investment objectives, risks, performance, and fees, and critical audit matters are not expected to provide information about these items and therefore would not be relevant. These and other commenters generally stated that investment companies are designed for the sole purpose of trading in and holding investments and auditor judgment would arise primarily with respect to valuation of investments, which would tend to be repeated as a critical audit matter. One of these commenters noted that, since the strategies of investment companies do not change significantly over time, the critical audit matters identified could become standardized from one reporting period to the next and also across funds with similar objectives.

Even though the disclosures required under the Investment Company Act and other federal securities laws provide investors with useful information, they may not fully substitute for the communication of critical audit matters. The required communication of critical audit matters contemplates that auditors would provide investors with audit-specific information, which is unlikely to appear in the disclosures provided by management. In addition, some academic research documented a difference in the perceived usefulness and reliability of information depending on the location of the disclosure and whether it was disclosed by management or by the independent auditor.[196] This academic research suggests that the auditor's communication of information similar to critical audit matters may provide value to investors because it comes from the auditor, even if the same information is disclosed by management in the experimental design of the study.

The benefits of providing critical audit matters, however, may be smaller for investment companies, other than BDCs, relative to other types of companies because of their purpose and structure. Unlike companies whose business models can change over time, investment companies have specific investment mandates that are disclosed in the prospectus and rarely change. This creates the potential for critical audit matters of investment companies to become excessively repetitive, making them uninformative.

---

[195] *See* Sections 8(b) and 13(a)(3) of the Investment Company Act and Investment Company Act Rule 8b-16.

[196] *See, e.g.*, Christensen et al., *Do Critical Audit Matter Paragraphs in the Audit Report Change Nonprofessional Investors' Decision to Invest?*

There may also be additional costs of applying critical audit matter requirements to audits of investment companies, other than BDCs, as compared to audits of other types of companies. For example, in some cases, annual shareholder reports of affiliated investment companies with the same fiscal year-end might be filed with the SEC in one document, which generally contains a single auditor's report that covers multiple audited investment companies. In these situations, communicating critical audit matters specific to each investment company may require the auditor to prepare separate auditor's reports. This could increase costs for these types of investment companies.

After consideration of the purpose and reporting characteristics of investment companies and the comments received on the proposal and reproposal, the Board has determined not to require the communication of critical audit matters for audits of most investment companies, although they will apply to audits of investment companies regulated as BDCs.[197] Unlike the audits of many other investment companies, auditing the valuation of BDCs' investments generally involves complexity and auditor judgments due to the nature of the BDCs' portfolios. Also, because of the more diverse operations of BDCs, such as providing managerial assistance and involvement with more complex debt and equity instruments than other investment companies, communication of critical audit matters in a BDC audit could be more informative to investors. Additionally, BDCs follow a reporting regime under the Exchange Act that is more closely aligned with that of companies to which the Board is applying the requirements for critical audit matters. For these reasons, the Board believes it is appropriate for audits of BDCs to be subject to critical audit matter requirements.

*3. Benefit plans*

Benefit plans that purchase and hold securities of the plan sponsor using participants' contributions are generally required to file with the SEC an annual report on Form 11-K[198] that includes the benefit plan's audited financial statements and the related auditor's report.[199] The audit of the financial statements included in a filing on Form 11-K is performed in accordance with the standards of the PCAOB. Benefit plans are also generally subject to the financial reporting requirements of the Employee

---

197 *See* Section 54 of the Investment Company Act.

198 *See* Section 15(d) of the Exchange Act.

199 A benefit plan's audited financial statements may also be included as part of the annual report of the issuer sponsoring the benefit plan. *See* Exchange Act Rule 15d-21, CFR 240.15d-21.

Retirement Income Security Act of 1974 ("ERISA"), including the U.S. Department of Labor's ("DOL") rules and regulations for disclosure under ERISA.[200]

Participation in a benefit plan is limited to eligible employees of the plan sponsor. Each plan participant in a defined contribution benefit plan is responsible for selecting, from the investment options made available by the plan sponsor, the specific investments in which the participant's funds are invested.

Employee stock benefit plans are generally less complex than other types of companies because they are designed for the sole purpose of holding the plan's investments for the participants' benefit. A plan's financial statements reflect summary information about the plan's assets and liabilities by aggregating the balances of all plan participants. However, only the individual account statements that plan participants receive periodically provide information specific to each participant's investments.

Several commenters on the proposal suggested excluding audits of benefit plans from the requirement for reporting critical audit matters due to the unique characteristics of these entities and their differences from other types of companies. For example, some commenters indicated that benefit plans are designed for a specific purpose and, as a result, would likely have similar critical audit matters from one reporting period to the next. Other commenters noted that benefit plans are inherently less complex and entail fewer estimates and judgments.

The communication of critical audit matters could provide information about any complex issues that were identified during the audit and how the auditor addressed them. However, since a benefit plan's assets and liabilities aggregate the balances of all plan participants, the financial statements or related critical audit matters would not provide actionable information about a plan participant's specific investment. Further, given the nature of benefit plans, there is a chance that the same critical audit matters would be communicated each year. For example, the valuation of investments is likely to be the most complex area in the audit of a benefit plan and therefore may be a critical audit matter in each reporting period, making the information less useful.

---

[200] ERISA Section 103(a)(3)(A) requires a plan administrator to engage an independent auditor to conduct an examination of the plan's financial statements and required schedules in accordance with generally accepted auditing standards. *See* 29 CFR 2520.103-1. Benefit plans subject to ERISA also file with the DOL an annual report on Form 5500, including audited financial statements and an auditor's report. *See also* FASB ASC 960-10-05-6.

After consideration of the structure and reporting characteristics of benefit plans and the comments received on the proposal and reproposal, the Board has determined not to require the communication of critical audit matters for audits of benefit plans.

## B. Smaller Companies

The reproposal sought comment on whether the critical audit matter requirements should not apply to audits of other types of companies, in addition to the exempted entities discussed above. Some commenters asserted that the communication of critical audit matters should apply to all companies. Other commenters recommended that the Board give consideration to not applying the critical audit matter requirements to audits of smaller reporting companies[201] and nonaccelerated filers[202] due to their smaller size and because, in the commenters' view, communication of critical audit mattes would not provide sufficient benefits for these companies to justify the costs.

Academic research suggests that smaller companies have a higher degree of information asymmetry relative to the broader population of companies. Although the degree of information asymmetry surrounding a particular issuer is unobservable, researchers have developed a number of proxies that are thought to be correlated with information asymmetry, including small issuer size, lower analyst coverage, larger insider holdings, and higher research and development costs.[203] To the extent that a

---

[201] In general, a "smaller reporting company" means an issuer with less than $75 million in public float or zero public float and annual revenues of less than $50 million during the most recently completed fiscal year for which audited financial statements are available. *See* Exchange Act Rule 12b-2, 17 CFR 240.12b-2. Smaller reporting companies currently make up approximately 42 percent of Form 10-K filers. The SEC recently proposed changes to the definition of smaller reporting companies, which would increase the percentage of smaller reporting companies to approximately 52 percent of Form 10-K filers. *See* SEC, *Amendments to Smaller Reporting Company Definition*, Release No. 33-10107 (June 27, 2016), 81 FR 43130 (July 1, 2016).

[202] Nonaccelerated filers are not defined in SEC rules but are generally understood to be companies that do not meet the definition of large accelerated filer or accelerated filer.

[203] *See*, *e.g.*, David Aboody, and Baruch Lev, *Information Asymmetry, R&D, and Insider Gains*, 55 The Journal of Finance 2747, 2747-2766 (2000), Michael J. Brennan and Avanidhar Subrahmanyam, *Investment Analysis and Price Formation in Securities Markets*, 38 Journal of Financial Economics 361, 361-381 (1995), Varadarajan V. Chari, Ravi Jagannathan, and Aharon R. Ofer, *Seasonalities in Security Returns: The Case of Earnings Announcements*, 21 Journal of Financial Economics

smaller company can be characterized as exhibiting one or more of these properties, this may suggest that it has a greater degree of information asymmetry relative to the broader population of companies. This would suggest that there is a higher likelihood that critical audit matters could provide new information about a smaller company than a large one for which there already exists a variety of information sources (such as annual reports, news media, and analyst research reports).

After consideration of comments, academic research, and data regarding the number of such companies, the final standard does not exclude smaller companies from the critical audit matter requirements. However, as discussed below, the Board has determined that it is appropriate to give auditors of smaller companies additional time to implement the new requirements. If approved by the SEC, auditors of companies that are not large accelerated filers will have an additional 18 months to implement the requirements for critical audit matters and will be able to benefit from the experiences of auditors of larger companies.

*Requirements of Other Regulators and Standard Setters*

Under the IAASB's standard, the communication of key audit matters applies to listed entities.[204] The EU requirements apply to audits of PIEs, including listed companies, credit institutions, and insurance companies.[205] The FRC 2013 requirements apply to auditor's reports for entities that apply the UK Corporate Governance Code.[206]

## VIII. <u>Considerations for Audits of Emerging Growth Companies</u>

Section 104 of the Jumpstart Our Business Startups ("JOBS") Act imposes certain limitations with respect to application of the Board's standards to audits of EGCs, as defined in Section 3(a)(80) of the Exchange Act. Section 104 provides that "[a]ny

---

101, 101-121 (1988), and Raymond Chiang, and P. C. Venkatesh, *Insider Holdings and Perceptions of Information Asymmetry: A note*, 43 The Journal of Finance 1041, 1041-1048 (1988).

[204] *See* paragraph 5 of ISA 701.

[205] *See* requirements in 1 of Article 2, *Audit Report* of Regulation (EU) No 537/2014.

[206] These include companies with a premium listing of equity shares on the London Stock Exchange regardless of whether they are incorporated in the U.K. or elsewhere.

rules of the Board requiring . . . a supplement to the auditor's report in which the auditor would be required to provide additional information about the audit and the financial statements of the issuer (auditor discussion and analysis) shall not apply to an audit of an emerging growth company . . ."[207] Auditor discussion and analysis ("AD&A") does not exist in auditing standards. The idea was introduced in the concept release, which described AD&A as one of several conceptual alternatives for changing the auditor's reporting model.[208]

Section 104 of the JOBS Act further provides that any additional rules adopted by the Board subsequent to April 5, 2012, do not apply to the audits of EGCs unless the SEC "determines that the application of such additional requirements is necessary or appropriate in the public interest, after considering the protection of investors, and whether the action will promote efficiency, competition, and capital formation."[209] As a result of the JOBS Act, the final standard and amendments are subject to an evaluation as to whether they could, and if so, should be applicable to the audits of EGCs.

## A. Critical Audit Matters

The reproposal solicited comment on the application of critical audit matter requirements to the audits of EGCs. Commenters on this issue generally favored applying the standard to audits of EGCs, primarily because investors in these companies would benefit from the additional information communicated in the auditor's report in the same way that investors in larger companies would. Two commenters recommended that the critical audit matter requirements not apply to audits of EGCs because there would not be sufficient benefits to justify the costs.

Three commenters addressed the legal question of whether the JOBS Act provision on AD&A would prohibit the Board from applying critical audit matter requirements to audits of EGCs. Two of these commenters suggested that this would be

---

207 *See* Pub. L. No. 112-106 (Apr. 5, 2012). *See* Section 103(a)(3)(C) of Sarbanes-Oxley, as added by Section 104 of the JOBS Act.

208 *See* PCAOB Release No. 2011-003 (June 21, 2011) at 2 (describing one alternative as "a supplement to the auditor's report in which the auditor would be required to provide additional information about the audit and the company's financial statements (an 'Auditor's Discussion and Analysis')"). Section IV.A., *Auditor's Discussion and Analysis,* of the proposal further described AD&A and related comments received on the concept release.

209 *Supra* note 207.

prohibited, on the basis that critical audit matters "appear substantively similar to"[210] or "closely resemble"[211] AD&A. The SEC's Investor Advocate stated that, from a policy perspective, critical audit matter requirements should apply to audits of EGCs, and recommended that the PCAOB adopt the standard for policy reasons and let the SEC determine the legal question.[212] This commenter also recommended that, "to prepare for any outcome of [the SEC's] determination," the PCAOB should "encourage auditors, on a voluntary basis, to include critical audit matter communications in the auditor's reports on EGCs."[213]

The requirements for critical audit matters share characteristics with two of the alternative approaches described in the concept release: required and expanded explanatory paragraphs and AD&A. Similar to critical audit matters, required and expanded explanatory paragraphs involved additional paragraphs in the auditor's report that would have highlighted areas of critical importance to the financial statements, with auditor comment on key audit procedures and a reference to relevant financial statement accounts and disclosure. AD&A, by contrast, envisioned a supplemental report in addition to the auditor's report that could cover a broad range of issues, including the auditor's views regarding the company's financial statements, material matters as to which the auditor believed disclosure could be enhanced, and areas where management could have applied different accounting or disclosure approaches.

However, critical audit matters go beyond the content of a required and expanded explanatory paragraph by including a discussion of the principal reasons the auditor determined that a matter was a critical audit matter. Further, although this is not required, critical audit matters could potentially include a discussion of auditor findings. These additional elements may make critical audit matters resemble AD&A in some respects. This potential similarity, together with the fact that there has been no authoritative interpretation of Section 104 of the JOBS Act, creates some uncertainty as

---

[210] *See* letter from the U.S. Chamber of Commerce, Center for Capital Markets Competitiveness (Aug. 15, 2016) at 10, available on the Board's website in Docket 034.

[211] *See* letter from Robert N. Waxman (Aug. 15, 2016) at 24, available on the Board's website in Docket 034.

[212] *See* letter from Rick A. Fleming, Investor Advocate, SEC (Aug. 15, 2016) at 5-6, available on the Board's website in Docket 034 (noting that "the SEC will need to make a legal determination on whether such a requirement with respect to the audits of EGCs would accord with certain provisions of" the JOBS Act).

[213] *Id.* at 6.

to whether it is legally permissible for critical audit matter requirements to be mandated for EGC audits. In view of this uncertainty, the Board has determined not to apply the requirements regarding critical audit matters to audits of EGCs at this time.

As with other audits where critical audit matter requirements do not apply, voluntary application is permissible. EGCs and their auditors can consider whether investors would benefit from additional information about the audit from the auditor's point of view.

## B. Additional Improvements to the Auditor's Report

The additional improvements to the auditor's report contained in the final standard and amendments do not raise concerns under the AD&A provisions of the JOBS Act, but instead fall within the category of "additional rules" that may not be applied to audits of EGCs unless the SEC determines that doing so "is necessary or appropriate in the public interest, after considering the protection of investors, and whether the action will promote efficiency, competition, and capital formation." The Board is providing this analysis to assist the SEC in making this determination.

To inform consideration of the application of auditing standards to audits of EGCs, the staff has also published a white paper that provides general information about characteristics of EGCs.[214] The data on EGCs outlined in the white paper remains generally consistent with the data discussed in the reproposal. A majority of EGCs continue to be smaller public companies that are generally new to the SEC reporting process. This suggests that there is less information available to investors regarding such companies (a higher degree of information asymmetry) relative to the broader population of public companies because, in general, investors are less informed about companies that are smaller and newer. For example, smaller companies have very little, if any, analyst coverage which reduces the amount of information made available to financial statement users and therefore makes markets less efficient.[215]

The reproposal solicited comment on whether the elements of the reproposed standard and amendments other than the requirements for critical audit matters should apply to the audits of EGCs. As noted above, one commenter supported application of the entire standard and amendments to EGCs (without differentiating between critical audit matters and other elements), and one commenter opposed application of the

---

[214] *See White Paper on Characteristics of Emerging Growth Companies as of November 15, 2016* (Mar. 28, 2017), available on the Board's website in Docket 034.

[215] *See* SEC, *Final Report of the Advisory Committee on Smaller Public Companies to the U.S. Securities and Exchange Commission* (Apr. 23, 2006) at 73.

entire standard and amendments. In addition, one commenter supported applying some of the reproposed improvements to the auditor's report to audits of EGCs (the requirement as to addressee and the clarifications of existing auditor responsibilities, as well as a modified version of the statement regarding auditor independence), but generally opposed the other aspects of the reproposal for both EGCs and other companies.

As described in Section VI.C.2. above, the additional improvements to the auditor's report are intended to provide a consistent location and decrease search costs with respect to information about auditor tenure, enhance users' understanding of the auditor's role, make the auditor's report easier to read and facilitate comparison across companies by making the format consistent. As described in Section VI.D.1.b. above, the costs associated with these changes are not expected to be significant and are primarily one-time, rather than recurring, costs.

For the reasons explained above, the Board believes that the additional improvements to the auditor's report contained in the final standard and amendments are in the public interest and, after considering the protection of investors and the promotion of efficiency, competition, and capital formation, recommends that the final standard and amendments should apply to audits of EGCs. Accordingly, the Board recommends that the SEC determine that it is necessary or appropriate in the public interest, after considering the protection of investors and whether the action will promote efficiency, competition, and capital formation, to apply the final standard and amendments, other than the provisions relating to critical audit matters, to audits of EGCs. The Board stands ready to assist the SEC in considering any comments the SEC receives on these matters during the SEC's public comment process.

## IX. Effective Date

The reproposal sought comment on how much time auditors would need to implement the standard, if adopted by the Board and approved by the SEC. The reproposal also solicited input on whether the Board should consider a delayed compliance date for the reproposed standard, or for certain parts of the reproposed standard, for audits of smaller companies and, if so, what criteria the Board should use in its consideration.

Commenters suggested a wide range of effective dates for the standard. Some commenters encouraged expeditious adoption of the final standard. One of these commenters suggested an effective date for audits of financial statements for periods ending on or after December 2017. Some commenters recommended that the effective date be a year after approval by the SEC, but no earlier than for auditor's reports issued on or after December 15, 2018. Other commenters suggested that the effective date be no earlier than for audit periods ending two years after approval by the SEC, primarily because of the audit firms' need to develop and implement training and quality control processes to support expanded auditor reporting. One commenter suggested that the Board delay the effective date until after the implementation of FASB ASU No. 2014-09, *Revenue from Contracts with Customers* (which, for issuers, will apply for fiscal years beginning after December 15, 2017).

Many commenters supported phased implementation of the final standard, or of the portion of the standard related to communication of critical audit matters, suggesting that implementation start with large accelerated filers[216] and a year later become effective for other companies in order to allow auditors of smaller companies to benefit from the experience of the audits of large accelerated filers.

After considering the comments received, the Board has chosen a phased approach to the effective date for the new requirements. If approved by the SEC, the final standard and related amendments to auditing standards will take effect as follows:

- All paragraphs of the final standard and related amendments, except the paragraphs in the Critical Audit Matters section of the standard (paragraphs .11 through .17) and amendments related to those paragraphs: audits of fiscal years ending on or after December 15, 2017.

- All paragraphs in the Critical Audit Matters section of the final standard and amendments related to those paragraphs:

    - *For audits of large accelerated filers*: fiscal years ending on or after June 30, 2019; and

    - *For audits of all other companies to which the requirements apply*: fiscal years ending on or after December 15, 2020.

A phased approach to the effective date will provide investors and other financial statement users with the new form auditor's report, other than the communication of critical audit matters, as soon as reasonably practicable. The later effective dates for the communication of critical audit matters provide accounting firms, companies, and audit committees more time to prepare for implementation of the requirements that are expected to require more effort to implement than the additional improvements to the auditor's report.

---

216 In general, "large accelerated filer" means an issuer with a public float of $700 million or more that has been subject to Exchange Act periodic reporting requirements for at least one year and has filed at least one annual report. *See* Exchange Act Rule 12b-2, 17 CFR 240.12b-2.

In selecting the effective date of the critical audit matter requirements for audits of large accelerated filers, the Board considered commenter suggestions that large accelerated filers and their auditors[217] generally have more resources to address the new requirements to help establish best practice as compared to smaller companies and their auditors. Further, the Board did not choose a calendar year-end effective date to allow auditors of large accelerated filers to gain experience implementing the critical audit matter communications at a time when fewer audits are being completed, outside of the busy calendar year-end reporting cycle.[218]

In response to comments, the effective date of the final standard with respect to the communication of critical audit matters is delayed by 18 months for audits of companies that are not large accelerated filers. In determining to adopt the effective date for these audits, the Board agreed with commenter input that auditors of smaller companies, which are often smaller audit firms, could benefit from the experience of the audits of large accelerated filers. In addition, the phased effective date may facilitate any post-implementation review of the impact of the final standard.

Auditors may elect to comply before the effective date, at any point after SEC approval of the final standard.

* * *

[217] Research by ERA indicates that approximately 79 percent of the large accelerated filers that filed audited financial statements with the SEC during the 18 months prior to December 31, 2016 are audited by the four largest US audit firms (measured by number of issuer audits); 6 percent are audited by other annually inspected US firms; and the rest are audited by triennially inspected firms—13 percent by non-US affiliates of the six largest US firms (measured by number of issuer audits) and 2 percent by other US firms.

[218] Research by ERA indicates that approximately 11 percent of the large accelerated filers that filed audited financial statements with the SEC during the 18 months prior to December 31, 2016 have year ends between June 30 and November 30.

On the 1st day of June, in the year 2017, the foregoing was, in accordance with the bylaws of the Public Company Accounting Oversight Board,

ADOPTED BY THE BOARD.

## APPENDIX 1

## AS 3101, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*

### *Introduction*

.01 The auditor's report contains either an expression of opinion on the financial statements,[1] taken as a whole,[2] or an assertion that an opinion cannot be expressed. This standard establishes requirements regarding the content of the auditor's written report when the auditor expresses an unqualified opinion on the financial statements (the "auditor's unqualified report").[3]

.02 The auditor is in a position to express an unqualified opinion on the financial statements when the auditor conducted an audit in accordance with the standards of the Public Company Accounting Oversight Board ("PCAOB") and concludes that the financial statements, taken as a whole, are presented fairly, in all material respects,[4] in conformity with the applicable financial reporting

---

[1] This standard uses the term "financial statements" as used by the U.S. Securities and Exchange Commission ("SEC") to include all notes to the statements and all related schedules. *See* Regulation S-X Rule 1-01(b), 17 CFR 210.1-01(b). This and other PCAOB standards often refer to the notes as disclosures; *see*, *e.g.*, AS 2110, *Identifying and Assessing Risks of Material Misstatement*.

[2] "Taken as a whole" applies equally to a complete set of financial statements and to an individual financial statement with appropriate disclosures.

[3] Paragraphs .85-.98 and Appendix C, *Special Reporting Situations*, of AS 2201, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*, address the form and content of the auditor's report when the auditor performs an audit of internal control over financial reporting.

[4] AS 2815, *The Meaning of "Present Fairly in Conformity with Generally Accepted Accounting Principles,"* describes the basis for an auditor's responsibility for forming an opinion on whether the company's financial statements are presented fairly in conformity with the applicable financial reporting framework.

framework.[5]

.03 When the auditor conducts an audit of financial statements in accordance with the standards of the PCAOB, some circumstances require that the auditor express a qualified opinion, adverse opinion, or disclaimer of opinion on the financial statements and state the reasons for the departure from the unqualified opinion. AS 3105, *Departures from Unqualified Opinions and Other Reporting Circumstances*, describes reporting requirements related to departures from unqualified opinions and other reporting circumstances.

## *Objectives*

.04 The objectives of the auditor when the auditor concludes that an unqualified opinion is appropriate are to:

a. Issue a written report that expresses an unqualified opinion on the financial statements and describes the basis for that opinion; and

b. Communicate in the auditor's unqualified report **critical audit matters,**[6] when required, relating to the audit of the financial statements or state that the auditor determined that there are no critical audit matters.

## *The Auditor's Unqualified Report*

.05 The auditor's unqualified report includes:[7]

a. The basic elements,[8] as described in paragraphs .06-.10;

---

[5] The auditor should look to the requirements of the SEC for the company under audit with respect to the accounting principles applicable to that company.

[6] This term is defined in Appendix A, *Definitions*, and is set in **boldface type** the first time it appears.

[7] Appendix B provides an illustrative auditor's unqualified report.

[8] Laws, rules, and forms may contain requirements for auditor's reports of different types of companies. *See*, *e.g.,* Sections 30(g) and 32(a)(4) of the Investment Company Act; Regulation S-X Rule 2-02, 17 CFR 210.2-02; and

b. Communication regarding critical audit matters relating to the audit of the current period's financial statements, as described in paragraphs .11-.17, unless such requirements do not apply;

Note: Communication of critical audit matters is not required for audits of (1) brokers[9] and dealers[10] reporting under Exchange Act Rule 17a-5; (2) investment companies registered under the Investment Company Act of 1940 ("Investment Company Act"),[11] other than companies that have elected to be regulated as business development companies;[12] (3) employee stock purchase, savings, and similar plans;[13] and (4) emerging growth companies.[14] Auditors of these entities may consider voluntarily including communication of critical audit matters as described in this standard.

c. Other explanatory language (or an explanatory paragraph), as appropriate in the circumstances, as described in paragraphs .18-.19; and

d. Information about certain audit participants, if the auditor decides to provide this information in the auditor's report, as described in paragraph .20.

---

Securities Exchange Act of 1934 ("Exchange Act") Rule 17a-5, 17 CFR 240.17a-5. Auditor's reports on financial statements filed with the SEC are subject to all such applicable requirements.

9 *See* PCAOB Rule 1001(b)(iii).

10 *See* PCAOB Rule 1001(d)(iii).

11 *See* Section 8 of the Investment Company Act.

12 *See* Section 54 of the Investment Company Act.

13 *See* Exchange Act Rule 15d-21, 17 CFR 240.15d-21.

14 *See* Section 3(a)(80) of the Exchange Act.

## Basic Elements

*Title*

.06 The auditor's report must include the title, "Report of Independent Registered Public Accounting Firm."

*Addressee*

.07 The auditor's report must be addressed to the shareholders and the board of directors, or equivalents for companies not organized as corporations. The auditor's report may include additional addressees.

*Opinion on the Financial Statements*

.08 The first section of the auditor's report must include the section title "Opinion on the Financial Statements" and the following elements:

a. The name of the company whose financial statements were audited;

b. A statement identifying each financial statement and any related schedule(s) that has been audited;[15]

c. The date of, or period covered by, each financial statement and related schedule, if applicable, identified in the report;

d. A statement indicating that the financial statements, including the related notes and any related schedule(s), identified and collectively referred to in the report as the financial statements, were audited; and

e. An opinion that the financial statements present fairly, in all material respects, the financial position of the company as of the balance

---

[15] Various SEC rules and forms require that companies file schedules of information and that those schedules be audited if the company's financial statements are audited. *See*, *e.g.,* Regulation S-X Rules 5-04, 6-10, 6A-05, and 7-05, 17 CFR 210.5-04, 210.6-10, 210.6A-05, 210.7-05. *See generally*, Regulation S-X Rule 12-01, 17 CFR 210.12-01, et seq., which address the form and content of certain SEC-required schedules.

sheet date and the results of its operations and its cash flows for the period then ended in conformity with the applicable financial reporting framework.[16] The opinion should also include an identification of the applicable financial reporting framework.

*Basis for Opinion*

.09 The second section of the auditor's report must include the section title "Basis for Opinion" and the following elements:

a. A statement that the financial statements are the responsibility of the company's management;

b. A statement that the auditor's responsibility is to express an opinion on the financial statements based on the audit;

c. A statement that the audit was conducted in accordance with the standards of the PCAOB;

d. A statement that PCAOB standards require that the auditor plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud;

e. A statement that the audit included:

(1) Performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks;

(2) Examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements;

(3) Evaluating the accounting principles used and significant estimates made by management; and

---

[16] The terms used in the Opinion on the Financial Statements section, such as financial position, results of operations and cash flows, should be modified, as appropriate, depending on the type of company and financial statements being audited.

(4) Evaluating the overall presentation of the financial statements;

f. A statement that the auditor believes that the audit provides a reasonable basis for the auditor's opinion; and

g. A statement that the auditor is a public accounting firm registered with the PCAOB (United States) and is required to be independent with respect to the company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the SEC and the PCAOB.

*Signature, Tenure, Location, and Date*

.10 The auditor's report must include the following elements:

a. The signature of the auditor's firm;[17]

b. A statement containing the year the auditor began serving consecutively as the company's auditor;[18]

Note: For purposes of this subparagraph, references to the auditor include other firms that the auditor's firm has acquired or that have merged with the auditor's firm. If there is uncertainty as to the year the auditor began serving consecutively as the company's auditor, such as due to firm or company mergers, acquisitions, or changes in ownership structure, the auditor should state that the auditor is uncertain as to the year the auditor became the company's auditor and provide the earliest year of which the auditor has knowledge.

c. The city and state (or city and country, in the case of non-U.S. auditors) from which the auditor's report has been issued;[19] and

---

[17] *See* Regulation S-X Rule 2-02(a), 17 CFR 210.2-02(a).

[18] For an investment company that is part of a group of investment companies, the statement contains the year the auditor began serving consecutively as the auditor of any investment company in the group of investment companies. *See* Section 12(d)(1)(G)(ii) of the Investment Company Act.

d. The date of the auditor's report.[20]

## Critical Audit Matters

*Determination of Critical Audit Matters*

.11 The auditor must determine whether there are any critical audit matters in the audit of the current period's financial statements. A critical audit matter is any matter arising from the audit of the financial statements that was communicated or required to be communicated to the audit committee and that: (1) relates to accounts or disclosures that are material to the financial statements and (2) involved especially challenging, subjective, or complex auditor judgment. Critical audit matters are not a substitute for the auditor's departure from an unqualified opinion (i.e., a qualified opinion, adverse opinion, or disclaimer of opinion on the financial statements as described in AS 3105).

.12 In determining whether a matter involved especially challenging, subjective, or complex auditor judgment, the auditor should take into account, alone or in combination, the following factors, as well as other factors specific to the audit:

a. The auditor's assessment of the risks of material misstatement, including significant risks;

b. The degree of auditor judgment related to areas in the financial statements that involved the application of significant judgment or estimation by management, including estimates with significant measurement uncertainty;

c. The nature and timing of significant unusual transactions and the extent of audit effort and judgment related to these transactions;

d. The degree of auditor subjectivity in applying audit procedures to address the matter or in evaluating the results of those procedures;

e. The nature and extent of audit effort required to address the matter, including the extent of specialized skill or knowledge needed or the

---

[19] *See* Regulation S-X Rule 2-02(a).

[20] *See* AS 3110, *Dating of the Independent Auditor's Report*.

nature of consultations outside the engagement team regarding the matter; and

f. The nature of audit evidence obtained regarding the matter.

Note: It is expected that, in most audits, the auditor would determine that at least one matter involved especially challenging, subjective, or complex auditor judgment.

*Communication of Critical Audit Matters*

.13 The auditor must communicate in the auditor's report critical audit matters[21] relating to the audit of the current period's financial statements or state that the auditor determined that there are no critical audit matters.

Note: When the current period's financial statements are presented on a comparative basis with those of one or more prior periods, the auditor may communicate critical audit matters relating to a prior period. This may be appropriate, for example, when (1) the prior period's financial statements are made public for the first time, such as in an initial public offering, or (2) issuing an auditor's report on the prior period's financial statements because the previously issued auditor's report could no longer be relied upon.

.14 For each critical audit matter communicated in the auditor's report the auditor must:

a. Identify the critical audit matter;

b. Describe the principal considerations that led the auditor to determine that the matter is a critical audit matter;

---

[21] Critical audit matters are not a substitute for required explanatory language (paragraphs) described in paragraph .18. If a matter that meets the definition of a critical audit matter also requires an explanatory paragraph, such as a matter related to going concern, the auditor may include the information required under paragraph .14 in the explanatory paragraph with a cross-reference in the critical audit matters section of the auditor's report to the explanatory paragraph. Alternatively, the auditor may include the explanatory paragraph and critical audit matter communication separately in the auditor's report and add a cross-reference between the two sections.

c. Describe how the critical audit matter was addressed in the audit; and

Note: In describing how the critical audit matter was addressed in the audit, the auditor may describe: (1) the auditor's response or approach that was most relevant to the matter; (2) a brief overview of the audit procedures performed; (3) an indication of the outcome of the audit procedures; and (4) key observations with respect to the matter, or some combination of these elements.

d. Refer to the relevant financial statement accounts or disclosures that relate to the critical audit matter.

Note 1: Language that could be viewed as disclaiming, qualifying, restricting, or minimizing the auditor's responsibility for the critical audit matters or the auditor's opinion on the financial statements is not appropriate and may not be used. The language used to communicate a critical audit matter should not imply that the auditor is providing a separate opinion on the critical audit matter or on the accounts or disclosures to which they relate.

Note 2: When describing critical audit matters in the auditor's report, the auditor is not expected to provide information about the company that has not been made publicly available by the company unless such information is necessary to describe the principal considerations that led the auditor to determine that a matter is a critical audit matter or how the matter was addressed in the audit.

*Language Preceding Critical Audit Matters in the Auditor's Report*

.15 The following language, including the section title "Critical Audit Matters," should precede critical audit matters communicated in the auditor's report:

Critical Audit Matters

The critical audit matters communicated below are matters arising from the current period audit of the financial statements that were communicated or required to be communicated to the audit committee and that: (1) relate to accounts or disclosures that are material to the financial statements and (2) involved our especially challenging, subjective, or complex judgments. The communication of critical audit matters does not alter in any way our opinion on the financial statements, taken as a whole, and we are not, by communicating the critical audit matters below, providing separate opinions on the critical audit matters or on the accounts or disclosures to which they relate.

Note: If the auditor communicates critical audit matters for prior periods, the language preceding the critical audit matters should be modified to indicate the periods to which the critical audit matters relate.

.16 In situations in which the auditor determines that there are no critical audit matters, the auditor should include the following language, including the section title "Critical Audit Matters," in the auditor's report:

Critical Audit Matters

Critical audit matters are matters arising from the current period audit of the financial statements that were communicated or required to be communicated to the audit committee and that: (1) relate to accounts or disclosures that are material to the financial statements and (2) involved our especially challenging, subjective, or complex judgments. We determined that there are no critical audit matters.

*Documentation of Critical Audit Matters*

.17 For each matter arising from the audit of the financial statements that:

a. Was communicated or required to be communicated to the audit committee; and

b. Relates to accounts or disclosures that are material to the financial statements;

the auditor must document whether or not the matter was determined to be a critical audit matter (i.e., involved especially challenging, subjective, or complex auditor judgment) and the basis for such determination.[22]

[22] Consistent with the requirements of AS 1215, *Audit Documentation*, the audit documentation should be in sufficient detail to enable an experienced auditor, having no previous connection with the engagement, to understand the determinations made to comply with the provisions of this standard.

PCAOB
Public Company Accounting Oversight Board

## Explanatory Language Added to the Auditor's Report

.18 Other standards of the PCAOB require that, in certain circumstances, the auditor include explanatory language (or an explanatory paragraph) in the auditor's report, while not affecting the auditor's opinion on the financial statements. These circumstances include when:

a. There is substantial doubt about the company's ability to continue as a going concern;[23]

b. The auditor decides to refer to the report of other auditors as the basis, in part, for the auditor's own report;[24]

c. There has been a change between periods in accounting principles or in the method of their application that has a material effect on the financial statements;[25]

d. There has been a change in a reporting entity, unless the change in the reporting entity results from a transaction or event, such as the creation, cessation, or complete or partial purchase or disposition of a subsidiary or other business unit;[26]

e. A material misstatement in previously issued financial statements has been corrected;[27]

f. The auditor performs an integrated audit and issues separate reports on the company's financial statements and internal control over financial reporting;[28]

---

[23] *See* AS 2415, *Consideration of an Entity's Ability to Continue as a Going Concern*.

[24] *See* paragraphs .06-.09 of AS 1205, *Part of the Audit Performed by Other Independent Auditors.*

[25] *See* paragraphs .08 and .12-.15 of AS 2820, *Evaluating Consistency of Financial Statements*.

[26] *See* AS 2820.06.

[27] *See* AS 2820.09 and .16-.17.

g. Management is required to report on the company's internal controls over financial reporting but such report is not required to be audited,[29] and the auditor has not been engaged to perform an audit of management's assessment of the effectiveness of the company's internal control over financial reporting;[30]

h. Certain circumstances relating to reports on comparative financial statements exist;[31]

i. Selected quarterly financial data required by Item 302(a) of Regulation S-K is not appropriately presented, has been omitted, or has not been reviewed;[32]

j. Supplementary information required by the applicable financial reporting framework has been omitted, the presentation of such information departs materially from the requirements of the applicable financial reporting framework, the auditor is unable to complete prescribed procedures with respect to such information, or the auditor is unable to remove substantial doubts about whether the supplementary information conforms to the requirements of the applicable financial reporting framework;[33]

---

[28] *See* AS 2201.88. AS 2201 provides additional circumstances in which the auditor includes an explanatory paragraph. If the combined report is issued, AS 2201 notes that the auditor should consider those circumstances as well.

[29] *See* Item 308 of Regulation S-K.

[30] *See* AS 3105.59-.60.

[31] *See* AS 3105.52-.53 and .56-.58.

[32] *See* paragraph .50 of AS 4105, *Reviews of Interim Financial Information*.

[33] *See* paragraphs .03 and .08 of AS 2705, *Required Supplementary Information*.

k. There has been a change in an investee year end that has a material effect on the company's financial statements;[34] and

l. Other information in a document containing audited financial statements is materially inconsistent with information appearing in the financial statements.[35]

## Emphasis of a Matter

.19 The auditor may emphasize a matter regarding the financial statements in the auditor's report ("emphasis paragraph").[36] The following are examples of matters, among others, that might be emphasized in the auditor's report:[37]

a. Significant transactions, including significant transactions with related parties;

b. Unusually important subsequent events, such as a catastrophe that has had, or continues to have, a significant effect on the company's financial position;

c. Accounting matters, other than those involving a change or changes in accounting principles, affecting the comparability of the financial statements with those of the preceding period;

d. An uncertainty relating to the future outcome of significant litigation or regulatory actions; and

e. That the entity is a component of a larger business enterprise.

---

[34] *See* paragraph .32 of AS 2503, *Auditing Derivative Instruments, Hedging Activities, and Investments in Securities*.

[35] *See* paragraph .04 of AS 2710, *Other Information in Documents Containing Audited Financial Statements*.

[36] Emphasis paragraphs are never required and are not a substitute for required critical audit matters described in paragraphs .11-.17.

[37] It is not appropriate for the auditor to use phrases such as "with the foregoing [following] explanation" in the opinion paragraph when an emphasis paragraph is included in the auditor's report.

PCAOB
Public Company Accounting Oversight Board

If the auditor adds an emphasis paragraph in the auditor's report, the auditor should use an appropriate section title.

## Information about Certain Audit Participants

.20 The auditor may include in the auditor's report information regarding the engagement partner and/or other accounting firms participating in the audit that is required to be reported on PCAOB Form AP, *Auditor Reporting of Certain Audit Participants*.[38] If the auditor decides to provide information about the engagement partner, other accounting firms participating in the audit, or both, the auditor must disclose the following:

a. *Engagement partner*—the engagement partner's full name as required on Form AP; or

b. *Other accounting firms participating in the audit*:

i. A statement that the auditor is responsible for the audits or audit procedures performed by the other public accounting firms and has supervised or performed procedures to assume responsibility for their work in accordance with PCAOB standards;

ii. *Other accounting firms individually contributing 5% or more of total audit hour*s—for each firm, (1) the firm's legal name, (2) the city and state (or, if outside the United States, city and country) of headquarters' office, and (3) percentage of total audit hours as a single number or within an appropriate range, as is required to be reported on Form AP; and

iii. *Other accounting firms individually contributing less than 5% of total audit hours*—(1) the number of other accounting firms individually representing less than 5% of total audit hours and (2) the aggregate percentage of total audit hours of such firms as a single number or within an appropriate range, as is required to be reported on Form AP.

---

[38] If the auditor decides to include information regarding certain audit participants in the auditor's report, the auditor should use an appropriate section title.

## *APPENDIX A – Definition*

A1. For purposes of this standard, the term listed below is defined as follows:

A2. Critical audit matter – Any matter arising from the audit of the financial statements that was communicated or required to be communicated to the audit committee and that: (1) relates to accounts or disclosures that are material to the financial statements and (2) involved especially challenging, subjective, or complex auditor judgment.

> Note: Required audit committee communications are set forth in PCAOB standards, including AS 1301, *Communications with Audit Committees*, and Appendix B of that standard which refers to other PCAOB rules and standards.

## *APPENDIX B – An Illustrative Auditor's Unqualified Report Including Critical Audit Matters*

**Report of Independent Registered Public Accounting Firm**

To the shareholders and the board of directors of X Company

Opinion on the Financial Statements

We have audited the accompanying balance sheets of X Company (the "Company") as of December 31, 20X2 and 20X1, the related statements of [*titles of the financial statements, e.g., income, comprehensive income, stockholders' equity, and cash flows*], for each of the three years in the period ended December 31, 20X2, and the related notes [*and schedules*] (collectively referred to as the "financial statements"). In our opinion, the financial statements present fairly, in all material respects, the financial position of the Company *as of* [*at*] December 31, 20X2 and 20X1, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 20X2, in conformity with [*the applicable financial reporting framework*].

Basis for Opinion

These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the Company's financial statements based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

Critical Audit Matters [if applicable]

The critical audit matters communicated below are matters arising from the current period audit of the financial statements that were communicated or required to be communicated to the audit committee and that: (1) relate to accounts or disclosures that are material to the financial statements and (2) involved our especially challenging, subjective, or complex judgments. The communication of critical audit matters does not alter in any way our opinion on the financial statements, taken as a whole, and we are not, by communicating the critical audit matters below, providing separate opinions on the critical audit matters or on the accounts or disclosures to which they relate.

[*Include critical audit matters*]

[*Signature*]

We have served as the Company's auditor since [*year*].

[*City and State or Country*]

[*Date*]

PCAOB

Public Company Accounting Oversight Board

## APPENDIX 2

### *Amendments to Other PCAOB Standards Related to the Proposed Standard*

In connection with a new auditor reporting standard AS 3101, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the "final standard"), the Board is adopting related amendments to several of its other auditing standards as set out below. Language that is deleted by the amendments is struck through. Language that is added is underlined. Language that is moved without being modified, such as changes to the illustrative auditor's report to conform to the required order in the final standard, is double underlined.

## Contents

## I. Amendments to AS 3105, *Departures from Unqualified Opinions and Other Reporting Circumstances*

~~**AS 3101: Reports on Audited Financial Statements**~~ **AS 3105, *Departures from Unqualified Opinions and Other Reporting Circumstances***

## Introduction

~~.01 This section applies to auditors' reports issued in connection with audits[1] of historical financial statements that are intended to present financial position, results of operations, and cash flows in conformity with generally accepted accounting principles. It distinguishes the types of reports, describes the circumstances in which each is appropriate, and provides example reports.~~

~~Note: When performing an integrated audit of financial statements and internal control over financial reporting, the auditor may choose to issue a combined report or separate reports on the company's financial statements and on internal control over financial reporting. Refer to paragraphs .85-.98 of AS 2201, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*, and Appendix C, *Special Reporting Situations*, of AS 2201, for direction on reporting on internal control over financial reporting. In addition, *see* AS 2201.86-.88, which includes an illustrative combined audit report.~~

~~[1] An audit, for purposes of this section, is defined as an examination of historical financial statements performed in accordance with the standards of the PCAOB in effect at the time the audit is performed. In some cases, regulatory authorities may have additional requirements applicable to entities under their jurisdiction and auditors of such entities should consider those requirements.~~

~~.02 This section does not apply to unaudited financial statements as described in AS 3320, *Association with Financial Statements*, nor does it apply to reports on incomplete financial information or other special presentations as described in AS 3305, *Special Reports*.~~

~~.03 Justification for the expression of the auditor's opinion rests on the conformity of his or her audit with the standards of the PCAOB and on the findings. This section is concerned primarily with the relationship of the requirements in paragraph .04 to the language of the auditor's report.~~

~~.04 The report shall either contain an expression of opinion regarding the financial statements, taken as a whole, or an assertion to the effect that an opinion cannot be~~

~~expressed. When an overall opinion cannot be expressed, the reasons therefor should be stated. In all cases where an auditor's name is associated with financial statements, the report should contain a clear-cut indication of the character of the auditor's work, if any, and the degree of responsibility the auditor is taking.~~

~~.05 The objective of the requirements in paragraph .04 is to prevent misinterpretation of the degree of responsibility the auditor is assuming when his or her name is associated with financial statements. Reference in paragraph .04 to the financial statements "taken as a whole" applies equally to a complete set of financial statements and to an individual financial statement (for example, to a balance sheet) for one or more periods presented. (Paragraph .65 discusses the requirements in paragraph .04 as it applies to comparative financial statements.) The auditor may express an unqualified opinion on one of the financial statements and express a qualified or adverse opinion or disclaim an opinion on another if the circumstances warrant.~~

~~.06 The auditor's report is customarily issued in connection with an entity's basic financial statements—balance sheet, statement of income, statement of retained earnings and statement of cash flows. Each financial statement audited should be specifically identified in the introductory paragraph of the auditor's report. If the basic financial statements include a separate statement of changes in stockholders' equity accounts, it should be identified in the introductory paragraph of the report but need not be reported on separately in the opinion paragraph since such changes are part of the presentation of financial position, results of operations, and cash flows.~~

## ~~The Auditor's Standard Report~~

~~.07 The auditor's standard report states that the financial statements present fairly, in all material respects, an entity's financial position, results of operations, and cash flows in conformity with generally accepted accounting principles. This conclusion may be expressed only when the auditor has formed such an opinion on the basis of an audit performed in accordance with the standards of the PCAOB.~~

~~.08 The auditor's standard report identifies the financial statements audited in an opening (introductory) paragraph, describes the nature of an audit in a scope paragraph, and expresses the auditor's opinion in a separate opinion paragraph. The basic elements of the report are the following:~~

> ~~*a.* A title that includes the word *independent*~~[3]

~~[3] This section does not require a title for an auditor's report if the auditor is not independent. *See* AS 3320 for guidance on reporting when the auditor is not independent.~~

~~*b.* A statement that the financial statements identified in the report were audited~~

~~*c.* A statement that the financial statements are the responsibility of the Company's management[4] and that the auditor's responsibility is to express an opinion on the financial statements based on his or her audit~~

~~[4] In some instances, a document containing the auditor's report may include a statement by management regarding its responsibility for the presentation of the financial statements. Nevertheless, the auditor's report should state that the financial statements are management's responsibility.~~

~~*d.* A statement that the audit was conducted in accordance with the standards of the PCAOB and an identification of the United States of America as the country of origin of those standards (for example, the standards of the Public Company Accounting Oversight Board (United States))~~

~~*e.* A statement that those standards require that the auditor plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement~~

~~*f.* A statement that an audit includes~~

~~(1) Examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements~~
~~(2) Assessing the accounting principles used and significant estimates made by management~~
~~(3) Evaluating the overall financial statement presentation[5]~~

~~[5] Paragraphs .03 and .04 of AS 2815, *The Meaning of "Present Fairly in Conformity with Generally Accepted Accounting Principles,"* discuss the auditor's evaluation of the overall presentation of the financial statements.~~

~~*g.* A statement that the auditor believes that his or her audit provides a reasonable basis for his or her opinion~~

~~*h.* An opinion as to whether the financial statements present fairly, in all material respects, the financial position of the Company as of the balance sheet date and the results of its operations and its cash flows for the period then ended in conformity with generally accepted accounting principles. The opinion should include an identification of the United States of America as the country of origin of those accounting principles (for example, accounting principles generally accepted in the United States of America or U.S. generally accepted accounting principles)~~

~~*i.* The manual or printed signature of the auditor's firm~~

~~*j.* The city and state (or city and country, in the case of non-U.S. auditors) from which the auditor's report has been issued[6A]~~

~~[6A] *See* SEC Rule 2-02(a) of Regulation S-X, 17 C.F.R. § 210.2-02(a).~~

~~*k.* The date[7] of the audit report~~

~~[7] For guidance on dating the auditor's report, *see* AS 3110, *Dating of the Independent Auditor's Report*.~~

~~The form of the auditor's standard report on financial statements covering a single year is as follows:~~

~~Report of Independent Registered Public Accounting Firm~~

~~We have audited the accompanying balance sheet of X Company as of December 31, 20XX, and the related statements of income, retained earnings, and cash flows for the year then ended. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audit.~~

~~We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.~~

~~In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of X Company as of [at] December 31, 20XX, and the results of its operations and its cash flows for the year then ended in conformity with accounting principles generally accepted in the United States of America.~~

~~[*Signature*]~~

~~[*City and State or Country*]~~

~~[*Date*]~~

~~The form of the auditor's standard report on comparative financial statements[8] is as follows:~~

~~Report of Independent Registered Public Accounting Firm~~

~~We have audited the accompanying balance sheets of X Company as of December 31, 20X2 and 20X1, and the related statements of income, retained earnings, and cash flows for the years then ended. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.~~

~~We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.~~

~~In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of X Company as of [at] December 31, 20X2 and 20X1, and the results of its operations and its cash flows for the years then ended in conformity with accounting principles generally accepted in the United States of America.~~

~~[*Signature*]~~

~~[*City and State or Country*]~~

~~[*Date*]~~

~~[8] If statements of income, retained earnings, and cash flows are presented on a comparative basis for one or more prior periods, but the balance sheet(s) as of the end of one (or more) of the prior period(s) is not presented, the phrase "for the years then ended" should be changed to indicate that the auditor's opinion applies to each period for which statements of income, retained earnings, and cash flows are presented, such as "for each of the three years in the period ended [date of latest balance sheet]."~~

~~*l.* When performing an integrated audit of financial statements and internal control over financial reporting, if the auditor issues separate reports on the company's financial statements and on internal control over financial reporting, the following paragraph should be added to the auditor's report on the company's financial statements:~~

> ~~We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the effectiveness of X Company's internal control over financial reporting as of December 31, 20X3, based on [identify control criteria] and our report dated [date of report, which should be the same as the date of the report on the financial statements] expressed [include nature of opinions].~~

~~.09 The report may be addressed to the company whose financial statements are being audited or to its board of directors or stockholders. A report on the financial statements of an unincorporated entity should be addressed as circumstances dictate, for example, to the partners, to the general partner, or to the proprietor. Occasionally, an auditor is retained to audit the financial statements of a company that is not a client; in such a case, the report is customarily addressed to the client and not to the directors or stockholders of the company whose financial statements are being audited.~~

.01~~0~~ The auditor's report contains either an expression of opinion on the financial statements, taken as a whole,[1] or an assertion that an opinion cannot be expressed. This standard ~~section~~ ~~also~~ discusses the circumstances that may require the auditor to depart from the ~~standard~~ auditor's unqualified report[2] and provides reporting guidance in the following circumstances: ~~This section is organized by type of opinion that the auditor may express in each of the various circumstances presented; this section describes what is meant by the various audit opinions:~~

- ~~*Unqualified opinion*. An unqualified opinion states that the financial statements present fairly, in all material respects, the financial position,~~

~~results of operations, and cash flows of the entity in conformity with generally accepted accounting principles. This is the opinion expressed in the standard report discussed in paragraph .08.~~

- ~~*Explanatory language added to the auditor's standard report*. Certain circumstances, while not affecting the auditor's unqualified opinion on the financial statements, may require that the auditor add an explanatory paragraph (or other explanatory language) to his or her report.~~

- *Qualified opinion*. A qualified opinion states that, except for the effects of the matter(s) to which the qualification relates, the financial statements present fairly, in all material respects, the financial position, results of operations, and cash flows of the entity in conformity with generally accepted accounting principles. *See* paragraphs .02 -.39.

- *Adverse opinion*. An adverse opinion states that the financial statements do not present fairly the financial position, results of operations, or cash flows of the entity in conformity with generally accepted accounting principles. *See* paragraphs .40 -.43.

- *Disclaimer of opinion.* A disclaimer of opinion states that the auditor does not express an opinion on the financial statements. *See* paragraphs .44 -.47.

~~These opinions are discussed in greater detail throughout the remainder of this section.~~ This standard also discusses other reporting circumstances, such as reports on comparative financial statements.

[1] "Taken as a whole" applies equally to a complete set of financial statements and to an individual financial statement with appropriate disclosures.

[2] AS 3101, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, establishes requirements for the auditor regarding the content of the auditor's written report when the auditor expresses an unqualified opinion on the financial statements (the "auditor's unqualified report"), including when explanatory language is added. Paragraphs .85–.98 of AS 2201, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*, and Appendix C, *Special Reporting Situations*, of AS 2201 address the form and content of the auditor's report when the auditor performs an audit of internal control over financial reporting. *See also* AS 2201.87, which includes an illustrative combined audit report.

## ~~Explanatory Language Added to the Auditor's Standard Report~~

~~.11 Certain circumstances, while not affecting the auditor's unqualified opinion, may require that the auditor add an explanatory[9] paragraph (or other explanatory language) to the standard report.[10] These circumstances include:~~

~~[9] Unless otherwise required by the provisions of this section, an explanatory paragraph may precede or follow the opinion paragraph in the auditor's report.~~

~~[10] *See* footnote 3.~~

- ~~*a.* The auditor's opinion is based in part on the report of another auditor (paragraphs .12 and .13).~~
- ~~*b.* There is substantial doubt about the entity's ability to continue as a going concern.[11]~~

~~[11] AS 2415, *Consideration of an Entity's Ability to Continue as a Going Concern*, describes the auditor's responsibility to evaluate whether there is substantial doubt about the entity's ability to continue as a going concern for a reasonable period of time and, when applicable, to consider the adequacy of financial statement disclosure and to include an explanatory paragraph in the report to reflect his or her conclusions.~~

- ~~*c.* There has been a material change between periods in accounting principles or in the method of their application (paragraphs .17A through .17E).~~
- ~~*d.* A material misstatement in previously issued financial statements has been corrected (paragraphs .18A through .18C).~~
- ~~*e.* Certain circumstances relating to reports on comparative financial statements exist (paragraphs .68, .69, and .72 through .74).~~
- ~~*f.* Selected quarterly financial data required by SEC Regulation S-K has been omitted or has not been reviewed. (*See* paragraph .50 of AS 4105, *Reviews of Interim Financial Information*.)~~
- ~~*g.* Supplementary information required by the Financial Accounting Standards Board (FASB), the Governmental Accounting Standards Board (GASB), or the Federal Accounting Standards Advisory Board (FASAB) has been omitted, the presentation of such information departs materially from FASB, GASB, or FASAB guidelines, the auditor is unable to~~

~~complete prescribed procedures with respect to such information, or the auditor is unable to remove substantial doubts about whether the supplementary information conforms to FASB, GASB, or FASAB guidelines. (*See* paragraph .02 of AS 2705, *Required Supplementary Information*.)~~

~~*h.* Other information in a document containing audited financial statements is materially inconsistent with information appearing in the financial statements. (*See* paragraph .04 of AS 2710, *Other Information in Documents Containing Audited Financial Statements*.)~~

~~In addition, the auditor may add an explanatory paragraph to emphasize a matter regarding the financial statements (paragraph .19).~~

**~~Opinion Based in Part on Report of Another Auditor~~**

~~.12 When the auditor decides to make reference to the report of another auditor as a basis, in part, for his or her opinion, he or she should disclose this fact in the introductory paragraph of his or her report and should refer to the report of the other auditor in expressing his or her opinion. These references indicate division of responsibility for performance of the audit. (*See* AS 1205, *Part of the Audit Performed by Other Independent Auditors*.)~~

~~.13 An example of a report indicating a division of responsibility follows:~~

~~Report of Independent Registered Public Accounting Firm~~

~~We have audited the consolidated balance sheets of ABC Company and subsidiaries as of December 31, 20X2 and 20X1, and the related consolidated statements of income, retained earnings, and cash flows for the years then ended. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits. We did not audit the financial statements of B Company, a wholly-owned subsidiary, which statements reflect total assets of $_______ and $________ as of December 31, 20X2 and 20X1, respectively, and total revenues of $_______ and $_______ for the years then ended. Those statements were audited by other auditors whose report has been furnished to us, and our opinion, insofar as it relates to the amounts included for B Company, is based solely on the report of the other auditors.~~

~~We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require~~

~~that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits and the report of other auditors provide a reasonable basis for our opinion.~~

~~In our opinion, based on our audits and the report of other auditors, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of ABC Company and subsidiaries as of December 31, 20X2 and 20X1, and the results of their operations and their cash flows for the years then ended in conformity with accounting principles generally accepted in the United States of America.~~

~~[.14-.15] [Paragraphs deleted.]~~

**~~Lack of Consistency~~**

~~.16 The auditor should recognize the following matters relating to the consistency of the company's financial statements in the auditor's report if those matters have a material effect on the financial statements:~~

~~*a.* A change in accounting principle.~~

~~*b.* An adjustment to correct a misstatement in previously issued financial statements.~~

**~~Change in Accounting Principle~~**

~~.17A As discussed in AS 2820, *Evaluating Consistency of Financial Statements*, the auditor should evaluate a change in accounting principle to determine whether (1) the newly adopted accounting principle is a generally accepted accounting principle, (2) the method of accounting for the effect of the change is in conformity with generally accepted accounting principles, (3) the disclosures related to the accounting change are adequate, and (4) the company has justified that the alternative accounting principle is preferable.[12] A change in accounting principle that has a material effect on the financial statements should be recognized in the auditor's report on the audited financial statements through the addition of an explanatory paragraph following the opinion paragraph. If the auditor concludes that the criteria in this paragraph have been met, the~~

~~explanatory paragraph in the auditor's report should include identification of the nature of the change and a reference to the note disclosure describing the change.~~

~~[12] The issuance of an accounting pronouncement that requires use of a new accounting principle, interprets an existing principle, expresses a preference for an accounting principle, or rejects a specific principle is sufficient justification for a change in accounting principle, as long as the change in accounting principle is made in accordance with the hierarchy of generally accepted accounting principles. *See* FASB Statement 154, paragraph 14.~~

~~.17B Following is an example of an explanatory paragraph for a change in accounting principle resulting from the adoption of a new accounting pronouncement:~~

> ~~As discussed in Note X to the financial statements, the company has changed its method of accounting for [*describe accounting method change*] in [*year(s) of financial statements that reflect the accounting method change*] due to the adoption of [*name of accounting pronouncement*].~~

~~.17C Following is an example of an explanatory paragraph when the company has made a change in accounting principle other than a change due to the adoption of a new accounting pronouncement:~~

> ~~As discussed in Note X to the financial statements, the company has elected to change its method of accounting for [*describe accounting method change*] in [*year(s) of financial statements that reflect the accounting method change*].~~

~~.17D The explanatory paragraph relating to a change in accounting principle should be included in reports on financial statements in the year of the change and in subsequent years until the new accounting principle is applied in all periods presented. If the accounting change is accounted for by retrospective application to the financial statements of all prior periods presented, the additional paragraph is needed only in the year of the change.~~

~~.17E If the auditor concludes that the criteria in paragraph .17A for a change in accounting principle are not met, the auditor should consider the matter to be a departure from generally accepted accounting principles and, if the effect of the change in accounting principle is material, issue a qualified or adverse opinion.~~

**~~Correction of a Material Misstatement in Previously Issued Financial Statements~~**

~~.18A Correction of a material misstatement in previously issued financial statements should be recognized in the auditor's report through the addition of an explanatory~~

~~paragraph following the opinion paragraph.[13] The explanatory paragraph should include (1) a statement that the previously issued financial statements have been restated for the correction of a misstatement in the respective period and (2) a reference to the company's disclosure of the correction of the misstatement. Following is an example of an appropriate explanatory paragraph when there has been a correction of a material misstatement in previously issued financial statements.~~

> ~~As discussed in Note X to the financial statements, the 20X2 financial statements have been restated to correct a misstatement.~~

~~[13] The directions in paragraphs .68-.69 apply when comparative financial statements are presented and the opinion on the prior-period financial statements differs from the opinion previously expressed.~~

~~.18B This type of explanatory paragraph in the auditor's report should be included in reports on financial statements when the related financial statements are restated to correct the prior material misstatement. The paragraph need not be repeated in subsequent years.~~

~~.18C The accounting pronouncements generally require certain disclosures relating to restatements to correct a misstatement in previously issued financial statements. If the financial statement disclosures are not adequate, the auditor should address the lack of disclosure as discussed beginning at paragraph .41.~~

**~~Emphasis of a Matter~~**

~~.19 In any report on financial statements, the auditor may emphasize a matter regarding the financial statements. Such explanatory information should be presented in a separate paragraph of the auditor's report. Phrases such as "with the foregoing [following] explanation" should not be used in the opinion paragraph if an emphasis paragraph is included in the auditor's report. Emphasis paragraphs are never required; they may be added solely at the auditor's discretion. Examples of matters the auditor may wish to emphasize are~~

- ~~That the entity is a component of a larger business enterprise.~~
- ~~That the entity has had significant transactions with related parties.~~
- ~~Unusually important subsequent events.~~

- ~~Accounting matters, other than those involving a change or changes in accounting principles, affecting the comparability of the financial statements with those of the preceding period.~~

## Departures From Unqualified Opinions

### Qualified Opinions

.02~~0~~ Certain circumstances may require a qualified opinion. A qualified opinion states that, *except for* the effects of the matter to which the qualification relates, the financial statements present fairly, in all material respects, financial position, results of operations, and cash flows in conformity with generally accepted accounting principles. Such an opinion is expressed when—

*a.* There is a lack of sufficient appropriate evidential matter or there are restrictions on the scope of the audit that have led the auditor to conclude that he or she cannot express an unqualified opinion and he or she has concluded not to disclaim an opinion (paragraphs .05~~22~~–.17~~34~~).

*b.* The auditor believes, on the basis of his or her audit, that the financial statements contain a departure from generally accepted accounting principles, the effect of which is material, and he or she has concluded not to express an adverse opinion (paragraphs .18~~35~~–.39~~57~~).

.03 When the auditor expresses a qualified opinion, the auditor's report must include the same basic elements and communication of critical audit matters, if requirements of critical audit matters apply, as would be required in an unqualified auditor's report under AS 3101.

.04~~21~~ When the auditor expresses a qualified opinion, he or she should disclose all of the substantive reasons for the qualified opinion in one or more separate ~~explanatory~~ paragraph(s) ~~preceding~~ immediately following the opinion paragraph of the auditor's report. The auditor should also include, in the opinion paragraph, the appropriate qualifying language and a reference to the ~~explanatory~~ paragraph that discloses all of the substantive reasons for the qualified opinion. A qualified opinion should include the word *except* or *exception* in a phrase such as *except for* or *with the exception of*. Phrases such as *subject to* and *with the foregoing explanation* are not clear or forceful enough and should not be used. Since accompanying notes are part of the financial statements, wording such as *fairly presented, in all material respects, when read in conjunction with Note 1* is likely to be misunderstood and should not be used.

Note: The auditor should refer to AS 3101 to determine if the matter for which the auditor qualified the opinion is also a critical audit matter.

**Scope Limitations**

.05~~22~~ The auditor can determine that he or she is able to express an unqualified opinion only if the audit has been conducted in accordance with the standards of the PCAOB and if he or she has therefore been able to apply all the procedures he considers necessary in the circumstances. Restrictions on the scope of the audit, whether imposed by the client or by circumstances, such as the timing of his or her work, the inability to obtain sufficient appropriate evidential matter, or an inadequacy in the accounting records, may require the auditor to qualify his or her opinion or to disclaim an opinion. In such instances, the reasons for the auditor's qualification of opinion or disclaimer of opinion should be described in the report.

.06~~23~~ The auditor's decision to qualify his or her opinion or disclaim an opinion because of a scope limitation depends on his or her assessment of the importance of the omitted procedure(s) to his or her ability to form an opinion on the financial statements being audited. This assessment will be affected by the nature and magnitude of the potential effects of the matters in question and by their significance to the financial statements. If the potential effects relate to many financial statement items, this significance is likely to be greater than if only a limited number of items is involved.

.07~~24~~ Common restrictions on the scope of the audit include those applying to the observation of physical inventories and the confirmation of accounts receivable by direct communication with debtors.[3]~~[14]~~ Another common scope restriction involves accounting for long-term investments when the auditor has not been able to obtain audited financial statements of an investee. Restrictions on the application of these or other audit procedures to important elements of the financial statements require the auditor to decide whether he or she has examined sufficient appropriate evidential matter to permit him or her to express an unqualified or qualified opinion, or whether he or she should disclaim an opinion. When restrictions that significantly limit the scope of the audit are imposed by the client, ordinarily the auditor should disclaim an opinion on the financial statements.

[3]~~[14]~~ Circumstances such as the timing of the work may make it impossible for the auditor to accomplish these procedures. In this case, if the auditor is able to satisfy himself or herself as to inventories or accounts receivable by applying alternative procedures, there is no significant limitation on the scope of the work, and the report need not include a reference to the omission of the procedures or the use of alternative procedures. It is important to understand, however, that AS 2510, *Auditing Inventories*,

states that "it will always be necessary for the auditor to make, or observe, some physical counts of the inventory and apply appropriate tests of intervening transactions."

.08~~25~~ When a qualified opinion results from a limitation on the scope of the audit or an insufficiency of evidential matter, the ~~situation~~ auditor's report should ~~be~~ describe~~d~~ the basis for departure from an unqualified opinion in a~~n~~ ~~explanatory~~ separate paragraph ~~preceding~~ immediately following the opinion paragraph and refer~~red~~ to that description in both the ~~scope~~ Basis for Opinion section and opinion paragraph~~s~~ of the auditor's report. It is not appropriate for the scope of the audit to be explained in a note to the financial statements, since the description of the audit scope is the responsibility of the auditor and not that of the client.

.09~~26~~ When an auditor qualifies his or her opinion because of a scope limitation, the wording in the opinion paragraph should indicate that the qualification pertains to the possible effects on the financial statements and not to the scope limitation itself. Wording such as "In our opinion, except for the above-mentioned limitation on the scope of our audit . . ." bases the exception on the restriction itself, rather than on the possible effects on the financial statements and, therefore, is unacceptable. An example of a qualified opinion related to a scope limitation concerning an investment in a foreign affiliate (assuming the effects of the limitation are such that the auditor has concluded that a disclaimer of opinion is not appropriate) follows:

Report of Independent Registered Public Accounting Firm

To the shareholders and the board of directors of X Company

~~[*Same first paragraph as the standard report*]~~

Opinion on the Financial Statements

We have audited the accompanying balance sheets of X Company (the "Company") as of December 31, 20X2 and 20X1, the related statements of [*titles of the financial statements, e.g., income, comprehensive income, stockholders' equity, and cash flows*] for each of the years then ended, and the related notes [*and schedules*] (collectively referred to as the "financial statements"). In our opinion, except for the effects of ~~such~~ the adjustments, if any, as might have been determined to be necessary had we been able to examine evidence regarding the foreign affiliate investment and earnings, as described below, the financial statements ~~referred to in the first paragraph above~~ present fairly, in all material respects, the financial position of ~~X~~ the Company as of December 31, 20X2 and 20X1, and the results of its operations and its cash flows for the years then ended in conformity with accounting principles generally accepted in the United States of America.

We were unable to obtain audited financial statements supporting the Company's investment in a foreign affiliate stated at $_______ and $_______ at December 31, 20X2 and 20X1, respectively, or its equity in earnings of that affiliate of $_______ and $_______, which is included in net income for the years then ended as described in Note X to the financial statements; nor were we able to satisfy ourselves as to the carrying value of the investment in the foreign affiliate or the equity in its earnings by other auditing procedures.

Basis for Opinion

These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the Company's financial statements based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

Except as discussed ~~in the following paragraph~~ above, we conducted our audits in accordance with the standards of the PCAOB ~~Public Company Accounting Oversight Board (United States)~~. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. ~~An audit~~ Such procedures included~~s~~ examining, on a test basis, evidence ~~supporting~~ regarding the amounts and disclosures in the financial statements. ~~An~~ Our audits also include~~s~~d ~~assessing~~ evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements ~~presentation~~. We believe that our audits provide a reasonable basis for our opinion.

Critical Audit Matters [if applicable]

*[Include critical audit matters]*

[*Signature*]

We have served as the Company's auditor since [*year*].

[*City and State or Country*]

[*Date*]

.10~~27~~ ***Other scope limitations.*** Sometimes, notes to financial statements may contain unaudited information, such as pro forma calculations or other similar disclosures. If the unaudited information (for example, an investor's share, material in amount, of an investee's earnings recognized on the equity method) is such that it should be subjected to auditing procedures in order for the auditor to form an opinion with respect to the financial statements taken as a whole, the auditor should apply the procedures he or she deems necessary to the unaudited information. If the auditor has not been able to apply the procedures he or she considers necessary, the auditor should qualify his or her opinion or disclaim an opinion because of a limitation on the scope of the audit.

.11~~28~~ If, however, these disclosures are not necessary to fairly present the financial position, operating results, or cash flows on which the auditor is reporting, such disclosures may be identified as *unaudited* or as *not covered by the auditor's report*. For example, the pro forma effects of a business combination or of a subsequent event may be labelled unaudited. Therefore, while the event or transaction giving rise to the disclosures in these circumstances should be audited, the pro forma disclosures of that event or transaction would not be. The auditor should be aware, however, that AS 3110, *Dating of the Independent Auditor's Report,* states that, if the auditor is aware of a material subsequent event that has occurred after the completion of fieldwork but before issuance of the report that should be disclosed, the auditor's only options are to dual date the report or date the report as of the date of the subsequent event and extend the procedures for review of subsequent events to that date. Labelling the note unaudited is not an acceptable alternative in these circumstances.

.12~~29~~ ***Uncertainties and scope limitations.*** A matter involving an uncertainty is one that is expected to be resolved at a future date, at which time conclusive evidential matter concerning its outcome would be expected to become available. Uncertainties include, but are not limited to, contingencies covered by Financial Accounting Standards Board (FASB) Statement of Financial Accounting Standards No. 5, *Accounting for Contingencies*, and matters related to estimates covered by Statement of Position 94-6, *Disclosure of Certain Significant Risks and Uncertainties*.

.13~~30~~ Conclusive evidential matter concerning the ultimate outcome of uncertainties cannot be expected to exist at the time of the audit because the outcome and related evidential matter are prospective. In these circumstances, management is responsible for estimating the effect of future events on the financial statements, or determining that a reasonable estimate cannot be made and making the required disclosures, all in accordance with generally accepted accounting principles, based on management's analysis of existing conditions. An audit includes an assessment of whether the evidential matter is sufficient to support management's analysis. Absence of the existence of information related to the outcome of an uncertainty does not necessarily lead to a conclusion that the evidential matter supporting management's assertion is not sufficient. Rather, the auditor's judgment regarding the sufficiency of the evidential matter is based on the evidential matter that is, or should be, available. If, after considering the existing conditions and available evidence, the auditor concludes that sufficient evidential matter supports management's assertions about the nature of a matter involving an uncertainty and its presentation or disclosure in the financial statements, an unqualified opinion ordinarily is appropriate.

.14~~31~~ If the auditor is unable to obtain sufficient evidential matter to support management's assertions about the nature of a matter involving an uncertainty and its presentation or disclosure in the financial statements, the auditor should consider the need to express a qualified opinion or to disclaim an opinion because of a scope limitation. A qualification or disclaimer of opinion because of a scope limitation is appropriate if sufficient evidential matter related to an uncertainty does or did exist but was not available to the auditor for reasons such as management's record retention policies or a restriction imposed by management.

.15~~32~~ Scope limitations related to uncertainties should be differentiated from situations in which the auditor concludes that the financial statements are materially misstated due to departures from generally accepted accounting principles related to uncertainties. Such departures may be caused by inadequate disclosure concerning the uncertainty, the use of inappropriate accounting principles, or the use of unreasonable accounting estimates. Paragraphs .28~~45~~ to .32~~49~~ provide guidance to the auditor when financial statements contain departures from generally accepted accounting principles related to uncertainties.

.16~~33~~ ***Limited reporting engagements.*** The auditor may be asked to report on one basic financial statement and not on the others. For example, he or she may be asked to report on the balance sheet and not on the statements of income, retained earnings or cash flows. These engagements do not involve scope limitations if the auditor's access to information underlying the basic financial statements is not limited and if the auditor applies all the procedures he considers necessary in the circumstances; rather, such engagements involve limited reporting objectives.

.17~~34~~ An auditor may be asked to report on the balance sheet only. In this case, the auditor may express an opinion on the balance sheet only. An example of an unqualified opinion on a balance-sheet-only audit follows (the report assumes that the auditor has been able to satisfy himself or herself regarding the consistency of application of accounting principles):

Report of Independent Registered Public Accounting Firm

To the shareholders and the board of directors of X Company

Opinion on the Financial Statement

We have audited the accompanying balance sheet of X Company (the "Company") as of December 31, 20XX, and the related notes [*and schedules*] (collectively referred to as the "financial statement"). In our opinion, ~~the balance sheet referred to above~~ the financial statement presents fairly, in all material respects, the financial position of ~~X~~ the Company as of December 31, 20XX, in conformity with accounting principles generally accepted in the United States of America.

Basis for Opinion

This financial statement is the responsibility of the Company's management. Our responsibility is to express an opinion on this financial statement based on our audit. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audit in accordance with the standards of the PCAOB ~~Public Company Accounting Oversight Board (United States)~~. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the ~~balance sheet~~ financial statement is free of material misstatement, whether due to error or fraud. Our audit included performing procedures to assess the risks of material misstatement of the financial statement, whether due to error or fraud, and performing procedures that respond to those risks. ~~An audit~~ Such procedures included~~s~~ examining, on a test basis, evidence ~~supporting~~ regarding the amounts and disclosures in the ~~balance sheet~~ financial statement. ~~An~~ Our audit also ~~includes~~ included assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall

~~balance sheet~~ presentation of the financial statement. We believe that our audit of the ~~balance sheet~~ financial statement provides a reasonable basis for our opinion.

Critical Audit Matters [if applicable]

We have served as the Company's auditor since [*year*].

[*City and State or Country*]

[*Date*]

**Departure From a Generally Accepted Accounting Principle**

.18~~35~~ When financial statements are materially affected by a departure from generally accepted accounting principles and the auditor has audited the statements in accordance with the standards of the PCAOB, he or she should express a qualified (paragraphs .19~~36~~ through .39~~57~~) or an adverse (paragraphs .40~~58~~ through .43~~60~~) opinion. The basis for such opinion should be stated in the report.

.19~~36~~ In deciding whether the effects of a departure from generally accepted accounting principles are sufficiently material to require either a qualified or adverse opinion, one factor to be considered is the dollar magnitude of such effects. However, the concept of materiality does not depend entirely on relative size; it involves qualitative as well as quantitative judgments. The significance of an item to a particular entity (for example, inventories to a manufacturing company), the pervasiveness of the misstatement (such as whether it affects the amounts and presentation of numerous financial statement items), and the effect of the misstatement on the financial statements taken as a whole are all factors to be considered in making a judgment regarding materiality.

.20~~37~~ When the auditor expresses a qualified opinion, he or she should disclose, in a separate ~~explanatory~~ paragraph(s) ~~preceding~~ immediately following the opinion paragraph ~~of the report~~, all of the substantive reasons that have led him or her to conclude that there has been a departure from generally accepted accounting principles. Furthermore, the opinion paragraph ~~of the report~~ should include the appropriate qualifying language and a reference to the ~~explanatory~~ paragraph(s) that describe the substantive reasons for the qualified opinion.

.21~~38~~ The ~~explanatory~~ paragraph(s) immediately following the opinion paragraph that describe the substantive reasons that led the auditor to conclude that there has been a departure from generally accepted accounting principles should also disclose the principal effects of the subject matter of the qualification on financial position, results of operations, and cash flows, if practicable.[4~~15~~] If the effects are not reasonably determinable, the report should so state. If such disclosures are made in a note to the financial statements, the ~~explanatory~~ paragraph(s) that describe the substantive reasons for the qualified opinion may be shortened by referring to it.

[4~~15~~] In this context, practicable means that the information is reasonably obtainable from management's accounts and records and that providing the information in the report does not require the auditor to assume the position of a preparer of financial information. For example, if the information can be obtained from the accounts and records without the auditor substantially increasing the effort that would normally be required to complete the audit, the information should be presented in the report.

.22~~39~~ An example of a report in which the opinion is qualified because of the use of an accounting principle at variance with generally accepted accounting principles follows (assuming the effects are such that the auditor has concluded that an adverse opinion is not appropriate):

Report of Independent Registered Public Accounting Firm

To the shareholders and the board of directors of X Company

Opinion on the Financial Statements

We have audited the accompanying balance sheets of X Company (the "Company") as of December 31, 20X2 and 20X1, the related statements of [*titles of the financial statements, e.g., income, comprehensive income, stockholders' equity, and cash flows*] for each of the years then ended, and the related notes [*and schedules*] (collectively referred to as the "financial statements"). In our opinion, except for the effects of not capitalizing certain lease obligations as discussed in the ~~preceding~~ following paragraph, the financial statements referred to above present fairly, in all material respects, the financial position of ~~X~~ the Company as of December 31, 20X2 and 20X1, and the results of its operations and its cash flows for the years then ended in conformity with accounting principles generally accepted in the United States of America.

The Company has excluded, from property and debt in the accompanying balance sheets, certain lease obligations that, in our opinion, should be capitalized in order to conform with accounting principles generally accepted in the United States of America. If these lease obligations were capitalized, property would be increased by $_______ and $_______, long-term debt by $_______ and $_______, and retained earnings by $_______ and $_______ as of December 31, 20X2 and 20X1, respectively. Additionally, net income would be increased (decreased) by $_______ and $_______ and earnings per share would be increased (decreased) by $_______ and $_______, respectively, for the years then ended.

Basis for Opinion

[~~*Same first and second paragraphs as the standard report*~~ *Same basic elements as the Basis for Opinion section of the auditor's unqualified report in AS 3101*]

Critical Audit Matters [if applicable]

*[Include critical audit matters]*

[*Signature*]

We have served as the Company's auditor since [*year*].

[*City and State or Country*]

[*Date*]

.23~~40~~ If the pertinent facts are disclosed in a note to the financial statements, a separate paragraph (~~preceding~~ immediately following the opinion paragraph) of the auditor's report in the circumstances illustrated in paragraph .22~~39~~ might read as follows:

As more fully described in Note X to the financial statements, the Company has excluded certain lease obligations from property and debt in the accompanying balance sheets. In our opinion, accounting principles generally accepted in the United States of America require that such obligations be included in the balance sheets.

.24~~41~~ ***Inadequate disclosure.*** Information essential for a fair presentation in conformity with generally accepted accounting principles should be set forth in the financial statements (which include the related notes). When such information is set forth elsewhere in a report to shareholders, or in a prospectus, proxy statement, or other similar report, it should be referred to in the financial statements. If the financial statements, including accompanying notes, fail to disclose information that is required by generally accepted accounting principles, the auditor should express a qualified or adverse opinion because of the departure from those principles and should provide the information in the report, if practicable,[5~~16~~] unless its omission from the auditor's report is recognized as appropriate by a specific PCAOB standard.

[5~~16~~] *See* footnote 4~~15~~.

.25~~42~~ Following is an example of a report qualified for inadequate disclosure (assuming the effects are such that the auditor has concluded an adverse opinion is not appropriate):

Report of Independent Registered Public Accounting Firm

To the shareholders and the board of directors of X Company

Opinion on the Financial Statements

We have audited the accompanying balance sheets of X Company (the "Company") as of December 31, 20X2 and 20X1, the related statements of [*titles of the financial statements, e.g., income, comprehensive income, stockholders' equity, and cash flows*] for each of the years then ended, and the related notes [*and schedules*] (collectively referred to as the "financial statements"). In our opinion, except for the omission of the information discussed in the ~~preceding~~ following paragraph, . . .

The Company's financial statements do not disclose [*describe the nature of the omitted disclosures*]. In our opinion, disclosure of this information is required by accounting principles generally accepted in the United States of America.

Basis for Opinion

[~~*Same first and second paragraphs as the standard report*~~ *Same basic elements as the Basis for Opinion section of the auditor's unqualified report in AS 3101*]

Critical Audit Matters [if applicable]

*[Include critical audit matters]*

[*Signature*]

We have served as the Company's auditor since [*year*].

[*City and State or Country*]

[*Date*]

.26~~43~~ If a company issues financial statements that purport to present financial position and results of operations but omits the related statement of cash flows, the auditor will normally conclude that the omission requires qualification of his opinion.

.27~~44~~ ~~The auditor is not required to prepare a basic financial statement (for example, a statement of cash flows for one or more periods) and include it in the report~~ ~~i~~If the company's management declines to present ~~the statement~~ a basic financial statement (for example, a statement of cash flows for one or more periods)~~.~~ ~~Accordingly, in these cases~~, the auditor should ordinarily qualify the report in the following manner:

Report of Independent Registered Public Accounting Firm

To the shareholders and the board of directors of X Company

Opinion on the Financial Statements

We have audited the accompanying balance sheets of X Company (the "Company") as of December 31, 20X2 and 20X1, and the related statements of operations and stockholders' equity for each of the years then ended, and the related notes [*and schedules*] (collectively referred to as the "financial statements").~~income and retained earnings for the years then ended.~~ In our opinion, except that the omission of a statement of cash flows results in an incomplete presentation as explained in the ~~preceding~~ following paragraph, the financial statements ~~referred to above~~ present fairly, in all material respects, the financial position of ~~X~~ the Company as of December 31, 20X2 and 20X1, and the results of its operations for the years then ended in conformity with accounting principles generally accepted in the United States of America.

The Company declined to present a statement of cash flows for the years ended December 31, 20X2 and 20X1. Presentation of such statement summarizing the Company's operating, investing, and financing activities is required by accounting principles generally accepted in the United States of America.

Basis for Opinion

[~~*Same second paragraph as the standard report*~~ *Same basic elements as the Basis for Opinion section of the auditor's unqualified report in AS 3101*]

Critical Audit Matters [if applicable]

*[Include critical audit matters]*

[*Signature*]

We have served as the Company's auditor since [*year*].

[*City and State or Country*]

[*Date*]

.28~~45~~ ***Departures from generally accepted accounting principles involving risks or uncertainties, and materiality considerations.*** Departures from generally accepted accounting principles involving risks or uncertainties generally fall into one of the following categories:

- Inadequate disclosure (paragraphs .29~~46~~ and .30~~47~~)
- Inappropriate accounting principles (paragraph .31~~48~~)
- Unreasonable accounting estimates (paragraph .32~~49~~)

.29~~46~~ If the auditor concludes that a matter involving a risk or an uncertainty is not adequately disclosed in the financial statements in conformity with generally accepted accounting principles, the auditor should express a qualified or an adverse opinion.

.30~~47~~ The auditor should consider materiality in evaluating the adequacy of disclosure of matters involving risks or uncertainties in the financial statements in the context of the financial statements taken as a whole. The auditor's consideration of materiality is a matter of professional judgment and is influenced by his or her perception of the needs of a reasonable person who will rely on the financial statements. Materiality judgments involving risks or uncertainties are made in light of the surrounding circumstances. The auditor evaluates the materiality of reasonably possible losses that may be incurred upon the resolution of uncertainties both individually and in the aggregate. The auditor performs the evaluation of reasonably possible losses without regard to his or her evaluation of the materiality of known and likely misstatements in the financial statements.

.31~~48~~ In preparing financial statements, management estimates the outcome of certain types of future events. For example, estimates ordinarily are made about the useful lives of depreciable assets, the collectibility of accounts receivable, the realizable value of inventory items, and the provision for product warranties. FASB Statement No. 5, *Accounting for Contingencies*, paragraphs 23 and 25, describes situations in which the inability to make a reasonable estimate may raise questions about the appropriateness of the accounting principles used. If, in those or other situations, the auditor concludes that the accounting principles used cause the financial statements to be materially misstated, he or she should express a qualified or an adverse opinion.

.32~~49~~ Usually, the auditor is able to satisfy himself or herself regarding the reasonableness of management's estimate of the effects of future events by considering various types of evidential matter, including the historical experience of the entity. If the auditor concludes that management's estimate is unreasonable (*see* paragraph .13 of AS 2810, *Evaluating Audit Results*) and that its effect is to cause the financial statements to be materially misstated, he or she should express a qualified or an adverse opinion.

~~[.50]~~

.33~~51~~ ***Departures from generally accepted accounting principles related to changes in accounting principle***. Paragraph .07 ~~.17A~~ of AS 2820, *Evaluating Consistency of Financial Statements*, ~~states~~ includes the criteria for evaluating a change in accounting principle. If the auditor concludes that the criteria have not been met, he or she should consider that circumstance to be a departure from generally accepted accounting principles and, if the effect of the accounting change is material, should issue a qualified or adverse opinion.

.34~~52~~ The accounting standards indicate that a company may make a change in accounting principle only if it justifies that the allowable alternative accounting principle is preferable. If the company does not provide reasonable justification that the alternative accounting principle is preferable, the auditor should consider the accounting change to be a departure from generally accepted accounting principles and, if the effect of the change in accounting principle is material, should issue a qualified or adverse opinion. The following is an example of a report qualified because a company did not provide reasonable justification that an alternative accounting principle is preferable:

Report of Independent Registered Public Accounting Firm

To the shareholders and the board of directors of X Company

Opinion on the Financial Statements

We have audited the accompanying balance sheets of X Company (the "Company") as of December 31, 20X2 and 20X1, the related statements of [*titles of the financial statements, e.g., income, comprehensive income, stockholders' equity, and cash flows*] for each of the years then ended, and the related notes [*and schedules*] (collectively referred to as the "financial statements"). In our opinion, except for the change in accounting principle discussed in the ~~preceding~~ following paragraph, the financial statements ~~referred to above~~ present fairly, in all material respects, the financial position of ~~X~~ the Company as of December 31, 20X2 and 20X1, and the results of its operations and its cash flows for the years then ended in conformity with accounting principles generally accepted in the United States of America.

As disclosed in Note X to the financial statements, the Company adopted, in 20X2, the first-in, first-out method of accounting for its inventories, whereas it previously used the last-in, first-out method. Although use of the first-in, first-out method is in conformity with accounting principles generally accepted in the United States of America, in our opinion the Company has not provided reasonable justification that this accounting principle is preferable as required by those principles.[6~~17~~]

Basis for Opinion

[~~*Same first and second paragraphs as the standard report*~~ *Same basic elements as the Basis for Opinion section of the auditor's unqualified report in AS 3101*]

Critical Audit Matters [if applicable]

*[Include critical audit matters]*

[*Signature*]

We have served as the Company's auditor since [*year*].

[*City and State or Country*]

[*Date*]

[6~~17~~] Because this paragraph included in the example presented contains all of the information required in a~~n~~ ~~explanatory~~ separate paragraph on consistency, an ~~separate~~ explanatory paragraph (immediately following the opinion paragraph) as required by ~~paragraphs .17A thorough .17E of this section~~ AS 2820.08 and .12-.15 is not necessary in this instance. A separate paragraph that identifies the change in accounting principle would be required if the substance of the disclosure did not fulfill the requirements outlined in these paragraphs.

.35~~53~~ Whenever an accounting change results in an auditor expressing a qualified or adverse opinion on the conformity of financial statements with generally accepted accounting principles for the year of change, the auditor should consider the possible effects of that change when reporting on the entity's financial statements for subsequent years, as discussed in paragraphs .36~~54~~ through .39~~57~~.

.36~~54~~ If the financial statements for the year of such change are presented and reported on with a subsequent year's financial statements, the auditor's report should disclose his or her reservations with respect to the statements for the year of change.

.37~~55~~ If an entity has adopted an accounting principle that is not a generally accepted accounting principle, its continued use might have a material effect on the statements of a subsequent year on which the auditor is reporting. In this situation, the independent auditor should express either a qualified opinion or an adverse opinion, depending on the materiality of the departure in relation to the statements of the subsequent year.

.38~~56~~ If an entity accounts for the effect of a change prospectively when generally accepted accounting principles require restatement or the inclusion of the cumulative effect of the change in the year of change, a subsequent year's financial statements could improperly include a charge or credit that is material to those statements. This situation also requires that the auditor express a qualified or an adverse opinion.

.39~~57~~ If the auditor issues a qualified or adverse opinion because the company has not justified that an allowable accounting principle adopted in an accounting change is preferable, as described in paragraph .34~~52~~, the auditor should continue to express that opinion on the financial statements for the year of change as long as those financial statements are presented and reported on. However, the auditor's qualified or adverse opinion relates only to the accounting change and does not affect the status of a newly adopted principle as a generally accepted accounting principle. Accordingly, while expressing a qualified or adverse opinion for the year of change, the independent auditor's opinion regarding the subsequent years' statements need not express a qualified or adverse opinion on the use of the newly adopted principle in subsequent periods.

**Adverse Opinions**

.40 When the auditor expresses an adverse opinion, the auditor's report must include the opinion as described in paragraph .41 and the same other basic elements as would be required in an unqualified auditor's report under AS 3101, modified appropriately.

> Note: The requirements as to critical audit matters described in AS 3101 do not apply when the auditor expresses an adverse opinion.

.41~~58~~ An adverse opinion states that the financial statements do not present fairly the financial position or the results of operations or cash flows in conformity with generally accepted accounting principles. Such an opinion is expressed when, in the auditor's judgment, the financial statements taken as a whole are not presented fairly in conformity with generally accepted accounting principles.

.42~~59~~ When the auditor expresses an adverse opinion, he or she should disclose in a separate ~~explanatory~~ paragraph(s) ~~preceding~~ immediately following the opinion paragraph of the report (*a*) all the substantive reasons for his or her adverse opinion, and (*b*) the principal effects of the subject matter of the adverse opinion on financial position, results of operations, and cash flows, if practicable.[7]~~[18]~~ If the effects are not reasonably determinable, the report should so state.[8]~~[19]~~

[7]~~[18]~~ *See* footnote 4~~15~~.

[8]~~[19]~~ When the auditor expresses an adverse opinion, he or she should also consider the need for an explanatory paragraph under the circumstances identified in ~~paragraph 11, subsection (*b*), (*c*), (*d*), and (*e*) of~~ AS 3101.18 ~~this section~~.

.43~~60~~ When an adverse opinion is expressed, the opinion paragraph should include a direct reference to a separate paragraph that discloses the basis for the adverse opinion.~~,~~ An example of this is ~~as~~ shown below:

Report of Independent Registered Public Accounting Firm

> To the shareholders and the board of directors of X Company
>
> Opinion on the Financial Statements
>
> We have audited the accompanying balance sheets of X Company (the "Company") as of December 31, 20X2 and 20X1, the related statements of [*titles of the financial statements, e.g., income, comprehensive income, stockholders' equity, and cash flows*] for each of the years then ended, and the related notes

[*and schedules*] (collectively referred to as the "financial statements"). In our opinion, because of the effects of the matters discussed in the ~~preceding~~ following paragraphs, the financial statements ~~referred to above~~ do not present fairly, in conformity with accounting principles generally accepted in the United States of America, the financial position of ~~X~~ the Company as of December 31, 20X2 and 20X1, or the results of its operations or its cash flows for the years then ended.

As discussed in Note X to the financial statements, the Company carries its property, plant and equipment accounts at appraisal values, and provides depreciation on the basis of such values. Further, the Company does not provide for income taxes with respect to differences between financial income and taxable income arising because of the use, for income tax purposes, of the installment method of reporting gross profit from certain types of sales. Accounting principles generally accepted in the United States of America require that property, plant and equipment be stated at an amount not in excess of cost, reduced by depreciation based on such amount, and that deferred income taxes be provided.

Because of the departures from accounting principles generally accepted in the United States of America identified above, as of December 31, 20X2 and 20X1, inventories have been increased $_______ and $_______ by inclusion in manufacturing overhead of depreciation in excess of that based on cost; property, plant and equipment, less accumulated depreciation, is carried at $_______ and $_______ in excess of an amount based on the cost to the Company; and deferred income taxes of $_______ and $_______ have not been recorded; resulting in an increase of $_______ and $_______ in retained earnings and in appraisal surplus of $_______ and $_______, respectively. For the years ended December 31, 20X2 and 20X1, cost of goods sold has been increased $_______ and $_______, respectively, because of the effects of the depreciation accounting referred to above and deferred income taxes of $_______ and $_______ have not been provided, resulting in an increase in net income of $_______ and $_______, respectively.

Basis for Opinion

[~~*Same first and second paragraphs as the standard report*~~ *Same basic elements as the Basis for Opinion section of the auditor's unqualified report in AS 3101*]

[*Signature*]

We have served as the Company's auditor since [*year*].

[*City and State or Country*]

[*Date*]

**Disclaimer of Opinion**

.44~~61~~ A disclaimer of opinion states that the auditor does not express an opinion on the financial statements. An auditor may decline to express an opinion whenever he or she is unable to form or has not formed an opinion as to the fairness of presentation of the financial statements in conformity with generally accepted accounting principles. If the auditor disclaims an opinion, the auditor's report should give all of the substantive reasons for the disclaimer.

.45~~62~~ A disclaimer is appropriate when the auditor has not performed an audit sufficient in scope to enable him or her to form an opinion on the financial statements.[~~20~~9] A disclaimer of opinion should not be expressed because the auditor believes, on the basis of his or her audit, that there are material departures from generally accepted accounting principles (*see* paragraphs .18~~35~~ through .39~~57~~). When disclaiming an opinion because of a scope limitation, the auditor should state in a separate paragraph or paragraphs all of the substantive reasons for the disclaimer. He or she should state that the scope of the audit was not sufficient to warrant the expression of an opinion. The auditor should not identify the procedures that were performed nor include the paragraph describing the characteristics of an audit (that is, the scope paragraph of the auditor's standard report); to do so may tend to overshadow the disclaimer. In addition, the auditor should also disclose any other reservations he or she has regarding fair presentation in conformity with generally accepted accounting principles.

[~~20~~9] AS 3320.05 provides guidance to an accountant who is associated with the financial statements of a public entity, but has not audited such statements.

.46 When the auditor disclaims an opinion, the auditor's report must include the basic elements as would be required in an unqualified auditor's report under AS 3101, modified as follows:

a. The first section of the auditor's report must include the section title "Disclaimer of Opinion on the Financial Statements" and the following elements:

   (1) The name of the company whose financial statements the auditor was engaged to audit;

(2) A statement identifying each financial statement and any related schedule(s) that the auditor was engaged to audit;

b. The second section of the auditor's report must include the title "Basis for Disclaimer of Opinion."

c. Elements in paragraphs .09b-f of AS 3101 should be omitted.

Note: The requirements as to critical audit matters described in AS 3101 do not apply when the auditor disclaims an opinion.

.47~~63~~ An example of a report disclaiming an opinion resulting from an inability to obtain sufficient appropriate evidential matter because of the scope limitation follows:

Report of Independent Registered Public Accounting Firm

To the shareholders and the board of directors of X Company

Disclaimer of Opinion on the Financial Statements

We were engaged to audit the accompanying balance sheets of X Company (the "Company") as of December 31, 20X2 and 20X1, and the related statements of [*titles of the financial statements, e.g., income, comprehensive income, stockholders' equity, and cash flows*]~~income, retained earnings, and cash flows for the years then ended~~, and the related notes [*and schedules*] (collectively referred to as the "financial statements").[10]~~[21]~~ ~~Since~~ As described in the following paragraph, because the Company did not take physical inventories and we were not able to apply other auditing procedures to satisfy ourselves as to inventory quantities and the cost of property and equipment, we were not able to obtain sufficient appropriate audit evidence to provide a basis for an audit opinion on the financial statements ~~the scope of our work was not sufficient to enable us to express~~, and we do not express, an opinion on these financial statements.

The Company did not make a count of its physical inventory in 20X2 or 20X1, stated in the accompanying financial statements at $________ as of December 31, 20X2, and at $_________ as of December 31, 20X1. Further, evidence supporting the cost of property and equipment acquired prior to December 31, 20X1, is no longer available. The Company's records do not permit the application of other auditing procedures to inventories or property and equipment.

Basis for Disclaimer of Opinion

These financial statements are the responsibility of the Company's management. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

[~~*Second paragraph of standard report should be omitted*~~]

[*Signature*]

We have served as the Company's auditor since [ *year* ].

[*City and State or Country*]

[*Date*]

[10]~~[21]~~ The wording in the ~~first paragraph of the auditor's standard report is changed in a disclaimer of opinion because of a scope limitation. The~~ first sentence now states that "we were engaged to audit" rather than "we have audited" since, because of the scope limitation, the auditor was not able to perform an audit in accordance with the standards of the PCAOB. In addition, the ~~last~~ sentence ~~of the first paragraph is also deleted, because of the scope limitation, to eliminate the~~ that references ~~to~~ the auditor's responsibility to express an opinion is deleted.

### Piecemeal Opinions

.48~~64~~ Piecemeal opinions (expressions of opinion as to certain identified items in financial statements) should not be expressed when the auditor has disclaimed an opinion or has expressed an adverse opinion on the financial statements *taken as a whole* because piecemeal opinions tend to overshadow or contradict a disclaimer of opinion or an adverse opinion.

### Reports on Comparative Financial Statements

.49~~65~~ The report shall ~~Paragraph .04 requires that an auditor's report contain~~ either contain an expression of opinion regarding the financial statements *taken as a whole* or an assertion to the effect that an opinion cannot be expressed. Reference ~~in paragraph .04~~ to the financial statements *taken as a whole* applies not only to the financial statements of the current period but also to those of one or more prior periods that are presented on a comparative basis with those of the current period. Therefore, a continuing auditor[11]~~[22]~~ should update[12]~~[23]~~ the report on the individual financial statements of the one or more prior periods presented on a comparative basis with those of the current period.[13~~24~~] Ordinarily, the auditor's report on comparative financial statements should be dated as of the date of completion of fieldwork for the most recent audit. (*See* AS 3110.01.)

[11~~22~~] A *continuing auditor* is one who has audited the financial statements of the current period and of one or more consecutive periods immediately prior to the current period. If one firm of independent auditors merges with another firm and the new firm becomes the auditor of a former client of one of the former firms, the new firm may accept responsibility and express an opinion on the financial statements for the prior period(s), as well as for those of the current period. In such circumstances, the new firm should follow the guidance in paragraphs .49~~65~~ through .53~~69~~ and may indicate in its report or signature that a merger took place and may name the firm of independent auditors that was merged with it. If the new firm decides not to express an opinion on the prior-period financial statements, the guidance in paragraphs .54~~70~~ through .58~~74~~ should be followed.

[12~~23~~] An updated report on prior-period financial statements should be distinguished from a reissuance of a previous report (*see* AS 3110.06 through .08), since in issuing an updated report the continuing auditor considers information that he or she has become aware of during his or her audit of the current-period financial statements (*see* paragraph .52~~68~~) and because an updated report is issued in conjunction with the auditor's report on the current-period financial statements.

[13~~24~~] A continuing auditor need not report on the prior-period financial statements if only summarized comparative information of the prior period(s) is presented. For example, entities such as state and local governmental units frequently present total-all-funds information for the prior period(s) rather than information by individual funds because of space limitations or to avoid cumbersome or confusing formats. Also, not-for-profit organizations frequently present certain information for the prior period(s) in total rather than by net asset class. In some circumstances, the client may request the auditor to express an opinion on the prior period(s) as well as the current period. In those circumstances, the auditor should consider whether the information included for the prior period(s) contains sufficient detail to constitute a fair presentation in conformity with generally accepted accounting principles. In most cases, this will necessitate including additional columns or separate detail by fund or net asset class, or the auditor would need to modify his or her report.

.50~~66~~ During the audit of the current-period financial statements, the auditor should be alert for circumstances or events that affect the prior-period financial statements presented (*see* paragraph .52~~68~~) or the adequacy of informative disclosures concerning those statements. (*See* AS 2810.31.) In updating his or her report on the prior-period financial statements, the auditor should consider the effects of any such circumstances or events coming to his or her attention.

**Different Reports on Comparative Financial Statements Presented**

.51~~67~~ Since the auditor's report on comparative financial statements applies to the individual financial statements presented, an auditor may express a qualified or adverse opinion, disclaim an opinion, or include an explanatory paragraph with respect to one or more financial statements for one or more periods, while issuing a different report on the other financial statements presented. Following are examples of reports on comparative financial statements ~~(excluding the standard introductory and scope paragraphs, where applicable)~~ with different reports on one or more financial statements presented.

**~~Standard~~ The Auditor's Unqualified Report on the Prior-Year Financial Statements and a Qualified Opinion on the Current-Year Financial Statements**

Report of Independent Registered Public Accounting Firm

To the shareholders and the board of directors of ABC Company

Opinion on the Financial Statements

We have audited the accompanying balance sheets of ABC Company (the "Company") as of December 31, 20X2 and 20X1, the related statements of [*titles of the financial statements, e.g., income, comprehensive income, stockholders' equity, and cash flows*] for each of the years then ended, and the related notes [*and schedules*] (collectively referred to as the "financial statements"). In our opinion, except for the effects on the 20X2 financial statements of not capitalizing certain lease obligations as described in the ~~preceding~~ following paragraph, the financial statements ~~referred to above~~ present fairly, in all material respects, the financial position of ~~ABC~~ the Company as of December 31, 20X2 and 20X1, and the results of its operations and its cash flows for the years then ended in conformity with accounting principles generally accepted in the United States of America.

The Company has excluded, from property and debt in the accompanying 20X2 balance sheet, certain lease obligations that were entered into in 20X2 which, in our opinion, should be capitalized in order to conform with accounting principles generally accepted in the United States of America. If these lease obligations were capitalized, property would be increased by $_______, long-term debt by $_______, and retained earnings by $_______ as of December 31, 20X2, and net income and earnings per share would be increased (decreased) by $_______ and $_______, respectively, for the year then ended.

Basis for Opinion

[~~*Same first and second paragraphs as the standard report*~~ *Same basic elements as the Basis for Opinion section of the auditor's unqualified report in AS 3101*]

Critical Audit Matters [if applicable]

*[Include critical audit matters]*

[*Signature*]

We have served as the Company's auditor since [*year*].

[*City and State or Country*]

[*Date*]

**~~Standard~~ The Auditor's Unqualified Report on the Current-Year Financial Statements With a Disclaimer of Opinion on the Prior-Year Statements of Income, Retained Earnings, and Cash Flows**

Report of Independent Registered Public Accounting Firm

To the shareholders and the board of directors of ABC Company

Opinion on the Financial Statements

We have audited the accompanying balance sheets of ABC Company (the "Company") as of December 31, 20X2 and 20X1, and the related statements of [*titles of the financial statements, e.g., income, comprehensive income, stockholders' equity, and cash flows*] for the year ended December 31, 20X2, and the related notes [*and schedules*] (collectively referred to as the "financial statements"). In our opinion, the balance sheets of ~~ABC~~ the Company as of December 31, 20X2 and 20X1, and the related statements of income, retained earnings, and cash flows for the year ended December 31, 20X2, present fairly, in all material respects, the financial position of ~~ABC~~ the Company as of December 31, 20X2 and 20X1, and the results of its operations and its cash flows for the year ended December 31, 20X2, in conformity with accounting principles generally accepted in the United States of America. Because of the matter discussed in the ~~preceding~~ following paragraph, ~~the scope of our work was not sufficient to enable us to express~~ we were not able to obtain sufficient appropriate audit evidence to provide a basis for an audit opinion on the results of operations and cash flows, and we do not express, an opinion on the results of operations and cash flows for the year ended December 31, 20X1.

We did not observe the taking of the physical inventory as of December 31, 20X0, since that date was prior to our appointment as auditors for the Company, and we were unable to satisfy ourselves regarding inventory quantities by means of other auditing procedures. Inventory amounts as of December 31, 20X0, enter into the determination of net income and cash flows for the year ended December 31, 20X1.[14]~~[25]~~

Basis for Opinion [~~Same first paragraph as the standard report~~]

These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the Company's financial statements based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

Except as explained ~~in the following paragraph~~ above, we conducted our audits in accordance with the standards of the PCAOB ~~Public Company Accounting Oversight Board (United States)~~. Those standards require that we plan and perform our audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. ~~An audit~~ Such procedures ~~includes~~ included examining, on a test basis, evidence ~~supporting~~ regarding the amounts and disclosures in the financial statements. ~~An~~ Our audits also ~~includes assessing~~ included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements ~~presentation~~. We believe that our audits provide a reasonable basis for our opinion.

Critical Audit Matters [if applicable]

*[Include critical audit matters]*

[*Signature*]

We have served as the Company's auditor since [ *year* ].

[*City and State or Country*]

[*Date*]

[14]~~[25]~~It is assumed that the independent auditor has been able to satisfy himself or herself as to the consistency of application of generally accepted accounting principles. *See* AS 2820 for a discussion of consistency.

**Opinion on Prior-Period Financial Statements Different From the Opinion Previously Expressed**

.52~~68~~ If, during the current audit, an auditor becomes aware of circumstances or events that affect the financial statements of a prior period, he or she should consider such matters when updating his or her report on the financial statements of the prior period. For example, if an auditor has previously qualified his or her opinion or expressed an adverse opinion on financial statements of a prior period because of a departure from generally accepted accounting principles, and the prior-period financial statements are restated in the current period to conform with generally accepted accounting principles, the auditor's updated report on the financial statements of the prior period should indicate that the statements have been restated and should express an unqualified opinion with respect to the restated financial statements.

.53~~69~~ If, in an updated report, the opinion is different from the opinion previously expressed on the financial statements of a prior period, the auditor should disclose all the substantive reasons for the different opinion in a separate explanatory paragraph(s) ~~preceding~~ immediately following the opinion paragraph of his or her report. The explanatory paragraph(s) should disclose (*a*) the date of the auditor's previous report, (*b*) the type of opinion previously expressed, (*c*) if applicable, a statement that the previously issued financial statements have been restated for the correction of a misstatement in the respective period, (*d*) the circumstances or events that caused the auditor to express a different opinion, and (*e*) if applicable, a reference to the company's disclosure of the correction of the misstatement, and (*f*) the fact that the auditor's updated opinion on the financial statements of the prior period is different from his or her previous opinion on those statements. The following is an example of ~~an explanatory~~ a report ~~paragraph~~ that may be appropriate when an auditor issues an updated report on the financial statements of a prior period that contains an opinion different from the opinion previously expressed:

Report of Independent Registered Public Accounting Firm

To the shareholders and the board of directors of X Company

Opinion on the Financial Statements

We have audited the accompanying balance sheets of X Company (the "Company") as of December 31, 20X2 and 20X1, the related statements of [*titles of the financial statements, e.g., income, comprehensive income, stockholders' equity, and cash flows*] for each of the years then ended, and the related notes [*and schedules*] (collectively referred to as the "financial statements"). In our opinion, the financial statements ~~referred to above~~ present fairly, in all material respects, the financial position of ~~X~~ the Company as of December 31, 20X2 and 20X1, and the results of its operations and its cash flows for the years then ended in conformity with accounting principles generally accepted in the United States of America.

In our report dated March 1, 20X2, we expressed an opinion that the 20X1 financial statements did not fairly present financial position, results of operations, and cash flows in conformity with accounting principles generally accepted in the United States of America because of two departures from such principles: (1) the Company carried its property, plant, and equipment at appraisal values, and provided for depreciation on the basis of such values, and (2) the Company did not provide for deferred income taxes with respect to differences between income for financial reporting purposes and taxable income. As described in Note X, the Company has changed its method of accounting for these items and restated its 20X1 financial statements to conform with accounting principles generally accepted in the United States of America. Accordingly, our present opinion on the 20X1 financial statements, as presented herein, is different from that expressed in our previous report. [15]~~[26]~~

Basis for Opinion

[*Date*]

[15~~26~~] *See* footnote 6~~17~~.

## Report of Predecessor Auditor

.54~~70~~ A predecessor auditor ordinarily would be in a position to reissue his or her report on the financial statements of a prior period at the request of a former client if he or she is able to make satisfactory arrangements with the former client to perform this service and if he or she performs the procedures described in paragraph .55~~71~~.[16~~27~~]

[16~~27~~] It is recognized that there may be reasons why a predecessor auditor's report may not be reissued and this section does not address the various situations that could arise.

### Predecessor Auditor's Report Reissued

.55~~71~~ Before reissuing (or consenting to the reuse of) a report previously issued on the financial statements of a prior period, when those financial statements are to be presented on a comparative basis with audited financial statements of a subsequent period, a predecessor auditor should consider whether his or her previous report on those statements is still appropriate. Either the current form or manner of presentation of the financial statements of the prior period or one or more subsequent events might make a predecessor auditor's previous report inappropriate. Consequently, a predecessor auditor should (*a*) read the financial statements of the current period, (*b*) compare the prior-period financial statements that he or she reported on with the financial statements to be presented for comparative purposes, and (*c*) obtain representation letters from management of the former client and from the successor auditor. The representation letter from management of the former client should state (*a*) whether any information has come to management's attention that would cause them to believe that any of the previous representations should be modified, and (*b*) whether any events have occurred subsequent to the balance-sheet date of the latest prior-period financial statements reported on by the predecessor auditor that would require adjustment to or disclosure in those financial statements.[17~~28~~] The representation letter from the successor auditor should state whether the successor's audit revealed any matters that, in the successor's opinion, might have a material effect on, or require disclosure in, the financial statements reported on by the predecessor auditor. Also, the predecessor auditor may wish to consider the matters described in paragraphs ~~AS 1205~~.10 through .12 of AS 1205, *Part of the Audit Performed by Other Independent Auditors*. However, the predecessor auditor should not refer in his or her reissued report to the report or work of the successor auditor.

[17]~~[28]~~ *See* AS 2805, *Management Representations*, appendix C [paragraph .18], "Illustrative Updating Management Representation Letter."

.56~~72~~ A predecessor auditor who has agreed to reissue his or her report may become aware of events or transactions occurring subsequent to the date of his or her previous report on the financial statements of a prior period that may affect his or her previous report (for example, the successor auditor might indicate in the response that certain matters have had a material effect on the prior-period financial statements reported on by the predecessor auditor). In such circumstances, the predecessor auditor should make inquiries and perform other procedures that he or she considers necessary (for example, reviewing the working papers of the successor auditor as they relate to the matters affecting the prior-period financial statements). The auditor should then decide, on the basis of the evidential matter obtained, whether to revise the report. If a predecessor auditor concludes that the report should be revised, he or she should follow the guidance in paragraphs .52~~68~~, .53~~69~~, and .57~~73~~ of this section.

.57~~73~~ A predecessor auditor's knowledge of the current affairs of his former client is obviously limited in the absence of a continuing relationship. Consequently, when reissuing the report on prior-period financial statements, a predecessor auditor should use the date of his or her previous report to avoid any implication that he or she has examined any records, transactions, or events after that date. If the predecessor auditor revises the report or if the financial statements are adjusted, he or she should dual-date the report. (*See* AS 3110.05.)

**Predecessor Auditor's Report Not Presented**

.58~~74~~ If the financial statements of a prior period have been audited by a predecessor auditor whose report is not presented, the successor auditor should indicate in the ~~introductory~~ paragraph immediately following the opinion paragraph of his or her report (a) that the financial statements of the prior period were audited by another auditor,[18]~~[29]~~ (b) the date of his or her report, (c) the type of report issued by the predecessor auditor, and (d) if the report was other than an ~~standard~~ unqualified report, the substantive reasons therefor.[19]~~[30]~~ An example of a successor auditor's report when the predecessor auditor's report is not presented is shown below:

Report of Independent Registered Public Accounting Firm

To the shareholders and the board of directors of ABC Company

Opinion on the Financial Statements

We have audited the accompanying balance sheet of ABC Company (the "Company") as of December 31, 20X2, and the related statements of [*titles of the financial statements, e.g., income, comprehensive income, stockholders' equity, and cash flows*]~~income, retained earnings, and cash flows for the year then ended~~, and the related notes [*and schedules*] (collectively referred to as the "financial statements"). ~~These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audit.~~ In our opinion, the 20X2 financial statements ~~referred to above~~ present fairly, in all material respects, the financial position of ~~ABC~~ the Company as of December 31, 20X2, and the results of its operations and its cash flows for the year then ended in conformity with accounting principles generally accepted in the United States of America.

The financial statements of ~~ABC~~ the Company as of December 31, 20X1, were audited by other auditors whose report dated March 31, 20X2, expressed an unqualified opinion on those statements.

Basis for Opinion

[~~*Same second paragraph as the standard report*~~ *Same basic elements as the Basis for Opinion section of the auditor's unqualified report in AS 3101*]

Critical Audit Matters [if applicable]

*[Include critical audit matters]*

[*Signature*]

We have served as the Company's auditor since [*year*].

[*City and State or Country*]

[*Date*]

If the predecessor auditor's report contained an explanatory paragraph or was other than an ~~standard~~ unqualified report, the successor auditor should describe the nature of and reasons for the explanatory paragraph added to the predecessor's report or the opinion qualification. Following is an illustration of the wording that may be included in the successor auditor's report:

> . . . were audited by other auditors whose report dated March 1, 20X2, on those statements included an explanatory paragraph that described the change in the Company's method of computing depreciation discussed in Note X to the financial statements.

If the financial statements have been adjusted, the ~~introductory paragraph~~ Opinion on the Financial Statements section should indicate that a predecessor auditor reported on the financial statements of the prior period before the adjustments. In addition, if the successor auditor is engaged to audit and applies sufficient procedures to satisfy himself or herself as to the appropriateness of the adjustments, he or she may also include the following paragraph in the auditor's report:

> We also audited the adjustments described in Note X that were applied to restate the 20X1 financial statements. In our opinion, such adjustments are appropriate and have been properly applied.

[18][~~29~~] The successor auditor should not name the predecessor auditor in his or her report; however, the successor auditor may name the predecessor auditor if the predecessor auditor's practice was acquired by, or merged with, that of the successor auditor.

[19][~~30~~] If the predecessor's report was issued before the effective date of this section and contained an uncertainties explanatory paragraph, a successor auditor's report issued or reissued after the effective date hereof should not make reference to the predecessor's previously required explanatory paragraph.

## Management Reports on Internal Control Over Financial Reporting

.59 In situations in which management is required to report on the company's internal control over financial reporting but such report is not required to be audited, and the auditor has not been engaged to perform an audit of management's assessment of the effectiveness of internal control over financial reporting, the auditor should refer to the auditor's responsibilities regarding other information in documents containing audited financial statements and the independent auditor's report under AS 2710, *Other Information in Documents Containing Audited Financial Statements.*

.60 In situations described in paragraph .59, the auditor must include statements in the auditor's report that:

- The company is not required to have, nor was the auditor engaged to perform, an audit of its internal control over financial reporting;

- As part of the audit, the auditor is required to obtain an understanding of internal control over financial reporting but not for the purpose of expressing an opinion on the effectiveness of the company's internal control over financial reporting; and

- The auditor expresses no such opinion.

Following is an example of the Basis for Opinion section in the auditor's report that contains such statements:

> [Basis for Opinion]
>
> These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the Company's financial statements based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.
>
> We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. The Company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. As part of our audits we are required to obtain an understanding of internal control over financial reporting but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion.
>
> Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

## ~~Effective Date and Transition~~

~~.75 This section is effective for reports issued or reissued on or after February 29, 1996. Earlier application of the provisions of this section is permissible.~~

~~.76 An auditor who previously included an uncertainties explanatory paragraph in a report should not repeat that paragraph and is not required to include an emphasis paragraph related to the uncertainty in a reissuance of that report or in a report on subsequent periods' financial statements, even if the uncertainty has not been resolved. If the auditor decides to include an emphasis paragraph related to the uncertainty, the paragraph may include an explanation of the change in reporting standards.~~

## II. Amendments to Other Auditing Standards

### AS 1205, *Part of the Audit Performed by Other Independent Auditors*

* * *

.07 When the principal auditor decides that he will make reference to the audit of the other auditor, his report should indicate clearly, in ~~both the introductory, scope and opinion paragraphs~~ the Opinion on the Financial Statements and Basis for Opinion sections, the division of responsibility as between that portion of the financial statements covered by his own audit and that covered by the audit of the other auditor. The report should disclose the magnitude of the portion of the financial statements audited by the other auditor. This may be done by stating the dollar amounts or percentages of one or more of the following: total assets, total revenues, or other appropriate criteria, whichever most clearly reveals the portion of the financial statements audited by the other auditor. The other auditor may be named but only with his express permission and provided his report is presented together with that of the principal auditor.[3]

* * *

.09 An example of appropriate reporting by the principal auditor indicating the division of responsibility when he makes reference to the audit of the other auditor follows:

Report of Independent Registered Public Accounting Firm

To the shareholders and the board of directors of X Company

Opinion on the Financial Statements

We have audited the accompanying consolidated balance sheet of X Company (the "Company") and subsidiaries as of December 31, 20...., and the related consolidated statements of [*titles of the financial statements, e.g., income, comprehensive income, stockholders' equity, and cash flows*]~~income and retained earnings and cash flows~~ for the year then ended, and the related notes [*and schedules*] (collectively referred to as the "consolidated financial statements"). In our opinion, based on our audit and the report of the other auditors, the consolidated financial statements ~~referred to above~~ present fairly, in all material respects, the financial position of ~~X~~ the Company as of [at] December 31, 20...., and the results of its operations and its cash flows for the year then ended in conformity with accounting principles generally accepted in the United States of America.

We did not audit the financial statements of B Company, a wholly-owned subsidiary, which statements reflect total assets and revenues constituting 20 percent and 22 percent, respectively, of the related consolidated totals. Those statements were audited by other auditors whose report has been furnished to us, and our opinion, insofar as it relates to the amounts included for B Company, is based solely on the report of the other auditors.

*Basis for Opinion*

These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audit~~s~~. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audit in accordance with the standards of the PCAOB ~~Public Company Accounting Oversight Board (United States)~~. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Our audit included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. ~~An audit~~ Such procedures ~~includes~~ included examining, on a test basis, evidence ~~supporting~~ regarding the amounts and disclosures in the financial statements. ~~An~~ Our audit also ~~includes~~ ~~assessing~~ included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements ~~presentation~~. We believe that our audit and the report of the other auditors provide a reasonable basis for our opinion.

Critical Audit Matters [if applicable]

*[Include critical audit matters]*

[*Signature*]

We have served as the Company's auditor since [*year*].

[*City and State or Country*]

[*Date*]

When two or more auditors in addition to the principal auditor participate in the audit, the percentages covered by the other auditors may be stated in the aggregate.

* * *

**Other Auditor's Report Departs From ~~Standard~~ the Auditor's Unqualified Report or Includes an Explanatory Paragraph**

.15 If the report of the other auditor is other than ~~a standard~~ an auditor's unqualified report or includes explanatory language, the principal auditor should decide whether the reason for the departure from the ~~standard~~ auditor's unqualified report or the explanatory language is of such nature and significance in relation to the financial statements on which the principal auditor is reporting that it would require recognition in his own report. If the reason for the departure is not material in relation to such financial statements and the other auditor's report is not presented, the principal auditor need not make reference in his report to such departure. If the other auditor's report is presented, the principal auditor may wish to make reference to such departure and its disposition.

**Restated Financial Statements of Prior Years Following a Pooling of Interests**

.16 Following a pooling-of-interests transaction, an auditor may be asked to report on restated financial statements for one or more prior years when other auditors have audited one or more of the entities included in such financial statements. In some of these situations the auditor may decide that he has not audited a sufficient portion of the financial statements for such prior year or years to enable him to serve as principal auditor (*see* paragraph .02). Also, in such cases, it often is not possible or it may not be appropriate or necessary for the auditor to satisfy himself with respect to the restated financial statements. In these circumstances it may be appropriate for him to express his opinion solely with respect to the combining of such statements; however, no opinion should be expressed unless the auditor has audited the statements of at least one of the entities included in the restatement for at least the latest period presented. The following is an illustration of appropriate reporting on such combination that can be presented in an additional paragraph of the auditor's report following the opinion paragraph ~~standard introductory, scope and opinion paragraphs~~ covering the consolidated financial statements for the current year:[*]

* * *

**AS 1210, *Using the Work of a Specialist***

* * *

**Effect of the Specialist's Work on the Auditor's Report**

.13 If the auditor determines that the specialist's findings support the related assertions in the financial statements, he or she reasonably may conclude that sufficient appropriate evidential matter has been obtained. If there is a material difference between the specialist's findings and the assertions in the financial statements, he or she should apply additional procedures. If after applying any additional procedures that might be appropriate the auditor is unable to resolve the matter, the auditor should obtain the opinion of another specialist, unless it appears to the auditor that the matter cannot be resolved. A matter that has not been resolved ordinarily will cause the auditor to conclude that he or she should qualify the opinion or disclaim an opinion because the inability to obtain sufficient appropriate evidential matter as to an assertion of material significance in the financial statements constitutes a scope limitation. (*See* paragraphs .05~~22~~ and .06~~23~~ of AS 3105~~1~~, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*.)

.14 The auditor may conclude after performing additional procedures, including possibly obtaining the opinion of another specialist, that the assertions in the financial statements are not in conformity with GAAP. In that event, the auditor should express a qualified or adverse opinion. (*See* AS 3105~~1~~.18~~35~~, .19~~36~~, and .24~~41~~.)

**Reference to the Specialist in the Auditor's Report**

.15 ~~Except as discussed in paragraph .16 the auditor should not refer to the work or findings of the specialist. Such a reference might be misunderstood to be a qualification of the auditor's opinion or a division of responsibility, neither of which is intended. Further, there may be an inference that the auditor making such reference performed a~~

~~more thorough audit than an auditor not making such reference.~~ Reference to the use of a specialist may be made in the auditor's report in the following situations:

a. *Critical Audit Matters*—If such a reference will facilitate an understanding of the matter, the principal considerations that led the auditor to determine that the matter was a critical audit matter, or how the critical audit matter was addressed in the audit;[7] or

b. *Explanatory language or departure from an unqualified opinion*—If such a reference will facilitate an understanding of the reason for the explanatory paragraph or departure from an unqualified opinion.

Otherwise the auditor should not refer to the work or findings of the specialist in the auditor's report.

[7] Critical audit matters are described in AS 3101, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*.

~~.16 The auditor may, as a result of the report or findings of the specialist, decide to add explanatory language to his or her standard report or depart from an unqualified opinion. Reference to and identification of the specialist may be made in the auditor's report if the auditor believes such reference will facilitate an understanding of the reason for the explanatory paragraph or the departure from the unqualified opinion.~~

* * *

**AS 1220, *Engagement Quality Review***

* * *

.10 In an audit, the engagement quality reviewer should:

* * *

j. Based on the procedures required by this standard, evaluate the engagement team's determination, communication, and documentation of critical audit matters in accordance with AS 3101, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*.

* * *

PCAOB
Public Company Accounting Oversight Board

**AS 1301, *Communications with Audit Committees***

* * *

**~~Departure from the Auditor's Standard Report~~ The Auditor's Report**

.21 The auditor should ~~communicate~~ provide to and discuss with the audit committee ~~the following matters related to~~ a draft of the auditor's report~~:~~.

~~a. When the auditor expects to modify the opinion in the auditor's report, the reasons for the modification, and the wording of the report; and~~

b. ~~When the auditor expects to include explanatory language or an explanatory paragraph in the auditor's report, the reasons for the explanatory language or paragraph, and the wording of the explanatory language or paragraph.~~

* * *

Note: Difficulties encountered by the auditor during the audit could represent a scope limitation,[39] which may result in the auditor modifying the auditor's opinion or withdrawing from the engagement.

[39] *See* paragraphs .05~~22~~-.15~~32~~ of AS 3105~~1~~, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*, for a discussion of scope limitations.

* * *

**AS 2201, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements***

* * *

## Reporting on Internal Control

.85 The auditor's report on the audit of internal control over financial reporting ~~must~~ includes the following elements[18] -

*Title*

.85A The auditor's report must include the title, "Report of Independent Registered Public Accounting Firm."

*Addressee*

.85B The auditor's report must be addressed to the shareholders and the board of directors, or equivalents for companies not organized as corporations. The auditor's report may include additional addressees.

*Opinion on the Internal Control over Financial Reporting*

.85C The first section of the auditor's report on the audit of internal control over financial reporting must include the section title "Opinion on Internal Control over Financial Reporting" and the following elements-

~~a. A title that includes the word *independent*;~~

a. The name of the company whose internal control over financial reporting was audited; and

b. ~~k.~~ The auditor's opinion on whether the company maintained, in all material respects, effective internal control over financial reporting as of the specified date, based on the control criteria.

*Basis for Opinion*

.85D The second section of the auditor's report on the audit of internal control over financial reporting must include the section title "Basis for Opinion" and the following elements:

a~~b~~. A statement that management is responsible for maintaining effective internal control over financial reporting and for assessing the effectiveness of internal control over financial reporting;

b~~c~~. An identification of management's report on internal control;

c~~d~~. A statement that the auditor's responsibility is to express an opinion on the company's internal control over financial reporting based on his or her audit;

d. A statement that the auditor is a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and is required to be independent with respect to the company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB;

ef. A statement that the audit was conducted in accordance with the standards of the PCAOB ~~Public Company Accounting Oversight Board (United States)~~;

fg. A statement that the standards of the PCAOB ~~Public Company Accounting Oversight Board~~ require that the auditor plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects;

gh. A statement that an audit includeds obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as the auditor considered necessary in the circumstances; and

hi. A statement that the auditor believes the audit provides a reasonable basis for his or her opinion;.

*Definition and Limitations of Internal Control Over Financial Reporting*

.85E The third section of the auditor's report on the audit of internal control over financial reporting must include the section title "*Definition and Limitations of Internal Control Over Financial Reporting* " and the following elements:

ae. A definition of internal control over financial reporting as stated in paragraph .A5;

bj. A paragraph stating that, because of inherent limitations, internal control over financial reporting may not prevent or detect misstatements and that projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

*Signature, Location, and Date*

.85F The auditor's report must include the following elements:

al. The ~~manual or printed~~ signature of the auditor's firm;[18A]

bm. The city and state (or city and country, in the case of non-U.S. auditors) from which the auditor's report has been issued; and

cn. The date of the audit report.

[18A] *See* Regulation S-X Rule 2-02(a).

* * *

.87 The following example combined report expressing an unqualified opinion on financial statements and an unqualified opinion on internal control over financial reporting illustrates the report elements described in this section.

Report of Independent Registered Public Accounting Firm

To the shareholders and the board of directors of W Company

[~~*Introductory paragraph*~~] *Opinions on the Financial Statements and Internal Control over Financial Reporting*

We have audited the accompanying balance sheets of W Company (the "Company") as of December 31, 20X8 and 20X7, and the related statements of [*titles of the financial statements, e.g., income, comprehensive income, stockholders' equity, and cash flows*]~~income, stockholders' equity and comprehensive income, and cash flows~~ for each of the years in the three-year period ended December 31, 20X8, and the related notes [*and schedules*] (collectively referred to as the "financial statements"). We also have audited ~~W~~ the Company's internal control over financial reporting as of December 31, 20X8, based on [*Identify control criteria, for example, "criteria established in Internal Control - Integrated Framework: (20XX) issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*].

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of ~~W~~ the Company as of December 31, 20X8 and 20X7, and the results of its operations and its cash flows for each of the years in the three-year period ended December 31, 20X8 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, ~~W~~ the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 20X8, based on [*Identify control criteria, for example, "criteria established in Internal Control - Integrated Framework: (20XX) issued by ~~the Committee of Sponsoring Organizations of the Treadway Commission (COSO)~~."*].

Basis for Opinion

[~~*Scope paragraph*~~]

~~W~~ The Company's management is responsible for these financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying [*title of management's report*]. Our responsibility is to express an opinion on ~~these~~ the Company's financial statements and an opinion on the ~~c~~Company's internal control over financial reporting based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB ~~Public Company Accounting Oversight Board (United States)~~. Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud, and whether effective internal control over financial reporting was maintained in all material respects.

Our audits of the financial statements included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence ~~supporting~~ regarding the amounts and disclosures in the financial statements.~~,~~ Our audits also included evaluating ~~assessing~~ the accounting principles used and significant estimates made by management, ~~and~~ as well as evaluating the overall ~~financial statement~~ presentation of the financial statements. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

~~[~~*Definition and Limitations of Internal Control Over Financial Reporting ~~paragraph~~*~~]~~

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

~~[*Inherent limitations paragraph*]~~

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Critical Audit Matters [if applicable]

*[Include critical audit matters]*

[*Signature*]

We have served as the Company's auditor since [*year*].

[*City and State or Country*]

[*Date*]

.88 If the auditor chooses to issue a separate report on internal control over financial reporting, he or she should add the following paragraph (immediately following the opinion paragraph) to the auditor's report on the financial statements –

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB"), the Company's internal control over financial reporting as of December 31, 20X8, based on [ *identify control criteria* ] and our report dated [ *date of report, which should be the same as the date of the report on the financial statements* ] expressed [ *include nature of opinion* ].

The auditor also should add the following paragraph (immediately following the opinion paragraph) to the report on internal control over financial reporting –

> We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB"), the [ *identify financial statements* ] of the Company and our report dated [ *date of report, which should be the same as the date of the report on the effectiveness of internal control over financial reporting* ] expressed [ *include nature of opinion* ].

* * *

.B16 In situations in which the SEC allows management to limit its assessment of internal control over financial reporting by excluding certain entities, the auditor may limit the audit in the same manner. In these situations, the auditor's opinion would not be affected by a scope limitation. However, the auditor should include, either in an additional explanatory paragraph or as part of the ~~scope paragraph~~ Basis for Opinion section in his or her report, a disclosure similar to management's regarding the exclusion of an entity from the scope of both management's assessment and the auditor's audit of internal control over financial reporting. Additionally, the auditor should evaluate the reasonableness of management's conclusion that the situation meets the criteria of the SEC's allowed exclusion and the appropriateness of any required disclosure related to such a limitation. If the auditor believes that management's disclosure about the limitation requires modification, the auditor should follow the same communication responsibilities that are described in paragraphs .29 through .32 of AS 4105, *Reviews of Interim Financial Information*. If management and the audit committee do not respond appropriately, in addition to fulfilling those responsibilities, the auditor should modify his or her report on the audit of internal control over financial reporting to include an explanatory paragraph describing the reasons why the auditor believes management's disclosure requires modification.

* * *

.C4 When disclaiming an opinion because of a scope limitation, the auditor should state that the scope of the audit was not sufficient to warrant the expression of an opinion and, in a separate paragraph or paragraphs, the substantive reasons for the disclaimer. The auditor should not identify the procedures that were performed nor include the statements describing the characteristics of an audit of internal control over financial reporting (paragraph .85D f, g, and h~~, and i~~); to do so might overshadow the disclaimer.

* * *

**AS 2405, *Illegal Acts by Clients***

* * *

.21 The auditor may be unable to determine whether an act is illegal because of limitations imposed by the circumstances rather than by the client or because of uncertainty associated with interpretation of applicable laws or regulations or surrounding facts. In these circumstances, the auditor should consider the effect on his report.[2]

[2] *See* AS 3105~~1~~, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*.

* * *

**AS 2410, *Related Parties***

* * *

***Assertions That Transactions with Related Parties Were Conducted on Terms Equivalent to Those Prevailing in Arm's-Length Transactions***

.18 If the financial statements include a statement by management that transactions with related parties were conducted on terms equivalent to those prevailing in an arm's-length transaction, the auditor should determine whether the evidence obtained supports or contradicts management's assertion. If the auditor is unable to obtain sufficient appropriate audit evidence to substantiate management's assertion, and if management does not agree to modify the disclosure, the auditor should express a qualified or adverse opinion.[20]

[20] *See* AS 2805.06l, which requires the auditor to obtain written representations from management if the financial statements include such an assertion. Representations from management alone are not sufficient appropriate audit evidence. *See also* paragraphs .18~~35~~–.19~~36~~ of AS 3105~~1~~, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*.

* * *

**AS 2415, *Consideration of an Entity's Ability to Continue as a Going Concern***

* * *

.03 The auditor should evaluate whether there is substantial doubt about the entity's ability to continue as a going concern for a reasonable period of time in the following manner:

* * *

> *c.* After the auditor has evaluated management's plans, he concludes whether he has substantial doubt about the entity's ability to continue as a going concern for a reasonable period of time. If the auditor concludes there is substantial doubt, he should (1) consider the adequacy of disclosure about the entity's possible inability to continue as a going concern for a reasonable period of time, and (2) include an explanatory paragraph, including an appropriate title (immediately following the opinion paragraph), in his audit report to reflect his conclusion. If the auditor concludes that substantial doubt does not exist, he should consider the need for disclosure.

.12 If, after considering identified conditions and events and management's plans, the auditor concludes that substantial doubt about the entity's ability to continue as a going concern for a reasonable period of time remains, the audit report should include an explanatory paragraph, including an appropriate title (immediately following the opinion paragraph), to reflect that conclusion.[4] The auditor's conclusion about the entity's ability to continue as a going concern should be expressed through the use of the phrase "substantial doubt about its (the entity's) ability to continue as a going concern" [or similar wording that includes the terms substantial doubt *and* going concern] as illustrated in paragraph .13.

[4] The inclusion of an explanatory paragraph (immediately following the opinion paragraph) in the auditor's report contemplated by this section should serve adequately to inform the users of the financial statements. Nothing in this section, however, is intended to preclude an auditor from declining to express an opinion in cases involving uncertainties. If he disclaims an opinion, the uncertainties and their possible effects on the financial statements should be disclosed in an appropriate manner (*see* paragraph .10), and the auditor's report should give all the substantive reasons for his disclaimer of opinion (*see* paragraphs .44-.47 of AS 3105~~1~~, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*).

.13 An example follows of an explanatory paragraph (immediately following the opinion paragraph) in the auditor's report describing an uncertainty about the entity's ability to continue as a going concern for a reasonable period of time.[5]

> [*Appropriate Title*]

> The accompanying financial statements have been prepared assuming that the Company will continue as a going concern. As discussed in Note X to the financial statements, the Company has suffered recurring losses from operations and has a net capital deficiency that raise substantial doubt about its ability to continue as a going concern. Management's plans in regard to these matters are also described in Note X. The financial statements do not include any adjustments that might result from the outcome of this uncertainty.

.14 If the auditor concludes that the entity's disclosures with respect to the entity's ability to continue as a going concern for a reasonable period of time are inadequate, a departure from generally accepted accounting principles exists. This may result in either a qualified (except for) or an adverse opinion. Reporting guidance for such situations is provided in AS 3105~~1,~~ ~~*Reports on Audited Financial Statements*~~.

.15 Substantial doubt about the entity's ability to continue as a going concern for a reasonable period of time that arose in the current period does not imply that a basis for such doubt existed in the prior period and, therefore, should not affect the auditor's report on the financial statements of the prior period that are presented on a comparative basis. When financial statements of one or more prior periods are presented on a comparative basis with financial statements of the current period, reporting guidance is provided in AS 3105~~1~~.

* * *

**AS 2503, *Auditing Derivative Instruments, Hedging Activities, and Investments in Securities***

* * *

.32 There may be a time lag in reporting between the date of the financial statements of the investor and that of the investee. A time lag in reporting should be consistent from period to period. If a time lag between the date of the entity's financial statements and those of the investee has a material effect on the entity's financial statements, the auditor should determine whether the entity's management has properly considered the lack of comparability. The effect may be material, for example, because the time lag is not consistent with the prior period in comparative statements or because a significant transaction occurred during the time lag. If a change in time lag occurs that has a material effect on the investor's financial statements, an explanatory paragraph, including an appropriate title, should be added to the auditor's report because of the change in reporting period.[15]

[15] *See* ~~paragraphs .16–.18 of AS 3101,~~ ~~*Reports on Audited Financial Statements*~~ AS 2820, *Evaluating Consistency of Financial Statements.*

* * *

**AS 2505, *Inquiry of a Client's Lawyer Concerning Litigation, Claims, and Assessments***

* * *

.13 A lawyer's refusal to furnish the information requested in an inquiry letter either in writing or orally (*see* paragraphs .09 and .10) would be a limitation on the scope of the audit sufficient to preclude an unqualified opinion (*see* paragraphs .05~~22~~ and .06~~23~~ of AS 3105~~1~~, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*).[7] A lawyer's response to such an inquiry and the procedures set forth in paragraph .05 provide the auditor with sufficient evidential matter to satisfy himself concerning the accounting for and reporting of pending and threatened litigation, claims and assessments. The auditor obtains sufficient evidential matter to satisfy himself concerning reporting for those unasserted claims and assessments required to be disclosed in financial statements from the foregoing procedures and the lawyer's specific acknowledgement of his responsibility to his client in respect of disclosure obligations (*see* paragraph .09*g*). This approach with respect to unasserted claims and assessments is necessitated by the public interest in protecting the confidentiality of lawyer-client communications.

.14 A lawyer may be unable to respond concerning the likelihood of an unfavorable outcome of litigation, claims, and assessments or the amount or range of potential loss, because of inherent uncertainties. Factors influencing the likelihood of an unfavorable outcome may sometimes not be within a lawyer's competence to judge; historical experience of the entity in similar litigation or the experience of other entities may not be relevant or available; and the amount of the possible loss frequently may vary widely at different stages of litigation. Consequently, a lawyer may not be able to form a conclusion with respect to such matters. In such circumstances, the auditor ordinarily will conclude that the financial statements are affected by an uncertainty concerning the outcome of a future event which is not susceptible of reasonable estimation, and should look to the guidance in AS 3105~~1~~.28~~45~~ through .32~~49~~ to determine the effect, if any, of the lawyer's response on the auditor's report.

* * *

**AS 2510, *Auditing Inventories***

* * *

.15 For a discussion of the circumstances relating to receivables and inventories affecting the independent auditor's report, see paragraphs .07~~24~~ and .51~~67~~ of AS 3105~~1~~, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*.

* * *

**AS 2610, *Initial Audits—Communications Between Predecessor and Successor Auditors***

* * *

[9] *See* paragraphs .54~~70~~ through .58~~74~~ of AS 3105~~1~~, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*, for reporting guidance.

* * *

**AS 2705, *Required Supplementary Information***

* * *

.03 Some entities may voluntarily include, in documents containing audited financial statements, certain supplementary information that is required of other entities. When an entity voluntarily includes such information as a supplement to the financial statements or in an unaudited note to the financial statements, the provisions of this section are applicable unless either the entity indicates that the auditor has not applied the procedures described in this section or the auditor includes in an explanatory paragraph, including an appropriate title, in his report on the audited financial statements a disclaimer on the information. The following is an example of a disclaimer an auditor might use in these circumstances:

> [*Appropriate Title*]
>
> The [*identify the supplementary information*] on page XX (or in Note XX) is not a required part of the basic financial statements, and we did not audit or apply limited procedures to such information and do not express any assurances on such information.

* * *

.08 Since the supplementary information is not audited and is not a required part of the basic financial statements, the auditor need not add an explanatory paragraph to the report on the audited financial statements to refer to the supplementary information or to his or her limited procedures, except in any of the following circumstances:[7] (*a*) the supplementary information that GAAP requires to be presented in the circumstances is omitted; (*b*) the auditor has concluded that the measurement or presentation of the supplementary information departs materially from prescribed guidelines; (*c*) the auditor is unable to complete the prescribed procedures; (*d*) the auditor is unable to remove substantial doubts about whether the supplementary information conforms to prescribed guidelines. Since the required supplementary information does not change the standards of financial accounting and reporting used for the preparation of the entity's basic financial statements, the circumstances described above do not affect the auditor's opinion on the fairness of presentation of such financial statements in conformity with generally accepted accounting principles. Furthermore, the auditor need not present the supplementary information if it is omitted by the entity. The following are examples of additional explanatory paragraphs, including appropriate titles, an auditor might use in these circumstances.

* * *

**AS 2710, *Other Information in Documents Containing Audited Financial Statements***

* * *

.04 Other information in a document may be relevant to an audit performed by an independent auditor or to the continuing propriety of his report. The auditor's responsibility with respect to information in a document does not extend beyond the financial information identified in his report, and the auditor has no obligation to perform any procedures to corroborate other information contained in a document. However, he should read the other information and consider whether such information, or the manner of its presentation, is materially inconsistent with information, or the manner of its presentation, appearing in the financial statements.[2] If the auditor concludes that there is a material inconsistency, he should determine whether the financial statements, his report, or both require revision. If he concludes that they do not require revision, he should request the client to revise the other information. If the other information is not revised to eliminate the material inconsistency, he should communicate the material inconsistency to the audit committee and consider other actions, such as revising his report to include an explanatory paragraph, including an appropriate title, describing the material inconsistency, withholding the use of his report in the document, and withdrawing from the engagement. The action he takes will depend on the particular circumstances and the significance of the inconsistency in the other information.

* * *

**AS 2801, *Subsequent Events***

* * *

.09 Occasionally, a subsequent event of the second type has such a material impact on the entity that the auditor may wish to include in his report an ~~explanatory~~ emphasis paragraph directing the reader's attention to the event and its effects. (*See* paragraph .19 of AS 3101, ~~*Reports on Audited Financial Statements*, ~~*The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*)

* * *

**AS 2805, *Management Representations***

* * *

[15] *See* paragraph .55~~71~~ of AS 3105~~1~~, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*.

* * *

[18] *See* AS 3105~~1~~.05~~22~~–.17~~34~~.

* * *

**AS 2810, *Evaluating Audit Results***

* * *

[7] If the financial statements contain material misstatements, AS 3105~~1~~, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*, indicates that the auditor should issue a qualified or an adverse opinion on the financial statements. AS 3105~~1~~.18~~35~~ discusses situations in which the financial statements are materially affected by a departure from the applicable financial reporting framework.

* * *

.31

* * *

Note: According to AS 3105~~1~~, if the financial statements, including the accompanying notes, fail to disclose information that is required by the applicable financial reporting framework, the auditor should express a qualified or adverse opinion and should provide the information in the report, if practicable, unless its omission from the report is recognized as appropriate by a specific auditing standard.[18]

[18] AS 3105~~1~~.24~~41~~–.27~~44~~.

* * *

.35 If the auditor has not obtained sufficient appropriate audit evidence about a relevant assertion or has substantial doubt about a relevant assertion, the auditor should perform procedures to obtain further audit evidence to address the matter. If the auditor is unable to obtain sufficient appropriate audit evidence to have a reasonable basis to conclude about whether the financial statements as a whole are free of material misstatement, AS 3105~~1~~ indicates that the auditor should express a qualified opinion or a disclaimer of opinion.[21]

[21] AS 3105~~1~~.05~~22~~–.17~~34~~ contains requirements regarding audit scope limitations.

* * *

**Appendix B**

[1] If the financial statements contain material misstatements, AS 3105~~1~~, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*, indicates that the auditor should issue a qualified or an adverse opinion on the financial statements. AS 3105~~1~~.18~~35~~ discusses situations in which the financial statements are materially affected by a departure from the applicable financial reporting framework.

* * *

**Appendix C**

[2] Denial of access to information might constitute a limitation on the scope of the audit that requires the auditor to qualify or disclaim an opinion. (*See* AS 2201, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements,* and AS 3105~~1~~, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*.)

* * *

**AS 2815, *The Meaning of "Present Fairly in Conformity with Generally Accepted Accounting Principles"***

.01 An independent auditor's report contains an opinion as to whether the financial statements present fairly, in all material respects, an entity's financial position, results of operations, and cash flows in conformity with generally accepted accounting principles. An identification of the applicable financial reporting framework ~~country of origin of those generally accepted accounting principles also~~ is required (*see* ~~paragraph .08*h* of AS 3101~~paragraph .08e of the AS 3101, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*).

The purpose of this section is to explain the meaning of "present fairly" as used in the phrase "present fairly . . . in conformity with generally accepted accounting principles." In applying this section, the auditor should look to the requirements of the Securities and Exchange Commission for the company under audit with respect to the accounting principles applicable to that company.

* * *

[1] The concept of materiality is inherent in the auditor's judgments. That concept involves qualitative as well as quantitative judgments (*see* AS 2105, *Consideration of Materiality in Planning and Performing an Audit*, and AS 3105~~1~~.19~~36~~).

* * *

**AS 2820, *Evaluating Consistency of Financial Statements***

* * *

.06 The auditor should evaluate and report on a change in accounting estimate effected by a change in accounting principle like other changes in accounting principle.[5] In addition, the auditor should recognize a change in the reporting entity[6] by including an explanatory paragraph, including an appropriate title, in the auditor's report, unless the change in reporting entity results from a transaction or event. A change in reporting entity that results from a transaction or event, such as the creation, cessation, or complete or partial purchase or disposition of a subsidiary or other business unit does not require recognition in the auditor's report.

* * *

.08 A change in accounting principle that has a material effect on the financial statements should be recognized in the auditor's report on the audited financial statements. If the auditor concludes that the criteria in paragraph .07 have been met, the auditor should add an explanatory paragraph, including an appropriate title, to the auditor's report, as described in ~~AS 3101, *Reports on Audited Financial Statements*~~ paragraphs .12-.15 of this standard. If those criteria are not met, the auditor should treat this accounting change as a departure from generally accepted accounting principles and, if the effect of the change in accounting principle is material, issue a qualified or an adverse opinion ~~address the matter as described in AS 3101~~.[8A]

> Note: If a company's financial statements contain an investment accounted for by the equity method, the auditor's evaluation of consistency should include consideration of the investee. If the investee makes a change in accounting principle that is material to the investing company's financial statements, the auditor should add an explanatory paragraph, including an appropriate title (immediately following the opinion paragraph), to the auditor's report, as described in ~~AS 3101~~ paragraphs .12-.15.

[8A] AS 3105, *Departures from Unqualified Opinions and Other Reporting Circumstances*, describes reporting requirements related to a qualified or an adverse opinion.

**Correction of a Material Misstatement in Previously Issued Financial Statements**

.09 The correction of a material misstatement in previously issued financial statements should be recognized in the auditor's report on the audited financial statements through the addition of an explanatory paragraph, including an appropriate title, as described in ~~AS 3101~~ paragraphs .16 and.17 of this standard.

.10 The accounting pronouncements generally require certain disclosures relating to restatements to correct misstatements in previously issued financial statements. If the financial statement disclosures are not adequate, the auditor should address the inadequacy of disclosure as described in paragraph .31 of AS 2810, *Evaluating Audit*

*Results,* and AS 3105~~1~~, *Departures from Unqualified Opinions and Other Reporting Circumstances*.

**Change in Classification**

.11 Changes in classification in previously issued financial statements do not require recognition in the auditor's report, unless the change represents the correction of a material misstatement or a change in accounting principle. Accordingly, the auditor should evaluate a material change in financial statement classification and the related disclosure to determine whether such a change also is a change in accounting principle or a correction of a material misstatement. For example, certain reclassifications in previously issued financial statements, such as reclassifications of debt from long-term to short-term or reclassifications of cash flows from the operating activities category to the financing activities category, might occur because those items were incorrectly classified in the previously issued financial statements. In such situations, the reclassification also is the correction of a misstatement. If the auditor determines that the reclassification is a change in accounting principle, he or she should address the matter as described in paragraphs .07,~~ and~~ .08, and ~~AS 3101~~ .12-.15. If the auditor determines that the reclassification is a correction of a material misstatement in previously issued financial statements, he or she should address the matter as described in paragraphs .09,~~ and~~ .10, ~~and~~ ~~AS 3101~~ .16 and.17.

**Reporting on Consistency of Financial Statements**

**Change in Accounting Principle**

.12 A change in accounting principle that has a material effect on the financial statements should be recognized in the auditor's report on the audited financial statements through the addition of an explanatory paragraph, including an appropriate title (immediately following the opinion paragraph). The explanatory paragraph should include identification of the nature of the change and a reference to the note disclosure describing the change.

.13 The following is an example of an explanatory paragraph for a change in accounting principle resulting from the adoption of a new accounting pronouncement:

> [*Appropriate Title*]
>
> As discussed in Note X to the financial statements, the Company has changed its method of accounting for [*describe accounting method changes*] in [*year(s) of financial statements that reflect the accounting method change*] due to the adoption of [*name of accounting pronouncement*].

.14 The following is an example of an explanatory paragraph for a change in accounting principle other than a change due to the adoption of a new accounting pronouncement:

> [*Appropriate Title*]
>
> As discussed in Note X to the financial statements, the Company has elected to change its method of accounting for [*describe accounting method changes*] in [*year(s) of financial statements that reflect the accounting method change*].

.15 The explanatory paragraph relating to a change in accounting principle should be included in reports on financial statements in the year of the change and in subsequent years until the new accounting principle is applied in all periods presented. If the new accounting change is accounted for by retrospective application to the financial statements of all prior periods presented, the additional paragraph is needed only in the year of the change.

**Correction of a Material Misstatement in Previously Issued Financial Statements**

.16 Correction of a material misstatement in previously issued financial statements should be recognized in the auditor's report through the addition of an explanatory paragraph, including an appropriate title (immediately following the opinion paragraph).[10] The explanatory paragraph should include (1) a statement that the previously issued financial statements have been restated for the correction of a misstatement in the respective period and (2) a reference to the note disclosure describing the correction of the misstatement. The following is an example of an appropriate explanatory paragraph when there has been a correction of a material misstatement in previously issued financial statements:

> [*Appropriate Title*]
>
> As discussed in Note X to the financial statements, the 20X2 financial statements have been restated to correct a misstatement.

[10] AS 3105.52-53 apply when comparative financial statements are presented and the opinion on the prior-period financial statements differs from the opinion previously expressed.

.17 This type of explanatory paragraph in the auditor's report should be included in reports on financial statements when the related financial statements are restated to correct the prior material misstatement. The paragraph need not be repeated in subsequent years.

*** * ***

**AS 3110, *Dating of the Independent Auditor's Report***

.06 An independent auditor may reissue his report on financial statements contained in annual reports filed with the Securities and Exchange Commission or other regulatory agencies or in a document he submits to his client or to others that contains information in addition to the client's basic financial statements subsequent to the date of his original report on the basic financial statements. An independent auditor may also be requested by his client to furnish additional copies of a previously issued report. Use of the original report date in a reissued report removes any implication that records, transactions, or events after that date have been examined or reviewed. In such cases, the independent auditor has no responsibility to make further investigation or inquiry as to events which may have occurred during the period between the original report date and the date of the release of additional reports. However, *see* AS 4101 as to an auditor's responsibility when his report is included in a registration statement filed under the Securities Act of 1933 and *see* paragraphs .54~~70 -~~.57~~73~~ of AS 3105~~1~~, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*, for the predecessor auditor's responsibility when reissuing or consenting to the reuse of a report previously issued on the financial statements of a prior period.

*** * ***

**AS 3305, *Special Reports***

.01 This section applies to auditors' reports issued in connection with the following:

*** * ***

*e.* Financial information presented in prescribed forms or schedules that require a prescribed form of auditor's reports (paragraphs .32 and .33)

Note: In situations in which an auditor's report described in this section is filed with the U.S. Securities and Exchange Commission, the auditor is required to include in the auditor's report the basic elements and, for reports under subparagraph .01a, communication of critical audit matters, as would be required in an unqualified auditor's reporting under AS 3101, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*. For qualified, adverse, and disclaimer of opinion reports, see requirements of AS 3105, *Departures from Unqualified Opinions and Other Reporting Circumstances*.

* * *

[2] In some instances, a document containing the auditor's report may include a statement by management regarding its responsibility for the presentation of the financial statements. Nevertheless, the auditor's report should state that the financial statements are management's responsibility. However, the statement about management's responsibility should not be further elaborated upon in the auditor's ~~standard~~ report or referenced to management's report.

* * *

.06 Unless the financial statements meet the conditions for presentation in conformity with a "comprehensive basis of accounting other than generally accepted accounting principles" as defined in paragraph .04, the auditor should modify his or her report ~~use the standard form of report (*see* paragraph .08 of AS 3101, Reports on Audited Financial Statements) modified as appropriate~~ because of the departures from generally accepted accounting principles (*see* AS 3105).

* * *

.12 When expressing an opinion on one or more specified elements, accounts, or items of a financial statement, the auditor should plan and perform the audit and prepare his or her report with a view to the purpose of the engagement. ~~With the exception of the requirement in AS 3101.08*h*, t~~The standards of the PCAOB are applicable to any engagement to express an opinion on one or more specified elements, accounts, or items of a financial statement. ~~AS 3101.08*h*, which requires that the auditor's report state whether the financial statements are presented in conformity with generally accepted accounting principles, is applicable only when~~ If the specified elements, accounts, or items of a financial statement are intended to be presented in conformity with generally accepted accounting principles, the requirements for the auditor's report, as described in AS 3101 and AS 3105, are applicable.

* * *

.14 The auditor should not express an opinion on specified elements, accounts, or items included in financial statements on which he or she has expressed an adverse opinion or disclaimed an opinion based on an audit, if such reporting would be tantamount to expressing a piecemeal opinion on the financial statements (*see* AS 3105~~1~~.48~~64~~). However, an auditor would be able to express an opinion on one or more specified elements, accounts, or items of a financial statement provided that the matters to be reported on and the related scope of the audit were not intended to and did not encompass so many elements, accounts, or items as to constitute a major portion of the financial statements. For example, it may be appropriate for an auditor to express an opinion on an entity's accounts receivable balance even if the auditor has disclaimed an opinion on the financial statements taken as a whole. However, the report on the specified element, account, or item should be presented separately from the report on the financial statements of the entity.

**Reports on One or More Specified Elements, Accounts, or Items of a Financial Statement**

.15 When an independent auditor is engaged to express an opinion on one or more specified elements, accounts, or items of a financial statement, the report should include—

*** * ***

b. A paragraph that—

(1) States that the specified elements, accounts, or items identified in the report were audited. If the audit was made in conjunction with an audit of the company's financial statements, the paragraph should so state and indicate the date of the auditor's report on those financial statements. Furthermore, any departure from the ~~standard~~ auditor's unqualified report on those statements should also be disclosed if considered relevant to the presentation of the specified element, account or item.

(2) States that the specified elements, accounts, or items are the responsibility of the Company's management and that the auditor is responsible for expressing an opinion on the specified elements, accounts or items based on the audit.

* * *

.17 The auditor should consider the effect that any departure, including additional explanatory language because of the circumstances discussed in AS 3101.18~~1~~, from the ~~standard~~ auditor's unqualified report on the audited financial statements might have on the report on a specified element, account, or item thereof.

* * *

.21 When an auditor's report on compliance with contractual agreements or regulatory provisions is included in the report that expresses the auditor's opinion on the financial statements, the auditor should include a paragraph, ~~after the opinion paragraph~~ in the Opinion on the Financial Statements section, that provides negative assurance relative to compliance with the applicable covenants of the agreement, insofar as they relate to accounting matters, and that specifies the negative assurance is being given in connection with the audit of the financial statements. The auditor should also ordinarily state that the audit was not directed primarily toward obtaining knowledge regarding compliance. In addition, the report should include a paragraph that includes a description and source of any significant interpretations made by the entity's management as discussed in paragraph .20d as well as a paragraph that restricts the use of the report to the specified parties as discussed in paragraph .20e. Following are examples of reports that might be issued:

* * *

.31 Certain circumstances, while not affecting the auditor's unqualified opinion, may require that the auditor add additional explanatory language to the special report. These circumstances include the following:

*a.* *Lack of Consistency in Accounting Principles.* If there has been a change in accounting principles or in the method of their application,[35] the auditor should add an explanatory paragraph, including an appropriate title, to the report (immediately following the opinion paragraph) that describes the change and refers to the note to the financial presentation (or specified elements, accounts, or items thereof) that discusses the change and its effect thereon [36] if the accounting change is considered relevant to the presentation. Guidance on reporting in this situation is contained in ~~AS 3101.16 through .18~~ AS 2820, *Evaluating Consistency of Financial Statements*.

*b.* *Going Concern* Uncertainties. If the auditor has substantial doubt about the entity's ability to continue as a going concern for a reasonable period of time not to exceed one year beyond the date of the financial statement, the auditor should add an explanatory paragraph, including an appropriate title, after the opinion paragraph of the report only if the auditor's substantial doubt is relevant to the presentation.[39]

*c.* *Other Auditors.* When the auditor decides to make reference to the report of another auditor as a basis, in part, for his or her opinion, the auditor should disclose that fact in the introductory paragraph of the report and should refer to the report of the other auditors in expressing his or her opinion. Guidance on reporting in this situation is contained in ~~section AS 3101.12 and .13~~ AS 1205, *Part of the Audit Performed by Other Independent Auditors*.

d. *Comparative Financial Statements (or Specified Elements, Accounts, or Items Thereof).* If the auditor expresses an opinion on prior-period financial statements (or specified elements, accounts, or items thereof) that is different from the opinion he or she previously expressed on that same information, the auditor should disclose all of the substantive reasons for the different opinion in a separate explanatory paragraph ~~preceding~~ immediately following the opinion paragraph of the report. Guidance on reporting in this situation is contained in AS 3105~~1~~.52~~68~~ and .53~~69~~.

* * *

**AS 3310, *Special Reports on Regulated Companies***

* * *

.02 The basic postulates and broad principles of accounting comprehended in the term "generally accepted accounting principles" which pertain to business enterprises in general apply also to companies whose accounting practices are prescribed by governmental regulatory authorities or commissions. (For example, public utilities and insurance companies.) Accordingly, the requirement in paragraph .08e~~h~~ of AS 3101, ~~*Reports on Audited Financial Statements*~~ *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, is equally applicable to opinions on financial statements of such regulated companies presented for purposes other than filings with their respective supervisory agencies; and material variances from generally accepted accounting principles, and their effects, should be dealt with in the independent auditor's report in the same manner followed for companies which are not regulated.[1] Ordinarily, this will require either a qualified or an adverse opinion on such statements. An adverse opinion may be accompanied by an opinion on supplementary data which are presented in conformity with generally accepted accounting principles.

* * *

.04 When financial statements of a regulated entity are prepared in accordance with a basis of accounting prescribed by one or more regulatory agencies or the financial reporting provisions of another agency, the independent auditor may also be requested to report on their fair presentation in conformity with such prescribed basis of accounting in presentations for distribution in other than filings with the entity's regulatory agency. In those circumstances, the auditor should ~~use the standard form of report (*see* AS 3101.08),~~ ~~modified~~ modify the auditor's report as appropriate (*see* paragraphs .18-.43 of AS 3105~~1.35–.60~~, *Departures from Unqualified Opinions and Other Reporting*

*Circumstances*) because of the departures from generally accepted accounting principles, and then, in an additional paragraph to the report, express an opinion on whether the financial statements are presented in conformity with the prescribed basis of accounting.

* * *

**AS 3315, *Reporting on Condensed Financial Statement and Selected Financial Data***

* * *

.02 In reporting on condensed financial statements or selected financial data in circumstances other than those described in paragraph .01, the auditor should follow the guidance in paragraphs .24~~41~~ through .27~~44~~ of AS 3105~~1~~, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*, AS 3305, *Special Reports*, or other applicable PCAOB standards.[2]

* * *

.06 The following is an example of wording that an auditor may use in the circumstances described in paragraph .01(*a*) to report on condensed financial statements that are derived from financial statements that he or she has audited and on which he or she has issued ~~a standard~~ an auditor's unqualified report:

Report of Independent Registered Public Accounting Firm

> We have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB"), the consolidated balance sheet of X Company and subsidiaries as of December 31, 20X0, and the related consolidated statements of [*titles of the financial statements, e.g., income, comprehensive income, stockholders' equity, and cash flows*]~~income, retained earnings, and cash flows~~ for the year then ended (not presented herein); and in our report dated February 15, 20X1, we expressed an unqualified opinion on those consolidated financial statements. In our opinion, the information set forth in the accompanying condensed consolidated financial statements is fairly stated, in all material respects, in relation to the consolidated financial statements from which it has been derived.

.07 A client might make a statement in a client-prepared document that names the auditor and also states that condensed financial statements have been derived from audited financial statements. Such a statement does not, in itself, require the auditor to report on the condensed financial statements, provided that they are included in a document that contains audited financial statements (or that incorporates such statements by reference to information filed with a regulatory agency). However, if such a statement is made in a client-prepared document of a public entity that is required to file, at least annually, complete audited financial statements with a regulatory agency and that document does not include audited financial statements (or does not incorporate such statements by reference to information filed with a regulatory agency), ~~[6]~~ the auditor should request that the client either (*a*) not include the auditor's name in the document or (*b*), include the auditor's report on the condensed financial statements, as described in paragraph .05. If the client will neither delete the reference to the auditor nor allow the appropriate report to be included, the auditor should advise the client that he does not consent to either the use of his name or the reference to him, and he should consider what other actions might be appropriate.[7]

~~[6] If such a statement is made in a client-prepared document that does not include audited financial statements and the client is not a public entity that is required to file complete audited financial statements with a regulatory agency (at least annually), the auditor would ordinarily express an adverse opinion on the condensed financial statements because of inadequate disclosure. (*See* AS 3101.41 through .44) The auditor would not be expected to provide the disclosure in his report. The following is an example of an auditor's report on condensed financial statements in such circumstances when the auditor had previously audited and reported on the complete financial statements:~~

~~Report of Independent Registered Public Accounting Firm.~~

> ~~We have audited the consolidated balance sheet of X Company and subsidiaries as of December 31, 20X0, and the related earnings, and cash flows for the year then ended (not presented herein). These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion. The condensed consolidated balance sheet as of December 31, 20X0, and the related condensed statements of income, retained~~

~~earnings, and cash flows for the year then ended, presented on pages xx-xx, are presented as a summary and therefore do not include all of the disclosures required by accounting principles generally accepted in the United States of America. In our opinion, because of the significance of the omission of the information referred to in the preceding paragraph, the condensed consolidated financial statements referred to above do not present fairly, in conformity with accounting principles generally accepted in the United States of America, the financial position of X Company and subsidiaries as of December 31, 20X0, or the results of its operations or its cash flows for the year then ended. [Footnote revised, October 2000, to reflect conforming changes necessary due to the issuance of Statement on Auditing Standards No. 93.]~~

* * *

.10 The following is an example of an additional paragraph included in the Opinion on the Financial Statements section of the auditor's report ~~that includes an additional paragraph~~ because ~~he~~ the auditor is also engaged to report on selected financial data for a five-year period ended December 31, ~~19~~20X5, in a client-prepared document that includes audited financial statements:

~~Report of Independent Registered Public Accounting Firm~~

~~We have audited the consolidated balance sheets of ABC Company and subsidiaries as of December 31, 19X5 and 19X4, and the related consolidated statements of income, retained earnings, and cash flows for each of the three years in the period ended December 31, 19X5. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audit.~~

~~We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provided a reasonable basis for our opinion.~~

Opinion on the Financial Statements

*[Same basic elements in the Opinion on the Financial Statements section as the auditor's unqualified report in AS 3101]*

In our opinion, the consolidated financial statements ~~referred to above~~ present fairly, in all material respects, the financial position of the ~~ABC~~ the Company and subsidiaries as of December 31, 20X5 and 20X4, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 20X5, in conformity with accounting principles generally accepted in the United States of America.

We have also previously audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB"), the consolidated balance sheets as of December 31, 20X3, 20X2, and 20X1, and the related statements of [*titles of the financial statements, e.g., income, comprehensive income, stockholders' equity, and cash flows*] for the years ended December 31, 20X2, and 20X1, and the related notes [*and schedules*] (collectively referred to as the "20X3, 20X2, and 20X1 consolidated financial statements") (none of which are presented herein); and we expressed unqualified opinions on those 20X3, 20X2, and 20X1 consolidated financial statements. In our opinion, the information set forth in the selected financial data for each of the five years in the period ended December 31, 20X5, appearing on page xx, is fairly stated, in all material respects, in relation to the consolidated financial statements from which it has been derived.

* * *

### AS 3320, *Association with Financial Statements*

* * *

.04 An accountant may be associated with audited or unaudited financial statements. Financial statements are audited if the accountant has applied auditing procedures sufficient to permit him to report on them as described in AS 3101, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion,* and AS 3105~~1~~, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*. The unaudited interim financial statements (or financial information) of a public entity are reviewed when the accountant has applied procedures sufficient to permit him to report on them as described in AS 4105, *Reviews of Interim Financial Information*.

* * *

**AS 4101, *Responsibilities Regarding Filings Under Federal Securities Statutes***

* * *

.11 A registration statement filed with the Securities and Exchange Commission may contain the reports of two or more independent auditors on their audits of the financial statements for different periods. An auditor who has audited the financial statements for prior periods but has not audited the financial statements for the most recent audited period included in the registration statement has a responsibility relating to events subsequent to the date of the prior-period financial statements, and extending to the effective date, that bear materially on the prior-period financial statements on which he reported. Generally, he should

*a.* Read pertinent portions of the prospectus and of the registration statement.

*b.* Obtain a letter of representation from the successor independent auditor regarding whether his audit (including his procedures with respect to subsequent events) revealed any matters that, in his opinion, might have a material effect on the financial statements reported on by the predecessor auditor or would require disclosure in the notes thereto.

The auditor should make inquiries and perform other procedures that he considers necessary to satisfy himself regarding the appropriateness of any adjustment or disclosure affecting the prior-period financial statements covered by his report (*see* AS 3105~~1~~, ~~Reports on Audited Financial Statements~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*).

* * *

**AS 4105, *Reviews of Interim Financial Information***

* * *

**Form of Accountant's Review Report**

* * *

.37 The accountant's review report accompanying interim financial information ~~should consist of~~ must include the title, "Report of Independent Registered Public Accounting Firm."

.37A If the accountant's review report is included in a filing with the SEC or another regulatory agency, the report must be addressed to the shareholders and the board of directors, or equivalents for companies not organized as corporations. The accountant's review report may include additional addressees.

.37B The first section of the accountant's review report must include the section title "Results of Review of Interim Financial Information" and the following elements:

> ~~a. A title that includes the word independent.~~
>
> a. The name of the company whose interim financial information was reviewed.
>
> b. A statement that the interim financial information identified in the report was reviewed.
>
> c~~g~~. A statement about whether the accountant is aware of any material modifications that should be made to the accompanying interim financial information for it to conform with generally accepted accounting principles. The statement should include an identification of the country of origin of those accounting principles (for example, accounting principles generally accepted in the United States of America or U.S. generally accepted accounting principles).

.37C The second section of the accountant's review report must include the section title "Basis for Review Results" and the following elements:

> a~~c~~. A statement that the interim financial information is the responsibility of the entity's management.
>
> b~~d~~. A statement that the review of interim financial information was conducted in accordance with the standards of the PCAOB.
>
> c~~e~~. A description of the procedures for a review of interim financial information.
>
> d~~f~~. A statement that a review of interim financial information is substantially less in scope than an audit conducted in accordance with the standards of the PCAOB, the objective of which is an expression of an opinion regarding the financial statements taken as a whole, and accordingly, no such opinion is expressed.
>
> e. A statement that the auditor is a public accounting firm registered with the PCAOB (United States) and is required to be independent with respect to the

company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the SEC and the PCAOB.

.37D The accountant's review report must include the following elements:

a~~h~~. The ~~manual or printed~~ signature of the accountant's firm.[24A]

b~~i~~. The city and state (or city and country, in the case of non-U.S. auditors) from which the accountant's review report has been issued.[24~~A~~B]

c~~j~~. The date of the review report. (Generally, the report should be dated as of the date of completion of the review procedures.[25])

In addition, each page of the interim financial information should be clearly marked as unaudited.

[24A] *See* SEC Rule 2-02(a) of Regulation S-X, 17 C.F.R. § 210.2-02(a).

[24~~A~~B] *Id.*~~*See* SEC Rule 2-02(a) of Regulation S-X, 17 C.F.R. § 210.2-02(a).~~

.38 The following is an example of a review report:[26]

Report of Independent Registered Public Accounting Firm

To the shareholders and the board of directors of ABC Company

Results of Review of Interim [*Financial Information or Statements*]

We have reviewed the accompanying [*describe the interim financial information or statements reviewed*] of ABC Company (the "Company") and consolidated subsidiaries as of September 30, 20X1, and for the three-month and nine-month periods then ended, and the related notes [*and schedules*] (collectively referred to as the "interim financial information or statements"). Based on our review, we are not aware of any material modifications that should be made to the accompanying interim financial information (statements) for it (them) to be in conformity with accounting principles generally accepted in the United States of America.

Basis for Review Results

This (These) interim financial information (statements) is (are) the responsibility of the Company's management. We conducted our review in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB"). A review of interim financial information consists principally of applying analytical procedures and making inquiries of persons responsible for financial and accounting matters. It is substantially less in scope than an audit conducted in accordance with the standards of the PCAOB ~~Public Company Accounting Oversight Board~~, the objective of which is the expression of an opinion regarding the financial statements taken as a whole. Accordingly, we do not express such an opinion.

[*Signature*]

[*City and State or Country*]

[*Date*]

.39 An accountant may be engaged to report on a review of comparative interim financial information. The following is an example of a review report on a condensed balance sheet as of March 31, 20X1, the related condensed statements of income and cash flows for the three-month periods ended March 31, 20X1 and 20X0, and a condensed balance sheet derived from audited financial statements as of December 31, 20X0, that were included in Form 10-Q. [27]

Report of Independent Registered Public Accounting Firm

To the shareholders and the board of directors of ABC Company

Results of Review of Interim [*Financial Information or Statements*]

We have reviewed the condensed consolidated balance sheet of ABC Company (the "Company") and subsidiaries as of March 31, 20X1, and the related condensed consolidated statements of income and cash flows for the three-month periods ended March 31, 20X1 and 20X0, and the related notes [*and schedules*] (collectively referred to as the "interim financial information or statements"). Based on our reviews, we are not aware of any material modifications that should be made to the condensed financial statements referred to above for them to be in conformity with accounting principles generally accepted in the United States of America.

We have previously audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB"), the consolidated balance sheet of ~~ABC~~ the Company and subsidiaries as of December 31, 20X0, and the related consolidated statements of income, retained earnings, and cash flows for the year then ended (not presented herein); and in our report dated February 15, 20X1, we expressed an unqualified opinion on those consolidated financial statements. In our opinion, the information set forth in the accompanying condensed consolidated balance sheet as of December 31, 20X0, is fairly stated, in all material respects, in relation to the consolidated balance sheet from which it has been derived.[28]

Basis for Review Results

These financial statements are the responsibility of the Company's management. We conducted our review in accordance with the standards of the PCAOB ~~Public Company Accounting Oversight Board (United States)~~. A review of interim financial information consists principally of applying analytical procedures and making inquiries of persons responsible for financial and accounting matters. It is substantially less in scope than an audit conducted in accordance with the standards of the PCAOB ~~Public Company Accounting Oversight Board~~, the objective of which is the expression of an opinion regarding the financial statements taken as a whole. Accordingly, we do not express such an opinion.

[*Signature*]

[*City and State or Country*]

[*Date*]

[28] If the auditor's report on the preceding year-end financial statements was other than unqualified, referred to other auditors, or included an explanatory paragraph because of a going-concern matter or an inconsistency in the application of accounting principles, the ~~last~~ second paragraph of the illustrative report in paragraph .39 should be appropriately modified.

.40 The accountant may use and make reference to another accountant's review report on the interim financial information of a significant component of a reporting entity. This reference indicates a division of responsibility for performing the review.[29] The following is an example of report including such a reference:

Report of Independent Registered Public Accounting Firm

To the shareholders and the board of directors of ABC Company

Results of Review of Interim [*Financial Information or Statements*]

We have reviewed the accompanying [*describe the interim financial information or statements reviewed*] of ABC Company (the "Company") and consolidated subsidiaries as of September 30, 20X1, and for the three-month and nine-month periods then ended, and the related notes [*and schedules*] (collectively referred to as the "interim financial information or statements"). Based on our review and the report of other accountants, we are not aware of any material modifications that should be made to the accompanying interim financial information (statements) for it (them) to be in conformity with accounting principles generally accepted in the United States of America.

We were furnished with the report of other accountants on their review of the interim financial information of DEF subsidiary, whose total assets as of September 30, 20X1, and whose revenues for the three-month and nine-month periods then ended, constituted 15 percent, 20 percent, and 22 percent, respectively, of the related consolidated totals.

Basis for Review Results

This (These) interim financial information (statements) is (are) the responsibility of the Company's management. We conducted our reviews in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB"). A review of interim financial information (statements) consists principally of applying analytical procedures and making inquiries of persons responsible for financial and accounting matters. It is substantially less in scope than an audit conducted in accordance with the standards of the PCAOB ~~Public Company Accounting Oversight Board~~, the objective of which is the expression of an opinion regarding the financial statements taken as a whole. Accordingly, we do not express such an opinion.

[*Signature*]

[*City and State or Country*]

[*Date*]

.41 The accountant's report on a review of interim financial information should be modified for departures from generally accepted accounting principles,[30] which include inadequate disclosure and changes in accounting principle that are not in conformity with generally accepted accounting principles. The existence of substantial doubt about the entity's ability to continue as a going concern or a lack of consistency in the application of accounting principles affecting the interim financial information would not require the accountant to add an additional paragraph to the report, provided that the interim financial information appropriately discloses such matters. Although not required, the accountant may wish to emphasize such matters in a separate explanatory paragraph of the report. *See* paragraphs .44 and .45 of this section for examples of paragraphs that address matters related to an entity's ability to continue as a going concern.

~~[30] If the circumstances contemplated by Rule 203, *Accounting Principles*, are present, the accountant should refer to the guidance in paragraph .15 of AS 3101, Reports on Audited Financial Statements.~~

.42 *Departure from generally accepted accounting principles.* If the accountant becomes aware that the interim financial information is materially affected by a departure from generally accepted accounting principles, he or she should modify the report. The modification should describe the nature of the departure and, if practicable, should state the effects on the interim financial information. Following is an example of such a modification of the accountant's report.

> [~~*Concluding paragraph*~~]
>
> Based on our review, with the exception of the matter(s) described in the ~~preceding~~ following paragraph(s), we are not aware of any material modifications that should be made to the accompanying interim financial information (statements) for it (them) to be in conformity with accounting principles generally accepted in the United States of America.
>
> [~~*Explanatory third paragraph*~~]
>
> Based on information furnished to us by management, we believe that the company has excluded from property and debt in the accompanying balance sheet certain lease obligations that we believe should be capitalized to conform with accounting principles generally accepted in the United States of America. This information indicates that if these lease obligations were capitalized at September 30, 20X1, property would be increased by $______, long-term debt by $______, and net income and earnings per share would be increased (decreased) by $________, $_________, $________, and $________, respectively, for the three-month and nine-month periods then ended.

* * *

.43 *Inadequate disclosure*. The information necessary for adequate disclosure is influenced by the form and context in which the interim financial information is presented. For example, the disclosures considered necessary for interim financial information presented in accordance with the minimum disclosure requirements of APB Opinion No. 28, paragraph 30, which is applicable to summarized financial statements of public companies, are considerably less extensive than those necessary for annual financial statements that present financial position, results of operations, and cash flows in conformity with generally accepted accounting principles.[31] If information that the accountant believes is necessary for adequate disclosure in conformity with generally accepted accounting principles[32] is not included in the interim financial information, the accountant should modify the report and, if practicable, include the necessary information in the report. The following is an example of such a modification of the accountant's report:

> ~~[*Concluding paragraph*]~~
>
> Based on our review, with the exception of the matter(s) described in the ~~preceding~~ following paragraph(s), we are not aware of any material modifications that should be made to the accompanying interim financial information (statements) for it (them) to be in conformity with accounting principles generally accepted in the United States of America.
>
> ~~[*Explanatory third paragraph*]~~
>
> Management has informed us that the company is presently contesting deficiencies in federal income taxes proposed by the Internal Revenue Service for the years 20X1 through 20X3 in the aggregate amount of approximately $_____, and that the extent of the company's liability, if any, and the effect on the accompanying information (statements) is not determinable at this time. The information (statements) fail(s) to disclose these matters, which we believe are required to be disclosed in conformity with accounting principles generally accepted in the United States of America.

.44 *Going-concern paragraph was included in the prior year's audit report; conditions giving rise to the paragraph continue to exist.* If (*a*) the auditor's report for the prior year end contained an explanatory paragraph indicating the existence of substantial doubt about the entity's ability to continue as a going concern, (*b*) the conditions that raised such doubt continued to exist as of the interim reporting date covered by the review, and (*c*) there is adequate and appropriate disclosure about these conditions in the interim financial information, the accountant is not required to modify his or her report. However, the accountant may add an explanatory paragraph to the review report, ~~after the concluding paragraph,~~ including an appropriate title (immediately following the paragraph describing the results of the review), emphasizing the matter disclosed in the audited financial statements and the interim financial information. The following is an example of such a paragraph.

> [Appropriate Title]
>
> Note 4 of the Company's audited financial statements as of December 31, 20X1, and for the year then ended discloses that the Company was unable to renew its line of credit or obtain alternative financing at December 31, 20X1. Our auditor's report on those financial statements includes an explanatory paragraph referring to the matters in Note 4 of those financial statements and indicating that these matters raised substantial doubt about the Company's ability to continue as a going concern. As indicated in Note 3 of the Company's unaudited interim financial statements as of March 31, 20X2, and for the three months then ended, the Company was still unable to renew its line of credit or obtain alternative financing as of March 31, 20X2. The accompanying interim financial information does not include any adjustments that might result from the outcome of this uncertainty.

.45 *Going-concern paragraph was not included in the prior year's audit report; conditions or events exist as of the interim reporting date covered by the review that might be indicative of the entity's possible inability to continue as a going concern.* If (*a*) conditions or events exist as of the interim reporting date covered by the review that might be indicative of the entity's possible inability to continue as a going concern, and (*b*) there is adequate and appropriate disclosure about these conditions or events in the interim financial information, the accountant is not required to modify his or her report. However, the accountant may add an explanatory paragraph to the review report~~, after the concluding paragraph~~, including an appropriate title (immediately following the paragraph describing the results of the review), emphasizing the matter disclosed in the interim financial information. The following is an example of such a paragraph.

> [Appropriate Title]
>
> As indicated in Note 3, certain conditions indicate that the Company may be unable to continue as a going concern. The accompanying interim financial information does not include any adjustments that might result from the outcome of this uncertainty.

* * *

.50 The auditor ordinarily need not modify his or her report on the audited financial statements to refer to his or her having performed a review in accordance with this section or to refer to the interim financial information accompanying the audited financial statements because the interim financial information has not been audited and is not required for the audited financial statements to be fairly stated in conformity with generally accepted accounting principles. The auditor's report on the audited financial statements should, however, be modified in the following circumstances:

* * *

c. The selected quarterly financial data required by item 302(a) of Regulation S-K is omitted. The auditor should add an explanatory paragraph, including an appropriate title, to the report, ~~The following is an example of a paragraph that should be added to the auditor's report~~ if the selected quarterly financial data required by item 302(a) is omitted. The following is an example of such a paragraph.

> [Appropriate Title]
>
> The company has not presented the selected quarterly financial data specified in item 302(a) of Regulation S-K that the Securities and Exchange Commission requires as supplementary information to the basic financial statements.

d. The selected quarterly financial data required by item 302(a) of Regulation S-K has not been reviewed. The auditor should add an explanatory paragraph, including an appropriate title, to the report, ~~The following is an example of a paragraph that should be added to the auditor's report~~ if the selected quarterly financial data required by item 302(a) has not been reviewed. The following is an example of such a paragraph.

> [Appropriate Title]
>
> The selected quarterly financial data on page xx contains information that we did not audit, and, accordingly, we do not express an opinion on that data. We attempted but were unable to review the quarterly data in accordance with the standards of the Public Company Accounting Oversight Board because we believe that the company's internal control for the preparation of interim financial information does not provide an adequate basis to enable us to complete such a review.

* * *

**AS 6101, *Letters for Underwriters and Certain Other Requesting Parties***

* * *

.27 When the report on the audited financial statements and financial statement schedules included (incorporated by reference) in the registration statement ~~departs from the standard report~~ includes one or more explanatory paragraphs or a paragraph to emphasize a matter regarding the financial statements, ~~for instance, where one or more explanatory paragraphs or a paragraph to emphasize a matter regarding the financial statements have been added to the report,~~ the accountants should refer[18] to that fact in the comfort letter and discuss the subject matter of the paragraph.[19] In those rare instances in which the SEC accepts a qualified opinion on historical financial statements, the accountants should refer to the qualification in the opening paragraph of the comfort letter and discuss the subject matter of the qualification. (*See also* paragraph .35*f*.)

* * *

.30 An underwriter may also request that the accountants comment in their comfort letter on (*a*) unaudited interim financial information required by item 302(a) of Regulation S-K, to which AS 4105 pertains or (*b*) required supplementary information, to which AS 2705 pertains. AS 4105 and AS 2705 provide that the accountants should expand the ~~standard~~ auditor's unqualified report on the audited financial statements to refer to such information when the scope of their procedures with regard to the information was restricted or when the information appears not to be presented in conformity with generally accepted accounting principles or, for required supplementary information, applicable guidelines. Such expansions of the ~~accountants' standard~~ auditor's unqualified report in the registration statement would ordinarily be referred to in the opening paragraph of the comfort letter (*see also* paragraph .35*f*). Additional comments on such unaudited information are therefore unnecessary. However, if the underwriter requests that the accountants perform procedures with regard to such information in addition to those performed in connection with their review or audit as prescribed by AS 4105 and AS 2705, the accountants may do so and report their findings.

* * *

.35

* * *

*f.* When the report on the audited financial statements and financial statement schedules in the registration statement departs from the auditor's ~~standard~~ unqualified report, and the comfort letter includes negative assurance with respect to subsequent unaudited condensed interim financial information included (incorporated by reference) in the registration statement or with respect to an absence of specified subsequent changes, increases, or decreases, the accountant should consider the effect thereon of the subject matter of the qualification, explanatory paragraph(s), or paragraph(s) emphasizing a matter regarding the financial statements. The accountant should also follow the guidance in paragraph .27. An illustration of how this type of situation may be dealt with is shown in example I [paragraph .64].

* * *

## III. Amendments to Auditing Interpretations

### AI 11, *Using the Work of a Specialist: Auditing Interpretations of AS 1210*

* * *

.21 *Interpretation*—When other relevant evidential matter exists, the auditor should consider it before reaching a conclusion about the appropriateness of management's accounting for a transfer.[14] However, since the isolation aspect of surrender of control is assessed primarily from a legal perspective, the auditor usually will not be able to obtain persuasive evidence in a form other than a legal opinion. In the absence of persuasive evidence that a transfer has met the isolation criterion, derecognition of the transferred assets is not in conformity with generally accepted accounting principles and the auditor should consider the need to express a qualified or adverse opinion in accordance with paragraphs .18~~35~~ through .43~~60~~ of AS 3105~~1~~, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*. However, if permission for the auditor to use a legal opinion that he or she deems otherwise adequate is not granted, this would be a scope limitation and the auditor should consider the need to express a qualified opinion or to disclaim an opinion in accordance with AS 3105~~1~~.05~~22–~~.09~~26~~ and AS 3105~~1~~.44~~61–~~.47~~63~~.

* * *

### AI 16, *Auditing Accounting Estimates: Auditing Interpretations of AS 2501*

* * *

.03 *Required Information Presented*—When an entity discloses in its basic financial statements only information required by FASB Statement No. 107, the auditor may issue an ~~standard~~ unqualified opinion (assuming no other report modifications are necessary). The auditor may add an emphasis-of-matter paragraph describing the nature and possible range of such fair value information especially when management's best estimate of value is used in the absence of quoted market values (FASB Statement No. 107, paragraph 11 [AC section F25.115D]) and the range of possible values is significant (*see* paragraph .19 of AS 3101, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*). If the entity has not disclosed required fair value information, the auditor should evaluate whether the financial statements are materially affected by the departure from generally accepted accounting principles.

* * *

**AI 17, Inquiry of a Client's Lawyer Concerning Litigation, Claims, and Assessments: Auditing Interpretations of AS 2505**

* * *

.23 If the auditor is uncertain as to the meaning of the lawyer's evaluation, he should request clarification either in a follow-up letter or a conference with the lawyer and client, appropriately documented. If the lawyer is still unable to give an unequivocal evaluation of the likelihood of an unfavorable outcome in writing or orally, the auditor should look to the guidance in paragraphs .28~~45~~ through .32~~49~~ of AS 3105~~1~~, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*, to determine the effect, if any, of the lawyer's response on the auditor's report.

* * *

**AI 20: *Other Information in Documents Containing Audited Financial Statements: Auditing Interpretations of AS 2710***

* * *

.08 *Interpretation*—If the auditor has been engaged to ~~examine and report on management's assertion, the guidance in AT section 501, *Reporting on an Entity's Internal Control Over Financial Reporting*, should be followed~~ perform an audit of management's assessment of the effectiveness of internal control over financial reporting, the auditor should follow the requirement of AS 2201, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*.

.09 If the auditor has not been engaged to perform an audit of management's assessment of the effectiveness of internal control over financial reporting ~~examine and report on management's assertion~~, the auditor should follow the requirements in AS

3105.59-60. ~~guidance in AS 2710, which states that "the auditor has no obligation to perform any procedures to corroborate other information contained in [such] a document." Under AS 2710, the auditor is required to read the report by management and consider whether it is materially inconsistent with information appearing in the financial statements and, as a result, he or she may become aware of a material misstatement of fact.[5]~~

~~[5] Unless information on internal control over financial reporting appears in the financial statements, which is not common, a management assertion on the effectiveness of internal control over financial reporting could not be inconsistent with information appearing in financial statements.~~

~~.10 Although not required, the auditor may consider adding the following paragraph to the standard auditor's report: "We were not engaged to examine management's assertion about the effectiveness of [*name of entity's*] internal control over financial reporting as of [*date*] included in the accompanying [*title of management's report*] and, accordingly, we do not express an opinion thereon."~~

* * *

**AI 23, ~~Reports on Audited Financial Statements: Auditing Interpretations of AS 3101~~ Departures from Unqualified Opinions and Other Reporting Circumstances: Auditing Interpretations of AS 310~~1~~5**

* * *

.01 *Question*— Paragraph .07~~24~~ of AS 310~~1~~5, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*, states that "Common restrictions on the scope of the audit include those applying to the observation of physical inventories and the confirmation of accounts receivable by direct communication with debtors. . . ." A footnote to that paragraph states: "Circumstances such as the timing of the work may make it impossible for the auditor to accomplish these procedures. In this case, if the auditor is able to satisfy himself or herself as to inventories or accounts receivable by applying alternative procedures, there is no significant limitation on the scope of the work, and the report need not include reference to the omission of the procedures or to the use of alternative procedures." Outside firms of nonaccountants specializing in the taking of physical inventories are used at times by some companies, such as retail stores, hospitals, and automobile dealers, to count, list, price and subsequently compute the total dollar amount of inventory on hand at the date of the physical count. Would obtaining the report of an outside inventory-taking firm be an acceptable alternative procedure to the independent auditor's own observation of physical inventories?

* * *

.36 ~~Examples of~~ An example of the Opinion on the Financial Statements and the Basis for Opinion sections of an auditor's report~~s~~ on single year financial statements in the year of adoption of liquidation basis follows:[1A] ~~with such an explanatory paragraph follow.~~

~~*Report on Single Year Financial Statements in Year of Adoption of Liquidation Basis*~~

Opinion on the Financial Statements

~~"~~We have audited the statement of net assets in liquidation of XYZ Company (the "Company") as of December 31, 20X2, and the related statement of changes in net assets in liquidation for the period from April 26, 20X2 to December 31, 20X2~~.~~, ~~In addition, we have~~ and audited the statements of income, retained earnings, and cash flows for the period from January 1, 20X2 to April 25, 20X2, and the related notes [*and schedules*] (collectively referred to as the "financial statements"). ~~"~~In our opinion, the financial statements ~~referred to above~~ present fairly, in all material respects, the net assets in liquidation of ~~XYZ~~ the Company as of December 31, 20X2, the changes in its net assets in liquidation for the period from April 26, 20X2 to December 31, 20X2, and the results of its operations and its cash flows for the period from January 1, 20X2 to April 25, 20X2, in conformity with accounting principles generally accepted in the United States of America applied on the bases described below. ~~in the preceding paragraph."~~

~~"~~As described in Note X to the financial statements, the stockholders of ~~XYZ~~ the Company approved a plan of liquidation on April 25, 20X2, and the Company commenced liquidation shortly thereafter. As a result, the Company has changed its basis of accounting for periods subsequent to April 25, 20X2 from the going-concern basis to a liquidation basis.

Basis for Opinion

These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audit. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

~~"~~We conducted our audit in accordance with the standards of the PCAOB ~~Public Company Accounting Oversight Board (United States)~~. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Our ~~An~~ audit included~~s~~ performing procedures to assess the risk of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence ~~supporting~~ regarding the amounts and disclosures in the financial statements. ~~An~~ Our audit also included~~s~~ ~~assessing~~ evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements ~~presentation~~. We believe that our audit provides a reasonable basis for our opinion.

[1A] The auditor's report must include the same basic elements and communication of critical audit matters as would be required in an unqualified auditor's report under AS 3101, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*.

~~*Report on Comparative Financial Statements in Year of Adoption of Liquidation Basis*~~ An example of the Opinion on the Financial Statements and the Basis for Opinion sections of an auditor's report on comparative financial statements in the year of adoption of liquidation basis follows:[1B]

Opinion on the Financial Statements

~~"~~We have audited the balance sheet of XYZ Company (the "Company") as of December 31, 20X1, the related statements of income, retained earnings, and cash flows for the year then ended, and the statements of income, retained earnings, and cash flows for the period from January 1, 20X2 to April 25, 20X2, and~~. In addition, we have~~ audited the statement of net assets in liquidation as of December 31, 20X2, and the related statement of changes in net assets in liquidation for the period from April 26, 20X2 to December 31, 20X2, and the related notes [*and schedules*] (collectively referred to as the "financial statements"). ~~"~~In our opinion, the financial statements ~~referred to above~~ present fairly, in all material respects, the financial position of ~~XYZ~~ the Company as of December 31, 20X1, the results of its operations and its cash flows for the year then ended and for the period from January 1, 20X2 to April 25, 20X2, its net assets in liquidation as of December 31, 20X2, and the changes in its net assets in liquidation for the period from April 26, 20X2 to December 31, 20X2, in conformity with accounting principles generally accepted in the United States of America applied on the bases described below.~~ in the preceding paragraph."~~

~~"~~As described in Note X to the financial statements, the stockholders of ~~XYZ~~ the Company approved a plan of liquidation on April 25, 20X2, and the Company commenced liquidation shortly thereafter. As a result, the Company has changed its basis of accounting for periods subsequent to April 25, 20X2 from the going-concern basis to a liquidation basis.

Basis for Opinion

These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

~~"~~We conducted our audits in accordance with the standards of the PCAOB ~~Public Company Accounting Oversight Board (United States)~~. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Our ~~An~~ audits included~~s~~ performing procedures to assess the risk of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence ~~supporting~~ regarding the amounts and disclosures in the financial statements. ~~An~~ Our audits also included~~s~~ ~~assessing~~ evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements ~~presentation~~. We believe that our audits provide a reasonable basis for our opinion.

[1B] *Id.*

* * *

**12. Reference in Auditor's ~~Standard~~ Unqualified Report to Management's Report**

.51 *Question*—One of the basic elements of the auditor's ~~standard~~ unqualified report is a statement that the financial statements are the responsibility of the Company's management. That statement is required in the auditor's report even when a document containing the auditor's report includes a statement by management regarding its responsibility for the presentation of the financial statements. When an annual shareholders' report (or other client-prepared document that includes audited financial statements) contains a management report that states the financial statements are the responsibility of management, is it permissible for the auditor's report to include a reference to the management report?

.52 *Interpretation*—No. The statement about management's responsibilities for the financial statements required by AS 3101, ~~*Reports on Audited Financial Statements*~~ *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, should not be further elaborated upon in the auditor's ~~standard~~ unqualified report or referenced to management's report. Such modifications to the ~~standard~~ auditor's unqualified report may lead users to erroneously believe that the auditor is providing assurances about representations made by management about their responsibility for financial reporting, internal controls and other matters that might be discussed in the management report.

* * *

**14. Reporting on Audits Conducted in Accordance with the Standards of the PCAOB and in Accordance with International Standards on Auditing**

* * *

.56 *Question*—AS 3101 requires ~~states that a basic element of the auditor’s report is~~ a statement that the audit was conducted in accordance with the standards of the PCAOB ~~and an identification of the United States of America as the country of origin of those standards~~. If the auditor conducts the audit in accordance with the standards of the PCAOB and in accordance with the International Standards on Auditing promulgated by the International Auditing and Assurance Standards Board ~~Practices Committee~~ of the International Federation of Accountants, may the auditor so indicate in the auditor’s report?

.57 *Interpretation*—Yes. AS 3101 requires that the auditor indicate in the auditor’s report that the audit was conducted in accordance with the standards of the PCAOB ~~and an identification of the United States of America as the country of origin of those standards~~; however, AS 3101 does not prohibit the auditor from indicating that the audit also was conducted in accordance with another set of auditing standards. If the audit also was conducted in accordance with the International Standards on Auditing, in their entirety, the auditor may so indicate in the auditor's report. To determine whether an audit was conducted in accordance with the International Standards on Auditing, it is necessary to consider the text of the International Standards on Auditing in their entirety, including the basic principles and essential procedures together with the related guidance included in the International Standards on Auditing.

* * *

.59 An example of reporting on an audit conducted in accordance with the standards of the PCAOB and in accordance with International Standards on Auditing follows:

> Basis for Opinion
>
> These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the Company's financial statements based on our audit. We are a public accounting firm registered with the Public Company Accounting Oversight Board (United States) ("PCAOB") and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.
>
> We conducted our audit in accordance with the standards of the PCAOB ~~Public Company Accounting Oversight Board (United States)~~ and in accordance with International Standards on Auditing. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. ~~An~~ Our audit included~~s~~ performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding ~~supporting~~ the amounts and disclosures in the financial statements. ~~An~~ Our audit also included~~s~~ evaluating ~~assessing~~ the accounting principles used and significant estimates made by management, as well as evaluating the overall ~~financial statement~~ presentation of the financial statements. We believe that our audit provides a reasonable basis for our opinion.

* * *

.61 *Interpretation*—If the prior-period audited financial statements are *unchanged*, pursuant to AS 3105~~1~~.58~~74~~ the successor auditor should indicate in the ~~introductory~~

~~paragraph~~ Opinion on the Financial Statements section of his or her report (*a*) that the financial statements of the prior period were audited by another auditor, (*b*) the date of the predecessor auditor's report, (*c*) the type of report issued by the predecessor auditor, and (*d*) if the report was other than ~~a standard~~ an auditor's unqualified report, the substantive reasons therefor. The successor auditor ordinarily also should indicate that the other auditor has ceased operations. Footnote 18~~29~~ of AS 3105~~1~~ indicates that the successor auditor should not name the predecessor auditor in the report. An example of the reference that would be added to the ~~introductory paragraph~~ Opinion on the Financial Statements section of the successor auditor's report is presented as follows:

> The financial statements of ABC Company as of December 31, 20X1, and for the year then ended were audited by other auditors who have ceased operations. Those auditors expressed an unqualified opinion on those financial statements in their report dated March 31, 20X2.

A reference to the predecessor auditor's report should be included even if the predecessor auditor's report on the prior-period financial statements is reprinted and accompanies the successor auditor's report, because reprinting does not constitute reissuance of the predecessor auditor's report.

* * *

.63 When the prior-period financial statements have been restated, the successor auditor may be engaged either to reaudit the prior-period financial statements or to audit only the restatement adjustments. If the successor auditor is engaged to audit only the restatement adjustments and applies sufficient procedures to satisfy himself or herself as to the appropriateness of the restatement adjustments, the successor auditor may report on the restatement adjustments using the guidance in AS 3105~~1~~.58~~74~~. (The auditor also may use the guidance on alternative language contained in paragraph .71, below.) In determining the nature, timing and extent of procedures, the successor auditor should consider that a predecessor auditor who has ceased operations cannot perform the procedures to evaluate the appropriateness of the restatement adjustments as described in AS 2905, *Subsequent Discovery of Facts Existing at the Date of the Auditor's Report*.

* * *

.71 If the successor auditor is engaged to audit only the restatement adjustments and applies sufficient procedures to satisfy himself or herself as to the appropriateness of the restatement adjustments, the successor auditor may report on the restatement adjustments using the guidance in AS 3105~~1~~.58~~74~~. Alternatively, the successor auditor may wish to make it clear that he or she did not audit, review, or apply other procedures to the prior-period financial statements beyond the procedures applied to the restatement adjustments. Accordingly, he or she may include the following paragraph in his or her report:

* * *

.74 *Question*—If the prior-period financial statements audited by a predecessor auditor who has ceased operations have been subsequently restated, but the successor auditor has not yet completed an audit of current-period financial statements, can the successor auditor report on the restatement adjustments pursuant to 3105~~1~~.58~~74~~?

.75 *Interpretation*—No. AS 3105~~1~~.58~~74~~ is only applicable when the prior-period financial statements are presented for comparative purposes with current-period audited financial statements. If the prior-period financial statements have been restated, and the successor auditor is requested to report on those financial statements without also reporting on current-period audited financial statements, the successor auditor would need to reaudit the prior-period financial statements in order to report on them.

* * *

**AI 24, *Special Reports: Auditing Interpretations of AS 3305***

* * *

[10] Generally accepted accounting principles require the use of current-value accounting for financial statements of certain types of entities (for example, investment companies, employee benefit plans, personal financial statements, and mutual and common trust funds). This interpretation does not apply to reports on current-value financial statements of such entities. The auditor engaged to report on current-value financial statements of such entities should follow the guidance in AS 3105~~1~~, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*.

* * *

.83 *Interpretation*—No. An offering memorandum generally is a document providing information as the basis for negotiating an offer to sell certain assets or businesses or to raise funds. Normally, parties to an agreement or other specified parties for whom the special-purpose financial presentation is intended have not been identified. Accordingly, the auditor should follow the reporting guidance in AS 3105~~1~~.18~~35–~~.27~~44~~ and .40~~58–~~.43~~60~~.

* * *

.86 If there is no such agreement, the auditor should follow the guidance in AS 3105~~1~~.18~~35–~~.27~~44~~ and .40~~58–~~.43~~60~~.

* * *

***AI 25, Association with Financial Statements: Auditing Interpretations of AS 3320***

* * *

.15 *Question*—Paragraph .01~~.04~~ of ~~AS 3101, *Reports on Audited Financial Statements*,~~ AS 3320, *Association with Financial Statements*, states in part: "In all cases where an auditor's name is associated with financial statements, the report should contain a clear-cut indication of the character of the auditor's work, if any, and the degree of responsibility the auditor is taking." ~~Paragraph .03 of~~ AS 3320.03~~, Association with Financial Statements,~~ states that "An accountant is associated with financial statements when he has consented to the use of his name in a report, document, or written communication containing the statements." Is the auditor "associated" with condensed financial data when he is identified by a financial reporting service as being a company's independent auditor or when his report is reproduced and presented with such data?

* * *

**AI 28, *Evidential Matter Relating to Income Tax Accruals: Auditing Interpretations***

* * *

.10 Auditing standards require the auditor to obtain sufficient appropriate evidential matter through, among other things, inspection and inquiries to afford a reasonable basis for an opinion on the financial statements. Paragraph .35 of AS 2810, *Evaluating Audit Results*, requires the auditor to obtain sufficient appropriate evidential matter about assertions in the financial statements of material significance or else to qualify or disclaim his or her opinion on the statements. Paragraph .07~~24~~ of AS 3105~~1~~, ~~*Reports on Audited Financial Statements*~~ *Departures from Unqualified Opinions and Other Reporting Circumstances*, states that, "When restrictions that significantly limit the scope of the audit are imposed by the client, ordinarily the auditor should disclaim an opinion on the financial statements." Also, AS 2805, *Management Representations,* requires the auditor to obtain written representations from management. AS 2805.06

states that specific representations should relate to the following matters, "availability of all financial records and related data," and AS 2805.08 states that a materiality limit does not apply to that representation. AS 2805.13 states that "management's refusal to furnish a written representation" constitutes a limitation on the scope of the audit sufficient to preclude an unqualified opinion.

* * *

**White Paper on Characteristics of Emerging Growth Companies**

**as of November 15, 2016[1]**

[1] This white paper was prepared by PCAOB staff and provides general information about certain characteristics of emerging growth companies. The views expressed herein are those of the authors and do not necessarily reflect the views of the Board, individual Board members, or PCAOB staff.

SUMMARY

This white paper provides general information about certain characteristics of emerging growth companies ("EGCs")—a group defined by the Jumpstart Our Business Startups Act ("JOBS Act"). The information is derived from the most recent available U.S. Securities and Exchange Commission ("SEC") filings and data from third-party vendors through November 15, 2016, the most recent measurement date.

The white paper includes the following key observations as of November 15, 2016:

- There were 1,951 companies that identified themselves as EGCs in at least one SEC filing since 2012 and have filed audited financial statements with the SEC in the 18 months preceding the measurement date ("EGC filers").[2]

- There were 742 EGC filers (or 38%) that have common equity securities listed on a U.S. national securities exchange ("exchange-listed"). These EGC filers represented 15% of the 4,797 exchange-listed companies and approximately 1% of total market capitalization of exchange-listed companies.

- Many EGC filers that were not exchange-listed had limited operations. Approximately 50% of the non-listed EGC filers reported zero revenue in their most recent filing with audited financial statements and 23% of non-listed EGCs that filed periodic reports disclosed that they were shell companies.

- Approximately 51% of EGC filers, including 74% of those that were not exchange-listed, received an explanatory paragraph in their most recent auditor's report expressing substantial doubt about the company's ability to continue as a going concern.

- Among the 1,951 EGC filers, 1,262 provided a management report on internal control over financial reporting in their most recent annual filing. Of those 1,262 companies, approximately 47% reported material weaknesses.

- Approximately 96% of EGC filers were audited by accounting firms that also audited issuers that are not EGC filers, including 39% of EGC filers that were audited by firms that provided audit reports for more than 100 issuers and were required to be inspected on an annual basis by the PCAOB.

---

[2] The 1,951 EGC filers do not include companies that were not reporting as EGCs as of the measurement date, as follows:

(i) 200 companies that ceased to qualify as EGCs because of their annual revenue or large accelerated filer status,
(ii) 465 companies that ceased to be SEC registrants, and
(iii) 414 companies that did not file audited financial statements with the SEC in the 18 months preceding the measurement date ("inactive EGCs").

CONTENTS

## I. BACKGROUND & METHODOLOGY

*Background*

Title I of the JOBS Act focuses on reducing regulatory burdens on EGCs in order to facilitate capital raising through public markets.[3] As relevant to this white paper, the JOBS Act generally provides that new PCAOB standards will not apply to the audits of EGCs unless the SEC determines that applying such additional requirements is necessary or appropriate in the public interest, after considering the protection of investors, and whether the action will promote efficiency, competition, and capital formation.[4] To implement this provision, upon adoption of a rule subject to this determination, the PCAOB recommends to the SEC whether the rule should apply to audits of EGCs, and submits information and analysis in its adopting release to assist the SEC in making a determination. This white paper provides general data about EGCs to inform the analysis contained in PCAOB rulemaking releases regarding the impact of applying new standards to the audits of EGCs.

PCAOB staff anticipates updating the white paper semiannually, based on the most recent data available as of May 15 and November 15 in each year.

Generally, a company qualifies as an EGC if it had less than $1 billion in annual revenues in its most recently completed fiscal year and had not sold common equity securities on or before December 8, 2011, pursuant to a registration statement under the Securities Act of 1933 ("Securities Act").[5] The company retains its EGC status until the earliest of:

(i) the last day of the first fiscal year in which the company's annual gross revenues are $1 billion[6] or more;

---

[3] Pub. L. No. 112-106 (April 5, 2012). *See* Section 103(a)(3)(C) of the Sarbanes-Oxley Act of 2002 ("Sarbanes-Oxley Act"), 15 U.S.C. 7213(a)(3), as added by Section 104 of the JOBS Act.

[4] *See* Section 103(a)(3)(C) of the Sarbanes-Oxley Act of 2002, as added by Section 104 of the JOBS Act, which provides:

> Any rules of the Board requiring mandatory audit firm rotation or a supplement to the auditor's report in which the auditor would be required to provide additional information about the audit and the financial statements (auditor discussion and analysis) shall not apply to an audit of an emerging growth company, as defined in section 3 of the Securities Exchange Act of 1934. Any additional rules adopted by the Board after [April 5, 2012] shall not apply to an audit of an emerging growth company, unless the Commission determines that the application of such additional requirements is necessary or appropriate in the public interest, after considering the protection of investors, and whether the action will promote efficiency, competition, and capital formation.

[5] *See* Section 3(a)(80) of the Securities Exchange Act of 1934 ("Exchange Act") and Section 101(d) of the JOBS Act.

[6] The $1 billion annual gross revenue threshold is indexed for inflation every five years to reflect the change in the Consumer Price Index.

(ii) the date on which the company is deemed to be a "large accelerated filer" under the Exchange Act (generally, an issuer with a public float of $700 million or more that has been subject to Exchange Act periodic reporting requirements for at least one year and has filed at least one annual report);
(iii) the date on which the company has issued more than $1 billion in non-convertible debt during the prior three year period; or
(iv) the last day of the fiscal year after the fifth anniversary of the company's first sale of common equity securities under an effective Securities Act registration statement.

*Methodology*

PCAOB staff identified the population of EGCs using commercial vendor data about companies that, as of the most recent measurement date, self-identified as EGCs in at least one SEC filing since 2012.[7] The analysis excludes 465 companies that, as of the most recent measurement date, had (i) terminated their Exchange Act registration, (ii) had their Exchange Act registration revoked, or (iii) withdrawn their registration statement before effectiveness, and, in each case, did not subsequently file audited financial statements with the SEC. The analysis also excludes 200 companies that were identified in a later SEC filing as no longer qualifying as EGCs (for example those that reported $1 billion or more in annual revenues) and companies whose financial statements may be, but are not required to be, audited under PCAOB standards. Using this methodology, the PCAOB staff identified 1,951 companies that have identified themselves as EGCs in at least one SEC filing since 2012 and have filed audited financial statements with the SEC in the 18 months preceding the measurement date ("EGC filers"). An additional 414 companies had previously identified themselves as EGCs but did not file audited financial statements with the SEC in the 18 months preceding the measurement date ("inactive EGCs").

The financial information presented is derived from the most recent annual financial statements filed with the SEC as of the measurement date. This data is obtained using commercial vendor data, supplemented with manually collected data from SEC filings, when necessary.

The white paper describes characteristics of EGC filers and inactive EGCs separately. The analysis focuses primarily on EGC filers, for which information is more current and reflects a more recent experience of an audit conducted under PCAOB standards. Because available information regarding inactive EGCs is potentially stale, the analysis of these is more limited.

The growth in the number of EGC filers and inactive EGCs is presented in Section II. Sections III through VII address EGC filers. Appendix A provides additional information about the population of EGC filers, while Appendix B provides additional information about inactive

[7] The PCAOB staff used commercial vendor data to identify the population of EGCs from SEC filings. SEC filings used to determine the population of companies that self-identified as an EGC include all Securities Act registration statements, Regulation A offering statements where a concurrent Exchange Act registration is filed, Exchange Act registration statements, and Exchange Act periodic reports. Not all companies that are EGCs identify as EGCs in all SEC filings.

EGCs. Appendix C provides information about companies that are no longer EGC filers because of annual revenue in excess of $1 billion or large accelerated filer status. Appendix D provides information about companies that are no longer EGC filers (or inactive EGCs) because they are no longer SEC registrants.

In various cross sectional analyses in this document, the population of EGC filers is further divided between companies that have at least one class of common equity securities listed on a U.S. national securities exchange ("exchange-listed" EGC filers)[8] and those that do not ("non-listed" EGC filers).[9] PCAOB staff identified 742 exchange-listed EGC filers and 1,209 non-listed EGC filers as of November 15, 2016.

To compare the exchange-listed EGC filer population with the broader public equity market, the analysis below also presents a benchmark derived from commercial vendor data on other exchange-listed companies. The benchmark population is limited to exchange-listed companies that are not investment companies[10] and that have filed audited financial statements with the SEC in the 18 months preceding the most recent measurement date. From a total population of 4,797 exchange-listed companies, the 742 exchange-listed EGC filers are excluded to allow for comparison of companies that are EGCs to those that are not. Using this methodology, PCAOB staff identified 4,055 companies in the benchmark population ("other exchange-listed companies") as of November 15, 2016. These exchange-listed companies tend to be larger and generally have a longer reporting history than EGC filers; these attributes may also correlate with other characteristics described in this paper.

The paper does not present a similar benchmark population or data on market capitalization for non-listed EGC filers. Market data may not be reliable or even regularly available with respect to issuers whose securities are quoted on the over-the-counter market or are otherwise illiquid. In addition, issuers whose only publicly-traded securities are debt securities do not have equity market capitalizations. These inherent limitations of available data limit our ability to make useful comparisons among non-listed EGC filers.

The above methodology is applied as of each measurement date. This paper focuses on data as of the most recent measurement date (November 15, 2016) but also provides time series data about the population of EGCs as of previous measurement dates.

---

[8] The PCAOB staff obtained exchange-listed company information as of the measurement date derived from Standard & Poor’s Xpressfeed data on all active issue types of "common-ordinary," "units with a common share component," and "depository receipts" where the exchange is a U.S. national securities exchange with available market capitalization data. As of November 15, 2016, EGC filers had primary listings of common equity securities on the following U.S. national securities exchanges: the New York Stock Exchange LLC, Nasdaq Stock Market LLC, NYSE MKT LLC, and NYSE Arca, Inc.

[9] Non-listed EGC filers include companies whose securities are traded over-the-counter or have no public market.

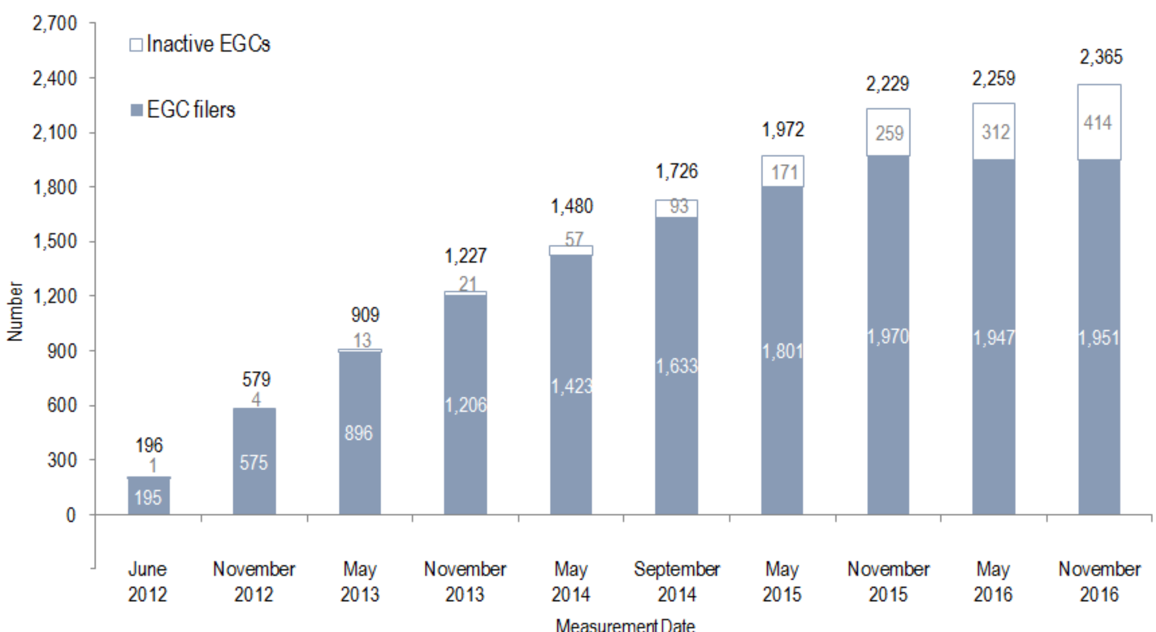
[10] Registered investment companies (other than business development companies) do not qualify as emerging growth companies. *See* SEC Division of Corporation Finance, Jumpstart Our Business Startups Act Frequently Asked Questions, Q. 20.

As previously indicated, the EGC filer and inactive EGC populations are derived using data from a commercial vendor based on companies' self-identification as EGCs in filings with the SEC. Self-identification data may understate or overstate these populations if companies fail to self-identify or self-identify erroneously. In addition, the populations will be overstated if there are companies that no longer qualify as EGCs but are not excluded from the population of EGCs identified by the third-party vendor (for example, because of a lack of known information about a change in status). Accordingly, the population of companies that meet the statutory definition of "emerging growth company" as of a specific measurement date may be larger or smaller than the population analyzed in this white paper.

## II. GROWTH IN THE NUMBER OF EGC FILERS AND INACTIVE EGCS

The number of EGC filers has grown since the enactment of the JOBS Act, but has stabilized recently. The number of inactive EGCs has also grown. Figure 1 depicts each of these populations at specific measurement dates used by PCAOB staff to analyze the populations between June 2012 and November 2016. The sum of EGC filers and inactive EGCs, as of each measurement date, is also presented.

**Figure 1: Growth in the number of EGC filers and inactive EGCs**



*Source: Audit Analytics and Strategic Insight*

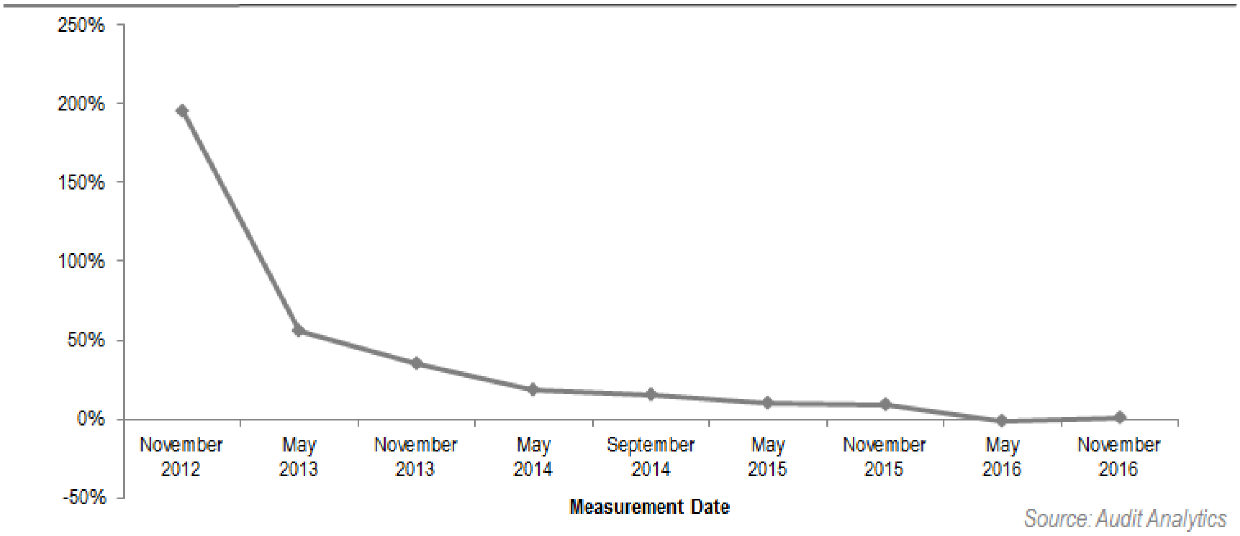
Changes in the populations of self-identified EGCs depicted above are affected by EGCs entering the population and EGCs leaving the population. From April 5, 2012 through November 15, 2016 there were 200 companies that ceased to qualify as EGCs because of their annual revenue or large accelerated filer status.[11] Further information on the industries of these companies is included in Appendix C. Additionally, there were 465 companies that previously identified as EGCs but then ceased to be SEC registrants. Specifically, these 465 companies had (i) terminated their Exchange Act registration, (ii) had their Exchange Act registration revoked, or (iii) withdrawn their registration statement before effectiveness, and, in each case, did not subsequently file audited financial statements with the SEC. Further information on the industries of these companies is included in Appendix D.

The number of EGC filers has stabilized recently – it increased by less than 1% at the November 15, 2016 measurement date. Between May 15, 2016 and November 15, 2016, 207 companies became EGC filers[12] and 203 ceased to be EGC filers. The 203 companies include:

- 136 companies that became inactive EGCs,
- 4 companies that ceased to qualify as EGCs because of their annual revenue or large accelerated filer status, and
- 63 companies that previously identified as EGCs but then ceased to be SEC registrants.

The trend in the rates of change between successive measurement dates is depicted in Figure 2.

**Figure 2: Rate of change in the number of EGC filers between each successive measurement date**



[11] PCAOB staff observed that the overwhelming majority of SEC registrants that ceased to qualify as EGCs did so because their annual revenue exceeded $1 billion or they became a large accelerated filer rather than only because of issuance of more than $1 billion in non-convertible debt.

[12] See Table A.7 in Appendix A for information on form types used to identify the 207 new EGC filers.

As of November 15, 2016, there were 414 inactive EGCs, compared to 312 as of May 15, 2016.

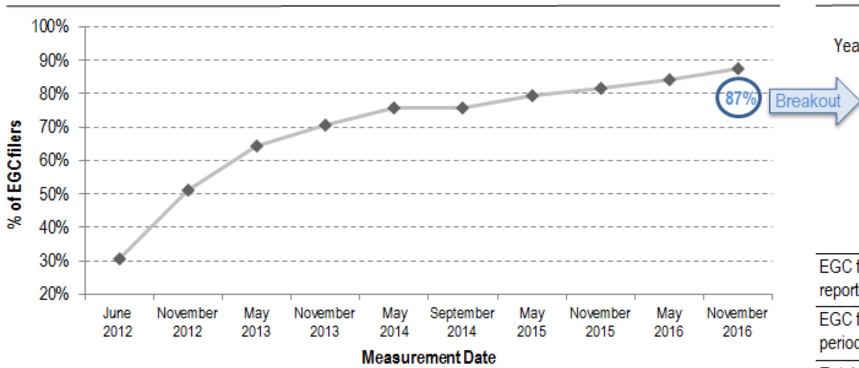
The discussion in sections III through VII and Appendix A focuses primarily on EGC filers.

## III. SECURITIES REGISTRATION AND EQUITY OFFERINGS BY EGC FILERS

*Periodic Reporting*

The population of EGC filers includes both (i) EGCs that have filed periodic reports with the SEC and (ii) EGCs that have filed registration statements but have not yet filed periodic reports. As shown in Figure 3, the percentage of EGC filers that have filed periodic reports has been increasing.[13] As of November 15, 2016, approximately 87% of the 1,951 EGC filers have filed periodic reports. The remaining 13% (or 248) have filed audited financial statements in registration statements but have not yet filed periodic reports.

**Figure 3: Percentage of EGC filers that have filed periodic reports**



*Source: Strategic Insight and Audit Analytics*

**Table 1: First year of periodic reporting as of November 15, 2016**

| Year of First Periodic Reporting | Number of EGC Filers | % |
|---|---|---|
| 2016 | 269 | |
| 2015 | 424 | |
| 2014 | 360 | |
| 2013 | 260 | |
| 2012 | 160 | |
| 2012 or later | 1,473 | 75% |
| 2011 or prior | 230 | 12% |
| EGC filers that have filed periodic reports | 1,703 | 87% |
| EGC filers that have not yet filed periodic reports | 248 | 13% |
| Total EGC filers | 1,951 | 100% |

*Source: Strategic Insight and Audit Analytics*

As of November 15, 2016, 75% of EGC filers had filed their first periodic report in 2012 or later. (See Table 1.) The length of time an EGC has been filing periodic reports provides an approximation of the length of time since the EGC completed a public offering.[14]

---

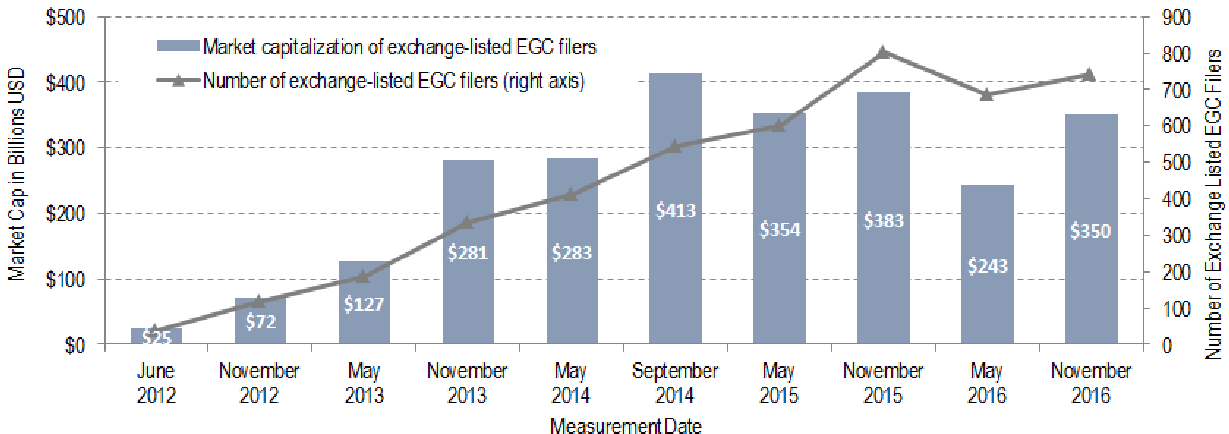
13 For the purpose of identifying EGCs that filed periodic reports as noted in Figure 3, PCAOB staff used commercial vendor data to identify companies that filed the following SEC Form submission types: 10-K, 10-Q, 20-F, and 40-F.

14 Companies that completed a registered public offering of equity securities on or before December 8, 2011, are not eligible to be EGCs. A company that qualifies as an EGC may have filed periodic reports prior to December 8, 2011 if the company had previously

*Exchange-Listed EGC Filers*

Approximately 38%, or 742, of the 1,951 EGC filers are exchange-listed. These 742 EGC filers represent 15% of all exchange-listed companies. As Figure 4 shows, total market capitalization for exchange-listed EGC filers has fluctuated with changes in the population of exchange-listed EGC filers and changes in their market value. All references to market capitalization represent global market capitalization in the case of companies that are listed on exchanges in multiple countries.

**Figure 4: Market capitalization and number of exchange-listed EGC filers**



*Source: Audit Analytics and Standard & Poor's*

As of November 15, 2016, the 742 exchange-listed EGC filers had $350 billion in market capitalization. These exchange-listed EGC filers represented 1% of the market capitalization of all exchange-listed companies. The market capitalization of exchange-listed EGC filers increased from $243 billion at May 15, 2016 to $350 billion at November 15, 2016. The 207 companies that became EGC filers between May 15, 2016 and November 15, 2016 accounted for approximately 14% of the total market capitalization of exchange-listed EGC filers.

Additional information on the number of EGC filers and exchange-listed companies by filer status under SEC rules (e.g., accelerated filer and large accelerated filer) is included in Table A.1 in Appendix A.

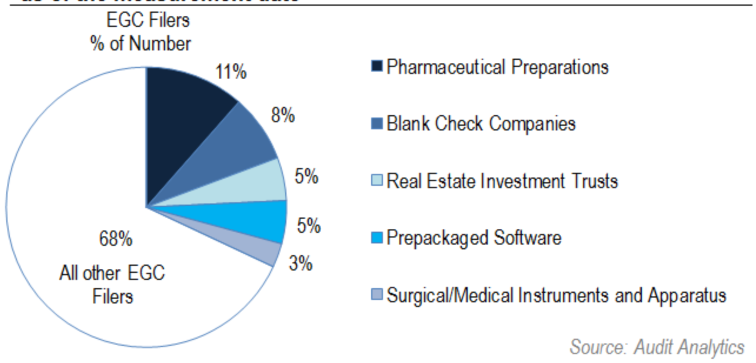
registered its securities under the Exchange Act without completing a public offering or had publicly issued only debt securities.

## IV. INDUSTRY AND FINANCIAL CHARACTERISTICS OF EGC FILERS

*Industry*

EGCs operate in many industries. Overall, the five most common Standard Industrial Classification ("SIC") codes reported for EGC filers as of the measurement date are: (i) pharmaceutical preparations; (ii) blank check companies;[15] (iii) real estate investment trusts; (iv) prepackaged software; and (v) surgical/medical instruments and apparatus. The proportion of EGC filers reporting the five most common SIC codes is summarized in Figure 5. Sixty-eight percent of EGC filers did not report being in these top five industries, including 65% of EGC filers that reported other SIC codes and 3% that did not report a SIC code in their SEC filings.

**Figure 5: Top five industries, by number, reported by EGC filers as of the measurement date**



Source: Audit Analytics

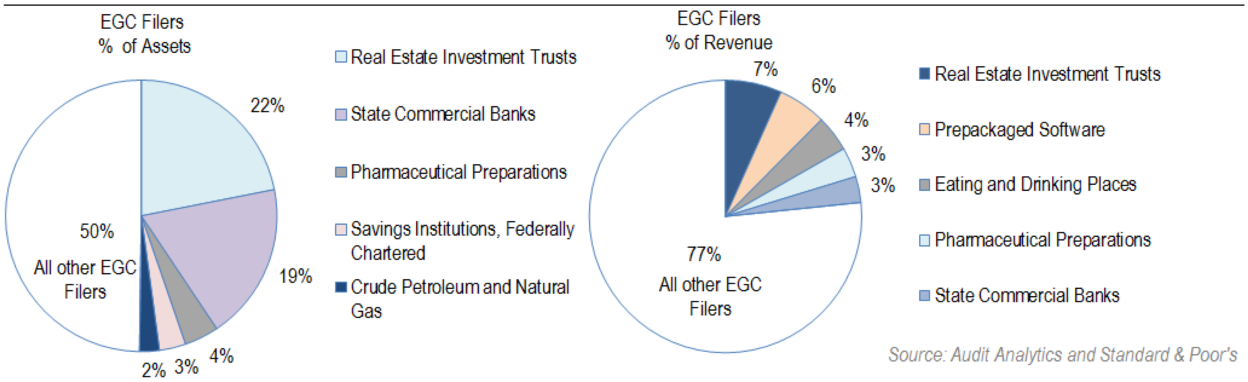
See Table A.2 in Appendix A for more detailed industry data on exchange-listed EGC filers, non-listed EGC filers, and other exchange-listed companies. Exchange-listed EGC filers are more concentrated in their top five industries than other exchange-listed companies. Larger proportions of exchange-listed EGC filers, as compared to other EGC filers and other exchange-listed companies, are concentrated in SIC codes related to health and life sciences, including: (i) pharmaceutical preparations and (ii) biological products.

The five SIC codes with the highest total assets as a percentage of the total assets for the EGC filer population as of the measurement date are: (i) real estate investment trusts; (ii) state commercial banks; (iii) pharmaceutical preparations; (iv) federally chartered savings institutions; and (v) crude petroleum and natural gas. Total assets of EGC filers reporting these five SIC codes represent approximately 50% of the total assets of EGC filers. Figure 6 provides a summary of this information as well as an analogous summary by revenue. See Tables A.3 and A.4 in Appendix A for more detailed industry data for EGC filers, exchange-listed EGC filers, non-listed EGC filers, and other exchange-listed companies.

---

15 The classification of "blank check company" generally means a development stage company that has no specific business plan or purpose or has indicated that its business plan is to engage in a merger or acquisition with an unidentified company or companies, or other entity or person. *See* Securities Act Rule 419, 17 CFR 230.419.

**Figure 6: Top five industries, by assets and revenue, reported by EGC filers as of the measurement date**

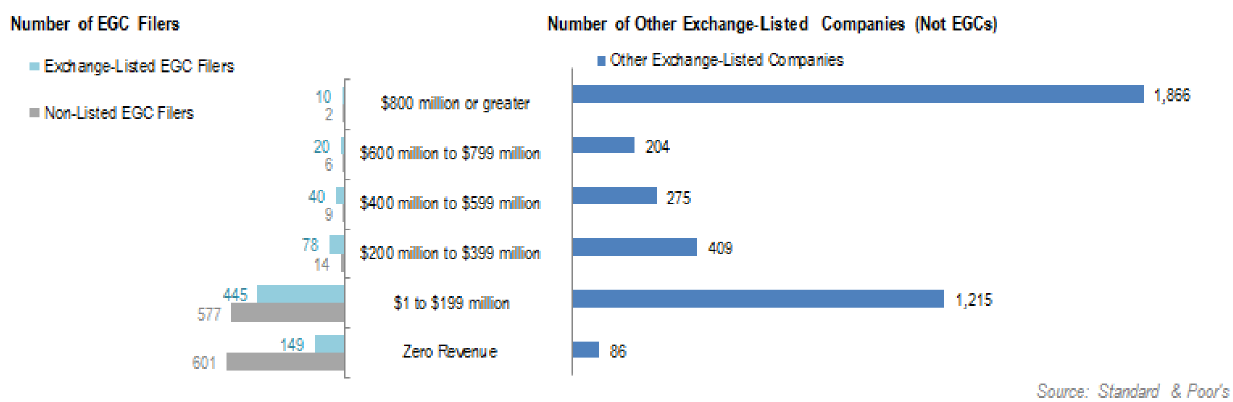


*Assets and Revenue*

The assets reported by EGC filers ranged from zero to approximately $19.4 billion. The average assets were approximately $245.9 million, while half of EGC filers reported assets of less than $5.9 million.

The annual revenue reported by EGC filers ranged from zero to approximately $978.5 million. The average revenue was approximately $56.6 million, while half of EGC filers reported revenue of less than $140,000. The distribution of revenue among EGC filers and exchange-listed companies is shown in Figure 7.

**Figure 7: Distribution of revenue reported by EGC filers and exchange-listed companies**



Additional information summarizing the distribution of revenue and assets reported by EGC filers, exchange-listed EGC filers, non-listed EGC filers, and other exchange-listed companies is presented in Tables A.5 and A.6 in Appendix A.

*Internal Control over Financial Reporting*

EGC management is generally required to report on the effectiveness of internal control over financial reporting ("ICFR") starting with the second annual report filed by the company, although auditor attestation is not required.[16] Among the 1,951 EGC filers, 1,262 provided a management report on ICFR in their most recent annual filing. Of those companies that provided a management report on ICFR, approximately 47% reported material weaknesses. Exchange-listed EGC filers reported material weaknesses at lower rates (13%). Table 2 shows that other exchange-listed companies reported material weaknesses at lower rates (7%) than the EGC filers.

**Table 2: Rates of material weakness in ICFR**

| | (1) All EGC Filers | (2) Non-listed EGC Filers | (3) Exchange-Listed EGC Filers | (4) Other Exchange-Listed (Not EGCs) |
|---|---|---|---|---|
| # of companies | 1,951 | 1,209 | 742 | 4,055 |
| # with management reports on ICFR | 1,262 | 790 | 472 | 3,969 |
| # with material weakness reported by management | 594 | 534 | 60 | 263 |
| % of ICFR reports with material weakness | 47% | 68% | 13% | 7% |

*Source: Audit Analytics*

While auditor attestation on the effectiveness of ICFR is not required for EGCs, 34 EGC filers, or 2% of EGC filers, voluntarily provided an auditor's report on ICFR. Of these 34 EGC filers, 33 reported assets larger than the median assets of EGC filers, and 26 were exchange-listed. Further, 16 of these 34 EGC filers were audited by firms required to be inspected on an annual basis by the PCAOB.

## V. SHELL COMPANIES AND LIMITED OPERATIONS AMONG EGC FILERS

A total of 774 EGC filers reported zero revenue, self-identified as shell companies in periodic filings, or both.[17] Table 3 and Table 4 show that these two attributes are less common

[16] *See* Instruction 1 to Item 308(a) of Regulation S-K. EGCs that have not yet filed at least one annual report are not required to provide a management report on ICFR. EGCs are exempt from the requirement for auditor attestation of ICFR. *See* Section 404(b) of the Sarbanes-Oxley Act, as amended by Section 103 of the JOBS Act.

[17] Generally, a company is a shell company if it has no or nominal operations and at least one of the following attributes: (i) no or nominal assets; (ii) assets consisting solely of cash and cash equivalents; or (iii) assets consisting of any amount of cash and cash equivalents and nominal other assets. *See* Exchange Act Rule 12b-2, 17 C.F.R. 240.12b-2. Blank check companies (discussed in Section IV) would generally be considered shell companies until they

among exchange-listed EGC filers as compared to non-listed EGC filers. The tables also show that these attributes are even less common among other exchange-listed companies.

Table 3 below presents data on the proportion of companies that reported zero revenue in their most recent annual audited financial statements included in SEC filings, which include Securities Act registration statements, Exchange Act registration statements, and Exchange Act periodic reports.

**Table 3: Reporting of zero revenue**

| | (1) All EGC Filers | (2) Non-listed EGC Filers | (3) Exchange-Listed EGC Filers | (4) Other Exchange-Listed (Not EGCs) |
|---|---|---|---|---|
| Total # of companies | 1,951 | 1,209 | 742 | 4,055 |
| # reporting zero revenue | 750 | 601 | 149 | 86 |
| % reporting zero revenue | 38% | 50% | 20% | 2% |

*Source: Standard & Poor's*

Table 4 presents shell company disclosure by companies that have filed periodic reports, some of which also reported zero revenue.

**Table 4: Shell company disclosure in periodic reports**

| | (1) All EGC Filers | (2) Non-listed EGC Filers | (3) Exchange-Listed EGC Filers | (4) Other Exchange-Listed (Not EGCs) |
|---|---|---|---|---|
| Total # of companies that filed periodic reports | 1,704 | 991 | 713 | 4,043 |
| # with shell company disclosure in periodic reports | 266 | 231 | 35 | 6 |
| % with shell company disclosure in periodic reports | 16% | 23% | 5% | 0% |

*Source: Audit Analytics*

*EGC Filers That Reported Zero Revenue in 2013: Where are They Now?*

As shown in Table 3, 38% of EGC filers reported zero revenue as of November 15, 2016. The population of EGC filers reporting zero revenue has changed over the last three years. Specifically, the percentage of EGC filers reporting zero revenue decreased from 50% at November 20, 2013 to 38% at November 15, 2016. (See Figure A.1 in Appendix A.) The following analysis explores the extent to which the declining trend in reporting zero revenue reflects EGC filers that began to generate revenue and EGC filers that left the EGC population.

---

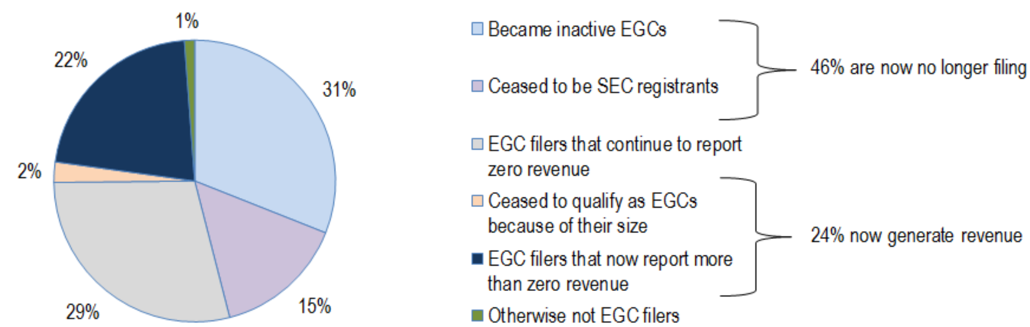
acquire an operating business or more than nominal assets. *See* SEC Release 33-8407, *Use of Form S-8 and Form 8-K by Shell Companies* (Apr. 15, 2004) at n. 20.

Specifically, we analyzed the 601 EGC filers reporting zero revenue at November 20, 2013 and categorized them based on their most recent reporting three years later. As of November 15, 2016, these 601 companies can be categorized as follows:

- 187 (31%) became inactive EGCs (and are therefore no longer EGC filers),
- 93 (15%) ceased to be SEC registrants (and are therefore no longer EGC filers),
- 173 (29%) are EGC filers that continue to report zero revenue,
- 130 (22%) are EGC filers that now report more than zero revenue,
- 14 (2%) ceased to qualify as EGCs because of their annual revenue or large accelerated filer status, and
- 4 (0.6%) other companies that were no longer EGC filers.[18]

This analysis indicates that 280 (46%) of the 601 EGC filers that reported zero revenue at November 15, 2013 were not filing with the SEC as of three years later, including 187 (31%) that went inactive and 93 (15%) that ceased to be SEC registrants. On the other hand, 144 (24%) of the 601 began reporting more than zero revenue, including 14 (2%) that ceased to qualify as EGCs because of their size. Figure 8 illustrates these findings.

**Figure 8: Classification, as of November 15, 2016, of the 601 EGC filers that reported zero revenue at November 15, 2013**



*Source: Audit Analytics and Standard & Poor's*

## VI. GOING CONCERN PARAGRAPHS IN AUDIT REPORTS OF EGC FILERS

For 51% of EGC filers, the most recent auditor's report included an explanatory paragraph expressing substantial doubt about the company's ability to continue as a going concern ("going concern paragraph"). EGC filers that are not exchange-listed received an auditor's report with a going concern paragraph at a substantially higher rate (74%) than exchange-listed EGC filers (12%). In addition, EGC filers received an auditor's report with a going concern paragraph (51%) at a substantially higher rate than other exchange-listed companies (3%).

---

[18] Such companies include, for example, companies that identified themselves as an EGC in an SEC filing but eliminated that disclosure in a subsequent amended SEC filing.

**Table 5: Rate of going concern paragraphs**

| | (1) All EGC Filers | (2) Non-listed EGC Filers | (3) Exchange-Listed EGC Filers | (4) Other Exchange-Listed (Not EGCs) |
|---|---|---|---|---|
| Companies with going concern paragraphs | 987 (51%) | 900 (74%) | 87 (12%) | 131 (3%) |

*Source: Audit Analytics*

The data in Table 6 shows that 58% of the EGC filers with going concern paragraphs in their auditor's report reported zero revenue. Only 15% of other exchange-listed companies with going concern paragraphs reported zero revenue.

**Table 6: Going concern paragraphs and revenue information**

| | (1) All EGC Filers | (2) Non-listed EGC Filers | (3) Exchange-Listed EGC Filers | (4) Other Exchange-Listed (Not EGCs) |
|---|---|---|---|---|
| # reporting zero revenue with going concern paragraphs | 575 (58%) | 536 (60%) | 39 (45%) | 20 (15%) |
| # reporting revenue >0 with going concern paragraphs | 412 (42%) | 364 (40%) | 48 (55%) | 111 (85%) |
| Total companies with going concern paragraphs | 987 (100%) | 900 (100%) | 87 (100%) | 131 (100%) |

## VII. AUDITORS OF EGC FILERS

The 1,951 EGC filers were audited by 273 registered public accounting firms. Approximately 96% of EGC filers were audited by accounting firms that also audit issuers that are not EGC filers.

Approximately 39% of the 1,951 EGC filers were audited by firms required to be inspected on an annual basis by the PCAOB.[19] The remaining 61% were audited by firms required to be inspected at least once in every three years.[20]

Approximately 14% of EGC filers were audited by non-U.S. firms, including 9% that were audited by affiliates of annually inspected firms.

---

19 These are firms that have issued auditor's reports for more than 100 issuer audit clients in a given year and therefore are required to be inspected on an annual basis by the PCAOB.

20 These are firms that have issued auditor's reports for 100 or fewer issuer audit clients in a given year and therefore are required to be inspected at least once every three years by the PCAOB.

## Appendix A: Additional Information on EGC Filers

This appendix includes tables with more detailed information on attributes discussed in the paper**.**

**Figure A.1 Percent of EGC filers reporting zero revenue as of various measurement dates**

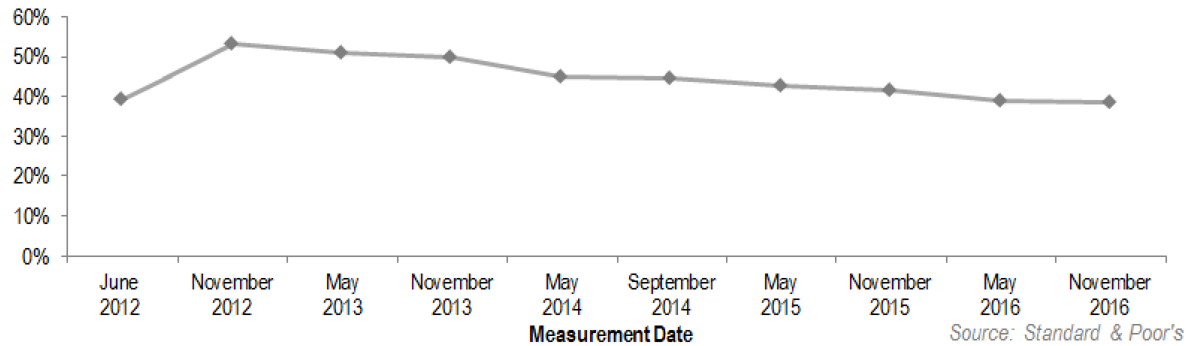

**Table A.1 Filer status from periodic reports**[21]

| | (1) All EGC Filers | (2) Non-listed EGC Filers | (3) Exchange-Listed EGC Filers | (4) Other Exchange-Listed (Not EGCs) |
|---|---|---|---|---|
| Large accelerated filers | 0 | 0 | 0 | 2168 |
| Accelerated filers | 317 | 21 | 296 | 1,119 |
| Non-accelerated filers | 1,387 | 970 | 417 | 756 |
| Total companies that filed periodic reports | 1,704 | 991 | 713 | 4,043 |
| Companies that did not file periodic reports[22] | 247 | 218 | 29 | 12 |
| Total companies | 1,951 | 1,209 | 742 | 4,055 |

---

[21] This data is derived from periodic reports with check boxes to indicate filer status, primarily Form 10-K, Form 10-Q, and Form 20-F. In general, "large accelerated filer" means an issuer with a public float of $700 million or more that has been subject to Exchange Act periodic reporting requirements for at least one year and has filed at least one annual report and "accelerated filer" means an issuer with a public float of $75 million or more, but less than $700 million, that has been subject to Exchange Act periodic reporting requirements for at least one year and has filed at least one annual report. *See* Exchange Act Rule 12b-2, 17 CFR 240.12b-2. The subset of companies summarized in Table A.1 as "non-accelerated filers" are those that filed periodic reports and did not identify themselves as "large accelerated filers" or "accelerated filers."

[22] As of the measurement date, there were 247 EGC filers that had filed audited financials in a Securities Act or Exchange Act registration statement in the preceding 18 months but did not file periodic reports.

## Appendix B: Inactive EGCs

The information presented below about inactive EGCs[24] is the most recent available information through November 15, 2016.

Approximately 21% of the 414 inactive EGCs are blank check companies, according to the SIC code reported in the companies' most recent SEC filings. This is the most common SIC code reported among the inactive companies; the next most common SIC code (3%) is metal mining (the remaining SIC codes each represent less than 3%).

Approximately 81% of the 414 inactive EGCs had an explanatory paragraph included in the last auditor's report stating that there is substantial doubt about the company's ability to continue as a going concern.

Approximately 14% of the 414 inactive EGCs were audited by firms required to be inspected on an annual basis by the PCAOB and the remaining 86% were audited by firms required to be inspected at least once in every three years.

Approximately 7% of the inactive EGCs were audited by non-U.S. firms, including 4% that were audited by non-U.S. firms that are affiliates of annually inspected firms.

---

[24] Inactive EGCs discussed in this white paper are those companies that had previously identified themselves as EGCs in at least one SEC filing since 2012 but have not filed audited financial statements with the SEC in the 18 months preceding November 15, 2016. The 414 Inactive EGCs do not include the 465 companies that ceased to be SEC registrants as described in Appendix D

## Appendix C: Companies that are no longer EGC filers because of their annual revenue or large accelerated filer status

From April 5, 2012 through November 15, 2016 there were 200 companies that ceased to qualify as EGCs because of annual revenue in excess of $1 billion or large accelerated filer status. For the 200 companies, the five most common industries by SIC code were:

(i) pharmaceutical preparations,
(ii) prepackaged software,
(iii) real estate investment trusts,
(iv) computer processing and data preparation, and
(v) crude petroleum and natural gas.

Forty percent of these 200 companies reported operating in these industries.

## Appendix D: Companies that are no longer EGC filers because they are no longer SEC registrants

From April 5, 2012 through November 15, 2016, there were 465 companies that previously identified as EGCs but ceased to be SEC registrants and therefore were no longer EGC filers or inactive EGCs. Specifically, these 465 companies had (i) terminated their Exchange Act registration, (ii) had their Exchange Act registration revoked, or (iii) withdrawn their registration statement before effectiveness, and, in each case, did not subsequently file audited financial statements with the SEC. For the 465 companies, the five most common industries by SIC code were:

(i) blank check companies,
(ii) pharmaceutical preparations,
(iii) prepackaged software,
(iv) metal mining, and
(v) crude petroleum and natural gas.

Thirty-five percent of these 465 companies reported operating in these industries.
