## Appendix I: Change in Audit Fees by Market Capitalization

**Table 7A: Changes in Audit Fees - 58 Companies with Market Capitalization Under £1 billion(a)**

| | % Change in Audit Fees | | |
|---|---|---|---|
| | All 58 companies | 44 companies, excluding investment trusts | 14 investment trusts |
| Mean | 3.7% | 5.5% | -2.1% |
| Median | 0.0% | 0.0% | 0.0% |
| Range - Low | -26.2% | -25.0% | -26.2% |
| Range - High | 91.0% | 91.0% | 18.4% |
| # of Companies with an Increase in Audit Fees: | 25 | 20 | 5 |
| # of Companies with No Change in Audit Fees: | 15 | 12 | 3 |
| # of Companies with a Decrease in Audit Fees: | 18 | 12 | 6 |

**Table 7B: Changes in Audit Fees - 50 Companies with Market Capitalization greater than or equal to £1 billion and under £2 billion(a)**

| | % Change in Audit Fees | | |
|---|---|---|---|
| | All 50 companies | 47 companies, excluding investment trusts | 3 investment trusts |
| Mean | 2.5% | 2.5% | 1.6% |
| Median | 0.0% | 0.0% | 0.0% |
| Range - Low | -46.6% | -46.6% | 0.0% |
| Range - High | 60.4% | 60.4% | 4.8% |
| # of Companies with an Increase in Audit Fees: | 20 | 19 | 1 |
| # of Companies with No Change in Audit Fees: | 21 | 19 | 2 |
| # of Companies with a Decrease in Audit Fees: | 9 | 9 | 0 |

**Table 7C: Changes in Audit Fees - 58 Companies with Market Capitalization greater than or equal to £2 billion and under £5 billion(a)**

| | % Change in Audit Fees | | |
|---|---|---|---|
| | All 58 companies | 57 companies, excluding investment trusts | 1 investment trust |
| Mean | 7.2% | 7.2% | 9.8% |
| Median | 6.4% | 6.3% | 9.8% |
| Range - Low | -22.2% | -22.2% | - |
| Range - High | 57.1% | 57.1% | - |
| # of Companies with an Increase in Audit Fees: | 37 | 36 | 1 |
| # of Companies with No Change in Audit Fees: | 12 | 12 | 0 |
| # of Companies with a Decrease in Audit Fees: | 9 | 9 | 0 |

**Table 7D: Changes in Audit Fees - 44 Companies with Market Capitalization £5 billion and over(a)**

| | % Change in Audit Fees | | |
|---|---|---|---|
| | All 44 companies | 44 companies, excluding investment trusts | 0 investment trust |
| Mean | 4.9% | 4.9% | - |
| Median | 0.0% | 0.0% | - |
| Range - Low | -26.4% | -26.4% | - |
| Range - High | 82.4% | 82.4% | - |
| | | | |
| # of Companies with an Increase in Audit Fees: | 17 | 17 | - |
| # of Companies with No Change in Audit Fees: | 11 | 11 | - |
| # of Companies with a Decrease in Audit Fees: | 16 | 16 | - |

(a) The percent change in audit fees needs to be interpreted with caution. Some companies report audit fees rounded in large unit values relative to the actual audit fee amount. This can create rounding errors which can result in overstating or understating changes in audit fees. For example, a company with actual audit fees of £549,000 in 2012, may report £0.5 million in the annual report for that year. If the fees increased to £551,000 in 2013, the company would report £0.6 million for this year. The amounts reported in the annual report would indicate a 20.0% increase in audit fees when the actual increase is 0.36%.

# Why change the auditor's report?

Investors asked for more information about the audits of public companies. The current auditor's report has gone largely unaltered for 70 years, while public companies and their audits have become increasingly complex. The PCAOB invited public comment on a reproposal to enhance the auditor's report issued.

Download the PCAOB release to learn more about the proposed enhancements to the auditor's report.

---

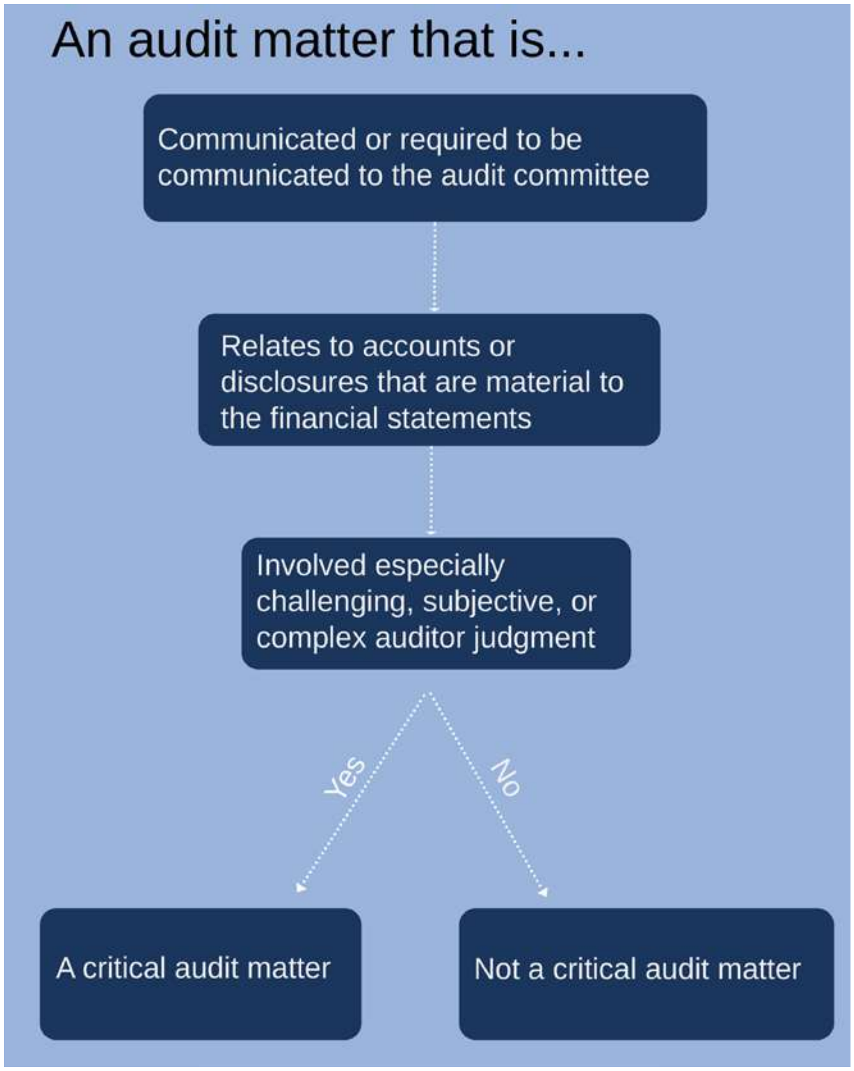
***In today's complex economy, and particularly in light of lessons learned after the financial crisis, investors want a better understanding of the judgments that go into an opinion … the specific judgments that were most critical to the auditor in arriving at the opinion.***

-- Chairman James R. Doty in his statement at the open Board meeting to consider the reproposal of the auditor's report

---

## What is a critical audit matter?

The reproposed standard would require auditors to communicate in the auditor's report the critical audit matters arising from an audit of a company's financial statements. When would an audit matter become a critical audit matter?



***The reproposed standard is meant to better arm investors with insight previously available to, and considered by, the auditors, but not ultimately evident in the auditor's report.***

-- Board Member Lewis H. Ferguson in his statement at the open Board meeting talking about the reproposal of the auditor's report

***The Board is taking another step forward in addressing questions about the relevance and usefulness of the standard auditor's report. This action … deals with one of the many elements contributing to the long-standing and multifaceted "expectations gap" between what investors and other financial statement users expect of independent auditors and what auditors deliver. Although this is a significant step forward in auditor reporting, it is a small step forward when considering the overall expectations gap related to auditor performance and reporting.***

-- Board Member Jeanette M. Franzel in her statement at the open Board meeting talking about the reproposal of the auditor's report

# Additional resources and information

PCAOB's reproposal was discussed at the May 18, 2016, Standing Advisory Group meeting. The Standing Advisory Group includes investors, auditors, public company executives, and others.

PCAOB staff described the reproposal at this open Board meeting. The meeting included Board member statements, as well as questions from Board members and PCAOB staff answers.

---

***The Board's statutory mandate is direct: "To protect the interest of investors ... in the preparation of informative, accurate and independent audit reports." In pressing to assure that audit reports are sufficiently explanatory and useful to investors, we are simply doing what Congress charged us to do and expected us to do -- namely provide "informative" reports, which is currently not the case in the view of most investors.***

-- Board Member Steven B. Harris in his statement at the open Board meeting talking about the reproposal of the auditor's report

AEROSPACE INDUSTRIES ASSOCIATION

September 27, 2011

Office of the Secretary
Public Company Accounting Oversight Board
166 K. Street, NW
Washington, D.C. 20006-2803

Re: Request for Public Comment on Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards and Notice of Roundtable (PCAOB Release No. 2011-003, June 21, 2011, Rulemaking Docket Matter No. 34)

Dear Members and Staff of the Public Company Accounting Oversight Board:

Thank you for providing the Aerospace Industries Association ("AIA") an opportunity to share our view on the Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards ("the Concept Release"), issued by the Public Company Accounting Oversight Board ("the Board") on June 21, 2011. AIA is the premier aerospace industry trade association representing the nation's major manufacturers of commercial, military and business products such as aircraft, helicopters, aircraft engines, missiles, spacecraft, and related components and equipment.

We are supportive of the Board's efforts to address the financial reporting concerns of investors and other users of financial statements, especially in light of the recent global financial crisis. We believe that improvements to financial reporting can best be achieved through clarifying changes to the audit report by the PCAOB coupled with continued targeted standard-setting by the Financial Accounting Standards Board ("FASB") and Securities and Exchange Commission ("SEC"). It would be most helpful to investors to clarify the purpose of an audit, the responsibilities of management, and the responsibilities of the auditor. Further, it would be useful to clarify the auditor's existing responsibility with respect to financial information presented outside of the financial statements and provide reference to PCAOB audit standards. Both FASB and the SEC have been responsive to investor needs since the financial crisis of 2008, as evidenced by, among other things, FASB requiring additional disclosures regarding the credit quality of financing receivables and the SEC requiring comprehensive disclosure of short-term borrowings.

We believe that additional, targeted standard-setting could promote greater transparency in disclosure for complex transactions. Furthermore, ongoing standard-setting projects at the FASB are focused on improving disclosures. For example, according to FASB, the desired result of its Disclosure Framework project is a "net reduction in disclosure volume and a net increase in the utility of the information disclosed." We understand that FASB is creating a decision process that will result in financial statement disclosures focused on matters that are most important to the users of a particular entity's financial statements. It is important for this project to be completed and implemented so that its impact on financial reporting can be determined.

Aerospace Industries Association of America, Inc.
1000 Wilson Boulevard, Suite 1700 Arlington, VA 22209-3928 (703) 358-1000 www.aia-aerospace.org

In the following paragraphs, we provide additional feedback on the ideas presented in the Concept Release:

The form of the auditor's report should be limited to providing an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows of reporting companies in conformity with the applicable financial reporting framework. We would support changes to the audit report that would clarify the purpose of an audit, the responsibilities of management, and the responsibilities of the auditor. Additionally, we support changes that would clarify the auditor's existing responsibility with respect to financial information presented outside of the financial statements (e.g., AU sec. 550) and provide reference to PCAOB audit standards or other summary documents that provide additional information about public company audits and auditors (e.g., Center for Audit Quality's recently published "*In-Depth Guide to Public Company Auditing: The Financial Statement Audit*").

Management's responsibility for the financial information of a company and the current segregation of responsibility among management, the audit committee and the auditor should be preserved. Management should be the original source of financial information about a company. Management of a company has a very deep knowledge and understanding of its industry, business strategy, and risk factors and their impact on current and future financial results. While an auditor learns about a company's accounting policies and procedures through an audit, their focus is on whether the financial statements are presented in conformity with prescribed accounting rules rather than the broader business risks (e.g. supply chain, environmental, operational, etc.) that can impact future financial results. A discussion of the company's financial information by the auditor could result in greater confusion for the investor and give the impression that the auditor is providing something other than an unqualified audit opinion. The issuance of an unqualified audit opinion should remain a statement to the investor that all material matters related to the audit have been resolved to the mutual satisfaction of management, the audit committee, and the auditor. Further analysis would be required to determine how an affirmative disclosure obligation might impact auditors' independence and objectivity. For example, might direct disclosure responsibilities, and the associated liability risk, impact the way auditors analyze corporate transactions?

We are concerned with the addition of an Auditor's Discussion and Analysis ("AD&A") supplement to the auditor's report for several reasons:

- First, we believe that a discussion of the company's financial information provided by the auditor could result in greater confusion for the investor and give the impression that the auditor is qualifying its audit opinion. As previously stated, the issuance of an unqualified opinion should be a signal to investors that all material items have been resolved and fairly presented in the financial statements.

- Second, investors are inundated with financial information in the form of audited financial statements and disclosures, Management Discussion and Analysis (MD&A), and Earnings Releases. We do not believe that the introduction of additional information through an AD&A will help investors better understand the company's financial statements or associated audit risks, audit procedures and results of audit procedures.

Rather, we feel that additional information presented by the auditor may lead to confusion as to which party is responsible for financial information and introduce additional risk to the company and audit firm.

- Third, the AD&A as presented in the Concept Release would be similar to the communications that currently take place between the auditor and the audit committee. While this sounds like a good solution, the two-way communication that takes place between the auditor and audit committee would be missing. We believe this dialogue is a key element of the communication process and that without it, the written words could be taken out of context and used incorrectly in making investment decisions. The auditor's views should be shared with the Audit Committee through the existing communication process -- it is ultimately management's responsibility to ensure that disclosures are transparent and fair.

- Fourth, the drafting of an AD&A supplement by the auditor could take a significant amount of the auditor's time. It could also lengthen the timetable between when a company closes its books and files its financial statements with the SEC, increasing audit costs and delaying the release of much anticipated financial information that would help investors manage their portfolios.

- Fifth, it is critical that open dialogue between auditors and audit committees be preserved, and this proposal could limit those discussions. In order to protect themselves against liability from eager plaintiffs' attorneys who seek comprehensive discussions of all deliberations, auditors will be incentivized to "over-disclose" in AD&A supplements, and include records of all discussions with management and audit committees. This practice would, in turn, convert audit committee meetings into formulaic, compliance-driven "check-the-box" sessions and eliminate the dynamic of open dialogue that is critical to effective governance.

Likewise, we are concerned with the proposed use of emphasis paragraphs. We believe that required use of emphasis paragraphs may give investors the impression that the audit opinion is being qualified in some manner and would unduly focus investors on certain components of the financial statements. We also believe that the use of emphasis paragraphs would result in a de facto "super-materiality" standard for corporate disclosures, in which plaintiffs' lawyers seek damages not only when risks are undisclosed, but when they are disclosed "only" in a company's filings but not called out specifically for emphasis by auditors. The end result, of course, would be longer auditor reports and even less attention paid to making the primary disclosures accurate and transparent. We believe that investors should be reading financial statements and notes thereto along with the MD&A and Earnings Releases in their entirety to gain a full picture of the financial health and risks of the company rather than focusing on specific aspects highlighted by the auditor. We believe that risk of misinterpretation of auditor's comments would introduce even greater risk to the capital markets.

We are concerned about auditor assurance requirements for information outside the financial statements. While some of the information comes directly from the financial statements, much of the information contained in the MD&A and Earnings Release is not derived from or coming directly from the financial statements or the information is forward looking in nature, which would be very difficult, if not impossible, to audit. We believe that if the scope of information contained in these documents were limited to what can be independently verified by the auditor, management would be forced to limit its communications with investors. This would be a negative consequence given that investors are able to gain an independent understanding of management's ability to estimate through its comparison of actual results versus the guidance that is currently provided in Earnings Releases. As with the AD&A and required emphasis paragraphs, requiring assurance on management's forward-looking financial information contained in the MD&A and Earnings Release would lengthen the timetable between when a company closes its books, releases earnings and files its financial statements with the SEC. This would increase audit costs and divert management's attention to past financial results for a longer period of time when they should be focused on current operations. In addition, requiring auditor assurance on these disclosures could deter companies from including forward-looking analysis or management perspective in these documents in the first place. Furthermore, auditors cannot take advantage of the SEC's safe harbor rules applicable to forward-looking information, with the result being that auditors' liability for inaccuracies in such disclosures would actually go beyond those of the issuers themselves. Such a result could put further pressure on issuers to eliminate such statements entirely, reducing transparency for investors.

We also believe it is noteworthy that current auditing standards describe the auditor's responsibilities regarding other information outside the financial statements in documents containing audited financial statements (e.g., MD&A). As described in the release, these responsibilities include reading and considering whether such information or the manner of its presentation is materially inconsistent with the financial statements or represents a material misstatement of fact. As mentioned above, it may be helpful to investors to describe the auditor's responsibilities related to financial information outside the financial statements in the auditor's report.

In summary, we are supportive of the Board's efforts to introduce alternatives to the audit reporting model that would meet the needs of investors and be practical for management, audit committees and audit firms to adopt in a cost-effective manner. We believe that the focus should not be on providing more information to investors but improving the quality of information to investors. We believe that better information can be provided through a combination of clarifying changes to the audit report by the PCAOB coupled with targeted standard-setting by the FASB or SEC.

We appreciate the opportunity to present our views on this subject and welcome the opportunity to meet in person to review them with you. Thank you for your attention and consideration.

Best regards,

Susan K. Tonner

Susan K. Tonner

Public Company Accounting Oversight Board
Attention: Office of the Secretary
1666 K Street, N.W.
Washington, D.C. 20006-2803

**RE: Rulemaking Docket Matter No. 34**
**Concept Release on Possible Revisions to PCAOB Standards**
**Related to Reports on Audited Financial Statements**

Dear Members of the Board,

We are the five leading publicly-traded managed care companies in the United States: Aetna Inc., CIGNA Corporation, Humana Inc., UnitedHealth Group Incorporated, and WellPoint Inc. As a group, we provide health insurance products and related services to more than 100 million medical members. Our customers include employer groups, individuals, seniors, college students, part-time and hourly workers, governmental units, government-sponsored plans, labor groups, and expatriates. We also provide other insurance products, such as dental, vision, term life, short-term and long-term disability, and supplemental health insurance coverage as well as a variety of healthcare-related services that do not involve insurance products. Collectively we reported annual revenues of approximately $242 billion in 2010 (equivalent to 1.7 percent of the gross domestic product of the United States). We primarily report financial information under the generally accepted accounting principles in the United States ("U.S. GAAP"), and we file public financial statements in accordance with the regulations of the United States Securities and Exchange Commission (the "SEC").

We appreciate the opportunity to provide our comments in response to the Public Company Accounting Oversight Board's ("PCAOB" or the "Board") *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (the "Concept Release"). The views expressed in this letter and the attached appendix on behalf of our collective group do not necessarily represent the positions of any specific company or individual.

It is our understanding that the Board is seeking feedback on several alternatives for changing the auditor's reporting model in an effort to increase transparency and relevance to financial statement users. Specifically, the proposed alternatives include one or a combination of the following: 1) a supplement to the auditor's report in which the firm would be required to provide additional information about the audit and our financial statements (an "Auditor's Discussion and Analysis" or "AD&A"), 2) required and expanded use of emphasis paragraphs in the auditor's report, 3) auditor reporting on information outside the financial statements, and 4) clarification of certain language in the auditor's report. The detailed discussions and illustrative examples in the Concept Release were useful in helping us understand exactly how the Board envisions these alternatives taking shape. Although we are not in the business of performing audits and providing assurance, and therefore might have different views than the firms that audit our public financial statements, the types of changes presented in the Concept Release nonetheless have the potential to significantly alter the public financial reporting landscape in which we operate.

Under the current distinct frameworks that govern financial reporting and auditing, the roles of all parties involved are clear. *Companies* are responsible for compiling and disclosing financial information in accordance with U.S. GAAP and SEC reporting requirements for the purpose of providing users of financial statements with relevant, useful information about our businesses. *Auditors* are responsible for forming independent, informed opinions about whether or not we have fulfilled that responsibility. Finally, a*udit committees and boards of directors* are responsible for active and independent oversight of management regarding the adequacy of internal controls, integrity of the financial statements, compliance with legal and regulatory requirements, and risk management; and a significant component of this role involves dialog and discussion with the auditors regarding the results of their audit procedures.

Our primary concern is that the types of changes presented in the Concept Release could alter the balance of duties within this framework by partially shifting responsibilities for reporting on the financial status of our businesses to our auditors, who are necessarily removed from the actual management and operations of those businesses. Additionally, enacting any of the proposed changes could have the effect of implying, in a subtle way, that audit committees are not capable of, or effective in, carrying out the responsibilities traditionally reserved for them. We believe that the Board's intention is to find a way to *supplement* our existing financial reporting; but in practice we believe that the proposed changes would have the effect of *diluting*, and potentially *supplanting* our own reporting to varying degrees to the detriment of users of our financial statements.

We do not believe that implementation of new forms of auditor reporting such as an AD&A is appropriate as contemplated in the Concept Release. An AD&A would undermine the role of the audit committee, which is independent from management and already represents the shareholders in its oversight of and direct communications with the auditors. Furthermore, an AD&A would ultimately provide little incremental value to users of financial statements since, over time, "boilerplate" language would be unavoidable and the information provided in such reports would likely gravitate towards the lowest level of acceptable disclosure for the purpose of minimizing legal exposure. At the same time, auditors would face significant risks by deviating in any meaningful way from the statements and commentary provided by management (or by choosing to highlight different areas), so their reporting would most likely mirror the company's reporting. The creation of duplicative disclosures would not add value or provide decision-useful information to our investors.

We also believe that requirements to expand the use of emphasis paragraphs in the auditor's report will not be helpful to users of our financial statements and should not be pursued. Emphasis paragraphs would likely shift users' reliance from more qualified sources (i.e., management) to less qualified sources (i.e., auditors). Users of our financial statements should understand our industry and operations, and therefore be able to assess which matters are most significant to their decision-making processes without an auditor's emphasis paragraph directing them where to focus their attention. We believe that the proposals in this Concept Release would actually lessen the incentives for users to perform thorough reviews of our financial statements and notes. Users should read the notes to our financial statements in full, not rely on our auditors to tell them which notes to read, which notes they can consequently ignore, and which estimates are important. If users, after thorough review of the financial statements and notes, have questions about specific disclosures, they may contact a company's dedicated investor relations department for clarification.

While certain investors may demand more transparent disclosure from public companies, we believe that reforms in that area should appropriately come from the standard-setters best positioned to enact them: the Financial Accounting Standards Board ("FASB") and the SEC. If financial information that is currently outside of our financial statements is deemed to be of such importance to investors and other users that auditor assurance is necessary, then GAAP should be amended and the information should be included in the notes to our financial statements and covered directly by the auditor's report. Our auditors are already associated with information outside of our financial statements that is included in various filings or other documents and they perform procedures to assess its consistency with information in the financial statements or information obtained in the course of the audit. Providing assurance on it will not change its quality, relevance, or usefulness.

Finally, we do not believe that clarification of the auditor's report is necessary. The report could not be expanded sufficiently to explain the detailed, nuanced concepts presented in the Concept Release. At the same time, all of these concepts and information on the auditor's responsibilities are fully described in existing public documents that can easily be read and understood by interested users.

Each of the four proposed alternatives adds costs and complexity without meaningfully adding value. In some instances, the proposed concepts may even introduce confusion about the role of management and the integrative nature of the current financial reports, including their MD&A and risk factors. Furthermore, the proposed changes would likely require additional time, delaying quarterly earnings release dates. Many investors would regard a delay in the availability of timely information for assessing company performance to be a significant step *backwards* in the financial reporting process.

Thank you for your attention to our concerns. Attached to this letter is an appendix that contains our responses to the detailed questions posed by the Board in the Concept Release. We hope that these perspectives are of value to you in your deliberation processes. If we can provide further information or clarification of our comments in the meantime, please call any of the signatories listed below.

Sincerely,

## APPENDIX – Responses to the Board's Questions

This appendix presents our responses to the questions interspersed throughout the Board's Concept Release. In preparing this document, we read the Concept Release along with the included illustrations, solicited feedback from various groups and individuals within our companies, and read available comment letters that have already been submitted to the Board and made public. In some instances, we agreed strongly with points made by other commenters and have made similar suggestions; in other cases, our views differed and we commented accordingly. Overall, these responses represent the current views of our five-company group and are not intended to align us with any particular commenter or subset of commenters.

*1. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.*

*a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?*

No. We believe that the FASB and the SEC, which are responsible for setting standards to ensure that public financial information is relevant and useful to investors, are better suited to consider and propose any such initiatives. We believe the Board should focus its finite resources on overseeing the conduct of auditors within the existing reporting framework in which *companies report* and *auditors attest*, rather than on remaking a framework that is overseen by the FASB and the SEC.

Fundamentally, we do not believe that "the inability of users to understand the auditors' report" is a problem that should be solved by the Board. Sophisticated users of public financial information (e.g., institutional investors) generally have the insight and experience to fully understand the roles and responsibilities of auditors without an expanded auditors' report. At the same time, less-sophisticated users of companies' financial statements likely would not benefit from expanded auditor disclosures or know how to interpret such disclosures in context. While certain investors may desire more transparent public disclosure, we believe that reforms in this area should come from the standard-setters, like those mentioned above, that are best positioned to enact such reforms.

*b. In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?*

We believe the standard auditor's report provides the appropriate amount of information. Although some level of informed understanding regarding the purpose and nature of the report is necessary to fully benefit from its contents, the same is true of financial reporting in general. It is important that users of financial statements accurately understand the scope of an audit – what it is intended to do and what it is **not** intended to do. However, we believe that expanding the auditor's report into a much longer and more detailed explanation of the audit process may detract from this central goal.

Furthermore, we do not believe that the purpose of an auditor's report is to "provide relevant and useful information to investors and other users of financial statements." The auditor's function is to independently opine on the financial statements and related notes disclosed by the companies that they audit – not to generate original commentary or content. If the Board believes that information currently presented in public filings is insufficient or irrelevant, the Board should work through standard-setters and regulators to help highlight these deficiencies and effectuate changes to U.S. GAAP. It should not seek to expand the role of auditors' reports from one of assurance to one of direct financial reporting.

*c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?*

The Board should not require that the auditor provide assurance on matters in addition to the financial statements. Our periodic SEC reports contain a significant amount of financial information and discussion outside of the financial statements; and our auditors currently perform additional procedures to gain comfort that all of these additional elements are consistent with the audited financial statements and their understanding of our respective businesses. We believe that most users of financial statements are aware of this and rely on that implicit assurance.

We do not believe that requiring auditors to give **explicit** assurance on these additional elements will improve quality, relevance, or usefulness of the existing disclosures for investors. At the same time, broadening the scope of the auditor's report would expand the auditor's legal exposure. The additional amount of work auditors would need to do (the cost of which would be borne by preparers through increased audit fees) to sufficiently protect their firms against this added legal exposure could be staggering. We do not believe that creating significant additional amounts of audit work with little to no improvement in the quality, relevance, or usefulness of the underlying financial information is worth pursuing.

The SEC already has an active role in establishing regulations over MD&A and other sections of public filings with the goal of encouraging companies to provide sufficiently meaningful and detailed information to investors. It is their responsibility to enact changes to reporting requirements when this objective is not being met.

*2. The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."*

*a. Should the auditor's report retain the pass/fail model? If so, why?*

Yes. The auditor's responsibility is to independently opine on whether or not the financial statements are presented fairly in all material respects, while rendering the appropriate opinion based on that conclusion. The users of financial statements should be able to confidently rely on the opinion issued by an auditor.

We believe that characterizing the current model as "pass/fail" is somewhat misleading. For most public companies, issuing financial statements with a qualified opinion would not be acceptable due to the broad range of users who need reliable information about our businesses. Creating a spectrum of potential levels of auditor comfort (e.g., auditor reporting of information that might conflict with management's filing or reporting of "close calls" – which would call into question the overall audit opinion on the financial statements as a whole) would be confusing and therefore unfair to the users of financial statements. Financial statements of public companies should comply with U.S. GAAP or they should not be filed with the SEC; and the current model accomplishes this by essentially forcing companies to "pass." Other alternatives would result in the public getting less reliable information than they currently receive.

*b. If not, why not, and what changes are needed?*

As discussed above, the current model incents companies to prepare financial statements that will receive unqualified opinions from their auditors. We believe that this dynamic benefits users of financial information and should not be changed.

*c. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.*

We do not believe that changes to the auditor's report or supplemental reporting are necessary, primarily because we feel that the current roles of companies and auditors in financial reporting are appropriate and are well understood by users of our financial statements.

*3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.*

Additional information, if any, about a company's financial statements and the underlying estimates, judgments, business plans, and expectations for the future should be provided by its management team, with oversight by the company's audit committee, and not by the auditor. The management team is in the best position to accurately and meaningfully explain results of operations and forward-looking information, and the audit committee assists the full board of directors in its oversight of the integrity of the company's financial statements. While auditors have significant, unique knowledge regarding company management and its business and financial information, such knowledge is derived second-hand. A fundamental premise underpinning an audit is seeking objectively verifiable evidence, which can only be gathered from historical financial reporting and not through a focus on forward-looking information. Consequently, management, with the oversight of the audit committee is the only group that can appropriately provide historical context and forward-looking information. In this regard, as discussed above, the FASB and the SEC are the appropriate agencies to implement any enhanced disclosure requirements.

*4. Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?*

As discussed throughout our responses, we do not believe that amendments to the standard auditor's report are necessary. Likewise, we believe the current auditor's report on internal controls clearly and concisely serves the purpose for which it was intended and does not need to be changed.

*5. Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?*

*a. If you support an AD&A as an alternative, provide an explanation as to why.*

We do not support the creation of an AD&A.

*b. Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?*

N/A. Refer to response in question 5a.

*c. Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?*

The framework for ensuring that public-company financial statements provide investors with the relevant, useful information they need in order to make informed decisions already exists in the form of U.S. GAAP and SEC regulations. The implication that investors need more or different types of information is really an implication that this existing framework needs to be reformed by the entities that have authority over public financial reporting. Users of the financial statements are best served by enabling auditors to focus on their job of ensuring that the existing financial reporting framework is being applied appropriately; not by requiring auditors to provide their own original commentary.

For example, the notes to our financial statements that describe estimates for medical costs incurred but not reported (IBNR) explain how these liabilities are subject to uncertainty and are the product of complex actuarial models and judgments that consider many factors. We provide substantial disclosures about the risks associated with this process in the notes to our financial statements, as well as in the MD&A and Risk Factors sections of our Forms 10-K. If, after review by management, our audit committees, *and our auditors*, they are deemed to be in accordance with GAAP, there should be nothing else our auditors could add (in an AD&A or elsewhere) that would make that information more useful or relevant. If our current disclosures under GAAP are deemed inadequate, the SEC and the FASB should undertake a project to amend GAAP accordingly.

Any commentary by our auditors on these IBNR disclosures would likely result in investors reducing the time they devote to reading and understanding our disclosures and increasing the extent to which they ignore other notes to the financial statements that are not highlighted in the auditors' report. Although our auditors do a significant amount of work to gain comfort that our IBNR estimates are not materially misstated, they have neither the time nor the resources to analyze and understand our reserves at the same level of detail that our own companies do.

*d. If you do not support an AD&A as an alternative, explain why.*

Our current financial reporting framework is intended to provide investors and other stakeholders with financial statements that convey useful, relevant information about our businesses. If the Board does not believe that U.S. GAAP or SEC disclosure requirements serve this purpose, the Board should work with the FASB or the SEC, as applicable, and other relevant stakeholders to ensure that they are achieving the desired objectives. Regardless, the auditor's report should not be expanded into a mechanism that is used to fix perceived shortcomings in our current accounting and reporting models.

The volume of publicly disclosed financial information could seem overwhelming to users of that information. From that standpoint, we can understand the surface appeal of an AD&A or emphasis paragraphs in auditors' reports, which could serve almost as 'executive summaries' of the related reports – directing users to focus on certain information while potentially giving them comfort that they can safely ignore areas that are not highlighted. However, as we discussed in our response to question 3, these determinations about the relative importance of different parts of the financial statements simply cannot and should not be made by our auditors.

*e. Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?*

We believe that the current auditor's report appropriately focuses on the audit scope and responsibilities and that no changes are necessary. We do not believe that the auditor should be required to further comment on the audit or companies' financial statements. The auditor's job has historically been, and should continue to be, to assess whether or not our financial statements are fairly presented in accordance with GAAP. Requiring auditors to publicly comment on the audit process and financial statements could also create a much more adversarial environment between auditors and management and could inhibit the free flow of information from one to the other.

*6. What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?*

We do not believe that any of the information proposed for inclusion in a potential AD&A would provide added benefits to users of our financial statements because a report of this type would, in practice, consist of standardized boilerplate language.

Audit risk is conceptually different than business risk, and not all of the risks businesses face impact the scope and conduct of an audit. More reporting on how and when specific audit procedures were conducted will not change how a strategic investor assesses the future prospects of our businesses, and will instead increase audit costs with no corresponding benefits to the investing community.

Furthermore, the Board's existing standards and other publicly-available resources (we agree with other commenters that have highlighted the CAQ Guide as a worthwhile example) already provide in-depth guidance on the techniques and terminology employed by auditors in their evaluations of companies' assertions in public financial statements. These centralized resources obviate the need for additional requirements that could essentially result in thousands of audit reports repeating the same information in a condensed and likely less meaningful format.

*7. What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, including "close calls")?*

A report presenting an auditor's views on a company's financial statements based on established audit procedures is not appropriate and will not achieve the Board's desired objectives. First, out of necessity we believe that these reports will largely become boilerplate language with little, if any, substantive content that would provide additional value to users (as further discussed in our response to question 10).

Second, without significant dialog and context, any information presented will not be useful and may even be misleading. For example, materials presented by auditors to audit committees regarding their views of the financial statements are almost always accompanied by significant discussion and take place within the context of a continuous dialog between those two groups. Third, based on our experiences, we: a) review and discuss with our auditors our disclosures and accounting for material matters, including judgments and estimates that may be considered “close calls” and b) resolve any significant differences in judgment on those matters prior to disseminating our financial information. Therefore, we would not expect any significant additional information that would be useful or relevant to investors to be provided in an AD&A. Rather, any auditor reporting on such matters would be unnecessary and repetitive of information already disclosed by management. Finally, any disclosures of an auditor’s views of management’s judgments or estimates that could be seen as “close calls” would undermine management’s financial reporting and the auditor’s own “unqualified” opinion, creating confusion for users of financial statements and a diluted or piecemeal audit opinion.

Additionally, audit committees, which are independent from management and represent our shareholders, have responsibility for assisting our boards of directors in their oversight of the integrity of our financial reporting, including the topics raised in this question. We believe users, auditors, and others do not have, and should not attempt to exercise, that responsibility. If the Board is of the opinion that audit committees are not effective in that role, it should work with the appropriate regulatory agencies to propose alternatives and take action.

*8. Should a standard format be required for an AD&A? Why or why not?*

We do not believe that an AD&A is appropriate. If required, AD&A reports would likely become standard boilerplate formats (whether or not standard parameters are required) driven by, among other things, an effort by audit firms to manage their legal exposure.

*9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?*

For the reasons previously stated, we do not agree that an AD&A is necessary. Our companies already discuss, in considerable detail, these types of risks in the Risk Factors sections of our Forms 10-K and other SEC reports. Adding such discussion to the auditors’ report is unnecessary, repetitive, and could be construed as an indication that the risk factor disclosures made by management are inadequate or misleading in some way. As previously stated, if there is significant concern that the current financial reporting standards and regulations are not resulting in relevant and useful information, the Board should help communicate these concerns to the SEC and the FASB so that the standard-setters responsible for financial reporting can take action to reform the framework.

If investors have questions pertaining to business, strategic, or operational risks, we believe that they should raise such questions with us rather than looking to our auditors to highlight or discuss those risks for them. Because different users of the financial statements will likely have different interests or concerns when reading our financial information, we currently present and discuss all material risks to our business so that those users can make informed decisions based on their needs. Auditors have traditionally evaluated risk from the standpoint of providing reasonable assurance on the financial statements, not from the viewpoint of a potential investor. Requiring auditors to discuss risks other than audit risk would essentially be asking them to take on an advisory role for which they do not have the necessary experience or qualifications.

*10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?*

Boilerplate language could likely not be avoided in an AD&A given the legal and regulatory environment in which businesses, auditors, and investors operate. We believe this environment will necessarily drive such reporting to the lowest level that would technically meet the applicable requirements in an effort to minimize legal exposure.

*11. What are the potential benefits and shortcomings of implementing an AD&A?*

We do not believe there would be any potential benefits to users of financial statements in implementing an AD&A.

The very concept of an AD&A undermines our management teams' reporting in MD&A as well as the Risk Factors section of our public filings. Requiring auditors to offer opinions on the same topics that we already discuss implies that company disclosures are somehow 'biased,' incomplete, or imperfect information that needs further clarification by an independent party. As previously noted, comments or concerns as to the completeness or quality of disclosure should be under the purview of the SEC. Attempting to cure perceived inadequate reporting under Regulation S-K by means of the auditor's report is both illogical and inappropriate. If users believe that our reporting under Regulation S-K is inadequate, they should discuss that with the SEC, not the Board.

*12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?*

We believe that any new language in an auditor report or AD&A will almost certainly conform to company disclosures because the legal and regulatory environments in which we operate effectively require us to agree on common language to minimize legal exposure. The end result would be unnecessary duplication and increased costs with no improvement in audit quality or in the information presented to users. Any unreconciled 'inconsistent or competing information' could be a source of great tension and disagreement between management, audit committees, and auditors and could lead to breakdowns in communication that would diminish the quality of financial reporting and auditing as a whole.

*13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?*

We do not believe the matters described in the illustrative paragraphs would be relevant or useful.

The Concept Release suggests that required emphasis paragraphs could highlight the most significant matters in the financial statements, including significant management judgments and estimates and areas with significant measurement uncertainty. In practice, emphasis paragraphs would simply shift users' reliance from more qualified sources (i.e., management disclosures) to less qualified sources (i.e., auditors). Users of our financial statements should understand our industry and operations, and thus be able to assess which matters are most significant to their decision-making processes. We believe that requirements proposed in this Release may cause investors and other users to rely on the auditor's report as a roadmap to limit their review of our public filings, including our financial statements and notes. Users should read the notes to our financial statements in full, not rely on our auditors to tell them which notes to read, which notes they can consequently ignore, and which estimates are important.

*14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?*

We do not believe that audit reports should be required to contain such emphasis paragraphs or discussion of key audit procedures. Auditors' descriptions of their procedures would be necessarily brief and general for the purpose of limiting legal exposure, and the inclusion of only certain audit procedures absent a more thorough discussion of the audit strategy, scoping, and risk-assessment could potentially confuse or mislead users. Auditors' reports included with our financial statements are not an appropriate vehicle for delivering long, detailed descriptions of an audit.

*15. What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs*?

None – for the reasons discussed in question 14.

*16. What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?*

None – for the reasons discussed in question 14.

*17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?*

As with an AD&A, we believe that boilerplate language will be unavoidable. Standard language will develop in response to the threat of legal challenges and as a result of the Board's inspection process.

*18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?*

We see no significant benefits.

In addition, serious shortcomings exist insofar as: 1) these emphasis paragraphs could divert users away from information that auditors deem unworthy of emphasis, but which may very well be relevant to the users; and 2) there would likely be a great deal of second-guessing related to matters that were not emphasized.

*19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model*?

No. As previously noted by us and by other respondents, the volume of information outside the financial statements exceeds the amount of information inside the financial statements, which are already complex and potentially daunting to many users. If financial information that is currently outside of our financial statements is deemed to be relevant and useful to investors and other users such that auditor assurance is necessary, then by implication GAAP has not met its objective of providing relevant and useful information in the financial statements. If that is the case, then GAAP should be changed and the information should be included in the notes to our financial statements covered directly by the auditor's report. As stated previously, our auditors are already associated with such information and perform procedures to assess whether any of it is inconsistent with information in the financial statements or obtained in the course of the audit. Providing assurance on it will not change its quality, relevance, or usefulness.

The Board might consider the quality of quarterly reports on Forms 10-Q for comparison. Certain of our companies' auditors do not issue review reports on those statements; but users still know that a filing cannot occur if the auditors object to any inclusions or exclusions from those documents. The same situation exists with respect to the information outside the financials but included in the Form 10-K. Just as requiring a review report in the 10-Q filing would not improve the quality of the quarterly report, including some form of assurance on the other information in a 10-K would not improve its quality.

Auditors may be willing to provide written assurance on information outside the financial statements as a means of expanding the scope of the services they sell to their audit clients. Given the question of whether additional assurance would actually change the quality, relevance, or usefulness of our financial information to users, it seems an unnecessary diversion of resources – both auditors' time and companies' money – to require such assurance.

*a. If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.*

Refer to our overall response to question 19.

*b. On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.*

Our views on MD&A are in the responses to questions 11, 12, 13, and 19.

Our auditors generally do read and perform limited procedures on earnings releases prior to their issuance; but since these releases occur prior to the completion of the audits, the firms are typically not in a position to provide assurance to the public.

As noted by other commenters, it would likely be difficult for auditors to provide meaningful assurance on non-GAAP information since there are often no standards that govern its form or composition. Different industries and companies within those industries may have different definitions of a non-GAAP metric like EBITDA, for example. Without a governing standard for non-GAAP information, auditors would only be able to opine on the consistent or inconsistent use of a particular concept. We include in our periodic filings certain metrics and statistics that are not defined or considered by GAAP, including membership counts and medical cost ratios. Since there are no GAAP definitions for these terms, our auditors would have no basis in which to ground an opinion on their presentation.

Furthermore, the information outside the financial statements often includes forward-looking statements and estimates, which auditors would not have an ability to opine on considering the difficulty in identifying or obtaining objectively verifiable support for this type of information.

*c. What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?*

None. We believe that the current procedures performed by our auditors over information outside of the financial statements are adequate and are well understood by sophisticated users of financial statements. We suggest that the Board consider additional educational initiatives to help less sophisticated users better understand the role and responsibilities of auditors.

*d. If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?*

As noted above, we believe that requiring auditors to provide assurance on MD&A is inappropriate. To the extent that information in MD&A is derived from our financial statements or is subject to our internal controls over financial reporting, our auditors are already performing audit procedures that are tied to MD&A reporting.

*e. Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?*

We do not believe that auditor reporting on MD&A would significantly change either the form or content of those disclosures. Auditors already evaluate MD&A disclosures for consistency with the financial statements and our underlying records. We would expect to make no significant changes to our MD&A as a result of any auditor attestation.

*f. Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?*

As discussed above, we do not believe auditors should be required to provide assurance on information outside the financial statements. If the Board, with the assistance of the SEC, concludes that auditor assurance on certain financial information outside the financial statements is necessary, then we believe (similar to other commenters) that such information should be required to be included in the notes to the financial statements and covered by the auditor's report. Requiring an auditor's report to cover specific discrete sections of a public filing located at various places throughout the document would be unnecessarily confusing for users.

*g. If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.*

See our comments above.

*20. What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?*

We see no significant benefits.

The major shortcoming, discussed above, would be the diversion of both companies' and auditors' time and resources to facilitate changes that would not improve the quality, relevance, or usefulness of financial reporting to users.

*21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:*

• *Reasonable assurance*

• *Auditor's responsibility for fraud*

• *Auditor's responsibility for financial statement disclosures*

• *Management's responsibility for the preparation of the financial statements*

• *Auditor's responsibility for information outside the financial statements*

• *Auditor independence*

> *a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?*
>
> We do not believe that attempts to clarify these areas in the auditor's report would be appropriate or helpful to users of our financial statements. As we (along with other commenters) have previously suggested, clarifications on all of these topics can already be found in publicly available documents including the Board's own publications. Discussions of these topics are usually necessarily precise, complex, and nuanced and are more suitably presented in robust stand-alone guides where they can be fully developed. Users of financial statements are better served by the availability of centralized, standardized literature describing the prevailing audit framework than by condensed, varying versions dispersed among thousands of auditors' reports.
>
> We believe that the Board should consider further developing, advertising, and distributing these centralized resources as part of an initiative to help train and educate users of financial statements about the roles and responsibilities of auditors.
>
> *b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.*
>
> No. We agree with a previous commenter who suggested that users of financial statements should be responsible for making reasonable efforts to understand the role and responsibilities of an auditor by way of understanding the applicable auditing and financial reporting frameworks. Our auditors' current reports on our financial statements clearly state that they have conducted their audits in accordance with PCAOB standards and that our financial statements are fairly presented in accordance with U.S. GAAP. Anything beyond that would amount to boilerplate language that would simply be repeated in every audit report.
>
> *c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?*

None are needed.

*d. What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?*

These clarifications relate to the content of the auditor's report, not to the processes and procedures actually employed by auditors. Attempts at "clarification" should not drive changes in the auditor's role or responsibilities.

*22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?*

As discussed above, we only see potential shortcomings. The language in the standard auditor's report is already very clear and expanding or changing the report would only introduce more opportunities for misinterpretation.

*23. This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?*

We do not believe that any of the alternatives are appropriately addressed through changes to the auditor's report or its roles and responsibilities.

*24. Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?*

No. As discussed throughout our responses, an auditor only needs to be able to communicate whether or not a company's financial statements are fairly presented in accordance with GAAP and are materially free of errors. The current form of the auditor's report accomplishes these two objectives clearly and concisely.

*25. What alternatives not mentioned in this concept release should the Board consider?*

The Board should consider removing this project from its agenda. We believe that our companies' management teams are the most qualified, most appropriate, and most reliable sources for first-hand financial information, discussion, and analysis about the businesses they operate. It is not clear to us how investors and other users of the financial statements would benefit from requirements that would shift the responsibility for financial reporting away from our companies and onto our auditors.

Our companies have had a great deal of experience fielding questions about our businesses and our financial statements from analysts, investors, regulators, and other users of our financial statements. Very few, if any, of these inquiries have dealt with the roles of our auditors, their audit reports, audit procedures, audit risks, or other topics presented in this Concept Release. Based on this experience, it is not apparent to us that any of this additional information needs to be included in an auditor's report.

*26. Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?*

As discussed throughout our responses, we are not supportive of any attempts by the Board to modify the existing auditor reporting framework or fundamentally change or expand the current roles and responsibilities of auditors. The Board should also refrain from implementing processes that deal with the reporting of financial information (as opposed to the auditing of reported financial information) since other regulatory agencies are primarily responsible for such reporting.

*27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?*

Yes. To the extent that information presented in auditors' reports: 1) conflicts with either our disclosures or the overall audit opinion on the financial statements or 2) otherwise indicates that certain accounts or disclosures are incorrect or inadequate, the perception of a qualified, piecemeal opinion will be unavoidable. Uncertainty as to whether or not the financial statements are fairly stated as a result of the perceived piecemeal opinion would be a significant problem, because users of the financial statements may determine that they are not able to rely on them despite what is technically an unqualified audit opinion.

Additionally, as noted above, we do not believe that users would rely on an expanded report any more than they rely on the current report. On the other hand, it is possible that any addition of emphasis paragraphs or risk discussion paragraphs would be used as a means to shortcut their responsibilities to read our entire financial statements and the related notes.

*28. Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?*

It is not necessary to pursue changes to the standard auditor's report that would likely result in the repetition of boilerplate language that would still fail to be robust enough to fully convey the role and responsibilities of auditors to users who are unfamiliar with the current system. Our recommendation would be for the Board to consider focusing its efforts on providing education about audits and audit requirements to investors and promoting the currently available resources.

*29. What effect would the various alternatives have on audit quality? What is the basis for your view?*

We see no basis to conclude that the types of auditor reporting discussed in the Concept Release will improve audit quality. On the other hand, expanding the auditor's role into one of financial reporting could instead have the unintended effect of deteriorating the quality of audits and significantly increasing audit costs. As discussed throughout our responses, these proposals would effectively create significant new roles and risks for audit firms. Therefore, the most senior auditors would be required to spend significant amounts of time addressing these new reporting requirements. By distracting these experienced auditors from their core competencies (i.e., auditing) and their most significant responsibilities with the added responsibilities for generating original financial commentary (while attempting to minimize legal exposure) and providing assurance on areas that would be difficult to audit (e.g., Risk Factors, MD&A, etc.), the Board's proposals would likely dilute the limited resources available to audit firms.

*30. Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others?*

Although we do not support significant changes to the auditor's reporting model, any changes made should apply to all registrants regardless of size or industry. Applying different changes to different industries or registrants would likely confuse users of financial statements, and may have unintended consequences on capital markets.

*31. This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.*

> *a. Are any of these considerations more important than others? If so, which ones and why?*
>
> As we and other commenters have already suggested, the proposed changes could potentially undermine the responsibilities and credibility of management teams and audit committees; adversely affect relationships among auditors, audit committees, and our management teams; and increase auditor legal exposure (which therefore increases costs to companies and investors with no added benefits). These are all very significant potential effects that we strongly urge the Board to avoid.
>
> *b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?*
>
> Since we see no significant benefits, we see no justification of additional costs. Many of these proposals would likely increase audit time and expense due to increased consultation, enhancements to quality control procedures, and the possibility of increased future litigation costs. Without concrete benefits or added value to offset these additional costs, changes to the auditor reporting model are simply not warranted.
>
> *c. Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?*
>
> No.
>
> *d. What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?*
>
> N/A

*32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial* *statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?*

As only one of the three parties involved in that equation, it is hard for us to fully evaluate how the relationship would change in practice. From our perspective, knowing that auditors would be providing first-hand discussions of our businesses independent of our own could alter the way in which we interact with them. Due to the fact that our current auditing and reporting frameworks are very clear in establishing unique, well-defined roles and responsibilities for both management and auditors, we believe that our relationships with our auditors are strong and open, yet necessarily separate to a healthy degree. Any negative changes to these otherwise effective relationships as a result of the blurring of roles and responsibilities would be harmful to investors.

Docket 034: Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards

Fatima Alali
California State University Fullerton

September 24, 2011

Based on my observations as a researcher and classroom discussions as an educator, please consider the following:

Changing the reporting model of the auditor's report may consider the following factors that are integral to the auditors' communication to the public reflecting both auditor's responsibilities and audit procedures' limitations:

First, due to the concept of reasonable assurance changes in auditor's reporting model would integrate clarification of reasonable assurance so the new reporting format and wording do not reflect beyond reasonable assurance, but it clarifies it. In addition, the report may indicate the level of assurance, this "very high level but not absolute assurance".

Second, in the current wording audit report, auditor's judgment is potentially only reflected in three locations while judgment involved in evaluating accounting estimates, principles and presentation and disclosure of financial statements would need great deal of explanation to reduce the expectation gap. This is important because public should not infer more than reasonable assurance, judgment and thus reducing expectation gap not increasing it.

Third, auditor's legal liability exposure is high and probably the highest in the last decade. The suggested "auditor's discussion & analysis" must be clear and beneficial to the public. However, the content of this communication is not-cost free to the auditor. The benefits to public must outweigh the costs of preparation and yet reduce expectation gap not increase it and provide a clearer understanding that "in auditor's judgment", conclusions reached are "fairly presented" or "true and fair". Therefore, integral to changes in auditor reporting model is agreeably concept of reasonable assurance, emphasizing the independent competent expert's judgment.

The auditors' discussion and analysis is beneficial to public as long as it does not hints a level of assurance above reasonable assurance that is assessed based on auditor's judgment and as long as it is clearly written and does not exposure auditors to increased liability. One alternative is then the emphasis of matter report in which the auditor would describe issues that may need special attention.

*Re: PCAOB Rulemaking Docket Matter No. 34*

The American Academy of Actuaries'[1] Financial Reporting Committee offers the following comments on the PCAOB's Concept Release.

We applaud the PCAOB's willingness to reach out and consult on the issues surrounding the auditor's report based on recent investor feedback. We believe most of the concerns of investors and other financial statement users stem from the need for enhanced disclosure of information regarding the risk and uncertainty of elements included in financial statements and reports which contain those (Financial Reports). Risk and uncertainty is the area of practice of actuaries and is a subject with which we deal constantly.

There is a dichotomy between the world of Financial Reports with its specific numbers and the world of economic reality in which there is a great deal of risk and uncertainty resulting in a range of possible values for a significant quantity of balance sheet items. Systems of financial security, such as the insurance industry, are excellent examples.

Accordingly, we strongly endorse steps to provide more disclosure by management about these matters to users of Financial Reports. Comments by management concerning the ranges of certain values shown in the Financial Statements, the methods used to determine those ranges, the methods of selecting the values shown, and the methods which might be used and reasoning for the selection of the methods chosen are some examples. However we do not believe that this information should come from the auditor. The auditor should assess the reasonableness of management's judgments without supplanting management's judgment. We instead endorse limited additional information being provided in the auditor's report as to the significant estimates in the Financial Reports, the key assumptions behind those significant estimates and the use of any internal or external specialists by the auditors to assist them in evaluating the reasonableness of management's estimates.

[1] The American Academy of Actuaries ("Academy") is a 17,000-member professional association whose mission is to serve the public on behalf of the U.S. actuarial profession. The Academy assists public policymakers on all levels by providing leadership, objective expertise, and actuarial advice on risk and financial security issues. The Academy also sets qualification, practice, and professionalism standards for actuaries in the United States.

Overall, we believe it will enhance the user's appreciation of Financial Reports as well as enhancing the usefulness of the Financial Reports to have at the user's disposal a description of the efforts made by management, auditors, and others to provide assurance that the information used by management and others to reach conclusions is correct.

Below we provide additional comments on certain questions posed in the Concept Release.

Questions

1. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.

a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?

**Yes, we believe the Board should undertake such an initiative to provide investors with more detail beyond the pass/fail model currently employed.**

b. In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?

**We believe the key improvement would be for the auditor to provide limited additional information regarding significant estimates in the Financial Reports, the key assumptions behind those significant estimates and the use of any internal or external specialists by the auditors to assist them in evaluating the reasonableness of management's estimates.**

c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?

**No, we do not think that the auditor should provide assurance on additional items like management's discussion and analysis (MD&A). MD&A gives management the opportunity to reflect on recent operations and discuss future goals and projects. While limited assurance could be given on factual information, MD&A will reflect the current management's style and judgment. This is something we do not think the auditor should supplant.**

2. The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."

a. Should the auditor's report retain the pass/fail model? If so, why?

**Yes, we believe investors are looking for a clear signal that the financial statements are fairly stated. We would discourage any change that would bring ambiguity to such a statement, including moving away from the pass/fail model.**

b. If not, why not, and what changes are needed?

**N/A**

c. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.

**Please see our response to question 1b.**

3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.

**We believe management, executives and the Board of Directors (including the audit committee) are the appropriate sources of information within the financial statements.**

5. Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?

a. If you support an AD&A as an alternative, provide an explanation as to why.

**Yes, but only to the extent that it permits the auditors to comment on procedures performed, communicate what they consider significant estimates and their use of specialists to assist them in evaluating the reasonableness of recorded estimates.**

b. Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?

**It should focus solely on the audit. See our response to question 5a.**

c. Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?

**See our response to question 5a.**

d. If you do not support an AD&A as an alternative, explain why.

**N/A**

e. Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?

**Yes, increased use of emphasis paragraphs may be another method by which the items we discussed in our response to question 1b could be communicated.**

6. What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?

**See our response to question 1b.**

7. What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?

**Management, not the auditor, should be communicating on these issues.**

9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?

**Business risks, strategic risks, or operational risks are best left for management to discuss. These should not be the purview of the auditor.**

15. What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?

**Please see our response to question 1b.**

19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?

**No**

g. If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.

**We are concerned that it would lead to conflict between management and the auditor on what is effectively business judgment rather than accounting judgment.**

21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:
• Reasonable assurance
• Auditor's responsibility for fraud
• Auditor's responsibility for financial statement disclosures
• Management's responsibility for the preparation of the financial statements
• Auditor's responsibility for information outside the financial statements
• Auditor independence

a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?

**Yes we believe the first two bulleted items would be appropriate for clarification. The third and fourth items listed might deserve some limited clarification. We have already stated our objection to auditing information outside of the financial statements and therefore do not believe clarification is appropriate. Finally, auditor independence is to be expected and therefore clarification would add little value.**

32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?

**This could be detrimental to the relationship between the company and its auditors if the auditor supplants management's judgment on the business with the auditors' own judgment.**

We would be happy to participate in further discussions on this issue. If you have any questions, please contact Tina Getachew, Senior Policy Analyst, Risk Management and Financial Reporting Council by phone (202/223/8196) or email getachew@actuary.org).

Sincerely,

William C. Hines

Re: PCAOB Rulemaking Docket Matter No. 34 – *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*

To Whom It May Concern:

The American Bankers Association (ABA) appreciates the opportunity to comment on the *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (Concept Release). ABA brings together banks of all sizes and charters into one association. ABA works to enhance the competitiveness of the nation's banking industry and strengthen America's economy and communities. Its members – the majority of which are banks with less than $125 million in assets – represent over 95 percent of the industry's $13.3 trillion in assets and employ over 2 million men and women.

The Concept Release seeks comments on potential changes to the auditor's reporting model based on concerns of investors and other financial statement users. The changes being considered include: (1) a required Auditor's Discussion and Analysis (AD&A) to be included with an auditor's report, (2) required and expanded use of emphasis paragraphs within the current format of the auditor's report, (3) auditor assurance on other information outside the financial statements (for example, information within Management's Discussion and Analysis (MD&A), non-GAAP information presented, and information within earnings releases), and (4) clarifying language within the current auditor's report that explains what the audit represents and the related auditor responsibilities.

ABA believes that auditor reporting should not be expanded as proposed in the Concept Release. Instead, the audit expectation gap should be narrowed. ABA fully supports efforts that lead to more efficient markets and the effort to provide better information for improving the level of knowledge needed in the allocation of capital. Representing lenders that collectively comprise a significant share of financial statement users in the U.S., we understand that external audits are important to many users of financial statements in effective decision-making related to the allocation of capital. Capital is efficiently allocated by those who have sufficient knowledge of the related reporting entities and their business models. However, we believe that the focus should be on continuing to enhance the quality of financial reporting in areas where investors perceive there are gaps, rather than expanding the role of the external auditor. . Investors are, thus, best served by direct communication from the companies themselves.

We disagree with those who believe that the value derived from expanding auditor procedures to include an AD&A or to provide auditor assurance on other information outside the financial statements will exceed the massive costs that would be required to perform the procedures. Such approaches will only lead to more user confusion between the different reports issued by the auditors and management and will likely increase the already-existing "expectation gap" of what audit assurance actually provides to the investor. For example, discussion of audit "close calls" may actually cause the financial statement user to question the quality of the audit work and why the amounts actually recorded should be relied upon. Considering that "close calls" do not necessarily mean that final decisions made by management or by the auditor are wrong, it is critical to clarify the overall audit process and specific concepts related to it. However, the focus of the audited financial statements should not be on the auditor, but on the related reporting entity.

Underlying the Concept Release is the notion that auditors often have significant information regarding how a company's financial statements were prepared that might be useful to investors and other financial statement users. ABA believes that this information from the auditor, at best, will only confirm what is already disclosed in footnotes to the financial statements or the MD&A. Over time, investors may become frustrated with the auditors' language, which is likely to be carefully-crafted and self-protecting. This could eventually render most of the additional reporting as irrelevant. At worst, such reporting, especially since it relates to highly judgmental areas, could result in uncertainty among users that is unwarranted.

Within the Concept Release, it was pointed out by some that the recent financial crisis is an example of how expanded auditor reporting might be useful in assessing the quality of the financial statements. Discussions of off-balance sheet contingencies and of the sensitivity of loan loss estimates were specifically cited. In our outreach to various banking analysts, we found that the vast majority do not list changes to the auditor report as a significant matter (and none believe it would adequately address the two issues just cited). While we understand that there are those who believe that the related disclosures within the notes to the financial statements or within the MD&A were insufficient prior to the financial crisis, those are issues that should be addressed (and, in fact, have been – or are currently being – addressed) by the Financial Accounting Standards Board and the Securities Exchange Commission. We question how expanded auditor reporting, especially that contemplated within an AD&A or by expanding procedures over the MD&A, would have adequately addressed such concerns. The judgmental nature of the valuation of loan loss estimates, contingencies, and fair values, is central to the commercial banking business. This is why detailed disclosure of those key areas of estimates and management judgment is normally included within the first notes to the financial statements, as well as within the risk sections of the MD&A.

Financial statements of any company include judgments and estimates at a specific point in time. No matter what kind of emphasis is put on this fact, volatility in the markets (especially the volatility experienced in the last four years) will often greatly reduce the relevance of these estimates by the time the report is issued. Further, bank financial performance (and, thus, bank equity prices) is often influenced by factors that cannot be adequately reflected in financial statements. Liquidity management and the business impact of regulation, which are commonly addressed in quarterly filings, are among examples. These types of disclosures would be impractical to audit. Attempting to provide additional investor comfort and focus in the financial statements through increased auditor communication will likely only add to the confusion over what those statements mean to future bank performance.

Instead, ABA believes that the PCAOB should consider solely how the auditor report can be revised to reduce the expectation gap. We caution the PCAOB on the expansion and requirement of the use of emphasis paragraphs. As bank audited financial statements often include scores of pages of footnote disclosures, the emphasis paragraphs could also turn the auditor report into one of similar length, thereby diluting the emphasis objective. We agree that these paragraphs could further turn into "boilerplate" wording over time (or be understood that way).

We believe that it may be useful to add additional clarifying language to the auditor report as to what the audit represents. This is the most direct way to lower the expectation gap. However, since most of the concern on this project addresses management's judgments and estimates, we admit that, practically speaking, the resulting language may end up merely advising the user to carefully read the whole report. While we are not confident that this will have significant impact on user understanding of the company, it is perhaps the best the auditor can do to help.

As was experienced during the implementation of the Sarbanes-Oxley Act, expansion of audit rules and processes can result in significant concerns about costs versus benefits. We realize that this is outside the purview of the PCAOB, but we believe that the expenses of implementing the Concept Release would be better spent, and investors would be better served, by reducing the complexity of financial reporting or clarifying the risks reporting companies face, rather than significantly expanding the requirements of the external auditor. These costs and benefits should also be considered in light of significant current efforts by both auditors and reporting entities to comply with existing reporting deadlines.

Thank you for your attention to these matters and for considering our views. Please feel free to contact me (mgullette@aba.com; 202-663-4986) if you would like to discuss our views.

Sincerely,

Michael L. Gullette

Subject: PCAOB Rulemaking Docket Matter No. 34

*Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*

Dear Board Members:

American Electric Power Company, Inc. (AEP) appreciates the opportunity to respond to the Public Company Accounting Oversight Board's (PCAOB) "Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards", dated June 21, 2011. AEP, a Columbus, Ohio based energy company, is one of the largest investor-owned utilities operating in the United States, with revenues of over $13 billion and more than 19,000 employees. We provide energy to approximately 5 million customers in Arkansas, Indiana, Kentucky, Louisiana, Michigan, Ohio, Oklahoma, Tennessee, Texas, Virginia and West Virginia.

We appreciate the opportunity to respond to the Concept Release and have addressed each of the major alternatives below.

***Auditor's Discussion and Analysis***

We agree that investors need relevant information. We also strongly believe management and the company's board should be the source of information regarding the company's financial statements and disclosure about a company's finances, policies and judgments. External auditors are independent, and their role is to provide assurance on reported information, not to be the original source. To expect them to step into the role of management for the purpose of preparing an Auditor's Discussion and Analysis (AD&A) would jeopardize their independence and expose them to inappropriate risk that will come with a significant cost. If there is a perceived need for improved reporting about judgments, estimates and uncertainties affecting a company's financial statements, then that need should be addressed through the accounting standards set by the SEC and the FASB.

***Required and expanded use of emphasis paragraphs***

We believe that required use of emphasis paragraphs could provide meaningful information to investors, but they should be limited to identification and location of the most significant items considered by the auditor. For many of the same reasons discussed above, there should be no auditor commentary on these items.

***Auditor assurance on other information outside the financial statements***

We are concerned about expanding the auditor's responsibility to forward looking statements within the MD&A and certain other non-GAAP information. Forward looking information is intrinsically dependent on management judgment, assumptions, economic indicators and other estimates. As such, forward looking information does not lend itself to an audit based upon independently verifiable evidential matter or specific guidelines such as generally accepted accounting principles. Auditors are not currently trained to opine on forward looking information, nor is there a framework on which to base their conclusions. The reasonableness of forward looking information should be judged in the marketplace by analysts and other market forces. An auditor's responsibility should be limited to historical financial statements and related disclosures.

***Clarification of language in the standard auditor's report***

We support the inclusion of clarifying language in the auditor's report to facilitate the readers' understanding of scope and the auditor's responsibilities. We believe the "pass/fail" nature of the report on historical information should be maintained.

Sincerely,

Joseph M. Buonaiuto

J. Gordon Seymour
Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.,
Washington, D.C. 20006-2803

**Re: *Rulemaking Docket Matter No. 34 Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements***

Dear Mr. Seymour:

On behalf of the American Federation of Labor and Congress of Industrial Organizations ("AFL-CIO"), I appreciate the opportunity to comment on the Public Company Accounting Oversight Board ("PCAOB") concept release on possible revisions to PCAOB standards related to reports on audited financial statements. The AFL-CIO is the largest labor federation in the United States and represents 12.2 million union members. Union-sponsored pension and employee benefit plans hold more than $480 billion in assets.

The ability of investors to rely on accurate and reliably audited financial statements is fundamental to ensuring the integrity of the capital markets. We commend the PCAOB for its initiatives to reform the audit process, including the report by auditors to shareholders on company financial statements. The auditor's report is the primary means through which auditors communicate with investors regarding the audit of a company's financial statements. But auditors' reports that consist of boilerplate are of little value to investors.

The auditor's report should include a discussion of the auditor's assessment of the estimates and judgments made by management in preparing the financial statements, and how the auditor arrived at the assessment. Financial statements have become increasingly complex and dependent on management's estimates of subjective values. We believe that auditors should be required to disclose their assessment of significant judgments and estimates made by management.

The auditor's report should also include a discussion of unusual transactions, restatements and other significant changes in the financial statements. Investors would benefit from knowing more about accounting misstatements, including failures in internal controls that permitted the misstatement to occur, whether those weaknesses in internal controls had been fixed, and other changes that have occurred as a result. Investors should also be provided more information about unusual transactions such as those made toward the end of a quarter, or at fiscal year-end, in order to meet financial targets. Other unusual transactions that would fall under this category would be tax-shelters, and related party transactions.

The auditor's report should also discuss the quality, not just the acceptability of the issuer's accounting practices and policies. For example, auditors should describe those instances in which a management's application of accounting principles, while acceptable under GAAP, was not the preferred practice. Differences in how companies apply GAAP can have a significant impact on their financial statements. In addition, we believe that the auditor's report should indicate the auditor's responsibility for detecting material fraud. The auditor's report should clearly state that the auditor provides reasonable (i.e., a high level of) assurance that financial statements are free of material misstatements.

Although there is some merit to the binary nature of the current audit report, we would prefer the audit report to have more levels than simply unmodified and modified – particularly since the large majority of audit reports issued are unmodified. For example, auditors could evaluate the quality of the issuer's accounting policies and practices (including its estimates and judgments) by assigning one of four grades: conservative, above average, average and aggressive. There will not be a failing grade because such a grade would denote non-GAAP reporting and would require the auditor to issue a modified opinion.

Requiring audit firms to issue reports using a forced curve could serve to meaningfully differentiate between issuers in the quality of their accounting policies and practices. Such differentiation would be useful to investors in making investment decisions, and could represent an efficient means of communicating the auditor's overall judgment about the issuer's accounting quality. Moreover, unlike other alternatives being considered by the PCAOB, expanding the audit report choice from two to four categories, and requiring auditors to issue reports based on a forced curve, virtually eliminates the risk that auditor reporting devolves into boilerplate language which would obviate any benefit to investors from changing the auditor reporting model.

The auditor's report should identify the role of any affiliated firms in conducting the audit. We believe this is important because investors currently have no information about the extent to which the audit was performed by a foreign affiliate of a U.S. auditing firm. Investors would also benefit from the development of an information clearinghouse that identified auditors attached to public company audit engagements worldwide, listing any sanctions, suspensions and litigation against them. Investors can already obtain this type of information about brokers and investment advisers.

Substance should take precedence over form in how this new information is presented to investors. If presented in an Auditor Discussion and Analysis section, the PCAOB should take steps to ensure this new section is not boilerplate. We also believe that the engagement partner should be required to sign his or her name on the auditor's report in addition to the audit firm's name. We find the absence of the engagement partner's signature inexplicable given that CEOs and CFOs must personally certify company financial statements.

Investors deserve more information about company audits and the auditors whose job is vital to preventing accounting fraud. Thank you again for the opportunity to comment on the proposal. If you need any additional information, please contact me at 202-637-3900.

Sincerely,

Damon A. Silvers

RE: PCAOB No. 2011-003, Rulemaking Docket Matter No. 34

Dear Sir/Madam,

The American Federation of State, County and Municipal Employees ("AFSCME") submits this letter in response to the Concept Release of the Public Company Accounting Oversight Board (the "Board") on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements, Release No. 2011-003 (the "Concept Release"). AFSCME is the largest union in the AFL-CIO, representing 1.6 million state and local government, health care and child care workers. AFSCME members participate in over 150 public pension systems whose assets total over $1 trillion. In addition, the AFSCME Employees Pension Plan (the "Plan") is a long-term shareholder that manages $850 million in assets for its participants, who are staff of AFSCME and its affiliates.

At the outset, we wish to emphasize that we view the Concept Release as one part of a larger suite of important reforms under consideration by the Board. In particular, we believe that some of the objectives of the measures proposed in the Concept Release cannot be fully realized in the absence of mandatory auditor rotation. Decades-long relationships between auditors and clients are likely to impair auditor independence. We therefore applaud the Board for issuing the Concept Release on Auditor Independence and Audit Firm Rotation, Release No. 2011-006, to explore this issue. Our support for the reforms proposed in this Concept Release does not indicate that we believe those changes would, by themselves, be sufficient.

American Federation of State, County and Municipal Employees, AFL-CIO
TEL (202) 429-1000 FAX (202) 429-1293 TDD (202) 659-0446 WEB www.afscme.org 1625 L Street, NW, Washington, DC 20036-5687

The Concept Release outlines several possible changes to the standard auditor's report. Before discussing the specifics of potential reforms, it is worth noting the importance of the auditor's report to investors. As the Treasury Department's Advisory Committee on the Auditing Profession stated, "The auditor's report is the primary means by which the auditor communicates to the users of financial statements regarding its audit of financial statements."[1]

In 2008, 2010 and 2011, the CFA Institute, a global, not-for-profit association of investment professionals, surveyed its members regarding the independent auditor's report. Seventy-two percent of respondents to the 2010 survey said that the auditor's report was important or very important to their analysis and use of financial reports in the investment decision making process.[2] These findings are consistent with the feedback the Board received from investors in the course of its outreach that the audit is a "valuable process" giving the auditor "significant insight into the company."[3]

The needs of investors and other users of financial statements should be the Board's highest priority as it decides whether to undertake the standard-setting initiative outlined in the Concept Release. The CEOs of the six largest accounting firms concurred with this notion in a 2006 white paper, which stated that "The new (reporting) model should be driven by the wants of *investors and other users of company information* . . . ." (emphasis in original)[4]

For several decades, influential voices have criticized the auditor's report. Numerous reports of expert panels have concluded that the auditor's report conveys insufficient information to public company investors. In the 1970s, the Commission on Auditors' Responsibilities (the Cohen Commission) called for the auditor's report to be expanded to report on the entire audit function.[5] The National Commission on Fraudulent Financial Reporting (the Treadway Commission) recommended in 1987 that the auditor's report provide additional information on the auditor's role, the extent to

5 Commission on Auditors' Responsibilities, "Report, Conclusions and Recommendations," at 75 (1978).

which users can rely on the audit and limitations on the audit process.[6] Most recently, the Treasury Advisory Committee on the Auditing Profession recommended in 2008 that the Board undertake a standard-setting initiative to consider improvements to the auditor's standard reporting model.[7]

Negative feedback has also come from the investor community. CFA Institute members were dissatisfied with the amount and type of information contained in the auditor's report. Some respondents characterized the auditor's report as "boilerplate."[8] Sixty percent said that the report should contain more information about the audit process itself and matters related to the audited financial statements.[9]

Key Disclosure Topics

In our view, requiring discussion in the auditor's report on four topics would substantially improve the report's usefulness to investors:

1. The auditor's assessment of the estimates and judgments made by management in preparing the financial statements and how the auditor arrived at that assessment;
2. Areas of high financial statement and audit risk and how the auditor addressed these high-risk areas;
3. Unusual transactions, restatements and other significant changes in the financial statements, including the notes; and
4. The quality, not just the acceptability, of the company's accounting practices and policies.

None of these areas require the auditor to become an "original source of information about the company," a concern raised by the Center for Capital Markets Competitiveness in its comment letter.[10] Instead, they primarily relate to the auditor's professional judgments about the audit and particular aspects of the company's accounting policies and practices. Moreover, they involve communicating to investors material the auditor already obtains and communicates to others.

[10] Comment of the Center for Capital Markets Competitiveness, at 9 (available at http://www.centerforcapitalmarkets.com/wp-content/uploads/2010/04/PCAOB-Concept-Release-9.14.2011.pdf).

*Estimates and Judgments*

We disagree with the assertion of the Center for Capital Markets Competitiveness that investors expect a single "right answer."[11] On the contrary, investors understand the role of estimates and judgments in applying accounting principles. The importance of estimates and judgments supports conveying the auditor's view on this subject to investors.

Auditors are already communicating with the audit committee of the board about estimates and judgments. AU section 380.08 requires that "The auditor should determine that the audit committee is informed about the process used by management in formulating particularly sensitive accounting estimates and about the basis for the auditor's conclusions regarding the reasonableness of those estimates."[12] Thus, including a discussion on this topic in the auditor's report would not require additional information gathering by the auditor.

Discussion regarding accounting estimates and judgments has support within the investor community. In the 2011 survey, 86% of respondents said they believed that it was important or very important that the auditor's report include information about the auditor's assessment of management's critical accounting judgments and estimates.[13] Respondents to the 2010 CFA Institute survey, which did not ask the specific question posed in the 2011 survey, cited "comments about accounting judgments and control issues" and "significant judgments and estimates made by management and how the auditors audited them" as examples of additional information that would be helpful.[14]

*Financial Statement and Audit Risk*

We believe that the auditor's report should discuss areas of high financial statement and audit risk and how the auditor addressed these areas. Fundamental to the performance of a GAAS audit is the identification of high-risk areas in the financial statements. Auditing Standard No. 12(4) requires that "The auditor should perform risk assessment procedures that are sufficient to provide a reasonable basis for identifying and

14 2010 Survey, supra note 2, at 11-12, 19.

assessing the risks of material misstatement, whether due to error or fraud, and designing further audit procedures."[15]

An evaluation of audit risk—the risk that the auditor expresses an inappropriate audit opinion—is also part of normal auditing procedures. Audit Standard No. 8(3) provides that "To form an appropriate basis for expressing an opinion on the financial statements, the auditor must plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatements due to error or fraud. Reasonable assurance is obtained by reducing audit risk to an appropriately low level through applying due professional care, including obtaining sufficient appropriate audit evidence."[16]

The audit committee is already receiving much of this information in the course of its oversight of the audit process. Thus, disclosing it to investors would not, we think, impose a significant information collection burden. Respondents to the CFA Institute's 2010 survey indicated that more information about high-risk areas would be useful to investors.[17] As one respondent noted, "Having been an auditor I know that certain areas of the balance sheet and income statement are much higher risk than others. If we as users know this information we can better understand the risks in using and analyzing the financial statements as presented."[18]

*Unusual Transactions, Restatements and Other Significant Changes*

In our view, the auditor's report should communicate information about unusual transactions, restatements and other significant changes. The auditor obtains information about unusual transactions, which have the potential to increase the risk of financial misstatements (see Auditing Standard 12(46)), in the regular course of performing the audit. Auditors are clearly very involved in accounting restatements. Significant changes in the company, including changes in internal control over financial reporting (see Auditing Standard No. 12(8)), plus changes in the company's accounting principles and related policies and disclosures (see Auditing Standard No. 12(13)), are currently noted by the auditor as part of its risk assessment procedures.

[16] PCAOB Auditing Standard No. 8(3) (available at http://pcaobus.org/Standards/Auditing/Pages/Auditing_Standard_8.aspx).
[17] 2010 Survey, supra note 2, at 12-13
[18] Id. at 13.

As well, these matters are already communicated to the audit committee. AU section 380.11 requires the auditor to discuss with the audit committee items that have a significant impact on the representational faithfulness, verifiability and neutrality of the accounting information included in the financial statements; examples of such items are unusual transactions and selection of new or changes to existing accounting policies.

The CFA Institute survey supports including this discussion in the auditor's report. Respondents cited changes in accounting standards and related party transactions as areas on which more information would aid investors.[19]

*Quality of Accounting Policies and Practices*

The auditor's report should discuss the quality, not just the acceptability, of the company's accounting policies and practices. Companies have significant discretion in applying GAAP; however, some alternatives are considered to be higher quality than others. Investor feedback to the Board indicates that information on the auditor's views regarding the quality of the company's financial statements would be useful.[20] Similarly, responses to the 2011 CFA Institute survey support such a requirement: 90% of respondents stated that information regarding the quality, not just the acceptability, of management's selection and application of accounting principles is important or very important to have in the auditor's report.[21] Numerous additional comments by respondents supported the value of such discussion.[22]

As with the other areas discussed in this comment, auditors are currently required to communicate this information to the audit committee. AU 380.11 requires the auditor to discuss with the audit committee the auditor's judgments about the quality of the company's accounting principles as applied in its financial reporting.

<u>Additional Items</u>

In our view, clarification in the auditor's report of the auditor's role would be valuable to investors. There has been much discussion of the "expectations gap" between what the audit actually does and what users of financial statements believe it does, especially in the area of fraud detection. The auditor's report should state that the auditor has a responsibility to obtain reasonable assurance as to whether the financial statements

20 Concept Release, at 8.
21 2011 Survey, supra note 14, at 6.
22 See id. at 6-7.

are materially misstated. Whether caused by error or fraud, and that this represents a high, though not absolute, level of assurance.[23] Responses to the CFA Institute survey indicate that investors are interested in more specific disclosure on this topic.[24]

Format for Additional Discussion

The Concept Release asks for comment on whether additional discussion by the auditor should appear in a separate supplemental report that has been described as an Auditor's Discussion and Analysis ("AD&A")(akin to the Management Discussion and Analysis section of a 10-K or a Compensation Discussion and Analysis section of a proxy statement). We believe that the AD&A would have the benefit of allowing fulsome discussion of key matters by the auditor, with the opportunity to place that discussion in context.

The format in which additional discussion takes place is less important, however, than the substance of that discussion. Accordingly, we would be open to other mechanisms, such as requiring and expanding the use of emphasis paragraphs in all audit reports.

* * * *

We appreciate the opportunity to share our views with the Board on these important issues. If you have any questions, or need additional information, please do not hesitate to contact Lisa Lindsley at (202) 429-1275.

Sincerely,

Gerald W McEntee

GERALD W. McENTEE
INTERNATIONAL PRESIDENT

American Gas Association

September 29, 2011

Public Company Accounting Oversight Board
Office of the Secretary
1666 K Street, NW
Washington, DC 20006-2803

**Rulemaking Docket No. 34**

The American Gas Association (AGA) respectfully submits our comments on the Public Company Accounting Oversight Board's (PCAOB) *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* No. 2011-003 (the "Release"). The AGA, founded in 1918, represents 199 local energy companies that deliver clean natural gas throughout the United States. There are more than 70 million residential, commercial and industrial natural gas customers in the U.S., of which 91 percent — more than 64 million customers — receive their gas from AGA members. AGA is an advocate for natural gas utility companies and their customers and provides a broad range of programs and services for member natural gas pipelines, marketers, gatherers, international natural gas companies and industry associates. Today, natural gas meets almost one-fourth of the United States' energy needs.

Based on the response to the PCAOB's outreach efforts preceding the Release, the AGA acknowledges that investors and other financial statement users expressed concerns about the information provided in the auditor's report in light of increasing complexity in preparing and auditing financial statements and ongoing dialogue both in the United States and in Europe on the role of the auditor and the form of the auditor's report. The AGA appreciates investors and other users' desire for more information on issuers' financial statements from the auditor, particularly given the auditor's independent oversight role. However, we have a number of concerns regarding the alternatives proposed in the Concept Release. The four alternatives proposed in the Concept Release are as follows:

1. Auditor's Discussion and Analysis (AD&A),
2. Required and expanded use of emphasis paragraphs,
3. Auditor assurance on other information outside the financial statements, and
4. Clarification of language in the standard auditor's report.

400 N. Capitol St., N.W., Washington, DC 20001 ■ Telephone 202-824-7000, Fax 202-824-7115 ■ Web Site http://www.aga.org

The Release notes that these alternatives are not mutually exclusive, and also asks for respondents to offer other alternatives that may provide further insight into entities' financial statements.

**Summary**

Highlights of our comments are summarized as follows:

- Reported financial results are management's responsibility. Commentary regarding what constitutes significant matters, areas of uncertainty, and critical management judgments and estimates are most appropriately provided by those in a position to have the best and most complete understanding of the basis and intent underlying these areas, which we believe to be the role of management. Additionally, the disclosure of critical and significant matters, uncertainties, and judgments is required by SEC regulation and by disclosure rules otherwise established under U.S. GAAP. If investors require changes to the disclosure and reporting requirements promulgated under current GAAP, this should be completed through the standard setting process of the FASB and SEC and provided by management.

- Due to the inherently limited nature of an audit of financial statements, the auditor may not possess a complete understanding of the above areas for which management is responsible, although they may nonetheless have obtained sufficient understanding to satisfy their audit requirements. Providing such information could result in conflicts with the information already required to be disclosed by management, thereby creating confusion amongst investors and other users and potentially subjecting the auditor and the entity to increased risks.

- Increasing the scope of the audit to include assurance on other information outside the financial statements will substantially increase the cost and effort to complete an audit, which could risk the timely filing of financial statements in compliance with regulatory deadlines while not providing a commensurate benefit for financial statement users.

- Clarification of terms in the audit report and explanation of auditor responsibilities could be beneficial to users of the financial statements. This information should be either provided by 1) issuing clarifying guidance (to the extent not already incorporated in existing guidance) without adding language to the standard auditor's opinion or 2) amending the standard auditor's opinion by providing standard language to be used in all auditor' reports.

- If additional information is to be provided by the auditor, it should be limited to information related to the audit process, such as significant audit risks identified by the auditor and audit procedures responsive to these significant risks.

400 N. Capitol St., N.W., Washington, DC 20001 ■ Telephone 202-824-7000, Fax 202-824-7115 ■ Web Site http://www.aga.org

**Auditor's Discussion and Analysis (AD&A) and Emphasis Paragraphs**

The Release discusses that the intent of an AD&A section would be a supplemental narrative report for the auditor to provide a view of the audit and financial statements "through the auditor's eyes". The AD&A could include information regarding significant matters, including management's judgments and estimates, difficult or contentious issues and areas where management could have applied different accounting. The proposal to expand the use of emphasis paragraphs would mandate the use of such paragraphs (not required today except in certain circumstances) in all audit reports. Such paragraphs would highlight the most significant matters in the financial statements (in the auditor's judgment), where these matters are disclosed in the financial statements, information related to significant management judgments and estimates, areas of significant uncertainty, and other areas the auditor deems important to emphasize.

While the auditor possesses enough understanding of the entity's financial statements to conclude for purposes of the audit, the financial statements are management's responsibility. The auditor's responsibility is to obtain reasonable assurance about whether the financial statements are free from material misstatement by executing appropriate audit procedures on a test basis (and in the case of public companies, to opine on the design and effectiveness of internal control over financial reporting in line with that objective). However, as a result of not being involved in the day-to-day analyses and decision-making of running the business, the auditor is unlikely to have a complete understanding of the rationale behind all of management's decisions, judgments and estimates. Therefore, we believe that information provided by the auditor to the public about an entity's financial statements should not include subjective information, such as the auditor's opinion of which matters are most important to a user, opinions about which areas involve the highest relative degree of uncertainty, or opinions about which judgments and estimates are the most important or subject to debate. Management's disclosure of critical and significant matters, uncertainties, and judgments is already required by the SEC. The auditor may provide information as to what are deemed areas of significant audit risk and the procedures executed in response to those risks, as this analysis is indeed part of the auditor's purview and responsibility. However, the reasons for deeming an audit risk as "significant", or including information on the results of related audit procedures, may not have a direct correlation to what would be most material or meaningful to an understanding of the financial statements and may serve to distract from the overall opinion and understanding of users.

Because of the limited nature of an audit, we are also concerned that an auditor providing subjective information through an AD&A or emphasis paragraphs could result in conflicting statements between management and the auditor, which may further confuse financial statement users. There is also a risk of the auditor disclosing information that is confidential to an entity. If an auditor provides subjective information that is later proved to be incorrect or of a confidential

400 N. Capitol St., N.W., Washington, DC 20001 ■ Telephone 202-824-7000, Fax 202-824-7115 ■ Web Site http://www.aga.org

nature, management has born the risk of this information negatively impacting the decisions of financial statement users, and the auditor may be subject to the additional risk of litigation. In order to effectively mitigate these risks, the auditor may need to significantly expand the scope and nature of procedures required by current auditing standards, which may be difficult to adhere to given the subjective nature of the information in question. At a minimum, expanding audit requirements in this manner would have a direct impact on the cost, effort, and timing to complete an audit of the financial statements for which we do not see a commensurate benefit. If the auditor were required to present subjective information in the form of an AD&A, the transparency of communications between the auditor and management and the Audit Committee could be compromised. Effective communication between these parties is important to uphold the transparency and quality of an audit. The Audit Committee is already charged with the authority and responsibility to oversee the financial reporting process on behalf of investors and to resolve any specific accounting treatments or judgmental financial reporting matters that they are not comfortable with, thereby providing assurance that these areas have been adequately addressed within the financial statements.

If additional disclosures are necessary they should be provided by management. GAAP prescribes the standards that must be followed by management when producing financial statements, which are then reviewed by the SEC. If investors require changes to the disclosure and reporting requirements promulgated under current GAAP, this should be accomplished through the standard setting process of the FASB and SEC and provided by management.

**Auditor Assurance on Information Outside the Financial Statements**

The Release states that another alternative to enhance the auditor's reporting model would be for the auditor to provide assurance on information outside the financial statements, such as Management's Discussion and Analysis (MD&A), earnings releases, and/or non-GAAP information. Guidance already exists for attestations of MD&A (although these engagements are not frequently performed), which the auditor can be engaged to perform by a particular entity's investors and other key stakeholders, if deemed necessary by those parties. Mandating an increase in the amount of information for which the auditor is asked to provide assurance would increase the scope and thus the cost of the audit and could negatively impact an entity's ability to comply with quarterly financial statement filing deadlines, which are increasingly compromised with each additional compliance requirement. Auditors already perform certain limited procedures related to this information. In our view the cost of providing assurance on this information would outweigh any benefits investors would receive from the additional information.

**Clarification of Language in the Standard Auditor's Report**

The fourth alternative discussed in the Release is the clarification of certain terms in the standard auditor's report, such as reasonable assurance, and the clarification of auditor responsibilities (such as the auditor's responsibility to detect fraud). The AGA does not object to the audit community providing the factual information proposed by this alternative.

400 N. Capitol St., N.W., Washington, DC 20001 ■ Telephone 202-824-7000, Fax 202-824-7115 ■ Web Site http://www.aga.org

If guidance is issued directing auditors to clarify terms and their responsibilities, the AGA recommends either 1) issuing clarifying guidance (to the extent not already incorporated in existing guidance) without adding language to the standard auditor's opinion, or 2) amending the standard auditor's opinion by providing standardized language to be used in all auditors' reports. If additional information is to be provided in the auditor's report, the information should be consistent for all auditors and entities. If guidance is issued that is left open for auditors to interpret what should be included in the auditor's report, varying language in reports could confuse financial statement users.

**Conclusion**

We appreciate the opportunity to comment on the Release. We understand the investment community's desire for further insight into entities' financial statements and the knowledge of these financial statements that an auditor obtains during an audit. We support the proposal to clarify the language in the standard auditor's report, if it is deemed necessary, by providing standardized language to be used by the auditing community. However, we believe the financial statements are management's responsibility and do not support proposals that allow or require an outside party to present subjective information on an entity's financial statements. If such additional disclosures are necessary, we believe they should be established through the FASB and/or SEC's standard setting process and provided by management. If an auditor has concerns with the information provided under such standards, they should be addressed with the Audit Committee whose role is to address those concerns.

We would be pleased to discuss our comments in further detail and provide any additional information that you may find helpful in addressing these important issues.

Very truly yours,

Jose Simon [s]

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington D.C. 2006-2803

RE: Response to the Public Company Accounting Oversight Board (PCAOB) – Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards (Ref Docket matter No. 34)

Members of the Board,

I appreciate the opportunity to submit comments to the Board with respect to the concept release addressing potential revisions to the external auditor's report on financial statements. To put my comments in context, I worked for ten years as an external auditor, 16 years as an internal auditor, and four years in other roles within a large publicly-held company. I have also had the privilege of being involved in a variety of standard setting and governance activities related to accounting and auditing over my career. These experiences have led me to have some clear views on the subject of this concept release. However, the comments in this letter are mine personally and should not be attributed to any organization or entity.

I believe the most of the potential changes outlined in the concept release are misguided and will not accomplish the intended result. They will create more of an expectations gap, create more confusion, and increase cost with little benefit. Below are my overall comments followed in an attachment with specific answers to some of the questions asked in the concept release.

1. The financial statements are management's communication to investors and other stakeholders. If there are gaps in the information being presented, management should be the source to fill those gaps. If more information is needed regarding treatment of judgmental accounting issues, significant risks, how changes in the economy will impact future financial performance, etc., the SEC should modify its financial statement requirements. The PCAOB should not use a "back door" mechanism of requirements on the external auditor to provide this information to the public.
2. The boards of directors and their audit committees are charged with representing the interest of the investor in financial reporting matters. Many of the potential changes in the concept release go around the audit committee and replace communication between the external auditors and the audit committee with communication between the external auditor and investors directly. If there has been a failure of audit committees to adequately represent investors, correct this deficiency. The PCAOB should not fundamentally change the nature of corporate governance structures.
3. Most of the potential changes in the concept release involve topics that are currently discussed between the audit committee and the external auditor. These communications are fundamentally different than what is possible through a published written report. Discussions in a meeting involve context of prior discussions, ability for dialogue over unclear points, knowledge of the competency of the persons in the discussion, and an ability for each party to ensure they are meeting the desired information needs of the other party. None of these are available in a written report. The somewhat subjective

nature of many of these communications needs the context of a setting like an audit committee meeting to be successful. Attempting to substitute this rich venue of discussion with a written report will only leave questions unanswered, requests unmet, and confusion for the readers.

4. If the intent of the potential changes outlined in the concept release is to provide the reader with an ability to judge the sufficiency of the audit work performed, this will be unsuccessful. An audit is a complex effort requiring deep understanding of the company, its financial reporting risks, and nature of available audit evidence. If quality of audit work is a concern, the response should improvements in audit standards and inspections performed by the PCAOB.
5. The potential changes outlined in the concept release have external auditors providing previously unreleased information about a company to the public. This puts the external auditor in the role of a principle information source to the public. In this role the external auditor loses as aspect of their independence from the company.
6. Much of the information that is suggested should be included in the external auditor's report is already addressed, at least in part, by management reports. The requests for the external auditor to opine on this information looks to be an attempt by investors to shift to the external auditors the hard work of understanding a business' financial statements. Investors should be expected to read financial statements, do the hard work to analyze them, and participate in the many avenues available to obtain additional information from the company instead of trying to shift this task on the external auditor.
7. An AD&A will be long and be interpreted as providing separate opinions on the elements addressed in the AD&A. While this may not be the intention of the concept release, I believe this will be the inevitable result. This will necessarily increase the legal risk assumed by the external auditor which will further increase their efforts and the length of the AD&A. In the end, costs will be very high to produce the AD&A.
8. The PCAOB should focus its efforts on establishing robust audit standards and enforcing compliance with them, rather than trying to force the eternal auditor into a role that is extremely unlikely to succeed in accomplishing what is expected.

Sincerely,

Douglas J. Anderson, CPA, CIA

## Attachment - Responses to Specific Questions

1. **Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.**

    a. **Should the board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?**

    No. None of the potential changes outlined in the concept release merit a major undertaking to revamp the auditor's reporting model. Minor adjustments can be made if necessary without a major project.

    b. **In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?**

    Additional guidance could be provided as to the appropriate circumstances for explanatory paragraphs in an auditor's report for highly unusual or material items.

    c. **Should the board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?**

    No. The external auditor's focus, training, competencies, and role relates to financial statements. Expanding to other matters pushes the external auditor into roles best addressed by management or others with the appropriate competencies.

2. **The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."**

    a. **Should the auditor's report retain the pass/fail model? If so, why?**

    Yes. This model removes the potential confusion over the final view of the external auditor. If a change was made to a purely subjective discussion, it could become very unclear what the external auditor believed.

    b. **If not, why not, and what changes are needed?**
    N/A

    c. **If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.**

Additional guidance on the use of explanatory paragraphs in the auditor's report to highlight material or unusual items included in the financial statements could be beneficial.

3. **Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.**

   Management has the responsibility to provide sufficient information to financial statement users to understand the financial position and performance of the company. If additional information is required by users, the SEC should amend their requirements for the content of financial statements as prepared by management.

4. **Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?**

   No response

5. **Should the board consider an AD&A as an alternative for providing additional information in the auditor's report?**

   No. Management should be the primary provider of information about the financial position and performance of a company. The description of the AD&A leads to having the external auditor take a larger than appropriate role in providing original information to the reader. If information is needed about accounting positions and performance of the company, management should be required to provide that. If the concern is inadequate audit quality, this is best addressed through high quality audit standards and the PCAOB inspection process, not a written report from the external auditors.

   a. **If you support an AD&A as an alternative, provide an explanation as to why.**

      Do not support an AD&A

   b. **Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?**

      Do not support an AD&A

c. **Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?**

Do not support an AD&A

d. **If you do not support an AD&A as an alternative, explain why.**

Answered above

e. **Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?**

Answered above

6. **What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?**

   Do not support an AD&A

7. **What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?**

   Do not support an AD&A

8. **Should a standard format be required for an AD&A? Why or why not?**

   Do not support an AD&A

9. **Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?**
   Do not support an AD&A, however, if one is included, it should focus only on areas of competency of the external auditors. Such competencies are in the realm of financial reporting, not generalized business and strategic risks. If investors desire an insurance policy against any and all potential negative consequences from their investment, they should look to an insurance company, not the external auditor.

**10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?**

In the current litigation environment of the United States, one of two outcomes is highly likely. Either the AD&A would be boilerplate, or an extensive rambling of information, some useful and much not useful.

**11. What are the potential benefits and shortcomings of implementing an AD&A?**

The shortcomings are numerous: (1) requiring external auditors to supplant management as the source of original information about a company's financial performance and position, (2) providing information in a method that ensures it would not be fully understood as the reader would not have context for the information in the report nor the ability to dialogue with the external auditor, (3) increasing costs of the audit significantly.

No benefits identified.

**12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?**

Over time the AD&A would likely result in management saying less and the external auditor saying more. Inconsistencies would likely not be tolerated so the solution will be for management to stop providing information that is required to be provided by the external auditor.

**13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?**

None identified

**14. Should the board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?**

a. **If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.**
   Areas of emphasis paragraphs should be included in an external auditor's report when they add useful information for the reader. Requiring them for all audits, even when they provide no meaningful information, in inappropriate.

b. **If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.**

Additional audit guidance could be prepared outlining those situations where areas of emphasis paragraphs are useful and encourage their use in more situations than is current practice.

15. **What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?**

    Requirement not supported

16. **What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?**

    Requirement not supported

17. **How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?**

    Requirement not supported

18. **What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?**

    Discussed above

19. **Should the board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?**

    a. **If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why. Subject to the caveat and suggestion above, assurance over other important components of information provided by management is a form of assurance commonly provided by the internal audit activity and a reasonable extension of financial statement auditors, to the extent it is cost justified and can be related to the financial statements and information considered in connection with the audit of the financial statements.**
    b. **On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.**

    While question (a) above asserts expanding the external auditor's work over other information is a "reasonable extension", I disagree. The MD&A, earnings releases, press releases, non-GAAP information and others all involve subject matter that is either management judgment of future events or involves matters outside of the field of financial reporting. The external auditors do not currently have the competency to adequately address these matters by providing assurance. Extension of their mandate into these areas would require extensive costs with no demonstrated benefit.

c. **What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?**

   Proposal not supported

d. **If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?**

   Proposal not supported

e. **Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?**

   If the auditor needed to provide assurance on the MD&A, management would limit their disclosures to historical, factual information.

f. **Are the requirements in the board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered? The cost of AT 701 form of assurance may exceed the benefits. We suggest a compromise position. As exists today, the auditor are required to read such disclosures, including MD&A, we suggest the auditor include a paragraph in the auditor's report that the auditor has read [add specific areas] and found such information and disclosures to be materially consistent with information the auditor learned as part of the audit of the financial statements. That is, have the auditor's report disclose what is essentially in effect today.**

   Disclosing what the external auditor is doing today to comply with audit standards is acceptable. However, this assumes investors are unaware of this requirement and are not able to read the audit standards.

g. **If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.**

   Discussed above

20. **What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?**

Discussed above

**21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:**
- **Reasonable assurance**
- **Auditor's responsibility for fraud**
- **Auditor's responsibility for financial statement disclosures**
- **Management's responsibility for the preparation of the financial statements**
- **Auditor's responsibility for information outside the financial statements**
- **Auditor independence**

**a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?**

There is no harm in expanding the auditor's report for these items. However, none are changing the requirements on the external auditor, merely stating the current standard. It is unclear that investors do not understand these long-established audit standards and cannot learn about them with limited amount of effort.

**b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.**

See answer above

**c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?**

See answer above

d. **What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?**

See answer above

**22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?**

The benefits are speculative and assume investors currently do not know this information and cannot read the audit standards. The shortcomings, however, are nil.

**23. This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?**

The best alternative is for the PCAOB to focus its efforts on producing high quality auditing standards and enforcing those standards.

**24. Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?**

See answer for Q23 above

**25. What alternatives not mentioned in this concept release should the board consider?**

See answer for Q23 above

**26. Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the board consider in developing such auditor reporting framework and related criteria for each of the alternatives?**

There would need to be a substantial level of effort to develop the framework and criteria. The PCAOB should not underestimate the extent of this effort or try to complete too quickly. Explicit consideration of costs and benefits of any specific proposals must be considered.

**27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the board take to mitigate the risk of this perception?**

No response

**28. Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?**

The external auditor's current role is already well defined in the audit standards.

**29. What effect would the various alternatives have on audit quality? What is the basis for your view?**

Audit quality would likely diminish is the external auditor were to provide assurance on other financial material outside of the financial statements. This is because of the current lack of competency of the external auditors with this material. If the external auditor were to produce an AD&D, it is hard to conclude on the effect on audit quality. However, I suspect most external auditors would devote substantial resources to this effort that would likely result in acceptable audit quality, but extremely high cost.

**30. Should changes to the auditor's reporting model considered by the board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.**

I am generally not in support of the potential changes proposed in the concept release. I don't believe my position would be different for different types of filers.

**31. This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.**

**a. Are any of these considerations more important than others? If so, which ones and why?**

The most important impact is requiring the external auditors to take away from management primary responsibility for reporting certain aspects of financial information.

**b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?**

The costs will increase significantly for marginal benefits. Before these initiatives move forward a much more robust cost benefit analysis would be required.

**c. Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?**

No

**d. What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?**

As most of the potential changes are not supported, no measures by the PCAOB would be necessary.

**32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in**

**the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?**

The nature of relationships between management, Audit Committee and the external auditors has certain inherent friction points. This is good and by design. However, the potential changes to the auditor's reporting model outlines in the concept release would substantially increase the pressure on these relationships, especially those between the external auditors and management. This increased pressure would substantially increase cost, potentially delay the reporting processes, and reduce the openness management may have with the external auditors. None of this improves the quality of financial reporting.

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington, DC 20006-2803

September 30, 2011

Re: PCAOB Rulemaking Docket No. 34

Board Members:

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board's "Concept Release on Possible Revisions to PCAOB Standards Related to Report on Audited Financial Statements and Related Amendment to PCAOB Standards" dated June 21, 2011.

We acknowledge the concerns addressed in the concept release and agree that investors should receive useful and relevant financial information on a timely basis. We support providing investors with the information necessary to make informed decisions. However, we believe management, as opposed to auditors, is the most appropriate and knowledgeable source for providing investors with information on the company's business risks and strategy, operating performance, and accounting judgments and policies, which is information management currently is required to disclose. If the independent auditors' report is expanded to include the alternatives outlined in the concept release, careful assessment should be made on whether such changes will create confusion for investors and blur the line between the important and unique responsibilities of management and auditors.

Overall, we believe the current financial reporting structure has clearly defined roles and responsibilities for the key groups involved in financial reporting including a company's management, its audit committee, and independent auditors. Each of these groups is required to have appropriate controls in place to ensure financial reporting is accurate and complete.

Company management is responsible for preparing the financial statements and related disclosure information in accordance with the accounting and disclosure requirements defined by the various standard setting regulatory agencies, including the Financial Accounting Standards Board and the Securities and Exchange Commission. A company's management is the most knowledgeable resource with respect to business and operational risks and serves as the primary source of information to investors. Additionally, the Chief Executive Officer and Chief Financial Officer approve and certify the integrity of the company's quarterly and annual financial reports.

The audit committee consists of independent members of a shareholder-elected Board of Directors, and includes at least one financial expert. The audit committee oversees management's financial statements and related disclosure reporting, monitors the appropriateness of accounting policies, and appoints and supervises the external auditors. The audit committee plays an integral role in the financial reporting process by monitoring that all material accounting issues and critical accounting transactions have been appropriately accounted for and disclosed.

Independent auditors are hired by the audit committee and that appointment is ratified by the shareholders. The independent auditors are required to plan and perform an audit of the company's financial statements and related disclosures in order to express an opinion as to whether the financial statements are free from material misstatement and are in conformity with generally accepted accounting principles. Additionally, the independent

Cupertino, CA 95014

T 408 996-1010
F 408 996-0275
www.apple.com

auditors attest to the effectiveness of the company's internal controls. The independent auditors' expertise is in the application of accounting principles and the assessment of financial controls, as well as in the process for auditing financial statements and related information based on an accepted framework. The independent auditors provide assurance on the reliability of financial statements being free of material misstatements. Auditors also serve to independently review management's financial statements and disclosures and read the MD&A and consider whether it is materially consistent with their understanding of the facts or with information appearing in the financial statements.

Certain of the proposed alternatives in this concept release would significantly alter these roles and responsibilities in a way that we believe would be expensive, not provide investors with significant incremental information, and could lead to investor confusion and inhibit open communication between management, the audit committee and auditors.

Our comments on each of the proposed alternatives discussed in the concept release are as follows:

**Auditor Discussion and Analysis ("AD&A")**

We do not support the AD&A alternative described in the concept release. The AD&A would significantly expand the auditors' role in the financial reporting process and would reach outside the bounds of their current expertise, and for which they have an established framework against which their work can be measured. Management currently has responsibility for informing the investing public. We believe the AD&A creates a conflict between the distinct roles and responsibilities of auditors and management that could only serve to confuse investors without providing them any beneficial information. In our opinion, the auditors should not be placed in the position of determining and disclosing subjective information that could be contradictory to the disclosures provided by management.

The concept release also contemplates the disclosure of "close calls," a requirement that is likely to confuse investors rather than provide them with additional beneficial information. An auditors' unqualified opinion means all material matters were resolved and the financial statements are fairly stated. Highlighting additional information about accounting issues that required consultation or involved evaluation of alternative accounting treatments would put an unnecessary spotlight on accounting matters that are appropriately accounted for and reflected in the financial statements. Currently, management openly discusses complex accounting issues with its auditors, and requiring auditors to disclose any such matters that they considered to be "close calls" could inhibit the open and dynamic communication that currently exists between management, audit committees and auditors. Under the current disclosure requirements for public companies, management is already required to assess and disclose its significant and critical accounting policies and estimates in periodic filings, which is reviewed by auditors and audit committees. We believe that management is the most well informed to make such assessments, and adding a discussion of the auditors' alternative views will only confuse financial statement users.

The concept release also proposes auditors provide the same level of information as communicated to the audit committee within their audit report. Independent auditors and the audit committee have a relationship whereby the auditors report on the results of their audit to the audit committee, and the audit committee oversees the auditors on behalf of the company and its shareholders. This dynamic relationship requires extensive two-way communication and periodic reporting. If the audit report included all the same information as communicated to the audit committee in a static reporting manner, we believe this could lead investors to misinterpret or misunderstand the information being provided since such disclosure would lack the interactive dialogue that exists between auditors and audit committees. Without this continuous two-way discussion, AD&A could be taken out of context and create investor confusion. This would also likely have a negative impact on the transparency of communications between auditors and audit committees.

We believe that many of the other aspects of the proposed AD&A outlined in the concept release pose similar concerns, including the proposal that auditors provide descriptions of specific audit procedures. Most readers of the financial statements will not have an appropriate level of expertise to understand the complexities of audit procedures, thus such disclosure will be of limited use to investors. Additionally, we believe the proposed AD&A will result in filing delays due to the extensive reviews and discussions that will be required by audit firms to issue customized reports for each client. Finally, issuance of AD&As would significantly increase both the scope of audit procedures and the overall cost of public company compliance, without providing significant incremental information.

**Emphasis Paragraphs**

We also do not support the alternative proposal to require the expanded use of emphasis paragraphs in the audit report. Within quarterly and annual reports, companies are required to disclose important business and accounting information, including information on the company's strategy, risks factors, legal proceedings, management's perspective on operating results, critical accounting policies and material business transactions. To fully understand the risks associated with investing in a company, these disclosures must be read in totality, rather than just focusing on identified areas of emphasis. We believe all the information currently provided in quarterly and annual reports, when taken as a whole and read in totality, provide sufficient information to investors about the material aspects of a company's business and accounting policies.

Without an established framework that provides specific identification criteria, the emphasis paragraph alternative will lead to inconsistent application and reporting across companies. Further, we believe the proposed scope increase to include emphasis paragraphs in audit reports will unduly focus attention on a limited number of accounting issues, which are already identified by management within the financial statements and related disclosure, and will de-emphasize all other information and disclosures provided. Appropriately prepared financial reports already identify critical accounting and judgment areas. Further emphasis in the audit report will only serve to provide repetitive information to investors. If investors believe the current financial statement disclosures and other information contained in periodic filings are deficient in certain areas, work should be undertaken by the various standard setting regulatory agencies to modify the current reporting requirements.

**Financial Information Outside of the Financial Statements**

We do not support the proposed alternative to require auditors to report on information outside of the financial statements as the costs would far exceed the benefits. Auditors currently have the responsibility to read non-financial statement information in public filings to ensure such information is materially consistent with the audited financial statements. There is a variety of information that falls outside of the financial statements, including earnings releases, management's discussion and analysis and non-GAAP reporting. We believe the current level of review over information that is outside of the financial statements is sufficient to ensure information is materially accurate. Requiring an audit over areas that are not based on authoritative accounting requirements or forecasted amounts would be unreasonably burdensome and create significant timing delays and excessive costs that would negatively impact investors' ability to obtain timely information.

**Clarification Language**

We support all efforts to clarify the language used in the audit report to ensure investors clearly understand the specific roles and responsibilities of management and auditors. Careful consideration should be made to ensure the proposed changes truly clarify the nature of an audit and the auditors' responsibility. As discussed previously, we believe it is important to support the usage of consistent language in audit reports so they are comparable company to company and are based on objective information.

* * *

In conclusion, we support improving communication to investors, while maintaining the scope and nature of an audit and the related responsibilities of auditors. We do not support making changes to the audit report that would require auditors to make subjective determinations or merely repeat information provided elsewhere in the financial statements and related disclosures. We believe the current roles and responsibilities of management, the audit committee and the auditors are the fundamental basis for the financial reporting infrastructure and certain of the proposed alternatives in this concept release would negatively impact this structure.

Thank you for your time and consideration. If you have any questions regarding our letter, you may contact me at (408) 862-1401.

Very truly yours,

Betsy Rafael

Dear Sirs

**PCAOB Rulemaking Docket Matter No. 34: Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements**

ACCA (the Association of Chartered Certified Accountants) is the global body for professional accountants. We aim to offer business-relevant, first-choice qualifications to people of application, ability and ambition around the world who seek a rewarding career in accountancy, finance and management.

We support our 147,000 members and 424,000 students throughout their careers, providing services through a network of 83 offices and centres. Our global infrastructure means that exams and support are delivered – and reputation and influence developed – at a local level, directly benefiting stakeholders wherever they are based, or plan to move to, in pursuit of new career opportunities.

ACCA is pleased to provide comments relating to *Rulemaking Docket Matter No. 34*. Our comments are consistent with those we have recently provided to the International Auditing and Assurance Standards Board (IAASB) on their Consultation Paper *Enhancing the Value of Auditor Reporting: Exploring Options for Change*[1]. That paper correctly identifies significant trends: the 'modernisation' of disclosures in the financial statements and user interest in disclosures that are arguably not part of the financial statements (or at least which are not addressed by the financial reporting framework). The overarching

[1] ACCA's response may be viewed at: http://www2.accaglobal.com/general/activities/technical/archive_v2/subject/auditing/cdr1021

www.accaglobal.com

question is whether such disclosures are understood by users without an expectations gap? Furthermore, is there an appropriate user understanding of the limits of assurance when the subject matter is narrative and unrelated to traditional financial disclosures?

ACCA has been arguing for the past two years that, while the audit is not 'broken' as it adds real value by enhancing trust in financial statements, auditors could do much more. We believe audit needs to evolve to address not just the financial statements but also to give an opinion on more forward-looking, qualitative and non-financial data. There needs to be less focus on out-of-date figures and more on risk information. Nevertheless, the starting point should be improving corporate reporting not just auditor reporting.

We have previously published suggestions as to how the auditor's role and report should be improved and we have recently commissioned associated research to inform the unfolding debate in the European Union. We provide details of those publications in the body of our attached answers to the specific questions posed in the concept release.

Should you have any questions regarding this response, or require further information, please do not hesitate to contact me.

Yours sincerely

David York
Head of Auditing Practice

ACCA

**Question 1**
*Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.*

a. *Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?*

Given that the IAASB and others have begun initiatives it seems sensible for the PCAOB to similarly consider improvements to the auditor's reporting model. Such a project should be undertaken in close collaboration with others, however, to ensure that national differences are understood and reconcilable. We caution that, when participating in international initiatives, the PCAOB should recognise that the IAASB has to have considerable regard to the needs of engagements on financial statements for smaller entities.

b. *In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?*

Explaining better the audit methodology employed may help change user perceptions of audit, but users have different needs and levels of understanding; necessitating different approaches to meet those needs. Audit methodology can be highly complex and clarity of communication to users will be difficult to achieve. Users can always refer to the standards to which the auditor is required to comply and related materials but these extend to many hundreds of pages. It is unlikely, therefore, that any audit report can itself go into sufficient detail on the audit methodology employed to properly inform users. It would be feasible, however, to use the report to communicate what the auditor has done, the major factors considered during the audit and why the auditor has arrived at a particular opinion.

www.accaglobal.com

ACCA believes that there should be consideration of incorporating into the standard auditor's report a clear statement of responsibilities for reviewing and/or reporting on companies' risk management and corporate governance arrangements, indeed we have suggested that the auditor should report on an extended audit committee report. We also believe the auditor is well-placed to assess and report on the client's business model, or at least on the financial assumptions underlying that model. We accept that taking on such responsibilities – which would meet demands from users for more useful information from the audit – would require commensurate legal protection for auditors.

c. *Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?*

There are essentially two ways to bridge the expectations gap: moving the audit closer to the public perception, or changing that perception. ACCA believes that it is now necessary to undertake an evolution of the auditor's role within the reporting process. The economic crisis has shown that there is still room for improvement within the audit and risk management functions and there is a legitimate debate that should take place about the role of audit, involving all stakeholders in the process. Reporting entities and auditors must pay heed to the deeper and wider needs of stakeholders and hence meet the reasonable demands of the market. All extensions of the auditor role have cost implications and the market would have to be suitably informed in making demands. The starting point should be improving corporate reporting not just auditor reporting.

ACCA is committed to identifying ways of closing the audit expectations gap and we have recently carried out a considerable body of work in response to the challenges presented to the auditing profession by the business environment. As part of ACCA's *Accountancy Futures* programme, in the year to September 2010 we researched the views of audit committee chairmen and hosted an international series of ten round-table discussions on the value of audit. The report *Reshaping the audit for the new global economy*[2] presents our findings including those in relation to expanding the scope of the audit.

[2] http://www2.accaglobal.com/pubs/general/activities/library/audit/audit_pubs/pol-af-rtf2.pdf

Within the above programme, during 2011 we would particularly draw attention to *The Value of Audit: Views from Retail (Private) Investors*[3], a report prepared by ACCA for the Singapore Accounting and Corporate Regulatory Authority (ACRA) which examines the value of audit as perceived by private investors and *A Framework for Extended Audit Reporting*[4] a report by Maastricht Accounting, Auditing and Information Management Research Center (MARC) of Maastricht University, Netherlands, commissioned by ACCA to examine a possible framework for extended audit reports.

**Question 2**

*The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."*

a. *Should the auditor's report retain the pass/fail model? If so, why?*

Given the widespread support for the direct signalling of the pass/fail model we believe that it should be continued. The PCAOB faces special national circumstances in that the Securities and Exchange Commission does not accept qualified or adverse opinions or disclaimers of opinion. Such circumstances may fundamentally affect the auditor/auditee interactions concerning identified issues but in the absence of reliable research findings it is not possible to draw informed conclusions as to the effect this might have on the need for change to reporting models; also, as noted in the concept release, *'coordination with the Securities and Exchange Commission ("SEC") would likely be necessary'*.

b. *If not, why not, and what changes are needed?*

In view of our answer to part (a) of this question, we do not answer part (b).

---

[3] http://www2.accaglobal.com/pubs/general/activities/library/audit/audit_pubs/views_from_retail.pdf

[4] http://www2.accaglobal.com/pubs/general/activities/library/audit/audit_pubs/extended_audit_reporting.pdf

c. *If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.*

It is important that the auditor continues to have available a means of emphasising matters in the financial statements that are fundamental to users' understanding of the financial statements.

Please refer to our answer to question 1, concerning possible changes to the report or supplemental reporting that would be beneficial.

**Question 3**

*Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.*

We believe that it is the role of management and those charged with governance (as appropriate) to provide additional information regarding the company's financial statements to financial statement users.

We are attracted to the model of reporting whereby the audited entity is free to report matters that the auditor has raised with the audit committee / those charged with governance. Auditing standards currently drive auditor communication, but entities may consider that they need the equivalent of financial reporting standards to govern the way in which they report externally, so that there is a degree of consistency and comparability between reporting entities. We fully support the development of such reporting and indeed targeted assurance engagements on it designed to achieve appropriate objectives; as these are more likely to be directly responsive to user needs and the value they place on them (as such assurance may be relatively costly).

**Question 4**
*Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?*

We recognise that information related to the audit of the company's financial statements discussed in the concept release could also include matters related to the audit of internal control over financial reporting. Unless there was prescribed content relating to the latter, however, we believe that the elements of reporting required by Auditing Standard No. 5 would continue to be relevant whether presented separately or in a combined report. It might be appropriate, therefore, to restrict any changes to standards to those other than Auditing Standard No. 5.

**Questions 5 to 32 concerning potential alternatives for changes to the auditor's report**
Questions 5 to 32 explore elements of reporting by means of presenting certain alternatives:

- Auditor's Discussion and Analysis,
- Required and expanded use of emphasis paragraphs,
- Auditor assurance on other information outside the financial statements, and
- Clarification of language in the standard auditor's report.

As the concept release notes, these alternatives are not mutually exclusive, and a revised auditor's report could include one or a combination of these alternatives, elements within the alternatives, or alternatives not currently presented in this concept release. We do not provide views on best presentation as to do so, before knowing what changes are to be made to the individual elements, would be premature. Accordingly, we answer individually below only those questions most relevant to the positions we wish to advocate.

In general, we prefer brevity and simplicity in reporting as both encourage users to read auditors' reports and both facilitate comprehension. Thus, a primary test for the inclusion of material has to be whether it is sufficiently important to counterbalance the attendant lengthening and complication of the report. We also believe that the overall impact of the report has to be considered even though, for the purposes of the concept release, elements of it are separately discussed.

F +44 (0)20 7059 5050
www.accaglobal.com

**Question 5 (and 6 to 12)**
*Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?*

- a. *If you support an AD&A as an alternative, provide an explanation as to why.*
- b. *Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?*
- c. *Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?*
- d. *If you do not support an AD&A as an alternative, explain why.*
- e. *Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?*

We do not believe that it is the auditor's role to provide detailed commentary on the financial statements, as management should provide all necessary disclosures. Accordingly, we do not support the concept of an Auditor's Discussion and Analysis which would be regarded mainly as commentary on the financial statements. This perception would persist even if the AD&A included commentary on the audit, or indeed on matters such as the auditor's relevant competencies.

We prefer the model under which the auditor reports to those charged with governance / the audit committee and the latter uses those insights to inform its own reporting in conjunction with the financial statements.

**Question 14 (and 13, and 15 to 18)**
*Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?*
a. *If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.*
b. *If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.*

We see considerable difficulty in producing a list of required areas for comment, as circumstances will differ between entities and a one-size-fits-all approach is unlikely to be effective. A principles-based approach would seem to be preferable. We believe that auditors will seek to demonstrate that a consistently rigorous approach has been taken in relation to each area on which they comment. This can result in repetition of disclosures, or at least very similar wording in relation to several commented matters. Moreover, with the expectation of comment, auditors are likely to address more, rather than less, matters, diluting the value of the information for users.

If such statements were to become extensive it would raise concerns over the brevity of reporting and we see, therefore, more scope for informative reporting where the auditor positively wishes to comment. This should continue to be allowed under reporting standards, rather than introduce a required separate section of the report.

Requiring emphasis paragraphs similar to the approach of the French *'justification of the auditor's assessments'* is likely to promote the emergence of boilerplate language. This has happened in practice.

**Question 19 (and 20)**
*Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?*

a. *If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.*
b. *On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.*
c. *What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?*
d. *If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?*
e. *Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?*
f. *Are the requirements in the Board's attestation standard, AT sec.701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?*

We believe that a balance must be struck between extending the audit of the financial statements and the provision of assurance on related matters. While ACCA has identified significant demand for change, through the body of work referred to earlier in this response, it is important that sufficient detailed research is carried out to explore the views of preparers, users and auditors to determine the demand and the acceptable cost; as experience has shown that, when cost is fully appreciated, the price to be paid may be considered too high.

When determining the relative priority of options to explore, we caution against focusing on matters close to the area of standard setting for auditors when more valuable progress may be made by working together with others in the financial reporting supply chain.

**Question 21**
*The concept release presents suggestions on how to clarify the auditor's report in the following areas:*

- *Reasonable assurance*
- *Auditor's responsibility for fraud*
- *Auditor's responsibility for financial statement disclosures*
- *Management's responsibility for the preparation of the financial statements*
- *Auditor's responsibility for information outside the financial statements*
- *Auditor independence*

a. *Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?*

The proposed clarifications may be subdivided into those dealing with what might be regarded as technical terms and those where ‘responsibility’, a word that takes its normal meaning, is being explained. We are sympathetic to the complaint that certain technical concepts are not understood by report users. Reasonable assurance is not explained by existing reports and we believe it is important that users understand that while the target might be absolute assurance, that is not achievable given the inherent limitations of the financial reporting and auditing processes and the need for timely reporting at a reasonable cost. Because auditing standards merely direct the process there is no direct link to the degree of confidence that a standards-compliant audit should provide. Nevertheless, users are entitled to demand the same level of assurance that financial statements are fairly presented as they demand that the next flight they take will arrive safely. Auditors must not be able to use the concept of reasonable assurance as a shelter against justified criticism of, for example, gathering insufficient evidence or exercising insufficient professional scepticism.

We have never found convincing the argument that mentioning ‘independent’ in the title of a report communicates sufficiently with users. We are sympathetic to the view that the auditor's report should disclose that the auditor has a responsibility to be independent of the audited entity and has complied with applicable independence requirements of the PCAOB and SEC. Moreover, where there are significant factors concerning independence that ought to be appreciated by users, we would support a requirement that such matters should be disclosed.

29 LINCOLN'S INN FIELDS
LONDON WC2A 3EE
UNITED KINGDOM
T +44 (0)20 7059 5000
F +44 (0)20 7059 5050
www.accaglobal.com

It is important that users understand the difference between information that is within the financial statements and is audited and the auditor's responsibilities towards other information. We believe that it would be generally beneficial for auditors to indicate, therefore, the precise scope of their responsibilities regarding 'other information'. This would be particularly important in cases where there are separate opinions on some other matters in addition to the general responsibility to consider other information in relation to the audit of the financial statements.

We discuss management and auditor responsibilities further in our answer to question 21.b below.

b. *Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.*

There has been academic research on the usefulness of generically-worded paragraphs concerning the responsibilities of management and auditors[5]. Recitations of the respective responsibilities of the auditor and management can be regarded as communication of their respective roles, but some regard the material as risk management by the auditing profession. We believe that the report of the auditor can best add to user understanding by setting out clearly the scope of the auditor's work. It is important to say what the auditor has done rather than what the auditor has not done. It is important to communicate the auditor's responsibilities precisely rather than make statements about who has assumed other related responsibilities.

ACCA

**Question 22**

*What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?*

The benefits of clarifications of the language in the standard auditor's report are that users have an increased understanding of the report and hence greater precision in the extent to which they derive assurance from the audit. However, it is not simply a matter that adding to the standard report increases understanding. A balance must be struck between brevity and the need to include wording to clarify the language in the standard auditor's report. There is also a dilemma because expert users will already understand the matters for which clarification is proposed, whereas other users may find brief explanations insufficient for their purposes. For example, the concept of independence – which is a matter of degree rather than an absolute – is not easily explained.

**Question 24**

*Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?*

As we indicated in our general remarks concerning questions 5 to 32, the way that certain elements are presented or combined is a secondary consideration. Each improvement to the standard auditor's report has to be assessed in relation to the needs of users. Only when that has determined the matters to be included in the report should the best form of presentation be itself decided. Having said that, in view of the different needs of expert and other users (mentioned in our answer to question 22 above) we see some merit in presenting further communications in a manner that clearly indicates their supplementary nature.

**Question 29**

*What effect would the various alternatives have on audit quality? What is the basis for your view?*

We see no causal link between the form of reporting and audit quality. Nevertheless, user perceptions of audit quality may be influenced by the inclusion of wording that better exposes the rigour of the process, the relevance of its outcomes and the competencies and relevant qualities of the auditor.

ACCA

**Question 30**
*Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.*

While the entities referenced in the question differ, they are ones in which there is considerable public interest and hence ones for which improvements in auditor reporting would be most valuable. This is not to say that all reports must be the same as, by promoting a flexible approach by auditors, the PCAOB would encourage tailoring to the particular circumstances rather than the application of perhaps boilerplate wording.

We suggest that some consideration should be given to the potential burden on smaller companies as their relative simplicity means that investors and indeed audit committees have less need of detailed information from auditors.

**Question 31**
*This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality*

a. *Are any of these considerations more important than others? If so, which ones and why?*
b. *If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?*
c. *Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?*

We suggest that users of auditor's reports would benefit from increased transparency concerning the auditor, for example by including options to allow the auditor to present appropriate credentials. In several jurisdictions large audit firms are required to adopt publicly visible governance arrangements and publish 'transparency reports' containing information about their governance and capabilities. They are also subject to regulatory review that is in the public domain. User demand for equivalent levels of information might be satisfied in part by the auditor's report but also might require different regulatory action to achieve such transparency.

d. *What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?*

We comment on those circumstances where users demand assurance on disclosures related to, but outside, the financial statements. In relation to such matters, the prime movers must necessarily be the users, preparers, regulators and standard setters concerned with the provision of subject matter information that is suitable for assurance.

The PCAOB needs to reach a satisfactory position on standards for assurance / attestation and perhaps related services (and quality control) to support such developments.

The issue of auditor liability must necessarily be resolved in parallel with other actions to develop further reporting of assurance or related services on disclosures related to, but outside, the financial statements.

**Question 32**
*The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?*

The answer to this question depends on the nature of the information disclosed by the auditor. We draw a distinction between primary provision of information and auditor commentary on disclosures already made by management. The latter is already familiar, albeit in restricted circumstances, and we do not see that expansion of that would change the interaction between the auditor, management and the audit committee. If auditors were to become primary disclosers, the relationship between the auditor, management and the audit committee would be affected by the blurring of roles and hamper the effectiveness of communication between them. Because the interaction is determined by the primary roles of each participant (which are unchanged), however, we do not see that the potential effects would be overly significant.

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington D.C. 20006-2803
United States

Sent via email to comments@pcaobus.org

Dear Office of the Secretary:

**Re: Request for Public Comment: *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*, PCAOB Rulemaking Docket Matter No. 034**

The Canadian Auditing and Assurance Standards Board (AASB) is pleased to provide its comments on the Public Company Accounting Oversight Board (PCAOB) *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*, PCAOB Rulemaking Docket Matter No. 034 (the concept release). We commend the PCAOB for soliciting public comment in connection with your proposed project to deal with possible revisions to the content and form of reports on audited financial statements and we appreciate the opportunity of responding to you.

By way of general background, the AASB's mission is to serve the public interest by setting high-quality standards and guidance that enable the Canadian public accounting profession to provide effective auditing, other assurance and related services. The AASB has the authority, as reflected in federal and provincial Business Corporations Acts, and other legislation and securities regulations, to set generally accepted auditing standards (GAAS) for financial statement audits in Canada. The activities of the AASB are overseen by the Auditing and Assurance Standards Oversight Council (AASOC), an independent body consisting of business leaders and regulators and having the oversight responsibility to ensure that the public interest is properly taken into account in the development of auditing and assurance standards in Canada by the AASB.

The AASB adopts International Standards on Auditing (ISAs) and International Standards on Quality Control (ISQCs) as Canadian Auditing Standards (CASs) and Canadian Standards on Quality Controls (CSQCs) respectively on the same timetable as the International Auditing and Assurance Standards Board (IAASB). CASs and CSQCs are Canadian GAAS for audits of financial statements. The AASB only makes amendments to ISAs and ISQCs that may affect how a practitioner performs an audit of financial statements in circumstances that meet specific criteria. These criteria allow the AASB to make very limited amendments, for example, to meet Canadian rules of professional conduct and to incorporate joint protocols for communicating with the Canadian legal and actuarial professions. When amendments are made, they are clearly identified in the standards. The AASB strongly believes in the consistent application of these standards and promotes their adoption globally.

**Our key comment**
In writing this response letter to you, we would like to focus on only one particular aspect of this project which is the importance of the PCAOB coordinating and collaborating with other global standard setters such as the IAASB on the auditor reporting model.

**Background to our key comment**
Canadian entities, like those in other countries, participate in today's global capital markets. However, Canada is also in a special position in that it has approximately 350 public companies registered and reporting with the Securities and Exchange Commission (SEC) as of December 31, 2010. This is well over twice the number from any other country and over a third of all foreign registrants.

Canadian securities regulators permit Canadian SEC registrants to have their audits conducted in accordance with PCAOB standards, recognizing the strong interrelationship between Canadian and US capital markets. Although there are differences between PCAOB reporting standards and Canadian GAAS, the auditors for some SEC foreign registrants are still able to prepare a single audit report that refers to both Canadian and PCAOB GAAS. This would not be possible if the reporting standards set by the PCAOB and IAASB were to diverge significantly.

While some flexibility between PCAOB reporting standards and those of the IAASB may be needed, we are concerned that significant differences in the form and content of reports resulting from the two sets of standards would create confusion for readers of auditor's reports on financial statements of Canadian SEC registrants, particularly as these comprise many of Canada's largest companies. We believe that significantly different auditor reporting models are not in the public interest.

The AASB responded to the IAASB's Consultation Paper, *Enhancing the Value of Auditor Reporting: Exploring Options for Change,* on September 16, 2011 and we attach a copy of our response for your information. We note that there are many overlapping areas of interest between the concept release and the IAASB's Consultation Paper. For example, we believe that the approach we used to develop our response to the IAASB, which included applying a series of boundaries to guide our responses to questions posed, would be equally applicable to the concept release.

We hope that our view will be useful to the PCAOB in developing the possible revisions to PCAOB reporting standards. If you have any questions or require additional information, please contact Greg Shields at (416) 204-3287.

Yours very truly,

Bruce Winter, FCA
Chair, Auditing and Assurance Standards Board (Canada)

Mr. James Gunn
Technical Director
International Auditing and Assurance Standards Board
International Federation of Accountants
545 Fifth Avenue – 14th Floor
New York, NY 10017
U.S.A.

Dear Mr. Gunn,

**Re: Consultation Paper *Enhancing the Value of Auditor Reporting: Exploring Options for Change***

The Canadian Auditing and Assurance Standards Board (AASB) is pleased to provide its comments on the Consultation Paper (CP) *Enhancing the Value of Auditor Reporting: Exploring Options for Change.* In developing this response, we considered comments provided to us by our stakeholders who showed a strong interest in this topic. Over 100 stakeholders participated in ten face to face and conference call meetings we held with various user groups, including company management, audit committees, directors, regulators, auditors and others. Nearly 300 participants also provided input to polling questions presented during an interactive webinar. We would be pleased to provide you with access to this data should this be of interest to you.

## GENERAL COMMENTS

We support the efforts of the IAASB as it seeks to obtain a better understanding about views on the issues raised in this CP as a pre-requisite to considering possible improvements in auditor reporting. We agree that it is appropriate to monitor and maintain the value and relevance of auditor reporting including, as appropriate, enhancing the auditor's report on the financial statements. In our view, there are opportunities for enhancing auditor reporting that will help meet the information needs of financial statement users and reduce the expectations gap.

The auditor's report is the key output from the audit process. We believe it is important that an international solution be developed on the form and content of the auditor's report and the auditor reporting model so that users around the world can understand and compare auditor's reports on a consistent basis. For example, many Canadian entities have operations in the United

States and other international markets. We believe it would be confusing to users of Canadian financial statements if there are significant differences among auditor's reports in major jurisdictions. For this reason, we urge the IAASB to work together with other bodies that are taking an interest in auditor reporting, such as the European Commission and the United States Public Company Accounting Oversight Board.

Having reviewed the results of the consultations referred to above, we noted a diverse range of views on many of the options presented in the CP. To put these views in perspective in a response letter to you, we developed a series of "boundaries" – a set of guidelines set out in the Appendix to this letter covering:

- cost/benefit considerations;
- maintaining and communicating the respective responsibilities of the auditor, management and those charged with governance in an audit of financial statements;
- other form and content issues; and
- the auditor's ability to provide assurance on information.

We have used these boundaries to guide our responses to each question posed in the CP and we believe that this has enabled us to present you with responses based on a rationale framework for moving forward. We commend this approach to you and hope that it may be of assistance as you consider the responses to the CP.

Where appropriate, we have included in our response to a question additional views presented to us by our stakeholders that provide support for our response.

## RESPONSES TO QUESTIONS

### Issues Identified

1. **Do respondents have any comments about the issues identified in Section II regarding the perceptions of auditor reporting today?**

   We agree that there is an expectations gap between what users expect from the auditor and the reality of what an audit is. This has been recognized, discussed and debated for many years. There continues to be a lack of understanding about the scope of an audit.

   As noted in the Preface to the CP, the IAASB recently made improvements to the auditor's report that were intended to address the expectations gap. We strongly supported those changes. In particular, we note that the expanded description of the auditor's responsibilities with respect to internal control have been well-received in Canada.

We also support the IAASB considering how the expectations gap can be narrowed. However, we believe that it is unlikely that further changes to the auditor's report, regardless of their nature and extent, will be able to completely eliminate the expectations gap. In our view, continuing work needs to be done to educate stakeholders about the nature and value of an audit. In our discussions with our stakeholders about the CP, we noted that many of them were not only unfamiliar with what an audit is, but also were unfamiliar with the broader context of the financial reporting process and the different measures in place in many jurisdictions to safeguard the quality of audits. We support and encourage the IAASB to continue its work in this area.

We also agree that there may be an information gap between what information about the entity and the audit is available and what is provided through the audited financial statements and other corporate disclosure mechanisms. At the same time, stakeholders informed us that in Canada there is sufficient information available in the financial statements and Management's Discussion and Analysis (MD&A) to assist users with their decision making. But in many cases, users are unwilling to read this information or they do not understand it. Users therefore question whether the information gap can be addressed by simply providing more and more information. Some users already feel overwhelmed by the volume of information provided in financial statements and other documents. For them, providing more information would not be helpful.

Many users have also indicated that they neither want nor value the additional commentary that auditors might make on the entity's financial information. In their view, such commentary would not likely be particularly helpful because users are not convinced that auditors have the competencies, nor are there available suitable criteria, for them to provide insightful comments that would affect users' decision making. Based on these comments from our stakeholders, we are not convinced that providing additional information about the entity in the auditor's report will address the expectations gap.

We noted that most of our stakeholders agreed that some changes to auditor reporting would be beneficial. For example, over 88% of respondents in our webinar strongly agreed or agreed with the statement "Keeping in mind benefits, costs, potential challenges and other implications at least some proposed options to enhance auditor reporting in the IAASB's Consultation Paper should be pursued."

**2. If respondents believe changes in auditor reporting are needed, what are the most critical issues to be addressed to narrow the information gap perceived by users or to improve the communicative value of auditor reporting? Which classes of users are, in the view of respondents, most affected by these issues? Are there any classes of users that respondents believe are unaffected by these issues?**

We believe that the following are the critical issues that need to be addressed when considering changes to auditor reporting:

- The format and structure of the auditor's report should effectively communicate what the auditor has done and the conclusions the auditor has reached.
- The auditor's communications with those charged with governance should assist those

charged with governance in playing an appropriate corporate governance role.

- Auditor reporting should support other changes that would strengthen the role of those charged with governance. In this respect, the IAASB can play a role in working with international bodies such as the International Corporate Governance Network and the International Organization of Securities Commissions.

The following are some key considerations in developing a revised format and structure of the auditor's report:

(a) *Meeting the divergent needs of users of financial statements*. It is evident that different users have different information needs with respect to understanding the audit and the auditor's report. On the one hand, there are many retail investors, for example, whose interests are limited to understanding who has done the audit, what has been its scope, what the auditor's conclusion is from it, and that the report is a standard report. A simple pass/fail report with standardized wording often meets their needs. Significantly expanding the auditor's report may only serve to confuse such users. On the other hand, there are users, for example institutional analysts, who want more information about the audit, including what were the areas of audit focus, how the auditor addressed significant risks and so on. For these users, the current form and content of the standard auditor's report does not appear to meet their needs. They are looking for a report that is more entity specific and nuanced. Finding the appropriate balance among different users appears to be one of the most challenging issues in making changes to auditor reporting.

(b) *Agreeing on what can reasonably be communicated in the auditor's report in order to provide value and enhance audit quality.* There is the potential to dramatically increase the amount of information that is contained in the auditor's report. However, as the auditor's report is incrementally increased, it is difficult to determine whether and to what extent the benefits of such additional information are counteracted by the lack of willingness of many users to read longer reports and the risk that they will be more rather than less confused. Simply increasing the quantity of information will likely not improve the quality of information.

(c) *Demonstrating that benefits exceed costs. For the options presented in the CP, there is a need for a clear articulation of the related costs and benefits.* We believe that the IAASB needs carefully to consider which stakeholders will bear the associated costs, which stakeholders will receive the benefits of the various options and whether the benefits exceed costs. Because some of the options may not have been implemented previously, there may not be factual information available that demonstrates costs and benefits. In addition, there may be unanticipated consequences for certain options that may not be identified until they are implemented.

We believe that all users are affected by these issues. However, there is a need to consider providing guidance on enhancing the auditor's communications with those charged with governance in smaller entities, especially smaller listed entities.

**3. Do respondents believe that changes are needed for audits of all types of entities, or only for audits of listed entities**

We believe in the principle that "an audit is an audit" and that the form of auditor's report on the financial statements should be the same irrespective of the entity being audited. We would be concerned that different forms of auditor's report for different entities would create unintended differentiation of the perceived relative quality of their financial statements; for example, the financial statements of unlisted entities might be considered to be second rate as compared with those of listed entities solely on the basis of the different form of auditor's report. Accordingly, we believe that changes are needed for audits of all types of entities.

As a result, the implications of potential changes to the auditor reporting model need to be considered in this light so that unnecessary burdens are not placed on small and medium sized entities, particularly private companies. At the same time, we recognize that auditors of financial statements of listed entities, for example, may have additional responsibilities that need to be reflected in the auditor's report.

**Format and Structure of the Standard Auditor's Report**

**4. Respondents are asked for their reactions to the options for change regarding the format and structure of the standard auditor's report described in Part A.**

Our stakeholders strongly supported including the explanation of management's and the auditor's responsibilities either within the report or as an appendix to it. Several respondents told us that they believed that the audit opinion should receive greater prominence because it is the key element of the auditor's report.

The following summarizes our reaction to the different options described in Part A as discussed in more detail below:

| | |
|---|---|
| Relocate the management and auditor responsibility paragraphs to a separate document. | We do not support this option because we believe that the auditor's report would not be complete without a description of management's and the auditor's responsibilities. We believe that readers of the auditor's report will not take the time to read a separate document. Because of this, under this option there may be confusion as to management's and the auditor's responsibilities. |
| Remove these paragraphs | We do not support this option for the same reasons as |

| | |
|---|---|
| entirely from the auditor's report. | above. |
| Retain these paragraphs in the auditor's report (and, as appropriate, expand their content) | We support this option. We believe that these paragraphs are important because they address the expectations gap. There may be opportunities to improve the wording in these paragraphs. |

We believe there is merit in considering an enhanced format, structure and content for the auditor's report as reflected in Appendix 1 of the CP. We also believe there is merit in considering whether wording used in the auditor's report can be made less technical, without significantly expanding the length of the report.

In summary, we support retaining a brief description of the auditor's and management's responsibilities within the auditor's report, possibly with a reference to an appendix to the auditor's report or a separate document that expands on these descriptions.

5. **If the paragraphs in the current standard auditor's report dealing with management and the auditor's responsibilities were removed or re-positioned, might that have the unintended consequence of widening the expectations gap? Do respondents have a view regarding whether the content of these paragraphs should be expanded?**

We believe that removal of these paragraphs from, or relocation of them outside, the auditor's report would have unintended consequences of widening the expectations gap. We believe that many users, particularly in smaller entities, do not understand the different roles of management and the auditor. An explanation of these roles therefore needs to be readily available. Their removal from the auditor's report or their relocation outside the auditor's report, for example on a website, would, in our view, make it much less likely that users would read the information.

We would not object to re-positioning the management and auditor responsibility paragraphs within the auditor's report. These paragraphs are not as important as other paragraphs, such as the auditor's conclusion, which should be located in a more prominent position.

We believe that there may be benefit in expanding the paragraphs to clarify them. There may also be benefit in expanding the paragraphs to clarify the auditor's role with respect to the assessment of the ability of the entity to continue as a going concern. At the same time, we note that some stakeholders also indicated that they prefer a simplified form of report and that making the report longer may make it difficult to understand.

We believe that it is important for readers that they understand the auditor's role not only with respect to the audit of the financial statements but also with respect to other information in documents containing financial statements. Accordingly, we support expanding the auditor's responsibility paragraph to include a statement about the auditor's responsibilities for such other information.

**Other Information in Documents Containing Audited Financial Statements**

**6. Respondents are asked for their reactions to the possibility that the standard auditor's report could include a statement about the auditor's responsibilities regarding other information in documents containing audited financial statements. Do respondents believe that such a change would be of benefit to users?**

Many users do not appear to understand what involvement the auditor has had with other information. For example, some financial reporting frameworks permit the entity to include certain financial statement disclosures in the MD&A (or a similar document) outside of the financial statements. Such disclosures are often subject to audit. However, the MD&A includes other information not specifically referenced from the audited financial statements. Therefore, there may be confusion about what information in the MD&A has been audited and what has not. It would benefit users if this could be explained.

While we support including in the auditor's report a statement about the auditor's responsibilities regarding other information in documents containing audited financial statements, we also recognize that sometimes such documents may be produced at a later date than the audited financial statements and that it may be impractical for the auditor to make such a statement about these responsibilities in the auditor's report in every case. An option to consider is whether the statement about the auditor's responsibilities for other information could be included in the document itself.

**7. If yes, what form should that statement take? Is it sufficient for the auditor to describe the auditor's responsibilities for other information in documents containing audited financial statements? Should there be an explicit statement as to whether the auditor has anything to report with respect to the other information?**

We believe that the statement could be based on paragraph 1 of ISA 720, The Auditor's Responsibilities Relating to Other Information in Documents Containing Audited Financial Statements, and explain that:

- The auditor is required to read the other information that is included in a document containing audited financial statements and the auditor's report thereon;
- The auditor reads the other information because the credibility of the audited financial statements may be undermined by material inconsistencies between the audited financial statements and other information;
- The auditor's opinion does not cover other information; and
- The auditor has no specific responsibility for determining whether or not the other information is properly stated.

Our stakeholders were strongly in favour of the auditor including a statement indicating whether the auditor has anything to report with respect to the other information. We believe that the IAASB should consider developing guidance so that auditors can do so. In our view, such a statement would effectively close the loop with respect to the auditor's involvement with respect to that information. However, such a statement should not provide assurance on the information because the auditor has not performed procedures to obtain such assurance.

**Auditor Commentary on Matters Significant to Users' Understanding of the Audits or the Audited Financial Statements**

**8. Respondents are asked for their views regarding the auditor providing additional information about the audit in the auditor's report on the financial statements.**

We are not in favour of the auditor providing additional information about the audit in the auditor's report on the financial statements for the following reasons:

1 It is unclear what the benefits of this information would be to users and whether these benefits would exceed the related costs. Due to the potential for increased legal liability, additional information may become standardized and boilerplate, not resulting in any positive benefit to users.

2 The CP notes that expanding the auditor's reporting responsibilities may enhance perceptions of audit quality. We are not aware of any evidence that this is the case.

3 Such additional disclosure by the auditor may give rise to the problem of "dueling" information about the entity – information about the entity being provided from two sources – with the consequence of blurring the responsibilities of the auditor and management.

4 It would likely result in a significant expansion of the auditor's report and move the report away from a standardized format. There is a danger that companies, for example in the same industry, will expect that their auditor's reports should contain similar information to those of their competitors. There will therefore be pressure on auditors to make their reports consistent with those of other entities. There will also be pressure for auditors to present this information consistently from year to year.

5 It is likely that only a limited number of users would understand the information being provided; other users may find the information confusing, misinterpret the information or find that it obscures other parts of the auditor's report. The audit committee has a detailed understanding of the entity and can ask the auditor questions on the auditor's commentary. Placing such commentary in the public domain, however, would be of limited value because users do not have the necessary background to understand the context nor can they question the auditor on it.

6 Suitable criteria may not be available for auditors to make consistent judgments about the areas being reported on. For example, how would the auditor make judgments about the quality and effectiveness of management unless there were appropriate criteria for making such judgments?

9. **Respondents are asked for their reactions to the example of use of "justification of assessments" in France, as a way to provide additional auditor commentary.**

We are not convinced that the benefits of this approach have been fully realized to justify it being adopted internationally. As explained in the CP, there is the potential for confusion about what information is being provided by the entity and what information is being provided by the auditor. This may cause confusion as to the separate responsibilities of the management, those charged with governance and the auditor.
We believe that this approach also suffers from many of the drawbacks listed in our response to question 8.

10. **Respondents are asked for their reactions to the prospect of the auditor providing insights about the entity or the quality of its financial reporting in the auditor's report.**

Paragraph 61 of the CP notes that some hold the view that more frequent use of Emphasis of Matter paragraphs could contribute to the quality of financial reporting. In considering whether we support this approach, we acknowledge the statement in ISA 706, Emphasis of Matter Paragraphs and Other Matter Paragraphs in the Independent Auditor's Report, paragraph A2, that "A widespread use of Emphasis of Matter paragraphs diminishes the effectiveness of the auditor's communication of such matters." Increased use of the proposed approach for Emphasis of Matter paragraphs would therefore serve to dilute the usefulness of such paragraphs.

We also note that ISA 706 is a relatively new standard. We believe that before considering expanding the use of Emphasis of Matter paragraphs, the IAASB should study the extent of use of such paragraphs in practice and the effect their use is having on the quality of financial reporting.

Increased use of Emphasis of Matter paragraphs would also suffer from many of the disadvantages included in our response to question 8. Also, we believe that the determination of when to use Emphasis of Matter paragraphs should remain with the professional judgment of the auditor.

In addition, we believe that it is management's responsibility to focus on matters that may be significant to users' understanding, not the auditor's. Increasing the use of Emphasis of Matter paragraphs is not the appropriate tool to improve the quality of financial reporting. This should be addressed directly in the applicable financial reporting framework. Responsibility for improving the quality of financial reporting should not be placed at the feet of auditors.

Finally, paragraph 72 of the CP calls for the auditor to share insights and perceptions about the entity or the quality of its financial reporting based on the work done for the financial statement audit. We do not support these proposals for the reasons included in our response to question 8.

**An Enhanced Corporate Governance Reporting Model: Role of Those Charged with Governance Regarding Financial Reporting and the External Audit**

11. **Respondents are asked for their reactions to the options for change relating to an enhanced model of corporate governance reporting, as described in Part D.**

    We agree that the interaction between those charged with governance and the auditor offers a sound platform for exploring further enhancement of corporate governance reporting. We support building on the existing two-way communication and dialogue about the audit between the audit committee and the independent auditor. In Canada, many auditors already provide the audit committee with information for it to understand fully the factors the auditor has relied upon in exercising professional judgment in the course of the audit and in reaching the audit opinion. We believe that such communication assists the audit committee in fulfilling its oversight responsibilities for the financial reporting process. We recognize, however, that the IAASB does not have the authority to mandate this sort of communication by audit committees but may have a role in working with others who do have such a mandate.

    In Canada, many audit committees already report publicly on their oversight responsibilities. We believe that extending this type of reporting to include more detail about how these responsibilities have been discharged would improve corporate governance.

12. **To the extent that respondents support this model, what challenges may be faced in promoting its acceptance? Also, what actions may be necessary to influence acceptance or adoption of this model, for example, by those responsible for regulating the financial reporting process?**

    We see the following challenges that may be faced in promoting its acceptance:

    - There may be resistance from audit committees in some jurisdictions from accepting the additional reporting responsibilities and the related additional legal liability.
    - In some jurisdictions, the corporate governance regime may not be strong. As a result, audit committee members may not have the skill sets required to prepare the kind of public reports contemplated by the enhanced model.
    - Auditors will likely require more detailed guidance on how to meet the additional communication requirements of the enhanced model.
    - The model may not work well for smaller entities where corporate governance arrangements are less formal and there is less need for communications between those charged with governance and shareholders.

13. **Do respondents believe assurance by the auditor on a report issued by those charged with governance would be appropriate?**

    We do not support the auditor reporting on the completeness and reasonableness of the audit committee's report for the following reasons:

- It is unclear what the benefits of such a report would be and whether they exceed the related costs.
- It appears to be contradictory to have the auditor, who is appointed by and reports to the audit committee, reporting publicly on the activities of the audit committee. It puts the auditor in a position of conflict by having to challenge the body that appoints the auditor.
- The auditor may not have the background knowledge and competencies to question the judgments of the audit committee.
- Such a reporting role could prejudice the ongoing two-way communication between the audit committee and the auditor. The audit committee may become reluctant to discuss issues with the auditor for fear of being contradicted publicly on the judgments it is making.
- It may undermine the accountability of the audit committee to the shareholders.

**Other Assurance or Related Services on Information Not Within the Current Scope of the Financial Statement Audit**

**14. Respondents are asked for their reactions to the need for, or potential value of, assurance or related services on the type of information discussed in Part E.**

We have not seen evidence of a need for, or benefit from, auditors providing such services. By way of example, the US requires that auditors report on an entity's internal control over financial reporting. When this was enacted in the US, Canadian regulators considered carefully whether this form of reporting was appropriate in Canada due to its close proximity with the US. In the end, regulators did not require such reporting. There is no clear evidence that the requirement to report on internal control over financial reporting, or the lack of such a requirement, has had any significant effect on the expectations gap or the information gap. This may be an area that merits further study.

We also believe that auditors may not have all the required competencies to provide assurance in some of the areas suggested in paragraph 88 of the CP. For example some Canadian stakeholders question whether auditors have the competencies to provide assurance about the business model or enterprise risk management.

It is not clear to us whether appropriate criteria could be developed in other areas suggested in paragraph 88 of the CP. For example, key performance indicators are often industry-specific and are not necessarily based on an applicable financial reporting framework. It seems unlikely that it would be possible to develop generic criteria for such indicators.

We note that in the United States a standard for providing assurance on MD&A has been in place for many years but understand that it has rarely been used in practice. We believe it might be beneficial for the IAASB to consider the US experience with this form of assurance before embarking on a project to develop a similar assurance standard. In this respect, our stakeholders did not support auditors reporting on the MD&A. They believe that doing so will stifle the useful reporting that currently takes place in such documents because it will inhibit management from making forward-looking and other qualitative statements on which it is difficult for auditors to provide assurance.

**15. What actions are necessary to influence further development of such assurance or related services?**

We believe further study needs to take place to determine the costs and benefits of any of these services as a prelude to considering more detailed issues such as the availability of suitable criteria, and whether auditors have the competencies to perform such engagements.

**Implications of Change**

**16. Respondents are requested to identify benefits, costs and other implications of change, or potential challenges they believe are associated with the different options explored in Section III.**

Addressed in responses to other questions.

**17. Do respondents believe the benefits, costs, potential challenges and other implications of change, are the same for all types of entity? If not, please explain how they may differ.**

We believe that for many smaller entities the benefits of the various options may differ significantly from those for larger entities because of differences relating to the types of users (institutional analysts are more involved with listed entities) and corporate governance structure (often there are overlaps between management, those charged with governance and shareholders).

**18. Which, if any, of the options explored in Section III, either individually or in combination, do respondents believe would be most effective in enhancing auditor reporting, keeping in mind benefits, costs, potential challenges, and other implications in each case. In this regard, do respondents believe there are opportunities for collaboration with others that the IAASB should explore, particularly with respect to the options described in Section III, Parts D and E, which envisage changes outside the scope of the existing auditor reporting model and scope of the financial statement audit?**

In summary, we support the following options as being the most effective in enhancing auditor reporting while falling within the boundaries that we defined in the Appendix to our response letter:

- Improving the format and structure of the auditor's report by:
  - Repositioning the opinion paragraph to a more prominent position in the report;
  - Reporting on audit procedures required by ISA 720;
  - Retaining a brief description of the auditor's and management's responsibilities within the auditor's report, possibly with a reference to an appendix to the auditor's report or a separate document that expands on these descriptions;

    - o Using less technical language in the report.
- Enhancing the auditor's communication to those charged with governance.
- Public reporting by the audit committee explaining how it discharged its responsibilities. In this respect, we believe the IAASB may need to explore with other international bodies, such as the International Corporate Governance Network and the International Organization of Securities Commissions, ways to improve corporate governance models worldwide.

**19. Are there other suggestions for change to auditor reporting to narrow the "information gap" perceived by users or to improve the communicative value of the auditor's report?**

In considering several of the options presented in the CP, the AASB noted that in many cases there did not appear to be clear evidence that such options would meet the needs of financial statement users. As a result, it may not be possible for the IAASB to conclude whether or not to begin related standards projects. In reviewing responses to the CP, we suggest that the IAASB consider undertaking further research on the more promising options identified by stakeholders to provide evidence of the merits of such options. Further, as indicated in our response to question 1, we support and encourage the IAASB to continue its work to educate stakeholders about the nature and value of an audit.

We hope that these comments will be useful to the IAASB in finalizing the CP. If you have any questions or require additional information, please contact Greg Shields at (416) 204-3287.

Yours very truly,

Bruce Winter

## Appendix – Boundaries applied by the AASB in developing responses to questions in the Consultation Paper

### Cost/benefit Considerations

1. **The benefits of each proposed change to users are clearly identified and there is an appropriate value proposition when these benefits are considered in relation to expected costs.**

   Costs would include those resulting from increased work effort by auditors, management and those charged with governance, including the ability to complete the financial reporting process within a reasonable time period.

   Potential benefits (e.g., clarity and completeness in reporting to reduce the "expectations gap") may be more difficult to measure than related costs. However, an effort should be made to identify explicit benefits to a wide range of users.

   In weighing benefits versus costs, the types and numbers of users of the auditor's report and financial statements will be a key consideration. However, this may need to be nuanced. For example, some evidence shows that analysts are significantly more likely to read the auditor's report than the average investor (many of whom may never read the report). On the other hand, as the number of retail investors increases, there may be a cost associated with developing an auditor's report that is difficult for the average investor to understand.

2. **Any change should at least maintain, if not improve audit quality.**

   Audit quality is a key to the financial reporting process. Changes in the form and content of the auditor's report may result, for example, in the need for the auditor to focus more specifically on certain matters of relevance to users, which may result in improved audit quality. On the other hand, the matters to be reported on should not be so extensive as to dilute the auditor's primary focus on detecting material misstatements of the financial statements should they exist.

### Maintaining and communicating the respective responsibilities of the auditor, management and those charged with governance in an audit of the financial statements

3. **The separate responsibilities of the auditor, management and those charged with governance should be maintained in the auditor reporting model. The roles and responsibilities of management and the auditor should be described in the auditor's report.**

   There are three distinct responsibilities for auditors, management and those charged with governance. An audit is conducted on the premise of a three-party relationship between the auditor, the accountable party and the user. All of these roles need to be respected and kept separate in order for the financial reporting process to operate effectively. Maintaining and communicating the distinct roles of management and the auditor is essential to reducing the "expectations gap".

4. **The auditor's responsibility (or absence of responsibility) for information that is perceived to be closely related to the financial statements should be clearly communicated.**

   Users should be informed as to what has been done or not done by the auditor regarding information such as MD&A which users typically associate with financial statements. There is an expectation gap regarding auditor's association with such information that needs to be narrowed.

## Other form and content issues

5. **The auditor's report should have standardized form and content, but allow some customization through use of emphasis of matter and other matters paragraphs when fundamental to users' understanding.**

   To facilitate consistent global audit reporting, the auditor's report should contain certain key elements that help users understand what has been audited and the outcome of the audit, and meet the expectations gap.

6. **The auditor's report should not be too long, while containing the essential information the auditor is required to communicate.**

   Anecdotal evidence suggests most readers have little patience with long documents. Changes will have little impact on the expectations gap if users do not read the report. Accordingly, changes need to balance the need to provide additional information with the dangers of providing too much information.

7. **Informed users should be able to understand and use the information contained in the auditor's report.**

   To reduce the expectations gap, the information in the auditor's report should be written in a language that users understand. A key goal should be to improve the quality of the auditor's report rather than simply the quantity of information it contains. Further, the objective of information contained in the auditor's report should be to meet users' needs.

## The auditor's ability to provide assurance on the information

8. **The information on which auditors are asked to provide assurance should be capable of being audited or reviewed in accordance with the applicable framework for assurance.**

   The applicable assurance framework sets out specific parameters under which auditors and reviewers can provide assurance on information. For example, there needs to be: a three-party relationship, suitable criteria, sufficient appropriate evidence, the subject matter should be within the collective expertise of the practitioner and other persons performing the engagement, etc.

**RE: PCAOB Rulemaking Docket Matter No. 34; PCAOB Release No. 2011-003; Concept Release on Possible Revisions to PCOAB Standards Related to Reports on Audited Financial Statements**

Dear Board Members:

The Auditing Standards Committee of the Auditing Section of the American Accounting Association is pleased to provide comments on the *PCAOB Rulemaking Docket Matter No. 34; PCAOB Release No. 2011-003; Concept Release on Possible Revisions to PCOAB Standards Related to Reports on Audited Financial Statements.*

The views expressed in this letter are those of the members of the Auditing Standards Committee and do not reflect an official position of the American Accounting Association. In addition, the comments reflect the overall consensus view of the Committee, not necessarily the views of every individual member.

We hope that our attached comments and suggestions are helpful and will assist the Board. If the Board has any questions about our input, please feel free to contact our committee chair for any follow-up.

Respectfully submitted,

Auditing Standards Committee
Auditing Section - American Accounting Association

Committee Members:
Chair – Joseph Brazel, North Carolina State University
Paul Caster, Fairfield University
Shawn Davis, Emory University
Steven Glover, Brigham Young University
Diane Janvrin, Iowa State University
Thomas Kozloski, Saint Mary's University
Mikhail Pevzner, George Mason University

**Responses to Specific Questions in the Release**

**1. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.**

**a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?**

The Board should undertake a standard-setting initiative to consider improvements to the auditor's reporting model. The existing format of the auditor's report lacks communicative value by not providing enough information regarding the nature and types of procedures, processes and information used in the determination of the auditor's opinion, etc. Therefore, the current report simply reflects a pass or fail outcome and is mostly standard or "boilerplate" wording.

In our view, the current format of auditor's report is not particularly informative. Empirically, we know that the majority of audit opinions are unqualified.

According the most recent version of the Compustat database, the following is the breakdown of opinion types over 2000-2011 period:

| Opinion Type | Number | Percentage |
|---|---|---|
| UNQUALIFIED | 53,834 | 62.45% |
| UNQUALIFIED WITH EMPHASIS OF A MATTER | 32,337 | 37.50% |
| ADVERSE, QUALIFIED, NO OPINION | 32 | 0.05% |
| | | 100% |

In effect, virtually all firms receive unqualified opinions or unqualified opinions with an emphasis of a matter paragraph. As such, because they are all very similar, it is very difficult to infer anything with respect to the information content of such opinions (i.e., their individual signaling value is questionable, except for perhaps going concern opinions).

Research shows that the market negatively reacts to going concern opinion announcements, suggesting they are informative and signal future financial distress (Jones 1996). Thus, it is likely that some forms of additional assurance on intuitive information (e.g., the validity of nonfinancial measure disclosures discussed below) will be useful to the users of financial statements.

**b. In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?**

Academic research findings suggest that users might benefit from materiality disclosures, auditor's findings in relation to fraud or illegal acts, disclosure of the engagement partner's name in the auditor's report, and disclosure of the communications between the auditor and audit committee (Church et al. 2008). On the other hand, due to the complexity involved with applying materiality in practice, the disclosure of materiality amounts or measures could be very difficult as a practical matter, and would probably be more confusing than informative. This is especially the case since magnitude is only one dimension of materiality. Quantitatively small misstatements can be material due to qualitative characteristics.

In addition, modified wording for clarification, as suggested later in the Concept Release, and increased disclosure about audit risks, as discussed in response to subsequent questions, could be useful.

The report could also emphasize the inherent uncertainty and risk associated with both financial accounting and auditing, it should clarify the auditor's responsibility regarding the detection of fraud, should clarify what is meant by the terms "reasonable assurance" and "materiality", and should clarify the auditor's responsibility for information outside the financial statements.

Other disclosures for the Board to consider include: a summary of proposed adjustments that auditors waived and the client did not record, a summary of adjustments the client agreed to record, a discussion of any significant disagreements with management, a discussion of inherent uncertainties facing different areas of financial reporting (in particular, as it is related to critical accounting policies), the potential effects of measurement errors in those areas, and a comparison of budgeted and actual audit fees charged and a discussion of significant differences between those two amounts. For example, recent research shows that changes in negotiated audit fees represent potential leading indicators of future significant negative events. Comparing negotiated fees to the actual fee charged could provide information about the financial reporting quality of a particular company and/or the likelihood of a negative event in the future (Hackenbrack et al. 2011).

Several issues have to be considered when determining whether to enhance information required to be reported in an auditor's report (or elsewhere): 1) auditor litigation and client confidentiality concerns inherently limit the amount of information an auditor can make publicly available about the audit, and clients have a vested interest in minimizing the extent of such disclosures; 2) markets are not necessarily good processors of "diffuse" and "soft" information or information not stated in binary fashion due to cognitive limitations present in investors (Hirshleifer and Teoh 2003)**;** 3) the readability of information could affect investors' ability to interpret it (Li 2008); and 4) auditors' unique perspectives on financial information and managers' attitudes towards the financial reporting process are potentially quite valuable to investors.

Concerns (2) and (3) suggest that the "pass/fail" format of the auditor report has some value since it gives investors' the ability to assess financial statements' credibility, taken as a whole, and in a straightforward manner. This is most likely the case for nonprofessional investors. Nonprofessional investors are likely to have more difficulty processing more "diffuse" information (e.g. in MD&A), and therefore are more likely to prefer shorter, more salient reports. However, given that qualified and adverse opinions are rarely if ever issued (as discussed above), the current pass/fail model communicates to investors that the final grade of virtually every company's audit was a "pass." For professional investors, any extra information might be valuable. However, there is empirical evidence that suggests that professional investors have difficulty processing accounting-related information as well (e.g., Picconi 2006). Overall, the Board should consider that any additional auditor disclosures may actually widen the information gap between nonprofessional and professional investors (and if widening that gap is good or bad for the functioning of our capital markets).

Christensen et al. (2011) suggest that financial reporting and auditing standards should be revised to produce more transparency in financial statements and audit reports in order to clearly convey the level of uncertainty in fair value and other estimates in the financial statements. They report that public company financial statements contain estimates with reasonable ranges that may be many multiples of materiality amounts. They argue that standards may be requiring a level and nature of assurance that auditors cannot provide for estimates with extreme uncertainty. They suggest that those who set standards for auditing consider the nature of assurance that auditors should be required to provide for highly uncertain estimates. Changes to auditing standards could result in a more appropriate representation of the uncertainty inherent in amounts reported in financial statements and can clarify the assurance auditors are able to provide. They further indicate that if more complete information were to be provided on estimates, including a reasonable range, auditors may be able to provide assurance that the reasonable range is fairly stated.

**c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?**

Professional standards (e.g., AICPA 2002), auditing texts (e.g., Messier et al. 2010), and prior research (e.g., Brazel et al. 2009) suggest that an abnormal inconsistency between a company's financial performance and related nonfinancial measures (e.g., number of retail outlets, warehouse space, employee headcount) represents a red flag with respect to financial statement fraud. For example, for companies that have committed fraud, Brazel et al. (2009) find that revenue growth exceeds nonfinancial measure (NFM) growth by approximately 25% whereas revenue growth exceeds NFM growth by approximately 8% for non-fraud firms.

Prior research has demonstrated that investors find both financial and NFMs to be value relevant (e.g., Callen et al. 2010; Brazel et al. 2011a). However, it appears that auditors are not apt to identify instances when substantial inconsistencies exist between their client's financial data and related NFMs (Brazel et al. 2011b). Thus, we believe that investors would benefit from management disclosing and discussing the comparison between (1) key financial measure growth (e.g., revenue, total assets) and (2) growth in related/key NFMs (e.g., number of patents, number of distribution centers). Management's discussion could be limited to instances where the financial measure growth is abnormally inconsistent (based on company history or industry norms) with growth in related NFMs. The reliability of such a disclosure (and the level of audit quality for that matter) would be tremendously enhanced if the auditor's role was expanded to provide assurance on these measures and management's explanation of any abnormal inconsistencies. Auditors already provide assurance related to the financial data (e.g., revenue, total assets) and the vast majority of NFMs are verifiable (e.g., confirming the number of retail outlets). In addition, financial measures and NFMs (albeit typically presented in paragraph form and provided only for the current year) are already disclosed in 10-K filings. Thus, the increased cost to management and the auditor to provide this disclosure would likely be negligible.

In addition, the SEC recently mandated that publicly traded companies assign eXtensible Business Reporting Language (XBRL) tags to each financial statement item and furnish this information, known as XBRL-related documents, along with their 10-K and 10-Qs (SEC 2009). Although the mandate explicitly states that public accountants are not required to provide assurance on these XBRL-related documents, early research (i.e., Bartley et al. 2009, 2011; Debreceny et al. 2010; Du et al. 2011; Weirich and Harrast 2010) finds that several documents contain errors. Further, new interactive data visualization software allows for the presentation of individual values from the financial statements (Dilla et al. 2010; Janvrin et al. 2011). Without assurance that these tags are appropriately mapped to each value, investors may be misled. To summarize, providing assurance that companies have properly assigned XBRL tags and that individual values attached to each tag are reasonable may be an important role for auditors in the near future.

Auditors could also provide their opinion on the quality of voluntary disclosures. For example, most of the market reaction to financial reporting news is around an earnings press release, not around the release of the 10-K (Stice 1991). Press releases are voluntary disclosures that vary greatly in their format and content (e.g., some provide balance sheet information, while some do not). Press releases also contain forward-looking information and non-GAAP disclosures. Moreover, the SEC has been concerned with the fact that sometimes the information in a press release or a conference call is not consistent with the disclosures in 10-K. Hence, it is only reasonable that auditors have some role in providing assurance that this information is not misleading to investors. Some evidence exists that auditors already look at this additional information (Black et al. 2011; Chen et al. 2011).

As noted in 1b, there may also be a role for auditors in providing information or assurance on the level of uncertainty of fair value and other estimates with estimation uncertainty greater than materiality.

Some additional areas beyond traditional financial statements where the Board may consider the need for expanding the auditors' role include:

1) Pro-forma disclosures, Reg G reconciliations, and assessments of whether any pro-forma exclusions are truly non-recurring.
2) Uniformity of information reported in press releases. (Assurance in this area would need to be preceded by a regulator decision as to whether all press releases should contain balance sheet and cash flow statement information.).
3) Reasonableness of earnings guidance contained in press releases and an explanation as to why auditors feel this guidance is reasonable.
4) Providing assurance regarding consistency between information reported in a press release, conference call, and the 10-K.
5) Provide details regarding the application of the audit risk model. Auditors could be required to report their separate assessments of inherent risk and control risk for each engagement. Categories, such as "low," "moderate," or "high" would be sufficient. Further, in an emphasis paragraph, or an expanded scope paragraph, auditors could explain how audit procedures were adjusted to deal with "high" inherent and/or control risks. Some members of the committee voiced the concern that inherent and control risk assessments are performed at the assertion level and vary between accounting/accounting cycles. Thus, the level of detail required to disclose these assessments could lead to more confusion amongst investors.
6) Fair value and other estimates.

Concerning all of these possible additional roles, the Board should consider if auditors have the levels of knowledge and expertise required to provide assurance on matters in addition to the financial statements (e.g., Management's Discussion and Analysis, earnings forecasts, or non-GAAP information). In addition, the Board should consider the extent to which any additional work required of the auditor (related to additional roles) might substantially reduce the amount of post-fiscal year-end audit time available to the auditor. In other words, if any additional roles require substantial time and effort, the possibility exists that post year-end audit effort related to the traditional audit may be sacrificed. Lambert et al. (2011) find that SEC mandated accelerations of 10-K filings that required a substantial ($\geq$ 10 days) reduction in post-fiscal year-end audit time led to reductions in earnings quality. This effect was more pronounced for smaller, accelerated filers (vs. large accelerated filers).

**2. The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."**

**a. Should the auditor's report retain the pass/fail model? If so, why?**

The general consensus of the committee was that the pass/fail model is a practical model that clearly conveys the auditor's opinion regarding whether the financial statements are fairly presented. Given the uncertainties involved with the application of GAAP and GAAS (i.e., the risk associated with interpreting and applying accounting and auditing standards), and the nature of the audit itself (i.e., testing, sampling, reasonable assurance, materiality, etc.), this is the only basic expression of assurance on the financial statements that is plausible and workable. However, additional disclosures, as described above are needed to improve the value relevance of auditor services, disclosures, and assurances.

Also as noted in 1b, recent research suggests that some of the current "pass" reports may not actually meet the required standards as the level and type of assurance required by auditing standards may not be possible, for example, for estimates with extreme uncertainty.

**c. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.**

We provide suggested changes above.

**3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.**

Management is most appropriate to provide additional information regarding the company's financial statements to financial statement users. Existing standards clearly state that management is responsible for the financial statements and the auditor is responsible for determining whether management's financial statements are fairly presented. The audit committee's role is to help the auditor in making that determination. Also, we believe a move away from this current model would increase the likelihood of impaired independence on the part of the auditor.

**4. Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?**

As stated above, auditors could disclose their separate assessments of inherent risk and control risk as part of their standard audit report. They could also disclose examples of steps taken to adjust detection risk in response to high inherent and/or control risk. Also, if the auditor's report on the financial statements is modified, and it becomes a longer report, the option for the auditor to provide one report that covers both the audit of the financial statements and the audit of internal control should be eliminated, and the auditor should provide two separate reports. This may improve the clarity of both reports.

**5. Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?**

**a. If you support an AD&A as an alternative, provide an explanation as to why.**

The consensus of the committee was that an AD&A would prevent a lengthy auditor's report and provide the additional disclosures about the audit that are described above. However, the Board should consider if such a requirement would put the auditor in the position of a preparer, and not an assurer, and would damage the financial reporting system that is in place. In addition, potential legal issues might all but ensure that an AD&A would over time be reduced to uninformative boilerplate language. In that case, it is hard to imagine an AD&A that would read much differently or provide additional content over that information which is presented in the scope paragraph of the current audit report.

**8. Should a standard format be required for an AD&A? Why or why not?**

A standard format should be required for an AD&A for general consistency and clarity of purpose. However, the content of an AD&A should be solely based on the discretion of the auditor in terms of the types of material or significant matters disclosed.

**9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?**

The Committee asks how different would these disclosures be or become from the current discussion, by management, of the risks disclosed in a Form 10-K or in a Prospectus for an initial public offering? We believe it is important for investors to consider business risks, strategic risks, and operating risks. However, we do not think assessments of those risks or reporting of those risks should be the responsibility of the auditor. Again, we fear a blurring of the roles of preparer and assurer and the possible impairment of independence if auditors are required to report these additional risks that may go beyond the audit risk model.

**11. What are the potential benefits and shortcomings of implementing an AD&A?**

Benefit: Investors may be able to better quantify the various risks faced by the entity, depending on what additional information is disclosed.

Shortcoming: It may add cost to the audit, with little added benefit, particularly if the ADA is reduced to boilerplate language. In addition, the AD&A might overshadow the MD&A and thus, cause management to disclose very little information in the MD&A. This may be especially the case if the AD&A is purposed to make comments regarding estimates, forecasts, and other items discussed by management in the MD&A.

**12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?**

The Committee offers this thought: suppose the auditor disagrees with management. What then are management's options for increased disclosure/rebuttal? The concept release is silent about this. We believe that the potential for competing information is reasonably high and, in such cases, it would probably lead to higher auditor turnover due to "opinion shopping." Also, because the auditor may not have all of the information used by management in reporting on components in the MD&A and/or the financial statements, there is in the Committee's opinion a high risk that the AD&A could indeed present inconsistent or competing information and consequently impact users' assessments and evaluations of the financial statements, of the assertions made by management, and of the competence and integrity of management.

**13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?**

Consistent with the Board's illustrative emphasis paragraph, areas of critical importance to the financial statements, including significant management judgments and estimates, areas with significant measurement uncertainty, and other areas that the auditor determines are important for a better understanding of the financial statement presentation could be discussed in emphasis paragraphs. These types of matters would be used to effectively highlight areas (e.g., the uncertainty surrounding management estimates and judgments) that might not be immediately apparent to financial statement users. However, if these disclosures become boilerplate they will be of little benefit to interested users.

**14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?**

The Board should consider a requirement to include areas of emphasis in each audit report, but only to the extent that the auditor determines such disclosures are important for a better understanding of the financial statements. However, disclosure of the related key audit procedures may or may not be necessary.

**a. If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.**

The consensus of our committee was that required and expanded emphasis paragraphs could benefit financial statement users by highlighting those matters deemed as significant and could potentially increase the quality of management's disclosures in the financial statements. For example, research generally reveals that going-concern opinions have information value, serving as an effective early warning of financial distress or entity failure and reducing the surprise associated with bankruptcy announcements. They are also useful in evaluating firm valuation and IPO securities (Asare 1990; Davis 2011).

In addition, providing assurance on XBRL-tagged financial statements may be one additional area of emphasis. As noted above, research has noted that current XBRL-related documents often contain errors (Bartley et al. 2009, 2011; Debreceny et al. 2010; Du et al. 2011; Weirich and Harrast 2010). As interactive data visualization software that presents financial statement values becomes readily available, investors will be more likely to rely on XBRL-related data. Assurance on XBRL-tagged financial statements may serve a vital role in the future.

Also, auditors often define materiality based on total values in the financial statements. To provide assurance on the individual values underlying each XBRL tag, auditors may need to change how they define materiality. This change may be needed since academicians and regulators argue that the advent of XBRL-tagged information will allow investors to examine individual data-centric financial items without requiring the items to be viewed within the context of the financial statements (e.g., Lowe and Locke 2011). For example, an investor may view the total inventory value differently if the value is shown alone vs. when it is shown as a component of total assets on the balance sheet.

**b. If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.**

Some of the committee members believe that the auditor should continue to have the option to employ emphasis paragraphs in the auditor's report, but do not believe that such paragraphs should be required. Again, it is perceived that this will risk having the auditor adopt the role of preparer, instead of assurer. Other concerns, similar to those raised by the possible AD&A, also apply: time delays, boilerplate language, etc. To further illustrate this concern, suppose management records an Allowance for Doubtful Accounts of $1 million. Further, suppose the auditors believe an allowance of $1.5 million would be appropriate, and they propose an audit adjustment to management for $.5 million. Management disagrees with the auditor’s estimate and refuses to record the adjustment. The auditors decide to go along with management’s lower estimate, and the $.5 million is deemed “borderline” material. What exactly would the expanded emphasis paragraph say in this situation? Estimates for the allowance may be more or less conservative and therefore a wide range of acceptable numbers may be applied. A discussion of this would likely be confusing to investors and would most likely be ignored. Further, a high potential for the use of boilerplate language exists in this situation.

In contrast, if management is consistently aggressive in its assumptions and consistently chooses income raising alternatives, the auditor most likely assigns a high degree of risk to the engagement. As stated above, disclosure by the auditor of their overall risk assessment of the client would be informative to investors without confusing them with additional emphasis paragraphs that most likely would evolve into boilerplate language.

**15. What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?**

Regarding assurance on XBRL tags, a statement should be included indicating that the auditors have conducted appropriate audit procedures to provide reasonable assurance that the XBRL-related documents follow four XBRL principles (recently proposed by the AICPA (2011)): (1) tags are complete (i.e. all required information has been tagged at the required levels), (2) mapping (or selection of elements) is appropriate, (3) values are accurate (i.e., the amounts, dates, monetary units, and calculation relationships in the XBRL-related documents are consistent with the source financial statements), and (4) XBRL files are structured for their intended use (e.g., regulatory requirements).

Further, if the auditor did not change his/her definition of materiality, the auditor may want to acknowledge that he/she performed only assurance as to XBRL tag selection; materiality considerations were not affected.

**18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?**

Potential shortcomings are that the paragraphs could end up having little or no communicative value if they are too boilerplate, or the information content of the paragraphs might not be fully incorporated by the market on a timely basis (or might be incorrectly incorporated). The obvious benefit to investors is the provision of additional information regarding the performance of the audit and quality/risks associated with the financial statement data. However, as stated previously, the provision of such information may have the consequence of increasing the information gap between nonprofessional and professional investors.

**19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?**

**b. On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.**

As noted above, providing assurance on XBRL-related documents is important as investors are now using interactive data visualization software to display XBRL-related documents when making investment decisions. Unfortunately, early research (Bartley 2009, 2011; Debreceny et al. 2010; Du et al. 2011; Weirich and Harrast 2010) indicates that several XBRL-related documents contain errors.

Also, we describe above how assurance related to the consistency between financial data and related NFMs may enhance the auditor's reporting model. Similarly, we discussed earlier the information and assurance that could be provided on fair values and other estimates (see 1b).

**20. What are the potential benefits and shortcoming of implementing auditor assurance on other information outside the financial statements?**

Several benefits and shortcomings of providing assurance on XBRL-related documents exist as noted below.

Benefits: Given that both the SEC and PCAOB have the core mission to protect the interests of investors, providing assurance on XBRL-related documents allows investors to rely on XBRL tagged information with fewer opportunities to be misled by incomplete, inappropriately mapped, inaccurate, or improperly structured data (Gunn 2007; Plumlee and Plumlee 2008; Srivastava and Kogan 2010; AICPA 2011).

Shortcomings: Auditors generally define materiality based on total values in the financial statements. To provide assurance on the individual values underlying each XBRL tag, auditors may need to change how they define materiality. Specifically, academicians and regulators argue that the advent of XBRL-tagged information will allow investors to examine individual data-centric financial items without requiring the items to be viewed within the context of the financial statements (Lowe and Locke 2011). For example, an investor may view the total inventory value differently if the value is shown alone vs. when it is shown as a component of total assets on the balance sheet.

Further, some opponents of XBRL assurance argue that the process may be cost prohibitive. However, recent work by Alles and Gray (2011) suggests that the cost of providing XBRL assurance will be fairly low compared to its benefits.

**21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:**

- **Reasonable assurance**
- **Auditor's responsibility for fraud**
- **Auditor's responsibility for financial statement disclosures**
- **Management's responsibility for the preparation of the financial statements**
- **Auditor's responsibility for information outside the financial statements**
- **Auditor independence**

**a. Do you believe these clarifications are appropriate? Why or why not?**

These clarifications are appropriate as research evidence tends to suggest that users of the financial statements are confused about the auditor's responsibilities and level of assurance provided by the auditor's report (Church et al. 2008).

**b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why.**

Yes, see 21(a) above.

**c. Should the auditor's report clarify all or some of the above areas? Why?**

The auditor's report should clarify all of the above areas as there appears to be an "expectation gap" related to the level of responsibility that is assumed by the auditor, as well as the level of assurance provided (Church et al. 2008).

**d. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?**

In terms of the nature of the audit, as stated above, users might benefit from an explanation of the uncertainty and risk associated with financial accounting and auditing, materiality disclosures, auditor's findings in relation to fraud or illegal acts, disclosure of the engagement partner's name in the auditor's report, and disclosure of the communications between the auditor and audit committee (Church et al. 2008).

**22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's reporting?**

Clarifications of the language (e.g., use of more straightforward and explanatory language (Robertson 1988), and minor wording modifications (Hermanson et al. 1991)) in the auditor's report would improve the communicative value of the report. The suggested clarifications would provide investors with a better understanding of the role of the auditor and the nature of an audit. The clarifications are extremely low cost and we see no shortcomings for investors or management.

**23. This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative or combination of alternatives is most appropriate and why?**

Auditor's Discussion and Analysis and clarification of language in the standard auditor's report would immediately improve communication to the users of financial statements based on comments obtained during the Board's outreach efforts. In addition, the content of the AD&A could expound on the emphasis paragraphs and/or auditor's assurance on other information outside the financial statements, if these two alternatives are adopted.

Revising the audit report to include the auditor's separate assessments of inherent risk and control risk, and the steps taken by the auditor to adjust the nature, timing, and extent of audit procedures to achieve an appropriate level of detection risk would be the useful.

**26. Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?**

In developing an auditor reporting framework and criteria the Board should work closely with the FASB to ensure that such framework is fully reflective of GAAP standards, and perhaps to influence GAAP standards to improve the transparency and auditability of fair value and other estimates.

**28. Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?**

Clarification of language in the standard auditor's report better conveys to the users of the financial statements the auditor's role in the performance of an audit as it would more clearly outline the auditor's responsibilities in conducting the audit relative to management's responsibilities, and would more accurately describe the level of assurance provided by the auditor.

**29. What effect would the various alternatives have on audit quality? What is the basis for your view?**

A revised report that included the auditor's separate assessments of inherent risk and control risk, plus an explanation of appropriate adjustments regarding detection risk would lead to better quality audits. This is based on the examination of audit failures using the audit risk model to determine why the audit failure occurred. When auditors simply state they are assuming control risk at the highest level, or, when they combine inherent risk and control risk into a single assessment, they invariably do not make the necessary adjustments to the nature, timing, and extent of audit procedures to achieve an appropriately low level of detection risk. In other cases, they simply assess inherent risk and/or control risk too low for the circumstances.

In addition, requiring auditors to explicitly express their independence in the audit report, and perhaps having them explain, in brief, the measures they take to ensure independence, may also lead to perceptions of higher audit quality due to perceived higher auditor independence.

Finally, improvement in financial and audit standards around fair value and other estimates would improve audit quality (Christensen et al. 2011).

**31. This concept release describes certain considerations related to changing the auditor's report, such as effects on quality control procedures, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.**

**b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes outweigh the potential cost? Why or why not?**

As with most new reporting standards, we believe that the benefits will outweigh the potential costs over time. Improving the communicative value of the auditor's report through additional disclosures will definitely involve additional audit costs but should improve audit quality and users' decision-making in the long run.

Re: PCAOB Rulemaking Docket Matter No. 34 – *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Auditing Financial Statements and Related Amendments to PCAOB Standards*

Dear Sir/Madam,

The Bank of New York Mellon Corporation ("BNY Mellon") wishes to comment on the PCAOB Rulemaking Docket Matter No. 34 – *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Auditing Financial Statements and Related Amendments to PCAOB Standard.*

BNY Mellon is a global financial institution with $305 billion in assets, $1.3 trillion in assets under management and $26.3 trillion in assets under custody and administration. We are a U.S. SEC Registrant and have also been subject to the Federal Deposit Insurance Corporation Improvement Act of 1991 ("FDICIA") and the Sarbanes Oxley Act of 2002 for many years.

BNY Mellon believes that an independent audit needs to remain objective and that no bias or different qualitative perspective should be introduced. Independent auditors are not trained analysts, although they do possess many analytical skills, by the nature of their profession such analytical skills are (and should be) more directed towards the negative. Well trained and experienced auditors should be asking themselves "what am I missing?", "is this too good to be true?" and their professional skepticism is to be applauded and nurtured by the PCAOB and the accounting firms and their professional bodies. In light of this, we do not believe that an Auditor's Discussion and Analysis ("AD&A") report is necessary, because such matters as contemplated in the PCAOB proposal are generally already communicated to the Audit Committee of the Board of Directors prior to the issuance of the independent auditor's report. Any matters of significant disagreement would therefore have been addressed with management, the independent auditors and the Audit Committee during the preparation of the financial statements and management's discussion and analysis ("MD&A"), otherwise a qualified audit opinion may be rendered by the audit firm with respect to any material deficiencies in the audited financial statements or any inconsistencies between the MD&A and the financial statements.

BNY Mellon does not believe that an expanded emphasis paragraph should be required in all independent auditors' reports. While we understand that there is a view that expanded emphasis paragraphs may assist users in focusing on matters that could impact their investing decisions, we are concerned that auditors do not have the appropriate perspective or expertise to provide such guidance. Under today's auditing standards the auditors can write an emphasis paragraph if necessary, and we do not believe that this should be a requirement.

BNY Mellon, however, does believe that it would be an improvement if independent auditors were required to provide written assurance on financial information disclosed outside of the audited financial statements, such as MD&A or other information. In our view, we believe that such assurance procedures should equate to the same level of assurance typically provided by auditors in comfort letters associated with 1933 Act filings with the U.S. Securities and Exchange Commission.

BNY Mellon believes that clarifying language about what an audit represents and the related auditor responsibilities, in areas such as reasonable assurance, auditor's responsibility for matters such as fraud, financial statement disclosures, management's responsibility for the preparation of the financial statements, and auditor independence in the standard auditor's report would be helpful to users and may assist in ensuring that the "expectation gap" is closed further. We are concerned, however, that only "boilerplate" language will develop over time and that such additional language may not be fully understood or appreciated by the users and other constituents who read audited financial statements.

If you have any questions or are in need of any further information, please contact me at (212) 635-7080.

Sincerely,

John A. Park

- **Release No. 2011-003**
- **PCAOB Rulemaking Docket Matter No. 034**
- **Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards**

Dear Sir.

Thank you for giving us the opportunity to comment on your Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards. This concept release (release) raises some important issues concerning the auditor's role with respect to audited financial statements. I have already commented on similar issues that were raised in the International Auditing and Assurance Standards Board's consultation paper "Enhancing the Value of Auditor Reporting: Exploring Options for Change".[1] For completeness I would suggest that you could also consider those comments in addition to these presented here.

In general I support improving the relevance and usability of the auditor's report. I would caution that we must clearly delineate the auditor's role and responsibilities in this context. For example it would be unacceptable under current responsibility structures and expectations if the auditor were to take on a governance role with respect to an entity it is

[1] See IAASB consultation paper Enhancing the Value of Auditor Reporting: Exploring Options for Change, available at http://www.ifac.org/Guidance/EXD-Details.php?EDID=0163.

auditing. That is not, nor should it be, the job of the auditor, who is independent from the audited entity. It would also not be appropriate for the auditor to take on an ongoing oversight, or pseudo-regulatory role regarding the entity. Such responsibilities lie elsewhere. Despite this, the release is rich in ideas and possibilities, many of which would certainly benefit users of audited financial statements (users). I have some specific comments, which I will address in answer to your specific questions.

**Answers to specific questions raised by the PCAOB**

1. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.

a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?

*Yes. Such initiative should address the legitimate concerns of users outlined in the release, and from the results of your staff's outreach activities.*

b. In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?

*The communicative value of auditor reporting could be substantially improved by altering and optimising the layout of the report. For example, the auditor's opinion should be prominent, and the majority of backup or supporting material should be presented in appendices. The auditor's report should also include greater disclosure of the tasks and procedures carried out in performing the audit, and that this should be included preferably in an appendix to the report. Users would then be able to better appreciate the completeness of the auditor's investigative work, and would therefore give greater credence to the auditor's views and opinions. I think that this would also help to manage users' expectations about the role and duties of the auditor in this context. Finally I would suggest that the auditor's report should including a clearer statement about the auditor's responsibilities regarding other information outside the financial statements. This would help to better manage users' expectations about the auditor's role and responsibilities here, and the extent of the auditor's duties pertaining to such other information*

c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?

*Possibly. This depends on the "matters" in question. The auditor's role and responsibilities must be clearly delineated, otherwise the auditor risks taking on a governance or ongoing oversight role with respect to the entity.*

2. The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."

a. Should the auditor's report retain the pass/fail model? If so, why?

*Yes. This is clear and sufficient to indicate that the entity has fairly presented its financial statements.*

c. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.

*As a minimum, I would suggest that expanded use of emphasis paragraphs, where relevant, could provide more meaningful and complete information to users, by highlighting significant matters that could help to manage users' expectations regarding the auditor's report and opinions therein.*

3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.

*This depends on the information and to what it relates. Opinions on consistency or completeness of information, rather than just disseminating information, should ideally be provided by an independent auditor.*

5. Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?

a. If you support an AD&A as an alternative, provide an explanation as to why.

*In general I support an expanded auditor commentary such as an AD&A. Such commentary should only be provided when necessary to aid understanding. In this sense it should not become boilerplate over time. At the end of the day, the auditor's report should be* *informative and useful as a whole, rather than just section-by-section, and any commentary that aids users' understanding in this regard should be beneficial.*

b. Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?

*I would suggest that an AD&A should comment primarily on the audit. Open commentary on the financial statements would otherwise need to be structured within a clear delineation of the auditor's role and responsibilities, in order to manage the expectations of users.*

6. What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?

*The AD&A should comment on material issues in order to better manage the expectations of users regarding the audit and risks thereon. The illustrative report on page 16 of the release provides a good framework.*

7. What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?

*Please see my responses to your questions 5.b and 6.*

8. Should a standard format be required for an AD&A? Why or why not?

*A standard framework would be useful in order to better delineate the role and responsibilities of auditors and to better manage the expectations of users.*

9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?

*I support expanded auditor commentary on the entity's internal controls, including any significant internal control deficiencies identified during the audit. I am not convinced of the* *need or appropriateness of expanding the auditor's responsibilities to include commentary on general business risks, strategic risks etc.*

10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?

*This is difficult. However, I would recommend that the auditor should only comment on material issues, highlighting in particular difficult or contentious issues. This should reduce the use of boilerplate language.*

12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?

*This is a risk. It is critical that the auditor should not take on a governance role with respect to the entity, nor should the auditor discuss matters that the entity has not disclosed in the financial statements. However, the auditor is also a professional with a public interest role. I would only expect to see such inconsistent or competing information in very difficult or extreme circumstances, when such disclosure could possibly better manage the expectations of users regarding the audit.*

13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?

*Possibly. See also my responses to your questions 2.c and 5.*

14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?

a. If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.

*In answer to this and your questions 15, 16 and 17, please see my responses to your questions 2.c and 5.*

19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?

*I would support an auditor's opinion on the consistency and completeness of information outside the financial statements, and their relation to the audited financial statements. However, auditor assurance on "other information outside the financial statements" is too* *broad and vague an objective, and negates a clear delineation of the auditor's role and responsibilities, especially as the nature and contents of such "other information" changes over time.*

*In principle I support auditor assurance on the MD&A. The illustration on page 24 of the release provides a starting point for further discussion.*

21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:

• Reasonable assurance
• Auditor's responsibility for fraud
• Auditor's responsibility for financial statement disclosures
• Management's responsibility for the preparation of the financial statements
• Auditor's responsibility for information outside the financial statements
• Auditor independence

a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?

*I agree that these clarifications are appropriate, and would help to delineate roles and responsibilities regarding the audit.*

b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.

*Yes. They should help to better manage the expectations of users. The results of your staff's outreach activities support this view.*

22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?

*One of management's and the auditor's most important responsibilities is to communicate with investors and users in a clear and straightforward manner. Anything which helps in this regard is worthy of further consideration.*

31. This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.

a. Are any of these considerations more important than others? If so, which ones and why?

*All of these considerations are important. Changing the content or form, or extending the scope of the audit report, must be considered in total, rather than piecemeal, along with a global, cumulative, credible and coherent analysis of the potential benefits and costs at the end of the process.*

b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?

*This is a business case, and users, preparers and others should be convinced that the additional and incremental benefits derived from such changes would outweigh the initial and ongoing costs of the changes and additional burdens thereafter.*

Yours faithfully

C.R.B.

**Re: PCAOB Release No. 2011-003, Rulemaking Docket Matter No. 034,**
*Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*

Dear Members and Staff of the Public Company Accounting Oversight Board:

BDO USA, LLP welcomes this opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB or the Board) Concept Release, *Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (the Concept Release). We note that the International Auditing and Assurance Standards Board (IAASB) has issued a consultation paper on the same subject matter, so we encourage the PCAOB to work with the IAASB to ensure convergence on auditor reporting so differences are minimized to the extent possible.

We support the Board's initiative to reassess the appropriateness of the current form and scope of the auditor's report. The increased complexity of financial reporting, recent events in the financial markets and the current economic environment have renewed interest in enhancing the transparency and relevance of auditor reporting. We strongly support objective consideration of changes that could enhance the transparency and relevance of auditor reporting to financial statement users[1] in recognition of the Board's mission to protect the interest of investors. As described below, we are confident that certain changes could be implemented in the short term, which have the potential to enhance auditor reporting in a relatively cost effective manner. Other changes that have the potential to positively impact auditor reporting may require significant training of professionals, regulatory rulemaking, and/or participation by other standard setters and, as such, could be considered as a subsequent phase of any project.

In conjunction with this initiative, we believe it is important to also consider how changes in the auditor's reporting model might impact the profession's liability risks.

Our comments to the specific questions posed in the Concept Release are presented below and have been developed consistent with the following overarching principles that we believe are essential to preserve the integrity of the auditor's report:

[1] In the context of this letter, the term "users" refers to investors and other financial statement users.

i) Management and the audit committee, rather than the auditor, should be the original source of information about the company;

ii) Auditor reporting should focus on objective matters;

iii) Changes should not detract from audit quality; and

iv) Changes should enhance transparency in a way that does not promote information overload.

In addition, we believe that any changes to the reporting model should be responsive to the underlying objectives of reasonable user demands and be cost-beneficial and practical to implement.

1. **Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.**
   a. **Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?**
   b. **In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?**
   c. **Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?**

We support the Board's initiative to consider improvements to the auditor's reporting model. The recent calls by some investor groups to increase the transparency and relevance of this model emphasize the importance of the auditor's report to their decision making process. The more clearly the auditor's report can communicate the results of the audit, in accordance with the fundamental role of the auditor in performing an audit, the more valuable the auditor's report will be to users.

As set out above, consistent with the overarching principles on which our comments are based, we strongly believe that management is responsible for providing information about the company, since it is in the best position to provide such information. If the auditor were required to provide original information about the company, it could create a situation where competing or inconsistent disclosures about the company, by management and the auditor, reduce rather than promote clarity. Our suggestions for improvements to the auditor's reporting model are grounded on the principle that management is the original source of information on which the auditor provides assurance.

While we believe the standard auditor's report in its current pass/fail form provides value to users, we recognize that improvements can be made to the report to provide more relevant and useful information to them. We believe significant improvements can be made through various means such as: clarification of the standard auditor's report, inclusion of emphasis of matters paragraphs, and auditor reporting on certain matters outside of the financial statements, which we discuss in detail in our responses to the questions set out below.

We believe suggestions to expand the auditor's role to provide assurance on certain matters in addition to the financial statements, specifically Management's Discussion and Analysis (MD&A) or portions thereof such as "Critical Accounting Estimates," merit further consideration. As noted in the Concept Release, auditor reporting on MD&A is currently available under the Interim Attestation Standards, AT Section 701 – *Management's Discussion and Analysis* (AT 701), although it is rarely used. This guidance could be refined such that a report on the examination of specific portions of the MD&A could be issued, if users considered that auditor association on such information provided sufficient value to warrant the extra cost.

2. **The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."**
    a. **Should the auditor's report retain the pass/fail model?**
    b. **If so, why? If not, why not, and what changes are needed?**
    c. **If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.**

We believe that the current form of reporting, referred to above as the pass/fail model, provides a clear mechanism to highlight the results of the audit and should be retained. We understand that the perceived value of this core model is shared by most constituents of the financial reporting community, although there are divergent views as to the degree to which that model should be expanded to provide supplemental reporting. Current auditing standards already allow for circumstances in which the auditor may provide emphasis of matters and explanatory language regarding certain matters and we believe this reporting can be mandated in certain circumstances and expanded into other areas, as discussed below.

We note that the Concept Release explains that some investors believe that when an auditor identifies and communicates to management a significant matter that is not necessarily material to the financial statements, and management has not fully addressed that matter in the financial statements, the auditor does not have a mechanism to communicate such information to investors. However, we believe that, by definition, immaterial matters do not impact the "fair presentation" of the financial statements to a reasonable user, so communication of such matters is not necessary and could possibly attribute greater importance to the matter than warranted.

To provide clarity about what the audit report conveys, we suggest providing definitions of the following terms:

- Present fairly
- Reasonable assurance
- Materiality
- Material misstatement

In this regard, rather than including these definitions in the report itself, it may be useful to include a cross reference to a glossary of technical terms used, in a manner similar to the approach adopted by the Auditing Practices Board in the UK that provides a dedicated area for information about the scope of the auditor's report.

3. **Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.**

As noted earlier, we strongly believe that management is responsible for providing information about the company and that the auditor's responsibility is to provide assurance on that information, rather than providing such information to users directly. Any requirement for the auditor to provide additional information directly to users about the company has the potential to (1) blur the lines of responsibility as it relates to financial reporting, (2) result in competing or inconsistent disclosures from the auditor and management that could create confusion and/or the perception of a qualified opinion, and (3) depending on the nature and extent of information disclosed/reported on, negatively impact the effectiveness of communication between management, the audit committee, and the auditor.

4. **Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?**

If changes to the audit report on the financial statements are made, consideration of how those changes might impact the report on internal control will also need to be assessed. For example, if the auditor's report on the financial statements is modified to explain the responsibility of management and the audit committee as it relates to the financial statements, the report on internal control over financial reporting should be similarly modified. Please see our response to question 2 and 21, where we have outlined other revisions to the auditor's report, which would also need to be assessed for applicability to reporting on internal control over financial reporting.

**Auditor's Discussion and Analysis**

5. **Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?**
   a. **If you support an AD&A as an alternative, provide an explanation as to why.**
   b. **Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?**
   c. **Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?**
   d. **If you do not support an AD&A as an alternative, explain why.**
   e. **Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?**

We do not support an AD&A alternative because such an approach is inconsistent with the overarching principles described in our introductory comments.

While we appreciate the rationale behind some investors' calls for additional information about the audit, certain of the matters mentioned in the Concept Release, such as audit risk, areas of significant audit judgment, and areas of significant difficulty encountered during the audit, are highly subjective and cannot be explained succinctly in any meaningful manner. Accordingly, these matters are typically discussed in depth between the auditor and management and the audit committee in the context of a dialogue where all of the relevant considerations can be explored in proper context. The PCAOB's proposed Auditing Standard, *Communications with Audit Committees,* paragraph 1 states, "Effective two-way communications throughout the audit assist the auditor and the audit committee in understanding matters related to the audit." In contrast, any additional information provided in the audit report is unlikely to be understood by others who would not possess a comprehensive knowledge of all of the attendant facts and circumstances, including expert knowledge as to how to conduct an audit.

Moreover, even if the matters that are set out as examples in question 7 below were required to be disclosed, they would necessitate development of disclosure frameworks to enable consistent assessments to be made in an infinite variety of circumstances. In that regard, it is also likely that auditor disclosures would differ in some respects from those of management, which could result in competing and inconsistent disclosures that may create confusion and/or the impression that the difference of views represents a qualified opinion. Further, to the extent that management would feel pressure to provide disclosures that mirror those of the auditor, this would seem to dilute management's primary responsibility for financial reporting.

We also believe any additional information about the company for which users require an associated auditor attestation should be provided in the context of auditor reporting on information already provided by management. In this way, the need to include additional information about the audit would not drive the information that the company describes within the financial statements. Rather, the auditor would comment on information that the company provides. This approach preserves the distinction between the company and the auditor, whereby management prepares the financial statements and the auditor expresses an opinion through the auditor's report.

We would also be concerned with the unintended consequences of disclosing sensitive information about the company that may limit the robustness and candor of discussions between the auditor and management/the audit committee. Such candid discussions are essential for the auditor to understand the company and its financial information and are critical to properly assess audit risk and therefore preserve the quality of the audit.

While we believe that certain important improvements to the auditor reporting model could be achieved in a relatively cost effective manner, the AD&A approach, to be effective, would require significant additional auditor effort to prepare and additional time for quality review and approvals, all of which would add cost and time to the financial reporting process.

We have provided our suggestions for improvements to the auditor reporting model that we believe are more cost effective and avoid the adverse unintended consequences of the AD&A approach. These suggestions are included in our responses to the questions below relating to the mandated use of emphasis of matters paragraphs, auditor assurance on other information outside the financial statements, and clarification of the standard auditor's report.

6. **What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?**

See our response to question 5.

7. **What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?**

See our response to question 5.

8. **Should a standard format be required for an AD&A? Why or why not?**

As previously stated, we do not support an AD&A alternative and therefore have no comment regarding the format of such a report.

9. **Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational**

**risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?**

As previously stated, we do not support an AD&A alternative. The areas mentioned in question 9 are even more subjective than audit-related areas and are outside the usual expertise of an auditor. Communication of the above-referenced matters is best left to company management or the audit committee, as they are in the best position to communicate these matters in the context of their company and the industry in which they operate.

**10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?**

As noted in our response to question 5 above, the requirement to report under this alternative would necessitate development of disclosure frameworks to enable consistent assessments to be made in an infinite variety of circumstances, which would not be feasible. Further, we believe the need to avoid competing or inconsistent disclosures between management and the auditor will likely result in these disclosures becoming boilerplate.

**11. What are the potential benefits and shortcomings of implementing an AD&A?**

There are a number of challenges to implementing this alternative that we believe would substantially outweigh any perceived benefits. These challenges include:

(1) possible delays in filing documents with regulators because of (i) additional internal review processes within audit firms necessary to provide an appropriate degree of consistency, given the highly judgmental analyses that would be susceptible to varying degrees of interpretation, and (ii) extensive additional discussions among auditors, the company, the audit committee, and the company's counsel that will likely need to take place with respect to the more judgmental types of matters;

(2) the potential to adversely impact the robust communications that would otherwise take place between the auditor and management or the audit committee;

(3) excessive information that could obfuscate rather than clarify meaningful information to users;

(4) shifting the respective roles of the auditor and management in terms of the responsibility for providing original information; and

(5) increasing the liability exposure of auditors, management, and the audit committee to the extent that certain information is highly subjective and subject to wide variations in interpretation.

**12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?**

Our comments relating to this matter are included in our response to question 5 above.

**Required and Expanded Use of Emphasis Paragraphs**

**13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?**

We agree that requiring this approach would be relevant and could be useful in making investment decisions since we believe pointing out areas of audit emphasis that are described in the financial statements would likely sharpen users' focus on these matters and could provide additional context for users to understand the more significant matters included in the financial statements.

**14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?**

- **a. If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.**
- **b. If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.**

We believe that the required use of emphasis of matters paragraphs is an appropriate approach to provide users with additional information by drawing attention to those disclosures in the financial statements that the auditor believes are most significant to an understanding of those statements. Accordingly, we favor mandating such disclosures provided that a suitable framework and implementation guidance is developed to ensure consistency in identification of relevant matters for inclusion therein. In crafting the framework, care should be taken to ensure that users understand that such paragraphs are written in the context of the financial statements taken as a whole.

While we support the use of emphasis of matters paragraphs, we are not in favor of describing key audit procedures within the auditor's report. A description of audit procedures, without a full understanding of the audit process, would not likely be understandable to users without the full context of the complex conduct of an audit, such as information on the risks, controls, and quality of audit evidence obtained. This would present an incomplete and potentially misleading picture of the auditor's response to the assessed risks of material misstatement and detract from, rather than enhance, transparency. Further, describing audit procedures relating to specific accounts or disclosures may inappropriately convey a higher level of assurance on those items than is actually the case. The auditor's report needs to be clear that audit procedures related to any particular area are performed in the context of an audit of the financial statements taken as a whole, and do not provide assurance on individual accounts or disclosures. An example of an auditor's report that includes an illustration of the use of emphasis paragraphs, which is consistent with our suggestions described above, is set out in the Center for Audit Quality's (CAQ) letter to the PCAOB, dated June 9, 2011, which has been posted on the Board's website as part of the CAQ's June 28, 2011 comment letter submission.

**15. What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?**

We believe that required and expanded use of emphasis paragraphs should focus attention on those areas of the audit that were of such importance that, in the auditor's judgment, they are fundamental to a user's understanding of the financial statements, even though those matters were considered to be appropriately presented and disclosed. While auditor judgment will be essential to assessing which matters to emphasize, we believe additional standard setting in this area would be needed to provide a framework within which the auditor can exercise his or her judgment and to ensure a level of consistency among practitioners in the types of matters identified and the extent and content of the auditor's emphasis of those matters.

Matters that may be appropriate to emphasize, if they represent the most significant matters to a user's understanding of a specific company's financial statements, could include: highly subjective accounting estimates, particularly those estimates that reflect significant unobservable inputs that are based on management assumptions or expectations; significant unusual or infrequent transactions; significant related party transactions; material weaknesses in internal control; and material uncertainties.

**16. What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?**

As noted above, we believe emphasis paragraphs should draw attention to matters presented or disclosed in the financial statements and be an objective, fact-based discussion. It is also important that any additional commentary within an emphasis paragraph not undermine the auditor's opinion on the financial statements as a whole.

**17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?**

We believe the key to providing information that is meaningful and specific to the circumstances of the reporting entity is through the development of principles based standards and implementation guidance that provide a framework to guide the auditor in identifying the types of matters appropriate for an emphasis paragraph, and the nature and extent of the discussion required.

**18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?**

The potential benefits of implementing required and expanded emphasis paragraphs are that they potentially:

- Enhance the communicative value of the auditor's report;
- Provide a roadmap to focus users of the financial statements on the key areas that are included in the financial statements that have become increasingly long and complex;
- Highlight the accounts and disclosures that are based on subjective judgments; and
- Improve the quality of financial statement disclosures in the areas emphasized.

The potential shortcomings of implementing required and expanded emphasis paragraphs are that:

- Users may inappropriately assume a greater level of assurance on an account or disclosure than is appropriate;
- Users may focus solely on those areas of emphasis and not the rest of the financial statement disclosures;
- Judgment will be needed to identify the appropriate items for emphasis and such judgments may be inappropriately and/or inconsistently applied; and
- Auditor's liability may increase as a result of judgments applied in selecting disclosures for emphasis. This in turn raises the costs of providing such services.

**<u>Auditor Assurance on Other Information Outside the Financial Statements</u>**

**19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?**

  **a. If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.**
  **b. On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.**
  **c. What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?**
  **d. If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?**
  **e. Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?**
  **f. Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?**
  **g. If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.**

We support consideration by the Board of auditor assurance on other information outside the financial statements as an alternative to, or in conjunction with, other auditor reporting enhancements. In particular, we believe that auditor assurance on MD&A, or on a portion thereof, may be appropriate. As noted in the Concept Release, the PCAOB currently has an attest standard relating to MD&A, AT 701. In such an engagement, the auditor performs procedures to express an opinion on the MD&A presentation taken as a whole by reporting whether the:

- Presentation includes, in all material respects, the required elements of the rules and regulations adopted by the SEC;
- Historical financial amounts have been accurately derived, in all material respects, from the company's financial statements; and
- Underlying information, determinations, estimates, and assumptions of the company provide a reasonable basis for the disclosures contained therein.

While we believe reporting under AT 701 could provide the basis for further standard setting to more broadly address information outside the financial statements, it is our understanding that AT 701 engagements are rarely requested by issuers.

One approach that we believe would furnish investors with useful information, while also offering a cost effective alternative, would be the development of an examination level service on a specific portion of the MD&A that investors have suggested is important to their investment decisions — the disclosure relating to critical accounting estimates. Reporting on this portion of the MD&A would likely improve the quality of such disclosures as a result of the increased attention given to these matters by management.

If this approach is implemented, the SEC would need to consider whether amendments to Regulation S-X are necessary to require the report or otherwise describe the circumstances when such a report would be required. Further, the supplemental report would need to clearly identify the applicable section of MD&A covered by the report. In addition, safe harbors may be necessary with respect to this type of reporting for both issuers and auditors, given the lack of precision generally inherent in such disclosures.

With respect to other types of information on which auditor reporting may be appropriate, we are generally in agreement that some form of auditor assurance on such matters as earnings releases and non-GAAP information should be considered. Providing assurance on such information would potentially improve the quality, completeness and reliability of such information and would likely provide users with an increased level of confidence therein.

Further, the level of assurance that an auditor will be able to provide on this other information will depend on the nature of the other information and the degree of assurance required by market participants. In this regard, consideration should be given to amending AT 201, *Agreed-Upon Procedures Engagements (AUP),* to permit its use in general purpose reporting, if such AUP reporting would be the appropriate mechanism for reporting in a particular area.

**20. What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?**

We believe that requiring an auditor to provide assurance on certain information (e.g., critical accounting estimates) outside the financial statements has the potential to improve the quality of such information. We are also open to exploring the feasibility and benefits of providing assurance on other areas as described in question 19 above. However, it is important to recognize the potential for unintended consequences in that regard. For example, some have suggested that auditor reporting on matters such as earnings releases would provide users with a higher level of confidence in the information. However, we believe that it is important to recognize that this financial information is often communicated prior to the completion of the audit, and that there is a trade-off between the timeliness of the information provided to the public and the level of assurance that can be provided. The different levels of assurance may not be apparent to users and this has the potential to expand the expectation gap. Moreover, there is a risk that providing a form of assurance on earnings releases may result in unwarranted pressure on auditors to reach premature conclusions on elements of the financial statements without subjecting them to sufficient audit procedures to support those conclusions.

**<u>Clarification of the Standard Auditor's Report</u>**

**21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:**

- **Reasonable assurance**
- **Auditor's responsibility for fraud**
- **Auditor's responsibility for financial statement disclosures**
- **Management's responsibility for the preparation of the financial statements**
- **Auditor's responsibility for information outside the financial statements**
- **Auditor independence**

**a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?**

**b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.**

**c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?**

**d. What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?**

We support clarifying the auditor's report and agree that the areas specified above would be appropriate and enhance transparency. In particular, we suggest:

1. Add titles to highlight the various sections of the auditor's report, similar to the International Auditing and Assurance Standards Board's ISA 700, *Forming an Opinion and Reporting on Financial Statements*
2. Include a section in the report that states the auditor is independent under all relevant SEC and PCAOB standards
3. Where applicable, include a section that explains the firm network structure and the responsibility of the member firm signing the audit report. Additionally, describe whether any component auditors participated in the engagement
4. Emphasize that management is responsible for establishing and maintaining adequate internal control over financial reporting to support the preparation of financial statements, including the notes, that are free from material misstatement, whether due to error or fraud
5. Include a section that describes the audit committee's responsibility for oversight of the financial reporting process
6. Include within the description of the auditor's responsibility that the auditor is responsible to obtain reasonable assurance about whether the financial statements, which include the notes, are free from material misstatement *whether due to error or fraud* and a description of the meaning of reasonable assurance
7. Include within the report itself a section that defines the technical terms used or provide a link to where such definitions are maintained
8. Emphasize the importance and integral nature of the notes to the financial statements, especially as disclosures are now more likely to include a broad range of types of information, some of which may not be derived from the accounting system and include more forward looking information
9. Add a section that describes the auditor's responsibility for other information presented outside the financial statements

We do not believe these clarifications would have any significant implications to the scope of the audit or the auditor's responsibilities.

**22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?**

In general, we believe clarifying the language in the standard auditor's report would be beneficial in that it sets the foundation for all users of the report to more fully understand the auditor's conclusion and level of assurance provided. The shortcoming of adding such clarifying language would be that the increased length of the report may lead to information overload. However, these shortcomings could be partially overcome through the use of links to a central location where such clarifications are maintained, similar to the reporting model used in the UK.

**Questions Related to all Alternatives**

23. **This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?**

We believe a combination of the alternatives may be the most appropriate approach to meeting investors' information needs and narrowing the expectations gap. The use of emphasis paragraphs to highlight and focus investors' attention on the significant areas of the financial statements would potentially benefit users by providing insights about these accounts and disclosures in the financial statements.

Another cost effective alternative to improving auditor communication, which could be implemented in conjunction with the use of emphasis paragraphs, would be to include additional clarification in the auditor's report regarding certain terms and concepts and revise the form of the report to provide more clarity about the audit process and the responsibilities of each of the parties involved in that process.

Auditor reporting on selected other information is another way to inform investors about the integrity of the information provided to investors by management. For example, providing for an examination engagement on the Critical Accounting Estimates disclosure in MD&A would potentially improve disclosures in this area and be responsive to suggestions by investor groups for auditors to emphasize the important judgments made by management in the preparation of the financial statements. Since this type of reporting would likely require some additional auditor effort, incremental to the work performed to report on the financial statements, it may be appropriate to first apply any requirements to larger issuers to evaluate the results of such reporting before considering the advisability of expanding such reporting requirements to smaller issuers.

24. **Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?**

As set out in our response to question 23 above, we believe the most effective approach to improving auditor communication would likely include a combination of alternatives.

25. **What alternatives not mentioned in this concept release should the Board consider?**

The IAASB's Consultation Paper, *Enhancing the Value of Auditor Reporting: Exploring Options for Change,* describes an alternative that is not mentioned in the Concept Release. This alternative is referred to as the "Enhanced Corporate Governance Reporting Model." The Consultation Paper explains that the existing interaction between those charged with governance of an entity and the external auditor provides a platform to explore further enhancements in corporate governance reporting and expanded auditor reporting on such information. Under this alternative, the audit committee would issue a report to investors with information about its oversight of the financial reporting process, accompanied by some level of assurance provided by the auditor. We would support further consideration of the development of a framework to support this type of reporting. In conjunction with the development of such a framework, and in light of the importance of the audit committee in overseeing financial reporting, we suggest further consideration be given to ways to strengthen the role of the audit committee in the financial reporting process.

**26. Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?**

Those areas that we support and that would require more standard setting relate to clarifying the language in the auditor's report, the expanded use of emphasis paragraphs, and separate reporting on the Critical Accounting Estimates disclosure. Additionally, action by the SEC would likely be needed to require auditor reporting and to develop guidance for management regarding the preparation of MD&A relating to these estimates.

With respect to the expanded use of emphasis paragraphs alternative, additional guidance would be required to provide the auditor with criteria with which to assess the matters requiring emphasis and to determine the nature and extent of the auditor's discussion relating to such matters.

**27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?**

As auditors, we cannot say definitively how users may perceive any of the alternatives suggested to enhance auditor reporting. However, we believe certain of the alternatives are subject to greater susceptibility to misinterpretation than others and for this reason we caution the PCAOB to ensure that any changes to auditor reporting clearly describe the auditor's responsibility to provide an opinion on the financial statements as a whole so as to avoid any perception that a qualified or piecemeal opinion has been provided.

**28. Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?**

We believe the modifications to the auditor's report, as described in our response to questions 2 and 21, particularly changes calling for descriptions of the role of management, the audit committee, and the external auditor best clarify the role of the auditor in the financial reporting process.

**29. What effect would the various alternatives have on audit quality? What is the basis for your view?**

While the concept of audit quality is often discussed, it is not easily defined and may be perceived differently depending on the unique position of the stakeholder. The IAASB's recent publication, *Audit Quality, An IAASB Perspective,* explores the meaning of audit quality and explains that "perceptions of audit quality vary amongst stakeholders depending on their level of direct involvement in audits and on the lens through which they assess audit quality." Certain academic research suggests that user perceptions of audit quality are influenced by the communicative value of the auditor's report. Accordingly, improvements to the auditor's report that provide increased transparency about the audit process could be considered a contributing input to enhancing audit quality.

We believe that certain alternatives discussed in the PCAOB Concept Release would potentially improve the communicative value of the auditor's report and advance audit quality, while others may have a detrimental effect. For example, the alternatives that (1) clarify the terms used in the auditor's report, (2) emphasize the importance of certain matters reflected in the financial statements, (3) explain the auditor's responsibility for the audit of the financial statements and other financial information presented in a document containing the audited financial statements, and (4) provide for reporting on the Critical Accounting Estimates disclosure section of the MD&A all serve to improve communication and will potentially improve the related disclosures, thereby enhancing audit quality in a relatively cost effective manner.

On the other hand, we believe other alternatives that do not meet the overarching principles described in the introductory section of our letter would tend to reduce the communicative value of the auditor's report.

Further, we believe any alternative auditor reporting that has the potential to impede the candid two-way communication between the auditor and the audit committee could negatively impact audit quality. Examples include the alternatives that call for a discussion of the auditor's views regarding the company's financial statements, such as management's judgments and estimates, accounting policies and practices, and difficult or contentious issues including "close calls."

**30. Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.**

While we believe that a broad based initiative to enhance the communicative value of the auditor's report and its relevance to the investing public is appropriate, there may be different approaches from those contemplated within this Concept Release to enhance the auditor reporting model with respect to the specific entities listed above. For this reason, we would support further consideration by the PCAOB of how best to enhance audit reports for these entities as part of a separate project.

**Considerations Relating to Changing the Auditor's Report**

**31. This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.**

- **a. Are any of these considerations more important than others? If so, which ones and why?**
- **b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?**
- **c. Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?**
- **d. What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?**

All of the considerations set out above are important and interrelated, and as such, it would be difficult to assess the relative importance of one consideration over another. We believe that any changes to the auditor reporting model need to be considered in tandem with how the interrelationships impact audit quality and cost.

Many of the suggested changes would be unlikely to increase audit costs significantly; for example, modifying the form and content of the audit report would potentially provide enhanced clarity with little additional associated costs. However, other alternatives, such as auditor reporting on Critical Accounting Estimates disclosures, would likely require additional work by both management and the auditor, with a corresponding increase in costs. Cost implications of other changes would be dependent on the specific nature of the change and their relevance to the entities concerned.

As the Board considers the comments received on this Concept Release, in advance of any standard setting project, we encourage the Board to consider the most effective way to implement any changes to accommodate smaller public companies and provide a way forward that considers user needs, while recognizing the cost constraints facing many of these companies. Additionally, other than those that could be easily implemented (such as changes to the format of the standard auditor's report), we believe that it would be reasonable to consider a phased in approach where larger public companies would implement any changes before applying the changes to smaller public companies.

We encourage the Board to collaborate with the IAASB, investors and other users of the financial statements, preparers, audit committees, auditors, and academics to flesh out the implications of the various options expressed in the Concept Release and to identify any others that should be considered. We believe that the Roundtable held on September 15th was an excellent step in that direction.

**32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?**

As stated elsewhere in our letter, we believe that inclusion in the auditor's report of qualitative insights and perceptions gleaned during the audit, which are of the kind usually communicated to management and the audit committee in the context of an extensive dialogue among all parties, would not be practical to communicate in an external communication. In addition, disclosure of this type of information would likely discourage a candid and robust dialogue that we believe is essential to the performance of a high quality audit.

******

In summary, we are supportive of the Board's initiatives to explore options to enhance the transparency and relevance of the auditor's report to financial statement users in response to their calls for change. As part of the Board's assessment of the various alternatives proposed within the Concept Release, in addition to any other alternatives that may be suggested as a result of outreach efforts, we strongly encourage the Board to ensure that any proposed standards meet the overarching principles set out in our introductory comments. In addition to ensuring costs are balanced against the need for additional/enhanced reporting, we also believe a project to educate users about the audit process and the meaning of the auditor's report would further the Board's goals of improving the transparency and relevance of auditor reporting and reducing the expectation gap.

We appreciate your consideration of our comments and suggestions, and would be pleased to discuss these with you at your convenience. Please direct any questions to Chris Smith, Audit and Accounting Professional Practice Leader, at 310-557-8549 (chsmith@bdo.com) or Susan Lister, National Director of Auditing, at 212-885-8375 (slister@bdo.com).

Very truly yours,

Rulemaking Docket No. 34

Board Members:

I write to comment on your concept release on "Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements." To put my comments in context, I spent 26 years in public accounting, ten years as an accounting standard setter, and have been an accounting faculty member for 14 years. Also, I am now or formerly have been chairman of the audit committee of five large, publicly-held companies. My comments are influenced by all those experiences, but particularly by the more recent ones as an audit committee chairman. However, these comments are personal and should not be attributed to any other entity.

As the concept release notes, the form and content of the auditor's report has been the subject of much debate over the past 75 years or so. During my 50 year professional career, in each case where the issue was thoroughly and thoughtfully debated, the result has been modest, incremental improvement. One such case was the Cohen Commission hearings in the 1970's in which I participated. I have followed this topic with interest since that time.

As noted early in the concept release, "The objective of this concept release is to discuss several alternatives for changing the auditor's reporting model that could increase its transparency and relevance to financial statement users, while not compromising audit quality." However, on page 6 of the release the PCAOB states that it wishes, "To obtain insight into the changes that investors and others are seeking to the auditor's report ...." As noted throughout the release, some investors continue to request all sorts of changes to the auditor's report. However, it is my impression that a large majority of the "others" referred to by the PCAOB (e.g., corporate officers, auditors, audit committee members) are not seeking changes as they believe they would be counterproductive for the reasons cited in the release and otherwise. I trust that the PCAOB will take into consideration all of the various views on this important topic and I'm pleased to provide mine in this letter.

OVERVIEW

The auditor's report provides assurance to those who read it that the accompanying financial statements have been fairly presented in accordance with generally accepted accounting principles. Those audited financial statements are most often included in annual reports to shareholders or Forms 10-K. The assurance provided to users of those reports is an important element in the efficient operation of our capital markets but it should be recognized that this is far from the only form of assurance that users receive. For example, they also rely on audit committees of the board of directors they elect and in most cases companies have internal audit functions that help provide assurance.

Further, the annual report is only one form of financial communication with shareholders and other users. Equally important are the quarterly reports on Form 10-Q that are of increasing length and detail. While auditors are required to review such quarterly information, their reports are seldom made public. So any assurance that shareholders receive from the auditors thereon is implicit rather than explicit.

Financial management of public companies (with oversight by the CEO) is responsible for the accuracy of financial reporting – hence the certifications required of the CFO and CEO on both annual and quarterly financial information. These people spend full time designing the systems, collecting the data, researching the difficult accounting judgments, etc. that are necessary to develop information that is summarized in quarterly and annual reports. As noted, internal auditors and audit committees can provide some level of assurance that these activities are functioning properly but their efforts (particularly the audit committee) are limited by the relatively small amount of time they spend as compared to the original activities.

The same is true to a large extent for the independent auditor. While he or she must design the audit to provide reasonable assurance that no material misstatements are present in the financial statements, because of cost/benefit considerations the amount of the auditor's work is a tiny fraction of the original finance work. I certainly don't intend to denigrate the purpose of the audit as I believe this independent assurance does add considerably to the integrity of our capital markets. But I also think it's important to keep in mind what's reasonable for management and auditors to bring to this process. When I speak to auditors about this matter, I analogize to the Motion Picture Academy Awards (Oscars) and describe their role as qualifying for the "Supporting Role" category while management is in the "Leading Role."

Another important point to keep in mind is that the financial statements subject to the auditor's procedures are historical in nature, providing information as of a point in time or for a period then ended. After the recent financial crisis some critics expressed concern that earlier financial statements and audit reports did not disclose to users that "things were going to get a lot worse in the near future," and that led them to argue for some of the changes suggested in the PCAOB concept release. However, neither GAAP financial statements nor GAAS auditor reports are intended to predict the future, with the possible exception of the "going concern" concept. Some companies do provide earnings guidance, "warnings" about forthcoming business difficulties, and certain other disclosures about future expectations – but those matters are outside of the financial statements and subject to significant caveats about their reliability.

I am also concerned that the concept release does not seem to take into consideration the realities of today's public markets wherein large, sophisticated institutional investors (who own a high percentage of U.S. public equity) already have reasonable access to companies in order to ask questions about the financial statements. On the other hand, the very small "mom and pop" type investors for the most part likely wouldn't know what to do with many of the types of greatly expanded information from auditors suggested in the concept release.

The above is by way of background to explain my concern that too many of the suggestions for changes in the auditor's report would fall into one or the other of the following categories:

New disclosures that should more appropriately be considered by the SEC or FASB as part of management's reporting and should not be separately reported by the auditor

New disclosures of audit procedures that would add bulk to the auditor's report but would be confusing and not helpful to most users

Thus, I strongly believe that suggestions for change that fall into the above categories should not be adopted by the PCAOB. In summary, my belief is that only the following changes would improve the current form and content of the auditor's report:

Incorporate the substance of AU 550 so as to inform investors and other readers of the report of the extent of the auditor's responsibility for the other information in 10-Ks, etc.

Add words to clarify that the auditor is required to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement whether caused by error or fraud.

While the many other suggestions to change the auditor's report are well intentioned, I do not support them in general and have provided reasons for the most important ones in the remainder of this letter. As an audit committee chairman, I'm particularly concerned that many of the suggestions could make the committee's oversight of the audit and communications with the external auditors more difficult without providing the promised benefits to ordinary investors.

It may be possible that certain of the "transparency" concerns of users raised in the concept release can be addressed by enhancement of Management's Discussion & Analysis or other non-financial statement sections of SEC filings. It is also possible that reports from Audit Committees, which are presently only included in proxy statements, could be included in Forms 10-K and their content could be improved. I would be pleased to provide further thoughts on these matters, particularly with respected to enhanced Audit Committee reports, when appropriate.

RESPECTING THE ROLES OF THE AUDITOR AND THE CLIENT

AU Section 508.09 currently states that, "The (auditor's) report may be addressed to the company whose financial statements are being audited or to its board of directors or stockholders." While I haven't done research on this, my limited experience is that for large, public companies, the report is generally addressed to the board of directors and the stockholders. It's interesting that the literature doesn't require this at present and the PCAOB might consider doing so as part of this project.

However, my real point in mentioning the addressing of the report is to note that the board of directors acts as representatives of the shareholders through the audit committee and in general. Thus, it seems to me that some of the things that the PCAOB says that investors wish to have included in or attached to auditor's reports more properly belong in the category of communications between independent auditors and audit committees. The most obvious example of this would be the required communications between the two groups, which sometimes run into dozens of pages as noted in the concept release. Based on my experience in dealing with these communications over the past ten years a written report made available annually or quarterly to all shareholders would not provide sufficient context for it to be generally useful to most investors. It would have to be completely re-programmed for purposes of reasonable external communication, thus undermining its principal purpose as an effective tool to facilitate auditor/audit committee dialogue.

Some of the other matters that the release suggests could be included in the auditor's report are:

> Risks identified by the auditor (including factors evaluated in determining which risks are significant)
>
> Audit procedures responsive to the identified risks, why they were considered responsive, and what the results of the procedures were
>
> Independence matters discussed with the audit committee
>
> Critical accounting estimates communicated to the audit committee and assumptions underlying the estimates (and how the estimates are susceptible to change)
>
> Critical accounting policies, including significant unusual transactions that were communicated to the audit committee (including ones that management doesn't consider critical)

Permissible alternative accounting treatments and the treatment preferred by the auditor

Difficult or contentious issues, including "close calls"

Material matters where disclosures could be enhanced or different accounting could have been applied

Some of these are already required to be communicated to the audit committee, as noted, and all of the others could be as well if audit committees felt such information was useful and could be provided in a reasonable manner and at a reasonable cost. In fact, the PCAOB has just such a subject on its agenda and presumably will be considering in the next few months whether to move forward with its proposal to expand the list of items auditors are required to communicate to audit committees. I provided comments on that proposal in my letter dated April 23, 2010 and suggested the Board not broaden the required disclosures as much as it proposed.

But disclosing this information to shareholders and other users of financial statements is an entirely different matter. If information such as the above and certain other matters covered in the concept release is sufficiently useful to investors and other users of public company financial statements and can be provided at a reasonable cost, then appropriate standard setters (SEC, FASB) should consider requiring companies to make such disclosures. The disclosure system should not be "back doored" through a PCAOB process that requires auditors to provide information that the issuers did not provide and possibly don't even agree with.

Also, some of the information requested by investors (e.g., with respect to critical accounting policies and estimates) is already provided by companies but apparently certain investors don't trust what they now receive. According to the concept release, "Some investors indicated that one of the primary reasons that they are looking to the auditor for more information, rather than management or the audit committee, is that the auditor is an independent third party." Or the investors believed they would receive "... more relevant insight into the financial statements, through the eyes of the auditor..." Again, asking auditors to do the initial reporting of certain information because investors don't trust registrants seems to reverse the normal "company reports and auditor attests" relationship.

While the auditor is required to be independent and should adopt a skeptical mindset when evaluating management judgments and estimates, as noted earlier in this letter the auditor will often have less information available to him and will often spend less time in reaching an opinion on the issues in question. The time and resources needed to support the initial representations for financial statement matters are management's and, therefore, those representations logically should come from management not from the auditor.

I think it would be a dangerous precedent for the PCAOB to begin requiring auditors publicly to disclose company information that hasn't already been provided by the company. This is a fundamental change in the issuer/auditor relationship and surely raises legal issues about which party is actually accepting responsibility for all of the audited financial statement information in an SEC filing.

POTENTIAL ALTERNATIVES FOR CHANGES TO THE AUDITOR'S REPORT

Auditor's Discussion and Analysis

My first comment with respect to the notion of an AD&A is that I don't think people can truly appreciate this proposal without a fully developed illustration. The illustration on pages 15-18 is pretty meaningless in that it does not include realistic examples of what companies would actually have to report. For a reasonable size company, I could envision this illustration going on for 20 pages or more (for one of my current public company boards it takes about nine pages in our annual report to just list the critical accounting policies and estimates and that's without letting the auditors express their views on alternatives, etc.). I strongly urge the PCAOB to field test the notion of an AD&A by asking a few companies and their auditors to prepare illustrations that could then be shared with the public on a no names basis before the end of the official comment period. Otherwise, the comments you receive on this matter will not be fully informed.

I also have a general concern about the notion of "an adaptable report that he or she can tailor to a company's specific risks, facts, and circumstances." This would likely lead to an administrative nightmare in trying to wrap up the audit given that each report would be "custom made" and would likely have to be cleared with a firm's national office accounting and auditing technical experts and perhaps even legal staff. Also, assuming that the AD&A included matters that the company would otherwise report, such as the auditor's views on significant estimates, those matters would require extensive discussion and negotiation with company finance and legal staff at a time when meeting SEC deadlines is quite challenging. Rather than spending time on procedures that really matter, audit partners would find themselves haggling over wording issues that could serve as an unnecessary distraction. This factor alone should persuade the PCAOB not to advance the notion of an AD&A as Board members should already know that too much partner time is involved in pinning down minor details of financial statement footnotes and other matters that take away from involvement in more important audit tasks.

I will not comment on each of the possible items that could be included in an AD&A. But, for example, with respect to critical accounting policies and estimates, this matter is properly covered in the current communications between auditors and audit committees. Investors should be able to assume that a company's disclosures adequately address these matters or else the auditor would have insisted on changes. See my later comments on improved reporting on non-financial sections of the SEC filings also.

The concept release suggests that investors would like the auditor to give his own reasons why accounting policies are considered critical, including those that management doesn't consider critical. The release goes on to say that investors would like the auditor to discuss situations where alternative treatments are available and say which approach the auditor preferred, including situations where the auditor believe alternative disclosures could have been applied. This would seem to require that each large firm develop a preferred alternative for every accounting policy and apply it uniformly for all of their clients or at least industry by industry. It would also mean that any particular company could easily have a large number of accounting policies for which alternatives are available, which would be confusing to say the least.

In general, requiring an AD&A is a bad idea.

It could require auditors to disclose information not already being disclosed by companies, which is contrary to the normal auditor/client relationship

The resulting reports would be very long, would probably lack comparability with other companies, and would likely not be in a format that easily improves communications with users

The process of arriving at the content of such a report would be highly inefficient and damaging to auditor/issuer relationships

The suggested contents are better left to communications between auditors and audit committees or possible future improvements in company disclosures

Required and Expanded Use of Emphasis Paragraphs

I believe that emphasis paragraphs can be useful in certain relatively limited circumstances and for one of my current boards (Fannie Mae) the auditors include an emphasis paragraph to describe the controlling relationship of the Federal government and the dependence of the entity on the government's continuing support. However, I do not support a requirement to require and expand the use of emphasis paragraphs in all audit reports.

In discussing this possible expansion of the auditor's report the concept release seems to suggest that it could help investors identify the most significant matters and where they are disclosed in the financial statements. If there is a need for such a "road map" to the financial statements (I'm not sure there is – perhaps this should be studied separately by the SEC or another group), it would be far better for the company to provide it, with appropriate review by the auditor.

Another suggestion for the emphasis paragraphs is for the auditor to explain the procedures performed with respect to relevant areas of the audit. As noted more generally earlier, this seems more appropriate as a communication between the auditor and the audit committee. Also, I think that most shareholders and other readers would be confused rather than informed by the addition of several paragraphs describing detailed audit procedures. They simply don't have the background to properly evaluate the appropriateness of particular audit procedures.

The use of added emphasis paragraphs to explain audit procedures for relevant areas of the audit sounds like the old "long-form audit report" that was still used to a limited extent when I entered the accounting profession half a century ago. Back then I believe it was an alternative to the short-form report and my memory as a young staff member is that our firm issued very few such reports. While I didn't try to research whether the current literature would permit auditors to issue a long-form report, it seems that the long-form report fell out of use for good reasons and there's no reason to bring it back.

Auditor Assurance on Other Information Outside the Financial Statements

I support limited auditor "assurance" on other information outside the financial statements. By that I mean that I believe the standard auditor's report would be enhanced by incorporating the substance of AU 550 so as to inform investors and other readers of the report of the extent of the auditor's responsibility for the other information in 10-Ks, etc. The auditor presently reports this to the audit committee and this is one matter that can be added to the external report that would aid communications with investors with little or no change in procedures.

Reading the non-financial statement information and considering whether it is materially consistent with the audited financial statements seems sufficient to me and an attest engagement on MD&A or all of the non-financial statement data in an SEC filing would usually not pass a reasonable cost-benefit test. As noted in the concept release, the literature has provided guidelines for attestations of MD&A for many years yet it's my understanding that there have been very few, if any, of these engagements. So companies don't see the usefulness and investors haven't made a sufficient case to compel companies to incur the cost.

I feel the same way about earnings releases. An auditor generally indicates the progress in performing the year-end audit or quarterly review at the time of the release and, accordingly, provides limited verbal assurance on the press release information, subject to completion of the work in process. An attest engagement would almost surely slow down the release of that information to the market. While it is at a minimum quite embarrassing to have to revise a preliminary earnings release, on balance the current system seems to be working adequately and I see no reason to change it. Those who are overly concerned about the reliability of information that might be released too soon can simply take more time to complete the regular audit or review process before announcing to the public.

Clarification of the Standard Auditor's Report

Reasonable assurance – Expanding the report to say that "reasonable assurance means a high level of assurance, but not absolute assurance" seems like just adding words to say the same thing.

Auditor's responsibility for fraud – I do agree that modest wording changes to the standard auditor's report should be made to clarify this responsibility. This can be done by simply modifying the language in the second paragraph of the standard report that now states, "Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement" by adding the words "whether caused by error or fraud."

Auditor's responsibility for financial statement disclosures – I am fairly ambivalent about this matter. The disclosures certainly are part of the "package" that is being examined by the auditors. However, when the audit report describes what the various financial statements fairly present (financial position, results of operations, cash flows) it's hard to see how the footnotes represent a different category – aren't they just integral to the rest of the financial statements? On balance, this seems like one of those "leave well enough alone" type of matters although it wouldn't really bother me either way.

Auditor's responsibility for information outside the financial statements – See my comments above about providing auditor negative assurance on non-financial statement data in 10-Ks, etc.

Auditor independence – As noted in the concept release, the title of the report includes the auditor's implicit representation of independence. Further, auditors are required to communicate about this matter with audit committees on a regular basis. This is sufficient.

Thank you for the opportunity to comment on this important topic. I would be pleased to provide further comments if you have any questions about my letter.

Sincerely,

Dennis R Beresford

Re: PCAOB Rulemaking Docket Matter No. 34

Board Members:

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board's (Board) "Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards," dated June 21, 2011.

We are a regional registered public accounting firm that currently audits six issuers. We believe that, given the quantity of feedback the Board has received regarding the inadequacy of the current audit reporting model, it is appropriate for the Board to undertake this project, and to consider potential changes that are likely to enhance the usefulness of issuer audit reports to users.

At the same time, we believe it is critical to maintain recognition of the respective responsibilities of issuer management and the auditor. Information regarding the issuer, including that regarding its accounting policies and the application thereof, is appropriately the responsibility of issuer management. Information regarding the audit, and the auditor's opinion regarding the conformity of information provided by management with applicable standards and regulations, is the appropriate purview of the auditor.

We also believe that, in the context of seeking input from users of audit reports, it is a tendency of human nature to respond affirmatively whenever one is asked whether additional disclosure or other information would be useful. Accordingly, while effective communication with audit report users is crucial to the effectiveness of the audit process, and is important to the broader objective of facilitating communication of decision-useful information to users of financial statements, we believe the natural bias toward seeking more information should be balanced with:

1. The cost of providing that information, which is ultimately borne by the shareholders of issuers; and
2. The risk of providing <u>too much</u> information, such that users get confused about the conclusions the auditor has reached regarding the fairness of presentation of the financial statements in accordance with U.S. generally accepted accounting principles (GAAP).

Based on these considerations, we offer the following feedback regarding the four alternatives described in the Concept Release:

**<u>Auditor's Discussion and Analysis</u>**

We do not believe the inclusion of an Auditor's Discussion and Analysis (AD&A) would achieve the objective of enhancing communication between auditors and the users of audit reports. We do not believe that the majority of users have sufficient expertise regarding the audit process to make effective use of this information, and we are concerned that there is a significant risk an AD&A might have the following unintended consequences:

1. Discussion of the significant risks the auditor identified, and the procedures undertaken to address those risks, would at times likely include language reinforcing complex audit concepts such as reasonable assurance, materiality, sampling risk, and the like. Adequate explanation of such concepts to nonauditors would likely require a very lengthy AD&A, and we believe would create a significant risk of confusing users regarding the clarity of the conclusions reached by the auditor (i.e., could be perceived as "hedging" the auditor's unqualified opinion).

2. An independent discussion of the auditor's views regarding, for example, the critical accounting policies of the issuer and how they have been implemented, which varies from similar discussion by management in Management's Discussion and Analysis (MD&A), is likely to confuse a user regarding these matters. We can appreciate that such a requirement would enhance the likelihood of a dialogue between management and the auditor that would reduce such differences; however, we believe requiring the auditor to report on that component of MD&A, as discussed below, is a better route to achieving that goal, while maintaining the distinction in responsibilities between management and the auditor and reducing the likelihood of confusing users.

## Required and Expanded Use of Emphasis Paragraphs

We do not believe required and expanded use of emphasis paragraphs would achieve the objective of enhancing communication between auditors and the users of audit reports. As with the Auditor's Discussion and Analysis concept, we have the following concerns regarding two areas that the Concept Release discusses as the potential subject of such paragraphs:

1. Discussion regarding matters included in the financial statements. We believe it is of critical importance that communication of matters related to the financial statements that are deemed to be important to users thereof remain the responsibility of management. The auditor's responsibility to communicate such matters should be limited to situations in which the financial statements are not in conformity with GAAP in all material respects. Requiring the auditor to provide an independent commentary on matters such as significant financial reporting risks will result in either a) a recapitulation of information already communicated by management in public filings, or b) communication different from that provided by management, despite an opinion by the auditor that the financial statements, including disclosures, comply with GAAP in all material respects. We believe the first of these would be of little value to users, while the second would be confusing to them.

2. Discussion regarding details of audit procedures. As noted above, due to the complexity of audit concepts and the audit process, we believe such discussion would need to be extensive in order to provide sufficient information for users who are not auditors to be able to understand it and place it in context. We believe an extensive written commentary on such matters would likely either a) tend toward boilerplate over time or b) provide insufficient value to users to justify the cost of its development. This information is already required to be communicated by the auditor to the audit committee, in which context the audit committee has the responsibility to oversee the audit and to engage in a dialogue where it deems additional information is needed; we believe this is the appropriate setting for such a requirement, and evidence such

communication is taking place as required by Board standards is an appropriate focus for Board inspection activity.

**Auditor Assurance on Other Information Outside the Financial Statements**

We believe requiring auditor assurance on certain information outside the financial statements is the most appropriate way to achieve the objective of enhancing communication between auditors and the users of audit reports. It is our observation that the primary driver of users' interest in additional information from auditors relates to the application of accounting principles involving significant estimates and uncertainty. As management is required to communicate information regarding critical accounting estimates in MD&A (pursuant to Securities and Exchange Commission (SEC) Release No. 33-8350, *Interpretation: Commission Guidance Regarding Management's Discussion and Analysis of Financial Condition and Results of Operations*), requiring the auditor to provide assurance on this component of MD&A is an appropriate means of enhancing communication to users of the primary topic for which they have requested more information. This is because it leverages the auditor's current responsibility of providing assurance on information communicated to users, while retaining management's responsibility for communicating such information.

The Board's current attestation standards for MD&A (AT Section 701) provide an appropriate framework for auditor assurance on the "critical accounting estimates" component of MD&A required by SEC Release No. 33-8350. Accordingly, we believe a requirement that auditors provide such assurance would be operational without extensive additional rulemaking by the Board.

**Clarification of the Standard Auditor's Report**

The concept release describes the following potential enhancements to the audit report itself:

- Clarification that "reasonable assurance" is a high level of assurance, but not absolute assurance
- Clarification that the auditor is required to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether caused by error or fraud
- Clarification that the auditor's responsibility with respect to the financial statements includes required disclosures
- A statement that management prepares, and is responsible for the fair presentation of, the financial statements
- A description of the auditor's responsibility for information outside the financial statements
- A statement regarding the auditor's responsibility to be independent

We are supportive of the inclusion of this information in the auditor's report, and believe it would help achieve the objective of enhancing communication between auditors and the users of audit reports, provided it can be included without lengthening the auditor's report to the point that its effectiveness is diminished. Attached to this letter is illustrative language, indicated with underlining, that we believe would achieve this goal.

We appreciate the opportunity to submit these observations for the Board's consideration, and look forward to its continued deliberations in this important area.

Sincerely,

BerryDunn

BERRYDUNN

**Illustrative Auditor's Report Modifications to Incorporate Clarification's Described in the Board's Concept Release**

Report of Independent Registered Public Accounting Firm

We have audited the accompanying balance sheets of W Company as of December 31, 20X8 and 20X7, and the related statements of income, stockholders' equity and comprehensive income, and cash flows for each of the years in the three-year period ended December 31, 20X8. We also have audited W Company's internal control over financial reporting as of December 31, 20X8, based on [ *Identify control criteria, for example, "criteria established in Internal Control - Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."* ]. W Company's management prepares these financial statements, and is responsible for ~~these financial statements~~their fair presentation, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying [title of management's report]. Our responsibility is to express an opinion on these financial statements and an opinion on the company's internal control over financial reporting based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements, including required disclosures, are free of material misstatement, whether caused by error or fraud, and whether effective internal control over financial reporting was maintained in all material respects. Reasonable assurance is a high level of assurance, but is not absolute assurance. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We are also required to be independent of W Company pursuant to applicable independence requirements of the Public Company Accounting Oversight Board (United States) and the U.S. Securities and Exchange Commission, and we have complied with these requirements. We believe that our audits provide a reasonable basis for our opinions.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of W Company as of December 31, 20X8 and 20X7, and the results of its operations and its cash flows for each of the years in the three-year period ended December 31, 20X8 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, W Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 20X8, based on [ *Identify control criteria, for example, "criteria established in Internal Control - Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."* ].

We have a responsibility to read, and have read, the other information contained in this Form 10-K, *Annual Report Pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934*, to consider whether such information, or the manner of its presentation, is materially inconsistent with the financial statements or represents a material misstatement of fact, and to discuss any identified potential inconsistencies or misstatements with management. However, such information has not been subjected to the auditing procedures applied in the audit of the basic financial statements, and, accordingly, we express no opinion on it.

RE: *PCAOB Release No. 2011-003, Rulemaking Docket Matter No. 34*

Dear Members and Staff of the Public Company Accounting Oversight Board:

The Biotechnology Industry Organization (BIO) appreciates the opportunity to comment on *Possible Revisions to Reports on Audited Financial Statements.*

BIO is a not-for-profit trade association that represents more than 1,100 biotechnology companies, academic institutions, state biotechnology centers, and related organizations across the United States and in 31 other nations. BIO members are involved in the research and development of healthcare, agriculture, industrial, and environmental biotechnology products.

BIO fully appreciates and agrees that strong auditing standards can enhance investor protection and confidence. BIO members strongly support this goal. However, additional regulatory requirements could put emerging biotech companies in a situation wherein funds and efforts that would be otherwise spent for core research and development of new therapies for patients would instead be used to meet these additional requirements. Growing biotechnology companies face a constant struggle to access working capital to fund operations, especially in these companies' development stage of operations. It takes 8 to 12 years and in excess of $800 million for a breakthrough company to bring a new medicine from discovery through Phase I, Phase II, and Phase III clinical trials and on to FDA approval of a product. Diverting effort and funding from research and development to addressing more stringent regulatory requirements could lead to research programs being delayed; clearly, this is not in our companies' investors' best interest.

Furthermore, the true value of biotech companies is embedded in their development technologies, pipeline of product candidates, and their progress in advancing those product candidates toward regulatory approval and product sales. Investors often make decisions based on these parameters rather than a biotech company's operating results and financial disclosures;

therefore, higher costs to comply with new standards related to financial statements would outweigh the benefits.

With this in mind, below are BIO's positions on different aspects of the release:

1. **BIO does not believe that the inclusion of an auditor's discussion and analysis in our companies' SEC filings would warrant the additional cost or enhance disclosures already provided to investors.**

   Requiring an auditor's discussion and analysis will almost certainly make our companies' audits more expensive, duplicate management's discussion and analysis of its business, operations, and financial results (MD&A), and potentially confuse investors and analysts.

   Currently, auditors review and provide comments and feedback to management and the audit committee on a company's financial statement disclosures and MD&A. During the course of this dialogue, management, the audit committee, and external auditors correspond in detail about identified risks, financial disclosures, management's judgments, estimates, and accounting policies and practices. Management and/or the audit committee address these auditor comments and feedback and, as required, engage in collaborative discussions regarding the appropriate depth and breadth of the company's disclosures. Auditors, whose opinion is included in with a company's financial statements and incorporated into the company's SEC filings, would not permit their audit opinion to be included with such financial statements if a company's disclosures and discussion of its operating results were inappropriate, inconsistent, or incomplete. Thus, the addition of an auditor's discussion and analysis section to an SEC filing would appear to be duplicative, of no additional value, and potentially confusing.

   Allowing auditors to provide information directly to investors could result in investors receiving disclosures without pertinent qualifying information that only management could provide. The auditors have limited involvement in the day-to-day operations and management of the business, so it would be difficult for them to provide more relevant information than management has already provided in the MD&A.

   In addition, the concept of "close calls" could become a point of contention between companies and their auditors because it is only generally defined in the proposal and would require significant judgment. The subjectivity of the matter combined with the vague definition raises questions about whether the requirement to disclose such "close calls" could be consistently applied.

2. **BIO believes that requiring the use of emphasis paragraphs in the auditor's report would not add value and perhaps cause confusion or misunderstanding by investors.**

Emphasis paragraphs would not be relevant or useful, as incomplete information/disclosure would be provided through the requirement for short emphasis paragraphs in an auditor's report. Highlighting significant matters in the financial statements without providing the appropriate and sometimes lengthy contextual background and basis for conclusion would create greater confusion – not better understanding – for investors.

Furthermore, it would not be appropriate to describe specific audit procedures performed in emphasis paragraphs, since readers would scrutinize and potentially criticize the auditor's described procedures, thereby potentially increasing the auditor's liability. In addition, with the added requirement for emphasis paragraphs, we are concerned that auditors will institute the practice of providing "boilerplate" language to help minimize the auditor's risk/liability, thereby adding negligible additional value to investors. Therefore, BIO does not support the required use of emphasis paragraphs in the standard audit report.

3. **BIO believes that requiring auditors to provide assurance on information outside of financial statements, such as the MD&A, would increase audit scope and cost without providing improvements to the quality and reliability of such information.**

Similar to our response in #1 above related to the auditor's discussion and analysis, this proposal would make our companies' audits more expensive by increasing the auditor's scope of work while adding, in our opinion, negligible value to investors. Furthermore, auditors would likely charge companies a premium to cover the potential additional liability associated with the providing assurance on other information outside of the financial statements.

As noted above, currently, auditors review and provide comments and feedback to management and the audit committee on a company's MD&A. Furthermore, in practice, for other financial information included outside of a company's financial statements, such as a company's earnings release, the auditor will perform certain procedures to satisfy themselves that the information is accurate and not inconsistent with the company's financial statements. As such, it is a company's expectation that their auditor will provide comments and feedback to management and the audit committee on other issued financial information such as an earnings release. Management and/or the audit committee address auditor comments and feedback as appropriate. In addition, for other information included within an SEC filing that contains an audit opinion, auditors would not permit their audit opinion to be included if the other financial information was inappropriate, inconsistent or incomplete. As a result, we feel strongly that there is no added benefit or value to investors in having such other financial information audited and opined upon by a company's external auditors.

Additionally, the increase in audit scope resulting from this proposal could jeopardize a company's timely issuance of its earnings releases and SEC filings. A company would be forced to provide drafts of other financial information to its auditor at an earlier stage in the process to ensure that the auditor has sufficient time to conduct their additional audit procedures. This will stress (and potentially stretch) a company's internal resources and, in turn, could have a negative impact on the quality of the information provided to investors. This could apply to a public company of any size, but will certainly impact our small public biotech companies with limited staff who are already operating at full capacity.

4. **BIO concurs with the PCAOB proposal to clarify certain language in the auditor's report.**

   BIO supports amending the auditor's report to better articulate and clarify the responsibilities of management and the external auditor. Furthermore, BIO supports providing additional descriptive language in the auditor's opinion for various terms, such as "reasonable assurance." Such clarifications would be a more cost-efficient way to enhance the auditing reporting model.

BIO looks forward to working with the PCAOB to maintain effective auditing standards that provide value to financial statement users without significantly increasing costs to biotech (and other) companies. If you have further questions or comments, please contact me or Tooshar Swain, Policy and Research Manager, at (202) 962-9200.

Sincerely,

Alan F. Eisenberg

Re: PCAOB Rulemaking Docket Matter No. 034, *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements*

Dear Office of the Secretary:

We appreciate the opportunity to respond to the Public Company Accounting Oversight Board's ("PCAOB" or "Board") *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* ("Concept Release").

We commend the PCAOB and its staff ("Staff") for its outreach to explore whether changes to the auditor's reporting model would increase transparency and relevance to financial statement users, and we fully support the Staff's goal of enhancing communication with financial statement users. It is evident based on the responses from investors to the Staff's outreach that there is a desire for increased communication from the auditor to the financial statement user. We recognize the need for change to improve the relevance of the current auditor's reporting model, and we support changes that are guided by the following overarching principles set forth by the Center for Audit Quality ("CAQ") in their recent letter to the PCAOB:

1. Auditors should not be the original source of disclosure about the entity; management's responsibility should be preserved in this regard.

2. Any changes to the auditor's reporting model need to enhance, or at least maintain, audit quality.

3. Any changes to the auditor's reporting model should narrow, or at least not expand, the expectation gap.

4. Any changes to the auditor's reporting model should add value and not create investor confusion. Specifically, any revisions should not require investors to sort through "dueling information" provided by management, the audit committee, and the independent auditors.

5. Auditor reporting should focus on the objective rather than the subjective. Financial reporting matters assessed by the auditor can be highly subjective; however, it is important that auditor communications provide objective information about these highly subjective matters.

We are submitting for the Board's consideration our views on the four alternatives described in the Concept Release.

**Auditor's Discussion and Analysis (AD&A)**

The Concept Release contemplates an AD&A as a supplemental narrative to the standard auditor's report to provide investors and other financial statement users with a view of the audit and the financial statements "through the auditor's eyes." We do not support the inclusion of an AD&A with the auditor's report, as we believe it would be counter to the goal of enhancing communication with financial statement users.

The analysis contemplated in an AD&A regarding the auditor's views about significant matters includes discussion of audit risks identified, audit procedures and results, and views on management's judgments and estimates, accounting policies and practices, and difficult or contentious issues. This analysis without the proper context and absent the robust dialogue necessary to understand the information would likely result in misunderstanding and misinterpretation of the auditor's communication. Specifically, we are concerned that inclusion of an AD&A as a supplement to the auditor's report could result in the following:

1. As contemplated in the Concept Release, information in an AD&A is very similar to that discussed with the audit committee. The auditor communication with the audit committee is designed to include a robust dialogue on key matters and allows the auditor to provide sufficient context for the information being communicated. We believe that presenting information about auditor risk assessments, choice of audit procedures and views on estimates and management judgments without the accompanying dialogue with investors would create confusion among investors and other financial statement users.

2. Auditor disclosure about significant audit risks identified and audit responses to those risks to investors who lack the proper education and training about those matters would create investor confusion as opposed to increased transparency. We are concerned that it would not be possible to provide enough information to adequately educate financial statement users about the risk evaluations and procedures that encompass the audit process. Such confusion may result in the improper use of the information provided in an AD&A for decision making by investors.

3. In an AD&A, an auditor would provide subjective views about risks and estimates embodied in the company's financial statements. We believe the source of information about the company should be provided by management, not the auditor. Management has far more insight and greater knowledge of the company, making them better equipped to provide the most meaningful information to investors. Discussion about the company by the auditor could result in conflicting information with that presented by management and, ultimately, lead to investor confusion.

4. Developing a disclosure framework for AD&A that can be consistently followed would be very difficult given the subjectivity involved in the analysis. Without such a framework, information disclosed in an AD&A would lack comparability between companies and potentially result in misinterpretation by users and create confusion. Variations would exist in how auditors determine what matters reach the level of significance to be included in an AD&A and the extent to which such matters are discussed. AD&A wording would be carefully crafted by auditors to limit exposure to litigation. The result would likely be a diluted message that is not easily understood by financial statement users and, thus, not achieving its intended purpose. We believe it would be inappropriate and potentially harmful for investors to use AD&A as a tool for analyzing risks and for investment decisions to be influenced by the writing skills of auditors and by the volume of information and level of detail auditors choose to disclose.

5. Drafting an AD&A would be time consuming due to necessary quality control reviews and could result in difficulty meeting filing deadlines and would certainly result in increased costs for issuers.

**Required and Expanded Use of Emphasis Paragraph**

The Concept Release outlines an alternative to require expanded emphasis paragraphs in all audit reports to highlight the most significant matters in the financial statements along with key audit procedures performed pertaining to the identified matters. While we do not support the inclusion of a required emphasis paragraph as outlined in the Concept Release, we do believe a slightly modified alternative would be beneficial to financial statement users.

We support including an emphasis paragraph in the auditor's report to call attention to significant accounting estimates used in the preparation of the financial statements that are subject to material change in the near term and require difficult subjective judgments by management and auditors. Highlighting significant estimates used in the preparation of the financial statements would allow investors to easily identify the related financial statement disclosures made by management as well as the discussion of critical accounting estimates included in Management's Discussion and Analysis (MD&A). We believe emphasizing significant estimates in the auditor's report would likely result in improved disclosures about accounting estimates thereby increasing transparency. In order to be effective in enhancing communication with investors, we believe it is critical that the scope of emphasis paragraphs be sufficiently narrow to limit inconsistencies based on the subjectivity of auditors. We believe the most effective means of ensuring consistent application in practice is to establish parameters for emphasis paragraphs that mirror the disclosure requirements for significant estimates in the current disclosure framework under U.S. GAAP.

At your request, we would be happy to provide an example auditor's report illustrating our proposed changes.

**Clarification of Language in Standard Auditor's Report**

We support including the following clarifying language to the auditor's report as suggested in the Concept Release along with other clarifications that we believe would enhance the auditor's report and help users to better understand the nature of an audit and auditor and management responsibilities.

1. *Reasonable Assurance* - Add clarifying language to explain that reasonable assurance is a high level of assurance, but not absolute assurance.

2. *Auditor's Responsibility for Fraud* - Highlight that the auditor is responsible to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether caused by error or fraud.

3. *Auditor's Responsibility for Financial Statement Disclosures* - Add clarifying language regarding the auditor's responsibility for financial statement disclosures.

4. *Management's Responsibility for the Preparation of the Financial Statements* - State that management prepares the financial statements and has responsibility for the fair presentation of the financial statements.

5. *Auditor's Responsibility for Information Outside the Financial Statements* - Describe the auditor's responsibility with respect to such information.

6. *Auditor Independence* - Include statement regarding the auditor's responsibility to be independent and compliance with the independence requirements.

7. *Audit Committee Responsibilities* - Describe the responsibilities of the audit committee.

In addition, we believe further enhancing investor understanding of what an audit represents and the auditor's responsibilities would best be accomplished by including reference in the auditor's report to a supplemental document that describes the audit process similar to the CAQ's *In-Depth Guide to Public Company Auditing*.

**Auditor Assurance on Other Information Outside the Financial Statements**

We support expanding the auditor's role to provide assurance on matters in addition to the financial statements that provide value to investors if the matter is within the skill set of auditors and could be applied within a framework that balances benefits and costs. One area that may provide a cost/benefit balance is an examination of issuer disclosures about significant accounting estimates within MD&A.

We believe reporting on issuer disclosures about critical accounting estimates could improve the quality of the information disclosed, thereby enhancing communication with investors. We believe enhanced communication also could be achieved by increased enforcement of the current disclosure requirements prescribed by SEC regulations related to critical accounting estimates and critical accounting policies without further imposing additional costs to issuers by requiring auditor assurance on this information.

*****

We appreciate the opportunity to express our views for the Board's consideration. If you have any questions or would like to discuss these matters further, please contact Steve Rafferty or Doug Bennett at 417.831.7283, or by email at srafferty@bkd.com or dbennett@bkd.com, respectively.

Sincerely,

BKD, LLP

**RE: Request for Public Comment: *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards,* PCAOB Rulemaking Docket No. 034**

Members of the Board,

BlackRock, Inc. ("BlackRock") appreciates the opportunity to comment on Public Company Accounting Oversight Board ("Board" or "PCAOB") *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* dated June 21, 2011 ("Concept Release"). BlackRock is a global investment manager, overseeing $3.66 trillion of assets under management at June 30, 2011. BlackRock and its subsidiaries manage approximately 3,400 investment vehicles, including registered investment companies, hedge funds, private equity funds, exchange-traded funds and collective investment trusts, in addition to separate accounts. Certain of BlackRock's wholly-owned subsidiaries operate as U.S. registered broker/dealers, U.K. registered life insurance companies, a U.S. registered bank trust company and numerous investment advisory companies registered in jurisdictions throughout the world.

As an investment manager, BlackRock is in the position to provide commentary on the Concept Release from the perspectives of a) a corporate preparer, b) an investment fund preparer and c) a user (i.e., BlackRock's research analysts). As such, our comments take into account all three of these distinct perspectives.

**Overview**

BlackRock's analysts and many investors believe that the auditor's report could be enhanced to provide more informative reporting. The auditor's report currently includes a statement on the financial statements and periods covered, the scope of the audit, and a "binary" opinion as to whether such statements present fairly, in all material respects, the financial position and results of operations and cash flows of the company. The current reporting model does not provide additional context or insight around the audit or significant matters that the auditor may have addressed during the course of their audit. However, the current model does provide consistency, clarity of reporting and comparability and normally is taken in the context of other available information, including other disclosures accompanying the financial statements and management oral and written communications.

The goal to provide additional information to investors can be met in part by changes in the auditor reporting framework, with a focus on objective rather than subjective reporting, as noted below. However, financial statement preparers also have a responsibility to disclose information that meets professional and regulatory standards and that enhances understanding of a company's financial position and results of operations. We believe it is preferable for preparers, and not the auditor, to be the original source of such disclosures about the company. We are

BLACKROCK®

New York, NY 10055
Tel 212.810.5300

concerned that contradictory disclosures by a company and its auditor would undermine the financial statements and their utility; the onus should be on management to prepare such information and for the auditors to determine whether it is fairly stated in all material respects. Further clarification by the Securities and Exchange Commission ("SEC") and the Financial Accounting Standards Board ("FASB") on existing disclosure requirements would help achieve this objective.

The Concept Release requested comments on whether certain information communicated to the audit committee should be conveyed in an auditor discussion and analysis ("AD&A"). As noted below, we believe that management may elect to make such disclosures but it would be difficult to communicate in an audit report the full context of those discussions. Accordingly, we encourage the SEC and FASB to clarify existing management disclosure requirements over certain items, such as accounting judgments, or to suggest additional management disclosures. For example, the SEC could require expanded discussion by management of any significant deficiencies related to internal controls over financial reporting that are unremediated for an extended period of time.

BlackRock prepares corporate and subsidiary financial statements in many jurisdictions. Additionally, each of our sponsored investment company reports may be filed with regulators in multiple countries. Given the nature of global markets, it is critical that the PCAOB work with the International Auditing and Assurance Standards Board ("IAASB") and the American Institute of Certified Public Accountants to minimize the confusion and expectation gap that may be created if different auditor reporting models are adopted.[1]

The PCAOB proposed four alternatives in its Concept Release, which we address in the remainder of this letter.

**Clarification of the language in the standard auditor's report**

We encourage the Board to undertake a standard-setting initiative to provide clarity about what an audit represents and the auditor's responsibilities, including the following items:

- The definition of "**reasonable assurance**." The auditor's report should explicitly state that reasonable assurance is a "high level of assurance, but not absolute assurance."
- Auditor's **responsibility for fraud**. We support inclusion of language in the auditor's report that is consistent with AU section 230 that clarifies that professional auditing standards require the auditor to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether caused by error or fraud.
- **Auditor's responsibility for financial statement disclosures**. We support inclusion of a statement in the audit report that clarifies the auditor's responsibility for financial statement disclosures, including all notes to the financial statements and all related schedules.
- **Management's responsibility for preparation of the financial statements.** The auditor's report should be further clarified to state that management prepares the financial statements and has responsibility for their fair presentation.
- **Auditor responsibility for information outside the financial statements**. When other information is contained in documents containing audited financial statements, the audit report should note that the auditor has a responsibility to read the other

[1] The IAASB has undertaken a similar project, entitled *Enhancing the Value of Auditor Reporting: Exploring Options for Change*, dated May 2011.

BLACKROCK®
55 E. 52nd Street
New York, NY 10055
Tel 212.810.5300

information and consider whether such information, or the manner of its presentation, is materially inconsistent with the financial statements or represents a material misstatement of fact.[2]

- **Auditor independence.** We support inclusion of a statement that the auditor has a responsibility to be independent of the company and has complied with the applicable independence requirements of the PCAOB and SEC.

We note that including all of the aforementioned information would significantly lengthen the auditor's report and accordingly suggest that such information could be presented in separate and subsequent paragraphs to not overwhelm the core audit opinion. These clarifications should not result in a significant change in audit scope or increase in audit fees.

**Required and expanded use of emphasis paragraphs**

The Board should consider providing additional guidance that encourages, but does not mandate, emphasis of matter paragraphs in the auditor's report that focus the reader on the location in the financial statements of:

- Significant new financial statement disclosures,
- Significant transactions, including related party transactions,
- Significant management judgments, estimates and areas with significant measurement uncertainty, and
- Information about a significant acquisition and related financing.

This approach is similar to the "justification of opinion" required in auditor reports in France. We would not object to expansion of the emphasis of matter paragraph to reference the location of critical disclosures outside the financial statements, such as in management's discussion and analysis ("MD&A"). Certain additional objective, fact-based matters may be included in the emphasis paragraph at the discretion of the auditor, if not disclosed by management.

**Auditor assurance on other information outside the financial statements**

BlackRock supports auditor assurance on information outside the financial statements, such as earnings releases or MD&A, at the discretion of management. As noted above, auditors already are required to read information that is associated with the financial statements to be satisfied that such information is consistent with the financial statements.[2] We do not support mandatory assurance on such information, because of the incremental cost, which we believe may exceed the benefit, and the potential to delay earnings releases and other time-sensitive information. Our analysts have not routinely observed situations where such information has been improperly presented or where the disclosures are misleading. However, we recognize that some information outside the core financial statements, such as non-GAAP measures, may be important tools to users of financial statements and therefore assurance may be cost-beneficial. Some companies also may find value in having assurance on specific aspects of MD&A, such as critical accounting estimates, key performance indicators, key drivers of revenue (such as assets under management) or certain non-financial measures of performance. This approach would be consistent with our fundamental thesis that management should be the original source of financial statement disclosures.

[2] Procedures currently required by AU section 550.04-.06.

BLACKROCK®

New York, NY 10055
Tel 212.810.5300

**Auditor's Discussion and Analysis ("AD&A")**

A supplemental AD&A that provides objective additional information could facilitate understanding of the financial statements taken as a whole. However, it may be difficult to provide enough context around certain issues, such as audit procedures performed and subsequent discussions with management and the audit committee. For example, many areas may require significant judgment and complex assumptions and calculations, including loan loss reserves, fair valuation of certain complex and illiquid financial instruments, litigation reserves, uncertain tax positions, or impairment analyses. However, there are some matters for which an AD&A discussion could be beneficial to financial statement users, including the following:

- Significant new accounting principles and whether they are preferable in the context of authoritative and regulatory guidance,
- Considerations in evaluating entities with going concern uncertainties, including observations on declining or concentrated cash flows or upcoming material financial obligations,
- Significant external information or inputs in performing audit procedures on significant accounting estimates,
- Matters related to auditor independence, including disclosure of the length of time the audit firm has been engaged by the company and other significant services provided to related parties outside the corporate audit that may not be disclosed in the proxy (e.g., audit fees paid by sponsored investment companies), and
- Audit procedures in material areas requiring significant judgment or with significant uncertainty (e.g., fair valuation, impairment of intangible assets – see the following paragraph).

We would not object to the identification in an AD&A of those areas which were subject to significant management or auditor judgment or significant uncertainty given their complexity, and the attendant significant audit procedures performed. We also would not object to disclosure of key inputs on which the auditor relied in performing their audit of those areas if those inputs are not disclosed by management. However, we are concerned that it may be difficult to convey succinctly the nature of those procedures in a manner that may provide useful information. We do not support auditor disclosure of a range of possible outcomes or estimates or other information that would blur the responsibility of management to prepare financial information and of the auditor to perform audit procedures to determine the reasonableness of the financial statements taken as a whole. Similarly management, and not the auditor, should provide any forward-looking information on the business, its assessment of operational risks and where appropriate, any additional information on accounting estimates. An AD&A should not be required if the auditor does not have any significant matters to communicate. This caveat is particularly important to entities with less complex financial reporting, such as certain investment companies.

Note that many of the matters that might be covered in an Auditor AD&A also may be required pursuant to the critical accounting estimates guidance within FR-72 *Interpretation: Commission Guidance Regarding Management's Discussion and Analysis of Financial Condition and Results of Operations*. The SEC could achieve some of the objectives of an auditor AD&A by clarifying and expanding management disclosure responsibilities in FR-72 or by requiring additional disclosures in the risk factors section of Form 10-K. They also could require that certain disclosures now contained in Regulation S-K be relocated to Regulation S-X where, as financial statement disclosures, they would be subject to greater scrutiny. To the extent that additional information would be useful to users of financial statements, such as disclosure of a range of estimates for significant accounting estimates, or ongoing significant deficiencies in internal controls, the SEC and FASB should work together to define the parameters.

BLACKROCK®

55 E. 52nd Street

New York, NY 10055

Tel 212.810.5300

BlackRock does not support disclosure of "close calls" by management or auditors because the term and any such disclosures may imply a failure to adopt sound accounting principles or to make an appropriate accounting determination, when in fact preparation of financial statements involves judgment and use of estimates. We also do not support disclosure of a dollar materiality threshold used by management in preparing, and the auditor in auditing, the financial statements. However, we support further efforts by the PCAOB to determine how financial statement preparers can describe the factors they consider in assessing materiality in the context of specific financial statement items and disclosures (e.g., net income, certain significant accounts).

Auditors should not be required to disclose matters communicated to the audit committee given the confidential nature of those communications and the risk that such disclosures could be misinterpreted without proper perspective and background. Reports to the audit committee normally are in the context of communications over an extended period, are accompanied by written and oral materials, and involve questioning and detailed responses that could not be sufficiently conveyed in an AD&A. We are concerned that mandatory disclosure in an AD&A of matters communicated to the audit committee could have the undesirable effect of limiting those communications.

Given the significance and breadth of the proposed changes, we strongly urge the PCAOB to perform field tests to help ensure that any proposed changes are practical and useful to users of financial statements and that they can be implemented in a cost-effective manner. It also would be useful to obtain input from auditors as to whether they are able to develop AD&A disclosures that would meet their internal quality control guidelines. Finally, we reiterate the need for a coordinated approach between the PCAOB, AICPA, SEC, FASB and IAASB to ensure consistency and due consideration of the implications of any changes to users and preparers of financial statements.

*****

We appreciate the opportunity to share our viewpoints relating to the possible revisions to the PCAOB standards related to reports on audited financial statements. We hope our comments are helpful to the Board. If the Board has any questions regarding our comments, please contact Steven Buller at (212) 810-3501.

Sincerely,

Steven E. Buller

J. Gordon Seymour
Office of the Secretary
PCAOB
1666 K Street, N.W.
Washington, DC 20006

Dear Mr. Seymour:

**RE: PCAOB No. 2011-003, Rulemaking Docket No. 34 – Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards**

CalPERS is the largest public pension fund in the United States with approximately $225 billion in global assets in more than 9,000 public companies worldwide within 47 markets. CalPERS invests these assets on behalf of more than 1.6 million public workers, retirees, their families, and beneficiaries in order to fund retirement and health benefits.

Thank you for this opportunity to comment on the concept release on the auditor's reporting model following CalPERS participation in the September 15 roundtable on this topic. We applaud the PCAOB's work to improve the auditor's report in order to increase its transparency and relevance to financial statement users.

CalPERS is fundamentally a long-term, fiduciary investor, with a vested interest in the stability of the markets and the integrity of financial reporting. We believe financial reporting should provide users the information needed to make informed capital allocation decisions. The integrity and quality of financial reports is strengthened by a robust external independent audit, carried out objectively and undertaken with appropriate professional skepticism on the part of the auditor.

The auditor's assurance is critical to investors' confidence in the integrity of financial reporting and its consistency with U.S. Generally Accepted Accounting Principles (GAAP). We also support the development of global best practice in this arena.

We outline in the attached Appendix CalPERS responses to the questions in this release which includes comments on: (1) Auditor's Discussion and Analysis (AD&A), (2) Required and Expanded Use of Emphasis Paragraphs, (3) Auditor Assurance on Other Information Outside the Financial Statements, and (4) Clarification of Language in the Standard Auditor's Report and Other Alternative.

We believe the PCAOB has the opportunity to make some substantive, robust changes that will improve auditor reporting and provide real value to investors and other users of financial reporting.

If you have any questions or concerns, please call me at 916-795-9672 or my colleague Mary Hartman Morris at 916-795-4129.

Sincerely,

ANNE SIMPSON
Senior Portfolio Manager

# Appendix – Responses to Questions in PCAOB Release No. 2011-003

***Content of the Auditor's Report***

*1. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.*

*a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?*

Yes, we believe improvement to the auditor's reporting model is necessary. CalPERS believes information provided in an AD&A would provide more congruent disclosures and provide a better tool for investors in their capital allocation decisions.

A study done in September 2009 "Investors', Auditors', and Lenders' Understanding of the message conveyed by the Standard Audit Report (SAR)"[1] highlighted group differences within three patterns:

I. Type I communication gap – whether the user groups investors and lenders differ from the auditor group.
II. Type II gap - The user groups differ from each other.
III. Type III gap – the user groups differ from each other as well as from the auditor group.

The purpose of the study was to evaluate the congruence or alternatively the communication gap between the three groups in their understanding of the objectives and limitations of the SAR and secondly, to evaluate the congruence in the interpretation of the technical language used in the SAR.

Participants rated the SAR as important in investing and lending decisions as well as for assessing whether financial statements are free from material fraud. This study showed that the SAR provided relatively lower level of confidence that a company is well managed, a sound investment or that the company would meet its strategic goals. Overall the results showed that the current Standard Auditor Report results in communication gaps and expectations between users and the auditor. We believe expanding the auditor's report through a narrative AD&A would narrow this gap.

[1] Report prepared for the AICPA Auditing Standards Board (ASB) and International Auditing and Assurance Standards Board (IAASB) to better understand communications conveyed in the standard audit report. http://web.ifac.org/download/Study__3_AICPA_IAASB_Paper.pdf, Sept. 2009.

*b. In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?*

The Auditor is in a unique position, and as an independent financial expert could provide an unbiased view of the audit and financial statements. See response to 2c.

*c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?*

Discussed in auditor assurance on page 11 question 19.

*2. The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."*

*a. Should the auditor's report retain the pass/fail model? If so, why?*

*b. If not, why not, and what changes are needed?*

We believe the current model needs improvement though better disclosure. We see where the current pass-fail model provides some value in expressing a standard opinion.

*c. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.*

We believe there is some value in the pass/fail model but support expansion of the auditor’s report. The specific model should be determined by the PCAOB.

We suggest this expanded report focus on:

I. Key financial statement and audit risks the auditor has considered when conducting the audit, and the extent, if any, as to how the auditor addressed those risks.
II. The auditor’s assessment of the key estimates and judgments made by management and how the auditor arrived at that assessment.

III. The quality of the accounting policies and practices adopted by management including accounting applications and practices that are uncommon to the industry.
IV. Unusual transactions and significant changes to accounting policies.

Other items should be considered in expanding the narrative reporting, such as:

V. The methods and judgments made in valuing assets and liabilities (with discussion of sensitivity analyses, and any stress tests).
VI. Identification of any matters in the annual report that the auditors believe are incorrect or inconsistent with the information contained in the financial statements or obtained in the course of the audit.
VII. Key audit issues and their resolution, which the audit partner documents in a final, summary audit memorandum to the audit committee.
VIII. Quality and effectiveness of the board governance structure and risk management.
IX. The completeness and reasonableness of the audit committee report.
X. The effectiveness of the company's internal controls over financial reporting.[2]
XI. Policies regarding the provision of non-audit services to avoid compromising auditor independence.

*3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.*

CalPERS believes the auditor should provide from their perspective expanded information. We do not discount the value and the fiduciary responsibility of the Audit Committee. We recognize the auditor is in a unique position. The auditor has extensive knowledge of the company and industry which is obtained through the audit process and experiences; is an independent third party; and we believe the auditor can provide an unbiased view of the company's financial statements.

We also emphasize that in our opinion, the auditor could use the disclosure requirement to leverage change and enhance management disclosure in the financial statements. This impetus to change would provide better disclosures and transparency to investors.

We also support greater transparency by Audit Committees on how as an effective monitor and fiduciary on behalf of shareowners, does the Audit Committee discharge

[2] Although required in the US, this is not required outside the US. We list here as global regulators will be reviewing comment letters with the IAASB also considering the auditor's report.

their responsibilities in relation to the integrity of the Annual Report, including oversight of the external auditors.

*4. Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?*

We supported during the comment period the development of Auditing Standard No. 5 (AS5), "An Audit of Internal Control Over Financial Reporting that is Integrated with an Audit of Financial Statements". We support and believe the proposed changes to the audit report do not increase the scope of the audit but provide better clarity of the work performed through AS 5. AS5 already requires the auditor to address the role of risk assessment, the risk of fraud, identifying significant accounts and relevant assertions, understanding the likely sources of misstatement, identifying and assessing risks of material misstatement, relationship of risk to the evidence to be obtained, evaluating identified deficiencies, indicators of material weaknesses, and forming an opinion based on this work. The work performed as required by AS5 should be the basis on which the auditor should provide additional information through a narrative format in an AD&A. We are unsure of what additional amendments are necessary to AS5 as it currently covers information that investors are requesting.

***Potential Alternatives for Changes to the Auditor's Report – Auditor's Discussion and Analysis***

*5. Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?*

*a. If you support an AD&A as an alternative, provide an explanation as to why.*

*b. Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?*

*c. Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?*

*d. If you do not support an AD&A as an alternative, explain why.*

*e. Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?*

Yes, we support an AD&A as an alternative for providing additional information in the auditor's report. We believe an expansion of the auditor's report will provide added value to investors. CalPERS supports the auditor reporting on the financial statement, on broader company information and on the audit process itself. We believe a narrative format would not be too prescriptive and would allow the auditor to explain the mitigation of financial statement and audit risks and how the auditor formed their overall opinion.

We do not see any alternatives other than an AD&A where the auditor could provide robust discussion and analysis.

*6. What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?*

We have highlighted the main areas of interests (Response to question 2c) that we believe would provide added value to investors and other users of financial reporting. We believe a narrative format would allow the auditor to customize an AD&A report appropriately to the specific company. Investors are interested at a high level where are the financial statement and audit risks; what conceptually was the work performed to understand those risks; and how did the auditor become comfortable in their testing to come to the conclusion in the opinion expressed.

*7. What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?*

CalPERS supports the PCAOB developing certain criteria the auditor should always include and other criteria the auditor should consider in providing an AD&A. We believe there is a qualitative aspect that the auditor will provide through a narrative on the company, the work performed and how they came to their conclusions. See response to question 2c.

*8. Should a standard format be required for an AD&A? Why or why not?*

We do not believe the format should be standardized as we would not encourage boiler plate language. We do suggest specific criteria be required and others considered in developing an AD&A.

*9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?*

It is the responsibility of management to comment on business, strategic and operational risks through the Management Discussion and Analysis (MD&A). The auditor should focus on risks associated with the audit, internal controls and risks that impact financial statements such as risks that may impact the valuation of assets and liabilities, critical accounting judgments and estimates and communicate how the auditor assessed these risk factors through their audit program and in their opinion.

CalPERS believes through lessons learned from the financial crisis that management, the board and the auditor should identify all risks, determine the impact of these risks, how to mitigate these risks and the appropriate oversight and disclosure of these risks.

*10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?*

CalPERS recommends the PCAOB articulate the objective of an AD&A and expectations on how the auditor should respond and develop a customized narrative on each company they audit.

*11. What are the potential benefits and shortcomings of implementing an AD&A?*

Investors would benefit from an expanded report including:

I. Greater objectivity and possibly improved audit quality.
II. Increased transparency into the audit process and the significant judgments made in forming the auditor's opinion.
III. Better understanding of the auditor's opinion taken as a whole and how the auditor reached that opinion.
IV. Improved perception of the integrity of reporting.
V. Improved usefulness of the audited financial statements in making informed investment decisions.
VI. Better information to inform shareowners with respect to their auditor ratification decision.

The one shortcoming of implementing an AD&A may be the issue of who is the customer of the auditor? Shareowners are the customers of the audit, although a potential conflict may exist, as auditors are paid by the company and may not want to challenge management.

*12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?*

CalPERS does not believe having inconsistent or competing information between the auditor and management is necessarily a concern. Shareowners are the owners of a company and obtaining both management's and the board's perspective along with an independent auditor's would provide a better understanding from different perspectives on the stewardship of the company

***<u>Required and Expanded Use of Emphasis Paragraphs (Questions 13-18</u>***

*13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?*

*14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?*

*a. If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.*

*b. If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.*

*15. What specific information should require and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?*

*16. What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?*

*17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?*

*18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?*

As emphasis paragraphs are already permitted but not required, CalPERS does not believe this would be the optimum area for additional disclosure.

Currently Emphasis paragraphs are allowed and can be used to expand on significant:

I. Issues in the financial statements, and how disclosed in the financials.
II. Measurement uncertainty.
III. Management judgments and estimates.
IV. Areas where in the opinion of the auditor, need additional clarification for a better understanding of the financial statements.

The issue is that most auditors do not use emphasis paragraphs.

Providing this type of information in emphasis paragraphs may need additional disclosures on procedures the auditor performed relating to each of these matters.

It is our belief that the PCAOB should remain focused on making the necessary and immediate changes to the existing auditor's reporting model. However, if the Board decides against an AD&A, then emphasis paragraphs should be required and should address:

I. Key financial statement and audit risks the auditor has considered when conducting the audit, and the extent, if any, as to how the auditor addressed those risks.
II. The auditor's assessment of the key estimates and judgments made by management and how the auditor arrived at that assessment.
III. The quality of the accounting policies and practices adopted by management including accounting applications and practices that are uncommon to the industry.
IV. Unusual transactions and significant changes to accounting policies.

Other items should be considered if emphasis paragraphs are required, such as:

V. The methods and judgments made in valuing assets and liabilities (with discussion of sensitivity analyses, and any stress tests).
VI. Identification of any matters in the annual report that the auditors believe are incorrect or inconsistent with the information contained in the financial statements or obtained in the course of the audit.
VII. Key audit issues and their resolution, which the audit partner documents in a final, summary audit memorandum to the audit committee.
VIII. Quality and effectiveness of the board governance structure and risk management.
IX. The completeness and reasonableness of the audit committee report.
X. The effectiveness of the company's internal controls over financial reporting.[3]

[3] Although required in the US, this is not required outside the US. We list here as global regulators will be reviewing comment letters with the IAASB also considering the auditor's report.

XI. Policies regarding the provision of non-audit services to avoid compromising auditor independence.

***<u>Auditor Assurance on Other Information Outside the Financial Statements</u>***

*19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?*

*a. If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.*

*b. On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.*

*c. What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?*

*d. If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?*

*e. Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?*

*f. Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?*

*g. If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.*

Currently the auditor's assurance is critical to investor confidence in the integrity of financial reporting and its comparability based on US Generally Accepted Accounting Principles (GAAP). It has long been recognized that financial statements alone are not sufficient to communicate the overall performance of an entity. In particular, MD&A has become a core element of the communication package for external reporting purposes. We utilize other information such as MD&A, earnings releases, to obtain a better understanding of a company and its peers.

The MD&A is a very important section of an annual report, especially to investors in our review of a company's fundamentals. MD&A proves a context within which the financial results and financial position can be interpreted. As underscored by the Principles for Ongoing Disclosure and Material Development Reporting by Listed Entities by the IOSCO Technical Committee, an issuer should provide all information that would be material to an investor's investment decision, including disclosures in the MD&A. The

MD&A requirements are intended to satisfy four principal objectives which benefit investors and other users of the MD&A:

I. Enables investors to see the company "through the eyes of management."
II. Improves financial disclosure overall and provides the context within which financial statements should be analyzed.
III. Provides information about the different components of earnings and cash flow and the extent to which they are recurring elements, thereby enabling investors to make a better prediction about the sustainability of earnings and cash flow in the future.
IV. Provides information about the risks to a company's earnings and cash flow.

MD&A proves a context within which the financial results and financial position can be interpreted. Currently auditors as part of their engagement review the MD&A and consider whether such information or the manner of its presentation is materially inconsistent with the financial restatements or represents a material misstatement of fact. We believe the auditor could provide a statement based on their current responsibilities as it relates to MD&A within the AD&A. Although the auditor would not be providing assurance on future performance, CalPERS believes the auditor could through an AD&A provide a statement whether the MD&A is reasonable, whether assumptions and conclusions are rational based on the current work of the auditor and its review of a company's financial performance.

We recommend the PCAOB focus on the AD&A and address additional assurance in a separate project.

CalPERS would support a fuller discussion of the MD&A, specifically as a framework for integrated reporting is developed further. The International Integrated Reporting Committee released a request for comment on an integrated reporting framework in September 2011.

*20. What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?*

Investors, like CalPERS would recommend the PCAOB focus on the AD&A and provide clarity within the AD&A on the responsibilities of the auditor on MD&A. We see the value of additional assurance but would need to understand what additional work will be performed and what additional assurance means to investors.

We agree if assurance on other information such as the MD&A is recommended – we would defer to the current attestation engagement procedures as issuers currently have the option to engage the auditor to attest on MD&A.

This would be a great opportunity to determine which issuers if any, currently request their external auditor firms to attest to the MD&A. If an issuer requested an attestation, then the benefits and challenges should have been outlined to the audit committee and discussion of the benefits may be well articulated. We believe the greatest benefit of reviewing the auditor's role in other assurance would be the impetus to issuers, specifically management in fulfilling the current SEC standards for appropriate disclosures in the MD&A.

***Clarification of the Standard Auditor's Report***

*21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:*
- *Reasonable assurance*
- *Auditor's responsibility for fraud*
- *Auditor's responsibility for financial statement disclosures*
- *Management's responsibility for the preparation of the financial statements*
- *Auditor's responsibility for information outside the financial statements*
- *Auditor independence 42/ AU sec. 550.04 - .06.*

*a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?*

*b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.*

*c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?*

*d. What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?*

CalPERS supports providing additional clarification of each of the areas listed above. We agree that language should be further clarified as these areas are not necessarily fully articulated and understood.

CalPERS as a part of its testimony to the US Treasury Department Advisory Committee on the Auditing Profession (ACAP) in February 2008, provided comments on auditors' responsibility for detecting fraud and auditor independence. We believe that the responsibility of auditors to detect fraud and improve the timely communication of these frauds to current shareowners and potential investors is critically important. We believe the standard audit report should indicate the auditor's responsibility for detecting material fraud and define that the auditor has a responsibility to obtain reasonable assurance (defined as a high, although not absolute, level of assurance) as to whether the financial statements are materially misstated, whether caused by error or fraud.

We also believe in defining the auditor's responsibility relating to fraud that "inherent limitations" be defined in detecting material misstatements resulting from fraud. In our opinion, there may not necessarily be inherent limitations, but rather time and cost limitations. In our view fraud detection would improve the quality of the audit and with time and effort may have detected many of the major frauds during the last few years. We believe that if during an audit if it is found that the control environment is weak and presents opportunities for fraud, auditors should highlight this to management and the audit committee and offer to undertake additional work.

*22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?*

We do not see any shortcomings to providing clarification of the language in the standard auditor's report. CalPERS believes better articulation and clarity will provide better transparency, understanding and narrow existing expectation gaps.

CalPERS does not see clarification as an alternative to the expansion of the auditor's report through an AD&A. We support clarification as it would be beneficial to investors to fully understand the role of the auditor and the extent of the work the auditor is performing during the financial statement review. We do not necessarily see this as an expansion of the auditor's report and support the focus on the AD&A.

***Questions Related to all Alternatives***

*23. This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?*

*24. Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?*

*25. What alternatives not mentioned in this concept release should the Board consider?*

*26. Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?*

CalPERS supports the expansion of the auditor's reporting through an AD&A. It is our belief that the PCAOB should remain focused on making the necessary and immediate changes to the existing auditor's reporting model.

Additionally, CalPERS believes corporate reporting needs to integrate key financial and non-financial information. We support that each company should consider an integrated report to identify risks related to the company's operational, financial, environmental, social, and governance status. Integrated reporting is necessary to understand risk management at a company and the drivers of value creation. CalPERS seeks financial and non-financial information that is relevant, timely, comparable, and of high quality.

As the International Integrated Reporting Committee has commented, "There is a need to develop more comprehensive and comprehensible information about an organization's total performance, prospective as well as retrospective, to meet the needs of the emerging, more sustainable, global economic model."[4]

CalPERS has a fiduciary duty of prudence, which requires that we take into account all information which identifies and enables the mitigation of risk and assists in identifying drivers of value creation. To fulfill this, investors require comprehensive financial and non-financial disclosures by investee companies. We mention this as we believe long-term, the auditor's reporting model, and framework should address the integration of financial and non-financial information, including relevant environmental, social and governance factors.

*27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?*

The focus of any changes in auditor reporting should be the value to investors. Yes, we believe addressing emphasis paragraphs, other assurance and clarification of language would provide a piecemeal approach. CalPERS preference would be for the PCAOB to focus on expanding the auditor's report through an AD&A.

Additionally, CalPERS supports changes to the auditor report or changes that may include a new style of auditor report, such as the AD&A. We suggest the PCAOB consider the current work on integrated reporting in its assessment of the auditor's reporting model.

[4] "Why we Need Integrated Reporting", Discussion Paper, by Sir Michael Peat, Chairman of the IIRC, IIRC website http://iirc.newsweaver.co.uk/newsletter/1ja775usz5leq5jjkzjymy.

*28. Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?*

From our perspective we believe an AD&A would better convey to users of the financial statements the auditor’s role in the performance of an audit.

*29. What effect would the various alternatives have on audit quality? What is the basis for your view?*

We believe that an AD&A would improve audit quality as its preparation would strengthen dialogue between the auditor, management and the Audit Committee. We also believe enhancing this three-way dialogue may allow the auditor to leverage discussions with management in accepting potential best practice reporting alternatives.

As we expressed in our response to question #12, CalPERS does not believe having inconsistent or competing information between the auditor and management is necessarily a concern. Shareowners are the owners of a company and obtaining both management’s and the board’s perspective along with an independent auditor’s would provide a better understanding from different perspectives on the stewardship of the company

*30. Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such exclusion.*

We support application to all SEC registrants. We do not support exemptions or application scaling based on company size in public markets. We support moving all audits of public companies in a direction which provides better disclosure and insight into the valuable work performed by auditors.

**Considerations Related to Changing the Auditor's Report**

*31. This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.*

*a. Are any of these considerations more important than others? If so, which ones and why?*

*b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?*

*c. Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?*

*d. What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?*

CalPERS believes that additional transparency will increase the quality of the audit and provide better disclosure of the added value which currently exists in the work performed by the auditor. We do not see where there would be additional cost as the AD&A would not increase the amount of audit work performed, it would be articulating the current work performed by an auditor, and how they came to the conclusion in the audit opinion.

*32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?*

CalPERS believes this will strengthen and expand more robust discussions between management, the audit committee and the auditor.

As previously stated, CalPERS does not believe having inconsistent or competing information between the auditor and management is necessarily a concern. Shareowners are the owners of a company and obtaining both management’s and the board’s perspective along with an independent auditor’s would provide a better understanding from different perspectives on the stewardship of the company

Re: PCAOB Release No. 2011-003
Concept Release on Possible Revisions to PCAOB Standards
Related to Reports on Audited Financial Statements

The Accounting Principles and Auditing Standards Committee (the "Committee" or "We") of the California Society of Certified Public Accountants ("CalCPA") is grateful for the opportunity to comment on the Concept Release referred to above. The Committee is the senior technical accounting and auditing committee of CalCPA. CalCPA has approximately 35,000 members. The Committee is comprised of 43 members, of whom 56% are from local or regional firms, 21% are from large multi-office firms, 12% are sole practitioners in public practice, 9% are in academia and 2% are in an international firm.

We have provided our comments in response to the questions set forth in the Concept Release within the main body of this letter. However, we wanted to present certain overall comments which reflect the tone of the Committee's views.

The Committee supports the Board's proposal to clarify certain basic elements of the auditor's report because to do so would not expand audit scope and would retain the current "pass/fail" model. The Committee does not support any of the other alternatives proposed by the Board in this Release as they ultimately seek to place the auditor into a role that cannot be fulfilled, and that can best be met by the entity's management. It should not be the auditor's role to function as a financial analyst and attempt to predict the future prospects of the entity under audit.

Many of the Board's proposals presume that auditors know as much (or more) about an entity as management of the company. This is worst exemplified in the discussion of an "Auditor's Discussion and Analysis." Auditor's knowledge of a company comes from four basic sources: Industry knowledge, what management tells them voluntarily, what management tells them in response to questions, and what auditors discover through audit procedures. The totality of this knowledge does not, and cannot, equal what management knows from dealing with the business day-to-day. Quite often, if management in good faith does not think the auditor needs knowledge of something and the auditor does not ask about it of find it, the auditor will not know about it, and in this case if the auditor prepares an AD&A, it will likely be deficient.

## PCAOB Concept Release: Audit Report. Staff Questions

### History and Outreach

1. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.

a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?

The Committee does not oppose an initiative to consider improvements to the auditor's reporting model. However, a clear distinction needs to be made between improvements in the report based on the existing scope of services and expansion of reporting based on an expanded scope of services. The Committee supports a better articulation of the overall audit process and certain significant findings. The Committee does not support the expansion of audit services and reporting on them.

Auditors should not be asked to report on the "quality" of an entity's financial statement. That quality is impacted by mandated accounting principles, which some believe underlie some complaints about the quality of financial statements. Auditors cannot be reasonably asked to critique mandatory accounting principles. Other aspects of "quality" are very subjective and what is good quality for some may be poor quality for others. There are bound to be inconsistencies among companies and even auditors within the same firm as to what is good vs. poor quality. What is needed is a clear disclosure of accounting principles followed, so users can draw their own conclusion about quality.

b. In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?

The Committee believes that clarification of the auditor's report, as highlighted in the PCOAB Concept Release, merit further study. The Committee further recommends this study be done in conjunction with the AICPA to avoid establishing different reporting standards for public and non-public entities.

A number of things can be better articulated, including reasonable assurance, responsibility for fraud, clarification of management's responsibility and auditor's lack of responsibility for preparation of the financial statements, responsibility for information outside the financial statements, and the meaning of independence. All of this can be done with no expansion of audit scope.

Another area for study is determining how to effectively communicate the fact the audit process is by definition predominately about the past. The exception is where the future is so clear that the auditor adds going concern language. One might argue that financial statements should contain more forward looking content; perhaps, but that is not the auditor's issue, that is a financial framework issue, which makes it a management disclosure issue. Should forward looking information be made obligatory in the notes, the auditing profession will have to come to grips with the question of what is, AND what is not auditable.

c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?

The Committee says "no", unless it is to report on information derived from the financial statements or prepared from records used to prepare the financial statements. Management has the responsibility for providing interpretation and analysis of historical and other business data, and this requires far more intimate knowledge of the entity, its business and its industry than an auditor has or is likely to be able to achieve.

The Committee is concerned that some of the responses described in the results of the staff's outreach activities demonstrate a complete lack of understanding of the role of the auditor, and worse, a desire to have the auditor perform analyses that should be performed by investors and analysts. Some responses seem to be based on the premise that the auditor has extensive knowledge of risks concerning the financial statements and the entity's business; the auditor clearly has some knowledge, but management is in the best position to assess and disclose risks, and is already required to do so in "risk factors." The Committee sees no point in having the auditor, with incomplete knowledge; attempt to provide information that is already within the purview of management's disclosure obligation.

2. The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."

a. Should the auditor's report retain the pass/fail model? If so, why?

Yes. It is the auditor's basic role, and is expected by users.

b. If not, why not, and what changes are needed?

See the Committee's response to Question 2.a. No change needed or desirable regarding the overall "pass/fail model."

c. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.

Please refer to the Committee's response to Question 1.b., above.

3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.

Additional information that may be provided should be provided by management. Management would have the information. The audit committee best serves in an independent oversight role, and does not have the same access to information that management has; further, if the audit committee is cast in the role of providing information, it can be perceived as losing its independence. Similarly, the auditor's role is independent verification. The auditor does not have the same access to information that management has and if the auditor is cast in the role of providing information, it can be perceived as losing its independence.

4. Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?

Most of the focus on internal controls has been oriented toward the financial statements. Internal controls and processes around information outside the financial statements may have differences from those related to the financial statements, but there are likely significant similarities. Differences will need to be identified before consideration can be given to the need for amendments to audit and reporting standards.

**Potential Alternatives for Changes to the Auditor's Report**

5. Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?

No.

a. If you support an AD&A as an alternative, provide an explanation as to why.

The Committee does not support an AD&A.

b. Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?

It should comment on neither.

c. Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?

Any information relevant and useful to making investment decisions should be furnished by management. The auditor's role is one of verification; expansion beyond this would jeopardize the auditor's independence and confuse the auditor's role with that of a financial analyst.

d. If you do not support an AD&A as an alternative, explain why.

The Committee opposes any AD&A. Auditors cannot achieve the level of knowledge of the audited entity that management has, and is, therefore, not in a position to report its own analysis of the entity's affairs. Commentary on audit procedures is not appropriate; the totality and interdependence of audit procedures is difficult, if not impossible, to communicate in a brief report and little constructive purpose is served in explaining procedures that, no matter how comprehensive, are likely to be "second-guessed" by parties less knowledgeable.

e. Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?

Any commentary should be included in the auditor's report. See the Committee's response to Question 1.b., above.

6. What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?

There should not be an AD&A.

7. What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?

There should not be an AD&A. The matters that might be discussed, per the PCAOB Release, should be covered by management in the financial statements, and perhaps in the MD&A as well. Better accounting standards may be needed as to what needs to be included, and to the extent required in the financial statements, audit standards should have a clear statement of the auditor's responsibility for auditing that data and reporting if the auditor concludes it is materially deficient.

8. Should a standard format be required for an AD&A? Why or why not?

No. An AD&A should not be required.

9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?

The discussion of these items is management's responsibility. The auditor's role is independent verification, based upon an objective evaluation of an entity's past performance, measured against a meaningful financial framework. The current audit framework is not meant to support providing an overall assessment of the "quality of the financial statements". The auditor does not have the same access to information that management has and is not able to perform the comprehensive analysis that is required for this risk analysis. Some of these risks are considered by the auditor in setting audit scope and procedures, but this is a far different context that providing such information to investors. Further, if the auditor is cast in the role of providing information and analysis of this type, it can be perceived as losing its independence.

10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?

An AD&A should not be required. "Boilerplate" language is one risk, as auditors would likely find it necessary to heavily caveat the scope and conclusions of any such analysis.

11. What are the potential benefits and shortcomings of implementing an AD&A?

See the Committee's responses to Questions 5.d., 7, and 9. and 10. above.

12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?

While the Committee rejects the use of an AD&A for auditors, the Committee would expect that any differences between management's and the auditor's information would normally be resolved before either side finalizes their views, just as it is now with presentation and disclosures in financial statements. The difficulty with an AD&A is that the knowledge bases of management and the auditor are different and the information is subjective, so it may be impossible to resolve differences between the AD&A and other information provided by management. Further, a complete discussion could lead the auditor to make statements which, in effect, second guess or criticize management's decisions; differences such as that may not be resolvable, and may reflect lack of business knowledge and perspective by the auditors, rather than a basis for differences with management. As for different or competing information in the financial statements themselves, the Committee would expect these to be resolved in most cases, since if the differences are not resolved, they would likely lead to a reporting exception by the auditor, and management usually seeks to avoid that.

**Required and Expanded Use of Emphasis Paragraphs**

13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?

The Committee does not support the "required" use of emphasis paragraphs in the audit report. The types of information proposed to be included in an emphasis paragraph are best left to management and be presented in the notes to the financial statements. Management, not the auditor, should have the responsibility of identifying significant risks, estimates and uncertainties about the accounting information. The accounting standards should deal with any such requirements.

14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?

No. The totality and interdependence of audit procedures is difficult, if not impossible, to communicate in a brief report and little constructive purpose is served in explaining procedures that, no matter how comprehensive, are likely to be "second-guessed" by parties less knowledgeable.

a. If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.

The Committee does not support the required use of emphasis paragraphs for the reasons set forth in our response to Question 13

b. If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.

Please refer to the Committee's response to Questions 13. and 14. above.

15. What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?

Please refer to the Committee's responses to Questions 13. and 14 above.

16. What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?

Please refer to the Committee's responses to Questions 13. and 14 above.

17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?

Please refer to the Committee's responses to Questions 13. and 14 above.

18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?

Please refer to the Committee's responses to Questions 13. and 14 above.

**Auditor Assurance on Other Information Outside the Financial Statements**

19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?

The Committee believes there may be aspects of "other information" on which auditors could provide assurance. However, The Committee questions whether the auditor should be placed in a role that ***requires*** him to provide assurance, directly or indirectly, that the information is complete or complies with applicable rules and regulations. Some of this requires legal perspective beyond the scope of the auditor's expertise. Some requires knowledge and perspective that management gains from running the business and that the auditor, as an independent outsider, cannot achieve. The current attest procedures to express an opinion on MD&A at AT sec. 701.05 et seq. in part require this, which may explain why auditors seldom report on the MD&A in practice.

a. If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.

The Committee does not support providing any assurance on a required basis.

b. On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.

None. See the Committee's response to Questions 19. and 19.a.

c. What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?

None.

d. If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?

Information derived directly from the financial statements or accounting records underlying that information that is subject to audit procedures employed in the audit of the financial statements.

e. Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?

If the reporting is limited to information derived directly from the financial statements or accounting records underlying that information that are subject to audit procedures employed in the audit of the financial statements, there should be no effect. However, if the information reported on includes other less objective and interpretative information, it may lead to a reduction of the amount of such information included because it may be difficult or expensive, or impossible for the auditor to audit it; this result would be undesirable.

f. Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?

AT 701 was written to deal specifically with the MD&A. The entire attestation standard would need to be re-examined under the Board's proposed expansion of reporting. If the Board moves in this direction, we suggest a comprehensive examination be done to determine why so few reports are currently rendered in practice under AT 701.

g. If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.

Please refer to the Committee's responses to Questions 19. 19.a. and 19.e.

20. What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?

A potential benefit may be some enhanced reliability of the information. However, for the reasons stated in the Committee's response to Questions 19. and 19.a. the shortcomings outweigh this small benefit.

**Clarification of the Standard Auditor's Report**

21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:
• Reasonable assurance
• Auditor's responsibility for fraud
• Auditor's responsibility for financial statement disclosures
• Management's responsibility for the preparation of the financial statements
• Auditor's responsibility for information outside the financial statements
• Auditor independence

a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?

The Committee supports the Board's proposal for clarifications. However, they are likely to lead to more boilerplate.

b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.

Yes. It is apparent that, after years of trying to communicate the meaning of the auditor's report, users still do not understand it.

c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?

The suggestions in the PCAOB Release are sufficient.

d. What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?

Within the current scope of the auditor's responsibility, there would be no effect since the auditor would merely be articulating what he is doing now.

22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?

See the Committee's response to Questions 1.b. and 21.b. However, the Committee sees little merit in trying to clarify the auditor's responsibility for financial statement disclosures; we believe it is well understood that the note disclosures are part of the financial statements, and it is not necessary to say more.

Questions Related to all Alternatives

23. This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?

The Committee supports the suggestion to consider clarifying the current auditor's report, and does not support the other suggested alternatives for the reasons previously set forth herein.

24. Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?

See the Committee's response to Question 23.

25. What alternatives not mentioned in this concept release should the Board consider?

None. However, the Committee believes that many of the issues set forth in this Release can be better solved by asking the accounting standard setters to address these issues, and by making changes to the current financial reporting model.

26. Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?

The Committee's suggestions presented in our response to Question 1.b. may be relatively easy to implement with additional reporting requirements, without significant changes to the auditor reporting framework beyond the additional requirements themselves.

The Committee has no comments on the other alternatives in the Release, as we do not support them.

27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?

The Committee's suggestions presented in our response to Question 1.b. are unlikely to cause any confusion. The clarification of the auditor's standard report would not be directed to any specific financial data, so would not cause any misperception.

28. Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?

The alternatives in the PCAOB Release item III.D. "Clarification of the Standard Auditor's Report" are sufficiently comprehensive. The Committee has no other recommendations.

29. What effect would the various alternatives have on audit quality? What is the basis for your view?

The answer to this is very dependent on the clarity of any standards written to implement the alternatives. Limiting changes to clarifications, as the Committee suggests in our response to Question 1.b. would likely have no negative effects on audit quality.

30. Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports

related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such exclusion.

Yes. the Committee sees little basis for differentiation.

**Considerations Related to Changing the Auditor's Report**

31. This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, and effects on audit committee governance, liability considerations, and confidentiality.

a. Are any of these considerations more important than others? If so, which ones and why?

See the Committee's response to Question 3. above. It is important to maintain the separate roles of management, the audit committee and the auditors. Any incursion of the audit committee or auditors into functions of management will create confusion for all and compromise the independence and effectiveness of the audit committee and the auditors.

b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?

No. Please see the Committee's response to Question 29. above.

c. Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?

The Committee strongly recommends the Board evaluate the cost benefit relationship of implementing any of the alternatives except for the audit report clarification process, which the Committee supports, as any expansion of the auditor's overall reporting responsibilities are likely to drive smaller registered auditing firms away from public company work. This will further restrict choices among a dwindling supply of qualified firms.

d. What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?

The AD&A and auditor reporting on information outside the financial statements are fraught with potential litigation exposure for the auditor. A "safe harbor" is not likely to provide adequate insulation, assuming one would even be acceptable to all.

32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?

Please see the Committee's responses to Questions 9 and 12. It could create an adversarial relationship between the auditor and management, and that would seriously impair communications between management and the auditor.

The Committee would be glad to discuss our comments further should you have any questions or require additional information.

Very truly yours,

Howard Sibel

Dear Sir:

**Request for Comment: Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards, PCAOB Rulemaking Docket Matter No. 34**

The Canadian Public Accountability Board (CPAB) is pleased to comment on the Public Company Accounting Oversight Board (PCAOB) *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (the "Concept Release"). We believe now is the time for a fundamental review of the auditor reporting model (the "Reporting Model") and we commend the PCAOB for engaging with stakeholders on how to enhance the quality, relevance and value of auditor reporting.

CPAB is Canada's independent audit regulator responsible for overseeing firms that audit Canadian reporting issuers. Our mandate is to promote high quality independent auditing that contributes to public confidence in the integrity of reporting issuers' financial reporting. We accomplish our mandate by inspecting audit firms and audit working paper files which provides us with insights into the application of auditing standards and how they might be improved.

## Transparency of the Audit

Many investors are asking for more transparency from the auditor with respect to communications addressing the audit process and the auditor's views on the underlying risks impacting the financial statements. The results of recent investor outreach show that many investors believe the current, largely boilerplate, audit report is not meeting their needs and they want deeper insights from the auditor. There is a perception that while the audit process is robust, the standard audit report does not adequately communicate the results of an extensive audit process.

In our view the status quo, with respect to auditor reporting, is not acceptable. Auditors need to provide greater value by sharing more information, related to the audit performed, directly with financial statement users ("Users"). Change needs to be responsive to the needs of Users, and should be implemented in a thoughtful, responsible way such that audit quality is enhanced and in no way diminished.

Since CPAB's mandate relates to listed entities in Canada our comments to follow are intended to apply solely to listed entities.

**Auditor Commentary- Supplemental Reporting**

The Reporting Model should retain the current pass/fail opinion but should be expanded to include a supplemental auditor commentary (the "Commentary"). The Commentary should be targeted at areas that will provide the greatest insights to Users without negatively impacting the three-way interaction between the auditor, audit committee and management.

We suggest the following areas could be included in the Commentary:

- Comments on key areas of audit risk identified by the auditor, including a description of why the risks are significant, and the related audit approach;
- A summary of areas of significant auditor judgement, including the auditor's assessment of management's critical accounting judgements and qualitative aspects of the entity's accounting policies;
- A discussion of key inputs for significant assumptions and the basis for concluding that these were appropriate;
- A discussion of unusual transactions and significant non-recurring transactions, including the basis for the accounting adopted; and
- A description of the extent of reliance on auditors in foreign jurisdictions.

We believe the increased transparency provided by a Commentary as described above will improve audit quality and ultimately lead to improved disclosures in financial information, thereby benefiting Users. Clearly, the challenge will be to write reporting standards that provide appropriate guidance to auditors to ensure that any such Commentary does not become boilerplate over time or lead to investor confusion. Reporting standards will also need to be appropriately field tested prior to finalization.

We recognize many will resist this approach as being a substantive change from existing practice and there will be concerns with respect to consistency, legal liability and confidentiality. In our view this is a necessary change if audits are to continue to provide value and relevance to Users of financial reporting in the 21st century.

CPAB
CCRC

**Emphasis of Matter Paragraphs in the Audit Report**

We support the expanded use of Emphasis of Matter paragraphs in areas of critical importance to the financial statements, including significant management judgements and estimates and areas of significant measurement uncertainty. This will assist Users in navigating their way through increasingly complex financial reporting by drawing attention to information within the financial statements that the auditor believes is critical to the Users understanding of the financial statements. We see the Emphasis of Matter Paragraphs as complementing and being cross-referenced to the more extensive Commentary described above. Emphasising these matters in the audit report should cause the auditor to focus more on the related audit procedures while focusing management more on the related significant judgements and disclosures, which should improve audit quality.

**Other Information in Documents Containing Audited Financial Statements**

We support efforts to explore how the auditor can provide assurance on information outside the financial statements such as Management's Discussion and Analysis ("MD&A") or other information such as non-GAAP measures or key performance metrics. However, it is important that auditors have the necessary competence and skill set to provide such services in a cost effective and timely manner that adds value to Users. We see this as a longer term project that needs further study and should be incorporated into a more holistic review of the corporate reporting framework. In our view, the more pressing issue in the short term is determining how the auditor can provide Users with more relevant and better information related to the financial statement audit.

**Global Auditor Reporting**

It is important for bodies such as the PCAOB, European Commission and International Auditing and Assurance Standards Board (IAASB) to work together to devise one global solution to the perceived deficiencies in auditor reporting. Since many audit reports are read globally; a more coordinated approach will improve consistency and mitigate investor confusion. Greater divergence in auditor reporting is not in the public interest.

In concluding we again commend the PCAOB for engaging with stakeholders on this important topic. Changes to the Reporting Model should be implemented in a cost effective way, ensuring that audit quality is enhanced and in no way diminished. In a global business environment that is continually changing and with increasingly complex financial reporting requirements, it is critical that auditor reporting evolves in a way that better meets the needs of financial statement users.

CPAB responded to the IAASB's Consultation Paper, *Enhancing the Value of Auditor Reporting: Exploring Options for Change*, and we attach a copy of our response for your information (see Attachment A). Our response to the IAASB Consultation Paper covered many of the areas where comments are requested in the Concept Release, and we believe these responses would be equally applicable to the Concept Release.

We appreciate the opportunity to respond to the Concept Release, and would be pleased to discuss further any of the above comments.

Yours very truly,

New York, NY 10017
USA

Dear Sir:

**Re: Consultation Paper on Enhancing the Value of Auditor Reporting: Exploring Options for Change**

The Canadian Public Accountability Board (CPAB) is pleased to comment on the International Auditing and Assurance Standards Board's (IAASB's) Paper *Enhancing the Value of Auditor Reporting: Exploring Options for Change* (the "Consultation Paper"). We believe now is the time for a fundamental review of the auditor reporting model and we commend the IAASB for engaging with stakeholders on how to enhance the quality, relevance and value of auditor reporting.

CPAB is Canada's independent audit regulator responsible for overseeing firms that audit Canadian reporting issuers. Our mandate is to promote high quality independent auditing that contributes to public confidence in the integrity of reporting issuers' financial reporting. We accomplish our mandate by inspecting audit firms and audit working paper files which provides us with insights into the application of auditing standards and how they might be improved.

**Corporate Reporting Framework**

While our comments focus on improvements to the auditor reporting model (the "Reporting Model"), we believe there is a need for a more holistic review of the corporate reporting framework in order to provide greater value to stakeholders. In our view, improvements to the Reporting Model should be part of a more comprehensive initiative to reform the corporate reporting framework which will require the active involvement of all stakeholders, including policy makers, investors, regulators, standard setters, corporate directors, company management and auditors.

**Transparency of the Audit**

Many investors are asking for more transparency from the auditor with communications addressing the audit process and the auditor's views on the financial statements. The results of recent investor outreach show that many investors believe the current, largely boilerplate, audit report is not meeting their needs and they want deeper insights from the auditor. There is a perception that while the audit process is robust, the standard audit report does not adequately communicate the results of an extensive audit process.

In our view the status quo, with respect to auditor reporting, is not acceptable. Auditors need to provide greater value by sharing more information, related to the audit performed, directly with financial statement users ("Users"). Change needs to be responsive to the needs of Users, and should be implemented in a thoughtful, responsible way such that audit quality is enhanced and in no way diminished.

Since CPAB's mandate relates to listed entities in Canada our comments to follow are intended to apply solely to listed entities.

**Auditor Commentary- Supplemental Reporting**

The Reporting Model should retain the current pass/fail opinion but should be expanded to include a supplemental auditor commentary (the "Commentary"). The Commentary should be targeted at areas that will provide the greatest insights to Users without negatively impacting the three-way interaction between the auditor, audit committee and management.

We suggest the following areas could be included in the Commentary:

- Comments on key areas of audit risk identified by the auditor, including a description of why the risks are significant, and the related audit approach;
- A summary of areas of significant auditor judgement, including the auditor's assessment of management's critical accounting judgements and qualitative aspects of the entity's accounting policies;
- A discussion of key inputs for significant assumptions and the basis for concluding that these were appropriate;
- A discussion of unusual transactions and significant non-recurring transactions, including the basis for the accounting adopted; and
- A description of the extent of reliance on auditors in foreign jurisdictions.

We believe the increased transparency provided by a Commentary as described above will improve audit quality and ultimately lead to improved disclosures in financial information, thereby benefiting Users. Clearly, the challenge will be to write reporting standards that provide appropriate guidance to auditors to ensure that any such supplemental commentary does not become boilerplate over time or lead to investor confusion. Reporting standards will also need to be appropriately field tested prior to finalization.

We recognize many will resist this approach as being too radical a change from existing practice and there will be concerns with respect to consistency, legal liability and confidentiality. In our view this is a necessary change if audits are to continue to provide value and relevance to Users of financial reporting in the 21st century.

**Emphasis of Matter Paragraphs in the Audit Report**

We support the expanded use of Emphasis of Matter paragraphs in areas of critical importance to the financial statements, including significant management judgements and estimates and areas of significant measurement uncertainty. This will assist Users in navigating increasingly complex financial reporting by drawing attention to information within the financial statements that the auditor believes is critical to the Users understanding of the financial statements. We see the Emphasis of Matter Paragraphs as complementing and being cross-referenced to the more extensive Commentary described above. Emphasising these matters in the audit report will make the auditor focus more on the related audit procedures and focus management more on the related significant judgements and disclosures.

**The Role of the Those Charged with Governance**

Audit committees have a key oversight role to play with respect to audit quality and high quality financial reporting. Continuous improvement in the two-way communications between the auditor and audit committees contributes significantly to audit quality, particularly given the increasing complexity and greater use of judgement in financial reporting. We believe it is important to further explore how communication between auditors and audit committees can be more forthright and transparent, particularly with respect to reporting of significant audit risks and related judgements. In our experience this is more of a challenge for smaller listed entities where corporate governance arrangements can be less formal.

In our view there is merit in considering having more transparent public reporting by audit committees on how they have discharged their responsibilities.

However, given the varying corporate governance models and practices used in different countries around the world it will be a challenge to implement an international model of enhanced corporate governance reporting to Users.

**Other Information in Documents Containing Audited Financial Statements**

We support efforts to explore how the auditor can provide assurance on information outside the financial statements such as the Management's Discussion and Analysis ("MD&A") or other information such as non-GAAP measures or key performance metrics. However, it is important that auditors have the necessary competence and skill set to provide such services in a cost effective and timely manner that adds value to Users. We see this as a longer term project for the IAASB that needs further study and should be incorporated into a more holistic review of the corporate reporting framework. In our view, the more pressing issue in the short term is determining how the auditor can provide Users with more relevant and better information related to the financial statement audit.

**Format and Structure of the Standard Auditor's Report**

We support the need to improve the format and structure of the existing standard audit report. We believe the explanations of management and auditor responsibilities should be retained within the audit report so that the report will be read with the appropriate context. However, the auditor's opinion should be given greater prominence and moved to the front of the audit report.

We agree that the technical language in the audit report could also be clarified, including terms such as "fair presentation", "materiality" and "reasonable assurance". Initially, such definitions should be included in the audit report with consideration to migration into a separate document or appendix over time.

**Global Auditor Reporting**

It is important for bodies such as the IAASB, European Commission and United States Public Company Accounting Oversight Board to work together to devise one global solution to the perceived deficiencies in auditor reporting. Since many audit reports are read globally; a more coordinated approach will improve consistency and mitigate investor confusion. Greater divergence in auditor reporting is not in the public interest.

In concluding we again commend the IAASB for engaging with stakeholders on this important topic. Changes to the Reporting Model should be implemented in a cost effective way, ensuring that audit quality is enhanced and in no way diminished. In a global business environment that is continually changing and with increasingly complex financial reporting requirements, it is critical that auditor reporting evolves in a way that better meets the needs of financial statement users.

In addition to our comments above, our responses to the questions posed in the Consultation Paper are included in the Appendix to this letter.

We would be pleased to discuss further any of the above comments.

Yours very truly,

Brian Hunt, FCA
Chief Executive Officer

**APPENDIX**

1. **Do respondents have any comments about the issues identified in Section II regarding the perceptions of auditor reporting today?**

   Many investors are asking for more transparency from the auditor with communications addressing the audit process and the auditor's views on the audited financial statements. The results of recent investor outreach show that many investors believe the current, largely boilerplate, audit report is not meeting their needs and they want deeper insights from the auditor. There is a perception that while the audit process is robust, the standard audit report does not adequately communicate the results of an extensive audit process.

   In our view the status quo, with respect to auditor reporting, is not acceptable. Auditors need to provide greater value by sharing more information directly with financial statement users ("Users") related to the audit performed. Change needs to be responsive to the needs of Users, and should be implemented in a thoughtful, responsible way such that audit quality is enhanced and in no way diminished.

2. **If respondents believe changes in auditor reporting are needed, what are the most critical issues to be addressed to narrow the information gap perceived by users or to improve the communicative value of auditor reporting? Which classes of users are, in the view of respondents, most affected by these issues? Are there any classes of users that respondents believe are unaffected by these issues?**

   **Auditor Commentary- Supplemental Reporting**

   The auditor reporting model (the "Reporting Model") should retain the pass/fail opinion but should be expanded to include a supplemental auditor commentary (the "Commentary"). The Commentary should be targeted at areas that will provide the greatest insights to Users without negatively impacting the three-way interaction between the auditor, audit committee and management.

   We suggest the following areas could be included in the Commentary:

   - Comments on key areas of audit risk identified by the auditor, including a description of why the risks are significant, and the related audit approach;
   - A summary of areas of significant auditor judgement, including the auditor's assessment of management's critical accounting judgements and qualitative aspects of the entity's accounting policies;
   - A discussion of key inputs for significant assumptions and the basis for concluding that these were appropriate;

- A discussion of unusual transactions and significant non-recurring transactions, including the basis for the accounting adopted; and
- A description of the extent of reliance on auditors in foreign jurisdictions.

We believe the increased transparency provided by a Commentary, as described above, will improve audit quality and ultimately lead to improved disclosures in financial information, thereby benefiting Users. Clearly, the challenge will be to write reporting standards that provide appropriate guidance to auditors to ensure that any such supplemental commentary does not become boilerplate over time or lead to investor confusion. Reporting standards will also need to be appropriately field tested prior to finalization.

**Emphasis of Matter Paragraphs in the Audit Report**

We support the expanded use of Emphasis of Matter paragraphs in areas of critical importance to the financial statements, including significant management judgements and estimates and areas of significant measurement uncertainty. This will assist users in navigating increasingly complex financial reporting by drawing attention to information within the financial statements that the auditor believes is critical to the users understanding of the financial statements. We see the Emphasis of Matter Paragraphs as complementing and being cross-referenced to the more extensive Auditor Commentary described above.

We believe these proposed changes will benefit all classes of users.

**3. Do respondents believe that changes are needed for audits of all types of entities, or only for audits of listed entities?**

Our comments are made in the context of listed entities.

**4. Respondents are asked for their reactions to the options for change regarding the format and structure of the standard auditor‘s report described in Part A. Do respondents have comments about how the options might be reflected in the standard auditor‘s report in the way outlined in Appendix 1 of this Consultation Paper?**

We support the need to improve the format and structure of the existing standard audit report. We believe the explanations of management and auditor responsibilities should be retained within the audit report so that the report will be read with the appropriate context. However, the auditor’s opinion should be given greater prominence and moved to the front of the audit report.

We agree that the technical language in the audit report could also be clarified, including terms such as “fair presentation”, “materiality” and “reasonable assurance”. Initially, such definitions should be included in the audit report with consideration to migration into a separate document or appendix over time.

5. **If the paragraphs in the current standard auditor‘s report dealing with management and the auditor‘s responsibilities were removed or re-positioned, might that have the unintended consequence of widening the expectations gap? Do respondents have a view regarding whether the content of these paragraphs should be expanded?**

   See response to #4.

6. **Respondents are asked for their reactions to the possibility that the standard auditor‘s report could include a statement about the auditor's responsibilities regarding other information in documents containing audited financial statements. Do respondents believe that such a change would be of benefit to users?**

   We believe it would be appropriate for the audit report to explicitly address the auditor's responsibility with respect to other information in documents containing audited financial statements. Many users may not understand the extent of auditor involvement with such information and clarification would benefit users.

7. **If yes, what form should that statement take? Is it sufficient for the auditor to describe the auditor‘s responsibilities for other information in documents containing audited financial statements? Should there be an explicit statement as to whether the auditor has anything to report with respect to the other information?**

   There should be an explicit statement describing the extent to which the auditor has been involved with other information outside the financial statements. A starting point for developing such a statement should be ISA 720 "The Auditor's Responsibilities Relating to Other Information in Documents Containing Audited Financial Statements."

8. **Respondents are asked for their views regarding the auditor providing additional information about the audit in the auditor‘s report on the financial statements.**

   **Auditor Commentary- Supplemental Reporting**

   Please see response to #2.

   We recognize many will resist this approach as being too radical a change from existing practice and there will be concerns with respect to consistency, legal liability and confidentiality. In our view this is a necessary change if audits are to continue to provide value and relevance to users of financial reporting in the 21st century.

CPAB
CCRC

**Emphasis of Matter Paragraphs in the Audit Report**

Please see response to #2.

**9. Respondents are asked for their reactions to the example of use of —justification of assessments in France, as a way to provide additional auditor commentary.**

We support the use of a model that provides expanded use of Emphasis of Matters paragraphs in the audit report, similar to the justification of assessments in France but with expanded auditor commentary in a supplemental report. The challenge will be to ensure that the expanded disclosure adds value to Users without becoming boilerplate.

Please also see responses to #2 and #8.

**10. Respondents are asked for their reactions to the prospect of the auditor providing insights about the entity or the quality of its financial reporting in the auditor's report.**

Please see responses to #2 and #8.

**11. Respondents are asked for their reactions to the options for change relating to an enhanced model of corporate governance reporting, as described in Section III, Part D.**

Audit committees have a key oversight role to play in ensuring both audit quality and high quality financial reporting. Continuous improvement in the two-way communications with audit committees contributes significantly to audit quality, particularly given the increasing complexity and greater use of judgement in financial reporting. We believe it is important to further explore how communication between auditors and audit committees can be more forthright and transparent, particularly with respect to the reporting of significant audit risks and related judgements. In our experience this is more of a challenge for smaller listed entities where corporate governance arrangements can be less formal.

In our view there is merit in considering having more transparent public reporting by audit committees on how they have discharged their responsibilities.

However, given the varying corporate governance models and practices used in different countries around the world it will be a challenge to implement an international model of enhanced corporate governance reporting to Users.

**12. To the extent that respondents support this model, what challenges may be faced in promoting its acceptance? Also, what actions may be necessary to influence acceptance or adoption of this model, for example, by those responsible for regulating the financial reporting process?**

Please see response to #11.

**13. Do respondents believe assurance by the auditor on a report issued by those charged with governance would be appropriate?**

Please see response to #11.

**14. Respondents are asked for their reactions to the need for, or potential value of, assurance or related services on the type of information discussed in Section III, Part E.**

Investors are increasingly using information outside the financial statements in their decision making. We believe there is merit in exploring how the auditor can provide assurance in areas such as the MD&A, non-GAAP measures or key performance metrics. However, it is important that auditors have the necessary competence and skill set to provide such services in a cost effective and timely manner that adds value to Users. For example, auditors may have limited expertise to provide assurance on such items as enterprise risk management and business models.

Standards will also need to be developed for auditors to provide assurance in these areas.

**15. What actions are necessary to influence further development of such assurance or related services?**

We see this as a longer term project for the IAASB which needs further study and should be incorporated into a more holistic review of the corporate reporting framework. In our view, the more pressing issue in the short term is determining how the auditor can provide Users with more relevant and better information related to the financial statement audit.

**16. Respondents are requested to identify benefits, costs and other implications of change, or potential challenges they believe are associated with the different options explored in Section III.**

These are addressed in the main body of the letter and our detailed responses above.

**17. Do respondents believe the benefits, costs, potential challenges and other implications of change are the same for all types of entity? If not, please explain how they may differ.**

Changes to the Reporting Model should be applied consistently across all listed entities. For smaller entities the reporting will generally be less complex. The challenges and costs will vary given differences in corporate governance structure and types of Users for smaller entities.

**18. Which, if any, of the options explored in Section III, either individually or in combination, do respondents believe would be most effective in enhancing auditor reporting, keeping in mind benefits, costs, potential challenges and other implications in each case? In this regard, do respondents believe there are opportunities for collaboration with others that the IAASB should explore, particularly with respect to the options described in Section III, Parts D and E, which envisage changes outside the scope of the existing auditor reporting model and scope of the financial statement audit?**

We believe Supplemental auditor reporting in the form of an **Auditor Commentary** and expanded use of **Emphasis of Matters paragraphs** in the Audit Report will be most effective in enhancing auditor reporting. Please also see our responses to #1 and #2 above.

We agree there should be greater collaboration with others by the IAASB. The IAASB, European Commission and United States Public Company Accounting Oversight Board should work more closely together to devise one global solution to the perceived deficiencies in auditor reporting. Since many audit reports are read globally; a more coordinated approach will improve consistency and mitigate investor confusion. Greater divergence in auditor reporting is not in the public interest.

**19. Are there other suggestions for change to auditor reporting to narrow the —information gap perceived by users or to improve the communicative value of the auditor's report?**

We have no other comments.

**RE: Request for Public Comment: Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards, PCAOB Rulemaking Docket Matter #34**

Dear Office of the Secretary:

Capital Research and Management Company ("Capital") serves as investment adviser to the American Funds, one of the oldest and largest mutual fund families in the nation. We appreciate the opportunity to provide comments on the Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards ("Concept Release"). These comments are our own views and not necessarily those of Capital or other Capital associates; these comments are informed by our experiences as preparers of audited financial statements related to both the adviser (and related companies) of the American Funds and the mutual funds themselves.

Although there may be ways to improve the existing auditor's report, the Auditor's Discussion and Analysis ("AD&A") could negatively impact audit committees and, ultimately, audit quality for several reasons. Proponents of the AD&A may argue that the concept simply requires that existing communication between the auditors and audit committee be added to the auditor's report.

However, the written communication between the auditors and the audit committee is highly structured and much of the value comes from the contextual discussion that takes place in the audit committee meetings. Audit committee members have the opportunity to question and clarify their understanding in these discussions. Attempting to capture the entire discussion between the audit committee and auditors, without opportunity for the further clarification that occurs in the context of Board interactions with the auditors, reduces the value of the disclosure and may lead to erroneous conclusions on the part of the financial statement user. Additionally, audit committees would likely spend significant resources reviewing the AD&A and negotiating the exact language rather than discussing substantive oversight of controls and financial reporting. If apprehension over how audit committee discussions will ultimately be characterized in the public disclosure inhibits audit committee discussion in any way, audit quality will decline.

We don't believe that the benefits of the AD&A will outweigh the costs. We expect that the disclosure will evolve to "boiler plate" language due to the scrutiny that the text will receive from the audit firms, the audit committees, and management. In our opinion, this standardized language may not provide the benefits intended. Additionally, the concept of an auditor disclosing "close calls" could be interpreted very broadly, resulting in meaningless and overwhelming disclosure. For instance, Accounting Standards Codification 740-10-50-15 does not require disclosure of uncertain tax positions that are "more likely than not" (i.e., greater than 50% chance) to be upheld upon examination by a tax authority. However, an auditor could view any uncertain position at the more likely than not standard (but not at a higher level of assurance, such as "should") as relevant for disclosure in the AD&A; such a list could be extensive, and in our opinion, of little value to a financial statement user.

The proposals are not designed to have any impact on audit quality and the benefit is expected to be for the end users. Based on the above points, we don't expect users to experience this benefit, but we do anticipate higher audit costs as well as higher external legal review costs related to the disclosures. Additionally, as mentioned above, we also expect non-monetary costs such as audit committee time and focus, and the potential degradation of audit quality. For the reasons listed above, we do not support the AD&A alternative as discussed in the Concept Release.

We do support further PCAOB staff research into the expanded use of emphasis paragraphs, and encourage the staff to perform a full cost/benefit analysis of this alternative. As noted in the Concept Release, emphasis paragraphs, though currently not required, can be included at the auditor's discretion in certain circumstances. We support the idea to use emphasis paragraphs to highlight significant matters related to financial statement presentation and/or areas with significant management judgments and estimates. We believe including discussion of key audit procedures performed around the areas discussed, though including no additional information not already in the financial statements and related notes, will help focus investors on key sections of information and risk in the financial statements. In addition, we believe such discussion may result in improved audit quality as auditors may audit any emphasized areas with increased testing. However, we believe that there is a risk once again that such disclosure could become boiler plate for similar issuers in the same industry and thus be of limited value to users, and for this reason we encourage the Board and its staff to continue to study the recommendation of emphasis paragraphs and to do a more complete cost/benefit analysis.

Finally, we wish to respond to a specific question asked in the Concept Release concerning the application of any changes to the auditor's reporting model for all financial statements filed with the SEC, including those of investment companies. We believe that the unique characteristics of an investment company, and the specific requirements of the auditors of investment companies, would make the cost of complying with any changes to the auditor reporting model far larger than any potential benefits. Currently, an auditor is required to verify the existence and amount of shares/par for each investment, as well as to audit each investment's valuation. Management estimates, though required in certain cases related to valuation, typically are immaterial to the overall financial presentation of the investment company. As such, similar to the requirements of Section 404 of the Sarbanes-Oxley Act which registered investment companies were not required to comply with, we would suggest that investment companies be excluded from any changes to auditor reporting model.

*     *     *     *     *

Thank you for considering these comments. Please feel free to contact any of us should you have any questions or wish to discuss our thoughts on the Concept Release.

Sincerely,

James M. Brown

**Re: PCAOB No. 2011-003 Rulemaking Docket #34**

Dear Messrs. Doty, Ferguson, Goelzer, Hanson and Harris:

Thank you very much for the opportunity to participate in the Roundtable on September 15, 2011 in Washington. This will be a brief summary of my remarks at the Roundtable and serve as my comments on the Public Company Accounting Oversight Board's *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements No. 2011-003, PCAOB Rulemaking Docket Matter #34.*

Capital Research and Management Company serves as investment adviser to the American Funds, one of the oldest and largest mutual fund families in the nation. As I pointed out at the Roundtable, I have reached out within Capital to our investment analysts who use financial statements extensively in evaluating prospective investments, as well as to our accounting associates who prepare financial statements for the funds and the advisory organization and who interact with our independent auditors. Although my comments were clearly informed by the experiences of my colleagues, the views expressed at the Roundtable and in this letter are mine alone.

1. It seems clear that something additional can and should be communicated by auditors beyond the current pass-fail opinion. My analyst colleagues cited numerous occasions on which a brief perspective from the auditors about some aspect of the financial statements or the audit would have been extremely useful to the analysts in evaluating a company or anticipating material issues. In each case it was a perspective that would have been uniquely within the knowledge of the auditors and also would not have required extensive effort or expense to bring to the attention of the investing public.

2. The auditor's perspective should be very brief and simply point out sensitive areas, material assumptions, material disagreements with management, material measurement issues, etc. It need not-- and should not-- be "transparent" by attempting to reflect every matter on which the auditors spent extra time or about which they communicated with the audit committee.

3. The additional commentary need not-- and should not-- change the respective roles of management, the auditors and the audit committee with respect to the financial statements.

4. The additional commentary should be brief. Among other things, this would help reduce expense, address any liability concerns and prevent it from becoming boilerplate, each of which was properly cited as a concern by several commentators at the Roundtable.

5. While I do not feel strongly about the location of the additional auditor's commentary-- Standard Auditor's Report (SAR), Auditor's Discussion and Analysis (ADA) or elsewhere-- I do tend to favor use of an emphasis paragraph within the SAR. The disclosure is more likely to remain brief and pointed if it is simply an additional paragraph within a letter that currently contains only three or four paragraphs.

6. I do not believe that the auditors should expand their opinion to cover unaudited disclosures such as Management's Discussion and Analysis (MDA) or earnings guidance; current rules regarding disclosure of direct conflicts between these statements and the financials are sufficient.

7. Additional disclosures about the nature of an audit are unnecessary, although probably harmless.

8. Finally, it is my view that some form of additional auditor commentary likely would result in a modest strengthening of the hand of auditors relative to management and audit committees, to the overall benefit of financial disclosure. While "tilting the playing field" is not clearly part of PCAOB's mandate, I hope this benefit can be recognized as you go forward to consider next steps.

Thank you again for inviting me to participate in the Roundtable and for accepting my comments on these important issues.

Sincerely,

Paul G. Haaga Jr.

Re: Rulemaking Docket Matter No. 34, *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*

Members of the Board:

CC Media Holdings, Inc. ("we" or the "Company") is pleased to respond to the Board's request for comments on the above referenced concept release. We acknowledge that the Board seeks to improve the current auditor's reporting model in response to concerns from investors and financial statement users and we fully support the Board's efforts to increase the transparency and relevance of the financial statements without compromising audit quality. However, we do have significant concerns about the proposed revisions to reporting by auditors, as summarized below.

***Auditor's Discussion and Analysis ("AD&A")***

We believe that the auditor should not be permitted or required to include in periodic filings of companies subjective commentary about the audit and the company's financial statements. We believe that providing an auditor's view about audit-related items, such as those included in required communications to audit committees, without the benefit of the related dialogue around these topics may result in unclear disclosure which may be confusing to readers. The subjective discussion of close calls in the proposed AD&A would likely result in inconsistent application and may limit open communication between management, audit committees, and their auditors. Commentary from the auditors including discussion of alternative accounting treatments is likely to compete with and potentially undermine the disclosures provided by management. As a result, it is likely the AD&A will evolve toward boiler-plate language and will not provide additional insight for readers.

It is our belief that the auditor's primary responsibility should remain unchanged: to opine on the financial statements and not provide subjective views on management's judgments or estimates, accounting policies and practices or other issues. The current relationship between the auditor, management and the audit committee is important, and potentially conflicting disclosures of judgmental matters by an auditor in an AD&A may jeopardize it. The issuance of an unqualified opinion indicates that the financial statements are fairly presented in accordance with GAAP and provides sufficient assurance to warrant investor reliance in its current form, without the addition of an AD&A. We believe the inclusion of an AD&A will result in significantly more work and higher audit fees, will confuse readers and will not accomplish the goal of providing additional insight.

***Required and Expanded Use of Emphasis Paragraphs***

We believe the proposal to revise and expand the use of emphasis paragraphs will result in the need for additional auditing standards to provide the auditor an objective framework to follow in determining the most significant matters to be reported. The additional work to be performed by auditors conforming to the standards will result in additional time and fees to complete the audit. Subjective use of emphasis paragraphs will likely result in inconsistent application of such paragraphs, reducing the comparability of financial statements between companies. Emphasis paragraphs mandated to highlight significant matters, referencing their disclosure within the financial statements, may require reporting of audit procedures performed which, taken out of the context of the audit, are unlikely to provide significant insight beyond that already included in management's disclosures. Accordingly we do not support the proposal to require and expand the use of emphasis paragraphs.

***Auditor Assurance on Other Information Outside the Financial Statements***

We believe auditors should not be required to provide assurance on information outside of the financial statements. Current audit standards require the auditor to read and consider whether the manner of presentation is materially inconsistent with the financial statements or presents a material misstatement of fact. In the course of performing the audit under current standards, auditors read the information associated with the financial statements and hold discussions with management and the audit committee regarding the disclosures. Requiring the auditor to attest to information such as MD&A or earnings releases will not improve the quality or relevance of the information but will result in increased time and expense to complete the audit. As a result of the application of attest standards to the disclosure, the MD&A discussion by management will likely become more boilerplate in nature instead of including a robust discussion of management's perception of the results and financial condition. We strongly disagree with the proposal that auditors provide assurance on information outside the financial statements because we believe it would drive significantly higher audit expenses and would result in companies providing less robust MD&A disclosure.

***Clarification of the Standard Auditor's Report***

We support clarification of the standard audit report and believe that the auditor's report could be improved to explain the auditor's responsibility with regard to information outside of the audited financial statements.

We appreciate the Board's consideration of our comments on this topic and welcome the opportunity to provide further comments if requested. In summary, the auditor should remain objective in reporting and modification of the standard report should provide benefits to investors without significant costs to the audited companies. If you have any questions in regard to this letter, please don't hesitate to contact Scott Hamilton, Senior Vice President and Chief Accounting Officer at (210) 822-2828.

Sincerely,

/s/ Scott D. Hamilton

**Re: Request for Public Comment: *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*, PCAOB Rulemaking Docket No. 034**

Dear Office of the Secretary:

The Center for Audit Quality (CAQ) is an autonomous public policy organization dedicated to enhancing investor confidence and public trust in the global capital markets. The CAQ fosters high quality performance by public company auditors, convenes and collaborates with other stakeholders to advance the discussion of critical issues requiring action and intervention, and advocates policies and standards that promote public company auditors' objectivity, effectiveness and responsiveness to dynamic market conditions. Based in Washington, D.C., the CAQ is affiliated with the American Institute of Certified Public Accountants (AICPA). The CAQ appreciates the opportunity to respond to the Public Company Accounting Oversight Board's (PCAOB or the Board) *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (the concept release). This letter and enclosures represent the observations of the CAQ, but not necessarily the views of any specific firm, individual or CAQ Governing Board member.

The CAQ wants to thank the PCAOB for its outreach to the profession and other stakeholders prior to publication of the June 21st concept release on the auditor's reporting model. The CAQ congratulates the PCAOB and its staff on the process and thoughtful content put forward for public consideration. In partial response to the concept release, the CAQ is formally submitting the ideas we discussed and shared with the staff on June 9th as part of the PCAOB's outreach efforts (see enclosed illustrative example reports and accompanying letter). In addition, the CAQ will be submitting further comments on the concept release on or prior to the September 30th due date.

The auditing profession would be happy to meet with the staff to discuss the content of the illustrative example reports in greater detail, or answer any questions.

Sincerely,

Cynthia M. Fornelli

**Re: Changes to the Auditor's Report - Model Approach for Consideration**

Dear Marty:

The Center for Audit Quality (CAQ) was formed in 2007 and is an autonomous public policy organization dedicated to enhancing investor confidence and public trust in the global capital markets by fostering high quality performance by public company auditors, convening and collaborating with other stakeholders to advance the discussion of critical issues requiring action and intervention, and advocating policies and standards that promote public company auditors' objectivity, effectiveness and responsiveness to dynamic market conditions. We are a membership organization with nearly 700 public company auditing firm members that are registered with the Public Company Accounting Oversight Board (PCAOB). Our member firms are committed to the public interest role that auditors play in our markets.

As a public policy organization, we strive to assure that our efforts are infused with a public interest perspective. The members of our Governing Board (which includes the CEOs of the eight largest accounting firms, the American Institute of Certified Public Accountants, and three independent public members) have a keen understanding and appreciation of the important role the public company auditing profession has in serving the public interest and honoring the public trust. Our three independent public board members strengthen our focus on the public interest and also bring us expertise in financial reporting, securities law and corporate governance.

To realize our vision, the CAQ works with investors, academics, audit committee members, preparers, internal auditors, and policy makers to explore issues and collaborate on initiatives that can advance audit quality.

The CAQ consistently has supported the implementation of the Sarbanes-Oxley Act of 2002 and, working in collaboration with others with responsibility for financial reporting, has a number of initiatives underway to advance the deterrence and detection of financial reporting fraud. We also support research on issues relating to investor confidence, public company auditing and the capital markets in part by issuing grants that fund independent academic research. In all that we do, we are particularly interested in investors' views, as they are the ultimate users of the audited financial statements.

Recent views expressed by investors convey their need for further information on a number of different matters including, but not limited to, additional insight into accounting policies, particularly critical accounting estimates; information about the activities of public company audit committees, including discussions on critical matters with management and the external auditors; and more information about the independent audit.

In response to these calls for change, the PCAOB announced a standard-setting initiative focused on possible changes to the auditor's reporting model. The profession also recognizes that change is needed, is prepared to embrace the responsible calls for change in this area, and believes that a holistic approach where all stakeholders agree on a way forward will best serve investors and is a requirement if such change is to be meaningful. In this regard, the CAQ established a working group in 2010, comprised of members of the profession, to consider how to best serve investors given their information needs as we understand them.

The working group explored a variety of possible alternatives for communicating additional information about the audit, including changes to the auditor's report combined with expanded management disclosures and audit committee reporting to shareholders with corresponding auditor association. Members of this working group met with you and your staff on February 7, 2011 to discuss these possible alternatives, which were also the subject of my February 11, 2011 letter. CAQ member firm representatives have also participated in recent Standing Advisory Group discussions on this important topic.

Subsequent to our meeting on February 7, 2011, the PCAOB staff identified a number of possible changes to the auditor's reporting model under current consideration. In line with your efforts to identify changes that are both responsive to the needs of investors and can be practicably implemented, the CAQ working group has developed a model approach, described below for your consideration. The model provides examples of potential revisions to the auditor's reporting model that we believe: (i) are responsive to many of the information needs we have heard from investors (ii) can be practically implemented in a relatively short time frame and (iii) are consistent with the overarching principles discussed with you at our February meeting and outlined below.
In presenting this potential reporting model for your consideration, we recognize that refinements in the actual language used may be necessary to align with other PCAOB professional standards, and that implementation guidance will need to be developed to address some of the concepts included in the model, such as the communication of component auditors and the "areas of audit emphasis" section.

***Overarching Principles***

In evaluating this topic, the CAQ working group established the following overarching principles, with investors in mind, to guide the development of possible areas for further consideration related to revisions to the auditor's reporting model:

- Auditors should not be the original source of disclosure about the entity; management's responsibility should be preserved in this regard.
- Any changes to the reporting model need to enhance, or at least maintain, audit quality.
- Any changes to the reporting model should narrow, or at least not expand, the expectations gap.
- Any changes to the reporting model should add value and not create investor confusion. Specifically, any revisions should not require investors to sort through "dueling information" provided by management, the audit committee, and independent auditors.
- Auditor reporting should focus on the objective rather than the subjective.

Conceptually, we understand the suggestion that an auditor deliver to investors the same information that is provided to the issuer's audit committee. However, it is important to understand (as is made clear in the PCAOB's proposed auditing standard on this topic) that such communication is prepared with the expectation that a dynamic two-way discussion between the auditor and audit committee will occur and that questions will arise and additional context and perspectives will be communicated during the course of this discussion. Such interaction can often clarify the specific points raised, particularly around certain accounting and financial reporting matters involving a high degree of subjectivity. This important two-way dialogue will not take place in connection with the general distribution of a report. Additionally, the audit committee obtains insight by virtue of its financial reporting oversight responsibilities which provide additional context for such communications from the auditor. Consequently, we believe that providing investors with the same information that is provided to the audit committee, without the context obtained from a two-way dialogue may be incomplete, generate greater confusion and not enhance the overall understanding of the readers of such a report.

***Illustration of a Potential Approach***

After evaluating various alternatives, the CAQ working group determined that the following approach would improve the auditor reporting framework, would help serve the interests of investors, and could be pragmatically implemented in relatively short-order. We recognize this is but one approach and there may be others that meet the objectives we have outlined above. In addition, while we have illustrated the approach in three separate reports; the reports could be combined.

1. Amend the standard financial statement audit report to include the following:

    a. Explicitly identify that the footnotes are an integral part of the financial statements and are covered by the audit report (highlighted in the scope section)
    b. Identify that the auditor is independent under all relevant U.S. Securities and Exchange Commission (SEC) and PCAOB standards
    c. Where applicable, describe the accounting firm network structure, the responsibility of the member firm signing the audit report, and the participation of other member firms in the audits
    d. Provide an expanded discussion covering management and audit committee responsibilities for the financial statements and the Form 10-K
    e. Highlight that the auditor is responsible for planning and performing the audit to obtain reasonable assurance that the financial statements, taken as a whole, are free of material misstatement, "whether due to error or fraud"
    f. Identify what is meant by the term "reasonable assurance," "material misstatement," and the approach used by the auditor to assess "materiality"
    g. Highlight the necessity of using professional judgment in making audit risk assessments and in the selection of audit procedures and the consideration the auditor gives to the issuer's internal control over financial reporting when making such determinations
    h. Outline the auditor's responsibility in the event a conclusion is reached that the financial statements are not in accordance with Generally Accepted Accounting Principles or in situations where the audit scope has been limited
    i. Describe the auditor's responsibility for information outside of the financial statements (including Management's Discussion & Analysis (MD&A))
    j. Address the audit report to the shareholders of the company in addition to the Board of Directors
    k. Include a reference and link to where more information about public company audits and auditors can be found. For purposes of the illustrative reports attached, we have utilized as an example of this approach the *In-Depth Guide to Public Company Auditing: the Financial Statement Audit*, published by the CAQ and available on our website.

    We have illustrated in Example A, attached to this letter, how the above suggestions would revise the current financial statement audit report. We believe these changes are responsive to many of the comments that have been raised.

2. Using an emphasis-of-matter like approach, the audit report would identify specific topics or events, unusual transactions or other matters that were viewed to be areas of audit emphasis by the auditor. Consistent with the overarching principles, we believe these descriptions should be objective, fact-based discussions and make specific reference to where such items appear in the financial statements. We have illustrated in Example A how this approach might look in practice. We believe this approach responds to the request that the auditor indicate areas of audit emphasis, and directs the user to where such matters are discussed in the financial statements. As noted above, we recognize that standard-setting activity and resulting implementation guidance will be necessary to help guide the auditor in assessing and consistently determining the type of

matters that should be identified in this section of the revised report, and the extent of the auditor's discussion relating to such matters.

3. Prepare a new report on the examination of the issuer's Critical Accounting Estimates disclosure in its MD&A. We have illustrated this new report in Example B attached to this letter. We believe auditor attestation will serve to continue to improve disclosures in this important area and will be responsive to the various suggestions that have been raised with respect to the need for more emphasis on the important judgment calls made in preparing the financial statements. The SEC would likely need to amend Regulation S-X to require this new report. Likewise, MD&A would need to clearly identify the Critical Accounting Estimates section that will be covered by the examination report. This may also likely require some SEC amendments, but we believe such changes should not be complex or time-consuming. (We note that Example B may also be written to include language from Example A, for example, language relating to the performance of procedures by member firms.)

4. Amend the standard audit report on internal control over financial reporting to reflect many of the changes outlined in 1. above. We have illustrated in Example C attached to this letter how these suggestions would change the present internal control over financial reporting audit report. We believe these changes are responsive to many of the comments that have been raised. (We note again that this Example C may also be written to include additional language from Example A, such as member firm considerations, when appropriate.)

While we have included in our model both an emphasis-of-matter like approach for specific areas of audit emphasis to be included in the financial statement auditor's report, and a separate examination report on the Critical Accounting Estimates disclosure, we appreciate that both of these enhancements may not be necessary. While we believe that the examination report is the enhancement most likely to address investor's needs, we recognize that each of these enhancements or a combination of the two has merit for consideration.

***Other Thoughts***

We also believe that an expanded audit committee report, which includes matters discussed with the auditor that the audit committee considered significant in discharging its responsibilities, accompanied by auditor association therewith, is worthy of further consideration as another means of providing additional information called for by certain investors. We continue to give thought to this idea, and would be pleased to collaborate with the PCAOB, SEC and others (importantly, representatives from the audit committee community) on the further consideration of this concept.

In connection with the potential expansion of the auditor's reporting model, we continue to have concerns about increasing the profession's liability risks. This is, of course, a matter that has been discussed in numerous forums for many decades, but we believe it would be a necessary component on any proposal for revised auditor reporting.

We appreciate the opportunity to share our views regarding possible revisions to the auditor's reporting model. We understand the PCAOB is working toward the issuance of a concept release on this topic by the end of June, and we look forward to reviewing and commenting on that document. At the same time, we want to go on record that we are fully committed to making progress and stand ready to embrace calls for responsible change in this important area. We sincerely believe the approach outlined above serves these purposes, will help serve investors, and can be implemented in a relatively quick time frame.

We also welcome the opportunity to work with the PCAOB staff following the issuance of the concept release and in your further evaluation of the auditor's reporting model. We stand ready to assist you in any way we can, including participation in any meetings or roundtables you are planning.

Sincerely,

Cynthia M. Fornelli

**Revised Auditor's Report on the Financial Statements with Reference to Separate ICFR and Critical Accounting Estimates Reports**

**Report of Independent Registered Public Accounting Firm on the Consolidated Financial Statements of Sample Company**

To the Board of Directors and Shareholders of Sample Company

We have audited the accompanying consolidated balance sheets of Sample Company and subsidiaries (the Company) as of December 31, 201Y and 201X, the consolidated statements of income, stockholders' equity, comprehensive income and cash flows for each year in the three year period ended December 31, 201Y, and the related notes to the consolidated financial statements for all periods presented (collectively referred to below as the "consolidated financial statements").

We are an independent registered public accounting firm with respect to the Company within the meaning of the Securities Act of 1933 and the applicable rules and regulations thereunder adopted by the United States Securities and Exchange Commission (SEC) and the Public Company Accounting Oversight Board (United States) (PCAOB). XYZ LLP is the principal auditor for the Company for the periods cited above. XYZ LLP is the US member firm of XYZ Limited, a global network of affiliated auditing firms. [Each member firm in the network is a separate legal entity, and all member firms follow a common audit methodology and consistent quality control policies.][1] Certain network member firms participated in our audits of the Company and such participation, in the aggregate, covered approximately Y% and X% of the Company's consolidated assets as of December 31, 201Y and 201X and approximately X%, Y% and Z% of the Company's consolidated revenues for each year in the three year period ended December 31, 201Y. We (XYZ LLP) take responsibility for the work performed by our member firms in connection with our audits.

**Management and Audit Committee Responsibilities for the Financial Statements and Other Information**

Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with accounting principles generally accepted in the United States of America (U.S. GAAP), and for establishing and maintaining adequate internal control over financial reporting to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to error or fraud.

Management is also responsible for the preparation and presentation of the Company's Annual Report on Form 10-K in accordance with the rules and regulations of the SEC, including

[1] Each firm would describe their member network affiliation.

Management's Discussion and Analysis of Financial Condition and Results of Operations (MD&A) appearing in Item 7 of the Annual Report.

The audit committee oversees the Company's financial reporting process and its internal control over financial reporting, areas for which management has the primary responsibility. Additionally, the audit committee is directly responsible for our appointment, compensation, and oversight of our work (including resolution of any disagreements with management regarding financial reporting) for the purpose of preparing or issuing an audit report or related work.

**Auditor Responsibility for the Audit of the Financial Statements**

Our responsibility is to express an opinion on these consolidated financial statements, taken as a whole, based on our audits. We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement, whether due to error or fraud. In this context, reasonable assurance, although representing a high level of assurance, is not absolute and consequently an audit conducted in accordance with PCAOB standards may not always detect a material misstatement. Our judgments about materiality are affected by our understanding of the financial information needs of investors and other users of the consolidated financial statements. A material misstatement represents an omission or misstatement that would be viewed by a reasonable investor as having significantly altered the 'total mix' of information presented in the consolidated financial statements, taken as a whole.

An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the consolidated financial statements. In the course of completing our audit, the audit evidence we obtain is often persuasive rather than conclusive. The procedures selected for performance depend on our judgment, including our assessment of the risks of material misstatement of the consolidated financial statements, whether due to error or fraud. In making those risk assessments, we consider internal controls relevant to the Company's preparation and fair presentation of the consolidated financial statements in accordance with U.S. GAAP in order to design audit procedures that we believe are appropriate in the circumstances. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation and related financial statement disclosures. Our audits also included such other procedures as we considered necessary in the circumstances.[2]

PCAOB standards require that we modify our report if we determine that the consolidated financial statements are materially misstated. If there are significant restrictions placed on the scope of our audit PCAOB standards prohibit us from expressing an opinion on the financial statements.

We believe that the procedures performed and the audit evidence obtained provides a reasonable basis for our opinion.

---

[2] Additional information about public company audits and auditors can be found in the *In-Depth Guide to Public Company Auditing: the Financial Statement Audit*, published by the Center for Audit Quality and available on the organization's website at http://www.thecaq.org/publications/In-Depth_GuidetoPublicCompanyAuditing.pdf.

**Auditor Responsibility for Other Information Presented Outside of the Financial Statements**

We have separately examined the Critical Accounting Estimates disclosure included as part of MD&A in the Company's December 201Y Annual Report on Form 10-K. Our responsibility with respect to all other information presented outside of the consolidated financial statements (including all other sections of the MD&A) is to read this other information and consider whether such information, or the manner of its presentation, is materially inconsistent with information, or the manner of its presentation, appearing in the consolidated financial statements. We are required to follow up on any material inconsistencies and material misstatements of fact of which the auditor becomes aware with management, and with the Audit Committee if necessary, until properly resolved, but are not otherwise required to express an opinion on the other information, including all other sections of MD&A. Other than where identified in this report, our responsibility with respect to the other information in the Form 10-K does not extend beyond the financial information identified in our report, and we have no obligation to perform any procedures to corroborate information presented outside of the consolidated financial statements.

**Opinion on the Consolidated Financial Statements**

In our opinion, the consolidated financial statements, taken as a whole, present fairly, in all material respects, the consolidated financial position of Sample Company and subsidiaries as of December 31, 201Y and 201X, and the consolidated results of their operations and cash flows for each year in the three year period ended December 31, 201Y, in conformity with U.S. GAAP.

**Areas of Audit Emphasis**

In connection with our audits, we also bring to your attention the matters listed below. This is not intended to be a complete list of all areas that our audit procedures addressed in response to identified risks of material misstatement.

1. In December of 201Y, the Company completed the acquisition of ABC Company. As of December 31, 201Y, the Company has completed the allocation of the purchase price on a preliminary basis, assigning approximately $XXX million to goodwill and other intangible assets with indefinite lives. The Company will finalize the purchase price allocation during 201Z, and the amounts assigned as of December 31,201Y could change. See Note B for further details.

2. In connection with the financing required to complete the ABC acquisition, the Company borrowed $XXX million from a consortium of banks. The borrowing has a maturity date of March 31, 201A, or fifteen months from the date of the balance sheet. As of December 31, 201Y, the borrowing is classified as long-term debt, since it has a maturity date beyond the end of the 201Z fiscal year. The Company is in the process of exploring alternatives to refinance this borrowing on a longer-term basis. See Note D for further details.

3. The Company provides financing to certain customers of its [Example Segment]. Business conditions in this Segment led to a slow-down in collections and an increase in potential uncollectible balances. At December 31, 201Y, the gross financing balance

approximated $X,XXX million and the Company maintained a reserve for uncollectible accounts of $XXX million. The balance of accounts that were 90 or more days past due at that date approximated $XX million. This compares to a gross financing balance, reserve for uncollectible accounts and amounts 90 or more days past due of $X,XXX million, $XXX million and $XX million at December 31, 201X respectively. The net expense recorded for estimated uncollectible amounts approximated $XXX million during 201Y. See Note E for further details.

4. The Company has goodwill of $X,XXX attributable to its [Example Segment] reporting unit as of December 31, 201Y. The Company performed its annual impairment testing as of October 31, 201Y. No impairment was recognized because the Company's estimated fair value of this reporting unit exceeded its carrying value at that date; however, the comparison was close and a further decline in the fair value of this reporting unit could give rise to an impairment of the goodwill balance in the future. See Note H for further details.

5. The Company is exposed to various claims and contingencies in the normal course of business. We note two significant matters outstanding as of December 31, 201Y. The Company is a defendant in litigation involving a patent claim that has been ongoing for several years. The Company is also liable for the costs of remediating an environmental claim relating to a business that was sold in 201X. See Note J for further details surrounding these matters.

We highlight the above matters because they represent some of the areas of audit emphasis during the periods covered by our report. Our audits included performing procedures designed to address the risks of material misstatement associated with the above matters. Such procedures were designed in the context of our audit of the consolidated financial statements taken as a whole, and not to provide assurance on individual accounts or disclosures. As noted above, our audits also included procedures in response to identified risks and those required by professional standards that have not been specifically identified herein.

**Other Reports**

We also have examined, in accordance with the standards of the PCAOB, Sample Company's Critical Accounting Estimates disclosure included as a part of MD&A in the Company's December 31, 201Y Annual Report on Form 10-K, and our report dated [*date*] expressed an unqualified opinion that the Company's presentation of the Critical Accounting Estimates disclosure includes, in all material respects, the required elements of the rules and regulations adopted by the SEC; that the historical financial amounts included therein have been accurately derived, in all material respects, from the Company's financial statements; and that the underlying information, determinations, estimates, and assumptions of the Company provide a reasonable basis for the disclosures contained therein.

In addition, we have audited, in accordance with the standards of the PCAOB, Sample Company's internal control over financial reporting as of December 31, 201Y, based on criteria established in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), and our report dated [*date*] expressed an unqualified opinion on the effectiveness of the Company's internal control over financial reporting.

**New Report on Critical Accounting Estimates**

## Report of Independent Registered Public Accounting Firm on the Critical Accounting Estimates Disclosure of Sample Company

To the Board of Directors and Shareholders of Sample Company

We have examined the Critical Accounting Estimates disclosure of Sample Company and subsidiaries (the Company) included as a part of the Company's Management's Discussion and Analysis (MD&A) that is included in the Company's December 31, 201Y Annual Report on Form 10-K.

**Nature of the Critical Accounting Estimates Disclosure**

The Critical Accounting Estimates disclosure is designed to present the Company's analysis of the uncertainties involved in applying its adopted accounting principles and policies at a given time or the variability that is reasonably likely to result from its application over time. The subjectivity of these disclosures is influenced by the availability and reliability of relevant data, the number and significance of assumptions that are made, and the degree of uncertainty associated with such assumptions. Consequently, actual results in the future may differ materially from management's present assessment of this information because events and circumstances frequently do not occur as expected.

**Management and Audit Committee Responsibilities for the Critical Accounting Estimates Disclosure**

Management is responsible for the preparation of the Company's Critical Accounting Estimates disclosure pursuant to the rules and regulations adopted by the U.S. Securities and Exchange Commission (SEC), and for such disclosure controls and procedures designed to ensure that information required to be disclosed pursuant to the securities laws is recorded, processed, summarized and reported, within the time periods specified in the SEC's rules and forms. The preparation of the Critical Accounting Estimates disclosure requires management to interpret the criteria for disclosure, make determinations as to the relevancy of information to be included, and make estimates and assumptions that affect reported information.

The Company's audit committee oversees the financial reporting process (including the Company's Critical Accounting Estimates disclosure) and its disclosure controls and procedures (which include internal control over financial reporting), areas for which management has the primary responsibility. Additionally, the audit committee is directly responsible for our appointment, compensation, and oversight of our work (including resolution of any disagreements with management regarding financial reporting) for the purpose of preparing or issuing an audit report or related work.

**Auditor Responsibility for the Examination of the Critical Accounting Estimates Disclosure**

Our responsibility is to express an opinion on the Critical Accounting Estimates disclosure presentation based on our examination. Our examination was conducted in accordance with the standards of the Public Company Accounting Oversight Board (United States) (PCAOB) and, accordingly, included examining, on a test basis, evidence supporting the historical amounts and other information disclosed in the presentation. An examination also includes assessing the significant determinations made by management as to the relevancy of information to be included and the estimates and assumptions that affect reported information. We believe that the procedures performed and the examination evidence obtained provides a reasonable basis for our opinion. In forming our opinion, we exercised professional judgment in evaluating the reasonableness of the disclosures based on information that was available at the time of our examination. In the course of completing our examination, the evidence we obtain is often persuasive rather than conclusive.

**Opinion on the Critical Accounting Estimates**

In our opinion, the Company's presentation of the Critical Accounting Estimates disclosure referred to above includes, in all material respects, the required elements of the rules and regulations adopted by the SEC; the historical financial amounts included therein have been accurately derived, in all material respects, from the Company's consolidated financial statements; and the underlying information, determinations, estimates, and assumptions of the Company provide a reasonable basis for the disclosures contained therein.

**Other Report**

We have audited, in accordance with the standards of the PCAOB, the consolidated financial statements of Sample Company and subsidiaries as of December 31, 201Y and 201X, and for each of the years in the three-year period ended December 31, 201Y, and in our report dated [*date*], we expressed an unqualified opinion on those consolidated financial statements.

XYZ LLP

**Example C**

**Revised Report on Internal Control over Financial Reporting**

**Report of Independent Registered Public Accounting Firm on Sample Company's Internal Control over Financial Reporting**

To the Board of Directors and Shareholders of Sample Company

We have audited Sample Company's (the Company) internal control over financial reporting as of December 31, 201Y, based on criteria established in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

**Management and Audit Committee Responsibilities for Internal Control over Financial Reporting**

Sample Company's management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying [title of management's report].

The audit committee oversees the Company's financial reporting process and its internal control over financial reporting, areas for which management has the primary responsibility. Additionally, the audit committee is directly responsible for our appointment, compensation, and oversight of our work (including resolution of any disagreements with management regarding financial reporting) for the purpose of preparing or issuing an audit report or related work.

**Auditor Responsibility for the Audit of Internal Control over Financial Reporting**

Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States) (PCAOB). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. In this context, reasonable assurance, although representing a high level of assurance, is not absolute and consequently an audit of internal control over financial reporting conducted in accordance with PCAOB standards may not always detect a material weakness. Our judgments about materiality are affected by our understanding of the financial information needs of users of this Report. A material weakness is a deficiency, or combination of deficiencies, in internal control over financial reporting, giving rise to a reasonable possibility that a material misstatement of the Company's annual or interim financial results will not be prevented or detected by the Company on a timely basis. If one or more material weaknesses exist, the Company's internal control over financial reporting cannot be considered effective, and we are required to include in our report an opinion that the Company's internal control over financial reporting is not effective. If there are restrictions placed on the scope of our audit, we are prohibited from expressing an opinion on the effectiveness of the Company's internal control over financial reporting.

Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances.

We believe <u>that the procedures performed and audit evidence obtained</u> provides a reasonable basis for our opinion.

**Definition and Limitations of Internal Control over Financial Reporting**

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with U.S. Generally Accepted Accounting Principles (U.S. GAAP). A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with U.S. GAAP, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

**Opinion on Internal Control over Financial Reporting**

In our opinion, Sample Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 201Y, based on the criteria established in *Internal Control – Integrated Framework* issued by COSO.

**Other Report**

We have audited in accordance with the standards of the PCAOB, the consolidated financial statements of Sample Company and subsidiaries as of December 31, 201Y and 201X, and for each of the years in the three-year period ended December 31, 201Y, and in our report dated [date], we expressed an unqualified opinion on those consolidated financial statements.

CENTER FOR AUDIT QUALITY

*Serving Investors, Public Company Auditors & the Markets*

September 30, 2011

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, NW
Washington, D.C. 20006-2803

**Re: Request for Public Comment: Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards, PCAOB Rulemaking Docket Matter No. 34**

Dear Office of the Secretary:

The Center for Audit Quality (CAQ) is an autonomous public policy organization dedicated to enhancing investor confidence and public trust in the global capital markets. The CAQ fosters high quality performance by public company auditors, convenes and collaborates with other stakeholders to advance the discussion of critical issues requiring action and intervention, and advocates policies and standards that promote public company auditors' objectivity, effectiveness, and responsiveness to dynamic market conditions. Based in Washington, D.C., the CAQ is affiliated with the American Institute of Certified Public Accountants (AICPA).

The CAQ appreciates the opportunity to respond to the Public Company Accounting Oversight Board (PCAOB or the Board) on its *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (Concept Release). This letter represents the observations of the CAQ, but not necessarily the views of any specific firm, individual, or CAQ Governing Board member.

The CAQ commends the PCAOB and its staff on the unprecedented outreach to investors, issuers, audit committee members, the auditing profession, and other stakeholders to inform the Concept Release and the thoughtful content put forward for public consideration. We are submitting for the Board's consideration our comments on the issues raised within the Concept Release which supplement the views expressed in our comment letter dated June 28, 2011 (Attachment A to this letter).

We have organized our observations into the following sections:

I. Profession's Commitment to Responsible Change
II. Holistic Approach Necessary for Responsible Change
III. Value of Standardized Language
IV. Reaffirmation of Suggested Approaches in the CAQ's June 28, 2011 Letter
   a. Retention of the Pass/Fail Opinion
   b. Addition of Clarifying Language to the Standard Auditor's Report
   c. Supplemental Reporting in Addition to the Standard Auditor's Report
      i) Separate Attestation Report on Critical Accounting Estimates in Management's Discussion & Analysis
      ii) Use of Emphasis Paragraphs in the Standard Auditor's Report
V. Views on Auditor's Discussion and Analysis (AD&A)
VI. Other Considerations
VII. Views on Auditor Assurance on Information Presented Outside the Financial Statements

## I. Profession's Commitment to Responsible Change

Recent views expressed by investors convey their desire for further information on a number of different financial reporting matters including, but not limited to, additional insight into accounting policies, particularly critical accounting estimates; more information about the independent audit; and information about the activities of public company audit committees, including their discussions of critical matters with management and the external auditors. The CAQ undertook the efforts described below in response to these calls for change.

***CAQ Auditor's Reporting Model Working Group***

The profession recognizes that change is needed to improve the information communicated to investors and supports change that would enhance the information available to financial statement users and the value of the audit. Accordingly, the CAQ established an auditor's reporting model (ARM) working group in 2010, comprised of members of the auditing profession, to consider how to best serve investors given their evolving information needs. The ARM working group explored a variety of possible alternatives for communicating additional information about the audit, including changes to the auditor's report combined with expanded disclosures by management or the audit committee.

Members of this working group met with PCAOB staff on February 7, 2011, to discuss the possible alternatives developed. Subsequent to this meeting, the ARM working group continued its efforts to identify and evaluate potential changes to the auditor's reporting model. On June 28$^{th}$, the CAQ submitted a comment letter to the PCAOB that addressed certain ideas raised in the Concept Release. The letter describes suggested approaches for potential revisions to the auditor's reporting model that are believed to be: (i) responsive to the information needs we have heard from investors, (ii) practically implementable in a relatively short time frame and (iii) consistent with the overarching principles developed and used by the ARM working group as a framework for its deliberations (see details below). These overarching principles were discussed with the PCAOB staff in February, reiterated in the CAQ's June 28$^{th}$ comment letter, and are a basis for our views in this letter.

***Overarching Principles***

In evaluating this topic, the ARM working group established the following overarching principles, with investors in mind, to guide the development of possible areas for further consideration related to revisions to the auditor's reporting model:

1. Auditors should not be an original source of disclosure about the entity; management's responsibility should be preserved in this regard. As explored further in this letter, a fundamental shift from the auditor attesting to information prepared by management to the auditor providing original information about the company could result in unintended consequences that are not in the best interest of investors.
2. Any changes to the auditor's reporting model need to enhance, or at least maintain, audit quality.
3. Any changes to the auditor's reporting model should narrow, or at least not expand, the expectation gap.
4. Any changes to the auditor's reporting model should add value and not lead to investor misunderstanding. Specifically, any revisions should not require investors to sort through "dueling information" provided by management, the audit committee, and the independent auditors.
5. Auditor reporting should focus on the objective rather than the subjective. Financial reporting matters assessed by the auditor can be highly subjective; however it is important that auditor communications provide objective information about these matters.

## II. <u>Holistic Approach Necessary for Responsible Change</u>

As discussed above, the CAQ recognizes the fundamental role of the auditor in serving the needs of investors and is prepared to embrace responsible calls for change related to the auditor's reporting model. We also believe that a holistic approach where all stakeholders agree on a way forward will best serve investors, and is a requirement if such change is to be lasting and meaningful. Such an approach should examine the roles and responsibilities of all members of the financial reporting supply chain to identify opportunities where changes can be made to better meet the needs of investors. Possible areas for further consideration include whether disclosures could be expanded or improved by preparers, whether audit committees could provide further information about oversight activities, how auditors could improve the information provided to investors through changes to the reporting model, and whether more useful information would be provided to investors through enhanced compliance efforts and/or additional rulemaking on the part of regulators/standard setters.

Pursuant to this approach, the ARM working group evaluated how auditors could better serve the needs of investors. We set forth below a suggested approach for improvements to the auditor's reporting model that we believe can be implemented in the shorter-term and are responsive to the needs of investors as articulated at the March 2011 PCAOB Investor Advisory Group (IAG) meeting and the CAQ's role of the auditor (RoA) roundtable discussion series (see further information below).

Our suggested approach includes the addition of clarifying language to the current auditor's report and a separate examination report on management's Critical Accounting Estimates (CAE) disclosure in Management's Discussion and Analysis (MD&A) and/or an emphasis-of-matter (EOM) approach anchored to the most significant matters in the financial statements.

The CAQ also believes that the PCAOB should further consider whether investors could benefit from auditor involvement with other information provided by management (including earnings releases, non-GAAP information, etc.) given the value that investors place on such information in making investment decisions. To this end, the CAQ has established a separate RoA working group to further evaluate what additional services auditors might provide beyond their current responsibilities to better meet the needs of investors. Through a series of discussion roundtables, the RoA working group sought feedback from investors, analysts, audit committee members, preparers, attorneys and academics regarding how the auditor's role could evolve. We have published a summary report[1] which highlights observations from the discussion series and includes areas for further consideration related to possible improvements to the corporate reporting framework and the role of the auditor. Certain observations derived from these roundtable discussions have contributed to the views set forth in this letter which we describe in further detail below. We would be pleased to discuss the observations made in this report with the Board at a future date.

## III. Value of Standardized Language

In the course of discussions around possible improvements to the auditor's report, some have questioned the role of standardized language, and in some cases disparaged it as "boilerplate." This term connotes a lack of substance and unfairly diminishes the importance of the work and the resulting opinions reached by public company auditors. In contrast, we believe there is significant value in using standardized language in the auditor's report. As the PCAOB acknowledges in the Concept Release and in its Standing Advisory Group (SAG) briefing paper on this topic for the April 2010 SAG meeting, standardized language was implemented to provide consistent, comparable, and easily recognizable audit reports.[2]

We observe that the sentence that begins "[i]n our opinion" in the current standard report is carefully considered and represents the conclusion, in many cases, of thousands of hours of audit work. As mandated by the Sarbanes-Oxley Act (SOX), that audit work is monitored and approved by audit committees. It represents a significant investment by public companies on behalf of their shareholders, not only in financial terms but also in terms of time spent by the audit committee, management, and employees of the company at all levels in order to meet the demands of the audit. The auditor's opinion represents a professional conclusion reached only after compliance with extensive PCAOB auditing standards--standards that would not be met if the audit were off-the-shelf or otherwise failed to be appropriately tailored to the specific facts and circumstances of the individual company being audited.

We note that standardized language plays an important role in other settings in the securities markets as well. Further to that point, we would highlight the "negative assurance" letters that lawyers provide their clients in connection with securities offerings and the standard certifications that chief executive and chief financial officers must provide with their companies' periodic U.S. Securities and Exchange Commission (SEC) reports.

1. Lawyers provide so-called "negative assurance" letters containing standardized language in connection with securities offerings. Preparation of these letters requires hundreds of hours of work by the attorney but the letter itself is short and conclusory. The letters do not express the lawyer's subjective views on the quality and specifics of the disclosure in the offering materials but rather provide a standardized statement that the lawyer has no reason to believe that the disclosure violates the anti-fraud provisions of the securities laws. These letters play an important role in the "due diligence" process contemplated for securities offerings by the Securities Act of 1933 and are valuable, not in spite of containing standardized language, but because of it.

[1] The CAQ report "Observations on the Evolving Role of the Auditor – a Summary of Stakeholder Discussions" is incorporated into this comment letter by reference, and is available at www.thecaq.org/publications/EvolvingRoleoftheAuditor.pdf

[2] See SAG Briefing Paper, *ACAP Committee's Recommendation Relating to the Auditor's Reporting Model* (April 2010). Available at: http://pcaobus.org/News/Events/Documents/04072010_SAGMeeting/Auditor%27s_Reporting_Model.pdf

2. Section 302 of SOX requires that an issuer's principal executive officer and principal financial officer provide an express certification in each annual and quarterly report filed with the SEC. These certifications assert that the signing officers have reviewed the report, that the report does not contain any material false statements or omissions, that the officers are responsible for the issuer's internal controls and that the financial statements included in the report "fairly present in all material respects the financial condition and results of operation of the issuer." The SEC, in adopting rules implementing Section 302, has prescribed the exact wording of the "302 certifications" and has made it clear that executives may not vary the wording. In fact, if a certification is modified, a revised "clean" certification will be required by the SEC reviewers. This standardization, however, does not make the certifications any less powerful or meaningful to investors.

We make these points to remind all stakeholders in the financial reporting process that there is a purpose for standardized language in audit reports – it was instituted to provide comparability and assurance to investors regarding the audit process and financial reporting, and it continues to have value today. While we are supportive of responsible changes to the auditor's reporting model, we encourage the Board to consider the important benefits of standardized language as it develops any modifications to the auditor's reporting model.

## IV. Reaffirmation of Suggested Approaches in the CAQ's June 28, 2011 Letter

### *a. Retention of the Pass/Fail Opinion*

The Concept Release questions whether the current pass/fail model for the auditor's report (i.e. whether the financial statements are fairly presented in all material respects with the applicable accounting framework) should be retained. We support the retention of the pass/fail model, but also believe the Board should consider enhancements to the auditor's reporting model as discussed further below. Participants at the CAQ's RoA roundtable discussion series agreed that the audit is valuable and the current pass/fail model for the auditor's report should be retained.

### *b. Addition of Clarifying Language to the Standard Auditor's Report*

The Concept Release also asks whether potential enhancements to the auditor's reporting model should include the addition of clarifying language to the standard auditor's report. As noted in the CAQ's June 28th comment letter, we believe the addition of such language would be beneficial in narrowing the expectation gap by enhancing the understanding of the auditor's role and responsibilities, the audit process, and the responsibilities of others in the financial reporting supply chain. We believe the addition of clarifying language will promote consistency in practice across audit reports. The CAQ does not believe that the addition of the clarifying language noted below will result in an increase in either the scope of the audit or the auditor's responsibilities but rather will promote a better understanding of the auditor's role and responsibilities.

We agree that the addition of clarifying language related to the following concepts is appropriate as described in the Concept Release and our June 28th comment letter:

1. *Reasonable Assurance* - Identify what is meant by the term "reasonable assurance."
2. *Auditor's Responsibility for Fraud* - Highlight that the auditor is responsible for planning and performing the audit to obtain reasonable assurance that the financial statements, taken as a whole, are free of material misstatement, "whether due to error or fraud."

3. *Auditor's Responsibility for Financial Statement Disclosures* - Explicitly identify that the footnotes are an integral part of the financial statements and are covered by the audit report.
4. *Management's Responsibility for the Preparation of the Financial Statements* - Provide an expanded discussion covering management's responsibilities for the financial statements and the Form 10-K.
5. *Auditor's Responsibility for Information Presented Outside the Financial Statements* - Describe the procedures performed by auditors on information outside of the financial statements, including MD&A.
6. *Auditor Independence* - Identify that the auditor is independent within the meaning of all relevant SEC and PCAOB standards.

Further, as noted in our June 28th comment letter, we believe the following additional language not identified in the Concept Release will also provide added clarification for investors and is appropriate for further PCAOB consideration.

7. *Material Misstatements & Assessment of Materiality* - Identify what is meant by the term "material misstatement" and discuss the approach used by auditors to assess "materiality."
8. *Audit Committee Responsibilities* - Provide an expanded discussion covering audit committee responsibilities.
9. *Addressing the Audit Report* - Address the audit report to the shareholders of the company in addition to the Board of Directors.
10. *Professional Judgment* - Highlight the necessity of using professional judgment in assessing audit risk, selecting audit procedures and considering the issuer's internal control over financial reporting when responding to such risks.
11. *Additional Information About Public Company Audits* - Include a reference and link to where more information about public company auditing can be found (for example, the CAQ's *In-Depth Guide to Public Company Auditing: the Financial Statement Audit*[3]), similar to the approach utilized in the United Kingdom.
12. *Scope Limitations and Non-Compliance with U.S. Generally Accepted Accounting Principles (GAAP)* - Outline the auditor's responsibility in the event a conclusion is reached that the financial statements are not presented in accordance with GAAP or situations where the audit scope is limited.
13. *Firm Network Structure and Responsibilities* - Where applicable, describe the accounting firm network structure, the responsibility of the member firm signing the audit report, and the participation of other member firms in the audits.

### *c. Supplemental Reporting in Addition to the Standard Auditor's Report*

In addition to adding clarifying language to the standard auditor's report, the CAQ's June 28th comment letter provides examples of supplemental reporting that could be made by the auditor including a separate attestation report on CAE disclosure in MD&A and the use of EOM paragraphs within the standard auditor's report. The CAQ believes that these approaches are responsive to many of the information needs heard from investors and can be practically implemented in a relatively short timeframe. While we describe both approaches below, we appreciate that adopting both of these alternative enhancements may not be necessary. We believe that the attestation report on CAE disclosure in MD&A is the enhancement most likely to address

[3] See Center for Audit Quality's *In-Depth Guide to Public Company Auditing* (2011).
Available at: http://www.thecaq.org/publications/In-Depth_GuidetoPublicCompanyAuditing.pdf

the needs of investors, but we recognize that each approach or a combination of the two also merits further consideration.

### *i) Separate Attestation Report on Critical Accounting Estimates in MD&A*

The Concept Release questions whether there are other alternatives the Board should consider that are not contemplated in the Concept Release. The CAQ believes a new, separate attestation report on the examination of the issuer's CAE disclosure in its MD&A is an appropriate alternative for consideration, as illustrated in Example B in the CAQ's June 28th comment letter. This approach is similar to that suggested in the Concept Release with respect to providing assurance on a portion of MD&A. Benefits and considerations of this approach are discussed below.

***Benefits***

We believe auditor examination of management's CAE disclosure in the MD&A, communicated in a separate attestation report is responsive to the needs of investors and avoids many of the unintended consequences that we believe would result from the AD&A approach described in the Concept Release and discussed further below.

At the PCAOB's March 2011 IAG meeting, participants presented the results of an investor survey indicating a desire for further information including, among other things: the auditor's evaluation of significant estimates and judgments, the auditor's evaluation of accounting policies and practices, the disclosure of sensitivity analyses performed by the audit engagement team, and the disclosure of unusual transactions, restatements and other significant changes. Participants at the CAQ's RoA roundtable discussions also identified a number of disclosures that could first be improved by management and might be appropriate for further auditor association. The disclosures most commonly identified related to financial information contained in MD&A, including the company's critical judgments and accounting estimates. We believe much of the information sought by investors, including those areas noted in the IAG presentation, should be disclosed by management in the CAE section of MD&A in compliance with SEC Financial Reporting Codification Section 500 – *Information Outside of the Financial Statements*[4] (SEC Codification); however, we also believe that such disclosure could be improved through auditor association as we discuss further below.

According to the SEC Codification, "[w]hen preparing disclosure under the current requirements, companies should consider whether they have made accounting estimates or assumptions where:

- The nature of the estimates or assumptions is material due to the levels of subjectivity and judgment necessary to account for highly uncertain matters or the susceptibility of such matters to change; and
- The impact of the estimates and assumptions on financial condition or operating performance is material."

Any CAEs or assumptions meeting those criteria should be disclosed in a company's MD&A. The SEC Codification requires that CAE disclosures include "to the extent material, such factors as how they arrived at the estimate, how accurate the estimate/assumption has been in the past, how much the estimate/assumption has changed in the past, and whether the estimate/assumption is reasonably likely to change in the future. Since CAEs and assumptions are based on matters that are highly uncertain, a company should analyze their specific sensitivity to change, based on other outcomes that are reasonably likely to occur and would have a material effect."

[4]See SEC Financial Reporting Codification: 501.14. *Critical Accounting Estimates*

We believe that auditor attestation on CAE disclosure in MD&A will lead to an increased focus in this area by both management and the auditor and will result in more robust disclosure and improved information provided to investors. In addition, auditor attestation on the CAE disclosure will provide users of the financial statements with additional confidence in management's disclosures.

***Other Considerations***

Should the PCAOB determine that the attestation report on CAE disclosure in MD&A is a viable option, the SEC would need to further consider whether amendments to Regulation S-X are necessary to require this new attestation report. Likewise, SEC consideration of whether the consolidation of existing CAE guidance into Regulation S-K is necessary in order to encourage better management disclosure and assist the auditor's examination, including a clear identification of the CAE section in MD&A that would be covered by the examination report. While we appreciate that the adoption of this alternative includes incremental SEC actions, the CAQ believes this approach best addresses the evolving information needs of investors, while being more practicable and cost effective than auditor attestation on MD&A in its entirety.

***ii) Use of Emphasis Paragraphs in the Standard Auditor's Report***

The Concept Release seeks comment on requiring the expanded use of emphasis paragraphs in all audit reports to highlight matters that are important in understanding the financial statement presentation, including significant management judgments and estimates and areas with significant measurement uncertainty, and to identify where those matters are disclosed in the financial statements.

As discussed in our June 28th comment letter, the CAQ believes the EOM approach is a viable method for highlighting such matters. In contrast to the Concept Release, however, the CAQ does not believe that emphasis paragraphs should include a reference to the audit procedures performed for the areas emphasized. The deliberations of the CAQ's ARM working group, which included challenging itself to develop examples of how such an approach would be implemented in practice, resulted in the determination that emphasis paragraphs should not describe audit procedures, since: (i) it may be difficult for users of the financial statements to understand these audit procedures without further context derived from dialogue with the auditor, (ii) succinct descriptions would not adequately describe significant and often complex audit procedures, and (iii) more thorough descriptions of audit processes could contribute to "disclosure overload" and detract from the purpose of providing useful information to investors.

We believe the emphasis paragraphs should be objective, fact-based discussions and should make specific reference to where such items appear in the financial statements. Example A in our June 28th comment letter illustrates how this approach might appear in practice. Below, we discuss further the importance of developing an appropriate auditor reporting framework for this approach.

***Benefits***

We believe an approach that requires emphasis paragraphs in audit reports as described above has several benefits. First, this approach responds to requests from investors at the PCAOB's March 2011 IAG meeting for the auditor to indicate in the audit report areas that are most significant in the financial statements and direct the user to where those matters appear in the financial statements and related disclosures. Similar requests were heard at the CAQ RoA discussion roundtables. Second, this method would retain the established role of the auditor attesting to information provided by management. Third, the reference within the auditor's report to management's financial statement disclosures could drive better disclosure practices, improving the quality of information provided to investors. Finally, this approach avoids many of the unintended consequences that we believe would result from the AD&A approach described in the Concept Release and discussed further below.

***Importance of Auditor's Reporting Framework***

Subsequent to the issuance of our June 28th comment letter, the ARM working group has given further thought to a possible framework for an EOM approach and would be pleased to explore this subject further with the Board at a future date. The CAQ strongly believes that the most important element of a successful EOM approach is the development of an appropriate framework, with sufficient detail, to guide the auditor's determination of what matters should be emphasized in the auditor's report. We believe the most significant matters are those that, in the auditor's judgment, are viewed to be the most important to a reader's understanding of the financial statements. Such matters should not necessarily represent all matters that may be material to the financial statements, have been the subject of significant audit effort or have involved the use of judgment in determining the accounting conclusions.

Moreover, the most significant matters should relate to items appearing in the financial statements, and not to risks that may be inherent in the company's business model, industry, or the broader business environment (the disclosure of which are covered by other requirements in the federal securities laws). Specific facts and circumstances should dictate how many items the auditor determines require emphasis; however, the CAQ believes that an overly broad framework resulting in a large number of EOM paragraphs would minimize the overarching objective of emphasizing the most important matters.

For items that meet the criteria of the framework, we recommend that the auditor communicate the following:

- A brief, factual and objective description of the item, which should not include information that is not otherwise reflected in the company's financial statements and related disclosures; and
- The identification of where the item has been accounted for and disclosed in the financial statements.

The auditor's report should be revised to include language regarding the auditor's responsibility with regard to the items emphasized; at the same time, the language in the auditor's report addressing the financial statements taken as a whole should be retained (i.e., no separate form of opinion or conclusion should be provided for any specific item emphasized).

Lastly, during the PCAOB roundtable held on September 15, 2011, some participants seemed to view the EOM approach and the AD&A approach as interchangeable solutions. In our view, AD&A is not similar to and is, in fact, inferior to the EOM approach. As described in more detail below, AD&A runs contrary to each of the five overarching principles established by the ARM working group. An appropriately designed EOM approach, however, would retain management's role in providing original information about the company, focus auditor reporting on the objective rather the subjective, enhance audit quality, narrow the expectation gap, and enhance communication to investors.

## V. <u>Views on AD&A</u>

The Concept Release seeks views on the possibility of a supplemental narrative from the auditor via an AD&A as a way to "provide investors and other financial statement users with a view of the audit and financial statements through the auditor's eyes." The CAQ does not support the AD&A approach for the reasons outlined below. We believe the AD&A approach runs contrary to the overarching principles previously articulated, could result in significant unintended consequences that could be detrimental to audit quality, and differs from the views expressed by participants at the CAQ's recent RoA discussion series. We believe the unintended consequences associated with this approach outweigh any potential benefits of an

AD&A. Further, we believe our suggested approaches noted above (i.e., a separate auditor attestation report on management's CAE disclosure in MD&A and/or required EOM paragraphs in the auditor's report) are superior alternatives to an AD&A as they serve the information needs of investors and avoid the unintended consequences associated with AD&A.

***Consequences of Auditors Focusing on the Subjective Rather than Objective***

The AD&A approach would require auditors to communicate subjective rather than objective information. While financial reporting matters assessed by the auditor through the performance of the audit are often highly subjective, it is important that auditor communications provide objective information about these matters. We are concerned that such a shift in the nature of information communicated by auditors may result in several unintended consequences which may negatively impact investors. Our view is consistent with those of participants at the CAQ's RoA roundtable discussions who strongly resisted the notion of auditors providing their views regarding the quality of a company's accounting policies and practices through a mechanism such as an AD&A.

The contemplated AD&A approach would require the auditor to provide "perspectives" or "impressions" on matters related to the audit as well as on the company's financial statements, including management's judgments and estimates, accounting policies and practices, and difficult or contentious issues such as "close calls." The Concept Release acknowledges, that as intended, the AD&A could result in the auditor communicating some of the same information that the auditor communicates to the audit committee regarding these matters. The CAQ has significant concerns regarding any revisions to the auditor's reporting model that would require the auditor to issue a public general-use report communicating information similar to that provided to the audit committee. When such matters are communicated by the auditor to the audit committee, the audit committee has the benefit of further discussion with the auditor to explore complex matters at the appropriate level of detail. Additionally, the audit committee has the benefit of periodic communications with the auditor throughout the year as well as information derived through its oversight of the financial reporting process, which also provide further context. Since investors lack this context, the CAQ believes that an auditor's public communication to investors of such complex and subjective matters (e.g. through an AD&A) may not be constructive and could be misleading.

Additionally, we believe it would be very difficult for audit firms to provide consistency in reporting related to auditor's "perspectives" or "impressions" on management's reporting. Without consistency in what is communicated, the AD&A requirement would diminish the comparability between companies, including those in similar industries. One audit partner's subjective opinion regarding a "close call" or "preferable accounting treatment" may differ significantly from that of another, which could result in unintended consequences for an issuer in comparison to its peers.

Further, we believe that efforts to ensure AD&A consistency, which would likely include the need for consultations at a crucial time during audit conclusion, would most likely strain valuable audit firm quality control resources. Participants at the CAQ's RoA roundtable discussions and the PCAOB's September 15th roundtable expressed similar concerns regarding the ability of the auditor to prepare a tailored narrative and complete the necessary reviews within current SEC filing deadlines.

***Consequences of Auditors Communicating Original Information about the Company***

The AD&A approach would result in auditors communicating original information about the company, creating a fundamental shift from the auditor attesting to information provided by management to the auditor providing original information about the company. We believe this could result in several unintended consequences including undermining the roles and responsibilities of the audit committee, management, and the auditor and a further widening of the expectation gap.

The CAQ believes that an AD&A requirement could undermine the established governance role of the audit committee. SOX strengthened the role of the audit committee by specifically vesting it with the authority and responsibility to oversee a company's auditor, including appointments, compensation, and resolution of disagreements between management and the auditor related to financial reporting. As a result, oversight of the financial reporting process and external audit on behalf of investors has improved through more frequent dialogue between the audit committee and auditor via periodic meetings, including executive sessions. Further, we also believe a requirement for auditors to discuss sensitive matters in AD&A, as contemplated in the Concept Release, could undermine the governance function of the audit committee by resulting in less robust discussions between the auditor, management and the audit committee for fear that such information would be communicated publicly in the AD&A. Any breakdown in this communication would negatively impact the effectiveness of the audit committee's oversight as well as audit quality, to the detriment of investors.

Additionally, we believe the responsibility of management for the preparation of the financial statements, including disclosures may also be undermined. Auditor communication of original information about the company, including information regarding management's judgments and estimates, accounting policies and practices and material matters, could create "dueling disclosures" between management and the auditor. If the potential for "dueling disclosure" compels management to change its disclosure in the financial statements to align with the auditor's communication in AD&A, this may effectively shift responsibility for the financial statement preparation from management to the auditor. It is unclear what impact this could have on overall management responsibilities as well as the quality of financial reporting. Additionally, it is unclear how this shift in roles could impact the independence of the auditor – who under current rules is prohibited from taking on any role that leads to acting or functioning as management. Audit committee members, preparers, and attorneys who participated in the CAQ's RoA roundtable discussions generally agreed.

Lastly, we believe that "dueling disclosures" could be subject to misinterpretation by investors in instances where there are differing views between management and the auditor. This concern was echoed by participants at the CAQ's RoA roundtable discussions who strongly believed that the auditor should not communicate original information about the company; rather, the auditor's established role of attesting to information provided by management should be retained. Further, there is also the risk that AD&A could contribute to the current state of "disclosure overload" as management and the auditor could often report identical or nearly identical information in separate communications. This is also consistent with what we heard from participants at our RoA discussion series.

***Auditor Independence***

The Concept Release contemplates an AD&A requirement for the auditor to discuss specific independence matters communicated to the audit committee under PCAOB Rule 3526, *Communication with Audit Committees Concerning Independence*. We believe a public discussion regarding such matters in an AD&A is unnecessary due to the existing governance function of the audit committee to assess auditor independence on behalf of investors, the external monitoring of auditor independence (by the PCAOB, SEC, and the firm itself), and existing means by which the auditor can communicate independence to investors. Under current PCAOB standards, the auditor is required to be independent, and every auditor's report is required to be titled, "Report of Independent Registered Public Accounting Firm." The CAQ also supports adding clarifying language to the standard auditor's report explicitly stating that the auditor is independent, as discussed in Section IV.b. of this letter.

For the reasons outlined above, we do not support the AD&A approach but, as discussed elsewhere in this letter, we fully support other alternatives that we believe are superior to the AD&A approach and would meet the needs of investors without creating significant unintended consequences.

## VI. Other Considerations

We offer further views below regarding liability, cost, and other considerations related to changes to the auditor's reporting model.

### *Liability Considerations*

We believe the concerns outlined by the PCAOB in the Concept Release related to the potential for increased litigation risk are warranted. Auditor liability has been discussed in numerous forums for decades, and we continue to believe it should be an important area for consideration by all stakeholders, including the PCAOB, as potential changes to the auditor's reporting model are evaluated.

### *Cost Considerations*

The CAQ believes the Board should determine whether the potential benefits of receiving certain information through changes to the auditor's reporting model outweigh the associated costs. The CAQ acknowledges that alternatives presented in the Concept Release as well as the CAQ's suggested attestation report on CAEs in the MD&A will require additional audit effort and increase audit cost.

### *Suggested PCAOB Actions to Determine if Potential Changes Meet Investor Needs*

We believe the PCAOB should consider several actions to ensure that any changes to the auditor's reporting model meet the needs of investors. First, it is important for the PCAOB to define clear objectives for any changes to the auditor's reporting model and to communicate these objectives to all stakeholders. Second, we believe the PCAOB should develop examples of how changes to the auditor's report could be incorporated (similar to the examples presented in the Concept Release) and that these examples be shared with a wide variety of investors to determine if the proposed changes will improve the usefulness of auditor reporting. Lastly, we believe the PCAOB could consider field testing as a mechanism to assess the feasibility and effectiveness of any changes prior to full-scale implementation in order to determine whether the needs of investors are being met by such changes. Without definition and communication of clear objectives, sharing of examples prior to implementation, and field testing to assess effectiveness, there is a risk that investors will remain dissatisfied despite the changes that are implemented.

### *Preparing for Changes to the Auditor's Report*

The CAQ believes that consideration should be given to the time and effort required to prepare and educate investors and other financial statement users on any changes that are ultimately adopted in order to reduce the risk of investor misunderstanding or widening the expectation gap. For instance, the PCAOB may consider holding investor forums, similar to the small business forums currently held, to help ready the market for any changes. In addition, the PCAOB may consider implementing certain changes to the auditor's report in tranches – requiring certain changes to be adopted for audits of the largest issuers first.

**VII. Views on Auditor Assurance on Information Presented Outside the Financial Statements**

As discussed previously, the CAQ believes that further consideration regarding auditor involvement with other information provided by management (e.g., earnings releases, non-GAAP information) is warranted, given the value that investors place on such information in making investment decisions. However, in the near term, the CAQ believes the Board should focus on improvements to the information communicated to investors through the addition of clarifying language to the standard auditor's report, a separate auditor attestation report on CAE disclosure in MD&A and/or an EOM approach.

With regard to the potential for auditor involvement with earnings releases, we note that the auditor often performs procedures on these management communications prior to public distribution to assess the consistency of the financial information contained therein with the audit in process. However, some investors may not be aware that these procedures are performed. Auditor issuance of the equivalent of an agreed-upon procedures (AUP) report for general use could potentially provide investors with added visibility in this area. Existing PCAOB standard AT 201, *Agreed-Upon Procedures Engagements*, which governs AUP reports, requires that this type of report be restricted for use by specified parties. Participants at the CAQ's RoA discussion series agreed that further auditor association with certain information communicated by management, such as earnings releases could add value, and is an area deserving of further exploration.

****

The CAQ recognizes that change is needed to enhance the information communicated by the auditor and is committed to embracing responsible calls for change. We continue to believe that a holistic approach examining opportunities for improvement in the roles and responsibilities of all members of the financial reporting supply chain will best serve the interests of investors over the long term. In the near term, as a result of our examination of possible improvements to the auditor's reporting model, we believe the addition of clarifying language to the standard auditor's report, a separate auditor attestation report on CAE disclosure in the MD&A and/or an EOM approach would improve the information communicated by auditors to investors while minimizing the unintended consequences associated with other alternatives such as AD&A.

The CAQ appreciates the opportunity to comment on the Concept Release and welcomes the opportunity to respond to any questions regarding the views expressed in this letter. Further, we stand ready to assist the PCAOB staff in any way we can as potential changes to the auditor's reporting model are further evaluated.

Sincerely,

Cynthia M. Fornelli

CENTER FOR AUDIT QUALITY

*Serving Investors, Public Company Auditors & the Markets*

June 28, 2011

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington D.C. 20006-2803

**Re: Request for Public Comment: *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*, PCAOB Rulemaking Docket No. 034**

Dear Office of the Secretary:

The Center for Audit Quality (CAQ) is an autonomous public policy organization dedicated to enhancing investor confidence and public trust in the global capital markets. The CAQ fosters high quality performance by public company auditors, convenes and collaborates with other stakeholders to advance the discussion of critical issues requiring action and intervention, and advocates policies and standards that promote public company auditors' objectivity, effectiveness and responsiveness to dynamic market conditions. Based in Washington, D.C., the CAQ is affiliated with the American Institute of Certified Public Accountants (AICPA). The CAQ appreciates the opportunity to respond to the Public Company Accounting Oversight Board's (PCAOB or the Board) *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (the concept release). This letter and enclosures represent the observations of the CAQ, but not necessarily the views of any specific firm, individual or CAQ Governing Board member.

The CAQ wants to thank the PCAOB for its outreach to the profession and other stakeholders prior to publication of the June 21st concept release on the auditor's reporting model. The CAQ congratulates the PCAOB and its staff on the process and thoughtful content put forward for public consideration. In partial response to the concept release, the CAQ is formally submitting the ideas we discussed and shared with the staff on June 9th as part of the PCAOB's outreach efforts (see enclosed illustrative example reports and accompanying letter). In addition, the CAQ will be submitting further comments on the concept release on or prior to the September 30th due date.

The auditing profession would be happy to meet with the staff to discuss the content of the illustrative example reports in greater detail, or answer any questions.

Sincerely,

Cynthia M. Fornelli

Mr. Martin Baumann
Chief Auditor and Director of Professional Standards
Public Company Accounting Oversight Board
1666 K Street
Washington, DC 20006-2803

**Re: Changes to the Auditor's Report - Model Approach for Consideration**

Dear Marty:

The Center for Audit Quality (CAQ) was formed in 2007 and is an autonomous public policy organization dedicated to enhancing investor confidence and public trust in the global capital markets by fostering high quality performance by public company auditors, convening and collaborating with other stakeholders to advance the discussion of critical issues requiring action and intervention, and advocating policies and standards that promote public company auditors' objectivity, effectiveness and responsiveness to dynamic market conditions. We are a membership organization with nearly 700 public company auditing firm members that are registered with the Public Company Accounting Oversight Board (PCAOB). Our member firms are committed to the public interest role that auditors play in our markets.

As a public policy organization, we strive to assure that our efforts are infused with a public interest perspective. The members of our Governing Board (which includes the CEOs of the eight largest accounting firms, the American Institute of Certified Public Accountants, and three independent public members) have a keen understanding and appreciation of the important role the public company auditing profession has in serving the public interest and honoring the public trust. Our three independent public board members strengthen our focus on the public interest and also bring us expertise in financial reporting, securities law and corporate governance.

To realize our vision, the CAQ works with investors, academics, audit committee members, preparers, internal auditors, and policy makers to explore issues and collaborate on initiatives that can advance audit quality.

**601 13th Street NW, Suite 800N, Washington, DC 20005, (202) 609-8120 www.thecaq.org**

The CAQ consistently has supported the implementation of the Sarbanes-Oxley Act of 2002 and, working in collaboration with others with responsibility for financial reporting, has a number of initiatives underway to advance the deterrence and detection of financial reporting fraud. We also support research on issues relating to investor confidence, public company auditing and the capital markets in part by issuing grants that fund independent academic research. In all that we do, we are particularly interested in investors' views, as they are the ultimate users of the audited financial statements.

Recent views expressed by investors convey their need for further information on a number of different matters including, but not limited to, additional insight into accounting policies, particularly critical accounting estimates; information about the activities of public company audit committees, including discussions on critical matters with management and the external auditors; and more information about the independent audit.

In response to these calls for change, the PCAOB announced a standard-setting initiative focused on possible changes to the auditor's reporting model. The profession also recognizes that change is needed, is prepared to embrace the responsible calls for change in this area, and believes that a holistic approach where all stakeholders agree on a way forward will best serve investors and is a requirement if such change is to be meaningful. In this regard, the CAQ established a working group in 2010, comprised of members of the profession, to consider how to best serve investors given their information needs as we understand them.

The working group explored a variety of possible alternatives for communicating additional information about the audit, including changes to the auditor's report combined with expanded management disclosures and audit committee reporting to shareholders with corresponding auditor association. Members of this working group met with you and your staff on February 7, 2011 to discuss these possible alternatives, which were also the subject of my February 11, 2011 letter. CAQ member firm representatives have also participated in recent Standing Advisory Group discussions on this important topic.

Subsequent to our meeting on February 7, 2011, the PCAOB staff identified a number of possible changes to the auditor's reporting model under current consideration. In line with your efforts to identify changes that are both responsive to the needs of investors and can be practicably implemented, the CAQ working group has developed a model approach, described below for your consideration. The model provides examples of potential revisions to the auditor's reporting model that we believe: (i) are responsive to many of the information needs we have heard from investors (ii) can be practically implemented in a relatively short time frame and (iii) are consistent with the overarching principles discussed with you at our February meeting and outlined below.
In presenting this potential reporting model for your consideration, we recognize that refinements in the actual language used may be necessary to align with other PCAOB professional standards, and that implementation guidance will need to be developed to address some of the concepts included in the model, such as the communication of component auditors and the "areas of audit emphasis" section.

***Overarching Principles***

In evaluating this topic, the CAQ working group established the following overarching principles, with investors in mind, to guide the development of possible areas for further consideration related to revisions to the auditor's reporting model:

- Auditors should not be the original source of disclosure about the entity; management's responsibility should be preserved in this regard.

- Any changes to the reporting model need to enhance, or at least maintain, audit quality.

- Any changes to the reporting model should narrow, or at least not expand, the expectations gap.

- Any changes to the reporting model should add value and not create investor confusion. Specifically, any revisions should not require investors to sort through "dueling information" provided by management, the audit committee, and independent auditors.

- Auditor reporting should focus on the objective rather than the subjective.

Conceptually, we understand the suggestion that an auditor deliver to investors the same information that is provided to the issuer's audit committee. However, it is important to understand (as is made clear in the PCAOB's proposed auditing standard on this topic) that such communication is prepared with the expectation that a dynamic two-way discussion between the auditor and audit committee will occur and that questions will arise and additional context and perspectives will be communicated during the course of this discussion. Such interaction can often clarify the specific points raised, particularly around certain accounting and financial reporting matters involving a high degree of subjectivity. This important two-way dialogue will not take place in connection with the general distribution of a report. Additionally, the audit committee obtains insight by virtue of its financial reporting oversight responsibilities which provide additional context for such communications from the auditor. Consequently, we believe that providing investors with the same information that is provided to the audit committee, without the context obtained from a two-way dialogue may be incomplete, generate greater confusion and not enhance the overall understanding of the readers of such a report.

***Illustration of a Potential Approach***

After evaluating various alternatives, the CAQ working group determined that the following approach would improve the auditor reporting framework, would help serve the interests of investors, and could be pragmatically implemented in relatively short-order. We recognize this is but one approach and there may be others that meet the objectives we have outlined above. In addition, while we have illustrated the approach in three separate reports; the reports could be combined.

1. Amend the standard financial statement audit report to include the following:

   a. Explicitly identify that the footnotes are an integral part of the financial statements and are covered by the audit report (highlighted in the scope section)
   b. Identify that the auditor is independent under all relevant U.S. Securities and Exchange Commission (SEC) and PCAOB standards
   c. Where applicable, describe the accounting firm network structure, the responsibility of the member firm signing the audit report, and the participation of other member firms in the audits
   d. Provide an expanded discussion covering management and audit committee responsibilities for the financial statements and the Form 10-K
   e. Highlight that the auditor is responsible for planning and performing the audit to obtain reasonable assurance that the financial statements, taken as a whole, are free of material misstatement, "whether due to error or fraud"
   f. Identify what is meant by the term "reasonable assurance," "material misstatement," and the approach used by the auditor to assess "materiality"
   g. Highlight the necessity of using professional judgment in making audit risk assessments and in the selection of audit procedures and the consideration the auditor gives to the issuer's internal control over financial reporting when making such determinations
   h. Outline the auditor's responsibility in the event a conclusion is reached that the financial statements are not in accordance with Generally Accepted Accounting Principles or in situations where the audit scope has been limited
   i. Describe the auditor's responsibility for information outside of the financial statements (including Management's Discussion & Analysis (MD&A))
   j. Address the audit report to the shareholders of the company in addition to the Board of Directors
   k. Include a reference and link to where more information about public company audits and auditors can be found. For purposes of the illustrative reports attached, we have utilized as an example of this approach the *In-Depth Guide to Public Company Auditing: the Financial Statement Audit*, published by the CAQ and available on our website.

   We have illustrated in Example A, attached to this letter, how the above suggestions would revise the current financial statement audit report. We believe these changes are responsive to many of the comments that have been raised.

2. Using an emphasis-of-matter like approach, the audit report would identify specific topics or events, unusual transactions or other matters that were viewed to be areas of audit emphasis by the auditor. Consistent with the overarching principles, we believe these descriptions should be objective, fact-based discussions and make specific reference to where such items appear in the financial statements. We have illustrated in Example A how this approach might look in practice. We believe this approach responds to the request that the auditor indicate areas of audit emphasis, and directs the user to where such matters are discussed in the financial statements. As noted above, we recognize that standard-setting activity and resulting implementation guidance will be necessary to help guide the auditor in assessing and consistently determining the type of

matters that should be identified in this section of the revised report, and the extent of the auditor's discussion relating to such matters.

3. Prepare a new report on the examination of the issuer's Critical Accounting Estimates disclosure in its MD&A. We have illustrated this new report in Example B attached to this letter. We believe auditor attestation will serve to continue to improve disclosures in this important area and will be responsive to the various suggestions that have been raised with respect to the need for more emphasis on the important judgment calls made in preparing the financial statements. The SEC would likely need to amend Regulation S-X to require this new report. Likewise, MD&A would need to clearly identify the Critical Accounting Estimates section that will be covered by the examination report. This may also likely require some SEC amendments, but we believe such changes should not be complex or time-consuming. (We note that Example B may also be written to include language from Example A, for example, language relating to the performance of procedures by member firms.)

4. Amend the standard audit report on internal control over financial reporting to reflect many of the changes outlined in 1. above. We have illustrated in Example C attached to this letter how these suggestions would change the present internal control over financial reporting audit report. We believe these changes are responsive to many of the comments that have been raised. (We note again that this Example C may also be written to include additional language from Example A, such as member firm considerations, when appropriate.)

While we have included in our model both an emphasis-of-matter like approach for specific areas of audit emphasis to be included in the financial statement auditor's report, and a separate examination report on the Critical Accounting Estimates disclosure, we appreciate that both of these enhancements may not be necessary. While we believe that the examination report is the enhancement most likely to address investor's needs, we recognize that each of these enhancements or a combination of the two has merit for consideration.

***Other Thoughts***

We also believe that an expanded audit committee report, which includes matters discussed with the auditor that the audit committee considered significant in discharging its responsibilities, accompanied by auditor association therewith, is worthy of further consideration as another means of providing additional information called for by certain investors. We continue to give thought to this idea, and would be pleased to collaborate with the PCAOB, SEC and others (importantly, representatives from the audit committee community) on the further consideration of this concept.

In connection with the potential expansion of the auditor's reporting model, we continue to have concerns about increasing the profession's liability risks. This is, of course, a matter that has been discussed in numerous forums for many decades, but we believe it would be a necessary component on any proposal for revised auditor reporting.

We appreciate the opportunity to share our views regarding possible revisions to the auditor's reporting model. We understand the PCAOB is working toward the issuance of a concept release on this topic by the end of June, and we look forward to reviewing and commenting on that document. At the same time, we want to go on record that we are fully committed to making progress and stand ready to embrace calls for responsible change in this important area. We sincerely believe the approach outlined above serves these purposes, will help serve investors, and can be implemented in a relatively quick time frame.

We also welcome the opportunity to work with the PCAOB staff following the issuance of the concept release and in your further evaluation of the auditor's reporting model. We stand ready to assist you in any way we can, including participation in any meetings or roundtables you are planning.

Sincerely,

Cynthia M. Fornelli

**Revised Auditor's Report on the Financial Statements with Reference to Separate ICFR and Critical Accounting Estimates Reports**

**Report of Independent Registered Public Accounting Firm on the Consolidated Financial Statements of Sample Company**

To the Board of Directors and Shareholders of Sample Company

We have audited the accompanying consolidated balance sheets of Sample Company and subsidiaries (the Company) as of December 31, 201Y and 201X, the consolidated statements of income, stockholders' equity, comprehensive income and cash flows for each year in the three year period ended December 31, 201Y, and the related notes to the consolidated financial statements for all periods presented (collectively referred to below as the "consolidated financial statements").

We are an independent registered public accounting firm with respect to the Company within the meaning of the Securities Act of 1933 and the applicable rules and regulations thereunder adopted by the United States Securities and Exchange Commission (SEC) and the Public Company Accounting Oversight Board (United States) (PCAOB). XYZ LLP is the principal auditor for the Company for the periods cited above. XYZ LLP is the US member firm of XYZ Limited, a global network of affiliated auditing firms. [Each member firm in the network is a separate legal entity, and all member firms follow a common audit methodology and consistent quality control policies.][1] Certain network member firms participated in our audits of the Company and such participation, in the aggregate, covered approximately Y% and X% of the Company's consolidated assets as of December 31, 201Y and 201X and approximately X%, Y% and Z% of the Company's consolidated revenues for each year in the three year period ended December 31, 201Y. We (XYZ LLP) take responsibility for the work performed by our member firms in connection with our audits.

**Management and Audit Committee Responsibilities for the Financial Statements and Other Information**

Management is responsible for the preparation and fair presentation of these consolidated financial statements in accordance with accounting principles generally accepted in the United States of America (U.S. GAAP), and for establishing and maintaining adequate internal control over financial reporting to enable the preparation of consolidated financial statements that are free from material misstatement, whether due to error or fraud.

Management is also responsible for the preparation and presentation of the Company's Annual Report on Form 10-K in accordance with the rules and regulations of the SEC, including

[1] Each firm would describe their member network affiliation.

Management's Discussion and Analysis of Financial Condition and Results of Operations (MD&A) appearing in Item 7 of the Annual Report.

The audit committee oversees the Company's financial reporting process and its internal control over financial reporting, areas for which management has the primary responsibility. Additionally, the audit committee is directly responsible for our appointment, compensation, and oversight of our work (including resolution of any disagreements with management regarding financial reporting) for the purpose of preparing or issuing an audit report or related work.

**Auditor Responsibility for the Audit of the Financial Statements**

Our responsibility is to express an opinion on these consolidated financial statements, taken as a whole, based on our audits. We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we comply with ethical requirements and plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free from material misstatement, whether due to error or fraud. In this context, reasonable assurance, although representing a high level of assurance, is not absolute and consequently an audit conducted in accordance with PCAOB standards may not always detect a material misstatement. Our judgments about materiality are affected by our understanding of the financial information needs of investors and other users of the consolidated financial statements. A material misstatement represents an omission or misstatement that would be viewed by a reasonable investor as having significantly altered the 'total mix' of information presented in the consolidated financial statements, taken as a whole.

An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the consolidated financial statements. In the course of completing our audit, the audit evidence we obtain is often persuasive rather than conclusive. The procedures selected for performance depend on our judgment, including our assessment of the risks of material misstatement of the consolidated financial statements, whether due to error or fraud. In making those risk assessments, we consider internal controls relevant to the Company's preparation and fair presentation of the consolidated financial statements in accordance with U.S. GAAP in order to design audit procedures that we believe are appropriate in the circumstances. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation and related financial statement disclosures. Our audits also included such other procedures as we considered necessary in the circumstances.[2]

PCAOB standards require that we modify our report if we determine that the consolidated financial statements are materially misstated. If there are significant restrictions placed on the scope of our audit PCAOB standards prohibit us from expressing an opinion on the financial statements.

We believe that the procedures performed and the audit evidence obtained provides a reasonable basis for our opinion.

[2] Additional information about public company audits and auditors can be found in the *In-Depth Guide to Public Company Auditing: the Financial Statement Audit*, published by the Center for Audit Quality and available on the organization's website at http://www.thecaq.org/publications/In-Depth_GuidetoPublicCompanyAuditing.pdf.

**Auditor Responsibility for Other Information Presented Outside of the Financial Statements**

We have separately examined the Critical Accounting Estimates disclosure included as part of MD&A in the Company's December 201Y Annual Report on Form 10-K. Our responsibility with respect to all other information presented outside of the consolidated financial statements (including all other sections of the MD&A) is to read this other information and consider whether such information, or the manner of its presentation, is materially inconsistent with information, or the manner of its presentation, appearing in the consolidated financial statements. We are required to follow up on any material inconsistencies and material misstatements of fact of which the auditor becomes aware with management, and with the Audit Committee if necessary, until properly resolved, but are not otherwise required to express an opinion on the other information, including all other sections of MD&A. Other than where identified in this report, our responsibility with respect to the other information in the Form 10-K does not extend beyond the financial information identified in our report, and we have no obligation to perform any procedures to corroborate information presented outside of the consolidated financial statements.

**Opinion on the Consolidated Financial Statements**

In our opinion, the consolidated financial statements, taken as a whole, present fairly, in all material respects, the consolidated financial position of Sample Company and subsidiaries as of December 31, 201Y and 201X, and the consolidated results of their operations and cash flows for each year in the three year period ended December 31, 201Y, in conformity with U.S. GAAP.

**Areas of Audit Emphasis**

In connection with our audits, we also bring to your attention the matters listed below. This is not intended to be a complete list of all areas that our audit procedures addressed in response to identified risks of material misstatement.

1. In December of 201Y, the Company completed the acquisition of ABC Company. As of December 31, 201Y, the Company has completed the allocation of the purchase price on a preliminary basis, assigning approximately $XXX million to goodwill and other intangible assets with indefinite lives. The Company will finalize the purchase price allocation during 201Z, and the amounts assigned as of December 31,201Y could change. See Note B for further details.

2. In connection with the financing required to complete the ABC acquisition, the Company borrowed $XXX million from a consortium of banks. The borrowing has a maturity date of March 31, 201A, or fifteen months from the date of the balance sheet. As of December 31, 201Y, the borrowing is classified as long-term debt, since it has a maturity date beyond the end of the 201Z fiscal year. The Company is in the process of exploring alternatives to refinance this borrowing on a longer-term basis. See Note D for further details.

3. The Company provides financing to certain customers of its [Example Segment]. Business conditions in this Segment led to a slow-down in collections and an increase in potential uncollectible balances. At December 31, 201Y, the gross financing balance

approximated $X,XXX million and the Company maintained a reserve for uncollectible accounts of $XXX million. The balance of accounts that were 90 or more days past due at that date approximated $XX million. This compares to a gross financing balance, reserve for uncollectible accounts and amounts 90 or more days past due of $X,XXX million, $XXX million and $XX million at December 31, 201X respectively. The net expense recorded for estimated uncollectible amounts approximated $XXX million during 201Y. See Note E for further details.

4. The Company has goodwill of $X,XXX attributable to its [Example Segment] reporting unit as of December 31, 201Y. The Company performed its annual impairment testing as of October 31, 201Y. No impairment was recognized because the Company's estimated fair value of this reporting unit exceeded its carrying value at that date; however, the comparison was close and a further decline in the fair value of this reporting unit could give rise to an impairment of the goodwill balance in the future. See Note H for further details.

5. The Company is exposed to various claims and contingencies in the normal course of business. We note two significant matters outstanding as of December 31, 201Y. The Company is a defendant in litigation involving a patent claim that has been ongoing for several years. The Company is also liable for the costs of remediating an environmental claim relating to a business that was sold in 201X. See Note J for further details surrounding these matters.

We highlight the above matters because they represent some of the areas of audit emphasis during the periods covered by our report. Our audits included performing procedures designed to address the risks of material misstatement associated with the above matters. Such procedures were designed in the context of our audit of the consolidated financial statements taken as a whole, and not to provide assurance on individual accounts or disclosures. As noted above, our audits also included procedures in response to identified risks and those required by professional standards that have not been specifically identified herein.

**Other Reports**

We also have examined, in accordance with the standards of the PCAOB, Sample Company's Critical Accounting Estimates disclosure included as a part of MD&A in the Company's December 31, 201Y Annual Report on Form 10-K, and our report dated [*date*] expressed an unqualified opinion that the Company's presentation of the Critical Accounting Estimates disclosure includes, in all material respects, the required elements of the rules and regulations adopted by the SEC; that the historical financial amounts included therein have been accurately derived, in all material respects, from the Company's financial statements; and that the underlying information, determinations, estimates, and assumptions of the Company provide a reasonable basis for the disclosures contained therein.

In addition, we have audited, in accordance with the standards of the PCAOB, Sample Company's internal control over financial reporting as of December 31, 201Y, based on criteria established in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), and our report dated [*date*] expressed an unqualified opinion on the effectiveness of the Company's internal control over financial reporting.

XYZ LLP

[City, State]

**Example B**

**New Report on Critical Accounting Estimates**

**Report of Independent Registered Public Accounting Firm on the Critical Accounting Estimates Disclosure of Sample Company**

To the Board of Directors and Shareholders of Sample Company

We have examined the Critical Accounting Estimates disclosure of Sample Company and subsidiaries (the Company) included as a part of the Company's Management's Discussion and Analysis (MD&A) that is included in the Company's December 31, 201Y Annual Report on Form 10-K.

**Nature of the Critical Accounting Estimates Disclosure**

The Critical Accounting Estimates disclosure is designed to present the Company's analysis of the uncertainties involved in applying its adopted accounting principles and policies at a given time or the variability that is reasonably likely to result from its application over time. The subjectivity of these disclosures is influenced by the availability and reliability of relevant data, the number and significance of assumptions that are made, and the degree of uncertainty associated with such assumptions. Consequently, actual results in the future may differ materially from management's present assessment of this information because events and circumstances frequently do not occur as expected.

**Management and Audit Committee Responsibilities for the Critical Accounting Estimates Disclosure**

Management is responsible for the preparation of the Company's Critical Accounting Estimates disclosure pursuant to the rules and regulations adopted by the U.S. Securities and Exchange Commission (SEC), and for such disclosure controls and procedures designed to ensure that information required to be disclosed pursuant to the securities laws is recorded, processed, summarized and reported, within the time periods specified in the SEC's rules and forms. The preparation of the Critical Accounting Estimates disclosure requires management to interpret the criteria for disclosure, make determinations as to the relevancy of information to be included, and make estimates and assumptions that affect reported information.

The Company's audit committee oversees the financial reporting process (including the Company's Critical Accounting Estimates disclosure) and its disclosure controls and procedures (which include internal control over financial reporting), areas for which management has the primary responsibility. Additionally, the audit committee is directly responsible for our appointment, compensation, and oversight of our work (including resolution of any disagreements with management regarding financial reporting) for the purpose of preparing or issuing an audit report or related work.

**Auditor Responsibility for the Examination of the Critical Accounting Estimates Disclosure**

Our responsibility is to express an opinion on the Critical Accounting Estimates disclosure presentation based on our examination. Our examination was conducted in accordance with the standards of the Public Company Accounting Oversight Board (United States) (PCAOB) and, accordingly, included examining, on a test basis, evidence supporting the historical amounts and other information disclosed in the presentation. An examination also includes assessing the significant determinations made by management as to the relevancy of information to be included and the estimates and assumptions that affect reported information. We believe that the procedures performed and the examination evidence obtained provides a reasonable basis for our opinion. In forming our opinion, we exercised professional judgment in evaluating the reasonableness of the disclosures based on information that was available at the time of our examination. In the course of completing our examination, the evidence we obtain is often persuasive rather than conclusive.

**Opinion on the Critical Accounting Estimates**

In our opinion, the Company's presentation of the Critical Accounting Estimates disclosure referred to above includes, in all material respects, the required elements of the rules and regulations adopted by the SEC; the historical financial amounts included therein have been accurately derived, in all material respects, from the Company's consolidated financial statements; and the underlying information, determinations, estimates, and assumptions of the Company provide a reasonable basis for the disclosures contained therein.

**Other Report**

We have audited, in accordance with the standards of the PCAOB, the consolidated financial statements of Sample Company and subsidiaries as of December 31, 201Y and 201X, and for each of the years in the three-year period ended December 31, 201Y, and in our report dated [*date*], we expressed an unqualified opinion on those consolidated financial statements.

XYZ LLP

[City, State]
[Date]

**Example C**

**Revised Report on Internal Control over Financial Reporting**

**Report of Independent Registered Public Accounting Firm on Sample Company's Internal Control over Financial Reporting**

To the Board of Directors and Shareholders of Sample Company

We have audited Sample Company's (the Company) internal control over financial reporting as of December 31, 201Y, based on criteria established in *Internal Control – Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO).

**Management and Audit Committee Responsibilities for Internal Control over Financial Reporting**

Sample Company's management is responsible for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting included in the accompanying [title of management's report].

The audit committee oversees the Company's financial reporting process and its internal control over financial reporting, areas for which management has the primary responsibility. Additionally, the audit committee is directly responsible for our appointment, compensation, and oversight of our work (including resolution of any disagreements with management regarding financial reporting) for the purpose of preparing or issuing an audit report or related work.

**Auditor Responsibility for the Audit of Internal Control over Financial Reporting**

Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit.

We conducted our audit in accordance with the standards of the Public Company Accounting Oversight Board (United States) (PCAOB). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. In this context, reasonable assurance, although representing a high level of assurance, is not absolute and consequently an audit of internal control over financial reporting conducted in accordance with PCAOB standards may not always detect a material weakness. Our judgments about materiality are affected by our understanding of the financial information needs of users of this Report. A material weakness is a deficiency, or combination of deficiencies, in internal control over financial reporting, giving rise to a reasonable possibility that a material misstatement of the Company's annual or interim financial results will not be prevented or detected by the Company on a timely basis. If one or more material weaknesses exist, the Company's internal control over financial reporting cannot be considered effective, and we are required to include in our report an opinion that the Company's internal control over financial reporting is not effective. If there are restrictions placed on the scope of our audit, we are prohibited from expressing an opinion on the effectiveness of the Company's internal control over financial reporting.

Our audit included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances.

We believe that the procedures performed and audit evidence obtained provides a reasonable basis for our opinion.

**Definition and Limitations of Internal Control over Financial Reporting**

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with U.S. Generally Accepted Accounting Principles (U.S. GAAP). A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with U.S. GAAP, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

**Opinion on Internal Control over Financial Reporting**

In our opinion, Sample Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 201Y, based on the criteria established in *Internal Control – Integrated Framework* issued by COSO.

**Other Report**

We have audited in accordance with the standards of the PCAOB, the consolidated financial statements of Sample Company and subsidiaries as of December 31, 201Y and 201X, and for each of the years in the three-year period ended December 31, 201Y, and in our report dated [date], we expressed an unqualified opinion on those consolidated financial statements.

**RE: PCAOB No. 2011-003, Rulemaking Docket No. 34 – Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards**

**Executive Summary**

As members of the PCAOB's Investor Advisory Group, we believe that the current auditor's report is deficient as a communication vehicle, and that significant changes to the auditor's report are needed to remediate these deficiencies. The only communication between the auditor and investors is typically a standard three-paragraph report that is essentially identical for the overwhelming majority of all public companies.

We believe that the four most important changes to the audit report would require the auditor to: (1) discuss the auditor's assessment of the estimates and judgments made by management in preparing the financial statements and how the auditor arrived at that assessment; (2) disclose areas of high financial statement and audit risk and how the auditor addressed these risk areas; (3) discuss unusual transactions, restatements, and other significant changes in the financial statements (including the notes); and (4) discuss the quality, not just the acceptability, of the issuer's accounting practices and policies. We believe that the disclosure of this information will improve investors' ability to make informed buy/sell decisions, which should result in higher returns to investors and improved capital allocation within society.

We believe that an Auditor Discussion & Analysis is the best means for providing this information. However, we are not opposed to the required use of emphasis-of-matter paragraphs, as long as the above information is included within these paragraphs.

In addition, we believe that the audit report should explain the auditor's responsibility for detecting material fraud. The standard audit report should clearly state that the auditor has a responsibility to obtain reasonable assurance as to whether the financial statements are materially misstated, whether caused by error or fraud. In addition, the report should indicate that "reasonable" assurance represents a high, although not absolute, level of assurance.

**RE: PCAOB No. 2011-003, Rulemaking Docket No. 34 – Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards**

Dear Messrs. Doty, Ferguson, Goelzer, Hanson, and Harris:

> "Rather than managing investors' expectations about the auditor's opinion, a better approach would be for the auditing profession, with the support of standard setters and market regulators, to take on a greater level of responsibility than they have today."[1]

1. As members of the PCAOB's Investor Advisory Group (IAG), we are writing to provide comments on the PCAOB's June 21, 2011 Concept Release entitled *Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*. The undersigned members of the PCAOB's IAG have collaborated in drafting this comment letter to the Board.[2] We discuss below the results of an investor survey we recently conducted on the topic of the auditor's report, and offer numerous suggestions regarding possible changes to the format and content of the report that would provide much greater value to investors than the current auditor's report provides.

2. The IAG is an "expert advisory group" that the PCAOB has convened under the statutory authority of Section 101 of the Sarbanes-Oxley Act. The IAG's mandate is to "provide its views and advice to the Board on broad policy issues, and other matters that affect investors and are related to the work of the Board."

3. The IAG believes that the current auditor's report is deficient as a communication vehicle, and that significant changes to the format and scope of the auditor's report are needed to remediate these deficiencies.[3] The IAG has devoted substantial efforts to improving the auditor's report throughout its limited life. In May 2010, at the initial IAG meeting, we identified improvements

---

[1]DiPiazza, S. A., Jr., and R. G. Eccles. 2002.*Building Public Trust: The Future of Corporate Reporting*. New York, NY: John Wiley & Sons. Mr. DiPiazza is a former CEO of PricewaterhouseCoopers (PwC).

[2]Hereafter when we refer to a position of the IAG, we are only referring to those IAG members who have chosen to sign this letter. The views expressed herein are those of the individual IAG members who have signed this letter and do not necessarily reflect the opinions of the companies or associations with which they are affiliated or any other officers, employees, or members thereof.

[3]Other international auditing standard setters recognize this deficiency in the communications value of the auditor's report. For example, the International Auditing and Assurance Standards Board (IAASB) has noted, "Users recognize there is richer information about the entity and about the audit itself than is currently being provided through the audited financial statements and other corporate disclosure mechanisms, and through the auditor's report." (IAASB Consultation Paper, *Enhancing the Value of Auditor Reporting: Exploring Options for Change*, p. 7.)

to the audit report as one of our highest priorities. Moreover, in advance of our March 2011 meeting, we conducted a survey of investors to measure their perceptions of the value of the current audit report and to solicit their input as to needed changes. We presented our findings at the PCAOB's March 2011 IAG meeting and discuss the survey results in greater detail below.

4. Audits of public companies can involve scores of auditors, thousands of hours, and millions in fees. The documentation in support of the auditor's opinion is voluminous. Indeed, with the possible exception of senior financial management, in most cases the auditor knows more about the financial statements and financial reporting risk of the audited company than other individuals, both inside and outside the company (including members of the audit committee). Notwithstanding this significant accumulated knowledge, the only communication between the auditor and investors is typically a boilerplate three-paragraph letter (hardly a "report," despite the commonly used title) that is essentially identical for the overwhelming majority of all public companies.

5. The members of the IAG believe that this reporting model fails to meet the legitimate needs of investors. PCAOB board member Steve Harris succinctly summarized our position in his comments at the PCAOB's June 21 open board meeting -- the IAG "believes public company auditors know much more about their audit clients than they currently are telling investors."[4]The IAG isn't asking for auditors to gather more audit evidence. We aren't asking for a fundamental change to the audit process. We are simply asking auditors to share with investors more of what they already know.

6. It is worth noting that a number of other parties agree that the current form of the auditor's report fails to meet the legitimate needs of investors. First, the U.S. Treasury Advisory Committee on the Auditing Profession (ACAP) called for the PCAOB to undertake a standard-setting initiative to consider improvements to the standard audit report. The ACAP members support "… improving the content of the auditor's report beyond the current pass/fail model to include a more relevant discussion about the audit of the financial statements."[5] Second, surveys conducted by the CFA Institute in 2008 and 2010 indicate that research analysts want auditors to communicate more information in their reports.[6] Finally, even leaders of the accounting profession have acknowledged that the audit report needs to become more relevant. In testimony before ACAP, Dennis Nally, Chairman of PwC International stated, "It's not difficult to imagine a world where the … trend to fair value measurement -- lead one to consider whether it is

[4]Steve Harris' statement at the PCAOB open board meeting on June 21, 2011.

necessary to change the content of the auditor's report to be more relevant to the capital marketsand its various stakeholders."[7] Finally, leaders of the accounting profession have previously stated that changes to the audit report should reflect investor preferences. In their 2006 White Paper, the CEOs of the six largest accounting firms stated, "The new (reporting) model should be driven by the wants of *investors and other users of company information …*" (their emphasis).[8]

7. Before we turn to a discussion of the IAG investor survey, we believe it is important to underscore the fundamental but often overlooked fact that the issuer's *investors*, not its audit committee or management team or the company itself, are the auditor's client. It is therefore not only appropriate, but essential, that investors' views and preferences take center stage as the PCAOB considers possible changes to the format and content of the audit report.

Information Desired by Investors and How Such Information Might Affect Decisions

8. The IAG survey of investors identified the following as the four most highly desired changes to the audit report: (1) a discussion of the auditor's assessment of the estimates and judgments made by management in preparing the financial statements and how the auditor arrived at that assessment; (2) disclosure of areas of high financial statement and audit risk and how the auditor addressed these risk areas in planning and conducting the audit; (3) discussion of unusual transactions, restatements, and other significant changes in the financial statements (including the notes); and (4) discussion of the quality, not just the acceptability, of the issuer's accounting practices and policies.[9]

*Auditor Assessment of Estimates and Judgments*

---

[7]Written testimony of Dennis Nally, Chairman and Senior Partner, PricewaterhouseCoopers, LLP Before the Federal Advisory Committee on the Auditing Profession, United States Department of the Treasury, December 3, 2007.

[8]DiPiazza, S. A., D. McDonnell, W. G. Parrett, M. D. Rake, F. Samyn, and J. S. Turley. 2006. *Global Capital Markets and the Global Economy: A Vision from the CEOs of the International Audit Networks.*

[9]Some might argue that this type of information should be communicated to investors by management and not by the auditor. However, the Companies Act in the United Kingdom requires additional narrative disclosures by management. The Financial Reporting Council (FRC) finds that these narrative disclosures have not been particularly forthcoming. The FRC states, "… the majority of risk reporting is a list of boilerplate disclosures which do not provide a meaningful discussion …" and, based on work by Deloitte referred to by the FRC, "… descriptions of principal risks are too generic, that there is a lack of detail on trends and factors, and that there are too many KPIs and no explanation of the link between strategy and objectives" (FRC, *Effective Company Stewardship: Enhancing Corporate Reporting and Audit*, p. 9). There may be a role for the audit committee in communicating some of the information desired by investors, but audit committee communication should not be a substitute for communication from the auditor. The arguments for and against requiring expanded audit committee communications are beyond the scope of this letter, as any such policy decision rests with the SEC and not the PCAOB.

9. Investors who responded to the IAG survey want the auditor to provide an assessment of the estimates and judgments made by management in preparing the financial statements and to describe the process the auditor followed in arriving at that assessment. Seventy-nine percent of the respondents to the IAG survey want the auditor to provide this information. As one representative example of investor sentiments on this issue, the chief investment officer of a large mutual fund stated, "There are many judgments that ultimately determine the data on the financial statements. It's critical to understand how estimates were made and how much margin of error there might be in the estimates."[10] In addition, the CFA Institute's 2008 survey of research analysts found that 84 percent of their respondents wanted the auditor to communicate additional information about management's estimates and judgments.[11]

10. As financial reporting has become more subjective -- as evidenced through the expanded use of fair value measurement, more complex revenue recognition issues, evaluation of impairments with respect to investments, fixed assets, intangible assets, and deferred tax assets -- the ultimate reliability of an issuer's financial statements depends increasingly on management's estimates and judgments. As a result of these changes in financial reporting, the FASB has increased the nature and scope of required disclosures about estimates and judgments. Some will argue that if investor needs are not being met, then the FASB should simply require more disclosures from management. However, this argument ignores the expressed desire of investors for additional, independent communication on these issues *from the auditor*.[12]

11. Obtaining an independent evaluation of management's estimates and judgments would add significant value to the audit process in several respects. First, management's evaluations of its own estimates and judgments are inherently biased; the auditor is uniquely positioned to provide an independent, objective assessment.[13]The rationale for obtaining the auditor's evaluation of management's estimates and judgments is the same as that which applies to the entire process of obtaining the auditor's assessment of the overall fairness of the financial statements. In other words,management's self-interest inherently precludes them from reporting in an unbiased fashion on either the financial statements taken as a whole or on the reasonableness of their material estimates and judgments. As the CEOs of the global network firms stated in their White

[10]The IAG survey was primarily composed of Likert-scaled questions, but also afforded respondents the opportunity to provide narrative comments.

[11]The CFA Institute's 2008 survey was based on 1,474 respondents.

[12]The IAASB recognizes the value in having information about estimates and judgments communicated directly by the auditor. The IAASB states, "Some investors and analysts in particular, however, view the auditor's insight into the entity and its business obtained through the audit of the entity's financial statements as being especially relevant information for their needs" (IAASB Consultation Paper, *Enhancing the Value of Auditor Reporting: Exploring Options for Change*, p. 9).

[13]AU ¶ 342.12 indicates that the auditor may independently develop an expectation of the estimate when evaluating the reasonableness of the issuer's estimates.

Paper, "Given our independence and experience, we are in an ideal position to provide value to investors throughout the world."[14] Also, the IAASB states in its Consultation Paper on the auditor's report: "… the fact that such information would be communicated by the independent auditor adds a degree of credibility to the information communicated."[15]We believe that financial statement users would be willing to pay incremental audit feesto obtain information to which they attach high value.[16]

12. Finally, the auditor already gathers and communicates much of the information investors wish to obtain relating to estimates and judgments. Under AU ¶ 380.08, "[t]he auditor should determine that the audit committee is informed about the process used by management in formulating particularly sensitive accounting estimates and about the basis for the auditor's conclusions regarding the reasonableness of those estimates." Since the auditor already gathers and communicates this information to the issuer's audit committee, there is no reasonable basis, in the IAG's view, for the auditor not to share this information with investors, who as the owners of the corporation are the auditor's true client.

*Financial Statement and Audit Risk*

13. Investors who responded to the IAG survey also expressed a strong desire that the auditor communicate areas of high financial statement and audit risk and explain how the auditor addressed these risk areas in planning and conducting the audit.[17] Seventy-seven percent of the respondents to the IAG survey want this information. As an equity analyst from a large mutual fund stated, "This would make me read the report instead of just skim it." The chief investment officer of another large mutual fund stated, "This would be very helpful. Understanding the issues the auditor recognizes as being difficult to measure enables us to focus our analysis on these issues." In addition, the CFA Institute's 2008 survey indicated that 84 percent of their respondents wanted the auditor to communicate additional information about risks.

14. Beyond the audit risks associated with management's estimates and judgments, overall financial statement and audit risk may be elevated because of: (a) the existence of certain

[14]DiPiazza, S. A., D. McDonnell, W. G. Parrett, M. D. Rake, F. Samyn, and J. S. Turley. 2006. *Global Capital Markets and the Global Economy: A Vision from the CEOs of the International Audit Networks.*

[15]IAASB Consultation Paper, *Enhancing the Value of Auditor Reporting: Exploring Options for Change*, p. 10.

[16]Investors' willingness to pay for additional auditor disclosures presupposes that the auditor's communication would serve to meaningfully *differentiate* between the estimates and judgments made by different companies. If all companies' estimates and judgments are treated as equally reasonable, then this new communication will devolve into boilerplate that is of little use to investors. Differentiation is key.

[17]The failure of the audit report to communicate information about audit and financial reporting risks and how they were addressed is a perceived deficiency by other auditing standard setters as well (IAASB Consultation Paper, *Enhancing the Value of Auditor Reporting: Exploring Options for Change*, p. 8).

structured transactions (e.g., special purpose entities, particularly those where the business purpose is suspect);(b) related party transactions;(c) weak corporate governance structures, including concerns about tone-at-the-top or inadequate management oversight; and (d) the challenges involved in discovering suspect transactions in businesses where a particular type of transaction occurs in high volumes. As an example of the last category of risk, an unusually large amount of revenue recognized near period-end -- particularly if the transactions are not recorded through normal channels, involve new customers, and/or are recorded in round dollar amounts -- significantly raises the risk of fraudulent financial reporting.[18]

15. The auditor already gathers and assesses information relating to financial statement risks; in fact, it would be impossible to perform an audit in compliance with PCAOB standards without assessing risks (e.g., see PCAOB Auditing Standards No. 12 and 13). More importantly, under existing rules and practices the auditor already communicates most, if not all, of the desired risk-related information to the audit committee. AU ¶ 316.81 requires that “[t]he auditor also should consider communicating other fraud risks, if any, identified by the auditor. Such a communication may be part of an overall communication to the audit committee of business and financial statement risks affecting the entity and/or in conjunction with the auditor communication about the quality of the entity’s accounting principles.” Moreover, the auditor is required to document significant findings and issues, which would include significant risks and how the auditor addressed these risks, in an engagement completion document.[19]

16. Some parties believe that providing this information to investors would introduce new risks into the audit process. This concern is grounded in a belief that because the auditor and the audit committee have the opportunity to engage frequently in a private, two-way discussion, the auditor has more of an opportunity to provide additional context around its process and findings in its interactions with the audit committee than it would if periodic public disclosures were required. For example, the Center for Audit Quality (CAQ) states, “… we believe that providing investors with the same information that is provided to the audit committee, without the context obtained from a two-way dialogue may be incomplete, generate greater confusion and not enhance the overall understanding of the readers of such a report” (Center for Audit Quality comment letter on PCAOB Release No. 2011-003, p. 3). However, since all investors are invited to attend the Annual Shareholder Meetings, and given that the external auditor typically attends this meeting as well, it would seem that a productive two-way dialogue between investors and the auditor could occur in this context. And although the CAQcautions against providing the same information to investors that is provided to the audit committee, the former CEO of one major accounting firm envisions a world where auditors communicate to investors about risks and estimates and judgments. DiPiazza and Eccles state:

[18] Beasley, Carcello, Hermanson, and Neal. 2010.*Fraudulent Financial Reporting 1998-2007: An Analysis of U.S. Public Companies*.COSO.

[19]AS #3, *Audit Documentation*, ¶ 13.

> "Making the future better requires responding to the market's demand for audit opinions that say more about the information on the health of the business. Today, a great deal of this information is already reported by management, and for certain purposes is considered in the course of the audit, including such issues as management estimates, the possibility of fraud, risks, liquidity, and future scenarios. *The audit opinion could be expanded to address this information, as well as how all the pieces fit together as a whole*."[20]

17. To summarize, the substantial majority of investors who participated in the IAG survey would derive great value from receiving the same communications from the auditor regarding audit and financial statement risk which the auditor provides to the investors' representatives – the members of the issuer's audit committee. In our view, this change to existing practices would introduce significantly improved transparency into the audit process, which would benefit investors, the capital markets, and corporate governance generally.

*Unusual Transactions, Restatements, and Other Significant Changes*

18. The IAG survey respondents also want the auditor to report to investors any unusual transactions, restatements, and other significant changes. Sixty-seven percent of the respondents to the IAG survey want this information. A state government official stated regarding this proposed change, "An unbiased and objective discussion of these issues by the auditor may provide the investor with information necessary to make an informed investment decision."

19. In addition to the potentially fraudulent transaction types previously discussed (revenue transactions that are not recorded through normal channels, that involve new customers, and/or that involve even dollar amounts), unusual transactions in general may increase the risk of material misstatements in the financial statements. For example, round-trip transactions involving revenue, aggressive capitalization of expenditures, and transactions without a clear business purpose (particularly if entered into in a country with a weak rule of law and opaque disclosure regime), all pose heightened risk. Investors would benefit from knowing if an entity meets its earnings targets only as a result of engaging in these types of transactions, and also from understanding the auditor's evaluation of the economic substance of such transactions and how the auditor reached its conclusion.

20. The auditor already gathers and communicates information about unusual transactions to the audit committee. AU ¶380.07 requires the auditor to "… determine that the audit committee is informed about the methods used to account for significant unusual transactions …"

---

[20] DiPiazza, S. A., Jr., and R. G. Eccles. 2002. *Building Public Trust: The Future of Corporate Reporting*. New York, NY: John Wiley & Sons. (Emphasis added.)

21. The auditor already communicates information about restatements. Auditing Standard No. 6, ¶ 9 requires that, "The correction of a material misstatement in previously issued financial statements should be recognized in the auditor's report on the audited financial statements through the addition of an explanatory paragraph, as described in AU sec. 508." However, rather than relying only on the relatively uninformative boilerplate language currently required, investors would benefit from knowing more about the auditor's views regarding the nature and consequences of the misstatement, including, for example, the failures in internal control that permitted the misstatement to occur, whether in the auditor's judgment these internal control weaknesses have been satisfactorily remediated, whether the responsible parties for the misstatement remain in their positions, and whether the issuer's governance mechanisms have changed as a result of the misstatement. This type of information istypically not disclosed. Even when it is disclosed, the disclosure is not provided by the auditor.

22. Investors told us also that they want the auditor to discuss significant changes in the financial statements, especially those that are not apparent from reading the financial statements. For example, an entity may have changed its sales distribution channel from selling directly to end users to selling through value added resellers. Such a change increases the complexity of revenue recognition and hence raises financial statement and audit risk. Or perhaps a financial institution that historically has invested in conservative securities is now investing in structured debt instruments. The risk profile of these investment choices is quite different. The list of potentially significant changes is endless; the important point is that investors want the auditor to communicate its evaluation of significant changes, an assessment that the auditor would already have completed as a result of performing the audit.

*Quality of Accounting Policies and Practices*

23. The IAG survey respondents also want the auditor's report to include a discussion of the quality, not just the acceptability, of the issuer's accounting policies and practices. Sixty-five percent of the respondents to the IAG survey want this information. A senior portfolio manager at a money management firm stated regarding this proposed change, "This is very key. Substance over form is a lost auditing principle."

24. Critical accounting policies are likely to vary by company and industry, in areas including, for example, revenue recognition, asset capitalization and amortization, asset impairment, and investments. In these and other areas, companies often have discretion in applying GAAP. This discretion can have a material effect on reported amounts in the financial statements. For example, companies can have very different policies for when they begin to capitalize software development costs and how they amortize such capitalized costs to expense. Although various alternatives may be acceptable under GAAP, not all alternatives are of equal "quality" in terms

of reasonableness, transparency, and accuracy. The auditor's judgment on the quality, not just the acceptability, of an entity's critical accounting policies would be useful to investors. This issue is particularly relevant when management decides to make a discretionary accounting change – the auditor's opinion as to the quality of the change would be of significant relevance to investors.

25. As noted previously, auditors already gather and communicate significant information about the issuer's critical accounting policies. Section 204 of the Sarbanes-Oxley Act, and the resulting SEC implementation rules, require the auditor to communicate to the audit committee the entity's critical accounting policies. Moreover, AU ¶ 380.11 requires that, "In connection with each SEC engagement, the auditor should discuss with the audit committee the auditor's judgments about the quality, not just the acceptability, of the entity's accounting principles as applied in its financial reporting." This rule further provides that "… the discussion should be open and frank …" and should include discussion of "estimates, judgments, and uncertainties" and "unusual transactions."

26. Thus, AU ¶ 380.11 already requires the auditor to communicate his or her*judgment* about the quality, not just the acceptability, of the entity's accounting principles. Since the auditor is forming his or her own professional judgment about this issue, this puts the auditor in the position of communicating new information, rather than simply attesting to a statement made by management (i.e., management does not opine on the quality of its accounting choices). The distinction between the auditor communicating new information, which we believe is required by AU ¶ 380.11, and attesting to information reported by others is important because some parties have argued that auditors should not be placed in the position of being the original source of information provided to financial statement users. For example, according to the Center for Audit Quality (CAQ), the following overarching principle should guide any change to the auditor's report, "Auditors should not be the original source of disclosure about the entity; management's responsibility should be preserved in this regard."[21] However, we find it curious that the CAQ, an entity that speaks for the public accounting firms that audit public companies, would oppose a standard that required the auditor to be the original source of information about the entity when the present and former CEOs of the global accounting firms essentially advocated such direct reporting in their 2006 White Paper. The CEOs stated:

> "… users of financial information may demand from public companies the ability to receive more finely nuanced opinions from auditors about the *degree* of a company's compliance with a given set of standards, or the relative conservatism of judgments

[21]Center for Audit Quality. 2011. Comment letter on PCAOB Release 2011-003.

compared to peer groups. Or more boldly, investors even may want the auditor's views about the overall health and future prospects of the companies they audit."[22]

27. AU ¶ 380.11 already requires the auditor to be the *original source*in assessing the quality, not just the acceptability, of the entity's accounting principles. However, under current rules and practice the auditor delivers this assessment only to the audit committee, not to investors. Since both audit committees and investors are users of financial statements, the existing framework requires the auditor to communicate new information to some users of the financial statements but not to others. In this Orwellian-manner of thinking, all financial statement users are equal, some are just more equal than others. As representatives of the investor community, either as individuals or in our institutional capacities, we urge the PCAOB to include in any new rules relating to the audit report a requirement that the auditor discuss its assessment of the quality of the issuer's accounting policies and practices.[23]

*How an Improved Audit Report Would Add Value to the Investment Process*

28. A company's stock price reflects primarily the market's assessment of its future earnings stream discounted at a risk-adjusted rate. A key predictor of future earnings is current earnings, and the quality of currently reported earnings affects the reliabilityof investors' projections of future earnings. Disclosures about financial reporting risks, estimates and judgments, unusual transactions, and accounting policies would enable investors to better assess the quality of current earnings. Moreover, these disclosures would better inform investors' perceptions of the entity's risk, which may affect the discount rate used to value future earnings. Therefore, enhanced auditor disclosures should lead to more efficient pricing of equity securities, either through changes in expected future earnings and/or changes in the discount rate used to value future earnings. The present and former CEOs of the global public accounting firms agree, stating, "Better information about public companies … in a more user-friendly format, will improve the ability of investors to assess the value of companies. In this process, markets will become more efficient, and improve the allocation of capital and talent …".[24]

---

[22]DiPiazza, S. A., D. McDonnell, W. G. Parrett, M. D. Rake, F. Samyn, and J. S. Turley. 2006. *Global Capital Markets and the Global Economy: A Vision from the CEOs of the International Audit Networks.*

[23]Although we believe that the auditor should communicate much of the same information now communicated to audit committees, we recognize that certain communications between the auditor and audit committee should be confidential. For example, communication between the auditor and audit committee involving information that is proprietary, or that involves unresolved legal or personnel issues, among other items, should not be disclosed in the auditor's report.

[24]DiPiazza, S. A., D. McDonnell, W. G. Parrett, M. D. Rake, F. Samyn, and J. S. Turley. 2006. *Global Capital Markets and the Global Economy: A Vision from the CEOs of the International Audit Networks.*

29. Perhaps more fundamentally, we believe thatcreating substantive disclosure requirements for the auditor's report will enhance investors' efforts to price debt and equity securities and improve their and other stakeholders' ability to assess management's stewardship, risk management practices, and overall corporate governance effectiveness. These outcomes would promote more informed investment decisions and create a further incentive for management of corporations to adhere to sound practices in managing the company's business and reporting its results of operations.

Other Desired Changes

30. Other proposed changes to the audit report that our survey respondents support include auditor discussions of: (a) sensitivity analyses in significant areas of judgment; (b) quantitative, and especially qualitative, materiality thresholds; (c) the key issues discussed in the auditor's summary audit memorandum; and (d) the nature and extent of work performed by other audit firms, including global affiliate firms of the primary auditor.

31. In addition, we believe that the audit report should explain the auditor's responsibility for detecting material fraud. Auditing standards currently require the auditor to plan and perform the engagement to detect material misstatements, whether caused by error or fraud.[25] Yet in the scope paragraph of the standard audit report, the auditor simply states, "Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement."[26] The standard audit report should clearly state that the auditor has a responsibility to obtain reasonable assurance as to whether the financial statements are materially misstated, whether caused by error or fraud. In addition, the report should indicate that reasonable assurance represents a high, although not absolute, level of assurance.[27]

32. We further believe that the audit report should indicate the auditor's responsibility for auditing the financial statement disclosures (notes) as well as the primary financial statements.[28] Additionally, the auditor's report should indicate that the auditor is independent of the company and that the auditor has complied with the independence requirements of the SEC and PCAOB.

[25]AU ¶ 110.02, AU ¶ 230.10, and AU ¶ 316.01

[26]AU ¶ 508.08

[27]AU ¶230.10

[28]Since note disclosure is far too often boilerplate, auditors should specifically indicate why a disclosure has remained the same in a given year compared to the previous year when there has been a substantial change in the financial statements – e.g., a significant increase (decrease) in the allowance for doubtful accounts or warranty repairs with little or no additional disclosure by management. Such a lack of incremental disclosure should prompt a review by the auditor and the results of that inquiry should be communicated to users of the financial statements.

We are not opposed to amending the audit report to indicate that management has the primary responsibility for the fairness of the financial statements, nor to clarifying the auditor's responsibility with respect to other information in documents containing audited financial statements.

Manner in Which Additional Information Should be Communicated

33. We believe that investors would be best served if new auditor reporting requirements were communicated to investors in a new report that the PCAOB's Concept Release describes as an Auditor Discussion and Analysis (AD&A). The majority of respondents to the IAG survey believe that additional substantive communications should be included in an AD&A rather than in required explanatory paragraph(s) appended to the existing auditor report.[29] In addition, we believe, and our survey respondents supported, a requirement that the engagement partner sign his or her name (in addition to the firm name) to the audit report.

34. Even if the PCAOB adopts an AD&A requirement, we believe that the standard three-paragraph audit report shouldstill be revised to more clearly communicate the results of an audit (e.g., referring to reasonable assurance, and discussing the auditor's responsibility for detecting material misstatements whether caused by error or fraud).

35. In our view, the key challenge to the PCAOB is to prevent an AD&A from reverting into boilerplate disclosure – in other words, becoming only a lengthier version of the existing auditor's report, which, as our survey respondents overwhelmingly believe, provides no useful substantive information. If this initiative results in nothing more than additional boilerplate disclosure, then itwill have failed and any additional costs will represent a dead weight loss to investors and society. But that is not areason for abandoning the effort, but rather for ensuring that it is implemented effectively.

36. We believe that the best way to prevent an outbreak of boilerplate disclosure is by setting clear expectations for auditor behavior through adopted standards and upholding them through a rigorous inspection and enforcement program. Toward that end, we suggest that the Board require certain topics to be addressed in the AD&A (e.g., financial statement and audit risk,

[29] The key issue to investors is that the additional communication between auditors and investors occurs, the mechanism for this additional communication is of secondary import (i.e., the additional communication could be through our preferred AD&A or through required emphasis of matter paragraphs in the standard auditor's report). However, in order to be an adequate substitute for an AD&A, emphasis paragraphs would have to be used very differently than how they are currently used. Professor Carcello analyzed the most recent audit report for every company in the S&P 500 and only five emphasis paragraphs existed. Even more troubling, these emphasis paragraphs were quite limited in their information content (see Appendix 2 where the five audit reports containing emphasis paragraphs are reproduced). Moreover, simply using emphasis paragraphs to highlight important matters already disclosed by the issuer – i.e., to provide a roadmap to the financial statements – would clearly fail to meet the needs of investors for incremental disclosures from the auditor.

estimates and judgments, accounting policies, unusual transactions, etc.), but that it not prescribe the required language within each section. The accounting profession has expressed concern about "free writing" audit reports, but investors are well positioned to efficiently process and analyze such additional disclosures.[30] Investors' interests will be best served by designing a new AD&A in a manner that requires the auditor to express judgments and assessments in a relatively subjective manner, based on the unique facts and circumstances of each audit, rather than in accordance with tightly prescribed language. We agree with Mark Newsome, Managing Director of ING Capital, who stated during the PCAOB's Roundtable on the Auditor's Reporting Model: "And so, if management financials are different even within peer groups, then why should the audit opinion be identical for companies within a peer group?"[31]

Challenges to Changing the Audit Report

37. PCAOB board member Jay Hanson has expressed concern about the ability of audit firms to provide additional disclosures, particularly in view of the 60-day filing deadline for the Form 10-K for large accelerated filers. To examine this issue, Professor Carcello gathered the most recent annual earnings announcement date for each company in the S&P 500 (a good proxy for the universe of large accelerated filers). The median earnings announcement lag – the number of days from year-end to the earnings announcement date – was 33 days. Given that the auditor often "signs off" on earnings before the earnings announcement, this suggests that much of the work involved in auditing the financial statements (or at least of the income statement and balance sheet) is completed within this time period. We also gathered the most recent 10-K filing date for the same S&P 500 companies. The median filing date was 21 days longer than the median earnings announcement date. Therefore, if the audit of the earnings number is substantially complete within 33 days after year end, we see no reason for concern about the ability of the auditor to write an AD&A in the remaining 15 days, especially since much of the information that would be included in an AD&A would already have been gathered in conducting the audit of the financial statements and communicated by the auditor to the audit committee.[32]

38. PCAOB board member Lew Ferguson has expressed concern about the cost associated with changing the standard audit report and whether any additional cost would be justified by the

[30]Indeed, our entire system of securities regulation is premised on investors' ability to effectively process complex disclosures. Those investors who read financial statements are arguably those most likely to be able to make such judgments.

[31]Transcript of the PCAOB's Roundtable on Auditor's Reporting Model (September 15, 2011).

[32]We recognize that substantial audit evidence is gathered before year end (i.e., interim testing). But as this interim testing is performed, the information needed for the AD&A will be gathered as well and the firm could begin drafting the AD&A well in advance of year end.

anticipated benefits. As we have emphasized, the investors we surveyed aremerelyasking thatauditors communicate more of the information they already have compiled and, in many cases, have already communicated to the audit committee. Any cost associated with communicating additional information should reflect only the time required to draft and review the communication. We expect these costs to be relatively modest given that the information to be communicated already exists and, more importantly, in our view the benefits of additional disclosure clearly outweigh the costs.

39. The PCAOB, with its passage of AS #5 and its statements at that time, established a precedent for evaluating both the effectiveness and efficiency with which audit services are provided. If the Board can evaluate, and hold firms accountable, for their efficiency in auditing internal control, the Board presumably could exercise its authority in a similar fashion with respect to the drafting an AD&A.[33]

Conclusion

40. We believe that expanding communications between auditors and investors in the manner described above will offer other salutary effects for both investors and auditors. Requiring the auditor to discuss risks, estimates and judgments, accounting policies, and unusual transactions should strengthen the auditor's position in negotiations[34] with management and lead to an improvement in the quality of the numbers reported in the financial statements. Areas of disagreement between the auditor and management that are not material enough to result in a qualified opinion, but which would be discussed in an AD&A, would provide the auditor with additional leverage to encourage management to improve its reporting.[35] In fact, DiPiazza and Eccles make this very argument: "More expansive audit opinions would provide a greater level of assurance to stakeholders, while creating an incentive for companies to improve their

[33]Much, if not all, of what has been proposed as AD&A content should be data and inferences used by auditors to evaluate the level and change in client risk. Therefore, the incremental cost of an AD&A should be limited to the cost of internal drafting, review, and discussion with management and the audit committee of the final content of the AD&A.

[34]During an audit, areas of disagreement related to how transactions are recognized, measured, and disclosed can sometimes arise between the auditor and the issuer. If the disagreement is not material enough to require the auditor to issue a qualified opinion, the resolution of these disagreements is the result of a negotiation process between the auditor and the issuer.

[35]Some representatives of the public accounting profession have argued that if the auditor prepares an AD&A then management will simply adopt whatever estimates, judgments, and policies that the auditor prefers, and this may be suboptimal because management may have greater insight into these issues than the auditor. Although this argument can't be conclusively refuted, we would ask one simple question in reply – in today's reporting environment, does management or the auditor have more leverage? In our view, the existence of an AD&A would simply put the two parties on more equal footing.

corporate reporting practices."[36] Moreover, as the United Kingdom's FRC argues, more transparent auditor reporting to investors should lead to enhanced auditor skepticism, which is a bedrock trait of effective auditing.[37]

41. We also believe that expanded communication between the auditor and investors would provide a recurring reminder to auditors that investors are their true clients. As a result, the auditor should disclose in the AD&A what investors need to know to understand the entity's financial position, results of operations, and cash flows, including related financial reporting risks. The resulting change in mindset would, in the words of PCAOB Chairman James Doty, "… change auditing from a culture that emphasizes client service to a culture that emphasizes public service."[38] Such a change in culture aligns with the PCAOB's mission "… to protect the interests of investors and further the public interest in the preparation of informative, accurate and independent audit reports."

We, as members of the PCAOB's Investor Advisory Group, jointly submit this comment letter.

Sincerely,

Appendix 1 – Response to the Questions Posed in PCAOB Release No. 2011-003

1. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other financial statements.

   a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?

**We believe that the Board should undertake a standard-setting initiative to improve the auditor's report. We believe that the current auditor's report is deficient as a communication vehicle, and that significant changes to the auditor's report are needed to remediate these deficiencies. See paragraphs 4-6 for an elaboration of our position.**

   b. In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?

**We believe that the four most important changes to the audit report would require the auditor to: (1) discuss the auditor's assessment of the estimates and judgments made by management in preparing the financial statements and how the auditor arrived at that assessment; (2) disclose areas of high financial statement and audit risk and how the auditor addressed these risk areas; (3) discuss unusual transactions, restatements, and other significant changes in the financial statements (including the notes); and (4) discuss the quality, not just the acceptability, of the issuer's accounting practices and policies.**

   c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?

**The IAG did not consider this issue in our investor survey related to the auditor's report and, as such, we do not take a group position on this issue at this time.**

2. The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."

   a. Should the auditor's report retain the pass/fail model? If so, why?

**The auditor's report should retain the pass/fail model. There was not a consensus among the investors we surveyed as to whether removing the pass/fail model would improve the quality of the auditor's report. A number of our survey respondents found the binary nature of the audit report to be of use to them.**

b. If not, why not, and what changes are needed?

**We believe that the current pass/fail model should be retained.**

c. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.

**We believe that the standard audit report, with the pass/fail model being retained, should be supplemented with an Auditor Discussion and Analysis (AD&A). The additional information that should be communicated by auditors to investors (see our response to question 1b) would be included in an AD&A.**

3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.

**As the Board recognizes, some preparers and audit committee members argue that additional information about the company's financial statements should be provided by management (or by the audit committee). But the investors who responded to the IAG survey indicated that they want to receive additional communications about the company's financial statements from the auditor. Investors want direct communication from auditors because management's evaluations of its own estimates and judgments are inherently biased, whereas the auditor is an independent, objective third party. See paragraphs 9-11 for an elaboration of our position.**

4. Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and are they necessary?

**The IAG did not consider this issue in our investor survey related to the auditor's report and, as such, we do not take a group position on this issue at this time.**

5. Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?

**We believe that investors would be best served if additional auditor reporting were to take the form of a new report that the PCAOB's Concept Release describes as an Auditor Discussion and Analysis (AD&A). However, the key issue to the investors surveyed by the IAG is that the additional communication between auditors and investors occurs. The mechanism for this additional communication is of secondary import (i.e., the additional communication could be through our preferred AD&A or through required emphasis of matter paragraphs in the standard auditor's report). The respondents to the IAG survey believe that additional substantive communications should be included in an AD&A rather than via required explanatory paragraph(s) appended to the existing auditor report.**

a. If you support an AD&A as an alternative, provide an explanation as to why.

**The additional communications that investors want from auditors involves the analysis and discussion of various financial statement issues. As such, it appears most appropriate to include this communication in a new narrative document, designed for this purpose, rather than to include these disclosures in a required emphasis of matter paragraph. Moreover, under current auditing standards, emphasis-of-matter paragraphs are used to elaborate on information that is already disclosed in the financial statements. We believe that auditors should communicate to investors information that is already communicated to audit committees but that is not generally communicated to investors. Therefore, since the additional communication contemplates information that is not currently disclosed in the financial statements, an emphasis-of-matter paragraph may not be the best method of auditors communicating this information to investors.**

b. Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?

**We believe that an AD&A should comment on both the audit and the company's financial statements, although commentary on the company's financial statements would predominate. For example, investors want the auditor to: (1) discuss the auditor's assessment of the estimates and judgments made by management in preparing the financial statements and how the auditor arrived at that assessment; and (2) disclose areas of high financial statement and audit risk and how the auditor addressed these risk areas. Both of these disclosures include information about the company's financial statements and the audit of that information.**

c. Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?

**As stated previously, we believe the information most useful in making investment decisions, and that should be included in an AD&A, would require the auditor to: (1) discuss the auditor's assessment of the estimates and judgments made by management in preparing the financial statements and how the auditor arrived at that assessment; (2) disclose areas of high financial statement and audit risk and how the auditor addressed these risk areas; (3) discuss unusual transactions, restatements, and other significant changes in the financial statements (including the notes); and (4) discuss the quality, not just the acceptability, of the issuer's accounting practices and policies.**

**The types of disclosures desired by investors would be used to assess the company's future earnings potential, to assess the company's risk, and to evaluate the stewardship of management and the board of directors in overseeing the company's affairs. See paragraphs 28-29 for an elaboration of our position.**

d. If you do not support an AD&A as an alternative, explain why.

**We support an AD&A.**

e. Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?

**Although we believe that an AD&A is the best medium for auditor commentary on the audit and the financial statements, the key issue to investors is that the additional communication between auditors and investors occurs. The mechanism for this additional communication is of secondary import (i.e., the additional communication could be through our preferred AD&A or through required emphasis of matter paragraphs in the standard auditor's report).**

6. What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?

**An AD&A should indicate areas of high financial statement and audit risk and how the auditor addressed these risk areas. The appropriate content and level of detail should reflect, subject to legitimate confidentiality concerns, the current structure of a summary audit memorandum prepared by the engagement partner at the conclusion of the engagement.**

7. What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?

**We believe that the auditor should communicate the following about the company's financial statements: (1) the auditor's assessment of the estimates and judgments made by management in preparing the financial statements and how the auditor arrived at that assessment; (2) unusual transactions, restatements, and other significant changes in the financial statements (including the notes); and (3) the quality, not just the acceptability, of the issuer's accounting practices and policies. Again, the appropriate content and level of detail should reflect, subject to legitimate confidentiality concerns, the current structure of a summary audit memorandum prepared by the engagement partner at the conclusion of the engagement.**

8. Should a standard format be required for an AD&A? Why or why not?

**We believe that the Board should require certain topics to be addressed in the AD&A (e.g., financial statement and audit risk, estimates and judgments, accounting policies, unusual transactions, etc.), but that it should not tightly define the required language within each section.**

9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?

**We believe that auditor reporting on risks be limited to those that affect audit and financial statement risk, at least at the current time. Auditor reporting on business, strategic, and operational risk would represent a significant expansion of audit scope, and it is not clear to us whether auditors currently have a comparative advantage in reporting on this type of information or whether investors would attach significant value to the auditor's perspective on these categories of risk.**

10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?

**In our view, the key challenge to the PCAOB is to prevent an AD&A from devolving into boilerplate disclosure. The best way to prevent boilerplate disclosure is by setting clear expectations for auditor behavior through adopted standards and upholding them through a rigorous inspection and enforcement program.**

**We are less concerned about the consistency of AD&A reports than are certain other parties. All partners and firms could report in a very consistent manner and the end result may be boilerplate disclosure. We believe that the marketplace can process, and would in fact benefit from, some variability in disclosure formats and practices.**

**Investors are well-positioned to analyze these additional disclosures. See paragraph 36 for further detail.**

11. What are the potential benefits and shortcomings of implementing an AD&A?

**The primary benefit is substantial incremental disclosure to investors from an independent and objective source. The primary shortcoming is that there will be a cost to this disclosure, and an AD&A will be more subjective and have a greater variance than existing auditor reports.**

12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?

**We believe that the threat that the auditor's communication would diverge from that of management would strengthen the auditor's bargaining position and lead to an improvement in the recognition, measurement, and disclosure practices followed by management. See paragraph 40 for further detail.**

13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?

**Investors might benefit from having the auditor highlight significant related party transactions and accounting matters affecting the comparability of the financial statements in an emphasis-of-matter paragraph. However, since these matters are already disclosed in the financial statements, we expect that any benefit would be modest. However, if the Board decides against requiring an AD&A, we would support requiring emphasis paragraphs to discuss significant estimates and judgments, financial statement and audit risk, unusual transactions and other significant changes, and the quality of the entity's accounting policies and practices.**

14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?

**Only if the Board decides against requiring an AD&A.**

   a. If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.

**We prefer an AD&A to emphasis paragraphs.**

   b. If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.

**See our response to question #13.**

15. What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?

**See our response to question #13.**

16. What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?

**The appropriate content and level of detail should be patterned after the disclosure in the summary audit memorandum prepared by the engagement partner at the conclusion of the engagement.**

17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?

**See our response to question #10.**

18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?

**See our response to question #13.**

19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?

**The IAG did not consider this issue in our investor survey related to the auditor's report and, as such, we do not take a group position on this issue at this time. We therefore do not respond to questions 19a-19g and 20.**

a. If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.

b. On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.

c. What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?

d. If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?

e. Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?

f. Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?

g. If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.

20. What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?

21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:

- Reasonable assurance
- Auditor's responsibility for fraud
- Auditor's responsibility for financial statement disclosures
- Management's responsibility for the preparation of the financial statements
- Auditor's responsibility for information outside the financial Statements
- Auditor independence

a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?

**We believe that the audit report should indicate the auditor's responsibility for detecting material fraud. The standard audit report should clearly explain that the auditor has a responsibility to obtain reasonable assurance as to whether the financial statements are materially misstated, whether caused by error or fraud. In addition, the report should indicate that reasonable assurance represents a high, although not absolute, level of assurance.**

**We further believe that the auditor should describe its responsibility for auditing the financial statement disclosures (notes) as well as the primary financial statements. Additionally, the auditor's report should indicate that the auditor is independent of the company and that the auditor has observed the independence requirements of the SEC and PCAOB. We are not opposed to amending the audit report to indicate that management has the primary responsibility for the fairness of the financial statements, nor to clarifying**

**the auditor's responsibility with respect to other information in documents containing audited financial statements. See paragraphs 31 and 32 for further details.**

b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.

**Yes. These clarifications would better explain to financial statement users the auditor's responsibility for detecting material misstatements due to fraud, would provide an acknowledgement that the auditor is responsible for auditing the financial statement notes, and would indicate that reasonable assurance is a high level of assurance (although not absolute assurance).**

c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?

**The audit report should disclose the nature and extent of work performed by other audit firms, including affiliate firms of the primary auditor (see paragraph 30). Also, the engagement partner should be required to sign the audit report (see paragraph 33).**

d. What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?

**We believe that the foregoing clarifications would not change the auditor's responsibilities, as they would simply clarify for the reader of the audit report the auditor's responsibilities under existing professional standards.**

22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?

**The benefit is that financial statement readers will have a better understanding of the auditor's current responsibilities. We are not aware of any major downside from requiring these clarifications.**

23. This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?

**We prefer an AD&A for the reasons previously articulated.**

24. Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?

**We prefer adding clarifying language to the standard audit report (see our response to #21a), and to requiring an AD&A to communicate new information to financial statement users.**

25. What alternatives not mentioned in this concept release should the Board consider?

**We believe that the changes in auditor reporting advocated in this comment letter would serve investors well at the current time.**

26. Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?

**We believe that the Board should write rules in a way that will encourage, or require, narrative commentary that is specific to the audit rather than formalized, non-specific recitations that fail to provide meaningful information.**

27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?

**The perception of a qualified or piecemeal opinion should not exist if the standard audit report is maintained (with modifications) and is supplemented with an AD&A. Moreover, the auditor would not be expressing an opinion in the AD&A.**

28. Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?

**The clarifying language we suggest would better convey the auditor's role in the performance of an audit. The problem isn't the auditor's role in the performance of the audit. The problem is that the auditor doesn't communicate enough about what he or she did and found. An AD&A addresses this problem.**

29. What effect would the various alternatives have on audit quality? What is the basis for your view?

**We believe that an AD&A would improve audit quality as its preparation would strengthen the auditor's position in negotiations with management relating to appropriate accounting treatments and disclosures. See our response to question #12.**

30. Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain

entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.

**We believe that the changes we advocate should be applied to all SEC registrants, unless a compelling case can be made for an exclusion. However, given that an AD&A would be a new requirement and there will almost certainly be a learning curve, implementing the requirement on a staggered basis depending on the issuer's size would be reasonable.**

31. This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.

    a. Are any of these considerations more important than others? If so, which one and why?

**We are most concerned about the impact of any change on audit quality, and audit effort and audit quality are positively correlated. However, as previously articulated, we believe that the changes we advocate will improve audit quality.**

    b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?

**We believe that the benefits of an AD&A, assuming the AD&A includes the type of information we advocate and assuming boilerplate can be avoided, will exceed any reasonable level of incremental costs. See paragraphs 38 and 39 for additional detail.**

    c. Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?

**None that we want to raise at this time.**

    d. What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?

**Not applicable given our response to question # 31c.**

32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?

**As stated previously, we believe that providing additional information, either in an AD&A or in emphasis-of-matter paragraphs will strengthen the auditor's position in negotiations with management. We also believe that since audit committees oversee the financial**

**reporting process, that requiring the auditor to communicate additional information to investors will encourage the audit committee to become more actively engaged in overseeing the financial reporting process.**

Appendix 2 – Most Recent Audit Reports for S&P 500 Companies Containing an Emphasis-of-Matter Paragraph

"Other Emphasis of Matter"

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Shareholders of American International Group, Inc.:

In our opinion, the consolidated financial statements listed in the accompanying index present fairly, in all material respects, the financial position of American International Group, Inc. and its subsidiaries (AIG) at December 31, 2010 and 2009, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2010 in conformity with accounting principles generally accepted in the United States of America. In addition, in our opinion, the financial statement schedules listed in the accompanying index present fairly, in all material respects, the information set forth therein when read in conjunction with the related consolidated financial statements. Also in our opinion, AIG maintained, in all material respects, effective internal control over financial reporting as of December 31, 2010, based on criteria established in Internal Control — Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). AIG's management is responsible for these financial statements and financial statement schedules, for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in Management's Report on Internal Control Over Financial Reporting appearing under Item 9A in the 2010 Form 10-K. Our responsibility is to express opinions on these financial statements, on the financial statement schedules, and on AIG's internal control over financial reporting based on our integrated audits. We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement and whether effective internal control over financial reporting was maintained in all material respects. Our audits of the financial statements included examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements, assessing the accounting principles used and significant estimates made by management, and evaluating the overall financial statement presentation. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

As described in Note 2 to the consolidated financial statements, AIG changed the manner in which it accounts for other-than-temporary impairments of fixed maturity securities as of April 1, 2009, as well as the classification of non-controlling interests in partially owned consolidated subsidiaries as of January 1, 2009. Also, as of January 1, 2008, AIG adopted a new framework for measuring fair value and elected an option to report selected financial assets and liabilities at fair value.

As described in Note 1 to the consolidated financial statements, AIG completed a series of integrated transactions to recapitalize AIG with the Department of Treasury, the Federal Reserve Bank of New York and the AIG Credit Facility Trust on January 14, 2011.

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (i) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (ii) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (iii) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements. As described in Management's Report on Internal Control Over Financial Reporting appearing under Item 9A in the 2010 Form 10-K, management has excluded Fuji Fire & Marine Insurance Company, from its assessment of internal control over financial reporting as of December 31, 2010 because AIG acquired a controlling interest in Fuji Fire & Marine Insurance Company in 2010. We have also excluded Fuji Fire & Marine Insurance Company from our audit of internal control over financial reporting. The total asset and total revenues of Fuji Fire & Marine Insurance Company constitute approximately 2 percent and less than 2 percent, respectively, of the related consolidated financial statement amounts as of and for the year ended December 31, 2010.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

/s/ PricewaterhouseCoopers LLP

New York, New York February 24, 2011

"Other Emphasis of Matter"

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Shareholders of Morgan Stanley:

We have audited the accompanying consolidated statements of financial condition of Morgan Stanley and subsidiaries (the "Company") as of December 31, 2010 and 2009 and the consolidated statements of income, comprehensive income, cash flows, and changes in total equity for the calendar years ended December 31, 2010 and 2009, the one month ended December 31, 2008, and the fiscal year ended November 30, 2008. These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2010 and 2009, and the results of their operations and their cash flows for the calendar years ended December 31, 2010 and 2009, the one month ended December 31, 2008, and the fiscal year ended November 30, 2008, in conformity with accounting principles generally accepted in the United States of America.

As discussed in Note 1 to the consolidated financial statements, the Company changed its fiscal year end from November 30 to December 31.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's internal control over financial reporting as of December 31, 2010, based on the criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission, and our report dated February 28, 2011 expresses an unqualified opinion on the Company's internal control over financial reporting.

"Other Emphasis of Matter"

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Shareholders

Scripps Networks Interactive, Inc.

We have audited the accompanying consolidated balance sheets of Scripps Networks Interactive, Inc. and subsidiaries (the "Company") as of December 31, 2010 and 2009, and the related consolidated and combined statements of operations, accumulated other comprehensive income (loss) and shareholders' equity, and cash flows for each of the three years in the period ended December 31, 2010. Our audits also included the financial statement schedule at Page S-2. These financial statements and financial statement schedule are the responsibility of the Company's management. Our responsibility is to express an opinion on the financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated and combined financial statements present fairly, in all material respects, the financial position of Scripps Networks Interactive, Inc. and subsidiaries as of December 31, 2010 and 2009, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2010, in conformity with accounting principles generally accepted in the United States of America. Also, in our opinion, such financial statement schedule, when considered in relation to the basic consolidated and combined financial statements taken as a whole, presents fairly, in all material respects, the information set forth therein.

As discussed in Note 1 to the consolidated and combined financial statements, prior to its separation from The E.W. Scripps Company ("E.W. Scripps"), the Company reflects the combined financial position, results of operations and cash flows of the Scripps Networks and Interactive Media businesses of E.W. Scripps. The combined financial statements also include allocations of certain general corporate overhead expenses from E.W. Scripps. These costs may not be reflective of the actual level of costs which would have been incurred had the Company operated as a separate, stand-alone public company apart from E.W. Scripps.

As disclosed in Note 3 to the consolidated and combined financial statements, the consolidated and combined financial statements have been adjusted for the retrospective application of Accounting Standards Codification (ASC) 810, Consolidation (formerly Statement of Financial Accounting Standards (SFAS) No. 160, Noncontrolling Interests in Consolidated Financial Statements), which became effective January 1, 2009.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's internal control over financial reporting as of December 31, 2010, based on the criteria established in Internal Control—Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated March 1, 2011 expressed an unqualified opinion on the Company's internal control over financial reporting.

"Other Emphasis of Matter"

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Stockholders of Dr Pepper Snapple Group, Inc.

We have audited the accompanying consolidated balance sheets of Dr Pepper Snapple Group, Inc. and subsidiaries (the "Company") as of December 31, 2010 and 2009, and the related consolidated statements of operations, stockholders' equity and other comprehensive income (loss), and cash flows for each of the three years in the period ended December 31, 2010. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of Dr Pepper Snapple Group, Inc. and subsidiaries at December 31, 2010 and 2009, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2010, in conformity with accounting principles generally accepted in the United States of America.

As discussed in the notes, the consolidated financial statements of the Company include allocation of certain general corporate overhead costs through May 7, 2008, from Cadbury Schweppes plc. These costs may not be reflective of the actual level of costs which would have been incurred had the Company operated as a separate entity apart from Cadbury Schweppes plc.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's internal control over financial reporting as of December 31, 2010, based on the criteria established in Internal Control-Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated February 22, 2011 expressed an unqualified opinion on the Company's internal control over financial reporting.

/s/ Deloitte & Touche LLP Dallas, Texas February 22, 2011

"Other Emphasis of Matter"

REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Shareholders and Board of Directors of Marshall & Ilsley Corporation

We have audited the accompanying consolidated balance sheets of Marshall & Ilsley Corporation and subsidiaries (the "Corporation") as of December 31, 2010 and 2009, and the related consolidated statements of income, equity, and cash flows for each of the three years in the period ended December 31, 2010. These financial statements are the responsibility of the Corporation's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of Marshall & Ilsley Corporation and subsidiaries as of December 31, 2010 and 2009, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2010, in conformity with accounting principles generally accepted in the United States of America.

As discussed in Note 26 to the consolidated financial statements, on December 17, 2010, the Corporation and Bank of Montreal announced that they had entered into a definitive agreement under which Bank of Montreal will acquire all outstanding shares of common stock of the Corporation in a stock-for-stock transaction.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Corporation's internal control over financial reporting as of December 31, 2010, based on the criteria established in Internal Control — Integrated Framework issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated March 1, 2011 expressed an unqualified opinion on the Corporation's internal control over financial reporting.

Setting the global standard for investment professionals

September 30, 2011

PCAOB
Office of the Secretary
1666 K Street, N.W.
Washington, D.C. 2006-2803

*Reference:* PCAOB Rulemaking Docket Matter No. 34

CFA Institute[1], in consultation with its Corporate Disclosure Policy Council ("CDPC")[2], appreciates the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB) *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements.*

CFA Institute is comprised of more than 100,000 investment professional members, including portfolio managers, investment analysts, and advisors, worldwide. CFA Institute seeks to promote fair and transparent global capital markets, and to advocate for investor protections. An integral part of our efforts toward meeting those goals is ensuring that the quality of corporate financial reporting and disclosures provided to investors and other end users is of high quality.

## General Comments

*CFA Institute Support for Changes to the Auditor's Reporting Model*

CFA Institute supports the efforts of the PCAOB to improve the independent auditor's reporting model. We have long expressed the need to improve the Standard Auditor's Report (SAR) as a means of communicating important information to investors and other users regarding the audit of a company's financial statements. It is our belief that the SAR along with the financial statements and management's discussion and analysis should be considered part of a holistic communication of valuable information to investors to make informed capital allocation decisions. Significant efforts and costs go into an audit, yet investors are provided very little information in the three paragraph report provided by the current SAR. Through increased

[1] With offices in Charlottesville, VA, New York, Hong Kong, and London, CFA Institute is a global, not-for-profit professional association of more than 100,000 investment analysts, portfolio managers, investment advisors, and other investment professionals in 133 countries, of whom nearly 83,000 hold the Chartered Financial Analyst® (CFA®) designation. The CFA Institute membership also includes 135 member societies in 57 countries and territories.

[2] The objective of the CDPC is to foster the integrity of financial markets through its efforts to address issues affecting the quality of financial reporting and disclosure worldwide. The CDPC is comprised of investment professionals with extensive expertise and experience in the global capital markets, some of whom are also CFA Institute member volunteers. In this capacity, the CDPC provides the practitioners' perspective in the promotion of high-quality financial reporting and disclosures that meet the needs of investors.

transparency, a revised auditor's reporting model should heighten user confidence in the audited financial statements and better inform them about the auditor's role.

The current SAR contains largely "boilerplate" language which has contributed to an "expectations gap", commonly understood as the gap between the auditor's performance, the auditor's communication of what they did, and the users' expectations regarding the audit process and findings. It is our belief that enhancements to the SAR hold the greatest promise to narrow this expectations gap and to provide decision-useful information to investors.

We are hopeful that the PCAOB will not delay enacting significant changes to the auditor's reporting model.

*CFA Institute Surveys Support Changes to the Auditor's Reporting Model*
CFA Institute has conducted multiple surveys[3] of our membership over the last few years on the importance of the SAR to investors and its information content. These surveys have consistently shown that the auditor's report is important to the analysis of financial statements but that it should provide more information about the basis for the auditor's opinion.

Among the more significant survey findings are:

- Seventy-two percent of respondents indicated that the auditor's report is important to the analysis and use of financial statements in the decision-making process.
- Fifty-eight percent of respondents indicated that the auditor's report needs to provide more specific information about how the auditor reaches their opinion.
- A large majority of respondents indicated that more information regarding materiality, auditor's independence, management's critical accounting judgments and estimates, and key areas of risk is important.

These surveys indicate that investors desire more qualitative information about the audit findings and audit process.

*CFA Institute Observations on the Pass/Fail Reporting Model*
The SAR has been commonly described as a pass/fail model since the auditor expresses an opinion on whether the financial statements are fairly presented (pass) or not (fail). This aspect of the SAR is beneficial because it is brief, clear, consistent and comparable. It benefits those investors who want to quickly scan the SAR for departures from the unqualified report. However, it has limited utility for those who desire a more thorough and complete understanding of the audit findings and the audit process. For this reason we believe that the pass/fail element of the model should be retained but, as explained in our responses to the specific questions from the PCAOB, it should be supplemented with additional information.

http://www.cfainstitute.org/Survey/usefulness_of_independent_auditors_report_survey_results_march_2011.pdf
CFA Institute, Independent Auditor's Report Survey Results, March 2010
http://www.cfainstitute.org/Survey/independent_auditors_report_survey_results.pdf

*Auditor's Discussion and Analysis vs. Emphasis of a Matter*
The principal consideration regarding expanded disclosure of the audit findings and audit process should be the content, irrespective of where the information is reported. We preface our remarks, however, with the assumption that in either form (i.e. AD&A or emphasis of a matter) the additional disclosure will be a component of an auditor's report that will include the audit opinion. Whether the information is presented in AD&A or in emphasis of a matter paragraphs should not be a barrier to requiring the auditor to report the information, provided that in either situation it should carry the same level of professional accountability for quality.

Furthermore, while auditor reports are required to be delivered annually, we believe that the AD&A requirement should extend to quarterly financial statements as well. Although registrants are required to have quarterly reviews, there is generally no associated report. Investors would benefit from the auditor's perception of the quarterly financial statement reviews through disclosure of many of the same reporting attributes we specify in our response to Question 6.

*Improvements to the Current Auditor's Reporting Model will Require a Cultural Shift*
Investor needs should be paramount when considering revisions to the auditor's reporting model. Requirements should be set with a view toward providing the highest quality and most comprehensive information possible for investors. We draw attention to the PCAOB mission statement, which places investor interests in its first line:

> *The PCAOB mission is to oversee the audits of public companies in order to protect the interests of investors and further the public interest in the preparation of informative, accurate and independent audit reports.*

We believe that for meaningful changes to be effective the reporting responsibilities of the audit committee, management, and independent auditors will need to undergo a cultural shift in reporting mindset. The historical reporting relationship has tended to be viewed as the auditor reporting to the audit committee and to management, rather than as a communication to investors. Instead, the reporting considerations of the auditor should be directed to the user, since it is the users (i.e. investors) who contract with the auditor, not management.

Shifting from the current mindset will take time and, given liability concerns, many audit firms are likely to oppose the alternatives in the concept release. Moreover, there is the potential that, even with a new and expanded audit reporting model, liability concerns will quickly cause any new disclosure requirement to revert to boilerplate reporting. *We urge the PCAOB to bear in mind that the investor pays for and is the ultimate consumer of the auditor's report and that the boilerplate nature of the existing model requires improvement and use of boilerplate in the revised report, should be discouraged by issuing a well-written standard that is rigorously enforced.*

*Audit Committee Reporting*
Although the matter of audit committee reporting is not part of the Concept Release, we believe that investors would also benefit from enhanced reporting directly from audit committees. It is our belief that requiring greater reporting to investors by the audit committee would enhance the overall value of the audit and provide useful information to investors. We suggest that the

PCAOB work with the appropriate governing bodies in a separate initiative to enhance the audit committee reporting requirements for the benefit of investors.

*CFA Institute Responses to Specific Questions*
CFA Institute responses to specific questions are presented in the **Appendix** to this letter.

**Closing Remarks**

We thank the PCAOB for the opportunity to express our views on the Auditor's Reporting Model. If the PCAOB have questions or seek further elaboration of our views, please contact Matthew M. Waldron by phone at +1.212.705.1733, or by e-mail at matthew.waldron@cfainstitute.org.

Sincerely,

## Responses to Specific Questions

1. ***Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.***
   a. ***Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?***
   b. ***Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?***

CFA Institute supports the PCAOB initiative to improve the independent auditor’s reporting model. The current standard auditor’s report (SAR) is in need of enhancement to provide additional information beneficial to investors regarding the audit findings and audit process beyond what is provided by the current pass/fail model. The auditor provides a valuable service for the users of financial statements regarding the reliability of reported operating results, cash flows, and asset/liability balances. However, the current three paragraph, largely boilerplate, report is not sufficiently informative to meet the needs of investors who would benefit from further insights into the auditor’s perspective on the audit findings and the audit process. Changing the auditor’s reporting model, which has been largely unchanged for decades, holds the greatest promise of providing relevant and decision-useful information to investors, provided that it does not revert to uninformative boilerplate language.

We are not in favor at this time of expanding the auditor’s role to include assurance on matters outside of the financial statements beyond what is already presently required by the auditing and attestation standards. It is our belief that the PCAOB should remain focused on making the necessary and immediate changes to the existing auditor’s reporting model.

2. ***The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cashflows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."***
   a. ***Should the auditor's report retain the pass/fail model? If so, why?***
   b. ***If not, why not, and what changes are needed?***
   c. ***If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.***

As noted in our opening remarks, CFA Institute supports retention of some form of the existing pass/fail model. However the model should be supplemented with additional reporting requirements regarding the audit findings and the audit process as noted in our answer to Question 6. The pass/fail model provides a clear and consistent means for a user to assess the results of the audit and the auditor's opinion. There are many investors who mainly scan the SAR to identify departures from the unqualified opinion and the pass/fail model meets their needs. However, the information needs of those who desire more information regarding the audit findings and audit process are not met. A model that combines both a pass/fail opinion with additional reporting requirements is optimal and would satisfy the needs of most investors.

See our response to Question 6 for the additional information we believe should be added to the auditor's report.

3. ***Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.***

We believe that the information regarding audit findings and audit process is best provided by the auditors, not management. The auditors are in the best position to provide information about their perspective on the reported financial results and the audit process since they are an independent third party and can offer an objective unbiased assessment of the financial statements. Furthermore, an independent assessment of the accuracy of the financial statements is necessary in order to maintain the integrity of the financial reporting process.

4. ***Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?***

   No response.

5. ***Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?***
   a. ***If you support an AD&A as an alternative, provide an explanation as to why.***
   b. ***Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?***
   c. ***Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?***
   d. ***If you do not support an AD&A as an alternative, explain why***.
   e. ***Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?***

   As noted in our opening remarks, we believe that either an AD&A or emphasis of a matter paragraphs would be acceptable means of communicating additional information regarding the audit findings and audit process provided that both locations carry the equivalent level of professional accountability for quality. Our principal concern is that the information should be reported by the auditor in such a way that it is not construed to be reported by management.

We also urge the PCAOB to consider requiring an AD&A on quarterly and interim financial information since investors rely on these periodic filings and currently often do not receive a report on the reviews conducted by the auditor. An AD&A on interim filings would provide much needed transparency regarding these reviews.

See our response to Question 6 regarding type of information to be reported to users.

**6.** ***What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?***

In accordance with the PCAOB Auditing Standard No. 3 paragraph 13, the auditor must identify all significant findings or issues in an engagement completion document. This document identifies and discusses the significant findings or issues and the basis for conclusions reached in connection with each engagement. The information in the completion document would be of interest to investors because it provides the auditor's perspective on significant risks and other matters associated with the audit. Much of this information is already documented in the auditor's working papers in connection with the issuance of the auditor's report. We believe that the auditor should report these same matters in plain, non-boilerplate language. We are not suggesting any change in audit scope or additional procedures, but that the auditor simply report what was done in conducting the audit, using information already largely contained in the audit completion memo.

We believe that the PCAOB's Concept Release illustration starting on page 15 includes the following elements in addition to others that we would consider important:

- <u>Audit Risk</u>- Provide a discussion of significant risks identified by the auditor and include factors the auditor evaluated in determining which risks are significant and how they were audited and assessed. This risk assessment should include not only specific financial statement risks, but also the auditor's overall client risk assessment factors. Also discuss why the auditor views these risks as significant.
- <u>Auditor Independence</u>- Provide a discussion of any matters that were reported and discussed with the audit committee concerning independence.
- <u>Auditor Materiality</u>- Provide details about the quantitative and qualitative materiality levels and factors the auditor considered in establishing materiality levels.
- <u>Assessment of Management's Critical Accounting Judgments and Estimates</u>- Provide a discussion of the critical accounting estimates that were discussed with management or the audit committee, the assumptions underlying the critical accounting estimates, and the auditor's assessment of and findings associated with the evaluation of these critical estimates. This could also include a discussion of movements and ranges around critical estimates.

- Accounting Policies and Practices- Provide a discussion of:
  a. Discretionary changes in accounting principles or estimates affecting the consistency of reported amounts.
  b. Qualitative aspects of the company's accounting practices, financial statements and disclosures discussed with the audit committee or management.
  c. Material matters that, while in technical compliance with the financial reporting framework, could have enhanced disclosures to improve investor understanding of the matters.
  d. Significant unusual transactions in the current reporting period.

This discussion should focus on the reasons why the auditor considers changes in critical accounting policies to be significant and include a statement that they found no inconsistencies in their review. The auditor should also discuss any changes in accounting policies and practices not deemed critical by the auditor and/or management. The auditor should opine on any accounting policies and practices that represent a significant departure from policies and practices commonly applied by comparable firms in relevant industries.

- Summary of Unadjusted Audit Differences- List and discuss all unadjusted audit differences by financial statement line item.
- Audit Scope Changes & Unique Management Representations- Discuss audit scope limitations or expansion in audit scope and the impact on the financial statements. Additionally, include a description of any unique/non-standard representations included as a part of the management representation letter.
- Difficult or Contentious Issues, Including "Close Calls"- Discuss any difficult or contentious issues or "close calls" that arose during the audit and the final resolution of each issue.

***7. What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?***

See response to Question 6. However, it is worth reiterating that the appropriate level of detail would be that which is documented in the auditor's completion memo, but written in plain English.

***8. Should a standard format be required for an AD&A? Why or why not?***

We believe that there should be some overall guidance regarding the format and content, however, we caution against an overly prescriptive format that could lead to the reporting requirements becoming boilerplate. The main objective should be to communicate information about the audit findings and audit process tailored to a company's particular circumstances.

9. ***Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?***

   To the degree that business risks, strategic risks or operational risks have a direct bearing on the financial statements – such as those that may impact the valuation of assets and liabilities, the related critical accounting judgments and estimates or the entities ability to continue as a going concern – then the auditor should provide information about how those risk factors were assessed and the overall impact on the financial statements and their audit process and findings. It is our belief that the auditor should also be expected to communicate information with respect to risks associated with the audit and internal controls.

   We are not in favor of the auditor reporting on business risks, strategic risks or operational risks outside of those with direct impact on the reported amounts in the financial statements as noted above. Commenting on these areas would require the auditor to be more fully embedded in the management of the company on a more contemporaneous basis in order to have a complete understanding of the matters. This is not, in our view, the role of the independent auditor. Management on the other hand should comment on the business, strategic and operational risks through the MD&A.

10. ***How can boilerplate language be avoided in an AD&A while providing consistency among such reports?***

    Boilerplate language can be avoided if the auditor identifies and reports on the unique issues facing the company. Audits are customized to address these issues and the investors would benefit from an auditor report in similar terms.

    As previously mentioned, while we think there should be some overall guidance about the form and content of the additional reporting requirements, we do not think it should be overly prescriptive which could lead to boilerplate language in the report.

11. ***What are the potential benefits and shortcomings of implementing an AD&A?***

    We believe that the benefits of implementing additional disclosure by the auditor are clear; an enhanced understanding of the auditor's perspective on the critical issues of the audit findings and audit process which will result greater transparency for the benefit of investors is long overdue.

    The shortcomings in implementing AD&A are rooted in the cultural shift in the current auditor's reporting model. A switch from the current mindset that the auditor is reporting to management and the audit committee to a user focused reporting relationship may pose challenges. We believe that, through proper review and enforcement of the auditor's reporting by the PCAOB, the content and quality should improve.

12. ***What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?***

    There is the potential for the additional disclosure to present inconsistent or competing information between auditor and management. There are some who argue that this would only confuse investors and other users which is not the case. We believe that on balance it should improve management's presentation of the financial results. With the added transparency provided by the new reporting requirements, management and the auditor would be expected to work together to resolve differences in advance of issuing the audited financial statements.

    We also do not believe that undue consideration should be devoted to this concern. The point of the additional reporting requirements is for the auditor to communicate to the investor. There is informational value to the investor if the auditor and management report inconsistent or competing information. As an example, any audit difference is a reflection of a difference of opinion between the auditor and management. Disclosure of such differences will not confuse investors.

13. ***Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?***

    See response to Question 6.

14. ***Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?***
    a. ***If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.***
    b. ***If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.***

    See response to Question 6. If it is decided that emphasis of a matter paragraphs should be used, it should be made a requirement rather than be permitted and the contents of the emphasis of matter paragraphs should not be substantively different from contents of an AD&A.

15. ***What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?***

    See responses above.

16. ***What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?***

    See responses above.

*17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?*

We believe that the audit committee and the PCAOB are in the best position to ensure that audit reports do not include boilerplate language. Additionally, we think there should be guidance issued about the objective and preparation of the additional reporting requirements noted in our response to Question 6 and that it not be overly prescriptive but rigorously enforced.

*18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?*

See responses above.

*19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?*

*a. If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.*
*b. On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.*
*c. What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?*
*d. If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?*
*e. Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?*
*f. Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?*
*g. If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.*

See response to Question 1.

*20. What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?*

See response to Question 1.

*21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:*

- *Reasonable assurance*
- *Auditor's responsibility for fraud*
- *Auditor's responsibility for financial statement disclosures*
- *Management's responsibility for the preparation of the financial statements*
- *Auditor's responsibility for information outside the financial statements*
- *Auditor independence*

a. ***Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?***

b. ***Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.***

c. ***What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?***

d. ***What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?***

We believe that clarification of the auditor's responsibilities will assist investors to understand better the auditor's role and narrow the expectations gap. We draw particular attention for the need to clarify the auditor's responsibility for detecting and reporting material fraud, which would be especially beneficial to users. It is our belief that further explanation of the extent of the auditor's fraud detection responsibilities combined with clarification of the auditor's responsibilities under the reasonable assurance standards will help narrow the expectations gap.

Additionally, the auditor's responsibilities for matters outside of the financial statements should be clarified since currently there is some confusion regarding these responsibilities.

22. ***What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?***

The benefit is that the expanded language will close the expectations gap by clarifying the auditor's responsibilities and perspective on the financial statements. For example, auditor independence is not mentioned in the main body of the auditor's report aside from the reference to the "Independent Registered Public Accounting Firm" in the title. The report could be strengthened by additional wording to describe exactly that the auditor has the duty to be independent of the company.

Also, in the case of the auditor's responsibility for information outside the financial statements for example, the auditor is required to read the other information accompanying the financial statements. This responsibility is not contained in the audit report and, if included, would alert investors to this responsibility.

23. ***This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?***

See response below.

24. ***Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?***

As mentioned in our responses above, we are indifferent to whether an AD&A or emphasis of a matter paragraphs are used if the contents are the same and the degree of professional responsibility is identical. The most important considerations are that the investors receive the expanded disclosures directly from the auditor.

***25. What alternatives not mentioned in this concept release should the Board consider?***

As stated in our opening remarks, we believe that the PCAOB should consider a separate initiative on requiring that audit committees report directly to investors. However, this should come at a later date and not delay the immediate and necessary changes to the current auditor's reporting model.

***26. Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?***

In order to minimize the potential for boilerplate reporting we believe that the guidance should not be overly prescriptive. However, we do believe a framework is necessary in order to guide the preparation of the report.

***27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?***

We do not believe that investors would perceive any of the alternatives as qualified or piecemeal opinions. Rather, it would be seen as a more thorough and transparent basis for the audit opinion, especially by retaining the pass/fail element of the existing model.

***28. Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?***

The additional descriptive language regarding the auditor's responsibilities in the auditor's report is the most effective means of conveying to investors the auditor's role in performing the audit.

***29. What effect would the various alternatives have on audit quality? What is the basis for your view?***

We believe that the avoidance of boilerplate language and clear qualitative descriptions of the audit findings and the audit process directly by the auditor, including enhanced descriptions of the responsibility of the auditor, should improve audit quality.

***30. Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities?***

***If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.***

We believe that the requirements should apply to all entities given that the information is equally relevant and important to investors regardless of the type of entity. We also note that the distinction between public and private enterprises has become increasingly blurred in recent years due to the growth of private equity.

***31. This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.***

***a. Are any of these considerations more important than others? If so which ones and why?***

***b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?***

***c. Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?***

***d. What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?***

While we understand the challenges presented by changing relationships, audit effort, auditor liability, etc. we believe that they should not either individually or in the aggregate override the need to improve the auditor's reporting model. The auditor provides a key service on behalf of the investor and revision of the current ineffective model is essential to adding transparency to the audit process and purpose.

We are aware that there are those in company management and in the audit committee who will object to changes for a variety of reasons. For instance they will argue against changes to the already well entrenched auditor's reporting model because of increased exposure to legal actions and increased audit fees. However, investors and other users have been disadvantaged by the lack of transparency and the uninformative auditor's report currently in place. Investors pay either way, through increased costs for additional information or through lacking information to assist them in making informed investment decisions. We do not believe that requiring the auditor to describe the audit findings and the audit process is an expansion of scope. We are simply asking that auditor's report on what they did and their findings, including the factors unique to the company that influenced the auditor's process and decisions.

***32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?***

We believe that including the additional information in the auditor's report will strengthen the interaction among the auditor, management, and the audit committee. It will change the reporting model that is currently grounded solely in the auditor-to-management reporting relationship to one focused more on investors and other users of the financial statements. The resulting change in auditor mindset can only increase *de facto* independence.

Public Company Accounting Oversight Board
Office of the Secretary
1666 K Street, NW
Washington D.C. 20006-2803

**Rulemaking Docket #34**

Sirs:

I am a member of the Board of Directors of the following:

- Edison International (NYSE:EIX) and member of the Audit and Finance Committees,
- EuroPacific Growth Fund ("AEPGX"), New Perspective Fund, Inc., ("ANWPX") and New World Fund ("NEWFX"), all members of the American Funds family of mutual funds advised by Capital Research and Management Company ("CRMC"), Chair of the Audit Committees, designated Audit Committee Financial Expert and member of the Contracts Committees,
- Blue Shield of California, a not-for-profit health plan covering approximately three million members in California, Chair of the Audit Committee and member of the Finance and Compensation Committees,
- Forest Lawn Memorial Parks Association, a not-for-profit mortuary and cemetery business, member of the Audit, Risk Management and Investment Committees.

I was a partner of KPMG from 1986 to 1997 and an auditor and consultant to various public and private companies from 1976 to 1997.

My comments on the Public Company Accounting Oversight Board's ("PCAOB") *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements No. 2011-003, PCAOB Rulemaking Docket Matter #34* contained in this letter are mine alone and do not represent those of my fellow board members nor management of the above named companies.

I commend the Public Company Accounting Oversight Board ("PCAOB") for its efforts in evaluating the status quo to improve both understanding of the auditor's responsibility and written communication between financial statement users and the auditors. However, efforts towards improvement should not change the fundamental roles and responsibilities of a Board of Directors ("Board"), its Committees or the auditors.

Our system of corporate governance consists of shareholders electing a Board to provide management oversight. The Board delegates the oversight of financial reporting, including the system of internal controls and risk management to the Audit Committee. The companies I am involved with are well managed, ethical organizations resulting from "tone at the top", with open, honest and transparent communication between management, the Board, its Committees and the auditors. Each of the companies' management respond positively to Board or committee requests for information and to challenging questions asked with respect and a healthy dose of skepticism. My fellow Audit Committee members in each of the above organizations are professional, financially literate, diligent and very engaged.

The **Auditor Discussion and Analysis ("ADA")** contemplates public disclosure of much of what already occurs between the auditor and the Audit Committee (e.g. the auditor's Required Communications to the Audit Committee). Our Audit Committee discussions with management and the auditors, and in executive session with the auditors only, are very valuable. These discussions involve the auditor's assessment of significant audit risks; management's bias with respect to judgments, estimates, significant accounting policies and disclosures; any difficulties encountered during the audit and other issues pertinent to the situation. The Audit Committee members probe, ask follow-up questions and pursue other topics. The Audit Committee exercises judgment built up from years of personal experiences and education as well as knowledge of the company obtained over time. Requiring public disclosure of what have heretofore been private discussions would severely limit these discussions, if for no other reason than fear of litigation, reducing the effectiveness and benefit of an active audit committee process. I believe the ADA would undermine the role and responsibility of the Audit Committee by substituting the auditor for the Audit Committee's judgment and change the fundamental concept of corporate governance of a Board.

In addition, The PCAOB's ADA proposal may require delays in providing information to investors or at a minimum require changes to the year-end approval process if the ADA conflicts with the MD&A. Currently the schedule for large accelerated filers requires annual reports on Form 10-K to be filed within 60 days from the end of the year. Due to complexity of the accounting and reporting requirements, meeting these deadlines require significant time and resource commitments with little flexibility for resolving conflicts. It would be unlikely for the Audit Committee to accept an unqualified opinion with an ADA in conflict with the MD&A without additional meetings with management and the auditors to understand both parties' rationale and resolve the conflicts between management and the auditors. If resolution is unsuccessful, the Audit Committee will be in an untenable position because of the confusing message that this will send to investors.

The financial statements for SEC registered investment management companies are less complex than operating companies because there are fewer judgments and estimates. The most significant audit risk, existence and valuation of the investment portfolio, is determined fairly routinely because of the nature of the investments at least with respect to the afore mentioned mutual funds—large cap securities traded on major exchanges around the world. Management, utilizing third parties, values the investment portfolio daily and retains third party custodians to maintain safe-keeping of the assets. Annually, the auditors independently price 100% of the portfolio and confirm their existence with the custodians. Mutual funds are also exempt from MD&A requirements. It would seem that an ADA for mutual funds is not applicable because it does not improve current disclosure and would negatively impact shareholders due to increased audit costs.

As a result, I strongly oppose the requirement that auditors issue an ADA for the reasons mentioned above.

The Concept Release proposes mandating an **Emphasis Paragraph** in the auditor's report to highlight significant matters. Management is responsible for the financial statements and disclosures, which include all significant matters. The auditor's report with an unqualified opinion affirms that the financial statements and disclosures are fairly presented and free from material misstatement—confirmation that the auditor agrees with management's disclosures. An Emphasis Paragraph would appear to be redundant.

All investors are not equal and the Emphasis Paragraph could clarify for the individual or unsophisticated investor that the auditor's unqualified opinion means that they agree with management's disclosures. Although the Emphasis Paragraph does not appear to involve significant additional cost, it is likely to evolve into standardized language without improving current disclosure.

The auditor currently performs limited procedures on **Information Outside the Financial Statements** to assure that the information is materially consistent with the financial statements. The proposal to expand the auditor's limited procedures to assurance would not only be costly but also require the auditor to provide assurance on areas not within their expertise. MD&A guidance is not prescriptive and allows management the flexibility and judgment to decide what to disclose based upon their day-to-day working knowledge of operations, liquidity and capital resources, regulatory risk, legal matters, etc.

SEC registered investment management companies are exempt from MD&A and do not issue earnings releases. Mutual funds are required to provide Management's Discussion of Fund Performance in shareholder reports addressing subjects such as, market trends and portfolio strategies.

I oppose expanding the auditor's scope of work to Information Outside the Financial Statements because the auditor does not have the expertise nor have the same depth of knowledge as management. As a result, it seems likely that this approach would add more confusion rather than clarity to the reporting process and ultimately the disclosures.

**Clarification of The Auditor's Report** may help the individual or unsophisticated investor understand what an audit represents and the limitations to the auditor's responsibility, for example the detection of fraud. However, the sophisticated investor may not see any benefit. Although this alternative does not appear to involve additional cost, I believe that any proposed language should be standardized, consistent for all auditors and across all entities.

Thank you for considering my views.

Yours truly,

Vanessa C. L. Chang

**Re: PCAOB Rulemaking Docket Matter No. 34**

Chevron Corporation (Chevron) appreciates the opportunity to provide comments to the Public Corporation Accounting Oversight Board (PCAOB) on the concept release regarding possible revisions to PCAOB standards related to reports on audited financial statements – Rulemaking Docket Matter No. 34.

Chevron is a global, integrated energy company based in San Ramon, California. The company explores for, produces and transports crude oil and natural gas; refines, markets and distributes transportation fuels and other energy products; manufactures and sells petrochemical products; generates power and produces geothermal energy; provides energy efficiency solutions; and develops the energy resources of the future, including biofuels. The company's activities are widely dispersed geographically with operations in North America, South America, Africa, Asia, Australia and Europe.

We appreciate the PCAOB's consideration as to what might enhance communications to investors and what might lead to more efficient markets and improved allocations of capital. While there may be some opportunity for improvement within the current auditor's report to clarify what an audit represents and what an auditor's responsibility is, we strongly believe that it is management's responsibility to provide investors with information about the company and the financial statements. Many of the proposals in the concept release infringe upon this principle, which we believe should be protected and strengthened. If there are shortcomings in disclosure identified through the PCAOB's outreach efforts, we believe they should be addressed through additional rule-making by the appropriate authority (e.g. FASB or the SEC) to enact changes to management's reporting requirements. Additionally, we would like to note that we are not aware that our investors have asked for, or are asking for, any expansion in auditor communications. We believe that providing significant additional information in the auditor's report would impose real costs that will ultimately be borne by the company's shareholders, and therefore, that the incremental costs associated with providing this information should be carefully balanced with the perceived benefits.

Please see detailed responses below to selected questions, which provide further background and clarification of our position.

***Question 1.*** *Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.*
*c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?*

We do not believe the auditor's role should be expanded to provide assurance on matters in addition to the financial statements. The current scope of the auditor's role is adequate and functioning appropriately. Additionally, for a large, accelerated filer such as Chevron there may not be sufficient time for the auditor to complete the audit of the financial statements and provide assurance in additional areas. This could distract the auditor from their primary responsibilities and potentially reduce the quality of the audit of the financial statements. We do not believe that additional assurances from the auditor would be sufficiently useful to offset this risk and the incremental costs.

***Question 2.*** *The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."*
*a. Should the auditor's report retain the pass/fail model? If so, why?*

We believe that the current "pass/fail model" is adequate for the same reasons identified by investors in the PCAOB's outreach. The standardized language of the auditor's report provides consistency, comparability, and clarity of auditor reporting. We do not share the concerns about the standard auditor's report being "boilerplate"; in our view, a standard is the natural and predictable end result of a pass/fail process that is consistent and comparable. For most companies, the report quickly conveys the necessary information to investors. The greatest strengths of the report could be quickly lost, and confusion unnecessarily created, if auditors were to attempt to convey subtleties that underlie their opinion. This type of information should be documented in the auditor's workpapers and conveyed to the audit committee (as per existing requirements), but should not be communicated by the auditor directly to the investing community.

***Question 3.*** *Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.*

Financial reporting standards are very clear that the financial statements are the responsibility of the company's management. Management bears responsibility and certifies to the completeness and accuracy of the financial statements. Any additional information that is deemed necessary should be provided by management.

***Question 5.*** *Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?*
*d. If you do not support an AD&A as an alternative, explain why.*

We are strongly opposed to the Auditor's Discussion & Analysis (AD&A) as an alternative. As noted in our response to Question 3, providing information about the financial statements is the responsibility of management. There would be significant effort involved in preparing and reviewing an AD&A, discussing it with management and the board audit committee, and resolving potentially confusing differences between it and management's report. All of these activities would divert attention from each party's critical and distinct responsibilities regarding the financial statements and would blur duties between preparer and auditor.

Furthermore, all the key points noted as potential topics for the AD&A already have an established forum for their communication that does not distort the lines of responsibility. For example, the auditor's views regarding the company's financial statements - such as management's judgments and estimates, accounting policies and practices, and where the company could have applied different accounting or disclosures - is already required to be communicated by the auditor to the board audit committee. Management is already required to discuss its significant accounting policies in the notes to the financial statements and its critical accounting estimates and assumptions in Management's Discussion and Analysis (MD&A). The auditor audits the notes and reads the MD&A for consistency with the audited financial statements.
The auditor's significant judgments in forming the audit opinion should be documented in its working papers. These are subject to scrutiny through peer and PCAOB reviews and are not intended for the general public because of the confidentiality of the information, the high level of detail and the significant judgments involved. We do not believe that dissemination of this information should extend beyond existing frameworks.

In the concept release there is mention of significant, but not material, items using various characterizations: "close calls", "significant deliberations", and "potential material impact." The existing financial reporting and internal controls frameworks generally only require reporting of material items in the financial statements. All of the aforementioned characterizations begin to shift and distort those reporting requirements as more attention is paid to significant, but not material, items. Many existing standards and rules would have to be rewritten to further clarify this expansion of reporting. We do not believe this is necessary or efficient. While a healthy dialogue exists between management and the auditors regarding all types of significant items, it would be very difficult under existing reporting deadlines to develop useful and understandable discussions of those items for financial reports. We feel that existing reporting requirements regarding material items are adequate and functioning appropriately. Any move into partial reporting of some significant, but not material, items would only add cost and create potential confusion and overly expansive and confusing disclosures.

***Question 14.*** *Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?*
*b. If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.*

We do not support a requirement to include areas of emphasis in each audit report. We believe this will result in "boilerplate" language. Furthermore, existing standards already allow the auditors to add areas of emphasis at their discretion. We believe this is functioning as appropriate and preserves the auditor's ability to include or exclude references, as necessary, based on the circumstances involved.

***Question 19.*** *Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?*
*g. If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.*

We do not support auditor assurance on other information outside the financial statements. Under existing standards, the auditor already reviews the other information in documents containing audited financial statements and considers whether such information, or the manner of its presentation, is materially inconsistent with the financial statements or represents a material misstatement of fact. Management carefully considers any comments on this information provided by the auditor. Expanding the audit assurance effort to include the MD&A and earnings releases would substantially increase audit fees and there may not be adequate time to complete the additional procedures within existing reporting deadlines. Moreover, we believe this expansion of effort would not add meaningful value beyond that currently provided by the auditor's review of this information to ensure its consistency with the audited financial statements. If there are misunderstandings within the investing community about the scope and role of the auditor with regard to information outside the financial statements, we would support some inclusion in the auditor's report, which clarifies the existing role. See further discussion below.

***Question 21.*** *The concept release presents suggestions on how to clarify the auditor's report in the following areas:*

- *Reasonable assurance*
- *Auditor's responsibility for fraud*
- *Auditor's responsibility for financial statement disclosures*
- *Management's responsibility for the preparation of the financial statements*
- *Auditor's responsibility for information outside the financial statements*
- *Auditor independence*

*a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?*

We do not have any significant concerns with additions to the auditor's report to clarify terms or the auditor's existing responsibilities. Of the items noted, we believe it may be most useful to provide clarifications on the auditor's responsibility for monitoring fraud, the auditor's and management's responsibilities regarding the financial statements, and the auditor's responsibility for information outside the financial statements. Clarifying the definition of reasonable assurance and providing additional commentary on auditor independence would not add value. The auditor's independence is directly stated in the title of the report, "Report of Independent Registered Accounting Firm."

*b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.*

A succinct clarification of some of the above items could augment investors' understanding of what an audit is and what responsibilities the auditor has. We would expect that, with any new additions, a standard, unqualified auditor's report should still fit on a single page within the financial report.

***Question 23.*** *This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?*

The only option that Chevron supports is the clarification of certain items in the auditor's report. All of the other alternatives weaken the core principle that communicating information regarding the financial statements is the responsibility of management. The auditor should focus on completing the audit effectively and improving its communication with management and the board audit committee, within existing standards, which we believe to be adequate. The auditor should not have an expanded role in communicating information to investors and financial statement users beyond the inclusion of its opinion in the financial report. It is not surprising that the PCAOB would discover in its outreach efforts that investors would like to receive more information from the auditors. Likewise, they would certainly like to receive additional information from the company's external legal counsel, regulators, and other entities, which have access to information about the company that is not in its financial reports. However, we believe the confidential nature of much of this information and the complexity of the auditor's judgments underlying their opinion are most appropriate for their workpapers.

* * *

Re: PCAOB Release No. 2011-003; Rulemaking Docket Matter No. 034; Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards

Dear Mr. Baumann:

In Release No. 2011-003 (the "Release"), the Public Company Accounting Oversight Board (the "Board" or "PCAOB") solicited public comment on the potential direction of a proposed standard-setting project on the content and form of reports on audited financial statements. We compliment the Board on its outreach in connection with the preparation of the Release and urge it to continue its efforts to make the financial statements and the auditor's report more transparent and relevant to investors. We welcome the opportunity to comment on the Release and on this important issue.

## I. Introduction

Our perspective in considering the auditor's report is informed by our role as legal advisers that represent issuers and others in connection with a wide variety of matters that are intimately involved with the financial reporting process. Among those matters are the following:

- We advise issuers in the preparation of their disclosure, including, in particular, financial reporting, during which we work closely with management, audit committees and auditors.

- We advise issuers and underwriters in a wide variety of capital markets transactions for which financial reporting is a critical element.
- We advise issuers, investors, acquirors and other participants in a wide variety of corporate transactions, including mergers and acquisitions, in which financial reporting is also critical.
- The transactions in which we participate (both capital markets and corporate) include public transactions involving disclosure to a broad range of investors and private transactions involving sophisticated institutional investors.

In all of these contexts, we are dedicated to the full and fair disclosure – and in particular financial disclosure and reporting – called for by the federal securities laws, transparency to investors and markets, and the improvements in financial disclosure and reporting that are fostered by the application of robust auditing standards by independent external auditors.

The Release correctly acknowledges the investment community's concern that auditors might have information useful to investors and other financial statement users that is not communicated under the existing pass-fail model of the auditor's report. While we think some modifications to the auditor's report may be desirable, we believe the Board should keep four principles in mind as it considers any changes to the auditor's report.

First, any change to the auditor's role or report must have a significant probability of improving the financial reporting process and its results. Most of the alternatives discussed in the Release relate to providing investors more information about the audit process and the decisions of management, the audit committee and the auditors in connection with the audit and financial statements. Such disclosure only provides benefits if it in fact improves the quality of financial reporting. For example, the Release suggests consideration of whether to propose an Auditor Discussion & Analysis ("AD&A") where, among other topics, auditors would provide discussion of alternative accounting treatments permissible under the applicable financial reporting framework for policies and practices related to material items that have been discussed with management. We do not think a discussion of alternative accounting treatments necessarily improves investors' understanding of an issuer's financial statements, because it risks burdening investors with too much information that may obscure what is truly important. If the treatment adopted and disclosed by management conforms to generally accepted accounting principles ("GAAP"), then, by definition, such treatment is acceptable accounting and, under the standard of the auditor's report, must fairly present the issuer's financial position. Further, a voluntary change to applicable accounting principles generally requires the issuer to conclude, and the auditor to agree, that application of the new principle is preferable.

Second, if there is additional information regarding an issuer that should be disclosed, that disclosure should be the responsibility of, and should come from, the issuer and not the auditor or any other third party. As noted in the Treadway Commission's 1987 report,

> the responsibility for reliable financial reporting resides first and foremost at the corporate level. . . . Independent public accountants play a crucial, but secondary role. They are not guarantors of the accuracy or the reliability of financial statements. . . . [M]anagement's primary responsibility for reliable financial reporting should be emphasized, so that public understanding of the relative and complementary obligations of corporate management and independent public accountants is improved.[1]

While the Release notes that as a result of the performance of audit procedures, auditors have significant information regarding a company's financial statements, it is nonetheless the case that management has the best insight into the financial statements and financial condition of a company and has the greatest ability to make judgments about market conditions, risks and other factors that might be relevant to the future performance of a company. If the Board believes additional financial disclosure is useful to investors, efforts should be made with the Securities and Exchange Commission (the "Commission") to address such concerns, which we believe are beyond the scope of the auditor's report.

As an illustration of this principle, continuing with the example discussed above, if one were to conclude that it is sufficiently beneficial to include additional information about alternative accounting treatments in an issuer's disclosure document (a conclusion as to which we are skeptical), the issuer and not the auditor should be responsible for providing that disclosure. Issuers – not auditors – are responsible for what accounting principles are applied and should be responsible for explaining those choices if an explanation is necessary. Under current auditing standards, the auditors would be required to read that disclosure and determine that it is not in conflict with the financial statements (including the Significant Accounting Policies Note). This is consistent with the primary and secondary roles of the company and its auditors, respectively, in connection with financial reporting.

Third, any change to the auditor's reporting model should not alter the relationship and the structure of interactions among management, the audit committee and auditors as they have developed since the enactment of the Sarbanes-Oxley Act of 2002 and the related implementation of regulations and standards adopted by the Commission and the PCAOB ("Sarbanes-Oxley"). In our view, based on considerable personal observation of both the processes of these interactions and the results, the Sarbanes-Oxley reforms have significantly enhanced the financial reporting system and the quality and reliability of financial reporting by

---

[1] *See* National Commission on Fraudulent Financial Reporting, Report of the National Commission on Fraudulent Financial Reporting (Oct. 1987).

empowering audit committees and mandating communication among management, the audit committee and auditors in ways that have expanded the discussion well beyond the mandated matters and have in other respects enhanced the audit process. We think the regular and free-flowing dialogue of auditors with management and the audit committee, as well as the robust application of GAAP and generally accepted auditing standards, have resulted in better and more reliable financial disclosure to investors. The reforms also paved the way for additional opportunity and leverage for auditors to influence the financial statements (one of the potential benefits cited for the AD&A proposal discussed in the Release). Based on our direct experience, we are concerned that requiring auditors to make public disclosure about issuers would have a chilling effect on communications among management, audit committees and auditors. If management and audit committees believe auditors will be required to make communications public, they may be reluctant to engage in the honest and open dialogue encouraged by Sarbanes-Oxley that has resulted in more robust financial disclosure. In our view, such a development carries with it a serious risk that the quality of the overall audit process would decline and with it the quality and reliability of financial reporting. The Board should therefore evaluate proposals based on whether they are likely to encourage or discourage open dialogue among management, audit committees and auditors.

Fourth, the benefits of any path pursued by the PCAOB should of course outweigh the costs. We do not believe the purpose of cost-benefit analysis should be to stifle appropriate regulation. Rather, it is a widely held view that our current disclosure system, accounting principles and auditing standards are overly complicated and burdensome. High quality, reliable financial reporting is pressured by market and regulatory demand for timely information. In this environment, there are genuine benefits to focusing on narrow and incremental changes that have the greatest likelihood of improving disclosure and providing investors better information in a cost effective manner. Moreover, while the costs that should be considered include monetary costs, burdens on management and auditors, and increased length and complexity of financial statements and other financial disclosure, there are others, some of which are noted above. In particular, the risk of reducing the quality of both the financial statements and the internal control audit posed by adversely affecting the steadily improving structure of relations among auditors, audit committees and management is in our view an unacceptable cost. Moreover, we are concerned that many of the alternatives suggested in the Release to expand the role of the auditor or the breadth of the auditor's report will impose costs without accompanying benefits, because they will take time and money to implement but may merely lead to additional boilerplate language that provides little additional information.

Finally, in considering changes to the auditor's report, we should not undervalue the current audit process and the significance of the report under the pass-fail model. The pass-fail determination has value for investors because it clearly reflects that an audit has taken place under the current robust standards and provides reasonable assurance that the issuer has both financial statements in accordance with GAAP and internal controls that, except as disclosed, do not suffer from material weaknesses. Other information surrounding the audit may be useful, but we believe nothing about the audit process is as important to investors and markets as making the audit process (and the resulting pass-fail conclusions) as reliable as possible. In our professional judgment, a robust pass-fail auditing system contributes significantly to the accuracy and reliability of financial statements.

## II. Auditor's Discussion and Analysis ("AD&A")

An AD&A of the sort described in the Release would be inconsistent with the principles described above. Our primary concern is that AD&A asks auditors to provide disclosure that is the responsibility of the issuer. Not only are issuers appropriately responsible for disclosure about themselves, but they also are in a better position than auditors to reach conclusions about their financial reporting and craft disclosure even as to financial matters. And issuers are certainly in a better position than auditors to draft disclosure regarding other, non-financial matters. If investors perceive shortcomings in issuer disclosure, those gaps arise in the application of GAAP, the Commission's disclosure rules and guidance or the reporting practices of issuers. We do not think changing the role of the auditor, adding auditor-authored sections to disclosure documents or altering the auditor's report is the best way to address concerns regarding the need for additional or enhanced financial disclosure. Rather a discussion of such concerns should include the Commission and the PCAOB in a broader dialogue with issuers and other market participants.

We understand that some investors believe auditors can provide insight into an issuer's financial statements due to the auditors' independence or familiarity with industry participants other than the issuer in question. The fact that auditors are independent, however, does not address whether they should provide disclosure regarding the issuer. The Commission's independence standards under Rule 2-01 of Regulation S-X speak to whether an auditor is objective in carrying out its audit of an issuer's financial information. We do not believe independence is probative of an auditor's ability to analyze or provide disclosure regarding an issuer or industry or supplant the judgments of an issuer. Any proposals should be careful not to confuse independence with expertise in crafting better disclosure.

We also believe the premise that industry familiarity provides auditors with an advantage that allows them to provide significantly better disclosure than issuers should be closely examined. In our experience, management is generally very familiar with industry practices. While industry familiarity can provide auditors an experience base for the current discussions that go on between auditors and management, it is difficult to see how it would translate into better disclosure. As a matter of professional confidentiality, an auditor will not be able to disclose that client Company A follows more or less preferable accounting than client Company B (or C or D). Instead, we believe internal discussions among management, audit committees and auditors regarding industry practice are more likely to lead to better financial reporting than disclosure regarding industry practice in a specified area of accounting.

Another issue with AD&A is that the proposed topics for disclosure may be of limited use to investors. For instance, the illustrative AD&A included in the Release suggests that auditors would provide discussion of difficult or contentious issues or "close calls" that arose during the audit and the final resolution of such issues, such as accounting matters that required significant deliberation by the auditor and management before being deemed acceptable within the applicable financial reporting framework. In our experience, when we focus on difficult financial disclosure questions with issuers, a matter often requires significant deliberation because it is extraordinarily important to the financial statements or is in an area where it is difficult to apply accounting principles because, for example, of the subjective judgments and estimates required. Put another way, as a general matter, extensive focus and deliberation may not be indicative of an issuer trying to "push the envelope" in application of accounting principles. The fact that the parties carefully thought about an issue for an extended period of time does not necessarily mean investors gain greater clarity into the company's financial statements from disclosure of those discussions. On the other hand, if the focus on difficult questions in the application of accounting principles or the use of accounting estimates is intended to illuminate the most important and challenging accounting judgments reflected in a company's financial reporting, we believe this is an area where, as further discussed below, disclosure enhancements can productively be considered.

The Board should also consider the effect AD&A would have on the Sarbanes-Oxley reporting framework. Any requirement that auditors make substantive public disclosures about the issuer will adversely affect the audit process, and the related corporate governance process, by inhibiting candid discussion and exchange among management, the audit committee and the auditor. Furthermore, the Sarbanes-Oxley reforms included measures, such as the CEO and CFO certifications as to disclosure and internal controls and the auditor's report on the effectiveness of internal control over financial reporting, to address concerns over the reporting process. The financial reporting process and related corporate governance have improved in the wake of Sarbanes-Oxley, and as discussed above, we fear this "chilling" effect carries with it a significant risk of adversely affecting the quality of audits and the accuracy and reliability of financial reporting.

A final concern we have with AD&A as proposed is our strong belief that it will devolve into boilerplate. Issuers and auditors alike fear that increased disclosure will lead to increased liability. There is a high degree of probability that AD&A will result in standardized disclosure and not meaningful company-specific individualized disclosure. Individualized disclosure will continue to be left to issuers. To the extent disclosure enhancements would be beneficial, issuer disclosure under the Commission's rules should be the focus.

## III. Modifications to the Auditor's Report

### A. Critical Accounting Policies and Estimates

At the September 15, 2011 Roundtable, during the discussion of AD&A, the possibility was raised of considering an important but more narrowly focused report on critical accounting policies and estimates, where additional attention by issuers and additional involvement by auditors would be both beneficial to investors and cost effective. While we do not believe a targeted discussion of critical accounting policies and estimates is appropriate within the broad rubric of AD&A (with the defects inherent in that approach described above), we do believe consideration should be given to focused auditing standard-setting on critical accounting policies and estimates. This area is ripe for auditor review because, as investors indicated in the Board's outreach effort, there remains a need for better disclosure of the impact of estimates and judgments by issuers. As noted in the Release:

> [s]ince reasonable estimates might vary significantly, there could be a wide range of acceptable results within a company's applicable financial reporting framework. Further, this range of acceptability is not mentioned in the auditor's report and might not be fully reflected in the financial statements.[2]

We believe, in connection with the PCAOB considering a new auditing standard, it would be valuable for the Commission to provide further guidance with respect to critical accounting policies and estimates disclosure. After two releases discussing critical accounting policies in December 2001 and January 2002, the Commission issued proposed rules on critical accounting policies in May 2002.[3] The Commission did not complete the process of a formal rulemaking. Instead it offered guidance on critical accounting policy disclosure in its December 2003 interpretive release on Management's Discussion and Analysis of Financial Condition and Results of Operations ("MD&A").[4] If auditors are to assist in a process of improving disclosure to investors, the Commission should consider whether it would be beneficial to consolidate the existing disclosure guidelines and give further guidance through additional formal rulemaking. In our view, it is important that any new guidance not provide for increased disclosure (in what are already overly lengthy disclosure documents) but rather improved disclosure. Ideally, the Commission guidance would focus on the methods for determining critical accounting policies and estimates and appropriate disclosure of such policies to investors, including uncertainties inherent in the estimation process and the impact of estimates on financial statements.

A new auditing standard, which we think would be best crafted through the joint efforts of the Commission and the PCAOB, could create a narrowly enhanced role for auditors to review an issuer's disclosure of critical accounting policies and estimates in MD&A to confirm whether it is consistent with the Commission's disclosure requirements. In an unqualified auditor's report, then, the auditor could attest to the issuer's compliance with requirements for the fair presentation of its critical accounting policies and estimates. We think in the narrowly focused context of critical accounting policies and estimates, the adoption of an auditor review standard could both improve issuer disclosure in MD&A and be beneficial to investors' understanding of such disclosure. The auditor's statement of compliance could also include an opportunity for the auditor, at its discretion, to emphasize matters within critical accounting policies and estimates that the auditor thinks worth highlighting, similar to the emphasis

---

[2] PCAOB Release No. 2011-03 (Jun. 2011) at 6.

[3] SEC Release Nos. 33-8040; 34-45149; FR-60 (Dec. 2001). SEC Release Nos. 33-8056; 34-45321; FR-61(Jan. 2002). SEC Release Nos. 33-8098; 34-45907; International Series Release No. 1258 File No. S7-16-02 (May 2002).

[4] SEC Release Nos. 33-8350; 34-48960; FR-72 (Dec. 2003).

paragraph framework. For the reasons we describe below, we do not think auditor review of all of MD&A would improve disclosure or be beneficial to investors.

As discussed above, instead of styling a new standard in an AD&A format as discussed at the September 15, 2011 Roundtable, we believe an auditor attestation with respect to critical accounting policies and estimates should be included in the auditor's report. This focused review and report is not dissimilar to the auditor's review and report on internal control over financial reporting, but we think this proposal fits more squarely within the existing auditor's report framework rather than calling for a separate auditor report.

B. Clarification of the Standard Auditor's Report

Clarifying the language in the standard auditor's report may be worth pursuing. If investors do not understand the auditor's role in providing reasonable assurance on the accuracy of the issuer's financial statements or that auditors are not guarantors against fraud, there is indeed an expectation gap between what investors expect and the reality of what an audit provides. Participants in the disclosure and financial reporting process, including auditors, should think of ways to provide investors with better information about what auditors are, and are not, responsible for and what they do and do not do. Additional explanation and clarification within the auditor's report may be a reasonable way to address this issue and can be introduced without changing the basic reporting framework.[5]

We wonder, however, if additional explanation in the auditor's report is the best way to addresses this expectation gap. Placing the same boilerplate in every auditor's report for thousands of issuers every year may not be the most efficient or effective way to educate investors about the auditor's role in the financial reporting process. Placing that information on the websites of the Commission, the PCAOB and audit firms may be a better solution than altering the auditor's report. However the Board proceeds, it should do so in the most cost effective and efficient way possible, mindful that the benefits must outweigh the costs.

C. Required and Expanded Use of Emphasis Paragraphs

Before mandating an expanded use of emphasis paragraphs, we believe it would be useful for the Board to reexamine the current framework surrounding such paragraphs. Under AU Section 508.19, auditors may, at their discretion, emphasize a matter regarding the financial statements. That said, as discussed at the September 15, 2011 Roundtable, auditors almost never

[5] As noted in the AICPA's clarifying Statement on Auditing Standards "Emphasis-of-Matter Paragraphs and Other-Matter Paragraphs in the Independent Auditor's Report" (the "Clarifying SAS"), "Other Matter" paragraphs in the auditor's report can be used to provide explanation "relevant to users' understanding of the audit, the auditor's responsibilities, or the auditor's report." *See* AICPA, *Statement on Auditing Standards: Emphasis-of-Matter Paragraphs and Other-Matter Paragraphs in the Independent Auditor's Report* (2010), available at: http://www.aicpa.org/Research/Standards/AuditAttest/ASB/DownloadableDocuments/Clarified_SAS_EOM_OM.pdf at §5.

use emphasis paragraphs. In our opinion, this lack of use may point more to an issue of implementation of the current standard than to a need for new standard setting.

As noted in the AICPA's Clarifying SAS "Emphasis-of-Matter Paragraphs and Other-Matter Paragraphs in the Independent Auditor's Report," emphasis paragraphs should be used

> [i]f the auditor considers it necessary to draw users' attention to a matter appropriately presented or disclosed in the financial statements that, in the auditor's judgment, is of such importance that it is fundamental to user's understanding of the financial statements . . . .[6]

We believe it may be helpful for the Board, as part of its regular inspection of auditor's reports, to consider where emphasis paragraphs could have been used and then to provide additional guidance to auditors to encourage the inclusion of emphasis paragraphs where useful.

If the Board determines instead to move forward with consideration of a proposal to mandate emphasis paragraphs, we believe the Board should consider two concerns. First, if not carefully constructed, the mandatory emphasis paragraphs will likely devolve into additional boilerplate, which would not provide the desired insight to investors. Second, any proposal for mandated emphasis paragraphs must also include clear, objective standards for auditors to follow in determining how and when to include those paragraphs.

## IV. Auditor Review of Other Information Outside the Financial Statements

### A. <u>MD&A</u>

In our view, requiring auditors to comment on information outside the financial statements, in particular on MD&A, is inconsistent with the auditor's role and core expertise. Auditor expertise centers on financial information, financial reporting, auditing and related matters and does not extend to evaluating business strategy and trends, analyzing risk (except for risks regarding financial reporting) or predicting future performance. The purpose of MD&A should be considered against this backdrop. The Commission has made it clear on several occasions that the principal value of well-crafted MD&A is that it provides information about the issuer through management's eyes, gives a sense of the overall context within which financial information should be analyzed and provides relevant information to investors about the issuer's past and future performance.[7] Good MD&A disclosure contains information with regard to the

---

[6] *Id.* at §6.

[7] *See* SEC Release Nos. 33-8350; 34-48960; FR-72 (Dec. 2003).

quality of earnings and known trends and uncertainties.[8] The Commission has also made clear that good MD&A should not consist merely of the regurgitation of information in the financial statements but should focus on analysis.[9] Asking auditors to attest to management assessments of the explanations for financial performance or condition, assessments of the impact of trends or uncertainties or forward-looking assessments of future performance or condition not only puts auditors well outside their core expertise, but also carries with it a significant risk that the audit process would lead to less rather than more "good" MD&A. Enhanced auditing standards should contribute to good disclosure under the Commission's rules and not work at cross-purposes, as we fear would be the case with application of auditing standards to MD&A.

Granted, MD&A does include financial information derived from an issuer's financial statements and other financial metrics, but auditors already review financial statement numbers in the MD&A as part of their audit procedures. The Board could consider whether the auditor review of such financial information similar to what they do as part of the standard comfort process under Statement on Auditing Standards 72, Letters for Underwriters and Certain Other Requesting Parities ("SAS 72") ought to be formally embodied in the audit and review process. In fact, a number of large issuers already request their auditors to conduct a SAS 72 review when those issuers prepare their Annual and Quarterly Reports on Forms 10-K and 10-Q in order to facilitate shelf offerings. We would be very concerned, however, that requiring smaller entities, especially those that do not regularly access the capital markets, to follow such procedures would be an unwarranted additional burden. Given that auditors already check the MD&A for consistency with the financial statements, we feel that requiring additional review procedures for financial information derived from the issuer's financial records might well add cost with little countervailing benefit. Furthermore, we are concerned that requiring additional procedures will make timely reporting more difficult and may cause issuers to reduce the financial information they include in MD&A.

B. <u>Earnings Releases</u>

A related subject that was not discussed at length in the Release but received much attention at the September 15, 2011 Roundtable was the idea of providing for additional auditor involvement in issuer earnings releases and Quarterly Reports on Form 10-Q. Certain participants seemed concerned that the results of an audit (in the case of annual earnings) or review under Statement on Auditing Standards 100 Interim Financial Statements ("SAS 100") (in the case of earnings in the first three quarters of the issuer's fiscal year) become available several weeks after earnings and other financial information are made available through an

---

[8] *See* SEC Nos. 33-6835; 34-26832; IC-16961; FR-36 (May 1989) and SEC Release Nos. 33-8350; 34-48960; FR-72 (Dec. 2003).

[9] In the 2003 Release, the SEC noted that in approaching MD&A "[m]anagement has a unique perspective on its business that only it can present. As such, MD&A should not be a recitation of financial statements in narrative form or an otherwise uninformative series of technical responses to MD&A requirements, neither of which provides this important management perspective." SEC Release Nos. 33-8350; 34-48960; FR-72 (Dec. 2003).

earnings release. Certain participants also queried whether the information and value conveyed by the audit and accompanying auditor's report or SAS 100 interim review, as the case may be, was as timely as it could be for the benefit of investors.

In our experience, management and audit committees almost always have auditors consider and review the financial information included in earnings releases. In particular, issuers in our experience recognize the dangers of a change from results reported in an earnings release in subsequent periodic Commission filings, and involve their auditors at the earnings release stage to help reduce that risk. We are concerned that formalizing this process would not be feasible within the current time constraints and that the costs would outweigh the benefits.

In addition, with respect to increasing the auditor's involvement in the review of Quarterly Reports on Form 10-Q, our experience is that the auditor involvement in a review of quarterly filings under SAS 100 does lead to enhanced quality and reliability of interim financial reporting. In particular, the process of auditor review, the communications of the auditor to the audit committee and the dialogue between the auditor and audit committee all contribute to this result. We believe these same factors were extensively considered at the time the mandatory quarterly review process was adopted in SAS 100, and we do not believe there have been significant developments since then that should favor moving to an audit of interim financial statements. Furthermore, requiring an audit of quarterly financial statements would no doubt delay quarterly reporting and add significantly to expense such that the increased burdens would, in our view, clearly outweigh the benefits. Indeed, the additional burden on issuers following the acceleration of filing deadlines for Quarterly Reports on Form 10-Q for larger issuers in 2004, while by only five days, would suggest that any change that introduces further time constraints in this area should not be made.

RE: PCAOB Rulemaking Docket Matter No. 34

We appreciate the opportunity to comment on Public Company Accounting Oversight Board (PCAOB) Release No. 2011-003, *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* (the Concept Release). This letter contains the comments of both CMS Energy Corporation and Consumers Energy Company.

CMS Energy Corporation, whose common stock is traded on the New York Stock Exchange, is a domestic energy company engaged in electric and natural gas utility services and independent power production, operating through subsidiaries in the U.S., primarily in Michigan. CMS Energy Corporation's consolidated assets are $16 billion and annual operating revenues are $6.4 billion. Consumers Energy Company, the principal subsidiary of CMS Energy Corporation, provides electricity and/or natural gas to more than 6 million of Michigan's 10 million residents and serves customers in all 68 counties of Michigan's Lower Peninsula.

**Overall Assessment** – We recognize that some investors have suggested that auditors' reports would be more relevant and transparent if they contained more information. In response, the PCAOB has proposed establishing requirements for an Auditor's Discussion and Analysis (AD&A), emphasis paragraphs in audit opinions, auditor reporting on information outside the financial statements, and/or clarification of certain language in the auditor's report. For the reasons given below, we believe that management, not the auditor, is best positioned to provide investors with information and commentary on a company's financial statements. In our opinion, any concerns that companies' disclosures are incomplete or unreliable should be addressed through the existing standard-setting, enforcement, and audit processes, rather than through a change to the auditor's reporting model.

Auditor's Discussion and Analysis and Required and Expanded Use of Emphasis Paragraphs

The Concept Release proposes that the auditor provide a supplemental AD&A, which would be a narrative report offering a view on the audit and financial statements, and/or include emphasis paragraphs in the auditor's report that highlight significant matters. We understand that these proposals are in response to some investors' desire for more information and commentary from auditors on companies' financial statements. These investors have stated that the auditor is uniquely positioned to provide such information and commentary because of the knowledge gained through the audit process combined with the auditor's independence.

We believe that commentary on a company's financial statements should come from a single source, rather than from both management and the auditor. Providing two perspectives on a single set of financial statements has the potential to confuse users and to reduce confidence in reported information. Moreover, if investors desire further commentary on a company's financial statements, then the best source of this information is the company's management. Though an auditor's understanding of a company's financial statements is more extensive than that of other third parties, it is still less complete than that of management. The degree to which the auditor must gain an understanding of the company's business, industry, transactions, and financial statements in order to render an audit opinion is substantially less than the depth of understanding required of the company's management. Correspondingly, the time the auditor devotes to gaining an understanding of these matters is a small fraction of the time invested by management. For these reasons, commentary on the financial statements should come from management, not the auditor.

The concerns of investors described in the Concept Release are best addressed through existing regulatory structures and roles. Any perceived deficiencies in existing disclosure requirements regarding such matters as significant risks and uncertainties, critical accounting estimates, unusual transactions, or alternative accounting policies should be addressed through the established standard-setting and rulemaking structures at the Financial Accounting Standards Board and the Securities Exchange Commission (SEC), rather than through a change to the auditor's reporting model. Further, any concerns that companies are not complying with existing disclosure requirements, or that the associated disclosures are unreliable, should be addressed through audits or through the SEC's review of company filings.

Such concerns should not lead to a requirement that the auditor publish information or commentary on a company's financial statements independently of management. Today, management is accountable for the quality and content of its SEC filings. In our opinion, the inclusion of commentary from the auditor in a company's SEC filings would represent an inappropriate departure from the auditor's attestation role, and a blurring of the present lines of responsibility according to which management prepares the financial statements and the auditor opines on these statements. The proposal would cast the auditor into the role of co-preparer, together with management, of public disclosures about a company; however, the auditor's public statements would not be subject to independent verification, except perhaps informally by the company's own management. Such a role reversal seems analogous to requiring the company's management to publish interpretive commentary on the design and execution of the audit engagement.

Additionally, as proposed in the Concept Release, the information that would be communicated in the AD&A and emphasis paragraphs would be similar to the information that the auditor now provides to the audit committee, whose role includes overseeing financial reporting and monitoring accounting policies on behalf of the company's investors. In many instances, the information reported in the AD&A would relate to complex issues that involve significant management judgment and that require a deep understanding of the company's business, industry, and specific transactions, as well as of complex accounting literature. Audit committee members have the expertise and background for this analysis. If such information were provided to investors with the full context needed to make it comprehensible, the extensive background details and technical explanations could ultimately create confusion and uncertainty among investors rather than provide insight.

Auditor Assurance on Other Information Outside of the Financial Statements

The Concept Release also proposes that the auditor provide assurance on information outside the financial statements, such as management's discussion and analysis (MD&A), earnings press releases, and non-GAAP information. The objective would be to give investors more confidence in the information that management provides in these communications.

As the SEC has stated in its guidance, "MD&A should be a discussion and analysis of a company's business as seen through the eyes of those who manage that business. Management has a unique perspective on its business that only it can present." Accordingly, much of the information contained in MD&A is highly subjective. We believe that the auditor's present responsibilities with respect to this information – reading and considering whether such information is materially inconsistent with the financial statements or represents a material misstatement of fact – are appropriate. Today, auditing standards contain guidelines for attestation engagements regarding MD&A. If investors had a compelling need for such assurance, then shareholders would put pressure on companies to incur the costs of attestation engagements. The number of such engagements now performed, however, does not support the view that a universal requirement for auditor assurance regarding MD&A would justify the cost.

Regarding earnings press releases, the capital markets offer sufficient disincentives for companies to issue press releases that contradict their audited financial statements, and auditor assurance would add little value to the earnings-release process. Moreover, existing standards regulate the use of non-GAAP information in such communications, and require that non-GAAP information be reconciled to the GAAP information in the audited financial statements.

Clarification of the Standard Auditor's Report

We do not oppose the proposal to add language to the standard auditor's report clarifying what an audit represents and describing the related auditor responsibilities, if there is sufficient evidence that many investors do not understand these concepts.

**Final Considerations** – In conclusion, while we appreciate the PCAOB's effort to respond to investor concerns, we believe that any information or commentary on a company's financial statements should originate from management, not the auditor. Furthermore, any concerns that disclosure of such information is inadequate should be addressed through normal standard-setting, enforcement, and audit processes, rather than through a change to the auditor's reporting model. Thank you for the opportunity to comment on the Concept Release.

Sincerely,

Glenn P. Barba

Re: PCAOB Rulemaking Docket Matter No. 34

Dear Members of the Board,

CNA Financial Corporation (CNA) appreciates the opportunity to comment on the PCAOB's proposed changes to the auditor's reporting model. CNA is the seventh largest commercial insurance writer and the thirteenth largest property & casualty writer in the United States. CNA has insurance operations in both North America and Europe. Loews Corporation (Loews) owns approximately 90% of CNA's outstanding common stock.

The Board's concept release proposes four alternatives to the current auditor's reporting model. The four proposed changes, Auditor's Discussion and Analysis (AD&A), required and expanded use of emphasis paragraphs, reporting on information outside the financial statements, and clarification of certain language in the auditor's report, vary in the degree to which they would impact and change the current reporting process. While we understand the Board's goal of improving the transparency and relevance of an auditor's report to investors, both the AD&A and emphasis of matter paragraphs will result in the auditor, not management, being a source of financial information. In our view, this would undermine management's responsibility of its financial statements and disclosures. With the exception of clarification of certain language in the auditor's report, all the other proposals constitute a significant audit scope change. We believe the increased time and cost incurred to provide the proposed disclosures will far outweigh the benefit and usefulness of the additional information to the investor.

Management, as the owner of the financial statements and the financial reporting process, is in the best position to disclose the company's financial position and comment on its operations. Auditors are not the owners of the financials and are not decision makers within the company, thus making supplementary disclosure on their part less effective than similar disclosure made by management. However, auditors, as an independent third party, are in an appropriate position to express an opinion on the fair representation of the financial statements. Additionally, with management as the sole provider of financial information, a certain level of trust is established with investors and competing disclosures could serve to undermine this trust. The current auditor's reporting model provides the investor with the required level of assurance while not compromising management's message and trust with investors. Any effort to improve the transparency and usefulness of financial statements and related disclosures to investors should be more appropriately addressed by the FASB.

Furthermore, the proposed auditor disclosure, specifically in the AD&A and the emphasis paragraphs, would inevitably become boilerplate in nature due to auditor's liability concerns which would significantly limit the disclosure's usefulness to investors. We are concerned that subjective disclosure from the auditor would not be beneficial to investors that lack an understanding of audit methodology to appropriately comprehend the proposed auditor's disclosure. As a result, we believe that the inclusion of such information could be confusing to certain investors and in some cases be perceived as conflicting with management's disclosure. The unintended consequence of which would be diminished investor confidence in management and reduced reliance on the financial statements.

The clarification of certain language in the auditor's report is the only proposal presented in which we believe the perceived benefit justifies the cost of implementation. While the clarification is somewhat redundant as sophisticated investors are well versed in the terms and phrases to be clarified, improved understanding on the part of less informed readers warrants the clarification. The cost of implementing such disclosure would be minimal.

In summary, we do not support the proposed changes presented within the concept release, except for the clarification of certain language discussed above. The other proposed changes would come at a significant cost to the company, but would fall short of the intended benefit of improving transparency into the financial performance of the company, the underlying key judgments, and the related risks and uncertainties.

If you have any questions, please feel free to call me at 312-822-5653.

Sincerely,

Lawrence Boysen

◆ COLE ◆
REAL ESTATE INVESTMENTS

September 30, 2011

Office of the Secretary
Public Corporation Accounting Oversight Board
1666 K Street, N.W.
Washington, D.C. 20006-2803

**Reference:** Request for Public Comment: *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*, PCAOB Rulemaking Docket Matter No. 34.

Dear Office of the Secretary:

Cole Real Estate Investments ("Cole", "we", "our", "us") appreciates the opportunity to provide comments to the Public Corporation Accounting Oversight Board ("PCAOB") on the *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (the "Concept Release"), PCAOB Rulemaking Docket Matter No. 34.

By way of background, Cole is one of the most active investors and owners of core real estate assets and manages one of the country's largest portfolios of retail properties. Cole primarily targets net leased single tenant and multi-tenant properties under long-term leases with high credit quality tenants, as well as, single tenant office and industrial properties. Cole related entities own or manage 51.3 million square feet of commercial real estate in 45 states with a combined acquisition cost of approximately $9.0 billion.

We appreciate the PCAOB's effort to make improvements to reports on audited financial statements and have provided detailed responses below addressing selected questions from the Concept Release.

***Question 1:*** *Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.*
*c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?*

We do not believe the auditor's role should be expanded to provide assurance on matters outside the financial statements, because it may create investor confusion about the auditor's role versus the role of the Company's management and the audit committee.

***Question 5:*** *Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?*
*d. If you do not support an AD&A as an alternative, explain why.*

We oppose an Auditor's Discussion and Analysis ("AD&A") as an alternative for providing additional information in the auditor's report. Providing information about the financial statements is the responsibility of management. We believe the auditors should not provide information about a Company's financial statements directly to investors, because doing so could cause confusion if the information "competes" or is subject to different interpretations then what management discloses on areas outside the financial statements. In addition, we believe that between the company and its auditors there would be significant effort and incremental costs involved for the auditor to prepare, review and provide an AD&A. We believe the additional discussions with management and the audit committee, together with additional procedures auditors may perform in preparing their AD&A, could distract each party from their primary responsibilities of financial statement preparation. Completing an AD&A may not give the auditor, in particular audit partners and managers, sufficient time to complete a quality audit of the company's financial statements and would require the auditor to split its focus between completing the AD&A and performing the audit procedures required to detect material misstatement in the financial statements. We believe this added cost in recurring audit fees for the preparation of the AD&A and potential time constraints which could reduce the audit's effectiveness outweigh the limited benefit it may provide to investors and users of the financial statements. Also, the Concept Release mentions the AD&A would include "close calls," or items the auditor ultimately deemed acceptable, but which required significant discussion by the auditor, management and the audit committee. We are concerned about the definition of "close calls" and the auditor's interpretation thereof. Because of the subjectivity involved in managing and providing information specific to the company, we question how a disclosure framework can be developed and consistently applied. In addition, we are concerned about a possible strain on auditor communications with management and the audit committee. As the PCAOB points out in the Concept Release, discussing potentially sensitive matters in an AD&A could create tension, stifle communication and hinder audit quality. We are also concerned about whether investors and other users of the financial statements would have the appropriate context for the information contained in the AD&A and the ability to evaluate the technical nuances typically associated with sensitive financial accounting and reporting matters. Typically, auditor's communications are prepared with the expectation of a dialogue with the audit committee in which additional context and perspectives are communicated.

***Question 14:*** *Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?*
*b. If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.*

Existing standards already allow the auditors to add areas of emphasis at their discretion. We believe this is functioning as appropriate and preserves the auditor's ability to include or exclude references, as necessary, based on the circumstances involved. If new standards require inclusion of an expanded emphasis paragraph, we believe the appropriate content and level of detail should be limited to objective and factual information with reference to the footnotes to the financial statements for more detailed disclosure.

***Question 19:*** *Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?*
*g. If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.*

We do not support auditor assurance on other information outside the financial statements. Information outside of the financial statements such as Management's Discussion and Analysis ("MD&A") contains forward looking statements, subjective information and non-financial data. Auditors provide assurance that a Company's financial statements present fairly, in all material respects, in conformity with generally accepted accounting principles ("GAAP"). It is unclear to us how auditors would be able to perform and support assurance procedures on such forward looking or projected information in order to report on such matters. We believe reporting on areas outside of the financial statements is outside of the auditor's core competencies of opining on GAAP based financial statements. Also, we have concerns that requiring auditor assurance on other information outside the financial statements, such as the MD&A, could lead to required auditor assurance on other reports or press releases publically provided to users of the financial statements by management (e.g. earnings releases and Form 8-Ks), which also contain subjective information, forward looking statements, and non-financial data and are not required to be reported on by auditors. Further, auditors currently review other information outside the audited financial statements but included in filings containing their audit reports, such as the MD&A, to determine whether there are material inconsistencies included therein, when compared to amounts and other matters disclosed in the audited financial statements. If material inconsistencies are identified the auditor discusses them with management and the audit committee, when appropriate. If there are misunderstandings among investors about the scope and role of the

• 2555 East Camelback Road, Suite 400 Phoenix, Arizona 85016 •
Phone (602) 468-3333 • Fax (602) 778-8780

auditor with regard to information outside the financial statements, we would support some inclusion in the auditor's report, which clarifies the existing role.

***Question 21:*** *The concept release presents suggestions on how to clarify the auditor's report in the following areas:*

- *Reasonable assurance*
- *Auditor's responsibility for fraud*
- *Auditor's responsibility for financial statement disclosures*
- *Management's responsibility for the preparation of the financial statements*
- *Auditor's responsibility for information outside the financial statements*
- *Auditor independence*

*a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?*

We do not have significant concerns with additions to the auditor's report to clarify terms or the auditor's existing responsibilities. We believe it may be most useful to provide clarifications on the auditor's responsibility for monitoring fraud, the auditor's and management's responsibilities regarding the financial statements, and the auditor's responsibility for information outside the financial statements.

We thank you for your consideration of these comments and we appreciate the opportunity to provide our comments on this Concept Release.

Best Regards,

Matthew J. Peel

RE: PCAOB Rulemaking Docket Matter No. 34

Dear PCAOB:

I am submitting the following comments for the PCAOB's consideration based on a request for guidance on potential revisions to the standards of auditor's reports. These comments represent my perspective as an institutional investor of a large public pension plan.

**Pass/Fail Model:** We appreciate and understand the concerns regarding the current auditor's pass/fail model. However, we have not yet seen a revised model that would significantly improve how financial statements are presented to investors without offsetting drawbacks. We do believe that some adjustments to the information provided by auditors to investors can bolster the pass/fail model, and should be explored.

**Auditor's Discussion & Analysis**: Of all the potential changes to the current auditor reporting model, we are most supportive of adding an Auditor's Discussion & Analysis (AD&A) section. An auditor's ultimate responsibility is to investors, and therefore we believe it is critical to increase the ability for auditors and investors to communicate. Investors crave information, and there is currently little information provided by the current Pass/Fail model. We also believe there is a misunderstanding by the investor community on how audits are conducted, and therefore, how the results of the pass/fail model should be interpreted. This misunderstanding can be remedied through both educational efforts by the PCAOB and details provided within an AD&A section.

An AD&A section will give auditors the ability to point out areas in the financial statements where companies have followed the standards of GAAP, but where significant areas of judgment and estimation were required to report financial results. In addition to highlighting areas where judgment and estimation were required, we would like for auditors to provide data points, when possible, that would allow us to calculate sensitivity analyses on the more opaque sections of financial statements. We believe this information will greatly improve visibility into some of the most problematic sections of the financial statements, particularly:

- Revenue Recognition and Accounting Methodology Changes
- Asset Valuation and Unusual Transactions
- Special Purpose Vehicle (SPVs) Assets and Liabilities
- Off-Balance Sheet Items
- Restatements and Charge-Offs
- Non-Performing Assets

Like all proposed changes to auditor reporting standards, the addition of an AD&A section provides challenges and drawbacks. We view obstacles to implementation of the AD&A section to include cost, particularly potential legal challenges to AD&A statements, and standardization of AD&A reports. Legal challenges to auditor's AD&A reports are likely to arise and may ultimately be paid by investors through higher auditor fees. We also recognize that the addition of an AD&A will require more auditor billing hours. However, we are not asking auditors to expand their audit activities. We simply want auditors to provide investors more of the information they have gathered during their audit process and a reasonable subset of the audit details they already provide corporate audit committees.

As for the standardization of AD&A reports, we have no easy answer, and believe a fully developed AD&A process will take years, similar to the addition of Management Discussion and Analysis (MD&A) reports. When MD&As were first published, the information provided to investors was underwhelming, prompting the SEC to issue a series of rules in order to require and encourage companies to improve their disclosure of financial information. After decades of work by the SEC, we now believe the MD&A to be one of investor's most valuable pieces of information. We feel that the AD&A could rival the MD&A for importance to investors, yet we would hope and expect the AD&A to develop faster than the decades required for the MD&A. For faster development of the AD&A, it will be critical for PCAOB to initially set a strong standard of quality and adopt new standards quickly as the AD&A develops over time.

We appreciate the opportunity to comment on the potential changes to the auditor's reporting model, and would welcome additional opportunities to provide input to the PCAOB as this process continues.

Sincerely,

Jennifer Paquette

Re: PCAOB Release No. 2011-003
PCAOB Rulemaking Docket Matter No. 34
*Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*

Dear Board Members:

We appreciate the opportunity to respond and comment to the PCAOB (the Board) regarding Concept Release No. 2011-003 (the Concept Release) which presents four proposed alternatives for supplementing the current auditor's report and to increase its transparency and relevance to financial statement users.

**Summary Comments**

Core-Mark is one of the largest marketers of fresh and broad-line supply solutions to the convenience retail industry in North America in terms of annual sales (approximately $7.3 billion in 2010), providing sales and marketing, distribution and logistics services to customer locations across the U.S. and Canada.

We agree with the Board's decision to undertake the initiative to consider possible changes and improvements to the auditor's reporting model and to enhance the communication to investors through improving the content of the auditor's report. We support those changes to the auditor's report which ultimately add meaningful value to investors and at the same do not add significant costs to issuers.

We do not agree with the proposed approach of expanding the auditor's role in the reporting and disclosure process. We strongly believe that management should retain responsibility and be the source of disclosures related to reporting information for the company's financial statements. The auditors should not become a source of disclosure about the company's financial information. The auditor's role should remain that of an independent auditor attesting that the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows of the company. Otherwise by changing the Auditor's role, we believe there could be blurred lines between management and the auditor. The lack of clearly defined roles may create investor confusion on potentially different perspectives related to the financial information being presented. Management is the most appropriate party to provide additional information about the company's financial statements and therefore we believe it is imperative to retain the distinction in responsibilities between management and the auditor.

Following are our comments related to the four alternatives presented in the Concept Release:

**I. Auditor's Discussion and Analysis**

It is our understanding that the intent of including a supplemental Auditor's Discussion and Analysis (AD&A) report is to provide auditors with the ability to discuss their views regarding significant matters. It is further intended to facilitate an understanding of the financial statements taken as a whole. While we are not necessarily opposed to auditors discussing current audit procedures as required by the PCAOB, we are strongly opposed to an AD&A which discusses alternative accounting or disclosure treatment and auditor views regarding significant matters and difficult and/or contentious issues including "close calls". We believe the addition of an AD&A discussing these items would confuse users regarding the conclusions reached by the auditor (i.e. was it really an "unqualified opinion"?). Further, two competing discussions, one from the independent auditor and the other from management, whether related to an accounting principle contained in the financial statements, footnotes or a disclosure item, is likely to confuse investors.

In addition to creating investor confusion, we believe the addition of the AD&A would significantly increase the scope and time requirement for completing audits, which would lead to significant increases in audit fees while putting even more pressure on meeting already tight filing deadlines. Also according to the Concept Release, if an AD&A were adopted it would lead to new auditing standards regarding the appropriate content and level of detail to be reported on. We believe this would also likely result in higher fees to the issuer.

Overall, we do not believe the AD&A brings greater clarity or value to investors. There is already substantial financial information and disclosures which are made by management in the Quarterly 10-Q and Annual 10-K Reports. In addition, the current auditor report generally states that the audit of the issuer's financial statements includes an assessment of the accounting principles used and significant estimates made by management, as well as, evaluating the overall financial statement presentation. If the auditor's opinion states that the financial statements present fairly, in all material respects, the financial position of a company for the respective period, we do not believe that providing an AD&A would add meaningful value to investors and that the incremental cost related to preparing it would be justified.

**II. Required and Expanded Use of Emphasis Paragraphs**

This alternative would mandate the use of emphasis paragraphs in all audit reports and further expand the emphasis paragraph to highlight the most significant matters in the financial statements and identify where these matters are disclosed in the financial statements.

We do not support the required and expanded use of emphasis paragraphs, as we do not believe it would achieve the objective of providing relevant and useful information to allow investors to make better investment decisions. We strongly believe that matters related to the financial statements including the discussion and disclosure of significant items should remain the responsibility of management. The auditor's responsibility should be focused on whether the financial statements are in conformity with GAAP in all material respects. We believe any separate auditor commentary inconsistent from that provided by management, despite a "clean" opinion by the auditor that the financial statements are in conformity with GAAP, would be confusing to investors.

The Concept Release suggests a couple of areas where emphasis paragraphs could be required with one of those being a discussion of audit procedures for certain areas. As audit procedures are specific to each company and each specific matter, any discussion or disclosure of procedures within the audit report would have to be detailed and lengthy in order to provide sufficient information for users who are not auditors to be able to understand it. Any detailed discussion of audit procedures and concepts could add confusion to the readers of the financial statements who are not generally financial experts. We believe a lengthy description of such procedures would likely detract and lessen the impact of the emphasis paragraphs and/or provide insufficient value to users. We believe it is more appropriate to provide a general overview of how an audit is conducted and perhaps refer investors to the PCAOB in the event they would like more specific information on auditing standards.

**III. Auditor Assurance on Other Information Outside the Financial Statements**

This alternative would require auditors to provide assurance on information outside the financial statements, such as MD&A, or other information (for example, non-GAAP information or earnings releases). We are strongly opposed to requiring auditors to provide assurance on information outside the financial statements. We do not think it is appropriate nor would it significantly enhance the respective disclosures.

The financial statements and disclosures are the responsibility of management and as such the information included within those financial statements should be that of management. Having auditors provide assurance on information outside of the financial statements would likely create confusion related to the auditor's role in regard to the financial statements and whether they were truly acting as an independent party. Furthermore, providing assurance on information contained within the MD&A, or certain other non-GAAP information where such information is often forward looking and judgmental, could be very difficult and provide for contentious debate between management and auditors. This approach would likely result in a significant increase in time and costs and we do not believe it would enhance or improve the quality of the information being communicated to the reader.

**IV. Clarification of the Standard Auditor's Report**

In general we agree with this alternative which proposes to clarify the auditor's report in the areas of reasonable assurance; the auditor's responsibility for fraud, financial statement disclosures and information outside of the financial statements; management's responsibility for the preparation of the financial statements and auditor independence.

We believe that improving or enhancing the above areas of the auditor's report provides a straight-forward approach in clarifying important areas in the report. It is an effective manner to enhancing the auditor's reporting model. We are supportive of the inclusion of this information in the auditor's report, and believe it would help achieve the objective of clarifying roles between auditors and management thereby increasing clarity for the readers of the audit report.

**Considerations Related to Changing the Auditor's Report**

The Board specifically asked for comments related to the practical challenges presented by the proposed auditor report alternatives including the effects on; audit effort, auditor relationships, audit committee governance, liability considerations and confidentiality.

As discussed above we believe the addition of an AD&A, requiring and expanding emphasis paragraphs and/or requiring auditors to provide assurance on information outside the financial statements would significantly increase the scope and work of auditors. This would likely translate into significant fee increases passed on to users. In addition, we are concerned about the impact that the additional work would have on meeting annual and interim filing deadlines which are already very tight. We suggest that a cost/benefit analysis be utilized for each alternative under consideration. In doing so, we believe the costs would be significantly higher than the benefits for the first three alternatives proposed in the Concept Release.

It seems certain proposed alternatives and ideas within this Concept Release would make auditor liability considerations a legitimate concern, especially if auditors were required to provide assurance on information outside the financial statements. Additionally, we believe any of the first three proposed alternatives could lead to negative effects and strained relationships between the auditor, management, and the Audit Committee, which may inhibit the lines of communication and ultimately not enhance the overall auditor reporting model.

While we support enhancing auditor communications to investors and increasing transparency related to the auditor's reporting model, we believe there must be a cost effective approach to achieve these goals, while minimizing the overall potential challenges and unintended consequences related to additional auditor reporting. We believe the proposed alternative which best achieves this goal is for auditors to provide clarification of the standard auditor's report.

We appreciate the opportunity to respond and the willingness of the PCAOB board members to exchange views with issuers during the comment period.

Please contact us at (650) 589-9445 with any follow-up questions you may have on our comment letter.

Sincerely,

CORE-MARK HOLDING COMPANY, INC.

***Re: Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards (PCAOB Rulemaking Docket Matter No. 34)***[1]

Dear Office of the Secretary:

I am writing on behalf of the Council of Institutional Investors ("Council"), a nonprofit association of public, corporate, and union pension funds with combined assets of over three trillion dollars. Member funds are major shareowners with a duty to protect the retirement assets of millions of American workers.[2]

The Council appreciates the opportunity to respond to the Public Company Accounting Oversight Board's ("PCAOB" or "Board") *Concept Release on Possible Revisions to the PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* ("Release"). Our detailed responses to the questions contained in the Release are included as an Attachment to this letter.

The Council wants to thank the PCAOB for its outreach to investors and other stakeholders in connection with the development of the Release. We congratulate the Board on its leadership and courage in exploring issues that have long been debated and remain controversial with some stakeholders. As you may be aware, the Council's membership approved policies contain a statement that expresses the widely held view that "investors are the key customer of audited financial reports and, therefore, the primary role of audited financial reports should be to satisfy in a timely manner investors' information needs."[3]

---

[1] Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards, PCAOB Release No. 2011-003, 34 PCAOB Rulemaking Docket Matter 1 (June 21, 2011), http://pcaobus.org/Rules/Rulemaking/Docket034/Concept_Release.pdf [hereinafter Release].

[2] For more information about the Council of Institutional Investors ("Council") and its members, please visit the Council's website at http://www.cii.org/.

Moreover, as indicated in the Release, the "auditor's report is the primary means by which the auditor communicates to investors and other users of financial statements information regarding his or her audits of financial statements."[4] Thus, from the perspective of Council members, the Release raises two core issues: (1) whether the current auditor's reporting model satisfies investors' information needs; and (2) if not, how the model might be improved so that it is more responsive to those needs.

### *1. The current auditor's reporting model does not satisfy investors' information needs*

The evidence indicates that there is a strong consensus among investors' that the auditor's report no longer satisfies their information needs. In just the past four years that view has been reflected in, among other sources: the recommendations and conclusions of the Department of the Treasury's Advisory Committee on the Auditing Profession ("Advisory Committee");[5] the surveys of members of the CFA Institute, the global not-for-profit association of more than 100,000 investment professionals;[6] a survey of investors by the PCAOB's Investor Advisory Group ("IAG Survey");[7] and in the PCAOB staff's own extensive research in connection with the development of the Release.[8]

[hereinafter 2011 CFA Survey]; CFA Institute, Independent Auditor's Report Survey Results 4 (Mar. 2010), http://www.cfainstitute.org/Survey/independent_auditors_report_survey_results.pdf ("94 percent of respondents would like to see additional information in the auditor's report"); CFA Institute, CFA Institute Member Poll on the Independent Auditor's Report 1 (Mar. 2008), http://www.cfainstitute.org/Survey/independent_auditors_report_poll_results_march_2008.pdf (80% responding that the "independent external auditors report [should] provide specific information about how the auditors reach their unqualified opinion").

[7] Joseph Carcello *et al*., Improving the Auditor's Report (Mar. 16, 2011), http://pcaobus.org/News/Events/Documents/03162011_IAGMeeting/Role_Of_The_Auditor.pdf ("23% of respondents believe the current auditor report provides valuable information") [hereinafter IAG Survey].

[8] Release, *supra* note 1, at 7 ("The staff observed that there was consensus among investors that the auditor has significant insight into the company and that the auditor's report should provide additional information based on that insight to make it more relevant and useful.").

***2. The current auditor's reporting model should be improved by supplementing the auditor's report with an auditor's discussion and analysis ("AD&A") that includes, at a minimum, the auditor's assessment of management's critical accounting judgments and estimates***

An AD&A is an ideal approach to improving the current auditor's report so that it provides information more responsive to investors' needs. An AD&A that supplements, rather than expands or replaces the current auditor's report, would retain the value of the existing report while responding to the needs of investors for more relevant and useful information from the auditor. We note that the recent IAG Survey revealed that a majority of investors responding "believe there should be a separate Auditor's Discussion and Analysis section in the 10-K."[9]

An AD&A should include, at a minimum, the independent auditor's assessment of management's critical accounting judgments and estimates. Such disclosure was supported by 86% of the respondents to the 2011 CFA Institute survey[10] and 79% of the respondents to the IAG Survey.[11] Other disclosures highly valued by many investors that should also be considered for inclusion in the AD&A, include: (1) areas of high financial statement and audit risk; (2) unusual transactions, restatements and other significant changes to the financial statements; and (3) the quality—not just acceptability—of the issuer's accounting policies and practices.[12]

The potential benefits of an AD&A approach as we have proposed are many. In addition to preserving the value of the current auditor's report, the AD&A would provide investors with critical information from an independent expert relevant to analyzing and pricing risks and making investment and voting decisions. An AD&A would also heighten the perceived value of the work of audit firms, increase quality competition among the firms, particularly with respect to auditor skepticism, and provide the firms more leverage to affect change and enhance management disclosure in the financial statements. The result would be increased transparency to investors and an overall boost to investor confidence in audited financial reports.

---

[9] IAG Survey, *supra* note 7.
[10] 2011 CFA Survey, *supra* note 6, at 6 ("[i]nformation about the independent auditor's assessment of management's critical accounting judgments and estimates (86% felt this was important to include)").
[11] IAG Survey, *supra* note 7 ("79% of respondents believe the auditor should discuss significant estimates and judgments made by management, the auditor's assessment of their accuracy, and how the auditor arrived at that assessment").
[12] *Id.*

The costs of an AD&A approach should not be particularly burdensome for public companies or their auditors. The type of information we propose to be included in an AD&A is already collected by auditors for a summary memorandum included in their work papers describing the major risks of the audit, or is required to be provided by the auditor to the audit committee. In any event, we believe the evidence indicates that investors, who ultimately pay the auditor's bill, have concluded that the benefits of the additional information they seek would outweigh the incremental costs.

Finally, we would like to take this opportunity to reiterate to the Board our strong support, consistent with the recommendation of the Advisory Committee and the existing requirements of the European Union's Eight Directive,[13] for requiring the engagement partner's signature on the auditor's report.[14] We continue to endorse the findings of the Advisory Committee that "the engagement partner's signature on the auditor's report would increase transparency and accountability."[15]

We are disappointed that more than two years have passed since the Board issued a concept release on requiring the engagement partner to sign the audit report and a proposed rule has not yet been issued. We would respectfully request that the Board either promptly release a timeline for issuing a proposed rule, or provide investors and the public with an explanation as to why this important improvement is no longer under active consideration.

[13] Treasury Report, *supra* note 5, at VII:19-20.
[14] Letter from Jonathan D. Urick, Analyst, Council of Institutional Investors to J. Gordon Seymour, Secretary and General Counsel, Public Company Accounting Oversight Board 3 (Sept. 4, 2009), http://www.cii.org/UserFiles/file/resource%20center/correspondence/2009/CII%20Comments%20on%20PCAOB%20Rulemaking%20Docket%20Matter%20No%20%2029%20(3)%20doc%20(final).pdf ("In light of the enhanced transparency and accountability resulting from the signature of the engagement partner on the auditor report, the Council strongly supports the PCAOB's Concept Release.").

**Responses to Questions**

**September 19, 2011**

1. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.

   a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?

   b. In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?

   c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?[1]

**The Public Company Accounting Oversight Board ("PCAOB" or "Board") should undertake a standard-setting initiative to consider improvements to the auditor's reporting model because the standard auditor's report no longer satisfies the information needs of its key customer—investors.**

**As an initial matter, we note that the membership approved policies of the Council of Institutional Investors ("Council") recognize that "investors are the key customer of audited financial reports, and, therefore, the primary role of audited financial reports should be to satisfy in a timely manner investors' information needs."[2] Moreover, the "auditor's report is the primary means by which the auditor communicates to investors regarding**

[1] Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards, PCAOB Release No. 2011-003, 34 PCAOB Rulemaking Docket Matter 1 (June 21, 2011), http://pcaobus.org/Rules/Rulemaking/Docket034/Concept_Release.pdf [hereinafter Release].

**its audit of the financial statements."[3] In our view, the evidence indicates that the standard auditor's report, which has had few alterations since the 1930's, no longer satisfies the information needs of its key customer.**

**The failure of the standard auditor's report to satisfy the information needs of investors was reflected in the PCAOB's outreach in connection with the development of the *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* ("Release").[4] More specifically, the PCAOB staff "observed that *there was consensus among investors* that the auditor has significant insight into the company and that the auditor's report should provide additional information based on that insight to make it more relevant and useful."[5]**

**The PCAOB staff observations that the primary customers of the standard auditor's report believe the report should be improved to make it more relevant and useful should not have been a surprise to anyone who is interested in, or follows, investor views on issues relating to accounting and auditing. As early as 1978, the Commission on Auditor's Responsibilities, one of the most significant studies of the auditing profession in U.S. history, concluded:**

> **Evidence abounds that communication between the auditor and the users of his work—*especially through the auditor's standard report*—is unsatisfactory.[6]**

**Since 1978, the evidence that investors demand more information from the auditor's report has only grown. As indicated in the Release, a March 2008 poll of the members of CFA Institute, the global not-for-profit organization of over 100,000 investment professionals, found that more than 80% of members responding agreed that the "independent external auditors report**

**because of its limited informational content "[u]sers generally do not read the auditor's report and auditors do not expect that they do."[13]**

**In March 2010, the CFA Institute conducted a second survey of its members "to gather feedback on topics associated with the independent auditor's report."[14] That survey found that "94 percent of respondents would like to see additional information in the auditor's report."[15] One of the respondents provided the following elaborative comments consistent with the survey results:**

> ***Because the auditor's report has become rather "boiler-plate" it is not very useful to investors. That being said, the "auditor's report" should be extremely valuable. The auditors possess much information which could be useful to investors.[16]***

**In April 2010, the Financial Services Faculty of the Institute of Chartered Accountants in England and Wales ("FSF") released the results of their interviews with investors and other stakeholders in connection with their research on the financial crisis and "ways in which bank auditors can more effectively support confidence."[17] The FSF's paper, entitled "Audit of Banks: Lessons from the Crisis," included the following observation summarizing the investor views on the audit reports of banks:**

> **The audit report itself, however, was not viewed as providing useful information to users. It was variously described as a statement of compliance with accounting standards and lacking in information content, since unqualified audit reports use standardized wording. This can make it difficult for investors to assess the quality of individual auditor performance and differentiate between audit firms.[18]**

**In January 2011, the Financial Reporting Council issued a paper entitled "Effective Company Stewardship, Enhancing Corporate Reporting and**

**Audit"("FRC Paper")[19] The FRC Paper describes the potential benefits to enhancing auditor skepticism if auditors provide "greater transparency . . . [of their assessments to] the Audit Committee and *investors*."[20]**

**In March 2011, the Investor Advisory Group ("IAG") of the PCAOB released their survey of investors' views on improving the auditor's report ("IAG Survey").[21] The IAG Survey included responses from multiple representatives from six institutional investors whose combined assets under management exceeded six trillion dollars.[22]**

**The IAG survey revealed that "45% of respondents believe the current audit report does *not* provide valuable information that is integral to understanding financial statements."[23] Perhaps more telling, only "23% of respondents believe the current audit report provides valuable information."[24] Some comments from those respondents include the following:**

> **"Over the years, the report has evolved into something that really communicates as little new information as possible." –Head of Fixed Income Portfolio Management, Money Management Firm**
>
> **"The audit report is largely boilerplate, and only provides meaningful information in extreme circumstances, usually around going concern issues." – Chief Investment Officer, Mutual Fund.[25]**

**Finally, also in March of this year, the CFA Institute issued a third survey of its members relating to the auditor's report ("2011 CFA Survey").[26] Entitled "Usefulness of the Independent Auditor's Report," the 2011 CFA Survey found that "58% think that the independent auditor's report needs to**

**provide more specific information . . . ."[27] Some comments from those respondents include:**

> ***Current opinion is boilerplate.***
> ***. . . .***
> ***Not a lot of confidence in current auditor's report.***
> ***Report now contains no information.***
> ***Right now it is boilerplate wording.***
> ***. . . .***
> ***Some highly legalised text that is the same for pretty much every company (as it is today) is not very useful.***
> ***. . . .***
> ***The current boilerplate language is simply not sufficient.***
> ***. . . .***
> ***The final presentation of the statements is very boilerplate and explains nothing that was encountered during the audit.***
> ***. . . .***
> ***The language is too boilerplate. The company is still the customer of the auditor.***[28]

**In our view, and generally consistent with the results of the PCAOB staff outreach, the evidence indicates investors believe the standard auditor's report should be improved to provide more relevant and useful information by supplementing the existing "pass/fail model and standardized language of the auditor's report."[29] More specifically, the standard auditor's report should be supplemented with, at a minimum,[30] "the independent auditor's assessment of management's critical accounting judgments and estimates."[31]**

**We note that our view is supported by 86% of respondents to the 2011 CFA Survey[32] and 79% of respondents to the IAG Survey.[33] One of the respondents to the 2011 CFA Survey explained:**

---

[27] *Id.*
[28] *Id*. at 2-3.
[29] Release, *supra* note 1, at 9 ("Accordingly, many of these investors supported a reporting format in which a standard auditor's report is retained, with certain language in the report clarified, but supplemented with discussion by the auditor about the audit and the company's financial statements.").
[30] Other disclosures highly valued by many investors that should also be considered for inclusion in the AD&A, include: (1) areas of high financial statement and audit risk; (2) unusual transactions, restatements and other significant changes to the financial statements; and (3) the quality—not just acceptability—of the issuer's accounting policies and practices. IAG Survey, *supra* note 21.
[31] 2011 CFA Survey, *supra* note 26, at 6 ("Information about the independent auditor's assessment of management's critical accounting judgments and estimates (86% felt this was important . . . .))."
[32] *Id*.

> ***Careful accounting analysts know that there is some discretion about which principle to apply and how to apply it. We can reach our own assessment of whether these principles are conservative or aggressive, but it would be nice if there was some way to indicate how much discretion the auditor believed had been taken, and in theory, in which direction.[34]***

**Similarly, a respondent to the IAG Survey, identified as a Chief Investment Officer of a Mutual Fund, commented:**

> **"There are many judgments that ultimately determine the data on the financial statements. It's critical to understand how estimates were made and how much margin of error there might be in the estimates."**

**Our view is also generally supported by the FRC Paper's observations that the auditor should enhance the transparency of their assessments of "material assumptions and estimates,"[35] and the Advisory Committee findings that "some institutional investors believe an expanded auditor's report would enhance investor confidence in financial reporting and recommended exploring a more 'narrative' report in areas, such as 'estimates, judgments . . . .'"[36]**

**Finally, we do not object to the Board considering the expansion of the auditor's role to provide assurance on matters in addition to the financial statements. We, however, currently have no basis for concluding that such an expansion would necessarily be responsive to the information needs of the key customer of the auditor's report.[37]**

2. The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash

---

[33] IAG Survey, *supra* note 21 ("79% of respondents believe the auditor should discuss significant estimates and judgments made by management, the auditor's assessment of their accuracy, and how the auditor arrived at that assessment (14% disagree with requiring this disclosure)").
[34] 2011 CFA Survey, *supra* note 26, at 7.
[35] FRC Paper, *supra* 19, at 14.
[36] Treasury Report, *supra* note 3, at VII:17.
[37] One prominent accountant/analyst/investor has indicated that an expansion of the auditor's role to provide assurance on matters in addition to the financial statements, while not necessarily responsive to the information needs of investors, may be responsive to some audit firms' desire to increase audit fees. Jack T. Ciesielski, A PCAOB Proposal: Not Your Father's Audit Opinion, 20(9) Analyst Acc. Observer 4 (July 16, 2011) (on file with Council) ("Auditing firms would likely favor this approach: by increasing the reach of the auditor's responsibilities, audit prices should increase.") [hereinafter Ciesielski].

flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."

a. Should the auditor's report retain the pass/fail model? If so, why?

b. If not, why not, and what changes are needed?

c. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.[38]

**As indicated in response to question 1, and consistent with the results of the PCAOB staff outreach to investors[39] and other available evidence,[40] the auditor's report should retain the pass/fail model, but be supplemented, at a minimum, with the independent auditor's assessment of management's critical accounting judgments and estimates. The pass/fail model, while clearly insufficient to meet investors' information needs, provides investors some value by allowing them to "skim [the] report quickly [and easily identify] . . . departures from the standard unqualified report."[41] As further explained by one respondent to the IAG Survey:**

> **"Either a qualified opinion or not. Not a lot of incremental information once a company gets an unqualified opinion."[42]**

**Similarly, a respondent to the 2010 CFA Survey commented:**

> ***Clean vs. not clean. Otherwise, not important, since it is boilerplate*.[43]**

**Finally, the Gray Paper included the following similar results form its series of focus groups on the auditor's report:**

> **When asked how they use the auditor's report, the most common response by users indicate they look at the third paragraph to see if there is an**

[38] Release, *supra* note 1, at 10-11.
[39] *Id*. at 9 ("Many investors indicated that the pass/fail model and standardized language of the auditor's report provides consistency, comparability, and clarity of auditor reporting.").
[40] *See, e.g.*, 2010 CFA Survey, *supra* note 14, at 3 (indicating that 72 percent of respondents believe that the existing "auditor's report is important to their analysis and use of financial reports in the investment decision making process").
[41] IAG Survey, *supra* note 21 ("73% of respondents skim report quickly for departures from the standard unqualified report while 18% believe it is of no use to them at all").
[42] *Id.*
[43] 2010 CFA Survey, *supra* note 14, at 5.

> **unqualified opinion and then they look to see which audit firm signed the report. If the report is unqualified and signed by a Big 4 firm, they do not consider the report again and move on to analyze the financial statements.[44]**

**Thus, in our view, supplementing the current auditor's report, rather than expanding or replacing it, preserves the value of the pass/fail model while at the same time responding to the needs of investors for more relevant and useful information from the auditor.**

3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.[45]

**As indicated in response to question 1, and consistent with the results of the PCAOB staff outreach to investors,[46] and other available evidence,[47] investors are demanding that the auditor provide additional information about the company's financial statements for several reasons. First, the auditor would be in a unique position to provide investors with information relevant to analyzing and pricing risks and making informed investment decisions because (a) the auditor's extensive knowledge of the company and industry obtained through the audit process and the auditor's experiences with other companies in similar industries;[48] (b) the auditor is an independent third party that could provide an unbiased view of the company's financial statements;[49] and (c) the auditor could use the disclosure requirement to "leverage to effect change and enhance management disclosure in the financial statements, thus increasing transparency to investors."[50]**

---

[44] Gray Paper, *supra* note 12, at 11.
[45] Release, *supra* note 1, at 11.
[46] *Id*. at 7-8.
[47] *See, e.g.,* Treasury Report, *supra* note 3, at VII:13-19.
[48] Release, *supra* note 1, at 7 ("During the staff's outreach, many investors indicated that the auditors are in a unique position to provide relevant and useful information, because of the auditors' extensive knowledge of the company and industry obtained through the audit process and the auditors' experiences with other companies in similar industries.").
[49] *Id*. ("Some investors indicated that one of the primary reasons that they are looking to the auditor for more information, rather than management or the audit committee, is that the auditor is an independent third party.").
[50] *Id.* at 13.

**Second, additional information from the auditor could increase quality competition among audit firms,[51] particularly in the area of professional skepticism,[52] and, thereby, enhance the value of the audit to investors and the confidence in audited financial reports.[53] Third, investor/shareowners would have more information to assist them in their responsibilities for overseeing company directors and management.[54] For example, information provided by the auditor providing insight into any disconnect between the company's and the auditor's assumptions would provide investor/shareowners a better sense of management, and perhaps management's willingness to engage in aggressive accounting.[55] Finally, investor/shareowners would have more information to assist them in making an informed vote on the board's choice of the external independent auditor.[56]**

4. Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?[57]

**No response.**

5. Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?

   a. If you support an AD&A as an alternative, provide an explanation as to why.

   b. Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?

---

[51] *See, e.g.*, 2011 CFA Survey, *supra* note 26, at 9 ("This [more transparency from the auditor] would increase quality competition between auditors.").

[52] *See, e.g.*, FRC Report, *supra* note 19, at 14 ("Such scepticism would be enhanced by greater transparency, with the assessments made by auditors being open to effective challenge by the Audit Committee and investors.").

[53] *See, e.g.*, Treasury Report, *supra* note 3, at VII:17 ("One witness noted that some institutional investors believe an expanded auditor's report would enhance investor confidence in financial reporting and recommended exploring a more 'narrative' report in areas, such as 'estimates, judgments, sufficiency of evidence and uncertainties.'").

[54] *See, e.g.*, IAG Survey, *supra* note 21 ("'[a]ny insight into the disconnect between the company's and the auditor's assumptions gives a better sense of management, and management's willingness to engage in aggressive accounting'").

[55] *Id.*

[56] *Cf.* FSF Paper, *supra* note 17, at § 1 (noting that the standard auditor's report makes "it difficult for investors to assess the quality of individual auditor performance and differentiate between audit firms").

[57] Release, *supra* note 1, at 11.

c. Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?

d. If you do not support an AD&A as an alternative, explain why.

e. Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?[58]

**The Board should consider an AD&A as an alternative for providing additional information in the auditor's report. As indicated in response to question 2, an AD&A as a supplement to the standard auditor's report is the best of the alternatives presented in the Release because it provides a vehicle to satisfy the information needs of investors for more relevant and useful information from the auditor without diminishing the value of the pass/fail model derived from investors' ability to quickly discern whether the report departs from the standard unqualified report.**

**We note that our view finds support in the results of the IAG Survey which found that "52% [of institutional investors responding] believe there should be a separate Auditor's Discussion and Analysis section in the 10-K . . . ."[59] We agree with the view expressed by a respondent to the IAG Survey who stated:**

> **This [an AD&A] would be a preferable approach to enhancing auditor information available versus changing the audit report rating system.[60]**

**As indicated in response to question 1, an AD&A should include, at a minimum, the independent auditor's assessment of management's critical accounting judgments and estimates. The evidence demonstrates that such a disclosure is strongly supported by investors.**

**As indicated in response to question 3, an AD&A disclosure about the independent auditor's assessment of management's critical accounting judgments and estimates would be relevant and useful in making investment decisions and would also be used for several other important purposes, including as an additional piece of relevant information to assist investor/shareowners in making an informed vote on the board's choice of the external independent auditor. Finally, of the four alternatives presented in the Release, the only alternative (other than an AD&A) that could potentially be responsive to investors' information needs is a "[r]equired**

[58] *Id.* at 18.
[59] IAG Survey, *supra* note 21.
[60] *Id.*

**and expanded use of emphasis paragraphs" to the extent that the emphasis paragraphs could accommodate, at a minimum, the auditor's assessment of management's critical accounting judgments and estimates.[61] In our view, the location of the information is less important than the existence, source and content of the information.**

6. What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?[62]

**As indicated in response to question 1, the AD&A should include, at a minimum, the independent auditor's assessment of management's critical accounting judgments and estimates. The appropriate content and level of detail regarding this, and potentially other, financial statement related matters presented in the AD&A should generally be consistent with the information currently required to be communicated to the audit committee, or the information required to be included in the summary memorandum prepared by the engagement partner for the audit work papers describing the major risks of the audit.[63]**

7. What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?[64]

**See response to question 6.**

8. Should a standard format be required for an AD&A? Why or why not?[65]

**While we do not oppose a standard format for an AD&A, we would be concerned with any overly prescriptive format requirements that might cause the AD&A disclosures to become boilerplate and, thereby, limit the potential benefits to investors resulting from the information we have proposed to be included in the AD&A. As described in response to question 3, two of the potential benefits of the information would be to: (1) increase the quality competition among audit firms and, thereby, enhance the value of the audit to investors and the confidence in audited financial**

---

[61] Release, *supra* note 1, at 12.
[62] *Id*. at 18.
[63] *See*, *e.g.*, Ciesielski, *supra* note 37, at 3 ("The ADA might be a forum where auditors could give investors the same information they provide to a firm's audit committee.").
[64] Release, *supra* note 1, at 18-19.
[65] *Id.* at 19.

**reports; and (2) assist the investor/shareowners in making an informed vote on the board's choice of the external independent auditor. These and other potential benefits could be diminished if the AD&A is subject to a rigid standard format.**

9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?[66]

**As indicated in response to question 1, we believe the standard auditor's report should be supplemented with, at a minimum, the independent auditor's assessment of management's critical accounting judgments and estimates. We are not, at this time, advocating that the auditor's current responsibilities be expanded beyond their current level of expertise and training.**

10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?[67]

**In our view, boilerplate language might best be avoided in an AD&A through vigorous enforcement of requirements that are not overly prescriptive. Our view is generally consistent with that of prominent accountant/analyst/investor Jack Ciesielski who opined that "[v]igorous enforcement by the PCAOB, through the inspection process, might discourage auditors from making the AD&A a boilerplate document."[68]**

**We are not overly concerned with "consistency among such [AD&A] reports."[69] As indicated in response to question 3, if the information contained in AD&A reports is always consistent, the potential benefits to investors would be diminished.**

11. What are the potential benefits and shortcomings of implementing an AD&A?[70]

**See responses to questions 3 and 5 for our views on the potential benefits to investors of implementing an AD&A. In addition, as indicated in response to question 10, one of the likely shortcomings of implementing an AD&A is the need for vigorous enforcement of the requirements to avoid an AD&A that produces only boilerplate information.**

---

[66] *Id.*
[67] *Id.*
[68] Ciesielski, *supra* note 37, at 3.
[69] Release, *supra* note 1, at 19.
[70] *Id.*

**We acknowledge that an AD&A would add to the cost of an audit.[71] We, however, note that the cost should be somewhat limited under our proposed AD&A because the information to be disclosed is already required to be collected by the auditor. Moreover, as indicated in response to question 1, we believe the evidence suggests that investors, who ultimately pay the auditor's bill, are willing to incur the added cost of receiving more relevant and useful information from the auditor.**

12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?[72]

**As indicated in response to question 3, if an AD&A presents inconsistent or competing information between the auditor and management that information would be of significant benefit to investors by assisting them: in making an informed investment decision; by increasing quality competition among audit firms; in their responsibilities as investor/shareowners for overseeing company directors and management; and in making an informed vote as investor/shareowners on the board's choice of external independent auditor. If, in contrast, management's financial statement presentation is changed or enhanced to avoid potentially inconsistent or competing information between the auditor and management, investors would still benefit as a result of the "enhanced management disclosure in the financial statements, thus increasing transparency . . . ."[73]**

13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?[74]

**As indicated in response to question 1, we believe the standard auditor's report should be supplemented with, at a minimum, the independent auditor's assessment of management's critical accounting judgments and estimates. In addition, in response to question 5, we explain why including the independent auditor's assessment in an AD&A would be superior to including the information in the emphasis paragraphs. If, however, the PCAOB ultimately rejects the AD&A alternative, we would not object to having the independent auditor's assessment or assessments be described in the emphasis paragraphs. In our view, the location of the**

[71] *See, e.g.*, Ciesielski, *supra* note 37, at 4 ("*Of the four alternatives presented in the concept release, it's the most expansive form of communication to investors – and one that would certainly add to the cost of an audit.")*.
[72] Release, *supra* note 1, at 19.
[73] *Id*. at 13; *see, e.g*., Ciesielski, *supra* note 37, at 3 (noting that one benefit of an AD&A is that management "might be more likely to knuckle under to auditors when contentious issues develop").
[74] Release *supra* note 1, at 22.

**information is less important than the existence, source and content of the information.**

14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?

    a. If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.

    b. If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.[75]

**See response to questions 5 and 13.**

15. What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?[76]

**See response to questions 5 and 13**.

16. What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?[77]

**See response to questions 6 and 13.**

17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?[78]

**See response to questions 10 and 13.**

18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?[79]

**See response to questions 11 and 13.**

19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?

---

[75] *Id.*
[76] *Id.*
[77] *Id.*
[78] *Id.*
[79] *Id.*

a. If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.

b. On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.

c. What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?

d. If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?

e. Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?

f. Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?

g. If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.[80]

**We do not support the Board considering auditor assurance on other information outside the financial statements *as an alternative* for enhancing the auditor's reporting model because it would not be responsive to investors' information needs. As indicated in response to question 1, we believe the standard auditor's report should be supplemented with, at a minimum, the independent auditor's assessment of management's critical accounting judgments and estimates.**

**We also note that if the Board were to pursue a project that considers auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's report, that project would not be responsive to the explicit recommendation of the Advisory Committee "[u]rging the PCAOB to undertake a standard-setting initiative to consider improvements to the auditor's standard reporting model."[81] We believe it is relevant that the Advisory Committee spent a significant amount of time and effort on issues surrounding potential improvements to the auditor's reporting model, and yet the findings of the Advisory Committee give no**

[80] *Id.* at 26.
[81] Treasury Report, *supra* note 3, at VII:13.

**indication that any member of the Advisory Committee, or any of the many prominent investors, preparers, members of audit committees, and auditors that provided input to the Advisory Committee, advocated auditor assurance on other information outside the financial statements as an alternative to improving the auditor's reporting model.[82]**

20. What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?[83]

**No response.**

21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:

- Reasonable assurance
- Auditor's responsibility for fraud
- Auditor's responsibility for financial statement disclosures
- Management's responsibility for the preparation of the financial statements
- Auditor's responsibility for information outside the financial statements
- Auditor independence

a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?

b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.

c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?

d. What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?[84]

**We believe the clarifications described in the Release are generally not appropriate with the exception of the clarification in the area of the "[a]uditor's responsibility for fraud."[85] Our support for that clarification is**

---

[82] *Id.* at VII:13-19.
[83] Release, *supra* note 1, at 27.
[84] *Id*. at 29-30.
[85] *Id*.

**based on the recommendation of the Advisory Committee that urged "the PCAOB and the SEC clarify in the auditor's report the auditor's role in detecting fraud under current auditing standards and further that the PCAOB periodically review and update these standards."[86] As the basis for this recommendation, the Advisory Committee found "that expressly communicating to investors, other financial statement users, and the public the role of auditors in finding and reporting fraud would help narrow the 'expectation gap.'"[87] We agree.**

**The remaining five clarifications in the Release appear designed more to benefit auditors, rather than investors, by clarifying the limits of the auditor's responsibilities.[88] In addition, as indicated in response to question 1, the clarifications are not responsive to investors' information needs regarding the auditor's reporting model. Finally, as indicated in response to question 2, the clarifications, at least in combination, would likely diminish the value of the existing auditor's report by making it more difficult for investors to quickly discern whether the report departs from the standard unqualified report.**

22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?[89]

**See response to question 21 for a discussion of the potential benefits of providing a clarification of the language in the standard auditor's report on the auditor's responsibility for fraud. We are presently unaware of any shortcomings of providing this clarification.**

23. This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?[90]

**As indicated in response to question 5, we believe an AD&A is the most appropriate of the several alternatives presented in the Release for improving auditor communication to the users of financial statements.**

24. Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than

---

[86] Treasury Report, *supra* note 3, at VII:13.
[87] *Id*. at VII:18.
[88] *Cf.* Ciesielski, *supra* note 37, at 5 (commenting that the clarification for reasonable assurance "doesn't really add much value to the information supplied to investors - but it does the auditor more good in that it establishes more limits on what they're seeking in an audit and puts investors on notice").
[89] Release, *supra* note 1, at 30.
[90] *Id*.

any one of the alternatives alone? What are those combinations of alternatives or elements?[91]

**As indicated in response to questions 5 and 21, we believe an AD&A alternative with, at a minimum, a required disclosure of the independent auditor's assessment of management's critical accounting judgments and estimates, together with clarification of the auditor's report in the area of the auditor's responsibility for fraud, would be the most appropriate combination of alternatives or elements contained in the Release for improving auditor communication to investors.**

25. What alternatives not mentioned in this concept release should the Board consider?[92]

**We would like to take this opportunity to reiterate to the Board that the Council strongly believes, consistent with the recommendation of the Advisory Committee and the existing requirements of the European Union's Eight Directive,[93] that improvements to the auditor's reporting model should include requiring the engagement partner's signature on the auditor's report.[94] We endorse the findings of the Advisory Committee that "the engagement partner's signature on the auditor's report would increase transparency and accountability."[95]**

**We are disappointed that more than two years have passed since the Board issued a concept release on requiring the engagement partner to sign the audit report and a proposed rule has not yet been issued.[96] We would respectfully request that the Board either promptly release a timeline for issuing a proposed rule, or provide investors and the public with an explanation as to why this important improvement is no longer under active consideration.**

26. Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should

the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?[97]

**As indicated in response to question 8, in developing an auditor reporting framework and related criteria the Board should take care to not be overly prescriptive so as to reduce the risk of boilerplate disclosures that would limit the benefits of our proposed alternative.**

27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?[98]

**We are currently unaware of any basis for a financial statement user to perceive the AD&A alternative we have proposed as providing a qualified or piecemeal opinion. In our view, the AD&A alternative would include information that clearly supplements, rather than qualifies, the opinion in the standard auditor's report. If the Board disagrees with our view and concludes that an AD&A would result in some users perceiving the AD&A as providing a qualified or piecemeal opinion, the Board could potentially mitigate the risk by simply requiring an explanatory paragraph in the AD&A clearly describing the purpose of AD&A disclosures.**

28. Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?[99]

**As indicated in response to question 21, the alternative clarifying the auditor's responsibility for fraud would better convey to users of the financial statements the auditor's role in the performance of an audit. That alternative, however, would not be fully responsive to investor information needs regarding improvements to the auditor's reporting model.**

29. What effect would the various alternatives have on audit quality? What is the basis for your view?[100]

**As indicated in response to question 3, we believe the evidence indicates that the AD&A alternative with, at a minimum, a required disclosure of the independent auditor's assessment of management's critical accounting judgments and estimates, could increase quality competition among audit firms, particularly in the area of professional skepticism.**

[97] Release, *supra* note 1, at 30.
[98] *Id.* at 31.
[99] *Id.*
[100] *Id.*

30. Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.[101]

**We are currently unaware of any basis for excluding an AD&A alternative, as we have proposed, from the audit reports of any entity subject to the Board's rulemaking authority that files financial statements that include management's critical accounting judgments and estimates.**

31. This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.

    a. Are any of these considerations more important than others? If so, which ones and why?

    b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?

    c. Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?

    d. What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?[102]

**As indicated in response to question 1, in our view, none of the considerations described in the Release relevant to changing the auditor's report are individually or collectively more important than the goal of improving the auditor's reporting model to satisfy the information needs of its key customer—investors. Moreover, as indicated in response to questions 1, 3, 5, and 11, we believe the evidence suggests that investors, who ultimately pay the auditor's bill, are willing to incur the added cost of receiving more relevant and useful information from the auditor.**

---

[101] *Id.*

[102] *Id.* at 33-34.

32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?[103]

**As indicated in response to question 3, one of the many potential benefits of having the auditor's report be supplemented, at a minimum, with the independent auditor's assessment of management's critical accounting judgments and estimates, is that the requirement would provide the auditor with leverage to effect change and enhance management disclosure in the financial statements, thus increasing transparency to investors. We, therefore, are not particularly troubled by the concern expressed by some that providing additional information in the auditor's report could "create more tension" or "result in additional stress" in the relationships among the auditor, management, and the audit committee.[104] In our view, the greater concern is that the current level of tension and stress among the three parties may in fact be too low.**

Dear Board Members

**Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards (PCAOB Rulemaking Docket Matter No. 34)**

CPA Australia welcomes the opportunity to comment on the Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards (the Concept Release). CPA Australia is one of the world's largest accounting bodies and represents the diverse interests of more than 132,000 members in finance, accounting and business in 111 countries throughout the world. Our vision is to make CPA Australia the global professional accountancy designation for strategic business leaders. We make this submission on behalf of our members and in the broader public interest.

CPA Australia supports developments in auditor reporting that serve the evolving needs of users and safeguard effectiveness in the core function of auditing. Varying degrees of assurance are achieved through engagements such as agreed upon procedures, limited assurance and reasonable assurance. Audit is expected to deliver a reasonable level of assurance over the subject matter and a comprehensive framework exists in most jurisdictions to achieve this, including standards, criteria for auditor registration and other audit quality measures.

Proposals around auditor reporting on information outside the financial statements and clarification of certain language in the auditor's report are promising and may if sufficiently explored and developed, complement the audit function. In our view users perceive real value in the current form of auditor reporting; where the auditor exercises their expertise independently to reach a clear view, and issues a concise report to express their conclusions. Proposals for an "Auditor's Discussion and Analysis" and expanded use of emphasis paragraphs in the audit report may pose a risk of impacting negatively on this value.

Under the current reporting model, management are responsible for the preparation and presentation of financial and other information, whilst auditors add credibility by providing assurance over that information to users. This setup is fundamental to the effectiveness of the financial reporting supply chain. Issues that exist in the current corporate reporting model are being explored more appropriately in the standards and practice of financial (and non-financial) reporting. This includes examining increased reporting complexity and the comprehensive solutions such as integrated reporting. It is important to dedicate resources within the audit profession, and oversight bodies to developing the capability and frameworks required to meet the assurance needs of evolving financial (and non-financial) reports and disclosures.

We have appended to this letter, our responses to the questions raised.

If you require further information on any of our views, please contact Amir Ghandar, CPA Australia by email at amir.ghandar@cpaaustralia.com.au.

Yours sincerely

Alex Malley FCPA
Chief Executive Officer

cc: A Ghandar

**Form and content of the auditor's report (Questions 1 – 4)**

The binary approach of the current standard auditor's report is of value to stakeholders. This allows the user to take assurance that the auditor has applied their expertise and judgement to the audit and reached a level of confidence that allows them to form a clear opinion. Supplementary reporting could require the user to form their own opinion about the additional information and the audit itself. This could have the effect of diminishing the value inherent in the current core audit role. The current auditor reporting model does provide scope for emphasis of additional information without qualifying the opinion where the auditor considers this necessary for the user.

Under the current system, disclosures and other information within financial statements are the responsibility of management and the auditor's role is to provide assurance in respect of that information to users. We strongly believe that these two roles need to be kept separate and we concur with the views of some of the preparers and audit committee members who have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Any proposals to the contrary could seriously prejudice the current position of an auditor in carrying out their core role.

**Auditor's Discussion and Analysis (Questions 5 – 12)**

Some of the content proposed under this alternative could cause a blurring of roles and responsibilities between those charged with the preparation of financial statements and the auditors. Proposals to expand the auditor's role to analyse and interpret financial information could detract from their primary role of providing assurance to the users of the information as to its integrity. Specifically, this includes discussing their views regarding management's judgements and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls". These matters should be addressed by those responsible for the preparation of the financial statements.

It is understandable that a more transparent audit process could lead to a better understanding of the financial statements, provided relevant information is delivered in a reliable and understandable way. A number of questions arise in considering the proposals surrounding the disclosure of further information about the audit. What level of detail will be appropriate, and who should make this judgment? There are concerns that financial reporting today is increasingly complex, and the AD&A could add to this if not appropriately calibrated. Secondly, recognising auditors' significant legal accountabilities, how can such information be disclosed in a technically precise way while still being understandable by a wide group of users? These competing objectives can lead to standardised and cautious disclosures that don't add value.

**Emphasis of Matter Paragraphs (Questions 13 – 18)**

The Concept Release points to the French "justification of the auditor's assessment" as an approach similar to this alternative. Whilst some support exists for the French model, we note observations from practice that suggest a tendency for the disclosures being boilerplate.

One of the factors that can give rise to boilerplate disclosures are competing accountabilities and objectives. Auditors are accountable for a core role of providing assurance on financial reports which carries significant legal ramifications. Current auditor reporting is concise and technical for the purpose of delivering on this accountability in a way that does not create further risk through discursiveness in language.

In our view the current approach to emphasis paragraphs adequately addresses the intended purpose of these paragraphs.

**Other information outside the financial statements (Questions 19 – 20)**

As outlined in the paper, information outside the financial statements, including non-GAAP information and earnings releases, are increasingly prominent in investor decision making. We concur that the capability of providing meaningful assurance on this information is important and would be of value to the users. In addition to developing standards there would be a need for developments in practice and methodology.

As the Concept Release highlights, auditing standards presently describe the auditor's responsibilities regarding other information outside the financial statements, and developments in this area would require separate projects addressing the standards and practice of assurance engagements on other information outside the financial statements.

**Clarification of Language (Questions 21 – 22)**

As a document, the audit report has significant legal implications for both auditors and management, and their respective responsibilities. Precision in language used is therefore essential and this is achieved through use of professional terminology and standardised text. Clarity over the language used could be achieved through linking to more explanatory and discursive information that supports the audit report, held at another location (for example, a website).

In Australia, a separately headed Independence section has been included in the audit report, which requires the auditor to declare their compliance with independence requirements outlined in regulations/legislation. There is also a requirement in the Australian *Corporations Act* 2001 to furnish to the audited entity an "Independence declaration" which is made publicly available in the entity's annual report. This makes the status of the audit firm clear with respect to independence.

RE: **PCAOB Rulemaking Docket Matter No. 34,**
**Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards**

Dear Office of the Secretary:

Crowe Horwath LLP appreciates the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB) "Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards" (Concept Release). We have provided summarized comments below, and provided responses to selected questions included in the Concept Release in Attachment A to this letter.

We support the pursuit of methods for auditors to better serve the needs of investors. We believe it is critically important that the value of the work performed by auditors is understood by the investing public and believe that certain improvements could be made to the current reporting model to improve that understanding. In considering the alternatives for changes to the auditor's report and questions in the Concept Release, we reached several underlying conclusions that influence our view of each of the alternatives suggested. Specifically, we concluded:

1) It is the role of the auditor to provide assurance on financial information provided by management; thus, the auditor's requirements for disclosure should not exceed those of management. This long-standing auditor role is the foundation of auditing standards, the development of auditor skills, the nature of the relationship between companies and their auditor, the cost of audit services, and a wide variety of related issues. We believe management is best suited to understand their business and future plans and to evaluate what is the most relevant information for investors; whereas the auditor's competency is providing independent assurance on information, not providing commentary on the business. We also believe requiring the auditor to provide additional information about the company may reduce audit quality by detracting from open communication between the auditor, management and the Audit Committee, while shifting some responsibility for financial reporting from management to the auditor could create the perception the auditor is an advocate for the client. Further, any requirements for auditor disclosure of client information would need to be reconciled with prohibitions on auditor disclosure of confidential client information.

2) There is value to standard reporting language that provides consistency and clarity of information. An auditor's report should provide clarity such that different investors will consistently interpret the meaning of the report content. As such, we believe the auditor's report should communicate objective information, not subjective information such as the auditor's views on the audited entity.

3) Often disclosure provided by public companies is written in a very detailed style, making it difficult to separate the truly differentiating risks and transactions from those which are less critical. We believe that an appropriately designed structure using the emphasis of a matter model could permit the auditor to point to the most significant and/or sensitive matters during the period under audit.

4) We believe matters regarding audit procedures, including matters within the scope of AU Section 380, "Communications With Audit Committees, " are most meaningful when discussed in a format of two-way communication, by parties who possess knowledge of the company's internal operations (the audit committee) and the full context of all audit work (the auditor). As such, we believe many communications related to the audit do not lend themselves to general use reporting and may create confusion.

5) An expansion of the auditor role to report on additional information involves not only additional standards for auditor reporting, but will necessitate issuance of clear management disclosure requirements.

<u>Clarification of the Standard Auditor's Report</u>
We support revisions to the standard auditor's report to provide clarifying language as suggested in the Concept Release. We believe such clarifications will lead toward more consistency in investor understanding of an auditor's report. We believe clarification regarding the auditor's responsibility for information outside the financial statements would be particularly helpful, in light of the expressed investor interest in that topic. We do not believe it necessary to add new language specifying auditor independence or relevant standards, as the title of the standard report states that the auditor is independent, and it is well understood that the auditor must be independent. Adding verbiage about independence requirements introduces risk of misunderstanding; the current brevity is clear.

<u>Auditor's Discussion and Analysis (AD&A)</u>
We do not support the AD&A alternative. As previously discussed, we believe the auditor's requirements for disclosure should not exceed those of management, and the AD&A would conflict with this criterion. Since the AD&A would inherently result in unique language for each audit report and also include subjective information about the auditor's views, we believe it would not provide sufficient consistency and clarity to investors; rather, different investors reading the same auditor's report may reach differing conclusions about the meaning of the report content, resulting in confusion. We believe matters regarding audit procedures are most meaningful when discussed in a format of two-way communication, by parties who possess knowledge of the company's internal operations and the full context of all audit work. In addition, we believe a discussion of "close calls" could vary widely, even between similar issuers that addressed similar matters. As such, we believe many communications related to the audit do not lend themselves to general use reporting and may create significant confusion. As the AD&A would be unique for each company and relatively lengthy, it would require significant effort to prepare, and would involve significant time from the more senior audit staff and a firm's quality control function. As a result, the AD&A would be a costly alternative.

<u>Required and Expanded use of Emphasis Paragraphs</u>
Properly designed emphasis paragraphs may communicate useful information to investors. While some additional requirements might be useful, we would encourage the PCAOB to retain auditor discretion and limit the number of required emphasis paragraphs or topics.

To the extent that the required use of emphasis paragraphs is expanded, we would suggest the following be considered:

- The paragraphs should contain a concise, objective reference to matters disclosed in the financial statements, and should not discuss the auditor's views on such matters or discuss matters that are not disclosed in the financial statements because the auditor's disclosure requirements should not exceed those of management.

- The paragraphs should not contain a discussion of audit procedures because a discussion of audit procedures may not be clearly understood by an investor. Understanding of the audit procedures is the responsibility of the audit committee.
- We believe required paragraphs or topics should be relatively limited, as the addition of numerous required topics to be discussed in emphasis paragraphs may unduly lengthen the auditor's report and increase the amount of "boilerplate" content. A longer auditor's report with numerous required emphasis paragraphs may not be more useful to investors.
- The standard report should explain the nature of the emphasis paragraphs, including that the information includes matters that may be, in the auditor's judgment, most important to users; that the information does not include all matters that are material, involved judgments and estimates, or involved significant auditing effort; that the information does not address business risks that are not required to be disclosed in the financial statements; and that the user is responsible for reading the entire financial statements.
- The requirements for emphasis paragraphs may need to specify a separate materiality level than overall financial statement materiality, since not all material matters should be included in emphasis paragraphs.
- Additional auditing standards and examples of potential emphasis paragraphs would be needed.

Auditor Assurance on Other Information Outside the Financial Statements
We support providing assurance on other information outside the financial statements, provided such reporting is useful to investors and there are appropriate underlying standards for both auditor reporting and management disclosure requirements. Should auditor assurance on other information outside the financial statements be determined to be useful, we believe assurance on Critical Accounting Policies (CAP) would be more relevant than assurance on the Management's Discussion and Analysis (MD&A), as CAP relate to significant financial statement estimates that are of concern to investors, and the CAP are closely related to the auditor's expertise and role as financial statement auditor. Before requiring an attestation on the CAP or MD&A, consideration should be given to ensuring the CAP and MD&A requirements are sufficiently clear to facilitate comparability in attestation results.

Some investor comments related to this Concept Release seem to be based on the assertion that auditors have information about companies that is not currently being disclosed, and the desire appears to be for disclosure of additional information, rather than additional assurance on existing information. Accordingly, before requiring additional auditor assurance, we suggest careful consideration be given to whether investor needs are better met by additional disclosure of information. We believe needs for additional disclosure of information are best met by revision of management disclosure requirements.

Cost/Benefit Considerations
Any new auditor reporting requirement to provide additional information will result in increased cost. We encourage the Board to perform a thorough cost/benefit analysis to determine that any perceived benefits will meaningfully exceed the initial and annual costs to comply with the contemplated new requirements.

Application
We recommend that revisions to the standard auditor's report on the financial statements, such as additions of clarifying language or required emphasis paragraphs, should apply to all auditor reports to promote consistency.

However, any new reporting requirements, such as an AD&A or assurance on information outside the financial statements, should be considered for application to only those companies subject to audits of internal control over financial reporting. For those audits, the auditor inherently has a better understanding of the company. Additional assurance requirements will require more audit effort in the absence of an audit of internal control and will add cost to the audit. Further, companies not subject to an audit of internal control may have different investor needs than larger companies such that the cost of additional reporting requirements may exceed the benefits.

At a minimum, we suggest a phased-in approach where the additional reporting would first apply to those audits subject to an internal control audit. This would allow for an evaluation to determine if investor needs are indeed being met and whether the additional benefit outweighs the cost. Further, a phased-in approach would allow auditors to avail themselves of best practices observed from audits that include an audit of internal control over financial reporting.

**Attachment A**
**Responses to Selected Concept Release Questions**

**Question 2.a. Should the auditor's report retain the pass/fail model? If so, why?**

We believe the current opinion model should be retained. We believe an auditor's report should provide clarity such that different investors will consistently interpret the meaning of the report content. Accordingly, we believe the auditor's report should communicate objective information, not subjective information about the auditor's views. We believe the standard opinion wording with a definitive indication of conformity with established standards provides objective information with clarity.

**Question 3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.**

We strongly believe it is the role of management to provide information regarding the company's financial reporting to financial statement users, and it is the auditor's role to provide assurance on information. The question of the appropriate role of the auditor is fundamental; impacting auditing standards, development of auditor skills, the nature of the relationship between companies and their auditor, the cost of audit services, etc. As such, fundamental changes to the role of the auditor would impact a wide variety of issues, and could result in unintended consequences. If undertaken, we believe such a change in role would require significant due process over an extended period of time. However, we believe such a change from long-standing practice is not appropriate. We believe management is best suited to understand their business and future plans and to evaluate what is the most relevant information for investors; whereas the auditor's competency is providing independent assurance on information, not providing commentary on the business. We also believe requiring the auditor to provide additional information about the company may reduce audit quality by detracting from open communication between the auditor, management and the Audit Committee, while shifting some responsibility for financial reporting from management to the auditor could create the perception the auditor is an advocate for the client. Further, any requirements for auditor disclosure of client information would need to be reconciled with prohibitions on auditor disclosure of confidential client information.

**Question 5. Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?**

We do not support the AD&A alternative discussed in the Concept Release.

**b. Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why.**

We do not believe it is appropriate to comment on audit risks and procedures in an AD&A. We do not believe a discussion of audit risks and procedures is appropriate in a general use report, since, to be meaningful, such requires a detailed knowledge about the internal operations of the company and a full context of all audit work, including audit scopes. We believe these issues lend themselves to a two-way discussion, such as those held with Audit Committees, but not to general use reporting. We believe the disclosure of audit procedures or audit scopes could decrease audit quality by providing a road-map of audit strategies and by reducing the element of unpredictability in the audit.

**d. If you do not support an AD&A as an alternative, explain why.**

As previously discussed, we believe the auditor's requirements for disclosure should not exceed those of management, and the AD&A would conflict with this criterion. Since the AD&A would inherently result in unique language for each audit report and also include subjective information about the auditor's views, we believe it would not provide sufficient consistency and clarity to investors. Rather, different investors reading the same auditor's report may reach differing conclusions about the meaning of the report content, resulting in confusion. We believe matters regarding audit procedures, including matters within the scope of AU Section 380, "Communications With Audit Committees, " are most meaningful when discussed in a format of two-way communication, by parties who possess knowledge of the company's

**Attachment A**
**Responses to Selected Concept Release Questions**

internal operations (the audit committee) and the full context of all audit work (the auditor). In addition, we believe a discussion of "close calls" could vary widely between similar issuers that addressed similar matters, due not only to differing judgments about what comprises a close call, but also due to previous experience a company or their auditors may have had with an issue; in other words, two companies may have addressed the same issue and reached the same correct conclusion, but one might consider it a close call while the other does not. As such, we believe many communications related to the audit do not lend themselves to general use reporting and may create significant confusion. As the AD&A would be unique for each company and relatively lengthy, it would require significant effort to prepare, and would involve significant time from the more senior audit staff and a firm's quality control function. As a result, the AD&A would be a costly alternative.

**Question 8. Should a standard format be required for an AD&A? Why or why not?**

We do not support the AD&A alternative, but if it were to be required, the Board should seek to standardize the format as much as possible to increase the comparability and clarity of the report.

**Question 9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?**

We strongly oppose including discussion of the issuer's risks, such as business risks, strategic risks or operational risks. As previously discussed, we believe the auditor's requirements for disclosure should not exceed those of management. We believe management is best suited to understand their business and future plans and to evaluate what is the most relevant information for investors; whereas the auditor's competency is providing independent assurance on information, not providing commentary on the business.

**Question 10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?**

We believe this would be very difficult to achieve, and the lack of comparability is one of the reasons we do not support the AD&A alternative.

**Question 14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?**

Properly designed emphasis paragraphs may communicate useful information to investors, and current auditing standards provide the auditor with the discretion to use such paragraphs. While some additional requirements might be useful, we would encourage the PCAOB to retain auditor discretion and limit the number of required emphasis paragraphs or topics.

To the extent that the required use of emphasis paragraphs is expanded, we would suggest the following be considered:

- The paragraphs should contain a concise, objective reference to matters disclosed in the financial statements, and should not discuss the auditor's views on such matters or discuss matters that are not disclosed in the financial statements because the auditor's disclosure requirements should not exceed those of management.
- The paragraphs should not contain a discussion of audit procedures because a discussion of audit procedures may not be clearly understood by an investor. Understanding of the audit procedures is the responsibility of the audit committee.
- We believe required paragraphs or topics should be relatively limited, as the addition of numerous required topics to be discussed in emphasis paragraphs may unduly lengthen the auditor's report and increase the amount of "boilerplate" content. A longer auditor's report with numerous required emphasis paragraphs may not be more useful to investors.
- The standard report should explain the nature of the emphasis paragraphs, including that the information includes matters that may be, in the auditor's judgment, most important to users; that the information does not include all matters that are material, involved judgments and estimates,

or involved significant auditing effort; that the information does not address business risks that are not required to be disclosed in the financial statements; and that the user is responsible for reading the entire financial statements.

- The requirements for emphasis paragraphs may need to specify a separate materiality level than overall financial statement materiality, since not all material matters should be included in emphasis paragraphs.
- Additional auditing standards and examples of potential emphasis paragraphs would be needed.

**Question 15. What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?**

We do not believe it is appropriate to include information about audit procedures in the auditor's report. We believe matters regarding audit procedures are most meaningful when discussed in a format of two-way communication, by parties who possess knowledge of the company's internal operations and the full context of all audit work. As such, we believe communications related to the audit do not lend themselves to general use reporting and may create confusion.

We believe that identification of matters of greatest significance and sensitivity in the historical financial statements presented could provide investors with additional value as they attempt to assess a company's future prospects.

**Question 16. What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?**

See the response to Question 14 above.

**Question 17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?**

This will be difficult to achieve, and is one reason we urge caution against creating a large number of required paragraphs. However, we also believe standard, objective language has value in providing consistency and clarity in auditor's reports. As previously discussed, we do not believe emphasis paragraphs should contain discussion of audit procedures or the auditor's views; rather, they should contain a concise, objective reference to matters further disclosed in the financial statements, and, as such, standard language is not necessarily a negative attribute.

**Question 19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?**

We support providing assurance on other information outside the financial statements, provided it is useful to investors and there are appropriate underlying standards for both auditor reporting and management disclosure requirements.

Some investor comments related to this Concept Release seem to be based on the assertion that auditors have information about companies that is not currently being disclosed, and the desire appears to be for disclosure of additional information, rather than additional assurance on existing information. Accordingly, before requiring additional auditor assurance, we suggest careful consideration be given to whether investor needs are better met by additional disclosure of information. We believe needs for additional disclosure of information are best met by revision to management disclosure requirements.

While Item 303 of Regulation S-K contains the requirements for Management's Discussion and Analysis (MD&A), the requirements are relatively general, are impacted by various SEC communications issued over a long period of time, and require management to interpret what information is relevant, including estimated future impacts of transactions and events that have occurred or are expected to occur. As a result, in practice there can be diversity in MD&A content between similar companies. Critical Accounting Policies (CAP) are a component of the MD&A, and some have suggested that CAP could also be subject to auditor assurance. However, the requirements for Critical Accounting Policies have not been

**Attachment A**
**Responses to Selected Concept Release Questions**

formalized into SEC rules. Accordingly, before requiring an attestation on the MD&A (or CAP), we believe consideration should be given to ensuring the MD&A and CAP requirements are sufficiently clear to facilitate comparability in attestation results (we recognize there is currently an attestation standard regarding MD&A, but we observe it is not widely used at present).

Should auditor assurance on other information outside the financial statements be determined to be useful, we believe assurance on Critical Accounting Policies would be more relevant than assurance on the MD&A. CAP relate to significant financial statement estimates that are of concern to investors, and the CAP are closely related to the auditor's expertise and role as financial statement auditor.

**Question 21.a. The concept release presents suggestions on how to clarify the auditor's report in the following areas:**

- **Reasonable assurance**
- **Auditor's responsibility for fraud**
- **Auditor's responsibility for financial statement disclosures**
- **Management's responsibility for the preparation of the financial statements**
- **Auditor's responsibility for information outside the financial statements**
- **Auditor independence**

**Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?**

We support revisions to the standard auditor's report to provide clarifying language as suggested in the Concept Release. We believe such clarifications will lead toward more consistency in investor understanding of an auditor's report. To provide such clarity, we believe the revisions should be concise language derived from the auditing standards. Since there seems to be some investor interest in the role of the auditor with information outside the financial statements, we believe clarification regarding the auditor's responsibility for information outside the financial statements would be particularly helpful. We do not believe it necessary to add new language specifying auditor independence or relevant standards, as the title of the standard report states that the auditor is independent, and it is well understood that the auditor must be independent. Adding verbiage about independence requirements introduces risk of misunderstanding; the current brevity is clear.

**Question 23. This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?**

The addition of clarifying language to the standard auditor's report is an appropriate alternative, as it is consistent with the auditor's current role, promotes clarity in reporting, would be less costly than the other alternatives in the Concept Release, and is less likely to be detrimental to audit quality.

Properly designed emphasis paragraphs may communicate useful information to investors. While some additional requirements might be useful, we would encourage the PCAOB to retain auditor discretion and limit the number of required emphasis paragraphs or topics.

We support providing assurance on other information outside the financial statements, provided it is useful to investors and there are appropriate underlying standards for both auditor reporting and management disclosure requirements. Should auditor assurance on other information outside the financial statements be determined to be useful, we believe assurance on Critical Accounting Policies would be more relevant than assurance on the MD&A.

**Question 24. Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?**

We believe the addition of clarifying language to the standard auditor's opinion would be useful. We believe there would be redundancy between the alternative of emphasis paragraphs related to significant accounting estimates and the alternative of a separate attestation report on critical accounting policies or the MD&A; and, therefore, requiring both emphasis paragraphs and a separate attestation report would seem unnecessary.

**Question 29. What effect would the various alternatives have on audit quality? What is the basis for your view?**

Three of the alternatives (clarifying language, AD&A, emphasis paragraphs) primarily involve additional communication and would not significantly improve audit quality. Alternatives that require auditor disclosure in excess of management disclosure requirements or disclosure of audit procedures could reduce audit quality by detracting from open communication between the auditor, management and the audit committee, and by providing a road-map of audit strategies, reducing the element of unpredictability. A separate engagement to provide assurance on information outside the financial statements would have a significant impact on overall financial reporting quality, which may positively impact audit quality.

**Question 30. Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.**

Revisions to the standard auditor's report on the financial statements, such as additions of clarifying language or required emphasis paragraphs, should apply to all audit reports to promote consistency.

However, any new reporting requirements, such as an AD&A or assurance on information outside the financial statements, should be considered for application to only those companies subject to audits of internal control over financial reporting. For those audits, the auditor inherently has a better understanding of the company, which could impact the comparability of reporting compared to similar companies that are not subject to an audit of internal control. Additional assurance requirements will require more audit effort in the absence of an audit of internal control and will add cost to the audit. Further, companies not subject to audits of internal control may have different investor needs than larger companies such that the cost of additional reporting requirements may exceed the benefits.

At a minimum, we suggest a phased-in approach where the additional reporting would first apply to those audits subject to an audit of internal control. This would allow an evaluation to determine if investor needs are indeed being met and whether the additional benefit outweighs the cost. Further, a phased-in approach would allow auditors to avail themselves of best practices observed from audits that include an audit of internal control over financial reporting.

Ideally, field testing would be performed prior to implementation for any changes to auditor reporting. This would provide a vehicle to assess the cost implications as well as evaluate whether investor needs are being served.

**Re: PCAOB Rulemaking Docket Matter No. 034, *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards***

Deloitte & Touche LLP appreciates the opportunity to respond to the request for comments from the Public Company Accounting Oversight Board (the "PCAOB" or the "Board") on its *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (the "Concept Release") (PCAOB Release No. 2011-003 June 21, 2011, PCAOB Rulemaking Docket Matter No. 034). Our comments on the Concept Release address the following areas:

- *I. Overall Comments*
- *II. Recommendations for Changes to the Auditor's Report*
- *III. Concerns with an Auditor Discussion and Analysis*
- *IV. Other Considerations*

## I. OVERALL COMMENTS

We commend the PCAOB for undertaking to solicit views regarding potential changes to the auditor's report in connection with the audit of financial statements. We particularly commend the PCAOB and Chief Auditor Martin Baumann and his staff for the unprecedented outreach that preceded the publication of the Concept Release. It is inevitable that, as the information needs of users of financial statements and the amount of information available to such users evolve, reporting (by auditors, management and the audit committee) would also evolve to meet those needs.

***A Holistic Approach to Changes in Financial Reporting:***

While we support the PCAOB's project to consider revisions to the auditor's report, we also strongly believe a holistic approach to improving financial reporting is necessary and warranted. The audit is only one piece of the financial reporting process. Reporting obligations on the part of the auditor should not be considered in isolation; changes to financial-related reporting and disclosures by management, the audit committee and auditors should all be considered together in order to achieve the best outcome for users. This holistic approach, and related coordination among regulators, will allow a more complete review of the allocation of responsibility among those who participate in the financial reporting process. We understand, however, that all of these changes would not be within the mandate of the PCAOB, and we encourage communication with accounting standard setters and the Securities and Exchange Commission ("SEC") in such an effort to improve the quality of financial reporting.

***Objectives of Potential Changes to the Auditor's Report:***

We encourage and support an evolution in auditor reporting that results in responsible changes that improve the relevance and information value of what auditors produce and helps to achieve high quality financial reporting. As part of the process of developing such changes, it is important to clearly link any proposed changes with the objectives of the project. We believe the objectives are to (1) meet the needs of users and (2) enhance audit quality. As the PCAOB weighs the merits of any proposed changes, we request that the Board assess the extent to which each option can help achieve these objectives.

***Principles for Changes:***

We believe there are fundamental principles that the PCAOB should keep in mind when considering changes to the auditor's report, as follows:

1. Any proposal that would increase the information gap or expectation gap or detract in any way from audit quality should not be considered.

2. The respective roles and responsibilities of the auditor, management and the audit committee should remain unchanged. Auditors should not be the original source of disclosure about an entity; the responsibilities of management and the audit committee should be preserved in this regard.

3. Any changes to the auditor's report should avoid user confusion. Specifically, any revisions should not require users to sort through different or duplicative information provided by the auditor, management and the audit committee. This would not improve financial reporting.

4. Auditor reporting should focus on the objective rather than the subjective.

5. Changes should be market driven, add value, and be made with appropriate consideration of costs and benefits.

## II. <u>RECOMMENDATIONS FOR CHANGES TO THE AUDITOR'S REPORT</u>

We have participated in many open discussions regarding potential changes to the auditor's report, including those at PCAOB Standing Advisory Group meetings, the PCAOB's roundtable, as well as dialogues undertaken by the profession through the Center for Audit Quality ("CAQ"). We have also observed other open PCAOB meetings on this topic, including the PCAOB's Investor Advisory Group ("IAG") meetings and public Board meetings. Throughout these discussions the common themes have been the following:

- More information about and a better understanding of management's estimates and judgments and areas involving significant measurement uncertainty would be useful;

- There is a lack of understanding regarding what an audit is and how it is performed; and

- There is a lack of awareness of the audit committee's responsibilities.

We support effective and responsible changes to the auditor's reporting model that address these common themes and will be most helpful to users, while at the same time meeting the principles identified in the "Overall Comments" section above. The approaches which we believe might be most effective are:

1) Including an additional paragraph in the auditor's report that references those footnotes in the financial statements which the auditor has determined are the most important to a user's understanding of the financial statements. In most cases, these will include the footnotes in which the entity identifies and discusses significant management estimates and judgments, as well as areas of significant measurement uncertainty;

2) Requiring the auditor to provide assurance on the portion of Management's Discussion and Analysis ("MD&A") related to critical accounting estimates;

3) Providing more information in the auditor's report, in a form prescribed for all audits, about what an audit is and the responsibilities of the auditor, management and the audit committee. This could be achieved by clarifying certain terms and adding some specific information regarding responsibilities.

These approaches, which are further discussed below, are designed to meet the needs of users, without imposing the unintended consequences and significant costs of other options, including requiring an Auditor's Discussion & Analysis ("AD&A") also discussed further below.

***Additional Paragraph Referencing the Footnotes:***

We support including an additional paragraph to the auditor's report which would reference those footnotes to the financial statements which the auditor has determined are most important to a user's understanding of the financial statements. As noted above, in most cases, these will include the footnotes in which the entity has identified and discussed its significant management judgments and estimates, and areas with significant measurement uncertainty. The objective of the paragraph would be to highlight matters that are in the financial statements. It would not describe audit procedures performed (refer to discussion in section III below) related to those financial statement disclosures.

We believe that this alternative would not blur the line of responsibility between the auditor and management (management is still the provider of information); however, it will often focus users on more important aspects of the entity's financial statements. We also believe that an increase in focus on these footnotes will improve management's disclosures in these areas.

We recognize that the PCAOB currently has standards with respect to emphasis of a matter paragraphs; however, a new standard would need to be promulgated by the PCAOB with an appropriate framework and guidance in order to make the above recommendation regarding an additional paragraph operational. In addition, we believe that the wording of the additional paragraph should be prescribed by the PCAOB (through the new audit standard), in part, to provide consistency in disclosure from audit to audit, and so that a user does not incorrectly assume that the auditor has provided additional assurance on the referenced footnotes.

***Assurance on MD&A Related to Critical Accounting Estimates:***

For several reasons, we support the auditor providing assurance on the portion of MD&A in which management discusses the entity's critical accounting estimates. Such an alternative is consistent with the principles outlined in the "Overall Comments" section above, including the fact that providing assurance on this portion of MD&A would not blur the line between auditor and management responsibility. Also, it may have the effect of enhancing management's disclosures in this area as auditors engage in increased dialogue with management on the content of the disclosures.

Additional benefits of auditors providing such assurance include:

- It would be responsive to what has been heard from investors regarding further information on management's significant estimates;
- It would avoid many of the unintended consequences associated with AD&A; and
- Although, to some extent, this will increase the costs and burdens associated with the audit process, it will focus on a particularly important aspect of MD&A from a financial reporting perspective, and avoid the undue cost and burden of auditing MD&A in its entirety.

In order for the auditor to provide assurance on the critical accounting estimates that are disclosed in MD&A, the SEC will need to first develop applicable disclosure and reporting rules, and the PCAOB will need to develop an auditing standard on how the auditor would provide such assurance.

***Additional Information on What Is an Audit:***

On a broad level, we support clarifying what an audit is and how it is performed. This can be achieved through supplementing the current form of the auditor's report and can be implemented in a cost-effective and practical manner. Specifically, similar to the CAQ[1], we support the following detailed recommendations for clarifying what an audit is and how it is performed:

1. Provide additional standard information on what an audit is, including an explanation of technical terms such as reasonable assurance, materiality and material misstatement. This standardized wording should include an explicit statement that the footnotes are an integral part of the financial statements that are covered by the audit report.

2. Clarify the auditor's responsibility. This could be achieved by adding descriptions of the auditor's responsibility with respect to:

    a. *Other information in documents containing audited financial statements.* We believe that some users of financial statements place undue reliance on other information in documents containing the audited financial statements because they are of the belief that, because such information is included with the financial statements, it has been audited.

[1] CAQ letter to the PCAOB, June 28, 2011.

b. *Being independent under all relevant standards.* In addition to the title that the auditor's report is performed by an independent audit firm, we believe the report could include a specific statement that the auditor is independent under all relevant independence standards.

c. *Using professional judgment in making risk assessments and selecting audit procedures.* We believe it is important to clarify the role of professional judgment within an audit, to inform users that procedures selected and performed go beyond simple adherence to a checklist, and may vary from audit to audit.

d. *Planning and performing the audit to obtain reasonable assurance about whether the financial statements taken as a whole are free of material misstatement "whether due to error **or fraud**."*

e. *Situations in which a conclusion is reached that the financial statements are not in accordance with GAAP or in situations where the audit scope has been limited.*

3. Provide expanded discussion on the responsibilities of management and the audit committee for financial statements and the Form 10-K.[2]

4. Where applicable, describe the accounting firm network structure, the responsibility of the member firm signing the audit report, and the level of participation by other member firms in the audits.

The forgoing changes could be implemented by including additional standardized language, prescribed by the PCAOB, either:

- As an appendix to the report;
- Within the audit report itself; or
- Through a link in the audit report to a document provided by a third party (e.g., the PCAOB; the CAQ).

The PCAOB prescribed language would be used by all auditors for all reports for audits of public companies.

## III. CONCERNS WITH AN AUDITOR DISCUSSION AND ANALYSIS

***Introduction:***

We believe there are several significant obstacles to an AD&A that would result in problematic, unintended consequences. First, it would result in auditors disclosing original information about the entity, causing a departure from the foundational concept that the auditor should give assurance on information provided by management. Such a change will likely result in unnecessary challenges with

[2] The SEC may also consider revising its rules concerning the form and content of an audit committee report and requiring the audit committee report to be included with the 10-K, rather than in the proxy statement. Depending on the form and content of the audit committee report, the SEC and the PCAOB might consider requiring the auditor to provide assurance on the accuracy and completeness of that report.

respect to aspects of the audit such as confidentiality, independence and auditor-management-audit committee communications, ultimately imposing significant burdens on the auditor and the entity. Additionally, it would be extremely difficult for the PCAOB to establish standards that would provide for the requisite consistency, and thus comparability, in AD&A from audit report to audit report. There is a significant risk that the AD&A would result in inconsistent or competing information coming from the auditor and management, resulting in unnecessary additional disclosure in Form 10-Ks, and likely causing user confusion. These issues are discussed further below.

***AD&A is Inconsistent with Our Basic Precepts for Any Change:***

The idea of an AD&A as set forth in the Concept Release is contrary to the principles outlined in the "Overall Comments" section above in several important respects:

- <u>Auditor becomes the original source of information.</u> The auditor, through the AD&A, would become a source of original disclosure about the entity and its financial reporting, thereby blurring the role of the auditor and management. The role of the auditor is to provide assurance, not information about the entity. It is the role of management to provide that information. The AD&A proposal in the Concept Release does not recognize the extent to which the AD&A proposal would involve the auditor becoming an original source of entity information and the impact such a change would have on the roles of the auditor, management, and the audit committee.

  If the auditor becomes a provider of original information, the following issues would have to be addressed:

  - *Uncertainties regarding the responsibilities of the auditor and management.* Where would the line be drawn between the responsibility of auditor and management for financial information about the entity, if entity information is initially disclosed by the auditor? There would likely be significant confusion on the part of readers of the financial statements who may believe the auditor is responsible for the financial statements -- and not management or the audit committee. Currently there is a clear distinction between the reporting and disclosure responsibilities of the auditor and of management, respectively.

  - *Impact on the responsibilities of the audit committee.* How would AD&A impact the role and responsibilities of the audit committee? Would the audit committee believe they are less responsible for financial reporting?

  - *Coordination and consistency with other regulatory requirements.* How would auditor requirements under PCAOB standards be reconciled with requirements for disclosure by issuers -- now governed by the SEC and the Financial Accounting Standards Board?

  - *Potential auditor independence issues.* SEC rules state that the auditor is not independent if the auditor acts as an employee of an audit client or performs any decision making, supervisory, or ongoing monitoring function for the audit client. Further, PCAOB independence rules preclude the auditor from preparing source documents or reporting on behalf of management. Writing an AD&A, determining which matters to include in the AD&A, and obtaining sufficient information about the matters to be included arguably puts the auditor in the position of performing impermissible management functions, including preparing source documents, decision making, monitoring, or reporting on behalf of management.

- o *Confidentiality issues.* Will confidentiality issues arise if the auditor is disclosing entity information not disclosed by management?

- Reduction in audit quality. Requiring AD&A has the potential of reducing audit quality. Auditor disclosure of original information about the entity could erode the robustness of discussions between the auditor and management and/or the audit committee and disrupt what should be a free flow of information among them. For example, management and the audit committee may be reluctant to candidly share with the auditor information with respect to the entity because of a concern that what is shared will be considered for inclusion in the AD&A. A level of distrust may develop as management and the audit committee are concerned about what the auditor is going to discuss in the AD&A.

  Additionally, establishing and maintaining a system of quality control to ensure a reasonable level of consistency in AD&A across firms and the profession would be a challenge. Consistency in content and presentation is important so that reports are comparable for users. Efforts to ensure consistency in the AD&A within a particular firm which would likely include the need for national office review of all AD&As, and would tax audit firm national office/quality control resources at the time they would be focusing on audit quality and reporting matters.

  Also, AD&A might detract auditors from effective completion of the audit. The ability of the auditor to prepare a tailored narrative and complete the necessary reviews within current SEC filing deadlines will be challenging. Once the auditor has completed the AD&A, management will want to review it for accuracy and completeness and will reconcile the AD&A to financial statements, MD&A and other entity disclosures. This will take significant time during a period that is already compressed. Creating this additional burden on management and the auditor will create added pressures and could keep auditors from focusing on other audit procedures.

  Further, a public discussion in AD&A regarding the audit procedures performed with respect to areas of significant risk has the potential to lessen the value and effectiveness of the audit procedures performed. Such discussion of particular audit procedures may better equip management to anticipate the procedures that will be performed going forward, potentially reducing audit effectiveness and quality to the detriment of users. (See further discussion below regarding disclosing audit procedures.)

- Creation of user confusion. Requiring an AD&A could easily create user confusion due to competing, duplicative, potentially inconsistent, and lengthy information contributed by both management and the auditor. Discussing matters in AD&A such as (1) difficult or contentious issues, (2) close calls, and (3) matters that are in technical compliance with the applicable financial reporting framework but could be enhanced through additional disclosure, would undermine the auditor's opinion reached on the financial statements as a whole. Further, the ability to appropriately distill, into a few sentences, the hundreds of hours spent auditing a complex area will be difficult, and cannot conceivably convey the audit effort, including all the procedures performed, evidence gathered and judgments made, relating to a particular area.

Additionally, when the auditor's views on complex items such as judgments, estimates, accounting policies and practices, difficult or contentious issues or close calls, are communicated with the audit committee, the audit committee has been provided with an appropriate context for these complex matters through:

- Live interaction with the auditor;
- Follow-up and two-way discussions with the auditor to review the information presented;
- Extensive background knowledge derived from their responsibility to oversee the financial reporting process.

This dialogue works quite well in practice as a means of discussing issues, assessments and conclusions. Such a dialogue cannot be meaningfully conveyed by way of AD&A reporting.

- Introduction of subjectivity and lack of comparability of reports. An AD&A would be a very subjective presentation by the auditor. As discussed earlier, achieving comparability of reports including subjective information, both within firms and across firms, would be a formidable challenge, and it is unclear how a firm would design and implement an effective system of quality control to achieve appropriate consistency regarding the reporting of such information, without having multiple layers of review at levels above the engagement team. Comparability between reports on different entities, including those in similar industries, would be sacrificed without consistent auditor reporting, potentially confusing the marketplace. For instance, one audit partner's subjective view regarding the inclusion or exclusion of a "close call" or "preferable accounting treatment" may differ from that of another, which could result in unintended consequences for an issuer in comparison to its peers.

  Ultimately, the expectations of those who support an AD&A will not be realized in practice, as consistency, comparability, and the legal environment will prevent the auditor from providing unique, narrative discussions regarding the public companies they audit.

***Discussing Audit Procedures is Inappropriate:***

In addition to being contradictory to the principles we presented in the "Overall Comments" section above, we do not support discussing risks, judgments and procedures specific to the audit performed within the audit report for the following reasons:

- It would be difficult to understand this information without further context derived from dialogue with the auditor;
- Succinct descriptions would not adequately describe significant and often complex audit judgments and procedures;
- It would reduce the element of unpredictability of audit procedures, which is required by PCAOB Auditing Standard No. 13, paragraph 5(c);[3] and

[3] PCAOB Auditing Standard No. 13, states the following: "*Incorporating elements of unpredictability in the selection of audit procedures to be performed.* As part of the auditor's response to the assessed risks of material

- More thorough descriptions could contribute to disclosure overload and detract from the ability to provide useful information to users.

***User Support for an AD&A is Uncertain at Best:***

The surveys[4] that have been referenced by proponents of AD&A do not support the more significant change that an AD&A would impose on the auditor reporting model, and, based on the input provided to date, there does not appear to be a mandate for such a change. For example:

- Consider information from the informal IAG survey as follows:
  - Respondents were asked to react to the following statement "The audit report as currently written, provides valuable information and is integral to understanding the financial statements." The results did not show support for drastic change: 55% of the respondents said either "strongly agree", "agree", or "neither agree or disagree." [5]
  - Respondents were also asked to react to the following statement: "The audit report (either in an AD&A or elsewhere) should include a narrative summary of the various items that the auditor communicated, both orally and in writing, to the entity's audit committee (relating, for example, to significant accounting policies, management's judgments and estimates, and significant audit adjustments) as required under existing PCAOB regulations." The results did not show overwhelming support for such a narrative, with 44% stating they "strongly disagree," "disagree," or "neither agree nor disagree."[6]

- Consider the following from the CFA's informal survey regarding the auditor's report:
  - When asked "What additional information, if any, would you like to see in the auditor's report," none of the respondents said they wanted the auditor to provide information about audit risks, audit procedures and results, discussion of critical accounting policies, significant unusual transactions, or "close calls" and other matters the Concept Release is suggesting be included in a potential AD&A.[7]

- Consider the following statements made at the PCAOB's roundtable on September 15, 2011:
  - Mr. Peter Nachtwey, Chief Financial Officer, Legg Mason, Inc., when speaking about the potential concept of an AD&A stated the following: "…when I go talk to the guys that run our funds and run our affiliates, and these are very, very seasoned guys and

---

misstatement, including the assessed risks of material misstatement due to fraud ("fraud risks"), the auditor should incorporate an element of unpredictability in the selection of auditing procedures to be performed from year to year."

[4] The surveys put forth by some to support the creation of the AD&A have not been comprehensive in terms of outreach or in response rates. The survey conducted by members of the PCAOB IAG in March 2011 resulted in 73 responses from at least 330 individuals surveyed. Additionally, the survey conducted by the CFA Institute in March 2010 resulted in 106 responses from approximately 500 individuals surveyed; however, it is not clear how many of the CFA survey respondents are from the United States. The related report explains that 27% of those surveyed were from Europe, the Middle East, and Africa, and 19% were from Asia Pacific. The remaining 54% surveyed are from the Americas; the CFA does not specifically provide a figure for those surveyed in the United States, but it would seem to be less than 54% of those surveyed.

[5] IAG Survey presented at the March 2011 IAG meeting, page 1.

[6] Ibid, page 7.

[7] CFA Institute Independent Auditor's Report Survey Results, March 2010, page 20.

gals who've been around for decades, they are not clamoring for a change in the auditor's report."[8]

- Mr. Alan Beller, Partner, Cleary Gottlieb Steen & Hamilton LLP and former Director of the Division of Corporation Finance of the SEC, when also speaking about AD&A stated, "It actually will be less productive than some of the more modest suggestions that have been made around the table."[9]

Based on the foregoing, we strongly oppose the concept of the auditor providing an AD&A. The options we have suggested in section II above would better meet the needs of users, without imposing the unintended consequences and significant costs of requiring an AD&A.

## IV. OTHER CONSIDERATIONS

If the PCAOB moves forward with its consideration of possible changes to the auditor's report, it should first perform a cost/benefit analysis, including consideration of the practical challenges related to the time, effort and resources required to implement any new requirements and complete them within the current SEC Form 10-K filing deadlines. The analysis should also include a comparison of the costs and benefits of instituting any required changes to the auditor's report versus requiring issuers to provide additional disclosure.

Additionally, like the CAQ, we believe the concerns articulated by the PCAOB in the Concept Release with respect to the potential for increased litigation risk are warranted, particularly if the Board proceeds with the AD&A alternative and such an approach is adopted. Auditor liability has been discussed in many forums over many decades, and it is an important issue for consideration as potential changes to the auditor's reporting model are evaluated.

Finally, as part of the process to develop proposed standards for changing the auditor's reporting model, we recommend that the PCAOB:

- Contemplate whether the changes make sense in the context of audits of employee benefit plans (EBP) of public companies, the financial statements of which are filed with the SEC through an 11-K. We do not believe users of EBP financial statements are requesting or in need of an expanded auditor's reporting model. Further, the alternatives the PCAOB is considering for audit reports on financial statement audits of public companies would not be meaningful in the context of reporting on EBP financial statement audits. As a result, the PCAOB may decide that the changes proposed and adopted may not apply in the context of an EBP audit report.

- Consider how any changes to the auditor's report would be managed to educate investors and other users.

***

**RE: PCAOB Rulemaking Docket Matter No. 34**

By way of background, I have worked at Dodge & Cox, an investment firm managing approximately $175 billion in public equity and fixed income assets, since 1997. Dodge & Cox has been in business since 1930 using a long-term, value oriented, style of investing. Prior to business school, I practiced as a CPA at Arthur Andersen. I have reviewed financial statements as a former auditor and used them as an investor. I agree that the current auditor's report is deficient as a communication vehicle, and that it needs significant changes to remediate those deficiencies.

I believe that the root causes of the overall deficiency result from 1) a litigious environment causing auditors to limit disclosure, 2) the fact that auditors are paid by the company's management and 3) the different priorities of auditors and investors. With respect to the third cause, auditors spend the majority of their time auditing the client's balance sheet while performing much less work on the other statements and footnotes. Investors, on the other hand, are more concerned about the quality of earnings, cash flow and footnote disclosures. The audit report should be expanded to offer more insights to investors than just the simplistic "pass or fail" model we have today.

I recommend that the PCAOB consider requiring a supplemental auditor's discussion and analysis (AD&A) section in addition to the basic opinion which could include the following:

- The auditor's assessment of the estimates, principles and judgments made by management in preparing the financial statements and how they arrived at their assessment. Statistics regarding the testing that supported the opinion would be useful.

- Add disclosures detailing areas of high financial statement audit risk or significant measurement uncertainty as well as procedures performed to render the opinion . A description of materiality thresholds for financial statements taken as a whole should be disclosed, e.g., 5% of reported net income materiality standard for adjustments.

- An assessment of the *quality*, not just the acceptability, of the audit client's accounting practices and policies could be required. For example, the AD&A section of the audit opinion could include information which summarizes the following analysis demonstrating the quality of reported results:

a. An assessment of the effectiveness of internal controls used by the client.
b. A description of the impact that material changes to accruals (e.g., *reserve reversals*), non-recurring or non-operating items and capitalized expenses had on reported results.
c. Auditor commentary on trends *between* financial statements, e.g., a comparison of net earnings to reported cash flow.
d. Discussion of unusual accounting related changes such as restatements that might cloud comparability and any other material changes in the financial statements or footnotes.
e. A comparison over a multi-year period of write-offs to cumulative reported earnings, if applicable.
f. *Qualitative* risk factors such as management's use of non-GAAP reporting of results, serial use of restructuring charges, expense write-offs, material M&A transactions etc. should be addressed along with quantitative factors.

- I also believe that there is a need for improved disclosure regarding the independence of the auditor. For example, the auditor should disclose if it is providing consulting services to the audit client in addition to the audit. They should have to disclose whether former auditors that worked on the audit engagement are now in senior finance roles at the client company. The nature and extent of involvement by other auditors should also be noted.

- Finally, we agree that the audit report should more clearly describe the auditor's responsibility for detecting material fraud.

We appreciate the opportunity to provide feedback to your committee and look forward to positive future changes that might result from your efforts. Please do not hesitate to contact me if you have any questions. I can be reached at 415-273-7672.

Sincerely,

John N. Iannuccillo

Power by Association℠

Edison Electric Institute

Richard F. McMahon, Jr.
*Vice President*

September 30, 2011

Public Company Accounting Oversight Board
Office of the Secretary
1666 K Street, NW
Washington, DC 20006-2803

**Rulemaking Docket No. 34**

The Edison Electric Institute (EEI) respectfully submits our comments on the Public Company Accounting Oversight Board's (PCAOB) *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* No. 2011-003 (Concept Release). EEI is the association of United States shareholder-owned electric companies. Our members provide service to 95 percent of the ultimate customers in the shareholder-owned segment of the industry, and represent approximately 70 percent of the United States electric power industry.

EEI and its member companies have several concerns about the alternatives proposed in the Concept Release as discussed further below. Our comments are organized in the following sections as set forth in the Concept Release:

1. Auditor's Discussion and Analysis (AD&A),
2. Required and expanded use of emphasis paragraphs,
3. Auditor assurance on other information outside the financial statements, and
4. Clarification of language in the standard auditor's report.

**Auditor's Discussion and Analysis**

The Concept Release discusses that the intent of an AD&A would be for the auditor to provide in a narrative format his or her views regarding significant matters, including management's judgments and estimates, difficult or contentious issues and areas where management could have applied different accounting. We believe that management is responsible for the financial statements and the disclosures set forth therein. The Audit Committee of a Board of Directors (Audit Committee) is the appropriate governance body, as discussed below, to provide oversight of management and to engage the auditors in open and transparent communication of their work and the quality of a company's financial statements and disclosures. The auditor's responsibility is to obtain reasonable assurance about whether the financial statements present fairly, in all material respects, the results of an entity in conformity with U.S. GAAP and with larger public companies, to opine on an entity's internal control over financial reporting. An auditor exercises professional judgment in accordance with the auditing standards in the design and execution of an audit plan to opine on the accuracy and completeness of the financial statements as a whole. The auditor does not opine on individual matters. Accordingly, subjective information about an entity's financial statements presented by an auditor, such as a discussion of management's judgments and estimates, could create greater confusion, and in our view, would not result in providing decision useful information to investors.

An AD&A would significantly increase the cost of and time to complete the audit due to the additional effort that would be required for the auditor to obtain the understanding necessary of the day-to-day operations of the company and management's decisions and estimates required to be able to provide meaningful disclosures. In addition, an increase in effort would be required to resolve and clarify differences between the AD&A and the other information in the financial statements and potentially require further time to make information available to investors. Further, if an auditor provides subjective information that is relied upon for investor decisions and is later proved to be incorrect, the auditor and the company could be subject to litigation.

Current auditing standards already require the auditor to report the items proposed in the Concept Release to the Audit Committee. The Audit Committee, as a part of the shareholder elected Board of Directors, has the authority and responsibility to oversee the financial reporting process on behalf of investors and to resolve any specific accounting treatments that they are not comfortable with. This auditing standard should provide the level of assurance that these judgmental areas have been adequately addressed within the financial statements. The auditor also reporting these items to the investors could not only potentially confuse an uninformed investor, but would also appear to undermine the governance role of the Audit Committee.

If the auditor is required to present subjective information in the form of an AD&A, communications between the auditor, management and the Audit Committee could become less transparent. Effective communication between these parties is important to uphold the transparency of the audit resulting in a quality audit. There is also a risk of disclosing information that is confidential to the company in an AD&A. GAAP prescribes the standards that must be followed by management when producing financial statements, which are then reviewed by the SEC. If the investors require changes to the disclosure and reporting requirements under

GAAP, this should be completed through the standard setting process and not via the proposed AD&A.

**Emphasis Paragraphs**

The Concept Release proposes that emphasis paragraphs could be required and their use expanded, in which the auditor would discuss such things as significant management judgments and estimates and areas with significant measurement uncertainty. The PCAOB's auditing standard AU 580.11 already requires an auditor to include an emphasis paragraph in certain situations and allows auditors to include them when the auditor wishes to emphasize a matter in the financial statements. Requiring and expanding the use of emphasis paragraphs may lead to standardized disclosures in the auditor's opinion that are not meaningful to investors. As discussed above, significant management judgments and estimates and significant risks are already discussed with the Audit Committee. We believe the existing guidance for the use of emphasis paragraphs in the audit report is appropriate.

We believe that ASC 275, *Risks and Uncertainties,* provides guidance for disclosures in the footnotes that addresses some of the concerns in this area. However, to the extent that these disclosures should be expanded to address significant judgments and estimates in the financial statements and footnotes, we believe that the accounting standard setting process is the appropriate forum as opposed to the auditor's opinion.

**Auditor Assurance on Other Information**

Another alternative presented in the Concept Release is for the auditor to provide assurance on information outside the financial statements, such as Management's Discussion and Analysis (MD&A), earnings releases, and/or non-GAAP financial information. Increasing the scope of the audit to include this other information could significantly increase the costs of the audit and could also put at risk the company's ability to timely file its financial statements in compliance with regulations.

Current auditing standard AU 550 already requires that auditors review other information accompanying the audited financial statements, such as MD&A, to ensure consistency with the audited financial statements. Simply providing assurance on other information outside the financial statements would not provide additional useful information for investors. We note there is a PCAOB attest standard detailing the requirements for attest engagements with respect to MD&A (AT 701), however, these engagements are typically not performed. Rather than a mandate, we believe that the Audit Committee is the appropriate place to make a judgment whether such undertaking is beneficial to their investors. Lastly, we believe that a regulatory mandate to audit additional information should only be made if a comprehensive analysis shows compelling evidence that the benefits outweigh the costs.

**Clarification of Language in the Standard Auditor's Report**

The fourth alternative discussed in the Concept Release is the clarification of certain terms in the standard auditor's report, such as reasonable assurance, and the clarification of auditor responsibilities, such as the auditor's responsibility to detect fraud. We appreciate the investment community's desire for additional understanding and do not object to the audit community providing the factual information proposed by this alternative.

If guidance is issued directing auditors to clarify their responsibilities and certain terms in the audit opinion, to avoid confusion, the EEI recommends amending the standard auditor's opinion by providing standardized language to be used in all auditor reports to maintain consistency between all auditors and all entities.

**Conclusion**

We appreciate the opportunity to comment on this Concept Release. As discussed above, we do not support the alternatives set forth in the Concept Release, including a requirement of the auditor to present subjective information on an entity's financial statements in their opinion. The auditor's views regarding significant matters, such as permissible alternative accounting treatments, could undermine the entity's financial statement presentation and disclosures and create greater confusion with the investor public. Furthermore, we do not support increasing mandates by the PCAOB of auditors that increase cost of operations of U.S. registrants, without measureable benefits to investors. If additional disclosures are necessary, we believe they should be established through the standard setting process and provided by management. If an auditor has concerns, they should be addressed with the Audit Committee whose role is to address those concerns.

We would be pleased to discuss our comments in further detail and provide any additional information that you may find helpful in addressing these important issues.

Sincerely,

Richard F. McMahon, Jr.

Washington, D.C. 20006-2803

**Re: Request for Public Comment:** ***Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standard***

We commend the Board's effort to make improvements to the auditor reporting model and appreciate the opportunity to provide our comments on this Concept Release.

Following are our responses to the specific questions noted in the Release.

**Content and Form of the Auditor's Report**

1. *Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.*

   a. *Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?*

   We believe that the Board should undertake a standard-setting initiative to consider improvements to the auditor's report, with the goal of providing investors with more information about the audit process, including a clear understanding by the users of the financial statements as to the different responsibilities of the auditor and management. However, we do not believe that this initiative should result in an expansion of the basic responsibilities of the auditor.

   b. *In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?*

   We believe that the standard auditor's report could be improved by further explaining the difference in responsibility of the auditor and that of management, and perhaps that of the Audit Committee, as well as further explaining the level of responsibility the auditor takes with respect to the financial statements as opposed to other information included outside of the financial statements.

c. *Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?*

We do not believe that the auditor's role should be expanded to provide assurance on matters other than the financial statements, as we believe that this is an assumption of the responsibilities of management by the auditor, which may potentially result in additional confusion as to the respective roles and responsibilities of the auditor and management.

2. *The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."*

a. *Should the auditor's report retain the pass/fail model? If so, why?*

Yes, as the current model provides consistency, comparability, and clarity for users of the related financial statements.

b. *If not, why not, and what changes are needed?*

c. *If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.*

We believe that the following changes to the auditor's report would be beneficial:

- A clear explanation of the responsibilities of the auditor, that of management, and that of the Audit Committee
- Information regarding the concept of "reasonable assurance"
- A clear explanation as to the responsibility of the auditor with respect to information outside of the financial statements, including Management Discussion and Analysis
- Expanded use of emphasis of matter paragraphs related to significant disclosures or other significant matters.

3. *Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.*

We believe that additional information about the company's financial statements is most appropriately provided by management and/or the Audit Committee. The auditor's responsibility is to express an opinion on the financial statements and related disclosure, rather than to communicate to users of the financial statements information about the company.

4. *Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?*

Similar to our comments above related to changes in the auditor's report on the financial statements, we suggest that information communicating the responsibility of the auditor vs. management related to internal control over financial reporting also be included in this report.

**Auditor's Discussion and Analysis**

5. *Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?*

   a. *If you support an AD&A as an alternative, provide an explanation as to why.*

   b. *Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?*

   c. *Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?*

   d. *If you do not support an AD&A as an alternative, explain why.*

   e. *Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?*

We do not believe that and auditor's discussion and analysis should be pursued as an alternative for the following reasons:

- Auditor's discussion of their views on topics such as management judgments and estimates, accounting policies and practices, and so-called "close calls" offer the opportunity to provide greater confusion as to the relative roles and responsibilities of auditors, management, and Audit Committees, rather than to reduce this confusion. The evaluation of these types of issues in the conduct of an audit involves considerations of specific facts and circumstances that would be nearly impossible to communicate to a user of the financial statements while providing the necessary context to fully understand that evaluation. To do so would likely result in an analysis that would be so lengthy and/or include boilerplate language such that it would not be useful to readers. We do believe that these topics should continue to be discussed by the auditor with the Audit Committee, the difference being that members of an Audit Committee have a knowledge base about the company and the opportunity for continuing dialogue with the auditor that can result in a meaningful discussion.

- The auditor discussion and analysis, as contemplated, appears to be such that may offer opportunities for users of the financial statements to either question the conclusions reached by the auditor, or at a minimum, provide less clarity, rather than more as to the basis for the auditor's opinion.

- We do not believe that it is or should be the auditor's responsibility to provide further context to management's discussion and analysis to users of the financial statements. We do not believe that a failure by management to provide the information necessary to investors or other users of the financial statements in the management discussion or analysis, or by other means, warrants a transfer of this responsibility to the auditor. This transfer of responsibility also may result in the auditor disclosing information that management did not, thus again creating confusion as to the responsibilities of each, and potentially calling into question the independence of the auditor.

- We believe that if investors and others believe that financial disclosure is not adequate at present, that this be addressed through changes to generally accepted accounting principles by the FASB and SEC, rather than attempting to address this through changes to the auditor's report.

- We believe that the auditor discussion and analysis contemplated would result in multiple levels of review not only by audit firms, but also by management, the audit committee, and the company's legal counsel. Considering the current time pressure currently experienced in many issuer engagements, we believe that this review process may result in time being taken away from the audit process, at the risk of decreased audit quality. We do not believe that the potential advantages of such an analysis outweigh the potential costs.

6. *What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?*

   As noted above, we do not believe that information about the audit should be disclosed in an auditor discussion and analysis.

7. *What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?*

   As noted above, we do not believe that information about the audit should be disclosed in an auditor discussion and analysis.

8. *Should a standard format be required for an AD&A? Why or why not?*

9. *Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?*

   We do not believe that it is the responsibility of the auditor; rather it is management's responsibility to communicate information related to business, strategic or operational risks to investors or other users of the financial statements. If this information is not currently being provided to users as it is expected to be, we do not believe that addressing this shortcoming through changes to the auditor's reporting model is the appropriate way to address this problem.

10. *How can boilerplate language be avoided in an AD&A while providing consistency among such reports?*

    Should an auditor discussion and analysis model be adopted, we believe that liability considerations would ultimately push the wording toward boilerplate language, similar to what has occurred over time with respect to management's discussion and analysis.

11. *What are the potential benefits and shortcomings of implementing an AD&A?*

    See our response to Question #5 above.

12. *What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?*

    Practically speaking, we do not believe that there would be significant differences between auditor discussion and analysis and management discussion and analysis, as these differences would be debated and addressed in the review process we have discussed above, with any differences ultimately being resolved via discussions between the auditor, management, company legal counsel, and possibly the Audit Committee. As we have mentioned above, we are concerned that the additional time that this would add to the audit process may have the effect of actually decreasing audit quality, at the expense of providing information that may or may not actually benefit users of financial statements.

**Required and Expanded Use of Emphasis Paragraphs**

13. *Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?*

    We believe that the use of emphasis paragraphs related to the types of matters described in the illustrative examples would be relevant to users, as they would draw attention to matters deemed by the auditor to be significant to users of the financial statements.

14. *Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?*

    a. *If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.*

       As noted above, we believe that the use of emphasis paragraphs can be effectively used to draw attention to significant matters in the financial statements and related disclosures. However, we also believe that the designation of topics which would require the use of an emphasis paragraph be relatively limited, as this would allow a measure of consistency to the types of items being discussed in these paragraphs. By ensuring a level of consistency in the types of issues included, the current negative connotation of the inclusion of such a paragraph in an auditor's report would be eliminated.

       We do not believe that related audit procedures should be required to be discussed in the emphasis paragraphs. The auditor's decision to perform certain audit procedures is the result of a risk assessment process and significant judgments. To require the auditor to disclose those procedures, particularly in areas which are as significant as those deemed necessary to provide additional auditor reporting in the form of an emphasis paragraph, creates the risk of decreasing audit quality due to the increased risk of management being able to manipulate information based upon their knowledge of planned procedures in key audit areas.

    b. *If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.*

15. *What specific information should be required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?*

    We believe that areas in which emphasis paragraphs be required be limited to a relatively few number of topics, and that the type of discussion be areas which are fact-based, rather than judgment-based. For example, we believe that it would be reasonable to require emphasis paragraphs that refer to disclosures of significant related party transactions, significant subsequent events, going concern, or accounting matters that impact the comparability of information between periods (significant acquisitions, discontinued operations, etc.). We also believe that the emphasis paragraphs be relatively brief, as their purpose will be to direct users of the financial statements to the relative matters, rather than to suggest that those specific matters are being separately reported on.

16. *What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?*

    See our response to Question 15.

17. *How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?*

    As noted above, we believe that the content of emphasis paragraphs be relatively brief, with the purpose of referring a user of the financial statements to significant disclosure, rather than repeating or providing an analysis of the specific matter. As such, it is likely that the language of these paragraphs will become boilerplate in nature. We do not view this as a negative consequence as this will result in a level of consistency in the reporting for these types of matters that will reduce the current negative connotation that exists for this type of auditor reporting.

18. *What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?*

    The potential benefit of required and expanded emphasis paragraphs is the clear direction that would be provided to users of financial statements with respect to significant financial reporting and disclosure issues. To maximize this benefit, we believe that the range of matters which would require emphasis paragraphs be relatively limited.

**Auditor Assurance on Other Information Outside the Financial Statements**

19. *Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?*

    a. *If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.*

    b. *On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.*

    c. *What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?*

    d. *If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?*

e. *Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?*

f. *Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?*

g. *If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.*

We do not than the auditor's responsibility should be expanded to provide assurance on other information outside of the financial statements. Similar to the proposal for an auditor discussion and analysis, we believe that this proposed solution is an unnecessary shift in responsibility from management to the auditor in an attempt to improve the quality of management discussion and analysis.

Additionally, there are certain components of this information that would be difficult to audit, if auditable at all, particularly the so-called forward-looking information. As a result, users of the financial statements and related other information may be unclear as to which portions of the other information is audited and which is not.

Lastly, we question the demand for this type of assurance from the auditor, whether from management of investors, as standards currently exist to provide for this reporting, however we do not believe that auditors are routinely engagement to provide this service.

20. *What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?*

We do not believe that there are significant benefits in requiring this information to be audited, and as any requirement to provide assurance on any of all of this information would increases audit costs and increase time pressures; we do not believe that an appropriate cost/benefit relationship exists.

**Clarification of the Standard Auditor's Report**

21. *The concept release presents suggestions on how to clarify the auditor's report in the following areas:*

- *Reasonable assurance*
- *Auditor's responsibility for fraud*
- *Auditor's responsibility for financial statement disclosures*
- *Management's responsibility for the preparation of the financial statements*
- *Auditor's responsibility for information outside the financial statements*
- *Auditor independence*

a. *Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?*

We believe that each of these clarifications are appropriate, as a better understanding of each of these concepts by users of the financial statements should result in a clearer understanding of the roles and responsibilities of the auditor, management, and possibly also that of audit committees.

b. *Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.*

Yes, as evidence suggests that users of financial statements do not have a clear understanding of the nature of the audit as it relates to the concept of reasonable assurance, nor do they have a clear understanding of the separate responsibilities of the auditor and management with respect to the financial statements.

c. *What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?*

We believe that similar clarifications be made in auditor’s reports on internal controls over financial reporting. Additionally, clarification of the role of audit committees may be of value to users of financial statements.

d. *What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?*

We do not believe that the clarification in the auditor’s report for the types of matters discussed will have a significant impact on the scope of the audit.

22. *What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?*

We believe that the proposed clarifications will result in a better understanding of the audit report, as well as a better understanding of the responsibilities of the auditor, management, and possibly audit committees with respect to the financial statements and the auditor’s report. We do not believe that there are significant shortcomings that would result from the inclusion of these clarifications.

**Questions Related to all Alternatives**

23. *This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?*

We believe that the possible reporting described in *Clarification of the Standard Auditor’s Report* can provide effective and meaningful enhancements to auditor reporting without a significant increase in the cost of audits.

24. *Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?*

We believe that the combination of the considerations noted in *Clarification of the Standard Auditor’s Report*, along with those discussed in the *Form of the Auditor’s Report* have the potential for the most benefit with limited cost. We also believe that consideration of required emphasis paragraphs may improve auditor reporting, depending upon the nature and extent of what matters the Board would deem to be “required”.

25. *What alternatives not mentioned in this concept release should the Board consider?*

None specific, other than that we believe that many of the considerations discussed also have applicability to the auditor’s reports on internal controls over financial reporting.

26. *Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?*

    The development of an auditor reporting framework needs to be such that the framework will appropriately consider the cost/benefit relationship of any expansion in auditor reporting. In addition, the Board needs to consider the impact of any changes on smaller issuers and smaller firms.

27. *Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?*

    We do not believe that the considerations discussed in *Clarification of the Standard Auditor's Report* would be perceived to result in a qualified or piecemeal opinion. Also, if appropriately scoped and applied, the concepts discussed in *Required and Expanded Use of Emphasis Paragraphs* may result in these paragraphs being perceived more favorably than they are currently.

    However, we believe that the concepts discussed in *Auditor's Discussion and Analysis* and *Auditor Assurance on Other Information Outside the Financial Statements* may well result in more confusion as to the auditor's responsibilities than what currently exists, in addition to adding significant time and cost to the audit process.

28. *Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?*

    See our response to Questions 23 and 24.

29. *What effect would the various alternatives have on audit quality? What is the basis for your view?*

    We believe that the considerations discussed in *Clarification of the Standard Auditor's Report* can be implemented at minimal cost with no effect on audit quality, other than an improvement in auditor reporting.

    As discussed in response to previous questions, we believe that the considerations discussed in both *Auditor's Discussion and Analysis* and *Auditor Assurance on Other Information Outside the Financial Statements* have the potential to decrease audit quality as a result of taking time away from the audit process to prepare and review auditor discussion and analysis and/or complete procedures necessary to provide assurance on other information, while still requiring timely reporting of financial information.

30. *Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.*

    In order to appropriately achieve the goal of consistency and comparability in auditor reporting, we believe that changes in the auditor reporting model apply equally to all reports covered by the standards of the Board. We do recommend, however, that the Board properly consider the impact of any changes to the reporting model to smaller issuers and smaller firms.

**Considerations Related to Changing the Auditor's Report**

31. *This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.*

    a. *Are any of these considerations more important than others? If so, which ones and why?*

    b. *If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?*

    c. *Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?*

    d. *What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?*

32. *The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?*

    We do not believe that the auditor should be placed in the position of being the source of information about the company to users of the financial statements. We believe that any proposed changes that would place the auditor in this position will result in a lesser understanding of the auditor's responsibility by users, rather than to clarify it.

Once again, we appreciate the opportunity to comment on this Concept Release. Please feel free to contact us if you have questions on any of our comments or would like to discuss them further.

Sincerely,

Eide Bailly LLP

Re: Rulemaking docket matter No.34: Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements

Dear Board Members:

Eli Lilly and Company ("Lilly") appreciates the opportunity to comment to the Public Company Accounting Oversight Board ("PCAOB") on the Concept Release No. 2011-003 on Reports on Audited Financial Statements. Lilly is a large, multinational pharmaceutical company, with presence in over 50 country jurisdictions, and creates and delivers innovative medicines that enable people to live longer, healthier, and more active lives.

Lilly commends the PCAOB for working to revamp the existing Auditor's Reporting Model in an effort to increase transparency and relevance to financial statement users ("users") while not compromising audit quality. We agree that any changes to the auditor's report should be based upon the principles of maintaining audit quality and adding value to the users while also focusing on objective communications from the auditors and being cost effective. While we believe the current "pass/fail" model is effective, we do agree with the PCAOB that there are some potential enhancements that could make the auditor's report more transparent and relevant for the users. We believe that certain proposed changes could potentially add value to the reporting model and enhance communication to users by improving the content of the auditor's report while retaining the current "pass/fail" model.

However, we believe that certain proposed changes, in particular the Auditor's Discussion and Analysis ("AD&A") and assurance on information outside of the financial statements, could have a significant adverse impact to companies, auditors and users. We appreciate that the PCAOB has taken into consideration the issues raised by stakeholders through the outreach that was conducted. Yet, we are very concerned that these particular proposed changes, if adopted, could change the fundamental role of the auditor, impact transparency between auditors and management and/or lead to confusion of users among other concerns addressed throughout this response.

We address each of the alternatives and our thoughts and concerns in further detail below.

**Alternative 1: Auditor's Discussion and Analysis**

We strongly oppose the AD&A alternative proposal, which would include a supplemental narrative report with the intent of providing investors and other users with a view of the audit and the financial statements "through the auditor's eyes." The alternative would allow the auditor to discuss views regarding significant matters such as audit risk identified in the audit, audit procedures and results, auditor independence, auditor's views on the company's financial statements including management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls". In addition, the auditor could highlight areas where the auditor believes management could have applied different accounting or disclosures.

Management's role is to determine the appropriate accounting policies and estimates and communicate through the financial statements while the audit committee's role is to provide governance and oversight. The auditor's role is to audit the financial information provided by management to ensure that it is materially accurate and not to act on behalf of management or the audit committee. The proposal, as described by the PCAOB, appears to be mixing the roles within these groups which would be unacceptable under current guidance and is contradictory to the roles that currently exist. This alternative would require that the auditor take on more of a governance and oversight role for the company that they are auditing, which could impair independence and naturally bring rise to a number of other issues. We strongly believe that the communication described within this alternative is the responsibility of management under the oversight of their audit committee and not that of the auditor.

We also question who would truly benefit from these additional details being provided when it is concluded that the financial statements are "presented fairly in all material respects." There are numerous estimates and judgments inherent in our financial statements. The role of the auditor is to opine on the reasonableness and consistent application of accounting principles to arrive at an appropriate conclusion. If there are unresolved differences presented to an audit committee then that should be disclosed, however, if there are no differences, we see no value for added discussion.

It is important to understand that many accounting issues are very complex and unique requiring much discussion and research to determine the appropriate accounting treatment. In fact, many times with complex accounting issues, local audit teams must reach out to their national accounting experts because the answers are not obvious. Thus, we believe this alternative is very dangerous. Management is responsible for the financial statements, accounting policies, financial estimates, etc. and there has been a significant effort to ensure that auditors are not making decisions on behalf of management. However, if the auditors are required to disclose their views and their process to understand, discuss and conclude on the accounting policies and estimates, there is a risk that the auditors become the ones who ultimately make the accounting policy and estimate decisions.

If this alternative were adopted it could require a considerable amount of time between management and the auditor to reconcile differences between company disclosures and the AD&A. If the differences are not able to be reconciled this would cause confusion among users. Additionally, requiring the auditor to provide this type of information to investors will likely impair transparency and openness in discussions and increase tension among auditors, management, and the audit committee thereby inhibiting information that is provided to users.

The preparation of an AD&A would substantially increase the scope of the auditor's responsibilities and could adversely impact the auditor's financial statement focus. Additionally, this alternative would bring about the potential for auditors to discuss information about the company that might be deemed proprietary or highly sensitive to a company's competitive industry position which would lead to increased liability for the auditors. As a result of the increased liability, significant expertise and time from auditors, involvement of their national offices and legal counsel would be required in order draft the narrative for public use to mitigate potential legal exposure, which would serve as a significant distraction from the audit. With the already tight reporting deadlines, attempting to complete this additional report would present challenges in terms of our ability to meet current reporting deadlines. All of these factors would promote the use of boilerplate language within the AD&A to avoid legal issues and create efficiency in the reporting process, which would undermine the purpose of providing the additional commentary.

Additionally, we believe that it would be very difficult for the PCAOB to develop an appropriate framework and once developed, whether the framework could be consistently followed by auditors when disclosing information of such a highly subjective nature. Requiring auditors to present information of this nature could result in misleading reports; making it difficult to have comparability among financial statements and causing confusion about the auditor's pass/fail opinion. In today's pass/fail model the unqualified opinion implies that all material matters were resolved and the financial statements are materially accurate and presented fairly. Highlighting this additional information (e.g. close calls, contentious issues, etc.) would suggest a higher level of importance to the issue(s) than is warranted since users would not be privy to the dialogue that occurs between the auditor, audit committee and management in which additional context and perspectives are communicated. This also raises the question of who would be responsible for "auditing" the information provided by the auditor within an AD&A to ensure that it is reliable and not misleading.

We do not believe this proposal meets the defined principles of maintaining quality, adding value, providing objective communication and being cost effective. Our most significant concern identified with this proposal is the impact to the auditor's independence, which may be impaired, if the auditor takes on a role in governance, deciding on accounting policies and making complex accounting judgments. Additionally, the AD&A proposal is potentially confusing to users due to the mixed messages of having an unqualified opinion but a lengthy and complex discussion in the AD&A regarding accounting issues that may be difficult to explain to users that are not experts in those areas. In addition, the AD&A may result in different disclosures between management within MD&A and the auditors within AD&A as well as negatively impacting the relationship between the auditors, audit committee and management. The results will reduce the audit quality and reduce the value to the users. Also, the AD&A is extremely subjective in nature potentially leading to inconsistent and incomparable financial statements which does not meet the principle of providing objective auditor communication. We believe that this proposal will result in significant increase in auditor scope and thus, increase in auditor time and costs which does not meet the principle of being cost effective. Lastly, we strongly believe it is management's role to communicate information to investors and users through the financial statements. Only if there is a disagreement between the auditors and the audit committee should the auditor communicate in this nature with investors, similar to the current requirements under SOx for material weaknesses. Therefore, we urge the PCAOB to eliminate this alternative from the proposal.

**Alternative 2: Required and expanded use of emphasis paragraphs**

We believe that this may be a reasonable approach depending on the scope of the expanded use of emphasis paragraphs. This alternative would mandate the use of emphasis paragraphs in all audit reports and would expand paragraphs to highlight the most significant matters in the financial statements and where these matters are disclosed. Emphasis paragraphs could be required in areas such as significant management judgments and estimates, areas with significant measurement uncertainty, and other areas that an auditor determines to be of critical importance. The auditor may also be required to comment on key audit procedures performed for each matter of emphasis.

Today the auditor communicates the areas of audit emphasis to the audit committee. We would be supportive of limiting the emphasis paragraphs to parallel what is currently communicated to the audit committee as to the areas of emphasis. This should also mirror, in part, the company's critical accounting policies and significant events which are currently disclosed in the Management's Discussion and Analysis ("MD&A") section of the annual report. These should be objective, fact-based descriptions that reference the specific areas of the financial statements where this information is disclosed. We believe that emphasis paragraphs whereby the auditor identifies the areas of audit emphasis, including critical accounting policies and significant events and where they are disclosed could potentially be helpful for users by providing users with a reference to the areas deemed significant by the auditors and impact the financial statements during the period.

However, we do have significant concerns that the emphasis paragraphs, as the proposal currently describes, are too broad and would be used inconsistently if not clearly defined. Similar to our concerns addressed in alternative 1, we believe that it would be very difficult for the PCAOB to develop an appropriate framework outside of the critical accounting policies and significant events discussion, and once developed, whether the framework could be consistently followed by auditors when disclosing information of such a highly subjective nature. Requiring auditors to emphasize areas that don't necessarily require emphasis could result in misleading reports, make it difficult to have comparability among financial statements and cause confusion about the auditor's pass/fail opinion. In today's pass/fail model the unqualified opinion implies that all material matters were resolved and the financial statements are materially accurate and presented fairly.

Additionally, we believe that requiring auditors to comment on key audit procedures performed pertaining to the identified matters would be difficult to communicate in a concise manner and would not provide the user with the full context of the audit strategy thereby confusing the reader rather than providing useful insight. An audit must be evaluated as a whole, not based on individual procedures. Thus, it would make it very difficult for users to understand an auditors overall assessment when highlighting only a few areas. In addition, many of the users do not have the background, understanding or context to properly evaluate the audit procedures. It is important to understand that many significant audit issues and the audit procedures are complex, resulting in local audit teams consulting with their national experts and if the users are not experts in the area, the additional information may be more confusing and potentially, even misleading.

While we do believe that the emphasis paragraphs may provide value and meet the defined principles, we urge the PCAOB to carefully consider the scope of the emphasis paragraphs. We propose that the emphasis paragraphs be limited to the areas of audit emphasis reported to the audit committee, which would include critical accounting policies and significant events during the period, to provide users with a summary of the most impactful areas to the financial statements for the period. This proposal would maintain audit quality, add value to the users by have one place to find the information, provide objective communications from the auditors, while still being cost effective.

**Alternative 3: Auditor assurance on other information outside of the financial statements**

We object to this alternative which would require auditors to provide assurance on information outside of the financial statements such as the MD&A disclosures, non-GAAP financial measures, and/or information contained in earnings releases.

The information outside of the financial statements allows management to comment on future plans, estimates and goals. Due to the nature of the information provided, the information outside of the financial statements is often times not an area on which the auditor's could effectively provide assurance. We do not believe that this alternative would add value to the process or provide additional comfort to users; however it would substantially increase the scope of the auditor's responsibilities as well as the time and cost of completing the audit. The increase in scope would shift the auditor's focus away from the financial statements, negatively impacting audit quality. Additionally, this alternative would lead to companies needing to furnish periodic filings at an earlier stage of the process, in order to provide the auditors with a chance to complete their procedures prior to the filing deadline which could put a severe strain on companies and auditors during the already tight reporting timelines and could lead to the delay of information being released to the public.

Also, we are specifically not supportive of requiring auditor assurance on the MD&A to cover the critical accounting policies as some proposals have suggested. The information typically included in the critical accounting policies section either discusses policies that do not require audit procedures or covers information that has already been audited within the footnote disclosures. We would be supportive of the auditor report referencing the critical accounting policies, indicating that they have been included in their overall audit procedures. However, we do not believe that providing a separate attestation report on the critical accounting policies within the MD&A would provide any additional benefit to the users.

There are situations where we rely on outside SEC counsel to provide our independent review consistent with Regulation FD. To include the auditors further within this process would require us to provide a significant amount of documentation for their work papers to meet PCAOB documentation standards on areas that do not have any significant impact on the reliability of the financial statements.

We would be supportive of the PCAOB expanding the current external auditor requirements for other information in documents containing audited financial statements as outlined in AU 550 (responsibilities include reading and considering whether such information or the manner of its presentation is materially inconsistent with the financial statements or represents a material misstatement of fact) to cover the press release and other Non-GAAP measures. In addition, we would be supportive of including language within the audit report that communicates the current requirements under AU 550 in order to help users to better understand the procedures being performed and address the points raised by participants in the staff outreach that auditor association may increase reliability and quality of the information provided by management.

We do not believe this proposal meets the defined principles of maintaining quality, adding value, and being cost effective. As a significant portion of the information outside the financial statements, such as MD&A, is subjective, judgmental and forward looking, we do not believe that requiring auditors to provide assurance is value adding or in the spirit of maintaining quality. In fact, there may be numerous pieces of information that are un-auditable. The auditors would also need to spend a significant amount of time and resources on areas that are outside the risks related to the financial statements. In addition, this proposal will result in significant increase in auditor scope and thus, increase in auditor time and costs which does not meet the principle of being cost effective. Therefore, we urge the PCAOB to eliminate this alternative from the proposal, with the exception of considering expansion of current requirements outlined in AU 550 to cover the press release and other Non-GAAP measures.

**Alternative 4: Clarification of language in the standard auditor's report**

We are supportive of amending the standard audit report with clarifying language that would serve to enhance the report and help users better understand the responsibilities of the auditor and what an audit represents. This alternative would require auditors to provide additional disclosures in the standard audit report to clarify key terms used in the report. Below are the proposed alternatives and our view on each of them as to whether the language around these topics within the auditor's report should be revised to provide clarification on the auditor's responsibilities.

- Reasonable assurance – We are supportive of clarifying the language around reasonable assurance to correspond with the current auditing standard in order to reinforce the concept that an audit provides a "high level of assurance, but not absolute assurance."
- Auditor's responsibility for fraud – We believe that the auditor's responsibility for the detection of fraud should be addressed within the standard auditor's report in order to be more transparent to users. We are supportive of expanding the current language within the report of, "…Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, to include the words, "whether caused by error or fraud" as is consistent with the current auditing standard.

- Auditor's responsibility for financial statement disclosures – We are supportive of revising the auditor's report to provide clarification on the auditor's responsibility for the financial statement disclosures that is consistent with the current auditing standard.
- Management's responsibility for the preparation of the financial statements – We are supportive of further clarifying the auditor's report to state that management prepares the financial statements and has responsibility for the fair presentation of the financial statements.
- Auditor's responsibility for information outside the financial statements – As discussed within the response to Alternative #3, we believe that providing the users with an understanding of the auditor's current responsibilities under AU 550 would be beneficial and help users to better understand the procedures being performed, which could address the recommendation made during the staff outreach that auditor association with the this information may increase its quality and reliability.
- Auditor independence – We are supportive of clarifying this concept as we believe this could provide users with a better understanding of the auditor's role and provide more confidence in their judgments and process. Additionally, this could address the belief that auditors are in a unique position to provide relevant and useful information because of the extensive knowledge of the company and industry. While the auditor's may be in a unique position to provide this inside information, this could potentially undermine the independence of the auditor.

These clarifications outlined above would not alter the scope of the audit nor impact the auditor's responsibilities; they would however provide additional information to users without changing the fundamental role of the auditor. We believe that this alternative is most closely aligned with the PCAOB's goal of increasing transparency and relevance to users while not compromising audit quality. We also believe that this alternative is aligned with the principles of maintaining quality, adding value, providing objective communication and being cost effective. The more the users understand of the auditor's role, the better informed they can be when making decisions.

**Conclusion**

Again, Lilly supports the PCAOB's efforts to provide transparency and relevant information to users and believe that certain proposed changes could add value to the reporting model and enhance communication to users through improving the content of the auditor's report while retaining the current "pass/fail" model. However, we are concerned that certain options, particularly the AD&A and assurance on information outside of the financial statements, could result in a number of unintended consequences and negatively impact that audit process. We again urge the PCAOB to carefully consider and evaluate the impact that each of the proposals and/or combination of proposals would have on the companies and the auditors who would be required to comply with any new standards issued and the related implications. We also urge the PCAOB to carefully consider the cost/benefit of all of the proposed alternatives prior to implementing any new standards.

As part of our conclusion, we would like to suggest that the PCAOB urge the Securities and Exchange Commission ("SEC") to reconsider the definition of an audit committee financial expert as defined under Section 407 of the Sarbanes-Oxley Act of 2002. We believe that it would be beneficial if the definition were clarified to indicate that the individual must possess significant GAAP accounting experience obtained through public accounting experience at the Senior Manager or Partner level or from serving as a Controller, Chief Accounting Officer or similar role that is involved with the preparation of the financial statements. We strongly believe that modifying the definition of an audit committee financial expert could foster more robust conversations and lead to higher quality financial statements.

We appreciate the opportunity to express our views and concerns regarding the concept release. If you have any questions regarding our response, or would like to discuss our comments further, please call me at (317) 276-2024.

Sincerely,

ELI LILLY AND COMPANY

Docket Matter No. 34 – Concepts Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements

Emerson Electric is a global manufacturing entity with 2011 sales of more than $24 billion. The Company appreciates the opportunity to comment on the PCAOB's recent Concept Release re: Reports on Audited Financial Statements.

In spite of the Release's reference to the auditor's "unique" role in public company financial reporting, an auditor's insight is largely limited to what has already occurred and the resulting financial statement impact. No one has a better understanding of or is more qualified to discuss an entity's results of operations, financial position, risks, control environment and future prospects than that entity's management. Creating a role for auditors to publicly comment on a company's financial statements beyond matters currently addressed by management under Rules S-X and S-K requirements is unnecessary and fraught with potential pitfalls. In such an environment, we envision auditor commentary quickly becoming boiler plate recitals that meet industry-determined requirements but provide no real value to investors. In a worst-case scenario, auditor discussions of matters that have been satisfactorily resolved with management (an everyday occurrence given the complexity of issues in today's business environment) are interpreted by investors as a disclosure of accounting "problems," due to a lack of understanding of the interaction between auditors, management and the audit committee, or of the audit process itself. This will unintentionally and inappropriately impact market expectations and valuations.

The basic premise of the PCAOB's question of whether the auditor's report should be expanded to provide more useful and relevant information to investors implies that the current U.S. GAAP and SEC financial reporting regime does not currently provide financial statements that are sufficiently relevant or useful. If there truly are shortcomings in the current financial reporting model, as implied by the Release, any perceived deficiencies should be addressed through appropriately targeted FASB and SEC rulemaking, not through an expansion of the auditor's reporting responsibilities. Management, with Audit Committee oversight, would then ultimately be responsible for meeting these revised SEC requirements, as they are currently. Expanded auditor discussion, if any, should be limited to matters concerning the auditor and the planning, conduct and inherent limitations of the audit itself. We believe the best role for the PCAOB with regard to shareholders is to remain focused on a strong audit inspection process and ultimately improving audit quality.

We are not altogether sure what deficiency in the financial reporting regime the Release aims to correct, as it is difficult to imagine the recent financial crisis could have been averted through additional financial reporting. Business is inherently risky, as is equity investing, and no amount of financial reporting will ever replace the responsibility of investors to fully research and understand the risks associated with the markets, industries and companies in which they invest. Financial reporting looks backward to explain how an entity was impacted by economic events and circumstances and cannot be expected to eliminate investment risk by forewarning of the next recession or financial crisis. Ever greater amounts of financial disclosure will not alter this dynamic, whether the risks arise from macroeconomic changes or from micro industry- and/or company-specific developments. We also believe that to some degree, the perceived demand for auditor identification of important disclosures results directly from the current disclosure overload, where every nuance is discussed in depth and tabular roll-forwards of detailed account activity make it difficult for investors to know what is relatively more or less important for their particular risk tolerance. In effect, investors might be saying that due to the already heavy volume of disclosure, they are having trouble separating what is genuinely important from what is perfunctory compliance.

Following are additional, specific comments on various items discussed in the Release:

- The current Pass / Fail model of audit reporting functions properly and does not require revision. If all accounting matters are satisfactorily resolved, then there simply are no issues to report. Either the financial statements are fairly presented and acceptable for filing with the SEC or they are not. There is no place for a hypothetical discussion of what might have happened. Further, what will be the definition of a contentious issue, or a "close-call," as the Release terms it? A lengthy or highly technical discussion between management and auditors, even where positions differ significantly, does not mean the matter is *contentious*; it does not even mean the transaction is especially risky. Whether it is simply a new transaction, evolving circumstances requiring extra time, or a complex matter elevated to the SEC for Staff consideration, once resolved the background and mechanics of resolution are not important. It is commonly understood that unaddressed or unresolved material issues could lead to a qualified opinion, which should rightfully be accompanied by additional disclosure. But added discussion of resolved matters is just not necessary. And we note there is already a requirement for management to report disagreements with auditors to the Audit Committee and publicly disclose the nature of such disagreements under Rule S-X. An auditor rendering an unqualified opinion and then discussing transactions that might have resulted in a qualified opinion had the accounting not been satisfactorily resolved can only confuse, and potentially mislead investors.

- We are very concerned an Auditor's Discussion and Analysis (AD&A), or other qualitative auditor assessments of financial reporting, will quickly push disclosures toward Big 4-decided standards, as management will want to avoid disclosures that appear to conflict with the view of their auditors. Investors will then lose critical nuance and perspective as seen through management's eyes as disclosures ultimately become subject to the limitations of an auditor's disclosure checklist. Management is far more experienced than any auditor and is the only appropriate source of meaningful qualitative disclosures regarding risk management or accounting alternatives. Requiring auditor reporting on these matters will ultimately result in the Big 4, instead of management or the SEC, collaborating to make decisions on accounting and reporting policies, including choosing preferability among GAAP-allowed accounting approaches.

- Investors will not necessarily understand the substantive differences between AD&A and MD&A, and instead will likely assume the auditor is "right" and management is "wrong," based on the public perception of auditors as corporate watchdogs. However, the key considerations in an auditor's decision on AD&A content will most likely not be what is in the best interests of shareholders, but instead will be what best avoids litigation for the auditor. This approach will limit auditor disclosures to something less than useful and we foresee AD&A being formulaic and filled with the caveats and disclaimers common in auditor procedural reporting. This will not create the independent expert "comfort" sought by the PCAOB or certain investors. It will simply increase auditor fees and add to disclosure overload.

- To ensure consistency with financial statement disclosures, auditors commonly review and provide input to management on other financial information in MD&A, press releases and analyst call information. We believe that in general auditors' views are respected and incorporated into the overall communication approach when appropriate. Additionally, auditors can withhold their opinion when there are material differences between the financial statements and other financial information. We therefore do not believe that auditors need an official and expanded role regarding the form or content of other financial information, as we are concerned that auditor involvement will quickly limit management's discussion to only matters that can be objectively verified by the auditor. Additionally, we believe that under the current U.S. regulatory and legal environment, auditor and management language regarding risks or MD&A will quickly conform to one another in lowest common denominator disclosure. This will sacrifice management candor and insight for the sake of procedural consistency, especially as it relates to forward-looking information.

- The Release discusses the possibility of the auditor pointing out specific elements of an entity's financial disclosures for emphasis. Financial statements and footnotes are integral to one another and designed to be read together, in their entirety. An auditor highlighting specific sections for reader emphasis will inappropriately elevate these matters and simultaneously diminish the non-emphasized disclosures. By what standard is the auditor to gauge significance? Will emphasized items be consistent across companies and industries? Will they be considered key by all shareholders? Would they be the same items to which management might assign emphasis? A detailed analysis by management of business risk factors is already required in annual 10-K reporting and these disclosures are a key element of investor understanding of an entity. Asking auditors to highlight what they believe are the most significant risk factors is effectively having them advise investors on which risks to focus, and conversely, which to ignore. It is the investor's responsibility to be fully informed about any company in which he might invest, prior to committing resources. Financial disclosures are provided in their entirety, without bias, so that investors can decide which elements have more importance, based on the investor's investment objectives and risk tolerance. More disclosure, regardless of the source, can never replace this responsibility.

- Outside of the accounting profession, the process of conducting an audit is largely unknown and investors might benefit from having a better understanding of the auditor's role, responsibilities and obligations, and the inherent limitations of an audit. The auditor's report already provides a solid summary of the auditor's and management's responsibility regarding their respective roles in the current financial reporting regimen. Additionally, PCAOB auditing standards plus the Center for Audit Quality's guide to public company auditing are public information and readily available to any investor who wants an in-depth understanding of audit requirements, approaches and techniques. Individual investors must have some responsibility for fully understanding the auditor's role, including the responsibility for detecting material misstatements, whether resulting from fraud or unintentional error. If investors will not avail themselves of this easily accessible information, then it seems doubtful auditor reporting in this area will advance investor understanding.

**Conclusion**

It is not clear to us exactly what malady the PCAOB is attempting to cure with this Release, as it is difficult to imagine the recent financial crisis could have been averted through additional financial reporting. Management, auditors and investors each have specific, interdependent but ultimately individual responsibilities in the financial reporting and investing regime. Management's responsibility, with proper audit committee oversight, is to report on its operations, risks, and outlook based on existing U.S. GAAP and SEC requirements. The auditor's responsibility is to plan and perform an audit, and render an opinion on the financial statements based on U.S. GAAP and industry and PCAOB auditing standards. Investors have a responsibility to gain an in-depth understanding of a company, its competition, and the markets in which they compete prior to committing their resources. Equity investing involves risks and uncertainties and that risk cannot be regulated away. No amount of disclosure, regardless of its source, will be a substitute for thorough investor research. A new disclosure role for auditors will not provide investors predictability regarding the depth or breadth of future industry- or company-specific impacts from adverse economic circumstances.

We appreciate the opportunity to respond and trust our comments will be taken seriously in future Board deliberations on this issue.

Sincerely,

Richard J. Schlueter

Re: Request for Public Comment: Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards, PCAOB Rulemaking Docket No. 34

Dear Office of the Secretary:

Endurance Specialty Holdings Ltd. ("Endurance") appreciates the opportunity to provide comments to the Public Company Accounting Oversight Board ("PCAOB") on the Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards released June 21, 2011 ("Concept Release").

Endurance is a global specialty provider of property and casualty insurance and reinsurance. Through its operating subsidiaries, Endurance writes property, casualty, healthcare liability, agriculture and professional lines of insurance and property, catastrophe, casualty, aerospace and marine, and surety and other specialty lines of reinsurance. We prepare our consolidated financial statements in accordance with generally accepted accounting principles in the United States ("U.S. GAAP"). Our gross premiums written were $2.1 billion for the year ended December 31, 2010 and our shareholders' equity was $2.8 billion at December 31, 2010.

Endurance supports the PCAOB's efforts to improve the current auditor reporting model. However, we have some concerns regarding the alternatives discussed in the Concept Release. Our views on each of the alternatives presented in the Concept Release are described below. We believe that the Auditor's Discussion and Analysis ("AD&A") and Auditor Assurance on Other Information Outside the Financial Statements alternatives would be costly to implement and the resulting benefits to investors would not justify the cost. We also believe that these alternatives may result in unintended consequences, as we believe management will change their accounting policies and disclosures to avoid investor confusion and reduce the information they disclose to ensure the disclosures are auditable.

**Changes to the Auditor's Reporting Model**

Endurance supports retaining the current "pass/fail" auditor's report model. This model is clear, consistent and comparable among all audited companies, and is therefore useful to investors. However, we also support expanding the auditor's report to incorporate additional information that would be useful for investors. We believe that any additional information regarding the company's financial statements should come from management, not the auditors. The financial statements are the responsibility of management,

**Endurance Specialty Holdings Ltd.**

90 Pitts Bay Road
Pembroke HM 08, Bermuda

www.endurance.bm

Endurance

not the auditors, and therefore it is inappropriate for the auditor to provide information regarding the financial statements. Management is in the best position to comment on the business and to provide any additional information regarding the financial statements. Although the auditors have a detailed understanding of the business, they are still a third party and their views of the business may not be entirely complete.

**Auditor's Discussion and Analysis**

Overall, Endurance believes that in practice, an AD&A would not provide useful information to investors. Instead, the AD&A would likely cause confusion in the investor community. This confusion could come from a number of different areas. If the auditor provides information that management has not disclosed, this could cause confusion for users of the financial statements, as clear, consistent information is not being provided. If management's discussion and analysis ("MD&A") and the AD&A are not consistent, investors may not know which version is correct. Requiring the auditors to discuss alternative accounting policies, practices and disclosures that the company could have chosen could also create confusion, as investors may be unsure as to which alternative is correct. If management chose one acceptable alternative and the auditors indicated a preference for another acceptable alternative, investors may question whether the financial statements (and the auditor's opinion on those financial statements) are accurate. Even knowledgeable, experienced investors may question management's choices in this situation. Even worse, we believe that in practice companies would attempt to reduce the number of differences between the MD&A and AD&A by adopting the auditor's preferred accounting policies, practices and disclosures, including those related to significant judgments and estimates, rather than having a disconnect between the MD&A and the AD&A. This would reduce the quality of the financial statements, as management should be making appropriate accounting policy and disclosure decisions based on their knowledge of the business, not based on auditor preferences.

We believe that auditors discussing "close calls" in their audit report would not be appropriate. Close calls are highly subjective, and what is considered a close call by the auditor may not be considered a close call by management. Also, due to the subjective nature of a close call, there is the potential for variability between auditors on what is considered a close call, which would reduce the comparability of this disclosure among different companies. Discussing close calls in the auditor's report would also be confusing for investors. If a contentious issue is being highlighted in the report, investors would wonder if it was resolved to the satisfaction of both parties or not. If it was resolved, why would it be highlighted in the auditor's report? Investors may also question the auditor's opinion in light of the issue – why would the opinion be unqualified when this issue was identified? Also, investors may not understand why the issue was highlighted or why it is being discussed in the auditor's report, and may infer that the financial statements are correct except for this issue. Other investors may wonder whether the final resolution was one that all parties agreed to, or if one party was forced to concede by the other.

Unfortunately, another unintended consequence of an AD&A may be less free-flowing discussions between management and the auditor, or less trust and more tension in the relationship with the auditor, as companies would be less willing to disclose sensitive or confidential information, fearing it will end up disclosed in the AD&A.

Overall, Endurance does not believe that the AD&A alternative suggested in the Concept Release would provide useful information to investors. Rather than assisting investors, the AD&A would in fact result in

Endurance

more confusion in the investor community. The AD&A is also one of the more extensive alternatives suggested in the Concept Release and would require a significant amount of effort by the audit firms to produce the AD&A and also to gather, audit and document the information required to support it. This would in turn result in increased audit costs for issuers. We believe that the additional cost of the AD&A would outweigh any benefits, therefore we do not support this alternative.

**Required and Expanded Use of Emphasis Paragraphs**

Endurance generally supports this alternative. We would encourage expanded use of the emphasis paragraphs, although we would like to see these kept optional rather than required. Some very small, simple audits may not have any significant items to highlight, and requiring the auditors to include insignificant details of the audit in emphasis paragraphs in the audit report would not be useful for users. We believe that the use of the emphasis paragraphs should be limited to truly significant issues or areas of judgment. Otherwise, overuse or frivolous use would dilute the importance of discussing a significant item. For example, if auditors were required to discuss the revenue recognition policies of all companies (as revenue is generally a significant audit area), those companies with truly significant revenue recognition or estimation issues would not stand out compared to those companies with standard revenue recognition policies. We agree that each of the issues discussed in the emphasis paragraphs should be referenced to the financial statements where these significant items are discussed by management.

We believe that emphasis paragraphs could lead to investor confusion if certain areas are discussed by the auditors in the auditor's report but not by management in the financial statements. This should be rare if the emphasis paragraphs are optional rather than required.

The language in the emphasis paragraphs is likely to become boilerplate over time, as this would increase consistency and comparability among companies. We believe it would be difficult to ensure these emphasis paragraphs are consistent among various companies without standard language.

**Auditor Assurance on Other Information Outside the Financial Statements**

Endurance believes that requiring the auditor to provide assurance on information outside of the financial statements will result in management disclosing less information to investors. We believe that management will scale back their disclosures in the MD&A to verifiable information, to ensure they can be audited by the auditors. Therefore, this alternative would result in less useful information for investors, as management would likely remove most forward-looking information and other important details which are less readily auditable. This is the opposite of the stated purpose of this project, which is to enhance transparency and relevance of the information provided to investors.

We are also concerned that this alternative would cause a significant increase in scope for the auditors. We believe that the auditors will need to spend a significant amount of time to audit the MD&A, and we are concerned that due to already tight reporting deadlines, this may cause a significant time crunch at the end of the reporting cycle. This increase in scope will also result in a corresponding increase in cost for issuers. As we do not believe that this alternative would result in better information for investors, the benefit does not exceed the cost and therefore we do not recommend this alternative.

Endurance

**Clarification of the Standard Auditor's Report**

Endurance supports each of the clarifications proposed in the Concept Release. We believe that these additions will provide additional valuable information to investors. However, as these items are not directly related to the opinion on the financial statements, we propose that this additional information is provided in a separate letter from the auditors to the readers of the financial statements, which issuers would then attach as an appendix to their filing. As these additions will not require additional work by the audit firms, nor by financial statement preparers, this alternative will provide additional information for little additional cost to auditors and issuers.

**Conclusion**

Endurance generally supports the Expanded Use of Emphasis Paragraphs and the Clarification of the Standard Auditor's Report alternatives discussed in the Concept Release. We believe that the AD&A and Auditor Assurance on Other Information Outside the Financial Statements alternatives would be costly to implement and benefits , if any, to investors related to the additional disclosures would not justify the cost. Also, these alternatives would have unintended consequences such as investor confusion and management disclosing less information to investors to ensure it is auditable. We therefore do not support the AD&A and Auditor Assurance on Other Information Outside the Financial Statements alternatives.

Thank you for consideration of our comments.

Yours sincerely,

Michael J. McGuire

Washington, DC 20006-2803

30 September 2011

**PCAOB Rulemaking Docket Matter No. 34**
**Concept release on possible revisions to PCAOB standards related to reports on audited financial statements**

Dear Mr. Seymour:

Ernst & Young LLP (Ernst & Young) is pleased to comment on the Public Company Accounting Oversight Board's (PCAOB or Board) concept release on possible revisions to the auditor's reporting model (the Concept Release). We believe that some change is clearly necessary and fully support responsible change in this area. This letter provides our views on the Concept Release and outlines a possible approach to revising the auditor's reporting model that would provide useful information to investors and other financial statement users. In the Appendix to this letter, we respond to the questions posed in the Concept Release.

1. **A General observation — a measured approach to changes to the auditor's reporting model would be more productive at this stage**

   Some financial statement users have expressed dissatisfaction with the current reporting by auditors and have suggested a variety of changes to the model, some of which would represent fundamental changes to the auditor's role. Some financial statement users also have expressed dissatisfaction with corporate financial reporting, saying annual reports are becoming too complex and, in some cases, appear to be more focused on compliance than on effectively communicating key information and performance trends.

   While we recognize that there are clear calls for improvements to auditor reporting, we believe the auditor's report is just one element in the suite of information provided to users of the financial statements. We believe it is important to consider changes to the auditor reporting model in the context of other initiatives aimed at enhancing overall corporate financial reporting. Attempts to address concerns with corporate financial reporting solely through changes in the auditor's reporting model will not be successful and could result in significant change to or expansion of the auditor's role, which we do not believe is appropriate or cost-effective.

   We note that both the Financial Accounting Standards Board (FASB) and the Securities and Exchange Commission (SEC) have ongoing projects, or have expressed an intention to undertake projects, to address perceived weaknesses in financial reporting. Therefore, we suggest the Board take a measured approach to changing the auditor's reporting model at this time. We recommend that the PCAOB and its staff collaborate with the SEC and the FASB to consider how changes in reporting by both issuers and auditors can better address the needs of users of the financial statements over the longer term.

However, we don't believe a collaborative longer-term effort on this front should prevent some needed improvements to the auditor's reporting model in the near-term. In the following sections, we propose an approach, which uses certain of the ideas outlined in the Concept Release, that could be developed and applied in a practical, cost-effective manner and would represent a constructive change to the information auditors currently provide to investors and other financial statement users.

In addition, we encourage the Board to consider the efforts of other standard setters, such as the International Auditing and Assurance Standards Board (IAASB) and the AICPA's Auditing Standards Board (ASB), which are also exploring changes to the auditor reporting model. We believe that users would be better served if the nature of information communicated by the auditor is generally consistent, regardless of the jurisdiction. Although we recognize that certain differences in auditor reporting standards will continue to exist, unnecessary differences in IAASB, ASB and PCAOB requirements will cause confusion and could lead to inappropriate inferences about a company's financial statements, audit quality and the nature of assurance provided.

2. **The overarching principles described by the CAQ must be addressed when considering any changes to the auditor's reporting model**

On 9 June 2011, the Center for Audit Quality (CAQ) submitted a letter[1] outlining five overarching principles that should guide the development of any changes to the auditor's reporting model. These principles are:

1. Auditors should not be the original source of disclosure about the entity; management's responsibility should be preserved in this regard. A substantive shift in responsibility from the auditor attesting to information prepared by management to the auditor providing original information about the company being audited could result in unintended consequences that are not in the best interest of investors and other financial statement users.

2. Any changes to the reporting model need to enhance, or at least maintain, audit quality.

3. Any changes to the reporting model should narrow, or at least not expand, the expectations gap.

4. Any changes to the reporting model should add value and not create investor misunderstanding. Specifically, any revisions should not require investors to sort through "dueling information" provided by management, the audit committee and independent auditors.

---

[1] For the full text of the Center for Audit Quality's letter to the PCAOB dated 9 June 2011, go to http://pcaobus.org/Rules/Rulemaking/Docket034/001_CAQ.pdf

5. Auditor reporting should focus on the objective rather than the subjective. Financial reporting matters assessed by an auditor can be highly subjective; however, it is important that auditor commentary, communicated in a widely distributed report, provide objective information about such matters. Requests for an auditor's subjective views or impressions on financial reporting matters cannot be effectively communicated and understood without the existence of an appropriate two-way discussion protocol. Without such dialogue, the communication of subjective views and impressions could lead to a misunderstanding and harmful consequences.

We firmly agree with these principles and believe the Board should evaluate any proposed changes to the auditor reporting model against each of them. Our approach adheres to these principles.

3. **We continue to support the current pass/fail opinion**

Users have consistently noted that a concise conclusion as to whether the financial statements, taken as a whole, are presented fairly in accordance with the applicable financial reporting framework is meaningful information. Therefore, we support maintaining the pass/fail framework in the current auditor's report.

4. **Changes to the current pass/fail opinion are needed to help investors and other financial statement users — summary of a proposed approach to revising the auditor reporting model**

Based on the principles noted above and views expressed by a number of participants in the Board's outreach, we believe the following approach, which incorporates certain of the ideas reflected in the Concept Release, would be a meaningful and practical change to the existing auditor reporting model:

- Adding certain clarifying language to the auditor's report
- Requiring the expanded use of emphasis paragraphs in the auditor's report

We believe this approach, while not addressing all of the calls for change, would be responsive to many of the suggestions and provide a meaningful enhancement to the information provided to investors and other financial statement users. Additional thoughts on this approach follow:

<u>**Adding certain clarifying language to the auditor's report**</u>

Many investors and other users of financial statements have suggested that adding certain clarifying language to the standard auditor's report could enhance users' understanding of an audit. We agree and strongly support adding new text or clarifying the existing language in the following areas of the standard auditor's report:

- *Reasonable assurance* — The report should clarify that reasonable assurance represents a high level of assurance, but reasonable assurance is not absolute assurance and an audit conducted in accordance with PCAOB standards may not always detect a material misstatement.

- *Auditor's responsibility for fraud* — The report should clarify, as set forth in PCAOB Interim Standard AU 316, that the auditor's responsibility is to plan and perform the audit to provide reasonable assurance about whether the financial statements are free of material misstatement, *whether caused by error or fraud*.

- *Auditor's responsibility for financial statement disclosures* — The report should explicitly state that the footnotes are an integral part of the financial statements, are subject to audit procedures and are covered by the auditor's report.

- *Management's responsibility for the preparation of the financial statements* — The report should provide an expanded discussion covering management's responsibilities for the financial statements and other information provided to users of the financial statements.

- *Auditor's responsibility for information outside of the financial statements* — The report should describe the auditor's responsibility to read certain other information in documents containing the audited financial statements for inconsistencies with the audited financial statements and to identify whether there are material misstatements of fact pursuant to PCAOB Interim Standard AU 550. We also believe it would be appropriate for an auditor to state in the audit report his or her conclusion on the results of these procedures (i.e., whether any inconsistencies or material misstatements of fact exist in the information containing audited financial statements).

- *Auditor independence* — The report should explicitly state that the auditor is independent under all relevant standards of the SEC and PCAOB.

We also believe the PCAOB should consider adding the following clarifications:

- *Material misstatements and assessment of materiality* — The report should identify what is meant by "material misstatement" and provide more qualitative information about the auditor's consideration of materiality when planning the audit and evaluating the financial statements. We do not believe that it would be appropriate to include specific quantitative measures of materiality in the auditor's report.

- *Audit committee responsibilities* — The auditor's report should provide an expanded discussion of the audit committee's responsibilities.

- *Addressing the audit report* — The report should be addressed to the shareholders of the company as well as the Board of Directors.

- *Professional judgment* — The report should highlight the need to use professional judgment in assessing audit risk, selecting audit procedures and considering the issuer's internal control over financial reporting.

- *Additional information about public company audits* – The report should include a reference and link to more information about public company auditing (e.g., the CAQ's *In-Depth Guide to Public Company Auditing: the Financial Statement Audit*[2]), similar to the approach used in the United Kingdom.

- *Scope limitations and non-compliance with US Generally Accepted Accounting Principles (GAAP)* – The report should outline the auditor's responsibility in the event a conclusion is reached that the financial statements are not presented in accordance with GAAP or the audit scope is limited.

- *Firm network structure and responsibilities* – The report should describe the accounting firm network structure, the responsibility of the member firm signing the audit report and, where applicable, the participation of other member firms in the audits.

We believe these clarifications would provide users with meaningful perspective on the auditor's responsibilities. We also believe the clarifications represent a cost-effective step that could be performed under the current PCAOB standard-setting process and be adopted by auditors in a timely manner.

**Requiring the expanded use of emphasis paragraphs in the audit report**

Outreach conducted by the PCAOB indicated that many users want additional information from the auditor about significant matters affecting the financial statements. Users noted that, because the number and variety of disclosures continue to grow, it is often difficult to identify the matters that have the most significant effects on a company's financial results and that auditors could help users better focus their analyses. In addition, users have requested additional insights into the auditor's communications with the audit committee on significant matters affecting the financial statements.

We believe the required and expanded use of emphasis paragraphs could help address certain of these requests. As outlined in the Concept Release, the approach could be used to highlight matters that, in the auditor's judgment, are the most significant matters in the financial statements and to point users to where those matters appear in the financial statements and related disclosures. This approach would draw attention to important items that may warrant a detailed review by financial statement users. We also believe identifying these matters in the auditor's report may increase preparer focus on these areas, thereby improving the quality of disclosures provided to investors.

The objective of this approach would be for the auditor to answer the following basic question: "What, in your view, are the most important matters affecting the financial statements this year?" Developing the criteria for the auditor to use to consistently determine the types of matters to include in the report will be challenging, but we believe it can be accomplished. Selecting the most

---

[2] See Center for Audit Quality's *In-Depth Guide to Public Company Auditing* (2010). Available at: http://www.thecaq.org/publications/In-Depth_GuidetoPublicCompanyAuditing.pdf

important matters will require the use of judgment. We believe the auditor should start by evaluating the material areas that involve an accounting policy or practice that has a significant effect on the issuer's financial reporting, a highly subjective accounting estimate, a material uncertainty, a significant unusual or infrequent event or transaction, or information about the structure of an entity that is significant to understanding the assertions made in the financial statements. The auditor should then evaluate whether these matters were the subject of significant discussion with the audit committee, required significant audit effort, underwent significant change or were unique to the company or the industry during the period. We believe these matters are the types of topics that users would like to see identified in the audit report.

Care would need to be taken to encourage auditors to highlight only the most important matters. Including too many areas would risk minimizing the intended emphasis. In addition, the report would need to clarify that while the audit included the performance of specific procedures designed to address the risks of material misstatement associated with these areas (1) no separate form of assurance has been given for any specific item emphasized and (2) the matters included in the report do not represent a complete list of all areas addressed in the audit. Finally, it should be clear that matters emphasized in the report are based on the auditor's professional judgment and may change from year to year based on a company's particular facts and circumstances.

Consistent with the CAQ's overarching principles noted above, we do not believe that the auditor should provide subjective views or impressions about financial statement matters in the audit report. We believe the emphasis paragraphs should be objective, fact-based descriptions of the items and should direct the reader to where such matters appear in the financial statements, including the related disclosures. Based on investor input provided at the PCAOB's recent roundtable on the Concept Release, we would also support the suggestion that the auditor identify why the matters emphasized were selected for specific emphasis in the audit report.

We do not believe the emphasis paragraphs should include a summary of "key audit procedures" performed in these areas. For important areas, it would be difficult to summarize the hundreds of audit hours spent into a few crisp sentences. We also do not believe that an expansive description of the audit procedures carried out in a particular area would be helpful to users. In addition, since specific procedures performed in a particular area are developed in the context of the overall audit, it may be difficult to effectively convey how such procedures relate to the auditor's evaluation of the financial statements taken as a whole.

Finally, we believe the required emphasis paragraph approach could be implemented timely.

5. **The value of standardized language**

As noted in the Concept Release and in the Board's outreach, users of financial statements have said that standardized (or boilerplate) language lacks substance. These users have said any modifications to the auditor's report that allow for additional standardized language would not be as useful as modifications requiring the communication of subjective views or impressions.

We believe there is significant value in using standardized language. For example, investors and other users have said they appreciate the clarity and simplicity of the current pass/fail opinion, which provides a succinct, objective conclusion about whether the financial statements are presented fairly in accordance with GAAP. We believe that modifications to the report should be clear, concise and objective. In addition, the use of consistent and objective language facilitates user comparisons across companies and minimizes the risk of user misunderstanding.

6. **Our views on other alternatives outlined in the concept release**

**Reporting on other information outside the audited financial statements—this may be a viable approach, but the cost-benefit analysis is important**

Users have noted that they use sources of financial information beyond a company's financial statements, such as management's discussion and analysis (MD&A), earnings releases and investor presentations to evaluate a company and that auditor reporting on this information could improve the quality, completeness and reliability of the information. This reporting would provide users with a higher level of confidence in the information. As noted above, professional standards require auditors to read information in documents containing the audited financial statements for any inconsistencies with the audited financial statements or any material misstatements of fact. We believe the audit report clarifications above would help users better understand the auditor's involvement with information in documents that contain the audited financial statements and the auditor's conclusion related to the procedures performed in this area.

We note that auditors often perform certain procedures on information such as earnings releases before public distribution to assess whether the information is consistent with the audit in process. We recognize that some investors may not be aware that these procedures are performed. Having auditors issue the equivalent of agreed-upon procedures reports for general use, describing the procedures performed on this information, could potentially provide investors with added visibility in this area.

Auditor reporting on information outside the financial statements would increase the scope of the auditor's responsibilities, would require the development of new auditing standards and would potentially require additional regulatory efforts. For example, if auditor attestation were deemed appropriate for earnings releases, preparer guidance would also need to be developed. We believe certain of these alternatives would require careful study.

As with all alternatives, the costs will need to be weighed against the benefits. As contemplated in the Concept Release, auditor attestation on a company's entire MD&A disclosure is an alternative. Such an attestation would be a significant undertaking and we do not believe financial statement users have requested this level of auditor involvement.

Given users' requests for more explicit auditor involvement in the most critical, subjective matters affecting a company's financial statements, we believe that separate auditor attestation on an issuer's critical accounting policies/estimates disclosure in MD&A may be a more modest step in this broad area. It would direct auditor effort to those areas that appear to be of the highest interest to investors, and could be a more cost-effective alternative. We also believe additional auditor involvement would likely lead to preparer focus and improved disclosures. While we believe requiring the expanded use of emphasis paragraphs may be a preferable alternative, consistent with the CAQ's June letter to the Board, we believe that auditor involvement with a company's critical accounting policies/estimates disclosure in MD&A is also a viable approach that merits further consideration by the Board.

**Auditor's Discussion and Analysis—we do not support this concept**

We do not support an Auditor's Discussion and Analysis (AD&A) approach as an alternative to address user requests for auditor's views on the company's financial statements and on the audit.

We strongly believe an AD&A would have adverse consequences for a variety of reasons, including the following:

**Auditor commentary on a company's financial statements**

A requirement for the auditor to provide subjective comments on a company's financial statements would be inconsistent with several of the overarching principles. For example, we do not believe auditor views on issues as subjective as the "quality" of the company's accounting policies and practices, difficult or contentious matters or "close calls" can be effectively communicated in a widely distributed report where no two-way dialogue will exist. In addition, inconsistencies in the areas emphasized in an AD&A between companies in the same industry may be difficult for users to reconcile and potentially result in inappropriate judgments related to the company or the audit. Moreover, the subjective nature of such matters could result in the presentation of information by the auditor that is not consistent with the information presented by management (as overseen by the audit committee). Providing information that may "compete" with information reported by management would likely be difficult for users to reconcile, particularly without the existence of a two-way discussion protocol.

Moreover, we do not believe the auditor should be the original source of information about the entity. The longstanding role of the auditor is to attest to information prepared and presented by management in accordance with an established framework. If the Board were to require an auditor to provide subjective impressions, it might inappropriately expand the role of the auditor into financial reporting, rather than opining on the company's financial statements. While the Concept Release notes that an AD&A may encourage management to improve a company's financial statements to prevent disclosure of conflicting information, such pressure could give the auditor undue influence on the presentation of matters in the financial statements. If management defers to the views of the auditor, this could effectively place the auditor in the role of the preparer, which would be contrary to the auditor's responsibility to provide an independent, objective evaluation of the financial statements.

Such an outcome could also adversely affect the auditor's relationship with management and the audit committee, which could have a negative effect on the audit. For example, it may discourage the company and its audit committee from engaging in robust discussions with the auditor of matters related to the financial statements for fear of that discussion being reported by the auditor. As the Board recognized in its proposed standard on the auditor's communications with the audit committee, open communication with both management and the audit committee is integral to the execution of a quality audit.

We are also concerned that an AD&A requirement could place significant additional pressure on the audit process and the company's ability to meet its regulatory filing deadlines. Due to the nature of issues that might be included in an AD&A, it would need to be developed during the completion phase of the audit. The effort to develop the AD&A could potentially divert attention away from the audit at a crucial time. In addition, audit firms would need to develop robust quality control processes to review the subjective views and impressions contained in an AD&A before the report is released. These processes would take time, which could place further strain on the challenging reporting timetable facing issuers and auditors.

**Auditor commentary on the audit**

The Concept Release considers whether an AD&A could present information about the audit, such as audit risk assessments, audit procedures performed and the results of those procedures, and auditor independence. Some users have suggested that additional information about the audit would enhance their understanding of what an audit represents and perhaps better equip them to evaluate the quality of the audit. We believe that subjective areas such as audit risk assessments and the related audit responses would be difficult to communicate in a widely distributed report.

Some users have also suggested that providing additional information about the audit would help them evaluate audit issues and efforts across companies in a particular industry. An audit is tailored to an assessment of the risks of material misstatement at the specific company under audit, takes into account the company's internal control structure, and is influenced by the audit team's perspectives and experience. As such, there may be disparity in information presented in an AD&A about the risks identified and audit procedures employed between audits of similar companies, even for two companies in the same industry. Investors would need to reconcile why different procedures were performed, even if the risks of material misstatement highlighted were similar. These differences may cause investors to inappropriately question the quality of the audits.

As previously discussed, we believe it would be very difficult for an auditor to concisely describe the procedures performed to inform its conclusion on an individual area or matter in the context of its evaluation of the financial statements taken as a whole. While this type of information is typically discussed with the audit committee, the opportunity for a two-way dialogue is critical to this communication. This dialogue would not exist with a widely distributed public report. In addition, while an auditor designs and performs procedures to identify material misstatements of significant accounts and assertions, the auditor's report provides an opinion on the financial statements taken as a whole. We fear that having auditors provide significant details on audit risks and related procedures in specific areas could result in users misinterpreting this communication as an opinion, or separate form of assurance, on the particular audit area being discussed.

While we understand that investors want more information about the audit and the company's financial statements, we do not believe an AD&A is an effective means of providing such information. As noted in the Concept Release, it would likely be the most expansive form of reporting and would likely be the most costly alternative. We doubt the benefits would exceed the cost and believe other alternatives could provide meaningful improvements to auditor reporting in a more cost effective manner.

* * * * *

We would be pleased to discuss our comments with members of the Public Company Accounting Oversight Board or its staff.

Sincerely,

Ernst + Young LLP

**Responses to questions raised in the Concept Release**

1. **Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of the financial statements.**

   a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?

   *We fully support the Board undertaking a standard-setting initiative to consider responsible change to the auditor's reporting model to continue to provide investors and other users of a company's financial statements with relevant reports. As more fully described in our response, we believe certain changes to the auditor's report can provide benefits to users of the financial statements by providing additional clarification about the audit and audit process, as well as additional input on significant matters affecting a company's financial statements.*

   b. In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?

   *Overall, we support enhancing auditor reporting by including information that is objective and adds value. We believe that the five principles expressed in the letter from the Center for Audit Quality (CAQ) to the PCAOB should guide the development of any alternatives. Specifically, as more fully detailed in our response to Question 21, we support modifying the standard financial statement audit report to better articulate the role of the auditor, highlight the professional judgment auditors exercise in making audit-risk assessments and selecting audit procedures and, where applicable, describe the accounting firm network structure and the participation of other member firms in audits. This type of information also could be included in reports on audits of internal control over financial reporting.*

   *We also support using an expanded emphasis paragraph approach in which an auditor would identify specific topics or events, unusual transactions or other matters viewed to be most significant to the financial statements. Such an approach would provide additional transparency related to important areas of the financial statements and the audit that may help users analyze a company. Consistent with the June 2011 CAQ letter, we also believe that auditor reporting on management's critical accounting estimates disclosure in MD&A is a viable approach that deserves further consideration by the Board.*

   c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?

   *Many parties play a role in reporting to investors — management, the audit committee and auditors, as well as regulators and standard setters who establish the framework for each party's reporting responsibilities. In addition to suggestions for improvements to auditor reporting, some financial statement users have expressed dissatisfaction with the corporate financial reporting model. We believe that any changes to auditor reporting should be made in the context of other initiatives aimed at enhancing overall corporate financial reporting. Attempts to address investor dissatisfaction with corporate financial reporting solely through changes in the auditor's reporting model would significantly expand the auditor's role, which we do not think is* *appropriate or cost-effective. Therefore, we suggest the Board take a measured approach to changing the auditor's reporting model at this time. We also believe the Board should work with the SEC and the FASB to consider how changes in reporting by both issuers and auditors can better address the needs of users of the financial statements over the longer term.*

*However, we believe that meaningful enhancements to the auditor reporting model can and should be achieved in the near term without expanding the role of the auditor. Such changes could provide users with additional perspective on the role of the auditor, highlight the professional judgment auditors exercise in making audit-risk assessments and selecting audit procedures, describe, where applicable, the accounting firm network structure and the participation of other member firms in audits and indicate the most significant matters affecting a company's financial statements.*

*Auditor attestation over other matters outside of the financial statements, such as a company's MD&A, would expand the role of the auditor and therefore we believe that careful consideration needs to be given to the costs and benefits, including consideration of the additional regulatory/standard-setting activity needed to implement such expansion. Given user requests for additional auditor involvement with significant matters affecting a company's financial statements, separate attestation over a company's critical accounting policy/estimate disclosure within MD&A may be a cost-effective alternative that should be considered by the Board.*

2. **The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."**

   a. Should the auditor's report retain the pass/fail model? If so, why?

      *We support maintaining the current pass/fail model. This model provides a concise conclusion as to whether the financial statements, taken as a whole, are presented fairly in accordance with the applicable financial reporting framework. Users have consistently noted that they find this overall conclusion useful.*

   b. If not, why not, and what changes are needed?

      *Not applicable*

   c. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.

      *As more fully described in our responses to Questions 21 and 22, we believe it would be beneficial to clarify a number of areas in the standard auditor's report, such as the role of the auditor, the auditor's responsibility for footnote disclosures, management and audit committee responsibilities for financial reporting, the concepts of reasonable assurance and material misstatement, the auditor's responsibility for fraud, and the professional judgment auditors exercise in making audit-risk assessments and selecting audit procedures, among others.*

3. **Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.**

   *Management has overall responsibility for the preparation of the financial statements. Consistent with the overarching principles previously noted, we strongly believe that auditors should not be the original source of disclosure about the entity; management is in the best position to provide information about the company and their responsibility should be preserved in this regard. The longstanding role of the auditor is to attest to information prepared and presented by management in accordance with an established framework. As more fully discussed in our responses to Questions 5 and 12, we believe that auditors providing additional information about the company's financial statements would fundamentally change the role of the auditor and could have adverse effects on audit quality, the auditor's relationship with management and the audit committee and the clarity of information provided to investors.*

   *We also note that the Board's outreach indicated that additional reporting by a company's audit committee related to significant matters addressed with the company and the auditor may provide users with meaningful information. Users indicated that auditor attestation of such enhanced audit committee reports may be useful in providing additional comfort that such reports accurately represent the interaction and conclusions of the matters discussed. Consistent with our previous comments, we are supportive of the PCAOB working with the SEC and other relevant organizations to evaluate whether modifications to audit committee reports, including potential auditor association with such reports, would be a cost-effective enhancement to the information provided to users.*

4. **Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?**

   *To the extent auditors are required to report additional information about a company's financial statements and such information is inconsistent in some respects with information provided by management, we believe investors may make inferences about a company's internal control over financial reporting (ICFR) that may not be appropriate. For example, to the extent AD&A emphasizes different areas across companies in the same industry, users may make inappropriate inferences about a company's controls compared to another. In addition, to the extent an auditor provides information that is somewhat different from information provided by management, an investor may inappropriately infer that those inconsistencies represent internal control deficiencies, rather than resulting from reasonable differences in judgment between the auditor and management that do not result from a deficiency in the company's ICFR. Given these potential outcomes, the Board will need to evaluate any proposed changes to the auditor reporting model to determine if clarifications are also needed to the auditor's report on ICFR.*

<u>Questions related to the auditor's discussion and analysis</u>

5. **Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?**

   a. If you support an AD&A as an alternative, provide an explanation as to why.

      *As more fully explained in our response to Question 5(d), we do not support an AD&A as a responsible change to the auditor reporting model.*

   b. Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?

      *As more fully explained in our response to Question 5(d), we do not support an AD&A as a responsible change to the auditor reporting model.*

   c. Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?

      *As more fully explained in our response to Question 5(d), we do not support an AD&A as a responsible change to the auditor reporting model.*

   d. If you do not support an AD&A as an alternative, explain why.

      *We do not support an AD&A as an alternative and strongly believe an AD&A would have adverse consequences to users of the financial statements and audit quality. While we acknowledge that investors want more information about a company's financial statements and the audit process, we do not believe an AD&A is an effective means of providing that information for a variety of reasons, including the following:*

      <u>Auditor commentary on a company's financial statements</u>

      *A requirement for the auditor to provide subjective comments on a company's financial statements would be inconsistent with several of the overarching principles. For example, we do not believe auditor views on issues as subjective as the "quality" of the company's accounting policies and practices, difficult or contentious matters or "close calls" can be effectively communicated in a widely distributed report where no two-way dialogue will exist. In addition, inconsistencies in the areas emphasized in an AD&A between companies in the same industry may be difficult for users to reconcile and potentially result in inappropriate judgments related to the company or the audit. Moreover, the subjective nature of such matters could result in the presentation of information by the auditor that is not consistent with the information presented by management (as overseen by the audit committee). Providing information that may "compete" with information reported by management would likely be difficult for users to reconcile, particularly without the existence of a two-way discussion protocol.*

      *Moreover, we do not believe the auditor should be the original source of information about the entity. The longstanding role of the auditor is to attest to information prepared and presented by management in accordance with an established framework. If the Board were to require an auditor to provide subjective impressions, it might inappropriately expand the role of the* *auditor into financial reporting, rather than opining on the company's financial statements. While the Concept Release notes that an AD&A may encourage management to improve a company's financial statements to prevent disclosure of conflicting information, such pressure could give the auditor undue influence on the presentation of matters in the financial statements. If management defers to the views of the auditor, this could effectively place the auditor into the role of the preparer, which would be contrary to the auditor's responsibility to provide an independent, objective evaluation of the financial statements.*

*Such an outcome could also adversely affect the auditor's relationship with management and the audit committee, which could have a negative effect on the audit. For example, it may discourage the company and its audit committee from engaging in robust discussions with the auditor of matters related to the financial statements for fear of that discussion being reported by the auditor. As the Board recognized in its proposed standard on the auditor's communications with the audit committee, open communication with both management and the audit committee is integral to the execution of a quality audit.*

*We are also concerned that an AD&A requirement could place significant additional pressure on the audit process and the company's ability to meet its regulatory filing deadlines. Due to the nature of issues that might be included in an AD&A, it would need to be developed during the completion phase of the audit. The effort to develop the AD&A could potentially divert attention away from the audit at a crucial time. In addition, audit firms would need to develop robust quality control processes to review the subjective views and impressions contained in an AD&A before the report is released. These processes would take time, which could place further strain on the challenging reporting timetable facing issuers and auditors.*

Auditor commentary on the audit

*The Concept Release considers whether an AD&A could present information about the audit, such as audit risk assessments, audit procedures performed and the results of those procedures, and auditor independence. Some users have suggested that additional information about the audit would enhance their understanding of what an audit represents and perhaps better equip them to evaluate the quality of the audit. We believe that subjective areas such as audit risk assessments and the related audit responses would be difficult to communicate in a widely distributed report.*

*Some users have also suggested that providing additional information about the audit would help them evaluate audit issues and efforts across companies in a particular industry. An audit is tailored to an assessment of the risks of material misstatement at the specific company under audit, takes into account the company's internal control structure, and is influenced by the audit team's perspectives and experience. As such, there may be disparity in information presented in an AD&A about the risks identified and audit procedures employed between audits of similar companies, even for two companies in the same industry. Investors would need to reconcile why different procedures were performed, even if the risks of material misstatement highlighted were similar. These differences may cause investors to inappropriately question the quality of the audits.*

*We believe it would be very difficult for an auditor to concisely describe the procedures performed to inform its conclusion on an individual area or matter in the context of its evaluation of the financial statements taken as a whole. While this type of information is typically discussed with the audit committee, the opportunity for a two-way dialogue is critical* *to this communication. This dialogue would not exist with a widely distributed public report. In addition, while an auditor designs and performs procedures to identify material misstatements of significant accounts and assertions, the auditor's report provides an opinion on the financial statements taken as a whole. We fear that having auditors provide significant details on audit risks and related procedures in specific areas could result in users misinterpreting this communication as an opinion, or separate form of assurance, on the particular audit area being discussed.*

*While we understand that investors want more information about the audit and the company's financial statements, we do not believe an AD&A is an effective means of providing such information. As noted in the Concept Release, it would likely be the most expansive form of reporting and would likely be the most costly alternative. We doubt the benefits would exceed the cost and believe other alternatives could provide meaningful improvements to auditor reporting in a more cost effective manner.*

e. Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?

*We believe that any modifications to the auditor's report should focus on the objective rather than the subjective and should maintain the auditor's role of attesting to assertions made by management. An auditor's views or impressions on financial reporting matters cannot be effectively communicated and understood without a two-way dialogue. Without such a dialogue, the communication of subjective views could lead to investor misunderstanding and harmful consequences.*

*However, we believe that adding certain clarifying language in the auditor's report and requiring the expanded use of emphasis paragraphs in the auditor's report would represent a constructive change to the auditor's reporting model. For more details of our rationale for both of these alternatives, see our responses to Questions 13, 21 and 22.*

6. **What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?**

   *See our response to Question 5(d).*

7. **What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?**

   *See our response to Question 5(d).*

8. **Should a standard format be required for an AD&A? Why or why not?**

   *We do not support an AD&A as a responsible change to the auditor reporting model. We do not believe that requiring the auditor to provide his or her subjective views on information about the company's financial statements or the audit is appropriate. In addition, we do not believe the disadvantages of the AD&A approach can be mitigated through the use of a standardized report.*

9. **Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?**

   *We do not support an AD&A as a responsible change to the auditor reporting model. We do not believe that requiring the auditor to provide his or her subjective views on information about the company's financial statements or the audit is appropriate.*

10. **How can boilerplate language be avoided in an AD&A while providing consistency among such reports?**

    *We do not support an AD&A as a responsible change to the auditor reporting model. We do not believe that requiring the auditor to provide his or her subjective views on information about the company's financial statements or the audit is appropriate. In addition, we do not believe the disadvantages of the AD&A approach can be mitigated through the use of a standardized report.*

11. **What are the potential benefits and shortcomings of implementing an AD&A?**

    *See our response to Question 5(d).*

12. **What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?**

    *As discussed in our response to Question 5(d), we believe the potential to present information that may not be consistent (and could compete) with information provided by management would prove to be a strong incentive for management to conform its disclosures to the auditor's. We believe such a situation would represent a fundamental shift in the auditor's role from attesting to information provided by management to that of a preparer.*

    *Such an outcome could also adversely affect the auditor's relationship with management and the audit committee, which could have a negative effect on the audit. For example, it may discourage the company and its audit committee from engaging in robust discussions with the auditor of matters related to the financial statements for fear of that discussion being reported by the auditor. Open communication with both management and the audit committee is integral to the execution of a quality audit.*

<u>Questions related to required and expanded use of emphasis paragraphs</u>

13. **Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?**

    *Outreach conducted by the PCAOB indicated that many financial statement users want additional information from the auditor about significant matters affecting the financial statements. Users noted that, because the number and variety of disclosures continue to grow, it is often difficult to identify the matters that have the most significant effects on a company's financial results. Some users have suggested that further input from the auditor could help better focus their analyses. In addition, users have requested additional insights into the auditor's communications with the audit committee on significant matters affecting the financial statements. We believe the emphasis* *paragraph approach, based on suitable, well-defined criteria that are understood by the users of the financial statements, would be responsive to user requests and would help users analyze a company's financial statements.*

**14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?**

a. If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.

*See our response to Question 13. We believe the required and expanded use of emphasis paragraphs could help address certain user requests by highlighting matters that, in the auditor's judgment, are the most significant matters in the financial statements and by pointing users to where those matters appear in the financial statements and related disclosures. This approach would draw attention to important items that may warrant a detailed review by financial statement users. We also believe identifying these matters in the auditor's report may increase preparer focus on these areas, thereby improving the quality of disclosures provided to investors.*

*However, we do not believe the auditor should comment on key audit procedures performed in these areas. As expressed in the CAQ letter, the Auditor's Reporting Model Working Group challenged itself to develop examples of how such an approach could be implemented in practice and determined that emphasis paragraphs should not include audit procedures for the following reasons:*

- *Audit procedures, particularly those performed for the most significant areas in a company's financial statements, rarely consist of a few, easily described procedures. We believe that it is unreasonable to expect the auditor to summarize the audit approach in a few sentences in the audit report.*
- *The audit procedures for a particular area are developed in the context of the audit of the financial statements taken as a whole. It may be difficult to appropriately convey to users how the audit strategy for a particular area relates to the audit as a whole. Without such context, users may not find a summary of the audit procedures useful.*
- *Users may perceive the additional discussion as representing a separate form of assurance on the individual areas included in the report.*
- *Users may also make inappropriate inferences to audit quality. For example, an auditor rarely has a single approach to addressing audit risk in an area, and the methods employed by the auditor depend on the company's internal controls and the auditor's assessed level of risk for the particular area relative to the financial statements taken as a whole. Without such context, users may inappropriately make assessments of audit quality based solely on differences in the audit procedures performed described.*
- *More thorough descriptions of audit processes could contribute to disclosure overload and detract from the purpose of providing useful information to investors.*

b. If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.

*We support required and expanded use of emphasis paragraphs. See response to Question 13.*

**15. What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?**

*Consistent with the overarching principles discussed previously, we believe emphasis paragraphs should be objective and factual and direct the user to the related disclosures within the financial statements. We believe the emphasis paragraphs should include the following:*

- *A brief factual and objective description of the item that should not include information that is not otherwise reflected in the company's disclosures.*
- *The identification of where the item has been accounted for and disclosed in the financial statements.*
- *The reason why the auditor identified the matters for emphasis.*
- *Clarification that no separate form of assurance has been given for any specific item emphasized and that the items identified do not represent a complete list of all significant areas addressed in the audit. The following is an example of language that could convey this clarification: "We highlight the above matters because they represent, in our judgment, important financial statement matters. While we have brought these specific matters to your attention, we note that such items do not represent a complete list of the matters that should be considered when evaluating the company's financial statements. Our audits included performing procedures designed to address the risks of material misstatements associated with the above matters. However, such procedures were designed in the context of our audits of the financial statements taken as a whole, and not to provide assurance on individual accounts or disclosures."*

*As discussed in our response to Question 14(a), we do not believe that emphasis paragraphs should include discussions of the audit procedures performed.*

**16. What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?**

*As discussed in our response to Question 15, users have requested additional information on the most significant matters affecting a company's financial statements. We believe criteria should be developed to help the auditor determine the matters that, in the auditor's judgment, are viewed to be the most significant/important to a user's understanding of the financial statements. Such criteria should not require emphasis of all matters that may be material to the financial statements, that were the subject of significant audit effort or that involved the use of judgment in determining the accounting conclusions for such areas.*

*We believe the following criteria may provide a foundation for the auditor's selection of matters to emphasize:*

- *An item initially considered for inclusion in an emphasis paragraph should be material to the financial statements in the current period and have one or more of the following characteristics:*
  - *The item involves an accounting policy or practice having a significant effect on the company's financial reporting. This may involve a policy or practice in a controversial or emerging area for which there may be a lack of authoritative guidance or consensus.*
  - *The item involves a highly subjective accounting estimate — an area requiring significant judgment and with substantial measurement challenges, including an estimate or assumption that could be susceptible to significant change in future periods*
  - *The item involves a material uncertainty (for example, an uncertainty about the ability of the entity to continue as a going concern or the existence of significant litigation)*
  - *The item is a significant unusual or infrequent event or transaction affecting the financial statements and related disclosures in the current period (for example, a significant subsequent event or a significant acquisition completed during the period)*
  - *The item involves information about the structure of the entity that is significant to understanding assertions made in the financial statements (for example, the existence of significant related party transactions or a parent/sub relationship)*
  - *The item is a matter not otherwise covered in one of the categories above, but is viewed by the auditor as a significant matter in the financial statements that may be worthy of emphasis in the audit report*
- *For items meeting one or more characteristics above, an auditor should also consider the following indicators to determine whether a particular item should be included in an emphasis paragraph:*
  - *The item was the subject of significant discussion with the audit committee.*
  - *The item underwent a significant change in the current period.*
  - *The item was the subject of significant audit effort or audit challenges/difficulties.*
  - *The item is unique to the company or its industry and has a significant bearing on a company's financial statements.*

*Care would need to be taken to encourage auditors to highlight only the most important matters. Including too many areas would risk minimizing the intended emphasis. We believe the Board should consider providing general guidelines about the number of items to be emphasized in the auditor's report. We note that similar guidance exists in accounting standards, most notably in ASC 280, Segment Reporting.*

17. **How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?**

*We believe that the main objective, and primary benefit, of this approach would be the identification of the items that are most significant to a user's understanding of the financial statements. This identification may help users better focus their analyses of a company. We believe objective, factual emphasis paragraphs that direct the reader of the financial statements to the related disclosure within the financial statements would help accomplish this objective. We believe these types of emphasis paragraphs would also be consistent with an overarching principle that the auditor not be the original source of information about the company.*

*We believe there is significant value in using standardized language in the auditor's report. For example, investors and other users have said they appreciate the clarity and simplicity of the current pass/fail opinion, which provides a succinct, objective conclusion about whether the financial statements are presented fairly in accordance with GAAP. We believe that modifications to the report that are clear, concise and objective provide for a more effective communication by the auditor. In addition, the use of consistent, objective language would minimize the risk of user misunderstanding and would allow for easier comparison of companies by users.*

18. **What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?**

*As noted in our response to Question 13, we believe that a required and expanded use of emphasis paragraphs would respond to user requests for additional input on the most significant matters affecting the financial statements. We also believe identifying these matters in the auditor's report may increase preparer focus and improve the quality of disclosures provided to investors. Such an approach could also be implemented in a timely manner.*

*Shortcomings to such an approach would be the potential for users to interpret the areas emphasized as subject to separate auditor assurance or as some form of "guarantee" as to the accuracy of the specific areas. Such inferences would be inappropriate given the auditor's responsibility to conclude on the fair presentation of the financial statements taken as a whole. Users could also interpret the areas included in the emphasis paragraphs as the only items that warrant further understanding/analysis when evaluating a company's financial statements. We believe that both of these shortcomings can be overcome by well defined and understood criteria, as well as appropriate explanatory language in the auditor's report.*

<u>Questions related to auditor assurance on other information outside the financial statements</u>

19. **Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?**

    a. If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.

    *Users have noted that they use sources of financial information beyond a company's financial statements, such as MD&A, earnings releases and investor presentations to evaluate a company and that auditor reporting on this information could improve the quality, completeness and reliability of the information. This reporting would provide users with a higher level of confidence in the information. Professional standards require auditors to read* *information in documents containing the audited financial statements for any inconsistencies with the audited financial statements or any material misstatements of fact. We believe the audit report clarifications noted above would help users better understand the auditor's involvement with information in documents that contain the audited financial statements and the auditor's conclusion related to the procedures performed in this area.*

*We note that auditors often perform certain procedures on information such as earnings releases before public distribution to assess whether the information is consistent with the audit in process. We recognize that some investors may not be aware that these procedures are performed. Having auditors issue the equivalent of agreed-upon procedures report for general use, describing the procedures performed on this information, could potentially provide investors with added visibility in this area.*

*Auditor reporting on information outside the financial statements would increase the scope of the auditor's responsibilities, would require the development of new auditing standards and would potentially require additional regulatory efforts. For example, if auditor attestation were deemed appropriate for earnings releases, guidance would also need to be developed. We believe certain of these alternatives would require careful study.*

*As with all alternatives, the costs would need to be weighed against the benefits. As contemplated in the Concept Release, auditor attestation of a company's entire MD&A disclosure is an alternative. Such an attestation would be a significant undertaking and we do not believe financial statement users have requested this level of auditor involvement.*

*Given users' requests for more explicit auditor involvement in the most critical, subjective matters affecting a company's financial statements, we believe that separate auditor attestation on an issuer's critical accounting policies/estimates disclosure in MD&A may be a more modest step in this broad area. It would direct auditor effort to those areas that appear to be of the highest interest to investors, and could be a more cost-effective alternative. We also believe additional auditor involvement would likely lead to preparer focus and improved disclosures. While we believe requiring the expanded use of emphasis paragraphs may be a preferable alternative, consistent with the CAQ's June letter to the Board, we believe that auditor involvement with a company's critical accounting policies/estimates disclosure in MD&A is also a viable approach that merits further consideration by the Board.*

*As previously noted, we believe that any changes to auditor reporting should be made in the context of potential improvements to the total package of information provided to users of the financial statements. Expanded reporting by the audit committee, on which the auditors could report, may be an enhancement to the overall corporate reporting model.*

b. On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.

   *See our response to Question 19(a).*

c. What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?

*AT Section 701 includes guidance for both review and examination engagements on a company's MD&A. We believe the Board should consider the costs and benefits of these alternatives. In general, we believe an examination approach would be more responsive to user requests in this area.*

d. If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?

*See our response to Question 19(a).*

e. Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?

*As mentioned above, we believe that auditor involvement could enhance the quality, completeness and the reliability of MD&A disclosures.*

f. Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?

*We believe that the guidance in AT section 701 would be sufficient if a review or examination engagement related to a company's critical accounting estimates/policies is determined appropriate.*

g. If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.

*See our response to Question 19(a).*

**20. What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?**

*With respect to potential benefits, we believe that auditor reporting on a company's critical accounting policies/estimates could improve the company's disclosures in areas users have noted are important to their evaluation of a company. However, this alternative would require coordination with the SEC, which would need to undertake a rule-making process to require issuers to obtain auditor attestation on the information.*

*With respect to auditor involvement with other information outside of MD&A, such as earnings releases, investor presentations and non-GAAP measures, we question whether it is feasible to develop frameworks in the short term for these communications (that would provide issuers with the required flexibility).*

<u>Questions related to clarification of the standard auditor's report</u>

21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:

    - Reasonable assurance
    - Auditor's responsibility for fraud
    - Auditor's responsibility for financial statement disclosures
    - Management's responsibility for the preparation of the financial statements
    - Auditor's responsibility for information outside the financial statements
    - Auditor independence

    a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?

    *By clarifying and defining certain terms and phrases, auditors can provide useful information to investors about the audit process and the auditor's responsibilities in an audit. We strongly support clarifying each of these terms in the standard auditor's report as follows:*

    - *Reasonable assurance — The report should clarify that reasonable assurance represents a high level of assurance, but reasonable assurance is not absolute assurance and an audit conducted in accordance with PCAOB standards may not always detect a material misstatement.*
    - *Auditor's responsibility for fraud — The report should clarify, as set forth in PCAOB Interim Standard AU 316, that the auditor's responsibility is to plan and perform the audit to provide reasonable assurance about whether the financial statements are free of material misstatement, whether caused by error or fraud.*
    - *Auditor's responsibility for financial statement disclosures — The report should explicitly state that the footnotes are an integral part of the financial statements, are equally subject to audit procedures and are covered by the auditor's report.*
    - *Management's responsibility for the preparation of the financial statements — The report should provide an expanded discussion of management's responsibilities for the financial statements and other information provided to users of the financial statements.*
    - *Auditor's responsibility for information outside of the financial statements — The report should describe the auditor's responsibility to read certain other information in documents containing the audited financial statements for inconsistencies with the audited financial statements and to identify whether there are material misstatements of fact pursuant to PCAOB Interim Standard AU 550. We also believe it would be appropriate for an auditor to state, in the audit report, his or her conclusion on the results of these procedures performed (i.e., whether any inconsistencies or material misstatements of fact exist in the information containing audited financial statements).*

- *Auditor independence — The report should explicitly state that the auditor is independent under all relevant standards of the SEC and PCAOB.*

b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.

*We believe the Board's outreach confirmed that users of the financial statements would like additional information about the auditor's responsibilities and the audit process. We believe clarifications of the items noted above would provide users with meaningful information about the type of assurance provided in an audit, the inherent limitations of an audit and the responsibilities of management and the auditor's as they relate to the financial statements.*

c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?

*We also believe the PCAOB should consider adding the following clarifications:*

- *Material misstatements and assessment of materiality — The report should identify what is meant by "material misstatement" and provide more qualitative information about the auditor's consideration of materiality when planning the audit and evaluating the financial statements. We do not believe that it would be appropriate to include specific quantitative measures of materiality in the auditor's report.*

- *Audit committee responsibilities — The auditor's report should provide an expanded discussion of the audit committee's responsibilities.*

- *Addressing the audit report — The report should be addressed to the shareholders of the company as well as to the Board of Directors.*

- *Professional judgment — The report should highlight the need to use professional judgment in assessing audit risk, selecting audit procedures and considering the issuer's internal control over financial reporting.*

- *Additional information about public company audits — The report should include a reference and link to where more information about public company auditing (e.g., the CAQ's In-Depth Guide to Public Company Auditing: the Financial Statement Audit3), similar to the approach used in the United Kingdom.*

- *Scope limitations and non-compliance with US Generally Accepted Accounting Principles (GAAP) — The report should outline the auditor's responsibility in the event a conclusion is reached that the financial statements are not presented in accordance with GAAP or the audit scope is limited.*

---

[3] See Center for Audit Quality's In-Depth Guide to Public Company Auditing (2010). Available at: http://www.thecaq.org/publications/In-Depth_GuidetoPublicCompanyAuditing.pdf

- *Firm network structure and responsibilities — The report should describe the accounting firm network structure, the responsibility of the member firm signing the audit report and, where applicable, the participation of other member firms in the audits.*

d. What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?

*Because the clarifications noted above would largely explain to users information already resident in PCAOB standards, we do not believe these alternatives would have any significant implications on the scope of the audit or the auditor's responsibilities. We also believe auditors would be able to implement this alternative in a timely manner.*

**22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?**

*We believe that the clarifications discussed above would respond to users' requests for additional information about the audit and audit process. In addition, we believe that this alternative could be implemented timely.*

*We do not believe the clarifications discussed above have any significant shortcomings, although we recognize that modifications to the auditor's reporting model that consist solely of the above clarifications would likely not satisfy users.*

Questions related to all alternatives

**23. This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?**

*For the reasons stated above, we believe that an approach that includes clarifications of the auditor's current responsibilities and the audit process, as well as the required and expanded use of emphasis paragraphs would provide some insights into the audit and the audit process and would be cost-effective enhancements that could be implemented in a timely fashion.*

*We also believe that additional auditor involvement with an issuer's critical accounting estimates/policies disclosure in MD&A deserves further consideration by the Board based on users' views on the importance of such disclosures to their understanding and analysis of a company's financial statements.*

**24. Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?**

*See our response to Question 23.*

**25. What alternatives not mentioned in this concept release should the Board consider?**

*As discussed in our letter, we believe that changes to auditor reporting should be made in the context of other initiatives aimed at enhancing overall corporate financial reporting. We believe the Board should work with the SEC, FASB and others to consider how changes in reporting by both* *issuers and auditors can better address the needs of users of the financial statements over the longer term. We believe this effort should also address whether enhanced audit committee reporting, which was noted by users in connection with the Board's outreach, might also respond to user requests for additional information on significant areas affecting the financial statements.*

*We also encourage the Board to consider the efforts of other standard setters, such as the IAASB and the ASB, which are also exploring changes to the auditor's reporting model. We believe that users would be better served if the nature of information communicated by the auditor is generally consistent, regardless of the jurisdiction. Although we recognize that certain differences in auditor reporting standards will continue to exist, unnecessary differences in IAASB, ASB and PCAOB requirements will cause confusion and could lead to inappropriate inferences about a company's financial statements, audit quality and the nature of assurance provided.*

26. **Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?**

*See our responses to Questions 14, 15, 16 and 21 related to considerations for criteria and reporting for alternatives related to clarifications to the auditor's report and the required and expanded use of emphasis paragraphs.*

*With respect to an AD&A, as more fully discussed in our responses to Questions 5, 6 and 12, we do not believe a reasonable and practical framework can be developed to drive consistency both within and across firms (given such disclosure would result from a free-writing exercise in which the auditor would share his or her views on a variety of topics related to the company's financial statements and the audit).*

27. **Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?**

*As discussed in our response to Questions 5(d) and 18, there is a risk that a user would interpret the auditor's discussion in an AD&A and the emphasis of certain matters in the audit report as constituting an opinion on the particular area being discussed. While we believe that such risk can be mitigated in an emphasis paragraph approach, we believe it would be significantly more challenging to mitigate the risk of this perception in an AD&A given the more expansive discussion and the wide disparity of disclosures.*

28. **Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?**

*We believe that clarifying terms in the standard auditor's report is the alternative that would best inform users of the financial statements about the audit process and the role of the auditor in financial reporting. As described in our response to Questions 21(a) — (c), this alternative would provide users with additional input on the professional standards governing the conduct and performance of the audit, as well as the role of management, the audit committee and the auditor as it relates to information provided to users of the financial statements.*

29. **What effect would the various alternatives have on audit quality? What is the basis for your view?**

    *We believe clarifying terms in the standard auditor's report, expanding and requiring the use of emphasis paragraphs and auditor involvement with information outside of the financial statements would not have a meaningful effect on audit quality, but would have a meaningful effect on a user's understanding of significant matters affecting a company's financial statements, the role of the audit and the audit process.*

    *As further detailed in our response to Question 5(d), we believe an AD&A could adversely affect audit quality.*

30. **Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and deals, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such a conclusion.**

    *With respect to whether changes to the auditor reporting model apply to all reports filed with the SEC, we believe further analysis of the how financial statements, including the audit report, are used by both users and regulators is necessary to answer this question.*

    *In addition, with respect to domestic and foreign private and listed companies, we note that other standard setting bodies, such as the AICPA's ASB and the IAASB, are undertaking initiatives to clarify the standard auditor's report issued in connection with the standards set by those bodies. As those changes take effect, there would be a variety of forms of auditor reporting. We believe users would find significantly different reports confusing. This could potentially result in inappropriate inferences as to audit quality and the level of assurance provided in an audit of companies in different jurisdictions around the world. As previously discussed, we encourage the Board to work with the AICPA's ASB, IAASB, the SEC and other securities regulators to consider the effects of varying auditor reporting on users of the financial statements. They should consider the fact that users of financial statements may have different needs depending on the nature and type of company (e.g., regulated vs. non-regulated).*

<u>Questions related to changing the auditor's report</u>

31. **This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations and confidentiality.**

    a. Are any of these considerations more important than others? If so, which ones and why?

       *We believe all of these matters should be carefully considered when evaluating potential changes to the auditor reporting model.*

       *With respect to audit effort, as discussed previously, we believe an approach that includes adding clarifying language to the auditor's report and requiring the expanded use of emphasis paragraphs is a viable approach that would respond to many of the suggestion made by users of the financial statements, could be implemented in the near term and would be cost-effective. We also believe that auditor attestation on an issuer's critical accounting policy/estimate* *disclosure in MD&A merits further study and could be cost-effective. We do not believe any benefits of an AD&A approach or auditor attestation on an issuer's complete MD&A disclosure outweigh the costs.*

*As described in our response to Question 5(d), we believe that an AD&A alternative is the most expansive alternative that would likely have the most significant effect on the audit committee's governance role and the auditor's relationships with management and the audit committee. In addition, we believe that an AD&A approach where the auditor expresses his or her views about the company's financial reporting matters could raise confidentiality concerns at a company if the auditor provides information that has not been disclosed by the company. This concern could discourage management and the audit committee from engaging in robust discussions of matters related to the financial statements for fear of additional disclosure by the auditor.*

*With respect to liability considerations, we believe that all alternatives should be analyzed to evaluate their potential effect on auditor liability. For example, areas identified in either an AD&A or emphasis paragraph approach could be misinterpreted as an opinion or separate form of assurance on the particular area being discussed. In addition, under both approaches, users may inappropriately question whether the auditor should have emphasized particular areas or the adequacy of the audit procedures with the benefit of hindsight. We believe this risk would be particularly acute in an AD&A approach, under which an auditor may be required to provide subjective views or impressions on the company's financial statements. Finally, auditor attestation on other information, such as earnings releases, would expand the auditor's role and therefore, the auditor's exposure to litigation.*

b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?

*We believe the alternatives to clarify terms in the standard auditor's report and expand and require the use of emphasis paragraphs would provide users of financial statements with enhanced understanding of significant matters affecting a company's financial statements as well as the role of the audit and the audit process. We also believe that such changes would respond to user requests for such information and could be implemented cost effectively.*

*For the reasons stated in our response to Question 5(d), we believe the potential costs of the AD&A approach would outweigh any benefits associated with this alternative.*

c. Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?

*As discussed in our letter, we believe that changes to auditor reporting should be made in the context of other initiatives aimed at enhancing overall corporate financial reporting. We believe the Board should work with the SEC, FASB and others to consider how changes in reporting by both issuers and auditors can better address the needs of users of the financial statements over the longer term. We believe this effort should also address whether enhanced audit committee reporting, which was noted by users in connection with the Board's outreach, might also respond to user requests for additional information on significant areas affecting the financial statements.*

d. What requirements and other measures should the PCAOB or others put into place to address the potential effects of these considerations?

   *Not applicable.*

32. **The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?**

    *See our response to Question 5(d).*

EXPRESS

September 30, 2011

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington, D.C. 20006-2803

Re: Request for Public Comment on Release No. 2011-003, PCAOB Rulemaking Docket Matter No. 34: *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*

Dear Board Members:

Express, Inc. ("Express") is a nationally recognized specialty apparel and accessory retailer offering both women's and men's merchandise. Express operates over 600 stores across the United States, in Puerto Rico, and in Canada.

Express appreciates the opportunity to comment on the Public Company Accounting Oversight Board's ("PCAOB") Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards (the "concept release").

While Express respects the recent views of investors regarding the need for further information about companies' financial statements and other related matters; and we appreciate the diligence performed by the PCAOB in providing this concept release; we do not believe that the concept release's suggested solutions will result in improved financial reporting, nor do we believe that they will improve auditor communications. **Conversely, we feel as though the concept release undermines the function of management and the audit committee, could deteriorate the relationship between the auditor and the company, and will only create confusion within the investment community. Furthermore, this creates an administrative burden by adding an unnecessary additional layer of procedures and reporting, which will result in significant additional costs incurred by the companies being audited.**

We agree that the auditors, through their experience, gain valuable insight into the significant business decisions contemplated and made by management, as well as the thought process behind establishing accounting policies and procedures. However, it is not appropriate for an auditor to be responsible for reporting behind the scenes information regarding business or financial reporting related decisions, as the concept release suggests. The auditor is hired by the audit committee on behalf of investors and serves the function of ensuring the integrity of the company's financial statements and ensuring the company is compliant with legal and regulatory reporting requirements. This includes transparency in financial reporting. The auditor is currently required to communicate to the audit committee any significant matters of judgment, significant estimates, and items of disagreement, among other items. Likewise, if there are items within the auditor's communication to the audit committee that are of interest to investors, and those items are not already disclosed in the financial statements or management's discussion and analysis, it is the audit committee's duty to request of management that such information be added. This process is well-designed and functions appropriately to ensure financial statements and related disclosures are complete, accurate, and transparent. Adding a layer of reporting into the auditor's report only adds a duplicative and unnecessary process, and inappropriately puts the auditor in the position of reporting information to the public that is not theirs to report. Requiring the auditors to report on significant matters suggests that audit committees are not functioning properly and undermines the audit committees' decision-making authority regarding items worthy of disclosure to the investment community.

**Auditor's Discussion and Analysis ("AD&A")**

*Audit Risk* and *Audit Procedures and Results*
The proposed requirement that the auditor disclose significant risks to the company's financial statements within an AD&A would provide only one piece of a very big puzzle. While every set of financial statements come with a certain amount of risk, there is diversity in how well companies address and respond to this risk. The AD&A, as proposed, does not address the additional context necessary to give investors comfort that the company's management has addressed the identified risks internally, which should be equally as important as how the auditor has addressed those risks. Additionally, what a knowledgeable businessperson considers a risk will vary from person to person. This leaves the process open to the subjectivity of the auditor, and opens the auditing firms up to even further scrutiny. Further scrutiny will result in the potential for inclusion of risks that aren't necessarily significant, as to avoid a "miss" in their report. We also believe additional scrutiny and additional procedures could result in increased costs.

*Management's Judgments and Estimates* and *Accounting Policies and Practices*
Critical accounting estimates and significant or judgmental accounting policies are already discussed within the financial statements and management's discussion and analysis. Further, the auditor currently reports these matters to the audit committee. Should the audit committee find that management has not provided adequate or transparent disclosure regarding an estimate or policy communicated by the auditor, the audit committee is responsible for recommending additional information be added to the financial statements or management's discussion and analysis. Mandating that the auditor also disclose such information to the public would add a duplicative layer of reporting to what is already included within the company's public filings. While we recognize the intent of the Board is to give the auditor further ability to influence financial reporting, that influence is already present and sufficient via the requirement of the auditor to ensure there are no material inconsistencies between the knowledge gained and conclusions reached during the audit and the disclosures within the financial statements and management's discussion and analysis. Therefore, the additional reporting requirement of Management's Judgments and Estimates and Accounting Policies and Practices within an AD&A will in practice provide no additional value or information to the investor.

*Difficult or Contentious Issues, Including Close Calls* and *Material Matters*
Every company employs a different style in trouble-shooting, brain-storming, and decision-making. Issues considered significant by a company may be given only a small amount of deliberation as there may be historical practice and GAAP knowledge leading to the proper accounting treatment, while items of little significance may be given a large amount of deliberation due to lack of experience on a given topic. Further, some decisions are made over the course of months. Further context would be necessary in order for the auditor to fully understand whether an issue is contentious or not. While some of this knowledge will be gained naturally through the audit process, there will still be a significant amount of additional time incurred to walk the auditor through the decision-making process. In reality, the end result is far more important than the process the company took to get there. This would require another unnecessary layer of auditor subjectivity. Investors will naturally attempt to compare contentious issues or close calls between companies within the same industry. We do not believe this will be possible or meaningful given the subjectivity involved in deciding what to include. Lastly, material items of significance to the investor should already be disclosed within the financial statements or management's discussion and analysis.

**Emphasis Paragraphs**

We believe mandating the use of emphasis paragraphs in all audit reports to highlight the most significant matters in the financial statements and key audit procedures performed would be confusing to investors as they will not have a full understanding of the audit process and reasoning behind judgments made by the auditors without the addition of lengthy explanations. Further, the mandated use of emphasis paragraphs will dilute the impact of the current emphasis of a matter model and could result in investors overlooking significant items of interest.

**Auditor Assurance on Other Information**

The concept release also includes a proposed model that auditors provide assurance on information outside of the financial statements. This includes management's discussion and analysis and non-GAAP information. We feel the current model whereby the auditor is required to ensure there is no misleading, inconsistent or inaccurate information within management's discussion and analysis and non-GAAP information is a working model that does not need to be corrected. Expanding the auditor's responsibility to include procedures on management's discussion and analysis or non-GAAP information would result in increased time and costs which we believe outweigh the benefits these procedures would provide and would diminish investor returns.

**Clarification of the Standard Auditor's Report**

While clarification of the standard auditor's report is certainly the most cost efficient model suggested within the concept release, it is not necessary. The definition of reasonable assurance, the auditor's responsibility for fraud, the auditor's responsibility for financial statement disclosures, management's responsibility for the preparation of the financial statements, the auditor's responsibility for information outside of the financial statements, and auditor independence are already concepts that are understood by the well-seasoned and well-versed investor. We believe additional language to define these terms will only serve to lengthen the auditor report and will not provide any additional value or information to the investor.

In closing, there are various challenges to be faced with each of the proposed models within the concept release. **Express believes that each proposed model undermines the responsibilities of management and the audit committee and creates an administrative burden by adding an unnecessary additional layer of procedures and reporting, which will result in significant additional costs incurred by the companies being audited. This will in turn reduce returns to investors. We do not believe that these measures are appropriate given the minimal benefit that would be derived.** The cost-benefit model should be carefully considered when evaluating each alternative. Ultimately, the concept release suggests a shift in responsibility from those directly responsible for the financial statements (management and audit committee) to a subjective third party (auditor), which does not appear to be the best solution for investors. Thank you for your consideration of our position.

Sincerely,

D. Paul Dascoli

**Re: Concept Release 2011-003, Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements, Rulemaking Docket Matter No. 34**

Exxon Mobil Corporation appreciates the opportunity to provide the PCAOB with our views on the Concept Release dated June 21, 2011, "Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements "(the "Release"). We agree that both high quality financial reporting and high quality audits are necessary to sustain investor confidence. Efforts to make real improvements in these areas should receive all due consideration from preparers, auditors, and regulators. As such, we support the comment letter recently submitted to the PCAOB by the Financial Executives International (FEI) Committee on Corporate Reporting (CCR).

The PCAOB standard setting initiative should not change the fundamental responsibilities of management, the audit committee or auditors. Management is responsible for preparation and reporting of the financial statements. Management has more perspective, knowledge, and detailed information about the entity than the auditor or audit committee. Management's responsibilities in these areas should be preserved. In addition, audit committee oversight responsibilities should be maintained, including oversight of management's conduct in the financial reporting process and the integrity of the financial statements and other financial information. The independent auditor's responsibility should continue to be auditing the financial statements and internal controls over financial reporting and providing an opinion on the financial statements taken as a whole.

Where the PCAOB's Release aligns with and strengthens the principles noted above, we provide our support. However, to the extent alternatives within the Release blur the responsibilities described above and could promote investor and user confusion, we take strong exception. Our specific comments and observations are noted below.

## Auditor's Discussion and Analysis

ExxonMobil does not support the Auditor's Discussion and Analysis (AD&A) alternative presented in the Release. The expansion of the auditor's role in developing an AD&A is inconsistent with the expectation that the auditor should not be the original source of disclosures about an entity. We are concerned that the AD&A would give undue prominence to items of lesser significance and ultimately be confusing to investors and other users. Variability in the AD&A across entities in the same industry will cause investors to misinterpret the inclusion or exclusion of a matter in a particular entity's audit report and draw erroneous conclusions. As a result, we suspect the disclosures would become "boilerplate" as entities and auditors work to reduce the inconsistency of AD&A disclosures.

## Use of Emphasis Paragraphs

We do not support a requirement to include emphasis paragraphs in each audit report. We expect this requirement would lead to "boilerplate" disclosures, similar to the situation described above. Auditing standards currently allow auditors to include an emphasis paragraph in their opinions on the financial statements, therefore no cause for action exists.

ExxonMobil does not support disclosure of the nature or extent of audit procedures in emphasis paragraphs for any matter, including matters of critical importance. The nature and extent of audit procedures can vary widely from company to company based on the auditors' risk assessments, professional judgment, and the entities' control environments. Putting the audit procedures in the proper context would require extensive discussion whose meaning would be lost on most users.

## Auditor Assurance Outside of Financial Statements

We do not support auditor assurance on other information outside the financial statements. The auditor currently reviews the information outside the financial statements and considers whether the information is consistent with its knowledge of the entity. Disclosures outside of financial statements include forward-looking statements, discussion of operations, and analysis of the business environment based on management's perspective, none of which an auditor would be reasonably able to attest. However, we do support including a statement in the auditor's report clarifying what its role is regarding other parts of a filing.

## Clarification of the Standard Auditor's Report

ExxonMobil is supportive of the Board's alternative to include clarifying language in the existing standard auditor's report. While such information is readily and publicly available through many other sources, including additional language within filings may enhance investors' and other users' understanding of the auditor's roles and responsibilities. The clarifying language around the auditor's responsibility for information outside the financial statements should be limited to items included in the annual report on Form 10-K.

Prior to proceeding with any of the proposed changes, the PCAOB should perform a robust cost / benefit analysis that clearly articulates the benefits expected to be realized from each of the proposals as well as the related costs.

We thank the PCAOB for undertaking the effort to consider improvements to the Audit Report and for providing an opportunity for stakeholders to comment. We would be pleased to discuss our observations and suggestions in further detail as the project progresses.

Sincerely,

Patrick T. Mulva

RE: PCAOB Rulemaking Docket Matter No. 34 – Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards

Dear Office of the Secretary:

The staffs of the four federal regulatory agencies (the agencies) responsible for supervising the safety and soundness of U.S. financial institutions appreciate the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB) *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (the Concept Release). The information provided in the auditor's report is relevant to the agencies given our requirements regarding independent audits and assessments of the effectiveness of internal control over financial reporting for financial institutions with total assets above certain thresholds. The auditors' reports for these institutions are available to the public.

In general, the agencies support changes to the auditor's reporting model that would bridge the information and expectations gaps of investors and other users of audited financial statements as long as the changes do not alter the auditor's fundamental role of opining on the financial statements or impair the auditor's independence. We believe that communicating additional information in the auditor's report on public company financial statements as a result of audit procedures performed may aid the agencies, investors, and other users in earlier identification of potential problems at individual public financial institutions. Furthermore, improvements to the auditor's reporting model may enhance the agencies' supervision of public financial institutions through better market discipline.

We offer the following comments and suggestions for your consideration as you evaluate possible changes to the auditor's reporting model.

Pass/Fail Model

Since the fundamental role of the auditor is to opine on the fairness of the presentation of the financial statements prepared by management, we recommend retaining a pass/fail model for the auditor's report that reflects a clear and unambiguous opinion on the audited financial statements. Additional disclosures or changes to the auditor's reporting model should be based on the results of the audit procedures performed by the auditor in accordance with the applicable auditing standards and should not result in the auditor assuming or performing management functions or responsibilities.

Emphasis Paragraphs and Clarifying Language

The Concept Release discusses the benefits and possible expanded use of emphasis paragraphs, including required paragraphs for certain important matters, as well as the addition of clarifying language to better explain the auditor's responsibilities and what an audit represents. Expanded use of emphasis paragraphs and the use of clarifying language in the standard auditor's report may reduce the information and expectations gaps and could also increase the readability of the auditor's report. For example, emphasis paragraphs could address critical management representations relied upon in arriving at the audit opinion. To avoid overreliance on such emphasis paragraphs by financial statement users, care should be taken within the body of the auditor's report to refer the reader to important information contained in the body of the financial statements and in the notes thereto. We recommend that any proposed expanded use of emphasis paragraphs and clarifying language focus on providing decision-useful information. The auditor's report should not become too lengthy and obscure its primary purpose, which is to disclose the auditor's opinion on the audited financial statements.

Disclosure of Material Weaknesses in Internal Control Over Financial Reporting

When an auditor conducts an audit of financial statements only, we encourage the PCAOB to consider requiring disclosure in the auditor's report of material weaknesses in internal control over financial reporting identified by the auditor during the audit. The auditor is currently required to communicate this information in writing to the audit committee and, in an integrated audit, to disclose the material weaknesses in the auditor's report on internal control over financial reporting. However, material weaknesses identified by the auditor during an audit of financial statements only are not currently required to be disclosed in the auditor's report. A registrant that is a non-accelerated filer is required to provide a report of management on the registrant's internal control over financial reporting. However, such a registrant is not required to undergo an integrated audit that would result in its auditor's issuance of a report on the effectiveness of internal control over financial reporting. We believe that disclosure in the auditor's report of any material weaknesses noted during an audit of financial statements only would provide meaningful information to regulators, investors, and other users of audited financial statements.

Independence

A key contributor to the value of an auditor's report is the auditor's independence in both fact and appearance. Also, in carrying out his or her responsibilities in conducting an audit, an atmosphere of candid and open communication must exist between the auditor, management, and the audit committee. In this regard, we encourage the PCAOB to consider the effects of any changes in the auditor's reporting model on the auditor's independence as well as the communication flow between the auditor, management, and the audit committee.

Outreach Efforts

The agencies encourage the PCAOB to continue its outreach efforts, particularly with the American Institute of Certified Public Accountants' Auditing Standards Board and the International Auditing and Assurance Standards Board (IAASB), in order to promote international consistency in the auditor's reporting model. The IAASB's Consultation Paper, *Enhancing the Value of Auditor Reporting: Exploring Options for Change,*[1] presents an opportunity to work toward international convergence.

Audit Quality

Finally, although the PCAOB's Concept Release discusses potential alternatives for changing and improving the auditor's report, it does not directly address the quality of the audit work performed that forms the basis for the information provided in the auditor's report. Changes to the auditor's reporting model, in and of themselves, will not ensure that audits are conducted in accordance with the PCAOB's auditing standards and are of high quality. If audits are not performed in this manner, any changes to the auditor's reporting model will not reduce the expectations gap. We believe that the quality and sufficiency of the audit procedures performed has a direct correlation to the degree of reliance that can be placed on the auditor's report. Thus, while we support and commend the PCAOB for its efforts to improve the value of the auditor's report, we also encourage the PCAOB to continue its work to improve audit quality, and the role of auditing standards in promoting it. We believe that the PCAOB's inspection program has helped improve audit quality.

We appreciate your consideration of our comments and we would be pleased to discuss in more detail our views on the Concept Release.

---

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington, DC 20006-2803

Dear Office of the Secretary:

The Federal Housing Finance Agency (FHFA) welcomes the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB or Board) Concept Release on *Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standard,* PCAOB Rulemaking Docket Matter No. 34 (the Concept Release).

As the regulator of the Federal Home Loan Bank System and the regulator and conservator of Fannie Mae and Freddie Mac, we consider audited financial reports by our regulated entities an important input to our safety and soundness supervision process. Therefore, we are interested in high-quality accounting and auditing standards that promote the reporting of unbiased, transparent and relevant information about the performance and condition of these entities. We support the Board's efforts to improve audit quality and provide users of the financial statements with relevant and useful information about audit results.

As stated in the Concept Release, "the auditor's report is the primary means by which the auditor communicates to investors and other users of financial statements information regarding his or her audits of financial statements." However, the current format and content of the standard auditor's report, besides communicating the auditor's overall conclusion in "boilerplate" wording, provides users of financial statements with too little relevant and useful information. We believe some of the alternatives discussed in the Concept Release could significantly increase the transparency and communicative value of the auditor's report. We recommend the following alternatives for the Board's consideration:

- Require an Auditor's Discussion and Analysis (AD&A) as a supplement to the standard auditor's report;
- Amend the format and content of the current standard auditor's report to improve understandability and clarify certain audit-related concepts and
- Require auditor's assurance on other information outside of the financial statements, such as the Management's Discussion and Analysis (MD&A), earnings releases and other non-GAAP information.

**I. Require an AD&A as a supplement to the standard auditor's report:**

The current standard auditor's report that employs the "pass/fail" model is a straightforward and practical way to inform users of financial statements about the audit opinion and therefore should be retained albeit with some minor modifications that we discuss in Item II below.

The external auditor, as an independent expert who spends a significant amount of time and effort to understand a company and audit its books and records, is uniquely positioned to provide valuable insights and observations about the company and the quality of its financial reporting. As noted in the Concept Release, including the AD&A as a supplement to the auditor's report could improve the understanding of the basis for the auditor's opinion and "could give the auditor greater leverage to effect change and enhance management disclosure in the financial statements, thus increasing transparency to investors."

The Concept Release noted that some preparers, auditors and audit committee members expressed concerns that requiring an AD&A could impair the transparency and openness of discussions among the auditors, management, and the audit committee and could create more tension in the overall relationship between these parties. However, since the AD&A would be supported by evidence obtained during the audit, it would continue to be in the company's best interests to be transparent with its auditor so that the auditor's insights and observations presented in the AD&A faithfully reflect the company's basis for its financial reporting policies and practices. A company's decision to temper discussions with its auditor would not only risk causing the auditor to misunderstand the perspectives behind the company's financial reporting practices but also could lead to higher audit costs if the auditor concludes that the inherent and control risks around the audit are higher due to management's lack of candor.

To provide relevant information, improve understandability and facilitate the timely filings of company's financial reports, we propose that the Board require that:

1. The AD&A be written in plain English;
2. The AD&A's audit and financial reporting issues be limited to the following important subject matters:
    - Significant audit risks identified by the auditor;
    - Management's critical accounting policies including accounting treatments for significant unusual transactions;
    - Management's significant judgments and estimates and
    - Difficult and contentious issues, including "close calls" and "material matters" as described in the Concept Release.
3. The AD&A format be standardized similar to that of the MD&A and consist of two sections:
    a. Executive Summary: We suggest limiting this section to approximately two pages and including a bullet-point list of only the most significant audit and financial reporting issues to be described in details in the Discussion and

Analysis section. Each bullet would also provide a reference to the page number in the Discussion and Analysis section where in-depth description of the issue is presented.

b. Discussion and Analysis: For each of the audit and financial reporting issues discussed and analyzed in this section, the auditor should provide information similar to that included in the illustrated example of the Concept Release. For instance, the auditor should discuss:
   - The nature of the issue;
   - The reasons the auditor considers the issue to be most significant;
   - The permissible alternative accounting policies or possible range of accounting estimates;
   - The auditor's assessment of the company's critical accounting policies or estimates including where each of the critical policies or estimates falls within a range of possible views or results, respectively.

## II. Amend the format and content of the current standard auditor's report to improve understandability and clarify certain language

We recommend the following incremental modifications to the standard auditor's report to enhance its transparency and clarity:

a. In the first (introductory) paragraph, require the auditor to explicitly identify the information audited. This means identifying, in addition to the financial statements, the notes to the financial statements, the related schedules and other supplemental information that have been audited.
b. At the end of the second (opinion) paragraph, refer readers to the AD&A for more in-depth discussions and analyses on significant issues identified during the audit.
c. In the final (scope) paragraph, include additional language to clarify concepts such as "reasonable assurance," "the auditor's responsibility for fraud," "fair presentation in conformity with GAAP" and "the level of materiality applied by the auditor in performing the audit."
d. At the end of the auditor's report, require both the firm and the engagement partner to sign the report.

## III. Require auditor's assurance on other information outside of the financial statements, such as the MD&A, earnings releases and other non-GAAP information

Management's Discussion and Analysis, earnings releases and other non-GAAP information are currently not required to be audited. However, information included in these documents is increasingly used by management to communicate the company's views on its financial results to users of financial statements. Also according to the Concept Release, "investors use and rely on MD&A and other financial information (e.g., non-GAAP information and earnings releases) for their investing decisions, in addition to historical audited financial statements."

Therefore, we agree with the Concept Release that having the auditor provide assurance on these disclosures "could improve the quality, completeness and reliability of such information, providing investors and other users of financial statements with a high level of confidence in information about the company."

However, we also concur with the recommendation expressed by some participants at the PCAOB's roundtable on the Concept Release in September 2011 that the Board consider creating a separate long-term project to develop reporting and auditing standards for this alternative. Arguments for a separate long-term project for this alternative include:

- This alternative expands the current scope of the auditor's responsibilities and therefore would require the Board to develop auditing standards to determine (1) what disclosures documents outside of the financial statements (MD&A, non-GAAP information or earnings releases) and which portions of these documents should be audited (2) what level of assurance would be appropriate for the auditor to provide;
- The reporting framework to prepare earnings releases and other non-GAAP information would need to be developed by the Securities and Exchange Commission (SEC) to provide relevant and consistent information; and
- A requirement for an auditor's assurance would likely increase costs to prepare, and to audit, disclosures on a timely basis in compliance with all applicable financial reporting and auditing standards, respectively. Costs and efforts would be compounded since companies currently provide these disclosures on a quarterly, not yearly, basis.

Accordingly, even though we believe in the important benefits of having the auditor providing assurance on information outside of the financial statements, given the potentially lengthy rulemaking process and the substantial compliance costs, we urge the Board to focus first on improving the auditor's report by requiring the AD&A as a supplement to the modified standard auditor's report per our suggestions in Items I and II.

Thank you for the opportunity to provide our views. We hope the Board and staff find our comments and suggestions helpful. If the Board and staff have any questions or comments regarding this letter, please feel free to contact me at 202-343-1832.

Sincerely,

N. Satriano

**Re: PCAOB Release No. 2011-003**
**PCAOB Rulemaking Docket Matter No. 34**
**Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements**

Dear Board Members:

Federated Investors, Inc. (Federated) is a component of the S&P 500 and is one of the largest investment managers in the United States of America with $349 billion in managed assets as of June 30, 2011. The majority of Federated's revenue is derived from advising and administering Federated's 129 registered domestic mutual funds as well as various offshore investment funds and numerous separate accounts in both domestic and international markets.

Federated appreciates the opportunity to comment on the proposed Public Company Accounting Oversight Board's (PCAOB) Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements (Concept Release).

Federated acknowledges the efforts by the PCAOB to identify ways to enhance an investor's understanding of the auditor's reporting model including the level of assurance given by their report. We understand that your outreach efforts indicated that financial statement users are desirous of more information. We believe a financial statement user, if polled, will always be in favor of more information. However, the request for more information must be balanced with the cost of providing additional information, as well as the potential for redundancies and information overload. Management is responsible for communicating information about the financial condition of the company and does so primarily through financial statement disclosures including Management's Discussion and Analysis of Financial Condition and Results of Operations (MD&A). If the auditor disagrees with management, they should report the disagreement under existing standards. If there is a perceived shortfall in information regarding business risks and areas of management judgment, these issues should be addressed by standard setters through the requirement of more disclosure and vigilant review of adherence to current reporting standards.

We strongly support retaining the current pass/fail model of auditor reporting and would support clarification of certain language in the auditor's report. With regard to the other proposals in this Concept Release, we have serious concerns which are outlined in the remainder of this letter.

Auditor's Discussion and Analysis

The Concept Release proposes an outline for an Auditor's Discussion and Analysis (AD&A) that would include the auditor's discussion on items such as Audit Risk, Audit Procedures and Results, Auditor Independence, Management's Judgment and Estimates, Accounting Policies and Practices and Difficult or Contentious Issues, including "Close Calls."

We believe that there is very little benefit with tremendous downside to the proposed AD&A. By introducing the auditor's perspective on the company in an AD&A, we are concerned that it could diminish the focus on the MD&A. We believe that management should be the source of information about a company. The discussion by the auditors of such sensitive topics could be taken out of context by readers. Discussion regarding "Close Calls" would be nothing more than a distraction to readers because such matters would be immaterial. If any matters of contention were material, they would have ultimately been reflected in the financial statements and/or footnotes or a qualified audit opinion would have been rendered.

When MD&A is properly written, areas such as business risk and management estimates in the AD&A would be repetitive disclosures. The other items suggested to be included in the AD&A that may not be included in the MD&A are items that are discussed with the Audit Committee through the required communications. In order to have an unqualified audit opinion, the parties involved would have reached a consensus or resolution on these items prior to finalizing the audit report.

An AD&A would exponentially increase time expended for both management and auditors and therefore further significantly increase costs associated with the audit. The increased time for both management and auditors will also increase the pressure in an already tight reporting timeline which could possibly delay SEC filings. In addition to Federated's corporate filing, it has 129 domestic mutual funds that require annual audits. In any given month, there could be as many as 27 mutual funds with audited financial statements due. The increased time to review the AD&A for each of these filings would create a significant burden to management. The increased time spent by the auditors to draft the AD&A would result in increases estimated to be 15 percent or more of current audit fees, which would be expensive to the company or mutual fund and ultimately to the underlying shareholder.

This lengthy, complex disclosure would also make comparability between companies difficult as each company's auditors would focus their attention on different matters. Alternatively, if a standard format was prescribed, we believe that the language would become boilerplate. We believe that the current audit opinion is appropriate and that a boilerplate AD&A would provide no incremental benefit to the reader.

Report on information outside the financial statements

The Concept Release proposes auditor assurance on other information outside the financial statements.

Under AU 550, Auditors are currently required to read information outside the financial statements to identify material inconsistencies. We would support a revision to the standard auditor's report to inform investors and other readers of the extent of the auditor's responsibility for the other information included in the filing. However, Federated does not support audit assurance on this information. We question the value this would provide given the increased costs and time expended for both management and the external auditors in an already tight reporting timeline.

We appreciate your consideration of this letter and we welcome the opportunity to talk through our comments and observations with the PCAOB Staff. Please contact Sally Lion at (412) 288-8342 to discuss any questions you may have regarding the comments in this letter.

Ref.: AUD/PRJ/HBL/LAN/SHA

Dear Sir or Madam,

**Re: PCAOB Rulemaking Docket Matter No. 34: Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards**

FEE is pleased to provide you with its comments on the PCAOB Rulemaking Docket Matter No. 34: Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards.

The recent debate regarding auditor communication has highlighted the need to provide the public with more details of what an audit is and more information on audit performance. FEE believes that it is important to carefully consider the arguments put forward and to reflect on which lessons can be learned from the financial crisis, as the debate has shown that the way that auditors communicate is a political issue as well as a technical issue. Even if auditors have been criticised during the financial crisis for not being sufficiently sceptical, audit remains of essential value to society in today's changing economy as an independent check of the validity of the financial information provided to users in the markets. Undoubtedly, now is the right time to consider whether there is scope for enhancing the role of the audit and of the auditor to maximise their contribution to the world economy.

As the PCAOB will be aware, the IAASB is currently also discussing this topic of improvements to auditor reporting in their recently published Consultation Paper on "Enhancing the Value of Auditor Reporting: Exploring Options for Change". It would be preferable that a truly global solution for these improvements is found, to the benefits of investors and other users of financial statements and audit reports. Therefore, FEE encourages the PCAOB to closely cooperate with the IAASB when deciding on the improvements that will be introduced.

FEE has only responded to the questions in the PCAOB Concept Release that are relevant from a European or international perspective, and has not expressed views on issues that focus on purely national US matters. Our detailed responses to the relevant questions, set out below, can be summarised as follows:

1. Changes are welcome and should be introduced to improve the communicative value of audit reports by carefully considering the comments made by various stakeholders of the current audit report being too generic and containing boilerplate language. The aim should be to provide better information, instead of merely providing more information to the users.
2. The key principle is that it is the responsibility of management and those charged with governance of an entity to provide the information on an entity that is required by users. The audit report only accompanies the information provided by the audited entity itself.
3. More company specific information about the audit could be provided by the auditor, such as information on audit risks. It will be essential to clearly specify which audit risks should be disclosed. Should it be the key audit procedures that have been performed in response to the key business risks of the company or the risks of material misstatements identified by the auditor as part of the risk assessment which might not be related directly to the key business risks of the company?
4. The auditor could provide more assurance outside the current scope of audit. This should be based on a generally accepted framework and on market requests for such additional assurance.

**Question 1 Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.**
**a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?**

An important role of the audit profession is to contribute to add transparency and provide comfort as to the reliability of corporate reporting. Audit and auditor communication should develop alongside corporate reporting. Auditors should also explore the opportunities to fulfill their role of providing assurance in areas such as governance, sustainability reporting, corporate governance statements, etc. which bring together financial and non-financial reporting. Since the audit is an integral part of the financial system operating in today's rapidly changing world, it is essential to consider the role of the auditor in the financial reporting system, as well as the way that auditors communicate, in a dynamic way rather than in isolation.

It should be ensured that any solutions are sought in a global context, aiming at harmonisation, and taking note of the explicit views of the users of auditor's communication. Close cooperation between the audit profession at global level and its stakeholders, including users and various regulators, is therefore needed to achieve a truly sustainable solution that will be perceived as bringing considerable added value to audit communication.

**Question 2 The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."**
**a. Should the auditor's report retain the pass/fail model? If so, why?**

Retaining the clear "pass/fail" nature of the audit report has received great support in recent consultations, including in the European Commission Green Paper on Audit Policy. Any changes should therefore ensure that this clear message from the auditor to the users of the financial statements and the audit report remains as it is today.

**Question 3 Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.**

FEE agrees that disclosures about the entity should be provided by the company itself and not by the auditor. It is first and foremost the responsibility of the company to meet the needs of the users of financial information and they should therefore provide the relevant disclosures regarding for example critical accounting policies. The audit report only accompanies the information provided by the audited entity itself.

<u>**Auditors Discussion and Analysis - Questions 5-12**</u>

FEE believes that the auditors could be responsive to the request from users of financial statements and could therefore provide more company specific information about the audit.

Given the rapid developments in technology, providing additional information has become easier, although it may still entail additional costs to do so. FEE fully subscribes to the aim of improving the quality of the information provided to users of financial statements. Increasing the quality of the information provided rather than the quantity would be most efficient for all market participants, and would, in our view, be a more appropriate way to support investors in their decision-making process.

However, the proposed Auditors Discussion and Analysis would in our view be too extensive and risks resulting in duplication of information in already lengthy reports, as some of the information should already have been provided by the company itself, as for instance in the MD&A. FEE strongly believes that the aim should be to provide <u>better</u> information and not just <u>more</u> information.

Also, the auditor already provides this information to those charged with governance. The information needs of external users will differ from those charged with governance and it is important to ensure the proper balance of information disclosed to the various user groups in order to facilitate their decision making process in the best way possible.

Although there could be merit in providing some of the information suggested within this model, for instance in relation to audit risks, which may or may not be related directly to the key business risks of the company, FEE believes that the model as proposed would not serve the needs of the users due to its duplication of information. Also, more attention within the model is needed to clearly distinguish between the reporting responsibilities of management and of the auditor, respectively.

**Required and Expanded Use of Emphasis Paragraphs - Questions 13-18**

In the recent debate, investors and other users have expressed a desire for more reporting from companies as well as from auditors. Taking note of these requests from users of financial statements and audit reports, such additional information could contribute to the important aim of reducing the current information gap between the information needs of users and the information provided by the auditors.

FEE believes that emphasis paragraphs should remain as paragraphs that are used to draw users' attention to matters that are of such importance that they are fundamental to users' understanding of the financial statements and the audit. Emphasis paragraphs should therefore remain as they are today and their application should be in situations of major importance.

Emphasis paragraphs should not be misused to compensate for the increasing complexity of financial statements. This increasing complexity is an issue that should be addressed as a matter of urgency, but this should be done by those responsible for the financial reporting framework and by preparers so that readable and understandable financial information is provided to stakeholders. This problem can not and should not be solved by the auditing standard setter through imposing additional reporting responsibilities on auditors.

The French requirement of "*justification of opinion*" is one example of how to approach the reduction of the information gap. The current French requirement states that the justification must "*… enable the user of the report to obtain a better understanding of the reasons behind the statutory auditor's opinion on the financial statements"*.

This principle appears appropriate and could be further explored. In doing so, comments and suggestions for improvement due to the diversified and inconsistent application seen in French audit reports should be carefully considered in order to avoid generic boilerplate language and to ensure that the request from users of providing more decision-useful company-specific information related to the specific audited company in question is de facto met.

It should be made sufficiently clear that this additional "*justification of opinion*" acts in conjunction with the pass/fail nature of the opinion as well as with qualifications and emphasis paragraphs in the audit reports. To avoid any confusion between "justification of opinion" paragraphs and "Emphasis" paragraphs, a term such as "Expanded emphasis paragraphs" should be avoided.

## Auditors Assurance on Other Information Outside the Financial Statements - Questions 19-20

The areas suggested are in relation to non-GAAP information, which could be in relation to, for example, corporate governance arrangements, the sustainability of the business model and key performance indicators.

FEE believes that the company could extend their reporting on such matters. The auditor could then provide additional assurance provided that there is a general request from the market to deliver such assurance services. The information may not necessarily be included in the financial statements, but could be provided outside the financial statements. The assurance given by the auditor on these matters should be separated accordingly.

The level of involvement could vary from no involvement to the auditor providing assurance on the entire content of the annual report and should depend on what users require. Further debate with all relevant stakeholders on proposals for additional management reporting on these matters would be needed to balance the information needs of the investor community. The additional disclosed business information should also not be detrimental to the commercial interests of the company. It is important that the assurance services are developed in response to these market requests for additional information.

## Clarification of the Standard Auditor's Report - Questions 21-22

The audit report is the core deliverable from the auditor. In order to preserve this core service, the comments on the usefulness of the audit report and suggestions for improvements from the users should be carefully considered. Changes made should be sustainable to allow for continuous changes to reporting and society in general.

FEE believes that the criticism of the current audit report being too long and defensive with too much boilerplate information is valid and there is clearly merit for rethinking the format and the structure of it. This could be done by reducing the technical jargon to a minimum with the aim of making it as understandable as possible for the reader.

Reducing this generic information in the audit report will also underline that an audit is not a generic product, but is a service that, although based on the same principles, is tailored to each specific audited entity. It will underline that the audit report is the result of a process conducted by the auditor that is based on the knowledge and experience of the auditor of that particular audited entity.

**Question 23 This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?**

Comments made by various preparer and user groups in other consultations[1] indicate that the changes that appear to be most responsive to the comments made on the current audit report appears to be related to the format and structure of the audit report itself. This could be done by reducing the amount of generic information in the audit report, also by communicating through using less audit technical language.

Retaining the clear “pass/fail” nature of the audit report has received great support. Any changes should therefore ensure that this clear message from the auditor to the users of the financial statements and the audit report remains as it is today.

The focus should be on reducing the “information gap” rather than the “expectation gap”. Without disregarding the expectation gap, there may be greater value in such a prioritisation, as the expectation gap will most likely continue to exist. Instead, the clear aim should be to enhance the value of audit through better, instead of more, communication. Changes regarding the audit report would most likely have the greatest impact on the perception of the value of audit, if they focus on matters related to format and structure.

**Question 24 Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?**

It should be carefully considered whether and how the changes explored in the Concept Release operate in conjunction with each other. For instance, an AD&A in a more limited format than proposed in the Concept Release and increased use of Emphasis paragraphs or combined with introducing “justification of opinion” as in France may result in duplication of requirements and of information disclosed.

**Question 29 What effect would the various alternatives have on audit quality? What is the basis for your view?**

It is essential that any initiatives to improve auditor reporting do not impact or impair audit quality, as any changes should only be introduced if they add value for the users of financial statements. Although it may not be possible to serve all user needs, the aim should be that the majority of users perceive the changes to be an improvement and that their information needs are better served.

[1] See the outcome of the consultation in the EC Green Paper on Audit Policy and the summary of responses on the IOSCO Consultation Paper on Auditor Communication, both in 2010.

For further information on this FEE[2] letter, please contact Hilde Blomme at +32 2 285 40 77 or via email at hilde.blomme@fee.be or Lotte Andersen at +32 2 285 40 80 or via email at lotte.andersen@fee.be from the FEE Secretariat.

Yours sincerely,

Philip Johnson
FEE President

[2] FEE is the Fédération des Experts comptables Européens (Federation of European Accountants). It represents 45 professional institutes of accountants and auditors from 33 European countries, including all of the 27 European Union (EU) Member States. In representing the European accountancy profession, FEE recognises the public interest. It has a combined membership of more than 500.000 professional accountants, working in different capacities in public practice, small and big firms, government and education, who all contribute to a more efficient, transparent and sustainable European economy.

FEE's objectives are:

- To promote and advance the interests of the European accountancy profession in the broadest sense recognising the public interest in the work of the profession;
- To work towards the enhancement, harmonisation and liberalisation of the practice and regulation of accountancy, statutory audit and financial reporting in Europe in both the public and private sector, taking account of developments at a worldwide level and, where necessary, promoting and defending specific European interests;
- To promote co-operation among the professional accountancy bodies in Europe in relation to issues of common interest in both the public and private sector;
- To identify developments that may have an impact on the practice of accountancy, statutory audit and financial reporting at an early stage, to advise Member Bodies of such developments and, in conjunction with Member Bodies, to seek to influence the outcome;
- To be the sole representative and consultative organisation of the European accountancy profession in relation to the EU institutions;
- To represent the European accountancy profession at the international level.

COMMITTEE ON CORPORATE REPORTING

September 30, 2011

Office of the Secretary
PCAOB
1666 K Street, N.W.
Washington, DC 20006-2803

**Re: PCAOB Rulemaking Docket Matter No. 34**

Dear Board:

The Committee on Corporate Reporting ("CCR") of Financial Executives International ("FEI") appreciates the opportunity to share its views on the Public Company Accounting Oversight Board's ("PCAOB" or "Board") Release No. 2011-003, "Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements" ("the Release"). FEI is a leading international organization of senior financial executives. CCR is a technical committee of FEI, which reviews and responds to research studies, statements, pronouncements, pending legislation, proposals and other documents issued by domestic and international agencies and organizations. This document represents the views of CCR and not necessarily the views of FEI or its members individually.

High quality financial statements accompanied by high quality audits are essential to investor confidence and we appreciate the Board's efforts in undertaking a standard-setting initiative to consider improvements to the current auditor's reporting model. We also want to thank the staff for their extensive outreach efforts leading up to the publication of the Release.

We agree with the Board that some improvements to the auditor's reporting model may enhance investors' and users' understanding of the audit process, its benefits and limitations. We are concerned, however, that the Board is considering possible changes, as illustrated in some of the alternatives, without clearly identifying the underlying problem.

Overall, we believe the following principles should be integral to the Board's decision around possible changes to the current auditors reporting model:

- Any standard-setting initiative should not change the fundamental responsibilities of management, the audit committee or the auditors. That is, management owns and is responsible for preparing the financial statements, for adopting sound accounting policies and for establishing and maintaining internal controls that will report transactions, events and conditions consistent with management's assertions embodied in the financial statements as a company's transactions, assets, liabilities and equity are within the direct knowledge and control of management; the audit committee has the responsibility to oversee management's financial reporting process; and the auditor has the responsibility to express an opinion on whether the financial statements and disclosures taken as a whole are presented in conformity with GAAP in all material respects. While an auditor may make suggestions around the form or content of the financial statements, their responsibility remains confined to the expression of an opinion on them.

- Given those responsibilities, we believe that the audit report should provide objective information, rather than subjective opinions on specific items which lack the context or balance that is achieved when forming an opinion on the overall financial statements. The outreach performed by the Board indicates that there is a significant gap between what the auditor's responsibility actually is and what the investor perceives that responsibility to be and therefore, the presentation of subjective opinions would increase the audit "expectation gap" by blurring the line between management and the auditor's responsibility. In particular, we observe that the Release contemplates the auditor possibly providing their views on contentious issues, close calls, and matters in which management is in technical compliance with GAAP but in the auditor's view, the disclosure of such matters could be enhanced. This subjectivity or second-guessing of management's decisions would suggest, if implemented, that the auditor has the responsibility to prepare financial statements and disclosures in compliance with GAAP. The current audit opinion already requires an explanation if the disclosures are materially deficient.

- The financial reporting process, as overseen by the audit committee, not the audit report, should be used to resolve any differences between management and the auditor. The audit report should not be an avenue, or a "lever," in which resolved issues are redistributed for public consumption without the depth of understanding necessary to develop an informed opinion about the meaningfulness of the issue and the associated views. We believe that such reporting would inhibit open communication between auditors, management and audit committees. Rather than using the audit report as a means to address users concerns, we recommend that the Board work with the FASB or the SEC to develop or enhance financial reporting disclosures, if necessary, to address specific concerns about perceived shortcomings in the current financial reporting model.

- Finally, any possible standard-setting changes must be accompanied by a comprehensive cost-benefit analysis. Costs should include increased legal exposure for auditors, management, the company's board members and the company that may be the result of the proposed reporting. While we understand that certain of the Board's alternatives utilize models from other countries, the unique U.S. litigation environment needs to be considered carefully in this analysis. Costs should also include an analysis of incremental audit efforts and whether these efforts will require filing deadlines to be extended. Changes to the auditor's reporting model will require additional audit time to prepare and conduct necessary reviews, as well as discuss with management and audit committees. The accelerated filing timelines, coupled with other reporting requirements, such as SOX, XBRL as well as increased reporting requirements included in the Board's Proposed Auditing Standard on Communications with Audit Committees, may create additional difficulties for some companies to maintain timely reporting. The audit reporting model initiative also comes at a time of significant pending changes in accounting standards as a result of the FASB and IASB's convergence projects, and the SEC's evaluation of the use of IFRS as the reporting framework in the United States. This should also be considered in the Board's analysis.

We believe the current pass/fail opinion is well understood by investors and users of financial statements. An unqualified opinion means that all material matters have been resolved and that the auditors are in agreement with management that the financial statements do not contain any material misstatements. We are in support of the Board's alternative to include clarifying language in the existing standard auditor's report and believe it will enhance investors' and users' understanding of the audit process. We are also of the opinion that the required and expanded use of emphasis paragraphs in certain limited instances may be of some value to certain investors and users. We do not support the auditor's discussion and analysis alternative and we do not believe that auditor assurance on other information outside the financial statements is appropriate. We believe these alternatives would result in more confusion and have unintended adverse effects on the auditor-client relationship, auditor independence and audit costs, and give certain information undue prominence.

**Auditor's Discussion and Analysis**

We are not in support of the Auditor's Discussion and Analysis (AD&A) alternative presented in the Release. The AD&A alternative would significantly expand the auditor's role beyond their current attestation responsibility and may impair the auditor's independence. Management owns and is responsible for the preparation of the financial statements and disclosures in compliance with GAAP, not the auditor. Further, it is the audit committee's responsibility to provide oversight of the financial reporting process on behalf of investors. Management, coupled with the oversight of the audit committee, is in the best position to provide understandable, accurate and insightful information regarding the company's historical results of operations and current financial position, and objectives and challenges for the future. An AD&A would confuse investors and users as to who is actually responsible for the company's financial reporting and damage the existing financial reporting system. We believe specific concerns about shortcomings in the current financial reporting model should be addressed to the FASB or the SEC to develop or enhance financial reporting disclosures, if necessary.

An AD&A requirement would create a barrier to productive and candid communications between management, auditors and the audit committee. Also, we believe that the AD&A could evolve into boilerplate disclosure. Consistent with an appropriate auditor-client relationship, management diligently works through highly subjective and judgmental issues to arrive at the appropriate GAAP accounting and disclosure, and the open and transparent discussion with auditors naturally results in the auditor's report to the audit committee summarizing matters upon which management and the auditor are in agreement. That is, the "contentious issues" that are contemplated for reporting in the AD&A are generally resolved by management and the auditor. In fact, items that investors and users might label as "contentious" are not generally disagreements or arguments, but are issues requiring discussion due to their highly complex nature. Such information in the AD&A may inappropriately highlight items that would raise unwarranted concerns and evolve into boilerplate disclosure.

We are also concerned that the AD&A would give undue prominence to items that are of lesser importance or immaterial. The intention of the AD&A is not to provide separate assurance on individual balances, disclosures, or transactions; however, we have difficulty reconciling that intention with our expectation that such granularity may result in order for the auditor to fully report on audit procedures and results, the auditor's views regarding management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls." Such AD&A disclosures would naturally be associated with balances, disclosures or transactions, while the auditor's knowledge would be limited to that acquired during the audit.

Finally, an AD&A would result in significant reporting delays and an increase in audit fees. A substantial amount of time would be required for the auditor to prepare the report, conduct national office consultations, and obtain the necessary reviews and agreement with management. We do not believe the reporting delays and additional cost will result in any beneficial information to the investor. Instead, as stated above, we recommend that the Board work with the FASB or the SEC to develop or enhance financial reporting disclosures, if necessary, to address specific concerns about shortcomings in the current financial reporting model.

**Required and Expanded Use of Emphasis Paragraphs**

We are of the opinion that the required and expanded use of emphasis paragraphs in certain limited instances may be of some value to certain investors and users. We are, however, concerned that this may over time evolve into a standard boilerplate section of the auditor's report that will eventually diminish the importance of the matters that we believe should be included in such paragraphs. In most cases, we do not believe the addition of emphasis paragraphs to the auditor's report will be particularly valuable to investors and users. We remain convinced that an educated investor and user of financial statements should be able to identify all the critically important matters by thoroughly reviewing the Management Discussion and Analysis ("MD&A") and the financial statements and related footnotes.

The auditor's report should only include emphasis paragraphs if there are matters that the auditor determines are of critical importance to the financial statements and there is the risk that a well informed investor and user will not reach the appropriate conclusion from their review of the financial statements. The auditor should highlight such matters and refer to management's disclosure regarding the matters as management is responsible for the financial statements and for maintaining effective internal control over financial reporting. Matters of critical importance not currently required by auditing standards may include critical accounting policies, areas of critical accounting estimates, changes to the financial statements that impact comparability to prior years, and significant transactions. It is important that the Board provides adequate guidelines to assist auditors in their determination of the matters that should be included in emphasis paragraphs, if any (e.g., material mergers or dispositions with materiality determined consistent with Form 8-K disclosure requirements).

We do not believe emphasis paragraphs should be required on an extensive basis. This would result in auditors developing lengthy checklists to determine which items should be included in emphasis paragraphs to ensure consistent application across all offices, and expect that the disclosures would become boilerplate over time. We are also concerned that auditors may include items that are not necessarily of critical importance, diminishing any potential benefit emphasis paragraphs may provide to the investor.

Further, if audit reports for companies in the same industry include different items in emphasis paragraphs, we are concerned that investors may misinterpret the inclusion or exclusion of a matter in a particular company's auditor's report and potentially draw erroneous conclusions.

We do not support the disclosure of the nature and/or extent of audit procedures in emphasis paragraphs for any matter, including matters of critical importance. The nature and extent of audit procedures appropriately vary significantly from company to company based on risk assessments and the control environment. Further, the complexity of audit procedures varies significantly from one area to the next. It would require extensive discussion to put the audit procedures for an item referred to in an emphasis paragraph in the proper context for an investor and user.

**Auditor Assurance on Other Information Outside the Financial Statements**

We do not believe it is appropriate for an auditor to provide assurance on any information outside the financial statements for the following reasons:

- The information contained outside the financial statements is of a more subjective nature, in particular with regards to the MD&A. Information presented in the financial statements is based on detailed and largely prescriptive GAAP rules, which dictate the accounting treatment and disclosure requirements. The auditors currently focus on auditing the accuracy of the information presented in the financial statements and the adequacy of disclosures in compliance with GAAP. However, the rules governing the MD&A disclosures are less prescriptive and encourage management to provide their views on the historical and future business performance "through the eyes of management." The MD&A information is intended to be more qualitative and forward-looking than those contained in the financial statements and requires significant judgment and understanding of the registrant's business. Much of the information provided represents management's analysis and insights based on their detailed current knowledge of their businesses. We believe it would be extremely difficult for the auditors to audit this information effectively to enable them to provide meaningful value to investors and users. We are also concerned that this may affect the independence of the auditors.

- We are concerned that the requirement to audit MD&A could lead to less transparent, boilerplate content. As noted above, the MD&A is intended to provide an analysis of performance (both past and forward-looking) through the eyes of management. By necessity, this involves the inclusion of items that may not be objectively verifiable. To the extent certain items are not auditable, we are concerned that there may be a tendency to exclude the related discussion rather than deal with the consequences of potential scope limitations in the auditor's report on the MD&A. This would reduce the overall value of the MD&A to shareholders.

- We expect that the cost to provide additional assurance would be high compared to the benefit investors and users may derive from such assurance. We are not aware of strong support from any relevant stakeholder groups for this alternative based on our interaction with such groups. It is likely that the auditors performing these types of engagements would generally be more experienced resulting in costs exceeding the existing average audit rates. The subjective nature of the information and lack of prescriptive guidelines would likely result in extensive additional discussions between senior management and auditors, as well as documentation supporting management's thought process and conclusions. The combination of higher rates and extensive hours would likely mean a significant increase in audit fees, which we believe would be completely disproportionate to any benefits received.

- The requirement to provide assurance on information outside of the financial statements would require significant additional time, and would almost certainly lead to a later release of Form 10-K filings, in most cases by at least several days. For some companies, SEC filing deadlines would become unachievable.

- To the extent that information in the MD&A is derived from financial statements or is subject to internal control over financial reporting, auditors are already performing procedures to ensure the information is materially consistent with the information presented in the audited financial statements and footnotes.

With respect to critical accounting policies and estimates, we do not believe separate assurance is appropriate for the reasons outlined above; however, as discussed earlier, we support an emphasis paragraph highlighting these. Further, we believe that clarification of the auditor's responsibilities with respect to MD&A in the standard auditor's report is desirable.

**Clarification of the Standard Auditor's Report**

We are in support of the Board's alternative to include clarifying language in the existing standard auditor's report and believe it will enhance investors' and users' understanding of the audit process.

We believe the clarifying language around the auditor's responsibility for information outside the financial statements should be limited to the items included in the annual report on Form 10-K as required by the SEC.

**Other Questions and Considerations**

In the attached appendix, we have included additional information on our views with respect to certain questions in the Release.

* * * * * * * *

We appreciate the Board's consideration of these matters and welcome the opportunity to discuss any and all related matters. If you have questions, please contact Lorraine Malonza at (973) 765-1047 or lmalonza@financialexecutives.org.

Sincerely,

Loretta V. Cangialosi
Chair, Committee on Corporate Reporting
Financial Executives International

cc: Martin F. Baumann, Chief Auditor and Director of Professional Standards

**Appendix**

**Form of the Auditor's Report**

**Question 3:**

Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.

Management is in the best position to provide additional information regarding the company's financial statements. Management is closest to the daily operations and has direct knowledge and control of assets, liabilities, equity and activities of the company and has the responsibility to prepare financial statements and disclosures in compliance with GAAP. Management is responsible for making the necessary judgments and estimates, and has a far better understanding than the auditor of the industry, business strategy and results of operations.

We are concerned that if the auditor was responsible for providing additional information, they could be seen as acting in the capacity of management, thus impairing their independence.

**B. Required and Expanded Use of Emphasis Paragraphs**

**Question 18:**

What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?

We are of the opinion that the required and expanded use of emphasis paragraphs in certain limited instances may be of some value to certain investors and users. However, we do not believe that the required emphasis "could potentially increase the quality of management's disclosures in the financial statements because of specific reference to such disclosures in the auditor's report." Management has the responsibility to provide high quality disclosures, and it is the auditor's responsibility to opine as to whether those disclosures are prepared in accordance with GAAP. Making reference to those disclosures in the auditor's report would only tend to highlight specific disclosures that are made in the financial statements, but we do not believe that this reference should change the content of those disclosures.

**D. Clarification of the Standard Auditor's Report**

**Question 22:**

What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?

We believe this alternative has some benefits without altering the scope of the audit or impacting the auditor's responsibilities. Further, the cost associated with this alternative would be minimal. It will enable investors and users to obtain a better understanding of the scope of the audit and the role of the auditor.

**Question 27:**

Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?

We believe the AD&A (alternative 1) and emphasis paragraph (alternative 2) may confuse the users of financial statements, who may possibly perceive the opinion to be qualified.

Alternative 1: We believe that it would be very difficult to develop an appropriate framework for an AD&A, and once developed, it would be very difficult for a framework to be consistently followed by auditors when disclosing information of such a highly subjective nature. Requiring auditors to present information of this nature could result in misleading reports, make it difficult to have comparability among financial statements, and cause confusion about the auditor's pass/fail opinion. An unqualified opinion means that all material matters have been resolved and that the auditors are in agreement with management that the financial statements do not contain any material misstatements. Highlighting additional information (e.g., close calls, contentious issues, etc.) would likely suggest a higher level of importance to the issue(s) than is warranted since users would not be privy to the dialogue that occurs between the auditor, management and the audit committee in which additional context and perspectives are communicated.

Alternative 2: Requiring auditors to emphasize certain areas could result in misleading reports, make it difficult to have comparability among financial statements, and cause confusion about the auditor's pass/fail opinion. For this reason, we believe it is vital that required emphasis paragraphs are limited to only include matters of critical importance.

We believe auditor assurance on other information outside the financial statements (alternative 3) could lead to the opinion being perceived as piecemeal, if this assurance is combined in one report with the audit pass/fail opinion.

We do not believe the clarification of the standard auditor's report (alternative 4) will result in the opinion being perceived as qualified or piecemeal. We believe it will enhance investors' and users' understanding of the audit process

**Question 28:**

Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?

We believe the clarification of the standard auditor's report alternative is the most appropriate way to improve the auditor's reporting model. Providing clarifying language for the items outlined in the Release would serve to enhance the auditor's report and help users better understand the responsibilities of the auditor and what an audit represents. Providing clarifying language for each of these items will be beneficial as discussed below.

- Reasonable assurance – This will reinforce the concept that an audit provides a "high level of assurance, but not absolute assurance."

- Auditor's responsibility for fraud – We believe that the auditor's responsibility for the detection of fraud should be addressed within the standard auditor's report. We are supportive of expanding the current language within the report to include "…Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether caused by error or fraud" as is consistent with the current auditing standard.
- Auditor's responsibility for financial statement disclosures – This will bring the standard auditor's report more in line with the actual responsibilities of auditors as set out in current auditing standards. This will provide assurance to users that the auditors have a responsibility to plan and perform their audit to obtain reasonable assurance that misstatements of items that are material to the financial statements are detected and that the financial statements cover both the basic statements and related footnotes.
- Management's responsibility for the financial statements – This language should reiterate that management has responsibility for preparing the financial statements and management has the responsibility for adopting sound accounting policies and for establishing and maintaining internal controls that will report transactions, events and conditions consistent with management's assertions embodied in the financial statements as a company's transactions, assets, liabilities and equity are within the direct knowledge and control of management. This will enhance the view that an auditor is an independent party responsible for evaluating the accuracy of management's presentations.
- Auditor's responsibility for information outside the financial statements – We believe that providing the users with an understanding of the auditor's current responsibilities under AU 550 would be beneficial and help users to better understand the procedures being performed on other information outside the financial statements. We believe the clarification should be limited to sections of the Form 10-K.
- Auditor independence –We believe this could provide users with a better understanding of the auditor's role and provide more confidence in their judgments and the audit process.

**Question 29:**

What effect would the various alternatives have on audit quality? What is the basis for your view?

We believe alternative 1 and 3 could have a serious negative effect on audit quality due to the additional time and resources these alternatives would require in today's accelerated filing timelines, which already includes an opinion on internal control over financial reporting. These alternatives would divert audit resources and the audit partner's attention away from required work needed to support a conclusion on the financial statements.

We also believe that requiring disclosure of audit procedures performed in connection with items discussed in the emphasis paragraphs could have a similar impact on audit quality for the reasons stated above.

**IV. Considerations Related to Changing the Auditor's Report**

**Question 31:**

This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.

a. Are any of these considerations more important than others? If so, which ones and why?

b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?

*a. Are any of these considerations more important than others? If so, which ones and why?*

All of these considerations are significant and could individually justify a conservative approach to the decisions to be made with respect to the alternatives before the Board. Some of the alternatives present significant consequences for the cost of the audit, particularly the AD&A and attestation to the MD&A. Some of the alternatives could raise very significant concerns about liability and confidentiality, especially the AD&A.

*b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?*

We believe that the AD&A and assurance on information outside the financial statements alternatives would likely result in significant audit cost increases. We also believe that these alternatives, especially the AD&A, would significantly increase legal exposure for auditors, companies, management and Boards of Directors. Further, we believe that these alternatives would result in significant unforeseen consequences and costs that would far outweigh the intended benefits.

**RESPONSE TO PCAOB RULEMAKING DOCKET MATTER No. 34**

**FINANCIAL REPORTING COUNCIL**
**SEPTEMBER 2011**

## 1. Introduction and main points

1.1 The Financial Reporting Council (FRC) welcomes the opportunity to respond to the PCAOB's Concept Release on potential changes to the auditor's reporting model. We are pleased to see the PCAOB consulting on this topic and we support the objectives that the PCAOB seeks to achieve through its proposals. Recent initiatives in the UK and Europe have also sought to address this and related issues. Whilst we believe that it is helpful where possible for there to be international consistency in substance if not always in form, alternative proposals to address similar issues will assist withan assessment of the relative effectiveness of different approaches.

1.2 The FRC is the United Kingdom's independent regulator responsible for promoting high quality corporate governance and reporting to foster investment. The FRC and its operating bodies have a number of responsibilities in relation to audit, including policy, standards, monitoring and investigations. These functions are carried out with the primary goal of improving audit quality.

1.3 Since the financial crisis the question has arisen as to whether the audit report is fit for purpose. Commentators have pointed to banks and other financial institutions which failed shortly after receiving clean audit reports. Whilst some of these comments are based on a misunderstanding of the purpose, scope and limitations of an audit, an attempt must be made to close the expectation gap if audit is to be considered fit for purpose.

1.4 In January 2011 the FRC published a discussion paper entitled Effective Company Stewardship – enhancing corporate reporting and audit. The aim of the paper was to consider how companies and auditors could better serve investors by providing more valuable and relevant information.

1.5 There are differences in UK and US approaches to corporate governance and reporting. For example, in respect of corporate governance matters the UK relies on a "comply or explain" approach rather than mandating disclosures. Nonetheless we believe that many of the principles in Effective Company Stewardship are applicable internationally.

1.6 In the event that different approaches are agreed in the UK, US and Europe consideration will need to be given to how best to deal with companies which are listed in more than one jurisdiction. We would suggest that, provided that the company's management provides the required information in the annual report, auditors are not obliged to duplicate it. This will ensure that companies with dual or multiple listings do not find themselves caught between different regulatory regimes.

1.7 Our submission concentrates on what we see to be the key issues and expands upon our preferred solutions.

**2. Narrative reporting**

2.1 The concept release identifies a number of issues with the audit report, including:

- The limitations of the pass/fail model.
- The prevalence of boilerplate language.
- Limited information about matters specific to the company.

2.2 The paper goes on to make a number of suggestions as to how the audit report could be improved and made more valuable to users.

2.3 The FRC agrees with the contention that the audit report does not always deliver the assurance that investors would like to see. However we believe that the audit report should not be seen in isolation from corporate reporting more generally. Some of the suggestions in the concept release, in particular the "AD&A" option, rely heavily on the auditor providing information some of which is in our view properly the responsibility of management. We appreciate that the PCAOB regulates auditors and not companies, and so an approach providing for the company to give further information may not be available to it.

2.4 It is a company's directors and executive management who have responsibility for running that company and reporting on its performance. Management should, in the first instance, decide what information should be communicated to investors and the wider public. The auditor has a vital role to play in validating and challenging management's views, and in assessing whether there are material inaccuracies or omissions.

2.5 The first step in improving the quality of information provided to investors and others should therefore be to make reporting by large companies more effective. Feedback received on our Effective Company Stewardship consultation indicates widespread dissatisfaction with current narrative reporting across all stakeholder groups. Investors in particular noted that annual reports have become longer and longer in recent years, without a corresponding increase in the relevance and value of the information disclosed.

2.6 The FRC is working with the UK Government to develop solutions to make improve narrative reporting. Likely solutions include:

- Introduction of a strategic report providing an overview of the business.
- Disclosure as part of that strategic report of an explanation of the links between company performance and the remuneration of directors and senior management.

- Greater transparency from directors about the activities of the company and disclosure of key operational risks.

**3. Role of the audit committee**

3.1 An enhanced role for the audit committee is at the heart of the FRC's proposals. In recent years the audit committee has grown in strength and influence, and we believe that audit committees are well placed to deliver effective governance and oversight of the audit process.

3.2 Much of the work done by audit committees remains invisible to investors, with the result that a key opportunity to build confidence in financial statements is missed.

3.3 We propose that audit committees should report to the full board on the approach that they have taken to the discharge of their responsibilities, describing in such terms as they consider appropriate, and having regard to the commercial interests of the company concerned:

- The key sensitivities or risks, including the choice of accounting policies, that they identified to the integrity of the annual report, including the financial statements, and how they arranged for those to be addressed.
- Any matters of material significance identified by the audit committee that are not addressed elsewhere in the annual report and which, in the directors' view, should be known to users if the annual report, taken as a whole, is to be fair and balanced.
- The steps they took and the judgements they made to assess the effectiveness of the audit.
- The policies that they adopted to avoid the independence of the company's auditors being compromised through the provision of non-audit services.
- The process by which they reached their recommendation to appoint or reappoint (as the case may be) the company's external auditors and the reasons for that recommendation.
- Any dialogue that they may have had with investors in relation to any material audit issues (not addressed elsewhere in their report).

3.4 The full audit committee report should be published in the annual report.

**4. Auditors and the audit report**

4.1 As noted above, it is the FRC's view that the primary responsibility for communicating key information on historical performance and future opportunities and risks lies with the company's directors and executive management. Substantive involvement by the auditor in direct reporting in this area runs the risk that the auditor takes on a management role.

4.2 For these reasons we do not believe that the auditor should be responsible for the provision of information on a company's business strategy or key risks. We do, however, believe there is scope for the auditor to add greater value in this area.

4.3 Firstly, we propose that auditors provide a fuller report to audit committees aimed at ensuring that the committee understands fully the factors that the auditors relied upon in exercising their professional judgement in the course of the audit and, in particular, in reaching their audit opinion. At a minimum, these are likely to include:

- The effectiveness of the company's system of control.
- The judgements made in the audit plan about what is material and the implications of those judgements for the level of assurance provided by the audit.
- The appropriateness of the accounting policies (viewed individually and in aggregate).
- Their overall conclusions on the valuations of the company's assets and liabilities provided by management (with particular reference to those that are significant to the financial statements).
- Any other matters identified in the audit plan or by the audit committee as material to the proper presentation of the company's financial position.

4.4 The audit report itself should then be expanded to provide:

- A new section on the completeness and reasonableness of the audit committee's report.
- Identification of any matters in the annual report that the auditors believe are incorrect or inconsistent with the information contained in the financial statements or obtained in the course of their audit.

4.5 Our proposals most closely resemble Option C in the concept release. The FRC will shortly launch a consultation on changing UK auditing standards to reflect our proposals.

**5. Conclusion**

5.1 In conclusion, we believe that the audit report cannot be treated in isolation and that attempts to improve the usefulness of the auditor reporting model must begin with improvements to corporate reporting more generally.

5.2 The primary responsibility for providing information to investors should rest with the company's management. The auditor should review that information and supplement or correct it as necessary; the auditor should not be obliged to duplicate management disclosures. Our preference therefore is that the PCAOB to proceed with Option C.

5.3 For further information please contact Paul George, Director of Auditing, on +44 20 7492 2340 (email: p.george@frc-pob.org.uk).

Re: PCAOB Rulemaking Docket Matter No. 34

Ladies and Gentlemen:

FirstEnergy Corp. is pleased to submit its views in response to the PCAOB's request for comments on the Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements.

FirstEnergy is a diversified energy company with approximately $48 billion of assets, $19 billion in annual revenues and an equity market capitalization currently exceeding $18 billion. Our ten electric distribution companies comprise the nation's largest investor-owned electric system. FirstEnergy's generating fleet features non-emitting nuclear, scrubbed base load coal, natural gas, and pumped-storage hydro and other renewables, and has a total generating capacity of approximately 23,000 megawatts.

We commend the PCAOB for reaching out to stakeholders through its Staff's outreach activities, the solicitation of comments and the recently concluded public roundtable addressing these issues. Chairman Doty's stated objective to "enhance the relevance of audits to the investing public" is important and we believe some of the ideas identified in the Concept Release may achieve that objective. Other alternatives included in the Concept Release could be very costly to execute and impede effective corporate governance. Our views on the major alternatives included in the Concept Release are summarized below.

<u>Auditor's Discussion and Analysis (AD&A)</u>

The proposed inclusion of an AD&A is the most troublesome of all of the alternatives put forth in the Concept Release. In addition to adding potentially significant costs to the financial reporting process, a requirement to include an AD&A accompanying the auditor's report would serve to dilute the corporate governance process.

The role of the auditor in the financial reporting process – attesting to the financial statements that have been prepared by management – would be drastically altered by requiring an AD&A. The Concept Release seeks a view of the audit and the financial statements "through the auditor's eyes". Providing commentary on management's estimates, judgment, accounting policies, "close calls" and other matters places the auditor in a very different position. PCAOB Board Member Hanson was correct when he stated that, "They [auditors] are not trained to evaluate and communicate the overall business and strategic risks of the companies they audit." It is clear that if an AD&A were required, more auditor education and training would be necessary, the cost of which would ultimately be borne by audit clients.

Audit committees represent the interests of shareholders appropriately through an effective corporate governance process and as such serve as the shareholders' representatives in their communications with the auditors and management. Much of what has been proposed to be communicated in the AD&A is communicated by auditors to audit committees on a regular basis. From that, audit committees are in the best position to determine if management's financial statements and related disclosures need to be supplemented, based on communications from the auditors, before completion and distribution to shareholders and other investors. Requiring an AD&A is counterproductive to effective and efficient corporate governance and could introduce a "chilling" element to the open and robust discussions that currently exist among auditors, audit committees and management.

Accompanying financial statements and related disclosures with an AD&A may be more confusing to investors and could call into question the credibility of the financial statements for which the auditors have attested. The current disclosure system, which also includes Management's Discussion and Analysis (MD&A) can be overwhelming to investors – adding an AD&A will exacerbate that issue and could be potentially misleading to all but the most sophisticated analysts.

From a practical standpoint, the addition of an AD&A would add significantly to the financial reporting timeline, which is already challenged with fairly accelerated Securities and Exchange Commission filing deadlines. Based on our experience with drafting any document that requires review from our auditors, the review process of an AD&A within the accounting firm will be intense – involving not only the local engagement team, but likely secondary field and national office reviews followed by legal reviews and final national office sign-off. That process would be very costly to companies and their shareholders.

Emphasis Paragraphs in Auditors' Reports

We believe that requiring emphasis paragraphs in auditors' reports could enhance investor understanding by providing guidance on where the most significant estimates, risks, judgments, etc. are located in the notes to the financial statements. It would be advisable to limit the additional information to no more than five of the most significant items considered by the auditor and should be limited to identification and location only, with no commentary on the items identified. Care should be taken to avoid expanding the auditor's report so much that its usefulness becomes diminished.

Auditor Assurance of Information Outside of the Financial Statements

The Concept Release requests views on whether the auditor's report should be expanded to include information outside of the financial statements (e.g., MD&A, earnings releases, non-GAAP financial information). We do not support extending the auditor's regular attest function beyond the financial statements. The auditors currently review this supplemental information to ensure that it is materially consistent with the financial statements – auditing this supplemental information is a very costly alternative that provides no incremental benefit to investors. Beyond the additional costs, practical considerations similar to those discussed above with the AD&A are applicable here. It is not inconceivable that management's timeline for communicating with the investment community could become hostage to the auditor's calendar.

Clarification of the Standard Auditor's Report

We believe that investors would benefit from changes to the standard auditor's report that would describe in "plain English" what an audit entails, clarification of management's responsibility for preparing the financial statements, the auditor's responsibility for providing assurance and the auditor's responsibility to detect fraud. We believe that the report should remain concise and be easy for investors to quickly assess the "pass/fail" nature of the auditor's opinion.

Summary

Investors' needs are paramount in the financial reporting process. We believe that some of the frustration that the PCAOB Staff may have heard in their outreach process is a function of the incredible amount of information currently disclosed in the notes to financial statements – investors may understandably have a difficult time discerning what is important. Our recommendation to require the emphasis paragraphs in the auditor's report to identify the more significant issues may help ease those frustrations.

Thank you for the opportunity to comment on the Concept Release and we look forward to participating further as the process unfolds.

Sincerely,

Re: PCAOB Release No. 2011-003
PCAOB Rulemaking Docket Matter No. 34

*Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*

Dear Board Members:

The Accounting Principles and Auditing Standards Committee of the Florida Institute of Certified Public Accountants (the "Committee") has reviewed and discussed the above Concept Release.

The Concept Release presents four proposed alternatives which are not mutually exclusive and the Board has requested responses to each separate alternative and general matters. Addressing these areas, the Committee has the following comments related to this release:

***Overview***

We agree with the Board's decision to undertake the initiative to consider improvements to the auditor's reporting model; however not to the extent of expanding the auditor's role in the auditing and reporting process. We believe that management should retain responsibility for their financial statements and disclosures, and that auditors should not become a source of disclosure within the reporting process. The auditor's role should remain that of an independent auditor attesting to the fairness, in all material respects, of the financial statements presented.

***Auditor's Discussion and Analysis***

While we do concur there is merit for the ability to discuss or highlight significant matters in a narrative form, we feel that other alternatives would better serve this intention and do not suggest that the Board consider an Auditor's Discussion and Analysis, (AD&A) as an alternative for providing additional information in the auditor's report for commenting on the audit, the company's financial statements or both.

The financial statements are the responsibility of management and as such the information included within those financial statements should be that of management. While the AD&A, as contemplated, is not intended to provide separate assurance on individual balances, disclosures, transactions, or any other matters discussed in the AD&A, it could create confusion to the readers of the financial statements and would increase the auditor's role related to the disclosure of non-financial information.

If required, the AD&A could eventually result in boilerplate language due in part to the potential for increased audit costs and increased auditor exposure to liability. The requirement to disclose matters such as difficult or contentious issues and close calls could impair relationships or limit open communications between the auditor, management and the Audit Committee.

***Required and Expanded Use of Emphasis Paragraphs***

This alternative would mandate the use of emphasis paragraphs in all audit reports and would further expand the emphasis paragraph to highlight the most significant matters in the financial statements and to identify where these matters are disclosed in the financial statements. The Concept Release suggests, among other items, disclosure of audit procedures performed on significant matters. Since audit procedures should be customized specifically to address these specific matters, discussion and disclosure of such procedures within the audit report could add confusion to the readers of the financial statements if they do not have an in-depth understanding of the specific entity and of the auditing process. They may not understand the reasoning supporting the judgments and procedures unless lengthy explanations are added which will then lead to readers bypassing the emphasis paragraphs.

Additionally, if the expanded emphasis paragraphs are required, the broad use of emphasis paragraphs may serve to lessen the impact and effect of emphasis paragraphs.

***Auditor Assurance on Other Information Outside the Financial Statements***

This alternative would require auditors to provide assurance on information outside the financial statements, such as MD&A, or other information (for example, non-GAAP information or earnings releases).

The proposed alternative would expand the auditor's responsibility beyond the scope of the financial statements. Providing assurance to forward looking statements, such as those contained within the MD&A or certain other non-GAAP information could be very difficult unless limited to historical and current financial related disclosures. Since this approach would result in increased time and costs and could possibly constitute a new engagement, the additional potential costs compared to the potential benefits derived does not appear to support this option as the best approach for improving the quality, completeness and reliability of the financial statements and auditor's report.

***Clarification of Language in the Standard Auditor's Report***

We feel this proposed approach would provide a more cost efficient and meaningful manner for enhancing the auditor's reporting model. The ability to clarify and explain the auditor's responsibility and role in the audit would serve to enhance the auditor's report and would increase the readers of the financial statements knowledge of the audit process. The suggested areas of clarification are matters that are already being communicated to the Audit Committee and management, and as such should not result in significant increases of time or cost.

We believe that all of the proposed clarifications within this approach are appropriate and we did not note any potential implications to the scope of the audit or the auditor's responsibilities resulting from such clarifications. To facilitate the ease of reading and understanding the expanded auditor's report, consideration of headings for each significant paragraph within the report is suggested.

***Considerations Related to Changing the Auditor's Report***

Concerned about potential challenges and unintended consequences that could result from additional auditor reporting, the Concept Release requested comments related to certain effects on: audit effort; auditor relationships; audit committee governance; liability considerations; and confidentiality.

We feel the considerations presented are overall equally important as the effect and impact could vary from company to company. We suggest that a cost/benefit analysis be considered related to any changes in the auditor's reporting model and changes should be implemented only if the cost benefit is justified for the majority of the affected entities.

With some of the proposed ideas within this concept, increased auditor liability considerations are a legitimate concern especially as it would relate to assurance on information outside the financial statements.

The proposed disclosures of sensitive matters in the auditor's report do appear to offer the potential for negative effects on the relationship between the auditor, management, and the Audit

Committee, which in response could erode the overall audit effectiveness by inhibiting open communication.

We commend the PCAOB Board for their efforts and we support enhancing the communications to investors and increasing transparency related to the auditor's reporting model. Overall, we believe that the proposal for Clarification of Language in the Standard Auditor's Report presents the most cost efficient method to achieve these goals, while minimizing the overall potential challenges and unintended consequences related to additional auditor reporting.

We appreciate the opportunity to respond.

RE: **PCAOB Rulemaking Docket Matter No. 34; PCAOB Release No. 2011-003; Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to the PCAOB Standards**

Ladies and Gentlemen:

FMR LLC, which is commonly known as Fidelity Investments ("Fidelity")[1], appreciates the opportunity to provide comments to the Public Company Accounting Oversight Board's ("PCAOB") with respect to its *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* ("Concept Release"). Our comments are intended to address the application of the four alternatives proposed for changes to the auditor's reporting model in the Concept Release on open-end investment companies (or "mutual funds") registered under the Investment Company Act of 1940 ("1940 Act") and clearing and introducing broker-dealers ("broker-dealers") registered with the U.S. Securities and Exchange Commission under the Securities Exchange Act of 1934 ("1934 Act").

Overall, Fidelity agrees with the PCAOB's objective of improving the auditor's reporting model to increase transparency into the audit process and the relevance of the auditors report to users of financial statements, while maintaining the quality of the financial statement audit. Fidelity believes that the PCAOB's approach to rulemaking in this area should be guided by the principle that the financial statements, including disclosures regarding significant estimates and judgments, are management's responsibility. Consistent with this principle, any changes to the audit opinion should (i) help clarify information about the audit and not create confusion about the opinion rendered by the auditor and (ii) balance the benefits of these changes, notably the value added to the users of the report, with the potential costs of these changes, such as the additional burdens placed

[1] Fidelity Investments is one of the world's largest providers of financial services, with assets under administration of $3.4 trillion, including managed assets of more than $1.5 trillion, as of August 31, 2011. Fidelity Investments is a diversified, privately held financial services company that includes Fidelity Management & Research Company ("FMR"), which serves as the investment advisor for the 411 registered investment companies in the Fidelity Group of Funds with aggregate net assets of over $1 trillion, as well as several FINRA registered broker-dealers, including Fidelity Brokerage Services LLC, an introducing broker-dealer with the nation's largest fund supermarket offering that provides services to over 12 million customer accounts with over $1.5 trillion in assets under administration, and National Financial Services LLC, a clearing broker-dealer that serves approximately 300 unaffiliated broker dealers. In addition, Fidelity is one of the largest retirement plan service providers, providing investment management, recordkeeping, brokerage, consulting, directed trustee and custodial services to over 18,000 defined contribution plans that cover more than 12 million participants.

on financial statement preparers that could increase the risk of meeting regulatory deadlines. Below, Fidelity comments on each of the four alternatives discussed in the Concept Release.

The first alternative presented in the Concept Release is the inclusion of a supplemental narrative by the auditor (described as an "Auditor's Discussion and Analysis" or "AD&A") as part of its report. Fidelity sees little benefit of the inclusion of an AD&A in the auditor report for mutual funds and broker-dealers in which the auditor would be required to provide additional information about the audit and the company's financial statements. The preparation of mutual fund financial statements requires few significant estimates and judgments. The key audit risks relate to the existence and valuation of the investment portfolio, which for most mutual funds is comprised of securities valued based on observable inputs. FASB Topic 820 *Fair Value Measurements* ("Topic 820") sets forth measurement and disclosure principles and requires management to provide extensive disclosure on its valuation policies. Recent updates to Topic 820 have expanded the disclosures about fair value measurements to include more information about transfers between Levels and the sensitivity of Level 3 securities.[2] Fidelity believes that inclusion of additional information from the auditors about the procedures performed to support the opinion rendered by the auditor would add little benefit in light of the recent updates to Topic 820 and may create investor and shareholder confusion about such opinion.

For broker-dealers, the objectives of the financial statement audit are discussed in Rule 17a-5 under the 1934 Act. Rule 17a-5 currently requires broker-dealers to file an annual report with the SEC that includes financial information and supporting schedules which are audited by an independent public accountant. An audit of a broker-dealer not only requires the auditor to express an opinion on the financial statements as a result of procedures performed in accordance with generally accepted auditing standards, but to report on the adequacy of internal controls in accordance with Rule 17a-5 and compliance with specific rules addressing financial responsibility and recordkeeping. Fidelity believes that the amendments recently proposed by the SEC[3] and the resulting PCAOB proposed guidance[4] concerning Rule 17a-5 provide the users of the broker-dealer financial statements with sufficient information such that the inclusion of an AD&A to the audit opinion would not be required. In addition, Fidelity believes that the enhancements to significant accounting policies through changes made to accounting guidance[5] and changes that are in the

---

[2] FASB ASC 820-10-50-2.

[3] *Proposed Amendments to Rule 17a-5 Under the Securities Exchange Act of 1934; Release No. 34-64676, 76 Fed. Reg. 37572; File No. S7-23-11 (the "Release")* that would become effective for annual reports filed with the SEC for fiscal years ending on or after December 15, 2011.

[4] PCAOB Rulemaking Docket Matter No. 035 - *Proposed Standards for attestation engagements related to broker and dealer compliance or exemption reports required by the U.S. Securities and Exchange Commission and related amendments to PCAOB standards* and PCAOB Rulemaking Docket Matter No. 036 – *Proposed Auditing Standard Related to Auditing Supplemental Information Accompanying Audited Financial Statements and Related Amendments to PCAOB Standards.*

[5] Recent enhancements to Topic 820 as noted above as well as enhancements to *Transfers and Servicing (Topic 860) Reconsideration of Effective Control for Repurchase Agreements* which improved the accounting for repurchase agreements that both entitle and obligate a transferor to repurchase or redeem financial assets before their maturity.

process of being addressed by the FASB[6] will increase the already transparent significant transactions reflected in the broker-dealer financial statements to the users of those statements.

The second alternative would require use of expanded emphasis paragraphs in all audit reports. Fidelity believes this additional disclosure could be beneficial to financial statement users by highlighting matters of significance to the auditor and where they are disclosed in the financial statements. This would increase the transparency of the audit. Fidelity recommends, however, that the PCAOB develop guidance on the auditor's use of emphasis paragraphs to ensure that there is consistency in application across industries and audit firms. As an example, certain audit risks are very specific to broker-dealers[7]; therefore, guidance should be provided for preparing the use of emphasis paragraph to ensure that it is consistently used by these entities.

The third alternative would require auditors to provide assurance on information outside the financial statements, such as management discussion and analysis ("MD&A") and earnings releases. SEC registered mutual funds are not required to present an MD&A (or earning releases), but instead provide a management discussion of fund performance ("MDFP"). The MDFP is limited to a discussion of factors that materially impacted fund performance, such as market conditions and investment strategies, and returns for the fund. Given the purpose of the MDFP for mutual funds, we see limited benefit of auditor assurance on this disclosure.

SEC registered broker-dealers are also not required to present an MD&A or earning releases. The only information provided outside the financial statements are the schedules currently required by Rule 17a-5, on which the SEC has recently proposed amendments.[8] We believe that the changes already proposed by the PCAOB in Docket Matter 36 would provide the users of the financial statements with sufficient assurance regarding the schedules.[9]

Fidelity believes that the fourth alternative, which would seek to include in the standard auditor's report clarifying language about what an audit represents and the related auditor responsibilities, could benefit users of mutual fund and broker-dealer financial statements by providing a better understanding of the terms used in the report and by illustrating the responsibilities of management and the auditor. In implementing this approach, Fidelity recommends that the PCAOB consider the addition of clarifying language in the audit opinion regarding the auditor's responsibility on evaluating internal controls for purposes of planning the audit procedures to be performed. For example, mutual fund financial statements represent the culmination of a large volume of investment and shareholder transactions that are executed for the period covered by the audit based

[6] Current FASB/IASB joint projects such as (but not limited to) Consolidation, Revenue Recognition, and Accounting for Financial Instruments.
[7] Risk primarily relates to obtaining and maintaining physical possession and control of all fully paid and excess margin securities, complying with Regulation T, and making the quarterly securities examinations, counts, verifications, and comparisons and recordation of differences required by Exchange Act Rule 17a-13 as well as significant accounting policies specific to the industry such as fair value measurements, derivatives, and repurchase agreements.
[8] *See, infra,* footnote 3.
[9] *See, infra,* footnote 4.

on GAAP. As part of the audit, the auditor evaluates internal controls relevant to the preparation and fair presentation of the financial statements, including the controls around the processing of these types of investment and shareholder transactions. We believe additional information on how the auditor evaluated controls around these transactions to plan procedures to be performed for the audit will provide more context for shareholders or investors in these types of entities.

* * * * * * * *

In closing, Fidelity appreciates the opportunity to respond to the Concept Release and welcomes the opportunity to meet with you to discuss any of the issues addressed in this letter. Fidelity also urges the PCAOB to perform a cost/benefit analysis of the alternatives considered before implementing any changes to the auditor report to help demonstrate why a particular alternative was chosen.

Very truly yours,

Attention: Office of the Secretary
1666 K Street, N.W.
Washington, D.C. 20006-2803

**RE: Rulemaking Docket Matter No. 34**
**Concept Release on Possible Revisions to PCAOB Standards**
**Related to Reports on Audited Financial Statements**

Members of the Board,

I appreciate the opportunity to submit my comments to the Board with respect to the proposed auditing standard on engagement quality review. I retired from public accounting in 2007 after 27 years at Deloitte & Touche LLP and am currently a full-time faculty member at the University of Notre Dame teaching undergraduate and graduate courses in accounting and auditing.

My comments are as follows:

*1. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.*

> *a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?*
>
> No; the Board would better spend its time setting standards for the conduct of the audit rather than on reporting. I believe users, particularly those managing large investment portfolios, are intelligent business people who have the ability to fully understand what auditors do without an expanded auditors' report. PCAOB Standards are a matter of public record and available to any who want to understand the meaning of specific terminology or what auditors do in evaluating managements' assertions in the financial statements. The level of detail that should be added to the auditors' report would likely expand it to four or five pages, and yet the expanded report would be less comprehensive than the Center for Audit Quality's recently published "In-Depth Guide to Public Company Auditing: The Financial Statement Audit" (CAQ Guide). Any user who does not have the time or inclination to read the PCAOB standards but who reads the CAQ Guide once will have the information necessary to understand the

auditors' report. Those who participated in your outreach process would have invested much less time reading the introductory chapters to an undergraduate auditing textbook than they invested preparing to meet with the Board were they truly interested in understanding what auditors do. I do not believe this issue is about users' inability to understand the auditors' report.

*b. In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?*

Investors and other users must be expected to do some homework. Understanding what auditors do in sufficient detail to read an auditors' report does not take as much effort as understanding the workings of the market place or the Black-Scholes model. The auditors' report should not contain a detailed explanation of the audit; it would further reduce users' incentives to understand what auditors do and what the report means. Furthermore, the premise of this question is that the information in the financial statements is not sufficiently relevant and/or useful. If the Board agrees, it should not use the auditors' report as a vehicle to supplement GAAP but should pursue improvements to GAAP to address any perceived shortcomings.

In the more than three decades since I became a CPA, business has become increasingly complex and, accordingly, the accounting and disclosure model has become more complex (e.g., fair value, derivatives, hedging, variable interest entities, securitizations, impairments, etc.). Those who read financial statements have to be expected to do some homework and not expect the notes to the financial statements to be self-study materials explaining all they need to know to understand them.

*c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?*

Annual reports on Forms 10-K contain financial information well beyond what is required to be directly included in the notes to the financial statements. For example, in Citigroup's 2010 Form 10-K, the financial statements comprise about 50 pages of the filing. MD&A comprises about 45; Risk Factors another 10; global risk management, loan information, and other financial instrument information another 55; information about significant accounting policies and management estimates another 9 pages. Much of that information is detailed information that expands on that required to be reported in the notes to the financial statements. As the Board is aware, auditors are associated with all of that information and as part of the audit perform procedures to satisfy themselves that this additional detail is not inconsistent with the audited financial statements. Further, as the Board is aware, the vast majority of that information is "comforted" by the auditors in connection with any registration statements issued by Citigroup. I'm sure most of the sophisticated users who participated in the Board's outreach are also aware of that.

Requiring the auditors to give some form of assurance on that information would probably not result in much more work on the part of the auditors than they already do on Citigroup's Form 10-K. However, requiring the auditors to give explicit assurance on that information would neither improve its quality nor would it make it any more relevant or useful than it already is. Through the pressure of its review process over the past decades, the SEC has lifted MD&A from surface commentary to meaningful discussion in most instances. Assurance by independent auditors would not improve its quality, but would certainly give plaintiffs one more area to cite the auditors in any legal complaint.

*2. The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."*

*a. Should the auditor's report retain the pass/fail model? If so, why?*

As the Board recognizes, the auditors' report for registrants is not "pass/fail"; either the financials "pass" or the auditors do not issue a report and the registrant does not file its financials. In the absence of support from a strong, independent audit committee, this situation does put added pressure on auditors in areas that are marginally material as the auditor must choose between an unqualified opinion and refusing to allow filing. Qualified opinions are acceptable on private company financial statements as owners and lenders are often indifferent to technical departures from GAAP if those departures do not impact their primary areas of interest. Such cannot be the case with public markets due to the broad range of users. Accordingly, discussion of any departures from a pass/fail reporting model for registrants is moot; the financials are both fair and acceptable for filing with the SEC or they are not.

*b. If not, why not, and what changes are needed?*

N/A

*c. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.*

Many users have expressed a belief that a third option between an unmodified opinion and one that is modified for a going concern uncertainty would be useful to investors. This third reporting option exists internationally. Such reporting option has been resisted in the past due to the belief that it would allow auditors to avoid the going concern paragraph when it is necessary. However, having that option would allow the auditor to avoid the all-or-nothing situation currently in place. It would likely reduce the number of reports with the going concern language we see now, but would likely increase the overall number of reports with some level of uncertainty language; many that have unmodified reports now might receive a middle ground report of this nature.

*3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.*

I preface this with the observation that the size of annual reports now makes it hard to believe that more information will be useful to investors and other users. I question whether they do read all the information they receive currently. I believe the information desired is not information that is being audited and disclosed but information that would impact their assessments of future cash flows, e.g., managements' plans, budgets, expectations and so on; the sort of "forward looking information" the SEC encourages but that management does not disclose for competitive reasons.

That being said, additional information about estimates, judgments, plans and expectations should come from those who generate them – management – and those who are directly responsible for their oversight – the audit committee. Auditors have much knowledge based on their access to management and company information, however, their knowledge is not as broad as management's; it is knowledge in the context of financial reporting and is tied to what has already happened, not what management hopes or believes will happen in the future. Thus, management and to some extent the audit committee, are the only ones with sufficient overall information to judge what is not included in the financial statements that should be or the relative importance among those disclosures that are included.

*4. Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?*

Prior to my retirement from public accounting in 2007, I observed first-hand the impact of the Board's inspection process on the conduct of audits. Based on that experience, I believe the Board has had a tremendous impact on the audit profession and on the overall quality of audits. I also believe the level of detail that is reported to audit committees by the auditors and management that is not reported publicly has been instrumental in improving the quality of systems of internal control. The "threat" that significant deficiencies that go un-remediated for an extended period of time could become material weaknesses forces some attention be paid to those deficiencies. Accordingly, the Board should consider working with the SEC to require that managements' reports included in Item 9A of Forms 10-K be expanded to include a discussion of any significant deficiencies that have been un-remediated for an extended period of time (e.g., three years) and managements' explanation for its decision not to undertake remediation efforts. However, the Board should resist the urge to amend AS No. 5 to simply require auditors to include such information in their reports. The improvements to internal control have come because management throughout the organization has taken ownership of the system. Expanding managements' reporting would keep that ownership with management.

*5. Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?*

*a. If you support an AD&A as an alternative, provide an explanation as to why.*

No I do not.

*b. Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?*

I do not support the concept of an AD&A.

*c. Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?*

N/A

*d. If you do not support an AD&A as an alternative, explain why.*

The objective of financial reporting is for the financial statements to provide information that is useful to investors and other users. If the GAAP financial reporting model does not do that, it should be changed so that it does. If additional information related or supportive of the financial statements needs to be reported that is not currently included in requirements under Regulation S-K, the SEC should be requested to consider changing those requirements. In either case, the auditors' report should not be the vehicle used to fix perceived shortcomings in GAAP or Regulation S-K.

That being said, over the years investors and other users have clamored for more and more information to the point that the amount of information provided appears to be overwhelming. Consequently, the call for AD&A or emphasis paragraphs in auditors' reports may be an attempt to have the auditors determine what information users should read and consequently what information they can ignore. Those determinations cannot be made by the auditors. Disclosures about complex financial investments may be important to some equity investors; disclosures about asset impairments may be important to a secured mortgage lender; alleged patent infringement litigation may be important to a purchaser of the subject components. If the auditors address the first two in their report, the user most interested in the third item may not read the financial statements, suffer a loss, and attempt to find fault with the auditors who did not address such matters in the AD&A.

*e. Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?*

None. The auditors' job should be to assess whether or not the financial statements are fair and presented in accordance with GAAP. Users may wish to know whether the company's financial management is performing well or not; they should ask the Audit Committee. If they believe additional information should be included, they should comment on FASB/IASB exposure drafts of new reporting standards and express that belief or request the SEC consider expanding Regulation S-K requirements. Investors already have incentives not to read the financial statements in their entirety; the Board should not take actions that might increase those incentives.

*6. What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?*

None. Any reports of this type will be boilerplate in nature just as the annual written reports to audit committees. Audit risk is only partly related to the registrant's business risk and not all of those business risks are related to the conduct of an audit. Whether inventory was observed at year end or the end of the third quarter will not change how a strategic investor assesses the registrant's future cash flows. Auditors' internal independence policies are far more restrictive than minimum professional requirements; auditors are either independent or they're not. The level of non-audit service is a small fraction of what it was a decade ago and PCAOB oversight of partner performance assessment (i.e., cross-selling pressures) has effectively put a stop that. As stated previously, an AD&A will only serve to cause users to further limit their reading of the financial statements.

*7. What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, including "close calls")?*

None. This sort of information is communicated to the audit committee and that body has responsibility for oversight of managements' financial reporting; users, auditors and others do not have, and should not attempt to exercise, that responsibility. If the message to the Board is that audit committees are not effective in that role, the Board should refer that to the SEC for action.

*8. Should a standard format be required for an AD&A? Why or why not?*

No, as discussed above.

*9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?*

As noted above, I do not agree with the inclusion of an AD&A. The matters discussed in this question are included in the Risk Factors section of the registrant's 10K and comprise many pages of information. My expectation is that the Risk Factors section is not read by users, though some may have word recognition software that searches for key risk terms. Adding that to the auditors' report is unnecessary and may be taken as a negative comment on the SEC's monitoring of the quality of registrant reporting in the risk section of filings. Furthermore, asking auditors to select the most significant of those Risk Factors for inclusion in their reports is tantamount to asking the auditors to advise investors and other users which of the many reported risk factors they should care about. Users will not all place equal weighting on identified risks as they likely have different needs and corresponding sensitivities to various risks. Auditors identify areas of risk for the purpose of designing an audit not for the purpose of advising users as to which risks might be important to them.

*10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?*

It can't be avoided. Our legal and regulatory systems will drive such reporting to a lowest common denominator.

*11. What are the potential benefits and shortcomings of implementing an AD&A?*

As discussed above. This concept undermines management's reporting in MD&A as well as the risk section of registrant filings. Comments as to the level of quality in those areas should be made to the SEC; attempting to cure perceived inadequate reporting under Regulation S-K by means of the auditors' report is both illogical and inappropriate. If users believe managements' reporting of under Regulation S-K is inadequate, they should report that to the SEC not the Board.

*12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?*

It will result in the transference of portions of MD&A and certain Risk Factors from the legal part of the filing to the auditors' report. The language in the auditors' reports will conform to the language in registrants' Risk Factors and/or MD&A. Our legal and regulatory environments will drive them to agree on common language and thus drive such reporting to a lowest common denominator.

*13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?*

They would neither be relevant nor useful. The descriptions of procedures would be necessarily brief. Users who want to understand how auditors assess managements' estimates and judgments should read PCAOB standards or the CAQ Guide. They should also read the notes to the financial statements, not rely on the auditors to tell them which notes to read, which notes they can consequently ignore, and which estimates are important. For example, the note describing Level 3 fair value estimates and changes therein is subject to significant uncertainty as is explained in the note and in the significant accounting policies section of MD&A. If the disclosures are inadequate, they should be expanded. If they're in accordance with GAAP there should be nothing else the auditor could add that would make that information more useful. Any comment by the auditors' on these fair value disclosures would likely result in investors reducing the extent to which they read this note and increasing the extent to which they ignore other notes to the financial statements that are not highlighted in the auditors' report.

*14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?*

No. As discussed above this will cause investors and other users to rely on the auditors' report as a source to limit the extent to which they read financial statements and notes. This would also facilitate the development of software that would read the auditors' report, extract the related notes to the financial statements, and effectively eliminate the user's incentive to read the financial statements in their entirety. This implicitly places the auditor in the position of having to guess which areas are important to which users. The auditors' determination of what matters to emphasize would likely differ from those areas that would be emphasized by users and likely different from those areas the Board's inspectors would emphasize subjecting the auditors to additional litigation exposure from the former and criticism from the latter.

*15. What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?*

None as discussed above.

*16. What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?*

None as discussed above.

*17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?*

Boilerplate language cannot be avoided. Language would develop in response to legal challenges and to challenges from the Board's inspection teams; it would seek to limit the inevitable exposure the auditors would face from users who did not read those notes to the financials that would have been relevant to them because such notes and disclosures were not highlighted by the auditors.

*18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?*

I see no benefits. The inevitable second guessing related to that which was not emphasized is a serious shortcoming.

*19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?*

No. As noted above, the volume of information outside the financial statements exceeds the amount of information inside the financial statements and that volume is such that I question whether users actually use all the information they receive. That being said, if certain information outside the financial statements is deemed to be useful and relevant, and should be the subject of auditor assurance, that suggests that GAAP is currently not adequate to address the needs of investors and other users.

The Board should therefore discuss with the SEC the relocation of such information from Regulation S-K to Regulation S-X. The SEC has the authority to determine what GAAP is for annual reporting by registrants and can therefore require that some or even all MD&A be included as a disclosure in the financial statements. If the Board and the SEC believe that the quality of managements' reporting could be improved by having auditors render a report on MD&A, then relocating MD&A to the first note to the financial statements and having it covered directly by the auditors' report is the best way to accomplish that. This would also help encourage users to read MD&A in conjunction with the financial statements and related notes.

> *a. If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.*
>
> See the comment above.
>
> *b. On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.*
>
> Providing meaningful assurance on non-GAAP information is problematic as there are often no standards that govern its form or composition; one need only read six different loan agreements to see six different definitions of EBITDA to understand that problem. MD&A is addressed above. The continuing evolution of sustainability reporting will likely result in some of this information being included in annual reports to shareholders and any meaningful assurance on such information by auditors is still dependant on real standards as to its nature and composition. In my experience, auditors do read earnings releases prior to their issuance however earnings releases are issued prior to the

completion of the audit. Accordingly, the auditor is not in a position to provide assurance to the public on an earnings release. However, the Board should consider explicitly including preparation and issuance of earnings releases as an activity subject to the system of internal control over financial reporting. Material errors or omissions in such releases would be reported by management in Item 9A and the auditors in their report as resulting from material weaknesses in internal control.

*c. What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?*

None. If information is relevant and useful, it should be included in the financial statements and related disclosures either as a requirement under GAAP as defined by the FASB or a requirement under Regulation S-X (or GAAP as defined by the SEC).

*d. If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?*

As noted above, any assurance on MD&A should be done only if MD&A is included in the financial statements and directly covered by the auditors' report as are the notes to the financials. Information on which auditors routinely provide "comfort" in letters to underwriters is most appropriate for consideration as such information is derived from the registrant's records and subject to the system of internal control over financial reporting.

*e. Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?*

I do not believe reporting on MD&A would change either the form or content of those disclosures. Since it is included in the 10-K and auditors are therefore "associated" with that information, they already test those disclosures for consistency with the financial statements and underlying records; for 10-Ks incorporated by reference into registration statements, they are "comforted" in letters to underwriters. I have no expectation that the quality of MD&A would improve as a result of its inclusion in the financial statements and direct coverage by the auditors' report. The SEC has spent decades working to increase the quality of MD&A and the SEC certainly has all the leverage it needs in this area.

*f. Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?*

Just as the Board did not look to Attestation Standards for reporting on internal control, it should not look to them in reporting on MD&A. As noted above, if the Board and the SEC conclude that auditor assurance on certain financial information outside the statements is really necessary, then such information should be included in the notes to the statements and covered by the auditors' report.

*g. If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.*

See comments above.

*20. What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?*

I see no real benefits. If financial information that is currently outside of the financial statements is deemed to be relevant and useful to investors and other users such that auditor assurance is necessary, then by implication

GAAP has not met its objective of providing relevant and useful information in the financial statements. If that is the case, then GAAP should be changed, the information should be included in the notes to the financial statements, and thus covered directly by the auditors' report. As stated previously, auditors are already associated with such information and perform procedures to assess whether any of it is inconsistent with information in the financial statements or obtained in the course of the audit. Providing assurance on it will not change its quality, relevance or usefulness.

The Board might consider the quality of quarterly reports on Forms 10-Q for comparison. The auditors generally issue no review reports on those statements, but users know that a filing cannot occur if the auditors object to any inclusions or exclusions from those documents. The same situation exists with respect to the information outside the financials but included in the Form 10-K. Just as including a review report in the 10-Q filing would not improve the quality of the quarterly report, including some form of assurance on the other information in a 10-K would not improve its quality.

That being said, it may be that auditors are more than willing to provide written assurance on information outside the financial statements as a means of expanding the scope of the services they sell to their audit clients. This would likely not significantly impact larger registrants who are regularly in the market and pay fees for comfort letters as a matter of course. However, smaller registrants would likely see increases in their audit fees to essentially capture the equivalent of comfort letter procedures.

*21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:*

• *Reasonable assurance*

• *Auditor's responsibility for fraud*

• *Auditor's responsibility for financial statement disclosures*

• *Management's responsibility for the preparation of the financial statements*

• *Auditor's responsibility for information outside the financial statements*

• *Auditor independence*

*a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?*

I do not. The auditors' report could not be expanded sufficiently to adequately explain these topics. All of these concepts and responsibilities are fully described in PCAOB standards, which are a matter of public record and available at no cost to users. For those who do not choose to invest the time to read those standards in their entirety, there is adequate information available in publications such as the CAQ Guide. The CAQ Guide contains 15 pages of text. Reading that guide one time would not require much effort on the part of investors or other users who are really interested in understanding what auditors' do. My personal belief is that users do not currently read the auditors' 3-paragraph report and none would therefore read a 5-page report.

*b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.*

No. For a user who reads the CAQ Guide or who actually reads the PCAOB standards all the auditors' report would need to say is "We've audited these financial statements in accordance with PCAOB standards and they are fairly presented in accordance with GAAP." All the rest is just boilerplate.

*c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?*

None.

*d. What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?*

None.  All of this discussion is about the content of the report, not what auditors actually do.

*22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?*

I only see shortcomings.  I believe those who take the time to understand what an audit is and what the auditors' report means do not need additional clarifying language in the report.  Those who have not taken the time will not read an expanded auditors' report, at least not more than once.  Therefore I do not believe the matter of auditors' reports is a substantive issue and I do not believe it has been worthy of the Board's time and effort. The longer the report, the less likely users are to invest any time in understanding what the underlying audit process entails.

*23. This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?*

Inclusion of some portion of MD&A in the financial statements appears to be the most appropriate.  The SEC has already determined that the information included in MD&A is both useful and relevant to investors and other users.  Therefore, that information should be included in the financial statements and covered directly by the auditors' report.

*24. Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?*

No.

*25. What alternatives not mentioned in this concept release should the Board consider?*

The Board should consider dropping this project in its entirety. To some extent I believe the Board is being used by those who have come forward on this topic.  Specifically, I believe some are trying to use the auditors' reporting process as a shortcut to reduce the amount of time they should spend reading financial statements and related disclosures.  As noted above, those who are intelligent enough to invest in public companies, especially those who manage large funds, are intelligent enough to read a summary document such as the CAQ Guide and understand what an auditors' report means.  Those individuals would not need an expanded auditors' report after spending an hour reading such a document.

I believe the Board's inspection program has had tremendous impact on the profession and has substantially improved the quality of audits.  The Board should spend its time and attention not only on the inspection program but on the education and training of auditors by means of implementing "best practices" identified by the Board's inspection teams.  The Board should consider using the SEC's model of "standard setting", i.e., directly influencing the private sector standard setters (e.g., IASB and IAASB) and "interpreting" standards set by them.  I note that the ASB and IAASB are in the midst of a reporting project.  The Board could leverage its resources greatly by using that process as a base on which to make any really meaningful changes to the auditors' report.

*26. Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?*

No further comments.

*27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?*

As noted above, I don't believe they will actually read an expanded report any more than they read the current report. However, also as noted above, I believe any addition of "emphasis" paragraphs or "risk discussion" paragraphs would be used as a means to shortcut their responsibilities to read the financial statements and related notes. So yes, we would end up with the equivalent of piecemeal opinions.

*28. Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?*

I suggest the Board tell investors and other users to read its standards or read a document such as the CAQ Guide. They would only have to do this once and it would take them less time than they spent telling the Board that they did not understand the auditors' role or the auditors' report.

*29. What effect would the various alternatives have on audit quality? What is the basis for your view?*

Reporting changes will not impact audit quality. Based on my personal experience prior to my retirement from public practice in 2007, the Board's inspection program has been the single biggest factor improving audit quality since I became a CPA over 30 years ago. The Board should spend its time and resources on that program.

*30. Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such exclusion.*

Any changes made should apply to all registrants regardless of size or industry.

*31. This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.*

*a. Are any of these considerations more important than others? If so, which ones and why?*

I agree with those who have commented to the Board already that some of the suggested changes would undermine the credibility of audit committees and would hamper relationships among auditors, audit committees and management. My comments here are meant to augment those observations by others. However, I would note that any changes that would cause users to take less responsibility for understanding the audit process and, more importantly, spend less time reading and understanding the financial statements in their entirety, will result in more instances of poor decisions by those users and increased litigation against auditors, directors and management consistent with our cultural tendency to seek others to blame for our own shortcomings.

*b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?*

Since I see no benefits, I see no advantages. However, I agree with the Board's observations that many of these proposals would increase time and expense due to increased consultation and quality control procedures not to mention the increase in litigation cost in the future. In addition, the Board should consider the increased time commitments for its own inspectors who will likely spend considerable time evaluating documentation of decisions related to any enhancements or, more likely, lack of enhancements to auditors' reports.

*c. Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?*

None beyond that previously noted.

*d. What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?*

N/A

*32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?*

I find it difficult to assess this. For some registrants, it could increase tensions among the three constituencies. However, for some others it could lead to a process whereby they seek to reach a common understanding of what to include and not include. That would likely result in reporting that strives for the lowest common denominator rather than the highest quality reporting possible. As stated previously, I believe that if financial information needs to be improved it should be improved, not circumvented by inclusion in the auditors' report. The financial statements are managements' responsibility and nothing should be done to undermine that. Oversight of management is the audit committee's responsibility and nothing should be done to undermine that. Most of the proposals in the Concept Release would undermine both.

I appreciate the opportunity to offer my comments.

Sincerely,

s/ James L. Fuehrmeyer, Jr.

Re: PCAOB Rulemaking Docket Matter No. 34

Dear Board:

Thank you for the opportunity to respond to the Public Company Accounting Oversight Board's Release No. 2011-003, "Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements."

We believe that the standard of quality financial statements and audits is essential for investor confidence. Therefore, it is critical that auditors need to be independent for their role in the integrity of the audit of a Company's financial statements. However, we do not believe that mandatory audit firm rotation would improve audit quality for the following reasons:

- The expanded role of the Company's audit committee under the Sarbanes-Oxley law is adequate to monitor and evaluate auditor independence. Our annual Proxy Statement includes an "Audit Review Committee Report" that includes our Committee's evaluation of the qualifications and independence of our independent registered public accounting firm and the performance of the independent registered public accounting firm. Our audit committee also has the sole authority and responsibility to select, determine the compensation of, evaluate, and when appropriate, replace the independent registered public accounting firm.
- Mandatory partner rotation requirements are adequate to maintain auditor independence. The rotation brings a new perspective to high risk and to high exposure accounting matters.
- The PCAOB inspection process to monitor audit quality and independence is adequate.
- Audit quality would most likely suffer in the first few years of an audit as the successor auditors begin to understand the business model and the applicable accounting.
- The cost of the audit would most likely increase significantly as more audit hours would be required to learn the accounting and processes at the new client. Likewise, the cost of client support would also increase to support the auditors. We do not believe that the benefit of mandatory auditor rotation would exceed the cost.
- Competition for non-audit services (e.g., tax, valuation, etc.) could be intense and become difficult to meet the independence criteria.

We are also not in support to the Auditor's Discussion and Analysis alternative presented in the Release or auditor assurance on other information outside of the financial statements. We believe that this requirement is not in the scope of an audit and may impair the auditor's independence. We believe that management should be responsible for the quality and transparency of Management's Discussion and Analysis of the Results of Operations and Financial Condition.

We appreciate the Board's consideration of our position on the proposed changes.

Sincerely,

Scott E. Kuechle

Re: PCAOB Rulemaking Docket Matter No. 34, *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*

Dear Board Members and Staff:

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB or Board) *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (Concept Release) and respectfully submit our observations and recommendations thereon.

We commend and support the Board on its standard-setting initiative to amend the auditor's reporting model to address the expressed needs of investors and other users of financial information (collectively referred to herein as "investors"). Throughout history and through recent profession research and outreach, we have noted that there are concerns as to the suitability of the current reporting model. We acknowledge and agree that revisiting the reporting model is warranted at this time due to the recent dramatic changes in the global economic environment, as well as the increasing complexity of financial and regulatory reporting, among other factors.

We generally support a combination of the potential reporting alternatives described in the Concept Release. However, we are concerned that focusing changes solely on the auditor's reporting model without considering potential issues or exploring opportunities for improvements in other aspects of the financial reporting model may result in marginal improvements in the usefulness of the auditor's report, as well as unintended consequences for investors and the financial markets. Our participation in profession outreach and firm discussions indicate that many of the areas for potentially increasing the quality of the financial reporting model go beyond the auditor's report. These areas generally include the current financial and regulatory reporting framework, the role and communication responsibilities of the audit committee, the transparency of management's disclosures within and outside of the financial statements, including Management's Discussion and Analysis (MD&A), and overall investor education and awareness. As discussed below, we believe that broader initiatives and outreach are needed to assess and inform recommendations in each of these areas.

The Concept Release describes the current auditor's report as a pass/fail model. Although this is true with respect to the fairly standardized language used by accounting firms, we would note that for a public company, only an unqualified opinion (pass) is accepted by the U.S. Securities and Exchange Commission (SEC or Commission). Unlike the views expressed by certain investors, we believe that, in consideration of this standardized language, the SEC's position provides ample leverage for the auditor to "effect appropriate change in the company's financial statements" (page 9 of the Concept Release) based on the applicable financial reporting framework. Certain of the Board's potential reporting alternatives attempt to address this investor view by requiring auditors to disclose their views regarding the sufficiency and appropriateness, among other matters, of certain of management's financial reporting decisions and disclosures. We believe that such commentary, on what also may be deemed confidential company information, could essentially provide information that management may not agree with nor find necessary to meet their reporting requirements. Other proposed alternatives contemplate an auditor's discussion about audit risks, related audit procedures and results, and auditor independence for investors to, in effect, assess the adequacy of the audit engagement and the accuracy of the related financial statements. While we believe that it may be possible to devise a standard that prescribes such reporting, we question whether this would truly address investor needs. In our view, the lack of transparency into the specific audit process details may not be a key investor concern and would be better relegated to the audit committee and the PCAOB to assess. We note that the implications of this aspect of auditor reporting also seem to imply a lack of trust or obfuscation inherent in management's reporting process and a possible need for assurance on other types of information communicated to investors. We believe that the latter would come at a greater cost and delay the timely reporting of financial information to the marketplace.

The value of the current auditor's report is that it provides an objective and independent opinion on financial statement compliance with an applicable financial reporting framework. The auditor is not in a position to serve as an analyst, which would blur the lines between the financial statement and the business and operational risks. Nor do we believe that an investor can accurately make allowances or adjustments for auditor subjectivity in assessing and making investment decisions based on their limited understanding of audit precision and processes. We do not believe that moving in this direction will address the issues with the current financial reporting model.

Stakeholders have continued to express concerns relating to the increasing complexity of financial reporting and the foundational aspects of auditing, including auditor objectivity and skepticism. Some form of enhanced reporting could improve the reliability of information used for investment decision making, while increasing investor trust and confidence. However, we note that challenges to the transparency and accuracy of financial information could arise from many factors, including the need for more timely information, deception or fraud, complexity of the underlying framework and significant changes thereto, and familiarity to name a few. The Board and the SEC may need to explore other opportunities to address such factors.

As expressed previously, we note that there are other standard-setter and regulator initiatives to assess the various auditor reporting models used today. In that context, we believe that it is imperative for the Board to work closely with other organizations, including the International Auditing and Assurance Standards Board (IAASB), to propose a global solution, including recommendations to other parties involved in the financial reporting process. Although the Board oversees the audits of public companies, as well as certain other organizations, to protect investor interests, we believe that those interests exist worldwide. Inconsistent approaches could bring about additional confusion among investors.

The following provides our specific views on the potential reporting alternatives and the Board's considerations related to changing the auditor's reporting model.

## Potential alternatives for changes to the auditor's report

Our views as to each of the potential reporting alternatives are expressed below. Overall, we support a short-term solution that includes a combination of certain elements of the alternatives proposed in the Concept Release: clarifying language in the standard auditor's report and the required use of emphasis of matter paragraphs. This specific combination should generally improve auditor communications to investors, while allowing more time for the Board to consider additional outreach along with other professional bodies. We encourage the Board to consider other alternatives, including the feasibility of an Auditor's Discussion and Analysis (AD&A), in a separate workstream that would also benefit from continued outreach and coordination with other regulators and standard-setters.

With respect to whether the changes being considered should apply equally to all audit reports filed with the SEC, we believe that the Board should proceed with caution, particularly for non-issuer affiliated entity audit reports filed as part of an issuer's filing or even employee benefit plans that file a Form 11-K. We suggest that the Board seek additional guidance on this matter upon issuing its proposed standards, as views may differ depending on the alternatives that are ultimately adopted.

### Auditor's Discussion and Analysis

We acknowledge that investors demand and need certain information for their investment decision making and that those needs should be addressed not only by the Board but also the SEC and the Financial Accounting Standards Board (FASB). The nature and extent of the information that is needed and by whom it should be provided is a vital consideration. We acknowledge the views expressed in various profession outreach and discussion forums that expanding the role of the auditor and leveraging the auditor's knowledge obtained throughout the audit process and other auditor related interactions could be valuable to investors. Thus, we support further evaluation by the Board and other standard-setters of the auditor's role and reporting responsibilities, including the use of an AD&A. Our comments below highlight some challenges both in mindset and current responsibilities that would need to be assessed and considered in further evaluating the feasibility of an AD&A within the context of the current financial and regulatory reporting framework.

Several Board members have indicated that an AD&A could be very costly in addition to other auditor requirements (refer to our comments below regarding the effects on audit effort). The Board also acknowledges that new auditing standards would need to be developed in collaboration with the SEC. We agree that this deserves much more attention and discussion so that information is appropriately provided to investors. In consideration of the potential costs and litigation risks involved, however, a more viable approach may be to strengthen the financial reporting requirements allowing management to provide the necessary information and the auditor to provide assurance on such information, such as enhanced MD&A. Generally, auditor involvement would drive better behavior. This is discussed further below

First and foremost, however, it is currently not the auditor's responsibility, nor does the auditor have the appropriate authority, to disclose information related to the company or its financial statements without specific consent (refer to our specific comments on confidentiality below). We believe that management has and would have the primary and sole responsibility to disclose such information, including the matters concerning management's judgments and estimates and accounting policies and practices described on pages 16 and 17 of the Concept Release, to users of the company's financial statements. Management's disclosures are also considered and approved by the audit committee. If investors believe that management's disclosures related to these or other matters are currently inadequate or obfuscated, it would be the FASB's and the SEC's responsibility to appropriately modify the accounting and regulatory presentation and disclosure requirements to meet investor needs. Disclosures made directly by the auditor to *fill the gap* could be seen by investors as likely more important or reliable than management's required disclosures. Such a change in focus would diminish the value of management's disclosures – those made by the people in the best position to enlighten investors – and elevate inappropriately the value of the auditor's disclosures, which are based on inherently inferior information.

Also, as previously noted, an auditor does not serve as, and is not trained to be, an analyst. Because an auditor reports on historical financial information, the Board cannot reasonably expect that an AD&A would enable investors "… to assess how changes in the economy might affect a company's future financial performance or condition" (page 8 of the Concept Release). This is clearly beyond the scope of an audit and could potentially conflict with the requirements therewith. We have the same view as it relates to any required discussion regarding business, strategic, or operational risks; however, we acknowledge that further exploration for auditor attestation in such areas, pursuant to an appropriate framework for management to operate in, would be worthwhile. In addition, performing an analyst-type role would require extensive training and significant costs for audit firms. We are concerned that an AD&A might be viewed as an alternative for the investor to perform a thoughtful review of MD&A. One of the objectives of MD&A is to provide information about the quality and potential variability of the company's earnings and cash flows so that investors can ascertain the likelihood that past performance is indicative of future performance (see Commission Statement About Management's Discussion and Analysis of Financial Condition and Results of Operations, Release No. 33-8056 issued Jan. 22, 2002). We believe that auditor assurance on some aspects of MD&A would provide greater value to investors by enhancing the quality and reliability of the information presented, as further described in our comments below.

Further, as proposed, certain potential AD&A content, particularly content related to difficult or contentious issues and "close calls," seems to undermine the convictions inherent in the auditor's opinion on the financial statements from two different but related perspectives. The first relates to the discussion about matters that are deemed acceptable within the applicable financial reporting framework or were appropriately corrected to comply with that framework but required significant deliberation or audit effort. We believe that such discussion can convey an inappropriate message that the auditor may not be objective by actually being a part of the company's system of internal control as it relates to the matters corrected. Additionally, matters that require significant deliberation or audit effort ordinarily would be those with significant risks that easily could be highlighted through the use of an emphasis of matter paragraph, as discussed in our subsequent comments. The second relates to the discussion about matters that are in technical compliance but "could be enhanced to provide the investor with an improved understanding," matters where the auditor believes that management "could have applied different accounting or disclosures," and *significant* matters that are "not necessarily material to the financial statements, and management does not adequately address the matter" (pages 9, 13, and 18 of the Concept Release). In this regard, another area that would need to be explored and assessed by the Board would be the education of and communication with the users of such information. It is possible that, if not properly understood or explained, such disclosures could raise doubts or uncertainties as to the appropriateness of the auditor's unqualified opinion by indirectly promoting the use of an AD&A as a substitute for a modified opinion for a departure from the framework, including a lack of fair presentation by omitting or providing incomplete disclosures.

In regards to changes in accounting principles and the application of different accounting principles or disclosures, we believe that the SEC's filing requirements related to preferability letters effectively eliminate the need for additional discussion in an AD&A. In either of the two aforementioned scenarios, we believe that the auditor's perspectives should not differ from those of management, as implied on page14 of the Concept Release, for to do so could result in challenges to the validity of the auditor's opinion. We do, however, acknowledge that additional discussion or disclosure by management may be beneficial related to areas where estimates or fair value determinations are necessary. Recent FASB issuances and SEC comments to issuers have focused on expanding such disclosures to highlight key assumptions, methods, and the like. But, such expanded disclosures may be difficult for an investor to factor into their assessment. In our experience, we have noted, for example, that the application of *FASB Accounting Standards Codification®* (ASC) 820 "Fair Value Measurements and Disclosures" allows for application of differing valuation methods. While the standard suggests certain implementation criteria, preparers and valuation experts may differ in selecting the most appropriate method or when multiple methods provide a better answer. We believe more clarity around such disclosures, and auditor involvement, particularly in MD&A, may be beneficial to investors.

We believe that the Board also should consider the following additional matters in the context of evaluating the operability and appropriateness of an AD&A:

- A standard report format would be necessary, along with clear and concise criteria related to its content. It is apparent to us that there are differing views as to what is expected in an AD&A and what an AD&A may encompass. We generally believe that introducing subjective assessments can undermine the overall quality of the auditor's opinion on the financial statements. In addition, such assessments would often relate specifically to the issuer without providing the investor with the benefit of a total view of the marketplace. For example, commenting on an issuer's specific estimate with regard to a warranty reserve would be limited to the auditor's knowledge of that particular issuer's methods and assumptions; so, in that context, the auditor commentary would be limited to that assessment. It would be difficult for an investor to put such an assessment into context or compare it across like companies in the same industry.

- Discussions in an AD&A regarding independence could be misused from an investment perspective causing undue harm to the company (refer to our comments below regarding auditor independence). We believe that the audit committee is appropriately charged with the appointment and oversight of the auditor and that the assessment of the auditor's relationships and independence is best left to the audit committee. If proxy materials need to be enhanced to include discussions regarding auditor independence for purposes of making voting decisions, we believe that the SEC should be charged with considering whether amendments to their disclosure rules are necessary.

- With regard to matters related to internal control over financial reporting, we believe that the internal control disclosures, including those related to material weaknesses, that are currently required are sufficient. We do not fully understand what is intended by a discussion about *significant deliberations* in this area and whether such discussion would include the communication of significant deficiencies or other significant internal control processes that may be effective. By no means do we believe that the Board should require auditor discussions in this area beyond the requirements of Section 404 of the Sarbanes-Oxley Act of 2002 and the related SEC rules and regulations. However, we do recognize that adopting certain reporting alternatives may require conforming amendments to an audit report on the effectiveness of internal control over financial reporting. For example, if the financial statement audit report was amended to describe the auditor's responsibility for other information, similar modifications may be needed in the internal control audit report. At this time, we do not envision any other needed amendments to that report.

For additional considerations, we refer the Board to our comments on the use of emphasis of matter paragraphs with respect to auditor discussions regarding significant risks and audit procedures. For an AD&A, we believe that the Board would need to develop suitable criteria that will strike an appropriate balance between providing relevant information to investors and describing the significant risks and related audit procedures and results. In addition, we believe that investors will be challenged to make adequate judgments about the sufficiency and appropriateness of the audit, including its precision, from one report to another, without having a full understanding of each individual audit engagement. Lengthy audit reports that provide significant details would seem to defeat the purpose of focusing investor attention on significant matters in the financial statements and also increasing investor confidence as to the reliability of information outside the financial statements. Language that summarizes the procedures would be too general in nature to be useful.

As an aside, we do not understand the language used in the Concept Release as to whether the Board foresees the need for a discussion of immaterial matters, which we think would make an AD&A ineffective. For example, we do not believe that a matter can be both significant but not necessarily material. This type of language challenges the notion of fair presentation and the fact that matters can be qualitatively material.

Overall, we recognize that there are many challenges to an AD&A approach for the Board to consider and overcome. Accordingly, we believe that the potential use of an AD&A would benefit from further dialogue and outreach, as part of a longer term project.

### Required and expanded use of emphasis paragraphs

We believe that defining situations requiring the use of emphasis of matter paragraphs in all audit reports may result in improvements to auditor reporting and investor analysis. Although we continue to believe that investors must read the financial statements as a whole, we also believe that emphasis of matter paragraphs may assist investors in analyzing those financial statements by directing them, or providing a *roadmap*, to the more significant matters. The usefulness of such paragraphs, however, will depend on the matters to be emphasized and the detail provided by management in the underlying financial statements. However, as with an AD&A, there is a potential increase in the risk of litigation against audit firms (see our comments below on liability considerations).

The Concept Release notes on page 21 that the auditor could emphasize "…those matters that are important in understanding the financial statement presentation, including significant management judgments and estimates and areas with significant measurement uncertainty." We believe that this *criteria* may be too broad and could result in drawn out audit reports that do not necessarily focus investors on significant matters, particularly as certain significant matters are quite common across various industries. We believe that the matters to be emphasized should not include all significant management judgments and estimates or all matters with complex or subjective measurements. To do so, could overshadow the importance of other matters, such as those listed above. Thus, it will be necessary for the Board to develop suitable criteria to assist auditors in determining the matters to be emphasized.

Matters that we believe may be most useful to investors are those that, based on auditor judgment, are not only significant but are unusual or non-recurring. Significant matters to be emphasized also could be similar to, but not the same as, those deemed by the auditor as significant risks. These matters could include:

- recent significant economic or other developments
- complex transactions or significant transactions with related parties

- measurements involving a wide range of measurement uncertainty, such as litigation
- transactions outside of the normal course of business or outside of industry norm.

Additionally, since we believe that the primary purpose of an emphasis of matter paragraph is to direct investors to significant matters, such paragraphs should simply identify the matter being emphasized and refer to the note to the financial statements that describes the matter. The auditor's emphasis of matter paragraph should not attempt to recreate or summarize the company's disclosure because investors should read the entire disclosure in context. In this regard, the auditor's required use of emphasis of matter paragraphs could generally improve management's disclosures.

Further, we believe that an emphasis of matter paragraph should not include a description of the audit procedures performed on the particular matter for several reasons. Audit procedures can vary significantly and are particularly dependent on the nature and depth of management's processes and supporting documentation. Consequently, investors, particularly those that are unfamiliar with audit standards and related guidance, may be unable to properly use such information in a logical or consistent manner. Inappropriate conclusions also can be reached as to the assurance expressed by the auditor (that is, a piecemeal opinion on the matter, rather than on the financial statements as a whole) and the appropriateness and sufficiency of the procedures between companies and audits. We do not believe that investors are seeking long form reports that include drawn out descriptions of audit procedures and results. Accordingly, the auditor's description may be at a higher level resulting in fairly boilerplate language that may not be deemed useful. In some respects, audit procedures also should remain confidential and unpredictable.

### Auditor assurance on other information outside the financial statements

In addition to modifying the standard auditor's report for the purpose of enhancing investment making decisions, we support a separate Board initiative, jointly with the SEC, to consider auditor assurance on information outside the financial statements and whether there is investor and market demand for such assurance. We genuinely believe that auditor assurance could enhance the quality and reliability of such information, in particular MD&A, which is used and relied on by investors today. In addition, unlike the AD&A reporting alternative, auditor assurance on information outside the financial statements maintains the appropriate lines of accountability between the auditor and management.

We believe that auditor assurance on information outside the financial statements generally would start with exploring additional involvement in certain areas of the issuer's MD&A. Auditor assurance would be difficult for information containing forecasts, projections, and subjective assertions due to its measurability and subjectivity, without the development of an appropriate framework and criteria. Thus, much of the information in earnings releases may not be conducive to auditor assurance. If the auditor were to report on only a portion(s) of MD&A, we believe that the information not covered by the auditor's report would need to be clearly differentiated and that the quality and reliability of that information could vary.

AT sec. 701, *Management's Discussion and Analysis*, provides a starting point for guidance for an assurance engagement related to MD&A. However, because AT sec. 701 has not been updated since 2001 and is rarely used, modifications may be necessary based on changes in the MD&A requirements. The framework and criteria for AT sec. 701 is based on SEC presentation and disclosure requirements. If the auditor were to report on other types of information outside the financial statements, suitable criteria against which the auditor would evaluate the information may need to be developed depending on the information presented.

To develop the standards and potential regulations necessary to facilitate auditor assurance on information outside the financial statements, we believe that additional outreach will be critical. Issues to be addressed might include the following:

- the sufficiency of the information presented. Changes in regulations may be necessary to modify or expand the disclosures to meet investor needs.
- the performance of an examination or a review engagement. The nature of a review may not necessarily boost investor confidence as to the information presented or it may be misunderstood as to the level of assurance provided.
- the form of opinion. An opinion on MD&A differs from an opinion as to *fair presentation* on audited financial statements. Investors may need to be well-informed on this matter.
- the nature, timing, and extent of related Board inspections. If AT sec. 701 were to be used in the short term, inspections could inform decisions about whether changes are necessary.
- the costs involved and whether the benefits outweigh those costs. Refer to our comments below regarding the effects on audit effort, including the potential impact on the ability for auditors to complete such work within the current issuer filing deadlines.

### Clarification of the standard auditor's report

Overall, we believe that adding certain clarifying language in the standard auditor's report is both appropriate and in the public interest. Considering the fact that there is a wide range of investors with various levels of knowledge, we support the general investor view that such language could enhance an investor's understanding of an audit and of the auditor's and management's responsibilities. We do not believe that any of the potential clarifications would affect either the scope of the audit or the auditor's responsibilities. Our specific views as to each of the potential clarifications follow.

- *Reasonable assurance* – Because the concept of reasonable assurance may not be fully understood by all investors, we understand the impetus to provide additional clarification around this term. However, we believe that simply adding a statement indicating that reasonable assurance is a *high level of assurance, but not absolute assurance* would not fully address the concern, particularly for less sophisticated investors. The Concept Release notes on page C-18: "Because of the nature of audit evidence and the characteristics of fraud, the auditor is able to obtain reasonable, but not absolute, assurance that material misstatements are detected. Therefore, an audit may not detect a material misstatement." We believe that combining the concept that reasonable assurance, although a high level of assurance, is not absolute assurance with the notion that a material misstatement, due to error or fraud, may remain undetected would provide much better clarity to an investor. We understand, however, that such language may be erroneously viewed as self-serving. As such, addressing the auditor's risk assessments, as described below, may be a more appropriate change.

- *Auditor's responsibility for fraud* – We support clarifying the standard auditor's report to indicate that the auditor is required to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free from material misstatement, due to error or fraud. Management, however, has the same responsibility as it relates to preparation and fair presentation. Accordingly, we believe that the description of management's responsibility also should refer to both error and fraud. In addition, because the risks of material misstatement due to fraud differ from those due to error, a discussion in the auditor's report indicating that the audit procedures are based on the auditor's assessment of risks might be helpful. This discussion could be similar to that included in an auditor's report issued in accordance with International Standards on Auditing (ISA).

- *Auditor's responsibility for financial statement disclosures* – We also support referring to the related notes to the financial statements within the introductory paragraph of the standard auditor's report. Such reference will more clearly identify the financial statements subject to audit and covered by the auditor's opinion and will give more prominence to the auditor's responsibility for disclosures.

- *Management's responsibility for the preparation of the financial statements* – To more fully describe what is currently meant by the phrase *these financial statements are the responsibility of the company's management*, we agree with clarifying management's responsibility by stating that management is responsible for the preparation and fair presentation of the financial statements in accordance with generally accepted accounting principles (or other applicable financial reporting framework). Management, however, also is responsible for establishing and maintaining effective internal control over financial reporting. As such, we believe that management's responsibility for such internal control should be included within that description. To visibly separate management's responsibility from that of the auditors, we believe that the description of management's responsibility should be included in a separate paragraph following the introductory paragraph of the standard auditor's report.

- *Auditor's responsibility for information outside the financial statements* – We understand how some unsophisticated investors may misinterpret the auditor's responsibility regarding other information presented outside the financial statements. Although clarifying such responsibility within the standard auditor's report could benefit those investors, we believe that there are certain drawbacks to be considered by the Board. Today's electronic environment can pose various challenges, particularly in describing the auditor's responsibility to read the other information and to consider whether the information is materially inconsistent with the financial statements. Although such description may be appropriate in a specific document or filing, it can be misconstrued when the same financial statements and related auditor's report are included on a website or otherwise distributed with additional information that was not subjected to these procedures. Also, depending on the form and content of the description, there may be other unanticipated consequences when the financial statements are included or incorporated by reference in a subsequent filing under the Securities Act of 1933, particularly for predecessor auditors.

Further, by indicating that the auditor has a responsibility to read the other information and to consider material inconsistencies, a user of the auditor's report may gain more comfort than what is intended by these procedures. Accordingly, what we believe needs to be clear to a user is that the auditor does not corroborate other information contained outside the financial statements and related notes and schedules and that the auditor does not express an opinion on such information. This form of description would be appropriate regardless of where the financial statements and related auditor's report are filed, included, or otherwise distributed. We view such a description as an additional communication that would be included in a separate paragraph following the opinion paragraph. That said, we encourage the Board to work with the IAASB with regard to the auditor's responsibility for other information to ensure a practical and operational approach.

- *Auditor independence* – We concur with the outreach participants views that the title of the standard auditor's report conveys compliance with the relevant independence rules and that additional discussion about independence could be redundant. Accordingly, we believe that an explicit statement regarding independence, in addition to the report title, does not seem warranted. If the Board were to consider requiring such a statement, it is important for the Board to consider the nature and extent of that statement and how it may be perceived by investors. Differing independence rules may apply, including their application to affiliated entities, depending on the circumstances. Because the rules are quite complex, investors may not fully understand these differences and may wrongly perceive a greater or lower level of assurance from one report to another. In which case, a general statement regarding compliance with the *applicable* rules may be more appropriate.

We believe that other potential clarifications or improvements to the standard auditor's report could include the use of headings, similar to the ISAs. Not only will such report format converge internationally promoting investor's understanding worldwide, it would also facilitate the potential additional reporting alternatives described in the Concept Release by differentiating the auditor's additional communications. As you may have noted, our views on report clarifications are based on achieving consistency between standard report language worldwide.

## Considerations related to changing the auditor's report

As the Concept Release describes, there could be practical challenges as well as unintended consequences related to certain potential reporting alternatives. Our views on these matters are discussed in more detail below.

### Effects on audit effort

As previously indicated, we generally believe that adding certain clarifying language in the standard auditor's report would not affect either the scope of the audit or the auditor's responsibilities. Other than the timing and costs involved in updating firm materials, this reporting alternative would have the least effect on audit effort. On the other hand, auditor assurance on other information would greatly affect audit effort and substantially increase audit costs because this would constitute a separate engagement that is rarely being performed today due, historically, to market demand and cost. For this type of engagement, in addition to considering the benefits to investors and the costs to companies and their auditors, consideration would need to be given to the ability to meet filing deadlines, which were accelerated to provide more timely information to investors.

We believe that the AD&A and the required and expanded use of emphasis paragraphs, particularly if such paragraphs describe the audit procedures performed, also would affect audit effort and costs, even though these reporting alternatives are not intended to affect audit scope or audit procedures. Obviously, the AD&A would have a greater affect, as we agree with the issues described in the Concept Release related to the need for increased quality control procedures over non-standardized reports, as well as the potential for significant discussions and debates with management and the audit committee. We also believe that an AD&A would require extensive training and quality monitoring by audit firms.

Effects on the auditor's relationships

We think it is important for the Board to consider the potential effects that requiring an AD&A might have on auditor relationships with management and the audit committee and whether such effects could result in possible audit quality challenges. We believe that the effectiveness of the audit could be affected primarily by the nature of the information that would be expected to be disclosed and commented on in the AD&A. Because the audit committee represents the interests of investors, we believe that there needs to be a further assessment of the audit committee's role in this proposed approach. It is critical that the responsibility of the audit committee be defined with respect to overseeing the auditor in their process of developing an AD&A, in particular, and also in the other areas of expanded auditor disclosure and potential involvement.

On page 32, the Concept Release indicates that management and the audit committee "…might be compelled to change the financial statements, in order to eliminate differences between the company's disclosures and the auditor's discussion in the audit report." Consistent with our previous concerns, it appears that the Board is concerned that without requiring an AD&A, a company's disclosures may be deemed deficient. We note that the auditor must evaluate the appropriateness of the company's disclosures against the requirements of the applicable financial reporting framework. As we previously expressed, an AD&A should not be used to disclose information that management should have otherwise disclosed in the financial statements in order to preclude a modified opinion.

Effects on audit committee governance

The audit committee plays an important role by challenging the company's activities in the financial arena and overseeing the auditor. We do not necessarily believe that information provided by the auditor would undermine the governance role of the audit committee. We do, however, believe that management and the audit committee have the primary responsibilities to communicate company matters to investors. Expanding that responsibility to allow the auditor to make assertions about the company would be a significant shift, and the impact of that shift would need to be considered and vetted against the current role of the audit committee, including the need to be cautious so as not to inappropriately suggest that governance disclosures may exist. We believe that the PCAOB could join efforts with other regulators and industry groups, including for example the SEC and National Association of Corporate Directors, to enhance the current reporting model for audit committees. Such reporting model, for example, could include the audit committee's views on significant matters, not necessarily the auditor's procedures on those matters.

Liability considerations

As recognized by the Board, changes in the role of the auditor and related reporting could have significant repercussions to auditor liability. Whether such information is furnished or filed or whether the auditor disclosures or involvement in other information could be accompanied by legal disclaimers are key questions that need answering. What might be perceived to be minor modifications might result in more time in the courtroom. With regard to an AD&A, we believe that it is highly likely that investors would place more weight on the auditor's perspectives about the company's financial statements, which could, in the glare of hindsight, result in allegations of harm by investors against the audit firm claiming inadequate, incomplete, or inaccurate auditor discussions. Furnishing, rather than filing, such information may be a factor with respect to the litigation exposure of these allegations and the auditor's liability related thereto.

Potential litigation also may result from the use of emphasis of matter paragraphs, particularly since such paragraphs are included within the auditor's report and would be deemed filed, rather than furnished. Regardless of whether suitable criteria are developed for the inclusion of such paragraphs in the standard auditor's report, we believe that there will always be some element of auditor judgment as to the significance of the particular matter. The auditor's judgment may be questioned by those who view a particular matter to be significant but not emphasized. Over time, any type of litigation increases audit costs.

Confidentiality

We are concerned that some aspects of the proposed AD&A could cause the auditor to violate professional ethical requirements relating to confidential client information by requiring the auditor to disclose information that has not been previously disclosed by the company. This could also be viewed as a breach of trust and confidence. Further, it could potentially jeopardize the auditor's independence and objectivity by performing this management function and by communicating matters that may be perceived as the auditor being a company advocate. While this discussion highlights what may be somewhat extreme implications of the disclosures, we think these are important considerations, which any proposed rulemaking would need to address.

In summary, we strongly support the Board's efforts to assess possible revisions to the auditor's reporting model to enhance the relevance and usefulness of the current financial reporting model. We also support moving with measured caution in that regard due to the potentially significant change in the role and expectations of the auditor that certain of the proposed amendments would entail. We have noted certain short-term amendments that could be implemented and encourage more study and collaborative efforts with other regulators and standard-setters on the more challenging proposals.

We would be pleased to discuss our letter with you. If you have any questions, please contact Karin A. French, National Managing Partner of Professional Standards, at (312) 602-9160.

Sincerely,

Grant Thornton LLP

PCAOB Rulemaking Docket Matter No. 34

Dear PCAOB Members and Staff:

I appreciate the opportunity to comment on the 2011 Jun 21 PCAOB Release No. 2011-003 (PCAOB Rulemaking Docket Matter No. 34), *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*. Please note that the views expressed in this comment letter are my own and not those of any past employers or other parties.

My opinions are informed by a career of more than twenty years in accounting. My first six years in accounting were spent in the audit (assurance) practices of two Big X accounting firms. The remainder of my accounting career included financial reporting and/or corporate controller positions at three small to mid-sized international companies which were headquartered in the United States and whose common stock traded publicly in the United States; therefore, these companies were domestic SEC registrants subject to SEC filing and financial reporting requirements. I am now retired from accounting, so my present relationship to the financial reporting process is primarily as an investor (a financial statement “user”).

Before presenting my answers to the various questions proposed by the Board about possible changes to the financial reporting model, I think it is important to briefly state my perspective on two underlying matters.

First, since the auditors’ report is on external financial statements, I think it is important to note my perspective on the purpose of external financial statements. I think that the purpose of external financial statements is to provide information to investors and potential investors in a business enterprise (a “company”) about the company’s financial position at a point in time and about changes in that financial position from the last time it was reported. For the matters at hand—possible changes to the auditor's reporting model, I do not think it is necessary in this letter to further discuss the definition of a "business enterprise" or "company". I think that the Board and I generally have the same conception of these terms, while sharing an awareness of the difficulties in many marginal situations of determining what is or is not a business enterprise and what its extent is (see, for example, the discussion at FASB Accounting Standards Codification (ASC) 805-10-55 regarding the definition of a "business").[1] I define "investors" as persons or entities that contribute resources of financial value to a company in the form of debt or equity. For the matters at hand, I do not think it is necessary in this letter to further consider the categorization of contributions of resources between debt, equity, or something in between.

Second, I think it is important to state my perspective on the purpose of the auditors' report on external financial statements. These are as follows:

1. To document that the financial statements were audited.
2. To document who performed the audit and whether or not they were independent of the company.
3. To specify which financial statements were audited and whether any limitations were placed on the scope of those audits.
4. To specify the standard against which the financial statements were evaluated by the audit. For public companies registered in the United States, this is almost always U.S. generally accepted accounting principles (GAAP).
5. To specify the standard under which the audit procedures were conducted. For public companies registered in the United States, this is the standards of the Public Company Accounting Oversight Board (PCAOB).
6. To present the auditor's opinion about the compliance of the financial statements with GAAP based on the audit.

My responses to your questions in the concept release are based on these two perspectives.

**Questions and Responses:**

*1. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.*

*a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?*

---

[1] My comments in this letter also do not pertain to financial statements and the associated auditors' reports for not-for-profit and governmental entities because I do not have recent extensive experience with the accounting for or auditing of these types of entities. However, I understand that auditor's reports for these types of entities are not within the scope of the concept release and are generally outside the Board's purview.

Yes, the Board should undertake a standard-setting initiative to consider improvements to the auditor's reporting model. It has been over 20 years since the auditor's reporting model has been comprehensively revised, and continuous improvement of the model is a worthwhile activity.

*b. In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?*

I think the auditor's report could be revised to better inform readers of what a financial statement audit entails and what the auditor's opinion on those financial statements means (and, to some extent, does not mean). My thoughts on these matters are further elaborated in my responses to the additional questions below.

*c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?*

No, I do not think that the Board should consider expanding the auditor's role to provide assurance on matters in addition to the financial statements. I think that this matter is a consideration for the U.S. Securities and Exchange Commission (SEC), not the Board. Jurisdictional issues aside, I am opposed to requirements to expand the role of the auditor to provide assurance on matters in addition to the financial statements. My thoughts on this topic are further described in my responses to the additional questions below.

*2. The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."*

*a. Should the auditor's report retain the pass/fail model? If so, why?*

Yes, the auditor's report should retain the pass/fail model. Financial statements used for external financial reporting under U.S. securities laws and regulations must be prepared, in all material respects, in accordance with GAAP. Either they are so prepared or they are not. Trying to make sense of the myriad of possible points in the middle is an auditing, regulatory, and reporting quagmire best avoided.

*b. If not, why not, and what changes are needed?*

N/A.

*c. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.*

For those financial statements that are not prepared, in all material respects, in accordance with GAAP, it would be useful for users of the financial statements for the auditor's report to, as briefly as possible, note the areas of material departure from GAAP.

*3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.*

It is appropriate for management to provide additional information regarding the company's financial statements to financial statement users. Management is responsible for communicating all relevant information regarding the matters addressed in the financial statements to users in accordance with legal and regulatory requirements and in accordance with sound business practice. The audit committee may provide information about its role with respect to the financial statements and relevant comments arising from its performance of that role.

The role of auditor is to audit the financial statements for conformity with GAAP and to express an opinion about the conformity of those financial statements with GAAP. Other communications regarding the financial statements are beyond the scope of the auditor's association with the financial statements, and may also involve matters that are beyond the auditor's areas of expertise.

*4. Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?*

I have no comment on this question at this time.

*5. Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?*

No, the Board should not consider an AD&A as an alternative for providing additional information in the auditor's report.

*a. If you support an AD&A as an alternative, provide an explanation as to why.*

N/A.

*b. Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?*

No, I do not think that there should be an AD&A commenting on either the audit or the company's financial statements.

*c. Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?*

I do not think an AD&A is an appropriate forum for the communication of information for making investment decisions.

*d. If you do not support an AD&A as an alternative, explain why.*

The matters suggested in the concept release for discussion in the AD&A are not appropriate to this type of report from a financial statement auditor:

- *Audit risk* – The auditor is responsible for reducing audit risk to a sufficiently low level to provide reasonable assurance that the auditor's opinion on the financial statements is correct. This fact should be described in the auditor's report. For many, if not all, audit engagements, it is not possible for the auditor to meaningfully address audit risk in a report of reasonable length, and attempts to do so could be misleading to the reader. For example, the idea of discussing audit risk in the AD&A seems to suggest a discussion of inherent risk and internal control risk. However, these risks are not relevant to the financial statement user's reliance on financial statements on which the auditor has rendered an unqualified opinion, because when designing audit procedures, the auditor will consider the level of inherent and internal control risks in order to perform an audit that provides reasonable support for his or her opinion. In any case, the Sarbanes Oxley Act and related regulations already prescribe requirements for management and auditor reporting of material matters with respect to internal control risk.
- *Audit procedures and results* – The auditor's report should provide a high-level (one paragraph) summary of the basic steps and types of procedures performed in a financial statement audit. The second paragraph of the current standard auditor's report attempts to do this, but perhaps this discussion could be slightly deepened to give a clearer sense of the general types of procedures used in a financial statement audit. However, the purpose of this explanation is to

provide some context for the statement that an audit provides *reasonable*, but not *absolute* assurance, that the financial statements are free of material misstatement. Actually, the most important point in the discussion of audit procedures in the auditor's report is documenting the auditing standards applied, rather than any digression into the details of audit procedures; the financial statement user can then consult these standards to obtain a deeper understanding of the audit process. The existing standard auditor's report already gives the results of the audit—the auditor's opinion. The suggestion to provide more information about the audit procedures seems to shift some responsibility for ensuring the auditor has done adequate work to support his or her opinion from the auditor to the financial statement user. This is inappropriate. In summary, the suggestion noted on page 13 of the concept release that an AD&A could "provide the auditor with the ability to communicate to investors and other users of financial statements the auditor's significant judgments in forming the audit opinion" is misguided.

- *Auditor independence* – The auditor's report should state that the auditor is independent and refer to the standard by which "independence" is determined. There is no need for further elaboration in an AD&A; independence standards are readily available for review by any interested party.
- *Auditor's views regarding the company's financial statements, such as management's judgments and estimates, accounting policies and practices, and difficult or contentious issues (including "close calls")* – Accounting policies and practices and the use of judgments and estimates are financial reporting issues that should be addressed in the relevant places in the financial statements. If there exists a general opinion in financial statement user community that present disclosure of such matters is inadequate in general or in certain particular circumstances, this issue should be taken up with the accounting standard setters. The auditor's responsibility is to determine whether the financial statements adequate address and disclose these matters in accordance with GAAP, not to present what the auditor considers to be a "better" disclosure than what is prescribed by duly adopted accounting standards. In any case, I note that the SEC requires discussion in MD&A of "critical accounting policies", which include policies that involve significant judgments and estimates. I discuss "difficult and contentious issues and 'close calls'" in detail with my response to question 7 below.
- *Enhanced disclosure of material matters that are in technical compliance with the applicable financial reporting framework* – Page 13 of the concept release suggests that AD&A could include comment by the auditor "on those material matters that might be in technical compliance with the applicable financial reporting framework, but in the auditors' view, the disclosure of such matters could be enhanced to provide the investor with an improved understanding of the matters and their impact on the financial statements." The accounting standard setters are responsible for providing accounting standards that provide for adequate disclosure of all material financial matters to financial statement users, and management is responsible for complying with these standards, in all material respects, in its financial reporting. The auditor is responsible for assessing management's compliance with these standards, not for providing additional disclosures that he or she thinks would be "improvements" to the duly adopted accounting standards. If compliance—"technical" or otherwise—with the applicable

financial reporting framework and associated accounting standards does not provide investors with adequate understanding of the related matters and their impact on the financial statements, these concerns should be addressed to the accounting standard setters.

- *Areas in which management could have applied different accounting or disclosures* – This is a financial reporting matter, not an audit matter. If the accounting standard setters believe that the understanding of the financial statements by the financial statement users could be significantly enhanced by discussion of accounting or disclosure alternatives, they should require this discussion in specific, duly adopted accounting standards. It is not the responsibility or business of the auditor to amend accounting or disclosures made under the duly adopted accounting standards based on the auditor's own opinion about what accounting or disclosures should be.

Page 13 of the concept release notes a suggestion that "an AD&A could give the auditor greater leverage to effect change and enhance management disclosure in the financial statements, thus increasing transparency to investors." This suggestion is senseless. Accounting standard setters are responsible for establishing the accounting and disclosure framework and standards, management is responsible for preparing accounting and disclosure in accordance with those standards, and the auditor is responsible for auditing and, based on the auditing, opining on management's application of the accounting framework and accounting and disclosure standards. If the auditor "effects change" and "enhances" disclosure, the auditor would be taking on a management responsibility. It is unclear from the concept release how this responsibility would be shared, or how liability if mistakes were made would be allocated. Furthermore, if the auditor took on responsibility for changing and enhancing disclosure, the auditor would no longer be independent with respect to that disclosure and would, therefore, not be qualified to audit it.

Page 13 of the concept release also notes a suggestion that an "AD&A could provide further context to an investor's understanding of a company's financial statements and management's related discussion and analysis …" It is not clear what "further context" means. Accounting standard setters (including the SEC for management's discussion and analysis) are responsible for prescribing disclosure standards that are adequate to allow financial statement users to understand the financial statements (and management's related discussion and analysis), and management is responsible for faithfully following these standards. If financial disclosures are unclear, the accounting standard setters must improve the standards, or if the standards are already adequate, management must better adhere to them. It is not the role of auditors to unilaterally decide that additional disclosure of financial matters beyond what is required by the duly adopted standards should be made. On the other hand, if management fails to materially comply with those standards, the auditor should disclose that in his or her report and cannot conclude that the financial statements were prepared, in all material respects, in accordance with GAAP. However, even in that case, it is not the responsibility of the auditor—and likely beyond the capability of the auditor—to provide sufficient additional disclosures in any auditor's report to remedy management's failure to follow GAAP in its financial statement disclosures.

On page 14, the concept release says, “An AD&A also could provide the auditor with an adaptable report that he or she can tailor to a company’s specific risks, facts, and circumstances.” On the same page the concept release says, “An AD&A would likely be among the most expansive form of reporting of the alternatives presented …” The release could have substituted *expensive* for *expansive*. Presenting an AD&A will add substantially to the cost of an audit. Beyond mere preparation time, the auditor will also need to charge for time enhancing audit procedures to adequately support statements made in the AD&A and for time sending this work and the draft report through multiple layers of review. Management will also need to spend time reviewing the draft report with the auditor and attempting to reconcile any differences of opinion. Also, I think it should be obvious even to non-lawyers that the AD&A will provide a lightning rod for litigation. Besides the direct costs associated with this inevitable litigation, all the preissuance processes I have just mentioned will likely have to be performed with even more care than they would on the face suggest due to the litigation risk involved.

*e. Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?*

An auditor can comment on the audit and its result in the auditor’s report. An auditor has no business making other comments about the financial statements.

*6. What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?*

An auditor should not provide an AD&A. If there are matters that an auditor considers critical to understanding the audit process and/or the auditor’s opinion on whether or not the financial statements were prepared in accordance with GAAP—including matters related to audit risk, audit procedures and results, and auditor independence—the auditor can provide the necessary communication, as briefly as is reasonable, in the auditor’s report.

*7. What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?*

The only information about the auditor’s views on the company’s financial statements based on an audit that the auditor should communicate in any report that will be delivered to users with the financial statements is the auditor’s opinion about whether or not those financial statements are prepared, in all material respects, in accordance with GAAP and, if the auditor concludes that the financial statements are not prepared in accordance with GAAP, an explanation of the significant GAAP departures noted.

The financial statements themselves should include all information needed by users to understand them, including relevant information about accounting policies and practices, areas involving significant management judgment and estimates, and matters to which application of accounting standards is particularly difficult.

The discussion of "difficult and contentious" issues on pages 17 and C-14-15 of the concept release shows confusion and misunderstanding by many parties interested in financial statements about how decisions are made by companies about the application of accounting standards to real world balances and transactions. This confusion and misunderstanding involves matters of technical knowledge and expertise that cannot be adequately resolved in any report by an auditor of reasonable length, and to attempt to do so would cause further confusion among financial statement users.

An accounting issue can be difficult for one or both of two reasons. First, the nature of the transaction or balance that is the subject of the issue could be such that it is difficult to report the transaction or balance in the financial statements in accordance with the conceptual framework used to develop those statements. This difficulty could arise from the complex nature of the transaction or balance or just some aspect of the transaction or balance that does not clearly accord with the financial reporting framework. This source of difficulty is a matter that should be clearly noted in the financial reporting standards that guide the application of the financial reporting framework to various types of transactions and balances. Of course, no financial reporting standard, or the framework that underlies it, can contemplate all the complexities of real world financial transactions and balances, but this inability is still an aspect of the financial reporting framework development and standard-setting process. Therefore, the existence and nature of these types of accounting difficulties should be addressed in the authoritative literature associated with complex transactions and measurements. This source of accounting difficulty is not an aspect of the auditing processes, although it does affect the application of the audit processes since they will be applied to balances and transactions involving these accounting difficulties.

The second reason an accounting issue can be difficult is that the accounting standard guiding application of the financial reporting framework to the particular transaction or balance is written in such a manner that the standard itself leaves itself open to multiple reasonable interpretations of what guidance it is giving. Again, this is an aspect of the accounting standard-setting process and should be addressed as part of the continuous improvement of the clarity of the guidance developed from that process. And again, this source of accounting difficulty is not an aspect of the auditing processes, although it does affect the application of the audit processes since they will be applied to balances and transactions involving these accounting difficulties.

The financial statements should assist the users in identifying material difficult accounting issues. This is done by specifically calling attention to the subject balances or transactions, summarizing the difficulties in applying the accounting framework to the balance or transaction or in interpreting the meaning of the accounting guidance, and referring to the relevant accounting guidance for further information on the technical issues involved. The financial statements should also clearly and succinctly explain how management resolved the difficulties. Note, again, that this is a financial reporting matter, and the auditor's opinion applies to this information that should be stipulated in the relevant accounting standards and provided by management. If the auditor concludes that management's disclosures related to difficult accounting and financial reporting issues are not in accordance with GAAP and believes that the matter is material to the financial statements taken as a whole, the auditor should not render an unqualified opinion on the financial statements and only then should provide a discussion in the audit report about the difficult issue—in order to justify the impact on the audit opinion.

The discussion of "contentious issues" on page C-15 clearly reflects a deep misunderstanding about how difficult accounting issues are resolved, both internally by management, and during the audit process. Points of contention are constantly arising at all stages of the resolution of difficult accounting issues. Generally, accountants close to the transaction, often assisted by the company's internal technical accounting experts, will make the first attempt to frame the accounting issue and its resolution. Operational management frequently will challenge these early attempts at resolution, usually on grounds that the accountants did not completely and adequately understand the substance of the underlying transactions. Higher levels of financial management also often contest initial attempts at resolving an accounting difficulty. This may also be on the grounds of an incomplete or inadequate understanding of the substance of the underlying transaction, but also often based on a differing understandings of the meaning of the relevant accounting standards, the underlying accounting framework, and the application of both of these to the substance of the underlying balance or transaction. Once a solid working resolution is made internally, the matter is discussed with the auditor. Initially, the accounting may be reviewed by a staff auditor, and then an engagement manager and engagement partner. The more difficult issues are given a first pass at each of these levels within the auditor's organization, with auditors' opinions beginning to be formed along the way. Each level of auditor will ask questions of management and offer indications of their own opinions. Management will provide more information about the balances and transactions and its decisions on the application of accounting standards and frameworks to the various audit levels. Continuous back and forth discussion and debate is common. For particularly difficult accounting applications and material balances, the audit engagement team will often seek support from firm-wide experts who may have their own views and opinions. In my experience, disagreements (or at least concerns) are quite common, especially in the initial vetting of transactions. Often, these are fairly easily resolved, but some issues do require more work, including substantial involvement by audit firm experts. In a long career in accounting and auditing, I have never been associated with any issued financial statements in which management or the auditors did not reach a resolution of any material matter which they did not agree was the best application of accounting principles and standards to the subject balance or transactions. I can see no clear level in this long process at which a meaningful line can be drawn for an issue to be considered "contentious" in a way providing useful disclosure to financial statement users.

No resolution of any difficult accounting issue can ever be made with absolute certainty, but to fill auditor's reports with discussion of all significant matters of debate in the preparation and audit of financial statements would be to provide users of financial statements with information that they would have no basis for understanding, evaluating, or using. And my discussion in the preceding paragraph should amply demonstrate the difficulty of defining what really characterizes a "contentious" accounting issue. There may be more judgment involved in deciding what is a "contentious" issue requiring disclosure in the auditor's report than is involved in making some of the underlying accounting decisions. And in the end, the auditor who issues an unqualified opinion on the financial statements must be as comfortable as any reasonable accounting expert can be on the resolution of all material difficult accounting issues in the preparation of the financial statements.

The concept of a "close call" needs to be discussed, and I will do so now.

Practitioners of accounting and financial statement auditing frequently speak among themselves about close calls, but they do so when communicating informally. If we are to discuss formal reporting about something that is a "close call", we need to clearly define what this means.

A "close call" is a decision made about an accounting matter where it seems that other reasonable decisions could have been made. Thus, it is a decision made as a resolution of a difficult accounting issue. I have already discussed the nature of "difficult accounting issues" in several paragraphs above.

Contrast my definition of "close call" to the attempts documented on page C-15 of the concept release, which evince a limited understanding of the actual level of difficulty and judgment involved in applying accounting concepts and standards to many financial balances and transactions. For many companies, it is a common occurrence every quarter to have several accounting decisions "that required significant deliberation by the auditor and management before being deemed to be acceptable within the applicable financial accounting framework." This effort often involves substantial communication about the facts surrounding the financial balance or transaction and further discussion of those facts to achieve an understanding of the substance of the balance or transaction. The effort also often involves identification of and agreement upon the relevant accounting principles and practices based on the substance of the balance or transaction and how those principles and practices are to be interpreted and applied. Again, in my experience, as difficult as these issues may have sometimes appeared at the outset of the accounting and auditing process, all parties involved always ultimately became comfortable with the final financial statement presentation.

Based on my views of the nature of so-called "close calls", I do not think they are relevant for discussion in reporting from the financial statement auditor to financial statement users. Either the auditor is satisfied that the financial statements reflect, in all material respects, a reasonable resolution of all the accounting difficulties involved in their preparation or the auditor is not. Those who are interested in how transactions and balances, including those that are complex, are accounted for and presented in the financial statements under GAAP should refer to that GAAP and the ample commentary thereon.

In concluding my discussion of "close calls", I want to make something very clear. If management selects its accounting approach from an apparent array of permissible choices under relevant accounting standards for any purpose other than an attempt to provide financial statement users with the most meaningful presentation of the subject transaction or balance in accordance with the conceptual framework underlying GAAP—reasonable cost-benefit considerations aside—this is not a “close call”. An accounting approach selected for any purpose other than the clearest possible presentation to financial statement users is by definition deceptive and, therefore, fraudulent. Some people may have the idea that “close calls” include selection of permissible, but not the best, accounting approaches from alternatives. Aside from reasonable cost-benefit considerations, selection of a permissible approach that management does not truly believe is the best accounting is fraudulent. The auditor should object to this accounting and cannot merely accept it as a “close call”. Therefore, situations in which these types of financial statement presentations and disclosures are made should not exist and, therefore, are not relevant to discussion of possible auditor disclosures of “close calls”.

Page 17 of the concept release includes “[a] financial statement issue that had a potential material impact to the financial statements and was corrected prior to the end of the period” under the category of “difficult or contentious issues, including ‘close calls’”. I am not sure whether this is to be viewed as a “difficult issue”, a “contentious issue”, or a “close call”, but these matters are irrelevant for disclosure, unless they indicate a material weakness in internal controls over financial reporting requiring disclosure in management and the auditor’s reports on those controls. What is relevant for disclosure to users of the financial statements is whether the financial statements as ultimately presented were prepared, in all material respects, in accordance with GAAP. It is *inevitable* that errors, occasionally material, will be made during the process of preparing financial statements. There is an inherent risk of error in all accounting processes; the level of this risk depends on the nature of the transactions, including the types of processes that can be applied to identify and record them. The point here is that errors are a routine part of accounting processing, and even material errors occur from time to time in a well-designed accounting system. Usually, but not always, any errors resulting from this inherent risk will be detected and corrected by the company’s system of internal controls over financial reporting. However, even the best designed system of internal control over financial reporting will have some small internal control risk—that is risk that a material error will occur and not be detected by the internal controls. Auditors assess inherent and internal control risk of accounting errors and tailor their audit procedures so that the likelihood of a material error occurring, not being detected and corrected by internal controls, and not being detected and corrected during the audit is minimal. Financial statements are intended to present important financial information to financial statement users. Financial statement users have a right to have faith in the processes used to prepare and audit these statements. They do not need to be bothered with the details of this process—that is other peoples’ jobs—and most financial statement users are ill-equipped to interpret details about the operation of those processes.

Even making the suggestion for this disclosure indicates how ill-equipped financial statement users are to draw appropriate conclusions from the requested information. The suggestion gives no indication of how the auditor would determine which “errors” to include in the AD&A, including from what level of the financial statement preparation process the disclosed “errors” could be drawn. Furthermore, the suggestion shows a misunderstanding of what an auditor is doing during a financial statement audit. The auditor does not perform procedures to systematically search for corrected errors (although the auditor will, of course, come across error corrections from time to time while performing normal procedures in areas such as internal control testing and journal entry review and may indeed detect material errors that were not detected by management's internal controls). Therefore, this suggestion would require a more significant expansion of the scope of standard audit procedures than I think the requestors realized. If the request is only to disclose potentially material errors that were detected by the auditor and subsequently corrected by management before issuing the financial statements, that should be clearly stated. However, this information is, by itself, irrelevant and potentially misleading; the implications of errors that are not detected by internal controls is already considered in management and the auditor's reporting on internal controls over financial reporting.

The general idea that matters related to internal controls over financial reporting are relevant to a financial statement user's understanding of the auditor's opinion on the financial statements evinces a fundamental misunderstanding about the relationship between internal controls and the quality of the financial statements on which the auditor has rendered an unqualified opinion. An auditor, when choosing the nature, timing, and extent of auditing procedures to perform, decides whether a company's particular internal control procedures are adequate to rely on to reduce the nature, timing, and extent of audit procedures needed. If the adequacy of internal controls are—shall we say—a "contentious" issue, the auditor will simply choose not to rely on them and perform additional audit procedures to compensate for the perceived deficiency. Typically, the auditor is able to perform sufficient compensating audit procedures to permit rendering an unqualified opinion on the financial statements, although the audit may require more time and expense to complete and may result in more auditor-proposed financial statement adjustments than if internal controls were better. However, deficiencies in internal controls over financial reporting are only relevant to the auditor's report on the audit of the financial statements if they were so extensive as to prevent the auditor from performing adequate audit procedures to render an unqualified opinion on the financial statements. Of course, auditors have additional reporting requirements related to internal controls over financial reporting under the Sarbanes-Oxley Act and related regulations. Financial statement users who are interested in gaining insight into the internal controls implemented by management can refer to that report and the related report by management, but this reporting model is not the subject of this concept release.

*8. Should a standard format be required for an AD&A? Why or why not?*

No. An AD&A itself should not be required.

*9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?*

Any report by a financial statement auditor is the wrong forum by the wrong people for a discussion of matters such as business risks, strategic risks, and operational risks. Financial statement auditors have no particular qualifications to comment on these matters with any suggestion of sufficient authoritativeness to inform investment decisions. Frankly, suggestions like this strike me as attempts by investors and investment advisors to offload their responsibilities to understand the businesses of actual and potential investees to some other party (the auditor).

*10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?*

I do not know how boilerplate language can be avoided while maintaining consistency among AD&A reports. However, I am unclear how the concept of “boilerplate” language is distinct from standardized best practices in written communication.

*11. What are the potential benefits and shortcomings of implementing an AD&A?*

I see no potential benefits to implementing an AD&A. The shortcomings are that an AD&A would involve a party making comments about a company’s matters that the commentator has neither the qualifications nor responsibility to make, and which might actually be seen relieve those who do have such qualifications and responsibilities from their obligations to do so. This would likely not only cause confusion among financial statement users if information from sources of different veracities conflict, but also would increase confusion about which parties are responsible for providing what information about a company. As a matter of fact, the suggestion that an AD&A be considered indicates confusion among at least some interested parties about who is responsible for providing them various types of information about a company’s financial matters.

Some of the suggestions related to AD&A seem to almost reflect a magical thinking. They seem based on an underlying idea that the auditor’s workpapers—and minds—contain mystical insights about whether a company will or won’t work out as an investment idea. I have been an auditor and worked with many others. They are, by and large, bright, competent people. However, the nature of their work, and the expertise they need to do it, are not directed toward assessing the soundness of their client companies as investments. The auditor’s work is directed toward an evaluation of historical financial information, which, along with other information, investors and their advisors can apply to draw conclusions about the company’s future prospects. I am sure that the answers investors seek are not in the auditor’s workpapers.

I close my remarks on the proposed content of an AD&A by acknowledging the suggestions from investor groups documented on pages C-2-8 (some of which might also apply to emphasis paragraphs, the subject of questions 13-18 of the concept release). I have numerous detailed criticisms of most of these suggestions. However, I agree with the comments critical of those suggestions documented on these same pages of the concept release, and I have provided significant criticism of these suggestions in my own responses to the Board's questions documented in this letter. Therefore, I will not include a point-by-point critique of these suggestions in this response letter.

*12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?*

In my response to question 11, I noted the potential for an AD&A to present information that is different than that presented by management (or other sources of financial analysis). From a practical standpoint, however, I expect that management and auditors will work to carefully align their messages. The word "work" in the preceding sentence is significant, because this effort will likely cause significant additional work for management and the auditor. In the end, this effort will usually result in aligned information being released, but with a confusing message about which party should really be responsible for delivering this information (again see my response to question 11).

*13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?*

Information about significant management judgments and estimates and areas with significant measurement uncertainty are financial reporting matters that should be presented in the financial statements themselves, not the auditor's report on those financial statements. Information about audit procedures performed on significant matters should also not be presented in the auditor's report. By expressing an opinion on the financial statements, the auditor is responsible for the adequacy of the audit procedures performed. The auditor's opinion refers to the audit standards used, which users can reference if they want a more complete understand about how financial statement auditors are supposed to approach they tasks. Also, there is ample literature about auditing techniques that is available to interested financial statement users. I see no way that an auditor's report on financial statements can adequately convey meaningful details about audit procedures performed on significant matters.

Before addressing the question of matters in the illustrative emphasis paragraphs, I offer a few comments regarding matters requiring emphasis paragraphs in the current audit reporting model (AU sec. 508):

- Substantial doubt about a company's ability to continue as a going concern is a financial reporting matter that should be clearly presented in the financial statements, not in the auditor's report.
- Material changes between periods in accounting principles or in the method of their application is a financial reporting matter that should be clearly presented in the financial statements, not in the auditor's report.

- Correction of material misstatements in previously issued financial statements is both an auditing and financial reporting matter, so discussion in the auditor's report is appropriate. The discussion in the auditor's report should be oriented toward auditing matters, which are how the presence of undetected errors in previously issued financial statements reflects on the quality of the audit of those financial statements and, by implication, the auditor's ability to provide a reliable opinion on the current period financial statements. However, these corrections should also be discussed in detail in the financial statements. That discussion should focus on the financial reporting implications of the misstatements, such as how their correction changes the previously issued financial statements and the implications of such misstatements for management's ability to presently prepare reliable financial statements.
- Specific accounting matters affecting the comparability of the financial statements is a financial reporting matter that should be clearly presented in the financial statements, not in the auditor's report.
- The financial statements should indicate if the entity audited is a component of a larger business enterprise, but including this information in the auditor's report as well is an important aspect of clearly indicating the scope of the audit.
- Significant related party transactions are a financial reporting matter that should be clearly presented in the financial statements. These transactions are not relevant to the auditor's report unless the nature and extent of these transactions are such as to prevent the auditor from forming a reasonably supported opinion on the financial statements. In that case, the auditor should not express an opinion on the financial statements and should clearly document the presence of these transactions as the reason why no opinion was rendered. Therefore, only if they impact on the auditor's ability to render an audit opinion, would related party transactions rise to an audit matter requiring discussion in the auditor's report.
- The auditor's report should note unusually important subsequent events in order to provide financial statement users with a clear understanding of the time period covered by the financial statements and the audit thereon.

Page 20 of the concept release notes a suggestion to "further expand the emphasis paragraph to highlight the most significant matters in the financial statements and to identify where these matters are disclosed in the financial statements." This suggestion is completely misguided. First, if it is unclear from the financial statements which matters are "most significant" and where they are disclosed, the accounting standard setters should modify their standards to provide for clearer disclosure and/or management should improve its financial statement presentation to more clearly disclose significant matters in accordance with duly adopted accounting standards. This applies to—again quoting from page 20—"significant management judgments and estimates" and "areas with significant measurement uncertainty". It is not the responsibility of auditors to unilaterally determine an appropriate manner to disclose significant financial information in circumvention of the disclosure requirements in duly adopted accounting standards. On the other hand, if the auditor believes that management's method of disclosure is so unclear as to materially depart from GAAP, the auditor should modify his or her opinion on those financial statements accordingly—a far different response than trying to compensate for the inadequate financial statement disclosure with supplemental disclosures in the audit report. Second, the auditor is not in a position to identify "the most significant matters in the financial statements". Auditors are not investment advisors and have a different skill set and training than these professionals, and the significance of various matters in the financial statements will vary from user to user in any case. It is the responsibility of the financial statement user to read the financial statements and determine what matters are significant for him or her. It is irresponsible to suggest that this work be passed off onto the auditor, including disclosure of "other areas that the auditor determines are important for better understanding of the financial statement presentation". If the financial statement users are having difficulty understanding certain types of disclosures in financial statements, they should take up these concerns with accounting standard setters, or management for company-specific disclosure difficulties. Third, the notion from page 20 that the auditor's report would serve as a sort of navigation aid to significant disclosures in the financial statements ("specific references to such disclosures in the auditor's report") implies that it is difficult to find significant information in the financial statements. If this is the case, again it should be addressed with accounting standard setters and, for company-specific difficulties, with company management. I will close this point by offering two pieces of investment advice of my own (although they are by no means original): (1) If you cannot understand a company's financial statements, do not invest in it except upon the advice of a trustworthy investment advisor who can, and (2) if you are the trustworthy investment advisor and cannot understand the company's financial statements, do not recommend that anyone invest in it.

Finally, a quick rhetorical question about a remark from page 21 of the concept release: "However, the Board may need to develop additional auditing standards to direct the auditor in determining which matters are of the most importance to emphasize in an auditor's report." Is the Board comfortable taking it upon itself to review GAAP (and international financial reporting standards) and issuing its own standards specifying which of these accounting standards "are of the most importance"—and therefore by implication which are not?

*14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?*

No.

*a. If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.*

N/A.

*b. If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.*

Areas of difficulty in measurement or application of GAAP are financial reporting matters and should be discussed in the financial statements, not the auditor's report. The auditor is responsible for performing adequate audit procedures on these areas to support the audit opinion. Financial statement users generally do not have the expertise in auditing necessary to evaluate the adequacy of these procedures, but attempting to document or summarize these procedures in the auditor's report would suggest that they have some responsibility to do so. Furthermore, the auditor's report is not a forum that can accommodate a meaningful presentation of these procedures. As I noted in my response to question 13, interested financial statement users have ample information available to them about auditing standards and procedures.

*15. What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?*

The purpose of emphasis paragraphs should be for the auditor to communicate to financial statement users unique circumstances related to the audit that the users should be aware of to properly understand the auditor's opinion on the financial statements. They are not an appropriate forum for communicating financial and business information about the company. An auditor should include emphasis paragraphs in the audit report for the following reasons:

- To explain why an audit opinion was not rendered or why an opinion was rendered that the financial statements did not conform with GAAP in all material respects.
- To describe limitations on the scope of the audit.
- To clarify the time period covered by the audit when particularly significant transactions or events related to the company occurred after the date of the financial statements but before the audit report was issued.
- To further clarify the entity whose financial statements were audited, if the entity is part of an organizational structure that is so complex that the usual wording of the auditor's report is not adequate to properly identify it to financial statement users.

In response to this question, I add that I am opposed to suggestions, documented on page C-16 of the concept release, to include in or attach to the auditor's report the auditor's communications with the audit committee. I agree with the objections documented on that page.

*16. What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?*

Emphasis paragraphs should be as succinct as possible while still communicating the essential information to the financial statement users.

*17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?*

I do not know how boilerplate language can be avoided while maintaining consistency among audit reports. However, I am unclear how the concept of "boilerplate" language is distinct from standardized best practices in written communication.

*18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?*

I do not believe that emphasis paragraphs should be required except in situations such as I describe in my response to question 15. In those situations, emphasis paragraphs would help financial statement users better understand the meaning and context of the auditor's opinion. On the other hand, excessive use of emphasis paragraphs could circumvent the financial reporting purpose of the financial statements themselves, encroach on communication matters that are management's responsibility, and involve the auditor in communicating about matters beyond his or her knowledge or expertise.

*19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?*

No, the Board should not consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model. Any assurance on this material would be voluntary (until and unless prescribed by the SEC). Therefore, the auditor and company can presently tailor the audit scope and procedures for any such assurance as they agree, and the auditor's report would reflect the unique decisions made during this tailoring.

*a. If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.*

N/A.

*b. On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.*

N/A.

*c. What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?*

N/A.

*d. If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?*

N/A.

*e. Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?*

Auditor reporting on a portion or portions of the MD&A should not affect the nature of MD&A disclosures because those disclosures are management's responsibility and must be prepared in accordance with SEC regulations. Auditing standards are not an appropriate forum for establishing financial (and nonfinancial) reporting requirements.

*f. Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?*

N/A.

*g. If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.*

I urge caution about requiring auditor assurance on other information outside the financial statements. Expanding the scope of the audit could be very costly, and I am not aware of instances in which financial statement users have been mislead about a company's financial situation by materially misstated information delivered with, but outside, financial statements that were not themselves also materially misstated. This is not surprising since existing audit standards already require auditors to review information outside financial statements to make sure it is consistent with any financial statements that accompany it. This connection between information presented inside and outside the financial statements is strong in both directions. Any information presented outside the financial statements that is inconsistent with information in the statements has serious implications for the propriety of those statements and the audit of them. In my many years of experience as a financial statement auditor and preparer, I have consistently given and received ample substantive auditor comments on the information outside the financial statements.

Although I think the current negative assurance given on the material outside the financial statements is strong, shifting to the auditor providing positive assurance would still result in substantial extra cost in checking details, delving further into operating metrics, and vetting disclosures. I also note that providing positive assurance on operating metrics might require expertise not normally possessed by a financial statement auditor.

*20. What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?*

See my response to question 19, which I summarize as high marginal costs and low marginal benefits.

*21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:*

- *Reasonable assurance*
- *Auditor's responsibility for fraud*
- *Auditor's responsibility for financial statement disclosures*
- *Management's responsibility for the preparation of the financial statements*
- *Auditor's responsibility for information outside the financial statements*
- *Auditor independence*

*a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?*

Yes, clarifications are appropriate for all the areas noted. I have comments on several of them.

Language clarifying the concept of “reasonable assurance”, like that suggested on p. 27 of the concept release, would be helpful. Financial statement users must be aware that an auditor can only design and carry out an audit to provide reasonable, but not absolute, assurance that material errors in the financial statements will be detected. The following are some reasons why absolute assurance cannot be provided. The Board should consider these while drafting any succinct language changes to the standard auditor’s report explaining reasonable assurance.

- The process of preparing financial statements involves processes, measurements, estimates, and judgments that are subject to error (“inherent risk”).
- The company’s internal control systems for detecting errors in financial statements have some risk of failing to operate adequately to detect an error in the financial statements even if the systems are properly designed (“control risk”).

- Planning an audit involves making choices about the depth in which various elements of the financial statement will be examined and the particular procedures to apply to the elements of the financial statements that will be examined. An auditor does not have unlimited financial and time resources to “examine everything”. Therefore, even a properly planned audit will have some risk that the chosen procedures will not be adequate to detect all possible errors in the financial statements. Furthermore, the choices the auditor makes in planning the audit involve judgment and are therefore subject to error. These unavoidable limitations on the audit planning process are one aspect of “audit risk”.
- Audit procedures are carried out by human beings and are therefore subject to error. This is another aspect to “audit risk”.
- Audit quality control procedures involve judgments as to their adequacy and are carried out by human beings. Therefore, they are subject to error. This is another aspect to “audit risk”.

Although it is a topic widely discussed, at least within the accounting profession, I think there is still widespread misunderstanding of the auditor’s responsibility for detecting fraud among financial statement users (and also company managements). Because the popular conception of an audit is so associated with forensics, I think it is necessary to clearly address the extent of the auditor’s responsibility for detecting fraud when performing a financial statement audit. Specifically, the auditor’s report should clearly articulate that the purpose of the financial statement audit is to express an opinion about whether financial statements are, in all material respects, prepared and presented in accordance with GAAP. Therefore, the auditor will design his or her procedures only to detect instances of fraud that materially impact the preparation and presentation of the financial statements in accordance with GAAP. Therefore, the auditor will only perform audit procedures that would detect types of fraud that could materially impact the financial statements *and* then only instances of those types of fraud that are substantial enough to actually be material to the financial statements. In other words, only certain types of fraud would be detected and even then only occurrences in amounts greater than some threshold value. (And as I mention in my response to question 21 c. below, I do not support disclosure of materiality thresholds used in the audit.)

Language regarding auditor independence merely needs to be a statement that the auditor is independent and reference to the standard of independence underlying that assertion.

*b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.*

Yes, these potential clarifications would serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities. In particular, I think that financial statement users are often unclear about the level of assurance offered by an auditor’s opinion, the auditor’s responsibility for detecting fraud, and the auditor’s responsibility for information outside the financial statements that is delivered with the financial statements.

*c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?*

I do not offer any other clarifications or improvements to the auditor's reporting model that can be made to better communicate the nature of an audit and the auditor's responsibilities. I think the list given is ample. I reiterate my opinion that information in the auditor's report should be limited to information about the audit. I think the auditor's report should be clear and cover all relevant points, but it should also be succinct. Auditing standards are available for interested parties to read, and numerous books on auditing are available. Also, classes on auditing are available, both through colleges and universities and through professional organizations (like the AICPA). Those who are interested in understanding the details of what goes behind an auditor's opinion should consult those resources. The Board oversees inspections of auditors to make sure that appropriate standards and practices are followed, providing comfort in audit quality to financial statement users, and financial statement users also have recourse to litigation if appropriate standards and practices are not followed, leading to financial losses.

At this point, I will comment on the discussion on pages C-8-9 about disclosure of materiality levels. I agree with the remarks critical of this suggestion. It is unclear what meaningful use financial statement users could make of this information or how the auditor could provide in any reasonably succinct manner the context needed to understand any benchmark quantitative measures the auditor may have used during the course of the audit.

*d. What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?*

Clarifications to the standard auditor's report should not affect the scope of the audit or the auditor's responsibilities; they should result in better communication of the matters addressed to financial statement users.

*22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?*

The major potential benefit of providing clarifications of the language in the standard auditor's report is that financial statement users will be able to better understand what they are "getting" with the audit opinion. The main shortcoming is the risk that the auditor's report will become too long to be clear or will creep in scope to include matters not directly related to the audit and its results.

Pages C-10-11 of the concept release document suggestions for including various engagement statistics in the auditor's report. However, the statistics suggested are inadequate to draw a reasonable conclusion about the quality of the audit, as the critical examples documented on page C-11 suggest. If financial statement users really want to get insight into an auditing firm's audit quality, they should press for release of more information about auditing firm quality control review results. I will not comment further here on that contentious subject. Financial statement users can also review information about lawsuits involving auditing firms and can review statistics about which firms were involved with failed audits.

*23. This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?*

The only alternatives discussed in this concept release that I think are appropriate are judicious improvement of the use of emphasis paragraphs and clarification of the standard auditor's report.

*24. Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?*

A combination of the alternatives that I noted in my response to question 23 would be effective.

*25. What alternatives not mentioned in this concept release should the Board consider?*

I am not aware at this time of any alternatives not mentioned in this concept release that the Board should consider.

*26. Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?*

I am not able to provide detailed guidance for an auditor reporting framework and criteria at this time. However, I direct the Board to my comments in the introduction to this response letter for my ideas about the purpose of the auditor's report.

*27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?*

I believe that it is very likely that financial statement users might perceive many of the alternatives suggested in this concept release as a piecemeal opinion. I recommend avoiding this by only implementing the changes that I have commented favorably on in this response letter.

*28. Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?*

Improvements to the standard auditor's report and improved guidance for emphasis paragraphs will better convey to the users of the financial statements the auditor's role in the performance of an audit.

The other alternatives suggested by this concept release would reduce clarity. This is particularly true of some possibilities for an AD&A, which could cause the auditor to appear to be a source of financial information about the company beyond what management provides (in the financial statements and elsewhere) and also to be an arbiter of whether or not the company is a good investment. Even emphasis paragraphs should be used judiciously to avoid encroaching on the realm of the financial statement preparer and users.

*29. What effect would the various alternatives have on audit quality? What is the basis for your view?*

An AD&A might marginally increase audit quality, since it would subject key aspects of the audit to the scrutiny of yet more parties and because its preparation would require the auditor to do yet one more pass through his or her work (including having another look by the quality control layer). However, the cost of this marginal improvement would be great, both in terms of time to issue the auditor's report and AD&A (and therefore the financial statements with which they are associated) and the expense of preparation. Ultimately, the monetary costs would all inure to the company being audited. Incremental audit costs would be billed to the company, and management would also incur additional costs of its own review of the draft AD&A and work with the auditor to resolve issues and reconcile inconsistencies between the AD&A and management communications (including the financial statements). Another "cost" would be increased financial statement user confusion about the nature and purpose of the financial statement audit and possible misdirection away from the financial statements as the primary source of information about the company's financial position and changes therein.

Assurance on information outside the financial statements might also provide a slight improvement in audit quality; any further understanding of the company that the auditor gains from this work would inure to the benefit of the financial statement audit, but this minor benefit would come with substantial costs from the additional audit and management work required for the added auditor assurance.

More liberal use of emphasis paragraphs would likely have little effect on audit quality. Clarification of the standard auditor's report would also likely have little effect on audit quality. Properly implemented, though, these changes would improve the quality of communication between the auditor and financial statement user about the audit work done and opinion rendered.

*30. Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.*

I am not familiar enough with these topics to provide an informed opinion.

*31. This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.*

*a. Are any of these considerations more important than others? If so, which ones and why?*

I think all five considerations are important and deserve careful attention before making any changes to the auditor's reporting model. However, I draw specific attention to the last sentence of "B. Effects on the Auditor's Relationships" on page 32: "Management and the audit committee also might be compelled to change the financial statements, in order to eliminate differences between the company's disclosures and the auditor's discussion in the audit report." I caution the Board to be avoid making changes to the auditor's reporting model that might inappropriately shift decision-making about financial reporting from management to the auditor. This could institutionalize an impairment of the auditor's independence.

*b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?*

For some types of changes, I believe that the benefits would justify the cost, and for some not. I have included discussion of cost-benefit issues in my detailed responses to the preceding questions. In general, I think the higher cost proposals offered in this concept release would not provide sufficient benefits to justify their implementation.

*c. Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?*

I am not aware of any other considerations at this time.

*d. What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?*

N/A.

*32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?*

I have documented my thoughts on this matter in my responses to the previous questions.

**Closing Comments:**

I note that the proposals in this concept release are more extensive than mere continuous improvement of the auditor's reporting model. This suggests a perception that there is a serious problem with the current model. However, the release does not attempt to identify this problem. I suggest that the Board consider answering the following clarifying questions before pursuing any significant changes to the auditor's reporting model:

1. Is there a problem with audit quality? If so, would changing the auditor's reporting model be an effective element of the correction of this problem?
2. Is there a problem with communication of audit results to financial statement users?
3. Is there a problem with the relevance and understandability of the financial statements? Are users looking for help from auditors to understand the financial statements? If so, is the auditor's reporting model the appropriate place to address these problems, or should financial accounting standard setters address these problems?

Pages 7-8 of the concept release notes that some parties have suggested to the Board that auditors could have helped assess the quality of the financial statements and provided early warning signals about potential issues like off-balance sheet contingencies and the sensitivity of loan loss estimates. The concept release does not specify a suggestion that off-balance sheet contingencies and the sensitivity of loan loss estimates in financial statements were not presented in accordance with GAAP in financial statements that received unqualified opinions in auditors' reports. Therefore, I am left to assume that the financial statements, including the related required disclosures, that the commentator's had in mind were prepared in accordance with GAAP, and if there is a problem with their understandability or disclosure about the limitations or sensitivity to economic conditions of the amounts disclosed, this is a criticism of the GAAP itself. The variability and other limitations of the judgments and estimates required for financial reporting under GAAP is a financial reporting issue. Proper financial statement disclosure of these inherent limitations on judgments and estimates should be considered by the accounting standard setters when they promulgate accounting standards requiring their use. It is not the responsibility, or business, of an auditor to criticize or expound on the auditor's perceptions of the limitations of GAAP in the auditor's report. Determination of GAAP and how its limitations are to be presented to financial statement users is the responsibility of the accounting standard setters. They meet these responsibilities through a rigorous process (although not without its criticisms as to particulars), not through ad hoc dissemination of opinions, as those who made the suggestion for auditor commentary to the Board seem to be requesting from auditors. The fact that "reasonable estimates might vary significantly" and that "there could be a wide range of acceptable results" is a financial reporting matter associated with the particular estimates and should be appropriately disclosed with them in the financial statements. Guidance for such disclosures should be developed through the established accounting standard setting process, not based on the opinions of any particular auditors.

I hope that you find my comments helpful as you consider improvements to the auditors' reporting model.

Sincerely,

/s/ Scott E. Green

**Subject:** PCAOB Release No. 2011-003 Proposed Changes to the Audit Report

We have reviewed the proposals and the example changes to the audit reports. We strongly disagree with each proposed change on the basis that each proposed change does not add any value to the information included in an issuer's financial statements. The issue for an investor is to identify risks to investing and those are unchanged by the proposal. The focus should remain on the quality of the issuers' financial statements.

In addition, the proposal significantly increases the risk to the auditing firm because of the proposed subjective comments to be made by the auditing firm. We believe the current audit reporting standards clearly communicates with the investor all of the information needed to understand whether the financial statements are accurate and sufficient, and whether internal controls over financial reporting are effective. Accordingly, we respectively request the proposals not be adopted.

**Subject:** Proposed standard-setting project on content and form of reports on audited financial statements

CONCEPT RELEASE ON POSSIBLE
REVISIONS TO PCAOB STANDARDS
RELATED TO REPORTS ON AUDITED
FINANCIAL STATEMENTS
AND RELATED AMENDMENTS TO PCAOB
STANDARDS
NOTICE OF ROUNDTABLE

The Public Company Accounting Oversight Board ("PCAOB" or "Board") is issuing a concept release to solicit public comment on the potential direction of a proposed standard-setting project on the content and form of reports on audited financial statements. The Board will also convene a public roundtable meeting in the third quarter of 2011, at which interested persons will present their views. Additional details about the roundtable will be announced at a later date.

Public Comment: Interested persons may submit written comments to the Board. Such comments should be sent to the Office of the Secretary, PCAOB, 1666 K Street, N.W., Washington, D.C. 20006-2803. Comments also may be submitted via email to comments@pcaobus.org

**Questions**

**1. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.**

**a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?**

Firstly, although my experiential background is less extensive with public accounting or auditing engagements than with general accounting, accounting cycle specialties, tax and financial statement preparation work, the academic work completed at Syracuse University for the attainment of my Bachelor of Science in Accounting degree was comprised of the necessary auditing courses for the completion of credit hours necessary for my graduation.

Still yet another standard-setting initiative at this level of professional oversight seems superlative when considering the historical development of Sox-Orbanes which at that time was developed to reduce the possibilities of management's blind reliance upon the inconsistencies and deficienceis of the public auditors and conversely, reassure investors and stockholders of auditors' due diligence when auditing management's financial records.

The current pass/fail auditing reporting model still seems sufficient to convey this reliance to financial statement users because theoretically it does utilize and comply with SAS guidelines and reporting for attestation to GAAP based upon relevant auditing and fiancial reporting requirements. It is incumbent upon investors and stockbrokers to readily understand this information, format, and reporting model whether they actually believe that the information is insufficient for their further investment and company performance information. The type of additional information implied by this new standard setting project seems more relevant from financial analysts than auditors and yet if also required by the public accounting and auditing community at some additional prohibitive cost at the further perils and burdens of corporate America.

**b. In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?**

The standard auditor's report or other auditor reporting could generalize financial operations by industry and report to the various shareholders and users of financial information the trends, similarities, differences, anomalies, and practices among companies as they affect profits and losses or other financial data while citing their clients' needs for improvements and variations from the normal operations, activities, and practices of other companies.

**c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?**

The pass/fail opinion attestation auditing role is currently sufficient for the assurance of all information reported upon financial statements for users including investors and shareholders. The recurring redundancy of auditors' assurance than management's assurance than auditors' assurance again seems to trivialize any legitimate process by which any oversight can remain authoritarian.

Yet matters of financial operation, planning, budgeting, logistics, and the normal strategic objectives as conducted by the executive level of companies would seem too proprietary and confidential to be revealed or audited by even a private entity

**2. The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."**

**a. Should the auditor's report retain the pass/fail model? If so, why?**

Yes, more relevant for cost benefit analysis

**b. If not, why not, and what changes are needed?**

**c. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.**

**3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.**

Preparers and management are most appropriate to submit any additional financial information because they are more involved with the day-to-day operations of the company

**4. Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?**

Broader scope and more aggressive audting of internal control with the necessary compliance testing to satisfy financial statement users like investors and stockholders

**RE: PCAOB Rulemaking Docket Matter No. 34; PCAOB Release No. 2011-003; Concept Release on Possible Revisions to PCOAB Standards Related to Reports on Audited Financial Statements**

Dear Board Members:

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board's "Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards," dated June 21, 2011

By way of background, Hermes is one of the largest asset managers in the City of London. As part of our Equity Ownership Service (Hermes EOS), we also respond to consultations on behalf of many clients from around Europe and the world, including the Lothian Pension Fund, Northern Pension Fund of Ireland, PNO Media (Netherlands), Canada's Public Sector Pensions Investment Board, and VicSuper of Australia (only those clients which have expressly given their support to this response are listed here). In all, EOS's advises clients with regard to assets worth more than $140 billion.

We firmly welcome the PCOAB's attention to the important issue of audit report quality and are extremely supportive of much needed reform in this area.

Users of financial statements have become increasingly aware that the matters that determine the scope and effectiveness of the audit and which are therefore important to the auditors in reaching their opinion are not expressly addressed in the audit opinion. The audit opinion contains nothing more than a pro-forma statement about the auditing and ethical standards that the auditor has complied with, and does not relate those standards to the actual work that has been done in the course of the particular engagement. Nor does the audit committee report on such matters. As a result users lack the information to enable them to assess the extent to which it is appropriate for them to rely on the financial statements. As importantly, the audit report, by not discussing the substance of the audit work that has actually been done, does nothing to reinforce perceptions of audit quality and so does not provide a vehicle to increase audit quality. We believe that increasing the focus on audit quality is vital to increase investor confidence and to improve standards within the profession.

At present the audit report contains much that is not a report from the auditor. Rather, it is a defensive outline more of what the auditor does, and indeed, does not do – apparently designed solely to limit the auditor's liability rather than enlighten investors with regard to the audit or audited entity in question. Even the outline of what an audit involves seems designed from this negative perspective rather than a positive one. We believe that this sort of audit report not only does not provide value to investors, it does a significant disservice to the audit profession by emphasizing not the value that the auditor brings through the audit but rather highlighting what investors should not expect from the auditor. We believe that this 'perceptions gap' is more important than the expectations gap these days: through such poor reporting to investors, they are invited to expect nothing of value from an audit. If the profession genuinely wishes to foster its own future we need to ensure that rather than emphasizing what little can be expected from an audit, the audit report needs to highlight the positive value that an audit brings for investors.

HERMES

We believe that a refocusing on the positive value added by the audit is needed and that will require a removal of the excess verbiage which emphasizes more what an audit does not do than the value that it brings
More useful disclosures on the audit process and audit quality will help start addressing the perception gap around the audit and emphasise audit quality in a way which over time will increase competition over audit quality. We would welcome better disclosures by all parties to corporate reporting. This is both necessary and important. But it is extremely important to focus on which parties have the primary responsibility for disclosure. We provide a brief table which we think provides a helpful insight into our thinking on this matter.

| | **Management** | **Those charged with governance** | **Auditor** |
|---|---|---|---|
| **Financial accounts** | Primary responsibility | | Audit opinion |
| **True and fair view** | Primary responsibility | | Audit opinion |
| **Neutrality** | | | Primary responsibility |
| **Associated narrative reporting** | Primary responsibility | | Read requirement – negative assertion ("we have nothing to add") |
| **Adequate books and records/internal controls** | Primary responsibility | | Positive statement |
| **Going concern** | Primary responsibility, including to disclose key risks and process for arriving at going concern view | | Secondary responsibility – exceptions opinion |
| **Key accounting judgements** | Primary responsibility | | Highlighting existing disclosures, negative assertion ("we have nothing to add") |
| **Key assumptions and estimates** | Primary responsibility | | Highlighting existing disclosures, negative assertion ("we have nothing to add") |
| **Key auditing judgements** | | Commentary on auditor disclosure and discussion of role in assisting auditor in reaching those judgements | Primary responsibility |
| **Key areas of debate & discussion between auditor and those charged with governance** | | Primary responsibility | Commentary, negative assertion ("we have nothing to add") |

This implies that there are indeed matters which those charged with governance - very usually the audit committee - have the primary responsibility for disclosing, and we strongly encourage the development of regulatory regimes which facilitate and encourage such disclosure, though we recognise that such matters are not directly within the control of the PCAOB.

We have taken the opportunity to respond below to a select number of individual questions presented in the consultation but generally feel that the table above reflects our overall position on the types of enhancements we hope to see implemented in order to address the severe deficiencies present in the current audit report.

**1c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?**

We do not believe that expanding the auditor's current role is warranted. We would welcome rather a focus on the current role and delivering effectively - and transparently - what is currently required. We firmly believe that a 'read requirement' is the appropriate level of auditor oversight of narrative reporting which accompanies the audited financial statements, and as the table indicates we welcome this work being made explicit in auditor reports. But we believe taking any further auditor assurance oversight of other matters is not warranted, and we fear it might significantly intrude into the reporting processes of audited entities.

**2. The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model.**
**a. Should the auditor's report retain the pass/fail model? If so, why?**
**b. If not, why not, and what changes are needed?**
**c. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.**

We would welcome audit reports becoming much more discursive and qualitative. We believe that the current binary nature of the audit opinion – in effect either a ' pass' or a 'fail'– leads to audits being less effective because companies can argue that as long as an accounting treatment is within the boundaries of acceptability they should receive a 'pass'. An audit report which gave an indication of how far the company is pushing the boundaries of accounting standards would provide much more useful information to investors, and be a basis for encouraging companies to take less aggressive stances - we believe that the alternative to this that would be most acceptable to the profession is our proposed auditor statement that the accounts do provide a neutral presentation. While this statement is a change, it is simply putting in writing an assertion that auditors make about accounts by signing them off; we also believe it is a more realistic request to make of auditors than a view as to degrees of accounting aggression. Its impact on the dynamic between the auditor and management and those charged with governance ought to be substantial and powerful. This process ought to lead to much more consistently appropriate reporting and so to less systemic risk. The sort of discursive and qualitative audit reports that this implies would avoid the all-or-nothing response to which qualifications currently give rise.

**3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.**

As the table indicates, we agree that in the first instance it should be for management, or those charged with governance (or indeed the two in combination) who have the primary responsibility for the disclosures we highlight in the table. However, we recognize that setting requirements for corporate disclosure is beyond the PCAOB's remit and we therefore believe that the PCAOB may need to require auditors to make such disclosures where the audited entity has not done so.

This is a fall-back because we would most welcome enhanced disclosure requirements of management and also those charged with governance, and we would also welcome enhanced requirements of the auditors to respond to these disclosures, probably in terms of highlighting where the disclosures are contrary to evidence highlighted in the audit, or a statement that there was no such evidence identified. The areas on which we would welcome further company disclosure, and auditor assurance in response to, would be: the up to five key areas of accounting judgment and why the relevant accounting choices have been made; which are the key assumptions embedded within the corporate reporting and what impact would alternative assumptions have made; significant changes to the business, including segmentation, capital structure, M&A divestments, and the reasons for these; risk management appetite and approach.

We believe that the auditor should have primary responsibility for disclosures on the key auditing judgments - such as the significant risks identified at the start of the audit, materiality thresholds (particularly such matters as which subsidiaries were audited directly and which not - and how this decision was reached), and the extent of reliance on another auditor or on the work of internal audit. We would welcome those charged with governance having the responsibility of commenting and responding to this disclosure.

We believe that the table provides a ready outline of our thinking in this area.

**5. Should the Board consider an AD&A as an alternative for providing? additional information in the auditor's report? a. If you support an AD&A as an alternative, provide an explanation as to why.**

While we are not fundamentally opposed to the possibility of the introduction of an AD&A we do not feel that it is necessarily the most effective way of bridging the communications gap which currently exists. We believe that the enhancements we are proposing to the audit report would address the bulk of current concerns and that more drastic steps are not yet warranted.

**18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?**

We believe that there would be real value in considering enhancing auditor reports in this way. However, we believe that this needs to be done with real care to strike the right balance of ensuring fuller more useful disclosures to investors while also leaving the balance of responsibilities placed appropriately between the auditor and the board. We understand there is a real risk that the auditing firms will seek to have standard language, which undermines the intent of developing audit reports which are genuinely bespoke to the individual company. It is for this reason that we are proposing auditor disclosures which are narrow and specific, requiring few words, but which cut to the heart of the judgements which investors need the auditors to be making.

**22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?**

We do not see any potential shortcomings in the provision of clarifications around the language in the standard auditors report provided the additional clarity is provided in a meaningful manner and accompanied by genuine enhancements to the quality and content of the audit report as discussed above. We do not believe though that this goes to the core of current concerns with audit reports and so do not believe that this warrants significant attention.

**23. This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?**

We believe that three things are fundamentally necessary:

- Audit reports need to drop any and all language which highlights what the audit does not do and what the auditor has not done.
- Audit reports need to include a report on the auditor’s conclusion in respect of all the elements that the standard audit delivers, whether these are matters of positive or negative assurance. All too often the breadth of the auditor’s work is not made apparent in the report, which again does the profession a disservice.
- The auditor should provide more discussion that is specifically relevant to the company. Our thoughts in this respect are considered in more depth below.

We believe that audit reports which deliver this will be of substantially more value to all users of financial reporting. We do not believe that there are users for whom such communication would not be of value – though because of the perception gap there are many who currently ignore audit reports.

In addition we ask you to refer to the table above for a more detail description of the types of enhancements we would like to see.

**31 b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?**

While the proposed enhancements may result in marginally increased costs we firmly believe that the benefits in terms of increased confidence in corporate reporting outweigh the costs involved in such additional regulation.

**32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?**

We make the proposals outlined in this response, and particularly in the table, in the fundamental belief that this will change the dynamic in the relationship between the auditor and the audited entity, and both its management and those charged with governance. We believe that enhanced disclosure requirements of the various parties on the crucial areas of accounting and audit judgment will ensure that these issues receive greater and more appropriate attention from all parties, including investors. The dynamic this will introduce to improve reporting quality will be significant, and it will have a similar upwards pressure on audit quality also. This will increase investor confidence in individual company reporting and the market as a whole. We firmly encourage the PCAOB to take these steps to capture these very significant benefits.

Yours faithfully

Darren Brady

Re: PCAOB Rulemaking Docket Matter No. 34

Dear Mr. Seymour:

Hess Corporation ("Hess" or "the Corporation") appreciates the opportunity to comment on the Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements ("Concept Release"). Hess is a global integrated energy company primarily engaged in the exploration for and production of crude oil and natural gas, the manufacturing of refined petroleum products and the purchasing, trading and marketing of refined petroleum products, natural gas and electricity. The Corporation is a registrant with the U.S. Securities and Exchange Commission and is classified as a large accelerated filer.

The Concept release presents four possible alternatives for increased auditing and disclosure responsibilities by the auditor and recommends changes to the auditor's report. The concept release proposals are grouped into the following four broad categories which are not intended to be mutually exclusive.

– Auditor's discussion and analysis,
– Expanded use of emphasis paragraphs,
– Auditor assurance on other information outside of the financial statements, and
– Clarification of language in the standard auditor's report.

The Corporation's comments on the proposals in the Concept Release below were primarily based on our views of whether the benefits of the proposals exceed the likely increase in costs, whether the proposed auditor requirements would enhance a reader's understanding of a registrant's underlying accounting and disclosures and how the proposed requirements might interplay with governance procedures already in place under the direction of the audit committee.

Auditor's discussion and analysis ("AD&A")

The concept of the AD&A would be to provide a supplemental narrative report in which the auditor would have the ability to discuss:

- their views regarding the audit process (audit risks and procedures);
- their views regarding the company's financial statements, such as judgements and estimates, "close calls" and potential alternative accounting or disclosure options; and,
- other matters that the auditor might choose to discuss.

We believe that the adoption of this proposed requirement would result in a very time consuming process for both the auditor and management, which would significantly increase costs. We believe that readers of financial statements would not benefit from an additional detailed discussion of complex accounting policy matters, since they are already described in the critical accounting policy and estimate disclosures. Detailed information on accounting or disclosure alternatives in an AD&A would be difficult to describe in a concise and understandable fashion. Discussions of these matters among management, auditors and audit committee members are already taking place in audit committee meetings, which we believe is the proper venue for these discussions. Once final decisions have been reached about the company's accounting policies and disclosures, we do not believe anything more is to be gained from having them further discussed in an AD&A.

Expanded use of emphasis paragraphs

The concept of the expanded use of emphasis paragraphs would be an attempt to emphasize the most significant matters disclosed in the financial statements, as well as to highlight significant management judgements, estimates and potential uncertainties.

While the proposal for added emphasis paragraphs is well-meaning, the Corporation believes that generally accepted accounting principles already requires material transactions to be reported and significant estimates and judgements to be disclosed. The auditor already has the responsibility to evaluate management's disclosures of significant transactions and related disclosures. Members of management and audit committees routinely consider auditor comments on accounting decisions and disclosures and the auditor's view would have already been incorporated into the disclosure. The emphasis paragraph in the auditor's report would likely be a duplication of disclosures appearing elsewhere in the document. Therefore, an emphasis paragraph would be redundant, potentially confusing, or even misleading, since it may be viewed as an area of disagreement with management's presentation. Given the proliferation of required disclosures in the financial statements, we are opposed to additional disclosures in the auditor's report of the same facts likely already described in several places in filed documents.

Auditor assurance on other information outside the financial statements

The purpose of this proposal would be to provide additional assurance on information outside of the financial statements, including MD&A or other non-GAAP information in filed documents and earnings releases. Although there is currently no requirement for the auditor to provide assurance on such information, current auditing standards require the auditor to review such disclosures to determine if the information is misstated or inconsistent with the financial statements.

We believe the current audit guidance is sufficient, as the auditor would be required to report to management and the audit committee any material inconsistency or misstatement in information appearing outside of the financial statements. We believe that any additional auditing requirements would significantly increase costs without a corresponding benefit. Since the SEC requirements for MD&A require discussion of the Corporation's results of operations and financial position "through the eyes of management," we question whether the auditor would bring additional value to the discussion. We would also oppose an audit requirement governing disclosures made by managements in the quarterly earnings release. We believe the existing governance over earnings releases is sufficient and should be the responsibility of the audit committee and not the auditor.

Clarification of language in the standard auditor's report

The purpose of this proposal would be to add clarifying language to the auditor's report that would provide additional information about what the audit represents and the related auditor responsibilities. While we believe that the nature of the audit and the auditor's responsibilities are already well understood by users of financial statements, we have no objection to some limited additional clarifying language if the auditing profession deems it necessary.

Summary

It is important to note that these proposals would be incremental to other standard setting initiatives already underway at the FASB and SEC and do not appear to be coordinated with those efforts. We believe these competing priorities will result in disclosure overload and could potentially create confusion for users of the financial statements. Therefore, we question both the timing and the need for the proposed additional auditor disclosures.

Hess Corporation appreciates the opportunity to comment on the PCAOB's Concept Release and would be happy to discuss these comments with the appropriate staff members.

Sincerely yours,

John P. Rielly
Senior Vice President and
Chief Financial Officer

***Re: PCAOB Rulemaking Docket Matter No. 34***

Dear Board Members:

Hilton Worldwide, Inc. (referred to herein as we, us, our, Hilton or the Company) is pleased to respond to the Public Company Accounting Oversight Board's (PCAOB) Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements (the Concept Release).

Hilton is one of the world's largest lodging companies based on system-wide room count and is engaged in the ownership, leasing, management, development, marketing and franchising of hotel, resort and timeshare properties. The Company was formed through the acquisition, in 2006, of Hilton International Company by Hilton's predecessor Hilton Hotels Corporation, which was subsequently acquired by a private equity fund in 2007. As of June 30, 2011, our system included over 3,700 hotels and resorts, totaling 611,000 rooms in 85 countries and territories.

While Hilton is currently a private company domiciled in the U.S. and not currently registered on any securities exchange, we may, at some point in the future, be a registrant. We, therefore, review the implementation of all guidance in a manner that would allow us to report under public company guidelines.

Based on the questions raised by the PCAOB Release No. 2011-003, our comments focus on certain key questions, and provide a discussion on key concepts within each section of the questions raised. Our responses are as follows:

**Questions:**

2. *The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of opinion is sometimes referred to as the "pass/fail model."*

a. *Should the auditor's report retain the pass/fail model? If so, why?*

The pass/fail model should be retained for public companies. Due to the wide range of potential users of public company financial statements, the statements should either be fair and acceptable for filing with the SEC or not. The pass/fail model allows users to have a clear understanding of whether there is risk in using the information contained in the financial statements. A graduated model would put much more burden on the users to interpret what a specific grade would mean as related to a company within a specific industry

HILTON
WORLDWIDE

and within a specific geographical operating area. This would inevitably lead to a lower level of trust on the reliance of financial statements overall. A clear pass/fail model allows the investment community and users of the financial statements to place comparable reliance when evaluating companies' quarterly and annual financial reporting. We believe moving away from this model would result in decreased confidence by all engaged constituents, thereby undermining reliability of the financial reporting of companies within the U.S.

b. *If not, why not, and what changes are needed?*

N/A

c. *If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.*

We believe the current model best serves users of financial statements and the public. Departure from the pass/fail model may result in audit reports that are misunderstood, to the detriment of an unsophisticated user or the issuer. Additionally, the departure would put more burden on the user to assess the level of reliance that could be placed on financial statements issued in the U.S. This could result in U.S. companies being disadvantaged as compared to Companies reporting in other countries. We do not believe changes to the report or supplemental reporting would be beneficial but instead may cause confusion and create subjective and inconsistent interpretation of financial results of Companies.

**III. Potential Alternatives for Changes to the Auditor's Report**
**A. Auditor's Discussion & Analysis (AD&A)**

We do not believe that an AD&A will increase transparency and provide further context to an investor's understanding of a company's financial statements and management's related discussion and analysis. As identified by the Board in its Concept Release, because an AD&A provides the auditor's perspectives about the audit and the issuer's financial statements, the perspectives in the AD&A on certain matters could differ from those that management has provided in the Management's Discussion & Analysis (MD&A). The presentation of differing views (both of which presumably would be acceptable under US GAAP and result in an unqualified audit opinion) would needlessly detract from investors' and other financial statement users' confidence in management and/or reliance on the financial statements. As such, an AD&A may cause users to decrease their reliance on information provided by management which we believe is an unintended consequence of the concept release.

Potentially requiring auditors to comment on certain topics (below) may result in the presentation of financial information not reported by management:

- Critical accounting estimates, assumptions underlying the estimates and how susceptible the estimates are to change

HILTON
WORLDWIDE

- Critical accounting policies including a discussion of permissible alternative accounting treatments, ramifications of the use of such alternative disclosures and treatments, and the treatment preferred by the auditor
- Material matters that are in technical compliance with the applicable financial reporting framework but, in the auditor's view, disclosures could be enhanced or those areas where the auditor believes management could have applied different accounting or disclosures.

These suggestions would represent a fundamental shift in the current roles of management (preparer of financial information) and its auditors (attest). Such changes would further confuse users and raise legal questions regarding who is responsible for all of the audited information in filings with the Securities Exchange Commission (SEC). Allowing the auditor to provide commentary in this manner that may differ from the information presented by an issuer would undermine the reliability and quality of the financial statements.

Further, the public presentation of the AD&A reduces the authority of audit committees who currently receive, have oversight, and engage in dialogue over such matters with the auditors and management. Investors rely on the audit committee to review the financial statements and related information prepared by management in light of the required auditor communications. The authority and governance of the audit committee could be seen to be undermined when auditor communications are presented to the larger audience served by the audit committee. Investors wishing for further clarity have the ability to consult the audit committee and/or management. Information provided in the AD&A may be taken out of context by the broader audience, and could provide users of the financial statements with information the issuer does not agree with and may be misleading.

The AD&A would also add significantly to the financial reporting timeline as a result of increased review time by the auditors, and increased review and sign-off by national office. This process would be costly to companies and their shareholders, without providing the intended benefits of reliability and transparency.

**B. Required and Expanded Use of Emphasis Paragraphs**

This proposal is to expand emphasis paragraphs to highlight the most significant matters, and possibly provide additional information on significant management judgments and estimates, areas of significant measurement uncertainty and other areas of importance determined by the auditor.

We believe this places the onus on the auditor to determine those significant matters necessary to understand the financial statements, which if different from what Management has focused on, could undermine the credibility of financial statements prepared by Management. In addition, significant accounting policies are required disclosures, which highlight Management's use of estimates and the underlying principals under which such financial statements are prepared and presented. Any changes deemed necessary should not be addressed in an emphasis of matter paragraph, but should rather follow revisions to current standards under which companies report.

HILTON
WORLDWIDE

In addition, when the auditor emphasizes only certain notes to the financial statements, financial statement users may focus solely on the information referenced by the auditor. All notes included in the financial statements are required under the financial statement reporting framework and are integral to the financial statements taken as a whole. If auditors emphasize only certain portions of the notes to the financial statements, users may be misguided.

Emphasis paragraphs may require the auditor to comment on key audit procedures performed related to the matters emphasized. For non-auditor users of the financial statements to obtain value from such a discussion, the language would have to be very detailed and precise, limiting its effectiveness. Such information could also become boilerplate over time. In addition, key audit procedures are currently communicated to the audit committee which has the responsibility to oversee the audit process.

**C. Auditor Assurance on Other Information Outside the Financial Statements**

We do not believe that an auditor providing assurance on information outside of the financial statements will improve the quality, completeness, and reliability of such information, or provide investors and other users of financial statements with a higher level of confidence in information about the issuer than that which is provided by management. As the Concept Release noted, an auditor's current "responsibilities include reading and considering whether such information or the manner of its presentation is materially inconsistent with the financial statements or represents a material misstatement of fact." As such, auditors currently perform procedures to review the information outside of financial statements and reconcile that information to the audited financial statements. Also noted within the Concept Release was the existing attest standard whereby an auditor engaged to attest on MD&A would express an opinion on the MD&A presentation. However, in our experience such engagements are not utilized, which indicates that investors and financial statement users do not find substantial added value when attestation reports on MD&A are issued.

The MD&A is required to conform to the rules and regulations adopted by the SEC, and the SEC performs reviews of companies' filings to monitor such compliance. We believe requiring auditors to attest on the completeness of the MD&A may not provide incremental value since this task is executed by the SEC and may be seen to represent only incremental effort and cost to investors.

Lastly, when registrants issue securities, underwriters require comfort letters from the registrants' auditors. Such comfort letter procedures would appear to duplicate certain procedures auditors would perform to provide assurance on information outside of the financial statements. This would be inefficient and costly to the registrant. However, it appears that such duplicate procedures would continue to be performed if this alternative were to be put in effect as the level of assurance gained from a comfort letter versus the opinion would be different.

**D. Clarification of the Standard Auditor's Report**

We do not have any concerns with clarifying language being added to the auditor's report. However, the expanded wording could result in the auditor's report becoming lengthy and cumbersome. We believe the report should remain concise and easy for investors to determine quickly the "pass/fail" nature of the auditor's opinion. In addition, the possible language that could be clarified in the auditor's report is fully described in PCAOB standards that are readily available at no cost to the public.

We appreciate the opportunity to comment on this Concept Release. We would be pleased to discuss our views with you at your convenience.

Very truly yours,

/s/ Paula A. Kuykendall

ILLINOIS CPA SOCIETY.

September 30, 2011

Office of the Secretary
PCAOB
1666 K Street, N.W.
Washington, D.C. 20006-2803

Dear Board Members:

The Audit and Assurance Services Committee of the Illinois CPA Society ("Committee") is pleased to comment on the Concept Release on Possible Revisions to PCAOB Standards Related To Reports On Audited Financial Statements (Docket Matter No. 34) dated June 21, 2011. The organization and operating procedures of the Committee are reflected in the attached Appendix A to this letter. These comments and recommendations represent the position of the Illinois CPA Society rather than any members of the Committee or of the organizations with which such members are associated.

***Executive Summary***

Our Committee is in favor of adding clarity to the auditor's report so that the responsibilities of the auditor, management and the audit committee are better understood by financial statement users. As described further in the following responses, our Committee is opposed to any mandatory expansion of the auditor's role into areas that we believe are the responsibility of management. Accordingly, we oppose a requirement to include an AD&A and have certain reservations regarding the required use of expanded emphasis of matter paragraphs and auditor reporting on information outside of the financial statements.

1. *Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.*
   a. *Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?*

      Yes. If investors or other users feel the current reporting model is becoming less relevant, then the Board should seek to increase the auditor's relevancy and communication to them. However, extreme caution should be exercised so that the objective of the initiative and resulting standards solely improves relevancy and communication of the auditor and the results of the audit. We believe many of the potential changes described in the concept release have the ultimate impact of shifting the responsibility of due diligence about an entity for investment purposes from the investor to the auditor; or shifting the responsibility for full financial statement disclosure and analysis about significant matters from management to the auditor. Transferring these responsibilities must be avoided as it could lead to an adverse effect on the

ILLINOIS CPA SOCIETY

credibility of financial reporting and ultimately impair the auditor's objectivity and independence as well as its ability to perform a cost-effective audit in a timely manner. Further, many of the potential changes in the concept release seem to change the definition of an audit. If changing the definition of an audit is the desire of the Board, the Board should consider exposing a specific model describing such changes rather than having such overarching changes to auditor responsibility be an unintended consequence of this proposal.

b. *In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?*

As further described in our responses to Questions 21 and 22, we believe that the language in the auditor's report could be clarified. Also as further described herein, we believe that management should be responsible to provide much of the additional information that investors and others claim they need by means of additional note disclosures in an entity's financial statements or expanded MD&A requirements. Auditor reporting should continue to primarily focus on communicating whether the auditor considers the financial statements are presented fairly, in all material respects, in accordance with the applicable financial reporting framework.

c. *Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?*

In general, the Committee is not opposed to mandatory auditor reporting on information outside of the financial statements as long as there is appropriate, objective guidance on how the auditor is to accomplish such reporting. We believe, in particular, that one reporting option should include a report that simply indicates the auditor's current AU 550 responsibility in regards to information outside of the financial statements.

2. *The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."*
   a. *Should the auditor's report retain the pass/fail model? If so, why?*

   While we do not necessarily agree that the characterization of the current model of reporting as simply "pass/fail" is appropriate, we do believe that the auditor's report should retain the current model. Changing the model would result in ambiguous auditor opinions that could easily be misinterpreted by the users of the financial statements. The current model provides consistency and comparability in opinions.

We do note that the current model of reporting provides for numerous variations in reporting, such as scope limitations, departures from generally accepted accounting principles and adverse opinions. We believe the variety of responses provided for in the literature is sufficient to cover the needs of users.

b. *If not, why not, and what changes are needed?*

Not applicable based on prior response.

c. *If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.*

As set forth in our answers to Questions 21 and 22 herein, the clarification of language in the standard auditor's report could be appropriate. However, although we agree with the Board's suggestion for clarification to include an enhanced discussion about the "auditor's responsibility for fraud," we also believe that the discussion of "management's responsibility" should also include a statement that management is ultimately responsible for the prevention and detection of fraud.

3. *Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g. management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.*

As stated throughout our response to the Concept Release, management and the audit committee members are the most appropriate parties to provide additional information to financial statement users regarding the entity's financial statements. They are intimately involved with the business on a day-to-day basis and have knowledge of all information affecting it, including business risks, strategic risks, and operational risks.

4. *Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?*

ILLINOIS CPA SOCIETY

Based upon our answers to the questions throughout this document, the current guidance included in Auditing Standards No. 5 is appropriate when an auditor is engaged to perform an audit of management's assessment of the effectiveness of internal control over financial reporting that is integrated with an audit of the financial statements. We do not support the reporting alternative that includes an AD&A and therefore, we believe that no changes to Auditing Standards No. 5 are necessary.

***Auditor's Discussion and Analysis***

Our Committee does not believe that the Board should consider an AD&A as a means of providing additional information to the auditor's report.

If additional information is needed specifically for investment decisions, it should be prepared and presented by management to the extent that current or revised disclosure rules require or as management deems appropriate. Relevant investment information is readily and easily available from a variety of different sources, such as company web sites, company press releases, company investor calls, industry publications and web sites, and the like that would be appreciably more useful to investors than information provided in regards to historical financial statements by the auditors. These other communication vehicles could provide management a means to enhance relevant information to investors.

One of the basic underlying principles of auditing is that the auditor performs audit services for the benefit of ALL of the people, not necessarily or specifically for one group, e.g. the investment community. Furthermore, the auditor stands between management and the investment community and must be viewed as independent of each. The auditor should not be viewed as an advocate of either party. In addition, auditing standards should not force the auditor into a position of addressing investment risk. While the auditor's role certainly includes a focus on investor protection, that role is, as it should be, limited to assessing management's historical financial statements' compliance with the appropriate financial reporting framework. Auditors do not have the necessary training or experience with investment principles to best determine what information is most appropriate to an investment decision.

The investment community, in its desire for enhanced auditor reporting, such as the reporting considered in an AD&A, appears to be attempting to shift its own investment due diligence responsibilities to the auditor.

In addition, we believe that the incremental cost of providing the type of information proposed for an AD&A could be substantial in terms of efforts by the auditor, efforts by management in 'negotiating' with the auditor the extent of the AD&A disclosures, timeliness of reporting and ultimate financial burden to the company.

5. *Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?*
   a. *If you support an AD&A as an alternative, provide an explanation as to why?*

The Committee does not support AD&A as an alternative.

b. *Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?*

As described above, our Committee does not support an AD&A alternative. The responsibility of providing additional information about a company's financial statements should reside with the company itself. As described in other parts of this response letter, to provide audit-related comments in sufficient detail to be well understood by readers who are not educated and experienced with the audit process is impractical.

c. *Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?*

Information about how management views its financial statements and the risks it faces in operating its business are inherent in the estimates it makes to prepare those financial statements would be relevant and useful in making investment decisions. However, as described above, we do not believe it is the auditor's role to provide such information.

d. *If you do not support an AD&A as an alternative, explain why?*

We do not support an AD&A as an alternative for providing additional information in the auditor's report. The Concept Release suggests that the intention of having an AD&A is to facilitate an understanding of the auditor's opinion on the financial statements taken as a whole. We believe that the current auditor's report is quite clear as to whether the auditor considers management's financial statements are presented fairly in all material respects in conformity with the applicable financial reporting framework. Further explanation of that opinion would necessitate significant additional guidance in the auditing standards to provide the auditor with instructions as to what particular aspects to consider in this explanation and how to describe such matters. Absent such guidance, the auditor would be asked to incur significant litigation risk by determining, on its own, what matters should be considered and described. Ultimately, this atmosphere will create additional market turmoil and distrust, the very environment the PCAOB wants to avoid with the current Concept Release. Management, and not the auditor, is responsible for the financial statements. As described, the AD&A appears to place responsibility for interpreting the financial statements with the auditor or, at a minimum, place the auditor as an investment analyst.

Auditing is an art, not a science. Auditors form their opinion on the financial statements based on judgments that require an evaluation of many relevant factors at one time. These factors include information widely available to the public, such as the

ILLINOIS CPA SOCIETY

general economic environment and industry climate, as well as factors specific to the company, such as corporate culture, management's operating style and competency, the specific findings from auditor procedures and auditor inquiries.

The judgments auditors form are so involved that to explain only specific portions of the audit in the AD&A will lead to more investor confusion, incorrect expectations and misleading conclusions. Audit risk and procedures performed as a response to those risks require years of training and experience to properly understand and assess. Most users of the financial statements do not have experience performing audits to determine whether the audit judgments are appropriate or comparable between entities - even between entities in the same industry or of the same size. A proper audit response will be different for two entities in the same industry because of the totality of each entity's specific processes, internal controls, culture, strategy, and people. For example, auditors may correctly designate different risks for two different companies in the same industry, located in the same city, operating under similar economic and other conditions because one of the two companies has highly qualified professionals using well designed and operating internal controls while the other may not. These differences do not necessarily translate into one company's audited financial statements being any more or less reliable than the other's. If both sets of financial statements received unmodified auditor's reports, then the investor has reasonable comfort that – regardless of the specific risks to each company – the audited financial statements are fairly stated in all material respects in accordance with the appropriate financial reporting framework.

An AD&A cannot realistically present the myriad of nuances involved in making auditor judgments, particularly without providing the audited company with too much insight into the audit process, including fraud procedures and rotation of audit procedures. The Concept Release states the AD&A is "not intended to provide separate assurance" on the financial statements. However, the typical investor could easily believe that the auditor is, in fact, providing incremental assurance or doubts as to the financial statements by its comments in an AD&A. Investors struggle with understanding the meaning of an audit opinion as is. Adding this additional requirement will likely increase the expectation gap. This confusion might also be compounded by making this AD&A requirement only applicable to U.S. public companies. Users of financial statements of non-U.S. and/or private companies will be less certain that the auditor's role is as robust in those circumstances and thereby reduce investor confidence.

Additionally, the AD&A requirement may add tension between management and the auditor. The AD&A adds an element of management bargaining with the auditor to limit its disclosures in the AD&A – almost all of which will serve to heighten investor concern about the company. Such bargaining might include management changing what it otherwise believes to be appropriate accounting or disclosure to appease the auditor in an effort to avoid adversarial auditor disclosures in the AD&A.

ILLINOIS CPA SOCIETY

Ultimately, AD&A disclosures regarding estimates in the company's financial statements will allude to the likelihood of future events and trends. The auditor should not be in a position – even if just in appearance – to comment or provide any assurance on such forward-looking matters, unless specifically engaged to report on projections in a restricted report.

e. *Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?*

Alternatives already exist for the auditor to provide its more detailed assessment of management's financial statements, including consideration of internal controls, acceptability and appropriateness of selected accounting policies, critical accounting policies and the like. PCAOB standards require such communications between the auditor and the company's audit committee. As management is typically present when such communications are made, either the audit committee or management can leverage those communications into whatever public disclosures they deem necessary or are required by current or revised SEC or financial reporting framework standards. We note that the two-way dialogue explicit in the auditor/audit committee communication is critical to its complete understanding by all parties. Trying to put such communications into an AD&A is not feasible. As such, we suspect that it would be similarly difficult for management to make public disclosures regarding some of the auditor/audit committee communications. However, if the investors demand additional information in this regard, we believe that enhanced accounting and footnote or other disclosure requirements to which the company would be bound might serve that objective.

6. *What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?*

Overall, we do not support the addition of an AD&A. However, if the AD&A is incorporated into professional standards, it should focus on items that the auditor noted of relevance, not those items deemed to be relevant from management's point of view. Items in this category include independence issues and any disagreements with management and their resolution. An AD&A should not include items considered audit team judgments requiring an auditor's breadth and depth of knowledge and experience to understand. Such matters include audit team decisions, audit risks, and audit procedures. Furthermore, auditor disclosure of some of these matters could jeopardize the effectiveness of future audits by informing management of the auditor's plan.

7. *What types of information should an AD&A include about an auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and procedures, and difficult or contentious issues, including "close calls")?*

ILLINOIS CPA SOCIETY

Overall, we do not support the addition of an AD&A. As described above, we believe that the auditor's overall view on the company's financial statements is already clearly articulated in the current standard auditor's report. Publicly providing more detailed views could be interpreted as adding piecemeal qualifications of the auditor's overall opinion on the financial statements taken as a whole. Such auditor disclosures could also be perceived to impact its independence. An AD&A should not include the auditor's views or opinions of the financial statements because it may leave an impression that the auditor "approves" all items not specifically mentioned in the AD&A. "Close calls" should not be disclosed as it would not be practical to adequately explain the full spectrum of information used in the judgment. As such, investors will interpret items out of context and potentially make inappropriate investment and other decisions, particularly if they compare auditor comments between companies and even between periods.

8. *Should a standard format be required for an AD&A? Why or why not?*

   Regardless of whether or not a standard AD&A format is released, audit firms will gravitate to a common presentation within their own firm and amongst each another – perhaps even as a means to be able to issue the financial statements timely. Firms will want to work together to find a similar method for communicating the AD&A in an effort to minimize perceived litigation risks associated with such disclosures. Investors will more readily understand a common format and consistent wording if the AD&A is standardized. Additionally, there is less risk of an auditor being scrutinized only because its AD&A is formatted or worded differently.

9. *Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?*

   The benefit of increased information for investors is enhanced decision making ability. However, an AD&A, in this capacity, will expand the responsibilities and role of an auditor while reducing those of management. Allowing management less culpability will only increase the likelihood of corporate corruption and investor insecurity. The auditor is not in the best position to provide this information; management and the audit committee should communicate such matters. Management best understands the entity and its operating environment. To a certain extent, some of this information should remain confidential within the company. Companies are at a distinct disadvantage if they have to disclose business and operational risks to competitors that are not public registrants. Ultimately, such AD&A disclosures may dissuade U.S. security market participation.

10. *How can boilerplate language be avoided in an AD&A while providing consistency among such reports?*

    We hypothesize that firms will adopt boilerplate language as described above.

11. *What are the potential benefits and shortcomings of implementing an AD&A?*

ILLINOIS CPA SOCIETY

As indicated throughout our response, we see minimal, if any, benefit and significant shortcomings in this proposal. An additional shortcoming is the likely continued overreliance by the user community on the literal wording in the financial statements as opposed to users utilizing their own knowledge and experience in reading and analyzing management's financial statements and commentary, including the MD&A. Additionally, the AD&A will increase the cost of an audit and the time it takes to provide investors with the audited financial statements.

12. *What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?*

    The AD&A could provide competing views of the financial statements. The differences in disclosures will reduce investor's confidence in management and create an adversarial relationship and atmosphere between the auditor and management. This tension is already apparent even in the auditor's communications with the audit committee whereby management often tries to dissuade auditors from raising potentially concerning matters with the audit committee. Additionally, AD&A disclosures could confuse investors and decrease the credibility of audit opinions in general.

***Required and Expanded Use of Emphasis Paragraphs***

In general, the consensus of the Committee is that the required and expanded use of emphasis paragraphs, while providing another means to highlight and reference certain matters that are deemed significant to the financial statements, will not necessarily provide a user of the financial statements with appreciably more information than is already provided in current financial reporting. Having the auditor make such highlights and references in its report does indicate what another informed constituent believes is significant to the financial statements, but the matters that are likely to be highlighted will already be described in the U.S. GAAP compliant financial statements and related disclosures, Management's Discussion and Analysis (including Critical Accounting Policies) and elsewhere in current reporting. In many if not most cases, the matters that an auditor would highlight in its report will not be different than the matters management describes in fulfilling its responsibility in preparing such reports.

A strong consensus of the Committee was that any required or expanded use of emphasis paragraphs should not include a discussion of audit procedures performed by the auditor in regards to the matters described therein. It is impractical to expect the whole body of audit procedures that serve to mitigate audit risk in any single particular area to be adequately described in such paragraphs and incomplete descriptions (which will result particularly if the requirement is to describe only *key* procedures) will only serve to cast doubt in a reader's mind as to the adequacy of such procedures. For this and several other reasons, the Committee is opposed to any requirements to describe audit procedures.

ILLINOIS CPA SOCIETY

13. *Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?*

Yes. However, the description of such matters in the auditor's report would necessarily not be sufficiently comprehensive to provide adequate information to help make such decisions. As the auditor's report would also reference further descriptions of the identified matters, the report merely acts as a cross reference guide to information that should otherwise already be more detailed in the footnotes and elsewhere in the filing. It can certainly be envisioned that the auditor's description of such matters in its report may contain incremental information about the matter that is not part of the required disclosure under US GAAP; however, such limited incremental information is not likely to completely address the matter in any case.

14. *Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?*

The Committee is not convinced that providing highlights of matters deemed to be significant to the financial statements will appreciably serve the purpose of better informing readers of the financial statements. If such a requirement is mandated, it must be flexible enough to allow adequate auditor judgment as to what matters to include in these paragraphs, including not describing any such matters if none are deemed significant to warrant more heightened identification.

If such a requirement is not mandated, there is a risk that audit committees, when selecting their independent auditing firm, begin to consider whether an auditor does or does not routinely include such paragraphs in its reports.

As described above, the Committee is opposed to describing any audit procedures in the emphasis paragraphs or any other communication.

15. *What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?*

In addition to the matters included in the illustrative emphasis paragraphs (excluding key auditing procedures) and as already provided as examples in current PCAOB standards, other matters that an auditor might consider identifying include significant non-routine transactions, selection of alternative new accounting policies or practices that might have significant alternative impacts, changes in prior period estimates that resulted in a significant impact on earnings and that the audit process does not mitigate all risk that future events and developments will not result in material adjustments in the financial statements.

ILLINOIS CPA SOCIETY

The level of detail in which to describe such matters should be limited to objective facts and only a brief description sufficient to provide a basic understanding of the applicable matter and a specific reference to the footnote where more comprehensive detail can be found. Auditor judgment will be required as to whether specific account balances, if applicable, are required to convey that basic understanding. A requirement for the auditor to specifically describe the particular risks that a specific matter might raise in the financial statements would necessitate lengthy descriptions and potentially dilute the confidence in the auditor's overall opinion regarding the financial statements taken as a whole.

16. *What is the appropriate content and level of detail regarding the matters presented in the required emphasis paragraphs?*

See above response 15.

17. *How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?*

With the potential conflicts that might arise between auditors and management about the descriptions of matters in this paragraph and the litigation risk that auditors will try to avoid, it is difficult to contemplate that a certain amount of the language will not become boilerplate. It is possible that the resulting boilerplate language will adequately provide the required information and thereby not be a detriment. Unique matters that effect different companies' and different industries' financial statements should naturally prompt unique descriptions in some areas. The more prescriptive the Staff's requirements are (and some prescription will be required to drive some appreciable level of consistency as to what descriptions are required), the greater the tendency to become boilerplate.

18. *What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?*

Potential Benefits:

- Highlighting matters the auditor considers significant to the company's financial statements will provide readers with direction on where to focus their attention
- Footnote disclosures may improve if auditors insist or encourage additional description of the matters in the footnotes to avoid lengthy descriptions in the auditor's report
- Simply describing the significant matters should not significantly increase efforts or cost of auditing the financial statements
- Potential decreased liability to companies and auditors as significant matters are more prominently highlighted and less likely to be overlooked by users of the financial statements.

ILLINOIS CPA SOCIETY

Potential Shortcomings:

- Increase conflicts between auditors and management in regards to what matters to disclose and how they are described in the auditor's report
- Potential dilution of the confidence of the auditor's opinion on the financial statements as a whole due to the highlighting of risk areas
- Determining what and how to disclose matters in the auditor's report and discussing those decisions with management and audit committees may appreciably increase auditor efforts and audit costs and delay financial statement issuance.
- Duplication of descriptions in the footnotes and/or other parts of the periodic reports will decrease the effectiveness of the proposed model
- Potential increased liability to companies and auditors if matters not included in recent reports eventually have significant adverse impact on investors

***Auditor Assurance on Other Information Outside the Financial Statements***

In general, the Committee is not opposed to mandatory auditor reporting on information outside of the financial statements as long as there is appropriate, objective guidance on how the auditor is to accomplish such reporting. We believe, in particular, that one reporting option should include a report that simply indicates the auditor's current AU 550 responsibility in regards to information outside of the financial statements.

19. *Should the Board consider auditor assurance on other information outside of the financial statements as an alternative for enhancing the auditor's reporting model?*
    a. *If you support assurance on other information outside the financial statements as an alternative, provide an explanation as to why.*

       Auditor assurance on other information outside of the financial statements would provide users some additional comfort regarding the completeness and appropriateness of the information presented as compared to the SEC or other requirements for disclosure of such information. However, this auditor reporting must stop short of providing the auditor's detailed views on the company's financial statements and of describing audit procedures. The auditor reporting must be limited to no more than an examination or review of the other information, generally as contemplated by AT Sec. 701 for auditor reporting on MD&A.

    b. *On what information should the auditor provide assurance e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why?*

ILLINOIS CPA SOCIETY

Auditor reporting should be limited to financial statement-related information. However, great care must be taken not to associate auditor reporting on information that includes forward looking statements or expectations. Even limited auditor assurance on such areas of information can be inappropriately perceived as the auditor providing its views on such forward looking statements or expectations. In any case, applicable auditing standards would need to be developed to provide guidance to auditors as to how to accomplish the required reporting (other than for MD&A). We also recommend that auditor reporting on other information outside of the financial statements be available, but not required in most circumstances.

c. *What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?*

The level of assurance contemplated in AT Sec. 701 appears appropriate, or, as suggested in the introduction to this section of our response, assurance equivalent to the current AU 550 requirements can be provided.

d. *If the auditor were to provide assurance on a portion of the MD&A, what portion or portions would be most appropriate and why?*

As the current MD&A requirements contemplate significant forward looking statements and expectations, it does not seem appropriate to mandate auditor reporting on all of MD&A. However, the Critical Accounting Policies and Contractual Obligations section of MD&A is generally important to investors and could be subject to auditor reporting. Additionally, reporting on strictly historical comparisons of operating results and liquidity could be possible.

e. *Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, why?*

The Committee does not believe auditor reporting will significantly affect the nature of MD&A disclosures. Management is already aware of the auditor's responsibility to read the MD&A and consider whether such information or the manner of presentation is materially inconsistent with the financial statements or represents a material misstatement of fact. However, we do believe that specific reporting on MD&A could prompt management to better comply with the spirit of MD&A disclosure requirements thereby improving the final product.

f. *Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?*

We do believe that the current requirements are sufficient. As described above, reporting only on auditor responsibilities as contemplated under AU 550 would also be appropriate.

ILLINOIS CPA SOCIETY

g. *If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why?*

Management is responsible for information presented in MD&A, earnings releases, and other communications about their company and that responsibility should not be shifted in any way to the auditor. Management should be responsible to its investors first and foremost. However, as long as auditor reporting on such information is limited as described above and does not serve to shift responsibility, the Committee is not opposed to certain mandatory auditor reporting on such information.

20. *What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?*

Potential benefits

- Investors gain incremental comfort in the other information because of the auditor's reporting thereon
- Users would be more conscious of the auditor's requirement to review MD&A for consistency with the audited financial statements
- Filers may become more conscientious in preparing their filings

Potential shortcomings

- Increased audit effort and increased fees
- Increase time to release the filing because of the additional procedures
- Decrease in market participation due to the prior shortcomings
- Possibility that investors assume more auditor assurance than is actually given on such information
- Increased responsibility and increased legal liability for auditors

***Clarification of the Standard Auditor's Report***

In general, the consensus of the Committee was that clarification of the standard auditor's report is appropriate. Information that might enhance a financial statement user's understanding of the audit process and auditor's, management's and the audit committee's roles in regards to the audited financial statements would be beneficial. We concur with the specific items that the staff suggests might be clarified, subject to two caveats. First, the clarifications will need to be succinct so as not to lengthen the standard auditor's report to an extent that it distracts the reader from the auditor's opinion on the financial statements. Second, the clarifications will need to be worded such that they do not read as if the auditor is attempting to relinquish or diminish its responsibilities to accurately report on the financial statements.

Another alternative, or perhaps a supplemental alternative, is for the auditor's report to provide a cross reference to a more complete description of what a public company auditor's role and

ILLINOIS CPA SOCIETY

responsibilities are and what level of assurance a compliant audit might provide. The referenced materials can be either a standard exhibit in all filings or available to the general public on a free basis from a named web-site.

21. *a. Do you believe some or all of {the clarifications described in the concept release} are appropriate? Is so, explain which of these clarifications is appropriate? How should auditor's reports be clarified?*

We agree that each of the noted matters should be clarified in the standard auditor's report. We make reference to the Center for Audit Quality's June 9, 2011 letter addressed to Mr. Martin Bauman of the PCAOB. The clarifications of these matters provided in the example standard auditor's report in that letter are adequate – both succinct and appropriately tailored to not appear to diminish the auditor's responsibilities. That example report also provides clarity as to a) the audit committee's responsibility for financial statements, b) the audit firm network structure and related matters, c) what is meant by 'material misstatement' and the auditor's general approach to determining 'materiality', d) the auditor's professional judgment in making audit risk assessments and in selecting audit procedures, e) the auditor's responsibility if the financial statements are not in accordance with the appropriate financial reporting framework or when audit scope has been limited and f) the addressees of the report. We have no objections to clarifying these matters or the manner in which the example report does so.

21. *b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not?*

These clarifications would serve the indicated purpose. As noted above, an even more comprehensive description of these matters as cross referenced from the auditor's report would be even more valuable (absent undue length which might reduce its impact). The more financial statement users understand about the public company auditor and its responsibilities in regards to the audited financial statements, the more informed they will be as to the level of assurance the auditor provides in its report as to the fair presentation of the financial statements. While this incremental understanding does not necessarily translate into a better understanding of what risks might reside in those financial statements, it nonetheless allows the user to better appreciate how the auditor may have addressed such risk as part of its audit.

21. *c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?*

See responses above. In addition, although we agree with the Board's suggestion for clarification to include an enhanced discussion about the "auditor's responsibility for fraud," we also believe that the discussion of "management's responsibility" should also include a statement that management is ultimately responsible for the prevention and detection of fraud.

21. *d. What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?*

We do not believe the clarifications described or referred to above would significantly impact the scope of the audit or the responsibilities of the auditor.

22. *What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?*

Potential Benefits:

- Enhanced understanding by audited financial statement users of the differing roles and responsibilities between management, audit committees and auditors in the presentation of those statements
- Enhanced understanding by audited financial statement users of the audit process and the level and areas of assurance provided in an auditor's report

Potential Shortcomings:

- Either the additional length of the auditor's report necessary to more fully clarify its terms and other matters or the need to obtain and read a separate document
- In an attempt to cover all areas of importance, the clarifications are truncated to reduce length, thereby reducing – rather than increasing – clarity
- Reduced focus on the auditor's opinion regarding the financial statements

***All Alternatives***

23. *The concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alterative is most appropriate and why?*

Our Committee believes the most appropriate alternatives are clarification of certain language in the auditor's report and potentially the expanded use of the emphasis paragraphs in the auditor's report. We believe that the current "pass/fail" model of reporting continues to be the best method to communicate the auditor's conclusion. Therefore, clarification of the terms used in the report and the concepts and limitations of the auditor's opinion would be helpful to the users of the financial statements. We also believe that expanded use of the emphasis paragraph could improve the auditor's report by directing users of the statements to footnotes where management describes issues that are essential for the reader to be aware of when evaluating the financial information. We believe that expanded

ILLINOIS CPA SOCIETY

footnote and other management-provided disclosures that provide more completely the information that investors are requesting is the best way to inform the reader of risks related to the financial statements.

24. *Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?*

See prior response. We believe that a combination of clarification and an expanded use of the emphasis paragraph would be the best combination of improving auditor communication.

25. *What alternatives not mentioned in this concept release should the Board consider?*

The historical approach to communicating the auditor's findings through a "pass/fail" auditor's report continues to be an acceptable overall approach.

Should one of the alternatives described in the Concept Release or a combination of them and/or other alternatives become PCAOB standards, the Board might consider whether any of them should be limited to only specific issuers – for example, just for large accelerated filers or just for issuers in certain industries.

26. *Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?*

Auditors are not and should not be financial advisors; therefore, reporting frameworks should be based on a concept that the auditor tested management's financial information. The conclusions of the auditor should be easy for a reader to clearly understand and be based on independently verifiable evidence. This basic concept precludes an auditor from giving its perspective on the reasonableness of information provided in MD&A that cannot be independently verified.

27. *Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?*

Our Committee believes that users could perceive that the auditors are providing a qualified or piecemeal opinion such as:

- The AD&A discussion of audit issues changes the users' perception of the value of the auditor's opinion.

ILLINOIS CPA SOCIETY

- A report that includes multiple emphasis paragraphs could also devalue the auditor's opinion.
- The auditor reporting on other information could be perceived, when combined with the auditor's report, as a piecemeal opinion.
- The clarification of terms in the auditor report reach the level that it appears the auditor is attempting to diminish its responsibility and/or lengthens the report to the point it becomes unreadable.

The Board should remain cognizant of the fundamental principles on which an auditor's opinion is based. Any changes to the auditor's reporting model should continue to emphasize auditor independence from management and be based on information obtained through auditor procedures.

28. *Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey? What is the basis for your view?*

Further clarification in the auditor's report of the auditor's role in the performance of an audit could, if properly written, convey a better understanding of the auditor's role to the users of financial statements.

The other alternatives could lead the user to the conclusion that the auditor's opinion has too many caveats and therefore cannot be relied upon.

29. *What effect would the various alternatives have on audit quality? What is the basis for your view?*

AD&A and auditor's reporting on other information could reduce audit quality since management and the audit committee would be more guarded about sensitive information because of the risk that the auditor's interpretations of the facts would be reported to the public. Such measures could lead to a) less open discussions between the auditor, management and the audit committee about significant audit issues and b) more boilerplate disclosures in an attempt to avoid issues and limit litigation risk.

30. *Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisors, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports of other entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such exclusion.*

Our Committee has not formed an opinion on this question.

ILLINOIS CPA SOCIETY

31. *This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, affects on audit committee governance, liability considerations, and confidentiality.*

   a. *Are any of these considerations more important than others? If so, which ones and why?*

      All of these considerations are important. Attempting to identify the "most" important should not be seen as relegating the other considerations to an "unimportant" category. Perhaps the most important consideration is the credibility of the auditor's opinion. The "pass/fail" approach to providing an opinion on financial statements has been in place for decades for a good reason, it works effectively. Although different auditors interpret the "pass/fail" line at somewhat different points, and decisions such as a company's ability to continue as a going concern, remain subjective, there is a well-established framework within which a user of financial statements can have a significant level of confidence in the auditor's opinion.

      The Board's efforts to enhance the auditor's reporting model seem to focus primarily on the needs of users in the investment community. These users have a higher level of "competence" in evaluating information available to them from a myriad of sources in making investment decisions. The audited financial statements are a key, but not the only, component in making their decisions. As auditors expand the scope of information over which they opine, the question of competency to do so will be an element in how investors evaluate such information. As historical information more appropriately subject to the audit process becomes combined with forward-looking information which is less subject to that process, sophisticated users will begin to question the auditor's overall opinion on all information. This dilution of credibility would likely have the impact of cheapening the value of the auditor's opinion and ultimately, market confidence.

      The existing relationship between the auditor and management will also likely change significantly under certain of the options presented in this proposal. Currently, the auditor depends on ongoing, open, honest communications with management. Certain matters that impact the decisions that frame an auditor's opinion are shared by management because it understands much of that information – which may include confidential information as well as competitive information – will remain out of the public domain. Under the current model, there is proper and appropriate exposure to the audit committee and those charged with governance; and the "pass/fail" framework serves to protect the confidentiality where warranted. For example, assume that in the course of the audit, the auditor becomes aware of certain weaknesses in internal controls, and management is not required to obtain an auditor's report on controls. The auditor, under current auditing standards, is

ILLINOIS CPA SOCIETY

obligated to inform those charged with governance of his or her concerns about the impact those weaknesses might have on the presentation of financial statements and/or the conservation of the entity's assets. This creates a positive atmosphere wherein the auditors can express their concerns, and management can evaluate the seriousness of the auditor's concerns and take appropriate actions. This is a "win-win" situation for the auditor and management. However, in a scenario where such control weakness(es) are made public, there would be a win-lose or a lose-lose scenario. The open communication that both auditor and management need to identify and evaluate the control weakness(es) suffers in management's attempt to keep the issues private. The users of the financial statements are left to wonder how the control deficiency impacts their investment decision. More information is not always better information. And what happens when management has a response to the auditor's findings? What weight does the auditor give to that response in his report, and how does the user evaluate it? This becomes problematic and likely not useful information to the user.

Finally, cost and timing of the audit can only suffer from requiring additional efforts from the auditor, and exposing the auditor to increased liability.

b. *If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?*

The justification depends on the nature of the changes. A relatively simple change requiring the use of emphasis paragraphs in the auditor's report which functions like an "index" to information provided elsewhere in the financial statements and the accompanying disclosures, would not significantly increase costs and might be worth the additional information. Given the concerns we identified in our response to Question 31 a., above, we have significant doubts as to the cost justification for any of the other proposals. If credibility is harmed, as we suspect it would be, then <u>any</u> additional cost would not be justified.

c. *Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?*

Enhanced usefulness of financial statements is most likely to involve more meaningful disclosures within the financial statements and MD&A. Some of the current information required in these disclosures borders on the incomprehensible to many readers. The sheer volume of information can distract from the most important issues on which a user should be focused. One suggestion for enhancing disclosures would be to have a separate footnote that identifies all significant risks associated with use of the financial statements. This could include the sensitivity of certain key estimates, the impact on going concern should certain key assumptions not prove as positive as projected, etc. On the other hand, certain disclosures should be evaluated

ILLINOIS CPA SOCIETY

to determine if they could either be eliminated or reduced to convey only the most meaningful and relevant information to users.

d. *What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?*

The additional effort required to add the "financial statement risk" disclosure would likely be offset by reduction in other less meaningful disclosures. Any addition to the auditor cost becomes problematic due to competitive pressures in acquiring large audit clients. This price competition will not, in the long run, prove to be motivation on the auditor's part to improve the audit process.

32. *The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?*

We do not agree with the concept of the auditor providing additional information on the company's financial statements in auditor reporting. We do agree, as the release describes in detail, that there may be many practical challenges and unintended consequences that would result from additional auditor reporting. The working dynamics of the triangle of the auditor, management, and the audit committee is typically fragile at best, with each member of the triangle having its own direct responsibilities which at times may not be consistent with that of the other members. As a result, this additional information should not become a corroborative effort nor should it ever become an integrated type of reporting method. The nature, timing, cost, content and extent of the additional information would most certainly weigh heavily on the interaction of the auditor, management, and the audit committee. As we have previously indicated, any additional information regarding the company's financial statements that is to be required should not be included in the auditor's report but rather should be included in expanded note disclosure and /or expanded MD&A required topics of discussion, both of which are management's responsibilities.

The Illinois CPA Society appreciates the opportunity to express its opinion on this matter. We would be pleased to discuss our comments in greater detail if requested.

Sincerely,

Kevin V. Wydra, CPA

ILLINOIS CPA SOCIETY

APPENDIX A

AUDIT AND ASSURANCE SERVICES COMMITTEE
ORGANIZATION AND OPERATING PROCEDURES
2011 – 2012

The Audit and Assurance Services Committee of the Illinois CPA Society (Committee) is composed of the following technically qualified, experienced members. The Committee seeks representation from members within industry, education and public practice. These members have Committee service ranging from newly appointed to more than 20 years. The Committee is an appointed senior technical committee of the Society and has been delegated the authority to issue written positions representing the Society on matters regarding the setting of audit and attestation standards. The Committee's comments reflect solely the views of the Committee, and do not purport to represent the views of their business affiliations.

The Committee usually operates by assigning Subcommittees of its members to study and discuss fully exposure documents proposing additions to or revisions of audit and attestation standards. The Subcommittee develops a proposed response that is considered, discussed and voted on by the full Committee. Support by the full Committee then results in the issuance of a formal response, which at times includes a minority viewpoint. Current members of the Committee and their business affiliations are as follows:

| | |
|---|---|
| **Public Accounting Firms:** | |

# ICBA
INDEPENDENT COMMUNITY BANKERS *of* AMERICA

September 29, 2011

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, NW
Washington, DC 20006

Re: Rulemaking Docket Matter No. 34
Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements

Dear Ladies and Gentlemen:

The Independent Community Bankers of America (ICBA)[1] appreciates the opportunity to comment on the concept release on possible revisions to Public Company Accounting Oversight Board (PCAOB) standards related to reports on audited financial statements. This concept release establishes alternatives to the current auditor reporting model with the goal of improving auditor communication to stakeholders by increasing the transparency of the current model and its importance for users. The release includes four alternatives that would supplement the current auditor's report to increase investor communication by the auditor without changing their role in the audit. The main impact of the implementation of the alternatives provided on reporting companies would be the increased use of auditor guidance to accompany currently issued opinions associated with audits of the financial statements and an expansion of the scope of the audit and the associated audit procedures.

**Background**

The current auditor's report represents a pass or fail model that discusses whether or not an organization fairly presents its financial statements in accordance with generally

[1] The Independent Community Bankers of America represents nearly 5,000 community banks of all sizes and charter types throughout the United States and is dedicated exclusively to representing the interests of the community banking industry and the communities and customers we serve. ICBA aggregates the power of its members to provide a voice for community banking interests in Washington, resources to enhance community bank education and marketability, and profitability options to help community banks compete in an ever-changing marketplace.

With nearly 5,000 members, representing more than 20,000 locations nationwide and employing nearly 300,000 Americans, ICBA members hold $1 trillion in assets, $800 billion in deposits, and $700 billion in loans to consumers, small businesses and the agricultural community. For more information, visit ICBA's website at www.icba.org.

accepted accounting principles (GAAP). In order to provide increased transparency into the audit and to move beyond the pass or fail opinion of presentation, the PCAOB has introduced the following four alternatives in the concept release:

- Auditor's discussion and analysis
- Required and expanded use of emphasis paragraphs
- Auditor assurance on other information outside the financial statements
- Clarification of language in the auditor's report

*Auditor's Discussion and Analysis.* This supplement to the auditor's report would be used by the auditor to discuss significant items associated with the audit. The goal of the auditor's discussion and analysis would be to give the reader an understanding of the auditor's opinion over the financial statements. Items covered here could include audit risks, procedures and results, and the auditor's views on management judgments and estimates. The discussion could also include areas where the auditor believes management could have used different disclosures or accounting practices.

*Required and Expanded Use of Emphasis Paragraphs.* Currently emphasis paragraphs can be added to the auditor's report at the discretion of the auditor to bring emphasis to a specific matter regarding the presentation of the financial statements. Under the concept release emphasis paragraphs would be used to highlight the most significant matters in the financial statements with the location of their disclosure. Further use of emphasis paragraphs could be required for materially large management estimates and measurement uncertainty.

*Increased Auditor Assurance.* The auditor's assurance could be broadened to include information outside the financial statements supplied by management including the management's discussion and analysis and non-GAAP financial measures. Expansion of auditor assurance to include information outside the financial statements would be used to provide increased confidence for stakeholders in the supplemental information provided by management.

*Clarification of Language in the Standard Auditor's Report.* This proposal involves expanding the explanation of what the audit is meant to represent and which responsibilities are with the auditor. Topics for inclusion here could include explanations for reasonable assurance, auditor's responsibility for fraud, auditor independence, and the auditor's responsibility for financial statement disclosures.

**Impact on Community Banks**

Of the four alternatives discussed in the concept release, ICBA supports the clarification of language in the standard auditor's report. Expanding the auditor's report to cover a discussion by the auditor of what the audit represents and the responsibilities of the auditor helps to further educate the users of the financial statements on the purpose and scope of the audit and the expectations of the auditor. Specific focus should be placed on the fact that management is fully responsible for the preparation of the financial statements and that the auditor expresses an opinion based on the findings of the audit. Additionally, the importance of the independence of the auditor and the requirement to comply with applicable independence requirements should be highlighted.

ICBA cautions against implementing any of the remaining proposed alternatives in the concept release without due consideration to the costs involved and their economic impact on smaller reporting companies including financial institutions. The introduction of the auditor's discussion and analysis, required use of emphasis paragraphs, and an increase in auditor assurance would almost certainly increase the costs of the audit substantially for these smaller reporting companies as it would require additional time and effort on the part of the auditor as well as the hiring and training of new personnel to complete the required procedures. Additionally, the auditor would face increased legal liability, with new incremental costs that would be passed on directly to the audit client in the form of higher fees. Implementation of the alternatives proposed would not result in any added benefits to financial statement users that are worth the increased costs of the audit since any need for increased disclosures could be fully integrated by the management of the reporting company. The role of management includes providing the disclosures necessary to inform the user of the financial statements of all relevant circumstances surrounding the company's performance and risks. Replacing the role of management with the independent auditor does not properly serve the needs of investors since they serve two different roles.

ICBA believes that the role of the independent auditor should remain limited only to the scope of the audit and its underlying assurance procedures. Expanding the role of the independent auditor is costly for the company, requires more time and resources for the auditor, and provides no incremental benefit to the stakeholder. Rather than increase the audit burden on reporting companies with no clear benefits, the PCAOB should focus its attention on keeping the auditor independent of the management of the organization to ensure that the role of the auditor retains its independent nature.

ICBA appreciates the opportunity to comment on this proposal. If you have any questions or would like additional information, please do not hesitate to contact me at (202) 659-8111 or james.kendrick@icba.org.

Sincerely,

/s/

Re: Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements; PCAOB Rulemaking Docket Matter No. 34

Dear Office of the Secretary:

The Independent Directors Council[1] appreciates the opportunity to comment on the Public Company Accounting Oversight Board concept release seeking public comment on several alternatives for enhancing the auditor's reporting model. The release encompasses a range of options aimed at increasing the transparency and relevance of auditor reports to financial statement users, while not compromising audit quality. We are commenting to express a general concern that we have on the potential adverse impact of these options on the relationship between fund board audit committees and fund auditors.

As an initial matter, we believe that the options discussed in the release, for the most part, should not apply to SEC-registered investment companies.[2] As the Investment Company Institute

---

[1] IDC serves the fund independent director community by advancing the education, interaction, communication, and policy positions of fund independent directors. IDC's activities are led by a Governing Council of independent directors of Investment Company Institute member funds. ICI is the national association of U.S. investment companies, including mutual funds, closed-end funds, exchange-traded funds, and unit investment trusts. Members of ICI manage total assets of almost $13 trillion and serve over 90 million shareholders, and there are almost 1,900 independent directors of ICI member funds. The views expressed by IDC in this letter do not purport to reflect the views of all fund independent directors.

[2] We do, however, support the option to provide clarification of concepts included in the auditor's report. We agree with the recommendation contained in the letter from the Investment Company Institute that, for audits of SEC-registered investment companies, the clarification should describe the auditor's consideration of the fund's internal control over financial reporting, including controls relating to security valuation, for purposes of designing audit procedures to be performed and expressing an opinion on the financial statements. *See* Letter from Gregory M. Smith, Director– Operations/Fund Accounting, Investment Company Institute, to Office of the Secretary, Public Company Accounting Oversight Board, regarding Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements (Sept. 30, 2011) (ICI Letter).

explains more fully in its comment letter, these options would provide little, if any, benefit to fund investors because fund financial statements are inherently less complex than operating company financial statements and entail fewer estimates and judgments than operating company financial statements.[3]

In the event these options are applied to registered funds, we oppose any required disclosure about the details of the communications between a fund's audit committee and the fund's auditor relating to the audit and the fund's financial statements. As part of their role to promote the interests of shareholders, fund directors oversee a fund's financial reporting process and therefore have a keen interest in preserving the effectiveness of the relationship between the board's audit committee and the auditor. We agree with those who have expressed concern that if the auditor were required to provide certain additional information about the audit and the company, such as details of communications between the audit committee and auditor, the discussions would suffer as a result.[4] As noted in the release, auditors "have regular and free-flowing dialogue with management and the audit committee as part of the audit." We are concerned that a requirement to disclose information about these communications could have a chilling effect both on the nature and the content of these discussions.

Disclosing potentially sensitive discussions in an auditor's report, either in an auditor's discussion and analysis or an emphasis paragraph, could impair the transparency and openness that contributes to the effective working relationship between a fund's audit committee and its auditor. This relationship is marked by a give-and-take that cannot effectively be captured in disclosure. If audit committee members are concerned that their questions and comments may eventually be made public, their discussion with the auditors could be stifled, impairing the work of the audit committee to the detriment of fund investors. Accordingly, we urge the PCAOB to be mindful of this concern and proceed cautiously in developing audit standards that could impact the relationship between fund board audit committees and fund auditors.

If you have any questions about our comments, please contact Amy B.R. Lancellotta, Managing Director, at (202) 326-5824.

Sincerely,

Dorothy A. Berry

Dear Sir(s),

**Re.: PCAOB Rulemaking Docket Matter No. 034**
**PCAOB Release No. 2011-003, June 21, 2011**
**Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements And Related Amendments to PCAOB Standards**

We would like to thank you for the opportunity to provide the Public Company Auditor's Oversight Board (PCAOB) with our comments on the Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements And Related Amendments to PCAOB Standards (hereinafter referred to as the "release").

The Institut der Wirtschaftsprüfer in Deutschland [Institute of Public Auditors in Germany], is the professional body that represents public auditors in Germany. We are responding to this release not only because certain of our members are registered with the PCAOB and therefore may undertake engagements in which they are required to apply PCAOB Auditing Standards, but also because the issue of auditor reporting is currently subject to debate by a number of other parties worldwide, including the IAASB, IOSCO and the European Commission, and therefore the PCAOB's discussions on this matter are relevant in this context.

Given the questions about the value of auditing that have arisen in the aftermath of the financial crisis, we consider the initiative by the PCAOB to consult on the

GESCHÄFTSFÜHRENDER VORSTAND:
Prof. Dr. Klaus-Peter Naumann,
WP StB, Sprecher des Vorstands;
Dr. Klaus-Peter Feld, WP StB CPA;
Manfred Hamannt, RA

IDW
INSTITUT DER WIRTSCHAFTSPRÜFER

options for enhancing the value of auditor reporting to be timely and appropriate. We therefore commend the PCAOB for addressing this issue at this time. However, the discussion of the value of auditor reporting cannot be delinked from an exploration of the added value of audits, which relates not only to reporting, but also the scope of the audit. The release recognizes this – particularly when discussing expanding the scope of the audit to information not currently within the scope of the audit – but, in the context of the European Commission's Green Paper on the role of the audit, further exploration of the scope of the audit beyond that in the paper is necessary.

We note that consultation with stakeholders on changes to auditor reporting is necessary because the issues relating to enhancing audit reporting and the scope of financial statement audits are foremost *political and legal* issues – not technical issues. Clearly, even political decision-making can only occur in the context of technical reality and therefore must be technically appropriate, but the questions about what, when, how (in a general sense) and to whom auditors should report given a particular audit scope, and whether the scope of audits should be enhanced, are public policy issues that require political resolution implemented by legal or regulatory means. **Such selection of public policies in relation to enhancing audit reporting ought to be decided on the basis of the public interest, which involves consideration of the costs and benefits to the public of potential policies, including the incidence of such costs and benefits among affected stakeholders.**

In this respect, we are concerned about suggestions that the auditor provide further "insights" into the audited entity or the audit. Without in any way suggesting that further exploration of audit reporting and audit scope issues to increase the added value of audits is not necessary – in our view, it is – we would like to note that some sophisticated investors, per se, always want more rather than less information, especially since potential (as opposed to existing) investors in entities perceive the provision of additional information as being virtually costless, and as not having an impact on the timing of communications. Hence, potential investors do not perceive that they are bearing the cost of additional information provided, which leads to a "free rider" syndrome among them. Once having obtained more information by means of regulation, such investors would still not be satisfied and then ask for even more, regardless of the cost. This is why it is important that **the selection of public policies in relation to audit reporting and scope needs to involve consideration of who all of the users of financial statements are and the actual demand for more information, as well as of the costs and benefits to the public (not just to certain investor groups) and the incidence of such costs and benefits.**

IDW
INSTITUT DER WIRTSCHAFTSPRÜFER

It should also be recognized that the provision of additional information in audit reports, particularly, but not limited to, information obtained by extending the scope of the audit, involves greater work effort and hence the incurrence of additional cost by auditors, which must ultimately be borne by preparers and then indirectly by other stakeholders, including investors. Calls for more information under the assumption that this would not involve significant increases in cost are not serious propositions. Nevertheless, there may be cases where the provision of more information may involve the benefits of that information exceeding the cost of providing it. **It is therefore important that legislators and regulators perform serious cost-benefit analyses to determine the need for additional information prior to prescribing its provision.**

Current discussions in the International Accounting Standards Board (IASB) and in other bodies about reducing the extent and complexity of disclosures in financial reporting suggest that most investors, other than a comparatively small group of financial analysts in certain larger financial institutions and funds, are already subject to information overload from, and have difficulty understanding, the information already provided to them. In this context, the call for "more" information may need to be interpreted as a call for "better" information by less sophisticated investors, rather than for "more". Furthermore, the provision of additional or better information may require more time, which may decrease its relevance to users. **It is therefore important for public policy decisions in relation to both financial and audit reporting to consider whether "better" information needs to be provided, rather than just "more", and the impact of additional information provided by auditors on the timing of the communication of information and the ability of most investors to process that information and understand it given the increasing complexity of financial reporting.** However, as the nature and sophistication of investors that use financial statements and auditor reporting vary considerably, it will be challenging to have concise and clear auditor's reports that meet certain investors' desires for additional information without causing information overload for most investors.

Audits are complex services that are difficult for many investors to understand, even though audits play an important role in the economy and in financial markets. Given the nature of some of the suggestions in the paper for more information from auditors, it seems that many investors may not fully appreciate what an audit involves or what the role of the auditor currently is, which contributes to the expectations gap. Some of the demands for more information from auditors – in particular "soft" information, such as the suggested "auditor's insights" – may in part be driven by the desire of investors to transfer investment risks from investors to other parties. Investors seek to minimize the risks arising from their investments without sacrificing returns, and ideally, would like "riskless" investments with high returns. To this effect, calls for more "soft" information from the auditor may in part reflect investors' desires to unreasonably narrow the expectations gap, which in its extreme form would involve closing the expectations gap by having auditors provide information that in effect represents a "guarantee" (i.e., have the auditors provide their views on audited entities, but make the auditors fully liable for those views). However, despite government support of financial institutions in the last financial crisis, and Eurozone support for Eurozone countries with sovereign debt difficulties to prevent greater private sector participation in losses, it is still a fundamental principle of free enterprise that those making investment decisions ought to bear the risks of those decisions. Disregarding this principle leads to moral hazard in investment decisions, which in turn leads to the gross misallocation of capital in economies, with the attendant negative macroeconomic consequences. **It is therefore important that public policy decisions in relation to audit reporting (including other communications in relation to the audit) and scope consider the proper delineation of the roles and responsibilities of audit stakeholders, including management, those charged with governance, auditors, and investors, and the appropriate nature and extent of the risks that ought to be borne by each in those roles and responsibilities to facilitate the efficient and sustainable operation of capital markets.**

In this context, communication by auditors with those charged with governance, and, in particular, audit committees, represents an important factor in aiding those charged with governance in meeting their oversight responsibilities, including their oversight responsibilities over financial reporting and the audit. Reporting by auditors to investors plays an important role in conveying to investors the credibility that they can attribute to financial reporting by the entity. However, the role of those charged with governance is significantly different from that of investors, and therefore when making public policy decisions, legislators, audit regulators and auditing standards setters need to consider the appropriate nature and extent of information to be conveyed by the auditor to those charged with governance compared to investors. Just because information is made available by auditors to aid decision-making by those charged with governance, who are subject to confidentiality requirements, does not mean it is appropriate for all of that information to be made publicly available for investors. A requirement for auditors to provide additional information about their findings to the general public may even unduly impair the effectiveness of audit procedures. The obligation of an auditor to treat information obtained as part of an audit as

IDW
INSTITUT DER WIRTSCHAFTSPRÜFER

confidential is an important prerequisite for management or other representatives of an entity to provide auditors with the information requested, even if it is regarded as highly sensitive or confidential. If new reporting requirements result in an auditor's obligation to disclose such confidential or sensitive audit evidence to the general public, this may undermine the willingness of management or others to provide auditors with information and thus endanger the effectiveness of an audit. **It is therefore critical that, when considering enhancements to the nature and extent of audit reporting to investors based on information that is made available by the auditors to those charged with governance, policymakers consider the nature and extent of that information that is important for investors without having auditors make public information that may unduly impair the operations of the entity or the effectiveness of the audit.**

At a technical level, public policy decision-making in relation to audit reporting and scope also needs to take into account that some of the "softer" information that some investors would like to have does not have the same quality of evidence available to support that information and therefore may not be as reliable as information currently subject to audit under PCAOB Auditing Standards. If an audit of some of the "softer" information is nevertheless desired by expanding the scope of an audit, **it needs to be recognized that the "reasonable assurance" obtained in these circumstances is less than that obtained for "harder" information for which there is better quality evidence available, that the nature of this part of the audit engagement may be different, and that therefore the audit opinion in relation to such information would also need to be different to convey to investors these differences. In some cases, even if it is considered valuable to have certain additional "softer" information provided by management, it may not always be useful to the public (i.e., it is a cost-benefit consideration) or possible (i.e., adequate evidence is generally not available to support an audit opinion in that respect) to have an audit of some of that information in every case.** Some jurisdictions (such as Germany) do have experience with the audit report extending to softer information, such as in the management report. However, it is important that additional "softer" information opined on in an auditor's report be clearly separated from the opinion on the financial statements and be supported by an introduction that describes the different nature and level of assurance associated with such "softer" information.

However, we note that the quality of an individual audit is not apparent from the auditor's report, which often leads to the value of the audit not being properly recognized, and at worst may lead to the audit being viewed as a commodity.

IDW

INSTITUT DER WIRTSCHAFTSPRÜFER

Including more information pertinent to each individual audit within the auditor's report may be a means of customising audits for certain issues. **There is an opportunity for the PCAOB to consider improvements to commoditized audit reporting by customizing audit reports for individual audits.**

In summary, the principles upon which we base the responses to the questions posed in the paper are:

- The selection of public policies in relation to enhancing audit reporting and audit scope ought to be decided on the basis of the public interest (not just the interests of certain investor groups), which involves consideration of who all of the users of financial statements are as well as of the costs and benefits to the public of potential policies, including the incidence of such costs and benefits among affected stakeholders.
- It is important for public policy decisions in relation to audit reporting to consider whether "better" information needs to be provided, rather than just "more", and the impact of additional information provided by auditors on the timing of the communication of information and the ability of most investors to process that information and understand it given the increasing complexity of financial reporting.
- It is important that legislators and regulators perform serious cost-benefit analyses to determine the need for additional information prior to prescribing its provision.
- Public policy decisions in relation to audit reporting (including other communications in relation to the audit) and audit scope must consider the proper delineation of the roles and responsibilities of management, those charged with governance (in particular, audit committees), auditors and investors, and the appropriate nature and extent of the risks that ought to be borne by each in those roles and responsibilities to facilitate the efficient and sustainable operation of capital markets. In this context, when considering enhancements to the nature and extent of audit reporting to investors based on information that is made available by the auditors to those charged with governance, it is critical that policymakers consider the nature and extent of that information that is important for these users without having auditors make public information that may unduly impair the operations of the entity or the effectiveness of the audit.
- When auditors opine on "softer" information, the nature of this part of the audit engagement may be different, and therefore the audit opinion in re-

IDW
INSTITUT DER WIRTSCHAFTSPRÜFER

lation to such information would also need to be different; in some cases, there may be no net public benefit to having some "softer" information audited, or some "softer" information may not be auditable due to a general lack of adequate available evidence.

- There is an opportunity for the PCAOB to consider improvements to commoditized audit reporting by customizing audit reports for individual audits.

We do recognize that the release on auditor reporting, and its relationship to the scope of the audit, is an opportunity to seek to enhance the value of audits by considering whether better information can be provided in audit reports about the current audit, and to consider whether it may be appropriate to expand the scope of the audit. To this effect, we make some specific recommendations in the Appendix to this comment letter to the questions posed in the release. We based our responses in this Appendix to the questions posed in the release on the principles that we have described in this letter above.

Various parties are currently deliberating on audit reporting and the scope of the audit, including the International Auditing and Assurance Standards Board (IAASB) and the European Commission. We would encourage both the IAASB and the PCAOB to strive for consistency between their respective future standards in this regard. It is crucial that the PCAOB consult on auditor reporting, and in particular, the scope of the audit, with regulators in the world's major jurisdictions – especially with the European Commission.

We hope that our views will be helpful to the PCAOB. If you have any questions relating to our comments in this letter, we would be pleased to be of further assistance.

Yours very truly,

# APPENDIX:

## Responses to Questions Raised in the Release

1. **Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.**

   a) **Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?**

   We believe that the Board should undertake an initiative to consider improvements to auditor reporting because it is important that audit reports are valuable to users. However, the question arises whether it is appropriate to consider commencing a standards-setting initiative without having first examined the responses to the concept release. Because some matters in relation to form or wording of the report may be more easily resolved than matters that extend to the content of the report given the current scope of the audit, which in turn may be more easily resolved than matters that extend the scope of the audit, it may be appropriate to distil those responses to the concept release by issuing a series of discussion papers or a similar vehicles in which the PCAOB makes general proposals to improve auditor reporting based on those responses prior to developing detailed exposure drafts of standards about the noted different aspects of auditor reporting. Given the importance of these issues, it would be inappropriate to seek "quick fixes" without having undertaken a serious cost-benefit analysis for each type of change.

   b) **In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?**

   Without extending the scope of an audit, matters that might be addressed to improve the standard auditor's report relate to:

IDW
INSTITUT DER WIRTSCHAFTSPRÜFER

- The format and structure of the report given its current content
- The wording of the report given its current content
- The provision of additional information about the audit given the current audit scope

*Format and Structure of the Report Given Its Current Content*

We believe that one of the main purposes of the auditor's report is to reduce the expectations gap by clarifying to users what the role and responsibilities of the auditor are. The fact that even some sophisticated users are not sufficiently well informed about matters addressed in such paragraphs lends support to this view. This is especially the case if the auditor's report were to be expanded to provide additional auditor commentary. In this case, there may even be a need to include further clarification of responsibilities so that users do not misperceive the role of the auditor.

One of the main issues in this respect is that the financial statements are management's financial statements – not the auditor's financial statements. Consequently, a description of management's responsibilities is crucial to contrast the responsibility of the auditor from that of management. Likewise, removing the description of what an audit involves would only serve to increase the expectations gap. We would therefore not support removing the paragraphs on the responsibilities of management or the auditor. We are less concerned about their positioning within the auditor's report, as long as there is a logical structure to the components of the report such that users are not confused by the report. However, we would not support repositioning these paragraphs to an appendix outside of the body of the report, which has been suggested by some commentators, because it diminishes the delineation of responsibilities between management and the auditors, which would serve to increase the expectations gap.

In respect of placement of the opinion paragraph, we tend towards the view that although it is a key element in the report, it does need to be understood in the right context. Moving the opinion right after the introductory paragraph, which has been suggested by some, also leads to the strange situation that in the case of modified opinions, the Basis for Modifications Paragraph would immediately precede the introductory paragraph. Where would emphasis and other matter paragraphs be placed so as to not indicate that they affect the opinion? Will users understand the change, especially for reports with modified opinions or emphasis or other matters paragraphs? It is not clear whether placing the opinion paragraph (almost) first rather than (almost) last really adds anything to the readability or understandability of the report and it may cause other difficulties as noted: in such a case, it is probably better to stick with tradition on format and structure, rather than moving things around for changes sake.

On the whole, we believe that instruments such as emphasis and other matter paragraphs have worked well because they have not been overused. We believe that these paragraphs ought to be clearly distinguished from any other additional "auditor commentary" that might be provided in the report, if the PCAOB were to choose to include such an item in the report. Their current positioning within the report serves to improve clarity about their meaning.

While changes to the format and structure of the standard auditor's report cause the least direct costs to auditors, such changes are not costless. The templates for auditor's reports would need to be changed across the entire firms and their networks and for standards issued by national standards setters. Such changes also increase the likelihood of errors in the reports, which will likely cause greater quality control costs. We also note some other costs that may result from the changes proposed. In many cases, the benefits of changes, other than the suggestions we make below, are likely to be marginal at best. We therefore recommend that the PCAOB not make changes to the format and structure of the report simply for the sake of change, but consider the direct and indirect costs that we address together with the rather marginal benefits that arise from such changes.

*Wording of the Report Given Its Current Content*

Complexity of the standardized language used is also an issue that means that many users lacking specialized technical skills may find the text hard to understand. However, we note that the terminology often regarded as overly technical language (fair presentation, materiality, misstatement) in fact stems from financial reporting frameworks such as US GAAP (the first two) or from law (negligent or gross "misstatement") and is not solely "auditor jargon". To this extent, users' misunderstanding of the auditor's report due to the use of technical language is actually indicative of a lack of understanding by users of the applicable financial reporting framework and basic legal concepts underlying

INSTITUT DER WIRTSCHAFTSPRÜFER

financial statements, which is not something that enhancing audit reporting would resolve. However, where pure "auditing jargon" (e.g., "reasonable assurance") is used, further clarification, or use of plain language to the extent possible, may need to be considered.

Given user misconceptions about the inherent limitations of an audit and what the role of an audit is, the explanation of the auditor's responsibilities ought to be enhanced by referring to these inherent limitations (which has the added benefit of helping to explain the meaning of "reasonable assurance"), and the third sentence of ISA 200.A1 or it's equivalent ought to be added to clarify what an audit does not do.

*The provision of additional information about the audit given current audit scope*

The provision of additional information about the entity or the audit given the current audit scope appears appealing at first glance. However, there are limitations on the dissemination of entity information that represent a real barrier to some of the suggestions made by some users that the auditor provide more information about the entity and its financial statements. In many jurisdictions, management or those charged with governance have legal control over the information about an entity or its financial statements obtained from within the entity: it is the entity's information and only management or those charged with governance have the legal right to determine which information from the entity may be made available to third parties unless such information is clearly required to be made available by law or regulation.

Even if management consents to the auditor providing additional information, data protection laws in the EU member states and other jurisdictions may hinder the provision of certain entity information. Hence, in these jurisdictions, auditors providing more information not provided by management or those charged with governance about the entity or its financial statements would likely be illegal without the introduction of specific laws or regulations to change this situation. The successful introduction of such laws or regulations is very unlikely because business and other enterprises would not be in favour of such legislation or regulation. This legal situation may also present a barrier to the auditor being able to provide information about the audit performed, including key areas of audit risk, because this information is often indistinguishable from information about the entity or its financial statements. It will therefore be very difficult for the PCAOB to promulgate an effective standard requiring such disclosures by the auditor internationally without a provision for an exception due to law or regulation, which would essentially cause that requirement to be ineffective in many jurisdictions.

Legal considerations aside, having the auditor provide information about the entity or its financial statements is not in consonance with the role of auditors vs. management or those charged with governance. An audit is, by definition, an attestation engagement in which the auditor opines on information provided by management or those charged with governance; an audit is not a direct engagement (see current Exposure Draft of ISAE 3000), in which the practitioner performs the measurement or evaluation and reports the resulting subject matter information about the entity. Hence, by suggesting that auditors provide information about the entity or its financial statement directly, users are confusing the relative roles of auditors vs. management or those charged with governance.

This is not to say that some information that is clearly audit-related may not be useful to users, but the costs and benefits as a whole need to be considered, including the impact on information overload of users, as we note in the body of our comment letter. <u>On this basis, consideration might be given to exploring as to whether the auditor's report might highlight a summary of significant risks of material misstatement identified during the audit that are identified as significant financial reporting issues in the financial statements by management. However, it would have to be clear from the report that any such information did not represent any form of piecemeal opinion on isolated aspects of financial statements – the auditor opines the financial statements as a whole – and not individual financial statement items.</u>

c) **Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?**

We believe it to be appropriate for the PCAOB to consider expanding the auditor's role to provide assurance on matters in addition to the financial statements. However, as we pointed out, issues in relation to information overload for investors as well as the costs and benefits would need serious consideration.

We would like to point out that this question goes beyond "audit reporting", and actually deals with the scope of the audit of financial statements. Extension to scope are possible as long as there are suitable criteria (i.e., criteria against which the entity's performance can be reliably measured or evaluated) for such areas such as prospective financial information, corporate governance, (sustainable) business models, risk management, and key performance indicators, an auditor cannot perform an audit on these matters without such criteria. A subjective assessment by the auditor would be inappropriate because it would neither be in line with AT sec. 101, nor sufficiently consistent to be of benefit to users.

Consequently, this question really represents a consultation for 1. the PCAOB to consider whether certain information accompanying the financial statements ought to be required, and to consider the suitable criteria for that information and the underlying subject matter, and 2. the PCAOB to consider the nature and extent of an auditor's responsibilities for any such information accompanying the financial statements.

Two potential extensions of financial reporting and consequent potential extensions of audit scope include auditor involvement in prospective financial information and in information about business risks (as opposed to risk management), prepared by management. To the extent that prospective information were, in future, required to be disclosed in the financial statements or in information accompanying the financial statements, auditors are able to opine on whether the assumptions used by management are plausible in the circumstances, and whether the information has been appropriately prepared on the basis of those assumptions, but not on whether such forecasts will actually occur. However, if an audit engagement were to be extended to cover prospective financial information, care would be needed not to widen the expectations gap in view of the auditor's limited ability to predict the future. For example, including statements by the auditor as to the future profitability and the sustainability of the entity's business model in the auditor's report would involve the danger of increasing the expectations gap as to the ability of the auditor to predict future events. Auditors are often loath to accept assurance engagements with respect to such information in some jurisdictions because of legitimate liability concerns: therefore, liability reform is a prerequisite for auditor involvement with prospective financial information. In our comment letter to the EU Commission dated December 8, 2010 in respect of the Green Paper on auditing, we also suggested that expanding financial reporting, specifically the management report (also called "management commentary" by IFRS or "annual report" in the Fourth and Seventh EU Directives), by requiring the inclusion of more prospective information – without requiring preparers to perform impracticable tasks, or prompting so-called self-fulfilling prophecies – might also contribute to a fair presentation of the entity's actual economic situation. We also suggested that the scope of the audit in Europe include the management report, provided any legislation in this respect also includes appropriate limitation of auditor liability in this respect.

We comment in turn on the four examples of financial reporting and consequent potential audit scope extensions:

a) Corporate Governance Arrangements

We suspect that users' expectations as to what information might be included in the auditor's report in respect of corporate governance arrangements could vary widely, such that an expectations gap in this respect would be unavoidable. The differences in corporate governance frameworks and requirements world-wide mean that this is an area that does not lend itself to standards setting by the PCAOB.

b) Business Model, Including the Sustainability Thereof

An entity's business model is one aspect that auditors will consider in obtaining the understanding of the entity required by PCAOB Auditing Standards. The auditor also considers the viability of an entity to continue as a going concern for a period of at least 12 months subsequent to the date of the financial statements. However, this is an area upon which auditors do not form an opinion specifically; rather it is considered as part of the opinion on the financial statements as a whole.

We are open to reasonable suggestions relating to legal requirements to have the auditor examine the impact of the entity's business model on the economic development of its business and how related risks are disclosed in the financial statements or in accompanying information. Provided there are appropriate financial reporting requirements (suitable criteria) in this area, the auditor may be able to consider management's assessment of the opportunities and risks that result from the applied business model and consider whether their presentation in the financial statements or in accompanying information is adequate.

c) Enterprise-Wide Risk Management

In some jurisdictions there may be legal requirements for certain entities to have systems to manage risk, whilst in others there may not be. However, PCAOB Auditing Standards do require the auditor to obtain an understanding of whether the entity has a risk assessment process and – in the absence of such a process – to hold certain discussions with management and consider whether it represents a significant deficiency in internal control.

In Germany the IDW has had such an auditing standard since 1999, as certain German entities are required pursuant to the German Aktiengesetz (Stock Corporation Act) to have in place a Risikofrüherkennungssystem (risk early recognition system), which, in respect of listed entities, the auditor is required to address within the audit of the financial statements. The auditor is required to evaluate whether the entity's management has complied with the legal requirement to establish this risk early recognition system in a suitable form and also whether that system is capable of fulfilling its role. The auditor is required to report internally (in the German long form audit report) thereon. Those entities that are not listed entities, but which have such a system because of their size or complexity, often elect to have the auditor cover this aspect on a voluntary basis.

Furthermore, under banking legislation, financial institutions are required to have the appropriateness (that is, the design and implementation, but not the operating effectiveness) of certain aspects of the institution's risk management system as required by banking legislation and regulation audited by their auditors as part of the financial statement audit.

The IDW also has a standard on assurance engagements in relation to parts of enterprise compliance management systems, which, however, is not a part of the financial statement audit.

We would like to point out that in all of these engagements, the subject matter is not the entire enterprise-wide risk management system. Due to the comprehensiveness of enterprise-wide risk

IDW
INSTITUT DER WIRTSCHAFTSPRÜFER

management systems, extending an audit of financial statements to the entire enterprise risk management system would involve considerably greater cost. Consequently, if an audit were to be extended to risk management, cost-benefit considerations may involve considering the scope of such an engagement in relation to certain aspects of risk management.

d) Key Performance Indicators

As financial reporting becomes more complex, users seek greater simplicity by reverting to key performance indicators (KPIs). Many of these KPIs are so-called "non-GAAP measures" – that is, they are developed by specific enterprises or represent loose industry practice. Prerequisites for auditor involvement with KPIs are suitable criteria for the development of appropriate KPIs and for their disclosure. At the present time, such suitable criteria are not yet available. However, once such criteria are available, auditor involvement may be beneficial to users.

2. **The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."**

   a) **Should the auditor's report retain the pass/fail model? If so, why?**
   We believe that many users continue to find the "binary opinion" (the pass/fail model) useful, and would therefore support its retention. We believe that the pass/fail model is facilitates good audit reporting ,and in this context accept that some standardization in wording is unavoidable.

   b) **If not, why not, and what changes are needed?**

   c) **If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.**

   As noted in our response to a) above, we believe retention of the pass/fail model is appropriate, and therefore no changes are needed in this regard.

However, as noted in our response to Question 1 b) above, we do believe that it may be worthwhile to consider supplemental reporting. In particular, consideration might be given to exploring as to whether the auditor's report might highlight a summary of significant risks of material misstatement identified during the audit that are identified as significant financial reporting issues in the financial statements by management. However, it would have to be clear from the report that any such information did not represent any form of piecemeal opinion on isolated aspects of financial statements – the auditor opines the financial statements as a whole – and not individual financial statement items.

3. **Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.**

   We believe that management is the most appropriate party to provide additional information regarding the company's financial statements to financial statement users. Please note our detailed response to Question 1 b) above on *the provision of additional information about the audit given current audit scope* for an explanation as to why.

4. **Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?**

   We have no comments on this issue at the present time.

5. **Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?**

   We do not believe that the PCAOB ought to consider an AD&A as an alternative for providing additional information in the auditor's report.

IDW
INSTITUT DER WIRTSCHAFTSPRÜFER

**a) If you support an AD&A as an alternative, provide an explanation as to why.**

We do not support an AD&A as an alternative.

**b) Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?**

If an AD&A were to be provided, as noted in our response to Question 1 b) above on the provision of additional information about the audit given current audit scope, the AD&A should comment on the audit, but not on the financial statements because 1. of the legal issues involved in having the auditor originating information on the financial statements and 2. the fact that having the auditor originate information in the financial statements blurs the respective roles of management and the auditor.

**c) Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?**

As noted, we believe that information about an entity that would be most relevant and useful in making investment decisions ought to be provided by the management of an entity. It is only appropriate that auditors provide more information about the audit – not the financial statements.

**d) If you do not support an AD&A as an alternative, explain why.**

We do not support an AD&A as an alternative because only management should be originating information about the entity. As noted in our response to Question 1 b) above on the provision of additional information about the audit given current audit scope, it is difficult to distinguish the provision of information about the audit from the provision of information about the entity. The concept of and AD&A presumes that a considerable amount of auditor commentary is possible or desirable, which is not necessarily the case.

e) **Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?**

As noted in our response to Question 1 b) above on the provision of additional information about the audit given current audit scope, consideration might be given to exploring as to whether the auditor's report might highlight a summary of significant risks of material misstatement identified during the audit that are identified as significant financial reporting issues in the financial statements by management. This approach would not involve the provision of information by the auditor that did not originate with management. However, it would have to be clear from the report that any such information did not represent any form of piecemeal opinion on isolated aspects of financial statements – the auditor opines the financial statements as a whole – and not individual financial statement items.

6. **What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?**

As we pointed out above, we do not consider an AD&A to be an appropriate vehicle to improve auditor reporting. We believe that, at most, consideration might be given to exploring as to whether the auditor's report might highlight a summary of significant risks of material misstatement identified during the audit that are identified as significant financial reporting issues in the financial statements by management.

7. **What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?**

As noted above, the AD&A should not include the auditor's views on the company's financial statements based on the audit, but rather highlight a summary of significant risks of material misstatement identified during the audit that are identified as significant financial reporting issues in the financial statements by management. Therefore, there is not appropriate content or level of detail regarding the auditor's views on the financial statements – it is not clear what "the auditor's views" means in this context. What criteria are to be applied for such "views"?

**8. Should a standard format be required for an AD&A? Why or why not?**

Since we do not support the use of an AD&A, we would not support either a standard or non-standard format.

**9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?**

We would like to point out that it is unclear what such a discussion of other risks would entail because such a discussion would need to be prepared on the basis of suitable criteria, which do not exist at the present time. If suitable criteria were developed, then applying these criteria to such a discussion would not be a part of the current audit scope, but would involve broadening the current audit scope (i.e., the expansion of the auditor's current responsibilities as noted). Having the auditor apply criteria to these matters means that the auditor is actually obtaining assurance on these matters. The PCAOB would need to consider the costs and benefits of extending the scope of the audit beyond the financial statements and internal control.

**10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?**

Without in any way favoring the introduction of an AD&A, in general, the way to avoid boilerplate language is to have auditors address matters that are specific to an individual audit. However, it should be noted that when matters are addressed that are specific to an individual audit, by definition the reports cannot be consistent in these matters. The advantage of such inconsistency is however a reduction in the commoditization of audits. This is why we would support exploring as to whether the auditor's report might highlight a summary of significant risks of material misstatement identified during the audit that are identified as significant financial reporting issues in the financial statements by management.

**11. What are the potential benefits and shortcomings of implementing an AD&A?**

We see few, if any, potential benefits of implementing an AD&A because the shortcomings that we noted above would negate those benefits. These potential shortcomings include having auditors originate entity information (which may not be legally possible or blur the role of auditors and management), and extending the scope of the audit without having the criteria in place so that assurance can be obtained.

**12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?**

We believe that having the AD&A present inconsistent or competing information between the auditor and management would serve to confuse investors, and would therefore not be desirable: we therefore would expect no such inconsistent or competing information to remain in the AD&A and the financial statements, as auditors and management would seek to minimize such inconsistent or competing information to prevent such confusion.

**13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?**

We believe that the release appears to confuse the justification used in France with emphasis of matter paragraphs as conceived in PCAOB Auditing Standards and emphasis of matter and other matter paragraphs as conceived in the ISAs. The French justification is an altogether different concept.

As noted in our previous responses above, it would be inappropriate for auditors to provide information in the auditor's report that originates solely from the entity or its financial statements. It is management's responsibility to help users "navigate" through complex financial reporting. As a matter of principle, the auditor's report should not be used to supplement financial reporting or mitigate poor financial reporting. However, emphasis of matter paragraphs remain a useful tool as long as their use remains exceptional. We therefore believe that increased use of emphasis of matter paragraphs blurs the distinction between the responsibilities of management and of the auditor, would inappropriately change the nature of those paragraphs and their impact, and therefore the costs of increasing the use of these paragraphs are greater than the benefits. Emphasis of matter paragraphs should be used in rare circumstances when the auditor believes there is a need to highlight a matter that is appropriately disclosed and presented in the financial statements that is fundamental to users' understanding of those financial statements.

On this basis, we believe that the PCAOB should make a clear distinction between emphasis of matter paragraphs for exceptional circumstances, and ordinary additional "auditor commentary" that would be provided in every audit, as we suggest in our response to Question 1 b) above, which involves supplemental reporting as to whether the auditor's report might highlight a summary of significant risks of material misstatement identified during the audit that are identified as significant financial reporting issues in the financial statements by management.

**14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?**

**a) If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.**

**b) If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.**

We do not believe that the PCAOB ought to consider a requirement to include areas of emphasis in each audit report in an emphasis of matter paragraph because, as we noted in our response to Question 13, emphasis of matter paragraphs should be used in rare circumstances to highlight matters that are appropriately disclosed and presented in the financial statements but that are fundamental to users' understanding of the financial statements. This should be distinguished from an "auditor commentary" that is included in every audit report that highlights a summary of significant risks of material misstatement identified during the audit that are identified as significant financial reporting issues in the financial statements by management. In this case, it would not be appropriate to provide information on key audit procedures because the procedures would either need to be described at such a high level so as to not be useful for users, or be described in such detail that the report would lead to information overload.

**15. What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?**

As noted above, we do not support requiring an expanded emphasis of matter paragraph on the audit; it should be distinguished from an "auditor commentary" that is included in every audit report that highlights a summary of significant risks of material misstatement identified during the audit that are identified as significant financial reporting issues in the financial statements by management.

**16. What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?**

In our view, the appropriate content and level of detail regarding an "auditor commentary" as noted above would be a *summary* of significant risks of material misstatement identified during the audit that are identified as significant financial reporting issues in the financial statements by management. As noted, such a commentary should be distinguished from an emphasis of matter paragraph.

**17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?**

In general, the way to avoid boilerplate language is to have auditors address matters that are specific to an individual audit. However, it should be noted that when matters are addressed that are specific to an individual audit, by definition the reports cannot be consistent in these matters. The advantage of such inconsistency is however a reduction in the commoditization of audits. This is why we would support exploring as to whether the auditor's report might highlight a summary of significant risks of material

IDW

INSTITUT DER WIRTSCHAFTSPRÜFER

misstatement identified during the audit that are identified as significant financial reporting issues in the financial statements by management.

**18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?**

The primary advantages of implementing an auditor commentary that highlights a summary of significant risks of material misstatement identified during the audit that are identified as significant financial reporting issues in the financial statements by management is the fact that such reporting would reduce the commoditization of audits by having a part of the audit report customized for matters that are specific to a particular audit. Furthermore, by addressing only those matters that are identified as significant financial reporting issues in the financial statements by management, the auditor would not be originating any entity information. This would help users understand the significant audit risks related to significant reporting issues. The shortcoming of implementing such commentary as a required and expanded emphasis of matter paragraph is the elimination of an instrument that enables the auditor to emphasis, in rare circumstances, matters of fundamental importance for users' understanding of the financial statements that have been appropriately disclosed and presented in those financial statements.

**19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?**

We believe that the PCAOB ought to consider auditor assurance on other information outside of the financial statements in addition to enhancing the auditor's reporting model. However, when considering to extend the scope of the audit in this way, the PCAOB must perform serious cost-benefit analyses of the potential impact of such extensions to ensure that there are significant net benefits to the public.

**a) If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.**

IDW
INSTITUT DER WIRTSCHAFTSPRÜFER

We support auditor assurance on other information outside of the financial statements, but not as an alternative to enhancing auditor reporting, but as an additional consideration that involves expanding the scope of the audit.

**b) On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.**

Two potential extensions of financial reporting and consequent potential extensions of audit scope include auditor involvement in prospective financial information and in information about business risks (as opposed to risk management), prepared by management. To the extent that prospective information were, in future, required to be disclosed in the financial statements or in information accompanying the financial statements, auditors are able to opine on whether the assumptions used by management are plausible in the circumstances, and whether the information has been appropriately prepared on the basis of those assumptions, but not on whether such forecasts will actually occur. However, if an audit engagement were to be extended to cover prospective financial information, care would be needed not to widen the expectations gap in view of the auditor's limited ability to predict the future. For example, including statements by the auditor as to the future profitability and the sustainability of the entity's business model in the auditor's report would involve the danger of increasing the expectations gap as to the ability of the auditor to predict future events. Auditors are often loath to accept assurance engagements with respect to such information in some jurisdictions because of legitimate liability concerns: therefore, liability reform is a prerequisite for auditor involvement with prospective financial information. In our comment letter to the EU Commission dated December 8, 2010 in respect of the Green Paper on auditing, we also suggested that expanding financial reporting, specifically the management report (also called "management commentary" by IFRS or "annual report" in the Fourth and Seventh EU Directives), by requiring the inclusion of more prospective information – without requiring preparers to perform impracticable tasks, or prompting so-called self-fulfilling prophecies – might also contribute to a fair presentation of the entity's actual economic situation. We also suggested that the scope of the audit in Europe include the management report, provided any legislation in this respect also includes appropriate limitation of auditor liability in this respect.

We comment in turn on the four examples of financial reporting and consequent potential audit scope extensions:

a) Corporate Governance Arrangements

We suspect that users' expectations as to what information might be included in the auditor's report in respect of corporate governance arrangements could vary widely, such that an expectations gap in this respect would be unavoidable. The differences in corporate governance frameworks and requirements world-wide mean that this is an area that does not lend itself to standards setting by the PCAOB.

b) Business Model, Including the Sustainability Thereof

An entity's business model is one aspect that auditors will consider in obtaining the understanding of the entity required by PCAOB Auditing Standards. The auditor also considers the viability of an entity to continue as a going concern for a period of at least 12 months subsequent to the date of the financial statements. However, this is an area upon which auditors do not form an opinion specifically; rather it is considered as part of the opinion on the financial statements as a whole.

We are open to reasonable suggestions relating to legal requirements to have the auditor examine the impact of the entity's business model on the economic development of its business and how related risks are disclosed in the financial statements or in accompanying information. Provided there are appropriate financial reporting requirements (suitable criteria) in this area, the auditor may be able to consider management's assessment of the opportunities and risks that result from the applied business model and consider whether their presentation in the financial statements or in accompanying information is adequate.

c) Enterprise-Wide Risk Management

In some jurisdictions there may be legal requirements for certain entities to have systems to manage risk, whilst in others there may not be. However, PCAOB Auditing Standards do require the auditor to obtain an understanding of whether the entity has a risk

IDW

INSTITUT DER WIRTSCHAFTSPRÜFER

assessment process and – in the absence of such a process – to hold certain discussions with management and consider whether it represents a significant deficiency in internal control.

In Germany the IDW has had such an auditing standard since 1999, as certain German entities are required pursuant to the German Aktiengesetz (Stock Corporation Act) to have in place a Risikofrüherkennungssystem (risk early recognition system), which, in respect of listed entities, the auditor is required to address within the audit of the financial statements. The auditor is required to evaluate whether the entity's management has complied with the legal requirement to establish this risk early recognition system in a suitable form and also whether that system is capable of fulfilling its role. The auditor is required to report internally (in the German long form audit report) thereon. Those entities that are not listed entities, but which have such a system because of their size or complexity, often elect to have the auditor cover this aspect on a voluntary basis.

Furthermore, under banking legislation, financial institutions are required to have the appropriateness (that is, the design and implementation, but not the operating effectiveness) of certain aspects of the institution's risk management system as required by banking legislation and regulation audited by their auditors as part of the financial statement audit.

The IDW also has a standard on assurance engagements in relation to parts of enterprise compliance management systems, which, however, is not a part of the financial statement audit.

We would like to point out that in all of these engagements, the subject matter is not the entire enterprise-wide risk management system. Due to the comprehensiveness of enterprise-wide risk management systems, extending an audit of financial statements to the entire enterprise risk management system would involve considerably greater cost. Consequently, if an audit were to be extended to risk management, cost-benefit considerations may involve considering the scope of such an engagement in relation to certain aspects of risk management.

INSTITUT DER WIRTSCHAFTSPRÜFER

d) Key Performance Indicators

As financial reporting becomes more complex, users seek greater simplicity by reverting to key performance indicators (KPIs). Many of these KPIs are so-called "non-GAAP measures" – that is, they are developed by specific enterprises or represent loose industry practice. Prerequisites for auditor involvement with KPIs are suitable criteria for the development of appropriate KPIs and for their disclosure. At the present time, such suitable criteria are not yet available. However, once such criteria are available, auditor involvement may be beneficial to users.

**c) What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?**

Whether reasonable or limited assurance would be appropriate depends upon the needs of investors and consideration of the relative costs and benefits of reasonable vs. limited assurance to support the credibility of the information in question. As a matter of principle, users generally prefer reasonable assurance unless the cost is prohibitive relative to the benefits.

**d) If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?**

Those portions of the MD&A for which sufficient appropriate evidence is available can be subject to assurance procedures, whereas those for which no such evidence is available should not be subject to assurance.

**e) Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?**

We expect subjecting the MD&A to assurance procedures would have the effect of causing the MD&A to distinguish more clearly between those parts that can be subjected to assurance procedures because sufficient appropriate evidence is available and those parts that cannot be subject to assurance procedures because such evidence is not available.

IDW

INSTITUT DER WIRTSCHAFTSPRÜFER

**f) Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?**

We believe that AT sec. 701 is outdated: it does not reflect the progress that has been made in the IAASB for extant ISAE 3000, which was issued at the end of 2003. Furthermore, considerable progress is being made in further improving ISAE 3000 (see IAASB Exposure Draft to ISAE 3000). For these reasons, be believe that AT sec. 701 is not sufficient to have auditors obtain the appropriate level of auditor assurance on other information outside the financial statements. In particular, ISAE 3000 clarifies that practitioners do not "provide assurance": they obtain assurance that they then convey in their report (i.e., the assurance conveyed may not be that which users attribute). We suggest that the PCAOB consider revising AT sec. 701 to update it.

**g) If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.**

Since we do support the PCAOB exploring auditor assurance on other information outside the financial statements, we need not provide an explanation to this question.

**20. What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?**

The benefits of implementing auditor assurance on other information is that investors would have greater comfort that this information is credible. The shortcomings would be the potential cost of such assurance. Consequently, it is critical that the PCAOB consult with all stakeholders (preparers, auditors, investors and those charged with governance) to enable the PCAOB to perform serious cost-benefit analyses of potential assurance on other information.

**21. The Concept Release presents suggestions on how to clarify the auditor's report in the following areas:**

- **Reasonable assurance**

- **Auditor's responsibility for fraud**
- **Auditor's responsibility for financial statement disclosures**
- **Management's responsibility for the preparation of the financial statements**
- **Auditor's responsibility for information outside the financial statements**
- **Auditor independence**

**a) Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?**

**b) Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.**

We will address each of the clarifications in turn:

*Reasonable Assurance*

We are not convinced that stating that reasonable assurance is "high but not absolute" really provides any help whatsoever for users of audit reports other than explaining that an audit is not a guarantee (i.e., "not absolute"). As we noted in our comment letters to the PCAOB on proposed AS-5 and AS-2 dated February 26, 2007 dated November 21, 2003, respectively, and to the SEC on May 17, 2004), and as is noted in the FEE Papers "Principles of Assurance" from 2003 and "Selected Issues in Relation to Financial Statement Audits" from 2007, the use of the word "high" begs the question of "high in relation to what"? Certainly not in relation to absolute, because the evidence available and that thereof obtainable by the auditor varies by assertion, and the level of assurance is only an expression of the strength (that is, the combination of quality and quantity) of the evidence obtained. Consequently, using the phrase "high, but not absolute" misleads users into believing that auditors are able to obtain the same level of assurance for all of the assertions in the financial statements, which is ludicrous. The fact that current PCAOB auditing standards state that reasonable assurance is a high level of assurance doesn't make it any more true than having a regulator or standards setter claim that the sky is green rather than blue. If the PCAOB were to address the issue of reasonable assurance, then it would only be appropriate to do so by explaining the inherent limitations of an audit (see the above-noted FEE paper from 2007) to users.

*Auditor's responsibility for fraud*

We agree that, like the auditor's report under ISA 700, reference should be made to obtaining "reasonable assurance about whether the financial statements are free of material misstatement, *whether due to fraud or error*". This would clarify the nature of the auditor's responsibility.

*Auditor's responsibility for financial statement disclosures*

It may be useful to clarify to users in the auditor's report that the financial statements include the related notes (see ISA 700).

*Management's responsibility for the preparation of the financial statements*

We believe that one of the main purposes of the auditor's report is to reduce the expectations gap by clarifying to users what the role and responsibilities of the auditor are. The fact that even some sophisticated users are not sufficiently well informed about matters addressed in such paragraphs lends support to this view. This is especially the case if the auditor's report were to be expanded to provide additional auditor commentary. In this case, there may even be a need to include further clarification of responsibilities so that users do not misperceive the role of the auditor.

One of the main issues in this respect is that the financial statements are management's financial statements – not the auditor's financial statements. Consequently, a description of management's responsibilities is crucial to contrast the responsibility of the auditor from that of management and we would therefore support its inclusion with wording similar to that in ISA 700. Likewise, removing the description of what an audit involves would only serve to increase the expectations gap. We would therefore not support removing the paragraphs on the responsibilities of management or the auditor.

*Auditor's responsibility for information outside the financial statements*

A statement of an auditor's responsibilities with respect to other information may be useful, provided it clarifies precisely the information for which the auditor has a particular responsibility and the nature and extent of that responsibility to prevent a widening of the expectations gap.

IDW

INSTITUT DER WIRTSCHAFTSPRÜFER

In our view, the auditor should report only when there is something to report, rather than also reporting that there is nothing to report. The costs of such a change are likely to be minimal: there may be an added benefit to have users understand the auditor's responsibilities in this regard, as long as these are clearly stated to prevent a widening of the expectations gap.

*Auditor independence*

Reference to auditor independence may provide useful information to users, and therefore is worthy of further consideration.

**c) What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?**

It may be useful to also include short statements on the following to better communicate the nature of an audit and an auditor's responsibilities:

- Given user misconceptions about the inherent limitations of an audit, the explanation of the auditor's responsibilities ought to be enhanced by referring to the inherent limitations of an audit (which has the added benefit of helping to explain the meaning of "reasonable assurance")
- Given user misconceptions about what the role of an audit is, the third sentence of ISA 200.A1 or its equivalent ought to be added to clarify what an audit does not do, since some users believe that audits cover these matters.

**d) What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?**

There should be no implications to the scope of the audit or the auditor's responsibilities because these explanations serve only to clarify the scope of the audit and the auditor's responsibilities to users.

**22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?**

The benefits of providing the clarification noted in our response to Question 22 are that users would have a better understanding of what the respective responsibilities of management and the auditors are, and have a

IDW

INSTITUT DER WIRTSCHAFTSPRÜFER

better understanding of the nature of an audit. The only drawback is that the audit report would be somewhat more lengthy with some more standard wording. However, we believe that this cost is worth the added benefit.

**23. This Concept Release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?**

**24. Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?**

In our view the most effective options that can be addressed by the PCAOB without needing to expand audit scope would be:

- Addressing user misconceptions about audits by enhancing the explanation of auditor responsibilities in the auditor's report by referring to inherent limitations (which has the added benefit of helping to explain the meaning of "reasonable assurance"), and adding the third sentence of ISA 200.A1 or it's equivalent to clarify what an audit does not do.
- Including a statement of an auditor's responsibilities with respect to other information that clarifies precisely the information for which the auditor has a particular responsibility and the nature and extent of that responsibility to prevent a widening of the expectations gap.
- Consideration of providing auditor commentary that highlights a summary of significant risks of material misstatement that are identified as significant financial reporting issues in the financial statements by management.
- Furthermore, the PCAOB ought to consider strengthening auditor reporting to those charged with governance, which does not affect audit scope.

IDW
INSTITUT DER WIRTSCHAFTSPRÜFER

**25. What alternatives not mentioned in this Concept Release should the Board consider?**

One matter that we have not addressed in the body of our letter or in the responses to the questions above is whether management ought to be required by financial reporting standards to provide an assessment of its use of the going concern assumption in every financial statement. Auditors' reports could then be required to include disclosure by the auditor of the auditor's consideration of management's use of the going concern assumption in the financial statements. However, as this is a financial reporting matter in the first instance, this issue would need further discussion with legislators, accounting regulators and financial reporting standards setters before being placed on an audit standards setting agenda.

**26. Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?**

We agree that the development of an auditor reporting framework would be advantageous. However, we would like to point out that the development of an auditor reporting framework depends on the development of a conceptual framework for auditing, which as yet no standards setter has attempted. We therefore suggest that without such a conceptual framework for auditing, the PCAOB should first seek to be less ambitious by developing reporting criteria.

**27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?**

We agree that users may perceive some or all of the alternatives as providing a qualified or piecemeal opinion. Consequently, it is critical that it be clear from the report that any such information did not represent any form of piecemeal opinion on isolated aspects of financial statements – the auditor opines the financial statements as a whole – and not individual financial statement items. Therefore, the PCAOB would need to consider wording in the report that clarifies the nature of any assertions made by the auditor in, for example, an auditor's commentary, by stating that these

IDW

INSTITUT DER WIRTSCHAFTSPRÜFER

are not audit opinions, but conclusions reached in forming the audit opinion.

**28. Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?**

We believe that the alternatives that we have provided in response to Question 24 would be best in conveying to users the auditor's role in the performance of an audit. The other alternatives proposed would either not convey the auditor's role or, in some cases, just expand the scope of the audit.

**29. What effect would the various alternatives have on audit quality? What is the basis for your view?**

Since the various alternatives deal with the form, structure, wording and content of the report, or extending the scope of the audit, none of the alternatives ought to have an impact on the quality of the audit disregarding reporting. However, improved auditor reporting will increase audit quality in the eyes of users.

**30. Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the Concept Release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.**

In our view, the changes to the reporting model as we suggest ought to be considered for financial statements of public companies. We do not comment on whether the changed reporting model is appropriate for investment companies, investment advisors, brokers and dealers, and others. We expect the effect of applying our suggestions to the audit of public companies would lead to users valuing the audit more than previously.

IDW
INSTITUT DER WIRTSCHAFTSPRÜFER

31. **This Concept Release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.**

    a) **Are any of these considerations more important than others? If so, which ones and why?**

    In our view, all of these considerations need to be balanced – that is audit effort, and hence cost, needs to be balanced with the expected benefits of increased communication or expansion of audit scope. Likewise, liability considerations are important when considering expanding audit scope beyond the financial statements to other information – particularly when that other information is "soft" in character or lacks evidence. It is also critical not to blur the distinction between the roles of management and those of the auditor when seeking to convey entity information to users, which may violate legal confidentiality requirements in some jurisdictions. It is also important not to confuse information needed by users with that needed by audit committees in their governance role.

    b) **If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?**

    Changes to the standardized wording of the auditor's report are not costless, but if done judiciously the cost of those changes can generally be easily justified by the benefits. With respect to expanding auditor reporting as we suggested, or to expand the scope of the audit, we believe that the PCAOB must engage in a rigorous cost-benefit analysis to ensure that the benefits of proposed changes exceed the cost.

    c) **Are there any other considerations related to changing the auditor's report that this Concept Release has not addressed? If so, what are these considerations?**

    d) **What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?**

    We are not aware of any other considerations that we have not already mentioned in our responses to the other Questions.

IDW
INSTITUT DER WIRTSCHAFTSPRÜFER

**32. The Concept Release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?**

As we had noted previously, we believe it to be inappropriate for the auditor to originate in the auditor's report information on the company's financial statements: such information should be provided by management.

The Institute of Chartered Accountants in Australia

29 September 2011

The Office of the Secretary,
Public Company Accounting Oversight Board,

Email: www.pcaobus.org

Sir / Madam,

**PCAOB Rulemaking Docket Matter No. 34**
**CONCEPT RELEASE ON POSSIBLE REVISIONS TO PCAOB STANDARDS RELATED TO REPORTS ON AUDITED FINANCIAL STATEMENTS**

The Institute of Chartered Accountants in Australia (Institute) is pleased to have the opportunity to respond to the above Concept Release. The Institute is Australia's premier accounting body, which represents over 55,000 professional accountants. Our members work in diverse roles across public practice, commerce, industry, government and academia throughout Australia and internationally.

The Institute is a founding member of the international accounting coalition called the Global Accounting Alliance (GAA), which provides reciprocal arrangements with ten other leading accounting bodies in the world. The Institute is the only Australian accounting body within the alliance. The GAA represents more than 780,000 members world-wide and includes professional accounting organisations from the USA, Canada, Hong Kong, England/Wales, Ireland, Scotland, Japan, Germany, New Zealand and South Africa.

We welcome the PCAOB's paper as an important component of the discussion regarding the auditor's role, the appropriate vehicle for the auditor's communication to stakeholders and the content of that communication.

In our view the role of auditors is vital to the functioning of a modern economy. And it is arguably more important now than ever, as economic activity develops and stakeholders seek further information on which to base policy and other decisions.

We have not attempted to address all the issues raised in the Concept Release, but have instead opted to offer comment in those areas we view as being of the greatest importance and where we might be able to add most value to the Board.

Some particular themes we believe are important for us collectively to consider follow:

**Auditors' Access to Significant Information**

The Concept Release contains the following statement:

*"Auditors, as a result of the performance of required audit procedures, often have significant information regarding a company's financial statements and the audit of such financial statement, that is not today reported in the standard auditor's report to the financial statements users. This information might be useful to investors and other financial statement users and could lead to more efficient markets and improved allocations of capital."*

There is no doubt that auditors, in the conduct of the audit could, and should, have knowledge of all relevant and significant information. However, in our view the primary obligation must be on the company, its Board and management to make that information available to financial statement users. Introducing the concept of the auditor disclosing information directly to financial statement users is fraught with danger. It has the potential to add to confusion and exacerbate the expectation gap, rather than the reverse.

It would be helpful to understand if the PCAOB, in reviewing the files of auditors, has seen any indications of significant information which the auditor has, but which has not been communicated to the Board and / or management of the client company; and to also understand what was communicated to the audit firm being inspected at that time.

Alternatively, if the significant information has been communicated to the Board and / or management, our view is that the preferred course of action should be for the regulator to ensure that the company makes the information available to the users of the financial statements and empower the auditor to report egregious failure to include matters of significance to the reports on which they are opining.

**The Role and Future of Audit**

A great deal of work has been conducted over a number of years on the clarity of communication, but it is evident that many stakeholders continue not to understand the role of external auditors in general – even by groups who have regular on-going contact with their auditors. The 'expectation gap' is very much alive, and potentially growing wider. The statutory audit report, a primary output of an audit, is important to stakeholders in terms of the fundamental assurance it provides, enhancing the credibility of information reported on.

The current model of audit needs to change and expand. Part of this change lies in the general frustration that audit is seen to be only focused on the past and the question asked as to 'why didn't the auditor see this beforehand?'

However, the primary obligation for reporting must remain with the company and its audit committee. It is first and foremost the responsibility of the company to report in accordance with a reporting framework. If there is information of value to stakeholders which is not currently being reported, the reporting and regulatory frameworks need to address this.

The role of the auditor has been, and continues to be, to provide an independent professional opinion on whether the financial report of the company present fairly its state of affairs and financial results for the period in accordance with the reporting framework. The financial position and operating results directly reflect the results of the decisions of management and the Board of Directors of the entity.

We believe that the role of the auditor should be expanded to focus on providing assurance around the reporting by management of risks to the business model – bearing in mind that the responsibility for reporting in accordance with a recognised framework remains with the company.

***Continuous Assurance***

Enabling technology now permits business to be conducted 24 hours a day, every day of the year. While this dramatic change has occurred in the business environment, the financial reporting and assurance model continues to focus on the past, reporting in accordance with a historical financial reporting framework. In our view there is merit in exploring changes to this model to permit 'closer to the event' assurance in order to align the assurance model more closely to the business model. The term 'continuous assurance' is used to describe such a model. It may well be that this type of assurance is complementary to, but does not replace the current historical financial reporting framework. We attach a copy of our recent thought leadership paper on continuous assurance titled *Continuous Assurance for the Now Economy*.

**Expectation and Information Gaps**

Consensus seems to be that the global events of recent years have revealed that more work needs to be done by all stakeholders to identifying, analysing and responding to 'systemic risk', stemming from the size and complexity of institutions and their relationships with other parts of the financial system. Proposals about systemic risk have been numerous. Current practice is for auditors to identify risk within the company. We foresee much greater emphasis internationally, at country level as well as industry and company level on business risks. Auditors are well placed to be involved with reporting on risks to the business model and the potential for that model to fracture.

However, we need to make sure that we understand as clearly as possible what actually failed. Once we know that, appropriate policy and other responses become easier to determine. Feedback from an Institute-sponsored round table discussion on this topic was that we need to be very careful we do not build a solution to yesterday's problems.

More detail in financial reports is not necessarily the solution. The Institute hears regularly from members and other stakeholders that financial reports are already far too voluminous, complicated and intelligible to only a few. Much of the detailed information that tends to be 'boiler plate' could, for example, be web-based only and not reproduced in the financial report itself. Stakeholders who require this information would thus continue to have access to it, albeit on the internet.

Further, the expectation gap is not necessarily confined only to external stakeholders. There are many in the director community who appear not to have a clear understanding of the auditor's role and how it relates to those charged with governance of the entity. Having more words in the auditor's report will not necessarily address this issue.

**The Role of the Audit Committee**

An independent audit committee is a fundamental component of a sound corporate governance structure. Importantly it brings together in one place non-executive directors, management, external audit, internal audit and advisors. The role of the audit committee has evolved significantly in the last decade and will continue to evolve. It has moved from being a fairly narrow function focused primarily on completion of the audited financial statements, involving limited interaction with the external auditors, to a much broader and integrated focus of responsibilities. Drivers of this evolution include regulatory expectations, market expectations and better practice initiatives the committee members and auditors gain in closer working relationships.

We are of the view that further enhancements can and should be made to the role of the audit committee. An essential element of the audit committee's role is to interact effectively with the external auditor towards obtaining a quality audit. In order for this to happen the audit committee needs to be equipped to understand what a quality audit entails and to engage with their auditor meaningfully. We are assisting with this goal and have a range of initiatives underway to assist the director and audit committee community. To support these initiatives we have used *The Benefit of Audit: A Guide to Audit Quality*. We attach a copy of our Guide.

We also believe further analysis needs to be undertaken about potential barriers to effective audit committees and how those barriers may be overcome. This could include consideration of potential changes which could be made to relevant laws (if any) to allow auditors to provide more meaningful reports for the better performance of the audit committee.

The rigour and nature of director and audit committee questions of auditors and the willingness and capacity of auditors to deal with those questions should be considered. What are the factors inhibiting a free and frank exchange between auditor and audit committee (or directors), which may be about business models, or also about individuals and other business stresses? Some of the barriers to a better and more fluent discussion between auditors and audit committees include a fear of litigation, as well as the competencies of those involved.

One also needs to ask whether some aspects of independence requirements limit an auditor's capacity to provide useful insights and engage in useful conversations with the audit committee or directors.

Communication between auditors and the audit committee is important, as is communication between the audit committee and the company's stakeholders. In our view there is merit in exploring an enhanced role for the audit committee in external communication and contributing to an improved understanding of what auditors do.

**Audit Quality**

Shareholders, company directors, audit committee members, auditors and regulators all agree that quality external auditing is fundamental to capital market confidence.

In only a few years the concept of audit quality has evolved from the somewhat esoteric, loosely discussed and poorly acknowledged, to having substance and involving all stakeholders. The pace of evolution of Audit Quality is accelerating, as evidenced by the establishment of the International Auditing and Assurance Standards Board's task force on this topic. There are great opportunities for standard setters, audit firms and professional bodies to influence the ongoing enhancement for the benefit of all.

For example in recent years there has been significant work in clearly understanding the drivers of audit quality. That work is being used by participants and stakeholders with the common goal of continuing to improve audit quality. We produced *The Benefit of Audit – A Guide to Audit Quality* based upon these drivers of audit quality to enhance communication (in plain English) between the audit committee and the external auditor.

We have also produced the *Framework for Managing Audit Quality Sustainability* to provide a structure for continuous improvement in audit quality and to stimulate further discussion on this important topic. We attach a copy of this Framework.

The Institute is of the view that the above themes are of sufficient importance that we will continue to devote substantial resources in their further development.

We would welcome the opportunity to provide further evidence to the Board if required.

# Continuous Assurance for the Now Economy

by Miklos A. Vasarhelyi, Michael Alles and Katie T. Williams

The Institute of Chartered Accountants in Australia

**The Institute of Chartered Accountants in Australia**

The Institute of Chartered Accountants in Australia (the Institute) is the professional body representing Chartered Accountants in Australia. Our reach extends to more than 65,000 of today's and tomorrow's business leaders, representing some 53,000 Chartered Accountants and 12,000 of Australia's best accounting graduates who are currently enrolled in our world-class post-graduate program.

Our members work in diverse roles across commerce and industry, academia, government and public practice throughout Australia and in 110 countries around the world. We aim to lead the profession by delivering visionary thought leadership projects, setting the benchmark for the highest ethical, professional and educational standards and enhancing and promoting the Chartered Accountants brand.

We also represent the interests of members in government, industry, academia and the general public by actively engaging our membership and local and international bodies on public policy, government legislation and regulatory issues.

The Institute can leverage advantages for its members as a founding member of the Global Accounting Alliance (GAA), an international accounting coalition formed by the world's premier accounting bodies. The GAA has a membership of 788,000 and promotes quality professional services to share information and collaborate on international accounting issues. The Institute is constituted by Royal Charter and was established in 1928.

For further information about the Institute visit **charteredaccountants.com.au**

# Foreword

The Institute of Chartered Accountants in Australia (the Institute) is delighted to bring to you *Continuous Assurance for the Now Economy* the second in a series of academic research papers. This series of papers is designed to provide and promote thought provoking debate on key issues relevant to the academic accounting community.

The IT revolution of the late 1980s early 1990s paved the way for information to be available upon demand. Over the years the demand by the users of information has grown stronger. As a result businesses, shareholders and sophisticated market analysts are demanding and are now receiving data in real-time.

The key question of what assurance could, and should, be provided over this stream of real time data needs to be addressed. The concept of ‘real-time’ or Continuous Assurance attempts to better match internal and external auditing practices with IT systems that provide stakeholders with more timely and accurate results.

This thought leadership paper is written to promote discussion on continuous assurance as a concept. All stakeholders, standard setters, regulators, government users, and the profession have a role to play.

Importantly, Continuous Assurance is in its infancy, and no standards have yet been put into place around it. What this does create is a unique opportunity for the profession and stakeholders to consider the ramifications of potentially widespread applications of Continuous Assurance; what users’ needs are; how the concept is to be applied; what standards are to be created; what the education needs are and any regulation that may be needed.

*Continuous assurance for the now economy* has been written by leading continuous assurance scholars, Prof Miklos A. Vasarhelyi, Assoc Prof Michael Alles and, Ms Katie T. Williams. The Institute would like to thank the authors for their dedicated time and assistance in producing this paper.

## Summary of figures

## Summary of tables

# Executive summary

Over the last few decades businesses in Australia and around the world have been utterly transformed by powerful information technologies, from the PC and the internet to email and cellular phones – to the extent that a new type of economy is said to have been created: the 'Now Economy' which is characterised by 24/7/365 globalised operations, customer interaction and management decision making. By contrast, the way in which these entities are audited has not experienced an equivalent evolution. Over the last century, external auditors have tended to examine an entity only once a year and listed entities themselves only report quarterly in many parts of the world and half yearly in Australia, even though the capability exists for both reporting and auditing on a much timelier basis. The emerging field of Continuous Assurance attempts to better match internal and external auditing practices to the reality of the IT-enabled entity in order to provide stakeholders with more timely assurance. The dramatic collapse of leading banks around the world makes it all the more important that external and internal auditors take full advantage of modern technology to provide shareholders and managers with the most timely and relevant assurance.[1]

Our experience with the emerging Continuous Assurance industry over the last decade indicates that traditional auditing will give way to a progressive form of 'close to the event' assurance. The obvious economic benefits to be gained from better matching internal and external assurance with the pace of their operations, combined with lower costs and increasing capabilities of the driving technologies, fosters the emergence of Continuous Assurance. However, it is likely that first, professional organisations and then, standard setters, as well as governments, will issue guidelines for progressively real-time assurance procedures.

External auditing involves an assessment by the auditor that reports prepared by the entity are in accordance with the relevant framework. Responsibility for recognition, measurement and disclosure is clearly the responsibility of those charged with the governance of the entity: senior management and the board of directors. Hence, the auditor's job is to assess if the entity has met its obligations by examining the entities' transactions and other parameters. As those transactions increasingly only exist in digital form, the audit process will have to change accordingly. The question is whether that change will be minimal – with the formerly manual procedures simply redone electronically – or whether auditing will be re-engineered fundamentally, to rethink how auditing can be done most effectively when it no longer needs to be done manually, and hence only periodically and with limited data.

Continuous Assurance is a progressive shift in audit practices towards the maximum possible degree of audit automation as a way of taking advantage of the technological basis of the modern entity in order to reduce audit costs and increase audit automation. Given the emphasis on the transformation of the entire system of auditing, the development of Continuous Assurance requires a fundamental rethink of all aspects of auditing, from the way in which data is made available to the auditor, to the kinds of tests the auditor conducts, how alarms are dealt with, what kinds of reports are issued, how often and to whom they are issued, and many other factors, the importance of some of which will only become apparent as Continuous Assurance is implemented. It is important for the profession and other stakeholders to start thinking about the impact of Continuous Assurance on auditing now, when it is easier to put in place the foundations for this change, rather than when technologies and practices have already become established.

1. Bear Stearns received an unqualified audit opinion on 28 January 2008. However, by 10 March 2008 its financial problems hit the headlines and on 14 March 2008, with state support, it was sold to JP Morgan Chase (Sikka, 2009).

While audit standard setters are letting Continuous Assurance reach a more mature level before developing standards around it, Continuous Assurance has already been the subject of white papers by several important professional bodies. The Canadian Institute of Chartered Accountants (CICA) jointly with the American Institute of Certified Public Accountants (AICPA) issued their 'red book' – entitled *Continuous Auditing* – in 1999. The US-based Institute of Internal Auditors issued a Global Technology Audit Guide (GTAG) entitled *Continuous Auditing: Implications for Assurance, Monitoring, and Risk Assessment* in 2005[2], while Information System Audit and Control Association (ISACA) International has also recently issued an exposure draft on Continuous Assurance, written in part by an Australian, Kevin Mar Fan, CISA, CA, of the Brisbane City Council.[3] It is important to recognise, however, that there are no established procedures for Continuous Assurance at this time, and this is not the time for anything to be considered settled. Rather, it is a time for experimentation, to 'let a thousand flowers bloom', in order for auditors to figure out what they should be doing in this new technological business age, and how they should be doing it. Standard setters and other regulators, accounting bodies and the government have to continue to play more of an educational and advocacy role at this stage, to encourage the adoption of Continuous Assurance and its continuing evolution. The rapid rise of the Continuous Assurance industry following the 1999 'red book' indicates that this strategy has paid dividends and that there is evidently no rush by any of these bodies to change their role.

Another key role in the evolution of Continuous Assurance will be played by the universities and accounting bodies that train the next generation of accountants. This next generation will spend much of their working lives in an environment where Continuous Assurance will no longer be an emerging audit methodology, but simply the everyday way in which auditing is done. However, much of current audit education reflects a manual, periodic accounting paradigm. Accounting information systems, for example, are often dispatched with a single support course, rather than being integrated into all aspects of the curriculum. The mindset and skill set of an auditor who uses technology to enhance and expand auditing is very different from one who simply takes as given whatever technology their entity happens to choose to introduce, and whose IT infrastructure is often much less sophisticated than that of the clients whose processes they are auditing. Students need training not just in technology, but also in advanced statistics since that technology enables far more complex analytics than are utilised today. Vasarhelyi et al. (2009e) discuss how audit education will have to change in response to the shift of auditing to Continuous Assurance.

The external audit profession, internal auditors, software vendors and academics are all busily developing new procedures for taking advantage of access to a universe of data in close to real time. Although technology is advancing at a faster rate than the slower moving processes of change management within organisations, a discrepancy is visible both in audit entities and their clients, as well as in the standard setting process. Moreover, Continuous Assurance is emerging far faster than the real-time reporting which is an important complement[4] to more frequent assurance; again, a not unexpected development given that much of reporting is determined by legislation and risks of litigation. But the bottom line is that a fundamental shift is taking place, slowly but surely, in the way

2. Available at http://www.acl.com/pdfs/GTAG_ContinuousAuditing-05.pdf
3. http://www.isaca.org
4. Real-time or close to the event information feeds are essential to a continuous audit. Continuous reporting is desirable for many reasons but not a requirement for a continuous audit.

in which external and internal audits are carried out, and this document both explores those changes and hopes to drive it forward in Australia and internationally.

This monograph is intended to stimulate thinking about the issues that need to be addressed in a world where Continuous Assurance has become, or aims to become, the standard for auditing both externally and internally. It examines how the audit profession needs to respond if that vision of IT-enabled real-time auditing is to become a reality, and this requires an understanding of how IT is transforming the modern large entity and how internal and external auditors are dealing with these changes.

The recent development of data interoperability standards such as the extensible markup language (XML)-based Extensible Business Reporting Language (XBRL) promises a much needed interconnectivity in the information highway. Creative organisations are bringing many of their processes into real-time. The many processes being accelerated include financial-related processes such as business measurement, financial management, business reporting (continuous reporting) and business assurance.

In a typical medium or large enterprise today, the IT environment encompasses the potential for automatic event sensing, automatic generation of transactions, electronic feeds from everywhere, integrated business management software (enterprise resource planning [ERP]), standards of universal data transfer (eg. XBRL) and automation of many processes. This 'Now' or 'real-time' economy uses the above components to increase the speed through which processes are performed and data is shuttled among processes. This acceleration provides substantial economies to business as 'time is money'. Furthermore, it places pressure on all competitors to further their automations. The latencies (delays) that are being eliminated in the Now Economy include: 1) the time taken to perform a process; 2) the time it takes to transmit information from one process to the next; 3) the time taken to make a decision; and 4) the time it takes for the decision to have consequences.

Many processes can be classified in four different overlapping ways:

- Processes that are supported by real-time systems
- Processes which are monitored on a close to continuous basis
- Processes that are highly time dependent
- Processes where timely decisions give competitive advantage.

Continuous Assurance was first reported in 1991 at the well-known AT&T Bell Laboratories (Vasarhelyi and Halper, 1991) which was, at that point, one of the leading world research institutions where the transistor, much of lasers and modern telephony were developed. It encompassed the monitoring and real-time assurance of a large billing system focusing on the data being measured and identifying through analytics methods, faults in the data that lead both to control and process diagnostics. This is now called continuous data auditing (CDA).

It took another 10 years for the accounting entities to take notice of these developments and propose some guidelines/standards for Continuous Assurance. First the CICA/AICPA and the Institute of Internal Auditors (IIA) issued guidance. The collapse of Enron, Arthur Andersen and WorldCom in the early part of this decade brought the *Sarbanes Oxley Act* (Sarbox) into being in the United States and similar focuses on internal controls in other countries which not only distracted organisations from improving their accounting data assurance but also brought attention to internal controls, their measurement, and statutes requiring their assurance. The attention to Sarbox section 404, associated with the fact that most large organisations use ERP and their controls cannot be visually observed, brought in the need for monitoring and evaluating controls on close to a real-time basis. This is called continuous control monitoring (CCM). While much of the attention paid to Continuous Assurance in this period was undertaken by internal auditors responding to the need to improve their entity's financial reporting controls, external auditors are now benefiting from these technological advances. External auditors were always involved in the development of Continuous Assurance by internal auditors because of their need to rely on the work performed by internal auditors when issuing their own audit opinion. Hence, anticipating the needs of the external auditor was a major factor in the shape of Continuous Assurance systems created by internal auditors. What is different now in this third decade of Continuous Assurance is that external auditors are themselves taking the initiative in investing in Continuous Assurance practice and technology, with all the major audit firms having their own home-grown Continuous Assurance systems and procedures. In recent years we have also witnessed the emergence of an industry of software to support Continuous Assurance including ACL, Caseware, Approva, Oversight, and SAP governance, risk and compliance (GRC).

The meltdown of the financial system of 2008/2009 has focused attention on the lack of adequate risk measurement, modelling and evaluation. Modern technology allows for closer and more realistic measurements of risk and continuous risk monitoring and assessment (CRMA). Consequently what we call today 'continuous audit' is the conjunction of CDA, CCM and CRMA. CRMA, however, is far more than just the continuous monitoring of major risk factors. We foresee that one day it will evolve into a mechanism for evolving the entity's Continuous Assurance systems themselves to better focus on those risk factors. In other words, while the emphasis today is on developing a Continuous Assurance system in the first place, the focus will inevitably have to shift towards how to make those static systems dynamic in order to maintain their relevance to the auditor over time.

Continuous Assurance has been the subject of extensive experimentation and implementation. The authors of this paper have been involved in Continuous Assurance since its inception and have conducted a series of Continuous Assurance development projects in cooperation with the Big 4 accounting firms and leading internal audit (IA) organisations. These projects have helped define the emerging field of Continuous Assurance.

The first reported Continuous Assurance effort took place at Bell Systems (now AT&T) in the USA from 1986 to 1991 (Vasarhelyi & Halper, 1991). This gave rise to a series of questions about data, the architecture of Continuous Assurance, models to compare data, etc. Research work with a large health organisation allowed for experimentation of modelling the supply chain and the creation of mathematically-based adaptive standards. The developed rules served to detect and remove two types of data errors that are largely caused by many unmatched records among different business processes:

- Data integrity violations
- Referential integrity violations.

An example of Continuous Assurance in practice can be seen at Itau Unibanco, one of Brazil's largest private banks. Over the last five years it has monitored its network of 1400 branches on a daily basis using a set of 18 analytic tests. This monitoring has reduced the average time for an onsite branch audit from 160 hours to 40 hours and has changed the scheduling and oversight procedures of branches. Five auditors perform this monitoring and issue from 200 to 400 alerts a week. The bank feels that its savings on this effort are ten times its cost.

Over the last four years, the giant German firm Siemens has experimented with the concept of CCM through a joint research program with Rutgers University's CarLab[5]. Its project aims to investigate the extent to which Continuous Assurance techniques:

1. Can be applied to their existing audit process
2. Help implement an automated Continuous Assurance system that frees up IA work force
3. Enables established manual audit procedures by re-engineering them.

The two phases of this project, which focused on the automation of SAP-related audit actions, indicated that close to 68% of the traditional audit steps could be automated. Furthermore, many audit steps could be performed more frequently and remotely. These facts raise interesting issues about the need to re-engineer the entire audit process in view of more frequent evidence, the locus of the auditor, and new types of systems and architectures.

A wide variety of supporting software and experimental considerations has emerged in Continuous Assurance. Today we talk about continuous audit that brings assurance procedures closer to the moment of the event, but in reality the audit of the future will use continuous evidence gathering and much of the Continuous Assurance methodology discussed in this paper to gather its evidence into a timely semi-automated audit process.

In addition to the methodology issues discussed there are a series of practical steps that must be followed in the implementation of Continuous Assurance. Six steps are recommended:

1. Establish priority areas
2. Identify monitoring and continuous audit rules
3. Determine the process's frequency
4. Configure continuous audit parameters
5. Follow up
6. Communicate results.

5. Continuous Audit and Reporting Laboratory, http://raw.rutgers.edu

# Rethinking auditing

**Inspection Program Details**

New Jersey must comply with standards defined in the federal Clean Air Act by inspecting every vehicle's catalytic converter and emissions system. Several types of tests are now used in New Jersey. For vehicles manufactured before 1996, a treadmill is used to monitor emissions during acceleration. For vehicles manufactured in 1996 or later, New Jersey uses the On-board Diagnostics, or OBD, test. 1OBD allows technicians to download emissions information from an on-board computer found in most vehicles manufactured in 1996 or later. MVC analyses emissions data in this way to determine if the vehicle passes inspection. www.cleanairnj.org

New Jersey Driver Manual, pages 79-80

In Australia, as in most other countries, the government agencies tasked with inspecting motor vehicles and issuing licenses are usually held up as the epitome of inefficiency and archaic bureaucracy, the kind of organisations people wish to avoid interacting with. Yet the Department of Motor Vehicles (DMV) in the US state of New Jersey offers some very useful insights into the impact of technology on everyday life.

For instance, it is a requirement in New Jersey, as in many other jurisdictions in this environmentally conscious age, that drivers take their vehicles in every few years for an inspection of their safety and emissions controls. That inspection process has been revolutionised in recent years thanks to advances in technology in both the automobile and the inspection station.

Once entirely mechanical cars are now highly computerised, so much so that the backyard mechanics who once spent their weekends tinkering with vehicles are now officially discouraged from doing much more than checking the oil and tyre pressure. As a result, the DMV no longer has to run the engine of the vehicle and sample the exhaust air when inspecting its emissions; instead, the inspector plugs a handheld device into the car's computer and downloads records of the vehicle's performance which enables its emissions to be tracked more accurately and over a wider range of actual driving conditions. So much better are these measures – and so much better controlled are these computerised cars – that inspections are now only conducted every two years instead of annually as in the past, and new cars are not even required to be inspected in their first four years.

When one considers that the DMV is effectively evaluating the performance of cars against the clean air standards that they are required to meet by US national law, it is apparent that what is taking place here is analogous to auditing as it applies to the accounting realm. And just as the authorities had to rethink the way in which they do vehicle inspections to take advantage of modern technology, auditors around the world are developing new practices and modifying existing methodologies to exploit the power of the IT that underlies modern entities, especially the largest ones. It would make little sense for auditors to retain practices first developed when audits became mandatory 70 years ago when their clients have been driven by the competitive necessity to be more like a high-tech, high-performance sports car than the pioneer automotives preceded by a man holding a warning flag. As with any analogy, the parallels are not exact, but the point of making such a comparison is to encourage looking at auditing from a new and different perspective.

This paper discusses the emerging field of Continuous Assurance and places it within the context of the IT-enabled business world which facilitates and gives rise to Continuous Assurance It is a world where transactions are processed and tracked electronically, thus making business much faster than before, while the tagging of financial data with the XBRL promises to make business information communication equally rapid. And, as the speed of business increases, so does the demand for auditors, both external and internal, to provide assurance closer to the transaction date than is typically made available in traditional auditing which is currently centered on the annual audit of paper-based income statements.

A final recourse to our automobile analogy: over the last century of motoring, it is not only the technology of the automobile that has changed, but the entire system of roads, traffic management, petrol distribution, etc. that supports driving, that has altered in tandem. It would hardly make sense, for example, to replace a Model T Ford of the 1920s with a modern Jaguar XF if it were forced to drive on the 'macadamised' single lane roads of that earlier era, with petrol carried along in jerry cans to make up for the lack of refuelling facilities along the way. Similarly, Continuous Assurance is but one manifestation of the fundamental changes in the entire accounting environment that technology will make inevitable. It does not take much foresight to predict that in 20 years it will be incomprehensible to report only annually, when one day closing, ERP systems, the internet and XBRL will make continuous reporting trivial. The roles of all parties in the reporting and auditing fields will change accordingly, and now is the time to begin planning for this eventuality.

This paper begins by considering the 'real time' or 'Now Economy' and understanding the technological infrastructure of the modern, large, global entity. It is on this foundation that the future of auditing is in the process of construction.

# The Now Economy

## Introduction

### Defining and classifying latency

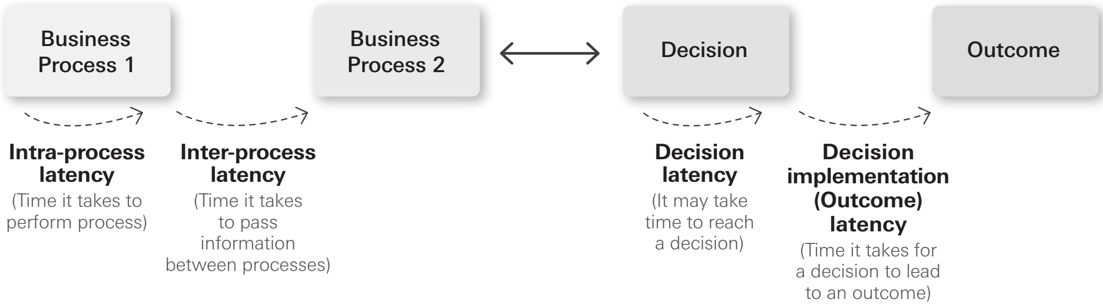
> In years to come, experts predict, many companies will use information technology to become a 'real-time enterprise' – an organization that is able to react instantaneously to changes in its business. And as firms wire themselves up and connect to their business partners, they make the entire economy more and more real-time, slowly but surely creating not so much a 'new' but a 'now' economy.
> *The Economist*, 1 February 2002.
>
> We have only just said goodbye to the new economy, yet it's time to say hello to the 'Now Economy'. Never heard of it? You're not alone. Even technology gurus sing different tunes when describing the newest buzzwords. The now, or real-time, economy is a complex set of enterprise software products and services that could transform the way companies work. This software could speed up supply chains, cut inventory costs, facilitate cross-company process reengineering, and put more oomph into CRM.
> *The McKinsey Quarterly Newsletter*, February 2002.

Four major types of latency (delay) are being addressed with improved incorporation of technologies:

- **Intra-process latency:** the time it takes for a process to be performed (eg. processing accounts payable). These latencies are addressed by increased automation of process steps. Automating the verification of ERP controls (Alles et al., 2006) falls into this category.
- **Inter-process latency:** the time it takes to pass data between processes. These latencies are addressed by the progressive adoption of methods of passing information between processes progressively adopting interoperability standards like XML. The financial value chain will be substantially accelerated by the inclusion of XBRL as the conduit for the financial value chain, when other XML-derivative language tagged transactions will flow coherently into XBRL/GL.[6]
- **Decision latency:** the time it takes for a decision to be made, reduced to nanoseconds if decisions are made automatically but rigidly in approach. Auditors make a series of examination decisions based on error detected in a sample or population. These decisions take time and human intervention. Rules can be developed to automatically highlight items for further examination or accept the sample as representative.
- **Decision implementation latency:** the time it takes for implementation of a decision, contingent on the nature of processes and about the types of interconnected processes. Once a sample is deemed to need more examination, original documents need to be scrutinised or subject to further analysis. Automation can reduce this latency by automatically submitting a sub-sample to increased filtering and analysis.

6. XBRL/GL is an XBRL dialect aimed at providing tagging at the ledger level and consequently allowing for direct postings of transactions tagged in other XML languages. For example, a transaction tagged in the XML standard for information on electronic tags can be directly converted to an entry on XBRL/GL and automatically feed the financial value chain.

**Figure 1: Intra, inter and decision latencies**



The essence of the progress towards the Now Economy is the reduction of latencies. Manual processes are very costly and time consuming but under certain conditions are necessary or unavoidable or render better outcomes than simple embedded computer-based rules. The balancing of these considerations and the progress in automation dramatically changes the competitive scenario.

## Some key concepts

Businesses are taking the lead in adapting to and accelerating the development of the Now Economy through the widespread adoption of integrated company software such as ERPs, modern communication technologies that ensure workers are on the job 24/7/365, and monitoring systems that give a greater range of managers the ability to track and control key business processes. All this allows businesses to manage their processes based on up-to-the-minute information and to achieve rapid adjustments of tactics and strategies.

Both *The Economist* and McKinsey (see quotes above) have adopted the terminology as a way to describe a complex set of evolving changes that are bringing the provisioning of information closer to the causal events. Their adoption of the term ‘Now Economy’ indicates its progressive understanding in the business community:

> Never mind New Economy vs. Old Economy industries. What matters is if your business enjoys intelligently revised and technologically enhanced business processes. Business process innovation is beginning to move in concert with accelerating technological evolution. Say goodbye to the New Economy; meet the Now Economy. We are witnessing the emergence of real-time enterprises (RTEs) that will comprise the bulk of the Now Economy. In the Now Economy, information flows rapidly through supply and demand chains, crossing corporate boundaries, ensuring maximum efficiency and responsiveness.

> The ideal vision of the RTE is one of companies where information moves without hindrance, and business processes are continuously monitored and trigger rapid reactions, usually automated according to embedded business rules. RTEs also sense shifts in tastes and practices and respond by offering new products and services. Automated processes easily traverse corporate boundaries, time zones, media and systems. Batch processes and manual input are minimized by ensuring that real-time information among employees, customers, partners and suppliers is current and coherent. The Now Economy is the instantaneous, frictionless economy of economists' legend – the mythical beast that may finally be emerging from the mist. The Now Economy is a web of RTEs that form a virtual supply and demand chain continually seeking information, monitoring, and responding, guided by humans, mostly at the highest strategic level (Fingar and Bellini, 2004).

The Now Economy is characterised by a substantive reduction in the latencies discussed above. For example, companies must manage their cash on a day-to-day basis to be able to apply it and borrow it overnight; manage receivables and payables on a day-to-day basis to take advantage and grant discounts; and manage inventories up to the minute to do just-in-time factory management. These are just a few examples of the advent of a real-time economy. Moreover, the effects of wireless technology, radio frequency identification and sensors and integrated software are just now starting to emerge. The coming years will bring in more nimble and adaptive companies integrated in the world. The evolution of these technologies, and their integration into business, also brings in behavioural effects that may accelerate or delay progress.

*The Economist* (30 April 2002) points out the issue of instant gratification:

> Instant Gratification: To advocates of the concept, the real-time enterprise is a giant spreadsheet of sorts, in which new information, such as an order, is automatically processed and percolates through a firm's computer systems and those of its suppliers. Thus a simple inquiry such as, 'When is my order being shipped?' can be answered immediately, and not six phone calls and three days later, explains Vinod Khosla, a partner with Kleiner Perkins Caufield & Byers and one of the most notable advocates of the real-time concept. Many consumers have already encountered real-time business without realizing it, for instance when they order a Dell computer. The firm's website allows customers to check the status of their order at any time.
>
> But the real-time enterprise is not simply about speeding up information flow. It is also, as GE's example shows, about being able to monitor a business continuously and react when conditions change. Today, businesses 'are mostly shooting in the dark', says Michael Maoz, a research director at Gartner, an IT consultancy, and one of the pioneers of the concept. Real-time technology, he predicts, will give firms a window into their business they never had before.

While the technological underpinnings of the Now Economy continue to evolve and emerge, it is also important to focus on the changes it brings about to the mentality of management, in particular, the decrease of latency between transaction and decision point, which means that processes have to be viewed with these delays in consideration. These real-time processes can be classified in at least four different overlapping ways, each with different implications for decision making, control and monitoring:

- Processes that are supported by real-time systems
- Processes that are monitored on a close to continuous basis
- Processes that are highly time dependent
- Processes where timely decisions give competitive advantage.

The classification of processes into these categories is not static, but dynamic with respect to technology, business process re-engineering and competitive pressures. Thus, as an increasing number of processes at more entities fall into the first and second categories, then the more likely they are to be used as sources of competitive advantage. Eventually, such practices become ubiquitous in an industry, at which point they stop providing a competitive advantage, but become a minimum necessary to stay competitive. Examples of such dynamics are the development of SABRE at American Airlines, the assignment of real-time seat choice on airline websites, the onslaught of online payment mechanisms, or the ability for consumers to track packages at UPS and FedEx and even the United States Postal Service (Wiseman, 1988).

The acceleration of business processes and their accompanying decision points necessitates access by a larger range of people within businesses to high quality data with the ability to drill down and search unconstrained by traditional data aggregation methods, such as into income statements. Thus, a large percentage of large entities today use ERP systems that integrate their information flows into one easily accessible data processing system. Add-on software, such as those providing increased business capabilities and customer relationship management, enables rapid and detailed analysis of that flood of data to allow decisions to be made at a level not possible before, such as treating each and every customer differently based on their individual profitability. Thus, the connection between technology and management use of that technology is clear:

> In the past, firms have faced a trade-off between being integrated and being flexible. New software technology promises to ease that trade-off, or even do away with it altogether. At the same time, new hardware, such as wireless sensors, makes it possible to gather ever more information about the physical world and feed it into a company's computer systems. Turbines made by GE are equipped with sensors that allow the firm to tell its customers online how efficiently their machinery is operating. Similarly, companies can now collect more data about people, even tracking their location. By themselves, these data would just contribute to the increasing information overload. But they present a new business opportunity: to develop software that analyses them and suggests ways of epitomising the supply chain, or even automates the response to certain kinds of new information (*The Economist*, 2002).

A more recent example from *The Economist*[7] (2009) demonstrates that these predictions about the use of real-time information to drive new businesses have come to pass:

> High above the Pacific, passengers doze on a long flight from Asia to America. Suddenly a bolt of lightning cleaves the air. Those startled by the flash and bang soon settle back into their dreams. But on the other side of the world, in Derby, in the English Midlands, engineers at Rolls-Royce get busy.
>
> Lightning strikes on passenger jets are common – a couple every hour – and usually harmless, but this one has caused a cough in one of the engines. The aircraft will land safely, and could do so even with the engine shut down. The question is whether it will need a full engine inspection in Los Angeles. That would be normal practice, but it would delay the return journey and keep hundreds of passengers waiting in the departure lounge.
>
> A torrent of data is beamed from the aircraft to Derby. Numbers dance across screens, graphs are drawn and technicians scratch their heads. Before the plane lands, word comes that the engine is running smoothly. The aircraft can take off on time.
>
> Rolls-Royce's global operations room in Derby, with 24-hour news channels, banks of computer screens and clocks showing the time around the world, looks and feels like a currency-trading floor. It seems far away from the grubby manufacturing that Derby has pioneered since the dawn of the industrial revolution. In fact, a few hundred yards down the road, furnaces roar, cutting tools whine and giant workhorses of the air take shape. The operations room is the heart of a vast industrial enterprise …
>
> The operations room … continuously assesses the performance of 3,500 jet engines around the world, raising an almost insurmountable barrier to any rival that hopes to grab the work of servicing them. The data collected can be invaluable to airlines: it enables Rolls-Royce to predict when engines are more likely to fail, letting customers schedule engine changes efficiently. That means fewer emergency repairs and fewer unhappy passengers. The data are equally valuable to Rolls-Royce. Spotting problems early helps it to design and build more reliable engines or to modify existing ones. The resulting evolution of its engines has steadily improved fuel efficiency and over the past 30 years has extended the operating life of engines tenfold (to about ten years between major rebuilds). 'You could only get closer to the customer by being on the plane,' says Mike Terrett, the company's chief operating officer.

It is obvious then that the Now Economy is driving major changes in the way in which businesses operate, beginning with the larger and more innovative entities and moving on to becoming a way of life for all types of entities. Not so long ago in most countries, and even today in some developing ones, buying a product meant going to a store, picking out the item and then going from counter to counter, getting a receipt from one clerk, paying another and picking up the purchase from a third. By contrast, consumers today buy many products online and expect immediate email confirmation of the transaction, its payment and order tracking, and would discontinue their business with the retailer if these services were not provided. And yet, while all this would have been utterly unfeasible even a

7. *The Economist*, Rolls-Royce, Britain's lonely high-flier, 8 Jan 2009.

decade ago, these consumer-oriented activities pale in comparison to the range of services provided in the business-to-business realm, as the Rolls Royce example shows.

But, as accountants, we can look back at these changes and recall that the reason for the labour intensive practices in that long-ago retailer was to ensure control and avoid pilfering of either products or cash. Thus, the electronisation of these business processes came about not only through the development of such technologies as the internet, but because of improvements in transactional control practices such as secure communications, digital cash management, seals of approval, privacy practices and regulations, and so forth. And that transition leads us to ask how the accounting profession, and in particular auditing, both external and internal, is responding to the arrival of the Now Economy.

## Automation

The electronisation of business is being driven by the need for latency reduction and is facilitated by progressive technological developments and their integration in the fabric of society, in particular, business processes. Automation is the core concept in electronisation and is composed of a large set of mechanisms. Experience with the early introduction of computers in business processes shows that highly formalised, repetitive, labour intensive processes are easier to automate and their economic benefits are simpler to quantify. On the other hand, more complex automation resulting in qualitative improvement is much more difficult to justify. For example, early labour replacement computer applications, such as billing for a large utility, were of obvious and dramatic justifiability. At first glance it was difficult to justify the replacement of a large number of spaghetti code legacy applications by cleaner but rigid and costly ERPs. For many entities it took the troubles of the Y2K bug to justify a serious data processing investment.

### Business versus audit automation

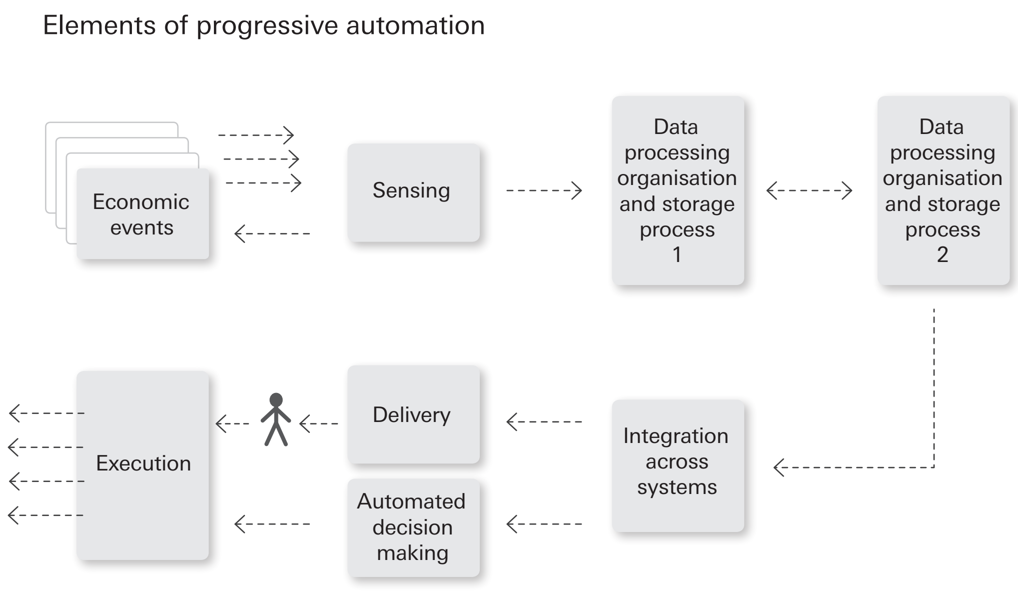
The auditing area has witnessed a similar phenomenon. It took little time from the introduction of PCs for the big audit firms to purchase masses of the devices replacing the much dreaded adding, extending and ticking by data extraction routines/software and a friendly spreadsheet. On the other hand, the next obvious step in automation of assurance which also entails integration of different steps of the assurance process, has lagged behind dramatically leaving the toolset of the auditor second generation in a fourth generation computer world.

While in business systems there is across application integration, in auditing there is software extraction (eg. using focus), which is cumbersome to import into spreadsheets and requires much manual manipulation. While in business there are dashboards and executive information systems spitting out status every six hours, in auditing there is a statute-driven manual reporting schema. The research projects at Siemens and Itau Unibanco described in this paper show useful paths in automatic data extraction and dashboarding for audit decisions. While in manufacturing there are fully automated paper pulp and iron ore mills mixing and controlling the output automatically, in auditing there is a failure prone manual judgment process where organisations are deemed healthy one month but fail the next. The economic crisis only makes it all the more urgent to recognise the reality that the current system of reporting and auditing is unable to keep up with the demands of the modern IT-enabled business, of which the financial service entities, with their continuous trading of derivative instruments whose value can only be calculated by computer, is the leading example.

## Components of audit automation

Some elements of the basic business process can be segregated and their automation discussed. A much deeper discussion of these factors is performed by Vasarhelyi et al. (2009d). Figure 2 displays some of the elements that in a socio-technical system are being progressively automated.

**Figure 2: Module integration**



The elements of Figure 2 are as applicable to computer-based corporate systems as they are to the evolving world of audit automation.

- The automation of data captures (sensing) floods corporate systems with large quantity of data with a quasi error-free data inflow. While this is progressively the norm in business the auditing area only in Continuous Assurance applications create automatic extractions and integration
- Corporations are progressively flowing these sensed data directly into applications. FedEx uses manually or automatically scanned barcodes all along its value chain to manage, distribute, decide and inform about its packages. Some vendors of Continuous Assurance software have created increased transitivity from systems such as SAP into some of their more integrated applications (eg. ACL CCM module)

- Discontinuities in the flow of data though business processes have created the frequent need for data re-keying which inserts large numbers of errors and costs in the data flow
- While ERPs bring together applications in common databases the area of automated work papers (and its obvious core database) is primitive to say the least. The natural evolution would make core work paper summaries the 'decision dashboard' for audit decisions
- Auditor reports of different types should be corporate shared documents leading to control management and improvements with inputs from CCM, CDA and CRMA. Increasingly Internal Auditors (IAs), organisations and auditees work in common documents across the audit domain. Much automation and technology could be used to improve these processes. The main sharing mechanisms currently used are office automation tools (eg. MS Office) which are powerful but not adapted to the dynamic needs of the assurance process.

Next we discuss in more detail the facilitators of automation necessary to the automation of audit.

## Making the Now Economy happen

Analogous to the DMV example above, new technologies have to be invented and developed causing substantive change in processes and human behaviour. The main technologies that are causing/facilitating the Now Economy are discussed next.

### Sensors

The manual capture of data is probably the main cause of delay and error in business processes. Modern technologies have progressively allowed business to detect and electronically record transactions, products, decisions and other business relevant business elements. In the early days it was telephone switches that collected telephone call information without human intervention. Today most e-commerce transactions are captured at the point of inception and executed with minimum human involvement.

### Enterprise Resource Planning systems

Enterprise Resource Planning (ERP) systems emerged in the late 1990s to integrate corporate applications. ERPs such as SAP, PeopleSoft, BAAN and Oracle Business Suite brought together a disparate set of corporate applications around a relational database system allowing corporations to have integrated systems that facilitated inter-functional management. These systems, associated with progressive sensing of economic events, provide a close to real-time environment accelerating the bases for (automated or not) business decision making.

### Extensible Markup Language dialects

The advent of the internet propitiated the development of tools to improve the use of this ubiquitous intercommunication platform. A very valuable set of tools is the extensible markup language (XML) defined by Wikipedia[8] as:

> The Extensible Markup Language (XML) is a general-purpose specification for creating custom markup languages.[1] It is classified as an extensible language, because it allows the user to define the mark-up elements. XML's purpose is to aid information systems in sharing structured data, especially via the Internet,[2] to encode documents and to serialize data; in the last context, it compares with text-based serialization languages such as JSON and YAML.[3]

Several hundred extension standards have been developed by different industry groups to facilitate interoperability in its domain. Extensible Business Reporting Language (XBRL) has been developed to facilitate the transmission of financial reports (XBRL/FR) among elements of the financial value chain as demonstrated in Figure 3. This figure incorporates XBRL/FR (which aims to facilitate the transmission of financial reports from the business to analysts, investors and policy makers) to the less mature XBRL XBRL/GL aimed to facilitate the exchange of information among modules/processes of the business enterprise as well as its outsourced entities. The development of XBRL is particularly important for external auditors who will face a world in which the financial statements they audit will be disseminated far more rapidly and widely than ever before and in a form in which the individual components of the statements will be disaggregated from the whole. New concepts of reporting and assurance will have to be developed to deal with XBRL as the primary means of reporting audited statements as opposed to the paper or pdf files of today.

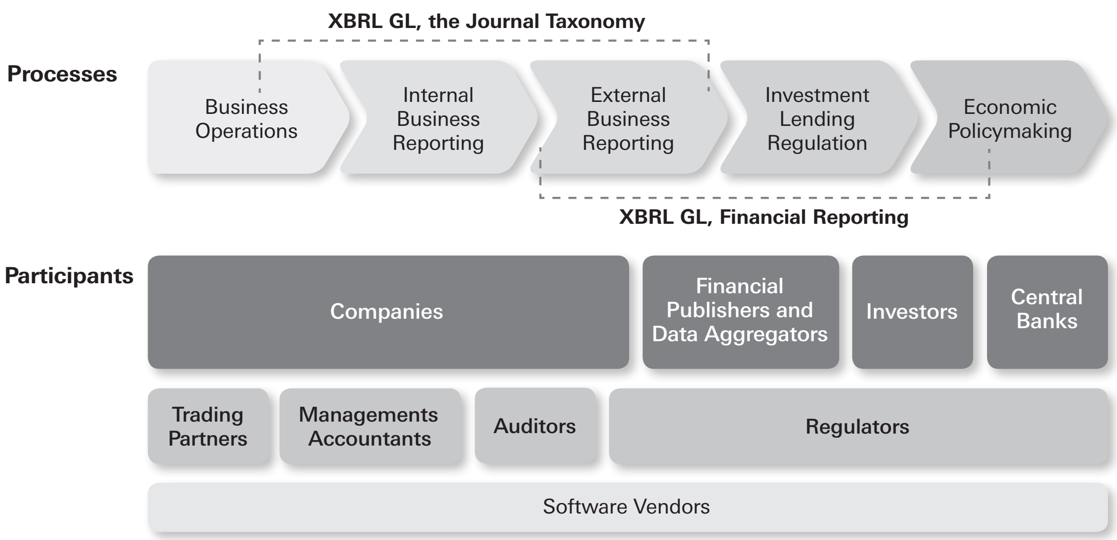
Over recent years several regulatory entities in different countries have progressed to require part of the corporate business report to be filed using this data interchange standard. Of special note is the Dutch effort on Standard Business Reporting (Burg, 2009) that brought together mandates by ministries, its required reporting function, the revenue services and their statistical gathering into a common set of data. This reduced the potential preparation of a couple of hundred thousand data fields to about eight thousand (Burg, 2009). The Dutch government and the governments of Australia, New Zealand and the United Kingdom have been progressing on forms of the XBRL Standard Business Reporting[9].

The Securities and Exchange Commission (SEC) mandate (effective mid April 2009) requires the filing of financials in XBRL format by all US public companies and foreign private issuers (this will affect all Australian SEC registrants directly in terms of corporate reporting). However, while mandatory XBRL for Australian companies is still some way off, Australia appears to be making considerable progress in taxonomy development.

While XBRL emerged as a voluntary standard it progressively became evident that it must be mandatory both for its adoption as well as for obtaining a commonality of standards. This approach will substantially facilitate the transmission of data downstream the financial value chain represented in Figure 3.

8. http://en.wikipedia.org/wiki/XML
9. Feb 2009, Sanders, F., XBRL Borders.

Figure 3: **The financial value chain**[10]



## Re-engineering

In addition to the actual technological elements of the Now Economy environment some major process changes are finally occurring. One of these is the process of re-engineering[11] where businesses are rethinking how they impound new technology into their processes. In general it is not a good idea to bring in substantive technological change without seriously rethinking business processes. For example, the inclusion of a data warehouse for data mining will require the rethinking of media acquisitions, contacts with clients and provisioning methods.

## Electronisation of business

The introduction of technology into business processes has often been the main driving force of change. Vasarhelyi & Greenstein (2003) define electronisation as:

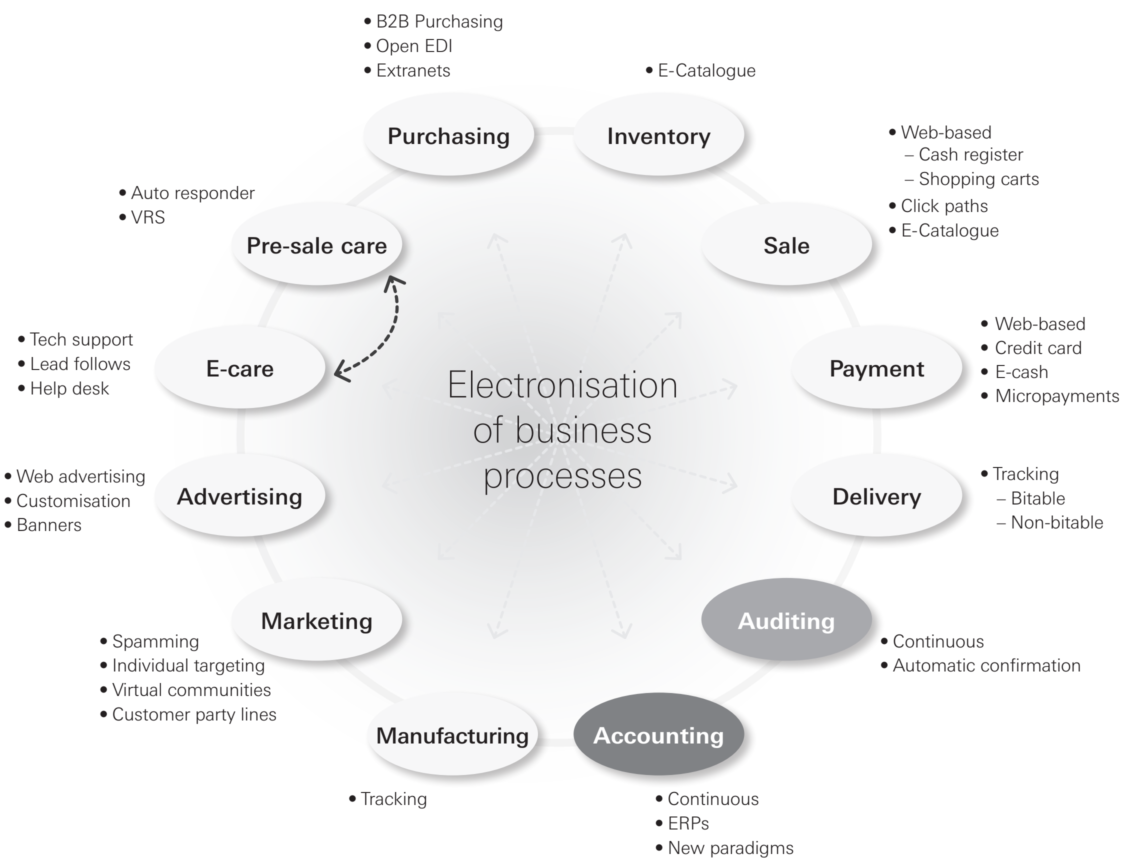
> The wider phenomenon of electronisation of economic activities encompasses the digitalisation of all processes of economic wealth generation including economic analysis, production, storage, information provisioning, marketing, etc. Consequently, within the more general phenomenon of digitalisation of modern life, we find a very important phenomenon – the increasing electronisation of business.

10. Picture adapted from http://www.xbrl.org
11. Davenport & Short, 1990.

General Electric[12] is known for its almost obsessive quest for perfection and its chief information officer heads the company's most important initiative: 'digitising' (to be used interchangeably with electronising) as much of its business as possible. That means that buying and selling most things online as well as setting up a digital nervous system connect anything and everything involved in the company's business: IT systems, factories and employees, as well as suppliers, customers and products.

Electronisation may be effected through the main areas of business as described in Figure 4. These main areas are: 1) e-commerce; 2) post-transaction care; 3) supply chain; 4) financial; 5) human resource; and 6) others.

**Figure 4: Electronisation of business processes**



12. 'Real time economy', *The Economist*, 31 January 2002.

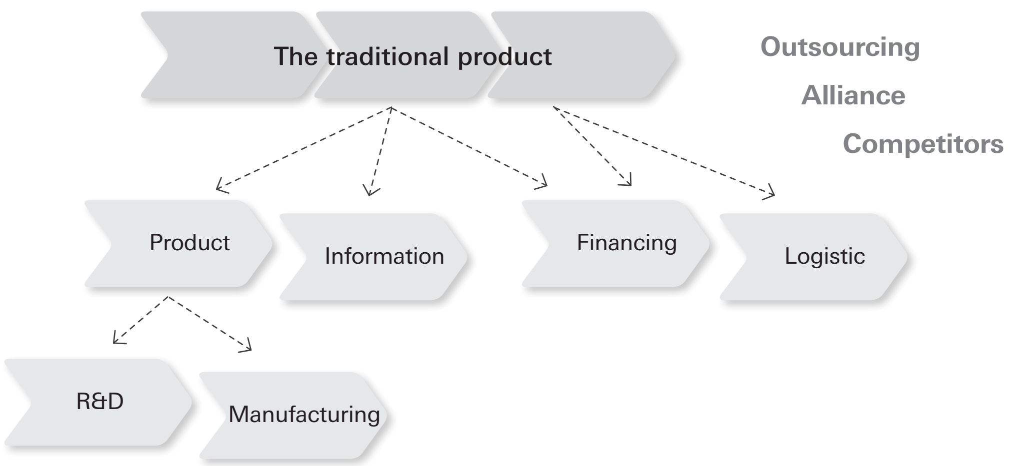
The electronisation of the financial area of business processes has affected everything from accounting recording (through sensors, standardised data collection screens on ERPs, and mostly the automatic importation of other types of XML-represented transactions), ledger posting (through XBRL/GL), system reports, data assurance (through continuous audit), financial reporting (through XBRL/FR), treasury function, corporate financial management, investment management, etc.

Continuous audit, part of the electronisation of the audit, will change the nature of this process, focusing on the improvement of data quality.

## Deconstruction of business

One of the key electronisation effects is the deconstruction of business where organisations focus on retaining key competitive advantage processes while passing over the ones in which they cannot excel. Organisations will focus on their strengths and attempt to garner the strength of other organisations to their advantage. If your organisation has inferior internal auditing and cannot provision it cheaply or competently why not go to your competitor and pay for such a service at a lower rate than it would cost you? The outsourcing argument has been adopted and used for a long time but the evolution of a ubiquitous communication platform (the internet) and a plethora of tools to make it more useful and functional have made this argument substantially stronger. In general deconstruction of business (Vasarhelyi & Greenstein, 2003) entails breaking down your business into key processes, keeping the processes that you consider the 'filet mignon' (core competencies) and passing the rest to better performers.

Figure 5: **Deconstruction of business**



Furthermore, with the emergence and evolution of Service Oriented Architecture (SOA), where the internet is fully utilised, many functions/sub-functions can be efficiently sub-contracted in a competitive advantage mode. For example:

- **Tax tables:** the United States has a wide set of taxing jurisdictions which have different tax rates and taxation rules. The collection and maintenance of these rules is expensive and cumbersome. It is to everyone's advantage that these be made into a SOA service feeding the many countrywide e-services.
- **Statutory reporting:** recent years have witnessed the emergence of potent organisations that as a service prepare filings for businesses. For example, R.R. Donnelley prepares SEC filings for many organisations and these services are going to be substantially stretched with XBRL filings.
- **General Ledger Fraud Examination:** several large audit firms are outsourcing the examination of audit trails to India as this part of the audit process that can be done off location.

In addition to the use of SOA, companies are delegating many of their key financial processes to subcontractors including data warehousing, ERPs, treasury, etc.

### Managing financial processes in real time

Modern corporations cannot survive well without managing certain processes on real time. Corporate Management Accounting is now the owner of a wide set of information. In the modern world, state-of-the-art companies have much online/real-time information. For example:

- No bank could live without their current daily financial balance closing as they would not be able to apply it overnight
- No manufacturing concern could live without real-time inventory information as they would not be able to practice just-in-time manufacturing
- Most companies would have great competitive difficulties if they did not have real-time payables and receivables information to collect or provide discounts based on time characteristics.

## Examples of companies in the Now Economy

Modern companies have developed a wide scope of applications in many domains to explore the benefits of the Now Economy. Vasarhelyi (2009b) has collected a wide array of examples.[13] Some of these examples include:

- **Advertising:** Doubleclick and Yahoo
- **Logistics:** Amazon, Boeing, Dell, FedEx
- **Customer relationship management (CRM):** Anheuser-Bush, E-Bay, Jet Blue Airways
- **Dashboards:** General Electric, California Heart Center Foundation
- **Financial:** Dow Chemical, Prestige Capital, Scottrade
- **Infrastructure:** AT&T, Sun Microsystems, Traffic.com, Xenogen
- **Others:** American Airlines (online reservations), Citrix Systems (per seat on demand jet travel), GM (in-vehicle safety), GN (advanced automatic crash notification), IBM (e-procurement).

13. Vasarhelyi, M.A. 2009 'Real time economy examples', http://raw.rutgers.edu/RTEexampls

Many of these applications were considered strategic information systems where they actually changed dramatically the nature of the business and forced competitors to copy or to perish. Real-time applications in financial systems such as real-time reporting, real-time monitoring, and Continuous Assurance will eventually fall into this classification.

## Comparing the Now Economy with the 'snail' economy

While the emergence of the Now Economy has provided us with startling new examples of efficiency and improved management, its emergence is a slow and confusing process. The level of electronisation of an entity often indicates its progress in moving towards the Now Economy. A diagnostic of its progress in this direction can be obtained by careful review of processes and their automation. Table 1 indicates some factors that compare a traditional (snail) economy to the Now Economy process.

Table 1: **Evolving towards the Now Economy**

| | Traditional | Evolutionary | Now Economy |
|---|---|---|---|
| **Medium** | Paper | Hybrid | All electronic |
| **Agent** | Human processing | Use computers | Automated processes |
| **Geography** | Local | Multinational | Integrated processes across countries |
| **Marketing** | Traditional marketing | | One-to-one database marketing |
| **Accounting** | Accounting – file systems | Accounting software | ERPs |
| **Auditing** | Ex-post facto auditing | IT audit procedures | Close to the event real-time audit |
| **Stock** | Large inventories | JIT | Integrated supply chain, JIT, supplier managed inventory |
| **Human resources** | Personnel management | | Real-time human resources, home work, extensive usage of labour pools |
| **Customer care** | Store-based technical support | | Real-time CRM with considerable automation, substantially outsourced |

Most processes evolving towards the Now Economy will go through an evolutionary process. Table 2 illustrates a view of the evolution of IA in a maturity model that evolves towards the Now Economy (Vasarhelyi and Kuenkaikaew, 2009c).

**Table 2: The internal audit maturity model**

| | Stage 1<br>Traditional audit | Stage 2<br>Emerging | Stage 3<br>Maturing | Stage 4<br>Continuous audit |
|---|---|---|---|---|
| **Objectives** | • Assurance on the financial reports presented by management | • Effective control monitoring | • Verification of the quality of controls and operational results | • Audit by exception<br>• Improvements in the quality of data<br>• Creation of a critical meta-control structure |
| **Tooling** | • Manual processes and separate IT audit | • Spots of IT and financial/OA audit integration | • Auditing links financial to operational processes | • Most of audit automated |
| **Approach** | • Traditional interim and year-end audit | • Traditional plus some key monitoring processes | • Use of alarms as evidence<br>• Continuous control monitoring | • Audit by exception |
| **IT/Data access** | • Case-by-case basis<br>• Data is captured during the audit process | • Repeating key extractions on cycles | • Systematic monitoring of processes with data capture | • Complete data access<br>• Audit data warehouse, production, finance, benchmarking and error history |
| **Audit automation** | • None | • Audit management software<br>• Work paper preparation software | • Automated monitoring module<br>• Alarm and follow-up process | • Continuous monitoring and immediate response |
| **Audit and management sharing** | • Independent and adversarial | • Independent with some core monitoring shared | • Shared systems and resources where natural process synergies allow | • Purposeful Parallel systems and common infrastructures |
| **Management of audit function** | • Financial organisation supervises audit and matrix report to the board of directors | • Some degree of coordination between the areas of risk, auditing and compliance<br>• IT audit works independently | • IA and IT audit coordinate risk management<br>• IA shares with IT audit automatic audit processes | • Centralised and integrates with risk management, compliance and SOX/ layer with external audit. High level of reliance |

In Table 2 a series of elements of the audit process are related to an evolutionary framework of increasing audit automation (Vasarhelyi and Kuenkaikaew, 2009c). Vasarhelyi and Kuenkaikaew (2009c) examined four leading world organisations and rated them by levels of progress.

**Figure 6: The current level of the adoption of Continuous Assurance and continuous monitoring of the companies**

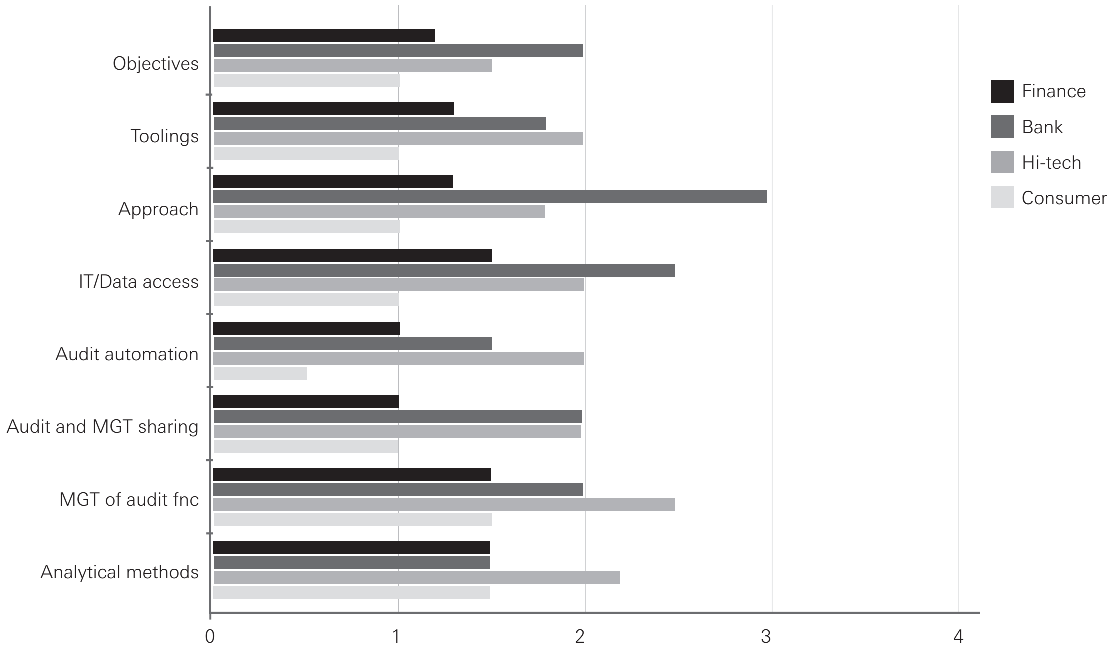

Figure 6 rates four different companies on a scale of IA maturity based on the Table 2 schema. Clearly companies are evolving progressively towards a substantial degree of maturity; however, with great differences among market players and industries. Financial companies were rated as the most mature while non-financial companies typically had substantive audit attention to core risk areas. It is noteworthy to observe the variables used to characterise the degree of maturity of an audit organisation. These variables could serve as the basis for developing objective analytics on audit maturity and a program of progress and self-assessment of the audit organisation.

It is worth asking how one should interpret the results of this study in the light of the credit crisis. The survey was conducted while the crisis was unfolding and as Figure 6 indicates, the financial services entity was among the leaders in Continuous Assurance adoption. This is hardly surprising since the nature of the transactions in that sector facilitate electronic controls and monitoring. Indeed, everyone is aware of how their credit card transactions are continuously monitored, leading to the occasional declined transaction because of the fear of fraud or a stolen card. But despite this head start, the fact that the crisis began and was centered on the financial services sector indicates that Continuous Assurance is no panacea for business failure. On the other hand, the adoption of continuous audit in the financial sector and other sectors is still incipient. Consequently it would be unreasonable to expect that a small degree of continuous audit adoption would have a large effect on the diffusion of the crisis.

There is a world of difference between issuing credit cards and credit default swaps, both in the scale and scope of the underlying risks and the complexity of the transactions that need monitoring. Most important of all, Continuous Assurance only works to the extent that its designers use it to monitor the correct sources of risk and provide it with the appropriate analytic engine to measure that risk. As we argue below, Continuous Assurance systems will need in the future to incorporate CRMA to dynamically adjust the scope of the Continuous Assurance system to emerging areas of entity risk, and ideally, will do so automatically with external sensing mechanisms, not subject to the human failure of assuming that the good times will continue forever, which is the handicap of any Continuous Assurance system subject to the need for manual adjustment to face new threats.

# Continuous Assurance for the Now Economy

## Measurement in the Now Economy (the accounting process)

In comparison to the changes that have been experienced in business, the fundamental practices of accounting have not changed for many decades. Thus, external accounting reports are presented quarterly and only audited annually; accounting standards are introduced in a reactive mode and are meant for purely manual application, with no directly formulated provision for tagging or automated referral; and auditing firms in general still retain billing practices developed for a highly manual audit process. In short, while businesses are moving on to the ‘Now’ economy, accounting and auditing remains in a ‘traditional’ mode.

This is only reinforced by the developments of the subprime crisis of 2007 – 2009. The financial institution crisis illustrates how the current accounting measurement methodologies fail to predict or detect serious crises. Many of the entities that failed during 2008, such as Bear Sterns, Lehman Brothers, Freddie Mac, Fannie Mae, and AIG had clean audit opinions with no going concern qualification issued just months prior to their failure. As we discussed above, Continuous Assurance by itself is only a technological/methodological tool and it is powerless to prevent catastrophic failures of this sort unless its designers have the imagination to foresee that such risks are present and need to be monitored. The key is to create a system of monitoring, external sensing and reporting rich enough that stakeholders, from investors, regulators and management to external auditors, receive advance warning of emerging threats to the entity’s business and operating environment.

However, accounting researchers and innovative practitioners are beginning to look forward to how the technologies that are already in widespread use elsewhere in business can be used to transform accounting practice. Conceptually it is important to position accounting measurement in relation to assurance. The Now Economy organisation uses a wide range of business measurements, from those that are highly automated and formalised, to wide-level estimates and capricious assumptions. While in order to conduct its business it needs to capture thousands of data flows in the different processes of business, and through ERPs use hundreds of thousands of controls to generate tens of thousands of reports, its external financial report uses arbitrary asset lives, meaningless goodwill estimates, etc.

On the other hand, a real monitoring process needs both an objective (and frequent) measure and comparison standards for detecting anomalies. These objective measurements run the business on a day-to-day basis and eventually will be reported to the different stakeholders of business in a meaningful, less anachronistic manner. Vasarhelyi and Alles (2007)[14] propose a set of new aggregate external reports. The Enhanced Business Reporting Consortium[15] has attempted to create additional reporting models to satisfy a wider audience and bring up to current some of the obsolete aspects of reporting.

14. http://raw.rutgers.edu/Galileo
15. http://www.ebr360.org

Current social and economic forces create a straitjacket for change in the business reporting process due to a series of factors:

- Reporting organisations must continue their day-to-day reporting so changes have to be evolutionary
- Business organisations consequently resist any serious attempt to change basic reporting guidelines
- The economics of the reporting tradeoffs (eg. level of aggregation, disclosure and materiality) have changed completely with automation but their reflection in reporting is still traditional
- External audit firms have little motivation to substantially change things in order to not antagonise their clients
- Governments, in particular in democratic countries, will be responsive to the grand public that, in general, does not understand the need for change.

While changing financial standards is necessary, their ineffectiveness does not stop IA organisations from innovating in order to provide better data quality and support to a trustworthy business organisation. Vasarhelyi and Kuenkaikaew (2009c) have documented some of these efforts. The particular focus of this monograph is on developments in the provision of assurance for business transactions, an area described by the general term of 'Continuous Assurance'. We typically consider assurance an umbrella of services while the traditional audit, WebTrust, SysTrust and an expanded set of auditor services exists. The Elliott Committee[16] of the AICPA has proposed 148 of these services and has chosen to develop six. Among these services are the WebTrust and SysTrust services. The AICPA's Assurance Services Executive Committee (ASEC)[17] is given the task to propose new services and create principles and criteria for these services. Under a wide umbrella of assurance services we find the 'traditional audit'. This monograph works on expanding the frame of the traditional audit towards a more timely and effective audit close to the event. While both the CICA/AICPA (1999) and the IIA (GTAG #3, 2005) have issued documents and some guidance in the United States, the state-of-the-art in audit is fluid and rapidly evolving.

The Australian Auditing and Assurance Standards Board (AUASB) continues to acknowledge the challenges created for auditors and standard setting in advancing the development of Continuous Assurance engagements. The AUASB will continue to monitor progress and develop guidance as necessary.

## Evolving toward a more continuous assurance

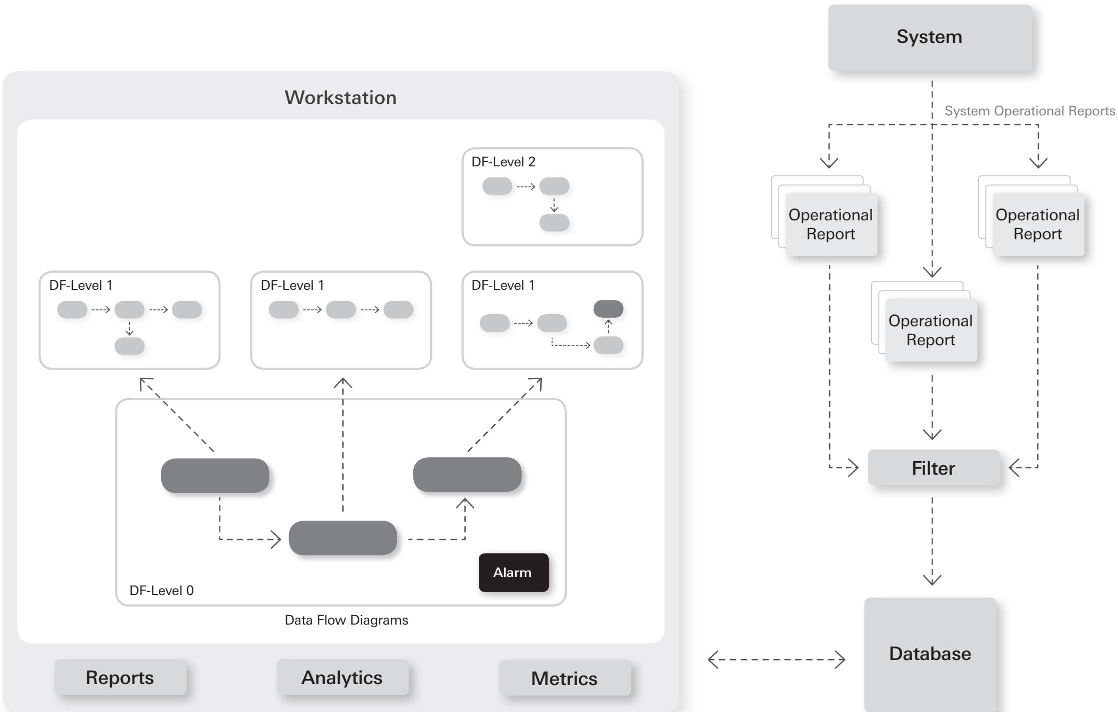
### Early Continuous Assurance

One of the first recognisable examples of what we now call 'Continuous Assurance/Continuous Auditing' was a large scale auditing system developed in the late 1980s at Bell Laboratories, the research arm of the giant US telecom firm American Telephone & Telegraph (AT&T). That project relied on the ground-breaking IT of the day (PCs, databases, corporate networks, but not yet the internet) to assure the reliability of the entity's billing systems through the automated acquisition and analysis of data and the electronic communication of alarms – no mean task when the entity's customer base comprised over one hundred million users. The tools available at the time would be considered primitive today, and yet that pioneering system, known internally as the Continuous Process Auditing System (CPAS), and its successors, were in use even as late as a few years ago to detect anomalies in billing and possible fraudulent use of long distance calling.

The system intended to monitor and audit the large biller initiative of AT&T. This was part of AT&T's 'take back' strategy where the billing for long distance services would not be done through the regional companies (as for local calls) but by a separate bill issued to the client by AT&T. The system was enormous and highly sensitive data extraction was through semantic processing where electronic versions of reports were captured through a remote job entry system and its content pattern scanned for specific content. Report BIL173 would have next to the word 'total' the value of a particular variable and next to 'date' the actual chronology of the event. In Figure 7 a symbolic view of this systems architecture shows the systems (four large data centres distributed throughout the United States) distributing electronic remote job entry (RJE) reports, these being filtered through the semantic extraction procedures discussed above, and placed in a relational database. This database was queried by screen-based reports that visually described the system in a 'flow-chart like' presentation comfortable to auditors.

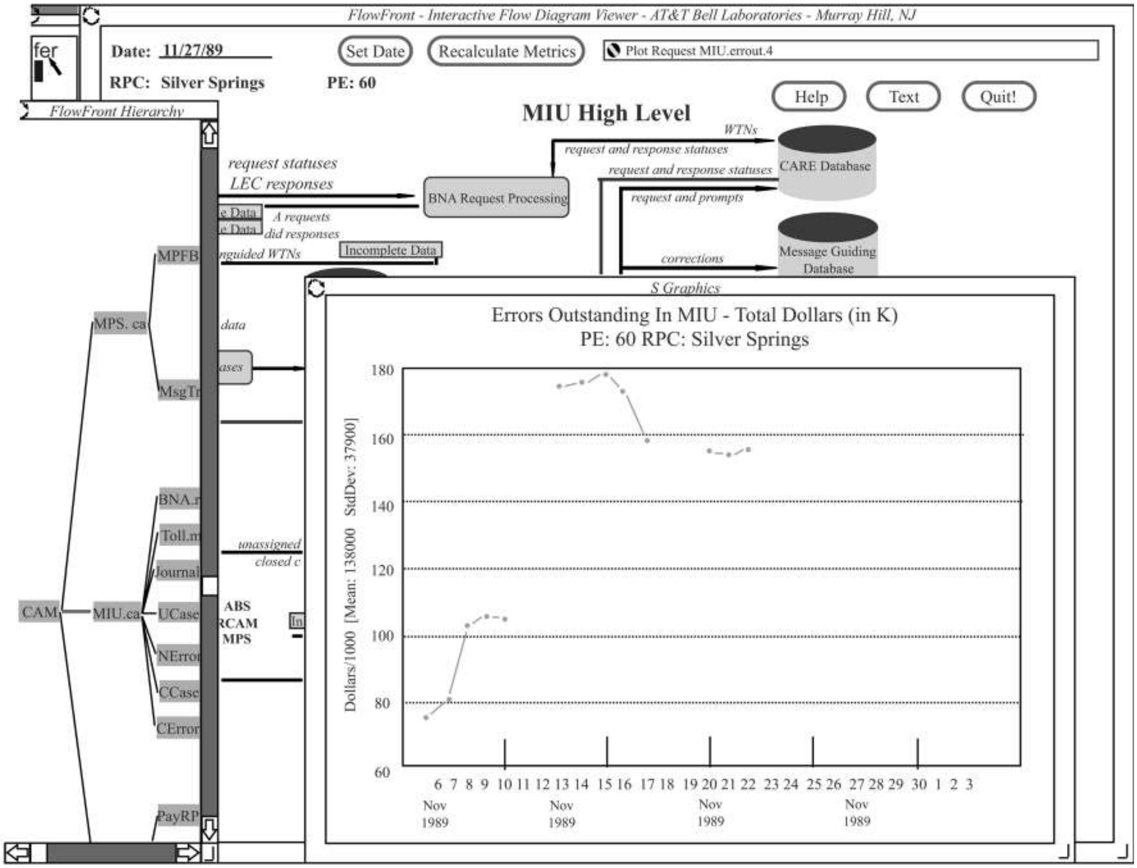
Internal auditors who intensively participated in the effort were 'knowledge engineered' to acquire information about many parts of the system and to capture audit rules to be impounded in the system. Furthermore, past audit reports were used to identify sources of data (metrics), types of analysis performed (analytics), and standards (models to compare against), as well as when an alarm should be issued (Vasarhelyi and Halper, 1991).

**Figure 7: CPAS architecture**



This effort in actual data monitoring to identify process flaws or data exceptions was termed 'continuous audit' but today would be known as 'continuous data audit'. Figure 8 displays a system screen with an error analytic report overlaid. Note the buttons on the top of the screen with date specification, time period specification, ability for requesting recalculation (data could change too rapidly so it was frozen for the display) and specific comments. Each screen had its own documentation and could be used for auditor or user training.

**Figure 8: CPAS screen with live flowchart and analytic graphic**



That first project clearly demonstrated that the ultimate point of Continuous Assurance is to bring auditing closer to the operational process, and away from the traditional backward looking annual examination of financial statements. The CPAS project was eventually paralleled by the 'Prometheus' project that used its infrastructure to deliver information to billing management analogous (but not identical) to the process monitoring features of CPAS.

## Developments and the status of Continuous Assurance

Despite this working example of Continuous Assurance, it took until 1999 before the accounting profession, in the form of a joint committee of the American Institute of Certified Public Accountants (AICPA) and the Canadian Institute of Chartered Accountants (CICA), took up the issue of Continuous Assurance and issued an often used definition of the term:

> A continuous audit is a methodology that enables independent auditors to provide written assurance on a subject matter, for which an entity's management is responsible, using a series of auditors' reports issued virtually simultaneously with, or a short period of time after, the occurrence of events underlying the subject matter (CICA/AICPA, 1999).

While parts of this definition, such as its emphasis on 'written assurance', have already been made obsolete by the progress of technology, the definition has helped jump start a thriving research and practice area in Continuous Assurance.

A June 2006 PricewaterhouseCoopers survey[18] found that:

> Eighty-one percent of 392 companies responding to questions about continuous auditing reported that they either had a continuous auditing or monitoring process in place or were planning to develop one. From 2005 to 2006, the percentage of survey respondents saying they have some form of continuous auditing or monitoring process within their internal audit functions increased from 35% to 50% – a significant gain.[19]

A similar survey jointly undertaken by ACL and the Institute of Internal Auditors (2006) also showed that interest in Continuous Assurance was increasing rapidly, with 36% of responding entities stating that they had adopted a Continuous Assurance approach across all of their business processes or within selected areas, and with another 39% planning to do so in the near future.[20] The latter survey concluded:

> Whatever the reasons organizations may have had for neglecting continuous auditing in the past, regulatory demands, the push for real time financial reporting and the drive to automate resource draining manual audits are nudging them to adopt it now.

Given the technological basis of Continuous Assurance, perhaps the best metric of the 'mainstreaming' of Continuous Assurance is the over 40,000 hits that the term generates on Google (as of January 2009). Practitioners and software vendors (such as SAP, ACL, Caseware, Approva and Oversight Systems) now outnumber academic researchers as attendees at the biannual global Continuous Assurance conferences organised by Rutgers University in the United States and internationally. Among those practitioners are representatives of the major audit entities, most of whom have ongoing Continuous Assurance initiatives.

20. Business Finance Magazine, August 2006, http://www.businessfinancemag.com/magazine/archives/article.html?articleID=14670&highlight=acl

As befits a concept developed by academics, there is a large and dynamic research program into Continuous Assurance. A recent review paper (Brown et al., 2007) surveyed the extent of Continuous Assurance literature and classified over 60 papers discussing a wide range of topics and approaches into six major categories: 1) demand factors, meaning drivers of change; 2) theory and guidance; 3) enabling technologies; 4) applications; 5) cost benefit factors; and 6) case studies.

The issues discussed relative to the demand factors that are driving the creation of the emerging Continuous Assurance systems include: the increasing complexity and data-intensiveness of the business environment; the growing prevalence of electronic data interchange, etc.; the ever increasing usage of outsourcing; value chain integration; web-based reporting and the users' desire for reliable information to be disclosed more frequently, more timely and in more detail; XBRL-based reporting; and the fact that under Sarbanes Oxley (Section 409) companies must disclose certain information on a current basis.

As impediments, Brown et al. (2007) drew attention to Alles et al. (2002) who discussed independence issues such as who will pay for the large start-up costs and who owns work product. Under theory and guidance, Brown et al. (2007) cited articles describing Continuous Assurance concepts, proposing a framework and research agenda for the topic, and providing implementation guidance and discussing implementation challenges.

Vasarhelyi et al. (2004) discuss the enabling technologies including statistical methodologies such as belief functions, neural networks, as well as technologies from computer science such as database and expert systems, intelligent agents, and especially technologies for tagging data to facilitate transmission and comparison, most notably XBRL and XBRL/GL. In the applications domain, case studies now exist of Continuous Assurance implementations, such as the pilot implementation of the monitoring and control layers for continuous monitoring of business process controls (Alles et al., 2006), the formerly mentioned CPAS system developed at AT&T Bell Laboratories (Vasarhelyi and Halper, 1991), the Financial Reporting and Auditing Agent with Net Knowledge agent for finding accounting numbers in electronic data-gathering, analysis and retrieval filings (Bovee et al. 2005), and advanced analytics at a major health services provider (Alles et al., 2006).

There is also an emerging literature of product descriptions in the application domain driven by the emergence of packaged commercial Continuous Assurance software solutions. Such solutions are now actively developed both by established computer assisted auditing techniques (CAAT) vendors such as ACL and CaseWare IDEA, and by new software vendors, such as Approva and Oversight Systems, who are quickly establishing themselves in this emerging market.

The final category of cost benefit issues deals with possible paths along which Continuous Assurance will evolve, long-run operating cost of running database audit, benefits of timely discovery of errors, omissions, defalcations, cost-effectiveness of automated, software-driven audit procedures, discussion of economic feasibility of continuous audit, an experimental market and laboratory experiment for continuous online audit, and nine benefits of continuous business assurance analytics.

While not yet an established technology, it is clear that Continuous Assurance is maturing both in practice and in the research arena, as lessons learned in implementations are used in refining the underlying conceptual model.

# The scope of Continuous Assurance

As the technological drivers of Continuous Assurance continue to rapidly progress, it has proven difficult to reach consensus on what Continuous Assurance actually encompasses. What makes this problem of more than academic interest is that the perception of what Continuous Assurance can and cannot do significantly impacts the ease or difficulty of getting its usage accepted in practice. We have already discussed the need to update the AICPA/CICA definition of Continuous Assurance to do away with written audit reports, which are redundant in today's world of electronic communication. Even more importantly, the word 'continuous' undoubtedly would not be used today, because it implies a frequency of auditing that is both difficult to achieve technically without impacting the operations of the entity's IT systems, and probably beyond the needs of most users. The different elements of a corporate information system have different pulses and natural rhythms. The assurance process must be coherent with these rhythms to be useful and effective.

## A narrow view

The difficulty of delineating the area of Continuous Assurance is manifested by the significant efforts made in the academic literature (Vasarhelyi and Halper, 1991; Vasarhelyi et al., 2004; Rezaee et al., 2002) on defining the distinction between 'continuous assurance' and 'Continuous Assurance' and how both differ from the traditional audit. Alles et al. (2002) defined Continuous Assurance as the application of modern information technologies to the standard audit products, be they the mandated annual audit opinion or internal IT audit. In this view, Continuous Assurance is another step on the path of the evolution of financial audit from manual to systems-based methods. The literature on Continuous Assurance can restrict itself to technical matters, working under the assumptions that the demand for the mandated audit is a given and that the emerging technologies will be adopted because they are cheaper and more effective than the current audit methods.

## A wider view

By contrast, continuous assurance sees Continuous Assurance as only a subset of a much wider range of new, non-statutory products and services that will be made possible by these technologies. In particular, in this wider view, continuous assurance is seen as going hand-in-hand with continuous reporting, because more frequent assurance can obviously only have an impact when its availability is made known through some reporting mechanism that matches its timeliness. Elliott has been the most forceful proponent of this wide view of Continuous Assurance, stating as long ago as 1997 (Elliott, 1997) that 'On-line reporting based on databases updated in real time will be less wedded to current protocols for periodicity, creating a parallel evolution toward continuous auditing. Continuous auditing may lead to continuous reporting that supplements and eventually replaces the annual audit report'. Subsequently, with the scope of such services expanded by the AICPA from auditing to assurance, Elliott (2002, p. 7) went on to say that 'The advantages of electronic business reporting will provide a market for – indeed, the necessity of – continuous assurance'.

Alles et al. (2002) subjected this view to an economic analysis, and recognised that assurance is driven by business necessity rather than being an inevitable outcome of technology. They postulated that the best way of thinking about the benefits of Continuous Assurance is that it enables 'audit on demand', which implies a continuous capability to audit, but not the continuous provision of assurance.

Shortly after the publication of this paper, the passage of the Sarbanes Oxley Act in the United States and especially its Section 404 requirements for assurance over financial reporting controls validated the view that demand would be the driver of Continuous Assurance . However, what was not anticipated by Alles et al. (2002) and other writers prior to the passage of the Sarbanes Oxley Act was that it would be internal rather than external auditors who would be the main champions of Continuous Assurance The reasons were two-fold. First, external auditors were overwhelmed with doing 404 work and so had no time to spare for developing new Continuous Assurance methodologies, while internal auditors, who also had to find resources to take on new 404 responsibilities, saw in Continuous Assurance the means of reducing the headcount demands of their existing tasks. Second, Sarbanes Oxley Section 201 strengthened the independence standards on external auditors and there was great concern that Continuous Assurance would violate those constraints, while internal auditors obviously faced no such restrictions.

In particular, an important component of Continuous Assurance is what Alles et al. (2006) call ‘Continuous Control Monitoring’ (CCM) which is the application of technology to the continuous monitoring of internal controls of business processes. This is often driven by management needs, as opposed to the requirements of external auditors, and so typically it can only be carried out by internal auditors. However, in practice, the external auditor has a major influence on the design of these CCM systems. In all instances that we are familiar with, the internal auditor of the entity sought at least an implicit agreement beforehand with the entity’s external auditor that the systems they use would be relied on by the external auditor in the their statutory auditor or (in the United States) SOX 404 certification. Otherwise, the cost and efficiency considerations would have made the CCM system economically unfeasible. Indeed, all the Big 4 audit firms are now developing Continuous Assurance technologies they are seeking to sell to non-audit client customers, and an important selling point of these products relative to those sold by third party vendors is the ‘seal of approval’ of an external auditor.

## An evolutionary view

In the early days of the aforementioned CPAS effort and other examples, Continuous Assurance meant using close to the event data streams to identify faults or to give assurance of system/data reliability. The ensuing emphasis on controls, the requirement of independent assessment of controls, and the emergence of ubiquitous ERP systems (where controls cannot be directly observable) brought the expansion of the conceptualisation to bring in monitoring technology to observe adherence to controls in embedded software. This added CCM to CDA to make Continuous Assurance.

We are currently at a stage of potential expansion of the scope of Continuous Assurance. The subprime crisis of 2007-2009 made it obvious that the accounting measures in place did not accurately report economic health, the business model and risks to which entities were exposed. So the unforeseen series of trigger events was not considered or factored in. It is also obvious that corporate enterprise risk management (ERM) procedures were inaccurate and inadequate for a systemic set of problems and the complex business environment foreshadowed by financial engineering. At the planning stage of the audit, risks are assessed to the elements of the entity, and resources allocated for a ‘risk-based audit’.

If corporate ERM procedures were not adequate to assess business risk, obviously audit risk assessments are limited too. Thus it is proposed that a new set of CRMA procedures be brought forward to take advantage of close to real-time monitoring and hopefully advancements in analytics and alerting technology.

## A practice view

In contrast to the academic literature, practitioners attach less significance to what Continuous Assurance means, with definitions mattering less than the application of Continuous Assurance techniques and the value they create – but this only applies to those practitioners who are already convinced of the benefits of implementing Continuous Assurance within their organisations. For others, the term ‘continuous’ can still pose a conceptual problem that impedes acceptance and change management.

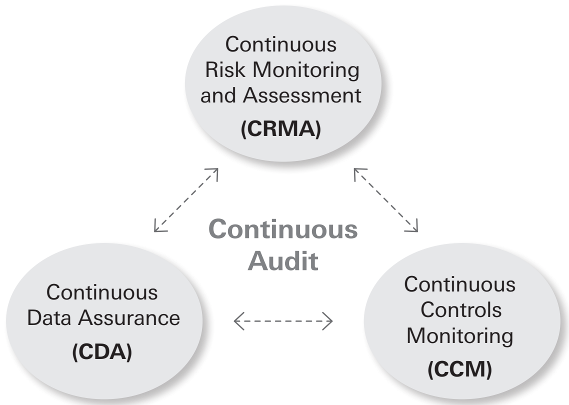
In the early days of Continuous Assurance, the ultimate goal was the development of the ‘push button audit’, in which auditing functions somewhat analogously to the way in which virus protection software automatically protects a PC today with little intervention from the user. This overly optimistic vision of the potential of Continuous Assurance is due to the focus on the extraordinary possibilities of modern IT and its rapid rate of change. But business practices, let alone the mindsets of the people involved, change far more slowly, and only in response to proven value added. That makes pilot implementations and the role of academics in creating and disseminating the lessons learned essential to the development of Continuous Assurance.

# Implementing Continuous Assurance

By analogy with conventional auditing, we divide Continuous Assurance into three distinct but complementary components:

- **Continuous controls monitoring (CCM)** which consists of a set of procedures used for monitoring the functionality of internal controls
- **Continuous data assurance (CDA)** which verifies the integrity of data flowing through the information systems
- **Continuous Risk Monitoring and Assessment (CRMA)** which is used to dynamically measure risk and provide input for audit planning.

**Figure 9: Three elements of Continuous Assurance**



Examples of CCM include procedures for monitoring:

- Access control and authorisations
- System configuration
- Business process settings.

Examples of CDA include procedures for verifying:

- Master data
- Transactions
- Key process metrics using analytics (including continuity equations [CEs]).

CRMA includes processes that:

- Measure risk factors on a continuing basis
- Integrate different risk scenarios into some quantitative framework
- Provide inputs for audit planning.

While continuous monitoring of access controls and authorisations is well developed in computer security applications, monitoring enterprise system configuration and business process settings is an emerging area of development. At present entities are implementing these Continuous Assurance components individually, but not as an integrated system of Continuous Assurance. Over time, there will be a need for better integration across all assurance platforms, in much the same way that the proliferation of stand-alone functional software across the entities eventually led to the development of ERP systems.

More fundamentally, creating a fully integrated Continuous Assurance system would require rethinking the conceptual framework for both assurance – and more frequent assurance is irrelevant without correspondingly timely reporting – and for reporting. There will be a need to re-engineer audit and reporting practices that were developed for a manual, annual procedure into ones that make sense for real-time, automated Continuous Assurance systems. Not only will new methodologies have to be created, along the lines of ones discussed in this paper, but new ways of thinking about such long accepted auditing and reporting principles as materiality, independence, recognition, measurement and disclosure will also have to be developed.

We now discuss implementation strategies of CCM and CDA. We also conceptually introduce CRMA and propose an integrated model.

## Continuous Control Monitoring of business processes

### Strategies for Continuous Control Monitoring

Continuous monitoring of business process (BP) controls relies on automatic procedures, and therefore presumes that both the controls themselves and the monitoring procedures are formal or are able to be formalised. Note that the latter is necessarily premised on the former. Formalisation of BP controls, while important in its own right, has been precipitated by ERP implementations and the ongoing Section 404 of Sarbanes Oxley compliance work. The verification of existence, suitability for purpose, and functioning of controls over BP can be accomplished in three different ways.

First, one can observe a BP and verify if the observations agree with the proposition that a control exists, is appropriate and functioning as intended. The benefit of this approach is that it can be applied even in those environments in which controls are not directly accessible by the auditor. The problem with this approach is that the observed behaviour of the BP may not completely cover the whole range of situations in which the control is expected to function, and therefore there is no assurance that this control will be functioning as expected under all circumstances.

Second, in the case of preventive controls, one can attempt to execute a prohibited BP behaviour (eg. run a prohibited transaction such as recording a large purchase order without proper authorisation) to verify that such behaviour cannot happen. In the case of detective or compensating controls, the auditor can verify that the prohibited behaviour is detected and compensated for. While such control testing provides much stronger evidence than the previous approach, it is highly unlikely that an auditor (even an internal one) will be allowed to execute such ‘penetration testing’ on the entity’s ERP system. Under most common circumstances, the best an auditor can count on is the read-only access to that system. Indeed, the most likely situation in our experience is that both internal and external auditors are reliant on the entity's IT personnel to install the interface which allows them to extract data from the ERP system on their behalf.

Finally, one can retrieve the control settings stored in the enterprise system and verify that they match the benchmark. The benefit of this approach is that it requires just read-only access to the enterprise system and provides very strong evidence since it actually confirms that the control is indeed what it has to be. The critical assumption in this approach is that the programming code of the control in the production enterprise system is correct, since what are verified in this approach are the control settings. This assumption seems to be reasonable with respect to the standard controls built into modern packaged ERP systems such as SAP R/3 or Oracle Business Suite. However, an ERP system can be customised, and in the case of customised controls, additional initial control verification work may be needed to complement the ongoing monitoring of BP control settings.

The analysis above implies that in the case of highly integrated and standardised enterprise system environments, the most appropriate approach to CCM is to implement continuous monitoring of BP control settings. Modern ERP systems make their automated BP control settings accessible online from the Continuous Assurance system. The process of monitoring itself falls within the general Continuous Assurance framework developed in Vasarhelyi et al. (2004) of obtaining assurance by continuously comparing the actual observations (in this case the control settings) against the benchmarks. Therefore, the determination of the appropriate benchmarks for the acceptable BP control settings constitutes a critical part of implementing a Continuous Assurance system. Clearly, such benchmarks are often enterprise-dependent. In the case of large multinational companies certain control setting benchmarks may depend on the country or a particular unit of an enterprise, which will complicate the setup of the Continuous Assurance system.

A critical parameter in the Continuous Assurance system is the frequency (eg. daily, hourly) of comparison of the actual BP control settings with the benchmarks. This is a generic issue in any Continuous Assurance system setup, and the optimal frequency may depend on many different features of the environment and the controls under consideration. Note that while higher frequency is indeed beneficial for achieving higher levels of assurance (since less time is available for undesirable adjustments or malfeasant transactions), the main problem with the excessive frequency is not the processing capability of the Continuous Assurance system, but rather the performance penalty imposed by such queries on the production enterprise system. While an hourly frequency will usually not present a problem, hitting a production system every second with a query to retrieve voluminous control settings may be problematic, especially during working hours.

The main task of a Continuous Assurance system is to take action in case the observed BP control values deviate from the benchmarks. We call such deviations 'exceptions'. A Continuous Assurance system has to automatically generate alarms in case of critical exceptions, such as individual accounts without passwords, or in case of numerous non-critical exceptions result in the aggregation of weaknesses in certain control areas (eg. segregation of duties). The alarms are always sent to the (internal and maybe external) auditors, and can optionally be sent to responsible enterprise personnel and/or enterprise managers, as well as other relevant parties.

### System architecture for Continuous Control Monitoring

Once an automated audit program for CCM has been created, it has to be implemented in audit software. This software can be categorised along its three dimensions: structure, access and platform.

In terms of structure, audit software can be either integrated or distributed. It is natural to mimic the structure of the enterprise software being audited: if it is tightly integrated, the auditing software can be a tightly integrated system as well, while in the case of loosely coupled enterprise applications, a distributed system consisting of multiple auditing software agents will be a better fit.

Auditing software's access to the enterprise system and data can be either direct or intermediated. As the word 'direct' suggests, in this case auditing software has access to the enterprise system implementing the business processes and containing source data being audited. Depending on the type of enterprise system, this interaction can be either with its database or the application layer. If the direct access is too cumbersome, expensive or unfeasible to set up, then intermediated access is in order, typically through a business data warehouse. This approach is usually the only option in the case of highly heterogeneous loosely coupled legacy enterprise system landscapes.

The platform of automated audit software can be either common with the enterprise system or completely separate. Modern integrated enterprise information systems have a three-tier architecture consisting of the presentation, application and database layers. While the database layer contains all the enterprise data, all the business logic is coded and executed in the application layer.

If the common enterprise platform hosts the audit software, the latter is usually referred to as an embedded audit module (EAM). Enterprise software vendors are naturally positioned to provide such software, even though until very recently they provided only rudimentary capabilities (Debreceny et al., 2005). If the audit software is hosted on a separate platform, it is usually referred to as monitoring and control layer (MCL), and this type of audit software is typically provided by third party vendors and audit firms. MCL can query the enterprise system through the application tier using its application program interfaces (eg. business application programming interface in the case of SAP R/3). This approach is usually well-supported by system vendors and the APIs are well-documented. Analogously, an EAM can be implemented as a sub-module of the application (eg. coded in advanced business application programming in the case of SAP R/3).

MCL can query the enterprise database directly (using structured query language [SQL] through open database connectivity). While in principle this approach is more versatile than querying through the application tier since it is not constrained by the structure of the enterprise business objects, in reality the schemas of enterprise databases are so complex and enormous (they are highly normalised and contain upwards of 20,000 tables) that digging out anything which is a not a well-documented business object is close to impossible. Analogously, EAM can be implemented as a trigger (written in SQL) and stored in the database. However, using triggers in transactional databases will have an adverse effect on the database performance, in some cases slowing down the enterprise transaction processing system to a standstill.

While EAMs are usually permanently installed on the enterprise platform, one can also utilise an automated audit software architecture based on mobile code. In this architecture, the code implementing certain automated audit procedures is transported over the network to the enterprise platform on an as needed basis to execute its procedures there, and the code remains there for as long as needed. The primary reasons for executing audit procedures (whether in the form of EAMs or mobile agents) on the common enterprise platform follow.

First, they protect against network connectivity outages. Since remote code critically relies on the availability of connection to the enterprise system for access, it will be effectively disabled if the connectivity is lost (whether accidentally or intentionally). While modern networks are increasingly more reliable, sporadic connectivity outages still present a significant problem.

Second, the execution of resident code can be triggered by events in the enterprise system, while remote procedures can execute only after they retrieve information at a scheduled time. Event-triggered execution of audit procedures potentially reduces their latency to zero. Additionally, their latency is not affected by possible network congestion, which can significantly increase the latency of remote procedures.

Third, it is usually more efficient to process large volumes of enterprise data on site as compared with moving that data over the network for remote processing. The tradeoff here will depend on the processing capabilities of the enterprise system and on its load at the moment when processing is needed.

While the benefits described above seem to provide strong support for basing the architecture of automated audit on EAMs or mobile agents, there are extremely difficult problems associated with relying on the enterprise system for audit code execution.

On the one hand, there is legitimate concern on the part of the enterprise platform owner about the possibly adverse impact of the auditing code on the enterprise system itself. This impact can be caused by simply imposing a taxing computational load that can lead to the degradation of response time of routine enterprise transaction processing. To mitigate this issue, the enterprise platform can limit the amount of processing it provides to the auditing code, thus somewhat limiting its abilities. An even more serious concern on the part of enterprise system owners is the possible interference by the code (either accidental or malicious) in the workings of the enterprise system. This is the reason for protecting the enterprise platform against a (possibly malicious) EAM or mobile agent. Modern IT provides well-developed facilities for dealing with this problem in the form of a strictly controlled execution environment (known as a 'sand box' or a virtual machine) which enables the auditor to experiment with implementing Continuous Assurance on a replica of the entity's ERP system without actually affecting the operating system itself. Only when the Continuous Assurance system has been exhaustively validated will it be allowed to be implemented on the real ERP system.

The other side of the issues discussed above is the necessity to protect the EAM or mobile agent auditing code against possible manipulation by the enterprise platform. Given that the super-user privileges for the enterprise system are held by the enterprise IT personnel, the integrity of the audit code processing is always in question since it is the objective of this code to check on the enterprise system and its personnel.

The extreme difficulty (if not impossibility) of protecting the EAM or mobile agent auditing code from possible manipulation by the enterprise platform puts in question the integrity of results provided by this auditing code. This lack of trust in the audit results outweighs the benefits of the resident code described above, and serves as one of the critical reasons for basing automated auditing architecture on remote monitoring of enterprise systems.

### Formalisation of audit action plans for Continuous Control Monitoring

Having explored the strategy and system architecture of CCM, the steps in implementing the Continuous Assurance system can now be laid out. The key to implementing Continuous Assurance easily is to already have a clear and formally specified audit action plan that the CCM system attempts to automate. Otherwise, the change management problem becomes compounded as the audit team has to determine both how to carry out the audit in the first place, and then how to automate it. The steps are as follows:

1. Determine the best mode for the continuous monitoring of the chosen business process controls
2. Develop the system architecture for this task, whether by using a monitoring and control layer or some sort of embedded audit module
3. Determine the interaction and integration between the CCM software and the entity's IT system, such as its ERP system
4. Develop guidelines for the formalisation of the audit action plan into a computer executable format. In particular, determine which aspects of the audit action plan are automatable and which require re-engineering
5. Create processes for managing the alarms generated by the automated Continuous Assurance system and put in place the required set of audit trails
6. Formulate a change management plan to move the project from the pilot stage to industrial strength software.

Of all these steps, the most critical is determining which aspects of the audit action plan are automatable. As Alles et al. (2006) indicated, before audit procedures can be automated, they must first be formalised:

> Automation requires formalisation of audit procedures. Approved audit programs are not highly formalised and most often reflect the legacy of the traditional manual audit/interview approach to auditing. Different human auditors interpret the same program somewhat differently. Our pilot study analysis of the approved internal IT audit program shows that certain parts of the program are formalisable while other parts are not.

Indeed, since the audit programs are designed by human auditors for execution by human auditors who are presumed to largely share their own knowledge and judgment, audit procedures in these programs are not completely formal and as such, they leave open significant room for interpretation. This is extremely problematic for the audit automation process though, since, as confirmed by experience, even highly qualified human auditors will at times disagree about the precise interpretation of a particular procedure. Whether this results in uneven audit quality is an empirical issue, and one outside the scope of this paper. What is undeniable though is that the resulting lack of consistency is one of the key barriers towards audit automation.

While formalisation is a prerequisite of automation, formalising an audit program has wide ranging benefits not limited to automation. By eliminating possible inconsistencies in program interpretation, the scope, scale and exact nature of audit procedures will be assured. Consequently, it can lead to the improved quality of results, and increased confidence in the audit as a whole, as was previously found to be the case after limited scope audit automation projects. It should also decrease long-run audit costs due to the elimination of the ongoing labour intensive task of interpreting an ambiguous audit program. Additionally, it will drastically simplify and improve training of new auditors.

One argument is that an audit process should not be formalised because of the need to retain the flexibility to interpret it suitably in differing future circumstances. The counter argument to that is to better specify what such circumstances of concern are and to systematically develop formal procedures to deal with them when they arise, as opposed to risking audit failure by building in excessive flexibility. Indeed, in our experience, auditors would simply leave out entire parts of the required audit manual by stating something like 'Well, I know that this was only intended to apply to our operations in China and so it is not relevant at this site'. While it may be acceptable for a very senior and highly experienced lead auditor to make such a judgment, what happens when the audit is carried out by someone less qualified, as will inevitably occur at some point due to resource constraints? The purpose of audit automation is to have areas of flexibility planned for rather than inserted haphazardly.

Formalising an audit program is a difficult endeavour. It can be very laborious and costly because a formal procedure has to be very specific and detailed, and it has to describe the precise modifications to be used in various conditions. This problem is compounded by the difficulties that many humans (even properly educated and trained ones) experience with logical reasoning and formal thinking. To address this problem, the audit automation project can utilise the methodology of knowledge engineering, especially knowledge elicitation, developed originally for expert systems and further enhanced as those evolved into modern knowledge-based systems.

Since manual audit programs were not designed for automation, formalisable and judgmental procedures are often intermixed. To formalise and automate such a program, a redesign is usually required to separate out formalisable and automatable audit procedures from the others. Such a redesign amounts to re-engineering the audit program and should be done systematically (as opposed to ad-hoc) and based on the top-down analysis of enterprise risks to make sure that the redesigned procedures appropriately address all exposure areas.

The objective of re-engineering is not only to enable automation by separating out the formalised audit procedures but, more significantly, to maximise the proportion of automatable procedures in the audit program, and thus to reduce the reliance of audit procedures on informal judgmental techniques. An additional argument in favour of increasing the proportion of automated procedures in a re-engineered audit program is due to the fact that these automated procedures can be performed much more frequently than the eliminated manual methods they substitute.

However, not everything can be made completely formal. Certain complex judgments are not amenable to formalisation. Formalisation is particularly difficult (if not impossible at the current state of technology) whenever audit procedures have to deal with the analysis of complex modern business contracts. At the same time, the possibility of formalisation is often underestimated, and when an earnest effort is made to formalise audit procedures, the results often exceed the most optimistic expectations.

### Example of Continuous Control Monitoring implementation: Siemens IT internal audit

In 2005, Siemens had over 460,000 employees and total global revenues exceeding US$95 billion. In the United States Siemens employs some 70,000 people in divisions spread throughout the country, generating in excess of US$20 billion in sales. Siemens US IT IA group works to:

- Investigate the extent to which Continuous Assurance techniques can be applied to their existing audit process
- Help implement an automated Continuous Assurance system that frees up the IA workforce
- 'Continuous Assurance-enable' established manual audit procedures by re-engineering them.

Siemens is one of the most SAP-enabled entities in the world. A downside as far as IA is concerned is that with over 60 SAP installations spread throughout the United States alone, each site can be audited no more than once every two years. The SAP IT audit process has to cover all the major SAP modules and is highly labour intensive. Each audit takes nearly 70 person days and requires a large audit team to travel to the site at great expense, both financial and personal.

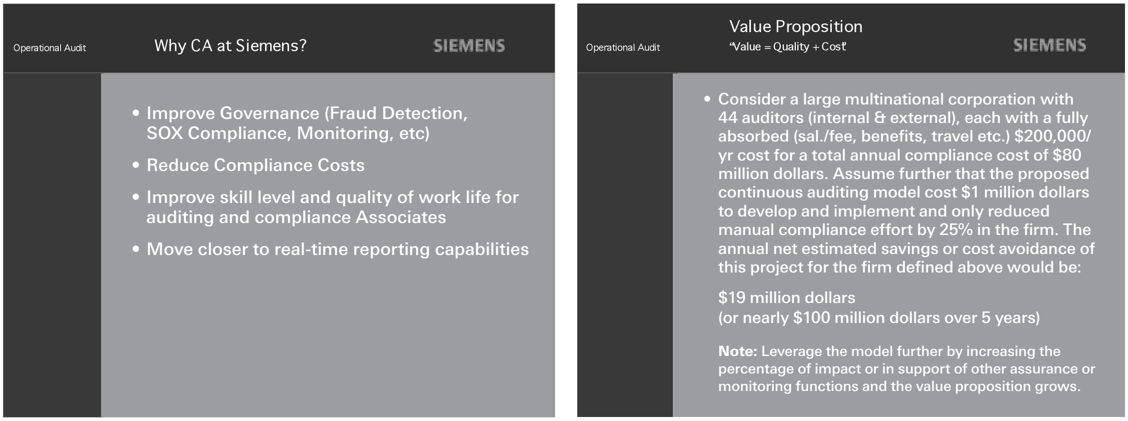
Apart from the obvious desire to increase the efficiency of this process, another key driver of interest in Continuous Assurance by Siemens was the anticipated demands of implementing Section 404 of the then recently passed Sarbanes Oxley Act. The challenge IT internal audit was presented with by senior management was to cope with the additional burden of 404 while not adding to headcount. Continuous Assurance was seen as a promising tool for at least reducing the workload of the audit team when carrying out the existing tasks, which could then be redeployed to Section 404 work. Ideally, the Continuous Assurance methodology would itself be considered 404 compliant, thus leveraging the value added.

Siemens' IA methodology for SAP facilities involves carrying out the procedures prescribed by hundreds of 'audit action sheets' by internal auditors at the entity site. Initially it was estimated that about 25% of the audit action sheets could be fully automated due to their deterministic nature. But this was always seen as a floor and not a ceiling as far as the scope of CCM was concerned because it presumed the use of a home-grown CCM software which was not industrial strength. More importantly, it was expected that far more audit action sheets would become automatable if they were rewritten on the presumption that they would be implemented by a computer rather than a human auditor; in other words, they would be formalised through re-engineering, removing ambiguity and missing instructions that would be filled by the judgment of the auditor.

In a more recent follow-up study of the Continuous Assurance initiative at Siemens based on its standard SAP platform and using Approva as an overlay control monitoring software (Teeter et al., 2008), it was concluded that about 68% of the actions could be automated to some extent. Considering that some of these automated steps would be performed in a daily monitoring mode (as opposed to the 18- to 24-month cycle of SAP audits) the strength of its evidence would be much stronger and conceivably could replace much of the residual 32% non-automated evidence.

As Siemens moves forward with extending CCM to all parts of their global operations, it is instructive to look back at the business case made by IT internal audit managers at the entity to senior management to justify the implementation of Continuous Assurance . Figure 10 is taken from a presentation prepared for internal and external audiences by Siemens' internal audit to explain why the project was undertaken. While the actual cost savings are difficult to determine, even achieving a fraction of these projections would give this project a very high return on investment.

**Figure 10: Continuous Assurance value propositions at Siemens Continuous Data Assurance**



## Continuous Data Auditing

### Strategies for CDA

Since its very inception, accounting has been shaped by the cost of obtaining and investigating data. Reports prepared and audited only once a year; sampling rather than examining the entire population; analysing at the trial balance level and using ratios: all these are outcomes of the fundamental constraint on the data accountants could gain access to and had the ability to analyse. What is common to all these responses to the constraint is the aggregation of data across time and space in order to reduce the data and analysis needs of the accountant. Moreover, aggregation at a level higher (often much higher) than the transactional level, has been a cost and capability-based limitation rather than the ideal process for assurance. Technology, auditor capabilities and the nature of auditee information have changed this constraint but accountants are still taught to follow these practices even though the underlying reason for them has not existed for some years now.

One area of accounting which has moved to exploit the capabilities of the new IT infrastructure of the entity is CDA. CDA uses powerful software to extract data from the entity's IT systems and then analyses it at the transactional level to provide more detailed assurance; on a more timely basis.

In developing a CDA system the assumption is that with access to transaction level data auditors will gain the ability to design expectation models for analytical procedures at the business process (BP) level, as opposed to the current practice of relying on ratio or trend analysis at a higher level of aggregation. Testing the content of an entity's data flow against such process level benchmarks focuses on examining both exceptional transactions and exceptional outcomes of expected transactions. With such benchmarks the Continuous Assurance software can continuously and automatically monitor company transactions, comparing their generic characteristics to observed/expected benchmarks, thus identifying anomalous situations. When significant discrepancies occur, alarms will be triggered and routed to the appropriate stakeholders.

An important innovation in the architecture of a CDA system is the utilisation of analytical monitoring as the second stage of data analysis, rather than the first one, as is the case in standard audit practice. Hence, the first component of the Continuous Assurance system utilises automatic transaction verification to filter out exceptions, which are transactions violating formal BP rules. The second component of the system creates and utilises benchmarks which model the fundamental business processes of an entity to serve as the expectation models for process-based analytical procedures.

Transaction verification will be found to be a necessity in most CDA implementations, especially in entities with disparate legacy IT systems rather than a single, integrated ERP system. When data is uploaded to the firm's data warehouse from the underlying legacy system the potential exists for errors to be introduced to the data set which have to be identified and removed before the data is suitable for automated testing, and that step is undertaken by the transaction verification component of a Continuous Assurance system. Potentially, in a very tightly integrated enterprise environment with automated BP controls, such data errors may be prevented by the client's ERP system.

Transaction verification is implemented by specifying data validity, consistency and referential integrity rules which are then used to filter the population of data. These rules are designed to detect and remove two types of data errors: first, data integrity violations which include, but are not limited to, invalid purchase quantities, receiving quantities and cheque numbers; and second, referential integrity violations which are largely caused by many unmatched records among different business processes. For example, a receiving transaction cannot be matched with any related ordering transaction. In other words, a payment was made for a non-existent purchase order.

While the verification of transactions relies on fairly straightforward business rules, entities implementing CDA often consider that just the exceptions identified at this stage are a major source of value added from the project. It is to be anticipated that as legacy systems are gradually superseded by the entity's ERP system with stronger automated controls, the transaction verification component of the Continuous Assurance system will be catching fewer and fewer problems. Conversely, the fact that any are caught at all indicates the value of this element of automated Continuous Assurance, since these transaction-level errors detected are only there because they have escaped detection by the standard manual practices being employed by the entity's internal auditors or control procedures.

The benchmarks for CDA can take a number of forms. The vendors of Continuous Assurance software all have proprietary tests of detail included in their packages, as well as (usually) the provision for the client to formulate their own tests. In addition, researchers are working on sophisticated statistical benchmarks called continuity equations (CEs) (Alles et al., 2010) that attempt to model the fundamental business processes of an entity to serve as the expectation models for process-based analytical procedures. Since those underlying business processes are probabilistic in nature, the CEs have to be data-driven statistical estimates. Once identified, CEs are applied to the transaction stream to detect statistical anomalies possibly indicating BP problems.

Recent research shows that for a given BP there is a variety of probabilistic models that differ in their statistical sophistication and ease of use. While these candidate CEs demonstrate differences in their predictive ability and anomaly detection performance, all models perform well and no single model performs better on all aspects. From this we can draw two important conclusions.

First, unlike in the traditional audit literature, the inability to clearly choose the ‘best’ across the candidate CE models is less important than the fact that all models yield efficient analytic procedure tests. Because of its automated and technology-driven nature, it is quite feasible and even desirable for the continuous data level audit system to use benchmarks based on multiple CE models instead of being forced to select only one, as would be necessary in a more manual system.

Second, the fact that all the CE models yield reasonably effective analytical procedures implies that it is the unconstrained data that matters the most. When auditors have access to transaction data, the richness of that disaggregate data makes error detection robust across a variety of expectations models. In other words, it is the nature of the data that serves as audit evidence which is the primary driver of audit effectiveness, with the selection of the specific analytical procedure a second order concern – not because the audit benchmark is not important, but because auditing at the process level makes errors stand out much more obviously in the data.

Thus the power of CDA comes from a variety of sources: the possibility of running automated tests closer to the event data; the ability of the auditor to access the population of data and to choose the level of aggregation for analytic procedures as opposed to being forced to accept constrained, highly aggregate and sample data; and the use of benchmarks for analytic procedure tests that model the business processes of the entity.

### Example of CDA implementation at a major bank

This section describes the CDA implementation at Itau Unibanco, a major full service bank in Brazil, which has had a very active Continuous Assurance initiative since 2000. The Continuous Assurance program is part of the bank’s Information Technology Internal Auditing and has over 10 people engaged in several roles. The CDA system currently monitors over five million customer accounts on a daily basis and sends out about six thousand alerts a month for detailed manual analysis by internal auditors.

The CDA program has as its motto achieving 'Productivity with Quality and Efficiency' and its mission statement includes:

- **Mission**
  - Automatically evaluate risks and controls on a continuous basis in order to identify exceptions and anomalies, trends and risk indicators
  - Issue opinions about controls, risk assessment for top management, audit committee and other interested parties. Contribute to corporate Governance of the Conglomerate
- **Scope**
  - All products, processes and services in the conglomerate that allow the systemic extraction and analysis of data generated by Information Technology
- **Approach**
  - Use of existing products, processes and services information analysis to improve timeliness and scope of the IA
  - Inform resulting non-compliance events, generating new products necessary to minimise risks and unforeseen events.

There are currently about 18 procedures that cover the following scope:

- **Detective:** Routines to detect potential errors
- **Deterrent:** Routines to inhibit inappropriate events and behaviours
- **Financial:** Routines to reduce or avoid financial losses
- **Compliance:** Routines to help compliance with existing laws, policies, norms and procedures.

The CDA routines were created from the knowledge and experience of senior internal auditors and bank examiners as to likely indicators of fraud, or situations where fraud could easily arise. For instance, in Brazil, federal tax payments are paid in over the counter to bank clerks. In some cases the clerk may pocket the cash and the client will not realise this until the tax authorities issue a writ for non-payment many months later. Not only is this a serious situation for the client, but also a liability for the bank that is responsible for paying both the overdue taxes and late fees, as well as incurring a reputational cost. The CDA system monitors federal tax payment cancellations at each bank branch and alerts auditors if there is an anomalous low amount in any given time period.

Another CDA test examines the balances of bank employees to detect overdrafts, an indicator of possible financial difficulties facing the employees and hence, of susceptibility to commit fraud. This particular test illustrates that the kinds of transactional testing in Continuous Assurance systems that are feasible in some jurisdictions are not possible, or may not even be legal, in others such as Australia, which have stronger privacy protections. But this example shows that having the ability to continuously test transactions allows very innovative and powerful tests to be devised, though doing so ultimately depends on the experience, skill and imagination of those implementing the Continuous Assurance application.

Figure 11 shows the scope of some of the CDA routines, while Figure 12 shows the benefits achieved through the automation of these tests:

**Figure 11: Sample CDA routines**

| | Approach | | | |
|---|---|---|---|---|
| **Daily Routines – Branches** | Detective | Deterrent | Financial | Compliance |
| 1. Check advances or Excess in account or overdrafts | X | X | X | X |
| 2. Returned cheques | X | X | X | |
| 3. Federal tax payment cancellations | X | X | X | |
| 4. TED (Electronic Funds Transfer) issue | X | X | X | X |

**Figure 12: Achieved benefits of sample CDA routines**

| | Achieved Benefits | | | | |
|---|---|---|---|---|---|
| **Daily Routines – Branches** | Time to detect | Inform to Business Area | Inform to Audit Staff | Before | Today |
| 1. Check advances or Excess in account or overdrafts | 1 day | 1 day | 1 day | 15 days | 1 day |
| 2. Returned cheques | 1 day | 1 day | 1 day | 30 days | 1 day |
| 3. Federal tax payment cancellations | 1 day | 1 day | 1 day | After Government Claims | 1 day |
| 4. TED (Electronic Funds Transfer) issue | 1 day | 1 day | 1 day | Never | 1 day |

Overall, the CDA program has enhanced the audit environment at the bank by increasing audit efficiency, detecting and reducing fraud incidence, and most important of all, creating a deterrence for future misbehaviour by bank employees who are aware that there is now continuous monitoring of transactions, combined with uncertainty about what the tests are looking at and how often they are carried out.

The tools used by the bank in creating its Continuous Assurance system include:

- Routines developed in FOCUS
- MS-Office (Access; Outlook; Word; Excel; Power Point; Visual Basic)
- Data Warehouse (SAS and BRIO)
- ACL
- Academic consultants.

The lessons from this CDA implementation are particularly pertinent in the light of the recent difficulties experienced by the banking sector worldwide. Continuous Assurance is closer to key bank controls, since it improves response time and risk management and increases IA involvement with the critical areas of the bank. In addition, it clearly improves audit effectiveness, efficiency and deterrence capability.

## Continuous Risk Monitoring and Assessment

### Strategies for CRMA

The focus so far in the development and implementation of Continuous Assurance has, understandably, been on creating initial Continuous Assurance systems. As audit automation matures, however, the focus will inevitably shift towards the question of how to keep the Continuous Assurance system relevant and efficient as the underlying audit environment changes. The audit planning process provides a template for how to make the Continuous Assurance system dynamic: by formally incorporating into it a risk assessment system that encompasses assessment of auditor perceptions of risks and allocation of audit resources to risky areas of the audit.

A recent PricewaterhouseCoopers study on the future audit of 2012 (Figure 13) found that while the primary focus of internal auditors was Continuous Assurance and monitoring, a close second was auditing of the entity’s enterprise risk management systems – a focus that surely has only increased after the experience of the ongoing credit crisis.[21] However, vital as auditing ERM is, it begs the question of how the entity’s auditors, both internal and external, will apply such risk management practices to the audit itself, to reflect changes in the business and audit environment that are more rapid than anything ever envisaged. The aim of CRMA is to give Continuous Assurance systems the robustness to deal with shocks to the audit environment and thereby to make the Continuous Assurance system dynamic rather than static.

21. http://www.pwc.com/us/en/internal-audit/publications/future-internal-auditing.html

**Figure 13: Internal audit responsibility**

Areas of greatest projected increases in internal audit's responsibility include:

| | |
|---|---|
| 1. Continuous auditing or monitoring | 95% |
| 2. Auditing the ERM process | 77% |
| 3. Auditing outsourced or off-shored operations | 75% |
| 4. Fraud detection | 66% |
| 5. Fraud risk assessments | 66% |
| 6. Auditing executive comp and disclosures | 65% |
| 7. Auditing operational efficiency/effectiveness | 64% |

Often entities focus their CCM and CDA resources on obvious but small-scale sources of risk (credit cards or employee fraud), while oblivious to the entity-destroying risks inherent in more glamorous parts of their operations. It is important to note that CRMA is not equal to continuous enterprise risk management, meaning that CRMA is distinct from, and has a different focus than, the auditing of the entity's ERM systems, whether or not that takes place continuously; clearly the former must be aligned with the latter.

As it stands, there is concern that audit risk planning is too episodic and constrained to remain relevant, as epitomised by the Bear Stearns collapse, which occurred only six weeks after its auditor issued a clean audit opinion. The stated justification for this was that while the audit opinion was valid, changes in that fortnight were beyond the scope of the audit. Whatever the merits of that argument, it only makes clear the need for a more dynamic, real-time risk management process for the Continuous Assurance audit system.

The good news is that just as continuous monitoring makes Continuous Assurance economically and politically feasible, the new emphasis on ERM will create the sensors and systems that will facilitate CRMA. But implementing CRMA will require that first the practice is formalised, for as we saw with CCM, only then can the degree to which it can be automated be meaningfully considered.

But can CRMA be automated? Does it need to be? A high degree of judgment will undoubtedly be called for when modifying Continuous Assurance systems. But key is to first have real-time information of changes in the business and audit environments, encompass new competitors and products, environmental and social impacts, new regulations and enforcement actions and so on. Again, as we saw with the credit crisis, it needs to be kept in mind that fundamental changes in an entity's risk profile can take place much faster than many expected. Even a Continuous Assurance system needs to adapt very rapidly while a manual audit system is bound to fail in the face of especially rapid changes in the risk environment. Thus, there is a need to think about different ways in which Continuous Assurance systems will have to change.

One useful analogy that can help illuminate the nature and scope of CRMA is to compare it to security software on a personal computer. In the latter setting there are different types of changes to the software possible, depending on changes in threat and technology. For example:

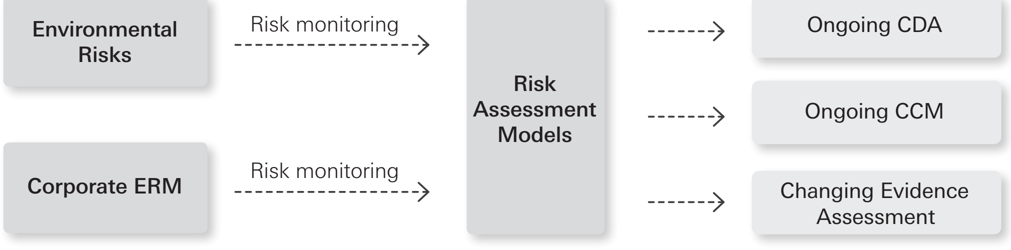
- Weekly updates of virus libraries
- New versions of the software
- New software altogether.

Similarly, Continuous Assurance systems will need continual updating as entity risks change, new CCM and CDA software and techniques are acquired or developed, and audit plans are changed. There is a clear requirement for auditors to create a formal model of CRMA and taxonomy of the stages and drivers of change in a Continuous Assurance system.

Analogous to CCM, risk assessment procedures have been an integral part of the traditional audit for many decades. The early audit planning process encompassed auditor perceptions of risks, and allocation of audit resources to areas of the audit. While there are many forms of guidance in the literature and statutes, this process is still vague and ad hoc. External audit firms have their own approaches and IA departments by and large use similar approaches, including:

- Divide the audit risk frame into manageable parts
- Understand the basic profile of risk of each of the parts
- Work on proposing joint risk profiles
- Create scenarios.

**Figure 14: CDA, CCM, and CRMA**



# Continuous Assurance software

While it is certainly possible to design, develop and implement a custom-made automated auditing system in-house, the expense and expertise requirements of such a project make it prohibitively expensive, if not outright unfeasible, for the vast majority of cases. It is therefore not surprising that there is an emerging industry of packaged software developed to support audit automation or at least some of its aspects.

A convenient way of categorising the current software offerings is in accordance with the breakdown of Continuous Assurance as consisting of CCM and CDA. While vendors are attempting to integrate in their packages as many features as possible, they still typically exhibit strength in one of the two components. The well-established (CAAT) vendors ACL and CaseWare IDEA have extended their products to position them as continuous monitoring solutions.[22] ACL, in particular, has invested significant efforts into providing what they call 'continuous controls monitoring' solutions.[23] Despite the name, in the terminology of this paper these solutions should be categorised as CDA since the substance of their tests is transaction verification and analysis focused on making inference about the functioning of controls (as opposed to direct tests of controls through monitoring of their settings). A relative newcomer to this area is Oversight Systems which also focuses on CDA and puts emphasis on providing hosted monitoring solutions.[24]

The common feature of CDA offerings is their utilisation of internal common data models to which enterprise data is mapped by the extract, transfer and load (ETL) subroutines. This system architecture allows for a relatively easy accommodation of many different enterprise systems (or even home-grown solutions) through the development of additional ETL modules to accommodate additional systems. The test libraries and the main processing sub-routines usually do not have to be changed.

While the common data model architecture is utilised successfully in CDA solutions, the systems that implement CCM directly do not use it. The reason is the great diversity of business process automation in enterprise systems. The very significant differences in the types of business objects, process configurations and controls seem to make the common model too complex to be cost-effectively designed and implemented in CCM solutions. This is why these solutions develop special CCM sub-routines targeted at specific enterprise systems. Not surprisingly, the two pioneering offerings in this field – Approva and VIRSA – were targeted at SAP R/3 (mySAP ECC). Approva has since extended its offerings to target other ERP systems, most notably Oracle E-Business Suite. Such extensions are quite laborious since they require the re-implementation of the CCM test libraries and processing for each new enterprise system. On the other hand, VIRSA has since been acquired by SAP itself, and has become the core of SAP's GRC offering. To keep up in its competition with SAP, Oracle acquired in the latter half of 2007 a major GRC and CCM vendor, LogicalApps, whose offerings were naturally targeted at the Oracle E-Business Suite.

The area of GRC is still maturing and has a very large number of vendors, many of them small, though some major vendors such as IBM, with its Workplace for Business Controls and Reporting do have a presence. Among other notable offerings in this market are Paisley Enterprise GRC, OpenPages, AXENTIS Enterprise, BWise, and Protiviti Governance Portal. Many of the solutions in this market are not much more than customised document management systems with GRC-specific templates, though there is a pronounced trend to enhance these offerings with automatic control testing and monitoring functionality that would bring these solutions closer to the fully developed CCM and/or CDA systems.

22. CaseWare IDEA is distributed in Australia and New Zealand through Audit and Fraud Software Pty Limited (see www.auditsoft.com.au) and Task Technology Pty Ltd (see http://www.task.com.au)
23. ACL services in Australia and New Zealand are provided through the partner firm Satori Group (see www.satoriassurance.com.au)
24. http://www.oversightsystems.com

# Practical steps for implementing Continuous Assurance

The audit profession is inherently conservative given that its entire benefit comes from the auditor's credible claims of professional independence, objectivity and reliability. As a consequence, auditing processes, even more so than other business processes, have a tremendous amount of inertia. It follows that any Continuous Assurance project, as with any major change initiative in such circumstances, will have numerous barriers to change and to overcome. As the large change management literature indicates, for a Continuous Assurance project to even get launched, let alone succeed, a senior executive has to champion the project, both at an IA level, and in their reporting level in top management or the audit committee. The fact that executives' positions with titles such as 'Associate Director, Continuous Assurance' are being created at entities indicates that such champions are becoming institutionalised as Continuous Assurance becomes mainstream.

The first critical task of audit automation champions will be to identify and engage project stakeholders. In addition to internal auditors, these stakeholders will include business process owners and IT personnel. Again, the use of such multifunctional teams is a standard recommendation of change management theory, but in the case of audit automation the problem is compounded by the need of internal auditors to be aware of the needs of the external auditor, while also balancing the demands of the IT process owners and line managers. The composition of audit automation teams must reflect the multifaceted nature of the task at hand.

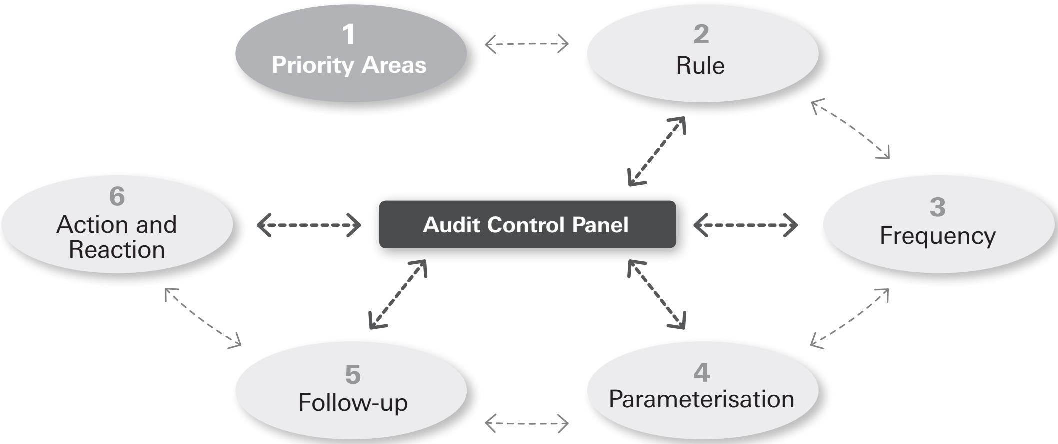
The reason for having a high powered team with a senior level champion is obvious when considering the complexity inherent in automating audit processes initially designed to be done largely manually. In our experience, even very experienced auditors differ in how such procedures are carried out in practice, which translates into differences in how to transform the process into an automated one, what the objective of the process should be and how much weight should be placed on a particular process or on a possible compensating control.

Once a champion has been found and the project receives the go-ahead with assured senior management support, actual implementation can begin. Implementing a Continuous Assurance system, be it CCM or CDA, consists of six procedural steps[25]:

1. Establishing priority areas
2. Identifying monitoring and Continuous Assurance rules
3. Determining the process's frequency
4. Configuring Continuous Assurance parameters
5. Following up
6. Communicating results.

25. Adapted from Vasarhelyi et al., 2008

**Figure 15: Steps in the Continuous Assurance implementation**[26]



## 1. Establishing priority areas

The activity of choosing which organisational areas to audit should be integrated as part of the annual IA plan and the company's risk management program. Many IA departments also integrate and coordinate with other compliance plans and activities, if applicable. (The remaining steps below are applicable to all of the priority areas and processes being monitored as part of the Continuous Assurance continuous audit program.)

Typically, while deciding priority areas to continuously audit, internal auditors and managers should:

- Identify the critical business processes that need to be audited by breaking down and rating risk areas
- Understand the availability of Continuous Assurance data for those risk areas.
- Evaluate the costs and benefits of implementing a Continuous Assurance process for a particular risk area
- Consider the corporate ramifications of continuously auditing the particular area or function
- Choose early applications to audit where rapid demonstration of results might be of great value to the organisation. Long extended efforts tend to decrease support for Continuous Assurance
- Once a demonstration project is successfully completed, negotiate with different auditees and IA areas, if needed, so that a longer-term plan is implemented.

When performing the actions listed above, auditors need to consider the key objectives from each audit procedure. Objectives can be classified as one of four types: detective, deterrent (also known as preventive), financial and compliance. A particular audit priority area may satisfy any one of these four objectives. For instance, it is not uncommon for an audit procedure to be put in place for preventive purposes to be reconfigured as a detective control once the audited activity's incidence of compliance failure decreases.

26. From Vasarhelyi et al., 2008

## 2. Monitoring and Continuous Assurance rules

This second step consists of determining the rules or analytics that will guide the Continuous Assurance activity, which need to be programmed, repeated frequently, and reconfigured when needed. For example, banks can monitor all chequing accounts nightly by extracting files that meet the criterion of having a debt balance that is 20% larger than the loan threshold and in which the balance is more than $1000.

In addition, monitoring and audit rules must take into consideration legal and environmental issues, as well as the objectives of the particular process. For instance, how quickly a management response is provided once an activity is flagged may depend on the speed of the clearance process (ie. the environment) while the activity's overall monitoring approach may depend on the enforceability of legal actions and existing compliance requirements.

## 3. Determining the process frequency

Although the process is called 'Continuous Assurance', the word 'continuous' is open to interpretation. Auditors need to consider the natural rhythm of the process being audited, including the timing of computer and business processes as well as the timing and availability of auditors trained or with experience in Continuous Assurance For instance, although increased testing frequency has substantial benefits, extracting, processing and following up on testing results might increase the costs of the Continuous Assurance activity. Therefore, the cost-benefit ratio of continuously auditing a particular area must be considered prior to its monitoring.

Furthermore, other tools used by the manager of the Continuous Assurance function include an audit control panel in which frequency and parameter variations can be activated. Hence, the nature of other Continuous Assurance objectives, such as deterrence or prevention, may determine their frequency and variation.

## 4. Configuring Continuous Assurance parameters

Rules used in each audit area need to be configured before the continuous audit procedure (CAP) is implemented. In addition, the frequency of each parameter might need to be changed after its initial set-up based on charges stemming from the activity being audited. Hence, rules, initial parameters, and the activity's frequency – also a special type of parameter – should be defined before the CAP begins and is reconfigured based on the activity's monitoring results.

When defining a CAP, auditors should consider the cost benefits of error detection and audit and management follow-up activities. The choice of a threshold of filtering implies a trade-off between false positives and false negatives, and consequently increases or decreases the follow-up effort. If the threshold is low it creates a larger number of false positives (items identified as problematic that after examination were found to be correct); however, if the threshold is high it allows more items that actually were incorrect not to be selected (false negatives). Because follow-up costs would go up as the number of false positives increases and the presence of false negatives may lead to high operational costs for the organisation, internal auditors should regularly re-evaluate if error detection and follow-up activities need to be continued, reconfigured, temporarily halted or used on an ad hoc basis.

## 5. Following up

Another type of parameter relates to the treatment of alarms and detected errors. Questions such as who will receive the alarm (eg. line managers, internal auditors, or both – usually the alarm is sent to the process manager, the manager's immediate supervisor or the auditor in charge of that CAP) and when the follow-up activity must be completed, need to be addressed when establishing the Continuous Assurance process.

Additional follow-up procedures that should be performed as part of the Continuous Assurance activity include reconciling the alarm prior to following up by looking at alternate sources of data and waiting for similar alarms to occur before following up or performing established escalation guidelines. For instance, the person receiving the alarm might wait to follow up on the issue if the alarm is purely educational (ie. the alarm verifies compliance but has no adverse economic implications), there are no resources available for evaluation or the area identified is a low benefit area that is mainly targeted for deterrence.

## 6. Communicating results

The final item to be considered is how to communicate with auditees. When informing auditees of Continuous Assurance activity results, it is important for the exchange to be independent and consistent. For instance, if multiple system alarms are issued and distributed to several auditees, it is crucial that steps 1 to 5 take place prior to the communication exchange and that detailed guidelines for individual factor considerations exist. In addition, the development and implementation of communication guidelines and follow-up procedures must consider the risk of collusion. Much of the work on fraud indicates that the majority of fraud is collusive and can be performed by an internal or external party. For example, in the case of dormant accounts, both the clerk who moves the money and the manager who receives the follow-up money may be in collusion since the manager's key may have to be used for certain transactions.

# Assurance in a changing world

The preceding sections focused on the progressive evolution towards the Now Economy and the body of research that is progressively showing ways to automate and accelerate the evolution toward a more frequent, more automatic and more close-to-the-event assurance process.

This section is even more speculative as it attempts to imagine a context of structural changes necessary to facilitate or allow the above changes. The context includes changes on: standards; standard setting; the structure of the audit professions; and the skills, behavioural attributes and competencies of the auditors.

A set of studies in the literature tries to anticipate the evolution of the assurance profession. Many of these use the Delphi method to anticipate, based on converging expert opinions, the future. The method utilises a set of questions provided to a panel of experts and shares their answers to obtain convergence. Delphi (Baldwin-Morgan [1993]; Brancheau et al. [2001]; Rowe & Wright [1999]), is suited to assessing the likelihood of future events and trends, and has been suggested as an appropriate technological forecasting tool for predicting the effect of technological changes on auditing.

Delphi is deemed to be particularly useful when understanding the problem benefits from subjective judgements on a collective basis and the rationales given by the panellists for their predictions providing insight into the reasons for the predictions and their implications. Parente et al. (1984) claim that these consensus forecasts are more accurate than 95% of individual forecasts, and iteration reveals more reflective opinions than single surveys. Mock et al. (1988), in a study for the Institute of Internal Auditors, also used the Delphi technique. Many of the considerations introduced in the ensuing discussion are based on Vasarhelyi & Lombardi (2010) who performed a 'modified' Delphi which aimed at creating a wider set of questions and inserting some flexibility into the methodology.

## Changing external reporting and external auditing standards

Earlier we discussed the difficulties with traditional measurement and the assurance model. Here we present a few thoughts with illustrative tools to further this discussion. The basic problems around the existing standards and standard setting process are multiple. In general the standard setting process tends to be slow and rules stay in place much beyond their usefulness. This said, political and economic frames change but some basic rules that served society well are changed causing serious problems for the economy. For example, in the United States many argue that the rescission of the Glass Steagall Act (1933)[27, 28] was one of the accelerating factors in the subprime crisis creating a perverse motivation scheme for bank executives and placing banks in areas where they had little or no competence.

Two other stalwart legislations, the SEC's FD rule (2000)[29] and the Sarbanes Oxley Act of 2002 can cause major difficulties, or substantive social costs in the emerging Now Economy:

- The fair disclosure (FD) ruling aims at curbing selective information disclosure by management. However, in the progressive migration from paper to electronic reporting, whatever direction it may take, the essence of reporting will be not 'directed disclosure' but the provisioning of access and

27. http://topics.nytimes.com/topics/reference/timestopics/subjects/g/glass_steagall_act_1933/index.html
28. http://seekingalpha.com/article/144581-should-we-reinstate-glass-steagall
29. http://www.sec.gov/answers/regfd.htm

availability to large data stores and the ensuing discussion of competitive impairment. In essence 'selective disclosure' will be provisioned by necessity to the multiple stakeholders of business of information access (see the Galileo monograph database Figure 25).

- Sarbanes Oxley aims at auditor independence and forbids auditors to provide consulting services to their clients. One clear assurance product that could emerge, in addition to the traditional audit, is some form of continuous (evergreen) opinion issued by auditors where they provide assurance that filters are in place and certain types of transactions will be monitored; if alarms arise auditors will be immediately aware and will take appropriate action.

Figure 16 and Figure 17 present symbolic auditor opinions aimed at rethinking what auditors do and what they assert. These are probably in violation of Sarbanes Oxley and likely need clarification concerning FD. In essence they:

- Assume a yearly opinion
- Assume auditors also being independent monitors of their auditees
- Assume some commonality and disclosure of agreements concerning monitoring analytics
- Assume the possibility of 'paid reports or assurances' where stakeholders would pay extra for additional or different assurance
- Assume the co-existence of an 'evergreen opinion' with the more traditional opinion
- Assume parallel monitoring efforts by management and assurance (internal and external).

**Figure 16: An assurance opinion in a Continuous Assurance environment**

## Pseudo report 1

We have examined the reliability and financial reports of ABC corporation and have been engaged on a continuous assurance engagement for the fiscal year of XXXX. We will monitor the organisation's operations and strategic accomplishments using a wide set of analytics as described in http://www.ca.com/analytics and other analytics we deem appropriate and will report on an audit by exception basis when more than XX% variance is found in operational and strategic standards or when we deem it appropriate. This exception report will be issued to all customers registered (*paying*) at http://www.ca.com/analytics/customers.

These few assumptions depart substantively from the current model that has evolved for more than a century. It is difficult to imagine current entities and standard setters evolving easily to such a different schema. In essence, however, the schema is analogous but substantively expands the role of assurance; in essence it is also clear that the lack of observability in computer-based economic activity requires a dimensionally different assurance effort.

**Figure 17: Alternative assurance opinion with Continuous Assurance implying other assurance services**

## Pseudo report 2

We have been engaged on a continuous assurance engagement for the fiscal year of XXXX for the purpose of covenant monitoring. We will monitor the organisation's covenants as described in our agreement with bank XYZ using a specified set of covenant figures and wide set of analytics as described in http://www.ca.com/analytics and other analytics we deem appropriate and will report on an audit by exception basis when more covenants are violated by more than XX% for a day or when we deem it appropriate. This exception report will be issued to bank XYZ immediately when the variance day is completed and to all customers registered (*paying*) at http://www.ca.com/analytics/customers.

In addition to expanding the role of assurance to the above examples and to a much wider scope, it is important to expand the knowledge set and structure of the accounting profession.

## Changing the structure of the external audit profession

Vasarhelyi and Romero (2009d) examined four engagements in external audit firms and Vasarhelyi and Kuenkaikaew (2009c) surveyed nine major leading IA organisations for their adoption and use of technology. Furthermore, Vasarhelyi and Lombardi (2009e) used a modified Delphi method to make some predictions concerning the future of audit [30]. These studies taken together suggest a series of communalities/trends/patterns/problems that together may point towards the need for structural changes in the assurance function.

First, internal audit organisations are taking the leadership on complex audits and external audit organisations are placing a much increased reliance on these audits. Second, industrial and consumer goods organisations present a substantively lower risk profile than financial entities, creating a very different set of emphases in internal and external audit procedures. Third, most large organisations,

30. http://www.thefutureofaudit.com

in particular those that often have limited interaction and synergy, have several audits. IA, fraud, compliance, Basel II, quality assurance and other organisations have similar functions, very different infrastructures, very different levels of technology adoption, and often do not share findings and process understanding. Rationalisation of audit-like functions, closer coordination and technology integration with external audit, and common platforms for audit/compliance, etc. support would create efficiencies and substantial improvement in the handling of risk.

Many IA organisations have extensive rotation programs. While these programs are greatly beneficial to staff training and individual growth, they come at a serious cost of professionalism and quality of IA programs. These trade-offs are not often at the forefront of the IA management's thinking. In addition, IA organisations often have several levels of leaders who are not audit professionals but who bring in a set of specific concerns about the competence and quality of the audits. If the pattern of increased reliance on monitoring and audit of complex systems by IA continues, this may become a serious concern. The adoption of technology in external audit organisations has been heterogeneous across entities, audits and geography. While audit standards delve into minutiae of procedure it is pretty much up to the entity and the cooperating client as to the depth of audit, the technology to be adopted, the extent of sampling, etc. The more automated audit will require having these minutiae more formalised and attempt to clearly specify the context and nature of the related audit judgement. The comprehension of client systems, audit firm technology, risks of complex client systems has also become a major issue.

But the problem that offers the greatest concern for external audit engagements is the inability to acquire independent data. All the interviewees (Vasarhelyi & Romero, 2009d) report that when data is required for a process, the entity produces a script to retrieve the data, but it is the client who procures it and submits a file to the entity. Upon receiving the file, auditors perform checks for completeness of the data, mainly comparing trial balances, and control that the code was not modified, which gives them the assurance that they are working with the correct data. However, it would be clearly preferable to have immediate and direct access to the data. So, the adoption of electronic work papers to reduce the interchange of papers and files is a clearly desirable objective. Both external and internal auditors recognise this as a desirable route but of heterogeneous path. Finally, external auditors, of different entities, expect that when the subprime related crisis is over, companies will adopt Continuous Assurance/continuous monitoring, and that their entity will be able to offer additional services related to analysis of data or controls that they associate with the use of technology in auditing.

Based on the above considerations a few key changes regarding the structure of the external audit profession may happen or be desirable. Owing to the fact that auditor systems are progressively more complex and less human observable (eg. SAP integrated with legacy systems and middleware) the assurance process will evolve away from the traditional audit to an evidence-based continuous systems monitoring, and opinions that cover: (1) assurance that monitoring of relevant ('material') events are being supervised by an independent third party; (2) evergreen opinion on the fairness of the financial statement; and (3) a grid measuring and explaining reliance and reliability of third-party processes outsourced. While the types of assurance issued by the external auditor need to be increased as described above, the complexities of understanding system structure and its monitoring requires substantive local specialisation and consequently much of the monitoring and audit work will be performed by internal auditors and relied upon by the external audit firm.

The current model of the client entity paying directly variable fees (often hour-based) to the external auditor will evolve towards some form of fixed fee size and complexity-based arrangement. This arrangement may entail mandatory auditor rotation and outside entity choice of auditor. In general the size of the audit and other assurance fees will increase in relation to the current compensation owing to the complexity and scope of the future audit. On the other hand, some form of audit firm risk reduction process will evolve as it is highly undesirable to have audit firms fail and have very limited sources of auditor services. The US public would be better served with a larger number of entities that can comfortably audit large multinationals. Most likely, a trade-off between tort reform to reduce auditor liability and some sort of supranational audit regulator/auditor choice will occur.

Internally companies will rationalise audit-like organisations by streamlining organisation charts, providing common infrastructures, keeping experienced IA management with audit training, and hiring specialised support as third party servicers for narrow complex tasks. The provisioning of this specialised support will probably come from consulting and/or audit support organisations, and depending on how the societal trade-offs evolve (corporate rights vs public rights) some of Sarbanes Oxley 404 independence requirements may be relaxed. Finally, audit firms have progressively moved to outsource labour intensive processes out of the United States to (mainly) India. While the scope and nature of outsourced work is unclear, it is obvious that this will be part of the emerging auditing frame of work. This raises an issue of great importance – quality control and monitoring of outsourced work.

## Education

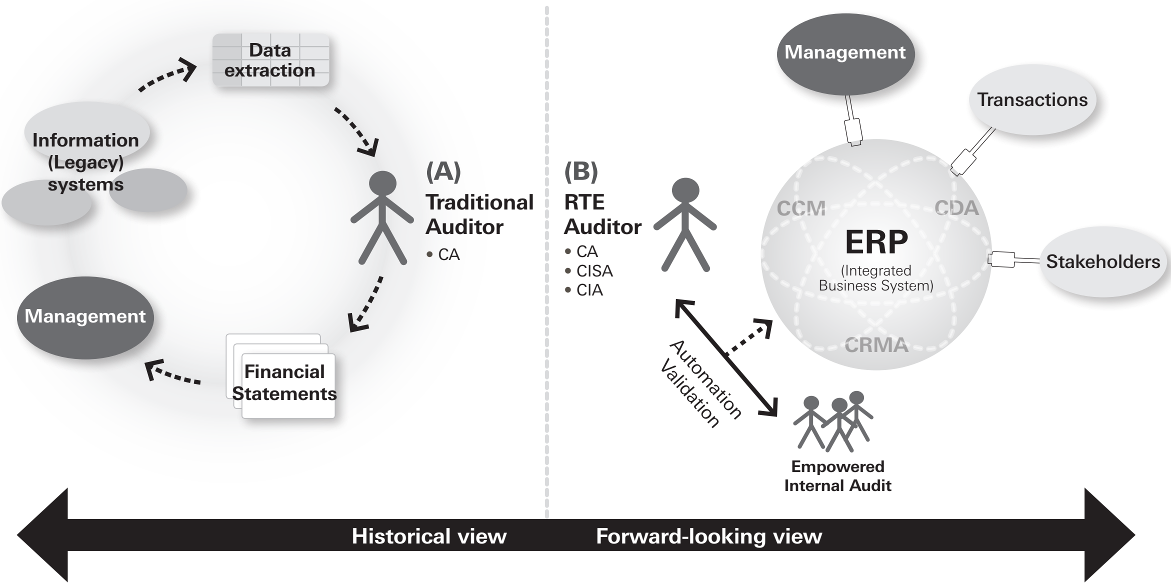
Vasarhelyi et al. (2009e) examine the issues concerning audit education and the Now Economy. They identify the motivation, skills (attitudes, behaviour and objective knowledge), and the necessary instructional artefacts.

### Skills for the 21st century auditor

To be better prepared to face the demands of the real-time economy, entrants into the audit profession will need to possess skills that will help them understand not only the technology that will be required while conducting their audits, but also the dynamics that involve working in a team and integrating work between the audit firm and the client. These tools will help them work effectively with clients and maximise this relationship.

Audit automation challenges the way that auditors have traditionally done their jobs. This is illustrated in Figure 18. The **traditional auditor (A)** focuses on the past. Armed with an accounting (CA, CPS, etc.) credential, (A) works to extract data from legacy and heterogeneous information systems, becomes a master of the spreadsheet and basic analytical tools, and certifies the financial statement prepared by management. Much of what (A) does is solitary; the numbers must fit within the bounds of IFRS or US GAAP, and the constant fear of litigation keeps (A) risk averse and resistant to change. All of the work (A) performs occurs several months after the occurrence of relevant events. Any material errors or fraud that have occurred in that period have had plenty of time to wreak havoc and create additional work (with the bonus of additional fees) for (As) client.

**Figure 18: The traditional vs the Now Economy auditor**[31]



| | | |
|---|---|---|
| Excel-focused, litigation fear, rigidity | **Attitude** | Proactive ethics, relevant tech, open to change, adaptability |
| Limited interface and team work, US GAAP | **Behaviour** | Client interfacing, remote team work, self-teach |
| Basic technology skills | **Technology** | IT audit tools, statistics/data analytics, ERPs, CCM/CRMA/CDA |

The **Now Economy auditor (B)**, on the other hand, is ready to work with today's information. Certainly past data can help model the future, but the forward-looking view allows (B) to react to problems as they occur and work with management to solve them. (B) may also possess a Chartered Accountant/Continuous Assurance certification, but also chooses to become a Certified Information Systems Auditor (CISA), Certified Internal Auditor, Certified Fraud Examiner or any combination of these and other certifications. (B) realises that events occur in real-time, so (B) is proactive in treating ethical dilemmas, open to change, and always searching for tools that will help (Bs) client remain a going concern. Working alongside an empowered IA team, (B) coordinates, delegates and evaluates the integrated ERP systems that ingest millions of transactions, ensure management knows that controls are working, and provides stakeholders with an accurate picture of (Bs) client's standing. In order to conceptualise, implement and operate these systems, the Now Economy auditor understands the technology and statistics that provide a continuous audit and assurance of the system. Finally, (B) has the ability to work remotely and to find solutions to problems if unsure.

31. From Vasarhelyi et al., *op cit* p.13.

The Now Economy auditor's skill set is the key to success. These skills include the attitudes, behaviour and objective knowledge resources that differentiate (B) from the traditional auditor. They are discussed further in this section.

## Attitudes

The following views and motivations will be the driving force behind the dynamic transition from traditional auditing to a Now Economy paradigm.

### Ethics

While the literature on ethics is extensive, and as one of the most noteworthy recent evolutionary changes in accounting education has been the progressive incorporation of ethical considerations, the Now Economy brings in a wide set of new considerations relative to the rapidity of information provisioning, the automation of entire subprocesses, the global nature of business activities, and the emergence of faceless technological threats (viruses, denial of service attacks, etc.). For a well-documented list of resources on ethics in accounting, see the work of Thomas (2004). One key attitude for the future is being proactive about ethical issues: identifying ethical issues in advance in relation to themselves, to the client, and to the environment, and taking action in advance of events as opposed to detecting ethical problems ex-post facto.

### Technology adoption

The acceleration of the introduction of technology into business requires auditors to have an attitude of constant learning towards technologies and their new features. Assisting this attitudinal posture is the rapid introduction of new devices (eg. mobile phones) in daily life and the need to learn their features and adapt life to their capabilities.

### Openness towards change

The popular perception is accountants are resistant to change, rigid and backward looking. But accountants and auditors must be receptive to changes in technology, social trends, business processes, accounting standards and accountant behaviour. Those who are not may survive by performing mundane tasks, but in order to prosper they will need to embrace change.

### Adaptability

Adaptability relates not only to openness to societal change but also to the ability to rapidly change behaviour in this dynamic environment. It can be reflected on the auditors' ability to navigate auditees' rapidly changing technology and understand its capabilities and needs. The same adaptability is required in relation to progressively dynamic standards, business activities and, most of all, changes in risk profile.

### Behaviour

Some key changes in underlying behaviour will go a long way to preparing students for the real-time economy. The primary focus should be on helping students foster an attitude of life-long learning. They should understand what the real-time economy is and how it will affect their function as an auditor.

### Client interaction

This relates to the interface with the client in the Now Economy, which will typically involve substantially more remote interaction, data transfer and remote presence with less face-to-face interaction. The auditor will have to learn to balance the needs of audit deterrence with the decreasing auditor presence in the facility, more frequent audit interface, increased 'audit by exception' approach instead of programmed dates, and pre-established audit plans.

As remote audits become more feasible, future auditors will also need to know how to deal with clients and team members when they are separated geographically.

### Working with a team

As is the case in many other business processes, virtual teams will turn from the exception to the norm aiming to explore narrow domain and scarce competencies (eg. extensive experience with Approva, an IT-audit SOD-oriented software), diverse geographic locations, not coordinated and often not predictable (due to alarms/alerts) audit actions and plans. The remote audit associated with real-time analytics and alarms will change the face of auditing.

### Dealing with standard setting entities and regulators

Inevitably, there will be an increased set of regulations and a much more frequent need to interface with government entities and standard setters. These will also eventually adopt a wide range of knowledge management and information provisioning tools. For example, the SEC has been provisioning an XBRL instance reader during the deployment of the rule in the United States.

### Managing the engagement

The virtual team, the virtual presence over a nearly continuous time set, and the existence of a large gamut of indigenous client technological tools all pose great audit engagement challenges. Furthermore, most audit entities will have engagement management tools that are expensive and complex and often not tailored to an individual auditor, company or client.

### Learning technology on the job

The auditor, owing to the large set of potential indigenous tools, will have to be constantly on a technology learning role. This could also force longer client tenures and could work against auditor rotation programs.

Students need to spend less time memorising the minutiae of standards and procedures and focus more on understanding what they mean. They should know how and where to locate auditing and accounting standards on the internet and through various other sources and how to extract information to formulate integrative knowledge. At this level the student/auditor has enough basic accounting/ auditing understanding/facts to knowledgeably search for information, but he is not overloaded with an over abundance of detail. Integrative knowledge uses basic and acquired information to formulate an integration of, for instance, accounting rules, audit evidence and relevant business facts to base judgement.

### Objective knowledge – accounting and technology competence

Understanding the underlying technology, or at least its functionality, is an additional necessary skill for future auditors. While they need not be IT professionals, students should know more than basic computer skills. They need to conceptually know what the 'black box' is doing to produce the evidence they are evaluating. This will require a more comprehensive analytics and statistics application. At a minimum, they should know what types of analytics are used. For example, many CCM procedures are rule-based. Understanding how monitoring of KPI provides insight into functioning controls is a critical skill.

Future auditors should possess the ability to keep up-to-date with the latest tools, and they need to be able to locate sources of information, such as professional association publications. Whether in auditing or accounting information system (AIS) courses, IT audit tools should be identified and implemented into the course instruction, identifying meta-controls, etc.

### Basic understanding of technology

Corporate IT encompasses a much wider set than pure PC and telephone/PDA manipulation competencies although these are highly related to attitudes vis-à-vis technology adoption and the ability to change. It basically involves a wide set of principles in hardware, software and business applications.

### IT audit

This includes a set of audit automation tools and more advanced software aimed at data extraction, manipulation, control evaluation, sampling, exception reporting, separation of duties, fraud detection, etc.

### Other audit-related tools

This encompasses software tools that are generic in nature and which are used in the audit. For example, software such as ACL and IDEA (IT audit packages) encompass sophisticated data extraction and statistical facilities. Auditors will often find the need to extract data from an ERP (eg. some knowledge of SAP and BAAP), use, for example, a statistical analysis system (SAS) to analyse the data and provide the output on a website where audit supporting documents are placed.

### Accounting

In general, accounting education in the Now Economy will de-emphasise factual details and emphasise principles and concepts that can be used to retrieve details in databases and knowledge bases that were not available in previous decades.

### Certifications

Rather than focusing entirely on professional qualifications such as the Chartered Accountant qualification, students should be shown alternatives and complementary certifications that may more accurately match their interests. Exams provided by these other associations require a similar level of comprehension but may be more relevant. Furthermore, if some of the considerations in this paper are taken to heart the Continuous Assurance/Chartered Accountant certificate will expand in scope to include IA, fraud examination and information audit certificates.

## The role of universities in preparing the Now Economy auditor

Given the rise of Continuous Assurance and the Now Economy, universities have to fundamentally rethink the audit education process. As with all re-engineering projects, the question they have to ask is whether, if they began teaching auditing for the first time today, in the 21st century, would they use the same approach and cover the same topics as the courses they currently have? It is hard to believe that they would answer this question in the affirmative, and while changing coursework is a time consuming affair, it is essential that universities at least begin the process of thinking about the skills, knowledge and attitudes that their graduates will need to thrive in the Now Economy.

Universities will need to change the content of educational offerings and learning methodologies to satisfy learners' forward-looking information educational needs. In general, accounting students are sensitive to their credentialing needs and expect to acquire the necessary knowledge during their university years without needing to take external courses to pass certification exams. Unfortunately, the certification exam delves into minutiae of the standards that are of small value in this age of accessible databases, search engines and archival knowledge. In general there is a basic conflict between the backward-looking nature of accounting standards and education and the forward-looking needs of the accountants of the 21st century.

Knowledge is much deeper and wider than it used to be, it takes longer to acquire and encompasses a much wider scope of quantitative and judgemental structures. While much of the archival knowledge (eg. codification of lease accounting) can be obtained over the internet, the utilisation of these queries, their efficiency and their availability has to be not only learned but kept current. It requires substantive actualisation and a dynamic learning attitude. In addition, learning of more quantitative techniques and their utilisation cannot be replaced by databases, as good as these may be. The learner must, to a certain degree, understand the analytic technology to be able to formulate the problem and choose key variables (eg. ratios, variables in a regression, optimisation function). Furthermore, the learner must be able to interpret the obtained results for the good of the client. And while Chartered Accountants are performing useful functions for their employer they are actually forgetting a large amount of basic knowledge. During these activities they are focusing on current work where they are acquiring a more in-depth and practical knowledge. However, there is a major need for currency in their integrative knowledge.

Like many other fields, education is going through a major process of electronisation (Vasarhelyi & Greenstein, 2003) where computer support of the classroom, distance learning and substantive automation are totally changing the landscape. Finally, the fact that most major accounting firms have extensive internal training that overlaps or supplants what students learned in the universities is an indictment of both the entities and the universities. It wastes social resources and misleads students and faculties in their quest to learn.

The above points lead to some obvious and speculative steps that could be undertaken by universities. With the use of real-time technologies some innovative programs could be developed to actually support the Chartered Accountant on the job and at the same time provide educational credits and substantive learning. These would be equivalent to the old 'cooperative programs' where students alternate between the job and the university but in this case would be less disruptive and more valuable to the employer. Universities would also have to redesign their curricula with the view that education is a lifelong process and that diplomas and certificates should be revalued if education is not continued. This same issue has implications for professional bodies.

Universities must rapidly improve their technological infrastructure to provide for this educational channel. They must understand that educational content requires substantive investment in development and updating. It is not clear if the university, or publishers, or major accounting firms, or suppliers of software and analytic technology or professional associations have the competitive advantage in developing knowledge packages. However, it is clear that major educational knowledge packages will exist and many educational institutions will become more content deliverers and administrators of the lifelong educational process.

Furthermore, universities must change the nature of their educational staff along the lines of modern knowledge structures. It is not clear that the traditional mix of teaching, research, service and external relationships that is currently required from faculties will make sense in the future. For a university to remain reputable it will have to establish narrow domain competencies that will be superior to others' and will enable it to provide the knowledge for knowledge packages.

Finally, universities should join the business of knowledge consulting where their lifelong learning partners can avail themselves of faculty knowledge to help them in their day-to-day jobs. The separation of the learning stage of life from the professional stage is now artificial. Companies and universities need to create knowledge support partnerships that are fully compensated. These of course would present a feed-forward effect where faculty would be more relevant but probably less independent and forward-looking.

## The role of professional bodies in preparing the Now Economy auditor

Professional bodies are a very important element of the mix for progress in the Now Economy. No other type of entity can drive the profession in a more positive way. While the government can enact laws and regulations that force activity, these rules do not respond well to the needs of the profession and/or for the proper advance of the state-of-the-art of accounting practice. Professional accounting organisations have the pulse of the profession and understand on-the-job needs as well as the shortcomings of instruction and professional knowledge. The following recommendations are closely related to the justifications and recommendations for universities.
