First, professional bodies should tighten up and expand their continuous professional education (CPE) efforts and requirements. Education is a lifelong process and it must recognised as such. Furthermore, accountants at different stages of their career should have different CPE requirements and restrictions on what education satisfies a CPE requirement. The body should develop a service of education counselling and direction. Second, professional societies, standard setters, governments and universities must work together on curriculum, certification requirements and learning monitoring efforts. While there may be some competition among these entities the old stovepipes of separate and artificially separated efforts cause substantive harm to society Third, professional societies need to work together with international entities to facilitate the globalisation of accounting and auditing standards and recognise the fact that there will be differences in local practice, local tax considerations and implementation of standards. Finally, on a wider scope, professional bodies should take into consideration the multiple convergences described in the next section where currencies, economies, stock exchanges and standards will converge but not fully merge and will require a nimble professional, above the local specialisation, to help clients in a rapidly changing world. A profession that tightly holds on to its current turf will see this domain shrink into irrelevancy. However, a profession that holds on to the present will tend to keep current gains but shrink towards the future.

## The effects of globalisation

Over the last 50 years technology has enabled major advances towards a global economy. Consequently it has set into motion social change, economic re-balancing and an unprecedented degree of cross-country cooperation. However, this phenomenon of ubiquitous consequence has created a wave of challenges to the socio-technical structure of business and corporate policy making.

Friedman[32] has extensively discussed the effects of globalisation and what he calls the flattening of the world. He talks about triple convergence where hardware and software multifuctionality, the availability of a large set of software and infrastructure tools of cooperation, and three billion new people joining the markets (in India, China and Eastern Europe) have substantively changed the way we live. Symbolising these changes are political change (the falling of the Berlin Wall in 1989), change in fund raising and equity markets (Netscape went public in 1995), and structural change he labels 'flatteners' (work flow software, open sourcing, outsourcing and offshoring among several items).

These major structural changes will also drive what we call the 10 major convergences or flatteners of the financial reporting and assurance world. These are discussed in Vasarhelyi and Alles (2009e). To understand these one must place them into the following wider context frames:

- One man gets richer and the other gets poorer; it is a zero sum game
- The eco-system is highly taxed with its exploration
- More technological 'glue' brings all together
- There will be more change in the next 10 years than in the last century.

Financial convergences:

- Financial markets are interlinked and that is good and bad
- Substantial reduction on the number of currencies
- Development of real global stock exchanges
- International Accounting Standards, common but with some differences
- International Auditing Standards, common and similar
- Workforces will blend across market and countries
- A wider set of assurance products
- Accounting work outsourcing
- Closer to supranational real-time reporting
- A wider set of reporting products?

32. Friedman, T., The World is Flat, 2005, Farrar, Strauss & Giroux.

Friedman's view sees a wider flat world, with double its current economic population working more efficiently and harmoniously through the 21st century with substantial gains in quality of life and longevity for a larger sector of the world. Accountants can have a substantive and positive contribution in this vision. Substantive opportunities for the expansion of scope of services (eg. carbon audits), size of the economic pie and contributions to the good management of the enterprise (eg. monitoring) lay ahead for the profession.

## The effect of the financial crisis

The subprime market precipitated the most serious crisis in the United States since the Great Depression. But it is hard to characterise this solely as a crisis of the real estate markets. Since the Reagan era [33] an economic bubble has been brewing. Since the 1970s the relationship between the market valuation of companies and the financial reports measuring them has been deteriorating. In simple term this means that financial reports do not explain the value of companies perceived by the markets [34]. Confirming this perception, interviews with financial analysts reveal a much wider examination of information and events and financial analyst reports that are grandly uncorrelated with actual corporate outcomes.

Any shakeup in the dynamics of the situation would have sooner or later burst the bubble. It could have been the subprime or the failure of a large company driving uncontrolled swap betting or a crisis of confidence on some of the intermediate markets.

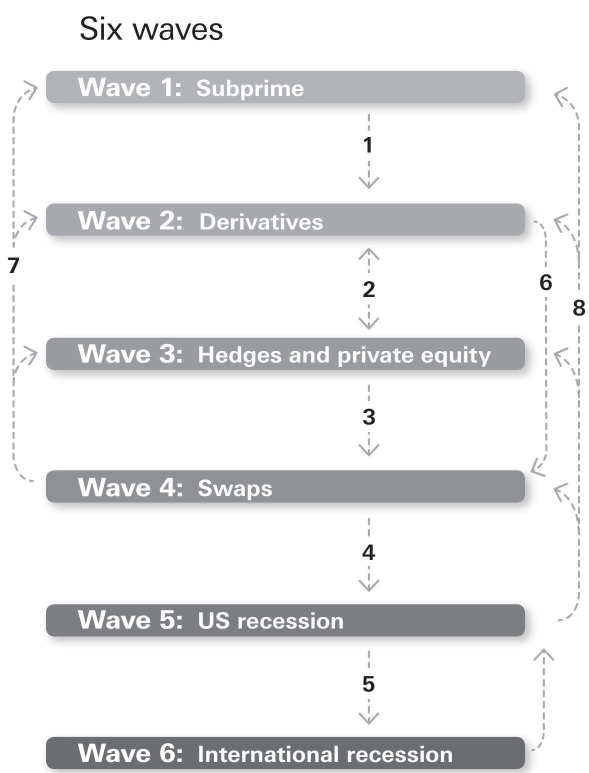
The initial burst of the bubble created a major misbalance in highly stretched markets. Investment banks at untenable leverage levels (between 30 to 50 to one) would go into negative equity with a bare 2% or 3% decrease in asset values. While the bubble kept growing, the equilibrium was maintained but the bad news created a crisis of confidence melting the intermediate markets. To summarise:

- Freezing of intermediate markets changed the short values of derivative financial assets
- These changes forced ill-capitalised investment banks to dump assets bellow their ongoing value
- Hedge funds and other parallel banking entities had abandoned strict hedging or hedges did not work when counterparties reneged or markets for the hedges did not exist
- Substantive de-leveraging aggravated the lack of credit
- The disappearance of the large US investment houses in the form we know them was a foregone conclusion
- The crisis can be represented by six waves (see Figure 19).

33. Paul Krugman, 'Reagan did it', *New York Times*, 31 May 2009

34. A set of meaningless financial reports makes the value of their assurance dubious for the financial market's purposes. Still these assurances have some value as they assert that the actual entities exist and perform transactions of economic value. Consequently to increase the social value of assurance much of this work has to revert to focusing on essential economic transactions not their meaningless obsolete aggregation.

**Figure 19: The cycles of the 'subprime' crisis**



## Effects of the six waves

### Wave 1: Subprime

Over the last two decades interest rates have been low in many countries propitiating a substantial increase in home ownership. Buyers tended to be totally cash-flow oriented and bought what they could afford to pay on a monthly basis. Over the last decade low interest rates allowed higher housing prices to be paid and a separation between loan origination (entity who sells the loan) and loan ownership (entity who carries the loan) created perverse incentives. The incentive to sell loans to those who could not afford it, the incentives by the government to increase home ownership without underlying wealth, and the incentives to the borrowers to buy above their means assumed an eternal growth in real estate values. With or without other factors such as swaps and derivatives eventually this would have led to a crisis. However, any of these three factors (and others) could have been the needle that pricked the bubble.

### Wave 2: Derivatives

Once the bubble is pricked all derivative assets that are stretched start giving way and it is only a matter of time before it bursts. The investment banks operating at very high leverages (over 30 times) have very little play when assets decrease in value. The Now Economy just accelerates this factor and 'panic' occurs unless there are 'fire breakers' in place to deal with rapid decreases in value as those instituted in the US stock markets. Real-time monitoring of hedging structures needs to be in place to rapidly detect waves of change and help in the prevention or attenuation of crises.

### Wave 3: Hedges and private equity

Hedge funds have become a large part of the 'shadow banking system', largely unregulated and the prime clients of investment banks. Over 20% of these 'shadow bank institutions' have been dissolved or failed but due to their smaller sizes have had less repercussion. If the US government had not stepped in to salvage the swap market and consequently salvage the large investment banks (eg. Goldman Sachs) the hedge funds would have been even further affected. In general hedge positions work well in well-behaved markets but with catastrophic change hedges are inoperative. While much of accountants' work has involved trying to measure the value of derivative positions and then the hedging strategies, a continuous audit would constantly map hedges and present aggregate positions measured under different scenarios. Purists would say that this is the role of management, but in a world of nanosecond transactions and rapidly changing economics, unless there is some continuous awareness of the matching of positions their actual hedge validity is questionable. A Now Economy will need substantial reigning in of these positions, shaded disclosure of all details of these positions, and rapidly functioning valuation dashboards with many alternative strategies available.

Private equity entities are another part of the 'shadow banking system' that have to be reigned in, placed in substantive disclosure, and subject to new rules of the game. In reality it is very difficult to assure a particular entity if their closely related party (private equity) is not publicly reporting and is privately held. Many European countries apply rules to a much wider set of organisations, many privately held, regarding disclosures. The emerging assurance and reporting environment must be aware of these issues and of the rapid set of regulation changes currently evolving.

### Wave 4: Swaps

There are many types of swaps. But in essence, as they are a form of barter transaction where, for example, an insurance company promises to pay another party the value of a bond if it fails, they have been kept out of the recording system. No economic transfer, except fees, occurs in most instances. Consequently this is a later event in most crises as it has to be caused by the original failure of the bond. The value of the swap markets, measured at face value, is in the 40 to 70 trillion dollars range but it cannot really be compared as it is low probability contingency compared with actual GNP numbers or bond being traded. Investors can't tell whether the people selling the swaps – known as counterparties – have the money to honour their promises. This clearly substantive market grew in the shadows and benefited from the difficulties and opacity of measuring and disclosing contracts.

On 8 May 2008 American International Group Inc. wrote down US$9.1 billion on the value of its certificates of deposit holdings. The world's largest insurer by assets sold credit protection on collateralised debt obligations (CDOs) that declined in value. In 2007, New York-based AIG reported US$11.5 billion in write downs on CDO credit default swaps. Ultimately the US government that intervened provided over US$130 billion to AIG in a bid to protect AIG's counterparties including Goldman Sachs and Morgan Stanley.

Once the marked liquidity diminished the probability of likely payout exploded and the US authorities felt obliged to rescue AIG which, in most of its areas, was a solid and profitable entity. Actually, the United States government was rescuing the investment banks that had not failed and their clients the hedge funds. The rapidly unfolding events was a consequence of absolute fear, investors, the government and financial entities not really understanding the reality of the situation. There were no overall maps that could give any of the main entities an aggregate view and an understanding of where the risks really were. If the modern world doesn't want to be the site of frequent and rapid meltdowns, measurement for all entities of their derivative and hedge positions is a must and its disclosure at least to a technologically enabled government must be full. Alternatively, an assured set of disclosure dashboards could be very useful in the monitoring and management of instruments and positions. Unless a real-time dashboarding and analytics framework exists, most likely the current mélange of risk instruments is unsustainable.

Supporting this view, billionaire investor George Soros indicated that a chain reaction of failures in the swaps market could trigger the next global financial crisis. The swap market is unregulated, and there are no public records showing whether sellers have the assets to pay out if a bond defaults.

### Wave 5: US recession

The United States moved into recession faster than the rest of the word in an ever increasing spiral. The government, remembering the Great Depression, worked very hard to stimulate the economy but these measures have been slow to take root in basic economic activity. On the other hand, by and large, the measures adopted to restore liquidity and calm the markets have worked and there has been a slow reignition of activity that has progressively slowed job losses and restarted sectors of the economy.

From measurement and assurance views the basic problems have not been addressed. On the contrary the standard setting authorities have been forced into poor regulation by skittish financial markets.

### Wave 6: Selective international recession

The interconnectivity of markets, a basis for their increased efficiency, becomes a compounding/accelerating factor. Different countries reacted different ways to the crisis but most of them eventually printed money (a symbolic expression) to stimulate the economy and increase liquidity. Again, even more than in the United States, the basic problems have not been addressed or resolved.

The interesting question is how would a Now Economy technology help in this situation? Clearly socio-technical systems cannot be modelled around technological innovation. Systems, with their human being components, are slow to adapt and follow economic motivation schema.

### How can Continuous Assurance and/or continuous monitoring help?

A Continuous Assurance environment can generate a forward looking environment in the following ways:

- By establishing a set of rules requiring all entities to report. Private, public, small, large, government, not-for-profit, all organisations must use their internal measurement tools (accounting packages) to prepare disclosures. Symbolic representation of all economic activity must be developed and to a certain degree monitored and assured
- The government or audit firms or independent internal auditors must monitor companies close to real-time and this will identify and prevent potential problems (ie. defaults in subprime)
- By using analytic CEs to create linkage
- By publishing process relationships and forward-looking metrics
- By considering the other technologies discussed in this monograph.

Transparent monitoring can create additional instability in the markets just like fair value regulations can be blamed for increased instabilities (clearly true but probably desirable in the long term) as it will reduce counterparty opacity and is necessary for long-term regulation and stability. Stabilising mechanisms must also be developed.

While monitoring and assurance can help reduce the size and consequences of bubbles they are not sufficient. Perverse incentives as described next must be reduced:

- Loan originators exploiting uneducated consumers and not caring if they fail as they are not the ones that carry the loan
- Derivative instruments that are too complex for client understanding
- Rating agencies being paid directly by the rated entities, if the rating is not good enough the issuer will not issue the title and the rating agency will not get income
- Accounting rules allowing ‘off balance sheet entities’ where entities may offload obligations for short or long periods of time
- Fair value valuations precipitating unintended consequences where frozen markets create temporary dramatic price drops… a cooling period with double reporting would help.

The credit crisis has choked off many of the markets that banks in recent years relied on to take assets off their balance sheets. Issuance of mortgage-backed securities has dropped sharply, while demand for more complex instruments such as collateralised debt obligations – packages of loans that have been sliced to create new securities – has dried up completely. Many bankers think it will be months, if not years, before they can start issuing these securities again. If and when they do, investors are bound to demand higher returns than before and are likely to require banks to demonstrate confidence in the securities by keeping a greater proportion to themselves. In short, this means that banks will be forced to fund more of their future loans from their own balance sheet resources. And it also means that Continuous Assurance could have helped but would not have, by any stretch of the imagination, avoided the subprime crisis of 2007/2009.

# Conclusions

This monograph first introduced an analogy to automotive inspections to stress the need for a fundamental reconstruction of the audit process. Then it defined and conceptualised the main elements of the Now Economy. The main driver towards the Now Economy is the need to reduce the latency within BPs or, in other words, to make the BP faster and more efficient. Any consumption of time costs money in a competitive framework may lead to competitive disadvantage.

A set of views on Continuous Assurance served to build a composite model where continuous data audit is complemented by continuous control monitoring, and a new view that we called continuous risk monitoring and assessment. Practice of the evolutionary audit field, and standard setting entities, will progressively consolidate practices that are experimental today.

The first recorded Continuous Assurance initiative was at AT&T (Vasarhelyi & Halper, 1991) and aimed to assure and monitor a large corporate customer relationship management system. There, high level monitoring of data led to increased system reliability and the detection of faults. Late in the 1990s and early 2000s first the CICA/AICPA and then the IIA issued guidelines on a more continuous audit. Surveys by ACL (a leading audit software vendor) and PricewaterhouseCoopers indicate that many companies have embraced some form of continuous audit. These definitions of 'continuous audit' are varied but the reality is that few companies are monitoring and assuring their processes in a timely fashion.

## Some experiences and some evolving questions

The Siemens effort described earlier is a leading edge experiment to expand the frame of Continuous Assurance. This effort is mainly aimed at assurance of large ERPs and their portion of audit automation. For this purpose the definition of Continuous Assurance was expanded to include CCM. ERPs encompass a large number of configurable and controls which may be active or inactive at a certain point in time. The Siemens project proposes a methodology to monitor and evaluate through base-lining the actual configuration of controls day by day. The second part of the Siemens project allowed for a wider evaluation of automation of Siemens' Audit Action Sheets and led to the conclusion that about 68% of the actions could be automated. Consequently instead of an 18- to 24-month cycle of internal audit evaluation of an SAP facility, daily, weekly and monthly evidence could be gathered automatically and fed to an audit evidence assessment mechanism. This rebalancing of audit evidence leads to the need to re-engineer the assurance function. Furthermore, the Siemens work raises interesting questions that must eventually be addressed. First, the current set of prescribed audit evidence is surely anachronistic. What is the type of evidence of the audit of the future? Second, the audit of the future can be heavily performed by automated means. Of the Siemens' audit actions only 32% could not be automated and the others would be provided automatically and frequently. In question was the need of the residual 32%, very often about existence of documentation, the execution of certain processes, the nature of certain facilities, etc. This type of 'soft' evidence, often just of perfunctory performance in traditional audits, may potentially be replaced or eliminated in the future. The question that arises is what evidence would be required in a new audit, of highly automated systems, if a new audit methodology is designed from scratch? Third, auditor presence, and the rituals of the repetitive audit, is clearly a deterrent for fraud and a mechanism whereby organisations increase data integrity.
What are the effects of a (visible or invisible) remote audit?

The modelling work performed at HCA (Vasarhelyi et al., 2004) modelled the supply chain of a major health organisation and aimed to improve the state-of-the-art in establishing the baseline against which to compare real-time data. Experience has shown that using static budget or estimates does not provide adequate comparison models. Consequently if we use sophisticated real-time data flows, we also need to improve the models against which we compare these streams of data. These models must incorporate provisions to account for seasonality, details in the value chain, special events and the inherent time delays in the process. Questions raised in this work include:

- Should monitoring be performed and at what level of aggregation? At the financial statement account level, at the general ledger level or at the individual transaction level?
- What kinds of faults do we find in streams of data? How can they be classified? How do these faults relate to weaknesses in internal controls?
- What are the intrinsic latencies in the value chain? How does one model the value chain integrating these latencies? For example, in average it takes 17 days to receive a delivery, three days to post a receivable, 29 days on average to collect a receivable (50% of events), and 60 days to collect (25% of events), etc.
- Can we automatically correct transactions that are estimated to be in error?

Several of the Itau Unibanco steps towards Continuous Assurance have helped understand the future of audit. The bank, as described above, created a monitoring of mechanism for its more than 1400 branches. Furthermore, it created a set of filters that brought up alarms in the areas of human resources, branch management, credit, etc. In its Continuous Assurance effort the bank proposed 56 potential Continuous Assurance projects, ranked these projects and made selections on their priority based on management perceptions for needs, the bank's corporate culture and expediency considerations. The 'low hanging fruit' approach, whereby the easiest projects take priority ahead of larger and more complex efforts, was considered vital:

- Auditor presence could be enhanced by constant monitoring (as at Itau-Unibanco) to replace the more extended presence of the auditor in the engagement. Itau-Unibanco replaced 160 audit hours annually for a 40-hour surprise audit driven by continuous monitoring-driven alerts, and a system of KPIs. What is the ideal mix of audit presence, remote human-manned auditing and automated auditing?
- This experience clearly indicates that Continuous Assurance can be applied across many areas of organisations. Also, the experience seems to indicate that banks and other financial organisations are particularly good targets to use continuous audit as their main product is easily abscondable cash.

Itau Unibanco chose to examine and monitor transitory accounts (Kim et al., 2009) in order to decrease their transaction risk and to create an infrastructure of enhanced data assurance. For this purpose it created an audit structure of four levels which encompassed: 1) analytical account review; 2) real-time monitoring for key events at the mainframe level; 3) detailed analysis of high risk accounts at daily cycles; and 4) business modelling of critical accounts using CE (Alles et al., 2010) analytic technology. At the same time Itau Unibanco hired IBM to create the necessary infrastructure to support these analytical processes, migrate the earlier mentioned branch monitoring and create the necessary audit dashboard for alarm and continuous audit management.

The Itau-Unibanco effort raises a series of important questions:

- What should be the methodology to choose Continuous Assurance applications?
- How should these be assigned priorities?
- What processes are to be monitored online, at the mainframe level, and at what level of detail?
- What is the depth of detail that account filters are to be developed to extract fallacious transactions? How does one make decisions at thresholds of filtering levels that would result in trading off false positives for false negatives?
- How should a Continuous Assurance dashboard be designed? Should the focus be on financial statements, processes or on particular variables, events, etc?

## Understanding some Continuous Assurance realities

The above discussion and examples of Continuous Assurance at several organisations indicate some commonalities that should serve as additional guidelines to establish a continuous audit effort. Our predictions include:

- Traditional auditing will give way to a progressive form of close to the event auditing without the need for special regulation. However, first professional organisations and then governments will need to identify the need for this and issue guidelines for a kit of progressively real-time assurance procedures
- Organisations must look in the domain of their processes to applications that are time sensitive and have material effects on their financial statements
- Organisations must balance application choices between their importance and ease of implementation
- Continuous Assurance implementation will happen over a range of companies but initially to companies that are highly sensitive to environmental change, have very liquid assets or must for legal reasons show high control in processes
- Financial organisations and corporate financial processes will have early priority but over time most industries will evolve towards real-time control and assurance basically to reduce latency and to improve data/product quality
- Advances in IT must be matched by advances in analytic modelling to bring Continuous Assurance to its full maturity
- The advent of XML, XBRL and other interoperability standards will accelerate Continuous Assurance and will allow for cooperative inter-organisational assurance processes. For example, a company and its banks will have automatic verification (confirmation) procedures for transactions and account balances. These will be established and regulated at the contractual date and follow eventually promulgated database-to-database confirmation standards
- The academic community has led the thinking in Continuous Assurance, and a small industry of software to support continuous audit has emerged. While external auditors have been very supportive of Continuous Assurance development it is the IA community that can invest in systems in loco, which is driving the development of Continuous Assurance
- While many of the Continuous Assurance solutions at large organisations will be ad hoc, it will take the integration of Continuous Assurance facilities in integrated software (ERPs) that will allow some of the benefits to flow to smaller organisations.

**Miklos A. Vasarhelyi**
KPMG Professor of AIS, Department of Accounting, Business Ethics and Information Systems, Rutgers Business School

Professor Vasarhelyi is currently the KPMG Professor of Accounting Information Systems and Director of the Continuous Auditing and Reporting Laboratory (CARLAB) at Rutgers University. He is also the Technology Consultant at the AT&T Laboratories. He has published more than 200 journal articles and 20 books. He is the editor of the Artificial Intelligence in Accounting and Auditing series and academic journals. Professor Vasarhelyi has taught executive programs on electronic commerce to many large international organisations including GE, J&J, Eli Lilly, Baxter, ADL, Volvo, Siemens, Chase Bank, and AT&T. Prof. Vasarhelyi is credited with the original continuous audit application and as the leading researcher in this field.

**Michael Alles**
Associate Professor, Department of Accounting, Business Ethics and Information Systems, Rutgers Business School

Dr. Michael Alles is a professor at the Department of Accounting, Business Ethics and Information Systems at Rutgers Business School. Prior to Rutgers, he taught at the University of Texas at Austin, New York University and Southern Methodist University. His specialties are the design of strategic control systems, continuous auditing, management accounting and corporate governance. He is widely published in all these areas. Dr. Alles holds a PhD from Stanford Business School and a First Class Honors in Economics from the Australian National University. He has served on the executive committee of the Management Accounting Section of the American Accounting Association, was co-chair of the 2004 mid-year Management Accounting Research Symposium and has helped organise numerous other conferences around the world on corporate governance and continuous auditing. He is now the editor of the International Journal of Disclosure & Governance, published by Palgrave Macmillan in London.

**Katie T. Williams**
Senior Manager, Global Services Centre, KPMG LLP

Katie Williams received her PhD in 2009. Her thesis explored the ways in which information security and risk management practices within Australian firms could be improved, enhancing overall effectiveness and efficiency. For the past two and a half years Katie has led the development of the Continuous Auditing and Continuous Monitoring project at KPMG's Global Services Centre. Katie is an Associate Director at KPMG's Perth office in Australia.

## A guide to audit quality

The Institute of
Chartered Accountants
in Australia

## The Institute of Chartered Accountants in Australia

The Institute of Chartered Accountants in Australia (the Institute) is the professional body representing Chartered Accountants in Australia. Our reach extends to more than 62,000 of today's and tomorrow's business leaders, representing more than 50,000 Chartered Accountants and 12,000 of Australia's best accounting graduates who are currently enrolled in our world class Chartered Accountants postgraduate program.

Our members work in diverse roles across commerce and industry, academia, government, and public practice throughout Australia and in 119 countries around the world.

We aim to lead the profession by delivering visionary leadership projects, setting the benchmark for the highest ethical, professional and educational standards, and enhancing and promoting the Chartered Accountant brand. We also represent the interests of members to government, industry, academia and the general public by actively engaging our membership and local and international bodies on public policy, government legislation and regulatory issues.

The Institute can leverage advantages for its members as a founding member of the Global Accounting Alliance (GAA), an international accounting coalition formed by the world's premier accounting bodies. With a membership of around 775,000, the GAA promotes quality professional services, shares information, and collaborates on international accounting issues.

Established in 1928, the Institute is constituted by Royal Charter. For further information about the Institute, visit **charteredaccountants.com.au**

# Foreword

Since the ASX Corporate Governance Council was formed in August 2002, we have been committed to developing and delivering practical guidance to boost corporate governance practices in Australia and to meet global expectations in this area.

A key component of good corporate governance in Australia and internationally is the role and responsibilities of the audit committee. Recognising that ultimate responsibility for the integrity of a company's financial reporting rests with the full board of the company, an audit committee provides an efficient mechanism for focusing on issues relevant to such reporting.

I welcome the initiative by the Institute of Chartered Accountants in Australia to produce *The benefit of audit: A guide to audit quality.* For the first time, there is practical, plain-English guidance available to fuel understanding of and communication on audit quality. This will be a valuable tool for directors and audit committees.

High-quality auditing is integral to capital market confidence. At times, the role of audit can be understated and undervalued. This guide will help ensure Australia remains focused on the benefit of audit.

**Eric Mayne**
Chairman
ASX Corporate Governance Council

# Contents

# Introduction

Given its significance, there have been various attempts to clearly define 'audit quality.' A good example is the following statement from the United Kingdom Financial Reporting Council's Audit Inspections Public Report:

> 'Undertaking a quality audit involves obtaining sufficient and appropriate audit evidence to support the conclusions on which the audit report is based and making objective and appropriate audit judgements… A quality audit [also] involves appropriate and complete reporting by the auditors which enables the Audit Committee and Board to discharge their responsibilities.' (June 2005)

While there can be differing views on the definition of audit quality, it is clear that shareholders, company directors, audit committee members, auditors and regulators all agree that quality external auditing is fundamental to business and capital market confidence.

Australia's auditing profession, along with the current framework of auditing standards, is among the world's best. However, we should be continually challenging ourselves to identify and develop actions that aim to improve auditing practices and outcomes.

To date, there has been little guidance available of which we are aware to help businesses understand the quality of the audit service being provided to them. This lack of information has compounded the concept of the 'audit expectation gap,' which we have seen emerge in the business and investor communities.

The Institute of Chartered Accountants in Australia is committed to addressing this expectation gap by raising awareness of the benefits of audit and by educating the marketplace on the specific drivers of audit quality. A follow-up to this guide will be released in 2010 and include the development of measures of audit quality and examples of external communication strategies for audit practitioners.

We hope this guide will foster better communication, interaction, and understanding between audit committee board members and their external auditor.

**Graham Meyer**
Chief Executive Officer
The Institute of Chartered Accountants in Australia

# Purpose of this guide

The purpose of this guide is to enhance communication between the audit committee and the external auditor. The guide provides assistance to audit committees and other relevant stakeholders to:

- Better understand the role and scope of an external audit
- Engage more effectively with the external auditor
- Consider the drivers of audit quality and the components of each driver.

This guide does not set out compliance requirements or override any existing requirements to which boards and committees may be subject, and it is not intended to deal with better practice of audit committees which is addressed in other publications, such as *Audit Committees: A Guide to Good Practice*[1].

Audit committees using this guide will need to determine when to communicate with the external auditor on the drivers of audit quality. For example, some discussion might occur at the initial planning phases of the external audit, while other communication will relate to the audit findings and conclusions. Audit committees could also consider using this guide during the proposal process to assist with auditor selection.

This guide addresses five drivers of audit quality, drawn from the Financial Reporting Council's (UK) Audit Quality Framework. This framework, the first of its kind, was developed following global consultation.

1. Auditing and Assurance Standards Board, Australian Institute of Company Directors, and the Institute of Internal Auditors in Australia (2008).

# Role of the audit committee

An independent audit committee is a fundamental component of a sound corporate governance structure.

Audit committee charters will typically focus on engagement with the external auditor and the quality of the external audit service. Examples of focus areas in audit committee charters include:

> ‘Review the performance of the external auditor’

> ‘Consider the overall effectiveness and independence of the external auditor’

> ‘Review, at least annually, the scope, results and performance of the external auditor’

> ‘Assess and monitor the performance and effectiveness of the external auditor’

> ‘The committee will progressively evaluate the performance of the external auditor during its term of appointment and the progress of the audit. The committee will ensure that the criteria for evaluation of performance extend to cover the value delivered to shareholders and the audit.’

This guide, and in particular the questions supporting each driver of audit quality, is designed to help audit committees meet the responsibilities of their charters.

# The five drivers of audit quality

1. The culture within an audit firm
2. The skills and personal qualities of audit partners and staff
3. The effectiveness of the audit process
4. Factors outside of the control of auditors
5. The reliability and usefulness of audit reporting.

This guide includes a practical range of questions to accompany this list. These questions are not designed to be comprehensive; rather they are intended to provide a foundation and will need to be tailored to the specific circumstances of each organisation and its auditing requirements.

## 1. The culture within an audit firm

### Points for consideration and discussion with your external auditor

> What are the core values of your auditor?
> Does your auditor's code of conduct include commitments to:
  – Honesty and integrity
  – Professional competence
  – Independence.
> How does your auditor regularly communicate the core values and principles of the code of conduct to staff?
> How does your auditor communicate to its staff about the importance of audit quality?
> How does your auditor assess compliance with independence requirements?
> Does your auditor create an environment where achieving high quality is valued, invested in and rewarded?
> Does your auditor have appraisal systems for partners and staff that promote audit quality?
> Does your auditor take appropriate action for poor ethical behaviour or poor decisions?
> Does your auditor have robust systems for client acceptance and continuation?
> Does your auditor promote and support consultations for exercising professional judgement in challenging circumstances? How?
> Does your auditor monitor audit quality across its firm and/or network? What actions would they take for shortcomings in these activities?
> Has any partner in your audit firm been the subject of regulatory action on the public record during the past year?
> How is your auditor structured to ensure appropriate focus on the quality of its audits? How does it commit to continuous improvement in audit quality?

## 2. The skills and personal qualities of audit partners and staff

### Points for consideration and discussion with your external auditor

> Do the partners and staff of your auditor demonstrate a thorough understanding of your business and the legal framework in which you operate?

> Do the partners and staff show technical competence and a thorough understanding of auditing and accounting standards, and professional and ethical standards? Do they receive regular training on these standards?

> Does your auditor provide you with details of your engagement team including the role and experience of the team and the way in which the team is managed and supervised?

> Where your audit requires specialised industry knowledge, have audit staff received adequate industry training?

> Are the partners or staff involved in relevant industry based groups?

> How do audit staff receive mentoring and on the job training?

> Do the partners and staff show appropriate professional scepticism and address issues identified during the audit in a robust manner?

## 3. The effectiveness of the audit process

### Points for consideration and discussion with your external auditor

> Do you understand what your auditor does and does not do, including how the auditor reviews the various operations of your business?

> Do you understand clearly the roles and responsibilities of each of the following groups: the audit committee, the board of directors, management, and the external auditor?

> Are the audit partner(s) and manager(s) closely involved in the planning of your audit?

> Is the external audit plan discussed at audit committee meetings well before year end?

> Are your reporting deadlines realistic and achievable for the delivery of reliable and relevant information to your auditor to allow a quality audit?

> Does your auditor's methodology, technology and/or tools:
  - Provide a framework and processes to obtain sufficient appropriate audit evidence?
  - Comply with all legal and professional requirements?
  - Require appropriate audit documentation?
  - Require an effective review of audit work?

> How does your auditor use technology to support its audit approach?

> Is sufficient technical support available to the audit team when required?

> How does your auditor review the work of experts, including assessing their terms of reference, competence, capabilities and objectivity?

> How does your auditor gain appropriate assurance on audits of group entities that operate overseas?

> How does your external auditor engage with, and use, the work of your internal auditor?

> Does your auditor have appropriate access to the audit committee, including 'in camera?'

## 4. Factors outside of the control of auditors

> Does your organisation attach appropriate importance to financial reporting and the audit process?

> What qualifications and level of experience do the preparers of financial statements have in your organisation?

> Is the composition of your audit committee sufficiently balanced in skills, experience and industry knowledge to ensure audit quality?

> Does your audit committee engage in a robust and professional manner with issues identified during the audit?

> How does your audit committee assess the quality of financial information provided by management?

> Is there sufficient capacity (nature, mix and size) in your organisation's financial reporting capability to meet your expectations?

> Are your organisation's financial reporting deadlines realistically focused to ensure quality financial reporting and auditing?

> Who in your organisation is responsible for communicating with investors?

> Does the audit committee approve releases to the market?

> What remuneration systems does your organisation have and how do they relate to key accounting judgements? Is there potential for bias and how is that monitored?

## 5. The reliability and usefulness of audit reporting

### Points for consideration and discussion with your external auditor

> Does your auditor communicate with sufficient detail on the scope of the audit and the accompanying report, including the way in which the risk of material misstatement in the financial statements has been addressed?

> Does your auditor report on the key judgements made by management in assessing the application of accounting standards and the auditor's assessment of these judgements?

> Are your auditor's reports written in a clear manner? How could they be improved?

> Does your auditor suggest potential ways of improving financial reporting and internal controls?

> Does your auditor provide the audit committee with a list of unadjusted differences identified during the course of the audit?

> Does your auditor seek feedback from its clients on a formal basis?

# Glossary

| | |
|---|---|
| **Audit committee** | A sub-committee of the governing board of a corporate entity, normally with responsibility for interacting with the external auditor and monitoring the audit process. |
| **Audit opinion** | The auditor's overall conclusion. |
| **Audit report** | The auditor's formal report, normally addressed to the board of directors of a company (or the equivalent for other entities), containing a written expression of the auditor's overall conclusion. |
| **Auditor** | The independent external individual who leads a team responsible for conducting an audit of the annual financial statements of a corporate entity. The auditor is normally responsible for forming and expressing a professional opinion on whether or not the financial statements 'present fairly' (or are a 'true and fair' representation of) the state of affairs of the entity and the results of its operations, for the period being audited. |
| **Auditor independence** | The concept of independence is fundamental to compliance with the principles of integrity and objectivity. Auditors and their staff are required to be independent of their audit clients both in fact and in appearance. |
| **Audit committee charter** | A document that sets out the functions and powers that have been delegated to the audit committee by the board of directors or governing board. |

This one page framework for managing audit quality sustainability has been designed to define the key components needed to manage a sustainable audit process.

It outlines the following 5 phases:

> Client acceptance and retention

> Strategy and policies

> People and tools

> Inspection

> Remediation.

We encourage you to refer to the framework's continuous cycle in your audit practice, and to work through the five phases to ensure that you are managing and maintaining audit quality.

If you have any comments on the framework, please email these to Lee White at lee.white@charteredaccountants.com.au

RE: Response to the Public Company Accounting Oversight Board (PCAOB) – Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards (Ref Docket matter No. 34)

Dear Sir/Madam:

The Institute of Internal Auditors (IIA) appreciates the opportunity to respond to the PCAOB's proposed Concept Release on possible revisions to PCAOB standards related to reports on audited financial statements and related amendments to PCAOB standards. We applaud the PCAOB's effort in soliciting feedback from diversified stakeholders. Our comments are based on a thorough analysis and discussion, utilizing a core team of governance, compliance and audit experts who serve on The IIA's Professional Issues Committee. These individuals consist of Certified Internal Auditors, Certified Public Accountants, Chartered Accountants, audit executives and consultants who have worked in both public accounting and management positions in small, medium and large multinational companies.

The following are our principal comments regarding the Concept Release on possible revisions to PCAOB standards related to reports on audited financial statements and related amendments to PCAOB standards. Detailed responses to the questions posed are summarized in Attachment A.

1. The board should undertake a standard-setting initiative to consider improvements to the auditor's reporting model. The objective of continually improving relevance and usefulness of information provided to users of financial statements together with the auditor's report is worthy and appropriate. This initiative should address the information gap and expectation gaps in auditor reporting identified on surveys and outreach activities.
2. However, the solution should not cause the auditor to assume the responsibilities of management nor the audit committee by determining how much of the entity's competitively sensitive and not-yet public information should be disclosed. The financial statement auditors should remain independent and objective while pursuing assurance responsibilities and not be put in a position to make determinations on the timing of disclosure of certain information before management and the audit committee deem it appropriate.
3. An alternative which should be evaluated by the board and promulgated by others (e.g., SEC), is utilization of the entity's internal audit activity in a role supporting management and the audit committee in carrying out their responsibilities for disclosing to shareholders relevant information.

The IIA is well-equipped to support those PCAOB projects that are related to the core competencies of internal auditing: governance, risk management and control. We value the opportunities to collaborate, share, contribute and learn. We welcome further discussion on any of these recommendations and offer our assistance in the continued development of these projects.

Best Regards,

Richard F. Chambers

Richard F. Chambers, CIA, CGAP, CCSA
President and Chief Executive Officer

**About The Institute of Internal Auditors**
The IIA is the global voice, acknowledged leader, principal educator, and recognized authority of the internal audit profession and maintains the International Standards for the Professional Practice of Internal Auditing (Standards). These principles-based standards are recognized globally and are available in 29 languages. The IIA represents more than 170,000 members across the globe and has 103 institutes in 165 countries that serve members at the local level.

**Attachment A**

**"Concept Release on possible revisions to PCAOB Standards related to reports on audited financial statements"**

Questions 1 through 32:

1. **Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.**

   **a. Should the board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?**

The board should undertake this initiative. The objective of continually improving relevance and usefulness of information provided to users of financial statements together with the auditor's report is worthy and appropriate. This initiative should address the information gap and expectation gaps in auditor reporting identified on surveys and outreach activities.

However, the solution should not cause the auditor to assume the responsibilities of management nor the audit committee by determining how much of the entity's competitively sensitive and not-yet public information should be disclosed. The financial statement auditors should remain independent, and **objective** while pursuing assurance responsibilities and not be put in a position to make determinations on the timing of disclosure of certain information before management and the audit committee deem it appropriate.

An alternative which should be evaluated by the board (and promulgated by others, e.g. SEC) is utilization of the entity's internal audit activity in a role supporting management and the audit committee in carrying out their responsibilities for disclosing relevant information to shareholders. It might also be appropriate to expand the internal audit activities' responsibility for providing assurance on other information contained within financial filings such as MD&A, so long as these expectations do not distract from other internal audit responsibilities. This would occur at the request of the audit committee to support expanded expectations for evaluation of disclosures and also at the request of management and the financial statement auditors, through the audit committee. As described later in our response, the board should consider the implications of more effective use of and higher expectations by the audit committee of the internal audit activity, including consideration of and coordination with financial statement audit needs. The internal audit activity could report to the audit committee on certain matters, in some cases in lieu of the financial statement auditor. These could include a) testing controls (financial reporting, operational), b) assurance provided on MD&A or other specified information (possibly in lieu of the financial statement auditor, c) Information bearing on the independence and objectivity of the internal audit activity, d) Earnings releases (in lieu of financial statement auditor).

**b. <u>In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?</u>**

We agree there is an apparent expectation gap (the difference between what users expect from the financial statement auditor and the audit and the reality of what an audit is); efforts should be taken to reduce or close the gap. There is of course a question of whose responsibility it is.

The gap can be closed by either side moving towards the other, or movement of both. While it is expected that users of financial statements are intelligent, knowledgeable people, who bear personal responsibility to be financially literate, it is reasonable to require the entity, through its audit committee, to more clearly disclose key processes, estimates, judgments, governance, and oversight for financial reporting. With respect to the disclosures of the independent financial statement auditor, we support disclosure of additional details of the nature of an audit, including the auditor‘s ability to detect financial statement fraud, the auditor‘s responsibilities relating to fraud under existing professional standards, and inherent limitations of a financial statement audit. The information should be communicated in plain English, free of technical jargon. This information could be placed as a disclosure in filings; the auditor’s report could reference that information.

It is extremely important that information that is deemed “more relevant and useful” be clearly defined by investors so the audit committee can execute the responsibility of accurately and completely disclosing such relevant and useful information. The audit committee and management should decide what information to disclose in the financial statements and/or related attachments, potentially including information which was disclosed by the auditor to management and the audit committee.

Potential inclusion of subjective information by an auditor to the public is not appropriate. The financial statement auditor role is differentiated from the current typical role of and disclosures by the internal audit activity which, while retaining objectivity, should share subjective judgments with management and the board, and as appropriate, unframed personal views with its constituents. The sharing of such subjective information in an external environment is inappropriate, because the users do not possess the same contextual knowledge, lack the ability to discuss information in a two-way dialogue to gain clarity, and do not know the competency and reliability of the person(s) expressing the judgments.

Lastly, there must be a consideration of costs and benefits related to levels of assurance. It would be reasonable to expect that if additional disclosures were required of the independent auditor, audit fees would surely rise. The board should consider who is paying the costs and who is deriving the benefits; there are many users of financial statements and related information who may seek to influence the board's views on assurance; some of those users may not be concerned with or consider the costs of such assurance.

**c. <u>Should the board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?</u>**

The board should consider whether this expanded role can be filled via an entity's own internal audit activity. Specifically, through direction of expected areas of actions, including information contained within financial presentations, such as (MD&A). While we believe there could be benefit in expanding the auditor's report as noted in our response in "b" above, the independent auditor's role and level of assurance related to information contained in a filing, but outside the financial statements, should be based upon what investors value and require, the source and level of assurance desired should carefully consider costs and benefits of such assurance. Auditors cannot be expected to determine what is important to the wide variety of users, in varying circumstances; therefore, standardization of what is reported by the financial statement auditor is prudent.

The incremental value of added assurance through the auditor's reporting on other information provided by management versus the level of assurance which exists today through the auditor's association with such information should be decided by investors or the audit committees representing investors, based on cost benefit analysis and determination of which elements warrant additional levels of assurance. Today, the auditor is required to read such information, including MD&A, and we recommend the auditor include a paragraph in the auditor's report that the auditor has read [auditor should note the specific areas] and found such information and disclosures to be materially consistent with information observed as part of the audit of the financial statements.

**2. <u>The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."</u>**

**a. <u>Should the auditor's report retain the pass/fail model? If so, why?</u>**

The current model should be retained. Without substantial additional guidance to both auditors and users of the auditor's report, additional information will exhibit subjectivity and create confusion.

**b. <u>If not, why not, and what changes are needed?</u>**

**c. <u>If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.</u>**

If the board believes there is insufficient understanding of the purpose and procedures of an audit, an explanation of an audit, including its purpose, procedures, techniques, and limitations, could be included in the auditor's report. This could be accomplished in a number of ways, including a reference in the auditor's report to a description elsewhere in the document containing the auditor's report. Also, users would benefit from an additional paragraph to the financial statement auditor's report describing their responsibility with respect to other information included in the document with the financial statement filing, their ability to detect financial statement fraud, their responsibilities relating to fraud under existing professional standards, and inherent limitations of an financial statement audit and a statement that the auditor has read [auditor should note the specific areas] and found such information and disclosures to be materially consistent with information the auditor observed as part of the financial statement audit.

**3. <u>Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.</u>**

We agree that the audit committee should have responsibility for ensuring the extent and timing of information disclosed publically. The shareholders have chosen an audit committee to oversee the reporting processes for disclosure of financial and operating results of the entity; they should continue to have the responsibility to see that accurate and complete disclosure of such relevant and useful information is achieved. The audit committee, together with full access to management which it has hired, has the greatest quantity of contemporaneous information, the greatest resources to analyze, validate, and seek clarity on such information and are closest to the investors who desire this information.

**4. <u>Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were</u>**

**made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?**

Changes necessary would be dependent upon the board's ultimate conclusions after considering public response to this exposure draft. The changes which seem evident at this point include reference to the nature of an audit and its limitations, financial statement auditor's ability to detect fraud and responsibilities relating to fraud under existing professional standards, along with a paragraph to describe the auditor's responsibilities for "other" information included with the financial statements.

**5. Should the board consider an AD&A as an alternative for providing additional information in the auditor's report?**

No.

**a. If you support an AD&A as an alternative, provide an explanation as to why.**

We do not support this.

**b. Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?**

We do not support AD&A.

**c. Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?**

**d. If you do not support an AD&A as an alternative, explain why.**

The auditor should retain the role of auditing financial statements and not be in the position where they create or are compelled to provide proprietary entity information. This could put independent auditors in direct contradiction of ethics and independence requirements (one because the auditor is not allowed to disclose confidential information and the other because the auditor should not be the source of information). The AD&A appears overly subjective, would likely confuse rather than inform readers and runs the risk of becoming boilerplate or watered down which would create yet a new and larger expectation gap. Much of the information suggested in the exposure draft (ED) discussion is already required of management in public filings (e.g., risk factors and processes to mitigate risks). If management does not provide appropriate information, the audit committee should require management to fill the void. We acknowledge that the auditor should comment if there is something materially missing or misstated.

If an AD&A was required by the board, how would the auditor know where to start and stop its commentary? What is the basis for including a comment on one item and not another? What rights to share entity information does the auditor have or need to acquire? What liability would the auditor be assuming, as the auditor could disclose information harmful to the entity (competitively or otherwise)? The auditor would likely encounter criticism for either saying too little and saying too much. Such an AD&A would put auditors in the role of formulating public reports and could, over time change the users' view of an auditor's objectivity, particularly if the auditor started to disclose in lieu of management. If all the auditor's views are open to public disclosure, information flows would be impacted. And of course there are cost considerations, both the immediate cost of extra time and effort to create, review and audit the information, but also the risk of litigation to the auditor and related costs would need to be built into ongoing fees. Lastly, haven't there been complaints by some users of public filings that there is too much information?

Of the four alternatives presented, some are good suggestions, while others would be problematic. Specifically:

- Auditor's Discussion and Analysis - We recommend limiting this to auditor's procedures to address the expectations gap of what an audit is and is not. It should not be used to disclose any information that management and its board has determined not to be appropriate for disclosure.
- Required and expanded use of emphasis paragraphs - We support this, with caution, it should be limited to include reference to the nature of an audit and its limitations, along with a paragraph to describe the auditor's responsibility with "other" information included together with the financial statements.
- Auditor assurance on other information outside the financial statements - We recommend limiting this to the procedures which auditors perform in conjunction with forming their opinion on the financial statements, and not expand any further. Requiring auditors to report on additional information would likely not be cost justified; it will likely increase audit fees and add additional complexity that in the end, might not provide improved relevant, useful information to investors.
- Clarification of language in the standard auditor's report - We support clarifying the terminology used to better explain to users the nature and extent of the procedures performed.

**e. <u>Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?</u>**

The auditor should have clear and robust communications with the audit committee on numerous matters; the audit committee is responsible for disclosing appropriate information that may be important to users of financial statements.

6. **What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?**

As stated previously, the auditor should not prepare an AD&A. The items listed could be incorporated into other expanded commentary.

7. **What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?**

Management, together with the audit committee should disclose areas of governance, judgments and estimates as they should know best the facts, risks and evaluations which were considered. As exists today, the auditor is required to read such disclosures, including MD&A; it would make sense to include a paragraph in the auditor’s report that the auditor has read [add specific areas] and found such information and disclosures to be materially consistent with information the auditor learned as part of his or her audit of the financial statements.

8. **Should a standard format be required for an AD&A? Why or why not?**

An AD&A should not be required.

9. **Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?**

Much of the information which the board is suggesting to be included in an AD&A is already required of management in public filings (e.g. risk factors and processes to mitigate risks). The audit committee also acknowledges their agreement, and the financial statement auditor associated with that information is required to comment if there is something materially missing or misstated.

**10. <u>How can boilerplate language be avoided in an AD&A while providing consistency among such reports?</u>**

Boilerplate in AD&A is best avoided by not requiring an AD&A. Given the potentially lengthy disclosures, which are likely to be confusing to users, the substantial risk to the auditor for such disclosures and the cost to entities being audited, it is likely many parties will ultimately influence reporting to a standard or boilerplate language; that is, boilerplate is likely unavoidable within current environment.

**11. <u>What are the potential benefits and shortcomings of implementing an AD&A?</u>**

Many have been mentioned in responses #5 - #10.

**12. <u>What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?</u>**

Because this potential exists and would be difficult to avoid, requiring an AD&A could force management and the auditor to work more closely together on their mutually exclusive and joint presentations, potentially impacting perceptions of auditor objectivity over time.

An AD&A could in many cases improve an entity's disclosures, however in a few cases, over time; it could instill passivity among management, under the presumption that whatever the entity does not cover the auditor will.

**13. <u>Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?</u>**

Reporting requirements are designed to require an entity to disclose important information, based upon what the various and varied users of the financial information require for making prudent investment decisions. Asking the auditor to prioritize which risks are most important requires judgment; akin to "beauty is the eye of the beholder". That is, no one other than a user can determine which areas suit the users' needs. That said, it may be useful for auditors to make greater use of additional paragraphs and draw a user's attention to specific management disclosures. The use of additional paragraphs should occur only in defined, prescribed circumstances, including where management's disclosure is deemed by the auditor to be inadequate.

**14. <u>Should the board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?</u>**

Under certain defined conditions, yes. For example, if the entity is a part of a larger enterprise, then a paragraph should state such. Another example would be if GAAP surrounding an area material to the entity is undefined, evolving or there are significant divergence in practice, those areas should be highlighted by management and the auditor's report should refer to them.

**a. <u>If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.</u>**

In the limited defined circumstances, it would help users focus their attention and provides a view towards what the auditor also considers important in a more defined and less confusing format than an AD&A.

**b. <u>If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.</u>**

N/A

**15. <u>What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?</u>**

In addition to areas already requiring mention (e.g., going concern), the items which would warrant specific auditor mention include the following (in each case, the auditor's report should refer to management's disclosure which would be expected to be adequate unless otherwise noted by the auditor):

1. If the entity is a part of a larger enterprise
2. If GAAP in an area material to the entity is undefined, evolving or there are significant divergences in practice.
3. Areas of significant leverage or exposure (derivatives, off balance sheet commitments, contingencies, etc.) which are not included in the gross figures displayed on the balance sheet.
4. Disclosures by the entity is deemed by the auditor to be inadequate
5. Material, unusual transactions impacting the financial statements.

**16. <u>What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?</u>**

The auditor's report should be limited to a) a few specific defined circumstances and b) reference to management's disclosure which would be deemed adequate unless otherwise noted by the auditor.

**17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?**

Boilerplate is not necessarily a negative. Consistent format may facilitate user review; when the boilerplate form changes, that in itself may be an indication of an area of interest.

**18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?**

Benefits include directing users' focus and require the financial statement auditor to emphasize significant matters. Shortcomings include the risks that a) the auditor is expected to know how each user will evaluate information presented, and each user's purpose in reading the financial information, b) users "assume" other information is not as important, and thus, a new expectation gap could form and litigation could increase if using hindsight about something not initially highlighted which ultimately turned significant.

**19. Should the board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?**

Yes, if investors believe the cost benefit analysis justifies auditor assurance on elements reported by management in addition to the financial statements. However, we believe it is unlikely that the cost justifies the benefits. However, a better and arguably more cost effective alternative might be to consider the use of an entity's internal audit activity to provide assurance to the audit committee or management where they deem appropriate.

> **a. If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why. Subject to the caveat and suggestion above, assurance over other important components of information provided by management is a form of assurance commonly provided by the internal audit activity and a reasonable extension of financial statement auditors, to the extent it is cost justified and can be related to the financial statements and information considered in connection with the audit of the financial statements.**
>
> **b. On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.**

The incremental value of direct assurance through a financial statement auditor's reporting on components of information provided by management versus the level of assurance which exists today through the auditor's association with such information should be decided by investors or the audit committees representing investors, based on cost benefit analysis, considering which components warrant direct assurance by financial statement auditors.

Earnings releases seem to fall in a different category as they are generally not attached to audited financial statements. Requiring financial statement auditor assurance on quarterly, or other periodic releases, would increase costs dramatically, pending analysis of the level of assurance required; this may be an area where use of the entity's internal audit activity in a role supporting the audit committee would be beneficial.

**c. <u>What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?</u>**

See answers "a" and "b" above together with responses to earlier questions about auditors report.

**d. <u>If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?</u>**

**e. <u>Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?</u>**

While we do not believe direct reporting or assurance by the financial statement auditor over MD&A is appropriate, there is a general presumption that knowledge of auditor oversight will encourage an appropriate level of scrutiny by preparers of such information.

**f. <u>Are the requirements in the board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered? The cost of AT 701 form of assurance may exceed the benefits. We suggest a compromise position. As exists today, the auditor are required to read such disclosures, including MD&A, we suggest the auditor include a paragraph in the auditor's report that the auditor has read [add specific areas] and found such information and disclosures to be materially consistent with information the auditor learned as part of the audit of the financial statements. That is, have the auditor's report disclose what is essentially in effect today.</u>**

**g. <u>If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.</u>**

The cost of AT 701 form of assurance may exceed the benefits. We suggest a compromise position. As exists today, the auditor would be required to read such disclosures, including MD&A, and we suggest the auditor include a paragraph in the auditor's report that the auditor has read [add specific areas] and found such information and disclosures to be materially consistent with information the auditor learned as part of the audit of the financial statements. For areas where additional assurance is requested by shareholders, we suggest that management disclose its processes ensuring the reliability of such information and the internal audit activity could provide "assurance" to the audit committee, if deemed materially important.

**20. <u>What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?</u>**

Potential shortcomings include costs outweighing benefits, usurping responsibilities of management, internal audit and audit committee, and creating inconsistencies in use of auditors among reporting registrants.

**21. <u>The concept release presents suggestions on how to clarify the auditor's report in the following areas:</u>**

- **Reasonable assurance**
- **Auditor's responsibility for fraud**
- **Auditor's responsibility for financial statement disclosures**
- **Management's responsibility for the preparation of the financial statements**
- **Auditor's responsibility for information outside the financial statements**
- **Auditor independence**

**a. <u>Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?</u>**

If the board believes user interests are not being served, or an expectation gap is a real issue, a clarification of all of the items is indeed appropriate. To achieve the goals of providing relevant, pertinent, user-friendly information and fuller disclosure, the auditor's report should include reference to a place where the terms are defined and clarifications are more fully explained.

**b. <u>Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.</u>**

As described in "a" above, numerous objectives would be met simultaneously.

**c. <u>What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?</u>**

A general explanation of the audit process would likely aid some readers, from considerations of risk, planning, execution (including some key techniques used), supervision and review of testing through to conclusion.

**d. <u>What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?</u>**

The implications to the scope of the audit, given our view of appropriate changes would be minimal.

**22. <u>What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?</u>**

Benefit is that users would have additional information more readily available. The major shortcoming, if the clarifications are provided within the report itself, is that the report would become very lengthy and other, arguably more crucial information could be lost in the morass.

Questions Related to all Alternatives:

**23. <u>This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?</u>**

If the board believes users interests are not being served, or expectation and information gaps are real issues, as discussed in more detail above, the auditor’s report should include a) additional explanatory information when warranted, b) state the auditor’s responsibility with respect to “other” information included with the financial statements (either as is current practice reading for material inconsistencies or omissions, or a higher level of assurance similar to AT 701, if investors and the audit committee believe such assurance is valuable) and c) reference to clarifications of various terms and concepts used in the auditor’s report and a description of an audit.

**24. <u>Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?</u>**

See answer to 23 above.

**25. <u>What alternatives not mentioned in this concept release should the board consider?</u>**

The board should consider use of the internal audit activity to support management and the audit committee in their responsibilities, as appropriate. Also, audit committee commentary to describe its governance process and as necessary information to supplement management's comments.

**26. <u>Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the board consider in developing such auditor reporting framework and related criteria for each of the alternatives?</u>**

If the board decides to require AD&A or other forms of reporting by the auditor, the board needs to carefully consider how to support the auditors' objectivity, avoid inconsistencies in disclosures provided by management and auditor, avoid inconsistencies among auditors, address potential perceptions of equivocation of the auditor's ultimate opinion, along with the costs and benefits to investors, including the potential for "information overload".

**27. <u>Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the board take to mitigate the risk of this perception?</u>**

Adoption by the board of all suggestions would make for a very lengthy auditor's report, one which likely would exacerbate the expectation and potentially the information gap, if indeed new information is to be provided by the financial statement auditor. As discussed in more detail above, if the board believes users interests are not being served, or expectation and information gaps are real current issues, the auditor's report should include a) additional explanatory information when warranted, b) state the auditor's responsibility with respect to "other" information included with the financial statements (either as is current practice reading for material inconsistencies or omissions, or a higher level of assurance similar to AT 701, if investors and the audit committee believe such assurance is valuable) and c) reference to clarifications of various terms and concepts used in the auditor's report and a description of an audit.

**28. <u>Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?</u>**

As discussed in more detail above, the auditor's report should state the auditor's responsibility with respect to "other" information included with the financial statements (either as is current practice reading for material inconsistencies or omissions, or a higher level of assurance similar to AT 701, if investors and the audit committee believe such assurance is valuable), the auditor‘s ability to detect financial statement fraud, the auditor‘s responsibilities relating to fraud under existing professional standards, and inherent limitations of an financial statement audit and provide a reference to clarifications of various terms and concepts used in the auditor’s report and a description of an audit.

**29. <u>What effect would the various alternatives have on audit quality? What is the basis for your view?</u>**

Audit quality is a key attribute which likely transcends the changes noted and suggested herein. Quality of reporting and financial statement audits could be enhanced through more effective use of and additional expectations by the audit committee of the internal audit activity, including consideration of and coordination with financial statement audit needs.

The AD&A and causing the auditor to be the original source of information could distract from the mission of a quality financial statement audit. The attention of key personnel could be diverted to creating, collecting, and writing their own disclosures. Crafting language which is clear, concise and meets the needs of various constituencies, determining the suitability for public consumption, while balancing audit risk will be time consuming and does not necessarily utilize the same skill set as auditing skills. We suggest keeping the financial statement auditor and management focused on their distinct roles and what they are good at: the auditors ”audit” and management creates disclosures.

**30. <u>Should changes to the auditor's reporting model considered by the board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.</u>**

The system benefits from consistency; there should be good reasons to allow for differences among types of companies, industries or other designations.

**31. <u>This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.</u>**

**a. <u>Are any of these considerations more important than others? If so, which ones and why?</u>**

All these considerations are relevant, which ones are more important are situational or contextually-based; that is, they will vary in importance in each individual circumstance.

**b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?**

As discussed in more detail above, the costs would appear to outweigh the benefits, in part because the benefits have not been well-defined. However, more appropriate cost benefit balance can be gained with more effective use of and higher expectations by the audit committee of the internal audit activity, including consideration of and coordination with financial statement audit needs. We caution that additional financial reporting matters should not distract from the internal audit activities' responsibilities.

Changes to the financial statement auditor's report should be limited to a) additional explanatory information when warranted, b) state the auditor's responsibility with respect to other information included with the financial statements (either as is current practice reading for material inconsistencies or omissions, or a higher level of assurance similar to AT 701, if investors and the audit committee believe such assurance is valuable), the auditor's ability to detect financial statement fraud, the auditor's responsibilities relating to fraud under existing professional standards, and inherent limitations of an financial statement audit, and c) reference to clarifications of various terms and concepts used in the auditor's report and a description of an audit.

**c. Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?**

Please see response to item d below.

**d. What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?**

An entity's governance structure warrants further consideration and potential changes to regulations. These would include:

1. The audit committee - We suggest disclosure of its governance and responsibilities in documents which include management disclosures, interactions between the audit committee and financial statement auditor, and guidance to audit committees as to consideration of additional audit committee disclosures, and possibly of its interactions surrounding key

areas of discussion with management and with auditors, both financial statement auditors and the entity's internal audit activity.

2. Internal Audit - The board should consider the implications more effective use of and higher expectations by the audit committee of the internal audit activity, including consideration of and coordination with financial statement audit needs. The internal audit activity could report to the audit committee on certain matters, in some cases in lieu of the financial statement auditor. These could include a) testing controls (financial reporting, operational), b) assurance provided on MD&A or other specified information (possibly in lieu of the financial statement auditor, c) Information bearing on the independence and objectivity of the internal audit activity, d) Earnings releases (in lieu of financial statement auditor).

**32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?**

In general there will be greater confusion and relationships could be strained or deteriorate when roles and responsibilities are not clear and/or those roles overlap. Many of the proposals herein would exacerbate tensions since the financial statement auditor could end up with responsibilities which overlap those of management and the audit committee, in addition to maintaining its financial statement audit responsibilities. Additionally, the board should ensure whatever actions are taken promote clear, open dialogue with auditors, to avoid degradation of audit quality.

Re: PCAOB Rulemaking Docket #34

Dear Sir:

The Financial Reporting and Small Business Financial and Regulatory Affairs Committees of the Institute of Management Accountants (the Committees) are pleased to provide their views on the Concept Release on "Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements" ("the Release"). Overall, the Committees do not believe that major modifications to the auditor's reporting model, as contemplated in the Release, will improve investors' understanding of the results of the audit in a manner that is actionable and material to their investment decisions. More importantly, we are concerned that the time and effort devoted to fulfilling the proposed new requirements may distract attention from the core deliverables of the audit and divert valuable resources of audit firms and audit committees. We ask the Board to be vigilant in preserving the readiness and capability of these important functions and that any improvements be focused on the core mission of ensuring the highest quality audit possible.

The FRC includes preparers of financial statements for some of the largest companies in the world, representatives from the world's largest accounting firms, valuation experts, accounting consultants, academics and analysts.[1] The FRC reviews and responds to research studies, statements, pronouncements, pending legislation, proposals and other documents issued by domestic and international agencies and organizations. The SBFRC advocates on behalf of small business entities (both public and private) to ensure that financial standards, laws, rules and regulations do not proportionately burden or disadvantage such entities. The advocacy efforts of the SBFRC include reviewing and responding to consultative documents issued by standard-setters, legislators, regulators, and other organizations.

**Overview**

The Committees believe that the overall framework for the auditor reporting model should be consistent with the following principles:

1. The objective on an audit should remain as we know it today. It should provide an opinion on the financial statements, not MD&A or other areas of financial reporting.
2. Auditors should not be disclosing information for which they are not the original source. Rather, they should opine on information provided by management.
3. The auditor's report should provide transparency for investors as to what the audit provides for in terms of assurance (what it is) as well as what it does not address (what it is not).
4. Auditor involvement and attestation should be limited to areas for which they have the appropriate expertise.

---

[1] Additional information about the IMA Financial Reporting Committee can be found at www.imafrc.org

Suite 1
Montvale, NJ 07645
www.imanet.org

We believe that the potential expansion of auditor reporting into some of the areas identified in the Release violates certain of these principles. We further believe that if these ideas are pursued they should not be folded in as part of the audit.

The Concept Release states that its objective is to increase the transparency and relevance of the auditor's reporting model while not compromising audit quality. It is our hope that the Board will be persuaded that audit quality may, in fact, be adversely affected by the diversion of auditor and audit committee focus and attention if certain of the more far-reaching and fundamental changes are carried forward to a final rule. We strongly encourage the Board to refine its objective in a manner that is more consistent with the true purpose of the auditor's opinion: providing investors with comfort that they can rely on the financial information provided in financial reports prepared by management in making investment decisions. In our view, the auditor's opinion regarding the resolution of the annual audit is a matter that requires an unambiguous and unqualified response. This objective is achieved with today's version of the auditor's opinion. If there is additional information that helps investors to better understand the scope of the audit and the meaning and limitations of the opinion, we would support these efforts. Beyond that, we have concerns that expanding the auditor's report to provide other information (e.g., the quality of management's choices of accounting policies) or redefining the purpose of the audit opinion may be potentially harmful to the core audit processes.

It is understandable that in the wake of the recent financial crisis, investors would desire improvements in financial reporting that would provide greater transparency, in a timely manner, into the depth and breadth of the impact of the crisis on the companies and the likely effect on their future results. However, the best source of this information is management not the auditor. If more transparency is desired, we believe that enhanced reporting by management in MD&A is the most appropriate and effective avenue to achieve this objective, as financial statements report on the effect of historical events and conditions at a point in time. Absent a situation that gives rise to the need for a going concern opinion, we do not believe the auditor's report should address these matters. If the Board decides further reporting is necessary, we believe it is important not to diminish the value of the core audit opinion by diffusing its focus and providing potentially non-comparable and subjective views on a wide variety of matters.

The Committees believe that it also is important to maintain a perspective on the relative ability of auditors and audit committees to provide the most relevant information in meeting investor needs for this kind of information. Corporate management has the requisite resources and regular, direct involvement in the core quarterly and annual processes to provide the insights that investors desire about their financial results and the difficult judgments and uncertain estimates contained therein. While the role of the auditors and audit committees is substantive and vital, they have less regular, direct involvement in these processes. Accordingly, they can only provide a level of assurance that is commensurate with the amount of time and resources they expend on these activities as compared to management.

We are concerned that the potential changes to the auditor's reporting model put forward in the Release do not fully contemplate these realities and endeavor to provide enhanced reporting through a less appropriate, and therefore less effective, channel.

We recommend that the Board consider more modest changes to the form and content of the auditor's report that would be limited to clarifying, at a summary level, the role of the auditor in planning and performing the audit in order to provide reasonable assurance about whether the financial statements are free of material misstatement, whether caused by error or fraud.

Separately, the SEC may wish to consider whether certain of the transparency concerns of financial statement users raised in the Release should be addressed through enhancements to Management's Discussion & Analysis or other non-financial statement sections of SEC filings.

Our specific concerns related to the proposals in the Release follow.

**Proposals in the Concept Release**

The Release identifies four principal alternatives for improving the Auditor's Report: (1) institute a new component, Auditor's Discussion and Analysis (AD&A); (2) require use of emphasis paragraphs and expand the circumstances in which they would be used; (3) require auditor assurance in other areas of financial reporting; and (4) clarify certain aspects of the auditor's report. Our views on these alternatives follow.

*Auditor's Discussion and Analysis*

The Release describes AD&A as an adaptable report that the auditor can tailor to a company's specific risks, facts, and circumstances. We expect that a custom report of this type would consume a significant amount of time and effort by the audit engagement team and, given the proposed information content, significant review time for the Audit Committee and management. For a reasonably large company, we could envision that a fulsome discussion of the type contemplated in the Release might fill many pages if it were to thoroughly and appropriately provide context and meaning to the matters discussed.

Moreover, given that the proposed form of the AD&A is likely to include commentary on critical accounting policies, significant estimates, professional judgments and other matters that are the responsibility of management, we would envision extensive consultation would be required with the reporting entity's finance and legal personnel at what is likely to be the very peak of the closing cycle. It also is unclear what framework the audit firms and engagement teams would use to reach conclusions about which alternative accounting treatments/disclosures are preferable to those selected by management and the reasons why this is so, given that preferability often is highly dependent on the issuer's specific facts and circumstances. Even if the PCAOB were to develop supplemental guidance to assist auditors in reaching conclusions on these matters, they are inherently highly judgmental and unlikely to be comparable across companies and industries. Accordingly, we question whether they would accomplish the objectives that the Board has set for them.

In addition to concerns about diverting important resources from the audit process, the Committees believe that a new AD&A requirement will be a costly and time-consuming exercise added to an already heavily burdened closing process. We envision the cost of diverted resources and time from senior management, audit committees and audit partners to be very significant and, in our view, would exceed any potential benefit for investors. However, if the Board decides to move forward with its proposal, we strongly encourage further direct outreach to companies. We believe it would be valuable and instructive for the Board to field test this proposal with a range of different size companies to better understand the nature of what would be reported and the impact that this requirement would have on audit and closing processes. To assure a thorough, frank and specific discussion of the ramifications of this concept, we believe the research should be augmented through site visits at large and small companies, in addition to the roundtable discussions the Board has already scheduled.

*Emphasis Paragraphs*

While the Committees understand that emphasis paragraphs are provided today in certain relatively limited circumstances, we do not support making these a requirement and expanding the contemplated circumstances in which they would be included in audit reports.

The Release indicates that emphasis paragraphs would assist investors in identifying the most significant accounting matters and their location within the financial statements. We believe that this is the purpose of MD&A and that further revisions to the requirements in this area should be addressed through modifications to the SEC's rules.

The Release also contemplates that the matters covered in emphasis paragraphs could include detailed explanations of the procedures performed with respect to relevant areas of the audit. Without a thorough understanding of the audit process, we believe these explanations may confuse, rather than enlighten, the readers of the financial statements. If additional and more detailed explanations of audit procedures are warranted, this would seem more appropriate as a part of the communication between the auditor and the audit committee.

*Auditor Assurance on Other Information Outside the Financial Statements*

As discussed previously, the size and scope of auditor involvement in the financial reporting process is a fraction of the resources employed by the reporting entity, which makes it challenging for the auditor to provide additional assurance related to other information outside of the financial statements beyond what is currently required under AU 550, *Other Information in Documents Containing Audited Financial Statements.* In addition, areas such as MD&A involve relatively more analysis and forward looking disclosure, which are not within the normal scope of the audit. In our view, any changes in this area require services that are beyond the scope of the current audit and, accordingly, would require a more significant amount of audit resources than are allocated today which would significantly increase the cost of the audit. When mandatory auditor attestation for MD&A has been proposed in the past, we have heard investors say that such involvement might actually make this section of the report less useful as the auditor might limit or object to the amount of forward looking, judgmental information included by management.[2]

While the Committees do not support extending the auditor's opinion to cover other areas of filed reports (e.g., MD&A, other 10-K information) or earnings releases, we would agree that there may be some benefit to providing investors and other readers of the financial statements a clearer articulation of the extent of the auditor's responsibility for the other information in filed financial reports. This information is currently provided to the audit committee and could be added to the auditor's external report in a manner that would not be disruptive or otherwise detrimental to the audit and closing processes.

We continue to believe that the involvement of auditors should be limited to reading the non-financial statement information and considering whether it is materially consistent with the audited financial statements. We do not believe that requiring auditor assurance related to MD&A or other information outside the financial statements would be cost-beneficial. However, we would not object if the PCAOB required that a brief description be added to the Auditor's report to assist investors in understanding the nature and extent of auditor involvement in reviewing other areas of the reporting entity's filed information.

*Clarification of the Standard Auditor's Report*

We do not object to the proposed clarifications to the standard auditor's report, if these changes enhance the understanding of investors of the important aspects and limitations of the audit. For example, we understand that it could be helpful to further clarify the auditor's responsibilities with regard to detecting

[2] The Committees observe that auditing standards have, for some time, permitted auditor reporting on MD&A and set requirements for doing so and providing guidance on what the report would say. We note that, to the best of our knowledge, there has been little to no market demand for the service.

fraud. We would suggest that the Board conduct further investor outreach to better understand what aspects of the auditing process are not well understood and, based on the results, focus on ways in which those matters could be clarified.

******

We believe that it is paramount that if the Board decides to move forward to a rule proposal, it conduct field visits with audit committees of large and small public companies to better understand how the proposed changes would affect their ability to meet their responsibilities to investors and other stakeholders. We strongly believe that any proposed changes that interfere with or otherwise adversely affect the work of auditors and audit committees should not be carried forward to a final rule.

We appreciate the opportunity to provide our views on the Concept Release. We would be pleased to answer any questions the Staff of the PCAOB may have on this response.

Sincerely,

Allan Cohen

Public Company Accounting Oversight Board
Attention: Office of the Secretary
1666 K Street, NW
Washington, DC 20006-2803

**Rulemaking Docket No. 34**

Integrys Energy Group, Inc. respectfully submits our comments on the Public Company Accounting Oversight Board's (PCAOB) *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* No. 2011-003 (the "Release"). Integrys Energy Group is a diversified holding company with six wholly owned regulated utility subsidiaries, wholly owned nonregulated subsidiaries, and a 34% equity ownership interest in an electric transmission company operating in Wisconsin, Michigan, Minnesota, and Illinois.

Integrys Energy Group understands that investors and other financial statement users expressed concerns about the information provided in the auditor's report in light of increasing complexity in preparing and auditing financial statements. Integrys Energy Group appreciates investors and other users' desire for more information on issuers' financial statements from the auditor, particularly given the auditor's independent oversight role. However, Integrys Energy Group has a number of concerns about the alternatives proposed in the Release. The four alternatives proposed in the Release are as follows:

1. Auditor's Discussion and Analysis (AD&A),
2. Required and expanded use of emphasis paragraphs,
3. Auditor assurance on other information outside the financial statements, and
4. Clarification of language in the standard auditor's report.

The Release notes that these alternatives are not mutually exclusive and also asks for respondents to offer other alternatives that may provide further insight into entities' financial statements. Integrys Energy Group offers the following comments for your consideration.

**Auditor's Discussion and Analysis (AD&A)**

The Release discusses that the intent of an AD&A section would be a supplemental narrative report for the auditor to provide a view of the audit and financial statements from an auditor's perspective. The AD&A could include audit risks identified, audit procedures and results, and independence. It could also provide a discussion of the auditor's views regarding the financial statements, management judgments and estimates, accounting policies, difficult or contentious issues, and areas where the auditor believes different accounting or disclosures could have been applied.

The auditor is responsible to conclude on the material correctness of the financials taken as a whole, not to guide investors' views about the risks of the entity and its industry. While the auditor possesses an understanding of the entity's financial statements to conclude for purposes of the audit, the financial statements are management's responsibility. If additional disclosures are necessary, they should be provided by Management. The auditor is not involved in the day-to-day decisions or strategic discussions and, therefore, is unlikely to have a complete understanding of the rationale behind all of management's decisions and judgments. Integrys Energy Group believes that the auditor should not provide subjective information to the public about an entity's financial statements, such as the auditor's opinion of which matters are most important to a user, opinions about which areas involve the highest relative degree of uncertainty, or opinions about which judgments and estimates are the most important or subject to debate. The auditors may provide information as to what they believe are areas of significant audit risk, as this analysis is part of the auditor's responsibilities. However, the reasons for considering an audit risk as "significant" may not have a direct correlation to what would be most material to financial statements or useful to investors.

Integrys Energy Group has a number of concerns with auditors providing subjective information through an AD&A. Subjective information provided by the auditor could result in conflicting statements between management's already very detailed disclosures, which may confuse financial statement users. The information provided by the auditor could also be sensitive information that could impact the company's competitive industry position. If an auditor provides subjective information that negatively impacts the decisions of financial statement users and is later proved to be incorrect, the auditor may be subject to the additional risk of litigation. As a result of the auditor's ability to provide subjective information, the relationship between management, audit committee members, and the auditors may become strained, which may impair the transparency and openness in discussions between these groups.

The increased responsibility for auditors to provide information directly to investors may undermine the role of the Audit Committee. Under existing rules, the auditor is responsible for discussing with Audit Committees the items that would be required in the proposed AD&A. It is then the Audit Committee's responsibility to resolve matters of concern raised by the auditor as well as oversee the financial reporting process on behalf of investors. Requiring auditors to communicate directly to investors through AD&A has the potential to stifle the candid interaction between Audit Committees and auditors encouraged by existing rules. Furthermore, the Audit Committee would be unable to act on these accounting issues prior to the release of AD&A to the public.

Finally, this alternative would increase the scope, and thus, the cost of the audit and could negatively impact the timing of compliance with deadlines for filing audited financial statements. More time and effort would be required to resolve and clarify differences between the AD&A and the other information in the financial statements.

**Required and Expanded Use of Emphasis Paragraphs**

The Release states that a second alternative to enhance the auditor's reporting model would be to mandate the use of emphasis paragraphs. In these paragraphs, the auditor would discuss the most significant matters in the financial statements and identify where they are disclosed, information related to significant management judgments and estimates, areas of significant uncertainty, and other areas the auditor believes are important to emphasize.

Current auditing standards require the auditor to report significant management judgments, estimates, and significant risks with the Audit Committee. If this information is required to be provided in the emphasis paragraphs, the language could become too subjective and could lead to the same concerns Integrys Energy Group has outlined in the AD&A alternative above, leading to strained relationships between the company and the auditors. The PCAOB's existing auditing standards already require use of emphasis paragraphs in certain situations and allow auditors to include them when the auditor would like to discuss a significant matter. Integrys Energy Group believes the existing guidance for the use of emphasis paragraphs in the audit report is sufficient.

**Auditor Assurance on Information Outside the Financial Statements**

The Release states that a third alternative to enhance the auditor's reporting model would be for the auditor to provide assurance on information outside the financial statements, such as Management's Discussion and Analysis, earnings releases, and/or non-GAAP financial information. Integrys Energy Group is concerned that mandating an increase in audit procedures over this type of information may not provide added value to financial statement users and could create delays in filing financial statements. This increase in scope of audit procedures would also add significant costs to the audit.

**Clarification of Language in the Standard Auditor's Report**

The fourth alternative discussed in the Release is the clarification of certain terms in the standard auditor's report and the clarification of auditor responsibilities as it relates to detecting fraud, testing financial statement disclosures, and information provided outside the financial statements. This alternative also requests clarification of management's responsibility for the preparation of financial statements.

Integrys Energy Group does not object to auditors providing the factual information proposed by this alternative. If guidance is issued directing auditors to clarify terms and their responsibilities, Integrys Energy Group recommends amending the standard auditor's opinion by providing standardized language to be used in all auditors' reports. If guidance is issued that is left open for auditors to interpret what should be included in the auditor's report, varying language in reports could confuse financial statement users.

**Conclusion**

Integrys Energy Group appreciates the opportunity to comment on the Release. Integrys Energy Group understands the investment community's desire for additional information about entities' financial statements from an independent auditor's perspective. Integrys Energy Group supports the proposal to clarify the language in the standard auditor's report by providing standardized language to be used by all auditors. However, Integrys Energy Group does not support proposals that allow or require an outside party to present subjective information on an entity's financial statements. Instead, Integrys Energy Group believes that additional disclosures should be provided by management.

Integrys Energy Group would be pleased to discuss its comments in further detail and provide any additional information that the PCAOB may find helpful in addressing these important issues.

Sincerely,

Integrys Energy Group, Inc.

Re: PCAOB Rulemaking Docket Matter No. 34.

Intel appreciates the opportunity to respond to the Public Corporation Accounting Oversight Board (PCAOB) on the concept release regarding possible revisions to PCAOB's standards related to Reports on Audited Financial Statements. We support the PCAOB's objective of increasing the transparency and relevance of the auditor's reporting model to financial statement users. We observe that the PCAOB has received numerous recommendations to help achieve that goal, without compromising audit quality. We are particularly interested in the recommendations set forth by the Center for Audit Quality (CAQ) in their letter dated June 28, 2011 and Financial Executives International's Committee on Corporate Reporting (CCR) in their letter dated September 30, 2011.

We agree with the overarching principles set forth in the CAQ and CCR letters. We firmly believe that any standard-setting initiative should not change the responsibilities of management, the audit committee or the auditors. It is for that reason that we do not support the Auditor's Discussion and Analysis (AD&A) presented in the Concept Release. With respect to auditor attestation related to a company's Management Discussion and Analysis (MD&A), we believe that MD&A requires significant judgment and understanding of our business to produce forward looking business insights. We believe it would be very difficult for the auditor to audit such statements and provide incremental value to financial statement users.

Unlike the CAQ and CCR letters, we believe that the auditor's report and quality of the financial statements could be improved by moving the critical accounting estimates disclosure from MD&A to the notes of the financial statements. Due to the importance of the areas identified as critical accounting estimates to our financial statements, auditors typically spend a significant amount of effort on those areas as part of their audit of the financial statements. Consistent with the auditor's professional responsibilities related to other information containing audited financial statements, auditors review the critical accounting estimate disclosure and provide comments based on their understanding of the areas from the audit as well as the consistency of the disclosures with those included in the financial statements. Auditors also discuss critical accounting estimates with the Audit Committee. While we recognize that auditor's current responsibilities do not require the same level of attention on the critical accounting estimates disclosure as would be required in an audit, given the emphasis in these areas in the audit, we believe incorporating the disclosure into the financial statements would be a cost-effective approach and would eliminate the need for a separate auditor's report. We recognize that this alternative would require action by the Securities and Exchange Commission or the Financial Accounting Standards Board.

Thank you for your consideration of our views. We would be happy to answer any questions that you might have and to assist you in the further development of the Concept Release. If you have any questions, please contact me at (971) 215-6270.

Sincerely,

James Campbell

Vice President, Corporate Controller

INVACARE

RECEIVED
SEP 27 2011

September 8, 2011

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington, DC 20006-2803

Dear Sir/Madam:

The Public Company Accounting Oversight Board (PCAOB) is seeking comment on a concept release exploring possible changes to the form and content of the auditor's report on financial statements.

As a general principle, we believe that auditors should not provide information about a company's financial statements directly to investors, because doing so could cause confusion if the information "competes" with what management says. It is the company's responsibility to prepare the financial statements in accordance with GAAP to effectively communicate a company's financial results to investors. An auditor's communication about elements of the company's financial statements would confuse the auditor's role with that of management's.

As such, we are concerned with the potential approach outlined in the concept release associated with an Auditor's Discussion and Analysis (AD&A). In addition to providing competing information, we are concerned about the possible chilling effect that an AD&A might have on an auditor's communications with management and the audit committee. As the PCAOB points out, discussing potentially sensitive matters in an AD&A could create tension, stifle communication and hinder audit quality. We believe that an AD&A will challenge the role/independence of the auditor as this tension may ultimately force companies to align their disclosures with those of the auditors in order to minimize any potential confusion.

We are also concerned with the topics proposed to be included within an AD&A, such as those topics that are included in an auditor's communication with the audit committee. Typically, auditor's communications are prepared with the expectation of a dialogue with the audit committee in which additional context and perspectives will be communicated. We are also concerned about whether readers would have the appropriate context for the information without the benefit of the dialogue that takes place between the auditor and the audit committee. The PCAOB has long recognized the importance of that dialogue, but readers would not be privy to it.

Finally, we believe that a discussion of alternative accounting principles or disclosures in an AD&A presentation would be ill-advised because it could undermine the company's financial statement presentation and disclosures, and potentially confuse readers about the auditor's pass-fail opinion.

Re: *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements*; PCAOB Rulemaking Docket Matter No. 34

Dear Office of the Secretary:

The Investment Company Institute[1] appreciates the opportunity to respond to the Public Company Accounting Oversight Board's (PCAOB or the Board) *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* (the Concept Release). The Concept Release describes four alternatives intended to enhance the information conveyed by auditors to investors in connection with the audit of financial statements. The alternatives under consideration are: 1) a supplement to the auditor's report in which the auditor would provide additional information about the audit and the company's financial statements (Auditor's Discussion and Analysis or AD&A); 2) required and expanded use of emphasis paragraphs in the auditor's report; 3) auditor reporting on information outside the financial statements (*e.g.* MD&A, earnings releases); and 4) clarification of certain concepts included in the auditor's report (*e.g.*, reasonable assurance, duty to detect fraud). Our comments below are from the perspective of SEC registered investment companies as issuers of audited financial statements.

We believe the first three alternatives described in the Concept Release would provide little, if any benefit to investors in SEC registered investment companies. We therefore recommend that the Board exclude audits of such companies from the scope of any rule-making that would implement these alternatives. We support the fourth alternative – clarification of concepts included in the auditor's report – and recommend that, for audits of SEC registered investment companies, the clarification describe the auditor's consideration of the fund's internal control over financial reporting, including controls relating to security valuation, for purposes of

[1] The Investment Company Institute is the national association of U.S. investment companies, including mutual funds, closed-end funds, exchange-traded funds (ETFs), and unit investment trusts (UITs). ICI seeks to encourage adherence to high ethical standards, promote public understanding, and otherwise advance the interests of funds, their shareholders, directors, and advisers. Members of ICI manage total assets of $12.9 trillion and serve over 90 million shareholders.

designing audit procedures to be performed and expressing an opinion on the financial statements. We elaborate on our recommendations below.

*SEC Registered Investment Companies*

SEC registered investment companies pool investor funds in order to provide shareholders with professional investment management. Typically an investment company sells its capital shares to the public and invests the proceeds entirely in securities consistent with its stated investment objectives and policies.

SEC registered investment companies typically have no employees. Instead, their operations are conducted by various affiliated organizations and independent contractors, such as an investment adviser, administrator, underwriter, custodian, and transfer agent. As is the case for other types of companies, fund directors have oversight responsibility for the management of the fund's business affairs. Overlaying state law duties is the fundamental concept of the Investment Company Act of 1940 (1940 Act) that independent directors serve as watchdogs for the shareholders' interests and provide a check on the adviser and other persons closely affiliated with the fund. The 1940 Act requires that a majority of the fund's board of directors be persons who are entirely independent of the fund's investment adviser and principal underwriter.

The 1940 Act subjects publicly-offered funds to a comprehensive framework of substantive SEC regulation that goes far beyond the other federal securities laws. For example, the 1940 Act contains specific prohibitions against certain transactions between a fund and its investment adviser, underwriter, or other affiliated persons. These provisions are designed to regulate strictly the potential for affiliates to profit from the operations of the fund. In addition, the 1940 Act requires all funds to safeguard their assets by placing them in the hands of a custodian and by providing fidelity bonding of fund officers and others who may access the fund's securities.

SEC registered investment companies prepare their financial statements under the industry-specific reporting model described in FASB ASC 946. The overall objective of investment company financial statements is to present the investment portfolio, results of operations, changes in net assets, and financial highlights from investment activities. SEC registered investment company financial statements must also comply with Article 6 of Regulation S-X.

*Audits of SEC Registered Investment Company Financial Statements*

SEC registered investment company financial statements are inherently less complex than operating company financial statements due to the limited nature of the fund's operations (*i.e.*, issuing shares and investing the proceeds in a portfolio of investment securities). Fund financial statements entail fewer estimates and judgments than operating company financial statements. For example, SEC registered investment companies typically have no employees, employee pension plans, or post employment benefit plans. SEC registered funds typically have no intangibles, goodwill, loan loss reserves, or discontinued operations. Further, management of SEC registered investment companies has fewer choices in the application of accounting policies. For example, all securities are recognized at fair value with the change in fair value reflected in earnings (*i.e.*, no securities are classified as available for sale or held to maturity).

Finally, SEC registered investment companies typically have no items that give rise to other comprehensive income, and they generally are not required to provide a statement of cash flows.[2]

The limited nature of SEC registered investment company operations results in financial statement audits that are less complex than audits of operating company financial statements. For the reasons described above, we believe audits of SEC registered investment companies entail fewer judgments or close calls by auditors. Accordingly, we believe both an AD&A and an emphasis of matter paragraph would provide little, if any benefit to investors in SEC registered funds. In addition, given that investment company financial statements are less complex than operating companies, we are concerned that any requirement to provide an AD&A or emphasis of matter paragraph would quickly evolve into standard language, lengthening auditor reports without providing meaningful information to investors.

We note that the PCAOB has previously recognized that audits of investment companies are less complex than audits of operating companies. The Board and the FASB are funded through accounting support fees paid by public companies based on their market capitalization. Investment companies pay accounting support fees at a rate equal to 10% of the rate paid by operating companies. When adopting the 10% fee rate structure applicable to investment companies the PCAOB stated, "In recognition of the structure of investment companies and the relatively less-complex nature of investment company audits (as compared to operating company audits), investment companies would be assessed at a lower rate."[3]

*Auditor Reporting on Information outside the Financial Statements*

The Concept Release requests comment on requiring auditors to provide assurance on information outside the financial statements, such as MD&A, earnings releases, or non-GAAP information. SEC registered investment companies are exempt from the requirement to provide an MD&A (Item 303 of Regulation S-K) in their shareholder reports and other filings. Also, SEC registered funds do not issue earnings releases and they do not provide non-GAAP information (*e.g.*, earnings from continuing operations).

Open-end investment companies are required to provide a Management's Discussion of Fund Performance (MDFP) in their annual shareholder report.[4] MDFP requires 1) a discussion of the factors that materially affected fund performance, including relevant market conditions and investment strategies; 2) a line graph illustrating the change in value of an investment in the fund over a 10-year period; and 3) average annual total return over 1, 5, and 10 year periods. We are not aware of any concerns by investors that information provided in MDFP is inaccurate or incomplete. We see little benefit associated with auditor assurance on MDFP.

*Clarification of Concepts Included in the Auditor's Opinion*

The final potential enhancement to the auditor reporting model included in the Concept Release would involve clarifying concepts in the existing standard auditor's report. Such

---

[2] *See* FASB ASC 230-10-15-4.

[3] *See* PCAOB Release No. 2003-003 (April 18, 2003).

[4] *See* Item 27(b)(7) of SEC Form N-1A. Money market funds are exempt from the requirement to provide MDFP.

enhancements could explain, for example, the meaning of "reasonable assurance," "material misstatement," or describe the auditor's responsibility to detect fraud. We believe such enhancements would provide investors with a better understanding of the audit of the financial statements and the auditor's responsibilities. We recommend that the Board consider an additional enhancement specific to investment companies not contemplated by the Concept Release as described below.

We believe the key audit risks for SEC registered investment companies relate to the existence and valuation of the investment portfolio. The auditor's opinion for a SEC registered investment company is unique in that it must state specifically that securities have been confirmed or physically examined to substantiate their existence.[5] The audit opinion, however, does not directly address the auditor's work with respect to confirming the value of securities at period end, or the auditor's consideration of internal controls relating to security valuation for purposes of planning the audit procedures to be performed.[6]

We believe SEC registered investment companies have well developed internal controls relating to valuation of their investment portfolios and that auditors perform extensive testing of these controls as part of the financial statement audit. We recommend that the Board consider, as part of the contemplated enhancements to the audit opinion, a more fulsome description of the auditor's work pertaining to evaluation of the internal controls for purposes of planning the audit procedures to be performed.[7] For example, the enhancements could require the opinion to indicate that the auditor considered the fund's internal control over financial reporting, including controls relating to valuation of investment securities, as a basis for designing its auditing procedures for the purpose of expressing an opinion on the financial statements.

---

[5] *See* Section 30(g) of the 1940 Act and SEC Codification of Financial Reporting Policies, section 404.03a.

[6] SEC registered investment companies are exempt from the audit of internal controls over financial reporting required by Section 404 of the Sarbanes-Oxley Act of 2002.

[7] AU Section 314 requires the auditor to obtain a sufficient understanding of the entity and its environment, including its internal control, to assess the risks of material misstatement of the financial statements whether due to error or fraud, and to design the nature, timing, and extent of further audit procedures.

If the Board pursues rule-making in this area, it should ensure that the benefits to fund investors exceed the related costs that will be incurred through increased audit fees. Any increase in fees billed to open-end funds will increase fund expenses and diminish fund returns. Finally, any rule-making should recognize that an AD&A or emphasis of matter paragraph may not be appropriate for all types of issuers in all instances. Please contact the undersigned at 202/326-5851 if you have any questions on our comments.

Sincerely,

/s/ Gregory M. Smith

Re: PCAOB Rulemaking Docket Matter No. 34

Ladies & Gentlemen:

Jacobs Engineering Group Inc. ("Jacobs", "we" or "our") is one of the largest technical professional services firms in the United States. With fiscal 2010 revenues of $10 billion, our business focuses exclusively on providing a broad range of technical, professional, and construction services to a large number of industrial, commercial, and governmental clients around the world. Not only are our financial statements used by our shareholders and potential investors, but by our employees, clients, potential clients, bankers, sureties, vendors, suppliers, and other business partners as well. Accordingly, we have a tremendous interest in ensuring that the financial information we provide our stakeholders is accurate and fairly reflects the financial condition, results of operations, and cash flows of our company.

We therefore appreciate the opportunity to respond to Concept Release No. 2011-003 – *Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* (the "Release") and hope that the PCAOB (the "Board") considers our comments in its deliberations.

**Summary**

Although we agree that there are certain practical enhancements that can be made to the auditor's report which the readers of our financial statements may find helpful in understanding better our auditor's scope of work and level of involvement with our financial statements, we believe that many of the alternatives suggested in the Release are unnecessary, impractical, and will not improve the readers' understanding of our financial condition, results of operations or cash flows.

Specifically, we believe that many of the alternatives suggested in the Release:

- Risk misrepresenting to the readers of our financial statements the responsibilities of companies and their auditors with respect to information contained in annual reports that include audited financial statements;
- Will not enhance the users' understanding of our financial statements; and
- Will increase significantly both the internal and external costs of annual audits, particularly in the earlier years after the Release is adopted as auditors struggle to understand the scope of their new responsibilities.

**The Need to Change the Auditor's Reporting Model**

As an issuer, we spend a considerable amount of time and resources responding to questions about our financial statements and the other financial information we file with the U.S. Securities and Exchange Commission. For as far back we can recall, none of the questions received have ever involved our auditor or their insights or perspectives as to the quality of our earnings, alternative accounting treatments for significant transactions, inherent risks in preparing financial statements, or "close calls" (a term that the Board does not define in the Release). Accordingly, we question whether there is a genuine need to change the auditor's reporting model so drastically as to include such things as an "Auditor's Discussion and Analysis" ("ADA") or expand the use of explanatory paragraphs in the auditor's opinion.

Undoubtedly, the Board has spent a lot of time conducting its outreach efforts. However, we feel it is incumbent upon the Board to challenge those outreach participants who are in favor of, for example, an ADA to explain what benefits they would derive from the information an ADA would provide.

"Disclosure overload", whether by an issuer or its auditors, is a real problem for companies such as Jacobs who continue to weather very challenging economic times and who must evaluate the cost of ***all*** new initiatives, including mandatory changes to disclosure requirements, against the benefits any such initiative would provide. The more such proposed changes are justified by loose references to achieving additional "transparency" or to provide additional information that "might be useful to investors", the more concerned we become that regulators may be overreacting to minority elements of the investing community, or are being victimized themselves by investor groups who subscribe to the "more is better" doctrine without pinpointing specific deficiencies within the existing reporting framework.

**The Role of Issuers and Auditors in Disseminating Financial Information**

We do not believe as a matter of principal that auditors should be the original source of information about an entity, its business or its financial condition and results of operations.

A company's financial statements are the result of applying uniform principles of accounting to thousands (or millions) of individual transactions. And although the majority of such transactions are relatively homogeneous in nature, other transactions occur so infrequently or, by their nature, are complex and therefore require management judgment in order to properly value and present them, together with their effects, in a complete set of financial statements. It is the job of the company and its management to ensure that its method of accounting for *all* transactions comply with applicable accounting rules on a consistent basis and fairly reflect the underlying economics of the various transactions.

It is the job of the company's auditor to test the results of the company's application of accounting principles to its transactions, and to challenge, with an attitude of professional skepticism, the assumptions and judgments made by company management. In certain instances where the auditor determines in his professional judgment that it is necessary or otherwise advisable, the auditor independently corroborates various aspects of selected transactions and/or the values assigned to them.

In the end:

- The issuer publishes a set of financial statements it believes fairly presents its financial condition and results of operations in accordance with GAAP. And to provide further assurance that its representations are genuine, the issuer's CEO and CFO certify the fairness, in all material respects, of the company's financial statement; and
- The entity's auditor issues a report on the entity's financial statements indicating whether or not, in the auditor's professional opinion, the financial statements fairly present, in all material respects, the company's financial condition, results of operations, and cash flows.

It is our experience that the above reports satisfy our shareholders' and other stakeholders' needs relating to our financial statements.

An ADA presents a tremendous risk that the auditor will disclose financial information about a company that will not have been disclosed previously by the company. We see potential for this situation to occur within the ADA if the auditor is required to discuss and describe:

- The critical estimates made and assumptions applied in preparing the financial statements;
- Alternative accounting treatments of transactions; and
- Financial statement issues that had a potential material impact to the financial statements but was adjusted or corrected prior to the end of the period.

We also see the adjacent risk that the auditor may feel compelled to disclose information that is confidential or which may put us at a competitive disadvantage. There is also the risk that the users of our financial statements will place undue weight on the matters discussed and described by the auditor – take such information out of context - and fail to appreciate the fact that the financial statements fairly present the entity's financial condition and results of operations, taken as a whole.

Accordingly, we believe an ADA will blur the line of responsibilities between issuers and their auditors. We understand that the concept behind an ADA is rooted in the notion that there would be some benefit by sharing with the users of our financial statements much of the information that our auditor discusses with and discloses to our Audit Committee. However, what will be lost in an ADA is the interactive communication that occurs between our auditor and our Audit Committee. That communication process is iterative and takes place throughout the fiscal period being audited. A simple "report" could not capture nor fairly present the substance of the auditor / audit committee communications.

We found it particularly concerning that the Board cites as a possible benefit of an ADA that, "An AD&A could give the auditor greater leverage to effect change and enhance management disclosure in the financial statements, thus increasing transparency to investors" (page 13 of the Release).

At best, this statement demonstrates a fundamental lack of understanding of the relationship we have with our auditor. If our auditor believes that our financial statements or a particular disclosure can be improved, all they need to do is discuss the matter with us. And any suggestion that the management of Jacobs or our Audit Committee would be more receptive to listening to our auditor's perspectives regarding the proper application of GAAP simply because of what the auditor may write in his ADA is erroneous.

**The Users' Understanding of Our Financial Statements Will Not be Enhanced**

We do not see either an ADA or the mandatory use of emphasis paragraphs in the auditor's opinion as significantly enhancing the understanding of our financial statements by users.

The purpose of an audit is to support the auditor's opinion. The specific procedures performed by the auditor are selected based on professional judgment and the auditor's assessment of risk. The auditor may apply statistical sampling techniques to certain categories of transactions and, as we understand, add elements of unpredictability to their procedures by alternating tests, changing scope, or varying testing locations from one year to the next (again, based on auditor judgment).

We do not believe our shareholders in general have the technical expertise to extract meaningful information about the reliability of our financial statements from reading an ADA. Similarly, we believe that an explanatory paragraph embedded in an audit opinion that otherwise expresses an unqualified opinion on the fairness of the related financial statements will be very confusing to our shareholders.

By way of illustration, consider the accounting for asset retirement obligations ("AROs") as prescribed at ASC 410-20. Consider specifically the example the FASB provides at ASC 410-20-55-37. In this example, an entity constructs and places into service an off-shore oil platform that it is legally required to dismantle and remove after ten years. The fair value of the obligation to retire the asset at the end of the ten year period is estimated on the date the platform is placed into service using a present value technique that depends on a number of assumptions including labor costs; allocable overhead costs; the profit margins a contractor would typically demand for removing oil platforms; risk premiums; and rates of inflation.

For ten years, the entity diligently monitors the accuracy of its assumptions - adjusting them as necessary - to ensure that the ARO is fairly presented in its financial statements. And for those ten years, the entity's auditor tests the assumptions used by the entity to value the ARO as part of the work it determined was necessary to be able to opine on the fairness of the entity's financial statements taken as a whole.

Undoubtedly, during the ten years the platform was in operation, the auditor had numerous conversations with management of the entity as well as the entity's audit committee about the ARO and the manner by which it was being estimated. Assuming that for each of those ten years the auditor issued unqualified opinions on the entity's financial statements, one wonders what information the auditor could possibly provide in an ADA or in an explanatory paragraph to his opinion that would enhance or expand the user's understanding of the financial condition, results of operations or cash flows of the entity. The fact is that the entity's GAAP disclosures during those ten years combined with the auditor's standard report on the entity's financial statements is all the information most users need to properly assess the entity's financial condition and results of operations.

We believe ADAs will likely evolve to be long, tedious documents containing boilerplate language that will never provide meaningful insights to shareholders or other users of our financial statements. And throughout such evolutionary journey, issuers will incur costs that are purely additive without enhancing or providing decision-useful information to the users of our financial statements. We also believe that explanatory paragraphs will not provide meaningful information to the users of our financial statements who will very likely misinterpret whatever nuance the auditor is attempting to convey. To the extent such paragraphs are used to explain in more detail the audit procedures employed over certain areas of the audit, such information will be lost among our shareholders outside of the context of the purpose of an audit, which is to express an opinion as to the fairness of the financial statements *taken as a whole*.

**Increased Cost of Audits**

We believe that many of the changes to the auditor's reporting model proposed in the Release will result in increased audit effort, resulting in higher costs to issuers. These costs will manifest themselves in higher fees to our outside auditor as well as increased internal costs as we coordinate disclosures with our auditor. As mentioned above, we continue to weather very challenging economic times and are very concerned that the changes described in the Release will increase the cost of audits in the future.

**Practical Changes to the Reporting Model**

Although not in favor of an ADA or the mandatory use of explanatory paragraphs, we believe the following are changes to the standard auditor's report are worthy of consideration:

- Disclosing the auditor's responsibilities to ensure that the financial statements are not materially misstated, regardless of whether the misstatement is due to error or fraud;
- Disclosing the auditor's responsibilities for information contained in the filing but residing outside the financial statements; and,
- Discussing the necessity of using professional judgment in (i) assessing risk; (ii) determining the extent and level of testing conducted; and (iii) the extent of reliance on the issuer's system of internal control.

In addition, we believe the Board might consider expanding the report of the Audit Committee to include a description of those areas of audit significance that was communicated to them by their auditor. This method of disclosure will preserve the integrity of the relationship between audit committees and their auditors while reinforcing the concept that material disclosures about an entity's business, financial condition and results of operations should rest with the issuer and its audit committee.

**Conclusions**

Although modest changes to the auditor's standard report (as described above) will increase a reader's grasp of the audit process, we believe that requiring the issuance of ADAs or the use of explanatory paragraphs will not enhance or improve the user's understanding of that process. In fact, we believe such changes will confuse users about the relationship between the issuer and the auditor and will blur the lines of responsibilities between the parties. The preparation of an ADA in particular has the potential of significantly increasing the costs of an audit as both the auditor and the issuer would have to work together to ensure that statements made in the ADA are properly supported and do not divulge confidential information.

Lastly, we encourage the Board to consider strong safe harbor provisions in the any final rule that includes the requirement for either an ADA or explanatory paragraphs in audit provisions that will protect issuers and auditors from shareholder litigation.

**PCAOB Rulemaking Docket Matter No. 034**
***Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards***

Dear Mr. Secretary:

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB or the Board) Release No. 2011-003, "Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards" (Concept Release).

The Board has requested public comment on its Concept Release that discusses several alternatives for changing the auditor's reporting model in response to concerns from investors and other financial statement users. The objective of these alternatives is to increase the transparency of the auditor's reporting model and its relevance to financial statement users. Such alternatives include (1) a supplement to the auditor's report in which the auditor would be required to provide additional information about the audit and the company's financial statements, (2) required and expanded use of emphasis paragraphs in the auditor's report, (3) auditor assurance on other information presented outside the financial statements, and (4) clarification of certain language in the auditor's report. In addition, the Board requested the consideration of other alternatives not specifically presented within the Concept Release.

## Overview

We support the Board's objectives reflected in the Concept Release to improve the auditor's reporting model and increase its relevance to financial statement users, and we encourage the Board to undertake a standard-setting initiative to consider improvements to the auditor's reporting model that both serve the interests of investors and provide benefits that outweigh

KPMG

their costs. The June 28, 2011 Center for Audit Quality (CAQ) letter to the Board[1], described several overarching principles for consideration when developing possible areas for further evaluation. These principles, with which we agree, are as follows:

- Auditors should not be an original source of disclosure about the entity; management's responsibility should be preserved in this regard. A fundamental shift from the auditor attesting to information prepared by management to the auditor providing original information about the company could result in unintended consequences that are not in the best interest of investors.

- Any changes to the auditor's reporting model need to enhance, or at least maintain, audit quality.

- Any changes to the auditor's reporting model should narrow, or at least not expand, the expectation gap.

- Any changes to the auditor's reporting model should add value and not lead to investor misunderstanding. Specifically, any revisions should not require investors to sort through "dueling information" provided by management, the audit committee, and the independent auditors.

- Auditor reporting should focus on the objective rather than the subjective. Financial reporting matters assessed by the auditor can be highly subjective; however it is important that auditor communications provide objective information about these matters.

In accordance with those principles, we believe the existing relationship between the auditor, audit committee and management is appropriate and should be retained, and that management should continue to be the original source of information about the company's financial position, results of operations and cash flows and related disclosure. Additionally, as further articulated below, we believe that the audit committee is in the best position to provide oversight of the auditor's risk assessment and audit response relative to the most significant matters affecting the financial statements and the audit. While the performance of audit procedures enables an independent auditor to attest to the fair presentation of an entity's financial statements, management who is tasked with supervising the entity's daily operations is in a superior position to provide enhanced disclosures of an entity's business or operations and is responsible for such information. The independent auditor is best positioned to add

[1] On June 28, 2011 the Center for Audit Quality provided the Board with a partial response to the Concept Release through the submission of ideas that were discussed and shared with the PCAOB staff on June 9, 2011, as part of the Board's outreach efforts. The letter is available at http://www.thecaq.org/newsroom/pdfs/CAQ_June28Letter_PCAOBRulemakingDocketMatterNo.34.pdf

KPMG

value to investors by providing assurance about the completeness and reliability of the information provided by management, and such assurance would provide a basis for increased confidence in the information.

**Suggested Enhancements to the Auditor's Reporting Model**

During the Board's outreach efforts to assess whether changes to the auditor's reporting model may be necessary, investors identified certain information they would recommend including in the auditor's report. Such information included (1) communication of areas with the most significant financial statement and audit risk and the audit work performed in those areas, (2) discussion of significant estimates and judgments made by management, the auditor's assessment of their accuracy and how the auditor arrived at that assessment, and (3) communication of results of sensitivity analyses in significant areas of judgment.

Current SEC rules and regulations require disclosures that substantially overlap with many of the items investors recommended to include in the auditor's report. For example, with respect to material estimates or assumptions with significant levels of subjectivity and judgment (e.g., Critical Accounting Estimates), management is directed to provide within management's discussion and analysis of financial condition and results of operations (MD&A) greater insight into the quality and variability of information regarding financial condition and operating performance and should include, to the extent material, such factors as how management arrived at the estimate, how accurate the estimate or assumption has been in the past, how much the estimate or assumption has changed in the past, and whether the estimate or assumption is reasonably likely to change in the future. Furthermore, the disclosures require analysis of the Critical Accounting Estimate's sensitivity to change, based on other outcomes that are reasonably likely to occur and could have a material impact[2]. Because these significant estimates and assumptions are typically in those areas with the most significant financial statement and audit risk, we believe that these disclosures in MD&A are designed to address the majority of the information requested by investors.

Given that there is such a significant overlap between investor requests for additional information relative to the most significant financial statement and audit risk and the incremental disclosures required within this portion of MD&A compared to what is required by GAAP, we believe that the most effective response to these requests is through a limited expansion of the auditor's role to provide assurance on a Critical Accounting Estimates portion of MD&A, in the form of an attestation examination report on such information.

---

[2] Refer to Section 501.14 of Financial Reporting Codification, *Critical Accounting Estimates*, for a description of the required MD&A disclosure requirements for critical accounting estimates.

Auditor assurance potentially could serve as a means to improve the quality of these disclosures, increase compliance with the SEC staff's stated intent of the disclosures, and provide a basis for increased confidence in the disclosures. Accordingly, we support a limited expansion of the auditor's role to provide examination-level assurance on a Critical Accounting Estimates portion of MD&A. We discuss this preferred alternative further in the section "Auditor Assurance on Other Information Presented Outside of the Financial Statements" below.

We support the clarifications to the standard auditor's report described in the Concept Release and continue to support the retention of the pass/fail auditor's opinion on the financial statements. We believe that users of our reports understand and value the auditor's opinion, a clear and unambiguous statement as to whether the auditor believes the financial statements are presented fairly, in all material respects, in accordance with the identified accounting framework. The retention of the current pass/fail auditor's opinion on the financial statements serves as a focal point from which enhanced auditor communications are driven.

We believe we could implement some form of the alternative that includes the required and expanded use of emphasis paragraphs in the auditor's report. New standards and implementation guidance will be necessary, however, to implement this alternative and to drive consistency among auditors relative to both the population of matters to emphasize and the informational content of these communications. While we would support an approach based on the use of emphasis of matter paragraphs, we believe that an examination-level assurance of a Critical Accounting Estimates portion of MD&A is a more effective response to investor and other users needs, and that the adoption of both the Critical Accounting Estimates attestation and emphasis of matter paragraphs will, in large part, be redundant.

Given that the Auditor's Discussion and Analysis (AD&A) alternative described in the Concept Release would put the auditor in the position of providing original information about the company and its financial reporting that is more appropriately disclosed, or is already required to be disclosed, by management, we do not support this alternative.

The Concept Release suggests that, for both the AD&A and required and expanded use of emphasis paragraphs in the auditor's report, the auditor describe the key audit procedures performed over those areas with the most significant financial statement and audit risk. While we acknowledge the potential benefits of emphasizing in the auditor's report the most significant matters in the financial statements, we do not support the auditor attempting to describe the key audit procedures over these matters. We question whether it will be possible to sufficiently describe the procedures in a concise manner appropriate for the auditor's report that will both give a sufficiently complete description of the many procedures performed in these most difficult areas and be relevant to financial statement users who may not be familiar with auditing practice. The extent of the necessary discussion is likely to dwarf other components of the auditor's report and accordingly may place undue emphasis on the communicated procedures. Conversely, a brief description of the extensive and sometimes complex procedures performed is likely to raise concerns, or worse, misunderstanding, about the level of the auditor's work and response to risks. Accordingly, we believe that the audit committee is in the best position to assess the appropriateness of, and discuss with the auditor the auditor's response and approach to auditing the most significant and complex portions of the financial statements.

**Auditor's Discussion and Analysis**

The AD&A alternative presented in the Concept Release is intended to provide auditors with the ability to communicate in a narrative format their views about significant matters. The AD&A may include additional information about the audit, such as audit risks, audit procedures and results, and auditor independence, and a discussion of the auditor's views or impressions regarding the company's financial statements, such as management's judgments and estimates, accounting policies and practices and difficult or contentious issues, including "close calls." The Concept Release also indicates that the AD&A could provide the auditor with discretion to comment on material matters for which the auditor believes an issuer's disclosure could be enhanced to improve investor understanding and highlight areas in which the auditor believes management could have applied different accounting or disclosures.

We do not support the AD&A alternative presented in the Concept Release for the following principal reasons: (1) it would put the auditor in the position of providing original information about the company and its financial reporting that is more appropriately disclosed, or is already required to be disclosed, by management; (2) summary information about the audit process is not likely to be meaningful to financial statement users and could be misleading; (3) the potential lack of comparability and consistency between the AD&A of companies with similar risk factors could create further investor confusion; and (4) the information included within an AD&A may become standardized over time, further reducing its effectiveness.

Certain of the information described within the Concept Release for inclusion within the AD&A, such as audit risks, audit procedures and results, auditor independence and the quality of financial statements, is similar to the information that is communicated by the auditor to the audit committee, under existing requirements. Conceptually, we understand that investors may believe that an auditor's required communications with the audit committee could include information they would find relevant and useful. Those written communications, however, are usually a starting point for discussion and are supplemented by significant dialogue between the auditor and the audit committee, which typically provides necessary context and perspectives to these communications. This interaction can often clarify specific points raised, particularly relative to certain accounting and financial reporting matters involving a high degree of subjectivity. Additionally, the audit committee obtains insight by virtue of its financial reporting oversight responsibilities, which provide additional context for these communications from the auditor. Absent such two-way dialogue and additional context, this type of information communicated in a general purpose report is likely to be taken out of context or be subject to misinterpretation.

Furthermore, although certain communications currently are required to be prepared under existing auditing standards for purposes of communicating with the audit committee, a requirement to communicate such additional information for general use would impose a responsibility on the auditor with respect to those additional users. To make such communications public would likely result in significant incremental effort and cost to overcome the challenges that may arise in the absence of the dialogue between the auditor and the audit committee. Specifically, communicating such additional information absent the typical accompanying dialogue would require the auditor to substantially enhance these written communications to provide the additional context and explanation necessary to make the communication understandable to persons who do not have access to management, the audit committee and the auditor. Finally, registered public accounting firms would need to consider enhancements to their existing systems of quality control to address additional consultation and review protocols associated with these communications.

We also agree with the sentiment expressed in the Concept Release that disclosing potentially sensitive matters in the auditor's report could impair transparency and openness in discussions between the auditor, audit committee and management. Current auditing standards encourage a free flow of communication between the auditor and the audit committee and the use of executive sessions between the auditor and the audit committee is an effective procedure that allows the audit committee to carry out its statutory oversight responsibilities. Providing the auditor with the responsibility to report directly to the audit committee seeks to ensure the independence and objectivity of the auditor. The Board should consider the potential impact on audit quality and the governance role of the audit committee should comments or presentations made in an audit committee executive session become potential subject matter for inclusion in an auditor's AD&A supplemental report.

The AD&A alternative furthermore includes a discussion by the auditor of difficult or contentious issues, including "close calls." We believe that such matters are likely to be associated with the most complex financial statement accounts and disclosures and those with the highest level of estimation uncertainty. The required disclosures within a Critical

Accounting Estimates portion of MD&A are designed specifically to address these matters and a part of the auditor's responsibility, as suggested above, could rather be to provide assurance on whether management's required disclosures appropriately describe the factors that contribute to that complexity and uncertainty.

A further shortcoming of this alternative, in our view, is that management and the audit committee may be compelled to change their financial statements, in order to eliminate differences between the company's presentation and disclosures and the auditor's communication in the audit report, thereby defaulting to those judgments and estimates preferred by the auditor. It is not clear that this would result in improved financial reporting given the complexity of business, financial reporting and the nature of "close calls." Furthermore, by virtue of the subjectivity associated with defining a "close call," inconsistency in the nature and extent of these auditor communications would likely result.

Certain investors indicated they could benefit from the information that is provided to audit committees pursuant to PCAOB Rule 3526 that enables the audit committee to monitor the auditor's independence. Similar to other communications with the audit committee, as discussed above, we believe that the information required to be communicated pursuant to Rule 3526 serves as the starting point for the audit committee's consideration of whether the matters communicated have an effect on the auditor's independence. The auditor's written communication is only one part of a process that includes discussion between the auditor and the audit committee. We question the usefulness of this information to financial statement users, especially given the impracticality of communicating directly with the auditor about such matters. Because of this limitation, combined with the complexity of the independence rules, we believe there is a risk that such communications will expand rather than narrow the expectations gap. Furthermore, the suggested clarifications to the standard auditor's report highlight the auditor's responsibility to be independent of the company and that the applicable independence requirements of the PCAOB and SEC have been complied with.

Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. We believe it would be more appropriate for management to provide further disclosure about these risks as they are in a superior position to comment on such matters. We do, however, support the Board evaluating this topic further as a separate project and considering whether the auditor could attest to disclosures of this nature should an appropriate authority develop a framework for such disclosures.

**Required and Expanded Use of Emphasis of Matter Paragraphs**

This alternative would require inclusion of emphasis of matter paragraphs in all audit reports that would highlight the most significant matters in the financial statements and identify where such matters are disclosed. Based on the discussion in the Concept Release, we believe that the principles underlying the emphasis of matter paragraphs alternative are fundamentally different than the AD&A alternative. Specifically, in an emphasis of matter paragraphs approach, an auditor communicates objective information highlighting significant financial information presented in the financial statements, whereas an AD&A approach focuses on auditor communications of original information relative to significant financial information, or an auditor's impressions relative to that financial information. Accordingly, our comments on the emphasis of matter paragraphs alternative are based on this understanding.

We acknowledge that the auditor's identification of significant matters in emphasis of matter paragraphs and referencing where those matters are disclosed within the financial statements may be helpful to financial statements users. Provided that sufficient criteria exists to provide a basis for auditors to consistently determine which matters should be included in emphasis paragraphs, and the informational content of these communications, we believe that auditors can implement some form of this alternative. We do wish to highlight, however, that those matters identified within the Concept Release for potential discussion within the required emphasis of matter paragraphs are likely to be duplicative of disclosures within a Critical Accounting Estimates portion of MD&A. We believe that an examination of that portion of MD&A by the auditor would be a more effective way of improving disclosure of these important matters, especially given that these disclosures are more appropriately made by management rather than the auditor.

Consistent with feedback received on the French form of auditor's report, which requires similar emphasis of matter paragraphs as those suggested within the Concept Release, we believe these emphasis of matter paragraphs may become excessively standardized over time, which may limit their usefulness to the users of financial statements[3].

Should the Board pursue this alternative, additional standard-setting activity and resulting implementation guidance will be required to assist the auditor in consistently identifying those matters that should be included in emphasis of matter paragraphs and the nature and extent of the auditor's communication. We believe it will be important for users of the financial

[3]The French accounting body, Compagnie Nationale des Commissaires aux Comptes (CNCC), engaged an independent consultant to conduct a study on its behalf to examine the perception of the statutory auditor's "justification of assessments" by users of the French form of auditor's report. This study is available at http://www.cncc.fr/download/footprintconsultant_reportstudy_va_cncc_fev2011.pdf

statements of similar entities (e.g., mid-sized companies in the same industry that operate in similar geographic regions or who have similar products and customers) to expect consistency in the nature and extent of such communications to the extent that risks and other relevant factors affecting the companies are consistent.

We believe that the criteria within the SEC rules and regulations for determining Critical Accounting Estimates for disclosure within MD&A could serve as a basis to establish objective criteria for identifying those significant estimates and judgments that the auditor includes within expanded emphasis of matter paragraphs. With regard to the nature of the communications, we believe that a plain English description by the auditor of why a particular judgment or estimate is significant to the financial statements (e.g., to emphasize the measurement uncertainty disclosed by the issuer) would be more useful to users than a description of the auditing procedures performed over such judgment or estimate. (See also our discussion, above, with regard to the auditor communicating the nature and extent of the auditing procedures applied.) Guidance from the Board to help frame the nature and extent of the auditor's communication also would be necessary.

**Auditor Assurance on Other Information Presented Outside the Financial Statements**

This alternative would require an auditor to provide assurance on information presented outside the financial statements such as MD&A, a portion of MD&A or other information (e.g., non-GAAP information or earnings releases).

Under existing auditing standards, the auditor's responsibility for the information presented outside the financial statements is limited to reading the other information included in documents containing audited financial statements and considering whether such information, or the manner of its presentation, is materially inconsistent with information appearing in the financial statements, or includes a material misstatement of fact. Should the auditor identify material inconsistencies or material misstatements of fact within the other information, the auditor is then required to take the necessary steps to address these matters. Auditor assurance on such information, on the other hand, would require the auditor to evaluate whether the information conforms to the requirements for its presentation. Such an evaluation would substantially increase the likelihood that the auditor would identify non-compliance with the requirements and result in improvements to the disclosure. Because the performance of procedures necessary to provide such assurance can be extensive, the Board should take care to require such assurance only on the information that is most important to investors and where auditor assurance can provide increased confidence in such disclosures (i.e., the benefit to investors is greater than the cost).

KPMG

As described above, we believe that auditor association with a Critical Accounting Estimates portion of MD&A, in the form of an attestation examination report on such information, would be the most effective manner of addressing the disclosures of information identified by investors as being important to them by providing a basis for increased confidence in such disclosures. That said, based on the investor concerns we have observed, we are not supportive of a requirement for the auditor to attest to the entire MD&A. At this time, we believe that an examination of only a portion of MD&A, a Critical Accounting Estimates section, is the most cost effective approach to addressing investor and other user's needs.

We believe the benefits of an attestation of a Critical Accounting Estimates portion of MD&A will outweigh the incremental costs and will address the information that investors have identified as important. To implement this alternative, the SEC would likely need to amend Regulation S-X to require an auditor examination of the Critical Accounting Estimates. Additionally, a Critical Accounting Estimates section that would be covered by the auditor's attestation report would need to be clearly identified within MD&A and, accordingly, SEC action also may be necessary to effect this change. With respect to existing SEC staff interpretive guidance relative to Critical Accounting Estimates disclosures, we suggest that the Board request the SEC staff to consider the adequacy of this guidance, including whether the interpretive guidance should be formally adopted as a part of Regulation S-K. The PCAOB, in consultation with the SEC, also may wish to consider whether the guidance constitutes suitable criteria for purposes of the auditor's attestation. With respect to the extant PCAOB attestation standards (i.e., AT Section 101, *Attest Engagements*, and AT Section 701, *Management's Discussion and Analysis*), we believe that registered public accounting firms can use these standards to perform and report on an examination-level attestation of Critical Accounting Estimates; however, we would expect the Board to address these issues as a part of any standard-setting project. For both issuer guidance and auditor attestation requirements, we are prepared to assist the SEC and/or PCAOB in addressing the existing guidance and requirements.

The Concept Release further suggests potential auditor association with earnings releases and non-GAAP financial information. Assuming that the demand for the expansion of the auditor's role has market acceptance, we are supportive of further study and consideration (including a cost/benefit test) as a separate project of more precisely defining the auditor's expanded role relative to both earnings releases and non-GAAP financial information. Considerations that will need to be addressed would include:

- Development of an issuer framework for the presentation of earnings releases and auditor performance and reporting standards;

- Addressing the question of how an auditor would report on earnings release information that is effectively a work in progress (whether an audit or an interim review);

- Addressing, as part of the cost/benefit analysis, whether auditor association with earnings release information would delay the issuance of this information; and

- Consideration of the existing SEC rules and regulations relative to non-GAAP financial information (i.e., both Regulation G and Item 10(e) of Regulation S-K) and auditor performance and reporting standards.

We are prepared to assist the PCAOB and SEC in addressing these considerations and others that may be identified if an expansion of the auditor's role for this information is warranted.

**Clarification of the Standard Auditor's Report**

We support the suggestions included within the Concept Release to clarify language in the existing standard auditor's report. We furthermore agree that, while this alternative would not significantly expand the content of the auditor's report, the additional explanation of the matters outlined in the Concept Release is likely to provide users with an improved understanding of the audit and the responsibilities of the parties to the financial reporting process. We believe that the suggested clarifications to the standard auditor's report could require similar conforming clarifications within the report on internal control over financial reporting required by Auditing Standard No. 5. Such changes may include further describing reasonable assurance, and management and the audit committee responsibilities for internal control over financial reporting. Similar changes were included within the suggested changes to auditor's reports on the financial statements and internal control over financial reporting as provided by the June 28, 2011 CAQ letter to the Board, with which we are in agreement. Finally, the CAQ June 28 letter includes additional "clarifying language" beyond the areas identified in the Concept Release. We also are supportive of these additional auditor communications.

**Other considerations**

In addition to the alternatives described within the Concept Release, we would encourage the Board to further consider the following:

*Scope of enhancements to the auditor's reporting model.* The discussion in the Concept Release is principally focused on improving communications with investors. The Board should consider whether these changes will benefit other financial statement users before requiring such reporting for all types of entities whose audits must be conducted pursuant to the standards of the PCAOB. For example, it is not clear that all such communications would be important to the users of the financial statements of a broker-dealer who are not invested in the company.

*Field tests*. The Board should consider field testing the more significant of the proposed alternatives to evaluate the value and practicability of the alternatives. In particular, we believe a field test would be especially helpful in determining the feasibility of implementing the AD&A or required emphasis of matter paragraphs alternatives.

*Global coordination.* The issue of an auditor's reporting framework, and the broader financial reporting framework, are the subject of consultations in other jurisdictions. For example, the International Auditing and Assurance Standards Board (IAASB) has issued a Consultation Paper, *Enhancing the Value of Auditor Reporting: Exploring Options for Change*[4]; the U.K. Financial Reporting Council has undertaken a project on effective company stewardship; and the European Commission has issued its Green Paper that addresses the auditing profession, including the reporting framework. In addition to working with the regulators in the U.S., such as the SEC, we encourage the Board to participate in and consider these other consultations in assessing the appropriate changes under PCAOB professional standards.

*Other potential alternatives.* The IAASB Consultation Paper described above suggests as a possible option to enhance the quality, relevance and value of auditor reporting, an enhanced model of corporate governance reporting, which may include the audit committee issuing a report describing its oversight of the financial reporting process and the audit, accompanied by auditor assurance. We believe this potential alternative is worthy of further consideration as another means of providing additional information called for by certain investors.

*Impact of increased professional liability for auditors and issuers.* We believe it is incumbent on the Board to consider the potential that one or other of the proposed changes may open up new fronts of liability exposure to claims by users of the financial statements. The cost of responding to civil damage suits already represents a significant operating cost for registered public accounting firms. Incremental forms of assurance required to be provided by the auditor, especially those with a higher level of inherent subjectivity or which call on the auditor to provide information about the company that is independent of the company's own disclosures (such as an AD&A), are likely to result in exposure to novel litigation claims that may substantially increase such costs. We urge that the Board give close consideration to

[4]In May 2011, the IAASB issued their consultation paper to explore possible options to improve the communicative value of the auditor's report. The consultation paper is available at http://www.ifac.org/publications-resources/enhancing-value-auditor-reporting-exploring-options-change.

KPMG

balancing the perceived benefits to users of the financial statements with the resulting increased professional liability as the Board moves forward with its proposals.

* * * * * * *

We appreciate the Board's careful consideration of our comments, and fully support the Board's efforts to enhance the auditor's reporting model and increase the value of the audit. If you have any questions regarding our comments or other information included in this letter, please do not hesitate to contact Sam Ranzilla, (212) 909-5837, sranzilla@kpmg.com, or Tom Ray, (212) 909-5095, tray@kpmg.com.

Very truly yours,

KPMG LLP

Re: PCAOB Rulemaking Docket Matter No. 34
Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements

Liberty Global, Inc. ("LGI") appreciates the opportunity to share our views on the *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* (the "Concept Release") issued by the Public Company Accounting Oversight Board ("PCAOB").

LGI is a leading international provider of video, voice and broadband internet services. These services are provided through our consolidated operating subsidiaries in 14 countries, primarily in Europe, Chile and Australia. Therefore, our views on the proposals presented in this Concept Release are from the perspective of a multi-national public company (a financial statement preparer) with complex accounting and reporting processes.

Overall, we don't believe that a fundamental change is required to the form or content of the audit report, and don't believe in a required expansion of auditor's assurance responsibilities to information outside of the financial statements. In this regard, our accounting, finance and investor relations groups have seen no evidence from the users of our financial statements that they desire such changes. In addition, we believe our financial statement users have a good understanding of the level of assurance provided by the current form of the audit report and the procedures performed by auditors in support of their audit reports.

**Content and Form of the Audit Report**

1. ***Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.***
    a. ***Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?***
    b. ***In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?***
    c. ***Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?***

We believe the roles of management of public companies, audit committees and auditors are currently correctly delineated. Management is responsible for providing accurate financial statements (including the notes thereto), selecting accounting policies that conform with Generally Accepted Accounting Principles ("GAAP"), and providing relevant and useful information to make sure investors make informed decisions. Audit committees of public companies serve an oversight role over management's function on behalf of shareholders along with the responsibility to engage and oversee the external auditor. The auditor's role is to provide reasonable assurance that financial statements have been presented fairly in accordance with generally accepted accounting principles. We believe the current form of the auditor report provides adequate information regarding the auditor's role and should be retained.

If added information is deemed necessary related to risks, judgments and estimates contained within the financial statements, it should be management's responsibility to provide such information. If auditors substantively disagree with management's treatment of any such risks, judgments or estimates, they already have the responsibility under current auditing standards to require changes to materially incorrect or misleading disclosures within the financial statements, and to disclosures outside of the financial statements that appear in the same documents as their audit reports.[1] If the auditor ultimately is not satisfied with such disclosures, the auditor is required to adjust or withhold their audit report as necessary. In the case of earnings releases, presentations and other company communications that do not fall under existing audit standards for auditors, we believe that the vast majority of companies are very diligent in verifying all information that is included in these communications and that there would not be sufficient added benefit that would outweigh the additional costs that companies would incur if auditors were to opine on all or any part of these company communications.

2. ***The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."***
    a. ***Should the auditor's report retain the pass/fail model? If so, why?***
    b. ***If not, why not, and what changes are needed?***
    c. ***If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.***

A pass/fail model provides the most objective and informative information to users of the financial statements in our opinion. If an audit "passes," a user is effectively notified that they can reasonably rely on the information presented in the financial statements. We strongly believe that the positive confirmation of a pass/fail model leads to the most efficient markets and appropriate allocations of capital. Burdening companies and their auditors with ever-increasing regulations and standards would have the opposite effect.

The potential solutions in the Concept Release for moving from a pass/fail model focus on allowing the auditor to supplement the audit report with their own discussions regarding the outcome of their audit. A model where an audit report is issued, but the auditor provides supplemental information regarding the audit, would likely be confusing to users of the financial statements. For example, if an auditor added commentary on a "significant matter" such as an accounting policy chosen by management, the commentary could be construed by users in multiples ways, including:

- The auditor did not really like the accounting policy choice made by management in the financial statements, but decided to issue an opinion anyway.
- There were other potentially preferable alternatives for the given accounting policy.

We believe the users of financial statements could easily misconstrue the purpose of the supplementary language, and in any event, any such supplemental information would likely not represent decision useful information for financial statement users, other than generally casting doubt, perhaps unwarranted, regarding the quality of companies' financial statements.

The current auditor reporting model is much more straightforward, because if an auditor has a substantive issue with a matter such as a managements' use of a particular accounting policy decision, the auditor either will not issue an opinion, or will issue a qualified opinion. If audit issues are driven by lack of clarity in accounting and reporting standards, the focus should be on correcting those standards.

[1] As set forth in AU Section 550

As noted in our prior response, we think the current form of the "pass/fail" report is appropriate and should be retained.

3. ***Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.***

As per our comments above, regarding the respective roles of prepapers, audit committee members and auditors, we strongly agree that any disclosure obligations should continue to reside with the preparers with oversight from the audit committee. In this regard, we believe that the expansion of the auditors' role to include the preparation of disclosures or analyses independent of management would create unnecessary conflicts between a company and its auditors and would not produce more reliable information for financial statement users. By definition, auditors are not involved in a company's day to day operations, and accordingly, are not in the best position to provide this type of information. We believe that, if auditors were to assume responsibility for these disclosure obligations, auditors would be at least partially assuming the role of management, which in our view would clearly conflict with the auditors' fundamental role and purpose. Further, additional information provided by the auditor that is in conflict with management's disclosures would simply add competing information. We do not understand how this competing information would serve investor's needs, and instead we believe would be incredibly confusing to investors as compared to the current financial reporting model. Overall, we strongly believe that all disclosure obligations should remain management's responsibility.

4. ***Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?***

As per our previous comments, our view is that the auditor reporting model as currently formulated is appropriate. We have no specific views on potential changes to the auditor's report on internal control over financial reporting until we first have more specific guidance on the nature of any proposed changes to the overall auditor reporting model.

**Auditor's Discussion and Analysis ("ADA")**

5. ***Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?***
    a. ***If you support an AD&A as an alternative, provide an explanation as to why.***
    b. ***Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?***
    c. ***Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?***
    d. ***If you do not support an AD&A as an alternative, explain why.***
    e. ***Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both?***

Consistent with our previous comments, we do not believe an AD&A should be added to the auditor's report. The AD&A would create a fundamental shift in the auditor/client relationship, with the auditor assuming certain disclosure obligations with respect to the audit and certain accounting and reporting decisions made by management. The types of matters up for discussion are better resolved through interaction between the auditor, management and the audit committee in their currently delineated roles. Public disclosures of such interactions would not be useful or beneficial because:

- The financial statements and disclosures are the responsibility of management, and presenting such information to the public should remain management's responsibility, with audit committee oversight.
- For a complex multinational company such as ours, we would expect that an AD&A could be a very long document, which would serve as more of a distraction to the financial statements than useful disclosure.
- Due to the significant level of judgment inherent in many complex accounting and auditing issues, there is not always a consistent view among audit firms or even partners within an audit firm on these matters, or even consistency between audit firms and partners on what would constitute a significant audit matter. As such, this public disclosure would likely provide very little decision usefulness since the disclosures would likely vary greatly from company to company.
- Time spent on generating such a report, along with the discussions with senior management and the audit committee, would require significant time and effort of the audit partner and senior company accountants. The result would likely lead to a significantly more expensive audit and would shift the audit partner away from more important issues relating to the conduct of an efficient and effective audit. In addition, we would envision significantly more expense related to national office inquiries as audit teams work to ensure that each and every AD&A is consistent across an audit firm.
- Finally, we are concerned that any added reporting obligations would extend the time required to file quarterly and annual reports with the U.S. Securities and Exchange Commission.

We have not specifically commented on questions 6 through 12 in the Concept Release as our full views on the AD&A are expressed above.

**Required and Expanded Use of Emphasis Paragraphs**

***13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?***
***14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?***
   ***a. If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.***
   ***b. If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.***
***15. What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?***
***16. What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?***
***17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?***
***18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?***

It is difficult for us to envision the exact nature and content of "required" auditor emphasis paragraphs. The Concept Release suggests the audit report could include emphasis paragraphs on significant management judgments and estimates, areas with significant measurement uncertainty, and other areas "that the auditor determines are important for a better understanding of the financial statement presentation". The Concept Release also states that the auditor may reference where such matters are disclosed in the financial statements and describe the audit procedures they employed.

Most of our concerns would be the same as our concerns with the AD&A, as we are not sure how added emphasis paragraphs would practically benefit users of the financial statements. We have the following specific concerns on requiring added auditor emphasis paragraphs:

- An audit report is not the proper place for a financial statement user to find information related to the location and content of significant judgments and estimates, and other areas with measurement uncertainty, or to obtain a better understanding of financial statement presentation. A user of the financial statements should be expected to read and understand the disclosures provided by management, and it should be management's responsibility to provide comprehensive and understandable financial statements. If there are specific concerns regarding the form or usefulness of financial statements, those issues should be addressed through corrections in accounting and reporting rules and regulations.
- A "requirement" for emphasis paragraphs will likely lead to the development of boilerplate language, and we believe it would be difficult if not impossible in practice to make sure boilerplate language is avoided ***while*** still maintaining consistency among audit reports. We would need to better understand how this might work, but our general assumption is that the auditors would only include emphasis paragraphs in audit reports in situations where PCAOB rules required auditors to do so, and that those PCAOB rules would include guidance on what the emphasis paragraphs should look like. Even if the PCAOB were able to achieve the goal of avoiding boilerplate language while maintaining consistency, the appearance of consistency in audit reports would not necessarily mean that the reports would in fact be consistent in terms of the scope and magnitude of the issue that is the subject of the emphasis paragraph. For example, if an emphasis paragraph were required to be added to address the impacts of acquisitions, the paragraph related to an acquisition that increased the size of the company by 10% would likely look the same as a paragraph related to an acquisition that doubled the size of another company.
- As the PCAOB recognizes, additional audit standards would likely be required to address the inclusion of required emphasis paragraphs in audit reports, which would add to the time and expense of audits, without providing information that would appear, in our view, to change the judgment of a reasonable investor.
- Finally, we are unclear what value would be derived by users if the PCAOB were to require emphasis paragraphs, mainly because we think sophisticated users already know their way around a set of financial statements without a roadmap, and unsophisticated users would not have the background to put emphasis paragraphs into proper perspective.

Overall, we believe the current model of the audit report is appropriate, where auditors are permitted to add emphasis paragraphs when they believe it is warranted in the circumstances.

**Auditor Assurance on Other Information Outside of the Financial Statements**

Questions 19 and 20 of the Concept Release discuss the expansion of auditor assurance to other information outside of the financial statements. Expanding auditor assurance to information outside of the financial statements, such as MD&A and press releases, would be a significant undertaking, and we believe should be addressed separately from the Concept Release, which specifically relates to possible revisions to reports on audited "financial statements". However, our general view is that such a large expansion of required auditor assurance would be cost prohibitive based on the need to establish new auditing standards, the need for the SEC to likely develop new management reporting requirements, and the added audit hours and fees that would result from these incremental attestation services. Also, as the PCAOB notes, companies currently have the ability to engage auditors to provide attestation services on information outside of the financial statements, including MD&A, through the Attestation Standards provided by the PCAOB. As far as we are aware, there is not widespread engagement of auditors to perform attestations outside of the financial statements, which would suggest there is not a large demand for these services either from preparers or users of the financial statements. A requirement for an auditor to attest to information outside of the financial statements would seem to be inconsistent with the lack of demand for these services from users of the financial statements. We believe this lack of demand is due, at least in part, to the fact that most stakeholders perceive that companies take great care to ensure that all communications with their stakeholders are accurate and complete.

While we don't agree with the idea of expanding the auditor's assurance responsibilities, we would not be opposed to expanding the current audit report to explain auditors pre-existing responsibilities related to information outside of the financial statements as contained in AU Section 550.

**Clarification of the Standard Auditor's Report**

Questions 21 and 22 of the Concept Release discuss certain revisions to the standard auditor's report in order to clarify certain matters. While we don't believe the clarifications are necessary, we don't have any specific objections to the proposed clarifications.

**Questions Related to All Alternatives**

Questions 23 through 30 of the Concept Release discuss which alternative or combination of alternatives would be best, whether there are any other alternatives, and other questions regarding the alternatives provided. We have not specifically addressed these questions because our views are fully expressed in our responses to the other questions, and our overall view is that there should be no change to the current form of the audit report or the current scope of auditor's responsibilities.

**Other Considerations Related to Changing the Auditor's Report**

Questions 30 and 31 of the Concept Release address various concerns and considerations related to changing the auditor's report and the potential effects of such changes. Concerns over increased costs, effects on relationships with auditors, effects on audit committee governance and liability considerations from changing the auditor's report are expressed in the Concept Release. While we have not had time to study any of these matters in-depth, we believe these considerations are all of great importance and must be thoroughly addressed before any major changes are made. Our preliminary views are as follows:

- Increased costs – costs will certainly increase if any of the major proposals in the Concept Release are made. The types of proposed changes would require substantive attention from the most senior audit engagement team members, primarily lead engagement partners and review partners. We would also expect that national office consultations would be much more prevalent in dealing with the specific form and content of any required supplementary reports, such as the proposed AD&A. Given the nature of personnel involved and the high billing rates for these personnel, we expect there would be pressure to significantly increase audit fees. In addition, we would expect companies to incur additional legal and accounting costs associated with the review of any additional auditor reporting.
- Effect on relationships with auditors – based on the current model, auditor communications with the audit committee are unconstrained by issues such as whether the content of the communications could end up in a public document. If such communications were required to be made public in some manner or form, the honest and frank discussions that occur now may become more constrained, or may become increasingly boilerplate as the auditor strives to avoid any inconsistency between clients.
- Effect on audit committee governance – oversight over key decisions made by management with regards to financial accounting and reporting is the responsibility of the audit committee. The proposals in the Concept Release would seem to have the practical impact of shifting some of that responsibility to the auditor, which in our view is inappropriate. If the PCAOB has concerns with respect to whether auditor communications with audit committees are ineffective and don't always

result in meaningful and proper disclosures in the financial statements, those concerns should be addressed separately and should have no bearing on the form and content of the auditor report.

- Legal/confidentiality issues – Certain of the proposed alternatives raise the risk of disclosure of confidential company-specific information and communications. In addition to the chilling effect on communications between the auditor and the company's management and audit committee, such disclosures would also violate long-standing legal and ethical obligations of auditors. When exceptions to these obligations have been imposed through legislation or regulation in the past, they have been narrowly tailored to address specific concerns (e.g. Section 10A(b)(1) of the Securities Exchange Act of 1934), rather than being left more broadly to the auditor's discretion as the Concept Release implies. Certain of the alternatives in the Concept Release may also increase the company's liability exposure. Public disclosure of conflicting views of management and the company's auditor, such as of "close calls" as contemplated by the release, may lead to investor confusion and resulting declines in the company's stock price based on erroneous impressions regarding the quality of the company's financial statements. Stock price declines of this nature may be expected to lead to meritless lawsuits which, in turn, may be expected to cite the disclosed conflicts as evidence of management or board failures resulting in a "fishing expedition" regarding the confidential discussions between and among the auditor, management and the audit committee.

In summary, we do not believe any significant elements of the PCAOB's proposals are warranted from a cost benefit perspective, and accordingly, we do not believe these proposals should be adopted.

We have discussed the contents of this letter with the chairman of our Audit Committee, who is in agreement with the views expressed herein. We appreciate the opportunity to comment on this Concept Release. We would welcome the opportunity to discuss these matters with you. I can be reached at 303 220 6603, or you can reach Leo Stegman at 303 220 6690.

Sincerely,

Bernard G. Dvorak

Re: PCAOB Rulemaking Docket Matter No. 34

Liberty Mutual Group ("LMG" or "the Company") is a diversified global insurer and the sixth largest global property and casualty insurer in the world. As of June 30, 2011, LMG has approximately $116 billion in consolidated assets and $98 billion in consolidated liabilities. Our consolidated revenues were approximately $33 billion for the year ended December 31, 2010.

We appreciate the opportunity to provide the Public Company Accounting Oversight Board ("PCAOB") with our comments pertaining to Rulemaking Docket No. 34, *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* ("the Concept Release").

**GENERAL COMMENTS**

First and foremost, we respect the time and effort the PCAOB and its Staff has put into consideration and development of the Concept Release and their desire for improving and increasing the transparency and relevance of the auditor's report on financial statements.

We do not support the alternative proposed for an Auditor's Discussion and Analysis ("AD&A"). Further examples and clarification has been provided below which indicate that this alternative could cause unnecessary conflict between management and the auditors, stifle communications, hinder audit quality, and send inconsistent messages to investors. We also do not support the alternative proposed that would require auditors to provide assurance on information outside of the financial statements. This would lead to increased time and money on the part of management, as well as the auditors. Confidentiality also arises as a concern with both proposed alternatives.

If the PCAOB concludes additional information is needed for the users of the financial statements, then we would support the alternatives that would require the use of emphasis paragraphs and/or clarification within the standard auditor's report. We feel that these alternatives would accomplish the PCAOB's objective to create more transparency and improve disclosures within the auditor's report, while not jeopardizing the relationship or adding unnecessary costs to the audit.

We appreciate the complexity of the project and would like to raise the following observations and recommendations in response to specific questions on the proposed alternatives for your consideration.

**Response to Question 5**

We do not support an AD&A as an alternative. Based on the points discussed within the Concept Release, we believe that implementing a requirement for an AD&A would potentially create unnecessary conflict between management and the auditors as a result of the subjective nature of the AD&A.

For example, the Concept Release notes that the AD&A would include what is referred to as "close calls." The documentation of these would involve significant discussion regarding difficult issues between management and the auditors. "Close calls" are usually debated during the course of the audit. Many hours are spent between management and the auditors to discuss such issues, and therefore, they have been resolved once the report is issued. The resolution or mutual agreement around such issues would indicate that it is no longer necessary to display the topic as a discussion point within the report. More definition needs to be placed around what would be classified as a "close call." Without a clear definition, "close calls" could encompass a variety of issues; furthermore, disclosure of these items could cause tension between the auditors and management, as having "close calls" disclosed within the auditor's report could lead to confusion and mixed messages for investors and ultimately have a negative impact on the market. Including "close calls" would not create any more transparency nor would it provide more relevance to the readers of the financial statements.

A similar instance in which conflict may arise would be related to the suggestion of highlighting within the AD&A those areas where the auditor felt that management could have applied different accounting or disclosures. The purpose of the auditor's report is to opine on the financial statements including the presentation and disclosures. It is contradictory to expect the auditor to opine on the financial statements and then include in the AD&A information on where they felt management could have presented their information differently. Again, this alternative could result in confusion for the users of the financial statements and a poor reaction by investors and analysts.

For those companies who produce an MD&A, it is important to consider the potential differences which could arise between this document and an AD&A. The auditor discussion about the financial statements could differ from disclosures that management provides and therefore might not convey a consistent communication to investors. Management would strongly insist that there is consistency between the two documents. Resolving discrepancies could require significant time to be spent between management and the auditors to ensure agreement has been reached on all topics discussed, thus increasing the cost to perform an audit. If for any reason the MD&A and the AD&A do not align, this inconsistent communication could again result in confusion and could lead to an unwarranted negative market reaction.

Additionally, we are concerned about whether the users would have the appropriate context for the information. Typically, auditors' communications are prepared with the expectation of a privileged dialogue with the audit committee. Any additional context and perspectives that are communicated are not intended to be shared with users.

**Response to Questions 6 & 7**

We believe that the audit information recommended to be included within the AD&A could pose a concern for management based on confidentiality issues. The information in the audit work papers is the property of the Company, and therefore, any information shared in the AD&A would have to be confirmed by management. Certain proprietary information is provided to the auditors during the audit, which is sensitive to the Company's competitive industry position and should not be disclosed to the public.

Additionally, the Company believes that including information about the auditor's views on the Company's financial statements based on the audit, such as management's judgments and estimates, could pose a confidentiality concern. As an insurance company, there is significant judgment used in preparing certain financial statement line items, specifically loss reserves. Disclosure of reserve ranges, or potential discussion of the reserve strength, are examples of metrics that could impact the Company's competitive position. Any potential for disclosure of these types of items would stifle the open-communication relationship between the management team and the auditors and could result in unnecessary tension between the two.

**Response to Question 8**

If the AD&A were to be implemented, we feel that a standard template must be created for all auditors to use in completing this document. The template should clearly define the information to be included in the document, who is to complete the document, and whether it would require a formal sign off. If a standard template is not implemented, the Company feels that the preparation of a document such as what has been described would result in added time to and increased cost for the audit and could lead to significant issues between the Company and the auditor for the inclusion of subjective disclosures.

**Response to Question 18**

The PCAOB has noted in the Concept Release that investors and analysts are requesting that there be more transparency and supplemental discussion in the auditor's report to provide additional clarity around the financial statements. In response to this, the Company supports the alternative that would require and expand the use of emphasis paragraphs in all audit reports.

This approach would help users identify significant events, unusual transactions, and other major items of the audit. The Company agrees that by requiring implementation of these types of paragraphs, the desired objective of creating more transparency and improved disclosures within the audit report would be achieved.

If this alternative is selected, the PCAOB must develop a standard template to be used to ensure consistency in the audit reports. Without a standard template, the emphasis paragraphs could again cause confusion among readers and would not operate as intended. In addition, the Company believes that all required descriptions should be objective, fact-based discussions and make specific reference to where such items appear in the financial statements. In the case where the emphasis paragraphs require comment on management judgments and estimates, it is specifically important that these descriptions contain strictly objective information. The Company believes that if the emphasis paragraphs were to contain any subjective information, similar to the AD&A, this could cause unnecessary conflict between management and the auditor and/or confusion for the reader.

**Response to Question 19**

The PCAOB is suggesting that auditor assurance be obtained on information outside of the financial statements. We believe that an increase in the amount of information for which auditor assurance may be obtained creates cause for concern as it would require an increase in time and money for the Company. Additional audit procedures would need to be put in place in order to opine on information that is separate from the core financial statements and disclosures. As a result, there could be a significant increase in the number of requests to which the Company must respond. There would be increases to staffing and additional time needed to work with the auditors on this new information, both of which could lead to an extended audit time frame and increased audit fees.

**Response to Question 21**

The Company agrees with the proposed alternative of clarification of certain language in the auditor's report. This would achieve the objective to better articulate certain matters (without incurring significant additional time or cost). This alternative provides the reader with a more transparent and relevant report by offering additional clarifying information on what the audit represents and a description of the auditor's responsibilities. We believe this type of information could be included in reports on audits of internal controls over financial reporting.

In summary, though we believe the current financial statement process is adequate, if the PCAOB feels the need to move forward with further clarification, we believe the alternative for clarification of emphasis paragraphs is sufficient. The Company cautions the PCAOB to be mindful of unintended consequences from the adoption of certain proposed alternatives, specifically as it pertains to the audit effort and the working relationship with management and the auditors. The Company looks forward to working with the PCAOB in future months to further discuss the project and to work collectively to determine a purposeful and appropriate resolution.

Sincerely,

John Doyle

**Re: Rulemaking Docket Matter No. 34**
**Concept Release on Possible Revisions to PCAOB**
**Standards Related to Reports on Audited Financial Statements**

Members of the Board:

We appreciate the opportunity to respond to you regarding the Board's *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* ("Concept Release"), issued by the Board on June 21, 2011.

By way of background, Limited Brands, Inc. (NYSE: LTD) is a $10B global specialty retailer focused on intimate and other apparel, personal care and beauty and accessories. Our specialty retail brands include Victoria's Secret and Bath & Body Works. We have been in business for nearly 50 years and employ over 90,000 associates.

Our management team and our stakeholders value accurate and informative financial statements and financial information. As a result, we understand and value a quality audit. We appreciate and support the PCAOB's objective to protect the interests of investors and further the public interest in the preparation of informative, accurate and independent audit reports.

Based on our values and our experience, we commend the Board for examining how to improve audit firms and auditing standards. However, we believe that wholesale changes to auditing standards are not warranted. Changing the content and form of the audit report is not an effective way to address concerns about the quality or quantity of disclosures. In addition, increasing audit scope outside the financial statements is beyond the training and expertise of audit firms and, as a result, would not add incremental value to investors.

Three Limited Parkway Columbus, Ohio 43230 www.LimitedBrands.com

We believe one of the most important areas for improvement with respect to financial information is to improve its timeliness. Many of the changes in the Concept Release would work contrary to this; the possible changes would increase the length of time necessary to complete an audit and, as a consequence, increase the length of time required to make audited financial information available to the public. Delaying the availability of information is contrary to the needs of investors and the financial markets. Following is a detailed discussion of our most significant concerns.

Content and Form of Auditor's Report

As described in the Concept Release, a standardized form of the auditor's report has been utilized since the 1940's. Although changes to the audit report have been debated or proposed since that point in time, the audit report has proved that it plays an important role in the financial markets and it is functioning effectively. If investors have a lack of understanding of what an audit means or how an audit works, those investors may have a gap in their financial expertise. This gap should be addressed by the investor, not the audit or the audit firm. If the investor believes that the financial statements have insufficient information with respect to risks, uncertainties or other matters or that certain disclosures require more prominence/emphasis, that is a discussion point for preparers, the accounting rule-making authorities, or the Securities and Exchange Commission. In addition, in the event that the financial statements would benefit from incremental disclosures, we believe that information is best provided by the preparer.

Secondly, we do not believe that a wholesale revision to the auditing standards is appropriate at this time. As an issuer, we are facing material changes to our financial reporting including rule changes around convergence and/or full transition to International Financial Reporting Standards. A significant revision to audit scope would place strain on our financial reporting resources. These resources are already constrained due to material changes in areas such as lease accounting and revenue recognition. Also, our audit firm will need to audit these material accounting changes. We do not believe that the audit firms can audit material accounting changes and concurrently absorb a material auditing standard change while still maintaining audit quality and timeliness. We would not object to minor improvement in the language in the Auditor's Report, but we believe this is not the right time to make wholesale changes to the auditing standards.

Thirdly, our financial leaders interact with investors and stakeholders frequently. We rarely receive requests for more information in our public financial statement filings. In our experience, unfortunately much of the published information is read by very few people. If we did receive a request for more information, we would seriously consider the request and incorporate it in future disclosures, if appropriate. Thus, the potential changes would only add incremental audit cost and not incremental value to our stakeholders.

Auditor's Discussion and Analysis ("AD&A")
As we state in our opening remarks, we value the service that our audit firm provides. Our management team and our investors count on accurate financial information to inform decisions. In order to provide an effective audit, auditors are well trained on accounting standards, auditing and audit risks. They are not trained on how to run our business. Although they have a thorough knowledge of audit risk associated with our financial statements, they do not have the deep comprehensive business knowledge that management possesses.

Audit firms are trained explicitly to obtain reasonable assurance that our financial statements are free of material misstatement. The auditors are not in a position to have a better point of view than management on judgments, estimates, accounting policies/practices, etc. The investor community must take ownership of understanding the risks and rewards of investing in a business. This ownership can not be delegated to an audit firm.

Some of the possible changes in the Concept Release, including potential disclosure of accounting "close calls," are problematic. In order to understand "close calls" and other similar areas, one needs context and thorough discussion. In many cases, the context is confidential. We believe that this is the role of the Audit Committee. In fact, if the financial statements are "free of material misstatement," close calls or debated items are not meaningful. An audit report that tries to summarize these types of items without adequate context would likely lead to increased litigation costs for both audit firms and preparers, further increasing total audit costs. In order to mitigate this risk, AD&A language would necessarily become boilerplate. As a result, the increased cost would not result in incremental value as the AD&A would not bring more valuable information or experienced perspective than management already provides.

Finally, the addition of an AD&A to the audit scope would add incremental time to complete the audit process. Completing the audit within today's reporting deadlines can already be a challenge. As we mention above, slowing the reporting process down is detracting value, not adding it.

Auditor Assurance on Other Information Outside the Financial Statements
Auditors are currently required to review information in documents containing the audited financial statements to consider whether such information, or the way that it is presented, is materially consistent with the financial statements or whether it constitutes a material misstatement of fact. We believe this scope is appropriate and well defined. We do not believe that the Board should consider additional auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model. As we discuss above, auditors are trained in accounting and auditing and their attest scope should focus on financial statements.

Conclusion

We appreciate the efforts and the outreach of the Board to protect the interests of investors. However, we do not believe that material changes as discussed in the Concept Release are necessary. In our opinion, the vast majority of changes discussed in the Concept Release would increase audit cost and the time necessary to complete an audit. However, these same changes would not improve the quality of audits or financial statements and disclosures.

We thank you for the opportunity to respond to the Concept Release and to provide our comments on these important topics.

Sincerely,

Stuart B. Burgdoerfer

**Re: PCAOB Rulemaking Docket Matter No. 34 - Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards**

Dear Mr. Baumann:

Markel Corporation (Markel) is a global, specialty property and casualty insurer traded on the New York Stock Exchange and headquartered in Richmond, VA. In response to the PCAOB's recently issued a concept release on the auditor's reporting model, Markel submits the following comments for your consideration.

We recognize and support the Board's goal of changing the auditor's reporting model in a way which would increase the transparency and relevance of financial statements and the audit process without compromising audit quality. However, of the four alternatives proposed, we believe the most effective approach to achieve this objective and to provide more relevant and useful information to investors and other financial statement users is to: (1) modify the current auditor's report to clarifying language about what an audit represents and what the related auditor responsibilities are; and (2) require inclusion of an expanded emphasis paragraph in all audit reports that would highlight the most significant matters in the financial statements and identify where these matters are disclosed. We believe these changes would enhance communication to investors by improving the content of the auditor's report rather than changing the fundamental role of the auditor in performing an audit of financial statements.

We do not support the proposal to require Auditor Discussion and Analysis as we believe this approach changes the role of the auditor in such a way as to increase the cost of audits and blurs the lines of accountability with management's. Auditors currently review Management's Discussion and Analysis to ensure that information presented there is consistent with the audit financial statements. During this review, auditors also have the opportunity to provide feedback, observations and comments regarding matters that they believe are relevant to the investors and other users of the financial statements.

We have reviewed the June 9, 2011 submission by the Center of Audit Quality and agree with the following "Overarching Principles":

- Auditors should not be the original source of disclosure about the entity; management's responsibility should be preserved in this regard.
- Any changes to the reporting model need to enhance, or at least maintain, audit quality.
- Any changes to the reporting model should narrow, or at least not expand, the expectations gap.
- Any changes to the reporting model should add value and not create investor confusion. Specifically, any revisions should not require investors to sort through "dueling information" provided by management, the audit committee, and independent auditors.
- Auditor reporting should focus on the objective rather than the subjective.

We would like to encourage you to consider the above principles to guide the development of possible areas for further consideration related to revisions to the auditor's reporting model.

We appreciate the opportunity to share our views regarding possible revisions to the auditor's reporting model.

Sincerely,

Anne G. Waleski

Re: **Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements**

PCAOB Release No. 2011-003
PCAOB Rulemaking Docket Matter No. 34

Ladies and Gentlemen:

The Accounting Principles and Auditing Procedures Committee is the senior technical committee of the Massachusetts Society of Certified Public Accountants. The Committee consists of members who are affiliated with public accounting firms of various sizes as well as members in both industry and academia. The Committee has discussed the above mentioned matter. The views expressed in this comment letter are solely those of the Committee and do not reflect the views of the organizations with which the Committee members are affiliated.

The Public Company Accounting Oversight Board ("PCAOB") has exposed for comments the document "Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements" (Concept Release) setting forth possible changes to the Independent Auditor's Report on Financial Statements.

**Overview**

The Committee feels it must express a concern up front before commenting on the Concept Release. The Committee feels that in considering the Concept Release that the PCAOB should keep in mind

617.556.4000 • Fax 617.556.4126 • Toll Free 1.800.392.6145
MSCPAonline.org • E-mail: MSCPA@MSCPAonline.org

the concerns of the non-issuer companies. The majority of the Committee members represent small and medium sized companies.

It is the firm belief of the Committee that any changes from the adoption, implementation and transition to the reporting alternatives as presented in the Concept Release will trickle down to non-issuer companies. These small and medium sized companies will be forced to transition to whatever changes that are adopted by the PCAOB.

The Committee in concept only agrees with the PCAOB undertaking the initiative to consider improvements to the auditor's reporting model. The Committee however as detailed below believes the approach taken in the Concept Release is not the right approach. The Committee believes that if more information is needed by users that generally accepted accounting standards should be reviewed and amended to address the concerns of users of the financial statement.

The Committee does not agree that the auditor's role should be expanded in the auditing and reporting process. Management of the audit entity should be responsible for the financial statements and disclosures. The Committee believes that the financial statements should stand "on their own". The Committee believes that the responsibility for the financial statements should stay with management and that the auditor should not become a source of disclosure within the reporting process. The Committee strongly believes that the auditor's role and purpose should remain that of an independent auditor attesting to the fairness, in all material respects, of the financial statements presented.

The Committee is also concerned about the costs of implementing any changes to the Independent Auditor's Report as set forth in the Concept Release. Any changes would result in the auditor incurring additional costs that cannot necessarily be passed onto the audit client.

**Auditor's Discussion and Analysis ("ADA")**

The Committee does not support the adoption of an ADA section as an alternative for providing additional information.

As stated above the management of the audit entity should be responsible for the disclosure and information in the financial statements. The Committee believes by adding an ADA section that an expectation gap would be created. The readers/users of the financial statements could misunderstand the purpose and content of the ADA resulting in confusion. This expectation gap would be that users of the financial statement would expect that the auditor is responsible for the financial statements and the disclosure of non-financial information.

The Committee is particularly concerned about the disclosure of risks and "close calls".

This disclosure could lead to increased litigation generating by either disclosing or even not disclosing this information. Because of the concern of litigation the ADA would result in "boilerplate language" as defined in the Concept Release. The Committee, because of the possibility of litigation, sees no alternative to either the "boilerplate language" or language that is less than forthright.

The Committee further sees that the addition of an ADA and its requirement to disclose certain items could impair the relationship and limit open communication between the auditor, management and the Audit Committee.

The Committee finally is concerned about the timeframes required to put the ADA section together. Time frames to complete audits in many cases are already tight.

The Committee feels that the implementation of an ADA section would result in information not useful to the reader for the reasons detailed above.

**Required and Expended Use of Emphasis Paragraph**

The Committee does not support the adoption of expanding the emphasis of matter paragraph as presently detailed in auditing literature as a mean of making the Independent Auditor's Report more relevant and useful in making investment decisions.

The Committee does not see how this would improve the readers understanding without lengthy explanations of the specific matters involved. These lengthy explanations could result in the lessening of the impact and effect of the emphasis paragraph. The lengthy explanations could also result in the readers/users of the financial statements skipping the applicable paragraphs entirely.

The Committee believes that the current auditing literature as related to emphasis of a matter paragraphs is appropriate and should not be changed.

**Auditor Assurance on Other Information Outside the Financial Statements**

The Committee does not support the adoption of auditor assurance on other information outside the financial statements as an alternative for enhancing the Independent Auditor's Report.

Information outside the financial statements such as Management Discussion and Analysis could include forward looking or prospective material. The Committee is concerned about how the auditor would have the ability to judge these prospective materials.

The Committee, once again, is concerned about the timeframes required to gain and report assurance on information outside the financial statements. Time frames to complete audits in many cases are already tight.

The Committee finally sees this proposal as resulting in a separate required engagement between the auditor and the audit client. This would result in greater costs to both the auditor and the audit client.

The Committee finally does not believe only portions of other information outside the financial statement should be reported on because this could be misconstrued as providing assurance on all the information instead the intended purpose of providing assurance on only a portion.

Because of the costs, timeframe and the required expertise as detailed above, the Committee feels that the costs of this option outweigh the benefits.

**Clarification of Language in the Standard Auditor's Report**

The Committee feels that this proposed approach would povide a more cost efficient and meaningful manner for enhancing the auditor's reporting model. As detailed in this section of the Concept Release to have the auditor clarify and explain the auditor's responsibilites and role in the audit would serve to enhance the Independent Auditor's Report. These clarifications and explanations would also hopefully increase the financial statementsuser's knowledge of the audit process.

The suggested areas of clarification arealready those matters that are presently being communicated to the Audit Committee and management Therefore this should not result in any material increases of time or cost.

The Committee sets forth that the proposed clarifications within this approach are appropriate. The Committee does not foresee any potential implications to the scope of the audit or the auditor's responsibilities resulting from such clarifications.

The Committee does suggest that the PCAOB consider adding the use of headings for each significant paragraph within the Independent Auditor's Report in order to make the report better understood and easier to read should these clarifications be adopted.

**Considerations Related to Changing the Audit Report**

The Committee has tried to address this section of theConcept Release in eachthe above sections.

The Committee feels that the present auditing standards regarding Independent Auditor's Reports should be sufficient to address the concerns the users of financial statements have. The Committee believes the concerns may be that users do not fully understand the purpose and content of the Independent Auditor's Report. The Committee expresses the opinion that users of the financial statements are looking to the auditors to "do their job" for them at the expense of the auditors.

As stated above, the Committee believes that if more information in the financial statements is needed by users that generally accepted accounting standards should be reviewed and amended to address the concerns of users of the financial statement. The Committee takes the position that if more information is needed that additional disclosure via either footnotes to the financial statements or changes to the financial statement framework be contemplated.

Thank you for allowing us to comment on this matter.

Very truly yours,

Philip B. Pacino, CPA, Chairman
Accounting Principles and Auditing Procedures Committee
Massachusetts Society of Certified Public Accountants

September 27, 2011

Office of the Secretary
PCAOB
1666 K Street, NW
Washington, DC 20006-2803

Attention: Mr. J. Gordon Seymour

Dear Mr. Secretary,

I am Principal and Chief Executive Officer of The Bronson Group, LLC, and serve on the Board of Directors of Maxim Integrated Products ("Maxim") and currently chair the Audit Committee. Maxim is headquartered in Sunnyvale, CA. Maxim designs, develops, manufactures and markets a broad range of linear and mixed-signal integrated circuits for a large number of customers in diverse geographical locations. Maxim is traded on NASDAQ and has a market capitalization of approximately $7.5 billion as of September 15, 2011.

I appreciate the opportunity to respond to the Public Company Accounting Oversight Board's Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards ("Rulemaking Docket No. 034").

I share the following expectations or guiding principles stated by those expressing concerns against proposed changes to the auditor's reporting model as outlined in the Center for Audit Quality Letter dated June 9, 2011 issued by Cynthia M. Fornelli, Executive Director of Center Audit Quality.

- Auditors should not be the original source of disclosure about the entity. This should be the responsibility of the Company's management.
- Any changes to the reporting model should enhance, or at least maintain audit quality, as well as maintain the independence of the external auditors
- Any changes to the reporting model should add value, be useful to investors and improve investor understanding of a company's operations and financial statements - not create investor confusion. New standards should not create "dueling information" provided by management, the audit committee and the independent auditors.
- Auditor reporting should focus on objective measures rather than subjective measures.

For the purpose of this letter, I wanted to focus on the following questions identified by the PCAOB:

MAXIM
INNOVATION DELIVERED

Maxim Integrated Products
120 San Gabriel Drive
Sunnyvale, California 94086
408.737.7600

**Question No. 1: Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?**

The current auditor opinion standardizes the language for the investing public and the reader of the issuer's financial statements. The current format enables consistency, comparability and clarity of the audit report. However it is true that the investing public may not fully comprehend the meaning and intent of the auditor's opinion. The proposals of the board exceed the amount of information that the investing public can digest and the amount of information an auditor can provide in a manner that is meaningful to readers of financial statements.

The proposal to change the auditor's reporting model as discussed in Docket Matter No. 34 is problematical for the following reasons:

- Additional information and disclosures to be included in the auditor's report, e.g. discussion of off-balance sheet contingencies or sensitivity of loan loss estimates, can be provided by management in the notes to the financial statements if required to be disclosed by U.S. GAAP or other pertinent accounting guidance;

- The proposed change will require auditors to communicate subjective comments relating to significant auditing and accounting matters such as critical accounting estimates or contingencies. This proposed change increases risk to the auditing firm and will result in significantly higher costs to companies and financial statement readers. The auditors' subjective comments will not necessarily reduce investing risk; and

- An expanded auditors' report will likely not be able to alert users of an issuer's premeditated act of concealing material misstatements in the financial statements. In their current responsibilities and obligations, auditors are responsible for failing to detect material misstatement due to fraud.

**Question No. 5: Should the Board consider an Auditor Discussion & Analysis (AD&A) as an alternative for providing additional information in the auditor's report?**

I have significant concerns over a revised auditor's reporting model that includes a supplemental narrative report, such as an Auditor's Discussion and Analysis ("AD&A"). This would indeed be the most expansive form of reporting of the alternatives presented. An AD&A, as embodied in the current proposal is not appropriate for the following reasons:

- The AD&A could result in conflicting information for the reader / user of the financial statements, and potentially confuse the reader of financial statements. The disclosures in an AD&A would need to be consistent and factually correct in every respect with management's disclosures in its financial statements in order to not be confusing to the reader of the financial statements. Additionally, this will add significant redundant costs both internally

INNOVATION DELIVERED

Maxim Integrated Products
120 San Gabriel Drive
Sunnyvale, California 94086
408.737.7600

and externally to the annual audit with absolutely no value to the user of the financial statements

- Management is responsible for the preparation of the financial statements, including related disclosures. The addition of an AD&A could confuse the user of the financial statements as to who has responsibility for the financial statements.
- The external auditor would be subjected to significant additional liability for the preparation of an AD&A and would therefore significantly increase audit fees to account for potential litigation that could arise from such disclosures.

The issuers' management is and should continue to be responsible for the reporting function and the original source of financial statement information and related disclosures.

Recommendation

It is intuitive that improvements to the Auditor's Report can provide value and information that enables the investing public to understand the nature and scope of the audit examination. Certain types of disclosures will add value and information to the Auditor's Report but the current proposals are highly problematical.

The types of disclosures that could be very helpful are similar to those that are made to audit committee chairs of public companies such as:

1. How the auditor determines the scope of the examination.
2. How the audit examination is conducted (i.e. types of procedures followed)
3. How the auditor determines risk areas and reviews management's assessment of risk
4. How the auditor meets its responsibilities in accordance with the appropriate SEC regulations in financial reporting and disclosures
5. Definition of the audit report and to what it is says and what it does say about the financial statements

Safe harbor provisions should be enacted to avoid any additional risk that the auditor currently has today in the release of an audit opinion on financial statements. These provisions along with progressive disclosure of the independent auditors approach to the examination of the financial statements of the issuers could be an effective bridge to the PCAOB is trying to achieve without the adverse impacts of significant issuer cost and expanded auditor liability.

Very truly yours,

Joseph Bronson

**Re: Request for Public Comment: *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*, PCAOB Rulemaking Docket No. 034**

Dear Board Members and Staff:

Mayer Hoffman McCann P.C. ("MHM") welcomes the opportunity to comment on the *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (the "Concept Release").

MHM supports the Board's efforts to improve the relevance and contents of auditors' reports. We appreciate the Board's responsiveness to requests from the investment community for additional information from auditors. However, we are concerned that many of the concepts proposed would substantially revise the basic financial reporting relationship whereby management provides the needed information and the auditor provides an independent opinion on the fairness of the information provided.

MHM is also concerned that if The Public Company Accounting Oversight Board ("PCAOB" or the "Board") moves forward with the proposals in the Concept Release, there will be significant unintended consequences. Those unintended consequences include, but are not limited to:

- Confusion of the responsibilities of management and the auditor
- Contradictory and confusing messages to readers of audit reports
- Significantly increased litigation exposure for audit firms
- Significantly increased costs of audits to registrants
- Probable boilerplate language in audit reports
- Contraction of the number of firms competing for audits of registrants
- Potential effects on global competitiveness of U.S. capital markets

As a general comment, we have noticed that the Concept Release uses the term auditor in its singular form and seems to be directed toward an individual auditor. Of course this is rarely the case in audits of public companies, most of which are conducted by substantial firms consisting of many auditors and including quality control systems, consultation policies, risk management policies and national office oversight. It appears that these features have not been considered in the Concept Release which may be the cause of our expected unintended consequences. Additionally, the concept of "joint audits" whereby the audit would be conducted by multiple firms is currently being considered in Europe.

We will explain our concerns with each of these consequences and then address the proposals in the Concept Release.

## Confusion of the responsibilities of management and the auditor

The efficiency of our capital markets depends upon public trust in the financial information provided by the entities seeking that capital. That public trust results from adequate disclosure of financial information by management that is examined by independent auditors. Many of the proposals in the Concept Release would require the auditor to provide significant additional disclosures about the audit and consequently about the entity. Presumably the parties requesting these disclosures expect the auditor to provide them without respect to the views and opinions of management. That is both inconsistent with the traditional role of the auditor and unreasonable in light of the relative familiarity of the parties with the entity.

The persons in financial reporting oversight roles in public companies are responsible for the completeness and accuracy of financial reporting in their filings with the Securities and Exchange Commission ("SEC"). These individuals spend full time designing the systems; collecting the data; researching, consulting and solving complex accounting and disclosure issues, and summarizing the information that is ultimately presented in the SEC filings. Additionally, their efforts are overseen and reviewed by the Audit Committee and the Board of Directors of the entity. In contrast, in forming an opinion on the financial statements, the auditor only spends a fraction of the time that management spends in producing the financial statements and developing the disclosures.

Therefore, if additional disclosures are necessary and can be provided at a reasonable cost, they should be provided by management in conformity with requirements and standards issued by the SEC and/or the Financial Accounting Standards Board ("FASB").

The current reporting system should not be subverted through "back door" requirements by the PCAOB for auditors to provide information that is not required to be provided by management and with which they may not agree.

The concept that management discloses and auditors opine should be maintained.

## Contradictory and confusing messages to readers of audit reports

As noted in the Concept Release "The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a 'pass/fail model.'" Of course, in actuality for SEC registrants, the only acceptable alternative is to "pass" since the SEC will not accept a qualified opinion. If the financial statements do not "pass" the auditor does not issue a report and the registrant does not file the financial statements. While this model is very simplistic, it is also very easily understood.

The Concept Release asks whether or not the pass/fail model should be retained. MHM believes that it should. This model is a direct affirmation of the auditor's assurance as to the fair presentation of the financial statements. Further, we believe that it should be left intact. A number of years ago auditors were allowed to issue "subject to" opinions. In this form of opinion the auditor could issue a clean opinion subject to the resolution of certain uncertainties. The profession subsequently determined that this type of opinion was not useful to readers of the opinion and that the auditor should issue either a clean or modified opinion depending on how management accounted for or disclosed the uncertainties. MHM believes that was an improvement to the auditor's reporting model that required the auditor to take more responsibility for the type of opinion rendered.

Many of the proposals in the Concept Release would require the auditor to supplement the audit report with additional information related to:

- Difficult or contentious issues including "close calls"
- Material matters where disclosures could be enhanced or different accounting methods could be applied
- Permissible alternative accounting treatments and which one is preferred by the auditor
- Critical accounting policies and critical accounting estimates discussed with the audit committee
- Significant risks identified by the auditor and the audit procedures performed in response to those risks.

MHM believes that much of this additional information would contradict the auditor's opinion on the financial statements; could be viewed to be a piecemeal opinion, and would produce confusion rather than clarity as to the responsibility the auditor is taking for the opinion.

### *Significantly increased litigation exposure for audit firms*

The Concept Release refers to "...changes that investors and others are seeking to the auditor's report ...." MHM acknowledges that investors have long requested that auditors provide additional insight into the audit process. We are also aware that the PCAOB has recently established an Investor Advisory Group and that this group recommended that the Board undertake this initiative. We understand that large sophisticated institutional investors and analysts may understand the types of additional disclosures that are being requested of auditors. These sophisticated investors and analysts already have substantial access to companies and receive substantial information on which to base their investment decisions. We therefore feel that the sophisticated investors and analysts are primarily attempting to reduce the inherent risks associated with their profession by increasing the risks of the auditing profession. We also feel that individual investors, which make up the bulk of the investing public, would only be confused by the additional disclosures as noted above.

MHM is seriously concerned that the segment that will benefit the most from the proposed revisions to the auditor's report is the plaintiff's bar.

In addition to the matters noted above, the auditing profession is being asked to publicly disclose all of the areas of weakness in an audit. These disclosures include:

- Difficult or contentious issues including "close calls"
- Significant risks identified by the auditor and the audit procedures performed in response to those risks.
- The results of audit procedures performed on audit risk areas or areas requiring significant auditor judgment
- Material matters where disclosures could be enhanced or different accounting methods could be applied
- Areas in which there were difficulties encountered in performing the related audit procedures

With hindsight after a financial problem for a company, these types of disclosures by the auditor will provide a blueprint for the lawsuit against the auditor. This is tantamount to purchasing a gun and ammunition; loading the gun, and handing it to your assassin.

### *Significantly increased costs of audits to registrants*

Section IV. A. of the Concept Release includes the following statement. *"Since many of the alternatives presented in this concept release focus on auditor reporting and do not require additional audit procedures by the auditor in forming the opinion on the financial statements, some expressed a view that the auditor's incremental efforts and cost to report such information should be minimal."* The section then goes on to discuss a few reasons that this may not be the case.

MHM would point to the previous section of our comments and emphasize the fact that it may be impossible to do enough work to manage the litigation risk associated with the requested additional disclosures. Accordingly, we find it totally improbable that any CPA firm would allow individual line partners to provide the types of disclosures requested, particularly in a free-writing format, without an extensive review by regional and national quality control and risk management personnel. It would also, in many cases, probably require review by the firm's legal counsel as well.

Our Firm's experience in negotiating the wording of management letters and communications with audit committees, which are currently not public documents, indicates that significant amounts of time would be required to formulate additional disclosures in audit reports which would be available to the public. As noted in the Concept Release, this discussion and debate among the auditor, management and the audit committee will require additional time which will place significant additional pressure on preparers' ability to meet public reporting deadlines.

It is totally inconceivable that the proposals included in the Concept release would not result in substantial increases in the costs of audits and in the time required to complete the audit and issue the auditor's report.

### *Probable boilerplate language in audit reports*

MHM believes that in response to the significantly increased litigation risks and the accompanying significant increased costs of the audit, most firms will develop standardized forms for the new audit reports. It is impractical to think that any national firm will allow a line partner in a remote location to jeopardize the capital of the firm. Consequently, standardized or "boilerplate" reports will quickly be developed.

### *Contraction of the number of firms competing for audits of registrants*

We also believe that in response to the significantly increased litigation risks, many firms which each perform a relatively few number of public company audits will decide that the rewards no longer justify the risks associated with these engagements. This will of course increase the concentration of firms willing to accept these risks and reduce the competition for audits of registrants. This may also serve to increase the cost of audits of public companies.

### *Potential effects on global competitiveness of U.S. capital markets*

MHM believes the PCAOB should thoroughly assess the potential effects of the proposed regulation and the additional cost of compliance on the effects on the U.S. Capital Markets. Numerous graduate studies have concluded that the Sarbanes Oxley legislation has driven both foreign and domestic companies from the U.S. Capital Markets since its introduction in 2002. This factor was also noted by Treasury Secretary Paulson's Committee on Capital Markets Regulation which cited the role of Sarbanes Oxley in the decline of U.S. dominance in investment banking. The Board should consider that foreign registrants are either exiting or by passing entirely the U.S. capital markets and should reconcile this fact pattern with the SEC's desire that the U.S. capital markets remain an attractive destination of capital formation for foreign entities.

The Board should also consider that Sarbanes Oxley has been a frequent target of competing foreign capital formation centers. Given the global competition in capital markets, and that many of these companies are based in emerging growth markets, the Board should bear this in mind to ensure that individual investors which comprise a significant segment of the U.S. markets are being denied an opportunity to these high growth opportunities due to increased regulatory burden.

We fear that the increased cost of regulatory compliance that we have seen with Sarbanes Oxley would only continue under this proposal.

**Potential Alternatives for Changes to the Auditor's Report**

***Auditor's Discussion and Analysis***

The first alternative to the current form of the auditor's report presented in the Concept Release is a supplemental narrative report described as an Auditor's Discussion and Analysis ("AD&A"). The intent of an AD&A would be to provide the auditor with the ability to discuss in a narrative format his or her views regarding significant matters and to provide investors and other financial statement users with a view of the audit and the financial statements "through the auditor's eyes."

MHM is strongly opposed to an AD&A.

We are concerned that all of the unintended consequences previously discussed are embodied in an AD&A.

- Auditors should not disclose information not previously disclosed by the management of their client. This is contrary to the normal relationship where management discloses and the auditor opines.
- An unqualified audit opinion supplemented with an AD&A that includes information about audit risk, audit procedures and results, management's judgments and estimates, accounting policies and practices, difficult or contentious issues including "close calls" and areas where the auditor would have preferred that management had chosen different accounting policies or enhanced disclosures seems to be contradictory at best.
- An unqualified audit opinion supplemented with an AD&A that includes the suggested information will be confusing to the vast majority of readers of the report and users of financial statements.
- An unqualified audit opinion supplemented with an AD&A that includes the suggested information will require extensive interaction between auditors, management, audit committees and both parties legal counsel and will discourage cooperation and encourage animosity among the parties.
- An unqualified audit opinion supplemented with an AD&A that includes the suggested information will significantly increase the cost of audits due to the required extensive review by regional and national quality control and risk management personnel as well as the firms' legal counsel.
- An unqualified audit opinion supplemented with an AD&A that includes the suggested information will provide a blueprint to the plaintiff's bar for claims against the auditor in any subsequent legal actions.
- An unqualified audit opinion supplemented with an AD&A that includes the suggested information will result in boilerplate language that does little to provide additional information to investors due the firms' desire to maintain reasonable costs and to protect them from increased legal liability.

MHM believes requiring an AD&A to be a bad idea that should not be considered as an alternative for future changes to the auditor's report.

### *Required and expanded use of emphasis paragraphs*

Emphasis paragraphs are extremely useful in limited circumstances. They provide the auditor with a mechanism to point to certain disclosures within the financial statements providing information the auditor feels is particularly important to users of the statements. They might also allow the auditor to emphasize a matter that was particularly crucial in forming the auditor's opinion on the financial statements. Emphasis paragraphs are not required but are a tool that the auditor may use when judgment calls for it.

Expanded use of emphasis paragraphs might be useful with additional guidance as to when they would be beneficial. They are an effective means of directing the reader's attention to areas within the financial statements that the auditor feels are significant.

MHM does not support required and expanded use of emphasis paragraphs.

- Emphasis paragraphs should not be mandated in all audit reports. The vast majority of audit report will probably never need an emphasis paragraph.
- Required and expanded use of emphasis paragraphs, particularly including key audit procedures pertaining to the matters identified may be seen as contradictory to an unqualified opinion and result in confusion on the part of the readers of the auditor's report.
- Required and expanded use of emphasis paragraphs will require extensive interaction between auditors, management, audit committees and both parties legal counsel and will discourage cooperation and encourage animosity among the parties.
- Required and expanded use of emphasis paragraphs will significantly increase the cost of audits due to the required extensive review by regional and national quality control and risk management personnel as well as the firms' legal counsel.
- Required and expanded use of emphasis paragraphs will provide a blueprint to the plaintiff's bar for claims against the auditor in any subsequent legal actions.
- Required and expanded use of emphasis paragraphs will result in boilerplate language that does little to provide additional information to investors due the firms' desire to maintain reasonable costs and to protect them from increased legal liability.

If, in all cases, investors need a "road map" to the more significant matters included in the financial statements it should be provided by the company with appropriate review by the auditor.

### *Auditor assurance on other information outside the financial statements*

MHM agrees that an auditor providing assurance on information outside of the financial statements could improve the quality, completeness, and reliability of such information, providing investors and other users of financial statements with a higher level of confidence in information about the company that is provided by management.

As noted in the Concept Release, current standards (AT sec. 201, *Agreed-Upon Procedures Engagements* and AT sec. 701, *Management's Discussion and Analysis*) provide companies the ability to retain auditors to provide assurance on information outside the financial statements. However, auditors rarely perform these services since there is no SEC requirement for companies to engage auditors to perform these procedures.

If auditors are to be required to perform these types of engagements, the SEC should require registrants to engage auditors to provide the assurance needed. The requirement should not be "back-doored" by the

PCAOB with a requirement for auditors to perform without a requirement for the company to engage us for the service.

Additionally, if the service is to be required, the SEC must realize that it will take additional time and a determination will be needed regarding the timing of the service in relation to current filing deadlines.

MHM could also support clarifying the current auditor's report to disclose our responsibility to read the information outside the financial statements and consider whether it is materially consistent with the audited financial statements.

### *Clarification of language in the standard auditor's report*

MHM agrees that in certain cases clarification of the language in the current auditor's report might enhance the reader's understanding of what the report is trying to convey. While we agree this might help in some areas, we do not think it is necessary for each of the terms suggested in the Concept Release as follows:

- Reasonable Assurance – It seems that adding language to the effect that "reasonable assurance is a high level of assurance, but not absolute assurance" would merely be additional words without a real improvement to clarity.
- Auditor's Responsibility for Fraud – We would not object to adding the phrase "whether caused by error or fraud" to the statement regarding our responsibility to obtain reasonable assurance about whether the financial statements are free of material misstatement.
- Auditor's Responsibility for Financial Statement Disclosures – Although we realize that the notes to the financial statements are not specifically mentioned in the auditor's report, we find it hard to believe that any knowledgeable reader would not consider them covered by the report when the footer on each of the statements mentioned in the report states that the notes are an integral part of the statement. However, we are not opposed to adding the notes to the financial statements to the list of items examined.
- Management's Responsibility for the Preparation of the Financial Statements – We suggest that the PCAOB incorporate the wording used by the AICPA's Auditing Standards Board in its clarified standard on auditor's reports.
- Auditor's Responsibility for Information Outside the Financial Statements – See our comment above. We would not object to disclosing our responsibility for this information.
- Auditor Independence – Since the title of the standard auditor's report is "Report of Independent Registered Public Accounting Firm", we feel that further clarification within the body of the report would only be redundant.

---

We appreciate the opportunity to provide comments on the Exposure Draft. Please contact Ernie Baugh (423-870-0511) if you have any questions.

Respectfully Submitted,

Mayer Hoffman McCann P.C.

**Subject:** Rulemaking Docket Matter No. 34

**RE: PCAOB No. 2011-003**

We are two sell-side equity analysts that publish reports on publicly traded financial companies in the United States, but our comments below are solely submitted in our personal capacity. These views do not reflect those of our employer, Credit Agricole Securities or affiliated company, CLSA.

We rely on financial statements from the companies we cover to gauge two key items: past performance (on an absolute and relative basis) and as means to test the veracity and quality of management. These financial statements are the life blood of our profession—something that we cannot live without and, when not working well, make our jobs and, in our view, all of finance perform well below its potential.

We rely on auditor reports as the key tool for making sure financial statements are accurate and fair. We also rely on the external auditors to make sure that contingent liabilities (such as credit guarantees, legal considerations, and long-term compensation plans) are accurately reported and capture all relevant long-term risks. Finally, we rely on the auditors to make sure all material risks are reported in the company's quarterly and annual reports so independent analysts and investors can make sufficiently informed sensitivity analyses for both the short and long terms. In short, analysts and investors cannot do their jobs well without the auditors doing their jobs well too.

Yet, the only communication between auditors and investors is typically a standard three-paragraph report presented in a company's annual report. Moreover, these reports are essentially identical for the overwhelming majority of all public companies with little or no variation regardless of sector, geography, etc. It is difficult to gauge the quality of the reporting process, except after firms fail when shortcomings are typically found in the financial statements, risk disclosures, and often the auditing processes. We believe more comprehensive communication between the auditors and analysts would be helpful for all parties involved—investors, the reporting companies, and the auditors as well.

To that end, we believe that the four most important changes to the audit report would require the auditor to: (1) discuss the auditor's assessment of the estimates and judgments made by management in preparing the financial statements and how the auditor arrived at that assessment; (2) disclose areas of high financial statement and audit risk and how the auditor addressed these risk areas; (3) discuss unusual transactions, restatements, and other significant changes in the financial statements (including the notes); and (4) discuss the quality, not just the acceptability, of the issuer's accounting practices and policies.

In addition, we believe that the audit report should indicate the auditor's responsibility for detecting material fraud. The standard audit report should clearly define that the auditor has a responsibility to obtain reasonable assurance as to whether the financial statements are materially misstated, whether caused by error or fraud.  In addition, the report should indicate that reasonable assurance represents a high, although not absolute, level of assurance.

Please feel free to contact us for any more information.

Regards,

Mike Mayo, CFA

Re: PCAOB Rulemaking Docket Matter No. 34

McGladrey & Pullen, LLP appreciates the opportunity to offer our comments on the PCAOB's *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (Concept Release). Our comments are organized by those that are general in nature, followed by those that relate to the specific potential alternatives for changes to the auditor's report presented in the Concept Release.

## General Comments

We agree that the PCAOB should explore potential changes to the auditor's reporting model. Improvements should be considered for the auditor's communications to investors regarding the work performed by the auditor under the current framework for the audits of the financial statements and internal control over financial reporting. This should include communicating additional information to investors within the parameters of PCAOB auditing standards and SEC disclosure requirements. In that regard, we believe the PCAOB should first focus on improvements to the current auditor's reporting model. Consideration of areas where auditors could provide assurance on information outside of the financial statements should be a secondary future project.

While investors, analysts and other users of the financial statements have expressed a desire and need for more information regarding certain aspects of the issuer's financial statements and business operations, it is important that management or the audit committee remain the source of such information. As discussed below, we believe that the auditor should not be the original source of disclosure of information about the issuer. However, if changes were made to SEC disclosure requirements whereby management or the audit committee were required to disclose additional information about the issuer, or even the nature of discussions with the auditor, we would support the auditor reporting on the accuracy of those disclosures as long as the information was not overly subjective in nature.

Clear objectives for any changes to the auditor's reporting model should be established and clearly communicated to issuers, auditors and users of financial statements. Regardless of the changes ultimately made to the auditor's reporting model, it will be important that investors and other financial statement users are educated on the changes and the implications of those changes.

## Comments on Specific Potential Alternatives for Changes to the Auditor's Report

***Auditor's Discussion and Analysis***

Our Firm believes the PCAOB should not consider a revised auditor's reporting model that would include a supplemental narrative report, referred to in the Concept Release as an Auditor's Discussion and Analysis (AD&A). We believe the responsibility for disclosure of any information about an issuer's financial statements should continue to be initially communicated by management or the audit committee.

Any analysis of the financial statements by the auditor could compete with management's disclosures, or shift the responsibility for accounting and disclosure away from the issuer and to the auditor. Further, auditors should not be the original source of disclosure about an issuer as this is contrary to the auditor's established role of attesting to information that is provided by management or the audit committee.

Not only would an AD&A be contrary to the auditor's established role, it also could create uncertainty on the part of users if such analysis was contradictory to that of management. If, on the other hand, the AD&A was consistent or nearly consistent with management's discussion and analysis in the issuer's annual report, there would be redundancy in disclosures resulting in additional disclosure overload. It therefore seems that the time involved by the auditor in drafting and reviewing an AD&A about information in the issuer's financial statements would result in additional costs that may not be commensurate with the potential related benefits.

If the AD&A provided information about the audit as opposed to a discussion about the financial statements, such a narrative report also would have the potential for disclosure overload and investor confusion. It would be nearly impossible for the auditor to succinctly discuss audit procedures that were responsive to significant risks identified by the auditor, why the procedures were responsive to such significant risks, and the results of those procedures. A discussion of such matters at a high level would provide no meaningful information to investors as it would become boilerplate. In addition, the time required to draft and review the AD&A would further condense the limited time available under existing SEC filing deadlines for the execution of existing audit responsibilities. Whenever additional work is required to be performed in an unchanging timeframe, a higher likelihood of error and mistakes exists resulting in possible negative effects on overall audit quality.

***Required and Expanded Use of Emphasis Paragraphs***

The required and expanded use of emphasis paragraphs could be a viable approach to providing additional information that might be useful to investors and other financial statement users. We believe such emphasis paragraphs should be objective, fact-based discussions of the most significant matters in the financial statements and should make specific reference to where such items appear in the financial statements. This approach would be beneficial in that it would highlight areas of audit emphasis in the auditor's report so that investors could refer to the related financial statement disclosures made by management. This method retains the auditor's established role of attesting to information provided by management.

We do not believe emphasis paragraphs should include auditor's comments on the key audit procedures pertaining to the identified matters. It would be nearly impossible for the auditor to succinctly comment on such audit procedures, and a discussion of such matters at a high level would provide no meaningful information to investors as it would become boilerplate.

If the Board decides to adopt required and expanded use of emphasis paragraphs, the resulting standard would need to include clear implementation guidance to help the auditor in assessing and consistently determining the types of matters that should be identified for emphasis.

***Auditor Assurance on other Information outside the Financial Statements***

Another alternative to enhance the auditor's reporting model could be to require auditors to provide assurance on information outside the financial statements, such as MD&A. This approach would allow the auditor to continue in its established role of attesting to information provided by management and also could provide more information for investors. One alternative for consideration in providing assurance on information outside the financial statements would be to require auditors to provide a separate attestation report on the examination of the completeness and accuracy of the issuer's critical accounting estimate disclosures in its MD&A. This alternative would be responsive to suggestions made by investors regarding the need for more information about important judgment calls made by management in preparing the financial statements. It should be noted, however, that the time required to perform an examination of the completeness and accuracy of the issuer's critical accounting estimate disclosures in its MD&A could detract from the limited time available under existing SEC filing deadlines for the execution of existing financial statement audit responsibilities.

With regard to the potential for auditor involvement with earnings releases, often the auditor performs procedures on these management communications prior to public distribution to assess the consistency of the financial information contained therein with the audit in process. We believe that the only potential engagement that might be performed on earnings releases prior to completion of the audit would be pursuant to existing PCAOB standard AT 201, *Agreed-Upon Procedures Engagements.* Such engagements however require that this type of report be restricted for use to specified parties. Given that earnings releases are by their very nature intended for general distribution, the PCAOB attestation standards would have to be modified for such a report to be of value to users of the earnings releases.

***Clarification of Language in the Standard Auditor's Report***

In addressing whether there should be clarification of language in the existing standard auditor's report, the question of whether the current model for the auditor's report should be retained should first be addressed. We support the retention of the current auditor's report as the issuance of an unmodified opinion continues to provide investors a measure of comfort with respect to the issuer's financial statements. However, we believe the addition of clarifying language to the standard auditor's report would be beneficial in enhancing the understanding of the auditor's role and responsibilities. Such clarifying language should be standardized, rather than tailored, so as to not create inconsistency and potential investor uncertainty.

We believe the addition of clarifying language to the following matters identified in the Concept Release could be beneficial:

- "Reasonable assurance about whether the financial statements are free of material misstatement" – Define the terms "reasonable assurance" and "material misstatement."
- Auditor's responsibility for fraud – Include a statement that the auditor is responsible for planning and performing the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement whether caused by error or fraud.
- Auditor's responsibility for financial statement disclosures – Specifically state that the financial statement footnotes are an integral part of the financial statements and are covered by the audit report.
- Management's responsibility for the preparation of the financial statements – Expand this concept to include management's responsibilities for the Form 10-K. Also consider including a brief description of the audit committee's responsibilities.
- Auditor's responsibility for information outside the financial statements – Describe the auditor's responsibility for information outside the financial statements.
- Auditor's independence – Explicitly state that the auditor is independent of the issuer under all relevant SEC and PCAOB rules.

Also, we believe the addition of clarifying language to the following additional matters could be beneficial:

- Auditor judgment – Highlight the necessary use of professional judgment in making decisions regarding risk assessments and the selection of audit procedures.
- Scope limitations and non-compliance with U.S. generally accepted accounting principles (GAAP) – Summarize the auditor's responsibility in situations where the audit scope is limited or when it is determined that the financial statements are not in accordance with GAAP.
- Networks – If applicable, describe the accounting firm's network structure, the responsibility of the member firm signing the audit report, and the participation of other member firms in the audit.

We would be pleased to respond to any questions the Board or its staff may have about these comments. Please direct any questions to Bob Dohrer, National Director of Assurance Services at 919-645-6819.

Sincerely,

McGladrey & Pullen, LLP

Washington, D.C. 20006-2803

**In regards to*: Request for Public Comment: Concept Release on Possible Revisions to PCAOB Standards related to reports on Audited Financial Statements and related Amendments to PCAOB Standards, PCAOB Rulemaking Docket No. 34***

Dear Public Company Accounting Oversight Board,

Meritor, Inc. ("We") appreciates this opportunity to comment on the Public Company Accounting Oversight Board's ("PCAOB" or "the Board") Release No. 2011-003, *Concept Release on Possible Revisions to PCAOB Standards related to reports on Audited Financial Statements and related Amendments to PCAOB Standards.* We are supportive of certain proposed clarifications to the auditor's report, however would like to share our reservations on the proposed rule.

The following are our comments on the potential direction of the proposed standard-setting project on the content and form of reports on audited financial statements:

***Form of the Auditor's Report***

We are in favor of the Board seeking input from investors, auditors, issuers, and other interested parties regarding their views on how to make the report more meaningful to users of financial statements. In the wake of the financial crisis, investors and independent commentators have been highly critical of the auditors for these failures and of regulators for failing to hold them accountable. The undertaking of improving the information provided and the language used in the auditor's report is recommended to improve investor confidence in the process.

In our opinion, the Board should retain the 'pass/fail' model on the auditor's report. The auditor's report is not the best place to go into details of operations, financial condition or other matters affecting a company's business in short and long-term periods. The purpose of a financial statement audit is to express an opinion on whether the financial statements meet the requirements of the underlying accounting framework and the auditor's report should continue to focus on the outcome of the audit performed with this purpose. If additional information is required to be presented in the auditor's report beyond what is currently provided in the 'pass/fail' model of the report, the auditors would generally be required to enhance the scope of their engagements significantly. The increase in the scope of audit engagements would result in significantly higher audit costs. In addition, auditor's responsibility with respect to financial statements would need to be further clarified if significant additional qualitative information is presented in the auditor's report.

Management is the most appropriate party to provide detailed information regarding a company's operations, financial condition and other matters to financial statement users. Management has the necessary insights into the industry in which the company operates, related risks and the company's business strategies to address those risks. The focus of financial statement auditors should continue to be on whether the financial statements are presented in accordance with the underlying accounting framework. While performing audit procedures on financial statements, an auditor gains significant insights into a company's operations. In our opinion, this information should be used by the auditor in assessing if the company has made appropriate disclosures required by the accounting framework and the Securities and Exchange Commission rules.

Investors should be able to obtain all necessary disclosure information about a company's results of operations, financial position and cash flows from the footnote disclosures that are required by the financial reporting framework. Investors should not be left to rely on an auditor for such information. We believe that company management is responsible for providing accurate and meaningful information to its investors.

The standard auditor's report could be modified to provide clarification on the following:

- Auditor's Responsibility: Clarification is needed to minimize the difference between how auditors perceive their role and how financial statement users perceive it. The standard report states the auditor's responsibility is to express an opinion on the financial statement based on their audit. We propose including additional language in the auditor's report stating auditors are responsible for detecting material misstatement due to errors or fraud.

- Reasonable Assurance: The standard auditor's report states an audit is performed to obtain reasonable assurance about whether the financial statements are free of material misstatements. Some users may not understand the level of assurance intended to be conveyed by this statement. Therefore, a definition of reasonable assurance could be included in the standard report to increase the comprehensibility of the report.

**Auditor's Discussion and Analysis**

We do not believe that the Auditor's Discussion and Analysis (AD&A) would be beneficial in providing any additional information about a company's operations, its financial condition or other matters. We believe that the incremental reporting in the form of AD&A is likely to cause confusion on the part of users of financial statements without a corresponding benefit. In addition, we believe the introduction of AD&A would lead to confusion among financial statement users about responsibility of the auditor vis-à-vis management.

Management's Discussion and Analysis (MD&A) currently provides most of the information utilized by investors, analysts and other interested parties. AD&A would not provide anything additional that is not currently available to investors. In case additional information is considered necessary for use by the investment community, this could be provided by enhancing discussion in the MD&A.

Auditors, by their training and experience, are best suited to provide assurance specific to accounting framework related matters and are not analysts, investment advisers or business commentators. In general, the auditors are not trained to evaluate and communicate a company's business and strategic risks. Therefore, adding AD&A to their reporting requirements would increase the complexity of the audits and would dilute and delay the timely delivery of financial statement audit services provided by the auditors.

Furthermore, the addition of AD&A to auditor reporting requirements would significantly increase the cost of a financial statement audit, which, in our opinion, will not justify the benefits provided to investors.

**Required and Expanded use of Emphasis Paragraphs in Auditor's Report**

We do not believe a required and expanded use of an emphasis paragraph in the auditor's report would enhance the usefulness of the auditor's report. Current accounting frameworks do include disclosure requirement about significant matters affecting a company's business, including the following:

- Significant accounting policies used in preparing the financial statements,
- Significant judgment and estimates made by management, and
- Areas with significant measurement uncertainty.

Any additional areas where enhanced disclosures are considered necessary should be included in the accounting framework rather than incorporating them in the auditor's report in the form of an emphasis paragraph. Such additions to the financial statement disclosure requirements could include areas where significantly diverse accounting treatments are available under the current accounting framework and are used by others in a company's competitive environment.

We are also not in favor of including discussion in the auditor's report about audit procedures performed by the auditor in arriving at their audit conclusions. We believe this information would not provide any useful information to the financial statement users since the independent auditor is engaged on behalf of investors as an expert in accounting and auditing.

**Auditor Assurance on Other Information Outside the Financial Statements**

Under the current auditing standards, auditors provide limited assurance on information disclosed in the MD&A. We do not believe auditors should be required to provide audit level assurance on information outside of the financial statements, including the MD&A, as an alternative for enhancing the auditor's reporting model. As discussed previously, the auditors by their training and experience are best suited to provide audit level assurance on matters reflected in financial statements as they relate to an accounting and financial reporting framework and those related to a company's internal control environment.

For information disclosed outside of the financial statements, it may be difficult to design and perform appropriate audit procedures and obtain sufficient audit evidence. These matters involve significant management judgment based on in-depth knowledge and experience accumulated over long periods of time. Requiring an audit of such matters would introduce significant challenges in the day-to-day business management processes and it may be difficult for the auditors to provide objective assurance on these matters.

We would welcome the opportunity to further discuss our comments in this letter.

Sincerely,

Kevin Nowlan

**Re: Request for Public Comment: *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* [PCAOB Rulemaking Docket No. 34]**

Dear Office of the Secretary:

MetLife, Inc. (MetLife) appreciates the opportunity to provide comments to the Public Company Accounting Oversight Board's (PCAOB) **Request for Public Comment: *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*** (the concept release). MetLife is a leading global provider of insurance, annuities and employee benefit programs, serving 90 million customers in over 60 countries. Through its subsidiaries and affiliates, MetLife holds leading market positions in the United States, Japan, Latin America, Asia Pacific, Europe and the Middle East. Our responses incorporate consideration of our position not only as a preparer of audited financial statements for a widely-held public enterprise, but also as a significant financial statement user, with a general account investment portfolio of US corporate debt and equity securities of approximately $100 billion as of June 30, 2011.

Metlife supports the PCAOB's overall effort to undertake standard-setting initiatives to consider certain enhancements to improve the quality and content of the current auditor reporting model. However, any changes must provide useful and objective information to investors and other financial statement users, while continuing to acknowledge that the preparation of the financial statements and related disclosures are the responsibility of management and that the auditor's opinion is on the fair presentation of the financial statements taken as a whole.

In our view, it is management's role, and not that of the auditor, to disclose all financial information relevant to investors and other financial statement users to facilitate making informed decisions based on those financial statements. Management owns the financial information, is most familiar with it, and is in the best position to disclose it in the most complete and meaningful manner. The primary role of the auditor's report should remain in providing an opinion as to whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in accordance with the applicable financial reporting framework. The auditor's opinion on the financial statements, in our view, must remain, and, perhaps more importantly, be perceived by financial statement users to remain, on the financial statements "taken as a whole". The moment the auditor's report begins to discuss specific audit risks, audit procedures, management judgment calls, etc. the perception of the opinion not covering the financial statements overall is compromised, which we believe will inevitably lead to lack of clarity, consistency and comparability for financial statement users.

In this regard, while MetLife does support the specific proposals in the concept release requiring the auditor's report to provide additional information to clarify what an audit represents and the auditor's specific responsibilities, we do not support the addition of an Auditor Discussion and Analysis (A, D&A) to the auditor's reporting model nor the required and expanded use of emphasis paragraphs in the auditor's report, as introduced in the concept release.

Certain disclosures suggested for the auditor's report in these areas are already required as part of financial statement prepared in accordance with Accounting Principles Generally Accepted in the United States (US GAAP), while others have traditionally been confined to communications between the auditor and the company's audit committee. Providing the latter information publicly, without the appropriate context or comparability, may lead to significant levels of confusion and potentially misinformation for financial statement users. Because any new disclosures in the auditor's report will most likely result in a company opting to make many of those disclosures themselves, it could result in the audit community being perceived as effectively dictating a new round of required financial statement disclosures. However, there would be no established framework to ensure consistency and comparability afforded financial statement disclosures that are subject to the full exposure and comment of the due process established by the Financial Accounting Standards Board (FASB). In this regard, if investors and other users feel the need for new or expanded disclosures in the audited financial statements to provide additional insight into areas of significant risk, uncertainty or judgment, management should be explicitly required to make those disclosures. Such disclosures should be established through the same standard-setting process as all other financial statement disclosures, and auditors would then encompass those disclosures in their overall opinion on the fair presentation of the financial statements.

The following pages present our more specific thoughts on each of the four potential alternatives for changes to the auditor's report outlined in the concept release: (1) A, D&A, (2) Required and Expanded Use of Emphasis Paragraphs, (3) Auditor Assurance on Other Information Outside the Financial Statements and (4) Clarification of the Standard Auditor's Report. We once again thank you for the opportunity to respond to your proposals and your consideration of our observations and comments. If you have any questions regarding the contents of this letter, please do not hesitate to contact me.

Sincerely,

Peter M. Carlson

***Auditor's Discussion and Analysis and***
***Required and Expanded Use of Emphasis Paragraphs (Emphasis Paragraphs)***

In accordance with generally accepted auditing standards, auditors design the audit and, in turn, related audit procedures, taking into consideration, among other things, materiality, financial and non-financial risks, and the review and understanding of management judgments, including the application of alternatively permissible accounting treatments, all of which can vary significantly between companies. The consideration of all of this information, when taken as a whole, along with the results of their overall and unique set of audit procedures designed to address these risks and uncertainties, allows the auditor to form an opinion as to the fair presentation of the overall financial statements, including financial statement disclosures.

The proposals in this concept release contained in the A, D&A and/or the Emphasis Paragraphs involve potential disclosure by the auditor of specific audit risks and specific audit procedures to address those risks, difficult and contentious issues with management, significant management judgments and estimates, and alternative accounting treatments.

ASC 275, *Risks and Uncertainties*, currently requires management to disclose in the audited financial statements, risks and uncertainties that could significantly affect the amounts reported in the financial statements in the near term, or the near term functioning of the company, stemming from the nature of the company's operations, the use of estimates, and significant concentrations in the company's operations. Financial statements prepared in accordance with US GAAP, therefore, already contain audited footnotes addressing many of the potential suggested disclosures raised in the concept release.

We believe that the additional suggested disclosures already form part of the required "internal" disclosure today between the auditor and the company's audit committee and should not be considered for incorporation into the auditor's report for the following reasons:

a) There could be a wide variety of interpretations by financial statement users as to how the information should be interpreted and used unless the entire context to which this information relates in the overall formation of the auditor's opinion is discussed and disclosed.

b) Audit committees of public companies in the United States are required to have at least one "financial expert" with knowledge of accounting and experience in preparing, auditing, or analyzing financial statements with a level of complexity of accounting issues that are generally comparable to the complexity of issues that can reasonably be expected to be present in that particular company's financial statements. In contrast, most financial statement users do not have the requisite audit or accounting background to assess whether certain audit procedures performed were adequate to address the risks identified by the auditor, thus potentially creating confusion and misunderstanding if disclosed.

c) Certain audit risks and related audit procedures are common to many companies, for example, those in a particular industry. Without providing a framework that can be consistently reported that would allow differentiating one company's specific audit risks and related procedures from another will significantly diminish the usefulness of providing this information.

d) There are currently a significant number of accounting standards that allow more than one acceptable treatment for the same transaction, based on management's judgment. As accounting standards become more principles-based, alternatively permissible accounting treatments will only increase and potentially become more overwhelming to financial statement users to sort out. Also, without quantifying the effects of such differences, these disclosures will most likely create more confusion than clarity.

e) We believe that information regarding the difficult or contentious issues (including "close calls") faced by an auditor is best left for discussion with a company's audit committee in their governance role rather than inclusion in the auditor's report. Requiring this type of disclosure in the auditor's report could conceivably have the effect of stifling, constraining, and even eliminating often constructive dialogue between a company and its auditors on routine accounting matters, because of the natural tendency for this type of activity to be viewed negatively by the public, if ever disclosed by the auditor. At an extreme, over time this could have the unwanted effect of the auditor's views on all accounting matters unduly influencing management's view, putting pressure on the perception of auditor independence.

As an alternative to the A, D&A and Emphasis Paragraphs, so as not to diminish the current role of the audit committee, we believe that any new disclosures regarding risks and accounting practices and judgments, if any, should be made by management and developed through the appropriate accounting standard-setting process for inclusion in the audited financial statement footnotes. This will allow for appropriate consideration and input of users, preparers, and other stakeholders and provide a consistent framework to ensure comparability and usefulness. Current SEC Regulation S-X Management, Discussion and Analysis (M, D&A) disclosure requirements for public companies of critical accounting estimates, for example, could be formally incorporated into the audited financial statement footnotes and expanded or revised as needed to address many of the concerns raised in the concept release.

***Auditor Assurance on Other Information Outside the Financial Statements***

The concept release discussed another alternative to enhance the auditor's reporting model, which could be to require auditors to provide assurance on information outside the financial statements, such as M, D&A or other information (for example, non-GAAP information or earnings releases).

Current auditing standards describe the auditor's responsibilities regarding other information outside the financial statements in documents containing audited financial statements (e.g., M, D&A). These responsibilities include reading and considering whether such information or the manner of its presentation is materially inconsistent with the financial statements or represents a material misstatement of fact.

Although we believe that an auditor providing assurance on information outside of the financial statements could potentially improve the quality, completeness, and reliability of such information, we are not sure that the benefits outweigh the costs. In addition, most companies accessing the equity and debt markets periodically provide “comfort letters” to underwriters and attorneys that represent investors’ interests. Although these letters outline specific procedures and provide support for underlying financial information contained outside the financial statements, they are not public reports and may not be issued very often by some companies. However, because they can be required unexpectedly at any time, it is not uncommon for companies to expect their auditors to perform a level of review each reporting period on the information outside of the financial statements in anticipation of potentially issuing a comfort letter at some later date. Current attestation reports outlined in the auditing standards with respect to M, D&A are not generally used in lieu of comfort letters, which could call into question whether the benefits of requiring such reports in some form or fashion will outweigh the cost.

Therefore, our recommendation is for the auditor’s report to contain clarifying language as to the auditor’s current responsibility for information outside the financial statements and not require the auditor to separately report on other information outside of the financial statements.

***Clarification of the Standard Auditor's Report***

MetLife supports the PCAOB's potential enhancement of the auditor's reporting model that would involve clarifying language in the existing standard auditor's report to provide additional explanations in order to help financial statement users understand the auditor's report and clearly understand the auditor's responsibility, as described more fully below:

• *Reasonable Assurance* – We do not believe the meaning of the term "reasonable assurance" is misunderstood, and therefore, no further clarification in the standard auditor's report is necessary.

• *Auditor's Responsibility for Fraud* – The standard auditor's report does not mention "fraud", language from the auditing standards should be added to the auditor's report to clarify the auditor's responsibility.

• *Auditor's Responsibility for Financial Statement Disclosures* – The auditor's report should be clarified to enumerate the auditor's responsibility with respect to footnote disclosures in forming an opinion on the financial statements taken as a whole. It is important for financial statement users to explicitly understand that the auditing standards require auditors to: (a) perform procedures to test the financial statement disclosures and to evaluate whether the financial statements contain the information essential for fair presentation of the financial statements in conformity with the applicable financial reporting framework, (b) perform procedures to assess the risk of omitted, incomplete, or inaccurate disclosures, whether intentional or unintentional; and (c) to identify and test significant disclosures and, in integrated audits, to test controls over significant disclosures.

• *Management's Responsibility for the Preparation of the Financial Statements* – The auditor's report already states Management's responsibility, so we do not believe that additional clarification is warranted here.

• *Auditor's Responsibility for Information Outside the Financial Statements* – With respect to SEC filings, the auditor has a responsibility to read the other information in documents containing audited financial statements and consider whether such information, or the manner of its presentation, is materially inconsistent with the financial statements or represents a material misstatement of fact. We believe it would be beneficial for the audit report (at least for SEC registrants) to describe the auditor's responsibility with respect to such other information.

• *Auditor Independence* –We believe that the auditor's report could be clarified to include a statement in the auditor's report, in addition to the title, that the auditor has a responsibility to be independent of the company and has complied with applicable independence requirements of the PCAOB and SEC.

NATIONAL ASSOCIATION OF CORPORATE DIRECTORS

Re: Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards (PCAOB Rulemaking Docket Matter No. 34)

Dear Office of the Secretary:

On behalf of the board of directors of the National Association of Corporate Directors (NACD), we are pleased to submit our comments on the Public Company Accounting Oversight Board's ("PCAOB" or "Board") "Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards" (Concept Release).

Founded in 1977, the NACD's mission is to advance exemplary board performance, and the only national membership organization created for and by directors. Given the close interaction between the auditor and the audit committee, and because a large number of our members are audit committee members and chairs, NACD believes it is appropriate to provide our views on the issues presented in the Concept Release. Our comments are as follows:

***Primary Role of Management to Assert and Auditors to Attest***

NACD believes that it is imperative that any change to the auditor's reporting model or expansion to the role of the auditor preserve the established role of management asserting information on which the auditor attests. We believe any change that would require or allow the auditor to disclose original information about the company may result in unintended consequences including potentially supplanting the role of the audit committee in overseeing both the financial reporting process and external audit on behalf of investors, and undermining management's responsibility for the financial statements, including disclosures. NACD does believe that some level of auditor assurance on additional information disclosed by management could result in heightened management focus on these areas; however, any such areas should be carefully chosen to ensure that the benefits of the additional work outweigh the costs.

***Views on Alternatives Presented in the Concept Release***

The Concept Release presents several alternatives for potential changes to the auditor's reporting model that could increase transparency and relevance to financial statement users. We present our views on each alternative below.

## I. <u>Auditor's Discussion & Analysis</u>

NACD has significant concerns regarding the auditor's discussion and analysis (AD&A) alternative presented in the Concept Release for the reasons described below.

First, and most importantly, we believe that the AD&A approach would undermine the governance role of the audit committee to oversee the financial reporting process. As described in the Concept Release, the AD&A would result in the auditor communicating, for public consumption, the equivalent of their required communications to the audit committee. Since the enactment of the Sarbanes-Oxley Act of 2002 and implementation of its corresponding provisions, NACD believes the role of the audit committee in overseeing the financial reporting process, including the external audit, has been strengthened and improved significantly. Public communication of such information in the AD&A or otherwise would supplant or confuse the fiduciary responsibility of the audit committee to oversee the financial reporting and external audit processes.

Second, we believe public communication of certain matters (e.g., auditor "perspectives" or "impressions" on matters related to the audit as well as on the company's financial statements, including management's judgments and estimates, accounting policies and practices, and difficult or contentious issues such as "close calls," etc.) in the AD&A could do more harm than good. When complex matters are communicated by the auditor to the audit committee, the audit committee has the benefit of ongoing discussion with the auditor and management to provide appropriate context to the complex matters. The audit committee also gains a further understanding of the issues that would be described in an AD&A through its oversight of the financial reporting process. Investors do not have the opportunity to hold further discussions with the auditor or management for a deeper understanding of issues derived through oversight of financial reporting process. As a result, NACD believes that the auditor's public communication of such matters could be misleading and counterproductive.

Third, a requirement for the auditor to provide an AD&A would require the auditor to provide original information about the company not previously provided by management, creating a fundamental shift in the established role of the auditor attesting to information provided by management. We believe such a shift would undermine management's responsibility for the financial statements, including respective disclosures, as well as the audit committee's role in overseeing the financial reporting and external audit processes. A requirement for auditors to discuss sensitive matters in the AD&A may reduce the robustness and candor of critical discussions between the auditor, audit committee and management for fear that such information would be communicated publicly. Such communication is critical to high-quality financial reporting and audit processes. Additionally, the potential for "dueling disclosures" between the auditor and company may prompt management to alter disclosures and/or accounting treatments to align with those of the auditor.

Fourth, we believe requiring auditors to provide their "impressions" on financial reporting matters could result in subjective, free-form AD&A, diminishing reporting comparability between companies. This would reduce the usefulness of the AD&A to financial statement users, who would be unable to evaluate investment alternatives due to a lack of comparability. Additionally, we are concerned that a lack of comparability in the AD&A could harm an issuer in comparison to its peers as a result of possible adverse market reactions to subjective communications provided by auditors.

Lastly, the AD&A appears likely to be one of the more costly alternatives, given the levels of review that would be required to draft and approve custom communications reflecting subjective views of the audit team. As such, it is hard to imagine that any potential benefits of the AD&A would outweigh both these direct costs and the "unintended consequences" described above. We believe the emphasis-of-matter approach described below would serve the needs of investors, but in a more cost-effective manner.

## II. Emphasis Paragraphs

The Concept Release suggests requiring emphasis paragraphs in all audit reports to highlight the most significant matters in the financial statements, identifying where these matters are disclosed in the financial statements and also identifying the corresponding audit procedures performed. NACD supports an approach that would inform financial statements users regarding important matters to focus on in the financial statements for purposes of their investment decision-making. However, we present the following views for further consideration when evaluating this alternative.

First, we believe it will be important for the PCAOB to develop a framework to ensure consistency in the determination of matters to be emphasized, as well as how such matters are emphasized to best serve the needs of investors. In particular, we are concerned that without such a framework, the number of matters emphasized could become too broad, in part to minimize litigation risk, detracting from the objective of emphasizing only the most significant matters for investors.

It is important to note that while auditors are expert in generally accepted accounting principles and their application, they are not expert in making investment decisions.

Second, NACD questions whether it is appropriate or practical for the auditor to describe audit procedures in the emphasis paragraphs. Given NACD's understanding of the comprehensive nature of most audit procedures, we believe it will present a significant challenge for auditors to provide a brief, user-friendly overview of the audit process and procedures that would convey the true depth and substance of their work. Consistent with our concerns noted on the AD&A, we question whether users of financial statements will have the appropriate context to understand the description of audit procedures included in emphasis paragraphs without the context the audit committee gains through dialogue with the auditor and the execution of its oversight responsibilities.

## III. Auditor Assurance on Other Information Outside of the Financial Statements

### *Management's Discussion and Analysis*

The Concept Release questions whether auditors should provide assurance on other information presented outside the financial statements such as Management's Discussion and Analysis (MD&A), or other information provided by management such as key performance indicators and earnings releases. NACD is not opposed to the auditor providing some level of assurance around management's assertions contained in the MD&A if—and only if—such information is auditable and within the expertise of the auditor. However, we believe cost and timeliness are important considerations and that the benefit provided would need to outweigh the cost of the auditor performing such procedures.

NACD believes that auditor attestation on management's critical accounting estimates, as suggested in the Center for Audit Quality's June 28, 2011, comment letter to the PCAOB, could be a mechanism to provide investors with greater clarity around management's accounting approaches and application of judgment. This seems to be an area where investors seek further information. This approach will also allow management to provide financial information, auditors to attest to it, and audit committees to oversee the process. NACD also believes that this approach could improve management's disclosures in this area and would also provide investors additional comfort based on further auditor assurance. While NACD has not evaluated the cost of such an approach, we believe it would be more cost conscious than auditor attestation on MD&A in its entirety.

***Other Information Provided by Management***

It is clear that investors and analysts rely on financial and nonfinancial information disclosed by management outside the annual report, including key performance indicators and information contained in earnings releases. NACD believes that further outreach and analysis is necessary to determine the precise management disclosures that could be subject to further procedures and whether it is appropriate for the auditor or some other expert to perform these procedures. We believe that any requirement for additional auditor assurance should be subject to clear standards, including the level of assurance to be provided. Further, we recognize that such a requirement would result in additional procedures. The Board should consider the additional cost such procedures would entail, the time and effort required on the part of the auditor and whether this would impact the issuer's ability to meet SEC filing deadlines.

With respect to earnings releases, we support further consideration of the extent to which auditors could have an explicit level of association with earning releases. Through the audit committee's oversight responsibilities it is aware of the procedures performed by auditors on the earnings release prior to public distribution. Explicit auditor association with earnings releases could provide investors with a better understanding of the auditor's procedures related to information communicated by management in the earnings release, though it would need to be clear that the audit had not been completed. However, we question whether the usefulness of information communicated in the earnings release would be reduced if the timeliness of distribution was delayed due to further auditor involvement. We encourage the Board to further explore this area and to include in these deliberations investors, audit committees, management, auditors and the SEC. NACD believes that auditor association with other types of communications provided by management (e.g., information provided in conference calls, etc.) would be more problematic, but we recognize that additional analysis may be necessary to better understand the needs of investors in this regard.

## IV. Addition of Clarifying Language to the Auditor's Report

NACD supports the proposed addition of clarifying language to the auditor's report as contemplated in the Concept Release including further explanation regarding the term "reasonable assurance," the auditor's responsibility for fraud, financial statement disclosures and information outside the financial statements, auditor independence, and management's responsibility for the preparation of the financial statements and disclosures.

While NACD believes that there is room for improvement to the auditor's reporting model, NACD urges the PCAOB, before proposing specific standards, to thoroughly consider how certain changes to the auditor's reporting model could impact how the audit committee and management—equally important parties in the financial reporting process—carry out their responsibilities to investors.

We applaud the PCAOB and its staff for seeking a wide range of views through outreach to all stakeholders to inform the development of this Concept Release. In particular, we believe clear consensus must be reached by the full spectrum of investors regarding what changes are necessary to provide the most relevant information for investment decisions. We, therefore, urge the Board to make special efforts to reach out to the investment community to ascertain clearly what changes to the auditor's report are most important, from the investor perspective, as well as the most cost-effective.

NACD appreciates the opportunity to comment on this Concept Release and would be pleased to respond to any questions regarding the views expressed in this letter.

Sincerely,

Barbara Franklin

RE: Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements

To the Members of the Public Company Accounting Oversight Board:

We appreciate the opportunity to offer comments to the Public Company Accounting Oversight Board ("PCAOB") on its Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements (the "Concept Release"). The National Association of State Boards of Accountancy's (NASBA) mission is to enhance the effectiveness of State Boards of Accountancy.

The PCAOB has undertaken an initiative to improve the present auditor's reporting model to make the model more responsive to the needs of users. NASBA's Regulatory Response Committee offers the following comments from a regulatory standpoint - not a practitioner's standpoint.

## Clarification of "Reasonable Assurance"

Auditing standards require that the auditor obtain reasonable assurance about whether the financial statements reported on are free of material misstatement, whether caused by error or fraud. The standards also state that, "Absolute assurance is not obtainable because of the nature of audit evidence and the characteristics of fraud. Although not absolute assurance, reasonable assurance is a high level of assurance."

The present auditor's report reads, in part: "The standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatements."

We believe that the clarity would be enhanced if the phrase "a high level of assurance but not absolute assurance" be substituted in the auditor's report for "reasonable assurance," and that "whether caused by error or fraud" also be added after "material misstatements" in the auditor's report. These recommended changes would not change auditing standards or the responsibility of the auditor.

**Adding the Auditor's Responsibility for Detecting Fraud to the Auditor's Report**

The present auditor's report makes no mention of "fraud." Fraud is encompassed in the phrase "material misstatements."

We recommend that the auditor's report be changed to explicitly address fraud and the auditor's responsibility for detecting fraud in a manner that reflects current auditing standards and does not extend such standards, or the auditor's responsibility. We also believe that the commentary added include the language in auditing standards that "absolute assurance is not obtainable because of the nature of audit evidence and the characteristics of fraud."

**Other Information in Documents Containing Audited Financial Statements**

If a document contains information ("other information") in addition to the auditor's report and the financial statements reported on, auditing standards require the auditor to read the other information and consider whether such information, or the manner of its presentation, is materially inconsistent with the information in the financial statements, or the manner of its presentation. However, the auditor's responsibility with respect to the other information does not extend beyond considering that the other information is not materially inconsistent with the financial statements covered by the auditor's report. The auditor has no obligation to perform any procedures to corroborate other information contained in a document. Management's Discussion and Analysis (MD & A) is required information in annual reports to the Securities and Exchange Commission ("SEC") on Form 10K and in annual reports to shareholders of publicly held companies. The MD & A is "other information" and the auditor's responsibility for such information is discussed above.

In discharging the auditor's responsibility to read and consider other information, typical practice includes comparing dollar amounts in the MD & A to dollar amounts in the financial statements to see if they are in agreement and to recalculate percentages, or to see if they are consistent with the financial statements. Dollar amounts appearing elsewhere in the document, if derived from the financial statements, are usually subjected to the same comparisons.

Auditing standards further provide that if the auditor becomes aware of information that the auditor believes is materially misstated and the discrepancy is not a material inconsistency as discussed above, the auditor should discuss the discrepancy with the client. If after discussion the auditor believes that the auditor is correct and the client takes no action, the auditor is required to take "appropriate action."

We believe that added assurance on MD & As and client releases should not be a part of the final changes to the auditor's report. We believe that the additional cost to provide such assurance would far outweigh the additional benefit received. Adding cost to an audit for little benefit is not in the public interest.

We recommend that a paragraph stating the auditor's responsibility for "other information" be included in the auditor's report. It is not likely that such responsibility is currently known by most of the readers of financial statements.

**Auditor's Discussion and Analysis ("AD & A")**

The Concept Release includes a section suggesting that consideration be given to adding an Auditor's Discussion and Analysis (AD & A) section to the auditor's report.

The Concept Release cites surveys by the Chartered Financial Analysts Institute in which a majority of the surveys' respondents note that audit reports need to provide more specific information about how the auditor reached his or her opinion on whether the company presented its financial statements in accordance with the required reporting standards. No indication is given as to what information is needed, or how it would be used by the surveys' participants in forming investment decisions about the reporting company. To only ask the participants if more information is needed about the audit is to ask for an easy "yes."

Such concerns may question the adequacy of the financial statements and the audit of such financial statements. Such concerns, however, would not be mitigated had the subject audit reports included more extensive disclosure-say in an AD & A-of the audit procedures used to establish a basis for the auditor's opinion.

The Concept Release cites the consensus among investors that the auditor has significant insight into the company, and the auditor's report should provide additional information based on that insight to make it more relevant. The Concept Release also notes that "some investors believe that more relevant insight into the financial statements through the eyes of the auditor might better enable them [the investors] to assess how changes in the economy might affect a company's future financial performance or condition."

The Concept Release also cites "recent concerns highlighted by the financial crisis related to preparing and auditing financial statements for complex global businesses" and comments that "reporting in advance of the crisis might have been helpful in assessing the quality of the financial statements, and providing early warning signals regarding potential issues including off-balance sheet contingencies or the sensitivity of loan losses." The Concept Release also cites views expressed by some investors that: (a) they would have a better perspective regarding the risks of material misstatements if they had a better understanding of how the audit was conducted; (b) the auditor should express the auditor's views regarding the quality of the financial statements reported on; and (c) the range of acceptability of judgments and estimates is not mentioned in the auditor's report and might not be fully reflected in the financial statements.

Further, the Concept Release notes that many investors want a discussion about the audit and the company's financial statements, and some want a discussion of risks, other than audit risk, such as business risks, strategic risks and operational risks.

The auditor's responsibility is to form an independent unbiased opinion, based on auditing standards, on whether the financial statements are fairly presented in accordance with the established reporting standards. The value of the audit rests on the independence of the auditor and the competence of the auditor. Management has the responsibility for preparing and issuing the financial statements, subject to the oversight of "those charged with governance," which group includes audit committees. Auditors are not the source of disclosures.

Some of the concerns noted in the Concept Release are concerns about the financial reporting model that could be considered by the setter of financial accounting standards. For example, how changes in the economy might affect a company's future financial performance or condition is a matter of financial reporting - not a matter for the auditor's report. Similarly, providing early warning signals regarding potential issues including off-balance sheet contingencies or the sensitivity of loan losses is a matter of financial reporting. Also, reporting in advance of the [financial] crisis might have been helpful in assessing the quality of the financial statements. Such a reporting issue is one that could be considered by the setter of financial reporting standards.

The request for discussion of risks other than audit risks is also a financial reporting issue that the setter of financial reporting standards might wish to consider. Such discussions are presently available in Form 10K, the annual report to the SEC, in items 1, 7 and 7a outside of the financial statements.

Regarding the commentary that the range of acceptability of judgments and estimates is not mentioned in the auditor's report and might not be fully reflected in the financial statements, the disclosure of the range of judgments and estimates is another financial reporting issue. If the reported estimates do not fall within the range of acceptability, then the results of the audit performed and the fairness of the financial statements could be questioned.

Requiring the auditor to have "more relevant insight," which is different from having an understanding of the client, its business and the business environment, could require development of an auditing standard that would by its very nature be vague and, therefore, unenforceable. As regulators, the enforceability of auditing standards is essential to the State Boards. Requiring the auditor to comment on the quality of earnings would compromise the independence of the auditor since such commentary is the responsibility of an analyst.

We believe that addressing issues in the auditor's report that should properly be included in financial statements would blur and undermine the very clear distinction between the responsibilities of the auditor and management. Such blurring of responsibility is not in the public interest.

We strongly disagree with the concept of an AD & A and believe that such addition to an auditor's report would not be in the public interest.

Information about the audit, how it was conducted, significant issues considered by the auditor, the independence of the auditor and other matters are required to be communicated to the audit committee by the auditor before the auditor's report is released. If additional information is desired for communication to the audit committee, the PCAOB has the authority to add to the current required communications, subject to approval of the SEC. We believe that this communication is the appropriate form for discussing audit performance - not an AD & A included in an auditor's report.

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board's Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements.

Sincerely,

Michael T. Daggett, CPA

RE: PCAOB Rulemaking Docket Matter No. 34

Dear Members of the Public Company Accounting Oversight Board:

The National Retail Federation (NRF) welcomes the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB) *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* ("Concept Release"). As the world's largest retail trade association and the voice of retail worldwide, NRF's global membership includes retailers of all sizes, formats and channels of distribution as well as chain restaurants and industry partners from the United States and more than 45 countries abroad. In the U.S., NRF represents an industry that includes more than 3.6 million establishments and which directly and indirectly accounts for 42 million jobs – one in four U.S. jobs. The total U.S. GDP impact of retail is $2.5 trillion annually, and retail is a daily barometer of the health of the nation's economy.

NRF fully supports financial statement transparency and sees value in the PCAOB's review of the auditor's reporting model. However, it is our opinion the current reporting mechanisms and processes in place provide ample information and assurance that the financial statements are presented fairly and accurately. The current process of open communication between management and auditors and the required communication between the auditors and the audit committee of significant accounting judgments and estimates is effective and any proposal that could interfere with this existing process would result in potentially more risk. Any changes to the auditor's report should only seek to clarify terminology and provide detail on the purpose of the audit and the role of the auditor, while leaving the reporting of company-specific information to management.

***Question 1:*** *Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.*

a. *Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?*

   We believe the Board should undertake a standard-setting initiative to consider improvements to the auditor's reporting model; however we believe that those changes should be limited as discussed under b. below. While we feel the current reporting model is generally sufficient, there may be some benefit to further clarification of the purpose of an audit, the responsibilities of the auditor and management in the audit and financial reporting process and the work performed by the auditor on information outside the financial statements, including Management's Discussion and Analysis (MD&A).

b. *In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?*

As discussed above, we support the inclusion of further explanatory language on the purpose of an audit, the responsibilities of the auditor and management in the audit and financial reporting process and the work performed by the auditor on information outside the financial statements, including MD&A. We also support discussion in the auditor's report of the significant management judgments and estimates in the company's application of accounting policies and practices, with reference to management's assessment of the company's critical accounting policies and the procedures performed by management and the auditor to determine the acceptability of these positions.

c. *Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?*

We do not believe the Board should consider expanding the auditor's role to provide assurance on matters in addition to the financial statements. Currently, auditors are required to review any supplemental information included with the financial statements to ensure that the information is consistent with information contained in the financial statements and notes thereto. For example, Item 303, Regulation S-K, Management's Discussion and Analysis of Financial Condition and Results of Operations (MD&A) is intended to provide in one section of a filing, material historical and prospective textual disclosure enabling investors and other users to assess the financial condition and results of operations of the registrant. Disclosure is required of prospective information that involves material events and uncertainties known to management that would cause reported financial information not to be necessarily indicative of future operating results or of future financial condition. We believe it would be improper for auditors to opine on prospective information. We also believe that the intent of Item 303 is to obtain management's perspective, not the auditor's, and that there would be no additional benefit gained from audit comfort over the additional historical information provided in MD&A. Further, the inclusion of additional audit procedures and reporting around MD&A would significantly increase audit costs and place added pressure on the registrant to meet 10-Q and 10-K filing dates. This potential delay runs counter to the SEC's efforts to get information to investors in a more timely fashion.

As an alternative to providing additional assurance, we would support discussion in the audit report that describes the work undertaken by the auditor in reviewing the additional information for consistency with the financial statements. This serves to communicate work performed by auditors that is already taking place.

***Question 2:*** *The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."*

a. *Should the auditor's report retain the pass/fail model? If so, why?*

Yes, we believe the auditor's report should retain the pass/fail model. We believe that anything more than pass/fail would be too judgmental and would add little value to readers of the financial statements. In addition, a more complicated model would certainly increase audit costs and pressure on filing deadlines. The auditor already has significant leverage to effect change in the financial statements via its communications with management and the audit committee. Additional information about the audit and the company's financial statements to enable the auditor to add commentary on significant matters in the audit report will not increase the auditor's leverage.

***Question 3:*** *Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.*

Responsibility for a company's financial statements and the financial reporting process ultimately resides with management. Management makes the final decision on estimates, judgments, and financial statement content and presentation. Therefore, it is management's responsibility to provide additional information about the company's financial statements, as is current practice. Management reviews and discusses this additional information with the auditors and with the audit committee.

The auditor's responsibility is to express an opinion on the financial statements and report directly to the audit committee the audit procedures performed, areas of focus, key accounting policies, assumptions and estimates, as well as any potential alternative accounting treatments on any key matters found during the audit. The audit committee is responsible for providing oversight of the financial reporting and disclosure process. Requiring auditors to provide information directly to financial statement users undermines the governance role of the audit committee. In the interest of increasing the information shared with financial statement users, we would support the inclusion of explanatory language in the audit report stating that the auditor has communicated with the audit committee about the audit procedures performed, the company's critical accounting policies and its significant judgments and estimates.

***Question 5:*** *Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?*

d. *If you do not support an AD&A as an alternative, explain why.*

We are concerned that the addition of an AD&A could potentially impact the open dialogue between auditors, management, and the audit committee concerning matters affecting the financial statements as well as financial statement content. Requiring auditors to report on potentially sensitive matters in the audit report or AD&A may limit these conversations due to concerns about confidentiality and in turn, possibly make the relationship more tenuous. A change in communication with management could reduce the effectiveness of an audit. It is important that management be able to have conversations with auditors when there are any gray areas without concern that these discussions will be taken out of context and included in the audit report.

Additionally, management currently discloses information about significant risks and critical accounting policies in the financial statements and MD&A, respectively, and the auditor reviews these disclosures for consistency as part of the normal audit process. Requiring the auditor to formally opine on these matters will increase legal risk and therefore the cost of the audit, with no added benefit. And, due to the additional work involved, the requirement of an AD&A will place unnecessary burden on companies in meeting applicable SEC reporting deadlines.

e. *Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?*

As mentioned above, increased discussion in the auditor's report on the role of the auditor and the purpose of an audit should be considered. This could be accomplished with additional language in the audit opinion explaining, for example, that the auditors have reviewed the additional information accompanying the financial statements for accuracy and consistency. If financial statement users fully understand the role of the auditor and their interaction with management and the audit committee during the course of the audit, we believe that many of the concerns expressed to the Board in advance of this Concept Release will be addressed without the inclusion of an AD&A.

***Question 14:*** *Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?*

a. *If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.*

NRF does not see the value in requiring the expanded use of emphasis paragraphs. The information cited in the Concept Release for inclusion in such paragraphs is included in the notes to the financial statements or MD&A.

***Question 15:*** *What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?*

If the use of expanded emphasis paragraphs is required, we strongly believe they should serve to clarify the areas of focus for the audit without providing detail on the specific audit procedures performed. Providing this detail could encourage unwarranted comparisons of the audit approaches of other firms, which can vary based on the specific facts and circumstances of the client being audited. In addition, we think most investors and users of the financial statements would be confused by paragraphs providing detailed information on audit procedures.

***Question 19:*** *Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?*

g. *If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.*

We support adding additional information in the auditor's report detailing the responsibilities of the auditor regarding other information outside the financial statements. However, we do not believe auditor assurance on the other information is warranted from a cost benefit perspective, as previously noted in the answer to Question 1 above.

***Question 21:*** *The concept release presents suggestions on how to clarify the auditor's report in the following areas:*

- *Reasonable assurance*
- *Auditor's responsibility for fraud*
- *Auditor's responsibility for financial statement disclosures*
- *Management's responsibility for the preparation of the financial statements*
- *Auditor's responsibility for information outside the financial statements*
- *Auditor independence*

*a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?*

We support clarification of the auditor's responsibility in short bullet point form outlining what was done and additional steps taken; in essence, laying out the process and defining for the financial statement user the work performed.

***Question 31:*** *This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.*

*a. Are any of these considerations more important than others? If so, which ones and why?*

The most important consideration is ensuring the audit is performed effectively so the financial statements are transparent and accurate. Openness and transparency between management, auditor, and audit committee are the keys to this goal.

*b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?*

We do not believe the potential increase in audit costs associated with the proposed changes to the auditor's reporting model are justified, for the reasons stated above.

NRF agrees with the Board's commitment to financial statement transparency and thanks the PCAOB for their consideration of our comments and suggestions. We welcome any further discussion on the topic.

Sincerely,

Carleen C. Kohut

Reference: Request for Public Comment: *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*, PCAOB Rulemaking Docket Matter No. 34

Dear Office of the Secretary:

The Accounting and Auditing Standards Interest Group of the New Jersey Society of Certified Public Accountants (NJSCPA) is pleased to offer its comments on the Public Company Accounting Oversight Board's (PCAOB or the Board) *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*. The NJSCPA represents over 15,000 certified public accountants. The comments herein represent those of some of the individuals of our Accounting and Auditing Standards Interest Group only and do not necessarily reflect the views of all members of the NJSCPA.

We commend the PCAOB's effort to make improvements to reports on audited financial statements, and appreciate the opportunity to provide the following comments on the questions contained in the Concept Release (CR).

As a result of our review of the concept release we have summarized our overall views in addition to addressing the PCAOB's specific questions below.

**Overarching Responses**

If more relevant and useful information is needed by investors and other users of the financial statements, then improvements to disclosures required by Generally Accepted Accounting Principles (GAAP) or SEC Regulation S-K should be considered and not changes to the auditor's report.

- Additional disclosures about forward looking information, expectations, estimates, judgments, plans, assessments, etc. should come from management since they developed that information and have the most knowledge.

- Auditors should not be the original source of any disclosure about a company. Nor should auditors determine which information about a company will be most useful or important to the investor.

- Additional lengthy disclosures by the auditor about significant risks, management's judgments and estimates, accounting policies and practices, difficult and contentious issues etc. may have the effect of confusing investors and may cause them to conclude that there are varying degrees of an unqualified audit opinion.

- Any changes made to the auditor's report should not "blur the line" or cause confusion among investors and other users of the financial statements about auditor responsibilities versus the responsibilities of management and the audit committee.

**Form of the Auditor's Report**

*1. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.*

*a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?*

We believe the Board should undertake a standard-setting initiative to consider improvements to the auditor's reporting model on a limited basis, because it is important that users of financial statements have a better understanding of the auditor's report, as well as the different responsibilities of the auditor and management. For these reasons clarification of the standard auditor's report listed in the concept release would be beneficial.

*b. In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?*

See our response to Question 2c below.

*c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?*

We do not believe that the auditor's role should be expanded to provide assurance on matters outside the financial statements, because it may create investor confusion about the auditor's role versus the role of the company's management and/or audit committee.

*2. The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."*

*a. Should the auditor's report retain the pass/fail model? If so, why?*

We believe the auditor's report should retain the current model, and do not consider the current model to be a "pass/fail model" as described in the concept release. The model does currently provides for an unqualified opinion ("pass"), or and adverse opinion ("fail"), but it also provides for unqualified opinions with additional explanatory language (emphasis of a matter paragraphs, going concern issues, inconsistencies, etc.). Private companies also have the option of a qualified (GAAP departures and Scope limitations) or disclaimer of opinion. However, these options are not acceptable to the Securities and Exchange Commission (SEC). The current model provides auditors with sufficient ability to provide opinions which are not just "pass/fail".

*b. If not, why not, and what changes are needed?*

We believe the current model should be retained.

*c. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.*

If the current model is maintained, we believe the following changes would be beneficial:

i. Include language in the auditor's opinion stating that the footnotes are an integral part of the financial statements and have also been audited

ii. Include language stating that management is responsible for all information outside of the financial statements (including management's discussion and analysis), and that the outside information has not been audited, but has instead been read by the auditor for consistency to audited amounts.

iii. Define the terms "reasonable assurance" and "material misstatement" as used in the auditor's report

iv. Consider the expanded use of the current "emphasis of a matter" paragraphs to potentially include such things as recent acquisitions, environmental matters, other significant matters, etc. assuming authoritative guidance is provided for use in determining which of these matters should be included. Information in the emphasis of a matter paragraphs should be objective and fact based with reference to expanded disclosures in the financial statement footnotes.

v. Identify that the auditor is independent with respect to SEC and PCAOB standards

*3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.*

We believe that management and the audit committee are most appropriate to provide additional information about the company's financial statements. Management is in the best position to have this relevant information and the audit committee is in an ongoing role of monitoring management. Since management, with the oversight of the audit committee, is responsible for developing estimates, expectations and judgments, they should be the parties responsible for providing the additional information. We do not believe that auditors should be the source for any original disclosure about a Company. Additionally, providing original disclosure about a Company may be a threat to our independence. While the auditor may be privy to much of this information, the depth of that knowledge is not as broad or deep as management's and therefore could not provide any additional meaningful information to the investor. It is our suggestion that management is the most appropriate party to provide additional information regarding their company's financial statements with the oversight of the audit committee.

*4. Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?*

In regards to reporting on internal control over financial reporting we suggest adding language related to the audit committee's role vs. management's responsibility for internal controls over financial reporting. In addition, we suggest that the terms "reasonable assurance" and "effective" be defined.

**Potential Alternatives for Changes to the Auditor's Report**

*5. Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?*

We do not believe that the Board should consider an auditor's discussion and analysis.

*a. If you support an AD&A as an alternative, provide an explanation as to why.*

We do not believe that an auditor's discussion and analysis should be pursued.

*b. Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?*

We do not believe that an auditor's discussion and analysis should comment on the audit or the company's financial statements.

*c. Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?*

We do not believe that this information would be relevant to investment decisions since it would provide users with confusing and potential conflicting information from that which is reported in management's financial statements.

*d. If you do not support an AD&A as an alternative, explain why.*

We do not believe that an auditor's discussion and analysis should be pursued for several reasons, as follows:

i. Investors needs for additional disclosures about a company's financial statements, should be addressed through changes to Generally Accepted Accounting Principles (GAAP) or SEC Regulation S-K and not through the auditor's reporting model.

ii. The inclusion of this information changes the existing auditor and client relationship by placing the auditor in the place of management. This can create a potential impairment of independence since the auditor will be expected to make decisions about what information should be disclosed, whether related to accounting policies, estimates, or operational matters. It could require that the auditor disclose information that management has not already disclosed which is inconsistent with the existing auditor/client relationship.

iii. Audit reports are fact based opinions based on the financial statements taken as a whole. Auditor roles have previously not been based on providing commentary and opinion on specific elements, unless engaged to do so on specific engagements or for "comfort letters" Typically, these engagement types have lower materiality levels. It is foreseeable that providing such specific commentary at a level lower than "the financial statements taken as a whole" will lower materiality levels and add significant time to audit engagements. This appears contrary to the new risk based auditing standards recently issued by the PCAOB.

iv. We do not believe that an auditor's discussion and analysis provides useful information to users of financial statements that are audited on the basis that the audit is performed on the financial statements taken as a whole. Most users of financial statements are not sufficiently familiar with auditing techniques to fully understand materiality, tolerable misstatement, audit procedures or the extent of audit procedures on specified areas, since those procedures are based on the financials taken as a whole and whether or not an informed user's judgment would be affected by items which are not material.

v. We believe that an auditor's discussion and analysis that discloses materiality levels, audit procedures, and the extent of those procedures creates additional opportunity for fraud in subsequent periods by reducing the element of unpredictability in audits. Thereby creating a roadmap for management's manipulation of those procedures in future periods.

vi. We also believe that detailed discussions regarding accounting estimates, alternative accounting policies considered, etc. could provide users with conflicting information that in the end would not be useful in their decision making. When auditors perform their audits there is an element of professional skepticism that innately causes auditors to consider various differing assumptions, estimates, and policies. These considerations are a normal part of auditing and were not developed with the contemplation that they would need to be disclosed to the public. Such disclosure could significantly impact how audits are performed in the future.

vii. There is an increase risk of additional liability upon auditors disclosing their various methods and decisions made throughout the audit, which could later be questioned. The potential threat of an auditor's increased risk of additional liability from the disclosure of such information may compromise overall audit quality thereby decreasing the value of the auditor's report to the investor.

viii. Initially, auditor's discussion and analysis would lack consistency and comparability to be useful for financial statement users. Over time these reports would become more standard as auditors begin to monitor how other auditors are preparing the discussion and analysis, which would also result in information that is not very useful to users of the financial statements.

*e. Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?*

As mentioned in our response to Question #5d, we do not believe that auditors are in a position to provide any commentary on specified elements since auditors perform their engagements on the basis of the financial statements taken as a whole. Additionally, we believe that such commentary lacks comparability and consistency; and could damage client/auditor/audit committee relationships. We are also unclear as to how management would respond to the auditor's discussion and analysis and the manner in which disagreements with management would be handled regarding additional disclosures of information, or if it is the intent of the Board that disagreements in these additional disclosures are expected and permitted.

*6. What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?*

We do not believe that any information should be disclosed in an AD&A.

*7. What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?*

We do not believe that auditor commentary or views on management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls", would provide useful information to financial statement users, but would rather create investor confusion. Disclosure in Management's Discussion and Analysis already requires critical accounting policies and estimates, including the judgments and uncertainties that affect them. Auditors are currently required to read this information for material consistency with the audited financial statements. Investors may assume that these disclosures are sufficient or otherwise the auditor would have recommended changes. Therefore, we do not see the value of auditors commenting on the same information.

*8. Should a standard format be required for an AD&A? Why or why not?*

In the event that the PCAOB elects to require an auditor's discussion and analysis it should be in a standardized format. It would need to be objective and factual, rather than subjective and opinionated

*9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?*

We do not believe that expanding the auditor role provides a benefit to investors since the auditors are not in a position to provide relevant information. The auditing profession is not in a position to take on these additional responsibilities which would require significant training and or hiring from outside the auditor profession of non-certified public accountants with sufficient experience to provide commentary in these areas. Additionally, this information is already disclosed in the Risk Factors section of the 10-K and therefore no additional risk discussion by the auditors is necessary.

*10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?*

Boilerplate language should be developed for consistency. Without sample language it would be difficult to have any consistency or comparability. Regardless, whether provided or not, over time due to the legal and regulatory systems, auditors will develop their own language for all of their engagements, and eventually the auditing profession as a whole will adopt similar language.

*11. What are the potential benefits and shortcomings of implementing an AD&A?*

See our response to Question 5d.

*12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?*

An auditor discussion and analysis creates a high probability of inconsistent and competing information between the auditor and management. It is also unclear if this would be filed with the 10K and discussed with management, or whether or not management would provide a separate response within the 10K or if the AD&A would be a separate filing.

**Required and Expanded Use of Emphasis Paragraphs**

*13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?*

We believe that the current emphasis paragraphs draw sufficient attention to significant matters critical to the decision making of a financial statement users, however we do believe that if a limited list of a few additional items that are fact based and not based on judgment was developed (e.g., the company completed an acquisition), such information may be useful in summary or bullet form.

*14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?*

Auditor procedures should not be disclosed since audits are performed on the basis of financial statements taken as a whole, and are planned and designed on that basis. These procedures are proprietary on an auditor by auditor basis, based on overall engagement risks which are not disclosed. Additionally, such disclosures provide increased risks for management manipulation in the future, and would be counter-productive to users of financial statements. Auditors are likely to increase their audit procedures and move further away from risk based auditing as they will be disclosing their procedures to the public. The likelihood of "over auditing" specific areas will increase. Overall the time it takes to perform an audit will be extended and an equivalent increase in auditor fees should be expected.

*a. If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.*

We would support required and expanded emphasis paragraphs if authoritative criteria were provided to assist in determining what information to include and if the disclosure was factual and did not include the key audit procedures that were performed related to the identified item.

*b. If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.*

Current standards allow the use of emphasis paragraphs but their use is usually reserved for matters of critical importance. They should not be used as a substitute for financial statement disclosures required by GAAP. If new standards require inclusion of an expanded emphasis paragraph in all audit reports and the decision is left up to the auditor to decide which items to disclose that they believe are important for the users to better understand the financial statements, there is a significant risk that other important disclosures may be overlooked. There is a risk of requiring auditors to select which items to emphasis since different disclosures may be important to different investors. There would be undue influence placed on the disclosures that are included in this required emphasis paragraph which would detract from the other disclosures in the financials. Expanded emphasis paragraphs would lack consistency and comparability and also put the auditor in the position of management in determining and commenting on what is "significant" in terms of what should be included in the report unless there was authoritative criteria for determining which items to emphasis. This results in possible independence issues as well as increased auditor liability.

We also do not support the requirement for auditors to comment on key audit procedures performed related to the identified matters.

*15. What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?*

Primarily what is currently permitted.

*16. What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?*

The appropriate content and level of detail should be limited to objective and factual information referencing to the footnotes for more detailed disclosure.

*17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?*

Boilerplate language should be developed for consistency. Without sample language it would be difficult to have any consistency or comparability. Regardless, whether provided or not, over time auditors will have their own language for all of their engagements, and eventually the profession as a whole will adopt similar language.

*18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?*

On a very limited basis financial statement users can benefit from a summary of major items that are predefined to be reported by the auditors (e.g., going concern). The shortcomings relate to inconsistency and lack of comparability, which will render this information useless by financial statement users unless it is limited, objective, and factual with reference to management's footnotes to the financial statements.

**Auditor Assurance on Other Information Outside the Financial Statements**

*19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?*

The Board should not consider auditor assurance on the other information outside of the financial statements. Information outside the financial statements such as MD&A contains forward looking statements, subjective information, and non-financial data. It is unclear how auditors would be able to perform assurance procedures on such forward looking or projected information while maintaining independence under existing rules.

Also, as mentioned in the concept release, companies currently have the ability to retain the auditor to provide some level assurance on other information outside of the financial statements however; very few companies have engaged auditors to perform this service. We can assume that is because the cost of this assurance outweighs the benefits perceived by the investors.

*a. If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.*

We do not support auditor assurance on other information.

*b. On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.*

None.

*c. What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?*

Auditors currently read this information to determine that there are no material inconsistencies included in the MD&A as compared to amounts reported in the audited financial statements and we believe that level of assurance is most appropriate. We believe that adding clarifying language to the auditor's report disclosing the substance of the current PCAOB AU Section 550, *Other Information in Documents Containing Audited Financial Statements,* and auditor's responsibility related to information in documents containing audited financial statements would be useful to investors to understand the extent of auditor's responsibility on that information. This would be consistent with current practice and would not expand upon audit procedures, or the time required to complete the audit.

*d. If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?*

We do not believe that the auditor is in a position to provide assurance on the MD&A, other than to compare specific dollar amounts that are already audited in the financial statements, as well as reading the MD&A for consistency.

*e. Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?*

Yes, in many cases these disclosures include opinions, subjective information, sensitivity analysis, early warnings and forward looking statements. In order for the auditors to provide any level of assurance these disclosures would need to be changed to be more fact based, historical and objective, with less subjectivity, opinions, or forward looking statements.

*f. Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?*

Due to the fact that historical data, forward looking statements, factual and subjective opinions are commingled within the MD&A additional guidance would be required.

*g. If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.*

As previously mentioned (in Questions 19d), the MD&A contains information that auditors are not in a position to provide assurance on. Auditor's currently read this information to determine if there is materially inconsistent information as compared to the financial statements. The requirement to provide assurance on the MD&A would require significant additional procedures and possibly the use of additional specialists in order to provide such assurance. The degree of work required would be comparable to, or exceed auditor comfort letters.

Additionally, the SEC would need to consider restructuring the format of the MD&A so that the portions in which auditors are required to provide assurance upon are separate and distinct from the portions that assurance is not provided on. Due to this commingling of information it would be very difficult for users of the MD&A to ascertain which portions were subjected to auditor assurance and which were not.

*20. What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?*

We do not see any benefit since the financial data in the MD&A is already audited in the financial statements and the auditors currently read the MD&A for material inconsistencies. Providing assurance on this information in a format that is commingled with opinion, forward looking-statements, and non-financial information will be too confusing for users of the MD&A, to determine what has assurance and what does not. The result would be users assuming that all of this information has been "audited", when it has not been. The additional time required in order to complete annual and quarterly filings would be substantial and it is unclear if the cost/benefit would be beneficial to investors.

**Clarification of the Standard Auditor's Report**

*21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:*

- *Reasonable assurance*
- *Auditor's responsibility for fraud*
- *Auditor's responsibility for financial statement disclosures*

- *Management's responsibility for the preparation of the financial statements*

- *Auditor's responsibility for information outside the financial statements*

- *Auditor independence*

*a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?*

Yes, we believe that the auditor's report should be clarified to better define all of the suggestions listed in the concept release. It is critical that financial statement users understand the role of the auditor, management, and the audit committee, as well as concepts such as reasonable assurance, materiality, fraud, etc.

*b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.*

Yes, currently many users of financial statement do not have a sufficient understanding of the responsibility of the auditor and the true nature of an audit.

*c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?*

- Management's responsibility related to internal control over financial reporting and fraud controls
- Role and responsibilities of audit committees
- Firm network structure including the responsibilities of the firm signing the report and the role of other member firms in the audit

*d. What are the implications to the scope of the audit, or the auditor's responsibilities. resulting from the foregoing clarifications?*

Improving the description of management's existing role, the role of the audit committee and the role of the auditor, as well as providing more accurate definitions of existing audit terminology would not have a material impact on the scope of audits or auditor's responsibilities.

*22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?*

We believe that all clarifications provide users of financial statements with a better understanding of the audit report. We do not believe that such clarifications would have any negative impact.

**Questions Related to all Alternatives**

*23. This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?*

We believe that *"Clarification of the Standard Auditor's Report"* is the most appropriate because it can efficiently and effective be implemented and provide the users of financial statements with the greatest benefit with limited additional cost.

*24. Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?*

A combination of considerations related to *"Clarification of the Standard Auditor's Report"* and *"Form of the Auditor's Report"* should be considered by incorporating the items suggested in our response to questions # 21c and #2c.

*25. What alternatives not mentioned in this concept release should the Board consider?*

Refer to our response to Questions #2c and #21c.

*26. Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?*

There would need to be an auditor reporting framework that provides clear, comparable and consistent information to users of financial statements that is relevant, standardized, and understandable. The Board should also consider the relationship of cost and benefit to investors as well as potential implications on auditor independence, client confidentiality, and the additional time that would be required under certain initiatives as it would relate to existing SEC filing dates.

*27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?*

*"Clarification of the Standard Auditor's Report"* would not be perceived as providing a qualified or piecemeal opinion. The use of *"Required and Expanded Use of Emphasis Paragraphs"* on a limited basis would also not likely impact user perception.

However, significant changes to the *"Form of the Auditor's Report"* from the current "pass/fail" model may be viewed as a piecemeal type opinion. Additionally, *"Potential Alternatives for Changes to the Auditor's Report"* would undoubtedly change the users perception of the financial statements as well as the reliance that can be placed on audits in general, if numerous items are discussed related to various scenarios that were contemplated during the process of an audit, which inevitably did not affect the opinion. The detailing of audit risks and procedures performed also is likely to harm the users in the long run and expose future audits to additional fraud risks. Lastly, *"Auditor Assurance on Other Information Outside the Financial Statement"*, as contemplated related to MD&A, would create significant confusion amongst users since the information that assurance can be provide upon would be comingled with information in which assurance could not be provide on, unless the intention exists to rearrange and reformat the existing MD&A by the Securities and Exchange Commission.

*28. Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?*

*"Clarification of the Standard Auditor's Report" is* the best alternative to convey the auditor's role. Refer to our responses to previous questions in that section.

*29. What effect would the various alternatives have on audit quality? What is the basis for your view?*

We believe that sufficient audit quality exists related to the responsibilities of auditors. Audit quality will not be improved by the suggestions mentioned in "*Potential Alternatives for Changes to the Auditor's Report*" *or* "*Auditor Assurance on Other Information Outside the Financial Statement*" in regard to the financial statements since these suggestions do not add to existing auditing procedures related to the financial statements. The suggestions in these two areas will however, greatly increase the time required to complete audits, potentially require the extension of deadlines, increase the costs of audits, and provide users of financial information with information that will likely be confusing and not useful in their decision making process.

*30. Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.*

In theory, all audit reporting models should be the same for consistency and comparability. However, given the SEC's willingness to exempt companies from audits of internal control over financial reporting based on market capitalization; we would suggest similar consideration be given to companies below a certain limit due to the significant additional cost associated with some of these proposals. Consideration should also be given to exempting broker-dealers.

**Considerations Related to Changing the Auditor's Report**

*31. This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.*

*a. Are any of these considerations more important than others? If so, which ones and why?*

All effects listed above are important. Some of the suggested changes would significantly increase audit effort (and cost) with questionable additional benefit to investors. The changes could undermine the auditor's relationship with management and the audit committee and would increase auditor's liability.

*b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?*

No. We do not believe that the substantial additional cost related to many of these proposals provide significant benefit and in certain instances will lessen users ability to make informed decisions related to audited financial statements as described above.

*c. Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?*

The concept release does not address forward-looking statements, and opinion verse fact based items in the MD&A. It also does not address any potential impact on independence. The proposals related to an AD&A do not consider how it will impact the user's perception of an unqualified opinion. when the AD&A highlights numerous significant "issues" and "close calls" to an investor. This will likely impact an investor negatively in cases where the opinion is truly an unqualified opinion without any reservations.

*d. What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?*

The PCAOB would need to heavily educate the investing public with regard to many of these proposals to avoid the likelihood that much of this additional information will be confusing and is not adding to audit quality or procedures.

*32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?*

For various reasons as described throughout our response, the auditor, management, and the audit committee relationship could be harmed in situations where the auditor is required to be the original source of disclosure about the Company. This could undermine the principle that the financial statements are the responsibility of management with the oversight of the audit committee. The relationship can also be harmed as a result of the substantial increase in time needed to complete the audit which will delay timely filings of annual and quarterly reports without commiserate benefit to the users.

Thank you for the opportunity to comment. We are available to discuss our comments at your convenience.

Respectively submitted,

**Comments on**

**PCAOB Release No. 2011-003—Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards**

We appreciate the opportunity to comment on the Public Company Accounting and Oversight Board's ("PCAOB" or the "Board") Concept Release, *Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*, (the "Concept Release or the release"). While we recognize the mission of the PCAOB is to protect the interests of investors and further the public interest in the U.S., we note that the International Auditing and Assurance Standards Board (IAASB) has issued a consultation paper on the same subject and we encourage the PCAOB and IAASB to work together to ensure convergence on auditor reporting so differences are minimized to the fullest extent possible.

**Responses to Specific Questions**

1. **Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.**
    a. **Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?**
    b. **In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?**
    c. **Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?**

We believe that audited financial statements are one of the primary sources of information investors use in making investment decisions. The auditor's report provides reasonable assurance that the financial statements do not contain material misstatement(s) and are presented fairly based on the financial reporting framework on which the auditor is reporting. However, we recognize that investors and other users of the financial statements have voiced concerns about the need for "richer" information available about the financial statements that they believe would be useful to them in making their investment decisions, and, as such, we support an initiative to explore how meaningful and cost efficient improvements can be made.

We do not believe that the current pass/fail audit report is deficient. If the objectives of the report are not readily understood in the marketplace, we suggest providing clarification through other means such as through education efforts. A glossary of terms could accompany the auditor's report until such time as users become more comfortable with the terms and concepts used.

Clarification of the following terms may be helpful to users:

- Reasonable assurance
- Fair presentation
- Materiality
- Material misstatement

We do not see an overriding need to substantively revise the format of the audit report, and believe that expanding the content and reorganizing the format would not impact the effectiveness of the audit report substantively.

We are generally supportive of auditor reporting on "other information" outside the financial statements that users may consider appropriate for their purposes.

**2. The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."**
   **a. Should the auditor's report retain the pass/fail model? If so, why?**
   **b. If not, why not, and what changes are needed?**
   **c. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.**

As stated above, we believe the pass/fail model of reporting should be retained.

Additionally, we have provided an illustration of an auditor's report (**Exhibit** attached) that provides for four main headings and includes report modifications, including some simplifications. We have added headings to make the audit report easier to understand, and to allow for those users only interested in the opinion paragraph a direct pathway. We believe that emphasis paragraphs can be used when deemed necessary; but not to be used for every report.

**3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.**

Information about the entity should be provided by management and/or the audit committee, as appropriate, because it is in the best position to provide such information.

**4. Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?**

If changes to the audit report on the financial statements are made, consideration of how those changes might impact the report on internal control will need to be assessed. For example, if the auditor’s report on the financial statements is modified to explain the responsibility of management and the audit committee as it relates to the financial statements, the report on internal control over financial reporting should be similarly modified.

**Auditor’s Discussion and Analysis**

**5. Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?**
   - **a. If you support an AD&A as an alternative, provide an explanation as to why.**
   - **b. Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?**
   - **c. Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?**
   - **d. If you do not support an AD&A as an alternative, explain why.**
   - **e. Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?**

An auditor’s discussion and analysis (“AD&A” ), which as described in the Concept Release, would provide the auditor’s view of significant matters and how they were addressed in the audit engagement, is basically an affirmation of communications made to the audit committee and/or those charged with governance. There is a compelling difference when this information is provided to the audit committee as opposed to when it is issued to shareholders/investors. In the former situation there is a two way dialogue throughout the course of the audit; whereas in the latter situation it is a one way communication at a point in time.

Further, if there is competing or “dueling” information such that the communication results in a perceived difference about what is said and what is disclosed in the financial statements, a credibility issue for the entity and auditor could arise. The level of detail disclosed about the audit procedures employed might result in an inference of providing assurance at the account balance or assertion level for the issues discussed when the level of assurance is provided only on financial statements taken as a whole.

For these reasons, this initiative would be the most difficult to implement, the most problematic and the least beneficial. Although there is subjectivity in many pronouncements, if there is management bias or in the auditor's judgment an erroneous conclusion or evaluation were made, we believe this is best dealt with as a proposed adjustment and/or a communication to the audit committee. Further, a matter that is germane is that a discussion of the quality of financial reporting may dwell on the accounting standards at issue, and that such a discussion may be construed or implied as critical to those standards.

**6. What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?**

See our response to question 5.

**7. What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?**

We believe it is inappropriate for the auditor to provide their views on the company's financial statements. Any auditor reporting or other means of communication to investors or other users should be based on objective criteria; not subjective views.

**8. Should a standard format be required for an AD&A? Why or why not?**

We do not believe the AD&A form of reporting is appropriate; therefore we have no comment regarding the format of such a report.

**9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?**

We do not believe it is appropriate for the auditor to comment on matters that cannot be objectively evaluated or that are outside the auditor's expertise. Communication of the above-referenced matters is best left to company management or the audit committee as it is in the best position to communicate these matters in the context of its company and the industry in which it operates.

Further, requiring auditors to discuss these matters, separate from the company, has the potential to provide investors with information that may not correspond with the way such information is provided by the company, creating confusion, rather than enhancing financial reporting

**10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?**

We do not believe the AD&A form of reporting is appropriate; therefore we have no comment concerning the language to be used in such a report.

**11. What are the potential benefits and shortcomings of implementing an AD&A?**

There are a number of challenges to implement this alternative, and they include:

(1) possible delays in filing documents with regulators because of additional internal reviews;

(2) extensive additional discussions between auditors, the company, and the entity's counsel that will likely need to take place with respect to the more judgmental types of matters;

(3) the potential to inhibit communication between the auditor and management or the audit committee; and

(4) shifting the roles of the auditor and management in terms of the responsibility for providing the financial statement information.

Further, the additional costs associated with this alternative, due to the significant effort on the part of the auditor and the entity to provide such information would need to be considered to determine if such an alternative were appropriate from a cost/benefit perspective. This cost/benefit analysis is especially significant as it relates to smaller public companies.

**12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?**

See our response to question 5 above.

**Required and Expanded Use of Emphasis Paragraphs**

**13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?**

The illustrative emphasis paragraph included on page 21 of the Concept Release explains that matters that are important in understanding the financial statement presentation, including significant management judgments and estimates and areas with significant measurement uncertainty, should be emphasized. We do not believe that the current audit report is deficient; nor that including mandatory emphasis paragraphs is appropriate.

A required emphasis paragraph would, in many cases, diminish the effect of the auditor's opinion. The current Standards appropriately provide for a qualification or disclaimer of opinion when the adequacy of disclosures and the suitability and implementation of Accounting Principles are inappropriate. Under current Standards, an auditor uses an emphasis paragraph to emphasize certain disclosure and/or very significant transactions and/or comparability if the financial information is not easily comparable. The scope and opinion paragraphs do not change. A qualified opinion would apply when there is a lack of sufficient appropriate evidence or a restriction on the scope in certain circumstances or there are material departures from Generally Accepted Accounting Principles. We assume that the use of a qualified opinion would not change with this initiative.

Historically, auditors use emphasis paragraphs to highlight such matters as:

- The entity is part of a larger business enterprise
- There are significant related party transactions
- A significant subsequent event has occurred
- An accounting matter other than a change in Accounting Principle occurred
- A matter affecting financial statement comparability has occurred

Under mandatory use of an emphasis paragraph, a significant expansion of the types of matters previously considered will be included and the intended effect of such an inclusion will dilute the financial reporting objectives.

**14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?**
   **a. If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.**
   **b. If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.**

We believe it is inappropriate to require the use of emphasis paragraphs in each audit report. Please see our response to question 13.

**15. What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?**

We do not believe the use of emphasis paragraphs should be required.

**16. What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?**

We do not believe the use of emphasis paragraphs should be required; therefore we have no comment regarding the level of detail of matters to be presented in such paragraphs.

**17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?**

As noted above in response to question 13, under the mandatory use of an emphasis paragraph, a significant expansion of the types of matters emphasized will dilute the financial reporting objectives and not increase transparency for users of the financial statements.

**18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?**

Please see our response to question 13 above.

**Auditor Assurance on Other Information Outside the Financial Statements**

**19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?**
   - **a. If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.**
   - **b. On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.**
   - **c. What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?**
   - **d. If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?**
   - **e. Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?**
   - **f. Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?**
   - **g. If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.**

We are generally supportive of auditor reporting on “other information” outside the financial statements. The standard for examining MD&A, AT 701, *Management’s Discussion and Analysis*, has been in place since 2001. Practitioners can examine such information and express reasonable assurance if:

- The presentation includes, in all material respects, the required elements of the rules and regulations adopted by the SEC,
- The historical information has been derived accurately, in all material respects, from the entity’s financial statements, and
- The underlying information, estimates, and assumptions of the entity provide a reasonable basis for the disclosures contained therein.

While reporting under AT 701 could provide the basis for further standard setting to broadly address more information outside the financial statements, it is our understanding that AT 701 engagements are rarely requested by issuers for a variety of reasons which include cost/benefit analysis considerations.

One approach that would furnish investors with useful information, while also offering a cost-effective alternative, is the development of an examination level service on a specific portion of the MD&A that investors have suggested is important to their investment decisions: the disclosure relating to critical accounting estimates. Reporting on this portion of the MD&A is likely to improve the quality of such disclosures as a result of the increased attention given to these matters.

Should this approach be implemented, amendments to Regulation S-X might be needed to require the report or describe the circumstances in which such a report would be required. Further, the supplemental report would need to identify clearly the applicable section of MD&A covered by the report.

It is interesting to note that auditors of certain governmental entities communicate within the auditor’s report on MD&A that is required supplemental information in U.S. GAAP for governmental entities under a Government Accounting Standards Board opinion (GASB No. 34, *Basic Financial Statements—and Management's Discussion and Analysis—for State and Local Governments*).

**20. What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?**

We believe that requiring an auditor to provide assurance on certain information (*e.g.*, critical accounting estimates) outside the financial statements has the potential to improve the quality of such information. We also think it feasible to explore the benefits of providing assurance on other areas.

For example, some have suggested that auditor reporting on matters such as annual earnings releases would provide users with a higher level of confidence in the information. However, we believe that it is important to recognize that this financial information is often issued prior to the completion of the audit, and that there is a trade-off between the timeliness of the information and the assurance level that can be provided.

<u>**Clarification of the Standard Auditor's Report**</u>

**21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:**

- **Reasonable Assurance**
- **Auditor's responsibility for fraud**
- **Auditor's responsibility for financial statement disclosures**
- **Management's responsibility for the preparation of the financial statements**
- **Auditor's responsibility for information outside the financial statements**
- **Auditor independence**

**a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?**
**b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.**
**c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?**
**d. What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?**

We believe the clarifications listed above would be appropriate. We have provided an illustration of an auditor's report that provides four main headings and includes report modifications including some simplifications (see attached **Exhibit**).

**22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?**

In general, clarifying the language in the standard auditor's report would be beneficial in that it sets the foundation for all users of the report to understand more fully the auditor's conclusion and level of assurance provided. The shortcoming of adding such clarifying language would be that the increased length of the report may add to "information clutter." This shortcoming could be overcome easily through the use of links to a central location where such clarifications are maintained. This approach is similar to the reporting model used in the U.K.

**Questions Related to all Alternatives**

**23. This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?**

We believe the most appropriate approach to improve auditor communication to users would be to revise the auditor's report and the description of the auditor's responsibility for the additional information outside the financial statements.

Auditor reporting on selected other information is another way to inform investors about the integrity of the information provided to investors by management. For example, providing an examination engagement on the Critical Accounting Estimates disclosure in MD&A would promote improved disclosures in this area and respond to suggestions by investor groups for auditor's to emphasize the important judgments made by management in the preparation of the financial statements.

In addition to these matters, the PCAOB should undertake a project to educate investors and other users of the financial statements about the meaning of the auditor's opinion on the financial statements and the terms used within the report.

**24. Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?**

See our response to question 23.

**25. What alternatives not mentioned in this concept release should the Board consider?**

See our response to question 23.

**26. Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?**

While standard setting initiatives by the Board will likely be needed for all of the alternatives as it relates to the alternatives we support, the alternative requiring more significant standard setting relates to the separate reporting on the Critical Accounting Estimates disclosure.

**27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?**

We believe certain of the alternatives are subject to greater susceptibility to misinterpretation than others, and, for this reason, we caution the PCAOB to ensure that any changes to auditor reporting clearly describe the auditor's responsibility to provide an opinion on the financial statements as a whole to avoid any perception that a qualified or piecemeal opinion has been provided.

**28. Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?**

The modifications calling for descriptions of the role of management, the audit committee and the external auditor would clarify the role of the auditor in the financial reporting process sufficiently.

**29. What effect would the various alternatives have on audit quality? What is the basis for your view?**

We believe that certain alternatives discussed in the PCAOB Concept Release would improve the communicative value of the auditor's report and advance audit quality while others may have a detrimental effect. For example, the alternatives that (1) clarify the terms used in the auditor's report, (2) explain the auditor's responsibility for the audit of the financial statements and other financial information presented in a document containing the audited financial statements, and (3) provide for reporting on the Critical Accounting Estimates disclosure section of the MD&A all serve to improve communication and the related disclosures enhancing audit quality in a cost effective manner.

**30. Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.**

There are unique characteristics that necessitate different approaches to enhance the reporting model for investment companies, investment advisors, broker dealers and others such that a "one-size-fits–all" approach would be inappropriate. For this reason, we would support further consideration of how best to enhance other reports called for by the Board's standards as part of a separate project.

**<u>Considerations Relating to Changing the Auditor's Report</u>**

**31. This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's**

**relationships, effects on audit committee governance, liability considerations, and confidentiality.**

a. **Are any of these considerations more important than others? If so, which ones and why?**
b. **If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?**
c. **Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?**
d. **What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?**

All of the considerations set out above are important and interrelated, and it would be difficult to assess the importance of one consideration over the other. Any changes to the auditor reporting model need to be considered in tandem with consideration given to how the interrelationships impact audit quality and cost.

Some of the suggested changes would not increase audit costs significantly. For example, modifying the form and content of the audit report would provide enhanced clarity while it would have little additional costs associated with it. However, other alternatives such as auditor reporting on Critical Accounting Estimates disclosures are likely to require additional work effort by both management and the auditor with a corresponding increase in costs.

We encourage the Board to consider the most effective way to implement any changes to accommodate the needs of smaller public companies and provide a way that considers the needs of investors while recognizing the cost constraints facing many smaller public companies.

We believe that a phased-in approach would be appropriate, that is, one that provides that the larger public companies would implement changes initially (other than those changes that could be easily implemented such as changes to the format of the standard auditor’s report) in order to allow the smaller public companies and their auditors learn from the experience of their larger counterparts.

**32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?**

As stated throughout our letter, management should be the source of original information about the company. We believe this position is consistent with the view of others integral to the financial reporting process (management and the audit committee). Our primary concern is that the candor and vigor of the interaction among the auditor, management and the audit committee would be impacted negatively if the auditor included information about the company's financial statements in the audit report with a corresponding negative impact on audit quality.

**Exhibit**

# Illustration of an Auditor's Report

## Independent Auditor's Report

### The Financial Statements that have been Audited

We have audited the accompanying Balance Sheet of X Company as of December 31, 20XX, and the related Statements of Income, Retained Earnings, and Cash Flows for the year then ended.

### Management's Responsibility versus Auditor's Responsibility

Management is responsible for the preparation and the fair presentation of these financial statements in accordance with U.S. Generally Accepted Accounting Principles. This responsibility includes the design, implementation and maintenance of effective internal control, adopting sound accounting policies, and making accounting estimates that are reasonable in the circumstances. Our responsibility is to express an opinion on these financial statements based on our audit, to be independent of X Company, and to comply with the applicable independence requirements of the [insert, as appropriate, the PCAOB and SEC or AICPA]. We have no responsibility for information in this document outside of the financial statements such as [identify the information, for example the CEO's letter to the shareholders, MD&A, *etc*.]

### Nature of Our Audit

We conducted our audit in accordance with auditing standards generally accepted in the U.S. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement , whether caused by error or fraud. Reasonable assurance is a high level of assurance; albeit not absolute assurance. Our audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. Our audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.

### Audit Opinion

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of X Company as of [at] December 31, 20XX, and the results of its operations and its cash flows for the year then ended in conformity with accounting principles generally accepted in the U.S.

**RE: Rulemaking Docket Matter No. 34 Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards No. 2011-003**

Dear Members of the Board,

NextEra Energy, Inc ("NextEra Energy") is a public company with 2010 revenues of more than $15 billion. Its rate-regulated subsidiary, Florida Power & Light Company, serves approximately 4.5 million customer accounts in Florida. Additionally, NextEra Energy Resources, LLC, NextEra Energy's competitive energy business, is a leader in producing electricity from clean and renewable fuels in 28 states and Canada.

At NextEra Energy we are committed to integrity and accountability in all aspects of our business. Providing accurate and complete information - and having the proper internal controls in place to ensure appropriate oversight - is a responsibility that management and the audit committee has always taken seriously. We believe that our shareholders, as well as investors and potential investors of every other publicly held company, are entitled to no less.

While investors have voiced concerns around the lack of transparency in the financial statements of the large financial institutions involved in the recent financial crisis, it must be noted that these incidents represent a small percentage of the financial statements issued each year and should therefore be considered an exception to, rather than, the rule.

NextEra Energy appreciates this opportunity to provide its views for consideration by the Board in connection with the above referenced concept release.

**Overview**

Of particular interest and concern to us are the proposals regarding Auditor's Discussion and Analysis ("AD&A") and auditor assurance on information outside the financial statements.

NextEra Energy, Inc.
700 Universe Boulevard, Juno Beach, FL 33408

While the alternatives suggested in the Concept Release are well intended, we believe they would add significant cost, potentially distract management and auditors from more significant audit activities with minimal chance, in our view, of making financial reporting more relevant or useful to investors.

The Board has proposed that additional information about the audit and the financial statements, including the auditor's views on management's judgments and estimates, management's accounting policies and other matters commonly presented to the audit committee, should be provided directly to investors as part of AD&A. We believe that auditors should not provide new and/or subjective information about a company's financial statements directly to investors for the following reasons:

- Ultimately, management has the knowledge and business context for the information most relevant to financial statement users and they should retain responsibility for communicating this information to the public. The role of the auditors should remain that of an independent auditor attesting to the fairness, in all material respects, of the financial statements presented.
- The role of the audit committee is to provide direct oversight of the financial reporting process on behalf of investors and we are concerned that the proposed AD&A will undermine the audit committee's governance role. Further, this could diminish or restrict ongoing and open communication amongst auditors, management and audit committees.
- The commentary contained within AD&A could likely become 'boilerplate' over time due to the increased auditor legal exposure and the associated audit costs, therefore negating any potential benefits it might have for the investor.

The Board has stated that their goal in reevaluating the auditor's reporting model is to increase its transparency and relevance to financial statement users. As per FASB Statement of Financial Accounting Concepts No. 8, *Conceptual Framework for Financial Reporting,* the overall objective of financial reporting is to provide financial information about the reporting entity that is useful to existing and potential investors, lenders and other creditors in making decision about providing resources to the entity. We suggest that if current financial reporting is not meeting that objective and additional disclosures are considered necessary this matter should more appropriately be considered by the SEC and FASB as part of the financial reporting standard setting process.

Finally, the Board needs to consider the cost and additional time requirements associated with the proposals in the Concept Release. Many of the proposals will require significantly increased auditor consultation time and the development and testing of additional quality control procedures. As the Board is aware, significant pressures are already being placed upon company resources to ensure compliance with the provisions of the Dodd-Frank Act, undertaking the necessary preparation for the significant accounting rule changes in a number of key areas expected through the convergence of US GAAP and IFRS, and potentially the adoption of IFRS by US Companies. The Board should ensure that any proposals implemented as a result of this

Concept Release are weighed carefully against the associated costs as these will ultimately be borne by the shareholders. Also, any time spent on additional reporting could impact public reporting deadlines and, consequently, the ability of investors to obtain financial information in a timely manner.

Thank you for taking the time to consider the views of NextEra Energy on this important topic. We will be happy to respond to any questions or to participate in any discussions relating to the feedback request.

Sincerely,

Chris N. Froggatt

**Re : PCAOB Rulemaking Docket Matter No. 34**

NIKE, Inc. ("NIKE") appreciates the invitation to comment on the Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements ("Concept Release") issued on June 21, 2011, by the Public Company Accounting Oversight Board ("PCAOB," "Board").

NIKE's principal business activity is the design, development, worldwide marketing and selling of high quality footwear, apparel, equipment, and accessory products. We are the largest seller of athletic footwear and athletic apparel in the world, employing over 38,000 people worldwide. Revenues for our fiscal year 2011 ended May 31, 2011, were over $20 billion. We sell our products to retail accounts, through NIKE-owned retail stores, internet sales, and through a mix of independent distributors and licensees, in over 170 countries around the world. NIKE prepares consolidated financial statements in accordance with accounting principles generally accepted in the United States ("U.S. GAAP") and files financial statements with the Securities and Exchange Commission ("SEC"). Our securities are listed and traded on the New York Stock Exchange.

We value the importance of a high-quality audit and are supportive of any changes that truly improve audit quality. Based on the stated objectives and remedies noted in the Concept Release, however, we do not believe changes to the current audit opinion will adequately address the noted objectives and therefore do not support any changes to the standard audit opinion. We believe the current audit opinion provides investors with a solid basis for understanding the accuracy and completeness of the financial statements and related disclosures. We believe investor education around the PCAOB auditing standards, inspection process, and auditor governance, in addition to the key terms stated in the standard audit opinion, would reduce some of the uncertainty investors feel about the audit.

We believe investor objectives could be effectively met by expressing the same concerns to the FASB and SEC as adjustments to disclosure requirements and accounting policy documentation would be a more effective means of meeting investor expectations. Our views on the alternatives presented in the Concept Release and the current audit opinion are summarized below.

## Current Audit Opinion

We believe the current audit opinion conveys all necessary information an investor would find useful in assessing the appropriateness and accuracy of the financial statements and the adequacy of the governing internal controls. We recognize investors have expressed concern the standard opinion is "boilerplate"; however, we believe that the current opinion allows for consistent analysis of audit results across all industries, companies, and auditing firms, leaving no grey area for investors in determining the outcome of the audit procedures. The opinion discloses the financial statements are presented fairly in all material respects in accordance with U.S. GAAP and we believe the opinion is adequate for investors to understand the auditor's view of the financial statements and related disclosures.

**Auditors Discussion and Analysis**

Of all the alternatives presented in the Concept Release, we believe the Auditors Discussion and Analysis ("AD&A") is the least appropriate way to meet investor expectations. Based on the commentary noted in the Concept Release, the AD&A is intended to facilitate an understanding of the auditor's opinion and provide the users of the financial statements with a view "through the auditor's eyes." We disagree with the intentions of the AD&A as we believe the view of the financial statements "through the auditor's eyes" is the current audit opinion. If the auditors did not believe the financial statements were presented fairly in all material respects in accordance with U.S. GAAP, an unqualified opinion would not be issued. The descriptions of each type of audit opinion and the PCAOB auditing standards that govern each audit are publicly available to investors who want an additional understanding of what the opinion represents. We do not see the added value in requiring the auditors to draft a response that summarizes the audit when the current opinion accomplishes the same in a clearer and more concise manner.

Additionally, we believe the auditor's role in an engagement is to independently attest that management's financial statements are presented fairly in all material respects in accordance with U.S. GAAP and that internal controls over financial reporting is effective in all material respects. We do not think the auditor's role should be expanded to provide additional disclosures regarding our business. The financial statements, associated MD&A, press releases, and other externally filed information is the responsibility of management, and all externally reported information regarding the company should come from management.

We are opposed to several of the disclosure items noted in the AD&A, including the disclosure of audit risk factors, audit procedures and results, and difficult or contentious issues, including "close calls." We believe the disclosure of each has the potential to create further confusion and we do not believe a reasonable investor would consider these disclosures to be important in making decisions about investments.

*Disclosure of Audit Risk Factors*

We disagree with the suggestion of disclosing audit risk factors in the AD&A. Audit risk factors do not necessarily align with the risks identified by the company and disclosed in our public quarterly and annual filings with the SEC. We believe disclosing these risks will not provide investors with useful decision making information and are uncertain how the investor will be able to reconcile the risks disclosed in our quarterly and annual filings with the SEC and the audit risks documented, as the audit risks are intended to drive the substantive procedures performed. The risk of creating confusion far outweighs the benefit of providing this information for investors.

*Disclosure of Audit Procedures Performed and Results*

We also disagree with the need to disclose audit procedures performed and the results of those procedures. The results of the audit are currently disclosed in the audit opinion and we do not believe it is worthwhile or necessary to require the results to be reported twice. The PCAOB auditing standards that govern the audit procedures performed are easily accessible for viewing by investors. The opinion states the audit was conducted in accordance with the PCAOB standards. We believe disclosure of the individual procedures is repetitive and do not see the value additional disclosure will provide investors considering the outcome of the procedures is summarized in the current opinion.

*Disclosure of Difficult or Contentious Issues, Including "Close Calls"*

We are opposed to the suggested disclosure of difficult or contentious issues, including "close calls." The auditor's view of our financial statements is stated in the opinion, which encompasses all of our judgments, estimates, and contentious issues. An unqualified opinion would not be issued if there were material errors, omissions, or differences between the auditors and management. We do not see the value of requiring the auditors to specifically state their opinion individually over these issues. There is more potential to create confusion among investors by disclosing this information.

**Required and Expanded Use of Emphasis Paragraphs**

We believe that the current use of emphasis of matter paragraphs is appropriate. Their intended purpose is to highlight situations or transactions that are material to the financial statements and disclosures and we do not believe that the mandatory use of these paragraphs provides any additional value to investors if there are no serious matters to emphasize. We believe the required use of these paragraphs would create confusion for investors who may not understand the technical nature of accounting estimates, judgments, and transactions that may be emphasized by the auditors.

The Concept Release noted that requiring emphasis paragraphs could persuade companies to improve their disclosures around the emphasized transactions. We do not see the perceived benefit, as disclosures must be presented in accordance with U.S. GAAP to receive an unqualified opinion, and unless U.S. GAAP disclosure requirements are changed, we believe it is highly unlikely that the disclosures will change.

**Auditor Assurance on Other Information Outside the Financial Statements**

We do not believe an auditor's opinion on other externally reported information will provide investors with the greater transparency they desire. Currently, under the anti-fraud rules and regulations promulgated and enforced by the SEC, issuers are liable for all externally reported information, including press releases and all public filings, which may include MD&A disclosures. Investors should have some comfort level that management is not intentionally providing misleading or incorrect information based on the governing SEC rules and regulations. Additionally, our auditors are required to review our MD&A and press release to ensure consistency with the reported financial statements. While review procedures are not as rigorous as audit procedures, we do not see the incremental benefit to investors by requiring this information to be audited. And, finally, we are concerned that adding this requirement could push back the filing time of our forms 10-K and 10-Q, earnings release calls, and investor meetings.

**Clarification of the Standard Auditor's Report**

We are not opposed to adding clarifying language to the standard audit opinion; however, we do not believe that the clarifications would add any value for an educated investor. The definitions and contextual meanings are available to the public and are consistent from opinion to opinion. If the investment community is mandating change and the Board believes that further clarification of the terms in the standard opinion will accomplish the stated objectives of investors, we would be supportive of this change to the opinion.

Each of these alternatives, and especially the proposed AD&A and Auditor Assurance on Other Information Outside the Financial Statements, will place significant additional burdens on both the auditors as well as issuers while providing only marginal, at best, value for investors. Adoption of any of these proposals will impose significant costs (both internal and external) to the issuers. While the PCAOB's proposals are well intended, they fail to strike the right balance between investor confidence and comfort versus issuer and auditor increased burden and cost.

Thank you for your consideration of the points outlined in this letter and we look forward to monitoring the project developments in the future. If you have questions or would like to discuss our responses further, please contact me at (503)671-6453.

Sincerely,

Bernard F Pliska

RE: PCAOB Rulemaking Docket Matter No. 34 – *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*

To Whom It May Concern:

Northrim BanCorp, Inc. ("Northrim") appreciates the opportunity to comment on the *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* ("Concept Release"). Northrim is a community bank headquartered in Anchorage, Alaska.

The Concept Release seeks comments on potential changes to the auditor's reporting model based on concerns of investors and other financial statement users. The changes being considered include: (1) a required Auditor's Discussion and Analysis ("AD&A") to be included with an auditor's report, (2) required and expanded use of emphasis paragraphs within the current format of the auditor's report, (3) auditor assurance on other information outside the financial statements (for example, information within Management's Discussion and Analysis ("MD&A"), non-GAAP information presented, and information within earnings releases), and (4) clarifying language within the current auditor's report that explains what the audit represents and the related auditor responsibilities.

Northrim believes that auditor reporting should not be expanded as proposed in the Concept Release. Instead, the audit expectation gap should be narrowed. We understand that external audits are important to many users of financial statements in effective decision-making related to the allocation of capital. Capital is efficiently allocated by those who have sufficient knowledge of the related reporting entities and their business models. However, we believe that increasing the quality of financial reporting is far more important than expanding the role of the external auditor. Investors are best served by direct communication from companies themselves.

We disagree with the idea that the value derived from expanding auditor procedures to include an AD&A or to provide auditor assurance on other information outside the financial statements will exceed the massive costs that would be required to perform the procedures. Such approaches will only lead to more user confusion between the different reports issued by the auditors and management and will likely increase the already-existing "expectation gap" of what audit assurance actually provides to the investor. For example, discussion of audit "close calls" may actually cause the financial statement user to question the quality of the audit work and why the amounts actually recorded should be relied upon. The focus of the audited financial statements should be on the reporting entity, not the auditor.

Underlying the Concept Release is the notion that auditors often have significant information regarding how a company's financial statements were prepared that might be useful to investors and other financial statement users. Northrim believes that this information from the auditor, at best, will only confirm what is already disclosed in footnotes to the financial statements or the MD&A. Over time, investors may become frustrated with the auditors' language, which is likely to be carefully-crafted and self-protecting. This could eventually render most of the additional reporting as irrelevant. At worst, such reporting, especially since it relates to highly judgmental areas, could result in uncertainty among users that is unwarranted.

Within the Concept Release, it was pointed out by some that the recent financial crisis is an example of how expanded auditor reporting might be useful in assessing the quality of the financial statements. Discussions of off-balance sheet contingencies and of the sensitivity of loan loss estimates were specifically cited. In outreach done by the American Bankers Association to various banking analysts, they found none that list the auditor report as a significant issue, nor did they know of other analysts (buy-side or sell-side analysts) who did. While we understand that there are those who believe that the related disclosures within the notes to the financial statements or within the MD&A were insufficient prior to the financial crisis, those are issues that should be addressed by the Financial Accounting Standards Board. We question how expanded auditor reporting, especially that contemplated within an AD&A or by expanding procedures over the MD&A, would have adequately addressed such concerns. The judgmental nature of the valuation of loan loss estimates, contingencies, and fair values, is central to the commercial banking business. This is why detailed disclosure of those key areas of estimates and management judgment is normally included within the first notes to the financial statements, as well as within the risk sections of the MD&A.

Financial statements of any company include judgments and estimates at a specific point in time. No matter what kind of emphasis is put on this fact, volatility in the markets (especially the volatility experienced in the last four years) will often greatly reduce the relevance of these estimates by the time the report is issued. Further, bank financial performance (and thus bank equity prices) is often influenced by factors that cannot be adequately reflected in financial statements. Liquidity management and the business impact of regulation, which are commonly addressed in quarterly filings, are among examples. These types of disclosures would be impractical to audit. Attempting to provide additional investor comfort and focus in the financial statements through increased auditor communication will likely only add to the confusion over what those statements mean to future bank performance.

Instead, Northrim believes that the PCAOB should consider solely how the auditor report can be revised to reduce the expectation gap. We do not believe that the expansion and requirement of the use of emphasis paragraphs would be beneficial to users of financial statements. As bank audited financial statements often include scores of pages of footnote disclosures, the emphasis paragraphs could also turn the auditor report into one of similar length, thereby diluting the emphasis objective.

As was experienced during the implementation of the Sarbanes-Oxley Act, expansion of audit rules and processes can result in significant concerns about costs versus benefits. We realize that this is outside the purview of the PCAOB, but we believe that the expenses of implementing the Concept Release would be better spent, and investors would be better served, by reducing the complexity of financial reporting or clarifying the risks reporting companies face, rather than significantly expanding the role of the external auditor.

Thank you for your attention to these matters and for considering our views.

Sincerely,

Latosha Dickinson, CPA

R.E. Release No. 2011-003: Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements

PCAOB Rulemaking Docket No. 34

Dear Board Members:

We appreciate the opportunity to provide our comments on the Concept Release issued by the PCAOB entitled "Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements" (the "Concept Release"). The intent of this letter is to articulate our position on the Concept Release, from our perspective as a leading provider of systems, products, and solutions to U.S. Government and commercial customers.

We believe that, when fully understood by the user of the financial statements, the current model for the auditor's report works well and is effective in accomplishing its objective. That objective, however, is limited to informing the user that the auditor has performed an independent examination of the financial statements in accordance with a broad set of audit standards and has found that the financial statements fairly present the information shown in accordance with a defined set of accounting principles, but it does not include information relating to the broader objectives discussed in the Concept Release. We believe the current audit report says a great deal to users of the financial statements and that what it represents is of great value to those users when they fully understand its meaning. What it does not do, and what the Concept Release would seek to change, is that it does not attempt to point users in a certain direction by highlighting one portion of the financial statements over another, nor does it attempt to communicate other qualitative information about the financial statements, management's processes or judgments used in preparing the financial statements or other similar information that the PCAOB believes might be useful to certain users. The auditor's report does not cover these latter issues for a number of reasons.

First, the auditor's report already communicates a great deal because it says the auditor completed their examination, an activity that constitutes a great deal of effort and represents the principal area of expertise that the auditor brings to the table to provide value to financial statement users. An auditor is not trained for, and there are no audit standards that provide guidance to assist the auditor in determining which portions of the financial statements or disclosures are more valuable or of greater interest to users than others. Likewise, they are not trained and have no standards to guide them in determining which management judgments, processes or conclusions should be highlighted for disclosure to financial statement users. The primary reason that this training and the audit standards guidance is missing is that these areas are very subjective in nature and thus do not lend themselves to evaluation through training or the application of standard procedures. Subjectivity is in the eye of the beholder, and what might seem important to one user, might not be of value to others, so where does one draw the line? The essence of the auditor's opinion is its objectivity drawn from the independent aspect of the auditor's work and any deviation from this perspective will, in our view, lessen the value of the auditor's opinion to the broader set of financial statement users.

Second, while the language of the standard auditor's opinion may appear to some as a "pass/fail" model, we believe it demonstrates consistency in the outcome of an auditor's processes and this is valuable in and of itself. It means that management has done their work, the auditors have done their work, the Audit Committee has fulfilled its oversight responsibilities and the auditor's report is the outcome. This outcome represents the completion of a great deal of work, the fulfillment of the responsibilities of numerous parties and all completed within a well understood framework that has been relied upon year after year. Condensing this effort to a simple "pass/fail" designation is to trivialize an enormous amount of effort and a valuable process model that should not be simply taken for granted. Historically, the auditor's role and the conclusion derived from their work has been considered in relation to the financial statements and disclosures taken as a whole, while the concept of expanding the auditor's reporting to matters that are removed from the financial statements, as contemplated by the Concept Release, would depart from that foundation and expand the auditor's responsibilities to matters that are apart from the underlying financial statements.

Lastly, we are concerned about what the auditor's report could become if it were required to include consideration of the other areas contained in the Concept Release. We see a situation where the complete opposite of what exists today could occur and there would be little consistency in the form of the auditor's report as each auditor and company situation could result in different outcomes. All of these variations would then fall to the users of the financial information to interpret and understand, yet today the PCAOB believes that the very straightforward language of the standard auditor's report is not well understood by financial statement users. We can only wonder how users will evaluate and put into context this new information if they do not already have a sound foundation and understanding of what management has presented in the financial statement disclosures. We are also concerned that users will inappropriately place greater emphasis on the matters and viewpoints of the auditors than those of management which will increase the auditor's litigation exposure and related audit fees as investor's rely more heavily on the auditor. We do not believe this is the PCAOB's intention for seeking this expanded level of reporting and we view this as an unintended consequence.

We therefore do not believe that the auditor's report should become the venue for dealing with financial statement user's perceived shortcomings in financial statement disclosures or the interaction between the auditors and management. In the case of the former, we believe that the only appropriate solution is to increase disclosure in the financial statements which is beyond the charter of the PCAOB. With regard to the latter, we believe that the Audit Committee is charged with overseeing and administering the conduct of the audit and the relationship between management and the independent auditor. Furthermore, any changes in the auditor's reporting model that would disclose information that the Audit Committee is charged with evaluating will only serve to invite financial statement users to question the effectiveness of the Audit Committee's performance of its responsibilities.

The Concept Release discusses a number of areas and includes suggestions for revisions to the existing auditor's report as well as changes in the scope and extent of the auditor's involvement in the financial reporting and disclosure model that is presently in use. We have the following observations regarding the specific areas of concern contained in the Concept Release:

- Clarification of the Auditor's Standard Report – Although we believe that the current model is sufficient, we have no objection to the language expansion discussed in the concept release regarding the meaning of reasonable assurance, expanded discussion of the auditor's responsibility for fraud, financial statement disclosures and explicit acknowledgement of their independence and the clarification of the roles of management and the auditors. With regard to having the auditor report on other matters outside of the financial statements, we would support expanding the auditor's report to include assurance on matters for which they have the relevant expertise and so long as that assurance is limited to that which can be obtained through the application of agreed-upon procedures to the applicable information. We do not believe that the auditor's work should be expanded to enable them to express an opinion on these other matters as they are either outside of their areas of expertise, not covered by existing auditing standards or represent areas where a separate opinion would be confusing given management's responsibilities. Any such expansion of the auditors work beyond that which can be derived from a limited assurance model would unduly add audit costs and potentially delay the completion of the preparation of the financial statements. Thus, limited assurance language covering critical accounting policies, management's discussion and analysis of financial information and similar narrative information would be acceptable, however, we believe it would be inappropriate and potentially misleading for the auditors to provide any coverage over risk factors, business outlook and similar areas that we believe are outside of their areas of expertise.

- Use of the emphasis paragraph – We believe that the current requirements for the use of this paragraph are sufficient, and that many of the areas where this paragraph might be used should instead be dealt with by improved disclosure in the financial statements rather than by having the auditors direct the users of the financial statements to areas of importance. Greater use of this requirement could serve to cause users of the financial statements to unduly focus on matters in the auditor's report to the exclusion of other information in the financial statements that is essential for the user's overall understanding of the financial information. We also believe that if the conditions that might require the use of this paragraph were changed or enhanced, it would result in changed disclosure in the financial statements that would limit the extent and value of the emphasis paragraph, and could lead to greater use of "boilerplate" language in the emphasis paragraph which would be of little value to financial statement users. At the end of the day, the auditor's opinion on the financial statements indicates that the financial statements "fairly present" the information contained therein, so an emphasis paragraph might raise concerns about whether the financial statement disclosures are adequate, or whether there are other concerns that the auditor is trying to communicate to financial statement users.

- Auditor's Discussion and Analysis Report ("AD&A") – We strongly feel that the addition of an AD&A report is unnecessary, unwarranted and unwise and thus will only lead to creating confusion and concern on the part of financial statement users. Most of the areas of concern discussed in the Concept Release that cause the PCAOB to believe that such a report might be worthwhile deal with areas that are within the purview of the Audit Committee. Including disclosure of these matters would bring into question the effectiveness of the Audit Committee's governance process and essentially provide financial statement users with information that could be used to "second-guess" management and the Audit Committee. Furthermore, we question whether, in the normal conduct of an audit, the auditor would obtain the requisite knowledge and understanding of all of the relevant information and have the expertise necessary to make the judgments necessary to report upon the information expected to be contained in the AD&A narrative disclosure. The requirement for inclusion of an AD&A could also lead to increased tension between management, the Audit Committee and the auditors which will diminish the overall effectiveness of the audit process. The matters considered for disclosure in the AD&A discussion represent matters that management, the Audit Committee and the auditors should review, discuss and resolve in the conduct of the audit such that the financial statements and related disclosures reflect the outcome of the satisfactory resolution of these matters.

In the appendix to this letter we discuss our responses to the specific questions contained in the Concept Release. We would be happy to discuss our comments with you in more detail and would be pleased to meet with you in person if you so desire. Thank you again for the opportunity to comment on these matters and for your consideration of our points of view.

Respectfully,

K.N. Heintz

Kenneth N. Heintz

Corporate Vice President, Controller
and Chief Accounting Officer

## Responses to Questions in the Concept Release

**Form of the Auditor's Report**
**1. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.**

> **a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?**
>
> **b. In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?**
>
> **c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?**

We do not believe that it is necessary for the Board to consider a significant overhaul of the auditor's reporting model or expansion of the auditor's role to provide assurance on matters other than the financial statements and related footnote disclosures. We feel the current level of auditor involvement and communication is effective and that additional detail provided in the audit report would introduce a great deal of subjectivity, as well as create the false perception that auditors have the same level of insight as management.

The Concept Release states that investors perceive the standard auditor's report as being too "boilerplate." We feel, however, that the auditor's report needs to remain standardized in order to retain clarity and comparability between public companies. One example in the Concept Release's proposed changes would allow an auditor to disclose items that it has communicated to management but which management has chosen not to disclose because of immateriality. If the audit report is unqualified, then the auditor has already concurred with management's decision not to disclose the matter. We cannot think of any situation where separate disclosure by the auditor of matters that do not affect the auditor's report would result in more clarity. To the contrary, we feel such disclosures would result in the opposite effect, leaving users of the financial statements wondering why the auditor has chosen to highlight something that management considered immaterial and to which they had concurred.

The auditor's report provides relevant and useful information if the reader has a reasonable understanding of the auditor's role and the processes and procedures that must be performed in order for the auditor to issue their report. An audit performed in accordance with Generally Accepted Auditing Standards ("GAAS") requires that the auditor put forth a substantial effort to plan and conduct the audit. The audit report reflects the conclusions reached by the auditor as well as confirming that this effort was performed. We believe that this is the most relevant and useful information that a financial statement user should expect to obtain from reading the auditor's report.

Investors and other financial statement users have the responsibility to educate themselves on what an audit represents. By obtaining this understanding they will have a much better ability to put into context the roles of management, the audit committee and the auditors.

We do, however, support several improvements to the standard audit report such as those contained in our responses to questions 21 and 22.

Additionally, we have no objection to expanding the auditor's report to provide limited assurance on supplemental information outside of the financial statements where the auditor could apply limited or agreed upon procedures to determine that the supplemental information was consistent with the information contained in the audited financial statements. As we will indicate in our response to questions 19 and 20, we believe that the auditors should use the audited financial statements as the basis for their work on the other information contained in documents in which the audited financial statements are presented. We do not believe that it is appropriate for auditors to expand their audit scope to enable them to express some form of an opinion on such supplemental information for a variety of reasons. These include the absence of auditing standards relating to such information, the absence of any reporting standards for auditors to use in reporting on such information and the absence of any expectation that the auditors would have the requisite experience and expertise to enable them to express an opinion on such supplemental information.

**2. The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."**

**a. Should the auditor's report retain the pass/fail model? If so, why?**

**b. If not, why not, and what changes are needed?**

**c. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.**

We feel strongly that the auditor's report should retain its current form of opinion and do not see this as a "pass/fail model". Reducing the opinion on the financial statements to such a simplistic outcome fails to acknowledge what an audit encompasses, and the substantial responsibilities of both management and the auditors that must be fulfilled in order to support the issuance of an opinion. The auditor's opinion has a much deeper significance than the words used to convey its outcome. The fact that few words are used to express the outcome of a substantial effort may, on its face, seem insufficient to provide comfort to an unsophisticated user of the financial statements having no knowledge about what is required by an audit or the role and responsibilities of the independent auditor. However, we feel that it is unrealistic to expect that the financial statements and the auditor's report should be designed to be relevant to such an unsophisticated user.

Additionally, the current model is universally understood. To modify that model would introduce a level of subjectivity into the process that will likely confuse readers and reduce comparability between companies and audit firms. Moreover, introducing subjectivity into the process will require the establishment of new auditing standards (assuming subjectivity can be standardized) and users will have to evaluate for themselves the meaning of the subjective determinations. Today's model contains an objective outcome that is not subject to the need for evaluation by financial statement users.

**3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.**

We believe management is the appropriate party to provide additional information about the company's financial statements. We further believe that any additional information that the PCAOB deems important through this comment process should be communicated and vetted as a proposal through the appropriate standard setters (i.e. the Financial Accounting Standards Board (FASB), or the Securities and Exchange Commission (SEC)). If deemed important, that information can be incorporated into current FASB or SEC disclosure requirements.

The audit committee is a governance body, and it devotes the time and effort necessary to oversee management's preparation of the financial statements. The audit committee's involvement is not sufficient to enable it to make its own judgments about financial statement matters and therefore it should not be responsible for providing financial information or disclosures to financial statement users. That responsibility clearly and appropriately rests with management.

**4. Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by -- Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?**

We do not believe that any changes to the report on internal control over financial reporting are necessary since we do not support substantive changes to the form of the auditor's report. Please refer back to our earlier comments. There is a much more detailed process that underlies the auditor's opinion on internal controls over financial reporting that should not be overlooked. Also, even sophisticated users of financial statements may not be technically knowledgeable enough to understand the nuances involved with internal control over financial reporting, and expanding the wording of this portion of the report may make it less useful to users.

**Auditor's Discussion and Analysis**

**5. Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?**

**a. If you support an AD&A as an alternative, provide an explanation as to why.**

**b. Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?**

**c. Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?**

**d. If you do not support an AD&A as an alternative, explain why.**

**e. Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?**

**8. Should a standard format be required for an AD&A? Why or why not?**

**9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?**

**10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?**

**11. What are the potential benefits and shortcomings of implementing an AD&A?**

**12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?**

We do not support the concept of an AD&A. If there are perceived shortcomings with what is presented in management filings then this should be communicated to the SEC and FASB and addressed by them. Furthermore, an AD&A seems to have limited value due to the inherent limitations in the scope of activities that the auditor could comment on as well as the limited amount of work performed by the auditor to enable them to provide any meaningful commentary. Auditors are independent of their clients, spend a limited amount of time testing and evaluating the financial information prepared by the company outside of that used to prepare the financial statements, and have no responsibility for the outcomes of the decisions made by management. Thus we believe that any supplemental commentary that is provided by the auditors will necessarily contain severe limitations as to the basis upon which such commentary was developed.

In this context, we do not believe it is cost effective or practicable to attempt to expand the scope of the auditor's involvement with management's responsibilities in order to enable the auditor to issue some form of opinion on such matters. Management performs its responsibilities in the continuum of its day-to-day activities and makes judgments based upon the weight of its experience, the totality of the information available to management, and the expertise of management. Management shares with its auditor the rationale for its judgments to enable the auditor to reach a conclusion as to the reasonableness of management's judgments. The auditors are not in a position to make their own independent judgments on such matters because these would be purely hypothetical judgments that do not result in actions taken by the company. Therefore, we do not think it would be meaningful for a user of financial statements to attempt to weigh the hypothetical judgments of an auditor against the actual decisions and judgments of management because only management's decisions can be evaluated on the basis of the outcomes of the judgments.

The preparation of an AD&A may also discourage users from performing a comprehensive review of the complete financial statements and disclosures. The AD&A should not be a substitute for the user obtaining a full understanding of the financial statements and related disclosures. Additionally, because the AD&A comes from an independent source it may inappropriately be viewed as having more authority than the information provided by management. To avoid this outcome, the auditor will likely have to include qualifying language in the AD&A report that will be viewed by users as "boilerplate" language that will limit the effectiveness of the auditor provided information.

It is also likely that if an AD&A were put in place, it would result in a duplication of the information already provided by management. If for example, an audit firm approached management about including something in their AD&A report that is different from what management was planning to disclose, discussions would ensue and the two parties would come to a mutual agreement whereby management would likely adjust their disclosures to avoid or minimize the effect of the auditor disclosure. This outcome again points out the overall relevance and value of the financial statements and related disclosures as being the primary source of information for users.

Furthermore, we do not believe that the auditor should be singling out certain aspects of a company's financial reporting or other disclosures. This would expose the auditor to undue risk of litigation, if for example a risk factor or critical accounting policy that was highlighted by the auditor in their AD&A report became an issue. In practice, the auditor and management would likely work together to ensure that the information in both parties' reports is consistent to reduce the exposure to misinterpretation or misunderstanding by financial statement users. The end result of all of this is that no meaningful additional reporting by the auditors would occur, again resulting in information that would be viewed by financial statement users as "boilerplate".

**6. What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?**

**7. What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?**

Many of the items described in your questions relate to issues or matters that are discussed between management, the auditor and the audit committee. The idea of requiring disclosure of these communications assumes that the user of the financial statements has sufficient expertise to be able to understand and interpret the information that will be disclosed. Under requirements established by Sarbanes-Oxley, members of the audit committee are required to have a minimum level of accounting and financial expertise that cannot be assumed to exist for users of financial information. In addition, the information provided to audit committee members is intended to assist them in conducting their oversight responsibilities with respect to management's preparation of the financial statements and its selection and application of accounting principles. These communications from the auditors are supplemental information to that which is provided to the Audit Committee by management, and this information and these communications are incorporated into the dialog between the audit committee, the auditor and management as the committee fulfills its oversight responsibilities. Adding disclosure of the information contained in these communications without including the context in which such communications are evaluated by the audit committee will likely render the information of limited value to financial statement users.

Moreover, the addition of an AD&A section in which the auditor provides subjective commentary about the audit process, management's judgments, and the company's financial statement disclosures would significantly alter the role and relationship of the auditor to the company being audited, and may completely undermine the fundamental independence relationship that now exists. Today, auditors perform tests, examine underlying documentary evidence, and evaluate the reasonableness of the judgments made by management to enable them to conclude that the financial statements are fairly presented. Their primary area of focus is the financial statements and related disclosures. We do not understand how a user of the financial statements would benefit from understanding the auditor's risk assessments or what audit procedures were applied so long as the outcome was such that the auditor was able to render an unqualified opinion. Similarly, asking the auditor to provide color on their assessment of management's judgments, use of estimates, accounting policies and/or contentious issues, including close calls, in situations where an unqualified opinion is issued is of dubious value because such commentary would seem to detract from the fact that the auditor ultimately became satisfied with these matters such that they did not affect the opinion on the financial statements. Without an extensive knowledge of the overall audit process and the importance of the various aspects of that process, we do not believe users of the financial statements will benefit from the auditor highlighting certain elements of the audit process over others. Thus, we believe that the auditor would necessarily have to provide a thorough explanation of the limitations upon which their supplemental commentary is based. Once these limitations are understood, we believe that they will significantly limit the value of any supplementary information provided.

**Required and Expanded Use of Emphasis Paragraphs**

**13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?**

**14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?**

> **a. If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.**
>
> **b. If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.**

**15. What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?**

**16. What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?**

**17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?**

**18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?**

We believe that the existing model for the use of an emphasis paragraph is sufficient. The fact that very few emphasis paragraph opinions occur in practice is due simply to the absence of matters necessary for such paragraphs.

The auditor's emphasis of additional matters that users may see as significant has a negative connotation given the current limited use of an emphasis paragraph. Thus expanding the use of an emphasis paragraph may be confusing to users since they have not been accustomed to seeing such disclosures. Users would have to become informed as to the changes in the standards regarding the use of an emphasis paragraph, and the meaning of any new emphasis paragraph disclosures.

Another concern is the quantity of emphasis paragraphs that an auditor may be required to provide. This would seem to merely increase the data in the report and further incentivize users to avoid reading the full financial statements and instead, look to the areas set forth in the auditor's opinion. We believe this would cause users to place more reliance on the auditor's work than on the information contained in the financial statements and related disclosures. Additionally, if a user sees one company with only one or two emphasis paragraphs and another with multiple paragraphs, they might mistakenly think that the company with more paragraphs is more risky, yet there are many other factors to consider when including multiple emphasis paragraphs (such as, complexity of the industry, degree of centralization of the accounting organization, geographical and jurisdictional dispersion of the company, etc.). Therefore, we are concerned that the greater use of emphasis paragraphs will be misinterpreted by financial statement users and thus lead to greater confusion over the meaning of the additional disclosures.

**Auditor Assurance on Other Information Outside the Financial Statements**

**19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?**

> **a. If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.**
>
> **b. On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.**
>
> **c. What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?**
>
> **d. If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?**
>
> **e. Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?**
>
> **f. Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?**
>
> **g. If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.**

**20. What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?**

We would support expanding the auditor's report to include assurance on matters for which they have the relevant expertise provided that such assurance is limited to that which can be obtained through the application of agreed-upon procedures or other limited scope work to the applicable information. We do not believe that the auditor's work should be expanded to enable them to express an opinion on these other matters as they are either outside of their areas of expertise, not covered by existing auditing standards or represent areas where a separate opinion would be confusing given management's responsibilities. Any such expansion of the auditor's work beyond that which can be derived from a limited assurance model would unduly add audit costs and potentially delay the completion of the preparation of the financial statements. Thus, limited assurance language covering critical accounting policies, management's discussion and analysis of financial information and similar narrative information would be acceptable to us. We question whether the auditors should provide any coverage on areas such as risk factors, business outlook and similar forward looking information which we believe are outside of their areas of expertise and knowledge.

We believe that the existing audit standards provide sufficient guidance to the auditor in determining the work scope and related reporting to utilize in reporting upon information outside of the financial statements and feel that this level of assurance would be beneficial to financial statement users. We do not feel that this level of reporting would unduly affect the timing of management's completion of the preparation of the financial statements, nor would it materially alter the form or content of such information as the auditor is already required to review this information today, and the primary change contemplated is to require the auditor to report on the review that was performed.

**Clarification of the Standard Auditor's Report**

**21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:**

**Reasonable assurance**
**Auditor's responsibility for fraud**
**Auditor's responsibility for financial statement disclosures**
**Management's responsibility for the preparation of the financial statements**
**Auditor's responsibility for information outside the financial statements**
**Auditor independence**

> **a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?**
>
> **b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.**
>
> **c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?**
>
> **d. What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?**

**22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?**

We have no objection to expanding the language in the standard auditor's report in the areas listed above. We believe that these clarifications would enhance the auditor's report by addressing areas that are of particular interest to users and do serve to better communicate the nature of the audit, and the respective responsibilities of management and the auditor.

Because these items represent clarifications of language, they do not change the audit scope or responsibility of the auditor, nor would they be expected to have any significant cost impact. Clarification of these matters would serve to further support our views expressed earlier regarding the utility of the auditor's report to financial statement users. We do not foresee any shortcomings in providing these clarifications.

Alternatives

**23. This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?**

As described in our earlier responses, we support the auditor's reporting on certain matters outside of the financial statements using a limited-assurance model and certain clarifications to the standard auditor's reporting model. We do not support the expanded use of the emphasis paragraph in auditor reporting and also do not support the concept of adding the time delays, added cost, and uncertain value of the AD&A reporting model described in the Concept Release.

**24. Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?**

See our response to Question 23.

**25. What alternatives not mentioned in this concept release should the Board consider?**

No further comment.

**26. Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?**

No further comment.

**27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?**

We believe that the greater use of an emphasis paragraph and the use of an AD&A report runs the risk of confusing the user's understanding of the auditor's reporting in much the same way as would a qualified opinion or piecemeal opinion. Financial statement users would have a difficult time understanding the context of these different levels of reporting and which is more representative or meaningful for them to rely upon. Without an appropriate context, which may be very difficult to convey, financial statement users will have a difficult time understanding the meaning of an emphasis paragraph or certain AD&A disclosures at the same time that the company receives an unqualified opinion on the financial statements. As indicated in our earlier responses, we believe that one of the values of the current model of auditor reporting is that it sends a clear message to financial statement users who understand what the report represents. Changing the form of the report, and adding different auditor involvement and levels of reporting will only serve to confuse financial statement users and leave them wondering which reporting element is the most valuable.

**28. Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?**

See our earlier comments.

**29. What effect would the various alternatives have on audit quality? What is the basis for your view?**

See our response to Question 23 regarding the alternatives that we would support. We do not believe that these alternatives would substantially improve the current audit quality as they do not significantly change the auditor's role. We do believe that the greater use of the emphasis paragraph and the potential inclusion of the AD&A report could create areas of greater tension between management and the auditor and thus affect the overall quality of the audit. We also believe that because many of the areas that the Concept Release suggests would be included in the AD&A report are either difficult for the auditor to perform or are beyond the expertise of the auditor, the overall quality of the audit would likely suffer.

**30. Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.**

Any changes made should apply to all registrants, no exception.

**<u>Confidentiality</u>**

**31. This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.**

> **a. Are any of these considerations more important than others? If so, which ones and why?**
>
> Audit committee governance is an important consideration as several of the alternatives suggested undermine their oversight role. The Sarbanes-Oxley Act significantly enhanced

and placed reliance upon the role of the audit committee in overseeing management's responsibilities related to internal controls over financial reporting and financial reporting in general. We believe that any changes that are contemplated in the auditor's report should be made in reliance upon and with a view towards strengthening the current role of the audit committee as opposed to diluting it or rendering it redundant.

**b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?**

The addition of an AD&A and/or increase in emphasis paragraphs will likely increase costs due to the increased effort and risk assumed by the auditor and delay the timing of the completion of the financial reporting process. We do not believe that the recommendations contained in the Concept Release provide sufficient benefits to justify the increased costs or the additional time delay for the completion of the financial statement reporting process.

**c. Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?**

No further comment.

**d. What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?**

No further comment.

**32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?**

We believe it has the potential of creating an adversarial relationship between the issuer and its auditor. If an auditor is required to include their subjective opinions on management's accounting practices or disclosures beyond what is currently required to satisfy themselves that the financial statements are fairly stated in accordance with GAAP, conflicts will be inevitable. We believe these conflicts will affect both the auditor's relationship with management and its relationship with the audit committee charged with overseeing the role of management.

Furthermore, as described in our earlier responses, we are concerned about the confusion that financial statement users would have in trying to understand the various reports and opinions that the auditor would issue. Without some meaningful context within which to evaluate the additional information we do not see how it could be useful in making judgments about the quality of the financial statement disclosures, the integrity of management and/or the effectiveness of the audit committee's oversight role. We see such incremental auditor disclosures as serving only to confuse users of financial statements as they would appear to indicate some conflict between the auditor, management and the audit committee notwithstanding the fact that the auditor will have issued an unqualified opinion on the financial statements.

Re: PCAOB Rulemaking Docket Matter No. 34

Dear Office of the Secretary:

Nucor Corporation appreciates the opportunity to provide comments to the Public Company Accounting Oversight Board (PCAOB) on the Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements.

Nucor is a manufacturer of steel and steel products, as well as a scrap processor, with operating facilities and customers located principally in North America. We are the largest recycler in North America, using scrap steel as the primary raw material in producing steel and steel products.

We have the following comments on the four proposed alternatives for changing the auditor's reporting model that are discussed in the concept release:

<u>Auditor's Discussion and Analysis (AD&A)</u>

We are strongly opposed to the inclusion of an AD&A. We believe that management, with oversight provided by the audit committee, is best suited to provide additional information about the company's financial statements. Since management, with the oversight of the audit committee, is responsible for making all judgments and estimates in a company's application of accounting policies and practices and resolving difficult issues, it should be exclusively responsible for communicating information about these matters to investors. Auditors should not be the original source of any disclosure about a company. Regardless of how extensive audit procedures are now or will be in the future, an auditor's knowledge about the company will never be as extensive as management's. In addition, since the auditor's comments in the AD&A could be different from management's comments in MD&A, investors could be confused or even, in some instances, misled. Further, such inconsistencies could cast doubt on the accuracy and reliability of the financial statements.

The current auditor report is based on the financial statements taken as a whole. If auditors are required to comment either on specific judgments and estimates made by management in applying accounting policies and practices or on contentious issues ("close calls"), which are both at a lower level than "financial statements taken as a whole," audit engagements will become more expensive and take additional time to complete.

Required and Expanded Use of Emphasis Paragraphs

This alternative would mandate the use of emphasis paragraphs in all audit reports and further expand the emphasis paragraph to highlight the most significant matters in the financial statements and identify where these matters are disclosed in the financial statements. The auditor could also be required to comment on key audit procedures performed pertaining to the identified matters.

Different disclosures may be important to different investors, and the expanded use of emphasis paragraphs could detract from other disclosures in the financial statements. This alternative would rely on the auditor, not management, to determine what information in the company's financial statements is most significant and should be emphasized in the report, which could potentially impair the auditor's independence.

Since many investors do not have an in-depth understanding of the auditing process, commenting on key audit procedures could result in confusion. Providing sufficient information on complex audit concepts would result in lengthy descriptions of the auditing process, which investors may be tempted to overlook. In addition, we believe their overuse could have the opposite effect and lessen the impact of emphasis paragraphs.

Under current standards, an unqualified opinion is an indication that all material matters related to an audit have been resolved. Additional discussion in the auditor's report in the form of multiple emphasis paragraphs is unnecessary and potentially misleading. The use of emphasis paragraphs would make it less obvious that a company was receiving an unqualified opinion and could be confusing to both sophisticated and unsophisticated investors alike.

Auditor Assurance on Other Information Outside the Financial Statements

We do not support requiring the auditor's assurance on information outside the financial statements (e.g., MD&A, non-GAAP information or earnings releases). Under current auditing standards, auditors are already required to read other information included in documents containing audited financial statements and ensure that such information is not materially inconsistent with the audited financial statements. Requiring that auditors provide any form of assurance on additional information would be costly while providing little, if any, incremental benefit to investors. In addition, requiring that this information be audited would require substantial additional time in an already tight reporting schedule.

Clarification of the Standard Auditor's Report

We believe that the auditor's report should remain concise and continue to follow the current "pass/fail" model. The language of the auditor's report should continue to use standardized language that provides consistency, comparability and clarity of auditor reporting. However, we do believe that investors would benefit from the following "plain English" changes that are discussed in section D of the concept release:

- Describe "reasonable assurance" as being a "high level of assurance, but not absolute assurance."
- Describe the auditor's responsibility to detect fraud.
- Provide clarification regarding the auditor's responsibility for financial statement disclosures.
- Describe the auditor's responsibility with respect to other information in documents containing audited financial statements.

Thank you for your consideration of these comments.

Very truly yours,

James D. Frias
Chief Financial Officer, Treasurer
and Executive Vice President

Re: Rule Docket # 34

Dear Members of the PCAOB:

Thank you for your interest in receiving constructive comments on your proposed new rules, Rule Docket #34. My comments are based on more than 25 years as CEO and Chairman of various companies, including both public and private, Audit Committee and Financial Expert roles, and Board Chairman and CEO of a public financial institution regulated by the FDIC. I am an independent director and trustee of American Funds Insurance Series and American Funds Target Date Funds. I am also a shareholder in the American Funds.

The proposed ADA ("Auditor Discussion and Analysis") requirement introduces a new dynamic in corporate governance. My personal experience is that independent directors and audit committees communicate often with both management and the independent audit firm, pursue full disclosure and transparency, and fulfill their primary responsibility to represent and protect shareholder interests. I question whether the addition of an ADA will add anything new or, in fact, will more likely stifle open and candid discussion. It would seem that the outcome might also be the opposite of what is intended – the absence of material discussions by less engaged boards might be interpreted in the final report as a positive.

As a shareholder and investor in the American Funds, I also do not believe the added auditor scrutiny and separate disclosure will provide measurable benefits for me and other shareholders to warrant the certain increase in auditor and preparer costs.

Thank you for considering my input.

Sincerely,

W H Baribault

Reference: PCAOB Rulemaking Docket Matter No. 34

Members of the Board and Staff,

I appreciate the opportunity to submit my comments with respect to the proposed concept release (proposal) regarding the auditor's reporting model. I had been active in public accounting from 1980 through 2008, last at Ernst & Young LLP (audit and assurance) and am currently an actively licensed CPA providing public and privately held businesses consulting (value-added) services in the areas of external financial reporting, technical accounting research, policies and procedures, internal accounting controls and liaise technical issues on behalf of clients with their external auditors. The opinions and views expressed herein are my own and are not associated with any company or other organization that I have been associated with. My comments are as follows.

*1. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.*

a. *Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?*

   Yes, the Board should consider and strive for improvements. I appreciate the Board's initiative in this matter. However, in my opinion the current proposal addresses changes in reporting without actual qualitative changes and or improved procedures. Additionally the proposal does not appear to result in significant practical cost/effective improvements to investors and users.

   Significant issues to date have not been due to the understandability of the information within the auditor's opinion. Issues have been that the opinion was in error due to lack of error detection and/or fraud resulting in material misstatements and/or omissions as well as lack of an appropriate assessment of management's accounting policies, significant estimates and overall financial presentation.

The current standard report articulates the auditor's opinion and describes an audit in a concise and accurate manner. That it is the planning and procedures performed, examining on a test-basis that the financial statements and disclosures are free of material error and/or omissions and includes an assessment of management's accounting policies, significant estimates and overall presentation.

The over-whelming communication in reading the opinion letter is to determine if the report has an unqualified opinion. Information overload within the opinion letter may result in less reliance in the opinion in that, the suggested "fine-print" may unintentionally implicitly disclaim audit scope and responsibility. I would further suggest that any needed expanded information either be included in the notes to the financial statements and/or as supplemental schedules as applicable. I would urge the Board to consider the *Federal Plain Writing Act of 2010* for any additional wording or schedules emphasizing the omission of unnecessary details as well as the elimination of redundant information.

Additions to improve the reporting model may unintentionally confuse and/or mislead the user that auditing procedures may have been expanded and/or improved. Until there is a change in the common understanding of what an audit is, or an actual change in the auditor role, there does not appear to be a need to consider significant changes to the current report model at this time.

In an ever-changing environment we should consider if the auditor's role is appropriate and what practical improvements could be implemented. However improving the reporting model in advance of actual qualitative changes in the auditor's role or procedures, in my opinion is putting the cart before the horse.

b. *In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?*

Other auditor reporting information (as a separate supplement to the opinion letter) that may be of use is for the auditor/and the PCAOB to provide a summary profile of the auditing firm's basic information in the report. Such information could include, how long the firm has been in business, location of corporate headquarters and number of offices and employees, including those within the U.S. The annual number of audit reports issued for publicly traded clients. Past disciplinary actions, peer review report findings and/or other reports including past litigation.

To note, the three-person auditing firm that certified the reports of Bernard Madoff Investment Securities, LLC, may have provided a red-flag to investors. Additionally, the current popularity of foreign offshore reverse mergers and other fraudulent reports may be more easily detectable.

c. *Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?*

No, the Board should not consider expanding the auditor's role to provide assurance (other than negative assurance which is currently implied) on matters in addition to the financial statements. Assurance in these other areas does not result in additional useful information or any further clarification. It only adds to the cost of the audit through additional audit effort and exposure. Auditor focus should remain on the fair and full presentation of the financial statements and the effectiveness of internal accounting controls. Those responsible for the other information and matters include, not limited to lawyers, underwriters, compliance officers and investor relations personnel. The auditor does not have near the interaction activity or a relationship with these groups as they do with financial personnel. The framework of the audit would require significant change with a practical learning curve provided. In my opinion, the cost would significantly exceed the benefit to have assurance on matters apart from the financial statements.

*2. The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."*

a. *Should the auditor's report retain the pass/fail model? If so, why?*

Yes, the pass/fail model should be retained. Providing for additional allowable alternatives could potentially provide the users misleading and/or confusing information as to the overall opinion and result in decisions based on piecemeal selected financial information versus the overall financial presentation as intended. The opinion should remain as a black and white communication, not be in shades of gray.

b. *If not, why not, and what changes are needed?*

N/A

c. *If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.*

See 1b.

*3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g. management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.*

Management and audit committees are the most appropriate parties to provide any potential additional information about the company's financial statements. These parties have the most insight and are most familiar with the issues and reports and have the best capacity to articulate and communicate that additional information. Management originates the information and periodically communicates key assumptions and decisions with the audit committee. it is the audit committee's responsibility to oversee the integrity of the company's financial statements and financial reporting process.
An auditor's understanding of these issues is indirect and often comes from management memorandums, inquiries and discussion with said parties. Additionally it is the responsibility of the preparers and audit committee members who should decide what information should and needs to be provided. If an auditor has significant issues or reservations with other information or omitted information, they have choices including not issuing an unqualified opinion. Auditors should not disclose additional information as it could result in a (real or perceived) breach of confidentiality that could result in a deterioration of communications with preparers and audit committee members. The roles should not overlap, management reports, auditors attest.

*4. Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?*

See 1a.

*5. Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?*

No, see Item 3.

a. *If you support an AD&A as an alternative, provide an explanation as to why.*

   N/A

b. *Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?*

   N/A

c. *Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?*

N/A

d. *If you do not support an AD&A as an alternative, explain why.*

I don’t believe the AD&A would be practical and/or cost effective. It potentially allows for an overload (increased complexity) of information. If said information is consistent with the report, it is of no practical benefit. Inconsistencies with the report could cause confusion resulting in a misunderstanding by the users of the financial statements as well as the audit opinion. Additionally the AD&A may become an effort in legalese that would directly conflict with the objective of providing more useful information to investors and users.

e. *Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?*

Any potential comments should be limited to the audit. Such comments could include clarifying issues that are unusual in nature to common practice as well as technical matters whereby there was a disagreement either between the auditors and the company or between audit team members that was ultimately decided by a consultation by a party outside the engagement team/company management.

*6. What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?*

N/A, see Item 5.

*7. What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?*

N/A, see Item 5.

*8. Should a standard format be required for an AD&A? Why or why not?*

While I don’t agree with the inclusion of an AD&A, a standard format should not be required. Companies and audits are unique. If it is truly the intent to provide specific information as to the audit and information therein, it would be difficult to achieve through a standard format.

*9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?*

An AD&A addressing risks (other than audit) would not be practical and/or cost effective. These risk assessments are judgmental in nature. They are usually feted out by the assistance of both internal and external counsel. These risks are addressed in the MD&A. If said information is consistent with the MD&A, it is of no practical benefit. Inconsistencies with the MD&A could cause confusion resulting in a misunderstanding by the users of the financial statements as well as the audit opinion. If these risks were to be addressed by a third-party, external general counsel, insurance risk professionals or applicable regulators would be more appropriate parties.

*10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?*

If the reports are consistent in format, they will appear to be boilerplate regardless.

*11. What are the potential benefits and shortcomings of implementing an AD&A?*

An AD&A may provide potential benefit to clarify audit risks and assessments of those risks. Shortcomings include increased resources, time and cost. Potential duplicity of information with the MD&A. Explicit and implicit conflicts with MD&A which may not result in an improved report to end-users. Increased legalese in the report similar to portions of the MD&A.

*12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?*

It should not be the role of the auditor to provide competing and/or inconsistent information. Including said information results in less confidence in the report and the opinion letter. Management needs to be held solely responsible for the information within the report. Auditors should be responsible for the opinion. Advance oversight of management exists by the audit committee and the auditor attests. There would be no advance oversight or attestation over the auditor in terms of an AD&A. If as a result of inclusion of an AD&A, adverse litigation was to become an issue. The AD&A may unintentionally evolve into a disclaimer of the audit and opinion.

*13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?*

Any matters not disclosed that would be relevant and useful in making investment decisions needs to be addressed by the FASB, IASB and SEC. These organizations are responsible to establish the standards. It should not be left to auditor's judgment to opine on undisclosed matters for which no standard exists.

As to the illustrated examples, including related party transactions and subsequent events, these are already in scope of the standards. For example, SEC staff observed that:

> Rules 10b-5 and 12b-20 under the Securities Exchange Act of 1934 and General Instruction C(3) to Form 10-K specify that financial statements must not be misleading as of the date they are filed with the Commission. For example, assume that a registrant widely distributes its financial statements but, before filing them with the Commission, the registrant or its auditor becomes aware of an event or transaction that existed at the date of the financial statements that causes those financial statements to be materially misleading. If a registrant does not amend those financial statements so that they are free of material misstatement or omissions when they are filed with the Commission, the registrant will be knowingly filing a false and misleading document. In addition, registrants are reminded of their responsibility to, at a minimum, disclose subsequent events[1], while independent auditors are reminded of their responsibility to assess subsequent events[2] and evaluate the impact of the events or transactions on their audit report.[3]

Emphasis paragraphs appear to be a "work-around" or "back-door" approach. I believe we would be better served by the standard setters addressing any reporting gaps as to proper and presentation and disclosure in lieu of expanded emphasis paragraphs.

*14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?*

No

a. *If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.*

   N/*A*

b. *If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.*

   Areas of emphasis conflicts with "fairly stated as a whole". The intention of U.S. GAAP/IFRS as well as SX-reporting is to provide/disclose all applicable information to assess the overall financial results. These judgment decisions

[1] AU Section 560, Subsequent Events, paragraphs 5 and 8 and Section 855-10-50.
[2] AU 560 and AU Section 561, Subsequent Discovery of Facts Existing at Date of the Auditor's Report.
[3] AU Section 530, Dating of the Independent Auditor's Report, and AU 560, paragraph 9.

would be unclear to the user as to just how much weight should be applied. Additionally areas not emphasized may be incorrectly undervalued by users.

Auditors should not be required to disclose key audit procedures to the public and/or clients. It provides no increased understanding of the report and could lead to circumvention of the effectiveness of future audits.

*15. What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?*

In my opinion, none should be required.

*16. What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?*

In my opinion, none should be presented.

*17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?*

If the reports are consistent in format, they will appear to be boilerplate regardless.

*18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?*

No benefit with an increased audit effort and complexity.

*19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?*

No, the increased audit effort does not appear to result in improved information or understanding of the report. There are no existing standards or an authoritative standard-setter for this other information. It increases auditor exposure and would require additional auditing standards to be implemented as well as additional disclosures and reporting rules from the SEC.

*a. If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.*

N/A

*b. On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.*

None

*c. What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?*

Negative assurance, that nothing came to their attention that would materially conflict with said information.

*d. If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?*

A piecemeal approach may cause more confusion. It should be for all of the MD&A or none.

*e. Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?*

No opinion.

*f. Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?*

N/A, in my opinion the auditor should not be required to attest or provide assurance as to other information outside the financial statements.

*g. If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.*

See Item 19.

*20. What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?*

See Item 19.

*21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:*

- *Reasonable assurance*
- *Auditor's responsibility for fraud*
- *Auditor's responsibility for financial statement disclosures*
- *Management's responsibility for the preparation of the financial statements*
- *Auditor's responsibility for information outside the financial statements*
- *Auditor independence*

*a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?*

All, with the exception of Auditor's responsibility for information outside the financial statements may be of some benefit.

*b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.*

Clarification of definitions and responsibilities could result in a greater understanding to the end-users. The shortcoming may be increased complexity.

*c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?*

See Item 1b.

*d. What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?*

May imply expanded procedures were performed when they were not. May incorrectly segment user's understanding of responsible parties.

*22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?*

See Item 21b

*23. This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?*

See response to Item 1b

*24. Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?*

See responses to Item 1b and Item 21.

*25. What alternatives not mentioned in this concept release should the Board consider?*

Expanding the information for registered firms on the PCAOB's web site that would include the additional information suggested in Item 1b. Require firms to update and confirm the information as accurate annually. Provide a link to the information in the report.

*26. Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?*

I disagree with the alternatives that would require an additional auditor framework. Any additional framework should directly relate to qualitative procedural improvements.

*27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?*

Yes, retain the "pass/fail" model and exclude emphasis paragraphs.

*28. Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?*

See responses to Item 21.

*29. What effect would the various alternatives have on audit quality? What is the basis for your view?*

I would expect no significant change in audit quality as the proposal is reporting driven and does not include qualitative process improvements.

*30. Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.*

Any changes should be consistently applied to all public registrants.

*31. This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.*

*a. Are any of these considerations more important than others? If so, which ones and why?*

In my opinion the AD&A and assurance on other information outside the financial statements are most important. These areas have a significant impact for auditors, preparers as well as users and investors. However for the reasons stated throughout, these areas should not be implemented. In my opinion the clarification of language in the standard auditor's report is least important.

*b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?*

No, cost/benefit has been addressed throughout my comments.

*c. Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?*

While comment is open to the public, I expect comments will be coming from mostly auditors and issuers. The objective is to expand and clarify information that might be useful to investors and other financial statement users and narrow the expectation gap. Therefore it is imperative that the PCAOB seek those comments and create a two-sided dialogue.

*d. What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?*

I would recommend that a PCAOB committee (with applicable external representation) review the comments and hold meetings available to the public to address said issues.

*32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?*

Auditors should not disclose additional information as it could result in a (real or perceived) breach of confidentiality that could result in a deterioration of communications with preparers and audit committee members.

***Overall***

Overall the proposal does not appear to result in achieving the objective of providing more useful and a better understanding of the information contained in the financial report and auditor's opinion.

- Does not appear to result in a cost/benefit;
- Unnecessarily expands the auditor role and exposure;
- Inappropriately expands the auditors role to areas better served by other professionals;
- Increases the complexity of the financial report and opinion letter;
- Results in duplicity and/or competing and conflicting information;
- Potentially compromises confidential information;
- Provides for (unclear) alternatives to current "pass/fail" model;
- May create confusion among end-users;
- Decisions may be made on piecemeal information and not the overall report;
- Disclosure of audit program, significant procedures and materiality thresholds could compromise audit integrity;
- Difficult or Contentious Issues, Including "Close Calls" could result in discounting the value and decreased confidence of the opinion as well as the audit profession.

The proposal does not specifically appear to be directly user/investor driven. The Commission on Auditors' Responsibilities (Cohen Commission) that was mandated by the American Institute of Certified Public Accountants (AICPA), to "develop conclusions and recommendations regarding the appropriate responsibilities of independent auditors." The Cohen Commission was directed to "consider whether a gap may exist between what the public expects or needs and what auditors can and should reasonably expect to accomplish."

We need to sharpen our focus what those expectations and needs are and in my opinion would include:

1. The auditor is independent and qualified to perform the audit and provide the opinion;
2. There is adequate oversight of the auditor;
3. Reduced complexity and the use of *Plain English* to better understand the report and opinion;
4. Elimination of voluminous information that clouds the position and results;

5. That if errors and omissions exist that would impact the end-users opinion and conclusion of the financial position and operating results that the audit would detect, report and address.

I don't believe an auditor AD&A, assurance on other information and competing information meet these objectives or narrows the expectation gap. In my opinion, this should be a qualitative process project, not a reporting model project that results in increased costs with the potential of no significant improvement on reliance or confidence on either the financial report or the auditor's opinion.

We would be better served addressing the substance of an audit versus the form of an audit and assuming that providing additional by-product information from the audit will be useful.

I appreciate the progress and improvements made by the PCAOB to date as well as the opportunity to submit my comments to the Board with respect to the proposed concept release.

Respectfully Submitted,

/s/Thomas P. O'Connor

Comment Letter to PCAOB about the Proposed Reporting Model

9/24/11

I have read only 100 pages of the transcript provided for the September 15 meeting. I appreciate the immediate posting of this transcript. (I am merely an ordinary auditing faculty member who has great respect for the auditing process. I came into the field just after the U. S. Government report **on *The Accounting Establishment was published in 1977.)*** I was amazed at the lack of attention to that publication by public accountants. (My search was back in the late 1970's and possibly not sufficient to locate the discussions that followed.) I spent a week at the SEC in the Summer of 1980, when the POB was a common topic of discussion. I was at the SEC with a colleague; we had several meetings with the Chairman of the SEC, who, it appeared to us, was successful in supporting the POB under the direction of the professional body. That oversight board was disappointing; yet there was little criticism. When it was disbanded, there was virtually no comment.

I thought the Sarbanes-Oxley Act of 2002 was an appropriate step in establishing a new structure for oversight. It was wise that the Act did not require that audit standard setting be a task the new organization assumed, but the Board could determine to be the standard setter. When the April 2003 Board, with an Interim chair, voted "yes" to be the standard setter, I was somewhat surprised. Possibly, there was a long discussion that was considered private; what was disclosed on the Website was a straight forward conclusion;, only one question from a member of the Board that it was true that the Board did not have to be the standard setter ( the response to the Board Member's question was "yes") . . the board did not have to assume the task, and then the vote with no further questions. In a day or two the chief accountant was announced. (The vision statement of the CEOs of the Big 6 firms included, in a side bar a statement that the PCAOB was mandated to be the standard setter. That is an incorrect statement) Several accountants from out side the U. S. asked me about this decision . . they all felt that there could be a conflict of interest to have the standard setter and the oversight functions handled by the same organization.

Now, please understand that I don't have a comprehensive view of your organization and what you have determined to do. My comments are presented in a highly tentative manner. I am guessing that the interaction with those present on September 15 was far more extensive than what is presented in the transcript. My comments:

Possibly, there was a discussion that wasn't recorded that presented the auditing framework assumptions that guided the proposed new reporting model. I was looking for some discussion of critical postulates. (After a review of all the sets of postulates we could find, a colleague and I concluded that the tentative postulates of Mautz and Sharaf (*The Philosophy of Auditing, AAA, 1961, first date of issue)* were most impressive. One of their tentative postulates that we have continued to believe is a critical foundation is: No. 7: ***When examining financial data for the purpose for the purpose of expressing an independent opinion thereon, the auditor acts exclusively in the capacity of an auditor.***

What is being proposed as some participants interpreted what is stated in the new reporting model seems to set aside this powerful postulate. There were references in the pages I read to "direct communication between the auditor and the investor" and "say more about the health of the business." There are a number of comments that don't seem to reflect a thorough understanding of the need for objectivity in the performance of an audit.

The auditor, as you well know, is to *verify* what is presented by the client. That process is guided by both GAAS and the criteria, GAAP. Does it make sense that the auditor become a predictor of the future of a client? How reasonable are the wishes of investors?

I will say nothing more about this first point. I would like to see a reasoned rationale for setting aside the current role of the auditor. as stated in the above identified postulate. It is stunning that there is consideration that the auditor's task is to assure the investor about the company's future. I guess there is no need for an audit. A statement of one's prediction will be sufficient.

There were enough statements that appeared not to destroy the current postulate identified above, including some statements from Board members, that I shall be optimistic that the final proposal will be a wise one.

The last revision of the standard report included a statement at the end of the scope paragraph that states: *"We believe that our audit provides a reasonable basis for our opinion."* I was surprised at that sentence and thought that it would not be retained in the final version. It was, however. *Belief* is a somewhat ambiguous word; it can refer to faith without evidence or to careful attention to evidence. Given the responsibilities of auditors as they develop conclusions, I continue to wonder the value of that sentence in both the standard report of the ASB and of your Board.

Is there a way to inform interested parties of the nature of a *quality* audit? (To date, inspections provide no evidence of the quality of audits performed by the issuers.) There are, of course, explicit disclaimers about the use of the information in a publicly issued inspection report; the careful reader realizes that generalizations about the issuer are not warranted. The discussion of procedures implies that a random selection is not used; a typical empirical study of an issuer's audit behavior is not undertaken. When I learned that the first chairman of the Board indicated that the strategy for inspections would be a supervisory approach, because he believed that would be the effort that would lead firms to undertake quality audits. There was no detailed rationale provided for this strategy, but after reading the first two reports on the limited audits of the major 4 public accounting firms related to the financial audits and to the quality control assessment, I concluded that initial observations of the quality of audits motivated the supervisory approach. It is not clear why that approach is persisting until now – the latter segment of 2011. I have been unable to get an authoritative response to the question: Does a supervisory model for an inspection meet what the Act states re *determining compliance?*

The Center for Audit Quality issued a bulletin of limited pages entitled *Guide to Public Company Auditing. .* Consider page 9, headed *Finding Fraud.* Highlighted is: Because the audit goal is "reasonable assurance" a properly planned . . . . audit may not detect fraud. . . . " I asked 10 individuals, as individuals, not in a group who know virtually nothing about an audit to read this page and give me a guess about the value of an audit. (these are academic professors in fields distant from accounting and business who have TIAA-CREF pension plans and pay no attention to what their pension plans do; they just have confidence in the firm. . . ) Without exception, each said: "Well, it appears that the audit is worthless. . . obviously, reasonable assurance is not a very high level of assurance." I have distributed this page to students, who are surprised by the lack of explanations. (See the proposed revision to the *Yellow Book of GAO,* which includes a valuable explanation of *reasonable assurance, fpr example.)*

I guess what we hear from investors does vary. After I initially read the proposal for a new format for the auditor's report, I asked a number of investors, who know what an audit a simple question: What do you want from an auditor's report? The answer I got was: "I want to know that the financials audited are reliable. That is what is important." I can read what is of interest to me and make my own judgment. It seems completely out of "character" for an auditor to communicate directly with me. Apparently, that isn't what some of those who participated in your meeting recently learned from those with whom they spoke.

As I view (from a questionable perspective) the activities of PCAOB from its getting underway in early 2003 to the present, these are matters that seem critical:

1. Provide more information to the public. Just two illustrations:

   1.1 I read many inspection reports; some include a letter from the issuer. A common comment is that professional judgment is required in many instances and professional judgment can vary. . . . "and we have undertaken the steps you proposed; we found no need to change our earlier conclusion." . . however, the reader wonders: was the issuer right? Did the PCAOB follow up with acceptance of the explanation? What happened?

   Professional judgment is grounded in technical knowledge of GAAP and GAAS; variations provided by inspections must be as carefully identified as is the case of the auditors on the job. What is being done to resolve the differences, that appear to disappoint the issuers?

   1.2 I have wondered about the audit documentation for AU 380, a continuing interim statement. Is any audit documentation required related to the audit itself or is that matter considered a part of quality control? In the inspections I have read, I have never seen a reference to insufficiencies of reporting related to AU 380.

2. How do you justify the following:

   2.1 In early 2007, as I recall the Center for Audit Quality was established. From what I have learned that is an advocacy group with one of the highest paid lobbyists as its executive director. Before that first year ended, the CAQ had a celebration for the first five year anniversary of the PCAOB. .. An oversight board accepting such a celebration seemed surprising. Is it common for issuers to provide elegant parties for the audit team and the key national leaders of the public accounting firm that provides an unqualified report?

2.2 How is the independence of inspectors and that of the office of the chief accountant maintained? We talk so much about division of duties where there is potential conflict of interest. Now we have an oversight board that is also the standard setter. (My accounting friends from other countries find this status difficult to believe)

In my brief reading of the transcript, I was reminded of a newsletter I read at J. C Penny just months before the company left New York to establish their headquarters in Texas. I was studying materials in their archives to trace J. C. Penny's development of his code of ethics. However, I read some newsletters that include copies of letters the company received from their auditors when the audit was completed. One that I read noted that no adjustments were necessary at the conclusion of their audit. I haven't thought about this, but could the proxy statement about the audit committee say something far more substantive than is the case now? In reviewing four statements about audit committees in proxy statements, the class and I were disappointed at how little we learned. Would issuers be willing to present, in some appropriate form, some degree of explanation of those matters that are presented to the audit committee? (During the financial crisis of the last several years, there have been some amazing disclosures of ineffective boards . . and of audit committees. . . governance at the board level is likely to be worthy of improvement. )

I know that establishing a new organization is no simple task. I know it takes time. I dislike being critical. I believe that the 2002 Act was promising. It is not clear that the implementation is as effective as we had anticipated. I am sorry that I see the problem re reporting in a broader framework than is likely to be justified. . .

Is it really only the content of the auditor's report that needs attention? I doubt it. I wonder if what we need is a reliable conclusion by the auditors?

Re: Rulemaking Docket Matter No.34

As members of management of a publicly traded partnership, we are writing to comment on the concept release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements, dated June 21, 2011. It is our opinion that the proposed revisions being considered have the potential to significantly alter the roles and responsibilities of both management and independent auditors in the financial statement reporting process. Given the potentially significant impacts of the proposed revisions, we believe that it is imperative that any changes are thoroughly analyzed and assessed from the perspectives of all impacted parties. We fully appreciate and support the need for financial statement transparency and the continually evolving need to provide financial statement users with a sufficient level of information for use in their applicable evaluation and decision-making processes. However, we also believe the manner in any changes made to facilitate achieving such objectives must be appropriately evaluated to ensure such changes will be effective and, at the same time, not result in any unintended, adverse consequences.

**Principles Underlying our Response**

As the preparation of a company's financial statements is ultimately the responsibility of the company's management, management should have the sole responsibility for financial statement reporting. If additional information regarding a company or its financial statements is determined to be necessary to be reported via a company's financial statements, the responsibility for providing such information should be placed upon management and not the company's auditor. Any communications provided by a company's auditor should be focused on the nature of audit procedures performed and the results of such procedures. These views are reflected in our responses to selected elements of the concept release further discussed below.

**Auditor's Discussion and Analysis**

We are not totally opposed to the concept of adding an Auditor's Discussion and Analysis ("AD&A"). However, we do believe that several respondents have raised compelling points regarding the sophistication of the investing community and the wealth, depth and sheer volume of information publicly available regarding auditing standards that cast doubt on the real benefit that will be gained in adding a significant amount of new disclosure. We also believe that the suggested alternatives will result in already lengthy audit reports and Form 10-Ks that may discourage investors and analysts from reading the reports and will be challenging for readers and difficult to compare between registrants. In

333 Clay Street, Suite 1500 ■ Houston, Texas 77002 ■ 713-646-4100 or 877-707-6457

addition, we believe there is a strong likelihood that the alternatives presented could result in significantly increased costs to issuers.

Although we do not have an outright opposition to the concept of an AD&A, we do feel strongly that if an AD&A were adopted, the focus should be on audit risk, procedures and results and not adding additional disclosure about the financial statements of the company. Understood and, at the heart of, the AD&A concept release is the belief that investors would benefit from the unique and relevant insights into the company provided by additional information in the auditor's report. The concept release goes on to mention that one alternative is for the AD&A to include the auditors discussion of the company's financial statements, such as management's judgments and estimates, accounting policies and practices, and difficult or contentious issues. It also suggests in the additional disclosure that auditors highlight where management could have applied different accounting approaches or disclosures. We believe that these alternatives create a fundamental shift in the responsibilities of the auditor away from performing an audit to provide reasonable assurance that the financial statements are free of material misstatement to a responsibility for disclosing any and all information about the company that they are auditing. We have several significant concerns with this.

Our foremost concern is the potential impact that this may have on communication. We believe that open communication between management, the auditor and the audit committee is vitally important to the audit process. We believe that this type of AD&A may reduce or hamper that important open communication.

The managements of public companies are responsible for the completeness and accuracy of the financial statements, footnotes and related disclosures. The company employs significant resources to ensure that the appropriate systems, policies, procedures and resources are in place to ensure that business activities are appropriately captured and reported in accordance with the applicable accounting standards. Underpinning these activities are significant time and resources dedicated to researching and concluding on the appropriate accounting for a number of matters. While we agree that the auditors expend a significant amount of time in the process of performing their audits and do gain insight and knowledge about the company that they are auditing, management remains the best and most appropriate source for information about the company and related accounting matters. To the extent that there is a real need by the investment community for additional disclosure regarding judgments and estimates used or the availability of alternate accounting methods, we believe that the Board should recommend that the FASB or the SEC consider amending the applicable disclosure requirements to meet those needs.

Further, a focus by the auditors on creating content and disclosure would require significant high-level input from the audit team which could distract the partner and manager from focusing on the audit itself, which could prove to be detrimental to the quality of the audit.

In addition, the illustration included in the concept release is difficult to assess for usefulness as it does not include any of the challenging concepts that are proposed in the AD&A concept release. The discussion of these matters would most likely extend to multiple pages and even at that length, be subject to confusion and potential undue concern without elaborate, detailed explanations. Also, there would be a significant challenge to the audit firms to determine the appropriate subjective wording that is appropriate for a specific company and yet still be consistent and comparable with similar fact patterns at other companies. There would be even more significant challenges for investors in attempting to compare and contrast disclosures made by different audit firms when attempting to appropriately consider the information provided in making their investment decisions. These conflicting issues would move us away the clear, concise and consistent audit report that provides investors reasonable assurance that the financial statements are materially free of misstatement to a lengthy, subjective, inconsistent report that potentially creates confusion.

**Required and Expanded Use of Emphasis Paragraphs**

We are not totally opposed to the required and expanded use of emphasis paragraph, but we do believe that certain principles should be maintained. Foremost, the alternate presentation style should focus on audit risks, procedures and results and should not extend to disclosing additional information about the company or the company's financial statements. The disclosure of information about the company and the financial statements should remain the responsibility of management. Current reporting standards require comprehensive disclosures covering a broad range of topics in an attempt to provide relevant information to financial statement users. To the extent more information is needed on certain topics, the relevant reporting standards should be amended to incorporate those requirements.

One practical downside to requiring auditors to disclose or summarize significant matters or risks highlighted, by designin an emphasis paragraph, is the potential increased exposure it would present to the auditor. We believe that a practical reaction would be for the auditor to provide laundry lists of lesser significant matters to mitigate that risk, which could eliminate or largely offset any meaningful intended benefit.

**Auditor reporting on information outside the financial statements**

The concept release includes alternatives for expanding auditor reporting to a wide range of areas ranging from MD&A to press releases. We believe that the costs of expanding the auditor's reporting responsibilities far outweigh the benefits associated with such changes. As noted in the concept release, the auditor's currently have responsibility to read and consider whether information outside the financial statements or the manner it is presented is materially inconsistent with the financial statements or represents a material misstatement of fact. To the extent there is real demand for additional assurance, a current PCAOB standard exists for the auditors to provide such assurance. We have not experienced demand for this level of assurance from investors and analysts and we do not believe that creating additional required reporting would be cost beneficial.

We understand that timely access to financial information is a key priority of the investment community regarding press releases. Any efforts to require an auditor report on press releases would necessitate a delay in the timing of disseminating that information to the public and would run contrary to the priority of timely access to that financial information.

**Clarification of language in the auditor's report**

We do not have any objections to the suggested alternatives to clarify the language in the auditor's report.

Thank you for the opportunity to comment on this concept release.

Sincerely,

Al Swanson

**Reference: Rulemaking Docket Matter No. 34**

Board Members:

Pfizer is a research-based, global biopharmaceutical company. We apply science and our global resources to improve health and well-being at every stage of life. We strive to set the standard for quality, safety and value in the discovery, development and manufacture of medicines for people and animals. Our diversified global healthcare portfolio includes human and animal biologic and small molecule medicines and vaccines, as well as nutritional products and many of the world's best-known consumer healthcare products. The Company's 2010 total revenues were $67.8 billion and its assets were $195.0 billion.

We appreciate the opportunity to present our comments on the Board's "Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements" and we recognize the Board's efforts in service to financial statement users. The concept release presents several alternatives for consideration – some quite far-reaching and problematic for both preparers and their auditors -- and others which would more clearly be seen as improvements.

While we understand that an expectation gap continues to exist between what auditors have responsibility for and what users perceive an audit to be, we agree with those investors who told the Board, during its outreach effort, that "…the pass/fail model and standardized language of the auditor's report provides consistency, comparability, and clarity of auditor reporting." In view of these positive characteristics of standardized language, we are less concerned than some about the use of so-called "boilerplate" of audit reports.

It is also not clear that standardized language can be avoided, given the cost in both time and effort, and the risk of confusion and liability that attends the notion of "custom-tailored" report language. However, we do appreciate and support the initiative to clarify the language of the auditor's report, and would support some of the changes discussed in the concept release.

In particular, we would agree that the audit report could be improved by adding standardized language that:

- defines the concept of reasonable assurance as it applies to the audit although we suggest that the definition of reasonable assurance be better defined than the current description of "high level of assurance but not absolute assurance" which is confusing

- explains that the audit is intended to provide reasonable assurance that the financial statements are free of material misstatement, whether caused by error or fraud

- describes management's responsibility for the financial statements and related footnote disclosures

- clarifies the nature of footnote disclosures as an integral part of the financial statements, and that they are covered by the auditor's report

- explains the limited nature of the auditor's responsibilities regarding information outside of the financial statements. With respect to this, we find that AU 110 provides Plain English language that should be considered in crafting the language:

  - *The auditor has a responsibility to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether caused by error or fraud. Because of the nature of audit evidence and the characteristics of fraud, the auditor is able to obtain reasonable, but not absolute, assurance that material misstatements are detected. The auditor has no responsibility to plan and perform the audit to obtain reasonable assurance that misstatements, whether caused by errors or fraud, that are not material to the financial statements are detected.*

  - *The financial statements are management's responsibility. The auditor's responsibility is to express an opinion on the financial statements. Management is responsible for adopting sound accounting policies and for establishing and maintaining internal control that will, among other things, initiate, record, process, and report transactions (as well as events and conditions) consistent with management's assertions embodied in the financial statements. The entity's transactions and the related assets, liabilities, and equity are within the direct knowledge and control of management. The auditor's knowledge of these matters and internal control is limited to that acquired through the audit. Thus, the fair presentation of financial statements in conformity with generally accepted accounting principles is an implicit and integral part of management's responsibility. The independent auditor may make suggestions about the form or content of the financial statements or draft them, in whole or in part, based on information from management during the performance of the audit. However, the auditor's responsibility for the financial statements he or she has audited is confined to the expression of his or her opinion on them.*

- states explicitly that the auditor is independent of the company and has complied with all applicable independence requirements of the SEC and PCAOB.

We don't believe that any of the proposals listed above would have a negative impact on audit quality or cost, and could be informative and clarifying for some financial statement users.

However, the concept release includes other alternatives that, in our view, would have significant adverse impacts on cost, audit committee governance, the auditor relationship, and that would raise serious concerns about liability. In addition, some of the proposals would only blur the boundaries around who owns and is ultimately accountable for the financial statements (management, not the auditor) and who is the most knowledgeable about the business that the financial statements purport to represent (again, management, not the auditors). Furthermore, certain of these proposals would subject companies to the personal views of an individual audit partner. Judgments are generally around the most subjective areas which often incorporate assumptions and estimates and, which are of the greatest concern to investors, are made by people, not companies or firms. Therefore, they do tend to be less consistent and given to more variability. Attempting to place the auditor's judgment at a higher level than management's will likely result in an adversarial relationship and less constructive debate between auditors and preparers which we view as resulting in a decline in audit quality.

Moreover, we believe that users of financials already have a wide collection of information available to them regarding risks and quality controls inherent in the process (although we note that these are contained in multiple documents as a result of various rulemaking) including, but not limited to:

- Management's Discussion and Analysis which provides a discussion of the critical accounting policies, the strategy of the company, the operating environment of the company which highlights the key risks impacting the business, significant changes in the period including acquisitions and divestitures, and impacts to revenue and net income;

- Section 302 certification of CEO and CFO regarding the assertion that the financial statements fully comply and the information contained in the report fairly presents the financial condition and results of operations of the company;

- Section 404 representations of management as well as the Auditor's report on internal controls;

- The Audit Committee report included in the Proxy materials indicating the procedures they have undertaken around the financial reporting process and the independence of auditors;

- Discussion of Board of Director independence in the Proxy materials; and

- Investment Analyst reports wherein such analysts often cover a specific industry and can provide a more in-depth perspective on industry and the company and challenges and opportunities to better understand the business and strategic risks. Unlike the financial report which focuses on the past, analyst reports tend to focus on the future of the company.

We discuss each of these alternatives below:

**Required and Expanded Use of Emphasis Paragraphs**

The concept release explains that "required emphasis paragraphs could be beneficial to financial statement users through the auditor's identification of significant matters and referencing where those matters are disclosed in the financial statements." In short, auditors would now be asked to provide a guide to users so that they could easily and quickly get to the important parts. The literature already provides auditors with discretion to use such emphasis paragraphs, and there may be occasions when these paragraphs will be appropriate and useful. Our experience has been that users, as a population, vary widely and what is "important" to them varies widely and, in an effort to cover everything that is possibly "important", auditor emphasis paragraphs could become unwieldy with the user no better served. Alternatively, without strict guidance as to what should be included, differing matters may be emphasized within a single industry leading users to a possible inappropriate conclusion that the matter is not significant at various companies in the same industry. Moreover,if there is a perceived need for guides to significant matters and key disclosures to be provided for every set of audited financial statements, then the SEC should require management to provide such additional disclosures, if needed, within its Management's Discussion and Analysis.

We believe that the MD&A already requires these types of disclosures which are currently reviewed for consistency by the auditor and therefore, this would only serve to provide redundant information. We think this is an important matter of principle, and urge the PCAOB not to require the use of emphasis paragraphs for such purposes. Another important and relevant principle is that the auditor's opinion is based on the financial statements taken as a whole: for this reason, emphasis paragraphs, when used, should relate to matters that pertain to "the whole" as it would otherwise come to represent a piecemeal opinion.

**Auditor's Discussion and Analysis**

The concept release describes the AD&A as something ranging from descriptive and objective information, such as a discussion of areas of audit risk and the audit procedures performed in relation to these areas of risk, to more subjective discussions including evaluations of management's judgments and estimates, and "close calls". We view the AD&A as a significant expansion of the auditor's responsibility beyond his or her opinion of the reasonableness of the financial statements. This perception that financial statements and the judgments contained therein are extremely precise or that having them be fairly stated, in all material respects is not good enough indicates that the expectation gap between what preparers must contend with in the accounting rules (predicting future impacts in terms of certain reserves, predicting market participant views for fair value, predicting possible success rates for in-process research and development, etc), what auditors must do in performing an audit, and what users believe financial statements present continues to be wide.

The concept release indicates that "An AD&A could give the auditor greater leverage to effect change and enhance management disclosure in the financial statements…." This statement in, and of itself, creates further confusion around the role of the auditor versus the role of management and actually increases the "expectation gap" between what an auditor's responsibilities actually are and what users of the financial statements think auditors do. As you are aware, management owns and is responsible for the financial statements, while the auditor's role is to provide assurance as to the reasonableness of the financial statements. The auditor assesses the reasonableness of the financial statements including the footnote disclosures but is not responsible for creating or enhanciing those disclosures. In practice, auditors provide comments to the preparers of the financial statements including suggestions for improvements in disclosures. Like most preparers, we give serious consideration to the comments we receive from our audit team, so we do not view this perceived need for leverage as something that needs to be fixed.

Including discussions of evaluations of management's judgments and estimates and "close calls" will only leave investors confused as to why varying views exist and why management is signing a Sec 302 assertion that the financial statements fully comply and the information contained within the report fairly presents the financial condition and results of operations of the company. We are not certain how the PCAOB will define "close calls" or "contentious issues", but our experience is that these matters are generally not negative conversations or arguments. Instead, robust dialog and debate is undertaken around issues that are very complex, subject to interpretation, or use multiple assumptions and judgments. This debate is critical to ensuring that the issues are well understood, the various interpretations are examined and a thoughtful and appropriate answer is reached by the registrant and the auditor. These disclosures would likely undermine investor confidence because they would not be well understood given the lack of context.

We believe that Audit Committees would take such public discussions very seriously and financial statements may no longer represent management's view, but rather, the auditor's views in an effort to avoid such public commentary. We do not believe that investors or preparers are served well by this. Preparers may wind up submitting financial statements using the auditor's assumptions or not enter into robust discussions of issues with their auditors to avoid getting a close call designation. This means that communication to the auditor may become more limited and that incorrect conclusions may be reached due to lack of discussion.

We believe that this is a giant step backwards in the gains reached since SOX 404 came into place and its interpretation immediately dampened communications between preparers and auditors around significant issues. Investors may "believe" that having the auditor's views embedded in the financial statements is better, but again, the auditor's view may not be the best or only view and without any context, the difference of views is likely to simply cause confusion and shift the responsibility for ownership of the financial statements to being jointly shared by management and the auditor. This of particular concern because such a view may not be standard, but rather, may be subject to the personal view of an individual audit partner who might be more, or even less conservative in his or her views than the company or other individuals in his firm based on his personal background, specific work issues, past dealings with the PCAOB, etc, none of which an investor could know.

We also believe that audit firms and individual partners would be subject to litigation from users. Again, it is important to remember that reasonable people can disagree, particularly when it relates to assumptions or estimates which are not black and white areas, or when it relates to areas that are so complex as to need multiple discussions between the auditor, preparer and, sometimes, the auditor's professional practice group to understand and evaluate the accounting rules which may be applicable. We note that, at times, the Big 4 accounting firms offer differing interpretations or guidance of rules and that these interpretations and guidance have all been made in good faith.

Because the auditor only gains limited knowledge through the audit, we do not believe that the auditor has more insight than management has provided within the MD&A or the financial statements. Finally, we believe that developing an AD&A report would be very inefficient for firms to have each partner preparing separate reports and ensure quality and consistency, and in fact, would likely result in a standardized, boilerplate report in the firm's attempt to control quality and limit litigation.

The concept release discusses potential disclosure by the auditor of "matters related to internal control over financial reporting that required significant deliberation by the auditor and management". This appears to re-open the definition of "material weakness" or to raise the question of whether "significant deficiencies" ought to be publicly disclosed. We believe that 2007 guidance from the SEC and PCAOB should be maintained, and would be very concerned to see such a fundamental change in the dynamics of SOX compliance and reporting.

A key principle that should be preserved is that the responsibility for the financial statements and related disclosures belongs to management, and that auditors should communicate their views on these matters to management and to the audit committee. If auditors are expected to disclose information that management deems to be confidential or inaccurate, there will be significantly less openness in communications with the auditors, as management will seek to minimize the impact of this problem. If auditors are required to express their viewpoint on management's estimates, judgments, disclosures, and selection of accounting policies/treatments, management and Audit Committees will often be faced with a difficult dilemma – conform to every preference of the auditor, or accept that auditor views may confuse users because they raise differences without context or how the auditor gained comfort with the financial statements being fairly stated in all material respects.

**Auditor Assurance on Other Information Outside the Financial Statements**

It is sufficient that the auditors read this information and consider whether such information or its presentation is materially inconsistent with the financial statements they have audited. A statement to this effect, clarifying the extent of the auditor's responsibilities for such information, should be included in the audit report, to enhance the understanding of users. However, we do not see any benefit in requiring auditor attestation to the earnings release, and an audit of the MD&A would be very costly, relative to the benefit of added assurance thereby obtained, and would add significantly to the time required to issue annual reports

As a point of reference, our MD&A is currently 48 pages long and we believe would take a significant amount of time to audit. Additionally, the PCAOB standards for documentation would be difficult to complete in a timely manner because many of the items discussed are not specifically related to financial matters but rather relate to, in our case, non-financial information around research and development. As such, auditors would wind up verifying what phase a clinical trial is in, obtaining and documenting FDA approvals, etc. These are not areas of expertise of an auditor and the auditor and are not subject to financial statement rules.

We also see additional downside risks in this proposal: first, that MD&A would morph into the Auditor's Discussion or that, to avoid conflicts and increase timeliness, registrants would put minimal information in their MD&A and investors would, in fact, receive less information than they do now. In the balancing of the possible benefits of increased auditor assurance against clear, concrete considerations of cost and timeliness of reporting, the benefits are, in our view, outweighed by a very wide margin.

* * * * *

In summary, as described above, we would welcome, if it will decrease the current expectation gap, the addition of limited, standardized, clarifying language to the auditor's report, to enhance user understanding of the report. We are very concerned that the other alternatives outlined in the concept release would be very costly and would adversely affect the timeliness of corporate reporting. More importantly, they would also undermine the important principle that management is responsible for the company's financial reporting and blur the responsibilities between auditors and management. The unintended effects and practical and legal consequences of such a fundamental change and expansion of auditor responsibilities are a significant cause of concern.

Once again, we appreciate this opportunity to comment on this concept release and encourage the Board to continue to engage its constituents. We would be pleased to discuss our perspective on these issues with you at any time.

Very truly yours,

Loretta V. Cangialosi

Re: PCAOB Rulemaking Docket Matter No. 34
Release No. 2011-003, "Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements"

We appreciate the opportunity to respond to the "Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements" (the Release) that is contained in Release No. 2011-003 dated June 21, 2011, of the Public Company Accounting Oversight Board (the PCAOB or the Board). We note that many of our concerns are already mentioned in the Release and deserve the Board's continuing serious consideration.

We begin our discussion by setting forth our broad view of the four "alternatives" suggested in the Release as possible ways to achieve the objective expressed in the third paragraph of Part I thereof. Briefly summarized, the four alternatives (reporting Alternative Nos. 1-4) include (1) a required "Auditor's Discussion and Analysis" (AD&A) to provide information about the audit and the financial statements, (2) required expanded use of emphasis paragraphs, (3) reporting on information outside the financial statements, and (4) clarification of certain report language. In short, we would be in favor only of reporting Alternative No. 4. For reasons articulated in the attachment that follows, we would be vigorously opposed to any future proposal that would seek to revise PCAOB standards to include requirements for any of the suggestions in reporting Alternative Nos. 1-3. Moreover, we doubt the validity of the Board's apparent conclusions as to the significance of any investor needs or demand for any such action.

We present details of, and support for, our overriding concerns and reservations in Part 1 of the attachment. In Part 2 we briefly respond to the 32 specific questions posed in the Release. To reduce the need for redundancies, our responses to such questions consist to a large extent of cross-references to relevant paragraphs in Part 1

Thank you for this opportunity to comment. We hope the Board finds our comments useful in its deliberations on this matter. Please contact the undersigned at hlevy@pbtk.com or 702/384-1120 if there are any questions about these comments.

Very truly yours,

Piercy Bowler Taylor & Kern, Certified Public Accountants

## Part 1 — Overriding Concerns and Reservations

1.1 The Release asserts that it is focused primarily on enhancing communication to investors rather than on changing the fundamental role of the auditor. However, as discussed below, most particularly in paragraph 1.8 (relative to the AD&A discussed as reporting Alternative No. 1), it is our view that new standards such as are under consideration in the Release, with the exception of reporting Alternative No, 4, would, indeed, have the unfavorable effect of fundamentally altering the auditor's role and function.

***Demand for change:***

1.2 We are far from persuaded and, in fact, have considerable doubt, that there is persuasive evidence currently available of any compelling need or demand among investors and other users for the kind of information that auditors might be required to report as a consequence of this project. We have read some of the early comment letters received from others (for example, the rather typical letter dated July 15, 2011, from the Florida Institute of Certified Public Accountants) and firmly believe that the comment letters ultimately will bear convincing evidence, to a much greater extent than the Board's initial "outreach" efforts did, of the highly controversial level of the conclusions and recommendations embodied in the Release, albeit presented as tentative. Moreover, we believe that the survey-based research about users' needs for possible revisions to PCAOB standards relating to auditor reporting appears most likely flawed seriously in many respects and has resulted in conclusions (again, albeit presented as tentative) that appear inherently biased and, therefore, unreliable. Accordingly, with the possible exception of reporting Alternative No. 4, without significantly more and credible research, we believe it would be extremely premature to take any action at this time on any proposal, even to formally propose such as in an exposure draft standard or series of standards relative to reporting Alternative Nos. 1-3. (See also paragraphs 1.22, 1 .24 and 1.26, below, with specific regard to the demand for reporting under reporting Alternative No. 3.)

1.3 Although not presented in the description of the PCAOB staff's "outreach" efforts (Appendix C) included in the Release, we have learned that the survey undertaken was distributed by mail to a relatively small population of 300 consisting primarily of leaders of institutional investors of which 73 (or 24%) responded. Although such a rate of response is not unusually small for any survey, only 45% of the respondents or 11% of the entire population surveyed (*i.e.*, only 33 respondents) expressed any dissatisfaction with the information provided by current audit report model. Accordingly, we believe the frequent use in the Release of the expression, "many investors," constitute a series of overstatements of the facts. We believe that 33 respondents is hardly a significant enough response to reasonably constitute a basis to justify the drastic changes in current practice suggested resulting in a fundamental and significant effect on issuers, their auditors and investors, alike. On the contrary, we believe that the survey results better supports an opposite conclusion because the 227 nonrespondents (or 76% of surveyed population) afford persuasive evidence of a high level of investor indifference to the prospect of introducing new reporting standards that would require such changes, rather than supporting an assertion that there is a substantial demand for it.

1.4 We find it extremely difficult to place any credence in Board's interpretation of these survey results when we factor into this analysis: (a) the probability that the 227 nonrespondents are likely satisfied with (or disinterested in) the content of the standard audit report, or as further evidence of probable investor indifference, considered themselves too busy to respond to the survey, (b) the fact that responses were inherently more likely to be received from those who are, in fact, dissatisfied with the *status quo* than from those who were not, and (c) that human nature being what it is, if you ask someone if (at no cost to them) they want more information than they are currently getting, they will likely respond in a knee-jerk reaction in the affirmative. We believe that the latter most likely accounts for the apparently unanimous support for the AD&A from large investor groups observed at the recent September 15th roundtable discussion – "If you build it, they will come!" This phenomenon may also explain why it is asserted in the Release only that the changes on the reporting model under consideration "might be useful to investors" and that "many investors ***are supportive*** of changing the auditor's model [emphasis added]" as opposed to more positive statements relative to perceived investor demand for such changes.

1.5 As is evident from the historical discussions in the Release, most particularly Appendix A, the evolution of the standard audit report has been slow and cautious over the past more than 100 years. In the early days of this evolution, standard-setters recognized the importance of eliminating or reducing opportunities for auditors to include vague and inconsistent language in their reports that would not effectively serve the needs of users. The most recent substantive changes in the standard audit report form (*i.e.*, excluding references to PCAOB standards for reporting on financial statements of issuers) were introduced in 1988 in SAS 58 as part of the so-called "expectation gap" standards and were primarily to clarify the auditor's responsibilities and distinguish them from management's. We believe these reporting objectives to be still valid today because sweeping, fundamental and sudden drastic changes in the audit reporting model would be inherently confusing to the investment community and, therefore, disruptive to the capital markets. We would oppose any recommendation, for example, such as for an AD&A, that would move audit reporting in any direction not consistent with the reporting objectives discussed in this paragraph. Accordingly, we believe considerably more evidence of the presence of a compelling demand should be necessary to support continuing efforts to produce a future proposal for such fundamental changes in the role of auditors and the nature of their reports.

***Role and authority of PCAOB:***

1.6 The Release causes one to question whether a forthcoming proposal from the PCAOB to adopt the suggested revisions to the standards might, in some ways, exceeds its statutory authority under the federal Sarbanes-Oxley Act of 2002 (the Act). It appears that Sections 101(a) and (c) (5) and 103(a)(1) and (4) of the Act contain broad enough language that could enable an interpretation that such action would be within the Board's authority. Nevertheless, it remains a question as to whether Congress ever intended the PCAOB's role or authority to go significantly beyond (a) setting the standards for performing audit and other services that issuers are already required under the federal securities laws or might optionally engage auditors to perform, (b) qualifying auditors through the registration process to perform such services, (c) monitor the performance of such services through its inspection process, and (d) impose disciplinary actions against noncompliant or incompetent auditors.

1.7 As discussed in more detail below, we believe that requirements such as those suggested for consideration by reporting Alternative Nos. 1 and 3 would be beyond our understanding of the probable intent of Congress as to the role and authority of the Board because they would set auditor's reporting responsibilities so far outside those requirements that are presently embodied in the federal securities laws, as now constituted, and the traditional auditor's role. Accordingly, if such requirements are ever to be included in standards applicable to auditors, we believe they should be initiated by actions of the U.S. Securities and Exchange Commission (SEC) under specific Congressional authority preferably to be derived from legislation not yet enacted.

***Alternative No. 1 (the AD&A):***

1.8 Expanding on the idea introduced above in paragraph 1.1, we believe any proposal to require auditors to issue AD&As under reporting Alternative No. 1 (clearly the most objectionable among the four presented) would likely have the generally undesirable effect of fundamentally changing and expanding the role of an auditor beyond that of an attester to the reliability of management's (*i.e.*, to add credibility to those assertions, most significantly, for example, as to fair presentation of the financial statements and accompanying note disclosures) to be more like that of a regulator, overseer, critic and/or whistleblower or adversary. This change in reporting responsibility would likely have the more specific undesirable effect, among others discussed below, of engendering management distrust of the auditors and consequently impairing working relationships and the open, unfiltered communications that are necessary to enable the effective and timely completion of a financial audit as we now know it. Further, we believe that public disclosure of matters that are now or should now be disclosed only to audit committees confidentially for them to act upon in exercising their oversight functions will likely put undue pressure on such committees and certain auditor disclosures might be viewed as providing a basis for criticizing audit committees, thus straining relationships between their members and the auditors as well.

1.9 Auditing is a highly complex professional discipline that requires years of education, training and experience to enable appropriate judgments as to risk assessment and audit scope in any given set of circumstances. Historically, we have seen countless examples of expert witnesses disagree on matters of risk assessment and audit scope adequacy and in recent years, substantial evidence of such disagreements between knowledgeable, experienced professionals is publicly available in the reports of PCAOB inspections and responses thereto. Accordingly, we believe that public disclosure of details of risk assessments and audit scope would not serve any useful purpose but rather would diminish the value of an audit report as such details would not only exceed the capabilities of investors and other users to make meaningful assessments and useful judgments about but also quite probably would be misunderstood and/or confusing to most of them. It is unreasonable, in our opinion, to create expectations that any form of written report, no matter how expanded it is from the current model, that is inherently limited by time and space, would enable lay users to make meaningful judgments as to such complex matters as would relate to the appropriate audit risks and scope.

1.10 Because of the almost endless variety of matters that might be included in an AD&A, if even a reasonably consistent structure or format were to be prescribed by a future standard, we firmly believe the language to be contained therein would necessarily be nonstandard. We also believe that, depending upon the writing style preferences and skills of individual auditors or their firms, such nonstandardized, free-form audit reports, in general (*i.e.*, even as to matters other than audit risk and scope), would not afford any measurable benefits to investors or other users because, at best, most likely, such reports would be readily misunderstood and extremely difficult for such users either to interpret or to make meaningful comparisons among reports on financial statements of different issuers that represent alternative investment opportunities under consideration.

1.11 It appears that an AD&A prepared under reporting Alternative No. 1 would be a throwback to an old, and similarly nonstandardized reporting format called the "long-form" report that was initially "officially" legitimized in 1957 in Statement on Auditing Procedure (SAP) No. 27 after many years of common use. In 1957, the long-form report was often issued either in addition to, or instead of, the so-called "short-form" report or "certificate," which was first formally standardized in 1948 in SAP 24 and designed to meet consistently the minimum requirements of the reporting standards contained in the nine (later expanded to ten) "generally accepted auditing standards" that were adopted that year. In connection with long-form reports, SAP 27 provided little or no specific guidance as to form and content except to caution auditors wisely against certain risks associated with such reporting by emphasizing (a) the need to maintain a "clear-cut distinction" between representations of management and the auditors (b) the fact that "comments or other data contained in the long-form report [may] lend themselves to a contention that they constitute exceptions or reservations, as distinguished from mere explanations," and (c) that client financial information contained in such a report may "support a contention that the auditor has made *factual* representations rather than express an *opinion*... [on] management representations." We believe these risks would re-present themselves and would remain significant in the event any form of reporting Alternative No. 1 were to be required (or even made optional) for public reporting purposes.

1.12 Although required to maintain objectivity and be independent in both fact and appearance (as independence has effectively been defined in a long series of rules, interpretations, rulings and regulations of various bodies), it remains a fact of professional life that auditors compete with one another for clients. One way they are able to compete while remaining within the restrictive boundaries of independence, is to offer their clients value-added suggestions for improving, for example, their operating efficiency and, thus, profitability.* In the face of an AD&A reporting responsibility, as mentions in SAP 27, many such recommendations may likely bear a significant risk of being inappropriately viewed as exceptions or criticisms if included an AD&A and may, therefore, be withheld and be adverse to the economic best interests of the issuer and its investors.

1.13 Over time, following the issuance in 1957 of SAP 27, the use of long-form reports diminished quickly and greatly in practice, particularly as an alternative for what, in contrast, was still called a "short-form" report. However, beginning with Statement on Auditing Standards (SAS) No. 2, issued in 1974, the short-form report was formally redesignated the "standard" audit report, and effectively, use of the long-form report as an alternative to it was no longer deemed acceptable. Although the long-form report continued to be available for use as a type of supplemental report, it was rarely issued thereafter for distribution to other than a select group of users, its use has virtually vanished from modern practice largely, we believe, most likely in recognition of the risks set forth in SAP 27 and other reasons presented elsewhere in this discussion (not the least of which was likely a growing concern for the liability risk discussed in the next paragraph). We do not believe there is any compelling reason at this time to bring the long-form report back as an AD&A.

1.14 We see it as frightening to consider the enormous exposure to liability for auditors presented by long-form type reporting in our nation's highly litigious culture, and in today's economic and political environment that tends to generate extreme market price volatility, given the improbability of developing sufficiently rigid standards at least as to form and general content, if not specific standard language. Such risk relates not just to what an audit firm might include in, but to what it might exclude from, its report. In fact, we believe such risk is likely to result in firms, particularly the large firms, adding multiple layers of review to the audit reporting process so as to seriously impair their ability to issue reports timely and also would add costs that are not commensurate with any realizable benefits to issuers or others that would be better spent in operations, thus adding real value indirectly to the interests of investors.

1.15 Although we recognize as worthwhile the objective of making the standard audit report more informative (such as in accordance with reporting Alternative No. 4, if proposed), we believe that human nature is such that if audit reports were to become too long (say, more than one page), the probability of them being read and effectively achieving any meaningful communication objective would likely diminish severely. We note that in the PCAOB staff's outreach survey, it was determined that a large proportion of the investors who responded do not currently read standard audit reports, but we believe that phenomenon is more likely attributable to their familiarity than to dissatisfaction with its content or to or disinterest therein.

1.16 Audit committees generally have at least one member who qualifies under a regulatory definition of "financial expert," and as pointed out by Cynthia M. Fornelli on p. 3 of her letter that was issued on behalf of the Center for Audit Quality and dated June 9, 2011, (prior to issuance of the Release), are expected, as part of their oversight responsibilities, to engage in two-way dialog with auditors in which dialog questions are raised and written

* Depending on the outcome of the Board's audit firm rotation project now under way, the significance of the economic dynamics of auditor competition to this matter could decline materially with regard to SEC practice. We intend to present our views on the rotation matter in a future comment letter.

communications are clarified and elaborated upon with explanations as may be deemed necessary. Of course, public investors clearly do not have such access to auditors. Accordingly, we believe that auditor communications such as an AD&A as suggested by reporting Alternative No. 1 should be made only to audit committees.

1.17 The Release cites increased transparency for the benefit of investors and other users as an objective. Nevertheless, audit committees, which are charged with financial oversight responsibilities (undoubtedly for the primary purpose of protecting the interests of investors), including assessing the quality and scope of work performed by the independent auditors, have never been made accountable publicly so as to make transparent the scope and results of their oversight activities and provide assurance that investors may rely upon We believe, if there is determined, in fact, to be a significant demand among investors and other users for the type of information such as an AD&A might provide, it may be time to add some transparency to the work of audit committees by making them accountable with periodic reporting to the public for that which they are supposed to be held responsible. Of course, such a requirement could not come from the PCAOB but rather from Congress and/or the SEC.

***Alternative No. 2 (emphasis paragraphs):***

1.18 We believe it should continue to be management's, not the auditor's, responsibility to communicate adequately matters necessary to assure an understanding by users of the financial statements. It has long been the auditor's obligation, on the other hand, to assess the adequacy of management's disclosures not only with respect to the requirements of specific accounting standards applicable in the circumstances but to judge whether they are sufficiently clear, complete and not misleading, and to report any exceptions not corrected to the auditors' satisfaction. If this obligation is deemed not widely understood or appreciated by the investment community, we are in favor of expanding the standard audit report, as discussed in the Release in connection with reporting Alternative No. 4, to require clear articulation of this responsibility in the reporting model. We believe that if the auditor meets this responsibility effectively, there ordinarily should be no reason to summarize, supplement or emphasize matters adequately disclosed by management disclosures merely for the purpose of making audit reports unnecessarily "more informative."

1.19 Historically, in addition to the requirement for expressing substantial doubt as a result of a going concern uncertainty, auditors have generally limited the relatively rare use of optional emphasis paragraphs to highlight such potentially sensitive matters that, solely at the auditor's discretion, they have judgmentally deemed sufficiently important, to call to users' attention without an opinion qualification. In its so-called "clarity standards" (issued but not yet effective), the AICPA's Auditing Standards Board (ASB) has elevated the use of such discretion to be characterized in the future as a so-called "requirement" that nevertheless remains solely a matter of auditor judgment with these words: "If the auditor considers it necessary to draw users' attention to a matter appropriately presented or disclosed in the financial statements that, in the auditor's judgment, is of such importance that it is fundamental to users' understanding of the financial statements, the auditor should include an emphasis-of-matter paragraph." However, although examples for consideration are presented in the ASB standard, it still does not require any specific type of matter to be the subject of an emphasis paragraph in audit reports on financial statements of nonisuuers. We believe such a requirement to use professional judgment without mandating emphasis paragraphs continues to be appropriate.

1.20 We believe that additional mandatory and expanded use of emphasis paragraphs, such as are suggested in the Release's discussion of reporting Alternative No. 2 would likely have the undesirable effect of diluting the auditor's message, confusing users and diminishing the apparent significance of matters more appropriately communicated by auditors, including the auditor's opinion, (see also paragraph 1.15, above).

1.21 Further, we believe that to mandate the expanded use of explanatory paragraphs would also likely have the undesirable effects of tending to (a) transfer the primary duty of clear disclosure of significant matters to the auditors from management (where it belongs) thus encouraging investors and other users to read only the auditors' most likely summarized discussions of such matters ignoring management's more comprehensive and fully detailed discussions, and (b) like the old long-form report (discussed in paragraphs 1.11-1.15), blur the distinction between representations of management and those of the auditors or be misconstrued by and confuse users as qualifications of, or contradictions to, an audit opinion, or in the absence of an qualified opinion, some comments might be misconstrued as a piecemeal opinion . Our comments above, objecting to public disclosure of matters of audit risk assessment and scope (relative to reporting Alternative No. 1) in paragraph 1.9 apply likewise to such disclosure if made in connection with Alternative No. 2.

***Alternative No. 3 (matters outside the financial statements):***

1.22 As mentioned in the Release, since 1998, auditors have had a standard (Statement on Standards for Attestation Engagements (SSAE) No. 8 [revised and recodified by SSAE 10 and now PCAOB Interim Attestation Standard AT 701) which we believe adequately governs and provides detailed guidance on the conduct of optional engagements and related reporting for providing assurance by auditors on a management's discussion and analysis (MD&A) included in an SEC filing. However, in the 13 years since the adoption of SSAE 8, very few such reports have been issued. Repeated requests of Congress and/or the SEC to require auditor attestation on the MD&A have been rejected or ignored over the years. Moreover, a succession of extensions of the effective date from the requirements of Section 404(b) of the Act for auditors' reports on internal control was eventually followed by a permanent exemption for smaller reporting companies. We believe a requirement for auditor attestation on data such as non-GAAP performance metrics would tend to present the undesirable risk of elevating the relevance and significance of such measurements while at the same time detracting from those of GAAP-consistent metrics.

1.23 It is certain that a requirement to extend auditor assurance to matters outside the financial statements would add considerable cost to issuers' compliance, depending on the nature and extent of the subject matter of such additional assurance (and with questionable benefits, as discussed at greater length in paragraphs 1.2-1.4). Also depending on the nature and extent of the subject matter, audit firms might likely have to hire and train additional staff and further disrupt issuers' operations by taking up additional space and time with the latter quite likely reducing their ability for timely financial reporting.

1.24 As discussed in the Release in connection with reporting Alternative No. 4, we are in favor of requiring auditors to better inform investors by including language in standard audit reports regarding their responsibility under AU 550, to read and consider whether information included in an SEC filing is materially inconsistent with the financial statements or other information obtained in the audit or is otherwise misleading. Of course, this responsibility is not applicable to earnings releases. We are not in favor of public auditor association with earnings releases, in large part because of an apparent perceived demand, in many cases, for timeliness of this kind of financial information such that it needs to be disseminated on a preliminary basis prior to the completion of the annual audit. User appetite for timeliness appears to override, and be with full understanding of, the risk that late adjustments might possibly arise that would cause the information to require modification. But we are in favor of a standard that would caution auditors in to read such releases (preferably prior to issuance) and to consider taking appropriate action in the event they appear to be unclear, inconsistent, false or misleading.

1.25 In the event it is ultimately deemed necessary to extend auditor attestation over disclosure matters currently presented outside the financial statements (*e.g.*, non-GAAP performance metrics), consistent with one of the comments of Dennis Beresford (most of which we are in full agreement with) contained in his letter to the Board of July 21, 2011, we assert that it would be relatively easy for the SEC to either cause the Financial Accounting Standards Board to sweep such disclosure matters into its current body of accounting standards or to supplement such accounting standards applicable to issuers as it has many times in the past. Thus, we believe there is no need to layer on additional auditor reporting as described under reporting Alternative No. 3 to cover matters that could be addressed in this fashion.

1.26 All of this, in our opinion, constitutes persuasive evidence of a relatively low level of investor demand or sense of need at this time to expand auditor reporting into information that is presented outside the financial statements. Accordingly, we do not believe a standard that would require such reporting should be proposed or adopted by the Board unless and until initiated by the SEC but only after duly considering and ruling out the alternative approach suggested in the preceding paragraph and following additional, more extensive research, including a period of experimentation through encouragement of voluntary compliance. The foregoing notwithstanding, we adequately would be in favor of developing and issuing performance and reporting standards for engagements to be entered into and conducted solely at the discretion of the client that would provide auditor assurance as to matters of disclosure made outside the financial statements.

***Alternative No. 4 (clarifying language):***

1.27 Although we are not in favor of altering the reporting model in any of the ways contemplated by reporting Alternative Nos. 1-3, we are in favor of clarifying matters auditors are already reporting upon that would improve the understandability of audit reports and, therefore, their usefulness for making investment decisions (provided the added report language does not speak directly to matters of specific audit risks and scope).

1.28 Consequently, in accordance with our afore-mentioned view (paragraph 1.5) that the evolution of the audit reporting model should remain (a) slow and cautious as it has been historically, and (b) consistent with the objectives of SAS 58 and the other "expectation gap" standards issued in 1988, we believe that reporting Alternative No. 4 has considerable merit and, thus, represents the only one of the four presented in the Release that clearly warrants further consideration at this time.

**Part 2 — Responses to Specific Questions Presented in the Release**

We believe we have addressed in the foregoing comments (Part 1) most, but not all, of the specific questions presented in the Release (and below). Nevertheless, in Part 2, to facilitate the analysis and summary by the PCAOB staff of the comments received, we have addressed these questions using parenthetical references to our relevant comments in Part 1, wherever applicable, that we believe are most directly responsive to the questions.

***Q1****. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.*

*a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?*

No. We believe the Board should undertake a standard-setting initiative at this time to consider improvements that would be limited only as set forth below under ***Q1b***. (1.1-1.17)

*b. In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?*

We believe any standard-setting initiative to be undertaken at this time should consider improvements only with regard to reporting Alternative No. 4. (1.1-1.17 and 1.27-1.28)

*c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?*

No. We do not believe the Board should consider expanding the auditor's role to require issuing assurance on matters presented outside the financial statements. (1.22-1.26)

***Q2***. *The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."*

*a. Should the auditor's report retain the pass/fail model? If so, why? If not, why not, and what changes are needed?*

Yes. We believe that the current so-called "pass/fail" audit report form continues to be appropriate and should not be changed. We believe the introduction of gradations within the "pass" condition will likely be inherently difficult, if not impossible, for by users to interpret consistently as intended and, therefore, most probably will be misunderstood and of no value to the investment community.

*b. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.*

No. See our response to ***Q2b***.

***Q3****. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.*

As stated in the "overall philosophy" contained in the September 8, 2011, e-mail comments to the Board of Arthur Siegel (which, incidentally, contains many insightful comments with which we concur), we firmly believe that to maintain the proper clear distinction between representations of management and the auditors, reports of independent auditors should continue to be limited to matters relevant to attesting to the reliability of those management assertions. Accordingly, we believe that, to the extent information about the issuer's financial statements is not provided pursuant to the SEC's requirements for the MD&A, it should be provided by management and/or the audit committee, as appropriate. (1.8 and 1.18-1.21)

*Q4. Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?*

Our opposition to introducing details of auditor judgments about risk assessments and scope determination in an audit report would apply equally to reports that attest to the effectiveness of internal control over financial reporting (ICFR). The type of changes that we would favor (*i.e.*, those that are described in reporting Alternative No. 4) would not be necessary with regard to the ICFR portion of a combined report on financial statements and ICFR (the most prevalent choice) but might likely be applicable in some respects for a separate ICFR report issued pursuant to AS5.

Because of our views, we choose not to respond with regard to any changes that might be proposed and be related to reporting Alternative Nos. 1-3.

*Q5. Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?*

No. We are equally opposed to the AD&A whether as either a component of, or supplement to, a standard audit report. See our response to ***Q1a***. (1.8-1.17)

a. *If you support an AD&A as an alternative, provide an explanation as to why.*

Not applicable. See our response to ***Q5***. (1.8-1.17)

b. *Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?*

Not applicable. See our response to ***Q5***. (1.8-1.17)

c. *Which types of information in an AD&A would be most relevant and useful in making investment decisions? How* would such information be used?

Not applicable. See our response to ***Q5***. (1.8-1.17)

d. *If you do not support an AD&A as an alternative, explain why.*

See our response to ***Q5***. (1.8-1.17)

e. *Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?*

No. We do not believe that public disclosure by auditors of details about judgments about risk assessments and scope is appropriate in any circumstances. We do believe, however, that audit committees should be required to disclose that they are satisfied with the significant auditor judgments about risk and scope and describe, in general terms, the basis for their conclusions. A requirement for such reporting by the audit committee should not come from the PCAOB. (1.9, 1.16-1.17)

For comments about the financial statements, see our response to ***Q3***. (1.8 and 1.18-1.21)

*Q6. What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (*i.e., *audit risk, audit procedures and results, and auditor independence)?*

Not applicable. See our responses to ***Q5a-f***. (1.8-1.17)

*Q7. What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (*i.e., *management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?*

As we have previously stated, we do not believe it is appropriate for an auditor to report publicly views on the issuer's financial statements beyond an opinion attesting to the fairness of management's assertions embodied therein or any reservation or exceptions thereto (which, of course, would not be acceptable to the SEC). We believe the capital markets would likely be disrupted and not be well served by either auditors or management reporting what might be called "close calls" once they have been resolved to the satisfaction of the auditors and the audit committee because such reporting might likely cause inappropriate doubts about the reliability of the management assertions embodied in their financial statements and likely be misconstrued as qualifications of, or contradictions to, an audit opinion (or, once again, in the absence of an qualified opinion, some comments might be misconstrued as a piecemeal opinion). (1.8, 1.11, 1.18-1.21)

***Q8.*** *Should a standard format be required for an AD&A? Why or why not?*

Not applicable. See our responses to ***Q5a-f.*** (1.8-1.17)

***Q9.*** *Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?*

Even if an AD&A were to be required by a future standard, to which we are opposed, we would likewise be opposed to public disclosure of such additional risk matters as we believe it would not be understandable by investors or other users in a way that would help them make intelligent investment decisions. See our responses to ***Q5a-f.*** (1.8-1.17)

***Q10.*** *How can boilerplate language be avoided in an AD&A while providing consistency among such reports?*

Because of the wide variety of possible matters that would be reported in an AD&A contemplated by reporting Alternative No. 1, if adopted in a future standard, we are unable to the development of any significant "boilerplate" language imagine at this time for use in an AD&A or to otherwise provide for consistency in reporting therefor. (1.10)

**Q11.** *What are the potential benefits and shortcomings of implementing an AD&A?*

We believe there would be no meaningful benefit to investors or others if a requirement to issue AD&As were adopted. See our responses to ***Q1a-f.*** (1.8-1.17)

***Q13.*** *Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?*

We believe that an emphasis paragraph regarding substantial doubt as to a going concern uncertainty should continue to be the only mandatory one. The use of other emphasis paragraphs should continue to be rare and at the reporting auditor's discretion based solely on judgmental considerations about sensitivity and significance. Emphasis paragraphs should not be used indiscriminately to supplement or explain management's disclosures once deemed to be adequate. (1.18-1.21)

***Q14.*** *Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?*

No. See our response to ***Q13.*** (1.18-1.21)

a. *If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.*

Not applicable. See our response to ***Q13.*** (1.18-1.21)

b. *If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.*

See our responses to ***Q1a-b, Q5e*** and ***Q13.*** (1.1-1.21)

***Q15.*** *What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?*

Not applicable. See our response to ***Q13.*** (1.18-1.21)

***Q16.*** *What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?*

Although we do not believe the required use of emphasis paragraphs should be expanded, if they were, we would not be in favor of any level of detail that would exceed the level customarily in use in today's audit reporting model especially if there is a perceived risk that additional explanatory language might likely be misconstrued as qualifying or contradicting an audit opinion. (1.21)

***Q17.*** *How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?*

Similar to our response to ***Q10*** relative to an AD&A, because of the wide variety of possible emphasis paragraphs contemplated by reporting Alternative No. 2, if adopted in a future standard, we are unable to the development of any significant "boilerplate" language imagine at this time for use in an AD&A or to otherwise provide for consistency in reporting therefor. See also our responses to *Q5a-f.* (1.10)

***Q18.*** What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?

See our response to ***Q13***. (1.18-1.21)

***Q19.*** *Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?*

No. (1.22)

a. *If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.*

Not applicable. See our response to ***Q19***. (1.22)

b. *On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.*

None. See our response to ***Q19***. (1.22-1.26)

c. *What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?*

None. See our response to ***Q19***. (1.22)

d. *If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?*

We are in favor of permitting auditor association with the MD&A (pursuant to AT 701) to remain solely a matter of issuer discretion and, based on our response to ***Q19f***, below, we see no reason to divide it into segments that auditors would or would not be required to report upon. If, on the other hand, such a division were to be made, we would recommend that priority for auditor reporting be given (not necessarily in this order) to the comparative results of operations analysis, critical accounting policies and estimates, recent accounting pronouncements, and liquidity and capital resources portions of the MD&A.

e. *Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?*

We understand the MD&A disclosure requirements to be determined by the SEC and its staff and do not understand how they should be affected by the nature and extent of auditor association as a result of attestation services except if divided, to organize the portions such that it is clear to readers which parts are covered by auditor assurance and which are not.

f. *Are the requirements in the Board's attestation standard, AT Sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?*

We believe AT 701 is appropriate and adequate for reporting on the entire MD&A, for which it was designed and intended, but that more tailored standards would likely be required for other applications, depending on the specific nature of other information to be reported on. (1.22)

g. *If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.*

See our response to ***Q19***. (1.22-1.26)

***Q20.*** *What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?*

We see no meaningful benefits likely to be realized by mandating auditor assurance on disclosures outside the financial statements, only shortcomings, principally the expenditure of company resources that would be unnecessary because of the absence of a demonstrable need. (1.22-1.26)

***Q21.*** *The concept release presents suggestions on how to clarify the auditor's report in the following areas:*

- *Reasonable assurance*
- *Auditor's responsibility for fraud*
- *Auditor's responsibility for financial statement disclosures*
- *Management's responsibility for the preparation of the financial statements*
- *Auditor's responsibility for information outside the financial statements*
- *Auditor independence*

a. *Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?*

We believe auditor communications would be improved by adding brief explanatory language in the standard report (say, one sentence or two) for each of the foregoing subjects. We also believe the Board should give consideration to requiring the addition of captions such as contained in the ASB's clarity standards" recently issued but not yet effective to aid users to understand and easily read auditor's reports. (ASB) (1.27)

b. *Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.*

Yes. (1.9 and 1.27-1.28)

c. *What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?*

We believe that definitions of the terms, "fairly presented," and "material misstatement," should be considered in addition to the list presented in ***Q21***.

d. *What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?*

We believe that adding to the standard audit report the foregoing clarifications of such terms and responsibilities, as they are presently understood by auditors, should have no effect on the scope of an audit conducted in accordance with currently applicable auditing standards.

***Q22.*** *What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?*

We believe the suggested clarifying the language in a standard auditor's report, and possibly adding captions, would make considerable progress in closing the expectation gap. We see no shortcomings of such a change unless the prescribed clarifying language were include discussion of specific risks and matters of audit scope or otherwise be too long and complex so as to impair or diminish the probability of being read or easily understood by users.

***Q23.*** *This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?*

As we have stated in many previous responses, we are in favor only of reporting Alternative No. 4. In this case, see particularly our response to ***Q1a-b***. (1.1-1.17 and 1.27-1.28)

***Q24.*** *Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?*

No. See our response to ***Q23***.

***Q25.*** *What alternatives not mentioned in this concept release should the Board consider?*

Not applicable. As we have stated in many previous responses, we are in favor only of reporting Alternative No. 4. In this case, see particularly our response to ***Q1a-b***. (1.1-1.2)

***Q26.*** *Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?*

As we have stated in many previous responses, we are in favor only of reporting Alternative No. 4, to which we are limiting our response. In this case, see particularly our response to ***Q22***.

***Q27.*** *Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?*

See our responses to ***Q7*** and ***Q16***. (1.11-1.12 and 1.21)

***Q28.*** *Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?*

As we have stated in many previous responses, we believe only reporting Alternative No. 4 effectively serves to better users' collective understanding of the auditor's role while Alternative Nos. 1-2 would most certainly add to users' confusion. (Alternative No. 3 would do neither.) See our responses to ***Q1a-b***, ***Q21a-b***, ***Q22*** and ***Q31a***. (1.5, 1.8-1.12, 1.15-1.18 and 1.20-1.21)

**Q29.** *What effect would the various alternatives have on audit quality? What is the basis for your view?*

We believe that none of the alternatives presented would have a measurable effect on audit quality relative to financial statements since, as presented, they would not add to or reduce audit procedures relative to the audit of the financial statement or, if applicable, ICFR. Only reporting Alternative No. 3 would require additional procedures to enable assurance on matters not now covered by an audit opinion. Our views on this matter (like all others expressed in this letter) are based primarily on decades of experience as auditors.

***Q30.*** *Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.*

Since it is our belief that only reporting Alternative No. 4 continue to be under consideration for any future proposed standard, we believe any standard that results from such continuing consideration should be applicable to all entities who are now or will become subject to the reporting requirements of PCAOB auditing standards, If such requirements are to be extended in the future to entities not yet covered, they should be limited to those whose securities are traded in the capital markets.

***Q31.*** *This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.*

*a. Are any of these considerations more important than others? If so, which ones and why?*

Yes. As we have stated in many previous responses, we are in favor only of reporting Alternative No. 4. See our responses to ***Q1b*** and ***Q31c***. We have ranked our responses to ***Q31c*** in categories in the order of importance with the considerations in category 1 seen as the most important primarily because of changing the fundamental role of auditors and their potential for confusing users. (1.1, 1.8-1.12, 1.15-1.18, 1.20-1.21 and 1.26)

*b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?*

We believe the costs associated with reporting Alternative No. 4 to be nominal and the benefits, therefore, worth in excess thereof. Although the costs that we believe would be associated with reporting Alternative No. 2 would likely be slightly greater, but probably still nominal, we see no significant benefit but rather several disadvantages (as previously stated) to be obtained from its adoption. On the other hand, we believe the costs that would be association with either of reporting Alternative Nos. 1 or 3 would be considerable, again with no significant benefits (and several disadvantages as previously stated) to be obtained from adoption of either. (1.14 and 1.23)

*c. Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?*

Among others addressed briefly in the Release, we have mentioned in Part 1 of this letter our reservations and concerns over such matters as may be grouped into four broad categories as follows:

1) Changing the fundamental role of the auditor *vs.* those of management and the audit committee, and the related risk of increasing rather than reducing user misunderstandings thereof (1.1, 1.8-1.12, 1.15-1.18, 1.20-1.21 and 1.26)

2) Questions as to reliability of the "outreach" efforts undertaken and the related conclusions drawn regarding investor demand for the types of auditor communications now under consideration (1.2-1.5)

3) Questions as to whether the Board is proceeding with too much haste and overstepping its role and authority, as intended by Congress (1.5-1.7)

4) Whether such new reporting responsibilities now under consideration (particularly under reporting Alternative Nos. 1-3) would likely damage relationships between auditors and management and between auditors and audit committees that would tend to impair communications and, hence, auditors' ability to conduct high quality audits. (See our response to ***Q32***.)

*d. What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?*

As we have stated in many previous responses, we are in favor only of reporting Alternative No. 4. In this case see particularly our response to ***Q1b***.

***Q32.*** *The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?*

We believe that new public auditor reporting responsibilities such as are now being considered under reporting Alternative Nos. 1 and 2 have considerable potential for being viewed as providing investors with a basis for criticism or distrust causing relationships among auditors management and audit committees to become more adversarial and guarded thus impairing working relationships and the open, unfiltered communications that are necessary to enable the effective and timely completion of a financial audit, and additional costs likely to be associated primarily with reporting Alternative No. 3 will further strain such relationships. (1.8, 1.12, 1.14 and 1.23)

Re: Rulemaking Docket Matter No.34

We write to comment on the concept release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements, dated June 21, 2011. Our comments come from the perspective of management and the audit committee of the board of directors of a public registrant and are based on our experience, information included in the concept release and viewpoints expressed in the discussion to date. We have not previously participated in the rulemaking process of the PCAOB, but believe the concepts set forth in this concept release warrant broad participation and feedback.

**Background and Principles Underlying our Response**

We understand that the objective of the concepts set forth in the concept release is to increase transparency and relevance to financial statement users, while not compromising audit quality. We further understand that the alternatives presented are primarily intended to focus on enhancing communication to investors through improving the content of the auditor's report rather than on changing the fundamental role of the auditor. There are several points that we believe are important and should be maintained in all of the alternatives considered. These are:

- Management is responsible for reporting information about the company and that should not change.
- There are currently requirements to disclose a significant amount of information about the company and accounting related matters. To the extent additional information is needed, the applicable rules and regulations should be amended to require companies to provide that information rather than shifting that disclosure to the auditor's report.
- The responsibility for review and analysis of financial statements lies with financial statement users, not with auditors.
- To the extent that the auditor's reports are expanded the focus should be on communicating information about audit risk, procedures and results.

We are proponents of full and fair financial disclosure in financial statements and related communications by SEC registrants. While it is understandable that the PCAOB would like to enhance the utility of the financial statements and audit reports, we fear that there could be significant negative unintended consequences from the alternatives proposed. For example, expanding the amount of information that the auditor discloses through the inclusion of an AD&A, Emphasis Paragraphs or Auditor Reports on information outside the financial statements could realistically cause financial statement users to be less diligent in reviewing information by substituting an Audit Report for review and analysis.

Our comments on the following topics are focused on the points above and our understanding of the objectives of the concept release.

**Auditor's Discussion and Analysis**

We are not totally opposed to the concept of adding an Auditor's Discussion and Analysis ("AD&A"). However, we do believe that several respondents have raised compelling points regarding the sophistication of the investing community and the wealth of information publicly available regarding auditing standards that cast doubt on the real benefit that will be gained in adding a significant amount of new disclosure to already lengthy 10-Ks. We also believe that the suggested alternatives will result in lengthy audit reports that may discourage some investors from reading the reports, will be challenging for readers to get through and difficult to compare between registrants, further calling into question the value that will be achieved. In addition, we believe there is a strong likelihood that the alternatives presented could result in significant increased costs.

Although we do not have an outright opposition to the concept of an AD&A, we do feel strongly that if an AD&A were adopted, the focus should be on audit risk, procedures and results and not on adding additional disclosure about the financial statements of the company. One alternative included in the concept release is for the AD&A to include the auditors discussion of the company's financial statements, such as management's judgments and estimates, accounting policies and practices, and difficult or contentious issues. It also suggests that the auditors highlight where management could have applied different accounting or disclosures. We have several significant concerns with this primarily associated with the impact on the roles of the audit committee and of the auditors.

Audit committees, as representatives of the shareholders, currently have responsibility to provide oversight of the financial reporting process. The current process includes required communications and dynamic interaction between the audit committee and auditors. Expanded disclosures of matters that are included in this dialogue would be a less effective method for providing the oversight that already exists. In addition, we believe that these alternatives create a fundamental shift in the responsibilities of the auditor away from performing an audit to provide reasonable assurance that the financial statements are free of material misstatement to a responsibility for disclosing information about the company that they are auditing. We are concerned about the potential impact that a change in the role of the auditor may have on communication. We believe that open communication between management, the auditor and the audit committee is vitally important to the audit process. We believe that this type of AD&A may reduce or hamper that important open communication.

We also don't believe that the auditors are the best source of information about the company. The managements of public companies are responsible for the completeness and accuracy of the financial statements, footnotes and related disclosures. The company employs significant resources to ensure that the appropriate systems, policies, procedures and resources are in place to ensure that business activities are appropriately captured and reported in accordance with the applicable accounting standards. Included in these activities can be significant time and resources dedicated to researching and concluding on the appropriate accounting for a number of matters. While we agree that the auditors expend a significant amount of time in the process of performing their audits and do gain insight and knowledge about the company that they are auditing, management remains the best and most appropriate source for information about the company and related accounting matters.

Further, a focus by the auditors on creating content and disclosure would require significant high-level input from the audit team which could distract the partner and manager from focusing on the audit itself, which could prove to be detrimental to the quality of the audit.

In addition, the illustration included in the concept release is difficult to assess for usefulness as it does not include any of the challenging concepts that are proposed in the concept release. The discussion of these matters would most likely extend to multiple pages and even at that length, be subject to confusion and potential undue concern without elaborate, detailed explanations. Also, there would be a significant challenge to the audit firms to determine the appropriate subjective wording that is appropriate for a specific company and yet still be consistent and comparable with similar fact patterns at other companies. There would be even more significant challenges for investors in attempting to compare and contrast disclosures made by different audit firms when attempting to appropriately consider the information provided in making their investment decisions. This alternative would seem to be moving away from what some have described as a clear, concise and consistent audit report that provides investors reasonable assurance that the financial statements are materially free of misstatement to a lengthy, subjective, inconsistent report that potentially creates confusion.

**Required and Expanded Use of Emphasis Paragraphs**

Similar to our view on adding an AD&A, we are not totally opposed to this alternative, but we do believe that certain principles should be maintained. Foremost, the required and expanded use of emphasis paragraphs should focus on audit risks, procedures and results and should not extend to disclosing additional information about the company or the company's financial statements. The disclosure of information about the company and the financial statements should remain management's responsibility. Current reporting standards require comprehensive disclosures covering a broad range of topics in an attempt to provide relevant information to financial statement users. To the extent more information is needed on certain topics, the relevant reporting standards should be amended to incorporate those requirements.

One practical downside to requiring auditors to disclose or summarize significant matters or risks considered in an emphasis paragraph is the potential increased exposure it would present to the auditor. We believe that a practical reaction would be for the auditor to provide laundry lists of lesser significant matters to mitigate that risk.

**Auditor reporting on information outside the financial statements**

The concept release includes alternatives for expanding auditor reporting to a wide range of areas ranging from MD&A to press releases. We do not agree that the benefits of expanding the auditors reporting outweigh the costs associated with such changes. As noted in the concept release, the auditor's currently have responsibility to read and consider whether information outside the financial statements or the manner it is presented is materially inconsistent with the financial statements or represents a material misstatement of fact. To the extent there is real demand for additional assurance, a current PCAOB standard exists for the auditors to provide such assurance. We have not experienced demand for this level of assurance and we do not believe that creating additional required reporting would be cost beneficial.

Regarding press releases, we understand timely access to financial information to be a key priority of the investment community. Any efforts to require an auditor report on press releases would necessitate a delay in the timing of disseminating that information to the public and would run contrary to the priority of timely access to that financial information.

**Clarification of language in the auditor's report**

We do not have any objections to the suggested alternatives to clarify the language in the auditor's report.

Thank you for the opportunity to comment on this concept release.

Sincerely,

/s/ Everardo Goyanes

Everardo Goyanes

RE: Rulemaking Docket Matter No. 34

Members of the Board,

I am writing this letter on behalf of the management of Plum Creek Timber Company, Inc. to comment on your concept release on "Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements." As management, we are responsible for Management's Discussion and Analysis (MD&A) and the consolidated financial statements and footnotes included in our annual report filed with the Securities and Exchange Commission (SEC) on Form 10-K and our quarterly reports filed on Form 10-Q.

**Inclusion of an Auditor's Discussion and Analysis section in a supplement to the auditor's report**

We do not support the inclusion of an Auditor's Discussion and Analysis (AD&A) section as a supplement to the auditor's report. Management is responsible for determining the estimates and judgments used in the financial statements and the critical accounting policies for a company. Management is solely responsible for analyzing the overall information regarding a company's business and related operations in order to determine what information should be included in the financial statements and related footnotes in accordance with generally accepted accounting principles and SEC regulations.

In addition, there are numerous users of a company's financial statements, and each of those users may have a different interpretation as to what is important to them and what they are most concerned about as it relates to a company's current and future operations. As a result, it is not the place for an auditor to determine what information the users should read and what information they should ignore. An auditor identifies risk based on professional judgment for purposes of designing audit procedures, and those procedures are not for the purpose of advising the various users of a company's financial statements what might be important to them. Additionally, given the various needs and focus of users, certain information may not be included in an auditor's AD&A that a particular group of users would like included, and as a result, this group of users could find fault with the auditor for excluding such information. Accordingly, this could lead to increased and unnecessary litigation.

The annual financial statements included in a Form 10-K as filed with the SEC is the only time in a company's periodic reporting cycle that an audit opinion is issued with a set of financial statements. However, there are numerous other important forms of communication that management uses with its shareholders throughout the year. These communications discuss significant and important information (e.g. an acquisition of a company, the sale of a business, or a change in officer, etc.) about a company that is useful and meaningful for a knowledgeable investor as he or she makes investment decisions. These important communications include: i) quarterly reports on Form 10-Q (which in most cases are not accompanied by a review report issued by an auditor), ii) quarterly earnings press releases, iii) press releases for significant events (as noted in a Form 8-K), iv) quarterly conference calls with analysts, and v) the annual shareholders' meeting and related proxy filings. Given the vast amount of information that is made available by management to a company's investors, it would seem redundant to have auditors provide additional information that has already been communicated timely throughout the year.

Lastly, the objective of financial reporting is for the financial statements to provide information that is useful to the users of the financial statements. If generally accepted accounting principles or SEC regulations do not currently require the disclosure of information that is useful to the users of a company's financial statements, the financial reporting model should be updated by the Financial Accounting Standards Board and the SEC such that it provides the necessary information needed by the users of the financial statements.

**Required and expanded use of emphasis paragraphs**

We do not support the "required" use of emphasis paragraphs in the audit opinion. We believe that it is appropriate to include emphasis paragraphs only as it relates to certain circumstances, such as the adoption of a new accounting principle or in the event of a going concern consideration. However, the requirement to include an emphasis paragraph as it relates to the identification of the most significant matters is not appropriate. As discussed above, this is management's responsibility as they are the only ones with sufficient knowledge to understand what is truly considered significant and important to the users of the financial statements. In addition, a company's significant matters are covered in adequate and sufficient detail through its disclosures in MD&A in its Form 10-K and Form 10-Qs and related footnote disclosures.

Current audit opinions are standard in the event of a "clean" opinion, and if an emphasis paragraph is required, the language would eventually become standard as well. This type of language would not be beneficial to the users of the financial statements. In addition, the users of the financial statements should be knowledgeable investors, and a knowledgeable investor should not need an audit opinion to help them identify areas that are significant.

**Auditor reporting on information outside the financial statements**

We do not support auditor reporting on information (e.g. MD&A, earnings releases, non-GAAP information) outside of the financial statements. As stated previously above, there is a significant amount of information that management provides to its investors on a regular basis, and this amount of information far exceeds the amount of information required in financial statements and footnote disclosures. Much of this "extra" information represents non-GAAP measures, such as EBITDA, which could have different meanings for different users. For example, a debt agreement for one financial institution could define EBITDA one way, and another debt agreement with a different financial institution could define EBITDA another way. As a result, there would be no standard by which to compare and/or understand the non-GAAP measures, and this would only provide confusion to the users of the financial statements.

In almost every case, a company's auditors do read the "information outside the financial statements" that will be shared with the public in the form of press releases included in a Form 8-K or quarterly financial information as presented in a Form 10-Q. If information to be presented to the public is not accurate, a company's auditors would be required to communicate such inaccuracies to management. Although, no formal opinion is issued on this information, a user should be able to obtain some comfort that the auditor reads the information with knowledge of the audited financial statements.

**Clarification of certain language in the current standard auditor's report**

We are not opposed to adding clarification language in the current standard auditor's report. As this proposal would not significantly expand the content of the auditor's report, it could provide additional information about what an audit represents and related auditor responsibilities that would be beneficial to certain users of the financial statements.

Thank you for the opportunity to comment on this topic and for taking the time to read our concerns regarding this topic. If you would like to discuss any of our observations further or would like for management of Plum Creek to provide more information, please feel free to contact me.

Sincerely,

David W. Lambert

Re: Concept Release on Possible Revisions to PCAOB Standards Related to Audit Reports on Audited Financial Statements; PCAOB Rulemaking Docket Matter No. 34

Dear Office of the Secretary:

PNM Resources, Inc. appreciates the opportunity to respond to the Concept Release proposed by the PCAOB.

PNM Resources, Inc. is a diversified energy company in the United States with approximately $5.3 billion of assets, $1.6 billion in annual revenues, and a market capitalization in excess of $1.4 billion. Our subsidiaries and affiliates are involved in the generation, transmission and distribution of electricity, as well as energy management and other energy-related services primarily in New Mexico and Texas.

We appreciate the PCAOB's efforts to enhance the current auditor's reporting model. We believe that there may be some room for improvement within the current auditor's reporting model that would help to clarify the purpose of an audit and the auditor's responsibility; however, providing information about the company, including financial information, is management's responsibility, and not the auditors. The PCAOB states in the Concept Release that these proposals are being made as a result of requests by the investment community to provide more information; however we have not experienced additional requests from our investors for additional information or an expansion in auditor communications. We believe that providing significant additional information in the auditor's report would greatly increase costs and little or no perceived benefit will be achieved.

Auditor's Discussion and Analysis (AD&A)
We are opposed to the AD&A as an alternative to strengthen the current auditor's reporting model. It is our belief that the financial statements are the responsibility of the company's management, and that any additional information that is deemed necessary to be provided to investors should be provided by management and not auditors. We are concerned that significant effort by the auditors would be required to prepare an AD&A. In addition, there would be significant effort by management of the company, as well as its audit committee. The additional review process and time involved by both the auditors and management will significantly increase costs of completing any reports that require an auditor's review. The additional time

required to complete and review the AD&A may also jeopardize the already compressed Securities and Exchange Commission (SEC) filing deadlines.

Emphasis Paragraphs in Auditor's Reports
We do not support a requirement to include additional emphasis paragraphs in the standard audit report, especially since auditing standards currently provide guidance on emphasis paragraphs. We believe that additional emphasis paragraphs will become "standard or boilerplate" that will not be meaningful and will not add additional value to the current audit report. It is our belief that the current auditors reporting model for the inclusion of emphasis paragraphs is functioning adequately and provides the auditors the opportunity to disclose additional significant information in the report as they determine to be appropriate.

Auditor Assurance of Information Outside the Financial Statements
We do not support expanding the auditor's regular attestation function beyond the financial statements. Currently, auditing standards require the auditor to review information outside of the financial statements for reasonableness and consistency with the financial statements. Requiring auditors to audit the information outside of the financial statements would only increase the audit fees and would add very little benefit to investors. Additionally, requiring auditors to attest to the information outside of the financial statements will make meeting required filing deadlines more difficult to attain due to the significant expansion of audit procedures. The nature of much of the information outside the financial statements is such that appropriate audit procedures can only be performed shortly before a document is filed rather than being subject to interim auditing.

Clarification of the Standard Auditor's Report
We do not have any objection with additions to the auditor's report to clarify terms or the auditor's existing responsibilities. We believe this could be accomplished without significant effort or cost. However, we believe that the clarifications should be standardized in the audit report guidance, written in "plain english" and should not be so prominent in the report that the clarifications distract from the purpose of the audit report.

*****

As set forth above, we do not support the proposal made surrounding an AD&A, additional emphasis paragraphs, and requiring auditors to attest to information outside of the financial statements. We believe that these additional requirements would significantly increase audit fees with little to no perceived benefit. It is also our belief that the proposed requirements would be extremely difficult, if not impossible, to complete within the already compressed filing requirements of the SEC.

Sincerely,

Henry A. Ingalls

Washington, DC 20006-2803

Re: PCAOB Rulemaking Docket Matter No. 34

PPL Corporation ("PPL") appreciates the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB) *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* (Release No. 2011-003, June 21, 2011) ("Concept Release"). PPL is an energy and utility holding company that, through its subsidiaries, owns or controls nearly 19,000 megawatts of generating capacity in the United States, sells energy in key U.S. markets, and delivers electricity and natural gas to about ten million end users in the United States and the United Kingdom.

We have several concerns about the alternatives proposed in the Concept Release as discussed further below. Our comments are organized in the following sections as set forth in the Concept Release:

1. Auditor's Discussion and Analysis (AD&A),
2. Required and expanded use of emphasis paragraphs,
3. Auditor assurance on other information outside the financial statements, and
4. Clarification of language in the standard auditor's report.

**Auditor's Discussion and Analysis**

The Concept Release discusses that the intent of the AD&A would be for the auditor to provide in a narrative format his or her views regarding significant matters, including management's judgments and estimates, difficult or contentious issues and areas where management could have applied different accounting. We believe that Management is responsible for the financial statements and the disclosures set forth therein and that the Audit Committee of a Board of Directors ("Audit Committee") is the appropriate governance body, as discussed below, to provide oversight of Management and to engage the auditors in open and transparent communication of their work and the quality of a company's financial statements and disclosures. The auditor's responsibility is to obtain reasonable assurance about whether the financial statements present fairly, in all material respects, the financial position and results of operations of an entity in conformity with U.S. generally accepted accounting principles ("GAAP") and, with larger public companies, to opine on an entity's internal control over financial reporting. An auditor exercises professional judgment in accordance with the auditing standards to design and execute an audit plan to opine on the accuracy and completeness of the financial statements as a whole. The auditor does not opine on individual matters as part of a standard financial statement audit. Accordingly, subjective information about an entity's financial statements presented by an auditor, such as their views on management's judgments and estimates, accounting policies and practices, and difficult or contentious issues could create greater confusion, and in our view, would not result in providing useful decision making information to investors.

An AD&A would significantly increase the cost of and time to complete the audit due to the additional effort that would be required for the auditor to obtain the understanding necessary of the day-to-day operations of the company and management's decisions and estimates required to be able to provide meaningful disclosures. In addition, an increase in effort would be required to resolve and clarify differences between information in the AD&A and information in the financial statements and potentially require further time to make information available to investors. Further, if an auditor provides subjective information that is relied upon for investor decisions and is later proved to be incorrect, the auditor and the company could be subject to litigation.

Current auditing standards already require the auditor to report the items proposed in the Concept Release to the Audit Committee. The Audit Committee, as a part of the shareholder elected Board of Directors, has the authority and responsibility to oversee the financial reporting process on behalf of investors and to resolve any specific accounting treatments that they are not comfortable with. This required involvement of the Audit Committee should provide the level of assurance that these judgmental areas have been adequately addressed within the financial statements. The auditor also reporting these items to the investors could not only potentially confuse an uninformed investor, but would also appear to undermine the governance role of the Audit Committee. A potential alternative to the auditor providing this information as part of an AD&A would be for the PCAOB to modify the standard audit opinion to state that management's significant judgments and estimates, critical accounting policies, alternative accounting treatments, etc., have been discussed with the entity's Audit Committee. This could provide the investor with additional assurance that the amounts and disclosures included in the financial statements related to these judgmental areas are appropriate without potentially confusing investors by discussing the actual alternatives.

If the auditor were required to present subjective information in the form of an AD&A, communications between the auditor, management and the Audit Committee could become less transparent. Effective communication between these parties is important to uphold the transparency of the audit resulting in a quality audit. There is also a risk of disclosing information that is confidential to the company in an AD&A. GAAP must be followed by management when producing financial statements. If investor needs require that changes be made to the current accounting and reporting framework under GAAP, those changes should be completed through the accounting standard setting process and not the auditing standard setting process.

**Emphasis Paragraphs**

The Concept Release proposes that emphasis paragraphs could be required and their use expanded, in which the auditor would discuss such things as significant management judgments and estimates and areas with significant measurement uncertainty. The PCOAB's auditing standard AU 580.11 already requires an auditor to include an emphasis paragraph in certain situations and allows auditors to include them when the auditor wishes to emphasize a matter in the financial statements. Requiring and expanding the use of emphasis paragraphs may lead to standardized disclosures in the auditor's opinion that are not meaningful to investors. As discussed above, significant management judgments and estimates and significant risks are already discussed with the Audit Committee. We believe the existing guidance for the use of emphasis paragraphs in the audit report is appropriate.

We believe that ASC 275, *Risks and Uncertainties*, provides guidance for disclosures in the footnotes that address some of the concerns in this area. However, to the extent that these disclosures should be expanded to address significant judgments and estimates in the financial statements and footnotes, we believe that the accounting standard setting process is the appropriate forum and not the auditing standard setting process.

**Auditor Assurance on Other Information**

Another alternative presented in the Concept Release is for the auditor to provide assurance on information outside the financial statements, such as Management's Discussion and Analysis (MD&A), earnings releases, and/or non-GAAP financial information. Increasing the scope of the audit to include this other information could significantly increase the costs of the audit and could also put at risk the company's ability to timely file its financial statements in compliance with regulations.

Current auditing standard AU 550 already requires that auditors review other information accompanying the audited financial statements, such as MD&A, to ensure consistency with the audited financial statements. Simply providing assurance on other information outside the financial statements would not provide additional useful information for investors. We note there is a PCAOB attest standard detailing the requirements for attest engagements with respect to MD&A (AT 701), however, these engagements are typically not performed. We believe that a regulatory mandate to audit additional information should only be made if a comprehensive analysis shows compelling evidence that the benefits of performing procedures above those that are already required outweigh the financial costs and risk of untimely filings.

**Clarification of Language in the Standard Auditor's Report**

The fourth alternative discussed in the Concept Release is the clarification of certain terms in the standard auditor's report, such as reasonable assurance, and the clarification of auditor responsibilities, such as the auditor's responsibility to detect fraud. We appreciate the investment community's desire for additional understanding of the audit process and do not object to the audit community providing the factual information proposed by this alternative.

If guidance is issued directing auditors to clarify their responsibilities and certain terms in the audit opinion, to avoid confusion, we recommend amending the standard auditor's opinion by providing standardized language to be used in all auditor reports to maintain consistency between all auditors and all entities.

**Conclusion**

We appreciate the opportunity to comment on this Concept Release. As discussed above, we do not support the alternatives set forth in the Concept Release, including the requirement that auditors present subjective information on an entity's financial statements in their opinions. The auditor's views regarding significant matters could undermine the entity's financial statement presentation and disclosures, create greater confusion and not enhance the overall understanding of the investor. Furthermore, we do not support mandates by the PCAOB or other regulatory bodies that increase the cost of operations of U.S. registrants, without measureable benefits to investors. If additional accounting and reporting requirements are necessary, we believe they should be established through the accounting standard setting process and be provided by management. If an auditor has concerns with the amounts recorded or the disclosures made by management, they should be addressed with the Audit Committee, whose role is to address those concerns.

We would be pleased to discuss our comments in further detail and provide any additional information that you may find helpful in addressing these important issues.

Very truly yours,

Vincent Sorgi

**Re: PCAOB Concept Release ("Concept Release") on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements – PCAOB Release No. 2011-003 June 21, 2011**

We appreciate the opportunity to provide our comments on the PCAOBs Concept Release relating to Auditor's Reports on Audited Financial Statements. Praxair, Inc. is a Fortune 300 U.S. - based public company that produces, sells and distributes atmospheric, process and specialty gases, and high-performance surface coatings with 2010 sales of $10 billion. About 60% of our sales are non-U.S. and we operate in over 40 countries. As such, we are very concerned with any proposals which would change the audit scope and/or communications related to our business/financial statements and the relationship with our external independent registered public accounting firm.

Although we support the PCAOB's periodic evaluation of the auditors' reports on audited financial statements, we do not support many of the proposals included in the Concept Release. In general, we believe:

- Auditors should not be the original source of disclosure about an entity; instead, management's responsibility should be preserved.[1]

- Auditor reporting should focus on the objective rather than the subjective[1] i.e., auditors should report on the accuracy and/or appropriateness of management's presentations and disclosures as measured against a defined set of accounting, disclosure and auditing standards.

- Auditor reporting should be standardized, with limited flexibility to (i) disclose deficiencies, and/or (ii) emphasize significant matter(s) that typically would already be disclosed by management.

[1] Similar to comments made by the Center for Audit Quality, June 28, 2011.

- Any changes to the auditor reporting model should be narrow and should be focused on better communicating what is actually done in the audit, not expanding the scope or providing original disclosures about the entity being audited.

We will discuss each of the proposals below under the following topics (consistent with the Concept Release):

1. Supplement the audit report with a new "Auditor's Discussion and Analysis"
2. Required and expanded use of emphasis paragraphs in the auditor's report,
3. Expand the audit scope to include information outside of the financial statements e.g., MD&A, Non-GAAP presentations,
4. Clarification or addition of certain language in the auditor's report
5. Considerations Related to Changing the Auditor's Report

In an attachment to this letter, we have included additional comments addressing the specific questions requested in the Concept Release.

***1. Supplement the audit report with a new "Auditor's Discussion and Analysis".***

We do not support a separate "Auditor's Discussion and Analysis". As a basic principle, we believe management of an entity, with close oversight by its Board of Directors and Committees (e.g., Audit Committee), is and should be responsible for assuring the fair presentation of the company's financial statements, the maintenance of effective internal controls over financial reporting, and the adequacy of disclosure relating to other required information (e.g., Business Description, Risk Factors, and MD&A among much more). In fact, each quarter the senior management of all public companies are required to certify to this and annually the members of the Board of Directors are required to sign the Annual Report Form 10-K. Although it is true that auditors, as a result of their audit process, should have "significant insight into the company" we do not believe that it is or should be the auditor's responsibility to communicate his or her observations and/or beliefs in this regard, many which are necessarily of a subjective nature, to the general public - this is the responsibility of management. Instead, auditors should continue to report on the accuracy of management's presentations and disclosures as reasonably measured against a defined set of auditing standards.

Besides the basic principles involved, it would simply not be practical, or cost effective, to require auditors to prepare a separate "Auditor's Discussion and Analysis" for external disclosure.

***2. Required and expanded use of emphasis paragraphs in the auditor's report.***

We do not agree with this proposal **to require and expand** the use of emphasis paragraphs within the auditor's report. We understand that such paragraphs are already available to the auditor to emphasize a matter(s) regarding the financial statements – we support this approach. The Concept Release lists several of examples which we will not repeat herein.

We believe that the financial statements should stand on their own and should generally not require additional information to be added by the auditors, unless of course there are deficiencies in the entity's reporting or if there is a matter that is extremely critical and needs to be emphasized to the user. If the reporting entity does not prepare its financial statements or disclosures appropriately, then the auditor is currently required to address this in the audit report in an appropriate manner, including the use of an emphasis paragraph. **There is no need to require the auditors to include an emphasis paragraph just for the sake of having an emphasis paragraph.** In fact, by making such emphasis paragraphs routine, it would actually reduce their usefulness.

If there are other areas that the PCAOB wants the auditor to cover in the audit report then that is a different question (see proposal No. 3 following).

***3. Expand the audit scope to include information outside of the financial statements e.g., MD&A, Non-GAAP presentations.***

Although we do not believe the scope of the audit should be expanded to include information outside of the financial statements, we believe it may make sense to consider expanding the audit report to include a full description of the scope and results of what is already being done in the audit. The PCAOB Concept Release states on page 23:

> "Current auditing standards describe the auditor's responsibilities regarding other information outside the financial statements in documents containing audited financial statements (e.g., MD&A). These responsibilities include reading and considering whether such information or the manner of its presentation is materially inconsistent with the financial statements or represents a material misstatement of fact."

We believe it may make sense to incorporate this thought within the standard audit report in an appropriate manner. Although we make no judgments on the adequacy of current guidance in this area, if the PCAOB concludes there needs to be additional guidance to auditors in this regard, such standards can easily be promulgated. For example, in such additional guidance, the PCAOB may want to specifically require the auditors to read the reporting entity's critical accounting policies and/or risk factors and positively express their agreement, or include an emphasis paragraph if it the entity's disclosures are not appropriate or complete. However, we do not believe there needs to be an increase in the audit scope to accomplish the goal or in the reporting if the entity's disclosures are appropriate.

***4. Clarification or addition of certain language in the auditor's report.***

Although we are not experts in this area, it may make sense to modify the audit report to include wording that best describes what is currently being done in an audit. Some of the examples presented in the PCAOB Concept Release seem reasonable but we will leave the words to the experts who are currently practicing in this field. In concept, we do not disagree with the PCAOB's Concept Release in this regard.

**Considerations Related to Changing the Auditor's Report**

Starting on page 31 of the Concept Release, the PCAOB lists several "practical challenges and unintended consequences" that were brought up during the staff's outreach efforts. We agree with these concerns and they are real. The "practical challenges and unintended consequences" listed in the Concept Release are:

1. ***Effects on the Audit Effort.*** The PCAOB should continue to require a "standardized" audit report and should not expand the scope of the audit to include information outside the financial statements. Instead, if changed, the audit report should be modified only to better communicate what an audit already is and the audit conclusions thereon – all in a standard way. It would be counterproductive if auditors were required to prepare and issue a non-standardized report such as the Concept Release suggests e.g., in an "Auditor's Discussion and Analysis"

2. ***Effects on the Auditor's Relationship.*** We agree with the concerns expressed in the Concept Release. The stifling of auditor communications would be a terrible result. Companies need to have open communications with their auditors – it is good for the company and it promotes an effective audit. We should all remember the unintended consequences of the initial ASB/SOX 404 requirements which had the effect of stifling communications between the auditor and the company until later corrected. None of us want to live through that again.

3. ***Effects on Audit Committee Governance.*** We agree with the outreach participant concerns. Communications about the entity are the responsibility of the reporting entity, and its management and Board of Directors. Auditors should audit and communicate the results of their audit in a standard, and therefore, understandable way.

4. ***Liability considerations.*** We believe the concerns are well founded. History shows that more rules and subjective disclosures will inevitably give birth to more lawsuits.

Thank you for the opportunity to express our comments. We would be pleased to discuss our views with members of the Commission or with its staff. Please contact me at 203-837-2158 (chuck_jacobson@praxair.com) or Liz Hirsch (VP & Controller 203-837-2354, liz_hirsch@praxair.com) if you have any questions.

Very truly yours,

Charles L. Jacobson
Assistant Controller and Chief Accountant

**Attachment Re: PCAOB Concepts Release ("Concept Release") on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements – PCAOB Release No. 2011-003 June 21, 2011**

**Form of the Auditor's Report**

*1. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.*

*a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?*

**Response:** As noted in the attached letter, we support improvements to the auditor's reporting model that are focused on better communicating what is actually done in the audit. We do not support expanding the scope or providing original disclosures. Any improvement effort should be narrowly focused.

*b. In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?*

**Response:** We do not have significant problems with the current auditor's report. However, as noted in the attached letter, if warranted we believe it may make sense to consider revising the audit report to include a full description of the scope and results of what is already being done in the audit. The audit report should not be the original source for disclosures about the entity and the scope of the audit should not be expanded

*c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?*

**Response:** As noted in the attached letter, we do not believe the scope of the audit should be expanded to include information outside of the financial statements. However, if warranted we believe it may make sense to consider expanding the audit report to include a full description of the scope and results of what is already being done in the audit. The PCAOB Concept Release states on page 23:

> "Current auditing standards describe the auditor's responsibilities regarding other information outside the financial statements in documents containing audited financial statements (e.g., MD&A). These responsibilities include reading and considering whether such information or the manner of its presentation is materially inconsistent with the financial statements or represents a material misstatement of fact."

We believe it may make sense to incorporate this thought within the standard audit report in an appropriate manner. Although we make no judgments on the adequacy of current guidance in this area, if the PCAOB concludes there needs to be additional guidance to auditors in this regard, such standards can easily be promulgated. For example, in such additional guidance, the PCAOB may want to specifically require the auditors to read the reporting entity's critical accounting policies and/or risk factors and express their agreement, or include an emphasis paragraph if it not appropriate or complete. Because auditor's already do this, we do not believe there needs to be an increase in the audit scope to accomplish the goal or in the reporting if the entity's disclosures are appropriate.

*2. The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."*

*a. Should the auditor's report retain the pass/fail model? If so, why?*

**Response:** Yes. The purpose of an audit is to do exactly this and the "pass/fail" model presents a clear conclusion that is well understood. If the Board believes certain terms need to be better defined (e.g., material), this should be done outside of the auditor's report (e.g., by a website link to the literature that provides the appropriate definitions).

*b. If not, why not, and what changes are needed?*

**Response:** See response to a.

*c. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.*

**Response:** See response to items 1. And 2.a. above.

*3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.*

**Response:** Management. As noted in the attached letter, we believe management of an entity, with close oversight by its Board of Directors and Committees (e.g., Audit Committee), is and should be responsible for assuring the fair presentation of the company's financial statements, the maintenance of effective internal controls over financial reporting, and the adequacy of disclosure relating to other required information (e.g., Business Description, Risk Factors, and MD&A among much more). Although it is true that auditors, as a result of their audit process, should have "significant insight into the company" we do not believe that it is or should be the auditor's responsibility to communicate his or her observations and/or beliefs in this regard, many of which are necessarily of a subjective nature, to the general public. This is the responsibility of management.

*4. Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?*

**Response:** Amendments are not necessary. The current reporting is clear and well understood and does not need to be changed again.

### *A. Auditor's Discussion and Analysis*

*5. Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?*

**Response:** No. We do not support an AD&A. See attached letter.

*b. Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?*

**Response:** We do not support an AD&A. However, if the Board continued with the AD&A concept it should definitely be limited to the audit and not include the financial statements.

*e. Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?*

**Response:** As described in the attached letter, there is no need for the auditor to provide "supplementary comments" on the audit or the company's financial statements beyond expressing their required opinions and other disclosures that are already part of the reporting framework. There is no need for subjective comments, judgments, interpretations etc. as discussed in the Concept Release.

*6. What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?*

**Response:** For the reasons stated in the attached letter, we do not support the need for an AD&A. Also, see our response to Question 1. C.

*7. What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?*

**Response:** For the reasons stated in the attached letter, we do not support the need for an AD&A or the requirement for an auditor to discuss any of these subjective matters. There should be no AD&A.
The auditor should not be required to discuss its "views" on the company's financial statements except to provide the required opinions. Nor should the auditor be required to discuss management judgments and estimates, accounting policies, and difficult or contentious issues, including close calls.

If implemented, there would also be significant negative consequences, many of which are identified in the Concept Release. The stifling of auditor communications would be a step backward again. Companies need to have open communications with their auditors – it is good for the company and it promotes an effective audit. We all remember the unintended consequences of the initial AS2/SOX 404 requirements which had the effect of stifling communications between the auditor and the company until later corrected by AS5. None of us want to live through that again. Also, there would be significant costs associated with the preparation of such information, without the commensurate benefit.

*8. Should a standard format be required for an AD&A? Why or why not?*

**Response:** For the reasons stated in the attached letter, we do not support the need for an AD&A. Also as stated in the attached letter, we believe the Board should continue to require a standard audit report.

*9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?*

**Response:** Such risks should not be included in any standard auditor reporting. Communications about the entity (e.g., business risks, strategic risks, operational risks, etc) are the responsibility of the reporting entity, and its management and Board of Directors. Auditors should audit and communicate the results of their audit in a standard, and therefore, understandable way.

*10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?*

**Response:** For the reasons stated in the attached letter, we do not support the need for an AD&A. However, we believe boilerplate language would be almost impossible to avoid.

*11. What are the potential benefits and shortcomings of implementing an AD&A?*

**Response:** See attached letter.

*12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?*

**Response:** For the reasons stated in the attached letter, we do not support the need for an AD&A. There should be no AD&A.

However, in a hypothetical world, we believe as a practical matter the potential for inconsistent or competing information is extremely low. The auditor is already required to read information that is disclosed outside the financial statements to be sure that it is consistent with the financial statements. This includes the business section, risk factors, the MD&A (including critical accounting policies), and much more. Through this process, entity management already has the benefit of the auditor's comments. Therefore, we do not believe management's disclosures would change significantly and I do not believe the auditor's would add anything new.

In part, this process is precisely why an AD&A is not needed.

**RE: PCAOB Rulemaking Docket Matter No. 34, *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards***

Dear Sir:

**Overview of our key message**

We appreciate the opportunity to respond to the Public Company Accounting Oversight Board's (the "Board") *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (the "Concept Release"). We commend the Board for its outreach to investors and others as a basis for developing the Concept Release and for its continued outreach via the public roundtable held on September 15, 2011. Results of that outreach clearly call for changes to the auditor's reporting model to increase its transparency and relevance. Recent projects undertaken by global standard-setters, in particular the International Auditing and Assurance Standards Board's (IAASB) consultation paper *Enhancing the Value of Auditor Reporting: Exploring Options for Change,*[1] and regulators further underscore the call for change. We also believe the time is right for changes to the auditor's reporting model, and further agree with the Board that any change cannot compromise audit quality. We believe:

- Changes should be driven by a clear set of principles to ensure all changes add value and increase relevance.
- Some changes can be made in the shorter term but any other reforms need to be framed as part of a wider consideration of the corporate reporting model.
- The public interest will be best served by different standard-setters working collaboratively to ensure that, as far as possible, consistent models are developed.

**Importance of corporate reporting context**

The fall-out of the financial crisis still reverberates around the world. In many ways, the crisis fundamentally shifted the way the world views the capital market systems. It also created a compelling case to consider reforming the corporate reporting model to better meet the information needs of users. Developing a relevant and valued corporate reporting model for the upcoming century will require the active engagement and collaboration of many — management, directors, investors, auditors, regulators, policy makers, legislators, as well as standard-setters.

[1] The IAASB consultation paper explores similar alternatives and the network of member firms of PricewaterhouseCoopers International Limited responded to this proposal on September 16, 2011.

*PricewaterhouseCoopers LLP, 400 Campus Drive, Florham Park, NJ 07932*
*T: (973) 236 4000, F: (973) 236 5000, www.pwc.com/us*

The current audit report pertains only to the financial statements and, for certain issuers, internal control over financial reporting. As corporate reporting evolves, a more comprehensive assurance model can further enhance the relevance and value of the auditor's role, which may potentially include opinions that cover other aspects of the company's reporting. We believe the PCAOB collaborating with the IAASB can, and should, play a leading role in promoting that debate, and we stand ready to work collaboratively with all interested parties to actively drive this agenda forward.

The Concept Release is framed within the context of today's corporate reporting model. We believe that genuine enhancements in auditor reporting can be made in the shorter term even with that constraint. Such improvements alone may not provide the informational value and greater insights many are seeking and, therefore, we continue to emphasize the importance of longer-term consideration of the corporate reporting model. Options proposed that we believe are not practicable in the shorter term — as well as options not yet even considered — may become viable as the wider corporate reporting model evolves.

**Why change today's auditor reporting?**

Today's audit underpins confidence in financial reporting. Its value rests in the reliability of audited financial statements that is pivotal to the effective functioning of the capital markets.

The audit report inevitably influences users' perceptions of audit quality and relevance. Users tell us that the current auditor's report is not meeting their needs as well as it could. They greatly value the auditor's opinion on the financial statements, but they would like more informative reporting — greater insight into the company's financial reporting and the audit, as well as assurance or related services on other information not within the scope of today's financial statement audit — which forms the basis for the alternatives for change proposed in the Concept Release.

**Our overarching principles for effective auditor reporting**

As we evaluated the alternatives for additional auditor reporting in the Concept Release, we assessed them against the following principles. We found them to be useful guideposts to identifying constructive changes and avoiding changes that may not accomplish the stated objective in the Concept Release of increasing auditor transparency and relevance, while not compromising audit quality.

1. **Changes made to auditor reporting should:**

   - **Maintain or improve audit quality.** Audit quality is paramount and could be negatively affected if a proposed solution inadvertently reduced the auditor's ability to obtain sufficient appropriate audit evidence.
   - **Enhance the value of the audit to users**. Users should see substantive value from the changes. To be sustainable, the incremental benefits of that additional information should exceed the costs involved.
   - **Increase the reliability of information the company provides in public reports.** Providing assurance on information that previously was not subject to audit/assurance directly affects its reliability. Some of the options may also have an indirect positive impact if they serve to increase the attention that management and audit committees pay to those elements of their corporate reporting.

pwc

2. **Changes should maintain or enhance the effectiveness of the relationships and interactions of auditors, audit committees and management in the financial reporting process.** The audit model depends on effective communication among the participants in the financial reporting process. Professional skepticism and challenge are key elements of an audit. Audit effectiveness also depends on the ability of the auditor to have effective communication with and obtain information from management and audit committees. The impact of the proposed solutions on the interrelationships among auditors, audit committees and management needs to be considered so that they do not have a negative impact on audit quality by impeding these important interactions.

3. **Auditor reporting should be sufficiently comparable**. Any move away from a completely standardized report and opinion will inevitably introduce some variation. Financial reporting and auditing also require significant exercise of professional judgment. Any solutions proposed must result in information that can further contribute to market confidence in audited financial statements. Auditor's reporting on information that is subjective or variable (such that two auditors given the same fact pattern and information could come to different conclusions and issue substantively different reports) will not meet this criterion.

4. **Auditor reporting can provide greater insight based on the audit but the auditor should not be an original source of factual data or information about the company.** Factual data or information about the company should be reported by the company (i.e., by management and/or audit committees) to avoid blurring the responsibilities of auditors, management and audit committees. This is also important to avoid confusion and disrupting capital markets by providing competing views of the true underlying picture of the company's ’s financial position and/or performance.

**Our vision of responsive changes in auditor reporting**

It is our understanding that today's pass/fail model contributes to the value placed on audited financial statements by market participants; therefore, we believe this model should be retained. Our vision of enhanced auditor reporting in the context of today's corporate reporting model retains what is working well but makes it better by:

- Highlighting the significant judgments disclosed by management in preparing the financial statements through the use of emphasis paragraphs in the auditor's report.
- Expanding auditor involvement to provide additional assurance on or other auditor association with other aspects of a company's corporate reporting (where the benefits of that additional assurance are agreed to exceed the costs).
- Clarifying certain aspects of, and adding additional information to, the standard auditor's report, principally to reduce any perceived expectations gap.

We also believe that some of the changes being sought with respect to the audit report — including, in particular, those that put the auditor in the position of reporting financial information for management — would be better met by changes to the broader corporate financial reporting model. Such proposals for change should be addressed holistically by all participants in the financial reporting supply chain to achieve meaningful change. This longer-term effort would involve examining opportunities for improvement in the roles/responsibilities of:

- Preparers – Consider whether disclosures should be expanded, streamlined and/or otherwise improved.
- Audit committees – Consider whether expanded and/or improved information about audit committee oversight activities should be provided. A secondary question exists regarding whether users believe additional benefits would be provided if the auditor provided assurance on or were otherwise associated with an expanded audit committee report.
- Regulators/ standard-setters – Consider whether enhanced disclosures by preparers could be achieved, where considered necessary.

This holistic approach is consistent with the feedback obtained from the Center for Audit Quality's (CAQ) role of the auditor (RoA)[2] working group.

Our comments on the specific alternatives outlined in the Concept Release follow.

**Required and expanded use of emphasis paragraphs**

As stated in the Concept Release, this alternative would mandate the use of emphasis paragraphs in all audit reports to highlight the most significant matters in the financial statements and to identify where these matters are disclosed in the financial statements. The Concept Release states emphasis paragraphs could be required in areas of critical importance to the financial statements, including significant management judgments and estimates, areas with significant measurement uncertainty, and other areas that the auditor determines are important for a better understanding of the financial statement presentation. With respect to each matter of emphasis under this alternative, the Concept Release also raises the possibility the auditor could be required to comment on key audit procedures performed pertaining to the identified matters.

We believe the required use of emphasis paragraphs could be a viable approach to enhance the navigability of management's disclosures by highlighting where the auditor believes management's significant judgments related to financial reporting, including areas with significant measurement/estimation uncertainty, are described in the financial statements.  In the short term, this improved navigation could be responsive to stakeholders' call in the CAQ's RoA working group for disclosures to be more streamlined and focus on what is significant.

Question 17 of the Concept Release asks how boilerplate language can be avoided in required emphasis paragraphs while providing consistency among audit reports. With respect to providing emphasis paragraphs highlighting management's significant judgments disclosed in the financial statements, we do not believe this would be a significant issue. First, the significant judgments may change from year to year, but even if they do not, standard language can still provide meaningful information to users of the financial statements if it draws attention to those accounting and disclosures areas of significance.

Subject to our comments below, we believe this alternative could be consistent with our overarching principles.

---

[2] The Center for Audit Quality's (CAQ) role of the auditor (RoA) working group is evaluating what additional work auditors might perform beyond their current responsibilities to better meet the needs of users, and to that end has hosted a series of discussion roundtables seeking feedback from investors, analysts, audit committee members, preparers, attorneys and academics. The CAQ has published a summary report that highlights observations from participants in these roundtables.

***Population of matters to be emphasized***

As discussed in our overarching principles, we believe effective implementation of the emphasis paragraph alternative depends on auditor reporting that is sufficiently similar to facilitate users' comparison of such matters among different companies. Accordingly, we believe that auditing standards should provide a clear framework for identifying the matters to be referenced in the auditor's report. Clear guidelines should be established for the identification of matters to be emphasized in order to facilitate comparability, and also to avoid the emphasis of too many matters. In addition, the clear identification in auditing standards of what matters are required to be emphasized would help mitigate the potential unintended consequence that users would use emphasis paragraphs as an indicator that other financial reporting disclosures that are not emphasized are not important to an understanding of the financial statements. This approach is consistent with the feedback from the CAQ's RoA working group that believed it would be beneficial for the auditor to highlight the highest risk areas of financial statements which could result in improved disclosures throughout the annual report, including Management's Discussion and Analysis (MD&A).

The extent of disclosure in the auditor's emphasis paragraphs, as well as the population, should also be addressed in the Board's standards. In keeping with the auditor's role of attesting to management's assertions so that management, not the auditor, remains the original source of a company's disclosures, we also believe that emphasis paragraphs in the auditor's report, if required, should provide only a high level summary of the facts already presented within the financial statements and leave the details for the financial statement disclosure that is referenced.

***Disclosure of auditing procedures in response to matters identified***

The Concept Release raises the possibility of the auditor's disclosure of key audit procedures that are responsive to the areas emphasized in the auditor's report. Although providing this information seems reasonable conceptually, and the CAQ's auditor's reporting model (ARM)[3] working group efforts included developing examples of how such disclosure could be implemented, certain challenges cannot be overcome. In particular, identifying only certain procedures in the absence of sufficient context regarding the audit approach, auditor's risk assessment and methodology could diminish users' perception of the auditor's work effort, which may increase the expectations gap by exacerbating, rather than reducing, perceived misconceptions of audits. On the other hand, a more complete discussion of the audit procedures could result in "disclosure overload," and could easily become either too technical or lead to boilerplate descriptions of "standard" procedures. In addition, the auditor's discussion of audit procedures related to emphasis paragraphs may be misinterpreted by some as the auditor's expression of an opinion on the matters emphasized.

For these reasons we are not supportive of disclosing the key audit procedures performed pertaining to the areas emphasized; however, if such an approach is pursued, we believe a more appropriate approach to disclosure of auditing procedures is included in the CAQ response letter to the PCAOB dated June 28th which concludes the emphasis paragraph section of the illustrative auditor's report with the following statements: that our audits included performing procedures designed to address the risks of material

[3] The CAQ's auditor's reporting model (ARM) working group is exploring changes to the auditor's reporting model that could best serve users' needs for additional information from auditors without compromising audit quality. The initial results of this group were communicated in a comment letter to the PCAOB dated June 28, 2011, and an additional comment letter is expected to be issued for the Board's consideration.

misstatement associated with the above matters; such procedures were designed in the context of our audit of the consolidated financial statements taken as a whole, and not to provide assurance on individual accounts or disclosures; and that our audits also included procedures in response to other identified risks of material misstatement and procedures required by professional standards that have not been specifically included herein.

**Auditor assurance on other information outside the financial statements**

The Concept Release discusses, and we agree, that many users rely on MD&A and other financial information (e.g., non-GAAP information and earnings releases) in addition to historical audited financial statements. As a result, we believe, if there is market demand, additional auditor assurance on other aspects of the company's corporate reporting would improve the quality, completeness, and reliability of such information as discussed in the Concept Release. This alternative is also consistent with the feedback received from the CAQ's RoA working group.

We believe that auditor reporting on information outside the financial statements is a natural expansion of the role of the auditor — to enhance the reliability of information provided by management — into new areas and, as such, it may be viewed as a continuum building on the audit of financial statements and, for certain issuers, the audit of internal control over financial reporting. Importantly, it is consistent with the principles articulated above and preserves the auditor's core role of attesting to information provided by management.

In the shorter term, we support the proposal in the CAQ response letter dated June 28th for an examination engagement to provide an opinion on the Critical Accounting Estimates (CAE) disclosure in MD&A. The advantages to this approach include that it is responsive to calls for more emphasis on the important judgment calls made in preparing the financial statements, including accounting estimates. Auditor attestation should also serve to improve disclosures in this important area.

In addition, focusing on a specific aspect of MD&A provides some practical advantages for implementation. As a starting point, the SEC has provided guidance in disclosing critical accounting estimates for management. We acknowledge that the SEC would need to consider whether amendments to Regulation S-X are necessary to require this new attestation report, and whether further rulemaking would be necessary to consolidate existing CAE requirements into Regulation S-K. Other practical advantages of focusing on a *specific* aspect of MD&A, rather than *all* of MD&A, include easing the time pressure of meeting SEC filing deadlines and limiting the incremental costs of such reporting.

Assuming there is market demand for auditor assurance on or association with earnings releases and non-GAAP information, we believe the Board should consider these as a separate project (or projects) because more extensive development would be needed to enable such engagements. While we support further consideration of this topic, based on discussions during the PCAOB's September 15th roundtable, it is unclear how strong the demand would ultimately be even for more limited auditor involvement and communication, such as whether the historical financial information included in earning releases or non-GAAP information agrees to the books and records subject to audit. Regardless, the PCAOB would need to develop more specific guidance for auditors; accordingly, consideration of increased auditor involvement with such information should be addressed separately. In addition, any proposal that increases the level of auditor involvement with such information — examination-level or otherwise — would also need to consider the appropriate legal framework being in place.

**Clarification of the standard auditor's report**

The Concept Release also discusses proposals to clarify certain language in the standard auditor's report. As discussed above and consistent with views expressed in the Concept Release, we believe the pass/fail model and standardized language of the auditor's report provide consistency, comparability, and clarity in auditor reporting and should be retained.

We also believe the Concept Release proposals to clarify certain language in the standard auditor's report will result in enhanced understanding of what an audit represents and the related auditor responsibilities, thus narrowing the expectations gap. These enhancements are consistent with our overarching principles, do not change the scope of the audit, would be free of incremental costs to implement, and could be achieved in the short term through the Board's standard-setting activities.

We identify below certain changes that we support conceptually. For specifics of suggested language and its location in the report, we are supportive of the illustrative language provided by the CAQ in its June 28th response letter, which also includes some items not addressed by the Board in the Concept Release. Also, the IAASB has explored other alternatives to the "core" elements of the IAASB standard auditor's report on the financial statements, and we would encourage the Board to work with the IAASB to ensure consistency, to the extent possible, related to the content and format of these "core" elements.

We agree that the addition of clarifying language related to the following concepts is appropriate:

- *Reasonable Assurance* – Clarify that reasonable assurance is a "high level of assurance, but not absolute assurance; therefore, an audit may not always detect a material misstatement."
- *Auditor's Responsibility for Fraud* – Add the words in boldface italics to the following sentence in the standard auditor's report to clarify the auditor's responsibility for fraud: "Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement ***whether due to error or fraud***."
- *Auditor's Responsibility for Financial Statement Disclosures* – Explicitly identify that the footnotes are an integral part of the financial statements and are covered by the audit report.
- *Management's Responsibility for the Preparation of the Financial Statements* – Provide an expanded discussion covering management's responsibilities for the financial statements, internal control over financial reporting, and the 10-K.
- *Auditor's Responsibility for Information Outside the Financial Statements* – Describing the procedures performed by the auditor on information outside of the financial statements would clarify the auditor's responsibility with respect to such information, and help reduce the expectations gap by addressing the misperception that the auditor's opinion covers such information.
- *Auditor Independence* – Identify that the auditor is independent within the meaning of all relevant SEC and PCAOB standards.

Other changes to the standard audit report, highlighted in the CAQ example provided in the June 28th letter, that we would support as being more beneficial to reduce the expectations gap are as follows:

- *Audit Committee Responsibilities* – Provide an expanded discussion covering audit committee responsibilities.

pwc

- *Addressing the Audit Report* – Address the audit report to the shareholders of the company in addition to the Board of Directors.
- *Professional Judgment* – Highlight the necessity of using professional judgment in assessing audit risks, in the selection of audit procedures, and the consideration the auditor gives to the issuer's internal control over financial reporting when responding to such risks.
- *Scope Limitations and Non-Compliance with U.S. Generally Accepted Accounting Principles (GAAP)* – Outline the auditor's responsibilities in the event a conclusion is reached that the financial statements are not in accordance with GAAP or in situations where audit scope is limited.
- *Material Misstatements & Assessment of Materiality* – Identify what is meant by the term "material misstatement" and discuss the approach used by the auditor to assess "materiality".
- *Clarifying that Audit Evidence is often Persuasive not Conclusive* – Clarify that the audit evidence the auditor obtains is often persuasive rather than conclusive.

**Auditor's discussion and analysis (AD&A)**

As discussed in the Concept Release, the AD&A alternative would require a supplemental narrative report that could provide users with a view of the audit and the financial statements "through the auditor's eyes."

We appreciate that additional insights or views related to the audit and the financial statements are desired by certain market participants but we believe the practical challenges and the unintended consequences that negatively impact audit quality and the overall financial reporting process cannot be overcome. As a result, we are not supportive of the AD&A alternative outlined in the Concept Release, as further discussed below. We also believe this would likely be the costliest and most time-consuming of the alternatives, diverting the attention of audit firms' resources from performing the audit to chronicling it, all at the risk of reducing audit quality. For the reasons described above, we believe the other alternatives are better solutions, without compromising audit quality.

***Auditor's views regarding the company's financial statements***

The AD&A approach would result in auditors communicating original information about the company, creating a fundamental shift from the auditor attesting to information provided by management to the auditor providing original information about the company. We believe this could result in several unintended consequences, including undermining the roles and responsibilities of the audit committee, management, and the auditor and further widening of the expectations gap.

Much of the information that the auditor would be required to disclose about the financial statements under the AD&A proposal, including, for example, management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls," is currently required to be discussed with audit committees. Communications between auditors and audit committees have become increasingly robust in recent years, improving the quality of both audits and financial reporting. We are concerned that a requirement for auditors to disclose their views about what are the more subjective areas of the financial statements may reduce the audit committee's and management's willingness to engage in an open and candid dialogue with the auditor, which is critical to the performance of a high-quality audit. Therefore, in our view, such a requirement has the potential to *reduce* audit quality and the quality of financial reporting. Such information, if required to be disclosed, should first be disclosed by the company. This is also consistent with the feedback received from the CAQ's RoA working group.

We also question what value users would find in the disclosure of matters that had been the subject of deliberation by the auditor and management, discussed with the audit committee and resolved. The key point from the perspective of users should be that such issues have been resolved to the satisfaction of the auditor in forming his or her opinion on the financial statements. If reported at all, such matters should be disclosed by the company.

The potential for an AD&A to present inconsistent or competing information between the auditor and management cannot, in our view, serve the public interest. On the other hand, as a practical matter, an AD&A requirement could force the resolution of inconsistent views prior to the issuance of the financial statements such that management and the auditor would make redundant, rather than competing, disclosures — resulting in increased disclosure overload.

Finally, we believe that AD&A disclosures would be highly susceptible to misinterpretation without the context of the dialogue that occurs between auditors, management, and audit committees. In requiring the auditor to provide the auditor's "perspectives" or "impressions" on management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls," the AD&A approach focuses on the subjective rather than the objective. When such matters are communicated by the auditor to the audit committee, the audit committee has the benefit of further discussion with the auditor to explore complex matters at the appropriate level of detail. Additionally, the audit committee has the benefit of periodic communications with the auditor throughout the year as well as information derived through its oversight of the financial reporting process, which also provide further context. Users lack the benefit of such information and periodic dialogue with the auditor to provide context for the information that would be communicated in an AD&A. As an example, AU 380.11 states that, "Objective criteria have not been developed to aid in the consistent evaluation of the quality of an entity's accounting principles as applied in the financial statements." Auditor communications with audit committees on that topic necessarily rely on the important dynamics involving auditor and audit committee discussions—an opportunity for dialogue that is not available to readers of the auditor's report.

Additionally, we believe it would be very difficult for audit firms to ensure any consistency in reporting related to an auditor's “perspectives” or “impressions” on management's reporting. One audit partner's subjective opinion regarding a “close call” may differ significantly from that of another, which could result in unintended consequences for an issuer in comparison to its peers. Without consistency in what is communicated, the AD&A requirement would diminish the comparability between companies, including those in similar industries.

***Information about the audit***

Providing greater insight into the audit through a discussion of the significant risks identified by the auditor and the audit procedures and results responsive to those risks conceptually appears reasonable as discussed in the Concept Release. However, the practical challenges of implementing this type of reporting cannot be overcome. For example, fraud risks by definition are significant risks. In the auditing standards, the risk of management override and a presumption of improper revenue recognition are fraud risks for all engagements. Publicly disclosing the risks, procedures, and results related to these and other potential fraud risks may cause confusion and increase the expectations gap, as the auditor assessing fraud risks during an audit does not mean that fraud has occurred or even that the entity presents a heightened risk of fraud.

The disclosure of significant risks poses practical implementation challenges, regardless of whether they reflect fraud risks. Significant risks by definition are risks of material misstatement that require special audit consideration. This definition inherently and appropriately requires auditor judgment, both in terms of identifying significant risks and in terms of designing and performing procedures that are appropriately responsive. As a result, there could be multiple reasons why an auditor believes that something requires special audit consideration in the context of the particular circumstances of an engagement. This would lead to considerable variation in the risks disclosed among audit reports, and the lack of comparability would be confusing. These potential unintended consequences would have a negative impact on audit quality and, as discussed above, we believe that users would be better served by the auditor's use of emphasis paragraphs linked to significant judgments made by management instead of significant risks identified by the auditor.

For the same reasons discussed under the emphasis paragraph alternative above, we do not support disclosing audit procedures performed in response to significant risks. Such disclosures will either be too succinct and lead to misperception about the extent of the auditor's work, widening the expectations gap, or fully describe the auditor's response in a voluminous disclosure that would not be useful.

Lastly, the Concept Release contemplates an AD&A requirement for the auditor to discuss specific independence matters communicated to the audit committee under PCAOB Rule 3526, *Communication with Audit Committees Concerning Independence*. We believe a public discussion regarding independence in an AD&A is unnecessary due to the existing governance function of the audit committee to assess auditor independence, the external monitoring of auditor independence by the PCAOB, SEC and the firm itself, and existing means by which the auditor can communicate independence to users. Under current PCAOB standards, the auditor is required to be independent, and every auditor's report is required to be titled, "Report of Independent Registered Public Accounting Firm." We also support adding clarifying language to the standard auditor's report related to auditor independence as discussed in the "Clarification of the standard auditor's report" section of our letter. We believe a requirement to publicly communicate further detailed information regarding auditor independence could result in misinterpretations regarding the independence of the auditor.

Question 9 of the Concept Release discusses that some investors suggested that, in addition to audit risks, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks, and asks "what are the potential benefits and shortcoming of including such risks in an A&DA?" Auditing Standard 12, *Identifying and Assessing Risks of Material Misstatement*, requires the auditor to obtain an understanding of the company's objectives, strategies and related business risks to identify business risks that could reasonably be expected to result in material misstatement of the financial statements. Given the relatively limited scope of the auditor's consideration of business risks, strategic risks, or operational risks in comparison to management's knowledge, it's not clear how the auditor's discussion of these risks would add value to users. Further, this proposal is inconsistent with the principle that information about the company should be reported by management or the audit committee. As a result, we are not supportive of these disclosures.

pwc

## Other considerations

***Cost considerations***

With the exception of changing language in the standard auditor's report, implementing any of the alternatives would involve increased costs. We believe the appropriate analysis is whether the benefits of any given alternative outweigh the costs. We believe AD&A, which would require significant resources both to draft and to review, would likely be the most costly, and in our view also poses a threat to audit quality. Assurance engagements to expand auditor reporting to other information outside the financial statements would be an added cost but the benefits may outweigh it if the result is increased perceptions of the reliability of the information received. As discussed above, the incremental cost of a separate assurance engagement on MD&A could be limited by focusing on the CAE aspect of MD&A. Even mandated emphasis paragraphs would require preparation and review time and increased discussion with management and audit committees, thus resulting in incremental costs. Whether the potential benefits of various options exceed the incremental costs is ultimately a matter for the marketplace to determine.

***Liability considerations***

We believe many of the alternatives being considered involve a potentially significant increase in legal risks for auditors. It is therefore important that appropriate auditor liability protections are also considered. In particular, auditor liability reform should be linked to proposals that increase auditors' responsibilities related to information outside of the annual financial statements and enhance auditor transparency, both of which increase auditor exposure to litigation risk.

***Suggested PCAOB Actions***

Except for changes related to clarifying the standard audit report, we believe the PCAOB should consider the following actions before requiring any changes to the auditor's reporting model:

- Further develop the content of any changes to the auditor's reporting model through more detailed examples. Share these examples with all stakeholders, including a wide variety of users.
- Consider field testing as a mechanism to assess the feasibility and effectiveness of any changes prior to full-scale implementation.

In responding to Q30, whether the proposed alternative(s) should be applied to all financial statements filed by public companies, investment companies, investment advisers, brokers and dealers, and others depends on which alternative(s) the Board chooses to pursue. We believe the clarifications to the standard auditor's report should apply to all companies but the other alternatives may need to first be field tested before determining which audits they should apply to.

## Conclusion

The time is right to enhance auditor reporting. Users' needs are more clearly articulated than ever before. Responding to those needs is critical to maintaining the value and relevance of the audit. Valuable enhancements can be made now that move us some way to achieving the goal of more informative and valuable auditor reporting.

As solutions are developed, it is critical that active, continuous and open dialogue among auditing standard-setters, regulators, investors, and other stakeholders occur. In particular, we urge the PCAOB to

pwc

work in collaboration with the IAASB in relation to their respective consultation papers to develop solutions that work globally. Significantly different auditor reporting models in a global market is not in the public interest. Some flexibility between jurisdictions may be needed, but unnecessary differences in approach should be avoided.

* * * * *

We appreciate the opportunity to express our views and would be pleased to discuss our comments or answer any questions that the PCAOB staff or the Board may have. Please contact Michael J. Gallagher (973-236-4328), Brian R. Richson (973-236-5615) or Marc A. Panucci (973-236-4885) regarding our submission.

Sincerely,

RE: PCAOB No. 2011-003, Rulemaking Docket No. 34 – Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards

Mssrs. Doty, Ferguson, Goelzer, Hanson, and Harris:

I commend the PCAOB for initiating its project on improvement of the auditor's reporting model. It's an effort worthy of the PCAOB's mission to strengthen the audit process for the benefit of investors. The current auditor's opinion, while concise, does not convey to investors any significant insights obtained by auditors during the audit process. Rather than perpetuating the audit reports investors rarely read, if ever, I think it is wise to consider if there are other ways the auditor can provide genuine value to the investor.

The chief information given to investors in the current auditor's opinion is that the financial statements are presented in accordance with generally accepted accounting principles. When you consider that there are thousands of pages of accounting standards, and often, alternative accounting treatments for one particular kind of transaction, the current auditor's opinion really says very little to the investor. It's even less information in comparison to the time spent on the job by the auditor and the kinds of insights the auditor should be obtaining.

<u>Investors – the real client of the auditor, not the firm audited - depend on the auditor to be their "eyes, ears and nose" when they are inside the audited firm.</u> Auditors executing their duties under PCAOB auditing standards should be aware of many more facts than are currently conveyed by the auditor's report, and if executed properly, these findings could help investors better understand the risks entailed in a particular investment, thereby enabling them to improve their investment decision-making.

Changes to the status quo will always make some parties uncomfortable. One defense of the status quo is likely to be that any modifications to the auditor's report will result in increased audit costs. If the information provided to investors is valuable, then investors – who are the ones actually bearing the costs of the audit - would be unlikely to complain about increases in audit fees. In fact, I have never encountered an investor who complained about the size of audit fees; if investors discuss audit fees at all, they might wonder sometimes how a legitimate audit was accomplished at such a low fee. Likewise, I have never encountered a company that blamed a poor earnings report on audit fees that were too high.

Auditing firms should be looking for ways to justify increases to their audit fees; putting more information into the auditor's report would be a good justification for increasing fees. It may sound odd to promote higher audit fees, but the audit profession needs to find auditing profitable in comparison to non-audit endeavors like consulting – or auditing will always be a second fiddle to more lucrative ventures, making it harder to attract and retain the most competent and motivated auditing talent. Investors do not benefit if auditing is a second-tier function in accounting firms, and improving communications to investors is an opportunity for audit firms to better their audit operations by improving the lot of investors.

<u>Suggesting that audit fees should increase (as long as value is given for an increase) is not a glib proposition.</u> Our firm has conducted a study of the audit fees, plus audit-related fees, for the 461 firms currently contained in the S&P 500 for which fee data is available for all of the years between 2002 and 2010. A summary compilation of audit and audit-related fees, by firm, appears at the top of the next page.

## S&P 500 Audit Fees By Auditor

*Table was constructed from the audit fees and audit-related fees listed in the proxies for 461 S&P 500 companies operating as separate independent entities for the entire period.*

Notice that audit and audit-related fees doubled between 2002 and 2006, due to the implementation of the Sarbanes-Oxley Act. From 2006 to 2010, however, audit and audit-related fees remained essentially flat, not even keeping pace with inflation – and this period encompasses the financial crisis, a period in which auditors would be expected to spend more time and effort in discharging their duties. One wonders if firms were able to keep audit performance high during this period: auditors' risk levels certainly didn't decrease, and investors would have to hope that they were spending the proper amount of time in conducting fieldwork. Did audit firms keep hours spent on fieldwork and audit quality high, and suffer their own decreased financial performance? Or did they cut corners on hours spent on fieldwork while preserving their own profitability? It's hard to tell because the audit firms do not present any of their own financial information to the public, but it's clear that in the long run, investors can't expect audit fees to stay low forever if they expect to benefit from high audit quality.

I hope all audit firms, both large and small, will support the concept release and work toward serving their investor clients better by trying to foment some of the suggested changes. The following is an expansion of the four proposed changes from the investor's point of view.

**Auditor's Discussion and Analysis (AD&A).** I believe the Auditor's Discussion & Analysis is the single best proposal in the concept release. Properly prepared as a supplemental report, this document would be the best means for auditors to communicate to investors as their agent inside the investee firm.

According to Auditing Standard No. 9, the planning of an audit requires the auditor to consider:

• Matters affecting the industry in which the company operates, such as financial reporting practices, economic conditions, laws and regulations, and technological changes;

• Matters relating to the company's business, including its organization, operating characteristics, and capital structure;

• Public information about the company relevant to the evaluation of the likelihood of material financial statement misstatements and the effectiveness of the company's internal control over financial reporting;

• Knowledge about risks related to the company evaluated as part of the auditor's client acceptance and retention evaluation; and

• The relative complexity of the company's operations.

During this planning process, the auditor should become aware of circumstances, both inside and outside of the firm, that will have an impact on the conduct of the audit. Those circumstances and/or risks would make an excellent discussion topic for the Auditor's Discussion & Analysis. They could include an identification of the factors that the auditor considered most important in planning the audit, and how the identified factors affected the allocation of auditor resources in conducting the audit. The factors that would affect the way an auditor thinks about risks of material misstatement of financial information might also affect the way that an investor views risks of an investment in the firm – if the risks were communicated to investors. I believe that many investors don't always adequately consider investment risks as much as they consider investment rewards. Adding more information about risks from another point of view – one coming from an advocate of the investor – might help some investors change their thinking before investing.

The AD&A could also be integrated with the "Risk Factors" section appearing in SEC filings. These are often useful to investors, but are also frequently so comprehensive that they seem to be developed as a sort of prophylaxis against legal liability, as if warning investors about any possible downside will neutralize a potential lawsuit. If the AD&A presents an informative discussion of the risks observed by the auditor from the inside of the firm, it could perhaps replace some of the boilerplate risk factors. Another possibility: the AD&A could be used to explain how the auditor evaluated the risk factors in formulating its audit plan.

A discussion of circumstances, risks, and how the auditor managed them would provide a context for investors that they don't currently receive in the financial statement package. It might make the AD&A a more engaging document for investors than the Management's Discussion & Analysis; it could certainly provide a contrast in the points of view provided by those who manage a firm and by those who examine the firm for the benefit of its owners.

The AD&A should also speak to the critical accounting policies and estimates appearing in the Management's Discussion & Analysis. These policies and estimates should have the auditor's attention in assessing risks and planning the audit. Investors would benefit from understanding the auditor's view on their significance and how they affected the conduct of the audit. They would also benefit from knowing if there were critical accounting policies and estimates that didn't appear in the Management's Discussion & Analysis that the auditor believes should have been included.

I do not believe that the AD&A should be a forum where the auditor is required annually to disclose disagreements with the management on issues that have been resolved to the auditor's satisfaction, as evidenced by the auditor's clean opinion. At the same time, the auditor should have the right to present their point of view in the AD&A when they believe the firm has employed accounting principles that fulfill the letter of the law but stray from the spirit of the law. Put another way, when the firm has engaged in "cute" or "clever" accounting that complies with GAAP but presents an unrealistic picture of performance of financial status, the auditor should be able to call out this behavior in the AD&A. Having that option available to the auditor might actually deter "clever" accounting practices in some companies.

*An example of "cute" accounting: under U.S. GAAP, firms are required to disclose in the financial statement footnotes, on a quarterly basis, the fair value of financial instruments. In the Accounting Standards Codification, there exists an example of such disclosures for originated loans, but the example incorporates a pre-Statement 157 concept of fair value – one that is not based on exit values, and is therefore not in conformity with the current standard. It exists in the codification erroneously. Yet firms will use that erroneous example as a template for their own disclosures, and they can claim conformity with GAAP. Auditor discussion of this treatment would be appreciated by investors – if it ever appeared in an AD&A.*

The AD&A should not be a document that's forced into a prefabricated mold. It should be primarily a text document, similar to the Management's Discussion & Analysis, and one that's flexible and adaptable to the situations encountered by the auditor. It could be based on the same information, albeit more highly summarized, that the auditors provide to a firm's audit committee.

The current auditor's report creates distance between the auditor and the party they are hired to serve – the investors. Being a standard formatted document, with only a black-and-white meaning, it does not effectively communicate the auditor's insights to the investors. The Auditor's Discussion & Analysis could go far beyond that binary "pass/fail" mentality; it could be a device that helps bridge the gap between auditors and investors. It would not have to be a document that will add hundreds of hours to an engagement: rather than requiring new or additional audit procedures, it would be more of an abstract and compendium of plans, communications and memos that are already compiled during the audit engagement.

There is the possibility that the AD&A could become a lame boilerplate document, year after year. The responsibility for seeing that this doesn't happen rests with the PCAOB. Inspections of the work papers on audit engagements give the PCAOB access to the same kinds of documents that should be the foundation for a well-written AD&A; the PCAOB inspectors should be able to make judgments as to whether reasonable attempts have been made to communicate relevant information to investors about the audit. Keeping the AD&A a focus of the inspection process will keep auditors vigilant in their development of the AD&A.

***If presented as a supplement to the basic auditor's report, I believe that the Auditor's Discussion & Analysis would be unparalleled in bringing investors more useful information about the audit.***

**Required and expanded use of emphasis paragraphs.** Relative to a required AD&A, I would consider required and expanded use of emphasis paragraphs to be a poor second choice for improving communications between auditors and investors. In theory, the same kind of information might be conveyed in emphasis paragraphs as in the AD&A, but I think it would be far less effective. The AD&A would be a more flexible document, one that could be lengthier than a paragraph on a particular topic. I believe that a requirement to use emphasis paragraphs would be far more likely to result in over-abbreviated information, and would be far more prone to becoming boilerplate talking points than would a full-fledged AD&A.

**Auditor Assurance on Other Information Outside the Financial Statements.** This is perhaps the most far-reaching alternative presented in the concept release, but it would provide less benefit to investors than the AD&A. I have not encountered investors who lament the lack of auditor assurance on the Management's Discussion & Analysis, or non-GAAP information, or earnings releases. They might want more or different non-GAAP information, more information drawn from the financial statements incorporated into earnings releases, or earlier earnings releases. I think if you were to poll a wide range of institutional investors, you would hear many ideas for improving non-financial statement information, but I believe all suggestions would relate to information content or timing.

***It's hard to see enough benefit resulting from this approach to justify the time and expense of developing new auditing standard for this kind of work. This simply does not seem to provide a more effective means of improving communications between auditors and investors than an AD&A.***

**Clarification of language in the standard auditor's report.** The concept release suggested these possible clarifications of the auditor's report:

- Reasonable assurance
- Auditor's responsibility for fraud
- Auditor's responsibility for financial statement disclosures
- Management's responsibility for the preparation of the financial statements
- Auditor's responsibility for information outside the financial statements
- Auditor independence

I endorse all of these proposed changes to the auditor's report. Investors should understand the concept of reasonable, not absolute, assurance and the role it plays in conduct and completion of an audit. At the same time, the auditor's opinion should inform investors that the auditor has a responsibility to determine that the financial statements are not materially misstated by either fraud or error. Furthermore, auditors have always applied audit procedures to financial statement disclosures, yet their opinion does not currently speak to disclosures. There is no reason to exclude the auditor's responsibility for disclosures from the auditor's report. Because the responsibility for the preparation actually resides with management, the auditor's report should make that clear, as well as defining the responsibility of the auditor for information outside of the financial statements. Finally, the current audit report barely speaks to the independence of the auditor. A stronger statement as to the auditor's independence would both be informative for investors and a reminder to auditors of their obligation to be independent of the audited firm.

***All of the proposed changes to the standard auditor's report are of a clarifying nature: they define more clearly the nature of an audit, an auditor's responsibilities to its investor clients, and the nature of management's responsibilities. Because they educate investors about the audit process and the fences around the different parties' responsibilities, they also provide incremental value to the communications between auditor and investors. I see no harm in incorporating them into the standard auditor's report.***

* * * * * * * * * * *

Those are my formal comments on the concept release. If I can provide any clarification or amplification, please do not hesitate to contact me. Best regards.

Sincerely,

Jack Ciesielski

Re: PCAOB Rulemaking Docket Matter No. 34

I am strongly opposed to these proposals. I believe the acceptance of these proposals would be expensive, useless to investors, and potentially damaging to client/auditor relations as we now understand them.

I believe that a major issue of our public security markets is the excessive expense incurred by being a public company. Over the last few years there has been a substantial expansion of the disclosure requirements of public companies and an increase in the cost of such disclosures, without a demonstrated value of the disclosure to the investing public.

The method used by the IAG to survey was to contact investors and their representatives as to information that could be requested. Not surprisingly, these individuals consistently asked for more information, although the information requested was not consistent. I have not seen a discussion as to whether any of the information is actually helpful to readers/users.

My article in the November 2007 issue of The CPA Journal, *Have We Created Financial Statement Disclosure Overload?*, discussed the huge increase in disclosure requirements, the equally huge increase of the size of annual reports and proxies, and the lack of evidence that anyone is actually using the information. It contained a plea to rationalize disclosures. Things have gotten worse.

I believe that before any new standard requiring additional disclosure is enacted, all of the following criteria should be met:

- The information is believed to be useful based on criteria other than someone would like it;
- The information is not available or reported elsewhere;

- The cost of preparing and reviewing the information must justify the requirement;
- The information is likely to be used by users of financial statements.

I do not believe that the suggested disclosures in the Concept Release meet these criteria. I will discuss the alternative suggestions from the Concept Release.

**Auditors Discussion & Analysis ("AD&A")**

The Concept Release states "The intent of an AD&A would be to provide the auditor with the ability to discuss in a narrative format his or her views regarding significant matters. " An alternative proposed approach is publication of the lead auditor's summary audit memorandum.

In evaluating these proposals, it is important to understand that documents written for an audit firm's internal use would be written entirely differently if their intended distribution was to the entire investment community. What if the lead partner's summary memorandum was to be included in AD&A? This document which may have taken originally an hour or two to produce, would require review by various levels first at the accounting firm, then by client management, and of course by the client's counsel, before it could be released to the public. A memorandum that was once useful would become a watered down document, committee produced, with a primary intent of not raising unwanted questions. Anyone suggesting that this document would not undergo such an evolution has not been in the loop of drafting a document for public distribution.

Much of the additional disclosure is already required in Management's Discussion and Analysis or elsewhere in a filing. Management's estimates, accounting policies and procedures, business risk factors are currently required to be disclosed. The rest is of questionable value. Information as to independence would invariably result in a statement that the auditor had followed all independence requirements. I believe that comments on difficult, contentious issues and close calls would be disclosed by the auditor by reference to the footnotes. Quantitative materiality would be disclosed by presentation of an amount. I do not believe that that information would be helpful to readers of financial statements.

Other suggestions for the AD&A include, but are not limited to, the following:

- Evaluation of the quality of the accounting principles used, as in are they "high quality" or "minimally acceptable"? The problem is a lack of definition of a high quality accounting principle, as opposed to those other, low quality ones. While the SEC has always said that it wants "high quality" accounting principles, I have never seen a definition. Would an auditor ever admit that its client was using one of those low quality accounting principles, whatever they are?
- There is a suggestion for a valuation as to whether the financial statements are "aggressive" or "conservative" on a 1 to 10 scale. Here again, the problem is one of definition. Is accelerated depreciation or LIFO, aggressive or conservative? Are high loss allowances aggressive or conservative? Hedge accounting? Is the use of current values aggressive or conservative? And, what about the use of IFRS?

- There is a request for a "sensitivity analysis" as to areas of significant judgment. Sensitivity analyses are useful, but are the province of management. Any used by management and included in a filing, are subject to auditor review as indicated above. The proposal appears to be a request for a separate, different analysis by auditors, which I believe would either be redundant or boilerplate.
- Disclosure of "unusual transactions". If such transactions occur and are material, they would be disclosed elsewhere in the filings. I doubt that there is a benefit to separate disclosure in AD&A

Among other suggested modifications to the standard audit report is one that would require the auditor to opine on whether, in addition to being in conformance with GAAP, the financial statements are, "true and fair". These code words imply that there should be two standards: GAAP and truth, with truth, like beauty, defined by the reader. For the last 75 years standard setters and the SEC have been working to write rules so that financial statements properly reflect underlying economic principles and are useful for readers. Believers in true and fair seem to claim that if auditors also had to say that the financial statements were "true and fair" all of the failings of GAAP would drop away. I do not expect that auditors will readily adopt the concept that they have to opine that the financial statements comply with an undefined standard.

**Required emphasis paragraphs in the auditors reports**

This alternative differs little from the suggestions made relating to the AD&A. Rather than a separate section, the auditor would add to its standard report paragraphs highlighting certain financial statement matters. All of the objections previously raised would apply to this proposal. The information that is suggested is generally required to be disclosed in the notes to the financial statements. It is unclear as to why financial statements would be improved by disclosure of such information in the auditor's report.

**Auditor's assurance on Management's Discussion and Analysis**

This suggestion is not new and was previously rejected by the SEC. Auditors are now required to read the entire filing, including the MD&A, and take action if it is believed that such information is either inconsistent with the financial statements or incorrect. My experience has been that auditors will challenge factual errors such as wrong numbers but will tend not to challenge management's judgments about why a trend or change has occurred. This proposal would require positive assurance. The SEC previously rejected this proposal as they believed that its adoption would limit the information presented, as auditors prefer opining on specific information and facts rather than on subjective judgments. For example, if management wished to state that the downward trend is a result of competition, auditors would appear to be required to challenge the response: are the client's projects approaching obsolescence; is the client not advertising enough or appropriately; is the market shrinking, etc. I believe that the result would be a less informative tabulation of statistics.

**Expansion of the standard auditor's report**

This issue has been around since our profession began. Seventy-five years ago the audit report was standardized so all of us use the same language. While great thought has gone into the exact words of the report, which have changed over the years, the basic concept of one-size-fits-all has continued. There are basically two approaches to what should be in a standard auditor's report:

- A concise, cogent description of the audit process and its weaknesses, auditor's and management's responsibilities, and the auditor's opinion on the financial statements , or
- A short document saying the auditor followed the rules and believes that the financial statements are in accordance with GAAP.

The proposals in the Concept Release suggest the following possible additions/changes:

- A definition of reasonable assurance
- Auditors responsibility for fraud
- Auditor's responsibility for financial statement disclosures
- Management's responsibility for the preparation of financial statements
- Auditors' responsibility for information outside of the financial statements
- Auditor's independence.

These are all educational suggestions for the readers of auditors' reports. And, education is good. The question is whether this is the place to educate readers and will they read the information. In the survey, 93% of respondents indicated they do not read audit reports in their entirety. I, of course, do not believe the result. Since the reports are all the same why would anyone read them, other than to scan for something difference or unusual? I believe that expanded opinions would also not be read. All the acceptance of the proposal would do is to drive up costs for paper and printing with no benefit.

I believe that each of the items would require two to three sentences. Not discussing the cost of drafting, to disclose in every report information that will not be read is not a productive enterprise. I would propose that the audit report be one sentence: "Based on our audit, which was performed in accordance with US auditing standards, in our opinion the financial statements on Pages __ to __ are presented in accordance with generally accepted accounting principles in the United States."

**Boilerplate issue**

The major problem with all of these disclosures is that they will quickly become boilerplate, carefully produced at great expense and providing no additional information to readers of financial statements. We have seen this with additional disclosures added over the years to financial statements and other areas of SEC filings. The Concept Release states that "these alternatives are focused primarily on enhancing communication to investors". I sincerely doubt that adoption of any of the proposals will have that effect. Public company annual financial and proxy statements now frequently run over 200 pages. The Concept Release proposes to add additional pages, substantially all of which will be repetitive information already presented or will quickly become boilerplate.

Another theory that runs through the Concept Release is that such disclosures will provide auditors "with the necessary leverage to effect appropriate change in the company's financial statement." I am not aware of any objective evidence that auditors do not already have such "leverage" or that additional disclosures will provide it. While the Concept Release looks forward to middle paragraphs or AD&A indicating positions different from those of management, I doubt it. I do not see auditing firms, after agreeing with management on the financial statements, differing with management as to the information discussed above.

Again, I am against all of the proposals in the Concept Release. I believe that we have more than enough disclosure, the bulk of which is not being read. The challenge is not more disclosure, but how do we make what we have useful to a reader.

Very truly yours,

Arthur J. Radin, CPA

Re: Rulemaking Docket Matter No. 34
Concept Release on Possible Revisions to PCAOB
Standards Related to Reports on Audited Financial Statements

Members of the Board:

The Retail Industry Leaders Association ("RILA") and its Financial Leaders Council ("FLC") are pleased to submit the following comments on the Board's *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* ("Concept Release"), issued by the Board on June 21, 2011. RILA is the trade association of the world's largest and most innovative retail companies. RILA members include more than 200 retailers, product manufacturers, and service suppliers, which together account for more than \$1.5 trillion in annual sales, millions of American jobs, and more than 100,000 stores, manufacturing facilities, and distribution centers domestically and abroad.

RILA and its FLC commend the Board for the significant effort that has preceded the issuance of the Concept Release. Most of our members are public companies and all of our members recognize that the efficient operation of our markets mandates that financial statements present fairly the financial position of the company as of a particular date and provide sufficient transparency so that investors and other users of financial statements can make informed investment or other decisions.

We believe that issuers and audit firms are in the best position to provide the Board with relevant information as to whether the proposed changes would likely increase the cost of a financial audit, increase the burden on issuers and the audit firms, and whether any additional costs and burden would be justified. In our view, the proposed changes would fundamentally change the existing audit framework and, as a result, greatly increase the scope, timing, and cost of financial audits and increase the potential liability of auditors, all without significant benefit.

In addition, many of the suggested changes implicate privilege and confidential or competitive information concerns that cannot be overcome.

While the Board's effort is commendable and this topic is of considerable importance, to the extent the comments set forth in the Concept Release raise issue with Generally Accepted Accounting Principles ("GAAP"), including the rules governing management's estimates and judgments, or the requirements of Regulations S-X and/or S-K promulgated by the Securities and Exchange Commission ("SEC"), attempting to address these issues through a wholesale revision of the audit framework and reports on audited financial statements is not the appropriate solution. The Financial Accounting Standards Board ("FASB") and the SEC have robust processes for making changes to GAAP and SEC rules, including a public comment and outreach process. To the extent there are issues with corporate communication of risk factors, business decisions, etc., the SEC is already equipped to deal with such shortcomings. To the extent there are bad actors, our legal system is fully equipped to deal with those who deserve punishment.

Several of the proposed clarifications to the auditor's report would not, however, raise the important concerns outlined above. If such changes would give investors and other users of the financial statements greater comfort, we believe they could be required without any negative impact.

Our specific comments follow:

1. *Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.*

   a. *Should the board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?*

   The Concept Release indicates that one of the primary rationales underlying such a project is the concern expressed by some to better understand the audit process and the auditor's report. The undertaking of a standard-setting initiative to address this basic educational concern would seem unnecessary. There already exists significant literature on this topic. Investors or other users of financial statements should already have a fulsome understanding of the auditor's role and various functions. However, to the extent they do not, they can avail themselves of the Board's Standards, all of which are publicly available. In addition, there are numerous other widely-available publications that address this concern. There also exist myriad educational programs and tutorials that focus on these areas, many of which are available free of charge.[1] As discussed in more detail below, while certain clarifications of the auditor's report would not be particularly

[1] For example, the Center for Audit Quality recently published its "In-Depth Guide to Public Company Auditing: The Financial Statement Audit," which provides a "plain English" explanation of the audit process and the auditor's report. This Guide is available free of charge on the Center for Audit Quality's website. See also http://www.investopedia.com/university/financialstatements/#axzz1XqGUV0SH for an example of on-line courses.

objectionable, we believe that any potential benefit that may result from wholesale changes to the auditor's reporting model would not outweigh the substantial costs of such a project.

Further, we do not believe that a standard-setting initiative would be appropriate at this time. As the Concept Release states, there is an ongoing and active international debate in this area that has gone on for decades. We would suggest deferral of any rulemaking until after the SEC has made a final determination as to whether or when to require SEC registrants to utilize International Financial Reporting Standards ("IFRS") rather than GAAP. Moreover, to the extent the use of IFRS is mandated, auditors, issuers, analysts, and investors will need time to learn and understand the implications of new financial accounting rules. Requiring significant changes now, in our view, would be premature and unnecessarily costly.

*b.* *In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?*

To the extent the concerns that have been expressed relate to a lack of understanding about the meaning of the auditor's report, several of the potential additional "clarifications" set forth in the Concept Release could be added to the current standard auditor's report. For example, an additional sentence defining the term "reasonable assurance" or an additional sentence to more fully describe the auditor's responsibility for financial statement disclosures or other information (*e.g.*, MD&A, risk disclosures, etc.) may be helpful. Similarly, having the auditor's report state expressly that management prepares the financial statements and is responsible for their fair presentation and that the auditor has complied with applicable independence requirements of the PCAOB and the SEC also could be helpful. See also further discussion in response to question 21, below.

*c.* *Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?*

Auditors already review information in documents containing the audited financial statements (*e.g.*, Form 10-K) and are required to consider whether such other information, or the way in which it is presented, is materially inconsistent with the financial statements or constitutes a material misstatement of fact. AU § 550.04-.06. Requiring auditors to provide express assurance on such non-financial statement matters would represent a fundamental change in the existing audit paradigm that would require development of a new and comprehensive audit framework. For example, there currently exists no framework for a comprehensive audit of MD&A. In our view, such a change would increase significantly the scope, cost, and time to complete an audit (potentially resulting in an increase in delayed filings) or, alternatively, discourage increased transparency and detail in certain corporate disclosures (*e.g.*, forward-looking information). Another factor which should not be ignored is the increased litigation risk to which the auditors would be subject. This further risk would inevitably lead to even greater audit costs to the company being audited to offset this risk. Increased audit costs will negatively impact shareholder value and increase consumer cost – all without any improvement in audit quality.

2. *The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."*

a. *Should the auditor's report retain the pass/fail model? If so, why?*

The phrasing of this question accepts the proposition that the current auditor's report is a pass/fail model. We disagree with this underlying premise. As the Concept Statement details, auditing standards allow for circumstances where the auditor can provide emphasis of certain matters, explanatory language, a qualification, or a disclaimer of the opinion. The apparent assertion by some that "the standard auditor's report does not provide the auditor with the necessary leverage to effect appropriate change in the company's financial statements"[2] does not take into consideration all of the reporting alternatives available to auditors under existing auditing standards. If the auditor does not believe that an unqualified opinion is appropriate, it should not, and we believe would not, be issued. This is significant "leverage," especially for public companies, because with out the auditor's opinion, filing with the SEC cannot occur.

The comments reflected in the Concept Statement also focus on concerns that may exist with respect to matters that are "not necessarily material to the financial statements."[3] If the matter is not material to the financial statements then it should not be a significant focus of the audit in general or of the auditor's report in particular. Materiality is an essential underpinning of our entire financial reporting system, as evidenced by the FASB's standard language at the end of each accounting pronouncement that "[t]he provisions of this Statement need not be applied to immaterial items." Education of the investor and user community would appear to be the more appropriate solution to the concerns that have apparently been expressed. A project to consider potentially wholesale changes to the auditor's reporting model, when the underlying issue appears to be one of education would, in our view, not be an appropriate use of time or resources.

b. *If not, why not, and what changes are needed?*

N/A

c. *If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.*

2 Concept Statement at 9.
3 *Id.*

We believe that the current form of the auditor's report is appropriate and strikes the appropriate balance of all competing interests. We would not, however, object to some of the additional "clarifications" set forth in the Concept Release. See discussion in response to question 21, below.

3. *Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation why.*

We question the premise of whether significant additional information about the company's financial statements is necessary, given the substantial (and often unread) amount information already contained therein.[4] In addition, today's MD&A contains considerable additional information regarding management's judgments, estimates, and expectations. Quarterly and additional SEC filings provide even more information, as do earnings calls and other company announcements. To the extent it is believed that additional information may be useful, then such information should be provided by management and, where appropriate, the audit committee. Auditors would not be the appropriate party to provide additional information regarding the company. They are not in the best position to evaluate the business and strategic risks faced by the companies they audit (including the attendant legal rules and risks) or to effectively communicate these items to the investing community.

4. *Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?*

AS 5 requires that the opinion specify whether the company maintained, in all material respects, effective internal control over financial reporting as so the specified date. We believe this is appropriate and that changes to the auditor's report on internal control over financial reporting are not necessary.

5. *Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?*

   a. *If you support an AD&A as an alternative, provide an explanation as to why.*

N/A

---

[4] Even the SEC emphasizes the significant information contained therein. *See, e.g., Beginners Guide to Financial Statements*, found at www.sec.gov/investor/pubs/begfinstmtguide.htm (which notes that "A horse called 'Read The Footnotes' ran in the 2004 Kentucky Derby. He finished seventh, but if he had won, it would have been a victory for financial literacy.").

*b.* *Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?*

N/A

*c.* *Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?*

N/A

*d.* *If you do not support an AD&A as an alternative, explain why.*

The requirement to include an AD&A would substantially increase the scope of an audit and the time necessary to complete it. It would also require auditors to perform a function substantially different from those they currently perform. When many issuers are required to file with the SEC within 60 days of year end, and audit firms are already challenged in meeting this requirement, such a vast increase in scope would not be workable. Moreover, the requirement of an AD&A would expose auditors to additional potential liability if, for example, the auditors discussed certain items in an AD&A but failed to discuss others that resulted in an investor loss or if its discussion of an item were determined to be incomplete. All of this would necessarily increase the cost of the financial audit, which, in turn, would negatively impact shareholders and, ultimately, consumers and the economy as a whole.

While auditors perform a very important function – the assurance function – the financial statements are and should remain the responsibility of management. In our view, a required AD&A would blur the line of responsibility between the company's audit committee and the auditor.[5]

If the real concern is that GAAP allows companies too much flexibility, then the appropriate forum to raise that concern is with the FASB (and its Emerging Issues Task Force) or International Accounting Standards Board ("IASB"). To the extent disclosures are deemed insufficient, the SEC is the appropriate body to address those concerns. We note that there currently exists a joint project of the IASB and FASB on Financial Statement Presentation. To the extent users of financial statements have concerns about financial statement presentation, participation in this important project would be the appropriate means to voice any concerns and to seek redress.

*e.* *Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?*

We believe that the auditor's report is the appropriate place and manner for the auditors to express their opinion on the financial statements.

---

[5] An issue not addressed in the proposal is what recourse would be available to the company if management disagreed with some portion of the auditor's discussion or believed it was incorrect.

6. *What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?*

   N/A

7. *What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, including "close calls")?*

   N/A

8. *Should a standard format be required for an AD&A? Why or why not?*

   N/A

9. *Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?*

   Because we do not believe that inclusion of an AD&A is appropriate in general, we disagree that it would be appropriate for auditors to step even further outsider their current functions and to comment on business risk, strategic risk, or operational risk. Discussing the nature and extent of such potential risks is more appropriately left to management, with oversight by the audit committee and the SEC. Moreover, management's discussion also is influenced by information that cannot be shared with the auditors because of privilege concerns. For this additional important reason, we do not believe that inclusion of an AD&A is appropriate.

   While the Concept Release notes that the Board, in conjunction with the SEC, would have to develop additional direction to auditors in identifying and reporting on such items, up front guidance alone would not be sufficient. Regulatory oversight by the SEC of the actual reporting also would be necessary. In our view, the increased cost and time commitment for the company, auditors, and the regulators, as well as the additional risk that would be placed on the auditors would greatly outweigh any perceived benefit from auditors expressing views on areas outside of their expertise. See also discussion in response to questions 11 and 12, below.

10. *How can boilerplate language be avoided in an AD&A while providing consistency among such reports?*

We do not believe that boilerplate language can be avoided.[6] If investors do not understand basic concepts like the assurance function and the audit process in general, it is unlikely that they would understand the nuances that would be necessary to understand an AD&A. For example, disclosure of other accounting methods that could have been, but were not, used could lead to confusion as to the propriety of the method that was used. If the method of accounting used is GAAP, it should not make any difference whether there are other, alternative GAAP-compliant methods that were not used.

11. *What are the potential benefits and shortcomings of implementing an AD&A?*

See discussion above. In addition, inclusion of an AD&A would require the creation of a detailed framework that does not currently exist. For example, there would have to be a mechanism to address which information can and cannot be disclosed in an AD&A. Disclosure in an AD&A of highly confidential competitive or proprietary information would be inappropriate and economically damaging to the company.

Further, to the extent there is concern that GAAP is too flexible, or financial statement presentation is ineffective, then the appropriate course is for those concerns to be expressed to FASB and/or the IASB and to participate in their robust deliberations. If the reporting under Regulation S-K is viewed as insufficient, the appropriate body to address such concerns is the SEC. We do not see any potential benefits. There would, however, be substantial additional costs, risks, and likely confusion that would result from such an expansion of the auditors' responsibilities.

12. *What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?*

If the AD&A were not subject to any regulatory review, the potential for inconsistent or competing information would be high. A lack of regulatory review, however, would make no sense given that the same types of disclosures when made by management are subject to the SEC's rigorous oversight. Further, as discussed above, if the auditor presents information that the SEC would deem appropriate for disclosure, it would beg the question of why such information was not presented by management. To the extent the SEC deems the information presented by management to be both appropriate and sufficient, there would be no need for any additional information to be presented by the auditor. In short, we do not believe that the concept of an AD&A is appropriate.

13. *Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?*

We do not believe that the emphasis paragraphs would be relevant or more useful in making investment decisions. The necessary detail should be in the footnotes to the

[6] If the AD&A language were not boilerplate, the quality of AD&A between companies would not be consistent and could vary considerably.

financial statements or in MD&A. Anything else added by the auditor would be superfluous. In addition, there is also a chance, and perhaps likelihood, that emphasis paragraphs in an auditor's report may make it *less* likely that the information in MD&A and the footnotes will be considered in the investment decision-making process.

14. *Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?*

    No. See response to question 13, above. In addition, given that the concerns that underlie the Concept Release apparently result in large part from a lack of understanding of financial statements and the financial auditing process, the suggestion to discuss the specific audit procedures used would likely be meaningless to those without a fulsome understanding of the audit process.[7]

15. *What specific information should be required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?*

    As discussed above, we do not believe that expanded emphasis paragraphs are appropriate.

16. *What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?*

    As discussed above, we do not believe that expanded emphasis paragraphs are appropriate.

17. *How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?*

    Any additional emphasis paragraphs by the auditors, just like any AD&A, will inevitably lead to more litigation and challenges. This, in turn, will lead to standardization of the language used. As a result, we believe that boilerplate language is inevitable.

18. *What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?*

    We do not see any benefits from the use of additional emphasis paragraphs. See our prior responses for a summary of some of the more significant shortcomings of such a

---

[7] For example, if a layperson wanted to know whether an operation was successful, a surgeon's explanation of the specific steps, actions, and procedures taken and the medical instruments used during the operation would not answer the question. While that information would be relevant to a medical review board in determining the quality of the operation, it would not provide meaningful information to a layperson. Similarly, while the detailed audit steps performed would be relevant to the Board's inspection of a public accounting firm that regularly performs audits, we do not believe that the information would be relevant or useful to the investment decision-making process.

proposal. We also note that a comprehensive framework would have to be developed if any such proposal were to be implemented.

*19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?*

No. The expertise of the corporate CEO and other corporate managers, in addition to the expertise of the finance, tax, legal, HR, and other corporate departments all contribute to the non-financial statement information. Having auditors opine on such matters will not lead to better or more transparent information. However, to the extent there is a belief that specific information currently contained in, for example, MD&A should be moved into the financial statements, the appropriate approach would be for the SEC to expand the scope of Regulation S-X (and reduce the scope of Regulation S-K). As discussed above, to the extent there is a perceived shortcoming in GAAP, the appropriate course of action to address any such issue is through FASB (including the EITF), and the IASB.

*a. If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.*

N/A

*b. On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.*

See discussion above and response to g, below.

*c. What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?*

In our view, this would be inappropriate.

*d. If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?*

As discussed above, only if the SEC were to conclude that certain specific items should be moved from Regulation S-K to Regulation S-X, and therefore included in the financial statements, would any such assurance be appropriate. If this were done, the auditor's report would apply to that new information just as it does to the rest of the financial statements.

e. *Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?*

We do not believe that any substantial changes are likely. The Form 10-K must already be signed by the company's principal officer(s), its principal financial officer(s), its controller or principal accounting officer, and by at least the majority of the board of directors or persons performing similar functions. In addition, the auditors already review the MD&A for material consistency with the financial statements that they are responsible for auditing.

f. *Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?*

See response to d, above.

g. *If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why*

See discussion above. Moreover, as the Concept Release notes, providing assurance on matters outside the financial statements would "increase the scope of the auditor's responsibilities." This increase in scope will necessarily increase the risk faced by the auditor. The increased scope and increased risk will therefore necessarily increase the cost of the audit (both in terms of dollars and time) resulting in, at most, minimal related benefit, especially given the already tight filing deadlines to which issuers are subject. In addition, we believe it would be inappropriate for an auditor to provide assurance on earnings releases or on other significant management judgments, especially given that such judgments may take into account privileged information.

20. *What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?*

See responses to question 19, and its subparts.

21. *The concept release presents suggestions on how to clarify the auditor's report in the following areas:*

- *Reasonable assurance*
- *Auditor's responsibility for fraud*
- *Auditor's responsibility for financial statement disclosures*
- *Management's responsibility for the preparation of the financial statements*
- *Auditor's responsibility for information outside the financial statements*

- *Auditor independence*

*a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?*

As discussed above, we believe that many of the issues raised in the Concept Release are the result of a basic lack of understanding by some of the assurance function and of the mechanics of how and why an audit is conducted. Greatly expanding the role of the auditor will not correct this problem. That being said, certain, limited clarifications of the auditor's report that would not increase the scope and cost of the audit process may be of some value.

Several of the suggested additions to the standard auditor's report may be useful. Specifically, providing a definition of the term "reasonable assurance" could be helpful, although there still could be some uncertainty over the definition of the term "high level." We also agree that clarification that the financial statements under Regulation S-X include all notes to the financial statements and all related schedules could be helpful as it may cause the investing public to read more thoroughly this important information. Clarification of the auditor's role with respect to non-financial information also may be helpful. Finally, while we believe it is implicit, requiring the auditor to state that it has a responsibility to be independent of the company and has complied with applicable independence requirements of the Board and SEC is not objectionable.

On the other hand, we do not believe that any discussion regarding fraud would be appropriate. Fraudulent financial statements are not common. Having the auditor's report mention fraud could lead some to believe that fraud exists where it does not, or that the auditor's report is somehow being qualified when it is in fact not. Finally, we do not think it is necessary for the auditor's report to state specifically that management prepares the financial statements and has responsibility for the fair presentation of the financial statements. Such language would simply restate what is already contained in the standard auditor's report – that the financial statements are management's responsibility.

*b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.*

See response to a, above.

*c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?*

None.

d. *What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?*

To the extent the changes were only clarifications, there should be no change to the scope of the audit or the auditor's responsibilities.

22. *What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?*

See discussion above.

23. *This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?*

We believe that some of the proposed clarifications could be of some marginal benefit. Also, to the extent there is a strong belief that certain portions of, for example, the MD&A, should be subject to the auditor's opinion, the appropriate body to make that determination would be the SEC through its rule-making process. Moving those discussions into the footnotes to the financial statements also would appear to be the appropriate action. In that way, such discussions would be subject to the auditor's opinion.

24. *Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?*

For all of the reasons set forth above, we do not believe so.

25. *What alternatives not mentioned in this concept release should the Board consider?*

We do not believe that there is a strong reason for the Board to take action in this area. In our view, certain of the audit report clarifications suggested, while not objectionable, are of marginal benefit. Virtually all of the other suggestions would increase the cost of the audit without the corresponding and meaningful benefit of improved information. Further, given that the SEC has not yet determined whether or when IFRS will be mandated, any significant regulatory action would appear to be premature and needlessly increase costs.

26. *Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?*

N/A

27. *Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?*

See discussion regarding fraud discussion above related to the perception of a qualified opinion. We believe that expansion of the auditors' role and scope of an audit, and corresponding increase in length and detail of the auditor's report, is likely to cause financial statement users to focus even more on the report rather than on the financial statements and footnotes themselves. Further discussion of certain items, such as significant risks, etc. could be perceived as a piecemeal opinion.

28. *Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?*

To the extent any changes are perceived as being needed, the some of the clarifications to the auditor's report, as discussed above, would be appropriate.

29. *What effect would the various alternatives have on audit quality? What is the basis for your view?*

We do not believe that any of the suggestions will improve audit quality. The Board's oversight of the profession is the driving factor behind the improved quality of audits.

30. *Should the changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such exclusion.*

We do not believe that distinctions should be drawn. Any changes should apply to all entities.

31. *This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.*

    a. *Are any of these considerations more important than others? If so, which ones and why?*

Increased potential liability will undoubtedly impact audit effort and cost. Confidentiality also is a primary consideration. Management's decisions and judgments are based on many factors, including consideration of confidential, competitive, and sometimes privileged information. Some of the suggested changes could not be implemented without increasing the risk and harm to the company if competitive, privileged, or legally protecting information were disclosed. Privilege would be waived if privileged information were disclosed to the auditors or third parties and legally protected information could lose that protection if disclosed to the auditors and would lose that protection if disclosed to third parties. The Concept Release does not appear to have considered these very important issues. In addition, to the extent the distinction between the role of the auditor and the role of the audit committee is eroded, as we believe would result if many of the proposals in the Concept Release were implemented, it could be viewed as decreasing auditor independence.

*b.* *If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?*

We do not believe that any perceived benefits would outweigh additional cost. See discussion above.

*c.* *Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?*

See discussion in a, above.

*d.* *What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?*

With respect to the legal privilege issues, those concerns could not be addressed by the PCAOB.

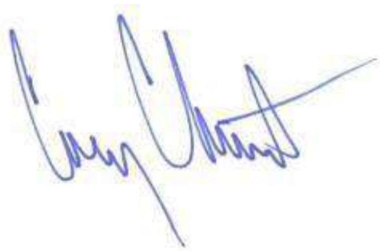
*32.* *The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?*

We believe there already exists a strong and appropriate system of checks and balances: the financial statements are the responsibility of management; management is overseen by the audit committee; the SEC has regulatory authority over registrants; FASB and the SEC set the accounting standards that must be satisfied, and the PCAOB has regulatory authority over the auditors and reviews the quality of their audits.

In conclusion, we do not believe that the proposals in the Concept Release would result in an improvement of audit quality or transparency and many of the suggestions implicate privilege and confidential or competitive information concerns. Comprehensive changes to the existing audit framework would be required and the scope, timing, and cost of financial audits would increase substantially. In our view, many concerns underlying the proposals in the Concept Release would be more appropriately addressed by modifications to GAAP and/or Regulations

S-X and S-K, rather than through a major change to the existing financial audit paradigm. We thank you for the opportunity to comment on this proposal.

Sincerely,



Casey Chroust

**RE: PCAOB Rulemaking Docket Matter No. 34, Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements**

Members of the Board:

Thank you for the opportunity to provide comments to the Board with respect to your recent Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements (the concept release). As the Controller of a public company who works with our auditors on a regular basis, I read the concept release with great interest.

Rockwell Collins (the Company) is a pioneer in the development and deployment of innovative communication and aviation electronic solutions for both commercial and government applications. Our expertise in flight deck avionics, cabin electronics, mission communications, information management, and simulation and training is delivered by 20,000 employees and a global service and support network that crosses 27 countries.

Our Company recognizes the important role that audits play in providing assurance to users of financial statements and we have a long-standing and productive relationship with our external audit firm, Deloitte. Further, the Company is committed to providing relevant, accurate and timely disclosures to investors in the most cost effective and transparent manner possible.

The Company has concerns regarding the ideas presented in the concept release, which are discussed below.

**The proposed Auditor's Discussion and Analysis (AD&A) will confuse the auditor client relationship, increase costs and delay the financial reporting process**

Role Confusion

A primary strength of today's "pass or fail" audit reporting model is that it avoids role confusion; management is responsible for the preparation of financial statements and auditors are responsible for attesting to their conformity with Generally Accepted Accounting Principles (GAAP). The AD&A as contemplated in the concept release may unduly place shared accountability for some elements of the financial statements on the auditor.

The relationship between management and auditor is often characterized by healthy and robust debate. Financial reporting, by its very nature, often requires management to evaluate a wide variety of complex (and sometimes contradictory) accounting rules in order to determine the most appropriate accounting model for a given transaction. At times, a variety of accounting models may be plausible for a given set of facts and circumstances. In situations such as this, the “best” accounting model often becomes evident after an exhaustive and iterative research process that at times, appropriately includes collaboration with the audit team. Working closely with the auditors on a “real time” basis, it is entirely appropriate for management to research and evaluate the various accounting models prior to selecting the accounting treatment that is most appropriate and reflective of the substance of the transaction. In order for this type of analysis to be effective, management teams and audit teams must be able to discuss issues in a frank and open manner. This ongoing dialogue on important issues ensures that management and the auditors build an effective understanding of the complex and often confusing accounting and reporting requirements. In addition, this dialogue between management and the auditor ultimately results in higher quality financial statements that fairly present the financial condition of the issuer.

The proposed AD&A will inevitably complicate the relationship between management and the auditor, turning an often collaborative and healthy relationship where open dialogue is the norm into a potentially combative relationship more frequently. The AD&A is also likely to create a culture of confusion and indecisiveness as management may feel the need to “run every decision past the auditor.” The auditor, in turn, may feel the need to “run every decision” past the engagement quality review partner or various other individuals within the audit firm. In this environment, the auditors run the risk of becoming a stand-in for management as management may be pressured to minimize even the slightest difference in opinion with the auditor; to that end, management may be motivated to defer to the judgment of the auditor in a variety of routine areas. The auditor, fearing potential litigation or the constant threat of being “second guessed” by regulators, may be unreasonably biased towards overly conservative estimates.

There are several important problems with this outcome. First, it assumes that the judgment of the auditor is better than that of management. Lost in the discussion of management’s purportedly biased estimates is the fact that auditors may be biased toward the most conservative of possible estimates in order to manage their potential liability and mitigate the possibility of being "second guessed" by regulators. Financial statements that are overly conservative run the risk of not being representative of results and being a disservice to shareowners. In addition to the bias problem, the industry knowledge and experience of management far outweighs that of the auditor in most circumstances. Further, it is important to recognize that any information possessed by the auditor is by definition a mere subset of the "complete picture" of information possessed by management. Finally, in situations where management is motivated to simply defer to the judgment or estimate of the auditor, it creates the awkward situation of the auditor becoming the source of financial statement information. Put simply, the Board's concept of an AD&A undermines the fact that financial statements are management's responsibility.

Delays in Financial Statement Issuance and Increased Audit Fees

The concept release and feedback from investor representatives at the September 15, 2011 PCAOB Roundtable on Auditor's Reporting Model (the roundtable) imply that the AD&A, if issued as proposed, should be a highly customized report reflecting the specific risks facing the issuer and judgments of the auditor in light of those risks. If implemented, reporting of this nature will dramatically increase the cost of the audit and decrease the timeliness of the financial statements.

The consistency of today's audit report across public accounting firms is not an accident; consistency in format is an outcome of the regulatory and legal environment in which financial statements are prepared and issued to the public. A custom report specific to each issuer runs in stark contrast to this environment.

Ignoring the legal and regulatory issues, a report of this nature suitable for public issuance is certain to take hundreds of hours to prepare, depending on the size and complexity of the issuer. This time will inevitably result in significant delays to the issuance of the financial statements when compared to current timelines. Further delays in the issuance of audited financial statements runs in direct conflict with the goal of timely financial information as described in Statement of Financial Accounting Concepts No. 8, *Conceptual Framework for Financial Reporting*. Further, the audit partner's attention to this reporting task will inevitably detract from the traditional audit tasks performed by the partner, potentially resulting in decreased audit quality.

The draft AD&A prepared by the engagement partner will inevitably be reviewed and edited by the engagement quality review partner, national office and the firm's legal department resulting in additional delays. Further, the resources in question are the most expensive resources of the firm which will lead to a dramatic increase in engagement cost. Finally, management teams at the issuer will want to review the AD&A and this too will result in additional review cycles that slow down financial reporting and drain critical management resources. Drafts of Management's Discussion and Analysis (MD&A) will likely impact the AD&A and vice versa, causing additional delays and use of resources.

The audit firms will obviously seek to recoup the increased costs in the form of higher audit fees. A highly customized AD&A may also expose the firm to substantially increased liability to investors. The fee increases likely to be sought by the audit firms will compensate them not only for increased engagement costs, but for increased liability as well.

In summary, we believe that the increased audit fees and drain on management resources will not dramatically improve the information that is currently available to investors. The current state reporting model already requires issuers to evaluate and disclose their "Critical Accounting Policies" within the MD&A section of the financial statements, with similar disclosures typically found within the financial statement footnotes. Many of the issues raised by the PCAOB in its concept release could theoretically be addressed in a far simpler manner by revising some of the currently required disclosure areas as needed. If the Board feels that the current GAAP reporting model fails to accomplish key goals, then GAAP should be amended. If the Board feels additional information needs to be reported that is not currently contemplated in the financial statements by GAAP or SEC Regulations S-K / S-X, then we suggest the Board should develop proposals on how to improve those standards. In any case, financial statements are the responsibility of management, not auditors. Proposals to use the auditor's report or a forum like "AD&A" to fix any perceived short-comings in the current state reporting model are misguided.

**Required and Expanded Use of Emphasis Paragraphs in Auditor Reports**

<u>Lack of Consistency and Comparability</u>

Another strength of today's pass or fail audit reporting model is that it is consistent and easily comparable by investors; the introduction of mandatory emphasis paragraphs will drastically reduce comparability of audit reports across issuers. The concerns expressed here apply to the AD&A section as well.

Investors are likely to interpret the presence of each emphasis paragraph as a cause for concern. This concern could result in lower share prices if investors are unable to quickly reconcile their concern by fully understanding the issue. Given the complexity of some issues likely to be discussed in emphasis paragraphs, some investors may be unwilling or unable to spend the time necessary to fully reconcile the issue.

Given this outcome, the judgment of audit firm partners responsible for drafting the required emphasis paragraphs could have the unintended consequence of causing a direct impact on the share price of issuers. Given the same facts, circumstances and risk profile, some partners will exercise their judgment to include fewer emphasis paragraphs in the audit report, whereas other partners will likely include more emphasis paragraphs. This variability among auditors will be confusing to investors and will create unpredictable and inconsistent outcomes in situations with similar facts, circumstances and risks.

Audit firms are very likely to recognize this concern and will work to bring consistency across the emphasis paragraphs utilized across issuers. This effort may mitigate the concern discussed here to some degree, but will likely result in boilerplate reports. The Board will endeavor to draft specific rules governing when emphasis paragraphs must be presented; the need for detailed PCAOB guidance in this area was discussed at great length during the roundtable. Even if the PCAOB is able to provide exhaustive guidance to auditors regarding where emphasis paragraphs are required, subjectivity and significant judgment on the part of audit partners will inevitably be required in selecting the issues for inclusion in the audit report. Ultimately, there will be second guessing related to “what needs to be emphasized” which most certainly will result in confusion and inconsistency, and inappropriately imply that investors need not review the financial statements and accompanying footnotes in their entirety.

**Auditor Assurance on Other Information Outside the Financial Statements**

Forward Looking Data

In today’s audit reporting model, auditors are primarily responsible for testing and providing assurance on historical financial statements. While forward looking estimates are inescapably part of developing certain account balances, such as pension liabilities and impairment reviews, these situations are relatively rare and are generally limited to financial forecasts.

Audit assurance on MD&A and earnings releases as contemplated in the concept release would drastically increase the number and breadth of forward looking estimates under review by auditors. The nature of forward looking information contained in MD&A and earnings releases is based on a wide range of both financial and non-financial forecasts. This information is typically industry specific and outside the scope of the auditor’s current work. The auditor’s specialized training and experience, while critical to their role, is not as well suited to providing assurance on industry specific, non-financial forecasts. Given this training and experience gap, the cost of an audit opinion on forward looking data seems to outweigh the relatively little incremental value to investors.

Contemplated Enhancements are Already Substantially Performed

To the extent that historical information is included in MD&A, auditors are already required to review that data to ensure that it is not inconsistent with the historical data presented in the financial statements and notes. In our Company's experience, this process extends to earnings releases as well. So, with the exception of the forward looking data discussed above, auditors are, to some extent, completing much of the work contemplated by the exposure draft.

A substantial overlap already exists between the information required for presentation in the notes to the financial statements and in MD&A. To the extent that unique MD&A disclosures exist on which investors would like audit assurance, the SEC should explore whether to direct the FASB to incorporate those disclosure requirements into GAAP thereby ensuring the desired audit coverage.

**Clarification of the Standard Auditor's Report**

The clarifications of the standard auditor's report identified in the concept release are relatively modest in nature, will not result in enhancements to current audit procedures and will not drastically improve the understanding of most financial statement users. The vast majority of investors willing to review issuer financial statements have a relatively strong understanding of the language identified for enhancement in the concept release.

As suggested by other responders, the additional information to be conveyed by the contemplated enhancements is freely available today from other authoritative public sources. We suggest that it would be far more cost effective for the PCAOB to develop a resource page for investors conveying the additional information contemplated in the concept release. The audit report of every issuer could be enhanced with a common sentence directing the reader to the resource page on the PCAOB web site.

This resource page could include links to more detailed information for interested readers and could quickly and cost effectively be enhanced to meet the new information requirements without the time and expense associated with the rulemaking process.

**An Alternative**

We support the alternative approach suggested by others in comment letters and during the roundtable, which is to enhance management disclosures to address the reasonable requests for additional information from the investor community. We also support calls to simplify disclosure requirements where possible to avoid overly complex information that is not meaningful to financial statement users.

The FASB and SEC are empowered to respond aggressively to investor calls for improved information through additional rulemaking. Further, the SEC comment letter process can specifically address situations where issuers are not adhering to current disclosure requirements. The inspection program of the PCAOB also plays an important role in ensuring compliance with regulatory requirements by issuers and auditors alike. To the extent that concerns exist regarding ineffective disclosure, the SEC and PCAOB should respond through established review mechanisms to improve the information available to investors. This pointed approach will be far more cost effective than what is proposed in the concept release.

Again, thank you for the opportunity to provide comments on these matters.

Sincerely,

/s/ Marsha A. Schulte

**Re: Request for Comment: Concept Release on Possible Revisions to PCAOB Standards Related to Reports in Audited Financial Statements and Related Amendments to PCAOB Standards, PCAOB Rulemaking Docket Matter No. 34**

Dear Office of the Secretary:

Rosen Seymour Shapss Martin & Company LLP ("RSSM," "We" or the "Firm") is a registered public accounting firm located in New York City. RSSM serves smaller reporting companies and non-accelerated filers. We appreciate the opportunity to respond to the Concept Release. Some general thoughts about the Concept Release and our comments on each of the four alternatives follow.

We do not believe that significant changes should be made to the auditor's report to assist investors in their investment decisions. An audit of the financial statements provides assurance as to the fair presentation of financial statements in accordance with a particular accounting framework. We believe, investment decisions are based on information related to the company being considered for an investment. While objective analytics may be performed, investment decisions are generally subjective. The investor generally decides on the extent to which he or she relies on objective analyses of the amounts presented in a company's financial statements and elsewhere, the extent of reliance placed on financial statement disclosures, and the extent of reliance placed on other available information about the prospective investment.

As stated in the Release, an audit of financial statements has long been recognized as a valuable process. Since the beginning of the twentieth century some form of assurance service has been provided by public accountants. Over time, both businessmen and public accountants have come to realize that assurance with respect to financial statements must be provided in relation to some form of standard or standards; hence the development of accounting standards. Assurance with respect to financial statements progressed from the 1902 "certification" that the financial statements were "correctly prepared from its books and records" to the present form of assurance which attests to whether a company's financial statements present financial position, results of operations, and cash flows fairly as that term is viewed under some framework of standards. Thus, historically, and currently, the purpose of the audit has been limited to being an attestation relating to the financial statements and the standards under which they have been prepared. The accounting principles underlying the financial statements facilitate the understanding of them:

757 THIRD AVENUE, NEW YORK, NY 10017-2049 ❖ TEL. (212) 303-1800 ❖ FAX (212) 755-5600 ❖ www.rssmcpa.com POLARIS INTERNATIONAL
*Member of the Center for Audit Quality, an Affiliate of the American Institute of Certified Public Accountants ("AICPA")*
*Member of the AICPA Employee Benefit Plan Audit Quality Center*

the auditing standards simply provide assurance that the financial statements have been prepared using the stated accounting principles (e.g., GAAP or IFRS, etc.).

Generally accepted accounting principles ("GAAP") have been developed over the years, to provide investors with a wealth of information for use in making investment and other decisions and we believe that significant changes to the auditor's reporting model could or would dilute the preeminence of GAAP as the basis for assessing financial statements. Financial statements prepared in accordance with GAAP provide investors with an abundance of information about the preparation of financial statements which includes information about how the elements of the financial statements are derived. For example, disclosures with respect to the fair values of financial instruments include information about how the fair values are determined. Likewise, disclosures about share-based compensation include information about how the amounts of these expenses are computed. Therefore, while we concur that an audit of financial statements has value, the value does not relate to providing information about the financial statements. Information about the financial statements is provided by the financial statements themselves, including the related disclosures as required by GAAP. The value of an audit relates to the support it provides about the relevance and representational faithfulness[(1)] of the financial statements.

Because we believe that GAAP provides the best means for communicating information about a company's financial position, results of operations, and cash flows, we believe the current pass/fail model is appropriate. Auditors are expected to render their opinion with respect to fair presentation. In our opinion, the following should be considered:

- An opinion is a subjective judgment which, by its nature is singular. One can have an opinion on this matter or that matter; but one cannot have multiple opinions on the same item or matter of interest. Thus, an opinion is a yes or no proposition. Of course there may be areas of uncertainty to be considered in forming an opinion, but the opinion is not a definitive statement. So uncertainties affect the formation of an opinion but they are not part of the opinion; consequently the financial statement presentation is considered either fair or not fair under the applicable set of standards.
- Under present auditing standards, an auditor may add a paragraph emphasizing a matter that was considered in forming the opinion; however, the matter being emphasized is only one of many matters considered by an auditor in forming his or her opinion. Since the auditor's opinion is the result of his subjective judgment based on many factors, there is a danger that an emphasis on any particular matter may mislead or confuse the user of the financial statements.

To summarize the preceding remarks, RSSM believes that the role of an audit of financial statements should be limited to the objective stated in AU§110, *Responsibilities and Functions of the Independent Auditor*. That is, the expression of an opinion on the fairness of the financial statements presented by management.

The Concept Release observes that "The auditor's report is the primary means by which the auditor communicates to investors and other users of financial statements information regarding his or her audits of financial statements." We think that the auditor's report communicates information regarding the results of the audit as it relates to the financial statements, not about the financial statements. The Board may wish to clarify this understanding. We believe the scope paragraph explains the nature of what was done to enable the auditor to express his or her opinion.

The Concept Release also states "Some investors indicated that if they had a better understanding about the audit and how the audit was conducted relative to a particular company, then they would have a better perspective regarding the risks of material misstatement in a company's financial statements." We believe this desire for better understanding about the audit is a request for information about unusual or complex transactions and potentially adverse situations encountered by the auditor during the engagement, and how such matters were resolved. Because the standard audit report does not disclose these and other matters, we understand the Board's decision to consider improvements to the auditors reporting model recommended by SAG, IAG and ACAP. However, after considering the information and viewpoints received from the comments to this Release, if the Board decides to pursue the notion of changing the auditor's report, we believe that more in-depth analysis should be made. While the PCAOB Staff (the "Staff") has conducted outreach activities, the degree to which those activities represent the attitudes of the population of users, preparers, and auditors of financial statements needs to be confirmed.

In considering the potential alternatives for changes to the auditor's report, we were mindful of the fact that the auditor's report should not be the original source of information or disclosure about the entity; that should remain the responsibility of the management of the entity. Accordingly, we offer the following comments regarding the proposed alternatives.

**A. Auditor's Discussion and Analysis ("ADA")**

We believe that having a supplemental narrative in the form of an ADA is not a good idea. In our view, such a supplemental report could confuse investors and shift their focus to the matters discussed in the ADA and away from the financial statements as a whole. As a result, we do not believe an ADA would facilitate an understanding of the auditor's opinion because it could bring about the loss of an investors primary perspective toward the financial statements as a whole.

Specifically, we do not believe that a discussion about the auditor's views with respect to estimates and judgments affecting the financial statements would be beneficial. The auditor's basic views with respect to such estimates and judgments are inherently part of the auditor's opinion on the financial statements as a whole. Any supplemental views that are either favorable or unfavorable could cause undue optimism or pessimism on the part of investors.

**B. Required and Expanded Use of Emphasis Paragraphs**

This alternative seems to be a shorter and less extensive version of an ADA that would be included in the auditor's opinion instead of as a supplemental narrative. Therefore, we do not believe that it's a good idea to expand the use of the emphasis paragraph to address matters of estimates and judgments affecting the financial statements. In other words, we do not believe that mandating the use of emphasis paragraphs in audit reports and to highlight the matters deemed to be most significant in the financial statements and to identify where these matters are disclosed in the financial statements would be of much benefit. However, emphasis paragraphs can amount to condensed footnotes and undermine the effectiveness of disclosures required by generally accepted accounting principles.

**C. Auditor Assurance on Other Information Outside the Financial Statements**

As pointed out in the Release[2]: "Providing assurance on information outside the financial statements would increase the scope of the auditor's responsibilities, require the development of new auditing standards, and might result in projects separate from the auditor's reporting model project." We fully agree with your statement.

The substantial increase in the cost of an audit should be carefully weighed against the added benefits that investors might receive. As the Board knows, Regulation S-K contains fairly detailed requirements about the content of the MD&A and much of the information includes management's subjective judgments and analysis about causes behind changes in operations and about the future. The Board should consider adding this subject matter to the requirement for discussion by management in MD&As. The reliability of this type of information, no matter how carefully it is prepared, is questionable due to its nature. Moreover, the cost of auditing it may well outweigh the perceived benefits.

**D. Clarification of the Standard Auditor's Report**

The standard auditor's report already has "built-in" explanations about an auditor's responsibility and what an audit represents. We think that any additional explanations, like an ADA, could be more confusing to the typical investor and, therefore, would not provide significant additional value to investors. We believe that auditor's reports should be as clear, concise, and to the point as possible. This approach supports the pass/fail structure of the opinion.

We appreciate the opportunity to express our views on this issue.

Respectfully submitted,

, PARTNER

Re: PCAOB Rulemaking Docket Matter No. 34

Dear Mr. Secretary:

I have the following comments on the Board's Concept Release on potential changes to the auditor's reporting model. In its comments on the potential changes, the Board has correctly stated that this effort is probably the most important task undertaken by the Board in its recent history.

I think that the Board will be inundated by comments on its Concept Release. My comments seek to help the Board in wading through the various comments and to single out those issues which need to be addressed before effecting any major change in the auditor's report.

It's probable that the accounting profession will by and large approve what the Board is trying to do but in fact will retreat from approving major changes in the auditor's report. The profession's comments will undoubtedly reflect its fear of liability and the disruptive effect on its auditors in changing what they report to the public. Many will retreat from any change in view of the additional costs that may be imposed on issuers pointing out that this impact would come at a time when issuers are increasingly overwhelmed by costs stemming from other Government regulations. They will seek to avoid changes that will place increasing burdens upon their clients.

Issuers will oppose the changes not only because of increasing costs but also because of further liability exposure. They will also see that increased disclosure of major issues in preparing their financial statements runs the risk of additional shareholder questions and concerns – something that they want to avoid in these times of economic upheaval.

Investor groups on the other hand will applaud the Board's efforts to seek greater transparency but they are not paying for the changes.

Seeking to reconcile these differences will not be easy.

I offer these suggestions to the Board in evaluating possible changes in the auditor's report. First, any changes should be limited in scope but should be positioned as a first step towards improving the report. The Board should signal that further changes will come in light of experience gained from this first step. Second, the Board should make every effort to limit the cost impact upon issuers.

Sincerely,

Docket 034 : Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards

http://pcaobus.org/Rules/Rulemaking/Pages/Docket034.aspx

i am an investor.
i have been watching the auditing controversy for some time.
in my opinion, the auditors have forgotten why they are going through this exercise.

someone has to comment on information presented to the SEC and investors and other stakeholders. it should be the auditors.

this is a business climate that is in a crisis brought about by the lack of truthfulness individually by companies and collectively by economic entities.

it is important to know:
if the commercial entity does not have the means to carry on the activities which are the subject of the audit. so far, only the "going concern" paragraph addresses this. auditors need to consider whether there might be events that would affect future revenues, such as the audit of a biotech that has an FDA submission in clinical trials, in the process of an FDA clearance process or an FDA drug submission process. in this case, future revenues certainly could be addressed by noting the possible application, the possible market for this submission. the investors can figure out whether they wish to invest in such a company.

it is important to know if the inventory is incorrect. the auditor should be required to do more than rubberstamp the inventory. the auditor should look at the inventory and verify that it is there. they should see that the inventory is not counterfeit. they might have to verify a count, whether by random sampling or counting it themselves or roughly estimating inventory. this same thing is true of accounts receivable, accounts payable. this issue might be particularly of concern in the securities business. i don't think an inventory reconciliation has been done in over 30 years. we all know what happens when we skip inventories. the clearinghouse has been "netting" long and short positions, has not been delivering particular stock certificates. if valid and legal stock certificates do not exist, what is the auditor going to do?

do customers exist? do vendors exist? is the inventory obsolete? are the accounts receivable to sold as to be uncollectable? how do these measures compare with the industry?

if there are "off-balance sheet items", i think an explanation of this should be required. in my view, anytime you take something off the balance sheet, you are creating a likely misstatement.

if management's discussion is misleading, what are auditors going to do?

if false records are presented or suspected, what would an auditor do?

i think resignation is not specific enough. as you know, the content of resignation letters that are filed with the SEC are notoriously blank about the causes of the resignation.

the reason that the auditors are hired is so that stakeholders can be assured that the financials fairly state the position of the entity and warrant that they are independent and impartial. auditors are often our eyes and ears. this is their role.

i also think that as audits become more complicated, they will need more time to complete the work.

i think auditors need a plan to address these items. the current model does not appear to address many possible situations that would impact the investment value or commercial interests in the marketplace. so at the very least, auditors need to redraft the current boilerplate statement.

while auditors are not in the law enforcement field, their work product might be required, should there be a legal/criminal question.

**Washington, D. C. 20006-2803**

**Re: Docket # 34**

**Gentlepeople:**

**For the past 30 years I have been a director of several of the mutual funds managed by Capital Research and Management Company and have served as well as the Independent Chair of the Investment Company of America, American Mutual Fund, AMCAP Fund, American funds Insurance Series, American Target Date Funds and all the Fixed Income Funds. In addition I have been Chair of many Audit Committees and have served as the Audit Committee Financial Expert.**

**From 1959 until 1986 I worked for The Christiana Companies, NYSE, and stepped down as Chairman and CEO in the late 70s / early 80s.**

**My experience with auditors and audit committees is extensive and I am pleased to note that we never received a qualified opinion and rarely had any disagreements, ( however small ), with the five separate audit firms with whom I dealt over these years.**

**However, I have seen an increasing responsibility delegated to these boards and to audit committee members. Although well intentioned, such as Sarbanes Oxley, many of these requirements have not aided our oversight ability and effectiveness.**

**Without exception the relations with these audit firms was, and is, collegial and not confrontational. In the mutual fund business an equivalent relationship has existed with the adviser, Capital Research and Management.**

**As directors, now trustees, of the American Funds, our function has been one of oversight and our ultimate responsibility is to our fellow shareholders. All directors have been encouraged to own shares in the enterprises as my belief is that, as directors responsible to shareholders, we should have "skin in the game".**

Thus each of these entities through their auditors, advisers and directors/trustees, have a shared commitment to the success, both short and long term, of the entities.

This shared commitment enhances and insures that there are many lines of communication, both required and in meetings, between the parties.

The duties and responsibilities of directors/trustees and of the auditor and of the adviser are clear and distinct. In my opinion to require the auditor to issue an "ADA" in addition to an opinion is to require the auditor to comment on areas in which the auditor might not have expertise and is to incur extra costs that could significantly increase the cost of the audit without providing any real benefit.

By the same token a requirement to use "Emphasis Paragraphs" or to involve auditors in commenting on "Information Outside of the Financial Statements" is unnecessary and would be ill advised. Emphasis might raise concern rather than clarification.

One of the great benefits of the confidential executive sessions that conclude each audit meeting is that the time is often used to ask the auditor to opine on any subject or incident that might have arisen during the year and/or the audit that would necessitate further inquiry by the Audit Committee.

Thank you for the opportunity to express my views,

Martin Fenton
Chairman

Subject: Docket Matter No. 34

I am pleased to comment on the Board's proposal.

Introduction

I am a retired partner of Price Waterhouse LLP (PW) and served for seven years as Vice Chairman of the Firm in charge of the audit practice. During my 37-year career with PW I also served as Chairman of both the AICPA's SEC Practice Section Executive Committee and AcSec's task force on risks and uncertainties. I was also a member of FASB's EITF, FASAC and other task forces.

After retiring from PW I was appointed executive director of the Independence Standards Board and served in that capacity throughout the Board's almost four years of operation.

For the last ten years I have been a director and chairman of the audit committee of an SEC registrant and a consultant and expert witness on various accounting and auditor independence issues.

Overall Philosophy

My overriding philosophy is that management, which is in possession of the most information that is relevant to users of financial statements and related SEC filings, should continue to have the sole responsibility to report such information publicly. However, the auditor plays a crucial role in reporting on the reliability of the financial statements and that role can be usefully expanded to include other information in SEC filings, financial press releases and similar management-prepared communications.

My comments which follow are predicated on that overall philosophy.

Detailed Response

My experience as a board member has made it abundantly clear that the auditor's knowledge of a client's affairs, while significant, is only a subset of the total information available to management. Moreover, while board members may be better informed on some matters, even their knowledge in many cases represents only the tip of the iceberg. This limited knowledge is the inevitable result of the part-time or highly-focused involvement of the auditor and audit committee vs. the full-time and broad-based involvement of the management team.

In particular, while the auditor has access to the financial records of the company, minutes, and other evidential matter, and holds discussions with officers and other personnel of the company, the auditor does normally not participate in internal discussions of strategic, operational, legal and accounting issues, does not routinely deal directly with vendors, customers, lawyers, bankers and other relevant third parties, nor does the auditor have access to emails and other communications between and among company officials and outsiders.

The implication of this knowledge gap is that it is unrealistic to assume that the auditor can independently report useful and credible information beyond what is required by GAAP and that management has decided is not otherwise required. In fact I predict that if such a proposal were adopted the information reported by the auditor will, in the vast majority of cases be wrong, incomplete, misleading or at best redundant to what the company has reported. The results will be users who are burdened with unnecessary and perhaps inaccurate disclosure. More importantly, it will result in a blurring of the very important distinction between the auditor who reports on the completeness and reliability of specified management assertions and management which must decide what public disclosures are required under both GAAP and the law.

Moreover, the proposal does not recognize that substantive discussions about what should be disclosed are normally conducted by the auditor with management and when necessary with the audit committee and legal counsel. As noted in the Concept Release, the auditor is already required to be satisfied that the disclosures in SEC filings that are outside the financial statements are not inconsistent with his knowledge and with the financial statements.

The AICPA's project on risks and uncertainties was intended to have management focus on and publicly report on the uncertainties facing the company which could materially affect the financial statements. If the standard now adopted is not accomplishing that purpose, then it should be revisited and improved, rather than trying out a new and highly problematic auditor reporting model.

The proposal raises a number of related issues. For example:

- what if the auditor and management discuss the same item differently? Will the SEC allow such disparities? If not, how will they be resolved? If the SEC insists on comparability what advantage is there to the user to reading similar information? On the other hand, If differences are allowed, which disclosure should the user to believe? And what role is envisioned for the audit committee in resolving such differences and what will that mean for audit committee and board liability?

- will the auditor resort to the kinds of laundry lists of risk factors that now bulk up SEC filings but in many cases do little to inform the user of relevant risks?

- will firms develop industry-specific risk factors that are not necessarily relevant to a particular client but get reported "to be on the safe side?"

- will the fact that auditors will be issuing their own AD&A impede or encourage communication among management, audit committees and auditors? Will the role of the auditor become more adversarial, without any resulting benefits to the integrity of the financial reporting process?

Other matters:

Expanding auditor reporting responsibilities - I strongly support requiring the auditor to explicitly report on MD&A and on financial press releases and similar information. The likely additional discipline and qualitative improvements in many cases would be worth any incremental cost, especially if the reporting were only to the audit committee (which should be sufficient if it were mandatory). The Board's standard for this reporting is appropriate for these purposes.

The Concept Release asks whether the auditor's report should state that the auditor "has complied with the applicable independence requirements of the PCAOB and SEC". I think this is the wrong question. It reinforces the "rules-compliance" mindset that prevails today in the auditing profession in dealing with accounting as well as with independence issues. ISB standard 1 (now incorporated with modification in Board standards) was intended to focus the auditor on his responsibility to maintain his objectivity. The Conceptual Framework issued by the ISB in 2001 and whose underlying principles are now reflected in independence standards adopted internationally as well as by the GAO and AICPA focus on threats to independence and possible offsetting controls. No set of rules can cover all situations. For example, can a partner maintain his objectivity while auditing a close friend? A cousin? Are there different threats if it is a friend or cousin of a manager or staff accountant? Are there any offsetting controls that might be effective? Who should be informed about potential impediments to objectivity at the client? Within the firm? The audit committee? Other examples: is there a level of fees from a client in relationship to total firm, office or department that would impair objectivity? What if it is fees paid to an office doing "branch work"? Are there controls that might mitigate such threats? A threats and safeguards approach requires the auditor, and management and the audit committee, to think about the nature of the auditor's objectivity, rather then whether he is in compliance with the detailed independence rules.

The Board should undertake a comprehensive project to consider a threats and safeguards, principles-based approach to auditor independence. It is the best way to ensure that all involved understand the goal of auditor independence - objectivity -

and to provide a methodology to resolve new issues that can be understood and debated by relevant stakeholders.

Finally, I do not believe that requiring the auditor to discuss the principal auditing procedures applied to relevant items would improve the usefulness of the auditor's report. The user is not in a position to assess the relevance of those procedures, their completeness or the effectiveness with which they were applied. As stated earlier, if the requirements by the company to disclose risks and uncertainties and other material information are inadequate, those requirements should be fixed. That would retain the responsibility for disclosure with management, where it belongs.

*Re: Rulemaking Docket No. 34*

Ladies and Gentlemen:

I am writing in response to your request for public comment on a variety of items covered in this Docket number related to the Auditor's Report. My comments are based on my 46 years teaching corporate and institutional finance at the graduate business school level and my involvement in the applied world—as a user rather than a generator of financial information. I have served as board member of three NYSE companies, audit committee member of each, chairing the audit committees of two, as well as a board and audit committee member of a small-cap private company.

Having reviewed some of the comments submitted on this Docket, I find myself in total agreement with Professor James L. Fuehrmeyer, Jr., of the Mendoza College of Business Administration of the University of Notre Dame, who wrote you on July 5, 2011. To avoid wasting time, therefore, I do not propose to repeat his and similar comments but rather to make a few broader points about the proposals.

First, the "many" and "some," whose desire for further information is frequently cited as a reason for this study, appear to confuse the task of the independent external auditor with that of the securities analyst. The former's task, dealing largely with the current and the past, is to determine whether management's presentation of an entity's financial statements are fairly stated, according to established principles and practices, in all material respects as of a specified date. The latter's task is to speculate and opine on what the future of the company and its value will be. The analysts performs their task with few established principles, practices, and standards against which their output can be measured. There is little legal requirement that the analysts perform their tasks with anything like the great care demanded of the independent auditor. Furthermore, the analyst's speculation and opinions are considered free speech and thus protected from challenge except in unusual instances.

The independent auditor, of course, has to consider the future in many instances, such as in validating depreciation assumptions and percent-of-completion calculations. These are technical items, however, distantly related to the concerns of the securities analyst. To think that the independent auditor should also function as a securities analyst or could effectively serve both functions suggests a misunderstanding of one function if not both. If implemented, many of these proposals would require independent auditors to set up the equivalent of a securities analysis department. Unless somehow held to new, more rigorous standards, the resulting opinions would be worth no more than those of a securities analyst. (For example, consider the analyst who recommended a company increase its market price by increasing its yield.)

Second, the "many" who are said to want more insight from the independent auditor in the form of additional comments or highlights to management's discussion and analysis appear to want someone else to do their research work. (The more cynical might think that the insights of the independent auditors are sought to replace the information provided hithertofore by the "expert" networks.) The pro forma example of an auditor's comments provided in the June 9, 2011, letter from Ms. Cynthia M. Fornelli on behalf of the Center for Audit Quality, are clearly merely restatements of what already would appear in the management discussion. At best, it is a sort of executive summary, adding nothing but perhaps enabling the careless reader to skip management's comments.

This result hardly reflects the aims and hopes of current security regulation. At worst, it is simply adding pages to documents that are already tedious to read and far too full of repetitions. The practice would also expose the independent auditor to litigation on the grounds that the auditor's comments did not emphasize something of importance in management's discussion that the "many," relying on the executive summary, did not find for themselves.

Third, many aspects of the proposals would alter the dynamics of the relationships among the auditors, the audit committee, and the management. At the moment, management proposes, the auditors either disagree, agree, or raise alternatives that should be considered. In the case of public companies, a disagreement is resolved in favor of the auditors because otherwise the required filings are not possible. Agreement presents no problem. The discussion of alternatives, presumably all of which fall within accepted accounting standards, should be helpful to the audit committee and, ultimately, to management.

If the auditors were required to disclose these discussions, concern about litigation would tend to eliminate the useful communication of alternatives. The resolution would become "my way or the highway" because the independent auditor could hardly allow potential litigation about not having insisted on an alternative that the audit committee did not select. The proposal might even result in "informal" discussions in advance of any formal meeting so that a consensus in advance would be established.

And, of course, considering the number of items in a set of financial statements, even for a small company, for which alternative reasonable approaches are possible under the accepted accounting policies, the list and explanation of these for each point would make the financial reports even more cumbersome than they are at present. At the extreme, financial statements would have to be prepared showing the effect, singly and in combination, of the alternatives discussed. The "many" would appear hardly to be able to make this analysis for themselves. Without these presentations, the simple discussion would be worthless. It is hard to believe this elaboration would provide any appreciable additional insight for the "many," who seem to seek the quick sound bite.

Third, for good reasons, the objective is that all the information the "many" request is to be provided without becoming boilerplate language. This objective seems very optimistic. The sample provided by the Center for Audit Quality runs to four solid pages of boilerplate. If I am correct that the type of information the "many" want is not the type of information an independent accounting firm is structured to provide, it is natural that the result will be boilerplate, constructed to comply in form while reducing the chance of litigation.

Nevertheless, it does make sense to allow the independent auditor to explain somewhat more completely in the attestation just what the independent auditor does not do and what is the responsibility of management. Thus, the addition of a few well-chosen phrases or words to the current rubric could help the uninformed investor understand that the independent auditor's role is a limited one and cannot guarantee one-hundred percent accuracy of the financial reports.

Fourth, I have a hard time imagining just what form the attestation by an independent auditor of any forward-looking statement would take. The existing boilerplate provided by management in the 10-K under SEC safe-harbor regulations indicates that statements dealing with the future are no more than best guesses as of a certain date. Securities analysts are not held to that high a standard. It appears that the "many" want a more formal certification by the independent auditor of those forward-looking comments. This requirement implies that the independent auditor would have to be at least as informed about a firm's business and its prospects as management is. One major reason for the independent auditor is that the auditor knows more about accounting principles than even the firm's financial managers, not because the independent auditor knows more about the firm's operations and prospects.

Finally, it would certainly be nice to have an independent party review the reports of management and, for that matter, of the independent auditors, if one could be found which would have better insights than the management and the independent auditors. And, of course, then a fourth party would be needed to vet the conclusions of the third party, and so on. I am reminded that not very long ago, it appeared that audit committees would have to engage their own independent auditors to review the work of the company's independent auditor. Fortunately, the idea was dropped by the wayside, apparently replaced by the PCAOB's responsibility to monitor the quality of independent auditing firms.

In conclusion, it strikes me that the "many" are trying to entice the PCAOB into doing the job of the SEC. If the "many" do not think that managements are presenting enough information or in the appropriate form, the proper body to address is the one responsible for public disclosure not the one responsible for proper accounting. Organizations tend to expand into adjacent turf when they do not have enough do to on their own field. The PCAOB certainly has many challenges in its own area. I urge the Board not to allow "many" to distract it from the excellent work it is doing where it has been given responsibility and thus to drop this study in favor of including a slightly more elaborate statement in the attestation of what the independent auditor cannot do.

Auditor's Reporting Model, Rulemaking Docket Matter No. 34
Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements

Members of the Board;

I'm pleased to have the opportunity to present my comments on the PCAOB's initiative to reconsider the audit reporting model. My comments are my own based upon nearly forty years in the accounting profession, twenty-five as an audit partner with KPMG and now serving as an adjunct at St. John's University teaching auditing and ethics to graduate students.

With the large number of books, studies and articles devoted to analyzing the various aspects of the financial crisis, it is apparent that we suffered from a massive systemic failure whereby the belief that institutions we once thought we could trust is no longer true. These Include legislators, financial institutions, rating agencies, directors (who were thought to represent the shareholders), pension fund managers and so called large sophisticated investors, all of whom have reportedly high powered analysis tools and techniques for managing the investments of their members, and yes, auditors. All of who failed to forecast or see the magnitude of the problems presented by excessive leverage and an unsustainable housing bubble.

Improved audit quality should be the main goal of this PCAOB initiative, and not the peripheral issues of an auditor's discussion and analysis, firm rotation, and individual signatures on reports. These are

st. john's UNIVERSITY

distractions that take time from the main issue of improving audit quality. I agree that the auditor's report requires some changes and updating. I'll suggest some in the following paragraphs or express my agreement with others who have commented rather than repeat similar comments.

Financial Reporting Council and Center for Audit Quality

The approach being pursued by the UK's Financial Reporting Council and should be adopted by the PCAOB, including the FRC's guiding principles (some of the FRC's wording will need to be adapted for US usage):

- Preparers, audit committees and auditors must ensure that all material issues are reported in a manner that is complete, neutral, free from error, fair and balanced.
- Auditors must exercise professional judgment when undertaking audits and adapt a challenging or appropriately skeptical approach to key issues, assumptions and evidence.
- Both the company and its auditor must be satisfied that the annual report, taken as a whole, is fair and balanced.

The Center for Audit Quality has also proposed a set of overarching Principles well worth adopting:

- Auditors should not be the original source of disclosure about the entity; management's responsibility should be preserved.
- Any changes to the reporting model need to enhance or at least maintain audit quality.
- Any changes to the reporting model should narrow, not expand, the expectation gap.
- Any changes to the reporting model should add value and not create investor confusion.
- Auditor reporting should focus on the objective rather than the subjective.

Although after reading the CAQ's proposed changes, it seems they violate some of their own principles with the examples presented.

While the FRC states that the primary responsibility for providing information rests with the company and its management, the FRC also proposes that the audit committee produce reports that fully describe those important judgments and other matters addressed during the course of the audit.

The FRC and CAQ's comments are consistent and present a clearly more productive avenue to pursue without introducing new reporting lines that would confuse the public as would an AD&A, which would most likely expand the expectation, gap, if not at initiation over time. As the FRC also plans to introduce standards governing the reports auditors provide to audit committees, the PCAOB also has this ability within its standard setting mandate and has taken some initial action to enhance the communications between auditor and audit committee. The audit committee's published report should also be addressed.

Adequacy of Management Disclosure

The issues at the center of this debate may well be the adequacy and credibility of the current information provided by management. Disclosures for public companies are an SEC matter and should be addressed accordingly, only if the SEC believes there is need for improved or more disclosure.

The issues related to other management disclosures such as those included in MD&A may be addressed by requirements to include GAAP and risk related information in the footnotes which will then be covered by the auditor's report. This is more desirable than opinions on individual pieces of management information scattered throughout a 10K. The premise is that if information is to be covered by some form of auditor assurance that information should be in the footnotes.

Audit Quality

Audit Quality is within the PCAOB's purview and may be greatly facilitated by increased transparency into what an audit involves, including the scope and generally accepted audit procedures. These should be addressed through PCAOB Auditing Standards and inspections processes. The PCAOB should also consider making public Part II of their reports on quality controls and related issues within the firms inspected on a timely basis.

The large US registered firms should adopt a form of transparency report similar to the UK and European Union to report on their efforts in the areas of governance, quality and internal control. I believe this will focus the firms on such controls and create an atmosphere in which all try to raise their game. Having been in charge of Risk Management and Quality Control for both the US and International network of a major firm for the last part of my career, I believe disclosing Part II and Transparency type reporting will help improve quality, if not initially over time as each of the major firms compete to demonstrate their controls are best.

The audit standard setting process should provide the definitional context for the current wording, principally reasonable assurance and materiality, so that the audit report need not always repeat. The belief being that once memorialized in a standard and clearly defined and discussed, the public including the investor community will have the context they desire.

Independence and Fraud Detection

Additionally, as I teach classes in both Ethics and Auditing, my students and I review the major investigations and studies regarding the profession dating back to the Metcalf Commission, the first significant investigation of the public accounting profession since the 1930's. It's interesting to note, that the profession, lawmakers and regulators have been debating independence (principally services related) and fraud detection for nearly the entire forty years of my career in public accounting and teaching. At some point a "reasonable person" might expect this debate to be concluded.

It now seems appropriate to conclude the debate on two points, independence and fraud detection. In so doing, it's recommended that some bright lines between auditing and advisory or consulting services be drawn, either by complete prohibition or separation into different legal entities with separate governance. During my long career in public accounting, I've observed that auditors and consultants have different mindsets, priorities and approaches to their relationship with their clients. There is also a cultural divide due principally to the auditors' education regimen and emphasis on professional standards. These differences cannot always be overcome and result in a divergence of priorities over competing business objectives centered around revenue growth and professionalism as manifested in the AICPA's Code of Conduct. Many auditing professionals would most likely applaud such a separation.

Concluding the fraud detection debate could be accomplished by explicitly identifying in the auditor's report the auditor's responsibilities for fraud detection. Consulting type skills are often used for valuation issues such a derivatives and IT controls. These skills could and should be imbedded in audit practices to avoid conflicting objectives and priorities.

Reporting Relationships

The PCAOB should thoroughly consider the all-important relationship triangle between shareholders as represented by the board and audit committee, the auditor and management. You should not confuse the participants by changing reporting responsibilities but strengthen those that already exist. Given the changes taking place in board and shareholder governance, investors, particularly large activist institutions, have access to management and the board that a retail investor does not. The NACD in fact encourages boards to communicate more often with their investors. This was the subject of an NACD Blue Ribbon Panel Report in 2008.

Audit Committee reports should be enhanced and include the key points that the auditor discusses with the committee including resolution. This may involve the SEC, NYSE and NASDAQ changing requirements for the audit committee report to shareholders. The PCAOB has embarked on improving auditor – audit committee communications and should continue to monitor and adjust based on inspections and conversations with audit committee members.

Standard Auditor Report

As for the current "pass/fail" report as it is dismissively referred to, such a report has met its purpose and objectives for comparability and reduced misunderstanding, as noted in the concept release, albeit, this is currently refuted by some. I confidently state the current reporting model was never a hindrance or constraint on reports I've signed and helped provide some leverage with clients in tenuous financial situations, particularly during the S&L crisis. However, it is most likely a good time to make changes and refresh the language, however, the goals of comparability and understandability remain; otherwise I fear a new level of confusion and expectation gap will be introduced. At that point, the investor groups will most likely be the first to note that the reports are confusing since they are no longer comparable.

As for the areas of emphasis and emphasis paragraphs, these are often discussed in the financial statements and footnotes, e.g. related party transactions, estimates and judgments; I see no purpose in repeating these in the auditor's report. This is true provided the initial disclosures are appropriate and informative, otherwise the auditor will comment to the audit committee or ultimately comment in the audit report. This reporting model works well in most cases and could be clarified for the investing public through an expanded audit committee report that addresses key elements of communications with the auditor. The PCAOB has the opportunity to observe compliance as part of the inspection process.

Costs

Costs will always be an issue. If the auditor's role and responsibilities are expanded, auditors should be compensated for any extra effort and responsibility assumed. A cost benefit analysis should be conducted. Most likely as a part of a test period for any proposed changes.

st. john's UNIVERSITY

Other comments

Lastly, I endorse the comments submitted by my academic colleagues and former industry professionals at the Universities of Georgia and Notre Dame and do not propose to comment further

I thank you for the opportunity to comment on Rulemaking Docket No. 34.

Sincerely,

Re: PCAOB Concept Release (No. 2011-003) on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements (PCAOB Rulemaking Docket Matter No. 034)

Ladies and Gentlemen:

The Society of Corporate Secretaries and Governance Professionals (the "Society") appreciates the opportunity to provide comments on the Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements, PCAOB Release No. 2011-003, issued on June 21, 2011 (the "Concept Release") by the Public Company Accounting Oversight Board (the "PCAOB").

Founded in 1946, the Society is a professional membership association of more than 3,100 attorneys, accountants, and other governance professionals who serve approximately 2,000 companies of most every size and industry. Society members are responsible for supporting the work of corporate boards of directors and their committees and the executive managements of their companies regarding corporate governance and disclosure. Our members generally are responsible for their companies' compliance with the securities laws and regulations, corporate law, and stock exchange listing requirements.

The Society appreciates the PCAOB's efforts to improve the relevancy and quality of public company audit reports to investors. However, the Society believes that even though the proposals in the Concept Release will fundamentally change the auditor's role, they will not meet the PCAOB's stated goals. Furthermore, the Society believes that the Concept Release does not set forth evidence supporting an appropriate cost/benefit rationale for the proposed changes. Our detailed comments follow.

*The PCAOB Concept Release Would Fundamentally Change the Role of the Auditor*

While the Concept Release states that the alternatives for changing the auditor's reporting model are "focused…on…improving the content of the auditor's report rather than on changing the fundamental role of the auditor," we believe the proposals in the Concept Release, if adopted, would, in fact, fundamentally change the role of the auditor from an independent analyst to an original source of information for investors. The net effect of many of the suggestions in the Concept Release, including the development of new auditing standards, would make the auditor a guarantor of the accuracy and completeness of the financial statements and, indeed, of the company's historical results of operations and financial condition.

The Concept Release also states that "the alternatives presented would retain the pass/fail opinion of the standard auditor's report." However, the Society believes that the pass/fail approach would be vitiated by the alternatives set out in the release. Instead, depending upon the nature and extent of the auditor's comments in the AD&A (as defined below), and in any required "assurance" on disclosures outside the financial statements, the audit would yield the equivalent of "high pass," "medium pass," "low pass," and similar "grades" – which would add complexity and uncertainty for investors that does not exist with the current pass/fail system.

*The Concept Release Provides Neither Empirical Evidence nor a Cost/Benefit Analysis for the Proposed Changes*

Further, the Concept Release does not provide any empirical evidence supporting the need for the proposed changes or a cost/benefit analysis of the alternatives proposed. For example, the Concept Release states that the information proposed to be provided "*might* be useful to investors and other financial statement users and *could* lead to more efficient markets and improved allocations of capital" and that "[t]he objective of this concept release is to discuss several alternatives for changing the auditor's reporting model that *could* increase its transparency and relevance…" (emphasis added) (see paragraphs 1 and 3 under "Purpose" on page 2). Because the PCAOB does not have the authority to unilaterally change the standard audit report without rulemaking from the Securities and Exchange Commission (the "SEC"), and in the absence of such empirical evidence, we believe any rules adopted under the Concept Release would be invalid under the recent United States Court of Appeals decision in *Business Roundtable v. Securities and Exchange Commission*. Moreover, if a proper cost/benefit analysis were undertaken, we believe the costs would far outweigh any possible benefits derived from the proposals.

Consequently, and for the reasons discussed below, the Society's does not support the proposed specific alternatives in the Concept Release.

*The Proposed Auditor's Discussion and Analysis Would be Confusing and Costly*

The Concept Release proposes an Auditor's Discussion and Analysis ("AD&A") section in the audit report that would give the auditor:

> "[t]he ability to discuss in a narrative format his or her views regarding significant matters. The AD&A could include information about the audit, such as audit risk identified in the audit, audit procedures and results, and auditor independence. It also could include a discussion of the auditor's views regarding the company's financial statements, such as management's judgments and estimates, accounting

> policies and practices, and difficult or contentious issues, including "close calls." Additionally, an AD&A could provide the auditor with discretion to comment on those material matters that might be in technical compliance with the applicable financial reporting framework, but in the auditor's view, the disclosure of such matters could be enhanced to provide the investor with an improved understanding of the matters and their impact on the financial statements. An AD&A could also highlight those areas where the auditor believes management, in its preparation and presentation of the financial statements, could have applied different accounting or disclosures. (Release, p. 13.)"

The Society strongly disagrees with requiring an AD&A because it would (i) be counterproductive to the goal of providing greater transparency to investors; (ii) greatly increase the cost of the audit to issuers with no corresponding benefit to investors; and (iii) substitute the auditor's judgment for management's judgment, which could ultimately undermine the auditor's independence and management's responsibility for the financial statements and related disclosures.

Providing more detailed disclosure by the auditor of the matters considered and underlying considerations with regard to an issuer's financial statements would not meet the PCAOB's stated objectives of "increasing transparency and relevance to financial statement users, while not compromising audit quality". Providing additional disclosure to already lengthy and granular disclosures would likely increase confusion and would substantially increase the length of disclosure documents without a corresponding benefit. In addition to reading the audited financial statements and notes and the Management Discussion & Analysis, which provides investors a detailed, comprehensive view of the business through management's eyes, investors would be expected to read and distill additional, and possibly competing, disclosure from the auditor, without the additional context provided to management and audit committees via regular dialogue between the two. Given the substantial increase in the size of disclosure documents over the past several years (Compensation Discussion & Analysis, Dodd-Frank Wall Street Reform and Consumer Protection Act disclosures, etc.), the Society believes additional disclosure would further exacerbate the overload of information to investors. At some point, the additional information will lead to either investors "tuning out" disclosures or material information becoming buried in overly lengthy disclosures. In addition, the nature and process of review and approval of the AD&A would greatly increase the difficulty of meeting tight time frames for filings under the securities laws, particularly filings of large, accelerated filers whose financial statements are generally complex.

As our collective experience with the attestation requirement of the Sarbanes-Oxley Act of 2002 demonstrates, a substantial increase in the auditor's workload is costly to issuers. While the attestation requirement over internal controls may provide investors with greater comfort on the validity and reliability of an issuer's financial statements, an AD&A would greatly increase the cost of the audit to issuers with no corresponding benefit. Discussion of audit risk, audit procedures and results, and auditor independence are likely, over time, to become boilerplate discussions that will be difficult for investors to fully appreciate without having a financial accounting and auditing background. Even if the AD&A does not become boilerplate, the lack of consistency and comparability among different issuers' AD&As would cause confusion and uncertainty. To add a discussion on difficult and contentious issues, particularly including "close calls" on the application of complex accounting standards, sets up the unproductive situation where there are two potentially competing views on accounting matters. Competing views can only lead to equally unsatisfactory conclusions by the investor – that either the auditor is wrong or the issuer, including possibly its audit committee, is wrong– which will ultimately lead to a loss of confidence in the reliability of the financial statements. The lack of any benefit combined with the expected cost of an auditor providing an AD&A would be particularly acute for small- and mid-cap public companies.

In addition, we strongly disagree that the PCAOB should require an AD&A, as it would substitute the auditor's judgment for management's judgment. Management is responsible for the preparation of the financial statements and related disclosures and is in the best position to understand its business and discuss its financial results. If an auditor were required to provide its own analysis of critical audit risks and "close calls", then the auditor would, in effect, be taking ownership of and become responsible for the financial statements and related disclosures. Having a stake, in this case its professional reputation, in the accounting treatment of an issuer would seem to ultimately undermine the independence of the auditor.

Finally, we believe that auditors will likely be concerned – possibly, justifiably – that the inclusion of an AD&A will increase their exposure to liability. This may cause auditors to draft AD&As in the most legally defensive boilerplate possible, which would result at best in ineffective communication and meaningless disclosure.

*Required and Expansive Use of Emphasis Paragraphs Would Not Result in Meaningful Information*

The Society disagrees with the proposal to require and expand use of emphasis paragraphs. The Society believes that requiring emphasis paragraphs would (i) provide no additional benefit to investors as the emphasis paragraphs will, over time, become boilerplate discussions and (ii) appear to "qualify" an otherwise clean audit opinion.

The Society expects the proposed AD&A to become boilerplate over time, resulting in emphasis paragraphs that become standardized. Issuers, depending on their industry, would receive the standard "revenue recognition", "goodwill", etc. emphasis paragraphs from its auditor that would merely make the audit opinion longer rather than provide any benefit to investors. Further, because of the need for the auditor to protect against future litigation, the auditor could be inclined to "emphasize" as many possible areas of accounting risk it can. Finally, due to the lack of consistency and comparability among issuers, readers of these emphasis paragraphs will have no context in which to view these paragraphs, which will render the emphasis paragraphs meaningless.

One of the strengths of having a "pass/fail" reporting model, a model that the PCAOB states that it is interested in maintaining, is its simplicity and understandability. Either an issuer receives a "clean" opinion or it does not. Investors can rely on financial statements with "clean" opinions and should not rely on financial statements without them. By adding emphasis paragraphs, the simple, understandable approach is eviscerated. Auditor opinions will be appear to be riddled with exceptions, and it would be unclear at what point multiple emphasis paragraphs would devolve, or be perceived as devolving, into an adverse or disclaimer of opinion.

*Auditor Assurance on Other Information Outside of the Financial Statements Would Not Be Beneficial*

The Society also does not support the proposed assurance on items outside of the financial statements because we believe that a model by which auditors would provide assurance on items such as MD&A, earnings releases and non-GAAP measures, has significant downsides. While auditors are familiar with the figures and disclosure upon which the MD&A, earning releases, and non-GAAP measures are based, the cost of requiring an auditor opinion on MD&A or these other disclosures would provide relatively little benefit compared to the cost. Auditors already routinely review and comment on these matters (and issuers routinely take such comments into account), and their responsibilities include consideration of whether such information is materially inconsistent with the financial statements. Thus, we believe that the scope and nature of these other disclosures is unlikely to materially change as a result of requiring a more formal assurance on the part of auditors, but would rather serve only to increase the cost. We note that the illustration of a possible attestation in the Concept Release appears to suggest that such an attestation would have to contain a legal opinion that the MD&A meets the SEC rules and regulations, as well as assurance or "comfort" regarding the amounts and numbers contained therein. We believe these requirements are well beyond the scope of auditors' duties and, among other things, would appear to require an auditor to develop expertise in areas not currently associated with auditing responsibility.

In addition, requiring such assurances is inconsistent with the existing pass/fail approach to auditor financial statement opinions because it would introduce additional numerous and complex requirements, which could be difficult to interpret without further context but which would not necessarily be comparable across issuers. Introducing additional procedures surrounding auditor sign-off on earnings releases, MD&As and the like into an already time-pressed process could delay the filing process. Among other things, the Society believes that the expected benefits of requiring these assurances should be more specifically identified and quantified prior to requiring any such assurances.

*Clarification of Language Would Improve the Standard Auditor's Report*

The Society supports the continued improvement of auditor reports and believes that enhancements to such reports that further their transparency and usefulness without introducing unnecessary disclosure, complexity, and cost are valuable for investors. To the extent that additional language in the standard auditor's report clarifies the respective responsibilities of the auditor and management that are not defined or addressed in other disclosures, the Society believes such additional clarifications could be useful. However, any such clarifications should be strictly limited to critical issues and set forth succinctly in plain English.

For all of these reasons, the Society does not support the alternative disclosures discussed in the Concept Release.

We thank the PCAOB for its efforts to improve audit reports and enhance investor insight into issuer financial statements, and we would be happy to provide you with further information to the extent you would find it useful.

Respectfully submitted,

The Society of Corporate Secretaries and Governance Professionals

Washington, D.C. 20006-2803

Re: PCAOB Rulemaking Docket Matter No. 34

Dear Members of the Public Company Accounting Oversight Board:

This is to provide my comments on PCAOB Rulemaking Docket Matter No. 34 regarding PCAOB Release No. 2011-003, Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards (the "Release").

I am a Certified Public Accountant who has experience auditing large and small public companies. I currently work in quality control for a New York City based registered public accounting firm that audits smaller reporting companies and non-accelerated filers; however, my comments are intended to relate to auditors' reports on the financial statements of all sizes of public companies. Some general comments about the release and my comments on each of the four alternatives follow.

I am not convinced that significant changes to an auditor's report would be useful for investment decisions. An audit of the financial statements provides assurance as to the fair presentation of financial statements in accordance with a particular accounting framework. However, investment decisions cannot be based on the auditor's report. Such decisions must be based on information related to the company being considered for an investment. In addition, while objective analytics may be performed, investment decisions are always subjective. The investor must chose the extent to which he or she relies on objective analysis of the amounts presented in a company's financial statements and elsewhere, the extent of reliance placed on financial statement disclosures, and the extent of reliance placed on other available information about the prospective investment.

As stated in the Release, an audit of financial statements has long been recognized as a valuable process. As indicated in the appendix to this response, since the beginning of the twentieth century some form of assurance service has been provided by public accountants. Over time, both businessmen and public accountants came to realize that assurance with respect to financial statements must be provided in relation to some form of standard or standards; hence the development of accounting standards. So assurance with respect to financial statements progressed from the 1902 "certification" that United States Steel's financial statements were "correctly prepared" from its books to the present form of assurance which attests to whether a company's financial statements present financial position, results of operations, and cash flows fairly as that term is viewed under some framework of standards. After 1934, auditor's reports began to refer to 'fair presentations' in accordance with 'accepted principles of accounting.'

Historically, and currently, the purpose of the audit has been limited to being an attestation relating to the financial statements and the standards under which they have been prepared. Over the last 100 years, attestations beginning with "verifications" and "certifications" and progressing to the modern audit have related to financial statements, not to any other information. The attestation has been confined to the financial statements and the basis (i.e., standards) under which the financial statements were prepared. The standards behind (or basis used in) the preparation of financial statements is the most important factor to be considered with respect to the financial statements and an investor's or other user's analysis. It is not a coincidence that accounting principles and auditing standards developed in tandem with one another as businesses became more sophisticated. The accounting principles underlying financial statements facilitate the understanding of them, the auditing standards simply provide assurance that the financial statements have been prepared using the stated accounting principles (e.g., U.S. GAAP, IFRS, etc.).

**Robert J. Sonnelitter, CPA**
**17 Hoyt Road**
**Bethel, CT 06801**

Thus, the basis for analyzing a company's financial statements must be the accounting principles under which they were prepared. I believe that much of the so-called "expectation gap" results from the confusion of auditing standards with accounting principles. Frequently, I find clients and their attorneys referring to a "GAAP Audit." Such a reference indicates a confusion of auditing standards with accounting principles. In addition, I believe that misunderstandings/confusion exists over the difference between audit risk and investment risk.

Generally accepted accounting principles ("GAAP") have been developed, as intended, to provide investors with a wealth of information for use in making investment decisions and I believe that significant changes to the auditor's reporting model could or would dilute the preeminence of GAAP as the basis for assessing financial statements. Financial statements prepared in accordance with GAAP provide investors with an abundance of information about the preparation of financial statements which includes information about how the elements of the financial statements are derived. For example, disclosures with respect to the fair values of financial instruments include information about the fair values are determined. Likewise, disclosures about share-based compensation include information about how the amounts of these expenses are computed. Therefore, while I concur that an audit of financial statements has value, the value does not relate to providing information about the financial statements. Information about the financial statements is provided by the financial statements themselves, including the related disclosures as required by GAAP. The value of an audit relates to the support it provides about the relevance and representational faithfulness[1] of the financial statements.

Because I believe that GAAP provides the best means for communicating information about a company's financial position, results of operations, and cash flows, I believe that the so-called pass/fail model is appropriate. Auditors are expected to render their opinion with respect to fair presentation. In my opinion, the following should be considered:

- An opinion is a subjective judgment which, by its nature is singular. One can have an opinion on this matter or that matter; but one cannot have multiple opinions on the same item or matter of interest. Thus, an opinion is a yes or no proposition. Of course there may be areas of uncertainty to be considered in forming an opinion, but the opinion is not a definitive statement. So uncertainties affect the formation of an opinion but they are not part of the opinion; consequently the financial statement presentation is considered either fair or not fair under the applicable set of standards.
- Under present auditing standards, an auditor may add a paragraph emphasizing a matter that was considered in forming the opinion; however, the matter being emphasized is only one of many matters considered by an auditor in forming his or her opinion. Since the auditor's opinion is the result of his subjective judgment based on many factors, there is a danger that an emphasis on any particular matter would mislead or confuse the user of the financial statements.
- Under present auditing standards, an auditor's report may be qualified due to a limitation in the scope of the audit or due to a departure from generally accepted accounting principles.
  - The reference to a scope limitation in the auditor's report may mislead or confuse the user of the financial statements. The fact that the scope limitation is not so egregious as to cause a disclaimer of opinion implies that the auditor has overcome the limitation; therefore, the limitation should not need to be mentioned in the opinion.
  - The reference to a departure from generally accepted accounting principles in the auditor's report may also mislead or confuse the user of the financial statements. As above, the fact that the departure is not so egregious as to cause an adverse opinion implies that the auditor has overcome the materiality of the departure; therefore it should not need to be mentioned in the opinion.

**Robert J. Sonnelitter, CPA**
**17 Hoyt Road**
**Bethel, CT 06801**

To summarize the preceding matters, I believe that the role of an audit of financial statements should be limited to the objective stated in AU§110, *Responsibilities and Functions of the Independent Auditor*. That is, the expression of an opinion on the fairness of the financial statements presented by management.[a]

[a] As the Board knows, fairness must be related to some set of standards of application. Fairness is not an absolute, it implies some degree of reasonable deviation as well as being a judgment related to matters that, by their nature, may only be applied by exercising some degree of judgment. Fairness includes the concept of importance or materiality.

The Release observes that "The auditor's report is the primary means by which the auditor communicates to investors and other users of financial statements information regarding his or her audits of financial statements."[2] I disagree. The auditor's report is not intended to communicate information regarding the audit; it is intended to communicate the auditor's opinion on the financial statements.[3] The scope paragraph explains the nature of what was done to enable the auditor to express his or her opinion. The Release also states "Some investors indicated that if they had a better understanding about the audit and how the audit was conducted relative to a particular company, then they would have a better perspective regarding the risks of material misstatement in a company's financial statements."[4] However, the standard audit report already states that the audit was performed in accordance with the standards of the PCAOB (or the "Board"). So it seems that providing "a better understanding about the audit and how the audit was conducted" could involve a treatise on the requirements contained in the auditing standards of the PCAOB as well as a copy of some key audit work papers. Satisfaction beyond referring to the auditing standards of the PCAOB is both not practical and ill advised.

Based on the above observations, I believe that the current and ever increasing disclosure requirements of GAAP provide investors and other users of financial statements with more than adequate information for making investment decisions. I also observe that the mission of the FASB relates to ensuring that financial statements provide useful information to investors and other users of financial reports for purposes of decision making.[5] Furthermore, the I believe that the expected benefits of providing more information about the audit as compared with the hindrance from providing excessive information must be considered. I believe that too much information about how the audit was conducted would lead to more confusion, especially with respect to distinguishing accounting principles from auditing standards. In my view, another aspect of the "expectation gap" that has often been discussed also stems from a misunderstanding about the purpose of an audit.

I understand that the Board's Standing Advisory Group ("SAG") and Investor Advisory Group ("IAG") suggested, and the U.S. Department of the Treasury Advisory Committee on the Auditing Profession ("ACAP") recommended, that the Board undertake a standard-setting initiative to consider improvements to the auditor's standard reporting model; however, it is most important to consider why those suggestions and recommendations have made. That is, why do these and the other groups mentioned in the Release believe changes should be made and how widespread is that belief.

After considering the information and viewpoints received from the comments to this Release, if the Board decides to pursue the notion of changing the auditor's report, I believe that more in-depth analysis should be made. While the PCAOB Staff (the "Staff") has conducted outreach activities, the degree to which those activities represent the attitudes of the population of users, preparers, and auditors of financial statements is not clear. For example:

- Statements throughout the Release indicate the attitudes or viewpoints of "some," or "many." However, it is not clear how extensive the attitudes or viewpoints of "some," or "many" are by comparison to others who may have different attitudes or viewpoints.

**Robert J. Sonnelitter, CPA**
**17 Hoyt Road**
**Bethel, CT 06801**

  - I believe that the perspectives of those financial statement users that were not part of the outreach activities as well the perspectives of those who were part of the outreach activities but did not participate or respond must be considered. In my view, such non-participation implies that there is no objection to the status quo.

- The Release provides an overview of the participants of the outreach, but no indication is given with respect to how extensive was the participation of each group by comparison to other groups. Certainly, there would be bias if the participation, attitudes or viewpoints of any one group (e.g., investors, preparers, auditors, audit committee members, regulators and standard-setters, and academics) was over or under weighted by comparison to other groups.

- The Release does not indicate or analyze the degree of weighting given to the perspectives of each of the above participating groups. In view of the goal of providing useful information to investors and other users of financial statements, I believe that:
  - the perspectives of investors and other users of financial statements should be given top priority,
  - the perspectives of a) audit committee members, b) preparers, and c) auditors should be given the next priority,
  - the perspectives of government, regulators and standard-setters, and academics should not be considered because those groups do not actively participate in the investment process. Government and regulators and standard-setters exist to serve investors and other users of financial statements and academics study the accounting, auditing, financial statement preparation, and investment processes.[b]

    [b] In my view, the role of regulators and standard-setters and academics should be to assist in determining the information desires of investors and other users of financial statements. Regulators and standard-setters must also balance those desires against what information can feasibly be provided.

I am also not convinced that there is widespread "grass roots" dissatisfaction.

A. Auditor's Discussion and Analysis ("ADA")

I believe that having a supplemental narrative is not a good idea. In my view, such a supplemental report could confuse investors and shift their focus to the matters discussed in the ADA and away from the financial statements as a whole. As a result, an ADA would not facilitate an understanding of the auditor's opinion because it could or would bring about the loss of an investors primary perspective toward the financial statements as a whole.

I especially do not believe that a discussion about the auditor's views with respect to estimates and judgments affecting the financial statements would be beneficial. The auditor's basic views with respect to such estimates and judgments are inherently part of the auditor's opinion on the financial statements as a whole. Any supplemental views that are either favorable or unfavorable could cause undue optimism or pessimism on the part of investors.

The Release states: "An ADA could give the auditor greater leverage to effect change and enhance management disclosure in the financial statements, thus increasing transparency to investors."[6] To the contrary, an ADA could cause management to be less forthright with their auditors for fear of negative statements.

Generally, an ADA could reduce investors' focus on the financial statements and cause an inappropriate increase in their focus on the auditor's opinion and comments. That kind of shift in focus undermines the

**Robert J. Sonnelitter, CPA**
**17 Hoyt Road**
**Bethel, CT 06801**

effectiveness of disclosures required by generally accepted accounting principles and can only increase an auditor's liability risk.

B. Required and Expanded Use of Emphasis Paragraphs

This alternative seems to be a watered down version of an ADA that would be included in the auditor's opinion instead of as a supplemental narrative. Therefore, I do not agree that it would be appropriate for the same reasons as above. Furthermore, I believe that mandating the use of emphasis paragraphs in audit reports and to highlight the most significant matters in the financial statements and to identify where these matters are disclosed in the financial statements is not or should not be necessary. Emphasis paragraphs like these can amount to condensed footnotes and, as above, undermine the effectiveness of disclosures required by generally accepted accounting principles.

A requirement that an auditor should "justify" the audit assessments made in forming an opinion on financial statements would shift the focus to individual matters relative to the financial statements at the expense of a focus on the financial statements as a whole.

C. Auditor Assurance on Other Information Outside the Financial Statements

As pointed out in the Release:[7] "Providing assurance on information outside the financial statements would increase the scope of the auditor's responsibilities, require the development of new auditing standards, and might result in projects separate from the auditor's reporting model project."

The substantial increase in the cost of an audit should be carefully weighed against the added benefits that investors might receive. Regulation S-K contains fairly detailed requirements about the content of the MD&A and much of the information includes management's subjective judgments and analysis about causes behind changes in operations and about the future. The reliability of this type of information, no matter how carefully it is prepared, is questionable due to its nature. Therefore, the cost of auditing it may well outweigh the perceived benefits. I believe that the cost would outweigh the benefits provided to investors.

D. Clarification of the Standard Auditor's Report

The standard auditor's report already has explanations about an auditor's responsibility and what an audit represents. I do not think that additional explanations about what an audit represents and the related auditor responsibilities would provide significant additional value to investors. I believes that auditor's reports should be as clear, concise, and to the point as possible.

I do not believe that any of the four alternatives presented in the release would provide substantial benefits.

- I especially believe that requiring an ADA or mandating the use of emphasis paragraphs would be detrimental for the reasons discussed above.
- Assurance on Other Information Outside the Financial Statements could cost more than the value of any expected benefits.
- In the interest of clarity, some modification to the standard auditor's report might provide some small benefit. Therefore, I have the following suggestion:

---

**Report of Independent Registered Public Accounting Firm**

In our opinion, the accompanying balance sheets of X Company as of December 31, 20X3 and 20X2, and the related statements of operations, stockholders' equity, and cash flows for each of the three years in the period ended December 31, 20X3 present the financial position of the Company as of [at] December 31, 20X3 and 20X2, and the results of its operations and its cash

**Robert J. Sonnelitter, CPA**
**17 Hoyt Road**
**Bethel, CT 06801**

flows for each of the three years in the period ended December 31, 20X3, in conformity with accounting principles generally accepted in the United States of America.

Our opinion is based on our audits which we conducted in accordance with the standards of the Public Company Accounting Oversight Board (United States). The financial statements referred to above are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits. Financial statements presented in conformity with accounting principles generally accepted in the United States of America are inherently free of material misstatement and require management to estimate the amounts of some of their elements.

Audits conducted in accordance with the standards of the Public Company Accounting Oversight Board (United States) require that auditors obtain reasonable assurance about whether the financial statements are free of material misstatement and that they assess the whether the accounting principles used are appropriate and appropriately applied. An auditors' assessment of the risks of material misstatement of the financial statements affects the type and amount of supporting evidence that is examined during the audit to reduce such risk to a minimum. Our audits did not extend to information presented outside of the financial statements; consequently, we have no opinion on any such information.

---

Notes regarding changes to the form of opinion:

- The opinion paragraph is placed first because the opinion on the financial statements is the primary matter of interest.
- The second paragraph adds a brief explanation about the nature of financial statements when they are presented in conformity with GAAP.
- The third paragraph adds a brief explanation about how audit risk assessment affects the audit.

Thank you for the opportunity to express my views on this issue.

Sincerely,

*Robert J. Sonnelitter*

Robert J. Sonnelitter, CPA

**Appendix: Historical Auditor's Reports**

An audit of financial statements has long been recognized as a valuable process. Since the beginning of the twentieth century some form of assurance service has been provided by public accountants. Over time, both businessmen and public accountants came to realize that assurance with respect to financial statements must be provided in relation to some form of standard or standards; hence the development of accounting standards. So assurance with respect to financial statements progressed from the 1902 "certification" that United States Steel's financial statements were "correctly prepared" from its books to the present form of assurance which attests to whether a company's financial statement present financial position, results of operations, and cash flows fairly as that term is viewed under some set of standards.

The following are examples of two early reports, each without a scope paragraph.

---

> The 1902 Annual Report of United States Steel includes **a certificate** from Price Waterhouse which stated:
>
> We examined the books of the US Steel Corporation and its Subsidiary Companies for the year ended December 31, 1902, and certify that the Balance Sheet at that date and the Relative Income Account are correctly prepared therefrom.
>
> The 1915 Annual Report of Sears, Roebuck and Co. includes **a note placed at the bottom of the Statement of Net Profits** from The Audit Company of New York which stated:
>
> We have made an audit of the books and accounts of Sears, Roebuck and Co. for the fiscal year ending December 31, 1915, and in accordance therewith we certify that in our opinion the foregoing statements of Income and the General Balance Sheet are true exhibits of the results of operations of the Company for the said period and of its condition as of December 31, 1915.

---

I have observed that, in 1917, The Federal Reserve Board prepared A Tentative Proposal entitled "UNIFORM ACCOUNTING." The proposal was meant as tentative proposal for a uniform system of accounting which "suggested standard forms of statements for merchants and manufacturers" and recognized the need for "(1) The improvement in standardization of the forms of statements," and "(2) The adoption of methods which will insure greater care in compiling the statements and the proper verification thereof." This proposal included instructions for the auditing procedures necessary for a balance sheet audit which included also some account descriptions, instructions for what should be addressed in the accountants' certificate, a proposed form of accountants report, and a proposed form of presentation of an income statement and balance sheet. The instructions were:

> The balance sheet and certificate should be connected with the accounts in such a way as to ensure that they shall be used only conjointly. This rule applies also to any report or memorandum containing any reservations as to the auditor's responsibility; any qualification as to the accounts, or any reference to facts materially affecting the financial position of the concern.
>
> The certificate should be as short and concise as possible, consistent with a correct statement of the facts, and if qualifications are necessary the auditor must state them in a clear and concise manner.
>
> If the auditor is satisfied that his audit has been complete and conforms to the general instructions of the Federal Reserve Board, and that the balance sheet and profit and loss statement are correct, or that any minor qualifications are fully covered by the footnotes on the balance sheet, the following form is proper:

**Robert J. Sonnelitter, CPA**
**17 Hoyt Road**
**Bethel, CT 06801**

I have audited the accounts of Blank & Co. for the period from .............. to .............. and I certify that the above balance sheet and statement of profit and loss have been made in accordance with the plan suggested and advised by the Federal Reserve Board and in my opinion set forth the financial condition of the firm at .............. and the results of its operations for the period.

(Signed) A. B. C.

The following is an example of an auditor's report issued after the above 1917 proposal:

---

The 1926 Annual Report of Abraham & Straus, Inc. includes **a note placed at the bottom of the Balance Sheet** from Touche, Niven & Co. which stated:

We have examined the books and account of Abraham & Straus, Inc. for the year ended January 31, 1926, and we certify that the above balance sheet and the accompanying income and surplus account are in accordance therewith and, in our opinion, exhibit a true and correct view of the financial condition of the Corporation at January 31, 1926, and its operations for the year then ended.

---

In 1929, a revision to the 1917 suggestions was issued by the American Institute of Accountants (now the AICPA) entitled "VERIFICATION OF FINANCIAL STATEMENTS" and submitted to The Federal Reserve Board. That document was oriented more toward auditing procedures necessary for a balance sheet audit, and included a proposed form of accountants report. The instructions in that document were:

The auditor's certificate should be as concise as may be consistent with a correct statement of the facts. If qualifications are necessary, the auditor must state them clearly.

The balance sheet, the profit-and-loss statement, the auditor's certificate, and any report or memorandum containing reservations as to the auditor's responsibility, any qualifications as to the accounts, or any reference to facts materially affecting the financial position of the concern should be connected in such a way as to insure their use conjointly.

If the auditor is convinced that his examination has been adequate and in conformity with these general instructions, that the balance sheet and the profit-and-loss statement are correct, and that any minor qualifications are fully stated, the following form of certificate may be used:

I have examined the accounts of ............................................................ company for the period from ........................... to ..........................

I certify that the accompanying balance sheet and statement of profit and loss, in my opinion, set forth the financial condition of the company a .................................. and the results of operations for the period.

The following is an example of an auditor's report, which includes an explanation about the scope of the audit work performed that was issued after the above 1929 proposal:

**Robert J. Sonnelitter, CPA**
**17 Hoyt Road**
**Bethel, CT 06801**

---

The 1930 Annual Report of American Telephone and Telegraph Company includes **a note placed at the bottom of the Statement of Earnings and Expenses** from Lybrand, Ross Bros. & Montgomery which stated:

> We have audited the accounts of
> AMERICAN TELEPHONE AND TELEGRAPH COMPANY
> for the year ended December 31, 1930. We have reviewed reports for that year rendered to the company by the associated and controlled companies and find that the American Telephone and Telegraph Company's proportion of the aggregate net income of the associated and directly and indirectly controlled companies as shown by such reports exceeded the dividends of $148,178,885 this company received on stocks owned by about $10,000,000. We have not, however, audited the accounts of the associated and controlled companies.
>
> We certify that, in our opinion, the accompanying balance sheet (on pages 14 and 15) and the above statement of earnings and expenses (subject to the explanation in the preceding paragraph) set forth correctly the financial position of American Telephone and Telegraph Company as at December 31, 1930 and the results of its operations for the year 1930.

---

In 1934, a document entitled "AUDITS OF CORPORATE ACCOUNTS" was prepared that included correspondence from 1932 to 1934 between the Special Committee on Co-operation with Stock Exchanges of the American Institute of Accountants and the Committee on Stock List of the New York Stock Exchange. The correspondence included a "Statement of Certain Accounting Principles Recommended by the Committee of American Institute of Accountants on Co-operation with Stock Exchanges," a "Revised Suggestion of a Form of Accountants' Report," and discussions about auditing procedures. Correspondence from the New York Stock Exchange stated that after July 1, 1933 all listing applications from corporations must contain the certificate of independent public accountants. The correspondence includes a suggestion for a form of Accountants' Report which includes a statement describing some of what was done (i.e., a partial scope of the procedures) in performing the examination ("audit"), The suggested form of Accountants' Report is below:

> We have made an examination of the balance-sheet of XYZ Company as at December 31, 1933, and of the statement of income and surplus for the year 1933. In connection therewith, we examined or tested accounting records of the Company and other supporting evidence and obtained information and explanations from officers and employees of the Company; we also made a general review of the accounting methods and of the operating and income accounts for the year, but we did not make a detailed audit of the transactions.
>
> In our opinion, based upon such examination, the accompanying balance-sheet and related statement of income and surplus fairly present, in accordance with accepted principles of accounting consistently maintained by the Company during the year under review, its position at December 31, 1933 and the results of its operations for the year.

With this suggested form, accountants' reports became more comparable to the modern form of accountants' reports. The following is an example of an auditor's report that was issued after the above 1934 correspondence:

**Robert J. Sonnelitter, CPA**
**17 Hoyt Road**
**Bethel, CT 06801**

---

The 1934 Annual Report of National Food Products Corporation includes the **Certificate** of Peat, Marwick, Mitchell & Co. which stated:

> We have made an examination of the Balance Sheet of National Food Products Corporation as at December 31, 1934, and of the Profit and Loss and Surplus Accounts for the year 1934. In connection therewith, we examined or tested accounting records of the Company and other supporting evidence and obtained information and explanations from officers and employees of the Company; we also made a general review of the accounting methods and of the operating and income accounts, but we did not make a detailed audit of the transactions.
>
> The securities representing the investments were confirmed by inspection or by acknowledgment from the holder; the investments in subsidiary and controlled companies and the other investment are stated at cost which was $1,322,424.37 in excess of their appraised value or quoted market price as indicated on the Balance Sheet. Sundry securities are carried at a net amount of $3000.00 after deduction of a reserve of $263,748.42 which was provided from Capital Surplus pursuant to resolution of the Board of Directors.
>
> In our opinion, based upon such examination and subject to the foregoing qualifications, the accompanying Balance Sheet and related Income and Surplus Accounts fairly present, in accordance with accepted principles of accounting consistently maintained by the Company during the year under review, its position at December 31, 1934 and the results of its operations for the year.

---

In January 1936 the American Institute of Accountants published a bulletin: “Examination of Financial Statements by Independent Public Accountants.” This bulletin contained a discussion regarding accounting principles but did not mandate the application of any such principles. This bulletin was published as a revision to the 1929 pamphlet “VERIFICATION OF FINANCIAL STATEMENTS” and included a form of accountants’ report. The bulletin contained the following notes about the use of the suggested accountants’ report:

1. It is contemplated that, before signing a report of the type suggested, the accountant will be satisfied that his examination has been adequate and in conformity with the principles outlined in this bulletin.
2. The report should be addressed to the directors of the company or to the stockholders, if the appointment is made by them.
3. The statement of what has been examined would, of course, conform to the titles of the accounts or statements reported upon.
4. In the second sentence, any special forms of confirmation could be mentioned: e.g., "including confirmation of cash and securities by inspection or certificates from depositaries."
5. This certificate is appropriate only if the accounting for the year is consistent in basis with that for the preceding year. If there has been any material change either in accounting principles or in the manner of their application, the nature of the change should be indicated.
6. It is contemplated that the form of report would be modified when and as necessary to embody any qualifications, reservations or supplementary explanations.

**Robert J. Sonnelitter, CPA**

**Bethel, CT 06801**

The non-binding reporting guidance was followed in the cases below:

---

The 1936 Annual Report of Dow Chemical includes the **Accountants' Certificate** of Haskins & Sells which stated:

We have made an examination of the balance sheet of The Dow Chemical Company as of May 31, 1936, and of the related summary of income and surplus for the year ended that date. In connection therewith, we made a review of the accounting methods and examined or tested accounting records of the company and other supporting evidence in a manner and to the extent which we considered appropriate in view of the system of internal accounting control. We did not verify the quantities in the inventories but were furnished with a certificate of officials of the company as to quantities upon which the inventory values were based.

The accounts of subsidiary and affiliated companies carried as investments at cost of $1,155,580.00 in the accompanying balance sheet were not examined by us at May 31, 1936. Examinations of the accounts of three of the companies, the investment in which amounted to $341,579.00, are now in progress, and the accounts of another of the companies, the investment in which amounted to $665,001.00 were examined by us as of March 31, 1936. We have not made an examination of the accounts of one remaining company, the investment in which amounted to $149,000.00.

In our opinion, based upon such examination and subject to the foregoing, the accompanying balance sheet and related summary of income and surplus fairly present, in accordance with accepted principles of accounting consistently followed by the company, its financial condition at May 31, 1936 and the results of its operations for the year ended that date.

The 1938 Annual Report of the Radio Corporation of America includes a report of Arthur Young & Company which stated:

We have made an examination of the Consolidated Balance Sheet of RADIO CORPORATION OF AMERICA AND SUBSIDIARY COMPANIES as at December 31, 1938, and of the Consolidated Statement of Income and Earned Surplus Accounts for the year 1938. In connection therewith, we examined or tested accounting records of the Corporation and its Subsidiaries and other supporting evidence to the extent which we considered sufficient and obtained information and explanations requested by us from officers and employees of the Companies. We also made a general review of the accounting methods and of the operating and income accounts for the year, but we did not make a detailed audit of the transactions. Following the practice of prior years the Companies' methods of taking inventory were reviewed and approved by us; we satisfied ourselves as to prices and computations and made substantial physical tests of quantities at the various locations. For certain foreign subsidiaries, whose assets amount to 3% of the total assets, we have accepted and incorporated in the consolidated statements, after a scrutiny and review sufficient to satisfy ourselves as to their accounting principles followed, the audited accounts prepared by their public accountants as at either October 31st, or November 30th, 1938.

The changes explained in Notes 1 and 4 to the Statement of Income, while they depart from the practice of prior years, are entirely consistent with accepted principles of accounting.

In our opinion, based upon such examination, the accompanying Consolidated Balance Sheet and related Consolidated Statement of Income and Earned Surplus, together with the notes thereon, fairly present, in accordance with accepted principles of accounting which have been consistently maintained by the Corporation, its financial position at December 31, 1934 and the results of its operations for the year ended that date.

---

In 1939 the American Institute of Accountants' Committee on Accounting Procedure issued Accounting Research Bulletin ("ARB") No. 1, *General Introduction and Rules Formerly Adopted*. ARB 1 again adopted six basic accounting principles that were adopted in 1934. In the same year, the American

**Robert J. Sonnelitter, CPA**
**17 Hoyt Road**
**Bethel, CT 06801**

Institute of Accountants' Committee on Auditing Procedure issued Statement on Auditing Procedure ("SAP") No. 1, *Extensions of Auditing Procedure*.

The Auditor's Reports below were issued after the AIA (now AICPA) began to issue ARBs and SAPs:

---

The 1942 Annual Report of Humble Oil & Refining Company includes the report of Price Waterhouse & Co. which stated:

We have examined the consolidated balance sheet of Humble Oil & Refining Company and its wholly owned subsidiary, Humble Pipeline Company, as at December 31, 1942 and the consolidated statements of income and surplus for the year then ended. Our examination was made in accordance with generally accepted auditing standards applicable in the circumstances, except that it was not practicable to confirm receivables from the United States Government, with respect to which we have satisfied ourselves by means of other auditing procedures. The examination included such tests of the accounting records, without detailed audit of the transactions, and other supporting evidence and such other procedures as we considered necessary.

We have accepted the balances of the fixed (capital) assets and relative reserves of the companies as at January 1, 1934 at the amounts shown on the books and records of the companies.

The income account for the year 1942 includes profits which were realized on sales to various departments and agencies of the United States Government. The profits realized therefrom are subject to renegotiation under the War Profits Control Act, but the amount of the adjustments, if any, which may result from such renegotiation is not presently determinable.

In our opinion, with the reservation in the preceding paragraph, the accompanying consolidated balance sheet of Humble Oil & Refining Company and its wholly owned subsidiary company and the related statements of income and surplus, together with the notes thereto, present fairly the consolidated position of the companies at December 31, 1942 and the consolidated results of their operations for the year, in conformity with generally accepted accounting principles applied on a basis consistent with that of the preceding year.

The 1950 Annual Report of the American Express Company includes the **Accountants' Certificate** of Haskins & Sells which stated:

We have examined the balance sheet of American Express Company as of December 31, 1950, and the consolidated statement of income and surplus of the Company and consolidated subsidiaries for the year then ended. We have also examined the consolidated balance sheet of the Company's principal subsidiary, The American Express Company, Incorporated and consolidated subsidiaries, as of December 31, 1950. Our examinations were made in accordance with generally accepted auditing standards, and accordingly included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances; as to American Express Company, it was not practicable to reconcile the individual liability balances of travelers cheques and drafts (money orders) with the respective related control accounts but, in view of the accounting procedures followed and the system of internal accounting control in effect, we satisfied with respect to the aggregate amounts of these liabilities by examination of the control accounts.

In our opinion, the accompanying balance sheets and statement of income and surplus, with their notes, present fairly the financial position of American Express Company and of The American Express Company, Incorporated at December 31, 1950 and the results of operations of American Express Company and consolidated subsidiaries for the year then ended, in conformity with generally accepted accounting principles applied on a consistent basis.

**Robert J. Sonnelitter, CPA**
**17 Hoyt Road**
**Bethel, CT 06801**

The 1955 Annual Report of Boeing Airplane Company includes the **Accountants' Report** of Touche, Niven Bailey & Smart which stated:

We have examined the balance sheet of Boeing Airplane Company as of December 31, 1955, and the related statements of net earnings and earnings retained for use in the business for the year then ended. Our examination was made in accordance with generally accepted auditing standards, and accordingly included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances. We were unable to obtain satisfactory confirmations of receivables from the United States by direct communication, but we satisfied ourselves as to such accounts by other auditing procedures.

In our opinion, the accompanying balance sheets and statements of net earnings and earnings retained for use in the business present fairly the financial position of Boeing Airplane Company at December 31, 1955 and the results of its operations for the year then ended, in conformity with generally accepted accounting principles applied on a basis consistent with that of the preceding year.

Also in our opinion, the action of the Board of Directors on December 12, 1955, in setting aside the sum of $3,250,000 for the year 1955 under the Incentive Compensation Plan for Officers and Employees, is in conformity with the provisions contained in the first paragraph of Section 2 of such plan.

The 1968 Annual Report of Magma Copper Company includes the **Auditors' Report** of Arthur Andersen & Co. which stated:

We have examined the consolidated balance sheet of MAGMA COPPER COMPANY (a Maine corporation) and subsidiaries as of December 31, 1968, and the related consolidated statements of income, retained earnings, and source and disposition of funds for the year then ended. Our examination was made in accordance with generally accepted auditing standards, and accordingly included such tests of the accounting records and such other auditing procedures as we considered necessary in the circumstances.

In our opinion, the accompanying consolidated balance sheet and consolidated statements of income, retained earnings, and source and disposition of funds present fairly the financial position of Magma Copper Company as of December 31, 1968, and the results of their operations and source and disposition of funds for the year then ended, in conformity with generally accepted accounting principles applied on a basis consistent with that of the preceding year.

**Re: Invitation to Comment:** ***Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards, PCAOB Rulemaking Docket Matter No. 34***

Dear Board Members:

State Street Corporation ("State Street") appreciates the opportunity to comment on the PCAOB's *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (the concept release). With $22.76 trillion in assets under custody and administration and $2.12 trillion in assets under management as of June 30, 2011, State Street is the world's leading provider of financial services to institutional investors.

We have a number of comments regarding the concept release that we believe need to be addressed in order to achieve the proper balance of ensuring that additional information in the form of auditor communications is both reliable and relevant to the users of financial statements. Our comments below are applicable to all of the alternatives proposed for changing the auditor's reporting model.

The proposals in the concept release appear to be inconsistent with the FASB and IASB objectives of encouraging more reasoned judgment instead of a prescriptive rules-based approach. We believe that requiring auditors to provide information on the company's financial reporting process either through the proposed Auditor's Discussion and Analysis (AD&A) or expanded use of emphasis paragraph alternatives would force independent auditors to consistently hold (or "assume") the most conservative view on matters of accounting judgment, effectively precluding reasoned judgment that might result in the most appropriate financial reporting outcome.

State Street believes that auditors should not be the original source of disclosure specifically related to management judgments and estimates, or accounting policies and practices, including areas of significant judgment, such as "close calls." Providing information to investors with respect to our accounting policies and their application is the responsibility of State Street's management, not the independent auditor. The auditor's role is to evaluate whether the financial statements taken as a whole are presented fairly in accordance with generally accepted accounting principles (GAAP). Requiring the auditors to disclose this information would create confusion for the readers of financial statements, as they would need to sort through information provided by both management and the independent auditors. The auditor's responsibility to communicate such matters should be limited to situations in which the financial statements are not in conformity with GAAP in all material respects.

Conceptually, requiring the independent auditors to summarize to investors the same level of detail and context that is provided to a company's Board of Directors would be difficult and potentially misleading. In the absence of appropriate context and two-way communication, we believe that such information would be incomplete, would generate greater confusion, and would not enhance the overall understanding of the readers of the auditor's report and financial statements. Additionally, we note that requiring supplemental reporting such as the proposed AD&A will likely lengthen the time to complete the audit as there may not be sufficient time for the auditor to complete the audit of the financial statements and provide assurance in additional areas and therefore adversely impact filing timelines for large accelerated filers.

We do not object to the concept of requiring auditors to provide assurance on certain information outside the financial statements, provided that the scope of such assurance is clearly defined. However, we are unclear on the incremental benefits to investors from the elevated level of assurance proposed to be provided by auditors over management's discussion and analysis (MD&A), including the critical accounting estimates currently discussed in MD&A, given the likely significant increase in audit procedures and audit-related costs that will ultimately be borne by our company's shareholders.

State Street believes that the current auditor's report ("pass/fail model") clearly communicates the nature of the audit and whether the financial statements are presented fairly, in all material respects, in accordance with GAAP. The concept of clarification of the standard auditor's report would further lengthen the auditor's report unnecessarily without achieving the objective of enhancing communication between auditors and the users of audit reports, thereby compromising the report's effectiveness. With respect to the proposed approach related to the required and expanded use of emphasis paragraphs, we note that existing standards allow auditors to add areas of emphasis at their discretion, based on circumstances. We believe that mandating the requirement for an emphasis paragraph would result in standardized language over time and would therefore not achieve the proposed objective.

We appreciate your consideration of these matters and welcome the opportunity to discuss them with you.

Sincerely,

James J. Malerba

Re: PCAOB Rulemaking Docket Matter No. 34 – Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements

Ladies and Gentlemen:

This letter is in response to the Concept Release issued by the Public Company Accounting Oversight Board (the "Board") relating to possible revisions to the Board's standards relating to auditors' reports on financial statements (the "Release").

We appreciate the opportunity to submit these comments for the Board's consideration. The Release discusses a wide range of possible revisions. One group of revisions would seek to address investors' understanding of the audit process in general, through clarification of language in the standard auditor's report; these changes seem to us unobjectionable in principle and worth pursuing. A second group of possible revisions would require the auditors to perform and report on additional procedures, leading to auditor assurance on additional information outside the financial statements. We believe that any revisions in this category would require rulemaking by the Securities and Exchange Commission, and should be subject to very rigorous cost/benefit analysis, but we do not have other comments on these measures at this time. The balance of the possible revisions – which include a required "auditor's discussion and analysis", or AD&A, and mandatory use of emphasis paragraphs in the audit report – would require the auditors to identify and disclose information about the particular issuer being audited and its results of operations and financial position, or about the particular audit being reported on. Such revisions would necessarily change significantly the auditor's traditional role of attesting to information prepared by management. From the perspective of lawyers regularly engaged in advising issuers on disclosure and reporting matters, we think that revisions of these sorts could raise serious governance and disclosure concerns for issuers and their auditors.

Our greatest concern relates to possible requirements that the auditor make disclosures about the issuer itself. The Release states that the purpose of these changes would be to provide investors with more transparency into the audit process and more insight into the issuer's financial statements or other information outside the financial statements. For reasons that have been well articulated, we think it is essential that the issuer should be the original source of any disclosure about the issuer or its results of operations or financial position. Although the auditor will generally have a well-informed perspective on these matters, that perspective is necessarily different from, and narrower than, management's perspective. Management is responsible for having the "complete picture" and making disclosure accordingly, while the auditor's knowledge of the issuer derives from what the auditor observes through the course of the audit. But the audit is designed for the specific purpose of supporting the audit report, not for the purpose of informing the auditor generally about the issuer and its affairs, or supporting general disclosures about the issuer (whether those disclosures relate to the financial statements or information outside the financial statements). So it seems to us fundamentally illogical to require the auditor to develop and publish substantive disclosures about the issuer itself. Such auditor comments will be subjective, raising potential comparability concerns, and therefore susceptible to a "boilerplate" approach, which will not further any transparency objectives. Part of the stated rationale for the proposed AD&A is that it would give the auditor greater leverage to convince the issuer to make changes. Given the differing roles and perspectives of the auditor, on the one hand, and management and the audit committee, on the other, we frankly think that this is an inappropriate objective for the Board to seek to advance. We are also concerned that new requirements for disclosure by auditors may expose the auditors to additional potential liability, unfairly in our view, since the auditor would be required to make comments on the basis of information acquired incidentally in the course of the audit, as opposed to as a result of procedures designed specifically to develop such disclosure. And we fear that auditor disclosures of the sort contemplated would likely enhance the issuer's liability profile, as well. In this regard, we question the benefit to investors of the reporting of so-called "difficult or contentious issues, including 'close calls'" that were resolved to the auditor's satisfaction based on its professional judgment, and believe such reporting would carry with it a particularly high risk of enhanced liability.

At the same time, we believe it is quite important that issuers (and derivatively, their shareholders) get the full benefit of the auditor's insights acquired through the course of the audit. But we feel strongly that requiring the auditor to make public substantive disclosures about the issuer will not promote that objective, and may well inhibit the governance processes now in place to oversee financial reporting. Governance changes over the past decade – such as the audit committee independence requirements of Rule 10A-3 under the Securities Exchange Act of 1934, the disclosure requirements with respect to "audit committee financial experts" and audit committee reports, and related practice developments – have enhanced the role of the public company audit committee and, we believe, audit committee effectiveness. Auditors should be encouraged to have the fullest and frankest conversations possible with the audit committee. The best way to promote that objective is to allow those conversations to be conducted, whenever the audit committee desires or the auditor so requests, on a confidential basis. We are quite concerned that if the auditor's discussions with the audit committee are conducted with the anticipation of subsequent public disclosures being made by the auditor, these auditor/audit committee discussions may be seriously inhibited. Auditors may be more cautious in raising concerns, and audit committee members may be more circumspect in probing such concerns with the auditor.

The audit committee, and the board of directors, have oversight responsibility for the issuer's disclosure, including its financial statements. We believe that public company audit committees generally seek to understand and address substantive concerns raised by auditors in the course of their interaction, but to the extent there are concerns about audit committee performance in this regard, that should be addressed as a governance matter, including through additional Securities and Exchange Commission or stock exchange rule making, if thought necessary, not by requiring auditors to make their own public disclosures about the issuer.

As noted, our greatest concern with the possible revisions relates to possible new requirements for the auditor to make disclosure about the issuer. Disclosure requirements relating to audit procedures and the audit itself might, as a theoretical matter, be less problematic, but we are concerned that in practice, the two sorts of disclosures may well overlap. For example, a disclosure by the auditor that it had followed enhanced procedures with respect to a particular item or matter might well lead the issuer to consider enhanced responsive disclosure about that same item or matter. In principle, we think that this raises the same concerns as requiring substantive disclosure by the auditor about the issuer itself. We also expect that such disclosure about the audit and audit procedures will be even more susceptible to "boilerplate" treatment, and less likely to be useful to investors.

* * *

We appreciate this opportunity to comment on the Release. You may direct any questions with respect to this letter to Robert E. Buckholz at (212) 558-3876, Robert W. Downes at (212) 558-4312 or William G. Farrar at (212) 558-4940.

Very truly yours,

**PCAOB RULEMAKING DOCKET MATTER No. 34**
**CONCEPT RELEASE ON POSSIBLE REVISIONS TO PCAOB STANDARDS RELATED TO REPORTS ON AUDITED FINANCIAL STATEMENTS**
**PCAOB Release No. 2011-003 June 21, 2011**

Dear Sir / Madam,

SwissHoldings, the Swiss Federation of Industrial and Services Groups in Switzerland represents 53 Swiss groups, including most of the country's major industrial and commercial enterprises. As certain of our members are registered with the SEC as Foreign Private Issuers, they are audited in accordance with PCAOB standards. Our response below has been prepared in conjunction with our affected member companies. We have grouped our specific comments into broad categories rather than providing responses to each detailed question in the release.

**GENERAL COMMENTS**

We understand the concern to improve the audit report, especially at the present time. In our view, the right response should take into account that no change to the content of reporting, either by the auditor or the issuer, can totally eliminate risk for investors. Financial information which investors need about an issuer should come from the issuer and its management, not from the auditor. Reporting of judgements and estimates should focus on those made by management and not those made by the auditor. The benefit from the auditor's existing ability to include emphasis of matter remarks would be devalued were such remarks to become a routine part of every audit report. Any changes made to auditor reporting should preserve and not undermine what has been described as the "pass/fail model" of the audit report, with its associated clear accountability for both management and the auditor, nor should it impede communication between auditor and issuer. Direct communication between auditors and users, which some commentators have suggested, would complicate auditor-issuer communication.

We believe that the purpose of the audit report should be to state the result of the audit process, rather than describe the technical detail of the process itself. We would not object to adding a statement to the standard audit opinion wording which clarified how information outside of, but accompanying the financial statements, such as the Operating and Financial Review (MD&A), impacts the scope of the auditor's procedures. However, we believe that that impact should remain limited to reviewing such information for consistency with the financial statements and the

Postfach 402, 3000 Bern 7

Fax +41 (0)31 352 32 55
www.swissholdings.ch

understanding the auditor has gained from the audit. The auditor should not be required to report formally on information presented outside the financial statements.

In our opinion, the pass/fail audit report model works well because of its simplicity and clarity. Although it does not make the audit or the financial statements risk-free, because of the potential consequences of a ‘fail’, one can reasonably expect that the audit client will do anything in its power to avoid that outcome. It would also be regrettable if, as a consequence of expanding the audit report content, the completion of the audit was delayed, resulting in less timely provision of financial information to users. In our view, this is a very real risk for those issuers who currently complete their SEC filings before the prescribed deadline because management, audit committees and auditors would need to spend additional time discussing the extra information to be reported.

## SPECIFIC COMMENTS ON ALTERNATIVES CONSIDERED IN THE RELEASE

### 1. "Auditor's Discussion and Analysis (AD&A)"

We do not believe that the Board should consider publication of an AD&A as a means of providing additional information about the audit. In our view, the content of an AD&A would almost inevitably blur the discipline of the pass/fail opinion model, and lead to ambiguity. Different financial statement users would interpret AD&A comments in different ways. It would also complicate issuer-auditor discussions, leading to the risk that the quality of the audit might be reduced. The auditor would need to discuss the content of the AD&A report with the issuer. These discussions might be prolonged, delaying the issuance of the financial statements.

### 2. Required and Expanded Use of Emphasis Paragraphs in Audit Opinion

In our view, audit reports should not routinely contain emphasis paragraphs. They should be used only by exception, and only for information which by its nature cannot be provided through the financial statements. The examples of emphasis matters mentioned in the release contain information which, in our view, could be provided in the financial statements. As with the AD&A, the risk that routine emphasis matter paragraphs would introduce ambiguity into the opinion and would reduce the value of the pass/fail model would be significant. The most serious dangers are that users might be confused and the auditor’s responsibility for the pass/fail opinion might be diminished, or at least perceived to be diminished. The issuance of the financial statements might also be delayed while issuer and auditor discuss the content and wording of the emphasis paragraphs. With routine emphasis of matters, any benefit of providing additional information would likely be eroded by a tendency to use boilerplate language.

We would not support a separate formal auditor report on the issuer’s critical accounting estimates. Issuers who report in accordance with IFRS provide information about those estimates as part of their audited financial statements, in line with the disclosure requirements in IAS 1. The auditor’s work on that information is part of the standard audit, and fully covered in the existing report.

### 3. Auditor Assurance on Other Information Outside the Financial Statements

In our view, because the MD&A has to be presented through the eyes of management, the auditor can only review it for reasonableness and consistency; it is not possible for an independent auditor to express an opinion on its intrinsic accuracy, since it represents only one view, rather than being objectively verifiable. Any report would have to focus purely on formal compliance with the applicable regulations. As there is no objective benchmark of what non-GAAP information should be prepared or how it should be prepared, it is again not possible for the auditor to express a pass/fail opinion on it. Extension of the scope of reporting, by requiring a separate formal report on information outside the financial statements, may lead to that information being published later than it is now. As stated in paragraph 4 below, in our opinion a brief addition to the standard audit report mentioning the scope of the review of the other information could be considered instead of a separate formal report.

## 4. Clarification of the Standard Auditor's Report

Once again, the more the report is expanded, the greater the risk of reducing the significance of the pass/fail opinion. Any clarification of language in the audit report should avoid adding significantly to its length, especially with regard to the phrases which describe the audit procedures. Most financial statement users are neither auditors nor have they been trained as auditors. Including an extensive and detailed description of technical auditing matters in the report would likely not add significant value for them.

As the release states, the auditor carries out certain procedures on certain information outside the financial statements, such as the MD&A. We would not object to the audit opinion stating that the auditor has reviewed that information for consistency with the financial statements and with the auditor's knowledge, but has not performed an audit of it. However, if the auditor were to give a separate formal report on that information, this would carry some risk of diluting the value of the pass/fail opinion in the audit report on the financial statements.

SwissHoldings would like to thank you for the opportunity to comment on this project. We would be pleased to respond to any questions arising from the above comments and are available for further consultation if required.

Yours sincerely

**Re: PCAOB Rulemaking Docket Matter No. 34, Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements**

Dear Board Members:

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB) "Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards," (the "concept release") dated June 21, 2011.

Synopsys, Inc. is a world leader in the electronic design automation (EDA) market. We supply software, IP and services for semiconductor design, verification and manufacturing.

We appreciate the Board's efforts to consider changing the audit reports for financial statements to enhance the usefulness for the users (i.e. the investor community). However, we believe that the potential changes reflected in the concept release will not only fail to enhance the usefulness of financial statements, but will actually complicate the communication of the auditor's opinion, while driving the cost of audits significantly higher. **Hence, we strongly suggest retaining the existing format and language of the auditor's report.**

The current format of the auditor's report provides a clear and complete representation of the auditor's opinion on the financial statements. The format ensures no confusion for the reader since the report follows a pass/fail model. The "pass" grade is a high standard to achieve and auditors do not make the "pass" representation lightly. The auditors must represent, without any qualifications, that the financials present fairly, **in all material respects,** the financial position of the company. In our opinion, any expansion of the report to include discussions of factors such as those impacting the issues encountered during the audit or an Auditor Discussion and Analysis, would serve only to dilute the representation and confuse readers by forcing them to evaluate the interrelation of the additional disclosures, understand new terms and interpret various comments that may be included in the proposed auditor's report. In our opinion, while sophisticated investors with significant research resources, such as institutional investors, may be able to navigate through the maze of the additional disclosures, we believe most users will have significant difficulty in doing so.

In all of the years that we have been filing our financial statements, we have received no inquiry from the investor community seeking any clarification of either the audit report or the contents presented therein. Therefore, we believe that these proposed revisions are not required or expected by the investor community.

We are further concerned about the increased costs associated with audit firms providing the proposed additional disclosures such as an AD&A and assurances on information outside of the financial statements. Historical experience with the increased costs for the additional representations related to SOX suggests a large increase in costs would result from the expansion of the audit report. We believe the increased costs do not support the benefit, if any, that may exist from the increased disclosures.

With this background, we offer the following feedback regarding the various alternatives described in the Concept release:

**Auditor's Discussion and Analysis**

We do not believe that the inclusion of an AD&A would achieve the objective of improving the understanding of the financial information by the users. Instead, any discussion of deficiencies or alternative approaches for an accounting matter would contradict a clean opinion and confuse the investors. Furthermore, we believe that auditors will include voluminous boilerplate language in order to reduce their exposure to litigation on account of the additional information required in the report. This language will provide limited, if any, qualitative inputs to improve the readers' understanding.

We also believe that the AD&A will become the auditors' view of which part of the financial information is most useful, which we believe is beyond the responsibility of the auditors. Along with additional responsibility would come a significant increase of costs to complete the audit, which we believe are unnecessary.

**Required and Expanded Use of Emphasis Paragraphs**

We do not believe that including mandatory emphasis paragraphs improves the understanding of the financial statements. As mentioned above, investors might confuse emphasis discussions as potential issues with the financial statements. Therefore, extensive investor education may be required to prevent any such confusion. We also believe that the responsibility of determining which areas of the financial statements are important to the readers should not be that of the auditors; instead, that responsibility should remain with management. Finally, PCAOB standards and guides already provide detailed descriptions of how auditors should deal with matters such as management's estimates and judgments. We believe that the investor community understands and has knowledge that all the auditors follow such guidance while performing the audit. Therefore, we do not feel that disclosing these procedures is helpful to the investor community or adds any additional benefit to making investment decisions.

**Auditor Assurance on Other Information Outside of the Financial Statements**

We believe that requiring auditors to provide assurance on information outside of the financial statements is not appropriate and that such assurances would be cost prohibitive. For example, we believe that management, not the auditor, is the most competent authority to provide a qualitative discussion in the MD&A on key changes as they are deeply involved in the day-to-day running of the business. Similarly, requiring auditors to provide meaningful assurance on non-GAAP information would be cumbersome as there are no set standards to govern its form or composition. Most of the non-GAAP information provided is specific and unique to each company. This information is based on how management views its business and it would be unrealistic to expect a uniform set of audit procedures to assist in providing any positive assurance on the adequacy or content of non-GAAP information. Providing assurances on MD&A or non-GAAP information would entail extensive procedures by the auditors and the costs would certainly outweigh the benefits.

**Clarification of the Standard Auditor's Report**

We believe that the current auditor's report provides adequate information about each company's financial statements. We do not believe that the audit report is the appropriate medium to educate the investor community of the audit process, risks, and independence issues that exist in any audit situation. Such education, including clear and concise summaries of the various PCAOB standards, could be presented generally through various other mediums, such as pamphlets from the PCAOB.

Therefore, we request retaining the current format of the auditor's report as an adequate and complete representation of the auditor's opinion on the financial statements. We believe the appropriate approach to improve the quality of the audits performed on the financial statements by the audit firms should be through the mechanism of the Board continuing to carry out effective reviews and providing suggestions to improve audit procedures and disclosures by the company in the financial statements.

We would like to refrain from answering specific questions mentioned in the concept release, but hope that the above responses communicate our concerns. We request you to strongly consider these thoughts and resist making any changes to the auditor's report.

Sincerely,

Brian M. Beattie

**PCAOB Rulemaking Docket Matter No. 34: Concept release on possible revisions to PCAOB standards related to reports on audited financial statements**

Dear Mr. Seymour:

Tesoro Corporation is pleased to submit comments on the Public Company Accounting Oversight Board's (PCAOB or the Board) concept release on possible revisions to PCAOB standards related to reports on audited financial statements (the Concept Release).

Tesoro Corporation ("Tesoro") is one of the largest independent petroleum refiners and marketers in the United States. We primarily manufacture and sell transportation fuels. We own and operate seven refineries in the western United States that refine crude oil and other feedstocks into transportation fuels, such as gasoline, gasoline blendstocks, jet fuel and diesel fuel, as well as other products, including heavy fuel oils, liquefied petroleum gas, petroleum coke and asphalt.

We support the Board's undertaking, and believe that certain, specific, objective changes could provide additional useful information to investors and other financial statement users; however the majority of options noted in the Concept Release are more likely to have negative consequences for the overall corporate governance structure. This letter provides our overall views of selected issues from the Concept Release including:

- Our belief that the auditor's role should not be expanded to incorporate any subjective commentary about the Company in any form, including an Auditor's Discussion and Analysis (AD&A);
- Our belief that the auditor's roles and report should not be expanded to include information outside of the financial statements; and
- Our belief that the current "pass/fail" audit opinion should be retained and should include information within the auditors' report that would clarify certain procedures already performed by auditors.

**Auditor's Discussion and Analysis (AD&A)**

*We do not believe that the auditor's role should be expanded to incorporate any subjective commentary about the Company in any form, including an Auditor's Discussion and Analysis (AD&A).*

The addition of an AD&A is clearly the most unsettling alternative noted in the Concept Release. First, this requirement for the auditor to provide subjective commentary on the company's financial statements would be inconsistent with the principle that management is responsible for preparing the financial statements and would likely have unanticipated repercussions for companies. The current disclosure control processes already require communications between management, the Board of Directors, the Audit Committee and the auditors and communications between these groups have made significant positive progress over the last decade. However, requiring that the topics discussed in such forums become the subject of AD&A will likely cause such open communication with the auditors to become much more restrained and significantly less effective.

There would be a substantial amount of time taken to prepare and review this type of disclosure with the appropriate parties in an already condensed reporting timeline. For example, a company may be ready to file their annual financial statements, but the AD&A section could delay that release. The lack of time to prepare documents could also lead auditors to focus on the preparation and review of the AD&A rather than on the audit of the financial statements. This could decrease overall audit quality.

Due to the subjective nature of matters to be included in AD&A, the information presented by the auditor may not be completely consistent with the information provided by management, which is overseen by the Audit Committee. Reconciling inconsistencies in the different styles and approaches used in Management's Discussion and Analysis ("MD&A") and AD&A could create tension between management, the Board of Directors, the Audit Committee and the auditors. Inconsistencies in the tone and writing styles of different audit partners and different audit firms could bring unintended difficulties in comparing the disclosures of different companies and their auditors. Discussion of "close calls" may bring unwarranted attention and confusion to areas that do not have specific inherent or audit risk. Investors would be left to subjectively decipher the message that the company is sending versus the message that the auditor is sending.

**Information Outside of the Financial Statements**

*We do not believe that the auditor's roles and report should be expanded to include information outside of the financial statements.*

Current PCAOB auditing standards describe the auditor's responsibilities regarding other information included in documents containing the audited financial statements. These responsibilities include reading and considering whether such information or the manner of its presentation is materially inconsistent with the financial statements or represents a material misstatement of fact. We take into consideration auditor comments on both the financial statements and the information outside the financial statements.

Furthermore, within the PCAOB attest standards, there is the option for the auditor to be engaged to attest on MD&A. Few companies engage their auditors to perform this service which indicates that financial statement users have not requested auditor involvement to that extent. If it is believed that such information outside of the financial statements should be subject to audit, it would be more appropriate to require the information to be included within the audited financial statements than to expand the auditor's scope and responsibilities to information outside of the financial statements.

In addition, providing assurance to forward looking statements, such as those contained within MD&A, or certain other non-GAAP information would result in increased time and costs, and may prove difficult unless limited to historical information. The additional potential costs compared to the potential benefits derived do not appear to support this option as the best approach for improving the quality, completeness and reliability of the financial statements and auditor's report.

**Clarification of Language in the Standard Auditor's Report**

*We continue to support the current pass/fail opinion and support adding information to the auditor's report that would clarify certain procedures already performed by auditors.*

Users have consistently noted that a concise conclusion as to whether the financial statements, taken as a whole, are presented fairly in accordance with the applicable financial reporting framework is meaningful information. Therefore, consistent with the Board's outreach and position in the Concept Release, we are supportive of maintaining the pass/fail framework included in the current auditor's report.

We believe there is significant value in using standardized language in the auditor's report. It provides clarity, comparability and simplicity, which provides for a succinct and objective conclusion. This opinion allows for a quick identification as to whether the financial statements comply with GAAP, which is helpful when evaluating a company's financial statements. In addition, the use of consistent, objective language minimizes the risk of investor confusion, which could lead to inefficient efforts by investors to reconcile information provided by the auditor to other information or inappropriate inferences about a company or the audit.

The ability to clarify and explain the auditor's responsibility and role in the audit would serve to enhance the auditor's report and would increase the readers of the financial statements knowledge of the audit process. The suggested areas of clarification are matters that are already being communicated to the Audit Committee and management and should not result in significant increases in time or cost. We support adding new text, or clarifying the existing language in, the following areas of the standard auditor's report:

- Reasonable assurance – the report should clarify that reasonable assurance represents a high level of assurance, but it is not absolute and that an audit conducted in accordance with PCAOB standards may not always detect a material misstatement;

- Auditor's responsibility for fraud – the report should clarify that the auditor's responsibility is to plan and perform the audit to provide reasonable assurance about whether the financial statements, taken as a whole, are free of material misstatement, whether caused by error or fraud;

- Auditor's responsibility for financial statement disclosures – the report should explicitly state that the footnotes are an integral part of the financial statements, are equally subject to audit procedures and are covered by the auditor's report;

- Management's responsibility for the preparation of the financial statements – the report should provide an expanded discussion covering management's responsibilities for the financial statements and other information provided to users of the financial statements;

- Auditor's responsibility for information outside of the financial statements – the report should describe the auditor's responsibility to read certain other information in documents containing the audited financial statements for inconsistencies with the audited financial statements; and

- Audit committee responsibilities – the auditor's report should provide an expanded discussion about the audit committee's responsibilities.

Clearly, investors are the primary users of financial statements and providing them the appropriate information to make sound investments is fundamental to our financial markets. It is imperative, however, that we provide them with clear, accurate and timely information rather than simply additional information. We believe that the majority of proposals in the Concept Release would hinder the ultimate goal of the preparation of financial statements by leading to mixed messages within the financial statements as well as a delay in the timeliness of providing that information. We would be pleased to discuss our comments with members of the Public Company Accounting Oversight Board or its staff.

Sincerely,

Arlen O. Glenewinkel
Vice President and Controller

Re: PCAOB Rulemaking Docket Matter No. 34

Ladies and Gentlemen:

**Introductory Comments**

The AES Corporation (NYSE:AES) is a Fortune 200 global power company with generation and distribution businesses. Through our diverse portfolio of thermal and renewable fuel sources, we provide affordable and sustainable energy to 28 countries. Our workforce of 29,000 people is committed to operational excellence and meeting the world's changing power needs. Our 2010 revenue was $17 billion and we own and manage $41 billion in total assets.

Following the passage of the Sarbanes Oxley Act of 2002, AES went through significant changes and efforts to improve our controls, processes and reporting to investors. Management and our Board have been very supportive of the required changes and have fostered an environment which strongly supports and reinforces the importance of the auditor's role.

The recent financial crisis in the United States may lead some to suggest additional regulatory action is required around the conduct of audits and disclosures in financial statements. However, there have been no regulatory findings or enforcement actions that would suggest that the financial crisis could have been avoided by expanded audit scope and disclosure. It would be unreasonable to expect audit firms to have the ability to tame market exuberance or to predict market bubbles. This goes well beyond the role of an audit. To attempt to protect investors from any negative market action or reaction is not reasonable, realistic or cost effective.

However, we support efforts which will strengthen the quality of management reporting and the conduct of audits. We feel strongly that any future changes to the financial reporting requirements must be supported by improvements that have a tangible value to investors and users of the financial statements in order to justify the additional cost and other burdens required to provide them.

In addition we believe that any new information that would be provided to an investor as contemplated by some of the suggestions made by the PCAOB should not result in conflicting messages that would lead to investor confusion. We also feel it is in the investors' best interests for the roles of management, the Audit Committee and the auditor to be clearly defined and we are concerned that the proposed changes would blur those roles. We agree with the Center for Audit Quality that auditors should not be the original source of disclosure about the entity; management's responsibility should be preserved in this regard.

We appreciate the opportunity to provide a response to the Concept Release and provide the following responses to selected questions, which we hope you find helpful.

**Responses to Selected Questions**

1. **Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.**
   a. **Should the Board undertake a standard-setting initiative to consider improvements to the auditor's report model? Why or why not?**
   b. **In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?**
   c. **Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?**

**Company's Response**
As discussed in the Concept Release, the auditor's role and report have evolved over time in response to investor needs in changing economic and legal environments. The most recent change was in response to instances of significant accounting fraud and inadequate audit detection which resulted in the passage of the Sarbanes-Oxley Act of 2002 ("the Act"). The Act drove a new form of governance within companies, a stronger focus on internal controls, a heightened focus on the accuracy of financial reporting, and an increased prominence in the role of the Audit Committee, which was charged with oversight of the auditor and the company's financial reporting. It also established the PCAOB and drove a significant expansion in the role and conduct of the auditor by requiring them to report on internal controls, expand disclosure and communication with the Audit Committee, and develop a more independent relationship with management. Our company has spent many millions in the implementation of the Act on processes, systems, people and increased audit fees. Many of these costs are ongoing.

Although the language in the auditor's opinion on the financial statements did not change, the conduct of the auditor has changed and expanded significantly. So has the quality and reliability of companies' financial statements, governance processes, and control systems. In evaluating a response to the question these changes should be put into context. In our opinion, expanding the mandated role of the auditor to require auditor's discussion and analysis is neither warranted nor appropriate. Expansion of the auditors' role as being considered by this Concept Release would effectively put the auditors in the role of management, significantly minimize the responsibility of the

Audit Committee and shift additional risk to the audit firms which would translate into significantly increased costs for companies and their shareholders.

We do however, support changes to the auditor's report that would provide additional clarity on the existing roles and responsibilities of the auditor, the Audit Committee and management, and that expand on the definition of certain concepts and terms. This could include the terms such as "reasonable assurance", "material misstatement", and "materiality". We believe additional clarity would further educate investors which would help minimize the expectation gap.

2. **The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach is sometimes referred to as a "pass/fail model."**
    a. **Should the auditor's report retain the pass/fail model? If so, why?**
    b. **If not, what changes are needed?**
    c. **If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.**

**Company's Response**
We believe the auditor's report should retain the pass/fail model. The complexities of accounting standards require many judgments which a company must evaluate and consider in formulating its position. The auditor's role is to challenge those judgments and ultimately determine if management had a reasonable basis for their conclusion as well as to determine whether, in their opinion, the company's financial statements are fairly presented in accordance with US GAAP. If the auditor does not agree there is a reasonable basis for the company's conclusion, the auditor's report is modified to note the affect of the issue on the auditor's opinion on the financial statements taken as a whole. When these situations arise, the company, the auditor and the Audit Committee actively engage in discussions to work through the issues and typically reconcile and remediate views such that modifications to the report are not needed. However, ultimately the auditor has final say in the audit report. The auditor either agrees that the judgments made by management are reasonable and that the accounting records are accurate or not. We believe that the auditor's conclusion as to whether the financial statements, taken as a whole, are presented in accordance with US GAAP is of significant value to investors. An approach other than the pass/fail model would put the investor in the position of evaluating judgments made without having the benefit of the context, facts and circumstances due to the significant dialogue that exists between the auditor, Audit Committee and the company. Investors do not have the benefit of that dialogue and no opportunity to resolve questions directly with the auditors; doing so would further increase the complexity of disclosure and communication requirements. Arguably, as more fully explained in our response to the other alternatives, we believe that moving away from the pass/fail model of auditor report has the potential to dilute

the value the auditor's report and the financial statements rather than enhance it to investors.

3. **Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g. management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.**

**Company's Response**
We believe it is management's responsibility and that management is most appropriate to provide additional information regarding the company's financial statements to financial statement users. The Audit Committee's role is to assure that the proper governance is in place to allow timely and accurate financial reporting. The auditor's role is to conduct procedures to allow them to provide assurance that the financial statements are fairly represented, including the adequacy and appropriateness of disclosures. But, it is only management, who has the best understanding of the business and what drivers impact the business, that can best anticipate and satisfy the informational needs of the investors and other financial statement users.

4. **Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?**

**Company's Response**
We do not believe changes should be made to the auditor's report on internal control over financial reporting. However, we would support changes to the report on internal control over financial reporting that would provide additional clarity on the role and responsibilities of the auditor, the Audit Committee and management, and that expand on the definition of certain concepts and terms.

5. **Should the Board consider an AD&A as an alternative for providing additional information on the auditor's report?**
   a. **If you support an AD&A as an alternative, provide an explanation as to why.**
   b. **Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?**
   c. **What types of information in an AD&A would be most relevant and useful in making investment decisions. How would such information be used?**
   d. **If you do not support an AD&A as an alternative, explain why.**

**e. Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?**

**Company's Response**
No. We do not believe the Board should consider an AD&A or other alternatives to an AD&A for providing additional information in the auditor's report. We believe it exceeds the role and scope of an audit and would not be appropriate for the auditor to provide a narrative format of his or her views regarding significant matters, management's judgments and estimates, accounting policies and practices, and difficult or contentious issues about the audit.

Investors expect and SEC regulations already require management to disclose information about significant transactions, critical accounting policies and estimates in SEC periodic reports. It would place the auditor in the role of management who should be properly disclosing those matters in MD&A and the notes to the financial statements or otherwise resolving them with the auditor. It is also the responsibility of the auditor to communicate and provide input to the Audit Committee on these items so they can independently assess if management has provided sufficient and proper disclosure.

We do not believe that having the auditor provide separate information about the audit, audit procedures and results, and auditor independence would be useful to investors. We believe that this would undermine the credibility and usefulness of the auditor's report on the financial statements. Investors would be put in the position of interpreting the information without full context or understanding of all the facts. Auditors are hired to provide an independent opinion on the company's financial statements and ultimately make the final judgment. This responsibility should not be diluted or opened up for second guessing.

In addition, the level of auditor effort that would be required for the auditors to draft, discuss and review with management would be excessive and cost prohibitive with questionable benefits to be derived. It would put further pressure on already tight filing timelines. Because of the additional risk it would place on the auditor, they will respond by incurring more time leading to more fees which may produce results of questionable value to investors.

**9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?**

**Company's Response**
This question suggests that companies' current disclosures are not adequate. If so, additional disclosures should be required. Management has the responsibility to

provide the information that satisfies US GAAP disclosure requirements, while the auditors have the responsibility to evaluate that the financial statements contain sufficient disclosure in accordance with US GAAP disclosure requirements. Outside of the financial statements, management has the responsibility to provide information as required by the SEC which the auditors review to make sure there are no material misstatements of fact or inconsistencies with the financial statements.

We do not believe that there would be benefit from changing the respective roles of the FASB, SEC, management or the auditors in determining and providing required disclosures. Further, the expansion of the auditor's responsibilities into areas outside the fair presentation of the financial statements could be time consuming and costly as they would need to get more involved in the operations of the business and make judgments about decisions being made by management. Investors expect management with the requisite knowledge of the business and the factors influencing the business to provide a meaningful discussion of these risks. For the reasons outlined in the response to question 5, we do not believe auditor's responsibilities should be extended beyond those currently in place.

**10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?**

**Company's Response**
Given the broad proposed scope of an AD&A, the risk to the auditor will increase significantly. They will need to manage this risk as effectively as possible, which will lead to Audit Firm guidelines and strict quality control that will naturally lead to a more boilerplate "checklist" approach, which seems to conflict with the spirit of the suggestion. In addition, as this occurs the perceived value to the investor will diminish, however, the costs (time and money) to comply will continue.

Investors rely upon consistency of financial terms and calculated metrics in order to prepare accurate analysis and recommendations. If auditor discussions and disclosures lack common terms and metrics, investors will need to be provided an avenue to permit questioning of auditors. Investors do not have the benefit of the significant dialogue that exists between the auditor, Audit Committee and the company and no opportunity to resolve questions directly with the auditors. This will require yet another process to further complicate, and potentially confuse, communication with investors. Moving away from standards has the potential to dilute the value of the auditor's report and the financial statements rather than enhance it to investors.

**11. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?**

**Company's Response**
Although the potential exists for an AD&A to present inconsistent or competing information between the auditor and management, we expect most companies would be

very diligent to discuss and resolve such differences prior to issuing the financial statements. A company's goal is to provide financial statements that are fairly presented in accordance with US GAAP and that comply with SEC regulations. Any suggestion to the contrary by the auditors would need to be resolved; otherwise the credibility of the financial statements would be in question. The time and effort associated with reconciling the disclosure could be extensive for little net benefit. Since investors would not have access to this reconciliation process, and since the end result of these efforts would be auditor disclosures that were consistent with those provided by the company, the value of an AD&A would be diminished and lack value to investors.

**14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?**

**a. If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.**

**b. If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.**

**Company's Response**

Although we do not believe it is necessary, we do not oppose the inclusion of emphasis paragraphs in the auditor's report to highlight the most significant matters in the financial statements with a reference to where these items are disclosed in the financial statements. However, we do not believe this discussion should deviate or expand on the company's disclosure. It should be a very objective statement serving to highlight matters of significance to a reader. If the auditor does not consider the company's disclosure adequate, it should be resolved with management and, if need be, the Audit Committee prior to the release of the financial statements.

**17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?**

**Company's Response**

For the reasons discussed in response to question 10, it will be difficult to eliminate some level of boilerplate. Audit Firms will need to manage the additional risk associated with determining which items should be considered for emphasis which could lead to an emphasis paragraph on any item that could be of potential interest to an investor. As a result, there will be a risk of the emphasis paragraphs being over used leading to diminished value.

**18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?**

**Company's Response**

The potential downside to this requirement is that due to the additional risk to the auditor from being required to make this judgment, the areas of emphasis could be lengthy and voluminous. In that case, the benefit to investors' of this section to the auditor's report would diminish as it becomes a laundry list of every disclosure that could have an interest to any reader of the financial statements.

**19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?**

- **If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.**
- **On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.**
- **What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?**
- **If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?**
- **Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?**
- **Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?**
- **If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.**

**Company's Response**

We recommend a cost and benefit analysis to determine if expanding the auditor's report to provide assurance on other information outside the financial statements would be warranted. Requiring the auditor to provide such assurance is not objectionable however it will result in higher audit fees for companies with no clear "return". To justify the cost there would need to be evidence that the lack of auditor assurance has resulted in misleading information being provided by companies that has led to shareholder losses. Absent such a correlation it would be difficult to justify adding this cost, especially considering auditors already review management's disclosures outside the financial statements as part of their audit process for any inconsistencies with the underlying financial statements.

The other challenge would be the highly judgmental nature of discussions outside of the financial statements. By design, many of these sections are intended to provide management's view of the company and its operations. If assurance were to be required, the SEC would need to provide much more prescriptive guidance on its content to provide audit firms a basis to determine if the company had correctly applied the standard. We believe this could lead to less meaningful disclosure for investors and more boilerplate language.

Finally, in addition to the cost element of expanding the areas of audit assurance, the time element would also be expanded. Filing deadlines are already very tight and adding another step to the process could result in delayed filings.

**21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:**

- **Reasonable assurance**
- **Auditor's responsibility for fraud**
- **Auditor's responsibility for financial statement disclosures**
- **Management's responsibility for the preparation of financial statements**
- **Auditor independence**

**a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?**

**b. Would these potential clarifications serve to enhance the auditor' report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.**

**c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?**

**d. What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?**

**Company's Response**

Any steps that can be taken to further educate and clarify the responsibilities of management and the auditor would be positive changes. We believe most investors do not read auditor's reports today other than to verify there is an unqualified opinion and that no matters of emphasis are noted. As pointed out in the Concept Release, there has not been a change to the auditor's report for a long period of time, so investors may not be as compelled to read it. We believe additional clarity would further educate investors which would help minimize the expectation gap.

**22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?**

**Company's Response**

The only shortcoming of providing clarifications of the language is its benefits may be short-lived when investors again begin to view the report as boilerplate. However, the ongoing educational benefit for new investors could support its inclusion.

**23. This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is appropriate and why?**

**Company's Response**

We do not believe the first alternative to require the auditor to provide AD&A disclosure is appropriate or useful to investors. If additional information is needed by investors to make informed decisions, management should be providing this information. The second alternative, expanded use of emphasis paragraphs would be of questionable value to investors. Due to the increased audit risk, the use of emphasis paragraphs could very easily expand to include a laundry list of topics resulting in limited value to investors. For the third alternative it would be necessary to demonstrate a strong benefit to support the cost associated with the requirement for the auditor to report on information outside the financial statements. It would also require more prescriptive guidance from the SEC on the content of the information to allow auditors to determine if the company has correctly applied the standard. However, the fourth alternative to clarify certain language in the auditor's report would be acceptable and could be helpful.

**27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate this perception?**

**Company's Response**
We believe the risk that a financial statement user would perceive any of these alternatives as providing a qualified or piecemeal opinion as low. With proper language and education programs this risk should be easily mitigated.

**29. What affect would the various alternatives have on audit quality? What is the basis for your view?**

**Company's Response**
We believe audit quality under alternative four would remain high but would not drive significant changes to the audit approach. Further clarification would be for the benefit of the financial statement users to better understand the responsibilities of management and the auditors, and to better mange their expectations about the scope and limitations of audits.

Audit quality under the other three alternatives would put auditors under significant strain that could reduce their effectiveness. Assuming the timing for filing financial statements stays the same, auditors would be required to get significantly more work done in a limited time period. This will lead to larger audit teams which will require greater coordination and management. It would also require greater effort from companies accounting staff to provide the support and respond to the inquiries of the auditors.

**32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial**

**statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?**

**Company's Response**
As discussed previously, expansion of the auditor's role and methods of communication could lead to a blurring of the lines between the roles of management, the Audit Committee and the auditor. Any steps taken to enhance a financial statement users understanding of each of the respective roles would be beneficial. However, to have the auditor take responsibility for communicating information to financial statement users in addition to management could result in conflicting information that the financial statement user is not in a position to evaluate correctly. More likely, communications made by the auditor would conform to management's discussion yielding no benefit to the financial statement user, but it would drive increased costs to shareholders.

**Closing Comments**
The PCAOB is to be commended for continuing to evaluate how to assure that investors and other financial statement users are being best served by the audit function. It is critical however that any such considerations be mindful of the purpose of an audit as well as the respective roles and responsibilities of management, the Audit Committee and the auditor. There also needs to be consideration of the costs and benefits to be achieved from any changes. Evidence should be collected and evaluated to determine if there are clear tangible benefits investors and other financial statement users would receive and if it would allow them to make better decisions about investments and a company's performance. Current accounting and SEC standards require extensive disclosures with a clear outlook to expand disclosures even further with current convergence and other projects. If such disclosures are not providing the information investors need to evaluate a company's performance, it is the role of the investment community to prompt management to provide additional disclosures, rather than the PCAOB require auditors to add their own disclosures. It is management's responsibility to provide investors and other financial statement users with the appropriate information in accordance with generally accepted accounting principles and SEC requirements and audit firms should continue to provide an independent conclusion as to the accuracy and completeness of such disclosures.

The auditor's professional responsibilities and management's conduct have changed significantly since the introduction of the Act and the establishment of the PCAOB. These changes were in response to significant shortcomings that existed in the conduct of management and auditors over accounting and financial reporting. Such changes have led to tangible enhancements in the entire process from which investors and other financial statement users should have benefited. Many of the changes being suggested in the Concept Release would drive another "seismic shift" that could be on the scale of the Act, but without the same level of benefits. We do not believe this would be in the best interest of users of the financial statements and especially not in the best interest of shareholders.

We appreciate the opportunity to provide comments on certain elements of the Concept Release and we look forward to your further deliberations.

Respectfully yours,

The AES Corporation

Re: PCAOB Release No. 2011-003; Rulemaking Docket Matter No. 034; Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards

Dear Mr. Baumann:

This letter is submitted on behalf of the Financial Reporting Committee and the Securities Regulation Committee of The Association of the Bar of the City of New York in response to Release No. 2011-003, dated June 21, 2011 (the "Release"), of the Public Company Accounting Oversight Board (the "Board" or "PCAOB"). The Release solicits public comment on the potential direction of a proposed standard-setting project on the content and form of reports on audited financial statements.

Our Committees are composed of lawyers with diverse perspectives on financial reporting and securities issues, including members of law firms, counsel to corporations, investment banks and investors and academics. We regularly comment on regulatory initiatives in the area of financial reporting (although our comment letters do not necessarily reflect the individual views of all members of the Committee).

We recognize the concerns about the audit report that have led the Board to issue the Release, and we believe that some modifications in audit reports may be desirable. However, we believe there are several reasons why the Board should proceed cautiously.

- It is the responsibility of the issuer, and not its auditors, to provide disclosure to investors. Any requirement that auditors make substantive public disclosures about the issuer will likely adversely affect the auditing process, and the related financial reporting process, by inhibiting candid, confidential discussion and exchange among the auditor, the issuer and the audit committee. The financial reporting process and related corporate governance procedures have improved, partly as a result of the Sarbanes-Oxley Act of 2002 and other reforms, and this "chilling" effect could undermine some of that progress to the detriment of reporting and auditing quality.

- Some of the perceived shortcomings to which the Release draws attention are not attributable primarily to the audit reporting format. They arise from features of SEC disclosure rules, generally accepted accounting principles, corporate governance, internal controls or the reporting practices of issuers. If there are weaknesses in those areas, they should be addressed by institutions other than the Board.

- Some of the ideas in the Release would require auditors to cover matters they do not now cover. The Board is properly concerned with how auditors report, but the matters on which they report are determined by legislation and regulations. The Board should not pursue the suggestions in the Release that would in effect extend or expand the subjects for which auditor reporting is required.

- The specific procedures performed during the course of a particular audit, and the information gathered as a result, are not designed for public disclosure and do not readily lend themselves to it. They are complex and technical, and serve to support a delicate professional judgment. We are concerned that any potential benefit to investors from disclosure about the audit process is outweighed by the potential adverse effects on the auditing process.

- It will be very easy for new disclosure requirements to devolve into boilerplate – the repetition of formulaic disclosure, with little variation from one issuer to the next, and with little benefit for investors.

- If the Board pursues the suggestions raised in the Release, it should carefully consider potential implications including, in addition to those mentioned above, additional cost for issuers, implications for already tight reporting deadlines, potential delays in initial public offerings and increased liability risks for issuers and auditors.

***Auditor's Discussion and Analysis***

We do not believe the Board should pursue the idea of an Auditor's Discussion and Analysis ("AD&A"). As sketched in the Release, the AD&A would have two parts:

"Information about the Company's Financial Statements" and "Information about the Audit." In our opinion, auditors should not provide disclosure on either topic.

- The disclosure concerning the issuer's financial statements would change the auditor's role from reviewing the issuer's financial reporting to providing substantive disclosures to investors about the issuer. As discussed above, we believe this is inappropriate. Effective financial reporting requires a complex and open discussion among the auditor, the issuer and the audit committee, which will change in character if the auditor is required to make a public report. In all likelihood, auditor and issuer will provide closely similar disclosures, because both will see serious risks if their disclosures diverge. The issuer will likely seek to limit its disclosures to statements the auditor is comfortable making, too, which will ultimately provide investors with weaker and less useful disclosure.

- We believe the disclosure concerning the audit will be of limited use to investors. As noted above, auditing involves complex professional judgments. It would be very difficult either to summarize them or to describe them fully, and neither approach would be likely to provide sufficiently useful information for investors to warrant the potential adverse effect on the financial reporting process.

***Required and Expanded Use of Emphasis Paragraphs***

The required and expanded use of emphasis paragraphs could improve the auditor's report, and it merits further consideration, although the Release does not provide enough specifics to comment in detail. As the proposal develops, the Board should consider two concerns. First, the Board should not mandate emphasis paragraphs without providing clear standards for auditors to follow. Without standards, auditors cannot perform their review in an objective manner. Second, the Board should address the risk that mandatory emphasis paragraphs will lend themselves to the development of additional boilerplate. Such rote language could make the auditor's report more confusing and less useful for financial statement users.

***Auditor Assurance on Other Information Outside the Financial Statements***

We do not believe the Board should pursue the idea of requiring auditor assurance covering information outside the financial statements. It should in any case fall to the SEC, not to the Board, to determine when auditor assurance is required, but we would strongly oppose such a requirement.

- With respect to material outside of periodic reports (such as earnings releases), the idea of regulating its content presents much larger issues, and we question whether there is a need for such an initiative.

- With respect to material in periodic reports, particularly MD&A, we believe imposing auditor assurance would be counterproductive. Crafting meaningful MD&A requires issuers to evaluate extensive information from outside the financial statements and the financial reporting process, to develop a nuanced analysis and to provide analytical, sometimes prospective information. The auditor does not have the same information, obligations or capabilities. Requiring auditor assurance would drive issuers to make this disclosure auditable, and potentially narrower and less useful to users – for example, by limiting forward-looking information, discussion of trends and uncertainties or disclosure about corporate strategy. There is, moreover, no time within the current periodic reporting framework for an additional process of auditor assurance.

***Clarification of the Standard Auditor's Report***

The idea of clarifying the standard report is a welcome suggestion. The present practice is not particularly effective to communicate the nature of the auditor's role, the significance of independence, the risks of the process or other matters, and it is possible this contributes to the existence of an "expectations gap." We believe the Board could implement meaningful changes that would clarify the report and improve investor understanding of the audit, the auditors and the report.

* * * * *

We appreciate the opportunity to provide our comments on the Release, and we believe the public would be well served if the PCAOB gave additional consideration to some elements of the proposals, as described in this letter.

We would be pleased to respond to any inquiries regarding this letter or our views on the Release more generally. Please contact Nicolas Grabar at (212) 225-2414 or Robert Buckholz at (212) 558-3876.

Very truly yours,

The Financial Reporting Committee and the Securities Regulation Committee of the Association of the Bar of the City of New York

PCAOB Rulemaking Docket Matter No. 34

Board:

The Hertz Corporation (Hertz), a subsidiary of Hertz Global Holdings, Inc. (NYSE: HTZ), operates the largest airport general use car rental brand, from approximately 8,000 locations in approximately 150 countries worldwide. Our Hertz brand name is one of the most recognized in the world, signifying leadership in quality rental services and products. Hertz operates both corporate and licensee locations in cities and airports in North America, Europe, Latin America, Australia, Asia and New Zealand. In addition, we have licensee locations in cities and airports in Africa and the Middle East. We and our predecessors have been in the car rental business since 1918 and in the equipment rental business since 1965. Product and service initiatives such as Hertz #1 Club Gold®, NeverLost® customized, onboard navigation systems, SIRIUS Satellite Radio, and unique cars and SUVs offered through the company's Adrenaline and Green Traveler Collections, set Hertz apart from the competition. In 2008, the Company entered the global car sharing market in London, New York City and Paris. Hertz also operates one of the world's largest equipment rental businesses, Hertz Equipment Rental Corporation, offering a diverse line of equipment, including tools and supplies, as well as new and used equipment for sale, to customers ranging from major industrial companies to local contractors and consumers from approximately 320 branches in the United States, Canada, China, France, Spain, Italy and Saudi Arabia.

We support the Board's efforts to develop high-quality standards that improve the transparency, usefulness and credibility of financial reporting. We appreciate the opportunity to comment on the Public Company Accounting Oversight Boards\'s (Board or PCAOB) "Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards" and respectfully submit the following thoughts/concerns regarding the Concept Release:

Questions

1. **Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.**
   a. **Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?**
   b. **In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?**
   c. **Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?**

Your release states that a "majority of survey respondents noted that the independent auditor's report needed to provide more specific information about how the auditor reaches his or her opinion on whether the company has fairly presented its financial statements in accordance with the required financial reporting standards". We think that, rather than undertake wholesale changes to the auditor's report, increased investor education efforts with respect to that group of respondents on what an audit entails would address these concerns. Your outreach group was said to be comprised of preparers, auditors, audit committee members, regulators and standard-setters, and representatives of academia. The investors group included money managers, asset management funds, pension funds, wealth management funds, and organizations that represented institutional investors. If readers of financial statements had a better understanding of the amount of work auditors must perform before they can issue their current audit opinion (planning, discussions with management, understanding of controls and the company's operating environment, compliance testing of those controls, substantive testing of transactions and account balances) they may realize that a change to the auditor's reporting is not necessary. Perhaps the AICPA, or the Board itself, should consider releasing some educational information, or conduct seminars, to explain what investors need to know about the conduct of an audit. This may relieve some of the perceived need for changes to the auditor's report.

As far as expanding the auditor's role, we believe that a comprehensive cost/ benefit analysis should be considered prior to pursuing.

2. **The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the**

**applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."**

a. **Should the auditor's report retain the pass/fail model? If so, why?**
b. **If not, why not, and what changes are needed?**
c. **If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.**

We believe that the pass/fail model should be retained. Either a company is presenting its financial statements fairly or they are not, which is currently the objective of the audit firm and its procedures to assess. It is the auditor's ultimate responsibility to obtain sufficient appropriate audit evidence to support the audit opinion. There is no such thing as "almost fairly", or fairly with an explanatory paragraph. Either the audit firm satisfies itself or it does not. We feel that any modification of this principle weakens the audit report.

3. **Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.**

Any, and all, information about a company's financial statements should be provided by the company. Auditors should not be placed in the position of preparing such information. They have been entrusted with the responsibility of opining on the financial statements. If they were now directed to prepare/ provide initial information, who would check *their* work? The Securities and Exchange Commission (SEC) has set the standards for the information that they expect public companies to report. If any additional information is required, the SEC has full authority to mandate companies to provide it. We see no reason for audit firms to assume preparer's roles.

4. **Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?**

We do not believe any changes are necessary.

5. **Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?**
   a. **If you support an AD&A as an alternative, provide an explanation as to why.**
   b. **Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?**
   c. **Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?**

d. **If you do not support an AD&A as an alternative, explain why.**

e. **Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both?**

**What are they?**

We do not support the idea of auditors providing additional information pertaining to a company's financial statements. The Hertz Global Holdings 2010 financial statements required 56 pages in our Form 10-K, and included all of the information the company (in consultation with its auditors) believed to be necessary to disclose in response to Regulation S-X. If investors do not believe this information is sufficient for them to make informed investment decisions, investors should request the SEC consider modifications to Regulation S-X.

Auditors should not be deciding what information an investor needs to make a decision. Their responsibility is to judge whether the financial statements are presented fairly in accordance with U.S. generally accepted accounting principles.

You suggest that an AD&A could give "the auditor greater leverage to effect change and enhance management disclosure in the financial statements". What greater leverage do they need than the ability to give a qualified opinion? If the auditor encountered difficult or contentious issues with management, they can take the matter to the Audit Committee to satisfy themselves. If they were satisfied, no further information is necessary.

We also have concerns about whether readers would have the appropriate context for the information. Auditor communications are typically prepared with the expectation of a dialogue with the Audit Committee/ management in which additional context and perspectives would be communicated. Readers would not be privy to that dialogue.

6. **What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?**

There should not be any.

Any information of this sort (audit risk, audit procedures, independence) will become boilerplate after a handful of audit cycles. Management already discloses Critical Accounting Policies and Estimates in their Form 10-K. An educated investor can surmise that these are the audit areas of most concern. The current opinion language already provides a high level explanation of what an audit entails. It is unlikely that any reader would spend much time perusing a detailed listing of audit procedures. An audit firm must assess that they are independent before accepting an audit engagement. We think it unlikely that any investor would gain comfort by having independence stated in a report.

7. **What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e.,**

**management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?**

If the auditor has already opined that the financial statements are presented fairly, then why should any comment about management's judgment and estimates (already disclosed in the filing) be required in an AD&A? This would be superfluous information that serves no purpose other than undermining the audit report. All "close calls" should have been satisfied prior to the auditor issuing their report. Presumably, the audit team shared their views with the Audit Committee, and the Audit Committee has gotten comfortable to approve the filing. We assume investors are not suggesting that Audit Committees are not fulfilling their responsibility.

**8. Should a standard format be required for an AD&A? Why or why not?**

As noted above, an AD&A is not necessary.

**9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?**

In 2010, management at Hertz devoted 12 pages of our Form 10-K to a discussion of the material risk factors impacting the company's business. Among others, the risks identified and described in detail, included the following:

- Competition
- seasonality of business
- tax liabilities due to downsizing of fleet
- declines in the value of fleet
- failure of manufacturers to fulfill obligations
- implementation of strategy to further reduce operating expenses
- impairment of goodwill
- increases in fuel prices
- safety recalls
- reliance on communications networks and centralized technology systems
- maintenance of favorable brand recognition
- loss of the services of senior management team members
- insurance, and
- environmental

As you can see, our discussion is very wide-ranging. Our audit team reads our entire Form 10-K and comments on non-financial disclosures when they believe it is appropriate to do so. In addition, our audit team provides "comfort" on what we present. We engage in dialogue with them as to additional items they feel should be included. We do not feel that any value would be added by having them undertake a separate discussion.

**10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?**

It likely would not be avoided, which is a major reason why we believe an AD&A would be of limited value.

**11. What are the potential benefits and shortcomings of implementing an AD&A?**

See our earlier comments.

**12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?**

In our view, this would be confusing to investors. Inconsistent or competing information where potentially neither is incorrect does not serve investors. The inevitable result would be the creation of a morass possible pitting auditors against their clients and shareholders.

**13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?**

While the types of matters described could be relevant and useful, it appears to us that investors are looking for a shortcut in reading the information presented. If the amount of information presented is too overwhelming, investors should solicit the SEC to reduce reporting requirements or request that management emphasize certain of the information that is already presented.

**14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?**

- **a. If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.**
- **b. If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.**

We do not support the idea of an emphasis paragraph. This would place the burden on auditors for guessing the areas of emphasis for a broad spectrum of investors. Management is already tasked with drafting its reports with an emphasis on the most important information, therefore we believe an investor should be able to read the entire document and make their own evaluation of what is important to him / her.

**15. What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?**

None.

**16. What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?**

None.

**17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?**

If implemented, the accounting firms will develop language which strives to limit legal exposure. We believe this will inevitably lead to boilerplate.

**18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?**

We see no benefits and, as discussed above, substantial shortcomings, including increased legal risks, time and expense.

**19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?**

a. **If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.**
b. **On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.**
c. **What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?**
d. **If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?**
e. **Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?**
f. **Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?**
g. **If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.**

In our collective experience, auditors do read earnings releases before they are issued. Often, these releases are prior to the completion of the audit. If an auditor were required to implement procedures in order to provide assurance on earnings releases we believe this practice would make the rendering of an opinion or review on traditional SEC filings extraordinarily difficult, or require the issuance of rules delaying them.

As stated, the SEC maintains reporting requirements for MD&A. Throughout the year and through mechanisms such as comment letters, speeches, "Dear CFO letters" and releases, they advise on areas of emphasis they will be focusing on. We would not be opposed to a limited statement in the annual report where auditors include a statement regarding whether or not the information contained in a company's MD&A is not inconsistent with the financial statements.

We do not see value in auditors reporting on non-GAAP information. It is called non-GAAP for a reason. Although the SEC has rules regarding the presentation of non-GAAP information, there are currently no standards governing the composition of this info.

**20. What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?**

If we need auditors to give assurance on information outside the financial statements the implication is that the SEC model is flawed, which we do not believe is the case. The financial statements should include all information that is required to present fairly in accordance with GAAP. The SEC requires all other information not required by GAAP to make the information disclosed not misleading pursuant to Rule 12b-20.

**21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:**

- **Reasonable assurance**
- **Auditor's responsibility for fraud**
- **Auditor's responsibility for financial statement disclosures**
- **Management's responsibility for the preparation of the financial statements**
- **Auditor's responsibility for information outside the financial statements**
- **Auditor independence**
  - **a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?**
  - **b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.**
  - **c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?**
  - **d. What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?**

None of these clarifications is needed. It would merely be more boilerplate stating the existing auditing standards. The complete set of standards is available as a matter of public record, for anyone who is interested. None of these clarifications would have any impact on the work that an auditor performs. It is solely modification of the report.

**22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?**

We see no benefit.

Questions Related to all Alternatives

**23. This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?**

As stated in our reply to question 19, auditor assurance on MD&A, primarily Critical Accounting Policies and Estimates, seems to make the most sense. We believe the information included there is useful to investors and would understand if the Board proposed standards for auditors to give assurance with respect to that disclosure.

**24. Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?**

We do not believe the Board needs to take further action in this area.

**25. What alternatives not mentioned in this concept release should the Board consider?**

We do not believe the Board needs to take further action in this area.

**26. Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?**

No comment.

**27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?**

If any of these alternatives were to proceed further, the auditor's report must be integrated into one comprehensive form. The consequence of not taking this step would lead to piecemeal opinions in our view.

**28. Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?**

As stated earlier, we believe the Board, along with the AICPA, should embark on an education campaign for users of financial statements to convey to the users of the financial statements the auditor's role in the performance of an audit.

**29. What effect would the various alternatives have on audit quality? What is the basis for your view?**

Based on our experiences, none of these suggested report changes would result in meaningful changes to the conduct of an audit. We do believe that it will result in higher billable hours for the accounting firms, but not provide any greater assurance. It is mainly a matter of report structure.

Assuming filing deadlines are not extended, auditors would have an additional workload during a compressed time period and as a result registrants would be pressured to provide information and proposed disclosure at an earlier date. This will place pressure on the controls in place and increase the risk of mistakes. Alternatively, the SEC could extend filing deadlines, but with investors expecting access to information more quickly, we would not advocate extending the filing deadlines.

**30. Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.**

We see no reason for exceptions.

**31. This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.**

**a. Are any of these considerations more important than others? If so, which ones and why?**

**b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?**

**c. Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?**

**d. What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?**

As previously stated, we believe that the proposals suggested here would lead to higher audit fees without any visible benefits to investors. We also believe that some of the proposed changes would lead to the potential for increased legal exposure for the accounting profession. In the end, many of the proposed structural changes to the auditor's report would become additional boilerplate.

**32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?**

This would have to be judged on a company by company basis. We have open dialogue with our auditors and do not envision any change. Another company, with a more contentious relationship with their auditor, may encounter heated discussions or disagreements.

We appreciate the opportunity to comment on the Concept Release.

Respectfully,

Elyse Douglas

Re: Rulemaking Docket Matter No. 34
Concept Release on Possible Revisions to PCAOB
Standards Related to Reports on Audited Financial Statements

Members of the Board:

This letter is submitted on behalf of The Home Depot, Inc. ("The Home Depot," "the Company," or "We") in response to the *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* ("Concept Release"), issued by the Public Company Accounting Oversight Board (the "Board") on June 21, 2011. The Home Depot is the world's largest home improvement specialty retailer, employing more than 300,000 associates. The Company has over 2,200 retail stores in all 50 states, the District of Columbia, Puerto Rico, U.S. Virgin Islands, Guam, 10 Canadian provinces, Mexico, and China. In fiscal year 2010, The Home Depot had sales of $68.0 billion and consolidated net earnings of $3.3 billion. Our stock has been traded on the New York Stock Exchange (NYSE: HD) since 1984 and is included in the Dow Jones industrial average and Standard & Poor's 500 index.

The Home Depot would like to thank the Board for its significant efforts in examining alternatives for increasing the transparency and relevance of the auditor's reporting model to financial statement users. We also appreciate the Board's attention to the viewpoints of all stakeholders on this important issue. However, we believe the Concept Release represents a fundamental change to a central tenet of financial reporting – that the financial statements and related disclosures are the responsibility of management, with the auditor's role being to express an opinion on whether the annual financial statements are fairly presented, in all material respects, in conformity with generally accepted accounting principles ("GAAP"). Such a change overturns the basic structure of the financial reporting system and cannot be done without extensive involvement and action by the Securities and Exchange Commission ("SEC") and the Financial Accounting Standards Board ("FASB"). Furthermore, any benefits of such a change to financial statement users are greatly outweighed by the many costs and the likely confusion that would result. Therefore, our strong belief is that the majority of the suggestions for change presented in the Concept Release should not be adopted by the Board. We explain our position in more detail below, including specific responses to applicable questions posed by the Board in the Concept Release.

Overview

The preparation of our financial information is the result of a rigorous process that involves the dedicated efforts of teams of trained and experienced employees whose responsibilities include designing effective systems and internal controls, collecting and analyzing large amounts of data, researching difficult accounting judgments, and undertaking all of the other necessary steps to prepare clear and accurate financial statements for our shareholders and investor community. A key underpinning of this process is the participation by The Home Depot's financial management team in multiple internal discussions of strategic, operational, legal and accounting issues integral to our business and routine interaction with our vendors, customers, shareholders, advisors and other relevant third parties. Our financial management team (including myself), with oversight by our Chief Executive Officer and Audit Committee, is responsible for the accuracy of our financial reporting, and the CEO and I certify both the annual and quarterly financial information.

As a result, management, with the oversight of and input from the Audit Committee, is in the best position to determine whether our financial disclosures are complete, accurate and provide our investor community with appropriate insight into our business. This role is recognized by the standards for disclosure of financial information adopted by the SEC and the FASB. These standards reflect the fact that the decisions and judgments required to be made under GAAP and related financial disclosures like MD&A can only be made by management based on its day-to-day, in-depth management of the Company's operations.

Our auditor's role is to provide, through the audit and ultimately the audit report, assurance to those who read the financial information that the accompanying financial statements have been fairly presented in accordance with GAAP. Because our auditor's responsibility is to design the audit to provide reasonable assurance that no material misstatements are present in our financial statements, the auditor must have significant knowledge of our affairs. However, the auditor does not have, nor does their role require, the extensive level of understanding and insight that comes from daily involvement at all levels of the business.

Because of the difference in the roles of the auditor and of management, the auditor is not well suited to independently report information about the Company beyond what is required to be disclosed by management under GAAP and SEC regulations. Any proposal requiring the auditor to do so, if adopted, would lead to the auditor reporting at best redundant information to what the Company has reported and potentially conflicting, confusing or misleading information. At the same time, such reporting would add considerable bulk to the Company's filings (at a time when financial statement users are already complaining of information overload) without measurable benefit but with significant additional cost. Furthermore, to enhance investor understanding and comparability between companies, the standard for disclosure should be consistent for all companies. The current auditor reporting model provides this consistency, whereas many of the proposals in the Concept Release would result in considerable subjectivity and lack of comparability.

Detailed Response Concept Release Questions Most Relevant to The Home Depot

*1. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.*

*a. Should the board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?*

Most of the proposals in the Concept Release would change the fundamental roles of Company management and the auditor with respect to financial disclosure, without clear benefits but with significant additional cost. Moreover, such a radical change does not appear to be necessary. If, as reflected in the Concept Release, a primary rationale for such an initiative is to provide users with a better understanding of the audit process and the auditor's report, there are many other, better tools to accomplish this goal. Significant literature designed to address this basic educational concern already exists, and the Board, working with other relevant stakeholders, would be well suited to develop and/or provide an easily accessible repository of additional "plain English" explanations designed to meet this need, to the extent they are not already available. As discussed in more detail below, while we do not particularly object to certain clarifications of the auditor's report, we believe that any potential benefit that may result from wholesale changes to the auditor's reporting model would not outweigh the substantial resulting costs.

*c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?*

In accordance with applicable requirements[1], our auditor already reviews the information in our Forms 10-K and 10-Q outside of the financial statements and considers whether that information, or the way in which we present it, is materially inconsistent with the financial statements or constitutes a material misstatement of fact. Unlike many companies, we include a report from our auditors in our Forms 10-Q with respect to their review. Similarly, our auditor reviews our earnings releases for quantitative accuracy and consistency with our financial results. Our approach is to ensure that our earnings releases are consistent with our financial statements as reported in our Forms 10-K and 10-Q, to avoid creating any confusion for our investor community or raising unnecessary questions about the Company. We do not believe an additional assurance requirement is necessary nor that it would impact the content of our earnings releases. We believe that the current level of review of matters outside of the financial statements is sufficient for our Company and our shareholders, and any additional

[1] AU § 550.04-.06.

requirements would increase audit costs unnecessarily, negatively impacting shareholder value without any improvement in audit quality.

2. *The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."*

   a. *Should the auditor's report retain the pass/fail model? If so, why?*

We believe that the current form of the auditor's report is appropriate and strikes the proper balance of all competing interests. It provides the consistency necessary for better comparability between companies and reflects the appropriate role and expertise of the auditor. What is important is that financial statement users understand the meaning and significance of the language currently used in that report. Any perceived shortcomings in the language of the report are better addressed through proper education of the user community. That being said, as discussed in question 21 below, we would not necessarily object to some of the additional "clarifications" set forth in the Concept Release.

To the extent that the concern with the current model is due to a perceived lack of leverage by the auditor "to effect appropriate change in the company's financial statements,"[2] we disagree completely and believe that this represents a lack of understanding of the audit process. Our auditor has the ability to review all information it deems relevant to fulfilling its role and determining whether our financials meet the standard for an unqualified opinion, and it will not issue its opinion if it believes that we have not fairly presented our financial results. Because we must have an auditor's opinion in order to file our financial statements with the SEC, this provides the auditor with significant, and powerful, leverage. Furthermore, the auditor has direct access to our Audit Committee, with whom it can discuss any concerns about our financial results or their presentation. This access also provides significant leverage.

The Concept Release also reflects concerns of users about matters that are "not necessarily material to the financial statements."[3] Again, this appears to represent a misunderstanding of the audit process and of the financial reporting system in general. Materiality is a key precept for the financial reporting system and is necessary to the creation of useful and informative financial reporting. Management, with its deep understanding of the business, is in the best position to assess materiality, and if a matter is not material to the financial statements, then it should not be a significant focus of the audit in general or of the auditor's report in particular. Education of financial statement users would again appear to better address this concern than a wholesale change in the audit reporting model. And to the extent that there are questions about decisions regarding what is and is not material, as we note

[2] Concept Release at 9.
[3] *Id.*

above, if the auditor has significant concerns about the materiality of a matter, it also has significant leverage to ensure that the Company appropriately addresses those concerns.

3. *Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation why.*

We firmly believe that the Company, whether through management or the Audit Committee, is best suited to provide information about the Company's financial statements. We also question whether significant additional information is necessary. We note that the repeated litany from the investor and user community is disclosure overload and that much of the information provided is not read. We believe that the footnotes and related financial information in our SEC filings already provide helpful and detailed information, together with earnings calls and other company announcements. To the extent that the SEC or FASB believes that this is not the case or that additional information is needed, we believe that they are in a better position to address any perceived disclosure gaps. Regardless, we do not believe that such information should come from auditors, whose role necessitates expertise in *auditing*, not in assessing the key business and strategic risks faced by our Company. It is our responsibility to effectively communicate these items to our shareholders, as reflected in the SEC's and FASB's rules and standards, and the importance of our relationship with our investing community, a relationship that does not exist between our auditors and investors, drives our efforts in this regard.

5. *Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?*

In short, no. An AD&A might provide more information to investors, but it would not necessarily be better information. Our auditors are not experts on the day-to-day workings of our business and industry and cannot have the same understanding of the business that our management and financial reporting team has.[4] The auditors are not trained to evaluate business risks faced by our Company or make necessary business judgments. If the purpose of the AD&A is to provide greater insight for financial statement users into these key aspects, management – with the tool it already has in the MD&A – is the best source of such insight. An AD&A would require audit firms to perform a judgmental function that is outside of their role and expertise. Furthermore, to have sufficient information upon which to render judgment on significant matters or evaluate key risks, the auditor would have to obtain that information from our financial management team. The result, therefore, would likely be redundant disclosure or potentially conflicting assessments of the same information that financial statement users would have to decipher and digest.

---

[4] We note that this lack of expertise would be even further exacerbated if mandatory audit firm rotation were required, as considered by the Board in its Concept Release on Auditor Independence and Audit Firm Rotation.

Additionally, many of the matters proposed to be addressed in the AD&A are already discussed by the auditor with the Audit Committee. The Audit Committee, with both its understanding of the Company and of audit-related matters, is well-suited to digest, assess and discuss those matters with the auditor, for the benefit of the Company and its shareholders. In contrast, given the lack of user understanding reflected in the Concept Release and the comment responses above, adding more discussion of detailed audit matters to auditor reporting is likely to create further confusion and misunderstanding, which is the opposite of what the Board intends. This problem would only be exacerbated by the AD&A's inherent subjectively and lack of comparability between companies.

An AD&A also represents significant costs that are not justified by any clear benefits. It would substantially increase the scope of and time needed to complete an audit. We already face short deadlines to file our Form 10-K with the SEC, and each year we and our audit teams are challenged to meet those deadlines. Moreover, these short deadlines were driven by an investor community who desires the information in an increasingly short timeframe, and in fact pushes companies not just to meet, but to beat, these deadlines.

The requirement of an AD&A also would expose the auditors to considerable additional liability. The AD&A would be part of a filed document and would reflect an original statement of the *auditor*, not the Company, exposing the auditor to SEC review of and primary liability for those statements. In our litigious society, auditors would necessarily spend significant amounts of time and money on legal review of these disclosures, putting further stress on the process of meeting deadlines and likely resulting in carefully crafted boilerplate driven as much or more by liability concerns than investor understanding. The costs of this review, as well as many of the risks of such liability, will be passed through to the audited companies and ultimately their shareholders, without any real benefit to those shareholders.

Management would also need to devote additional time and effort to the audit and the AD&A, particularly to the extent that there are concerns about the propriety of additional disclosures in the AD&A or disagreements with portions of the discussion. Given the leverage that auditors have, management would be forced to address its concerns or disagreements with the AD&A in the Company's financial disclosures. This would result in more time, further disclosure overload and confusion for investors. We believe this would negatively impact the usefulness of financial reporting, not improve it.

*9.* *Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?*

We reiterate our belief, expressed above, that an AD&A is inappropriate. A discussion of risks that are even further outside of the purview of the auditor's attest function and their area of expertise is best left to management, with oversight by the Audit Committee and the SEC.

Furthermore, there is already an extensive discussion of risks in our SEC filings, specifically tailored to our Company, that is derived from a comprehensive enterprise risk management process at The Home Depot. Again, to include similar discussion in the auditor's report would create, at best, redundant disclosure.

*10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?*

As noted above, we believe boilerplate would be inevitable. We also believe that investor understanding would be further impaired by an AD&A. As we discuss above under question 1, if financial statement users do not currently understand basic audit concepts, we fail to see how they could understand or benefit from an AD&A full of detailed discussion of audit procedures undertaken or other accounting methods that could have been used.

*11. What are the potential benefits and shortcomings of implementing an AD&A?*

See our discussion above.

*12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?*

We believe the potential for such inconsistencies is high. Many of the matters proposed to be discussed in the AD&A directly overlap with matters already addressed in financial reports, raising the question of why such information is necessary. As noted above in our response to question 5, because of the auditor's leverage, management would be forced to address concerns or disagreements with the AD&A in the Company's financial disclosures. For financial statement users, this would create confusion and further disclosure overload.

To the extent that a matter is important to the understanding of the financial statements and is not currently included in the financial report, it begs the question of why such information was not presented by the Company. The SEC is the better arbiter of this concern – if the SEC deems the Company's information to be appropriate and sufficient, there is no need for additional information from the auditor. If the SEC sees a need for more information, its rules governing the Company's disclosures are the best source for any additional requirements.

*13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?*

We do not believe that the emphasis paragraphs would be relevant or more useful in making investment decisions. We believe that the best location for such information is in the footnotes to the financial statements or in MD&A – both prepared by the people with the greatest understanding of the Company. Anything else added by the auditor reflects the same problems discussed above and may even detract from or distract users from the more important information in footnotes and MD&A. Given the apparent lack of understanding of the audit process implicit in the Concept Release, such a result is even more likely.

14. *Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?*

No. See our response to question 13 above. In addition, any detailed discussion of specific audit procedures will likely be meaningless to many users, given the understanding gap that already exists.

17. *How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?*

Similar to the AD&A, we believe that additional emphasis paragraphs will inevitably lead to standardized, boilerplate language driven by liability concerns.

18. *What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?*

We do not believe additional emphasis paragraphs will provide benefits. See our responses above for a discussion of significant shortcomings.

19. *Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?*

No. The current scope of auditor assurance is appropriate and reflects their role, their training and their expertise in financial accounting and auditing. Having auditors opine on matters with respect to which they possess no (or at best limited) expertise will not lead to better or more transparent information. While we do not currently see such a need, if the SEC believes that certain specific items outside of the financial statements and notes should be subject to auditor assurance, they should be moved from Regulation S-K to Regulation S-X, and therefore included in the financial statements.

Moreover, as the Concept Release notes, such additional assurance would increase the scope of the auditor's responsibilities, resulting in increased risk and audit cost (both in terms of dollars and time). The benefits, however, would be minimal at best, especially given the reviews that are already performed by the auditor. For example, our auditor currently reviews our earnings releases for quantitative accuracy and for consistency with our financial results. We do not believe that adding an assurance requirement for the earnings releases would impact the content of those releases. We do believe, however, that it would increase the time prior to the release of the information, in direct contrast to the desires of our investor community, and it would clearly increase our audit costs.

e. *Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?*

While we believe that any significant changes are unlikely, we also believe any such reporting is unnecessary and, in fact, inappropriate. Our auditors already test MD&A to assure that it is consistent with our financial statements and does not constitute a material misstatement of fact. Beyond these matters, the content of MD&A is specifically designed to present *management's* analysis of the financial condition and results of operations of the Company, to "give the investor an opportunity to look at the company through the eyes of management…."[5] Our disclosures reflect the input, review and oversight, as applicable, of our financial management, disclosure committee, senior management including the CEO, Audit Committee and Board of Directors. We believe that additional auditor reporting would not significantly impact this process, other than to add unnecessary time, effort and cost, and is not appropriate given the nature of what MD&A is designed to provide.

21. *The concept release presents suggestions on how to clarify the auditor's report in the following areas:*

- *Reasonable assurance*
- *Auditor's responsibility for fraud*
- *Auditor's responsibility for financial statement disclosures*
- *Management's responsibility for the preparation of the financial statements*
- *Auditor's responsibility for information outside the financial statements*
- *Auditor independence*

a. *Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?*

We believe that many of the issues raised in the Concept Release result from of a basic lack of understanding of the attest and audit function. We do not believe that fundamentally changing and expanding the role of the auditor will address this problem, and in fact is more likely to exacerbate it. We do not object, however, to limited clarifications of the auditor's report that would not increase the scope and cost of the audit process and may be of some value in addressing the understanding gap.

[5] Securities Act Release No. 6711 (April 24, 1987) [52 FR 13715] at 13717; cited in Securities Act Release No. 6835 (May 18, 1989) [54 FR 22427].

Specifically, providing a definition of the term "reasonable assurance," clarifying that the financial statements under Regulation S-X include all notes and all related schedules, and clarifying the auditor's role with respect to non-financial information could all be helpful to financial statement users. We would also not object to requiring the auditor to state that it has a responsibility to be independent of the company and has complied with applicable independence requirements of the Board and the SEC, although we note that this is both implicit in the title of the report and is already addressed in the Audit Committee report in the Company's proxy statement.[6]

We do not believe, however, that discussion regarding fraud would be appropriate, and believe it would have the negative effect of leading some to believe that fraud exists where it does not or that the report is somehow being qualified. Fraudulent financial statements are not common, and adding this language would seem to penalize the many for the bad actions of a few. Furthermore, assessment and detection of potential fraud is already addressed by the Company with the Audit Committee and the auditor on a quarterly basis through our robust internal controls and disclosure controls process and is better addressed in that forum. Finally, we do not think it is necessary for the auditor's report to state specifically that management prepares the financial statements and has responsibility for the fair presentation of the financial statements. We note that we already specifically address this in a statement by management that precedes our auditor's report and believe that it is better suited to that location.

c. *What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?*

None.

d. *What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?*

Because these changes only reflect clarifications, there should be no change to the audit scope or the auditor's responsibilities.

22. *What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?*

See our discussion above.

25. *What alternatives not mentioned in this concept release should the Board consider?*

We do not believe that there is a strong need for action by the Board in this area. Resources would be better spent on reducing the understanding gap of users and better educating them

---

[6] If there is a significant call among financial statement users for auditors to address their independence, it raises the question of whether investors are in fact reviewing the Audit Committee report and whether it might be better located in the Form 10-K rather than the proxy statement.

on the role of the auditor and the audit and the meaning and significance of the auditor's opinion. While certain of the audit report clarifications are not objectionable to us, we believe they provide minimal benefit. The other suggestions would result in significant increases in costs without meaningful improvements to financial information provided to investors.

29. *What effect would the various alternatives have on audit quality? What is the basis for your view?*

We do not believe that any of the suggestions will improve audit quality and, for many of the reasons discussed above, may actually impair it.

30. *Should the changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such exclusion.*

We believe that any changes should apply to all entities.

31. *This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.*

a. *Are any of these considerations more important than others? If so, which ones and why?*

As discussed above, we believe that increased liability is a primary consideration which will impact the amount of time spent, the level of review required by both the auditor and its legal counsel and the Company and its counsel, the costs of the audit, and the ultimate content and usefulness of any changes actually made.

b. *If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?*

We do not believe that any perceived benefits would outweigh the inevitable additional costs.

32. *The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?*

We believe that the right balance currently exists, both in the form and content of the audit report and in the leverage between the auditor and the Company. If the proposed changes are implemented, we foresee a disruption of this balance driven by the inevitable back and forth over the auditor's subjective assessment of what is important to the Company's investors, based on their more limited scope of expertise, and the corresponding assessment by management and the Audit Committee. As discussed above, the time that this process would take, including the need for each side to obtain additional legal review and, in the auditor's case, national office review, followed by the significant potential for conflicting disclosures or disagreements, cannot avoid straining the relationship. When viewed in light of the lack of measurable benefits, we do not believe this balance should be disrupted.

Thank you for the opportunity to comment on this important topic. I would be pleased to provide further comments if you have any questions regarding this letter.

Sincerely,

Carol Blome

ICAEW REPRESENTATION

# CONCEPT RELEASE ON POSSIBLE REVISIONS TO PCAOB STANDARDS RELATED TO REPORTS ON AUDITED FINANCIAL STATEMENTS AND RELATED AMENDMENTS TO PCAOB STANDARDS

**Memorandum of comment submitted in September 2011 by ICAEW, in response to the PCAOB*Concept Releaseon Possible Revisions to PCAOB Standard Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*published in June 2011**

| **Contents** | **Page** |
|---|---|

## INTRODUCTION

**1.** ICAEW welcomes the opportunity to comment on the *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*published by the PCAOB on 21 June 2011, a copy of which is available from this link. We have prepared this response alongside our response to IAASB on its current consultation on auditor reporting *Enhancing the Value of Audit Reporting: Exploring Options for Change.*

## WHO WE ARE

**2.** ICAEW is a world-leading professional accountancy body. We operate under a Royal Charter which obliges us to work in the public interest. ICAEW's regulation of its members, in particular its responsibilities in respect of auditors, is overseen by the UK Financial Reporting Council. We provide leadership and practical support to over 136,000 member chartered accountants in more than 160 countries, working with governments, regulators and industry in order to ensure that the highest standards are maintained.

**3.** ICAEW members operate across a wide range of areas in business, practice and the public sector. They provide financial expertise and guidance based on the highest professional, technical and ethical standards. They are trained to provide clarity and apply rigour, and so help create long-term sustainable economic value.

**4.** The Audit and Assurance Faculty is a leading authority on external audit and other assurance activities and is recognised internationally as a source of expertise on audit issues. It is responsible for technical audit and assurance submissions on behalf of ICAEW as a whole. The faculty membership consists of nearly 8,000 members drawn from practising firms and organisations of all sizes from both the private and public sectors. Members receive a range of services including the monthly Audit & Beyond newsletter.

## MAJOR POINTS

**5.** Key Messages

- The current auditor reporting model works well but there is room for improvement within the broader spectrum of auditor and corporate reporting. The demands for change from investors in larger listed companies need to be justified and there is no need for smaller companies to be subject to all of the reporting requirements of larger companies. Investors and other users are best served by better quality reporting by companies and more relevant reporting by auditors; more reporting for its own sake will not help anyone.

- Differing corporate governance regimes from which auditor reporting practices arise are likely to remain legally, culturally and economically highly jurisdiction-specific.Efforts should therefore be made by standard-setters towards the convergence of reporting requirements wherever possible, on the basis of high-level high-quality principles.

- The following principles should underpin any standard-setting activity in this area:

  – companies should provide high-quality information on which auditors report; auditors should only provide original information about companies in exceptional circumstances
  – the pass/failmodel should be retained
  – auditor reporting should be in sufficient detail to provide transparency about what auditors do and their findings, but not so detailed as to obscure key messages.

- The overall strategy for the evolution of auditor reporting should matchshort-term improvements to the format and content of the auditors' report with more ambitious longer term solutions in the form ofimprovements to the provision of wider-ranging auditor assurance.

## The Current Auditor Reporting Model and UK Reporting Initiatives

**6.** It is clear from research that the current auditor's report has value in the eyes of investors. It is also evident that auditor reporting has in fact changed substantially in recent years. What has not changed is the extent to which the current framework is a pass/fail model and the overarching opinion provided by auditors continues to be valuable to investors the world over. The significance of a 'clean' audit report to companies seeking listings on the world's stock exchanges is easily overlooked. More can certainly be done though and much of the rest of the debate is about who provides additional information, where, what sort of assurance, if any, can be provided on it, and indirectly about the need for improvements to corporate reporting, and how the quality of auditor reporting can be assessed.

**7.** The Audit Quality Forum (AQF), convened by ICAEW, considered the issue of auditor reporting in 2006, and its work was instrumental in stimulating the debate internationally. It considered the information that shareholders wished to see in the audit report, why they wanted it, barriers to change and ways to overcome them. The report noted that some shareholders want more discursive information within the audit report, covering uncertainties and risks and details of difficult, sensitive or contentious issues, for example, which would typically be discussed in the UK with the audit committee[1].

**8.** The AQF debated a number of other auditor reporting issues in subsequent years including reporting on the Internet and auditor signatures on audit reports, which widely influenced thinking of these matters. More recently, ICAEW responded to the FRC in the UK on its *Effective Company Stewardship: Enhancing Corporate Reporting and Audit* consultation dealing with the content of and reporting on audit committee reports. We also responded to IOSCO on its auditor communications consultation. In both cases, we argued that one effective way forward in this area is in audit committee reporting, and auditor assurance on those parts not dealing with information provided by the auditor.

**9.** Most recently, ICAEW's Financial Reporting Faculty is about to publish a thought leadership work entitled *Reporting Business Risks: Meeting Expectations* as part of its *Information for Better Markets* series which deals with the current position in the USA, Canada, Italy and Germany as well as the UK, and with calls for enhanced reporting and the challenges and opportunities in meeting those demands.

**10.** Changes to auditor reporting are desirable and may involve reporting on areas of significant audit risks, but we believe that there is a strong case for addressing deficiencies in financial reporting, by better application of the requirements that already exist and by means of additional reporting requirements, if necessary. In the UK, the USA, and elsewhere, frameworks for risk reporting are in place but a minority of companies continue to provide a minimum and comply with the letter of the law only. We believe that regulators might seek to change behaviour *vis a vis* the existing framework before proposing new requirements, butinvestors will be disappointed if they expect auditors to remedy the provision of scant or poor quality information about business risks by requiring them to report on significant areas of audit risk. Business risks and significant audit risks are not the same.Auditors cannot disclose what they are not privy to and management will not furnish auditors with information that they are not prepared to disclose themselves. We encourage regulators to apply greater pressure to companies to provide better quality disclosures, even when they satisfy the minimum requirements. If the minimum requirements are in fact inadequate, they should be improved. In February 2011, the UK's Financial Reporting Review Panel highlighted the need for better reporting by companies of the principal risks and uncertainties they face.[2]

[1]The report of the working group can be found at www.icaew.com/en/technical/audit-and-assurance/audit-quality-forum-agf/fundamentals

[2]www.frc.org.uk/frrp/press/pub2503.html

**11.** The FRC's September 2011 papers *Boards and Risk – A Summary of Consultations with Companies, Investors and Advisors* and *Effective Company Stewardship - Next Steps*[3]propose that company narrative reports focus primarily on strategic and major operational risks rather than indiscriminate lists of risks that all companies face. It is proposed that the audit committee's remit should be extended to include consideration of the whole annual report and to ensure that the report, viewed as a whole, is fair and balanced. There are also proposals regarding auditor reporting on inconsistencies between the annual report and the financial statements and for a financial reporting laboratory in which preparers, auditors and other stakeholders experiment with novel forms of reporting.

**12.** While ICAEW is an international body, in this response we give a number of examples of changes that have been proposed or implemented in the UK. All of these examples are predicated on the UK corporate governance framework which is not in place elsewhere. We recognise this limitation. Nevertheless, we offer these examples in order to demonstrate the manner in which high-level principles might be applied at a local level.

## The Significance of Corporate Governance Regimes and the Desirability of Convergence

**13.** Auditor reporting is an area in which there is a pressing need for high-level principles which can be topped and tailed to meet local needs. We consider ourselves champions of international auditing standards in the UK and we engaged at a very early stage with investors through the AQF. Despite all of this, we struggled to adopt international standards on auditor reporting which reflects, among other things, the difficulties associated with prescription in this area. The diversity of practice in auditor reporting is more entrenched than diversity in audit practice generally not simply because auditor reporting is often legislated, but because of the incentives and disincentives to convergence arising from different corporate governance models and the different strengths, capabilities and focus of audit committees and auditors in different jurisdictions. Answers to auditor reporting questions depend on local governance frameworks and no auditing standard-setter or regulator is in a position to engineer change in this area without engaging all of the relevant stakeholders, and there are many. Attempts to do so by means of prescription in auditing standards are unlikely to be successful and may lead to unintended consequences, in the form of non-compliance with auditing standards and more defensive auditor behaviour which risk bringing standard-setters into disrepute. We encourage the PCAOB and IAASB to be diligent in their attention to each other's work in this area and urge them to co-operate as much as they can on their respective consultations. It would be a pity and a wasted opportunity if the two consultations resulted in further divergence which is a real risk, particularly if either or both bodies propose changes that are too prescriptive. We cannot avoid the impression that the number of questions in both consultations impliesa premature attention to detail, rather than a broader consideration of the higher-level and more important issues, and we emphasise the suggested principles needed to underpin standard-setting noted in our key messages above.

## Principles Underpinning Standard-Setting

**14.** Both the PCAOB and IAASB consultations propose two options: the first is enhancements to the current reporting regime without change to the fundamental premise of an audit in which independent auditors report on information prepared by companies; the second involves change to that fundamental premise whereby auditors produce original information about the company that is not already provided by management. We believe that auditors should only provide original information about companies in the exceptional circumstances in which it is required by law or regulation. The independent audit is predicated on this assumption and confusion will arise if the responsibility for reporting is split between auditors and management. Most audits are attest engagements which require independent auditors to report on

[3] http://www.frc.org.uk/press/pub2632.html

information provided by management. Their strength derives from a combination of auditor independence and the pass/fail model. Other models may be more fluid, may not require auditor independence and may permit original reporting by auditors. All have a place, but they should not be mixed together to avoid calling into question the all-important pass/fail assessment. Furthermore, we believe that it is likely that both options may lead, rightly or wrongly and whether intended or not, to changes in the conduct of audits and auditor behaviour, and that those changes may not necessarily be positive. The more detailed the proposals, the more likely it is that behaviour will change. The IAASB and the PCAOB need to be aware of the possibility of more defensive auditing whereby auditors perform procedures in order to mitigate the risk of claims rather than to improve the quality of the audit, of a greater level of involvement of lawyers in the reporting process, and of less frank exchanges with management and audit committees if more of what is discussed is likely to be reported.

**15.** There are calls for the demystification of the audit process and for information about both the audit and the audited entity to be provided. Some additional information may usefully be provided by auditors about the audit and by management about the audited entity. We believe that there is merit in careful consideration of the possibility of auditor reporting on significant audit risks, either within the audit report or elsewhere, however, we believe that there is a lot or work to be done if boilerplate is to be avoided. Business risks as reported by the entity are not the same as significant audit risks, although in many cases they cover similar ground, and it is important that all stakeholders are clear as to the difference to avoid confusion as to whose 'version of reality' is to be believed. Current auditing standards do not equip auditors to report on business risks and while they can be developed, for auditors to report on business risks that are not also audit risks would compromise their independence and result in them substitutingtheir judgement for, or subordinating their judgement to, that of management, instead of attesting to management's assertions.

**16.** Investors involved in this debate are already well aware that audit quality, on which they seek more information, comprises many elements and is not something than can be demonstrated quickly or easily. They are also aware that the provision of some of the information called for may be interesting, but that it will not enable informed decisions to be made about audit quality. Furthermore, investors are well aware that any information provided to the audit committee takes place in the context of an extended dialogue with the audit committee. To ask auditors to provide that information out of context is likely to cause confusion.

## Changes to the Format and Content of Auditor Reports and Longer- Lasting Improvements

**17.** While changes to the form and content of standard elements of the audit report may be relatively easy to achieve, and therefore attractive, we think it unlikely, on the basis of past experience, that they will significantly improve communications overall. Of themselves they are unlikely to have any significant effect on the information or expectation gaps. Equally, while we can support changing the placement and content of responsibility statements which might fulfil a desire among auditors to articulate their position more clearly, such changes are unlikely to make a significant impact on what users believe auditors are or should be doing, and any change risks an increasein the expectations gap.

**18.** While the need to cut clutter in financial reporting is not currently so much of an issue in the US as it is elsewhere, there are difficulties in reconciling calls for enhanced reporting made at the same time as calls to cut clutter. In some jurisdictions, continuing to add to the financial statements and auditor reporting has already resulted in overload and a complex navigation exercise to determine what is relevant, and what has been audited, reviewed or read and what has not. It is clear, at least in Europe, that investors want more relevant, better information which is sometimes already provided but can be difficult to find. Additional disclosures should not be provided merely to satisfy curiosity and investors in listed companies should explain how the information called for will be used in the decision making process. We support, as notedabove, the concept promulgated by the FRC of a financial reporting laboratory in which preparers, auditors and other stakeholders consider novel forms of reporting, how to avoid the natural tendency to revert to boilerplate, and how users of financial information can better navigate the information that is already made available to them.

**19.** We believe that both the PCAOB and the IAASB need to take a step back and consider the issue of auditor communications in a holistic manner. We are pleased that the IAASB has recognised the importance of corporate governance in this context but we believe that concrete proposals are premature. Both consultations focus heavily on the detail of auditor reporting and both are light on the need to balance the broad issues of investor needs, which are not homogenous, their desires, which are not necessarily the same as their needs, and what auditors and management are able to legitimately and usefully provide. Both consultations are also light on the inhibitory effects of the liability regime on auditor willingness to report.

**20.** Financial reporting has changed in recent years. There is a perception that auditor reporting has not kept up and there is certainly an appetite for change both in Europe and the US. We believe that it is essential that changes are real, that the costs are recognised, and that benefits can be measured. A great deal of heat and light may be generated in this debate but it is essential that change does in fact lead to greater investor satisfaction and convergence internationally, and that regulators and the profession do not simply make change in order to be seen to be doing so. We do not believe that, as has been suggested, that the benefits of the proposals can be realised at no cost, or are cost-neutral and we urge the PCAOB and the IAASB not to disregard this issue.

## PCAOB Proposals

**21.** We believe that there is merit in exploring the provision of assurance on additional information outside the scope of the financial statement audit provided that the information assured forms part of an acceptable financial reporting framework or meets criteria similar to those found in ISAE 3000 *Assurance Engagements Other Than Audits or Reviews of Historical Financial Information*.

**22.** In order of preference, we believe that the following proposals are likely to be most productive in improving investor understanding of the audit:

- clarifications to the audit report
- encouraging the proper use of emphases of matter
- assurance on information outside the financial statements, including assurance on audit committee reporting
- commentary on significant audit risks, however, we do not believe that an auditor's discussion and analysis (AD&A) is feasible.

While on the face of it an AD&A seems to nicely parallel the MD&A, the parallel is shallow. The proposals mix information about the audited entity and the audit and invite a comparison, between the auditors' account and that of management. Whilst this may be entertaining, briefly, it will not be helpful because it will cause confusion, encourage auditors and management to be excessively cautious, and force them even closer together when the annual report and AD&A are being prepared at the very time at which auditors should be and be seen to be independent. Investors will be unhappy if auditors and management report different things, and even unhappier if they report the same things.

## RESPONSES TO SPECIFIC QUESTIONS

**Q1: Many have suggested that the auditor's report, and in some cases, theauditor's role, should be expanded so that it is more relevant and useful toinvestors and other users of financial statements.**

**a. Should the Board undertake a standard-setting initiative to considerimprovements**

**to the auditor's reporting model? Why or why not?**

**23.** The Board should undertake an initiative to consider improvements to the auditor's reporting model. Standard-setting is only part of it. Financial reporting has changed in recent years and while auditor reporting has also done so, perhaps more than is generally acknowledged, there is a perception that further change is desirable. It is important that careful consideration is given to who provides additional information about the entity and the audit, where that information is provided, and to the need for the net result of change to be improved communication rather than more confusion which is a risk, particularly if the changes proposed are too prescriptive and do not converge with changes proposed by the IAASB.

**b. In what ways, if any, could the standard auditor's report or otherauditor reporting be improved to provide more relevant and usefulinformation to investors and other users of financial statements?**

**24.** We believe that clarifications to the audit report, encouraging the proper use of emphases of matter in limited circumstances, commentary on significant audit risks either within the auditors' report or outside it, andseparate assurance on other information outside the financial statements may help, to varying degrees, with improving investor understanding of what auditors have done.

**c. Should the Board consider expanding the auditor's role to provideassurance on matters in addition to the financial statements? If so,in what other areas of financial reporting should auditors provideassurance? If not, why not?**

**25.** Yes, the Board should consider expanding the auditor's role to provide assurance on matters in addition to the financial statements. There are many new areas in which non-audit assurance is being developed, including reporting on review engagements and CSR statements. In the context of this concept release we believe there is merit in considering the provision of assurance on audit committee reporting. This stands more of a chance of maintaining the proper relationship between auditors and management and of providing investors with more of the information they need, than some of the other proposals.AT 701 sets forth attestation standards and provides guidance to auditors concerning the performance of an attest engagement with respect to management discussion and analysis. Although issued more than 10 years ago we understand that there are very few examples of such reports being issued. This may be due to limited investor demand for such reports and the unwillingness of management to incur the additional costs associated with such engagements.

**26.** The FRC's January 2011 Consultation Paper *Effective Company Stewardship: Enhancing Corporate Reporting and Audit* recommends, among other things, that directors should describe in more detail the steps they take to ensure transparency about the activities of the business and any associated risks.Its September 2011 papers*Boards and Risk – A Summary of Consultations with Companies, Investors and Advisors* and *Effective Company Stewardship - Next Steps*note thatthe FRC proposes to ensure that company narrative reports focus primarily on strategic and major operational risks, rather than indiscriminate lists of risks that all companies face. It is possible that separate auditor assurance on these risks outside the main auditors' report will be considered.

**27.** While the US and UK models of corporate governance are not the same and the roles of audit committees are different, we believe that the high-level issues noted above are of an appropriate level to be considered by the Board in developing principles for auditor reporting.

**Q2: The standard auditor's report on the financial statements contains anopinion about whether the financial statements present fairly, in allmaterial respects, the financial condition, results of operations, and cashflows in conformity with the applicable financial reporting framework. Thistype of approach to the opinion is sometimes referred to as a 'pass/fail model.'**

**Should the auditor's report retain the pass/fail model? If so, why?**

**If not, why not, and what changes are needed?**

**c. If the pass/fail model were retained, are there changes to the reportor supplemental reporting that would be beneficial? If so, describesuch changes or supplemental reporting.**

**28.** The pass fail/model is one that investors are broadly happy withand the current model is not broken. It was developed because of inconsistency in auditor reporting and its success and significance should not be underestimated or obscured. Companies can neither obtain nor maintain listings on the world's stock exchanges if they 'fail' the audit test and a huge amount of effort goes into obtaining a 'pass'. Companies in transition economies often do not pass and the sometimes manifold reasons for their failure are listed in auditors' report. Audit reports give no indication as to the quality of the audit performed though, and there are calls for the demystification of the audit process and for the provision of more information about the audit and the audited entity. We believe that some additional information may usefully be provided by auditors about the audit and by management about the audited entity as indicated elsewhere in this response. Nevertheless, we believe that investors involved in this debate are already well aware that audit quality, like quality in other professions, comprises many elements and is not something than can be demonstrated quickly or easily.They are also aware that the provision of some of the information called for may be interesting, but that it will not enable informed decisions to be made whether a high quality audit has been performed.

**29.** Information provided by auditors to the audit committee is in the context of an extended dialogue, in which the information provided is sometimes only the starting point. To ask auditors to provide that information out of context is likely to cause confusion. It is important that if investors are provided with the information they ask for on significant audit risks, they accept that there is likely to be overlap with information provided by management on key financial reporting risks, that there will be different slants, and that they should not expect that auditors and management 'agree' on common wording.

**Q3: Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.**

**30.** It is clear from our discussions with some investors that while they understand the need for information about the entity to come from management, they do not always trust management to give a balanced view and would rather have the same information from the auditor. This lack of trust and the desire of some investors to exert better control over management underlie many of the calls for more information, rather than assurance, to be provided by auditors, but it calls into question the fundamentals of the relationships between management, auditors and investors.

**31.** Auditors are appointed to report on information provided by management, to, or for the benefit of, investors or the capital markets. In order for the audit to be credible, the auditor needs to be independent not only of management but of the audited information. Auditors should only provide original information about companies in the exceptional circumstances when it is required by law or regulation. Confusion is likely to arise if the responsibility for reporting is split between auditors and management. The auditor cannot provide information about the audited entity independently of management – the auditor relies on management for that – and if the auditor then puts his own slant on the information provided by management the auditor is no longer independent of the information he is reporting on. Furthermore, and perhaps even more importantly, if management is aware that auditors will take the information provided and alter it is some way they will be reluctant to provide it.

**32.** While additional information about the company's financial statements should come from management, and cannot come from auditors, it may also come from audit committees. We believe that investors should be turning their attention to the quality of people on audit committees and their processes and reporting functions. Much valuable information about the audited entity can be provided by audit committees which are in a better and more proper position than external auditors to provide and report on detailed information and explanations about the audited entity. External auditors are then in a position to provide assurance on this information.

**Q4: Some changes to the standard auditor's report could result in the need foramendments to the report on internal control over financial reporting, asrequired by Auditing Standard No. 5. If amendments were made to theauditor's report on internal control over financial reporting, what shouldthey be, and why are they necessary?**

**33.** We do not comment on this question.

**Q5: Should the Board consider an AD&A as an alternative for providingadditional information in the auditor's report?**

**a. If you support an AD&A as an alternative, provide an explanationas to why.**

**b. Do you think an AD&A should comment on the audit, thecompany's financial statements or both? Provide an explanation asto why. Should the AD&A comment about any other information?**

**c. Which types of information in an AD&A would be most relevant anduseful in making investment decisions? How would suchinformation be used?**

**d. If you do not support an AD&A as an alternative, explain why.**

**e. Are there alternatives other than an AD&A where the auditor couldcomment on the audit, the company's financial statements, or both?What are they?**

**34.** At first sight, the notion of an AD&A is an attractive one. It appears to parallel the MD&A and might offer scope for creativity in auditor reporting and provide something new for investors to read. We believe that the costs of an AD&A would be substantial, so much so as to significantly outweigh the benefits, not least because of the need to involve lawyers because of the liability regime. This in turn would lead to it reverting to boilerplate or near boilerplate over a very short space of time. The overlap with the MD&A would cause confusion and, certainly in Europe, it would very likely to be perceived as adding to the clutter. We do not believe that an AD&A is feasible.

**35.** There may be some scope for limited auditor reporting on areas that constitute significant audit risks, particularly on critical accounting policies and on auditor independence. This information could be provided either within the auditor’s report, although auditor’s reports are already very long in some cases, or outside it, either as a supplement or in a separate document.

**Q6: What types of information should an AD&A. include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?**

**36.** We note in our answer to question 5 above that we do not believe that an AD&A is feasible. We do believe however, that there is some scope for limited auditor reporting on significant audit risks, particularly on critical accounting policies and auditor independence. It would not be helpful for auditors to provide a wide spread of detail on all risks, nor a great depth of detail on the significant risks, because this would almost certainly serve to divert attention from what investors are really interested in, which are the broad areas to which auditors devoted their attention in which the big audit judgements were made. Less is increasingly more. Even less useful would be reporting on the extensive mechanics of audit procedures applied and the audit methodologies used as these, of themselves, are of little use in explaining how judgements are applied, which remains at the heart of auditing. Any such reporting would amount in any case to extensive boilerplate and it is helpful to remember in this context that it also for audit regulators consider auditor methodologies.

**Q7: What types of information should an AD&A include about the auditor'sviews on the company's financial statements based on the audit? What isthe appropriate content and level of detail regarding these matters presented in an AD&A (ie, management's judgments and estimates,accounting policies and practices, and difficult or contentious issues, including 'close calls')?**

**37.** Reporting the auditor's 'views' on the company's financial statements, if they could be articulated, would be highly subjective and vague at best. Reporting on management's judgements and estimates is likely to be covered by reporting on significant audit risks as noted in our answer to question 5 above, as are difficult and contentious issues which, if material, are almost by definition 'significant audit risks'.

**38.** It is clear that some investors trust neither management nor auditors and would like to be able to challenge auditors' judgements by effectively re-conducting the audit themselves, by micro-managing the auditor's work, or by reading the auditor's files. No amount of additional information is likely to satisfy such investors and the call for reporting on 'close calls' demonstrates the lack of understanding of how broad the range of acceptable management estimates can be in some cases. It also demonstrates the naïve belief that the pass/fail model that can be measure much like an exam script, in that 49% is a fail, and 51% is a pass, and auditors are failing to distinguish clearly between 51% passes and the 75% passes. The audit opinion is just that, an opinion and companies are not entered into a competitive audit examination in which their financial statements can be marked and one company's financial statements deemed better than another's. Audit qualifications represent a fail, albeit excused in some cases, and multiple qualifications, adverse opinions and disclaimers represent bad fails. But 'awards' bestowed by auditors for better or fairer application of accounting standards, say, would put the auditor in the position of reporting on management's performance which does not help investors who do this themselves, and who make it clear from time to time that they do not require auditor help with this.Investors require auditor expertise to report on the fairness of reporting *vis a vis* the company itself, not management.

**Q8: Should a standard format be required for an AD&A? Why or why not?**

**39.** If an AD&A is required, guidelines as to the main headings and the matters to be included might be helpful to auditors.

**Q9: Some investors suggested that, in addition to audit risk, an AD&A shouldinclude a discussion of other risks, such as business risks, strategic risks,or operational risks. Discussion of risks other than audit risk would requirean expansion of the auditor's current responsibilities. What are thepotential benefits and shortcomings of including such risks in an AD&A?**

**40.** It is inappropriate for auditors to provide original information about the entity as to do so would fundamentally alter the relationship between management, auditors and investors. Information on business, strategic and operational risks should come from management and should in any case already be included under most reporting frameworks in annual reports.

**Q10: How can boilerplate language be avoided in an AD&A while providingconsistency among such reports?**

**41.** Avoiding boilerplate and achieving consistency are antagonistic aims. To begin with, any new type of reporting that is not heavily prescribed will lack consistency, particularly across organisations. Over time, consistency will be achieved but boilerplate will have crept in. This is not of itself necessarily an evil, rather it is just one dynamic of reporting. The simple process of introducing new reporting requirements results in more reading of reports which helps user understanding, even if over time this drops off.

**Q11: What are the potential benefits and shortcomings of implementing anAD&A?**

**42.** Implementing an AD&A would provide something new for investors to read but the costs are likely to be substantial and its value limited for the reasons set out elsewhere in this response.

**Q12: What are your views regarding the potential for an AD&A to presentinconsistent or competing information between the auditor andmanagement? What effect will this have on management's financialstatement presentation?**

**43.** Investors are likely to make comparisons between an AD&A and the MD&A and it is inevitable that however diligent management and auditors are in trying to avoid inconsistency or competition, they will arise. This will further erode confidence in both management and auditors as investors would naturally seek to align, probably without much success, management and auditor views. If management and auditors provide the same view investors will have cause to question auditor independence and ask why they are paying for two identical reports.

**B. Required and Expanded Use of Emphasis Paragraphs**

**Q13: Would the types of matters described in the illustrative emphasisparagraphs be relevant and useful in making investment decisions? If so,how would they be used?**

**44.** It is important to ensure that the desire among investors for more information about emphases of matter does not result in the currency of emphases of matter being debased through over or inconsistent usage. The illustrative emphases of matter cover matters such as related parties, 'unusually important' subsequent events and certain accounting matters and are certainly of current interest, but it is likely over time that they will be routinely added to, creating substantial clutter in audit reports. The purpose of emphases of matter is not to remedy defective accounting but to draw users' attention to matters that are critical to the understanding of financial statements. One of the reasons that investors are unhappy with the status quo is because of how companies report. The remedy may be clarification of and better application of existing requirements and the enforcement thereof, not asking the auditors instead. Subsequent events and related parties will not always be critical, even though they are often important. It is also important to remember that emphases can easily be used in the place of or misconstrued as qualifications. This may be less of a problem for companies and investors than it is for auditors. Auditors may be tempted to abuse emphases of matter in circumstances in which a qualification may be more appropriate, enabling them to avoid the need to put pressure on management to change an accounting treatment or disclose a matter in order to avoid the qualification.

**Q14: Should the Board consider a requirement to include areas of emphasis ineach audit report, together with related key audit procedures?**

**a. If you support required and expanded emphasis paragraphs as analternative, provide an explanation as to why.**

**b. If you do not support required and expanded emphasis paragraphsas an alternative, provide an explanation as to why.**

**45.** The Board might consider a requirement to consider including areas of emphasis but to require auditors to do so will inevitably result in the re-iteration year after year of 'key areas'. This would be counter-productive to the extent that in some years, a key area would be critical and in other it would not, but users of financial statements are likely to miss the significance of any changes in wording as a result of habitual (over) exposure to a note about the same issue. Key audit procedures will only add to clutter and will not be helpful to investors for the reasons outlined in our answer to question 6 above.

**Q15: What specific information should required expanded emphasisparagraphs include regarding the audit or the company's financialstatements? What other matters should be required to be included inemphasis paragraphs?**

**46.** We believe that if the PCAOB wishes to increase the level of usage of emphases of matter and the level of detail provided therein, it would be better to police their existing use more effectively through regulatory measures than to changes the rules, which are adequate.

**Q16: What is the appropriate content and level of detail regarding the matterspresented in required emphasis paragraphs?**

**47.** A short and carefully crafted but clear description of the issue in appropriate circumstances that takes up a few lines is likely to be more helpful to investors than half a page of boilerplate written by lawyers.

**Q17: How can boilerplate language be avoided in required emphasisparagraphs while providing consistency among such audit reports?**

**48.** If emphases are mandated, boilerplate is inevitable. If more rather than less is encouraged, boilerplate can be put off for longer.

**Q18: What are the potential benefits and shortcomings of implementingrequired and expanded emphasis paragraphs?**

**49.** The potential benefits of implementing required and expanded emphasis paragraphs are very limited and the potential shortcomings are extensive. They include auditors misusing emphases where qualifications are more appropriate, boilerplate and the loss of distinction between routine key issues and non-routine critical issues. Better application and enforcement of the existing regime and clear regulatory steer might help encourage the appropriate use of emphases.

**Q19: Should the Board consider auditor assurance on other information outsidethe financial statements as an alternative for enhancing the auditor'sreporting model?**

**a. If you support auditor assurance on other information outside thefinancial statements as an alternative, provide an explanation as towhy.**

**50.** Yes, the Board should consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model.Assurance outside the financial statements will avoid the build-up of clutter in over-laden audit reports where it does not yet exist might ameliorate it where it does.

**b. On what information should the auditor provide assurance (eg,MD&A, earnings releases, non-GAAP information, or othermatters)? Provide an explanation as to why.**

**51.** Auditors are best able to report on and develop tools and techniques for reporting on information provided in the context of an acceptable financial reporting framework or information that meets criteria similar to those set out in ISAE 3000 *Assurance Engagements Other Than Audits or Reviews of Historical Financial Information.*To the extent that the MD&A contains a fair amount of forward looking information that is only very loosely related to the financial statements, and may or may not meet criteria similar to those in ISAE 3000,providing assurance thereon is likely to prove difficult and, in practice, auditors are likely to report selectively thereon. Auditors may be able to provide assurance on earnings releases if they contain GAAP information and certain types of non-GAAP information outside the main financial statementsif they meet the aforementioned criteria.

**c. What level of assurance would be most appropriate for the auditorto provide on information outside the financial statements?**

**52.** In order to answer this question, it is necessary to have a framework for reporting such as IAASB's ISAE 3000. The most appropriate level of assurance depends on the work effort and this in turn depends on what the market is prepared to bear in terms of cost.

**d. If the auditor were to provide assurance on a portion or portions ofthe MD&A, what portion or portions would be most appropriate andwhy?**

**e. Would auditor reporting on a portion or portions of the MD&A affectthe nature of MD&A disclosures? If so, how?**

**f. Are the requirements in the Board's attestation standard, AT sec.701, sufficient to provide the appropriate level of auditor assuranceon other information outside the financial statements? If not, whatother requirements should be considered?**

**g. If you do not support auditor assurance on other informationoutside the financial statements, provide an explanation as to why.**

**53.** To add to the patchwork of reporting by reporting selectively on elements of the MD&A would be a regressive step and add to confusion in an already muddled area.

**54.** We note above our understanding that AT 701 which sets forth attestation standards and provides guidance to auditors concerning the performance of an attest engagement with respect to management discussion and analysis is not widely used. More tailored standards are likely to be required

**Q20:What are the potential benefits and shortcomings of implementing auditorassurance on other information outside the financial statements?**

**55.** It is possible that where financial reports are cluttered, the potential benefit of implementing auditor assurance on other information outside the financial statements is in improving the current situation in which it is difficult to determine which parts of annual reports have been audited, reviewed or read.

**Q21:The concept release presents suggestions on how to clarify the auditor'sreport in the following areas:**

**• Reasonable assurance**

**• Auditor's responsibility for fraud**

**• Auditor's responsibility for financial statement disclosures**

**• Management's responsibility for the preparation of thefinancial statements**

**• Auditor's responsibility for information outside the financialstatements**

**• Auditor independence42/ AU sec. 550.04 - .06.**

**a. Do you believe some or all of these clarifications are appropriate? Ifso, explain which of these clarifications is appropriate? How shouldthe auditor's report be clarified?**

**b. Would these potential clarifications serve to enhance the auditor'sreport and help readers understand the auditor's report and theauditor's responsibilities? Provide an explanation as to why or whynot.**

**c. What other clarifications or improvements to the auditor's reportingmodel can be made to better communicate the nature of an auditand the auditor's responsibilities?**

**d. What are the implications to the scope of the audit, or the auditor'sresponsibilities, resulting from the foregoing clarifications?**

**Q22: What are the potential benefits and shortcomings of providing clarificationsof the language in the standard auditor's report?**

**56.** The principal benefit, although it not a significant one, of clarifying the auditor's report in the areas noted in question 21 above is that the report will better articulate the auditor's position. But clarification is unlikely to serve any useful educational purpose as it is clear from IAASB's research that the boilerplate in auditors' reports is not read, in much the same way as any 'small print' is not read (and the more there is of it, the less likely it is that it will be read). The main function of the audit report is as a medium through which to transmit the all-important pass/fail assessment. All of the matters noted above are already dealt with in audit reports and the fact that there is more to read will neither encourage reading, nor will it enhance comprehension. The fact that auditors protest, even more vociferously than they do now, that the purpose of the audit is not to detect fraud *per se*, will do nothing to change the belief that auditors should do so. The principal shortcoming is that clarification will give the appearance of improved communication without actually doing so.

**Questions Related to all Alternatives**

**Q23: This concept release presents several alternatives intended to improveauditor communication to the users of financial statements through theauditor's reporting model. Which alternative is most appropriate and why?**

**Q24: Would a combination of the alternatives, or certain elements of thealternatives, be more effective in improving auditor communication thanany one of the alternatives alone? What are those combinations ofalternatives or elements?**

**57.** In order of preference, we believe that the following proposals are likely to be most productive in improving investor understanding of the audit:

- clarifications to the audit report
- encouraging the proper use of emphases of matter by regulatory means, among others
- assurance on information outside the financial statements, including providing assurance on audit committee reporting and
- commentary on significant audit risks and auditor independence, but we do not believe that an AD&A is feasible or practical for reasons we set out elsewhere in this response.

**Q25: What alternatives not mentioned in this concept release should the Boardconsider?**

**58.** We believe that the PCAOB and IAASB need to take a step back and consider the issue of auditor communications in a holistic manner. Both consultations focus heavily on the detail of auditor reporting and both are light on the need to balance the broad issues of investor needs, their desires, and what auditors and management are able to legitimately and usefully provide. Both consultations are also light on the inhibitory effects of the liability regime on auditor willingness to report.

**59.** The auditor's report has value and is not broken in the eyes of investors. It has changed substantially in recent years. What has not changed is the pass/fail model and it is clear that investors value the overarching opinion provided by auditors. More can certainly be done though and much of the rest of the debate is about who provides additional information, where, what sort of assurance, if any, can be provided on it, and indirectly about the need for improvements to corporate reporting and how the quality of auditor reporting can be assessed.

**Q26: Each of the alternatives presented might require the development of anauditor reporting framework and criteria. What recommendations shouldthe Board consider in developing such auditor reporting framework andrelated criteria for each of the alternatives?**

**60.** We strongly recommend that the Board consult with the IAASB on an auditor reporting framework. Both Boards and all of their stakeholders would benefit from such a dialogue because any framework needs to be able to accommodate different corporate governance regimes in order to be effective.

**Q27: Would financial statement users perceive any of these alternatives asproviding a qualified or piecemeal opinion? If so, what steps could theBoard take to mitigate the risk of this perception?**

**61.** There is always a risk that change results in misunderstanding but the risks of missing or underestimating the significance of auditor red flags are much more important than the risks of overestimating their importance.

**Q28: Do any of the alternatives better convey to the users of the financialstatements the auditor's role in the performance of an audit? Why or whynot? Are there other recommendations that could better convey this role?**

**Q29: What effect would the various alternatives have on audit quality? What isthe basis for your view?**

**62.** Auditor reporting is an integral part of audit quality and misconceptions regarding audit quality arise in part from a failure by auditors to communicate adequately. It is important to note the possibility that the demystification of the audit might result in its marginalisation or in calls for auditors to take on a radically different role to the one they play at present.

**Q30: Should changes to the auditor's reporting model considered by the Boardapply equally to all audit reports filed with the SEC, including those filed inconnection with the financial statements of public companies, investmentcompanies, investment advisers, brokers and dealers, and others? Whatwould be the effects of applying the alternatives discussed in the conceptrelease to the audit reports for such entities? If audit reports related tocertain entities should be excluded from one or more of the alternatives,please explain the basis for such an exclusion.**

**63.** We do not comment on this question.

**Q31:This concept release describes certain considerations related to changingthe auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liabilityconsiderations, and confidentiality.**

**a. Are any of these considerations more important than others? If so,which ones and why?**

**b. If changes to the auditor's reporting model increased cost, do youbelieve the benefits of such changes justify the potential cost? Whyor why not?**

**c. Are there any other considerations related to changing the auditor'sreport that this concept release has not addressed? If so, what arethese considerations?**

**d. What requirements and other measures could the PCAOB or othersput into place to address the potential effects of theseconsiderations?**

**64.** The concept release is light on the impact of liability considerations which actively inhibit what auditors are able to say. We note elsewhere in this response, and particularly in our answers to questions 5, 11 and 18 that in some cases, the costs may significantly outweigh the benefits of the proposed changes. We hope that overall that the changes arising from these discussions will result in more efficient audit effort. We also believe that the PCAOB should actively consider the benefits of convergence with IAASB in this area.

**Q32: The concept release discusses the potential effects that providingadditional information in the auditor's report could have on relationshipsamong the auditor, management, and the audit committee. If the auditorwere to include in the auditor's report information regarding the company'sfinancial statements, what potential effects could that have on theinteraction among the auditor, management, and the audit committee?**

**65.** We note in our answers to questions 3, 7 and 9 that while some investors understand the need for information about the entity to come from management, they do not always trust management to give a balanced view and would rather have the same information from the auditor. It is inappropriate for auditors to provide original information about the entity as it would fundamentally alter the relationship between management, auditors and investors.

**66.** Auditors are appointed to report on information provided by management and in order for the audit to be credible, the auditor needs to be independent of management and the audited information. The auditor cannot provide information about the audited entity independently of management and if the auditor puts his own slant on the information provided by management the auditor is no longer independent of the information he is reporting on. If management is aware that auditors will take the information they provide to them and alter it is some way they will be reluctant to provide it.

**67.** While additional information about the company's financial statements should come from management, and cannot come from auditors, we believe that going forward it is more likely to come from audit committees. Investors should focus on the quality of people on audit committees, their processes and reporting functions. Much valuable information about the audited entity can be provided by audit committees and external auditors are then in a position to provide assurance on it.

**68.** We also make it clear that while some investors trust neither management nor auditors and would like to be able to challenge auditors' judgements by effectively re-conducting the audit themselves by interrogating auditors, no amount of additional information is likely to satisfy such investors.

Dear Sir/Madam

**PCAOBs CONCEPT RELEASE ON AUDITORs REPORTING MODEL – SEPTEMBER 2011**

In response to your request for comments on the PCAOB's Concept Release on Auditor's Reporting Model – September 2011, the Assurance Guidance Committee of the South African Institute of Chartered Accountants (SAICA).

We thank you for the opportunity to provide comments on this document.

Please do not hesitate to contact us should you wish to discuss any of our comments.

Yours sincerely

**Ashley Vandiar**

**OVERALL COMMENTS**

We acknowledge that there is a need to provide more information in the auditor's report and that this should be fairly addressed to include views from various users. There are areas were an audit cannot provide assurance, such as management's projections and assumptions; however, there are some areas were additional information can be provided to add value to the auditor's report without compromising the auditor's independence or breaching confidentiality by divulging client information, for example by articulating risks in the report that may expose the auditor to undue litigation.

This concept release is based on the investors' perspective, yet investors are not using the auditor's report for their investment decisions. Investors use and rely on the MD&A and other financial information (e.g. non-GAAP information and earnings' releases) for their investing decisions, in addition to historical audited financial statements.
We believe it is important for investors to consider business risks, strategic risks and operating risks. However, we do not believe that assessment of those risks or reporting on those risks should be the responsibility of the auditor. We fear a blurring of the roles between the preparer and the assurer, and the possible impairment of independence if auditors are required to report on these additional risks, which may go beyond the audit risk model.

We need to distinguish between public interest and investor interest, and also acknowledge that users, other than investors, utilising the auditor's report may require an understanding of matters discussed in the auditor's report and the impact thereof on the financial statements, as well as education on what an audit is and what the limitations of an audit are.

According to the concept release, "some investors indicated that one of the primary reasons that they are looking to the auditor for more information, rather than management or the audit committee, is that the auditor is an independent third party" and that "some investors believed that more relevant insight into the financial statements, through the eyes of the auditor, might better enable them to assess how changes in the economy might affect a company's future financial performance or condition". This will cause a self-interest threat for the auditor as the auditor is required to be independent and adopt a skeptical mindset when evaluating management judgments and estimates.

The resources required to support the initial representations for financial statements are management's and, therefore, those representations should come from management and not the auditor.

As noted in the concept release, "the objective of this release is to discuss several alternatives for changing the auditor's reporting model that could increase its transparency and relevance to financial statement users, while not compromising audit quality". Furthermore, on page 6 of the concept release, PCAOB states that it wishes "to obtain insight into the changes that investors and others are seeking to the auditor's report and how those changes could be incorporated into the auditor's report or the overall auditor's reporting model". Some investors, as noted throughout the concept release, continue to request all sorts of changes to the auditor's report while others, as referred to in the concept release, are not seeking changes as they believe it would be counterproductive for reasons cited in the release and otherwise. We believe that the PCAOB will take into consideration all various views on this concept release, as well as comments submitted, and that any improvements to the auditor reporting model will be principle-based and not rules driven.

**RESPONSES TO THE SPECIFIC QUESTIONS**

1. *Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.*

   a. *Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?*

   **Response:** Yes, but it should be subject to limitations. Any improvements to the auditor reporting model should be principle-based and should not be rules driven. It should also be noted that auditors cannot provide assurance on information that is not part of the financial statements and cannot disclose information in the audit report unless it constitutes instances of non-compliance.

   We also believe that no amendments should be made to the audit report per se; however, an additional assurance report, for example reporting on compliance matters and/or legislation requirements, should be provided contextualising additional information on which assurance is required by users.

   b. *In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?*

   **Response:** By providing a separate or additional assurance report on other information required by investors and other users.

   The audit report can also be modified by expanding on certain terminology used in the report by providing explanations to words such as "materiality", "independence" and "reasonable assurance".

   c. *Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?*

   .

   **Response:** No, the auditor's role to provide assurance should be limited to financial reporting and any other assurance should be addressed outside of this particular scope.
   Should the PCAOB decide to expand the auditor's role to provide assurance on matters in addition to the financial statements, education and training should be provided to users.

   Assurance on other matters in addition to the financial statements should be provided separately as required by the investors and users; however, it should be considered whether assuring such information may require certain skills that are not possessed by the auditors.

It should be noted that, in terms of ISA 720, auditors are associated with other information in documents that include audited financial statements and as part of the audit perform procedures to satisfy themselves that this additional detail is not inconsistent with the audited financial statements. The auditor is required to read other information in documents that include audited financial statements. If the auditor finds that such information contradicts the financial statements, they must investigate and resolve the differences to ensure the statements are correct. This process improves both the audited financial information and the unaudited company information, if done properly.

2. *The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."*

    a. *Should the auditor's report retain the pass/fail model? If so, why?*

    **Response:** Yes, this is clear and sufficient to indicate that the entity has fairly presented its financial statements.

    b. *If not, why not, and what changes are needed?*

    **Response:** N/A with reference to our response to question 2(a).

    c. *If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.*

    **Response:** Yes, these supplemental reporting should be limited to what has been supplied by management, that is information already disclosed by management. The 'emphasis of matter paragraph" highlights what is already in the notes to the financial statements. The audit report does not need to highlight items already in the financial statements as there is already an index to the financial statements.

3. *Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g. management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.*

**Response:** This remains management's responsibility so they must make these assertions and the extent of assurance that is provided is effectively done by the audit committee.

4. *Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?*

   **Response:** We do not believe that they should be changes to the standard audit report hence no amendments to the report on internal control over financial reporting.

5. *Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?*

   **Response:** No, because the end result is what is important.

   The AD&A could require auditors to disclose information which should be left for internal communication between the auditor and the client as well as disclosing confidential information which may be contrary to the normal auditor-client relationship.
   This concept tends to confuse the role of management and the role of the auditor. Management is responsible for the business and the auditor is responsible for expressing an opinion on the financial statements.

   This response applies to question 5 until question 12.

   a. *If you support an AD&A as an alternative, provide an explanation as to why.*

      **Response:** Refer to the response under question 5 above.

   b. *Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?*

      **Response:** Refer to the response under question 5.

   c. *Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?*

      **Response:** Refer to the response under question 5.

   d. *If you do not support an AD&A as an alternative, explain why.*

      **Response:** Refer to the response under question 5.

   e. *Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?*

**Response:** Refer to the response under question 5.

6. *What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?*

   **Response:** Refer to the response under question 5.

7. *What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?*

   **Response:** Refer to the response under question 5.

8. *Should a standard format be required for an AD&A? Why or why not?*

   **Response:** Refer to the response under question 5.

9. *Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?*

   **Response:** Refer to the response under question 5.

10. *How can boilerplate language be avoided in an AD&A while providing consistency among such reports?*

    **Response:** Refer to the response under question 5.

11. *What are the potential benefits and shortcomings of implementing an AD&A?*

    **Response:** Refer to the response under question 5.

12. *What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?*

    **Response:** Refer to the response under question 5.

13. *Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?*

    **Response:** We believe in a principle based approach therefore we don't agree with this as it is tailored rules.
    Management is required to disclose all major estimates and judgements because they are presenting the financial information. The emphasis of matter paragraph tends to highlight or repeat what has already been presented by management in the financial statements, hence it is not used judiciously to achieve the desired emphasis and this may also be seen as auditors taking the responsibility of management.

    We believe that the emphasis of matter paragraph would be used effectively only to highlight disagreements that warrant the attention of users but that does affect the fair presentation of the financial statements.

14. *Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?*

    a. *If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.*

       **Response:** Refer to response to question 13

    b. *If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.*

       **Response:** Refer to response to question 13

15. *What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?*

    **Response:** Refer to response to question 13

16. *What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?*

    **Response:** Refer to response to question 13

17. *How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?*

    **Response:** Refer to response to question 13

18. *What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?*

    **Response:** refer to response to question 13

19. *Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?*

    **Response:** Yes, as per users' needs and have a separate report for those needs. Identify users' needs and provide a relevant assurance service for that domain and develop a separate related assurance report. This will be on a case by case basis, where the auditor and management engage and agree on the type of assurance to be provided as well as the type of report required.

    a. *If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.*

       **Response:** Refer to the response above.

    b. *On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.*

       **Response:** This should be limited to financial information. There should not be a requirement for auditor to provide assurance on other information, however this will be on a case by case basis, where the auditor and management should engage and agree on the type of assurance to be provided as well as the type of report required, for example the reporting on financial information as required by the JSE Securities Exchange Listing Requirements.

    c. *What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?*

       **Response:** The level of assurance would generally be negative assurance that is "nothing has come to our attention.......", however the most appropriate level of assurance will be guided by the needs of the user.

    d. *If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?*

       **Response:** No comment as we are not MD&A specialists.

    e. *Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?*

       **Response:** No comment as we are not MD&A specialists.

    f. *Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?*

**Response:** No comment as we are not MD&A specialists.

g. *If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.*

**Response:** N/A, based on our responses above.

20. *What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?*

**Response:** There are potential benefits as there will be more reliance on this information however assurance on other information in addition to the financial statements should be a separate engagement and a separate report should be issued.

The shortcomings of implementing auditor assurance on other information outside the financial statements include:

- The possibility of reports not addressing all stakeholders' needs depending on varying stakeholders.
- The cost implications of assuring this information.
- The expertise required should auditors not have specific skills, associated with assuring such information.

21. *The concept release presents suggestions on how to clarify the auditor's report in the following areas:*
    - *Reasonable assurance*
    - *Auditor's responsibility for fraud*
    - *Auditor's responsibility for financial statement disclosures*
    - *Management's responsibility for the preparation of the financial statements*
    - *Auditor's responsibility for information outside the financial statements*
    - *Auditor independence*

a. *Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?*

**Response:** Yes, we believe that these clarifications are appropriate and would help delineate roles and responsibilities of the audit. These clarifications should be principle-based and should be clarified by way of footnotes or an appendix.

b. *Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.*

**Response:** Yes, these clarifications will provide users with better understanding.

c. *What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?*
**Response:** None.

d. *What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?*

**Response:** There will be no implications to the scope of the audit if the definitions in the auditing standards are used for this purpose.

22. *What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?*

**Response:** This will provide users with a better understanding of the language in the standard audit report; however these clarifications should be from the auditing standards and not individual definitions.

23. *This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?*

**Response:** We believe that the most appropriate alternative is the clarification of the language in the standard audit report because it will provide users with better understanding.

24. *Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?*

**Response:** There could be combinations of these alternatives however, this should also depend on the needs of the users and separate assurance reports should be issued.

25. *What alternatives not mentioned in this concept release should the Board consider?*

**Response:** None.

26. *Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?*

**Response:** For each of the alternatives, the Board should consider the needs of the users and the ability to provide assurance for those needs. There will be a need for the

Board to provide guidance on criteria to be used and what type of assurance would be provided as well as additional disclosures that may be required in the financial statements to facilitate this and the clarification of the auditor's responsibilities and management's responsibilities.

27. *Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?*

**Response:** There will be a definite risk of misunderstanding. There will be a need for user education. However, if you have separate assurance reports for all different areas, it will be self-explanatory and will not create different perceptions as it will indicate clearly the scope, objective, work performed and on what information the auditor is expressing an opinion on, hence alternative 3 in the concept release is favorable.

28. *Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?*

**Response:** Alternative 3 will better convey the auditor's role in the performance of an audit to the users of financial statements as there will be separate assurance reports explaining clearly the scope, objective, work performed and on what information the auditor is expressing an opinion on.

29. *What effect would the various alternatives have on audit quality? What is the basis for your view?*

**Response:** Audit quality might be compromised due to time constraints, or clients may incur high audit costs due to the resources that may need to be employed to be able to complete the work within the set timeframes.

30. *Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such exclusion.*

**Response:** There will be no impact if audit reports are standardized, however, should the first two alternatives be implemented, then there would be a need to differentiate the audit reports for such entities.

31. *This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, and effects on audit committee governance, liability considerations, and confidentiality.*

a. *Are any of these considerations more important than others? If so, which ones and why*?
**Response:** All these considerations are important. The largest effect will be on the auditor's time and effort which will drive up costs for stakeholders, liability, relationships as well as maintaining confidentiality of company information. This will increase risk for negative impact on the profession.

b. *If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?*

**Response:** There will be increased cost in changes to the auditor's reporting model. It is unknown at this stage whether the benefit will outweigh the cost over time.

c. *Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?*

**Response:** The recognition that it is management's responsibility to identify who the users/stakeholders are.

d. *What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?*

**Response:** no comment.

32. *The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?*

**Response:** This will impact negatively on the relationships between the auditor, management and the auditor committee. It will also create confusion on the roles and responsibilities of all three parties as well as increase tension.

Re: PCAOB Release No. 2011-003, *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements, and Related Amendments to PCAOB Standards*

Dear Members and Staff of the Public Company Accounting Oversight Board:

TRW Automotive Holdings Corp. ("TRW") appreciates the opportunity to comment on the PCAOB's *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements, and Related Amendments to PCAOB Standards* (the "Concept Release"). TRW is among the world's largest suppliers of automotive systems, modules, and components to global automotive manufacturers and related aftermarkets. TRW is also a large accelerated filer with the Securities and Exchange Commission ("SEC") and thus subject to audit under the standards issued by the PCAOB.

TRW supports the stated objectives of the Concept Release, and believes that improvements to the auditor's reporting model that would permit better user understanding of an audit would be beneficial to both users and management. However, as with any changes to auditing or accounting standards, the benefits to all parties under the proposed changes must also exceed the sum of the costs incurred by all parties to make the proposed improvements.

While TRW supports the stated objectives of the Concept Release, TRW does not support the Auditor Discussion & Analysis ("AD&A"), emphasis paragraph, or expansion of auditor responsibility alternatives, as we believe that the costs associated with each of these alternatives would substantially exceed the benefits that would be derived. In addition, while TRW supports some of the improvements associated with the clarification of the auditor's opinion, TRW is also concerned that, even with this alternative, the costs to make the changes would exceed the benefits yielded by investors. Given the tight filing deadlines currently mandated by the SEC, TRW is also concerned that adding additional responsibilities to the auditor could lead to significant delays in the reporting process, causing reporting entities to miss their filing deadlines.

In addition, the PCAOB should give serious thought to the potential implications of issuing any one of the four alternatives outlined in the Concept Release. In particular, TRW is concerned that, if any of the four alternatives are issued as a final standard (or, as the PCAOB has indicated, some combination of the alternatives), it could result in a significant increase in the litigation risk born by both auditors and management. Further, several of the alternatives (most notably the AD&A and emphasis paragraphs) call into question what the role of the auditor and management would be, and could result in damage to the auditor-management relationship.

A further explanation of our concerns follows.

**Role of Management and Auditors**

The Concept Release provides ideas as to how the auditor can provide additional information to users of financial statements. Several of the ideas that are included in the Concept Release include the potential for auditors to comment on the quality of the disclosures made by management, discussion of other risk factors that the auditor believes affect the reporting entity, and the discussion of matters that the auditors believe to be significant to the overall presentation of the financial statements.

As more fully enumerated in our responses to the specific questions asked by the Concept Release below, TRW is not supportive of auditor commentary on items that are specific to the reporting entity. TRW believes that, to the extent that the disclosures made by the reporting entity are in conformance with the applicable financial reporting framework, commentary indicating that the auditor believes that disclosures could be improved would, at best, be confusing to users of the financial statements, as the users of financial statements would have to spend additional time and resources to sort through conflicting information given by the auditors and by the reporting entity. More realistically, we believe that if any of the alternatives that call for auditor commentary on items specific to the reporting entity are approved, management and the auditors would see the costs of issuing financial statements increase, along with the risk of potential litigation (as further discussed below).

The Concept Release also raises, in several spots, an interesting question that the PCAOB should address prior to the issuance of a final standard. As noted above, several of the proposed alternatives would place the auditor in a position of commenting on the quality of the disclosures made by management. However, all applicable financial reporting frameworks and PCAOB auditing standards state that management is responsible for the financial statements; indeed, this is explicitly stated in the auditor's opinion. TRW is concerned that, in scenarios where the auditor is commenting on the financial statements, there could be significant confusion among users of financial statements as to who is ultimately responsible for the financial statements – management, or the auditors? In addition, several of the alternatives raise the question as to who is better equipped to inform users of financial statements about the reporting entity – management, or the auditors? Who is the best source of opinion on where the reporting entity is heading – management, or the auditors?

TRW's view is that management is the best situated to provide commentary in the financial statements on the reporting entity. Management has the broadest view of the specific risks and uncertainties that face the reporting entity, and should be permitted to provide whatever disclosures it feels are necessary in order to permit users of financial statements to understand those risks and uncertainties. TRW further believes that the only time that the auditors should be providing commentary on the disclosures made by the reporting entity is when those disclosures are not in compliance with the applicable financial reporting framework.

**Litigation**
Several of the alternatives presented in the Concept Release envision that the auditors will be candid in providing feedback about the reporting entity's financial statements. The Concept Release also envisions that the alternatives would, ideally, not result in additional boilerplate language being provided by the auditors, but rather that the auditors would provide users of financial statements with useful, relevant information.

This objective, however, needs to be balanced against the significantly increased risk of litigation that the auditors will face as a result of the increase in their responsibilities. TRW is concerned that litigation costs, for both auditors and management, could significantly increase under the AD&A and emphasis paragraph alternatives, due to differences between what the auditor and management have concluded and presented in their financial statements. In addition, TRW fears that, if these alternatives go forward as proposed, they could quickly devolve into a standardized form, resulting in more boilerplate language in the financial statements, which is exactly what the PCAOB is trying to avoid.

In order to combat this, the PCAOB, in concert with the SEC, should give serious thought as to how best to balance the desire for candor from the auditors and management with the need to ensure that auditors and management are not overly penalized for providing their opinion. Management is afforded Safe Harbor protections for disclosures made in reporting entities' MD&As in forms 10-K and 10-Q; no such Safe Harbor is proposed for auditors under the Concept Release covering the AD&A.

**Auditor-Management Relationship**
During the course of the audit, management and the auditors will frequently meet to discuss the significant issues that have arisen. During these meetings, management will ask questions of the auditors, will suggest ideas to the auditors on the proper accounting for certain types of transactions, and the auditors will ask questions of management in order to obtain a proper understanding of the transaction. Jointly, management works with the auditors to reach the appropriate accounting conclusion, which management then presents in its financial statements. TRW believes that this collaborative approach between management and the auditors works well.

To that end, TRW believes that certain of the alternatives could significantly jeopardize that collaborative relationship. In particular, the Concept Release envisions that the auditor provide feedback on the quality of the financial statements and on those matters that are deemed most significant by the auditor. Generally speaking, the matters that the Concept Release wants the auditors to disclose are the same matters that management is consulting with the auditors on, in order to ensure that the appropriate conclusions are being reached.

TRW believes that the Concept Release as a whole, and the AD&A and emphasis paragraph alternatives in particular, could lead to a significant chilling of the relationship between management and the auditor. If the auditor is going to disclose the nature of these conversations in its reporting on the financial statements, management will likely respond by consulting with the auditors on a less frequent basis, and would thereby cause management to be less candid, and less forthcoming, with questions and information than would otherwise be the case.

**Cost and Timing**
TRW observes that the AD&A, emphasis paragraph, and expansion of auditor responsibilities into other information would result in an increase in auditor effort to perform their required responsibilities, as the auditor will either need to provide new reporting to users of financial statements, or to expand assurance to users of financial statements to areas previously not audited. As such, should the PCAOB select one or more of these alternatives, TRW would expect the audit fees to rise, reflecting the auditor's additional work.

However, TRW further believes that the increase in audit fees is only one element of the potential increase in costs that would be felt by all participants in the financial reporting process. TRW would further expect that costs of management would rise indirectly through documenting processes and controls over the preparation of other information prepared simultaneously with the financial statements (expansion of auditor responsibility) or in answering users questions about differences between the financial statements/management discussion and analysis and the AD&A . Costs for users of the financial statements would also increase, as they will need to spend additional effort reconciling between management and auditor conclusions (AD&A), and determining whether the matters that the auditor chose to emphasize are important to them (emphasis paragraph).

In each of the first three alternatives presented by the Concept Release, TRW believes that the direct and indirect costs that would be borne by management, users, and the auditors would significantly exceed the benefits that would be generated by the alternative. TRW believes that, particularly under the AD&A and the expansion of auditor responsibilities alternatives, the costs of performing an audit will increase significantly.

In addition, TRW is concerned that the additional effort required under each of the first three alternatives, in addition to all of the other responsibilities that auditors have under PCAOB auditing standards, may cause delays in the issuance of financial statements by reporting entities, as they wait for auditors to complete their required reporting. Given that the SEC has imposed tight deadlines on public filers, TRW believes that a significant increase in auditor responsibility will correlate to a significant increase in delayed and/or non-timely filings by registrants, particularly in the first several years of a new audit reporting model. The PCAOB, in any final standard, should address the transition elements of ensuring that the auditors, while meeting the new guidelines, have sufficient resources to be able to add an additional element to their reporting requirements.

**Summary**
As noted above and in our detail responses to the questions in Appendix A, while TRW supports the stated objectives of the PCAOB's concept release, we nonetheless feel that the proposed changes as stated will not adequately address such objectives in a cost-efficient or effective manner for the constituents involved.

We thank the PCAOB for its consideration of our comments and recommendations, and would be pleased to discuss these issues with the PCAOB, or its staff, at your convenience.

Sincerely,

Tammy S. Mitchell

Tammy S. Mitchell
Vice President & Corporate Controller

Appendix A: Answers to Questions for Respondents

**Appendix A: Answers to Questions for Respondents**

**Question 1: Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.**

**a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor reporting model? Why or why not?**

**b. In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?**

**c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?**

In considering how to make the auditor's report and/or the auditor's role more relevant and useful to users of financial statements, TRW believes that the PCAOB should first examine why there is the perception that the auditor's report and/or auditor's role is currently not meeting the needs of users of financial statements. While we note that the PCAOB, in the Concept Release, has elaborated on some of the potential reasons why users of financial statements are not having their needs met, TRW questions whether the complaints levied against the current auditor reporting model reflect less specific complaints against the report itself but rather a lack of understanding by users of financial statements of what an audit comprises, what the auditor's and management's responsibilities are, what the audit opinion means, and the extent of procedures performed by the auditors in order to be able to reach the conclusion that the financial statements are presented fairly, in all material respects.

To that end, TRW would be supportive of improvements to the auditor reporting model that would seek to enhance user understanding of what an audit is, and what the audit opinion means, as further discussed below. In particular, we feel that enhancements to the audit opinion, particularly to provide a "plain English" version of the audit opinion, could produce the benefits that the PCAOB is seeking in the concept release, as further discussed in questions 21 and 22.

With regards to the expansion of the auditor's role to provide assurance on matters beyond the financial statements, TRW would be supportive of these efforts if the benefits to the users of financial statements exceed the additional costs that would be borne, by issuers of financial statements, users of financial statements, and the audit firms themselves, to provide the additional assurance. However, while TRW supports such efforts in a general manner, TRW is not supportive of the specific alternatives discussed in the Concept Release, as further discussed below.

**Question 2: The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."**

**a. Should the auditor's report retain the pass/fail model? If so, why?**

**b. If not, why not, and what changes are needed?**

TRW believes that the current "pass/fail" model of financial statements should be retained. A set of financial statements either conforms to the applicable financial reporting framework or it does not. Decisions to enhance the disclosures made in the financial statements beyond what is required by the applicable financial reporting framework should be made by management, as they best understand the business that they are reporting on, and the specific benefits and risks associated with such an expansion of disclosures. If management has chosen not to provide additional disclosure because disclosures are sufficient and are in compliance with the applicable financial reporting framework, then why should they be subject to further judgment from auditors on the adequacy of such disclosures?

TRW believes that asking the auditors to "grade" the financial statements or to provide commentary on the quality of the financial statements, other than in those situations where the financial statements are not in conformity with the applicable financial reporting framework, could lead users to question whether the applicable financial reporting framework is, itself, of sufficient quality. We believe that this could lead to conflict between the PCAOB and the governing bodies of the applicable financial reporting framework(s), and could create more problems than the PCAOB is trying to solve through this Concept Release. In addition, we believe that the "grading" of the financial statements, especially in situations where the financial statements are in conformance with the applicable financial reporting framework, could lead to questions as to who is ultimately responsible for the financial statements – management or the auditors.

**Question 3: Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.**

As we discuss more extensively in our responses to the questions surrounding the Auditor's Discussion and Analysis below, we believe that management would be the most appropriate group to provide additional information to the users regarding the Company's financial statements. Further, additional disclosure requirements should come from the financial reporting framework under US GAAP, not from auditors' discretion on what should be disclosed.

**Question 4: Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?**

Based on TRW's overall evaluation of the Concept Release, we believe that if the PCAOB supports the proposals made by TRW (i.e. only proceeds with the clarification of the auditor's report, and drops the other alternatives), no revisions would be necessary to the reporting required by Auditing Standard No. 5.

If, however, the PCAOB goes forward with other alternatives presented in the Concept Release, in particular, the expansion of auditor responsibilities over other financial information and the required use of emphasis paragraphs, TRW believes that the auditor report over internal control would need to be modified.

***Auditor Discussion and Analysis (AD&A)***

**Question 5: Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?**

- **a. If you support an AD&A as an alternative, provide an explanation as to why.**
- **b. Do you think an AD&A should comment on the audit, the company's financial statements, or both? Provide an explanation as to why. Should the AD&A comment about any other information?**
- **c. Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?**
- **d. If you do not support an AD&A as an alternative, explain why.**
- **e. Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?**

TRW does not support the proposal for the auditors to write an A&DA for multiple reasons. These reasons include investor confusion about the information presented in the AD&A, a worsening of the auditor-client relationship, increased litigation risk for both management and the auditors, a significant increase in audit fees to support the AD&A, and the time and effort that the auditor would expend in preparing the AD&A.

One of TRW's biggest concerns with the AD&A relates to the potential for significant investor confusion if the AD&A and the management discussion and analysis (MD&A) presented different information. Users of financial statements would have to reconcile the differing viewpoints between the information presented by management and the auditor, which would increase the costs of obtaining this information by users of financial statements (and would increase the costs incurred by preparers by having to provide this information to users). In addition, if the auditor presents different conclusions in the AD&A than those presented by management, and the auditor's report shows that the financial statements are presented in conformance with the applicable financial reporting framework, it may cause users of financial statements to call into question whether the auditor's report was correctly formulated and the proper audit opinion was reached.

In addition, the Concept Release envisions that the auditor, in the AD&A, would be reporting on those items that were the most judgmental, and required the most scrutiny, during the course of the audit. Frequently, these items are the subject of significant, lengthy discussions that occur between the auditors and management, as well as the auditor and the audit committee. The AD&A would likely require the auditor, who has previously not disclosed any information relating to these conversations and the ultimate decisions that are made for the financial statements, to disclose the nature of these conversations. This disclosure could significantly chill the auditor-client relationship, making management generally less willing to be open and candid with the auditors, thereby causing preparers to provide the auditors with the bare minimum information needed to perform their audit procedures.

The Concept Release also envisions that, in the AD&A, the auditor would provide candid feedback on the quality of the financial statements and the quality of the disclosures made. In addition to the concern, noted above, of users of financial statements calling into question whether the audit opinion was correctly formulated, if the auditors and management come to different conclusions about the level of disclosures provided, this difference of conclusions could lead to increased litigation faced by both management and the auditors, primarily through shareholder derivative suits (e.g., the presence of a different conclusion by the auditors may cause the market capitalization of the reporting entity to fluctuate, leading to lawsuits). In addition, the Concept Release envisions that the auditor would be providing their conclusions; TRW believes that the opinions expressed by the auditor in an AD&A, could lead to increased litigation risk to the auditors themselves. While management, when expressing its viewpoints in the MD&A, is protected by the Safe Harbor rules of the SEC, TRW observes that no similar protection exists for the auditors.

As with any increase in the scope of the responsibilities of, and deliverables from, the auditors, the potential benefits to be obtained from the AD&A must be measured against the increased costs. In the case of the AD&A, the increased costs would be felt by management (increased audit fees), auditors (increased work, potential for increased litigation risk), and by users (need to reconcile AD&A/financial statement differences). As the PCAOB notes, the AD&A represents the most expansive form of additional assurance that is proposed in the Concept Release; consequently, TRW believes that the AD&A would result in a significant increase in audit fees. As such, TRW believes that the costs incurred for the AD&A reporting model would far exceed any potential benefit derived from the AD&A.

Finally, as noted in the Concept Release, the AD&A would include many of the most significant transactions entered into by management, as well as conversations between management and the auditors. In many cases, the conclusions may be reached, by both management and the auditors, late into the audit of the reporting entity. TRW is concerned that, given the significant expansion of the reporting function for the auditor that is contemplated by the AD&A, and the tight deadlines that have been imposed by the SEC for public filers for forms 10-K and 10-Q, the reporting requirements of the AD&A (particularly the drafting of the AD&A, obtaining the appropriate concurring reviewer and national office approvals, etc.) could significantly impair a reporting entity's ability to timely meet the reporting deadlines set out by the SEC.

**Question 6: What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?**

While we do not support the creation of an AD&A, should the PCAOB choose to pursue the adoption of an AD&A, we believe that the inclusion of the items noted above, such as audit risk, audit procedures and results, and auditor information, at a sufficiently appropriate level (e.g., providing the users of financial statement information with sufficient information for them to understand, but not overburden them with meaningless detail), would be appropriate.

**Question 7: What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?**

TRW does not support the AD&A including commentary from the auditor on their views of the reporting entity's financial statements; TRW believes that the only appropriate place for this information is in the audit opinion, and should appear only in those circumstances where the financial statements of the reporting entity are not in conformance with the applicable financial reporting framework. As we stated in our response to question 2, a reporting entity's financial statements either comply with the applicable financial reporting framework or they do not comply. To that end, the auditor's opinion of management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, especially when the auditor states that the financial statements are in conformance with the applicable financial reporting framework, would either imply that (1) the auditor reached the wrong conclusion in their opinion or (2) the auditor believes that the applicable financial reporting framework is insufficient.

**Question 8: Should a standard format be required for an AD&A? Why or why not?**

While we do not support the creation of an AD&A, should the PCAOB choose to pursue its adoption, we would not support a standard format. However, as we further discuss in the response to question 10, we believe that a standard format, even if not mandated by the PCAOB, will quickly be adopted by accounting firms.

**Question 9: Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risk factors, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential shortcomings of including such risks in an AD&A?**

TRW does not support the inclusion of other risk factors in the AD&A. We believe that management has the best knowledge of the business, strategic, and operational risks that a reporting entity faces, not the auditors. While the auditor may, during the course of the audit, obtain an understanding of the business, strategic, and/or operational risks that are faced by the reporting entity, that knowledge will likely not be as complete, or as extensive, as the knowledge held by management, who runs the reporting entity.

Including this information in the AD&A, in a manner with equal prominence to that of management (which would presumably be included in the MD&A) would suggest that the auditor knows the reporting entity and its business just as well as, or better than, current management, which would not be true.

**Question 10: How can boilerplate language be avoided in an AD&A while providing consistency among such reports?**

TRW believes that, in the current legal and regulatory environment, the use of boilerplate language in an AD&A would be inevitable. As discussed in our response to previous questions, auditors who present information that conflicts with, or is presented differently than, the presentation of management could be subject to significantly higher litigation risk and legal costs. We believe that this factor, alone, would drive public accounting firms to standardize their reporting in an AD&A, leading to the boilerplate language that the Concept Release is trying to avoid. In addition, the desire of the public accounting firms (and, to a lesser extent, management, who is paying fees to the public accounting firms) to achieve standardization and cost savings in preparing the AD&A would also lead to boilerplate language.

To address the first point (increased litigation risk/legal costs) TRW believes that, should the PCAOB pursue the AD&A option, in order to avoid the risk of boilerplate language while reducing litigation risk, the PCAOB should petition the SEC to grant the public accounting firm some form of Safe Harbor protection on the AD&A. The Safe Harbor protection should be analogous to the Safe Harbor protections that reporting entities have in their MD&As in forms 10-K and 10-Q.

**Question 11: What are the potential benefits and shortcomings of implementing an AD&A?**

Please see our response to question 5 on the shortcomings of the AD&A, and to question 12 on the limited benefits we see the AD&A providing.

**Question 12: What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?**

While TRW believes that, in an AD&A, there is certainly the potential for the AD&A to present different or inconsistent information than that disclosed by management (either in MD&A or the footnotes), in practice TRW believes that this will not happen as often as would be expected in the Concept Release. While we believe that the PCAOB has identified one possible source that could lead to a reduction of differences (that is, pressure from the auditors by disclosing something in the AD&A leading to an improvement in the financial statements), we believe that this is only one factor among several that would drive greater conformity between the MD&A/financial statements and the AD&A.

In particular, TRW believes that the pressure that the auditor can bring to bear against the reporting entity, by including items in the AD&A, goes both ways; we believe that, under an AD&A scenario, the auditors would be subjected to significant pressure by management to conform their AD&A to the presentation presented by management. While the auditor may choose to not do this, the auditor would risk significant damage to the auditor-client relationship, up to and including management replacing the auditor. Further, as discussed in other responses above, we believe that the auditor would face significant litigation risk in the event that the AD&A is different than management's interpretation, particularly in those situations where the auditor opines that the financial statements are fairly presented in accordance with the applicable financial reporting framework.

To that end, TRW questions whether the perceived benefits that the PCAOB notes in the Concept Release behind an AD&A will materialize. While there may be some marginal improvements in reporting entity financial statements, TRW believes that the significant improvement that the PCAOB indicates that, in the Concept Release, they want to see will not be realized by an AD&A.

*Emphasis Paragraph*

**Question 13: Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?**

TRW believes that while the emphasis paragraphs, as described in the Concept Release, might serve to point users of financial statements to the relevant sections of the financial statements that contain the areas that the auditor chooses to emphasize, we do not believe that the presence of an emphasis paragraph, in and of itself, would provide relevant, useful information to users of financial statements.

TRW also believes that the inclusion of an emphasis paragraph, which emphasizes the matters that the auditor believes are significant, may also be misleading to users of financial statements, as the items that the auditors may find to require emphasis may differ from the items that the users of financial statements would like to have emphasis/additional information on.

**Question 14: Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?**

a. **If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.**

b. **If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.**

TRW does not support the use of required and expanded emphasis paragraphs, as proposed in the Concept Release. The reasons include investor confusion about the information presented in the emphasis paragraphs, a lack of clarity as to what a "significant" matter is and what the resolution process is if the auditor and management disagree, and increased litigation risk for both management and the auditors.

While, as we note in our response to question 13, the emphasis paragraph may serve as a reference to users of the financial statements to indicate the areas that the auditor chooses to emphasize, the Concept Release does not require the auditor to provide a rationale as to why the auditor chose to emphasize that matter. TRW acknowledges that, in some cases, the reason why the auditor chose to emphasize a particular matter will be obvious to most users of that reporting entity's financial statements (for example, an auditor may choose to highlight disclosures surrounding credit default swaps issued by the reporting entity) due to the highly complex, judgmental, or material nature of the topic to the reporting entity. However, in other instances, the rationale behind why the auditor chose to emphasize a matter may be less clear, or may not be clear at all, to the users of the financial statements. This will, in turn, cause users of financial statements to question why the auditor chose to emphasize a particular matter, leading to increased costs being borne by the users of the financial statements (in order to properly understand the financial statements) and by preparers (in answering the questions raised by users of financial statements).

The failure in the Concept Release to require the auditor to discuss why a particular topic was emphasized is compounded by the lack of clarity as to what a "significant matter" is. TRW observes that the word "significant" does not exist in either the accounting or auditing literature. Consequently, we are uncertain as to what a "significant matter" would be – is it a material matter (as defined in the auditing/accounting literature), a severe matter (as that term is defined in Accounting Standards Codification (ASC) Topic 275), something greater than a severe matter, or is it at some level in between?

Even ignoring the lack of definition as to what a "significant" matter is, TRW foresees that the required use of emphasis paragraphs to discuss these matters could result in significant disagreement between management and the auditor as to what constitutes a "significant" matter. For example, if management identifies a matter as being significant, and expends effort to appropriately disclose this in the MD&A and financial statements, but it is not identified as one by the auditor, the auditor may be questioned as to whether they performed adequate procedures to support the audit opinion issued. Similarly, if the auditor identifies a topic as being significant, but there is little disclosure made by management (either because the disclosures are in compliance with the applicable financial reporting framework or because management does not believe the matter to be significant or material), it may raise questions to management as to why their disclosures on the topic are short, but it may also raise questions to the auditors as to why they are focusing on areas that management deems to be less significant or immaterial. It further raises the question as to who is best suited to determine what provides the best insight and understanding to the users of financial statements – management or the auditors?

Finally, the requirement to have an emphasis paragraph in the audit opinion will lead to increased litigation risk faced by both auditors and management. The increased litigation risk borne by both auditors and management will occur if there is a disagreement between the auditors and management, as envisioned above, and could lead to a significant increase in derivative lawsuits filed against both the management of the reporting entity and the auditors for damaging shareholder value. In addition, the emphasis paragraph would effectively provide a "road map" to what the auditors felt are the most significant items in the audit; in the event that management or the auditor makes an oversight error in the identification of the significant items, or even if management and the auditor correctly identified the significant items and reached the right conclusions based on the facts and circumstances at the time, it would lead to greater litigation risk and a reduction of shareholder value.

**Question 15: What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?**

TRW does not support the required and expanded emphasis paragraphs that would be required in the audit opinion; however, should the PCAOB choose to pursue this option we believe that the required and expanded emphasis paragraphs should only cover those items which, if the accounting was deemed to be materially incorrect, would result in a severe impact to the reporting entity's financial statements, as that term is defined in ASC Topic 275. For example, a large lawsuit equal to 20% of revenues, a large business combination, non-compliance with debt covenants, or the bankruptcy of a material customer, could prompt the issuance of an emphasis paragraph.

**Question 16: What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?**

While TRW does not support the concept of a required emphasis paragraph in the audit opinion, should the PCAOB choose to pursue this option, we believe that the content should be at a sufficiently appropriate level to allow users of the financial statements to understand (1) why the matter was emphasized and (2) the procedures that the auditors performed to gain comfort that management's assertions were correct.

As to the level of detail, we believe that the emphasis paragraph should strike a balance between providing the users of financial statements with sufficient information to understand the points noted in the preceding paragraph, while not overburdening users of financial statements with meaningless detail.

**Question 17: How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?**

TRW believes that, if the PCAOB chooses to pursue the use of required emphasis paragraphs, boilerplate language in the emphasis paragraphs is inevitable, for many of the same reasons that we cited in our response to question 10 above (e.g., litigation risk, desire by both auditors and management to streamline/reduce amount of work needed).

Unlike the AD&A, TRW believes that, because the emphasis paragraph would be included in the audit opinion, the potential of offering the auditor a "Safe Harbor" provision, such as that discussed in question 10 above, would not be a viable solution for the emphasis paragraph. TRW acknowledges that, given the PCAOB's desire to have the auditors be candid in the required emphasis paragraph, some form of protection would need to be given to the auditors to promote that candor; however, TRW does not know, nor do we offer any suggestions on, how that form of protection can or should be given.

**Question 18: What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?**

Please see TRW's response to question 13 on the potential benefit of the required emphasis paragraph, and our response to question 14 on the shortcomings that we foresee with the required emphasis paragraph.

**Question 19: Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?**

a. **If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.**

b. **On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.**

c. **What level of assurance would be most appropriate for the auditor to provide on information outside of the financial statements?**

d. **If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate, and why?**

e. **Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?**

f. **Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?**

g. **If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.**

TRW does not support the PCAOB's proposals to extend auditor assurance on other information outside of the financial statements. While we do see some benefits associated with the proposals, as more fully discussed in question 20, TRW believes that the costs associated with the proposals would greatly exceed the benefits that users of financial statements would derive. In particular, TRW believes that the idea of extending auditor assurance would increase the workload on auditors, leading to higher audit fees, could create difficulties for the auditors in attempting to audit management opinions and forecasts, and could result in creating investor confusion about the suitability of the financial reporting framework under audit.

TRW believes that the expansion of the scope of the audit to cover all other information outside of the financial statements represents the most significant expansion of auditor responsibilities contemplated by the Concept Release, resulting in a potentially greater auditor effort than even the AD&A discussed above. Greater auditor effort would, necessarily, result in higher fees to be paid by preparers of financial statements to support the increased audit requirements. In addition, as the Board notes in the Concept Release, there is currently no guidance in the auditing or attestation literature for items that would be found outside of Form 10-K or Form 10-Q (e.g., earnings releases, non-GAAP measurements, etc.). TRW is concerned that the significant expansion of auditor responsibilities will lead to higher indirect costs for management, as they will be required to document and formalize controls that may be in place over the issuance of such information. While TRW does not support the expansion of auditor responsibilities outside of the financial statements, should the PCAOB choose to pursue this path, we would very strongly advocate that the additional responsibility given to auditors be limited to what would be found in Form 10-K or Form 10-Q.

Even if the PCAOB limits the expansion of the scope of the audit to just those items included in Forms 10-K and 10-Q, TRW would still have significant reservations about the expansion of responsibilities to these items. This is because, in many cases in the Form 10-K and 10-Q, management is giving their opinion about what has happened, or giving an estimate or forecast as to what may happen in the future. Under the premise of the Concept Release, TRW believes that these opinions, estimates, and/or forecasts would have to be subject to some form of auditor scrutiny, which raises the question of how would an auditor audit an opinion? How would an auditor provide assurance that management's forecast appears reasonable? TRW foresees, without a significant investment by the PCAOB in developing auditing standards to support auditors in making these significant decisions (or, perhaps, an exemption from attempting to audit management opinion), significant breakdowns in the audit process when management and the auditor disagree about the opinions, forecasts, or estimates that are presented outside of the financial statements, but elsewhere within Forms 10-K and 10-Q. Further, open communications between preparers and auditors may in fact deteriorate as a result. To this end, we believe that the PCAOB's attestation standard, AT 701, would not be sufficient by itself to cover the responsibilities of the auditor in such a scenario; however, TRW does acknowledge that it does represent a reasonable starting point for the creation of such a future standard.

Finally, we question whether extending auditor responsibilities to information presented outside of the financial statements would yield the benefits to users of financial statements that the PCAOB seems to believe would materialize. In particular, if the PCAOB extends auditor responsibilities to cover all information, as suggested in the Concept Release, it calls into question whether the PCAOB believes that the applicable financial reporting framework is sufficient. For example, if the PCAOB expands auditor responsibility into non-GAAP measurements, users of financial statements could infer that the auditors are providing just as much assurance on the non-GAAP measurements as they would on a measurement that is specified in the applicable financial reporting framework. This could, in turn, suggest that the auditors and/or the PCAOB believe that the applicable financial reporting framework is, itself, incomplete or deficient.

**Question 20: What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?**

TRW does believe that, if the expansion of auditor responsibilities is adopted as envisioned in the Concept Release, it may lead to a standardization of presentation of certain non-GAAP financial measurements; however, as noted in our response to the last question, we believe that this could create jurisdictional issues between the auditors/PCAOB and the governing bodies of the applicable financial reporting framework.

Please see our response to question 19 for the potential shortcomings of the expansion of auditor assurance to other information outside of the financial statements.

***Audit Report Clarification***

**Question 21: The concept release presents suggestions on how to clarify the auditor's report in the following areas:**

- **Reasonable assurance**
- **Auditor's responsibility for fraud**
- **Auditor's responsibility for financial statement disclosures**
- **Management's responsibility for the preparation of the financial statements**
- **Auditor's responsibility for information outside the financial statements**
- **Auditor independence**

**a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?**

**b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.**

**c. What other clarifications or improvements to the auditor's report can be made to better communicate the nature of an audit and the auditor's responsibilities?**

**d. What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?**

TRW believes that a number of the proposed clarifications could enhance the understanding of users of financial statements as to what exactly the auditor's report states. In particular, we would support the clarifications surrounding the definition of reasonable assurance, the auditor's responsibility for fraud, and the auditor's responsibility for information outside of the financial statements in the audit opinion, as we feel that having a clearer, or "Plain English," explanation could enhance user knowledge over these terms. At the same time, however, TRW also acknowledges that the PCAOB's auditing standards are publicly available on its web site and the AICPA (and, indirectly, the PCAOB) is currently participating in a "Clarity Project" to make the requirements of the auditing standards more "Plain English," such that users could, on their own, enhance their understanding by fully reading the auditing standards.

TRW does not believe that the proposed enhancements surrounding the auditor's responsibility for financial statement disclosures, management's responsibility for the preparation of the financial statements, and auditor independence would enhance the understanding of users of financial statements, as TRW feels that these are either clearly spelled out already in the audit report (in the case of management's responsibility and auditor independence) or would seem to logically flow from the audit report itself (in the case of the auditor's responsibility).

TRW does not believe that additional clarifications or improvements to the auditor's report, other than those already discussed above, are necessary or would be warranted, and believes that there would be no significant implications to the scope of the audit, or auditor's current responsibilities – as the PCAOB suggests, this would merely represent a clarification of what the auditor should already be doing.

**Question 22: What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?**

Please see our response to question 21.

*Questions Related to All Alternatives*

**Question 23: This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?**

As noted in our responses to questions above, TRW believes that all of the alternatives will significantly increase costs to preparers, auditors, and, in some cases, users of financial statements. In addition, as noted above, TRW does not support the proposed alternatives in the Concept Release surrounding the AD&A, required and expanded emphasis paragraphs, and expansion of auditor responsibilities to other information outside of the financial statements.

Based on this, TRW believes that the fourth alternative, the clarification of certain phrases in the audit report itself, comes closest to balancing the benefits to be obtained by the users of the financial statements with the costs associated with making the changes proposed in the Concept Release borne by preparers, auditors, or users of financial statements.

**Question 24: Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?**

Since, as noted above, TRW does not support three of the four alternatives, and only partially supports the fourth alternative, TRW believes that combining the alternatives would only exacerbate the problems that TRW foresees with the individual alternatives presented in the Concept Release. Even in a pared down scenario, such as we discuss in our response to question 19, we see significant difficulties in implementing any combination of the four alternatives.

**Question 25: What alternatives not mentioned in this concept release should the Board consider?**

We did not identify any alternatives that the PCAOB should consider.

**Question 26: Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?**

As noted in our responses to several of the questions above, TRW believes that, should the PCAOB pursue any one of the alternatives (even though, as noted above, TRW does not support three of the four alternatives), that the PCAOB should take a cue from the FASB in their development of the auditor reporting framework. That is, the overriding goal of the auditor reporting framework developed by the PCAOB should be to provide the user with sufficient information to understand the decisions made by the auditor and the procedures performed by the auditor, while not overburdening the users of financial statements with so much information to make the auditor's reporting irrelevant.

**Question 27: Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?**

TRW believes that, if the PCAOB pursues the first three of the alternatives presented in the Concept Release (that is, the AD&A, emphasis paragraph, or expansion of auditor responsibilities option), financial statement users could, and probably would, perceive the language in any of these alternatives as potentially providing a qualified or piecemeal opinion, regardless of the ultimate opinion expressed by the auditor over the financial statements. In particular, if the auditor is providing commentary on the quality of the disclosures, or emphasizes a matter for which management has not provided a lot of disclosure, TRW believes that users of the financial statements may interpret this commentary to suggest that the audit opinion is qualified or piecemeal. Further, an emphasis paragraph or matters discussed in AD&A could lead to greater user confusion based on the relative prominence given such matters as compared to the level of disclosure provided by preparers.

There are a couple of potential solutions that may partially ameliorate this problem that the PCAOB could implement. The first would be that, in any situation where the auditor may be commenting on the quality of disclosures or emphasizing a matter, the auditor should provide commentary indicating that the disclosures made by management are in accordance with the applicable financial reporting framework. While it will not completely inoculate the auditor from the perception that they are providing a piecemeal report, emphasizing management's compliance with the applicable financial reporting framework will provide users with assurance that the audit opinion can be relied upon.

Second, TRW feels that, should the PCAOB choose to pursue any of the four alternatives, that the level of assurance/reporting that should be performed should be at the same level as that provided to the financial statements; that is, the auditor should be providing reasonable assurance that the information being covered in each of the alternatives is correct (whether in an AD&A format, emphasis paragraph, or expansion of auditor's responsibilities). Any lower level of assurance to be provided by the auditors, in any of the proposed alternatives, could lead to the perception by users of financial statements that the work performed is of lower quality than the work performed on the financial statements. For the avoidance of doubt, it should be clearly indicated, and users must be educated to the fact, that no such lower level of quality exists. Otherwise, varying degrees of standards will lead to even greater confusion as to the level of assurance provided.

**Question 28: Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?**

TRW believes that the fourth alternative (clarification of phrases in the audit opinion) would have the most impact to the understanding of users of financial statements on the auditor's role, as it would help to clarify the roles and responsibilities of the auditor during this process. While the AD&A and the emphasis paragraphs may help users of financial statements to understand better the auditor's role, the understanding would be limited only to those matters that the auditor emphasized (in the emphasis paragraph) or covered in the AD&A.

**Question 29: What effect would the various alternatives have on audit quality? What is the basis for your view?**

TRW believes that the various alternatives proposed in the Concept Release would have a negligible impact on audit quality. Auditors should be obtaining sufficient, credible evidence to evaluate the totality of management's financial statement presentation and disclosures, regardless of the topic being presented. While including the matter in an emphasis paragraph, or in the AD&A, may create an improvement in audit quality, as the significant matter(s) would be on public display, TRW believes that the improvement that these alternatives may obtain would be marginal, at best.

We further believe that the expansion of auditor's responsibility to information outside of the financial statements, as well as clarification of the auditor's report, would have no impact on audit quality, and may even degrade audit quality in the initial period in which the alternatives are required, as the auditors may not have the capacity to support the additional reporting proposed in the Concept Release.

**Question 30: Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed by the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisors, brokers and dealers, and others? What would be the effect of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.**

While we do not support the AD&A, required use of emphasis paragraphs, or expansion of auditor responsibilities, and have offered qualified support for the clarifications to the audit report discussed in the Concept Release, TRW believes that if the PCAOB chooses to pursue these changes, the changes should be applied equally to all audit reports filed with the SEC.

**Re: Request for Public Comment *on Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards and Notice of Roundtable (PCAOB Release No. 2011-003, June 21, 2011, Rulemaking Docket Matter No. 34)***

Dear Members and Staff of the Public Company Accounting Oversight Board:

The U.S. Chamber of Commerce (the "Chamber") is the world's largest federation of businesses and associations, representing the interests of more than three million U.S. businesses and professional organizations of every size and in every economic sector. These members are both users and preparers of financial information. The Chamber created the Center for Capital Markets Competitiveness ("CCMC") to promote a modern and effective regulatory structure for capital markets to fully function in a 21st century economy.

The CCMC recognizes the vital role external audits play in capital formation and supports efforts to improve audit effectiveness. We appreciate the opportunity to comment on the Public Company Accounting Oversight Board's ("PCAOB") *Concept Release on Possible*

*Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* ("Concept Release").

The CCMC has a number of concerns regarding the issues and concepts outlined in the Concept Release including those related to:

- The potential increase in financial reporting complexity;
- The apparent overturning of fundamental precepts of financial reporting;
- The conflict with other forms of mandated corporate disclosure;
- The fundamental shift in the role of the auditor and communications;
- The potential activities that may fall outside of the legal mandates of the PCAOB's powers and encroachment upon mandated powers of other regulators and standard setters;
- The potential increase in litigation harmful to investors and the capital markets; and
- The failure to weigh recommendations made by other entities to reduce financial reporting complexity.

In reviewing the intent and purpose behind the Concept Release, the CCMC believes that the PCAOB should work with the Securities and

Exchange Commission ("SEC") and Financial Accounting Standards Board ("FASB") to:

- Take a coordinated holistic approach to reducing financial reporting complexity;
- Create a Financial Reporting Forum allowing all stakeholders to work together to identify long-term financial reporting issues and solutions; and
- Follow transparency and disclosure standards, used by regulators, in the development of standards and concept releases.

**Discussion**

The stated objective of the Concept Release is to seek public comment on auditor reporting alternatives that could provide investors with more insight into the company's financial statements, or possibly other information outside the financial statements, and more transparency into the audit process.

The Concept Release presents four alternatives (auditor's discussion and analysis ("AD&A"), required and expanded use of emphasis paragraphs, auditor assurance on other information outside the financial statements, and clarification of the standard auditor's report). Nonetheless, the Concept Release makes clear that the PCAOB intends to retain the current ("pass/fail") approach of the standard auditor's report. Indeed, as recognized in the Concept Release, the PCAOB has heard overwhelming support from all stakeholder groups for retaining this long-standing approach to auditor reporting. Thus, the alternatives presented in the Concept Release would be additive to the current approach.

Before addressing any specifics in regards to the Concept Release, it is important to consider the threshold question of whether the PCAOB should undertake a standard-setting initiative. CCMC notes that standards related to auditor reporting are long-standing and have served the test of time. While this does not mean that improvements should not be considered by the PCAOB, it does suggest the need to exercise caution in doing so.

The CCMC has a number of concerns about the PCAOB's approach to this reporting project and the alternatives discussed in the Concept Release. These concerns are outlined in the remainder of this letter.

## I. Approach to Developing the Concept Release

An overarching concern is that, in developing the Concept Release, the PCAOB has not taken a comprehensive and holistic approach to considering the role of *both* auditors and audit regulators in achieving an optimal level of quality and clarity in public company financial reporting. The PCAOB has not clearly articulated the current structural audit weaknesses in public company financial reporting, which is a necessary predicate to address the threshold question of whether the PCAOB should undertake a standard-setting initiative on auditor reporting. In addition, the Concept Release does not appreciate that the PCAOB as the regulator of public company audits actually shares responsibility with auditors for audit quality. Instead, the Concept Release appears intent on transferring responsibilities to auditors when it comes to auditor reporting.

A more holistic approach to considering the interplay of audit and financial reporting regulation could likely have informed this PCAOB auditor reporting project in other ways, including by raising questions about some of the essential premises that underlie it. For example, in response to the 2008 economic crisis, FASB has promulgated new standards and the SEC has enacted new regulations. There is no indication that the PCAOB considered these FASB and SEC activities in developing the alternatives discussed in the Concept Release.

Furthermore, the project does not appear to have taken into account the insights and recommendations from prior blue-ribbon advisory committees, such as the SEC Advisory Committee on Improvements to Financial Reporting ("CIFiR"), the U.S. Department of the Treasury Advisory Committee on the Auditing Profession ("ACAP"), and the Panel on Audit Effectiveness.[1] For example, ACAP recommended that the PCAOB narrow the expectation gap and provided useful guidance to the PCAOB for exercising its responsibility to do so; whereas, the Concept Release seems intent on delegating this regulator responsibility to auditors, including through the assignment of new responsibilities.

Moreover, the reports and recommendations of previous advisory committees should have provided perspective on the feedback that the PCAOB received during its outreach activities. For example, it is financial reporting complexity, including disclosure overload, which is at the heart of some of what the PCAOB heard from its outreach activities. Calls by investors for "tell us what matters" and "give us a roadmap" should be less about asking auditors to weigh-in with their views (as the Concept Release suggests with alternatives such as AD&A and expanded and required use of emphasis of matter paragraphs), and more about the PCAOB working

[1] Recommendations of the Panel on Audit Effectiveness are discussed in a subsequent section of this letter on going concern reporting and disclosures.

with other regulators, including the SEC and FASB, to help fix the essential problem.

Disclosures for public companies and their investors are a triad that involves the SEC, FASB, and the PCAOB. It is imperative that this triad work in harmony to provide a rational coordinated system of disclosure for all public company stakeholders. A failure to do so will create competing disclosures and confusion, sowing uncertainty and doubt in the capital markets for investors and companies alike. The CCMC once again reiterates its call for a Financial Reporting Forum that will provide for coordination as well as the identification and resolution of problems that may drive complexity and obfuscation.[2]

Importantly, complexity challenges a premise for this project that expanded auditor reporting in advance of the 2008 economic crisis might have been helpful in assessing the quality of the financial statement and provided early warning signals regarding potential issues.

In its August 2008 Final Report, CIFiR recognized that over time "financial reporting has become a burdensome compliance exercise with decreasing relevance to investors" (p. 18). CIFiR identified financial reporting complexity as the key factor driving the disconnect between current financial reporting and the information necessary to make sound investment decisions. Thus, CIFiR made a number of recommendations to the SEC, FASB, and PCAOB to improve the usefulness and reduce the complexity in financial reporting. While some progress has been made, many of CIFiR's recommendations have yet to be taken up by the appropriate bodies – in particular the PCAOB.

---

[2] See CCMC testimony provided to the U.S. Senate Subcommittee on Securities, Insurance and Investment's April 6, 2011 hearing: *The role of the accounting and auditing profession in preventing another financial crisis.*

One example of a CIFiR recommendation not yet addressed by the PCAOB relates to judgment. Whereas discussions in the Concept Release indicate that some participants in the PCAOB's outreach activities expect a single "right answer," CIFiR appreciated the role of judgment and understood that there is not necessarily one right answer in accounting and auditing matters. In turn, CIFiR recommended that the PCAOB develop and articulate guidance related to how the PCAOB, including in its inspections and enforcement divisions, would evaluate the reasonableness of judgments made based on PCAOB auditing standards. CIFiR also recommended that the PCAOB's statement of policy should acknowledge that the PCAOB would look to the SEC to the extent that the PCAOB would be evaluating the appropriateness of accounting judgments as part of an auditor's compliance with PCAOB auditing standards.[3]

To summarize, CIFiR understood the need to take a comprehensive and holistic approach to overcoming the problem of financial reporting complexity. The CCMC recommends that the PCAOB adopt such an approach and redirect its efforts and resources from initiatives that will only exacerbate the disclosure overload problem. All financial reporting stakeholders would be better served if the PCAOB worked with other regulators and standard-setters, such as the SEC and FASB, to implement the CIFiR recommendations; to help update and improve existing disclosure requirements and eliminate redundant and unnecessary disclosures; to facilitate the ability of management (rather than lawyers) to drive discussions in MD&A, including those around critical accounting estimates; and to help address issues around the auditability of GAAP.

---

[3] CIFiR recommended that the SEC issue a statement of policy articulating how it evaluates the reasonableness of accounting judgments and include factors that it considers when making this evaluation. CIFiR then went on to suggest some components of an accounting policy statement related to the choice and application of accounting principles, as well as estimates and evidence related to the application of accounting principles. CIFiR's suggested components are consistent with advice on the SEC's website for consultations on accounting matters with the Office of the Chief Accountant and the Division of Corporation Finance. However, CIFiR made no such suggestions in regards to an audit judgment framework.

The CCMC also recommends that the PCAOB work with others such as the SEC and FASB to better understand the responsibilities of users when it comes to financial reporting. The Concept Release seems not to appreciate that users are heterogeneous and, therefore, their information needs vary. General purpose financial reporting, as represented by GAAP financial statements, is designed to meet the needs of the broad set of all users and not the demands of any particular special interest group.

## II. Overturning a Fundamental Premise of Financial Reporting

Another major CCMC concern is that the Concept Release overturns a fundamental premise of financial reporting—namely that the financial statements and disclosures are the responsibility of management. This premise likewise extends to other information that accompanies the financial statements, such as Management's Discussion and Analysis of Financial Condition and Results of Operations ("MD&A"), which management prepares in accordance with SEC requirements, as well as other information outside the financial statements.

Management's financial reporting responsibility includes the selection and application of Generally Accepted Accounting Principles ("GAAP") and the determination of the many estimates and judgments required by GAAP and SEC financial reporting requirements, including MD&A disclosures. Management's responsibility for financial reporting extends beyond compliance with GAAP to determining the "quality" of the company's financial reporting within GAAP. In turn, the board of directors, largely through the audit committee, exercises oversight of management's financial reporting, including the company's annual (Form 10-K) and quarterly (Form 10-Q) filings with the SEC.

The independent audit firm's responsibility is to express an opinion as to whether the company's annual financial statements, including notes thereto, are presented fairly, in all material respects, in conformity with GAAP.[4] The auditor's report is the mechanism by which the audit firm communicates this opinion. The SEC does not accept filings that contain audited financial statements with qualified or adverse audit opinions.[5] Thus, for public companies, the auditor's unqualified audit opinion indicates that all material matters have been resolved.[6]

An essential element of the fundamental premise of financial reporting is that the auditor is not an original source of information about the company. Auditors' legal and ethical obligations recognize and reinforce this point by requiring that auditors treat all company-specific information as confidential.[7] Except in rare circumstances where management and the board of directors have failed to disclose certain information, as provided for under PCAOB auditing standards and SEC regulations,[8] auditors are *precluded* from disclosing any company-specific

---

[4] Quarterly financials included in Form 10-Q filings with the SEC are reviewed by the auditor, rather than audited.
[5] The Concept Release does not explore the implications of this prohibition or suggest altering it.
[6] However, auditing standards provide that audit reports with unqualified opinions can contain additional explanatory or emphasis of matter language, including when there is substantial doubt about the entity's ability to continue as a going concern, there has been a material change between periods in accounting principles or their method of application, there are significant transactions with related parties, or unusually important subsequent events have occurred.
[7] Rule 301 of the American Institute of Certified Public Accountants ("AICPA") Code of Professional Conduct states that "a member in public practice shall not disclose any confidential client information without the specific consent of the client." The PCAOB did not adopt Rule 301 as part of its interim standards. Apparently the PCAOB's decision was based on a determination that incorporation of Rule 301 was not necessary to fulfill the Board's mandate under Section 103(a)(1) and (3) of The Sarbanes-Oxley Act of 2002 ("SOX"). The PCAOB has assured that this determination did not reflect a decision that auditor confidentiality requirements imposed by other authorities were inappropriate. In adopting conforming amendments in conjunction with Auditing Standard No. 6 ("AS No. 6"), *Evaluating Consistency of Financial Statements*, the PCAOB reaffirmed that it sought neither to modify nor detract from existing confidentiality requirements. Nonetheless, in approving AS No. 6 in September 2008, the SEC encouraged the PCAOB to develop and adopt a rule addressing the auditor's responsibility with respect to maintaining the confidentiality of client information. The PCAOB has yet to do so.

[8] Examples include information under certain circumstances in reports in connection with the termination of the audit engagement and reports that may be required pursuant to Section 10A(b)1 of the Securities Exchange Act of 1934 relating to an illegal act that has a material effect on the financial statements.

information to outside parties. Nonetheless, the Concept Release includes alternatives, in particular an AD&A, that represent a radical departure from the bedrock premise of financial reporting.

Further, at first blush it would appear that the proposed AD&A would be in direct conflict with the MD&A required by the SEC. Accordingly it would seem that such a system would provide competing disclosures that will increase complexity and create confusion for investors. Seemingly, that would appear to be a situation that the SEC could not allow to develop.

As described in the Concept Release, an AD&A would provide financial statement users with a view of the audit and financial statements "through the auditor's eyes" (p. 13). Importantly, the Concept Release recognizes that the auditor's perspectives about the company's financial statements could differ from those of management.

According to the Concept Release, AD&A would give the auditor the ability to discuss significant matters, which could include such things as the auditor's views regarding management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls." The Concept Release goes on to explain that:

> *Additionally, an AD&A could provide the auditor with discretion to comment on those material matters that might be in technical compliance with the applicable financial reporting framework, but in the auditor's view, the disclosure of such matters could be enhanced to provide the investor with an improved understanding of the matters and their impact on the financial statements. And, AD&A could also highlight those areas where the auditor believes management, in its preparation and presentation of the financial statements, could have applied different accounting or disclosures* (p. 13).

Needless to say, providing auditor views and perspectives would represent a profound shift in the role and responsibilities of the independent auditor vis-à-vis management and the board of directors/audit committee. AD&A would necessitate the auditor becoming an original and competing source of company-specific information.[9] While it is not clear that the PCAOB would have the authority to enact this sea change, on principle, the CCMC strongly disagrees with any move by the PCAOB in this direction.

Investors need factual information to make decisions with their goal being a return on investment. Those decisions are premised on the health, direction and management of a company. An auditor's opinion in AD&A may be considered Monday morning quarterbacking that may not even be welcomed by investors generally. For that matter why not create a disclosure on the opinions of top financial reporter's opinions on management decisions. While everyone may have an opinion, it may not provide relevant facts or substance for investment decisions.

Moreover, any such change in the fundamental premise of financial reporting would likewise have significant implications for auditors from the standpoint of legal liability. AD&A may even create new avenues for legal actions against auditors. For example, the U.S. Supreme Court recently reaffirmed its decision in Central Bank[10] that precludes private securities fraud actions against secondary actors such as auditors. As described in the Concept Release, it appears that an AD&A would move the auditor into the position of being an original maker of statements. The auditor would have ultimate authority and control over AD&A, including its content and

---

[9] As subsequently discussed, a similar argument can be made for required and expanded use of emphasis of matter paragraphs in all audit reports as this alternative would necessitate that the *auditor* determine significant matters to highlight and reference where those matters are further disclosed by management in the financial statements.

[10] *Central Bank of Denver v. First Interstate Bank of Denver*, 511 U.S. 164 (1994).

whether and how to communicate it. As a consequence, Rule 10b-5 could then apply to auditors, as plaintiffs in private actions could allege the auditor directly or indirectly made an untrue statement of a material fact in connection with the purchase or sale of securities.

## III. Additional Practical Considerations

Setting aside disagreement on fundamentals, the Concept Release also does not appreciate the full range of practical implications from adding an AD&A requirement that go well beyond effects on the timing of the delivery of audit reports. For example, it seems unlikely that expressing auditor views on financial statement matters in an AD&A-type report could be the end of it. Investors and other third-parties would likely call for clarification, additional insights, and further explanations from auditors in order to understand the auditor's views and to help reconcile, as necessary, such views with those of management. Would auditors then need to issue press releases and hold conference calls to meet these demands for further information? Would SEC reviews by the Division of Corporation Finance come to involve reviewer comments addressed to auditors? Likewise, in putting the auditor in the position of being an original and competing source for financial information about the company, one can easily envision that an AD&A-type responsibility could create a material adverse interest with management and, therefore, raise questions about auditor independence under extant requirements.[11] And the list of problematic consequences goes on.

---

[11] The Concept Release describes one rationale for an AD&A as being to "give the auditor greater leverage to effect change and enhance management disclosure in the financial statements, thus increasing transparency to investors" (p. 13). However, as previously discussed, this rationale involves transforming the role of the auditor vis-à-vis that of management and the board/audit committee. Additionally, the Concept Release fails to appreciate that under extant arrangements, the need for the financial statements to comply with GAAP to obtain an unqualified audit opinion provides auditors with powerful "leverage." Otherwise, extant auditing standards support the auditor's role in facilitating the operation of corporate governance mechanisms related to the quality of financial reporting, via requirements such as the one on auditor communications with audit committees about the "quality" of the company's accounting principles (within GAAP), in addition to their compliance with GAAP.

Other aspects of the AD&A alternative involve suggestions for an auditor narrative with information about the audit, including audit risks identified in the audit, audit procedures and results, and auditor independence. Regarding the latter, there is no indication in the Concept Release why current disclosures on auditor independence are inadequate, including proxy statement disclosures by audit committees. Indeed, it raises the question of whether investors participating in the PCAOB's outreach activities are even reading the information now available to them.

As to more information about the audit,[12] it is a difficult to envision how the auditor could condense all the work done on each engagement related to audit risks identified, audit procedures performed, and results obtained into a few sentences or even paragraphs. It is also a challenge to understand how any such condensation would be meaningful. PCAOB auditing standards, which are publicly available, provide the basis for performing audits. PCAOB inspections review the application of and adherence to such standards on individual engagements. The Concept Release does not make the case for why or how adding a reporting requirement for auditors to provide more details about their performance on each individual engagement would provide useful information to investors and other users.

Relatedly, the Concept Release is wanting when it comes to illustrating the alternatives. Illustrative examples that only contain placeholders for substantive information are unhelpful. The PCAOB should have developed substantive illustrations or even used field testing to assist in evaluating the usefulness and limitations of the various suggestions that emerged from their outreach activities *before* issuing a Concept Release.

---

[12] More information about the audit is also suggested under the alternative for required and expanded use of emphasis of matter paragraphs. For example, the Concept Release states that "under this alternative, the auditor also could be required to comment on key audit procedures performed pertaining the identified matters" (p. 20).

Otherwise, legal considerations and the need for audit firms to maintain consistency across engagements and over time preclude alternatives involving auditor narratives from being "free-writing" exercises. Before mandating AD&A or the expanded use of emphasis of matter paragraphs on all audits, criteria would need to be developed by the PCAOB (and audit firms would likely need to further refine such criteria). Even information currently part of internal communications among auditors, management, and boards/audit committees cannot be moved to the public arena without such criteria. For example, PCAOB auditing standards related to auditor communications with audit committees recognize that "objective criteria have not been developed to aid in the consistent evaluation of the quality of an entity's accounting principles as applied in its financial statements" (AU 380.11).[13]

All things considered, rather than meaningful information, requirements for AD&A and the expanded use of emphasis of matter paragraphs on all audits appear more likely to add boilerplate to that already cluttering SEC filings. Boilerplate is the tip of the financial reporting complexity iceberg.

As we previously discussed, because of overly complex and detailed periodic reporting, CIFiR likewise heard that investors want to be told "what matters." However, after extensive deliberations, CIFiR did *not* recommend that auditors step-in to fill the breach; it did not recommend such things as an AD&A or required and expanded use of emphasis of matter paragraphs on all audits.[14] Rather, CIFiR recognized the importance

---

[13] Moreover, altering the auditor's responsibilities to involve external disclosure of AD&A-type information would likely transform current relationships and interactions among auditors, management, and boards/audit committees to the detriment of audit quality.

[14] Members of CIFiR included investors and representatives of other financial statement users along with financial executives and board members, auditors, and securities lawyers. In addition, the chairman of the PCAOB was an official observer on CIFiR.

of the fundamental premise of financial reporting, as previously discussed. Thus, CIFiR recommended that *management* provide a short executive summary at the beginning of a company's annual report on Form 10-K (with material updates in quarterly reports on Form 10-Q). CIFiR suggested the summary describe concisely the most important themes or other significant matters with which management is primarily concerned, along with a page index showing where investors could find more detailed information on particular subjects (p. 3).

## IV. Additional Assurance Services

The Concept Release presents another alternative that would *require* auditors to provide assurance on information outside the financial statements such as MD&A (or portions thereof, such as critical accounting estimates), non-GAAP information, and/or earnings releases. Current PCAOB auditing standards describe the auditor's responsibilities regarding other information outside the financial statements in documents containing audited financial statements. These responsibilities include reading and considering whether such information or the manner of its presentation is materially inconsistent with the financial statements or represents a material misstatement of fact. The Concept Release fails to make the case for why this current arrangement is inadequate. Likewise, the Concept Release fails to identify the flaws in earnings releases that would be fixed with auditor assurances or how such assurances would otherwise be value-added in this context.

Moreover, extant PCAOB attest standards allow the auditor to be engaged to attest on MD&A and the standards provide requirements for such engagements. Yet, few if any public companies engage their auditors for this additional assurance service on MD&A. Further, CCMC is not aware of any instances where shareholders have requested a company to do so. The lack of any voluntary demand for additional assurance services is revealing and provides a basis for concluding that proposals to *mandate* such services fail cost/benefit considerations.

## V. Adding Clarifying Language to the Auditor's Report

The fourth alternative presented in the Concept Release would provide for adding clarifying language in the existing standard auditor's report. The Concept Release suggests that language around reasonable assurance, the auditor's responsibility for fraud, the auditor's responsibility for financial statement disclosures, management's responsibility for the preparation of the financial statements, the auditor's responsibility for information outside the financial statements, and auditor independence would be potential areas for clarification. These suggestions represent refinements to the current auditor's report and, overall, are not objectionable in concept, although it is hard to argue the need for all of them individually. For example, in regards to independence, currently the audit report is labeled as the "report of the independent registered public accounting firm" and, as previously noted, proxy statements provide disclosures on auditor independence. So, it is not clear why any further disclosures contemplated by the Concept Release would be useful information rather than added boilerplate.

## VI. Going Concern Reporting and Disclosures

At the PCAOB's open board meeting on June 21, 2011 to approve the Concept Release, one board member focused on going concern reporting by auditors. For example, the statement of Mr. Harris has an entire section on "Going Concern Opinions: A Rarely Used Tool." This is curious because the Concept Release is *silent* on this topic; and, it creates some confusion about the direction of this auditor reporting initiative.

Going concern is long recognized as an area in need of FASB attention. Although the financial statements are prepared on the assumption that the entity will continue as a going concern, auditing standards contain the only real guidance on going concern. More than a decade ago, the Final Report (August 31, 2000), of the Panel on Audit Effectiveness recommended that the FASB (1) define the going concern concept and clarify that management, not the auditor, has the primary responsibility to assess whether the entity has the ability to remain a going concern, (2) consider the appropriateness of the one-year time horizon in SAS No. 59 (i.e., the FASB should evaluate this time horizon and recognize its importance to auditors in framing their audit reports), and (3) promulgate explicit going concern disclosure requirements to fit various circumstances (pp. 61-62).

The FASB has had a going concern project on its agenda for a number of years now, but the FASB has yet to finalize any guidance in this area. If the PCAOB heard from its outreach activities in response to the 2008 economic crisis that this is an area of concern for investors, it would seem that this project should have provided a golden opportunity for the PCAOB board itself to become engaged in working with the FASB and SEC to overcome this perceived deficiency in GAAP and address other issues related to the auditability of GAAP.

## VII. Outreach, Transparency, and Cost/Benefit Considerations

Chairman Doty's statement at the PCAOB's open board meeting notes the "fluid" nature of feedback from the PCAOB's outreach activities on this project. However, this raises issues about the transparency of the PCAOB's outreach activities.

On one hand, the CCMC appreciates the extensive discussion of the feedback received by the PCAOB's staff from its outreach activities contained in the Concept Release, including Appendix C. On the other hand, the discussion is mostly confined to the alternatives pursued in the Concept Release rather than those considered but dropped along the way (e.g., going concern reporting).

In addition, it is difficult to interpret the information in the Concept Release because discussions with participants were private (no transcript is publicly available of the outreach discussions) and apparently informal (the PCAOB has provided no sample questionnaire or interview script).[15] Further, the Concept Release does not identify the number of participants in the PCAOB's outreach activities or list their names and organizations. And, while overall categories of participants are given, discussions of the various views, in particular those in Appendix C, mostly just combine all categories into "outreach participants," with only qualitative information on the degree of commonality in views noted by using terms such as "some" or "many" outreach participants.

The CCMC strongly agrees that the PCAOB should consult with and have access to a full range of perspectives among all users of financial statements. However, these activities need to have transparency. The CCMC appreciates that the PCAOB has included auditor reporting issues on the agendas at various public meetings of its advisory groups, including its Standing Advisory Group ("SAG") and IAG. Public roundtables are another mechanism for conducting public outreach with transparency and the PCAOB has announced plans to hold one or more roundtables in conjunction with this project. Nonetheless, as noted, the CCMC has

[15] CCMC understands that the PCAOB includes the March 2011 Investor Advisory Group ("IAG") survey as part of its outreach activities and some details of participants in that survey are publicly available, including that IAG members themselves were among the survey participants.

concerns about the lack of transparency around many of the PCAOB's outreach activities that produced this Concept Release, which are consistent with concerns the CCMC has previously expressed about the transparency of the PCAOB's activities and due process generally.[16]

Finally, most of the reporting alternatives presented in the Concept Release would involve additional costs. Feedback from the PCAOB's investor outreach that informed the alternatives presented in the Concept Release appears to underplay the existence and significance of any additional costs. Indeed, in the main, it does not appear that cost/benefit considerations played a major role in the discussions with outreach participants.[17]

## Conclusion

In conclusion, the CCMC appreciates the opportunity to comment on the Concept Release. In closing, we would like to reiterate that the CCMC supports working to achieve one set of global high quality auditing standards through the convergence of PCAOB auditing standards with those of the AICPA's Auditing Standards Board ("ASB") and the International Auditing and Assurance Standards Board ("IAASB"). In this regard, CCMC notes that the Concept Release gives short shrift to activities by other audit standard-setters related to auditor reporting and fails to provide any comparison of relevant portions of PCAOB auditor reporting standards with those of the ASB and IAASB as part of considering improvements to PCAOB auditing standards. The CCMC

---

[16] For example, see the October 7, 2009 letter from the U.S. Chamber of Commerce CCMC to the Honorable Daniel L. Goelzer, Acting Chairman of the PCAOB.

[17] For example, during discussions at the March 2011 IAG meeting, some IAG members dismissed cost concerns for AD&A with assertions that no additional audit work would be required as auditors would just be disclosing to investors information currently communicated with audit committees.

encourages the PCAOB to reconsider its "go it alone" approach to audit standard-setting.

Thank you for your consideration and the CCMC stands ready to assist in these efforts.

Sincerely,

UHY LLP

**PCAOB Rulemaking Docket Matter No. 34**

**BACKGROUND**

This letter is to comment on the PCAOB Release No. 2011-003 dated June 21, 2011, *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements.*

The PCAOB release referred to in the preceding paragraph requests comments on possible revisions or additions to the content of the auditor's report. Rather than responding to each of the thirty questions in that release document, we have chosen to articulate our views in the following few paragraphs.

**OVERALL VIEW OF PROPOSAL**

We believe that the appropriate order of events for the PCAOB in fulfilling its mission should be to first review the current audit requirements and then to compare them with what it believes the requirements for an audit should be. Only after the PCAOB has taken that critical step can there be any meaningful and logical discussion about the wording and content of the auditor's report. The wording can have no objective other than ensuring that the report faithfully represents to its readers the purpose, scope, and conclusion of the audit. Until the PCAOB is content with the objective of an audit, any meaningful changes to the report are premature and merely cosmetic. However, if immediate change to the auditor's report fulfills a sense of accomplishment for the PCAOB in responding to widely reported but nevertheless anecdotal comments made by those purporting to represent the user community, we offer our reaction to some changes that could take place without the need for the PCAOB to rethink the audit process. Those comments are in the section that follows.

Our overall reaction to this request for comments is that a change to the current auditor's report is simply unnecessary. In our view, the current auditor's report is clear in describing the objective, the scope, and the conclusion of an audit prepared in accordance with standards issued by the PCAOB in fairly understandable and unambiguous plain English. However, any language and description can be improved, and we certainly have no objections to attempts to make such improvements to the report.

We do want to be very clear that changes to improve the auditor's report should not become the driving force behind changes to the scope of the audit. If it is the PCAOB's desire to change what is required to be done in an audit, the proposed change should be addressed head-on by issuing a proposed auditing standard following the normal exposure rules of procedure for a change in auditing standards as now required for any change to auditing requirements. Such a change should not be attempted in a back-door manner by making an addition to the auditor's report to require reporting on an area not currently subject to an audit requirement. A vivid example that cries out from the discussion document is the sample discussion in the audit report of past and present company operations. We definitely believe any discussion of company operations along the lines of management's discussion and analysis has no place appearing in an auditor's report which is, after all, a report from the auditor and not the company's management. Current requirements are for the auditor to read management's discussion and analysis that is prepared by the company's management to ensure that nothing is being stated therein that conflicts with information about which the audit team has knowledge as a result of its audit.

Including a narrative discussion of the company's past and future operations to the auditor's report also indirectly imposes a new requirement to audit prospective information about company plans—something that has no place in an audit report.

We believe the PCAOB needs to decide whether it wants to change the core content of an audit or simply revise the auditor's report. If the latter is the intent, then the only changes to the auditor's report that can be considered are changes that add information about what already takes place in an audit performed in accordance with PCAOB standards. We provide our reaction to those in the following section.

**POSSIBLE *AD HOC* CHANGES THAT COULD BE MADE TO THE AUDITOR'S REPORT**

If the PCAOB should choose to simply make changes to the auditor's report based on no more than the anecdotal comments made by those who purport to represent the user community, then some changes can be made to the report without the PCAOB conducting a full study and evaluation of the audit process described in the second paragraph of our letter. Our reactions below are to some of the possible changes to the auditor's report that could be made by the PCAOB on an *ad hoc* basis:

- Firstly, we have no objection to any wording changes to the auditor's report that, in the view of the PCAOB, add clarity to readers' understanding of the audit process and the audit conclusion.

- Secondly, we have no objection to the addition of any language additions or changes in the audit report that, in the view of the PCAOB, adds clarity to the readers' understanding of the independence of the audit firm.

- Thirdly, we have no objection to adding to the audit report the significant audit risks required to be identified in the normal course of the audit, should the PCAOB conclude that such information adds to the report readers' understanding of the audit report. *However, we would caution whether such information really would be helpful or might simply lead to readers of the auditor's report wrongly concluding that the sheer number of audit risk areas identified by the auditor in some way correlates to the reasonableness of the financial statements that are the subject of the auditor's report.*

- Fourthly, we have no objection to adding affirmative statements to the audit report to indicate in general terms the specific and significant audit procedures employed by the audit firm in the course of the audit, whether those audit procedures are mandatory, presumptively mandatory, or elective, should the PCAOB conclude that such information adds to the audit report readers' understanding of that report. *However, we would again caution whether such information really would be helpful or might simply lead to readers of the auditor's report wrongly concluding that the sheer number of audit procedures identified by the auditor in some way correlates to the effectiveness of the audit and the reasonableness of the financial statements that are the subject of the auditor's report.*

- Finally, we have no objection to adding to the auditor's report the identity and extent of auditing services provided by the firm signing the report and others—both network and non-network firms, as well as identifying the domestic and foreign locations in which those other firms provided their audit services.

**CONCLUSION**

Thank you for the opportunity to comment on this topic. I would be pleased to provide further information and comments should you so wish. Also, please contact me at (203) 401-2101 should you have any questions.

Very truly yours,

Paul Rohan, CPA

**Reference: PCAOB Rulemaking Docket Matter No. 34**

United Parcel Service, Inc. (UPS) has reviewed the Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements issued in June 2011, and we appreciate the opportunity to comment on the proposal.

The concept release seeks input on alternatives for changing the auditor's reporting model, including (1) an "Auditor's Discussion and Analysis", requiring the auditor to provide additional information about the audit and the company's financial statements, (2) use of emphasis paragraphs in the auditor's report to highlight the most significant matters in the financial statements and the corresponding key audit procedures, (3) auditor reporting on information outside of the financial statements, and (4) clarification of certain language in the auditor's report. These alternatives are not mutually exclusive. A revised auditor's report could include one or a combination of these alternatives or elements of these alternatives.

We present our views from the perspective of a financial statement preparer. As noted, the proposed change in the auditor's disclosure or reporting may take various forms. We value the fundamental objective to improve the transparency and relevance of the auditor's report, however, we do not support some of the notions outlined in the concept release. Specifically we do not agree with the implied change in responsibility of the auditors to opine on information outside of the financial statements, an outline of terminology definitions and audit procedures performed, and the implied changes to disclosure requirements outside of the frame work established by the FASB and SEC.

**Increasing the Responsibility of Auditors**

The objective of an audit of financial statements by the independent auditor (auditor) is the expression of an opinion on the fairness with which they present, in all material respects, an entity's financial position, results of operations, and cash flows in conformity with accounting principles generally accepted in the United States (GAAP). The auditor has a responsibility to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether caused by error or fraud. As this concept release notes, the objective of the proposal is not to change the role of the auditor, however, some of the proposed changes in scope have implied changes that we believe crosses the line between the responsibility of management and the auditor. It is our opinion, that the scope of an audit should not include an opinion on forward looking information or non-financial data or a requirement for an auditor to become a professional expert in the economics of the business an entity operates. Further, the requirements of the auditor should not lead the investor community to imply that the auditor has the primary responsibility of disclosure or governance of an entity.

The financial statements as prepared by an entity are historical in nature. An auditor is given facts about a transaction that has transpired and has the responsibility to assess whether that transaction was recorded and disclosed appropriately. It is also often the case that the auditor has access to subsequent events that aid in the evaluation of certain transactions. This historical stance therefore puts the auditor in an objective position where use of accounting knowledge, industry trends and professional judgment aids in the assessment of management's accounting and disclosure. An auditor therefore is not, and should not, be required to opine on matters that have not transacted, with the exception of the going concern opinion, where knowledge of historical data is viewed in light of management plans to provide an indication, not a surety, of continuity risks. Expanding the auditor's reporting model to provide assurance on information outside the financial statements, such as Management's Discussion and Analysis ("MD&A"), earnings releases, or non-GAAP information is a significant deviation in the traditional role of an auditor, one that may create a sentiment of assurance on future events where none can truly exist.

An audit of financial data does not include an examination of all financial transactions of an entity. The auditor uses professional judgment in the selection of transactions, which are often done on a sample basis. Therefore, as noted in the concept release, the auditor may have insights that are not afforded the average investor but they do not have the same insights or skills as management. A requirement to gain logic and understanding of non financial data will increase engagement time, audit fees and surely liability exposure of the audit firm. Further, an audit firm has many clients and while it may have professionals that may be subject matter experts on accounting theory, those professionals should not be regarded as expert operational managers for that industry or company under audit. An auditor's expertise is in accounting and their responsibility should be limited to opining on the accuracy and completeness of financial information. Requirements for additional disclosure about operations or the outlook of the company should continue to be directed at management.

The financial statements are the responsibility of management. The shareholders govern the entity through the voted proxy of a board of directors. To recommend that auditors report items that have not already been disclosed by management, not only diminishes the role of the elected board, but also creates an impression that the auditors have the primary responsibility of disclosure. The issuance of a separate auditor's discussion and analysis report also suggests that the auditor does not have a current mechanism to highlight inconsistencies. In actuality, though the auditors do not opine on the management's discussion and analysis, they do review it for consistency with other information included in the financial statements. If there is an inappropriate disclosure made, it is reasonable to assume that a reputable auditor would require an edit before releasing the audit report. The value of the auditor/management relationship is in the ability to discuss difference in opinions, communications to the audit committee and the auditor's use of the audit report to highlight a qualified opinion or an emphasis paragraph. Further, an auditor's discussion and analysis will be subject to review by management and the audit committee before release and therefore the usual disclosure reviews and discussions will ensue. The end result will most likely be the same information, as already disclosed by management, reported in the auditor's discussion and analysis which does not provide the user of the financial statements with any additional insight and serves as a redundant exercise for both management and the auditor. Moreover, reaching a consensus on verbiage of such a report may detract time from performing relevant audit procedures within a time frame that is already stressed by accelerated reporting deadlines.

**Disclosure of Terminology Definitions and Audit Procedures Performed**

This concept release highlights a concern of the investor community that more guidance is needed to understand the meaning of certain terms used in the audit report and to gain more insight on the nature of the audit procedures performed.

We agree that defining the responsibility of the auditor to detect fraud may be beneficial to the user of the financial statements. However, we caution that the audit report should not be used to define all terminology used. The audit report should continue to be a pointed document that users can review to get a direct statement of the quality of the financial statements; adding boilerplate terminology will detract from that objective. Such information is better served in communications from the PCAOB and the AICPA to the investor community or a reference as to where such information can be located.

The consideration of the auditor's disclosure of the nature and timing of the audit procedures performed should be handled with caution due to the prerequisite knowledge needed to understand such a disclosure and the litigious environment we operate in. The average user of the financial statement may not understand the terminology used to describe the procedure or be able to effectively validate the appropriateness of the procedure to address the risk. This disclosure may also become a score card in which investors begin to compare the depth of the work performed by audit firms which will have an unintended effect of pressing audit firms to disclose detail audit programs. Further, this public document could also be used as a source for plaintiffs seeking a target for failed companies. Moreover, this requirement questions the validity and strength of the audit firm's quality review programs and the reviews performed by the PCAOB. The reason these reviews exist is to provide the investor community with assurance that there is an independent review of the auditors by professionals that have the appropriate knowledge to perform an assessment of the quality of the audit work being performed.

**Disclosure Requirements Outside of the Frame Work Established by the FASB and SEC**

The financial statements, which include the notes to the financial statements, should tell the investor a story of the operations of the company. Requiring an auditor to make a subjective highlight of only certain transactions, which viewed in isolation or taken out of context, may not provide a true representation of the financial information. Also, as the needs of the users of the financial statements vary, there is the potential for a subset to argue that what was most relevant to them was not appropriately highlighted by the auditor. If there are concerns that the story is incomplete, and additional disclosure is needed regarding the sensitivity of management's estimates, those issues should be resolved by the FASB and SEC to ensure consistent application of the accounting and disclosure requirements.

In conclusion, we value the role of the auditors and the PCOAB in the review of the quality of information we provide to the investing public. We continually strive to provide our investors with timely and transparent disclosure of our operating results and will continue to adhere to rules as prescribed by the FASB and SEC. We appreciate the opportunity to comment on this concept release and thank you for consideration of our comments.

Sincerely,

Kurt Kuehn

Washington, D.C. 20006-2803

Subject: *PCAOB Rulemaking Docket Matter 034, PCAOB Release No. 2011-003: Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*

This letter provides GAO's comments on the Public Company Accounting Oversight Board's (PCAOB) concept release on possible revisions to PCAOB standards related to reports on audited financial statements.

We support the general premise of enhancing the auditor's report, and believe that this concept release is a positive step toward improving the transparency and relevance of these reports. We believe that several of the suggestions—specifically, those relating to clarification of wording in the auditor's report to help users understand management's and the auditor's responsibilities, and enhanced use of "Emphasis of Matter" and "Other Matter" paragraphs to identify specific issues to which the auditor wishes to draw the users' attention—would improve the usefulness of the auditor's report. While we believe that the current "pass/fail" reporting model should be retained as an effective means of encouraging management to provide appropriate disclosure, the above suggestions for improving the auditor's report, the auditor's primary means of communicating audit results, should be considered. GAO and others in the federal audit community have had significant experience in enhanced reporting, and we have attached an illustrative audit report from the GAO/President's Council on Integrity and Efficiency (PCIE) *Financial Audit Manual* (FAM).[1]

Although we support enhancing the auditor's report, we do not support the required use of "Emphasis of Matter" paragraphs in all cases or a requirement for an Auditor's Discussion and Analysis narrative report. In addition, we caution against an expansion

---

[1] See FAM/PCIE Section 595 A - Example of Unqualified Financial Statement, Internal Control Opinion, and Opinion on Substantial Compliance of Entity's Systems with FFMIA on GAO's special publications web page (http://www.gao.gov/special.pubs/gaopcie/).

of the auditor's reporting or assurance to include information outside the financial statements as part of the financial statement audit.

Consistent with both the auditing standards and years of accepted practice, management of the audited entity is responsible for the fair presentation of the entity's financial statements, including disclosure of all information required by the applicable financial reporting framework, and for the full, accurate, and timely disclosure of information required by federal securities laws and the Securities and Exchange Commission (SEC). Such disclosures include Management's Discussion and Analysis (and the critical accounting estimates or assumptions contained therein) and additional disclosures necessary to provide investors with a materially accurate and complete picture of an issuer's financial condition, results of operations, and cash flows. The role of the auditor is to assess the fair presentation of the financial statements, including the completeness of management's disclosures. If there is a situation in which management does not provide the required disclosures, or such disclosures are not fairly presented, then the auditor considers the effect on the auditor's opinion and report.

As we've stated in previous comment letters, we strongly believe that auditing standard setters should work together to achieve core auditing standards that are universally accepted. This issue is an especially timely subject for discussion, as the International Auditing and Assurance Standards Board (IAASB) has recently issued its consultation paper entitled *Enhancing the Value of Auditor Reporting: Exploring Options for Change*. We encourage the PCAOB, the IAASB, and the Auditing Standards Board to coordinate the development of potential new expanded auditor reporting requirements with a goal of harmonizing the auditor's report to the maximum extent possible, based on common core auditing and reporting requirements. We believe that having different audit reports in the marketplace will create significant confusion to the users of the financial statements and may lessen, rather than enhance, the users' understanding of the auditor's report. Only where there is a clear and compelling reason should the individual standard-setting bodies develop differential standards to meet the unique needs of their respective constituencies. The nature of any differences from core auditing standards and the basis for the differences also should be communicated.

We also encourage the PCAOB to seek ways to work with the Financial Accounting Standards Board (FASB) and the SEC on issues related to management disclosures. For instance, collaboration with the FASB and the SEC could provide valuable information in developing, as appropriate, management disclosure requirements or guidance that provides additional information to users, based on needs identified by the PCAOB (e.g., disclosure of risks, significant estimates and judgments, critical accounting issues, and audit committee views). Such disclosures could then be evaluated by the auditors, as appropriate, during the audit process.

We have specific comments related to the PCAOB's questions and potential changes to the auditor's reporting model, which are provided below.

**Questions 1-4: Content and Form of the Auditor's Report**

**Question 1: Auditor's Report and Role**
We support the general premise that the auditor's report should be improved so that it is more relevant and useful to the financial statement users. Specifically, we would be in favor of wording in the auditor's report that provides a fuller explanation and expanded description of the respective responsibilities of management and the auditor, especially with respect to fraud, risk, nonfinancial disclosures, the extent of internal control testing, and auditor independence.

**Question 2: Pass/Fail Option**
We believe that the current pass/fail reporting model should be retained, and we agree with several Standing Advisory Group members that the pass/fail model is clear, consistent, comparable, and easy for the investing public to digest. Further, we believe it is an important tool that encourages management to make all necessary and appropriate disclosures.

**Question 3: Additional Information**
We believe that management and the audit committee, rather than the auditor, should provide any additional information about the entity and that an auditor's discussion of these matters, as well as discussions of significant management judgments and estimates, may blur the lines regarding the roles of the auditor, preparer, and the audit committee. It is important that users clearly understand their respective roles. We believe that an expansion of this sort could potentially increase the auditor's role and could challenge users with competing disclosures about the entity from management and the independent auditor. Further, we are concerned that the audit report language would become "boilerplate" and not ultimately improve reporting, the descriptions of the audit procedures applied would lack context and not convey the significant judgment involved in an audit, and an expansion of the auditor's reporting would increase audit costs.

**Question 4: Internal Control**
Our envisioned modifications to the standard auditor's report would not result in the need for amendments to the report on internal control as auditors are currently able to report on internal controls as part of a financial audit.

**Questions 5-12: Auditor's Discussion and Analysis**

We do not support a requirement for an Auditor's Discussion and Analysis narrative report discussing auditor views on significant matters because, in addition to believing that disclosure of such information is management's responsibility, such a requirement may result in unintended consequences. For instance, it might present conflicting information and serve to confuse users. The auditor's view on critical accounting estimates may not necessarily correspond with the way such information is disclosed by management in the financial statements, and this conflicting information may confuse users and lead to a situation where users are faced with the challenge of interpreting competing disclosures. Further, we believe that a discussion providing insights about the entity and the quality of its reporting may not provide sufficient context, and we do not support such an expansion. If the auditor finds it necessary to provide commentary on matters significant to users' understanding, we support the expanded use of "Emphasis of Matter" paragraphs, as discussed below.

**Questions 13-18: Required and Expanded Use of Emphasis Paragraphs**

We support the greater use of "Emphasis of Matter" paragraphs, but we do not support the required use of such paragraphs in all cases. The use of "Emphasis of Matter" paragraphs is helpful to call users' attention to the most significant matters in the financial statements or any other matter that is significant to the users' understanding of the audit, the auditor's responsibilities, or the auditor's report. These issues might include reference to management's discussion of critical accounting judgments and estimates and other areas with significant measurement uncertainty. GAO has frequently used "Emphasis of Matter" paragraphs to highlight significant uncertainties and risks that are important to the users' understanding of the financial statements. If the PCAOB decides to expand the use of "Emphasis of Matter" paragraphs, we encourage the PCAOB to provide guidance on when the use of these paragraphs is appropriate.

We do not support the required use of "Emphasis of Matter" paragraphs in all cases, because they may not always be appropriate, necessary, or useful and could be confusing for report users. In some cases, a required "Emphasis of Matter" paragraph might be of little use to the users and may result in boilerplate paragraphs that provide little value and distract users from more relevant information contained in the report.

**Questions 19-20: Auditor Assurance on Other Information outside the Financial Statements**

We caution against requiring auditors to provide assurance or related services on information not within the current scope of the financial statement audit. We believe the ability to provide assurance fully depends on the nature of the information provided during a financial statement audit. Therefore, the scope of information reported by management would need to be expanded. Auditors would also need to be able to audit that information against objective criteria to sufficiently provide assurance. The feasibility will depend on the nature of the information and the availability of suitable criteria. Some information may be better suited for use in audit procedures. For example, an auditor may be able to determine whether performance measures have been properly calculated. The auditor can also provide reports on internal control. Other information, such as non-GAAP[2] financial information and whether an organization fosters strong governance, may not be auditable.

Another consideration is the cost to provide assurance on information outside the financial statements. Requiring the auditor to provide assurance on information outside the financial statements (e.g., corporate governance arrangements, internal controls, key performance indicators, and other information) may be challenging in practice, involving significant additional cost while providing limited additional user benefit.

[2] GAAP: Generally Accepted Accounting Principles.

**Questions 21-22: Clarification of the Standard Auditor's Report**

We support the clarification of wording in the auditor's report to help users better understand management's and the auditor's responsibilities for information in the report. This clarification of wording in the auditor's report may help reduce the "expectations gap" by more clearly explaining difficult concepts, such as reasonable assurance, and better explaining the auditor's responsibility for fraud, financial statement disclosure, and other information outside the financial statements. Such clarified wording should not change the concepts or the auditor's responsibilities but could help clarify the auditor's communication of this information.

**Questions 23-30: Alternatives**

We support (1) the clarification of wording in the auditor's report to help users understand management's and the auditor's responsibilities and (2) the enhanced use of "Emphasis of Matter" paragraphs to identify specific issues to which the auditor wishes to draw the users' attention. As noted above, we do not support requiring an "Emphasis of Matter" paragraph in all cases. Similarly, we do not support use of an Auditor's Discussion and Analysis narrative report that discusses the auditor's views on significant matters as it might present conflicting information and expand the auditor's reporting responsibilities. In addition, we caution against requiring auditors to provide assurance on information outside the financial statements.

**Questions 31-32: Other Considerations and Potential Effects**

If the board decides to undertake a standard-setting project on auditor reports to include consideration of the areas discussed above, we encourage it to develop enhanced guidance for implementing such new requirements and information in coordination with the FASB and the SEC, as necessary. For example, the FASB and the SEC could develop guidance concerning any additional required disclosures, and the PCAOB could develop guidance and criteria to help the auditor evaluate management's disclosures. Absent this guidance, there may be a lack of conformity across auditor reports that confuses the user and diminishes the usefulness of the report.

We thank you for considering our comments on this important issue as the PCAOB considers possible revisions to standards related to reports on audited financial statements.

Sincerely yours,

James R. Dalkin
Director
Financial Management and Assurance

Enclosure

Auditor: This illustrative audit report from the GAO/PCIE *Financial Audit Manual* presents an example of GAO's enhanced reporting.

## Enclosure

## Example 1 - Unqualified Financial Statement, Internal Control Opinion, and Opinion on Substantial Compliance of Entity's Systems with FFMIA

[Addressee]

In accordance with [cite audit authority] we are responsible for conducting audits of [full name of entity]. In our audits of the [entity] for fiscal year(s) [cite], we found

- the financial statements are presented fairly, in all material respects, in conformity with U.S. generally accepted accounting principles,
- [entity] had effective internal control over financial reporting (including safeguarding assets) and compliance with laws and regulations,
- [entity's] financial management systems substantially complied with the requirements of the Federal Financial Management Improvement Act of 1996 (FFMIA),[3] [for CFO Act agencies, omit for non-CFO Act agencies] and[4]
- no reportable noncompliance with laws and regulations we tested.

The following sections discuss in more detail (1) these conclusions, (2) our conclusions on Management's Discussion and Analysis and other supplementary information, (3) our audit objectives, scope, and methodology, and (4) agency comments and our evaluation.

**<u>Opinion on Financial Statements</u>**

The financial statements including the accompanying notes present fairly, in all material respects, in conformity with U.S. generally accepted accounting principles, [entity's] assets, liabilities, and net position as of September 30, 20XX [and 20X1]; the financial condition of [entity's] social insurance programs (if applicable) as of [the specified date]; and net costs; changes in net position; budgetary resources; and custodial activity (if applicable)[5] for the year[s] then ended.

**<u>Opinion on Internal Control</u>**

[Entity] maintained, in all material respects, effective internal control over financial reporting (including safeguarding assets) and compliance as of [end of fiscal year] that provided reasonable assurance that misstatements, losses, or noncompliance material in relation to the financial statements would be prevented or detected on a timely basis. Our opinion is based on criteria established under 31 U.S.C. 3512 (c), (d), the Federal Managers' Financial Integrity Act, and the Office of Management and Budget (OMB) Circular No. A-123, *Management's Responsibility for Internal Control*, [or other criteria].

---

[3] OMB audit guidance provides guidance for reporting on FFMIA compliance without expressing an opinion.
[4] Non-GAO auditors may combine bullets 3 and 4.
[5] This list assumes the entity follows U.S. GAAP issued by FASAB. If the entity follows U.S. GAAP issued by FASB (government corporations and others such as the U.S. Postal Service), modify the list accordingly.

**Systems' Compliance with FFMIA Requirements [Omit this section for non-CFO act entities]**

[Entity's] financial management systems, as of [end of fiscal year], substantially complied with the following requirements of FFMIA: (1) federal financial management systems requirements, (2) federal accounting standards, and (3) the *U.S. Government Standard General Ledger* (SGL) at the transaction level. Our opinion is based on criteria established under FFMIA, OMB Circular No. A-127, *Financial Management Systems* (which includes the Joint Financial Management Improvement Program/Office of Federal Financial Management series of system requirements documents), U.S. generally accepted accounting principles, and the SGL.[6]

**Compliance With Laws and Regulations**

Our tests of the [entity's] compliance with selected provisions of laws and regulations for fiscal year 20XX disclosed no instances of noncompliance that would be reportable under U.S. generally accepted government auditing standards or OMB audit guidance. However, the objective of our audit was not to provide an opinion on overall compliance with laws and regulations. Accordingly, we do not express such an opinion.

**Consistency of Other Information**

The [entity's] Management's Discussion and Analysis, required supplementary information (including stewardship information), and other accompanying information contain a wide range of information, some of which is not directly related to the financial statements.[7] We do not express an opinion on this information. However, we compared this information for consistency with the financial statements and discussed the methods of measurement and presentation with [name of entity] officials. On the basis of this limited work, we found no material inconsistencies with the financial statements, U.S. generally accepted accounting principles, or OMB guidance.

**Objectives, Scope, and Methodology**

[Entity] management is responsible for (1) preparing the financial statements in conformity with U.S. generally accepted accounting principles, (2) establishing, maintaining, and assessing internal control to provide reasonable assurance that the broad control objectives of the Federal Managers' Financial Integrity Act are met, (3) ensuring that the [entity's] financial management systems substantially comply with FFMIA requirements (for CFO Act agencies), and (4) complying with applicable laws and regulations.

We are responsible for obtaining reasonable assurance about whether (1) the [entity's] financial statements are presented fairly, in all material respects, in conformity with

---

[6] Non-GAO auditors may combine this information with compliance with laws and regulations.

[7] The Annual Financial Statement that includes the MD&A, any RSSI, RSI, and OAI, may be included in a larger document such as a Performance and Accountability Report (PAR). Depending on the presentation of these items in the PAR, the auditor may find it useful to refer to the specific page numbers on which this information appears. Additionally, there may be additional information presented in the PAR on which the auditor may need to provide an additional disclaimer. This disclaimer may be worded as "The other accompanying information included on pages XX, XX, and XX of this PAR is presented for purposes of additional analysis and is not a required part of the financial statements. This information has not been subjected to the auditing procedures applied in the audit of the financial statements and, accordingly, we express no opinion on it."

U.S. generally accepted accounting principles and (2) [entity] management maintained effective internal control, the objectives of which are as follows:

- Financial reporting: Transactions are properly recorded, processed, and summarized to permit the preparation of financial statements in conformity with U.S. generally accepted accounting principles, and assets are safeguarded against loss from unauthorized acquisition, use, or disposition.
- Compliance with laws and regulations: Transactions are executed in accordance with (1) laws governing the use of budget authority, (2) other laws and regulations that could have a direct and material effect on the financial statements, and (3) any other laws, regulations, and government-wide policies identified by OMB audit guidance.

We are also responsible for (1) testing whether [entity's] financial management systems substantially comply with the three FFMIA requirements [omit for non-CFO Act agencies], (2) testing compliance with selected provisions of laws and regulations that have a direct and material effect on the financial statements and laws for which OMB audit guidance requires testing, and (3) performing limited procedures with respect to certain other information appearing in the Annual Financial Statement.

In order to fulfill these responsibilities, we

- examined, on a test basis, evidence supporting the amounts and disclosures in the financial statements;
- assessed the accounting principles used and significant estimates made by management;
- evaluated the overall presentation of the financial statements;
- obtained an understanding of the entity and its operations, including its internal control related to financial reporting (including safeguarding assets), and compliance with laws and regulations (including execution of transactions in accordance with budget authority);
- tested relevant internal controls over financial reporting and compliance, and evaluated the design and operating effectiveness of internal control;
- considered the design of the process for evaluating and reporting on internal control and financial management systems under the Federal Managers' Financial Integrity Act;
- tested whether [entity's] financial management systems substantially complied with the three FFMIA requirements [omit for non-CFO Act agencies]; and
- tested compliance with selected provisions of the following laws and regulations: [list laws and regulations]

We did not evaluate all internal controls relevant to operating objectives as broadly defined by the Federal Managers' Financial Integrity Act, such as those controls relevant to preparing statistical reports and ensuring efficient operations. We limited our internal control testing to controls over financial reporting and compliance. Because of inherent limitations in internal control, misstatements due to error or fraud, losses, or noncompliance may nevertheless occur and not be detected. We also caution that projecting our evaluation to future periods is subject to the risk that controls may become inadequate because of changes in conditions or that the degree of compliance with controls may deteriorate.

We did not test compliance with all laws and regulations applicable to [entity]. We limited our tests of compliance to selected provisions of laws and regulations that have a direct and material effect on the financial statements and those required by OMB audit guidance that we deemed applicable to the [entity's] financial statements for the fiscal year ended [date]. We caution that noncompliance may occur and not be detected by these tests and that such testing may not be sufficient for other purposes.

We performed our audit in accordance with U.S. generally accepted government auditing standards and OMB audit guidance.

**Agency Comments and Our Evaluation**

In commenting on a draft of this report (see appendix x), [entity] concurred [or partially concurred, or did not concur] with the facts and conclusions in our report. Discuss agency comments with auditor evaluation if agency partially concurred or did not concur. [8]

[Auditor's signature]

[Date of audit completion]

[8] If the entity's comments include discussions of corrective action plans or other matters as discussed in FAM 580.84, example wording is: "We did not perform audit procedures on [entity's] written response to the significant deficiencies [and material weaknesses, if applicable] and, accordingly, we express no opinion on it."

Re: Rulemaking Docket Matter No. 34
*Concept Release On Possible Revisions To PCAOB Standards Related to Reports On Audited Financial Statements*

Dear Sirs,

We write to the Board to comment on its June 2011 Concept Release, *Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements.* We appreciate the opportunity to share our views on the Concept Release.

United Therapeutics Corporation is a biotechnology company focused on the development and commercialization of unique products to address the unmet medical needs of patients with chronic and life-threatening conditions.

We appreciate that the Board has conducted extensive outreach in relation to the Concept Release, including soliciting input both before and after the issuance of the release and organizing a recent roundtable on this subject. As an initial matter, however, we question the premise on which the Concept Release is grounded: that investors and other users of financial statements actually desire "more" information about the financial statements. We have not heard and are not aware that our investors believe that additional information about company financial statements is vital. Investors already receive robust information about company financial results, including the financial statements and notes thereto and MD&A, and have the assurance on these results provided by the auditor through the audit report and have access to the auditor at the company's annual meeting. We recognize that some groups speaking on behalf of investors espouse this view, but we do not believe it is one generally held in the marketplace. In any event, empirical evidence on the actual benefits that investors might hope to attain from any of the ideas in the Concept Release is needed if the Board determines it is appropriate to proceed.

In addition, if there is in fact an information deficit that is caused by the current financial reporting framework, we urge the Board to work in coordination with the other standards-setters, particularly the SEC and FASB, to evaluate the manner in which the standards may need to be modified, rather than implementing sweeping changes to the audit report which would result in significant costs to companies.

## I. The Board Should Not Move Forward With The Auditor's Discussion & Analysis Concept.

We firmly believe that including an Auditor's Discussion & Analysis (AD&A) in an audit report would be a mistake. Management should remain the source of disclosure in the first instance about the company's financial statements; the auditor's role is and should remain to provide assurance about that information. Adopting an AD&A would fundamentally alter the role of an auditor by making the auditor an original source of information about the company. Indeed, there is a risk that the auditor's role could be transformed from that of an independent, objective third party to that of a party who can influence the operations and direction of a company by providing a platform to articulate inherently subjective judgments about a company and its financial statements. And disclosures about these judgments could be influenced by any number of external forces – the economic environment, the dynamic relationship between the auditor and the client, and even stylistic choices about disclosures, to name a few.

In addition, providing additional statements from the auditor on management estimates, judgments, accounting policies, and "close calls" encountered during the audit would not make company financial statements easier to understand. Instead, we believe an AD&A would only serve to burden users with additional disclosures that, at best, provide some limited information that has not already been presented by management and, at worst, risk confusing readers and perhaps causing a lack of confidence in both the company's management and the auditors. Investors and other users of a company's financial statements would have to weigh and reconcile information provided by the auditor, the company's management, and, in some cases, the audit committee. This would not provide clarity, but would generate additional complexity and confusion.

An AD&A also would complicate the interaction the auditor has with the audit committee and, as a result, would impede an effective corporate governance process. Currently, auditors, audit committees and management have robust discussion about financial reporting issues. The AD&A concept would require that the substance of these discussions should then be reflected in the AD&A prepared by the auditor. This could drastically alter the relationship and dampen the flow of communication among these parties. The healthy dialogue that occurs among audit committees, management and auditors on issues related to accounting judgments and management estimates could become adversarial and thus strained as the auditor may dominate conversations on considerations related to AD&A disclosures the auditor might have to make in order to protect themselves from potential legal and regulatory exposure.. At a minimum, demands on audit committees would increase as they would have to spend additional time analyzing and discussing the AD&A with the auditor. These foreseeable developments in the wake of an AD&A would undermine, rather than further, good corporate governance and would be detrimental to investors' interests.

Also, because an AD&A would place the auditor in the position of making original disclosures about the company, it would expose not only the auditor, but also the company, to new legal risks. For example, plaintiffs' attorneys inevitably will look to parse distinctions between statements made by the auditor and management and will seek to exploit these perceived distinctions.

Finally, although the empirical data to support any of the ideas in the Concept Release appears to be lacking, in the event such benefits are identified, the Board must rigorously examine those benefits against the extensive costs and the addition burdens that the concepts in the release would engender. This is particularly true in relation to the AD&A, which would require the auditor to expend extensive time and effort preparing the AD&A including multiple layers of internal review. As a predictive matter, it is reasonable to assume that these efforts to prepare an AD&A would result in considerable expense to the client. Given the accelerated reporting schedules that public companies now confront, the time and effort to fashion an AD&A also could put increased pressure on meeting these deadlines. Together, we believe these costs plainly outweigh any benefit that might be identified that the AD&A has to offer.

## II. The Board Should Not Require Auditors To Provide Assurance On Information Outside Of The Financial Statements.

The Concept Release also suggests that the Board may consider a proposal that would require auditors to provide assurance on information outside of the financial statements, such as information in Management's Discussion & Analysis (MD&A) and earnings releases. We do not support moving ahead with this concept. Current PCAOB standards require the auditor to review such information and consider whether it is inconsistent with the financial statements or constitutes a material misstatement of fact. This regime provides reasonable protection for investors while also appropriately balancing the costs that could arise from more intrusive requirements.

The costs of an attest engagement of the MD&A or other information outside of the financial statements would not be worth the marginal benefit that may be attained through conducting additional procedures. It may take considerable time and effort to complete these additional attest engagements. And, performing attest procedures in relation to earnings releases could delay the release of this information to the market. As noted in the Concept Release, the PCAOB standards currently permit such an engagement, but those engagements are rarely conducted. The fact that companies have not embraced this additional attest engagement suggests that the costs of the engagement generally outweigh any benefits.

To the extent that certain information currently presented in the MD&A is deemed useful and that assurance of such information by auditors would be desirable, the

PCAOB should work with other standards-setters to consider whether the financial reporting standards should be modified so that such information is presented as disclosure in the notes to the financial statements.

* * *

Thank you for the opportunity to offer our comments on this important issue. If you have any questions regarding these comments, please do not hesitate to contact me by email, jferrari@unither.com, or telephone, 301-608-9292, extension 1729.

Respectfully,

John M. Ferrari
Chief Financial Officer and Treasurer

Re: PCAOB Rulemaking Docket Matter No. 34

Thank you for the opportunity to comment on the Public Company Accounting Oversight Board (PCAOB) Concept Release on possible revisions to PCAOB standards related to reports on audited financial statements. We appreciate the Board's efforts to address investors' needs regarding the auditor's reports on financial statements and agree that changes could be made to the current auditor reporting model to provide clarity around the auditor's responsibilities. We have addressed the applicable questions from the concept release in the appendix to this letter and have summarized our primary considerations below:

***Auditor's Discussion and Analysis (AD&A)***

We have concerns about auditors providing an analysis of financial information directly to financial statement users, as doing so could confuse the users as to who owns and prepares the financial statements. Management, not the auditors, is ultimately responsible for the accurate preparation, presentation, and distribution of financial information. Discussions of "close calls" or alternative accounting principles within the AD&A without the ability to capture the verbal discussions that are held between the auditor, company management, and/or the audit committee could lead to a misinterpretation by users and ultimately cause confusion. We believe that if the auditor's opinion states that financial statements and disclosures are in accordance with U.S. GAAP, then qualifying language to the contrary should not be presented by the auditors.

***Expanded use of emphasis paragraphs and clarification of the Standard Audit Report***

We support the expanded use of emphasis paragraphs to highlight important areas that the auditor specifically examines in forming their opinion on the financial statements, and we support clarifying the standard audit report regarding auditor responsibilities for fraud detection and independence. However, we are concerned about the inclusion of a discussion of audit procedures performed as we believe it would be difficult to succinctly and adequately capture the procedures that auditors perform during an engagement, especially when the audit pertains to a large and complex organization.

***Reporting on information outside of the financial statements***

We generally do not support a requirement for auditor attestation on information outside of the financial statements, such as the management's discussion and analysis (MD&A). Much of the MD&A contains information that is not contained in the financial statements and footnotes, such as sales data and sensitivity information, and therefore is not as clearly related to historical financial statement amounts in the financial statements and footnotes, which could prove difficult for the auditor to apply audit procedures in a practical manner in order to provide value to the user of the financial statements.

Although in principle we are not opposed to auditor attestation on earnings release information, we believe that having auditor involvement in this process would hamper our ability to provide this information on a timely basis. We do not believe that attestation of this information adds enough value for investors to warrant slowing this process especially in light of the fact that the majority of this information is subsequently contained in quarterly financial statements and audited annual financial statements which are subjected to auditor review.

We address the applicable questions contained in the concept release in the remainder of our response below.

Sincerely,

Vicki Corbett
Senior Vice President and Controller
Unum Group

## Responses to Concept Release Questions

**Form of the Auditor's Report**

*1. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.*

***1a.** Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?*

**Company Response:**
Yes, we agree with the Board's view that the auditor's report should be expanded so that the auditor's report is more relevant and useful to financial statement users.

***1b.** In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?*

**Company Response:**
We believe that the following improvements to the standard auditor's report would provide more relevant and useful information to financial statement users:

- The use of emphasis paragraphs in identifying topics or events, unusual transactions or other matters in the financial statements.
- Revision of the standard auditor's report to clarify the auditor's responsibilities including fraud detection and independence.

***1c.** Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?*

**Company Response:**
We generally do not support a requirement for auditor attestation on information outside of the financial statements, such as the management's discussion and analysis (MD&A). Much of the MD&A contains information that is not contained in the financial statements and footnotes, such as sales data and sensitivity information, and therefore is not as clearly related to historical financial statement amounts in the financial statements and footnotes, which could prove difficult for the auditor to apply audit procedures in a practical manner in order to provide value to the user of the financial statements.

Although in principle we are not opposed to auditor attestation on earnings release information, we believe that having auditor involvement in this process would hamper our ability to provide this information on a timely basis. We do not believe that attestation of this information adds enough value for investors to warrant slowing this process especially in light of the fact that the majority of this information is subsequently contained in quarterly financial statements and audited annual financial statements which are subjected to auditor review.

**2.** *The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."*

**2a.** *Should the auditor's report retain the pass/fail model? If so, why?*

**Company Response:**
Yes, we believe that the pass/fail model of the standard auditor's report should be retained. An indication that the financial statements are presented fairly in conformity with the applicable financial reporting framework is helpful to financial statement users. Varying degrees of passing or failing would be confusing.

**2c:** *If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.*

**Company Response:**
While we believe that the pass/fail model of the standard auditor's report should be retained, we also believe that certain changes to the report would be beneficial. An expanded use of emphasis paragraphs and the clarification of standard language in the auditor's report would also provide financial statement users with more relevant and useful information.

**3.** *Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.*

**Company Response:**
We do not believe it is appropriate for auditors to provide financial information directly to financial statement users, as doing so could confuse these users as to who owns and prepares the financial statements. We agree with the delegation of responsibilities outlined in

Auditing Standard (AU) Section 110.03, which states that "the financial statements are management's responsibility. The auditor's responsibility is to express an opinion on the financial statements." We believe it is in the best interest of investors, auditors and financial statement preparers to maintain the requirement that management, not auditors, is responsible for the accurate preparation, presentation and distribution of financial information. While auditors have substantial knowledge based on their access to management and company records, their knowledge about a company is not as comprehensive as management's knowledge.

4. *Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?*

**Company Response:**
Depending on the alternatives chosen by the Board, certain changes to the report on internal control over financial reporting will be necessary:

- **AD&A**: Control issues that are required to be reported as a "close call" would require discussion in the report on internal control over financial reporting. We have concerns about the disclosure of these close calls, given the subjectivity involved, and whether an appropriate disclosure framework can be developed and consistently followed.
- **Required and expanded use of emphasis paragraphs:** We do not believe that any changes to the report on internal controls over financial reporting are necessary under this alternative.
- **Auditor assurance on other information outside the financial statements:** Because the scope of the auditors' procedures would be expanded under this alternative, additional internal control documentation and testing would likely be required.
- **Clarification of language in the standard auditor's report:** We do not believe that any changes to the report on internal controls over financial reporting are necessary under this alternative.

**Auditors Discussion and Analysis**

5. *Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?*

**Company Response:**
We do not support the AD&A as an alternative to the current auditor reporting model.

***5d**. If you do not support an AD&A as an alternative, explain why.*

**Company Response:**
The objective of financial reporting is to provide information that is useful to financial statement users. If standards promulgated by U.S. GAAP do not adequately provide this information, then those standards should be changed. If additional information related to the financial statements needs to be reported that is not currently included in requirements under Regulation S-K, the SEC should consider changing those requirements. We believe the AD&A is an inappropriate alternative for providing information to financial statement users.

***5e**. Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?*

**Company Response:**
While we do not support the use of an AD&A, we do support the expanded use of emphasis paragraphs in identifying matters in the financial statements that are important for a better understanding of the financial statement presentation.

***9.** Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?*

**Company Response:**
We do not support the AD&A as an alternative to the current auditor reporting model. Please refer to our response to question 5d. Furthermore, we do not support the inclusion of the aforementioned risks in the auditor's report. These risks are already discussed at length in Item 1A (Risk Factors) of the Form 10-K. Auditors should not be required to select the most significant of those risk factors for inclusion in their reports, as this is tantamount to their advising financial statement users which of the reported risk factors are most important. As mentioned earlier, company management is most familiar with risks that the company faces and should be the source for such a discussion.

***11.** What are the potential benefits and shortcomings of implementing an AD&A?*

**Company Response:**

We do not support the AD&A as an alternative to the current auditor reporting model. Please refer to our response to question 5d. We believe that benefits gained from the AD&A are outweighed by its potentially detrimental impacts. An AD&A could potentially undermine management's reporting.

12. *What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?*

**Company Response:**
This alternative would require close coordination between auditors and company management to ensure that the MD&A and AD&A are aligned. It is doubtful that the AD&A would differ very much from the MD&A, as most companies already closely communicate with their auditors on topics related to significant accounting policies and practices and the adoption of new accounting guidance.

**Matter of Emphasis Paragraphs**

13. *Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?*

**Company Response:**
We support the use of emphasis paragraphs in identifying topics or events, unusual transactions, or other matters in the financial statements that are important for a better understanding of the financial statement presentation. These emphasis paragraphs should be objective, fact-based discussions and should make specific references to the location of such items in the financial statements.

We do not support requiring auditors to comment on key audit procedures due to the risk of confusion that may be caused by disclosures that do not provide the full context of the audit strategy employed for a particular matter. We are concerned about how auditors might succinctly describe procedures performed in an audit on a large or complex engagement.

15. *What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?*

**Company Response:**
We support inclusion of significant transactions, significant changes in accounting policy, etc. occurring during the period under audit and also believe that all emphasis paragraphs should make specific reference to the location of such items in the financial statements.

***16.*** *What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?*

**Company Response:**
Please refer to our response to question 15 for the appropriate content that we believe should be required in emphasis paragraphs. We believe that the information presented should be at a more summarized level of detail than is presented in the footnotes to prevent unnecessary duplication.

***17.*** *How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?*

**Company Response:**
It will be difficult for auditors to avoid boilerplate language when composing the emphasis paragraphs, as auditors will conform to specific guidelines and examples provided by the PCAOB. If the emphasis paragraphs are limited to material, important, or other unusual information, then the use of boilerplate language may be reduced.

**Auditor Assurance on Other Information Outside the Financial Statements**

***19.*** *Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?*

**Company Response:**
We do not agree with expanding the auditor's role to provide assurance on the MD&A, although we are not opposed to the auditor providing assurance on the quarterly earnings release. We do, however, question the value that investors would receive from auditor attestation on information contained in the quarterly earnings release in light of the fact that much of this information is contained in quarterly and annual financial statements and is eventually subjected to auditor review.

***19g.*** *If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.*

**Company Response:**
We do not support a requirement for auditor attestation on certain information outside of the financial statements, such as the MD&A. Much of the MD&A is forward looking and is not as clearly related to historical financial statement amounts reported in the financial

statements and footnotes. One example of this type of information is sales results, which are prominent in most insurance companies' MD&A. Sales results generally represent the annualized premium or annualized fee income on new sales which insurance companies expect to receive and report as premium income or fee income during the next 12 months, depending on the effective date of the new sale. Sales are not a GAAP measure and do not directly correspond to premium income or fee income reported as revenue in accordance with GAAP. This is because new annualized sales premiums reflect current sales performance and what companies expect to recognize as premium or fee income over a 12 month period, while premium income and fee income reported in financial statements are generally reported on an earned basis rather than an annualized basis and also include renewals and persistency of in-force policies written in prior years. Because of this difference between sales results and GAAP premium revenue, auditors would, in this example, need to expand their efforts to be able to provide assurance on sales data. This might involve providing assurance on reporting processes, including information systems, and financial controls that the auditor has little, if any, involvement with today and would result, in our opinion, in little additional value to the financial statement user as compared to the cost.

In addition, Item 7A (Quantitative and Qualitative Disclosures about Market Risk) of the MD&A contains sensitivity analyses, in which estimates of future performance and economic conditions are reflected assuming certain changes in market rates and prices were to occur. Because of the judgmental nature of this disclosure, we do not believe auditor assurance on this sensitivity analysis would provide significant value to the financial statement user.

***20.*** *What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?*

**Company Response:**
We appreciate the additional level of comfort to investors that auditor assurance on information outside the financial statements would provide. However, we believe that the cost of providing this additional assurance outweighs the benefits, as it would be difficult for the auditor to develop a practical approach for providing assurance on forward looking non-GAAP and estimated sensitivity information.

Please see our response to question 19g for this alternative's shortcomings.

**Clarification of the Standard Auditor's Report**

***21.*** *The Concept Release presents suggestions on how to clarify the auditor's report in the following areas:*

- *Reasonable assurance*

- *Auditor's responsibility for fraud*
- *Auditor's responsibility for financial statement disclosures*
- *Management's responsibility for the preparation of the financial statements*
- *Auditor's responsibility for information outside the financial statements*
- *Auditor independence*

***21a.** Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?*

**Company Response:**
We believe that all of these clarifications are appropriate in describing the roles and responsibilities of auditors. These clarifications would enhance communication between auditors and financial statement users and would better manage the expectations of financial statement users on the limitations of audits.

***21d.** What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?*

**Company Response:**
We believe that the scope of the audit will remain the same, as this alternative primarily clarifies the auditor's current roles and responsibilities. The auditor's responsibilities may increase slightly, as the audit report would contain more information and would therefore require more time to prepare.

***22.** What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?*

**Company Response:**
These clarifications would enhance communication between auditors and the users of these audit reports and would better manage the expectations of financial statement users on the limitations of audits. The benefits of such clarifications outweigh any shortcomings.

**Questions Related to all Alternatives**

***23.** This Concept Release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?*

**Company Response:**

We believe the proposed clarifications of the auditor's report are the most appropriate alternative. Please refer to our response to question 22 for the benefits of this alternative.

***24.*** *Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?*

**Company Response:**
We support the following elements of the proposed alternatives, which would serve to improve auditor communication:

- The use of emphasis paragraphs in identifying topics or events, unusual transactions, or other matters in the financial statements that are important for a better understanding of the financial statement presentation.
- All of the suggested clarifications to the standard auditor's report.

***26.*** *Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?*

**Company Response:**
We request that the board consider the following in developing auditor reporting framework for each of the alternatives that we support:

- **The use of emphasis paragraphs in identifying topics or events, unusual transactions, or other matters in the financial statements.** These should be objective, fact-based discussions and should make specific references to the location of such items in the financial statements. Auditors should avoid merely repeating information in the financial statements, but instead should highlight areas that were specifically addressed in forming their opinion on the financial statements.
- **Clarification of the Standard Auditor's Report.** We believe the framework outlined on pages 27-29 of the Concept Release should be adopted by the Board.

*27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?*

**Company Response:**
It is possible that financial statement users could perceive the emphasis paragraphs and the clarifying language as a qualified or piecemeal opinion. This risk could be mitigated by

retaining the standard auditor opinion and adding the other alternatives on a separate page as a supplemental report.

**28.** *Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?*

**Company Response:**
We believe the proposed clarifications of the standard auditor's report best conveys to financial statement users the auditor's role in the performance of an audit.

**29.** *What effect would the various alternatives have on audit quality? What is the basis for your view?*

**Company Response:**
Neither the use of emphasis paragraphs nor the clarifications to the standard auditor's report would impact audit quality.

**30.** *Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the Concept Release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.*

**Company Response:**
In order to promote consistency among all audit reports filed with the SEC, we believe that the changes to the auditor's reporting model should apply equally to all audit reports, regardless of industry.

**Considerations Related to Changing the Auditor's Report**

**31.** *This Concept Release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.*

**31a**. *Are any of these considerations more important than others? If so, which ones and why?*

**Company Response:**
We believe the most important of these considerations is the balance of usefulness to the financial statement user compared with the additional costs incurred by the auditor and

registrants. As we have stated in our responses above, carefully weighing this balance is important, and we believe the current auditor reporting model, with expanded use of emphasis paragraphs and clarifications of the auditor's role and responsibilities, is the most suitable model for both financial statement users and preparers.

***31b.*** *If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?*

**Company Response:**
We believe that the benefits of emphasis paragraphs in identifying specific items in the financial statements, as well as clarification of the standard auditor's report, will generally outweigh the costs. However, any benefits gained from the AD&A or auditor assurance on information outside the financial statements might be outweighed by the potentially detrimental impacts of these alternatives.

***31c.*** *Are there any other considerations related to changing the auditor's report that this Concept Release has not addressed? If so, what are these considerations?*

**Company Response:**
The Concept Release does not adequately address concerns we have with the AD&A. These concerns are addressed on the introduction page of this letter, as well as in our responses to questions 5-12. In addition, the Concept Release does not adequately address concerns we have on auditor assurance of information outside the financial statements. These concerns are addressed on the introduction page of this letter, as well as in our responses to questions 19 and 20.

***31d.*** *What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?*

**Company Response:**
We believe that neither the AD&A nor auditor assurance on information outside the financial statements are desirable alternatives and therefore both alternatives should be removed from consideration, except as noted in our response to question 19.

***32.*** *The Concept Release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?*

**Company Response:**

We are concerned about the possible impact that the AD&A would have on an auditor's communications with management and the audit committee. Discussing potentially sensitive matters in an AD&A could create tension, stifle communication, and thereby hinder audit quality.

Re: PCAOB Rulemaking Docket Matter No. 34, *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*

Dear Sir/Madam,

We appreciate the opportunity to respond to the PCAOB's *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards (herein referred to as "Concept Release").*

USG Corporation (herein referred to as "we" and "our"), through our subsidiaries, is a leading manufacturer and distributor of building materials with annual revenues of approximately $3 billion. We produce a wide range of products for use in new residential, new nonresidential, and residential and nonresidential repair and remodel construction as well as products used in certain industrial processes. Our major product lines include SHEETROCK® brand gypsum wallboard and joint treatment products, DUROCK® brand cement board and FIBEROCK® brand gypsum fiber panels.

Overall, we do not support a standard-setting project to modify current auditing standards resulting in an increase in audit scope or a significant expansion of the independent auditor's reports. We do not believe that the proposals in the Concept Release will materialize into an increase in financial statement transparency or relevance as decisions by financial statement users are made throughout the year, and not made only in connection with annual filings. While we believe elements of the auditor's reports could be updated to clarify certain auditor responsibilities, we do not believe that clarification is necessary for financial statement users to understand the responsibility of the independent auditor. The proposed modifications will have the unintended consequence of absolving the financial statement user from the responsibility of developing an understanding of the auditor's role and the audit process independent of our auditor's reports.

*1. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.*

*a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?*

We do not believe that changes to the auditor's reporting model are needed as they would not enhance investors' and other financial statement users' understanding of a public company. Rather, any expansion of the auditor's role could bring the auditor's independence into question as under the proposed changes they would have to effectively function as an auditor and analyst. The likelihood of this result would run counter to the Board's stated objectives of transparency and relevance. Therefore, unintended consequences should be seriously considered prior to any adoption or implementation. In addition, such considerations would likely increase the time and cost of an audit, increase other professional fees, and potentially delay a company's Securities and Exchange Commission ("SEC") filings. The auditor's role has always been to provide reasonable assurance that the financial statements are free of material misstatement and can be relied upon by investors and other users of the financial information. This assurance has been and should continue to be limited to the reasonableness of the financial statements in accordance with U.S. GAAP.

*b. In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?*

It is a responsibility of a public company to provide investors and other financial statement users with information to make investing, lending or other significant financial decisions about the company. Information that is relevant and useful in making significant financial decisions about a company should only be provided by management. In addition, this information is already provided in documents filed with the SEC, including (but not limited to) Form 10-K, Form 10-Q, Form 8-K, and the Proxy Statement, as well as press releases and earnings calls. The audit report is issued to provide reasonable assurance that the financial statements are free of material misstatement and in accordance with U.S. GAAP. We believe the current audit report sufficiently states the reasonableness of the financial statements and no improvements are necessary.

Investor relations departments field many inquiries from investors and analysts for which the answers could be found in the public filings. It is questionable that increasing content of already voluminous filings would create greater understanding of the financial statements or provide more transparency. Quite the contrary, we believe that this would merely create questions on the part of investors, as much of the proposal by the Board would add narrative that is boilerplate or information without the benefit of further elaboration or context.

*c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?*

We do not believe expanding the auditor's role on matters in addition to the financial statements would provide a greater amount of certainty to financial statement users, nor would it increase the amount of relevant information already provided. The cost of expanding the auditor's role would be significant and would outweigh the benefit. Information is presently communicated by management to investors, analysts and financial statement users through quarterly press releases, earnings calls and other webcast presentations, Form 10-Q filings and other event-driven filings; and investors, analysts and others are using this information to make investment decisions, despite not having an opinion or other commentary by an auditor. We do not see the benefit of an auditor providing assurance on information contained in the annual 10-K filing in addition to the annual financial statements when decisions are currently being made by financial statement users throughout the year.

*2. The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."*

*a. Should the auditor's report retain the pass/fail model? If so,why?*

An audit report should be retained as pass/fail. Any alternative to the pass/fail model will only create misunderstanding as to the quality of the financial statements. Suggesting that there could be varying degrees of quality within financial statements, or providing a "range of reasonableness" does not add valuable information to the user of the financial statements. If the standard the auditor is attesting to is "reasonable within all material respects," then any varying degree of reasonableness, by definition, would not be material to the user. Therefore, additional information provided in the audit report would not benefit financial statement users at a level that would outweigh the significant cost that would be incurred to provide that information. Financial statements are as of a point-in-time, and not necessarily indicative of future results. Users having knowledge of anything other than pass or fail will not provide more useful information on the expected future results of the company. Furthermore, it is not, and should not be, the auditor's responsibility to provide outlook to financial statement users.

*b. If not, why not, and what changes are needed?*

Not applicable. No changes to the pass/fail model are necessary.

*c. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.*

Except for certain clarifications as described in our response to Question 21, we do not believe it is necessary to include any supplemental reporting by the auditor.

*3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.*

Information is presently communicated by management to investors, analysts and financial statement users through quarterly press releases, earnings calls and other webcast presentations, Form 10-Q filings and other event-driven filings; and investors, analysts and others are using this information to make investment decisions, despite not having an opinion or other commentary by an auditor. Investors frequently contact investor relations departments to discuss information already contained in public filings or to request additional information. It is the responsibility of management to ensure that information disclosed through a company's public filings and announcements and its investor relations department is accurate and consistent and is within the boundaries of what management is required, able and willing to disclose to financial statement users. Management is responsible and in the best position to ensure that enterprise risk is managed through any disclosure activity.

Management has the greatest knowledge regarding its company and related business and thus is in the best position to provide additional information regarding the company's financial statements. It is inconsistent to propose that a separate reporting model on information contained outside the financial statements or expansion of the auditor's reporting model in connection with the annual audit would provide users with a greater level of comfort over the financial statements when decision-making information is disseminated by management and is used by financial statement users throughout the year without any auditor assurance.

*4. Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?*

We do not believe any amendments are necessary to the audit report on internal control over financial reporting.

*5. Should the Board consider an Auditor Discussion and Analysis ("AD&A") as an alternative for providing additional information in the auditor's report?*

We do not support an AD&A as an alternative method of providing additional information in the auditor's report. Any proposal of AD&A will add significant time and cost and will materially alter the historical relationship of the independent auditor and management. In addition, it will undermine the audit committee and its responsibilities.

*a. If you support an AD&A as an alternative, provide an explanation as to why.*

We do not support the AD&A as an alternative because it does not promote the Board's objectives of transparency and relevance. We believe the auditor's responsibility is clearly defined in the existing PCAOB Audit Standards. Those standards state that "the auditor has the responsibility to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether caused by error or fraud" and that the "objective of an audit of the financial statements is the expression of an opinion on the fairness with which they present, in all material respects, financial position, results of operations, and its cash flows in conformity with generally accepted accounting principles."[1] The auditors are not, nor should they be, responsible for discussion and analysis. This responsibility is, and should continue to be, the role of management and the audit committee. If investors are looking for third party analysis for their determination of the risk and reward of investment in a certain company, they should contract with analysts to perform such tasks to their specifications based upon their assessed risk portfolio.

The auditor is to perform tasks to mitigate audit risk and to opine that management's financial statements are free from material misstatement in accordance with U.S. GAAP. The auditor should not opine on how the statements could be presented differently if they were management. If financial statements do not currently provide the proper transparency and relevance, then U.S. GAAP should be amended. The necessary transparency and relevance should not be achieved by the expansion of the auditor's role or report.

*b. Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?*

We do not believe that an AD&A should comment on the audit or the company's financial statements. We believe that the redundancy of such comments would not provide additional transparency or understanding for the financial statement users. We will continue to reference throughout our response the theme and goals of the Concept Release – of transparency and relevance without the sacrifice of audit quality. We continue to believe that the proposals to change the auditor's reporting model will not meet these goals but will hinder them.

The standards for conducting audits are available through various public means including the PCAOB, the SEC, and the Center for Audit Quality ("CAQ"). If the real objective of this proposal

[1] AU Section 110, *Responsibilities and Function of the Independent Auditor*

is education of the audit process, then the Board should engage in activities to enhance its own mission and not create additional costly reporting requirements.

The inherent nature of the additional auditor commentary will do little to promote relevance of reporting. On the contrary, this language will largely be repetitive of reporting already contained within existing financial statements and of publically available information which discusses the auditor roles and responsibilities. Furthermore, additional information would likely increase the current perception that the reporting is too dense, lengthy and obtuse to promote transparency.

*c. Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?*

We do not believe most investors would find an AD&A relevant or useful in making investment decisions. On the contrary, investment decisions and models for large institutional investors who rely on various, short, mid and long-term valuation models are made throughout the year, and not necessarily in conjunction with the audited financial statements or the corresponding information. Investors believe that an audit is an integral part of their trust in the reasonableness of the financial statements when making investment decisions, however, having an in-depth knowledge of the process on how that audit is conducted, we believe is not relevant in their decision making. In addition, if investors believe that having an understanding of the audit process is an integral part of their investment decisions, they can obtain that understanding through existing resources.

The auditor should not be tasked to analyze the company's results or to comment, specifically on management's forward-looking statements. This would materially change the auditor's historical role and may impair independence and negatively alter management's relationship with the auditor.

*d. If you do not support an AD&A as an alternative, explain why.*

We do not believe an AD&A promotes any of the objectives of the Board's Concept Release. Please see responses to questions 5a, 5b and 5c.

*e. Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both? What are they?*

We do not believe that there is a need for the auditor to further comment on either the audit or the company's financial statements. The audit report provides the necessary information relevant to convey the reasonableness of the financial statements, and information about the nature, purpose and scope of an audit is publically available to financial statement users through various channels.

*6. What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?*

We do not believe there is a need for an AD&A. The overall objectives of the Board are to assist and protect investors. The proposed AD&A is not in line with these objectives. The language of an AD&A would be boilerplate in order to discuss audit risk and independence in a comprehensive and consistent voice to demonstrate universal policies and procedures, or would be so voluminous in order to provide appropriate context to audit procedures and results that financial users would likely not read such a report.

Audit risk is addressed in the current auditing standards. If users of public financial information require education on audit risk and its relationship to the audit, then the PCAOB and the SEC in conjunction with the AICPA should plan and provide additional forums, such as literature, workshops and trainings to better disseminate the existing information. This process would be appropriate for audit procedures and auditor independence, as well.

Further, auditor independence is clearly defined in multiple existing sources and is referenced as part of the title of the audit opinion. We strongly believe that additional commentary on the topic of auditor independence would be redundant. This commentary would add more words to an already extensive and exhaustive reporting package without adding meaningful information.

Lastly, the auditor already comments on the results of the audit in the issuance of an unqualified audit opinion. If the auditor did not receive appropriate results from the audit procedures performed, the unqualified report would not have been issued. We do not believe that adding specific content about the audit procedures would provide financial statement users with any further comfort of the ultimate conclusion on the reasonableness of the financial statements, nor would knowledge of the procedures perform change their investment decisions.

*7. What types of information should an AD&A include about the auditor's views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?*

We do not recommend the use of an AD&A in total and in specific. Therefore, we do not recommend it include any content or level of detail. Information about management's judgments and estimates, accounting policies and practices is already a required disclosure in both the Form 10-K and the notes to the financial statements. We continue to assert that any further discussion by the auditor of management's judgments, estimates, accounting policies and practices, etc., would not increase transparency or relevance to the users of public financial reports.

In the existing auditor's opinion, the auditor provides reasonable assurance of the amounts and disclosures in the financial statements, the accounting principles used and significant estimates made by management, and the overall financial statement presentation. This opinion encompasses the areas that are considered to have "expanded" analysis and review. If the auditor determines that amounts or management's estimates are not properly disclosed in the financial statements in accordance with U.S. GAAP, the auditor would not issue an unqualified or 'pass' opinion. Therefore, we do not see the benefit in additional and repetitive information.

If the Board and its constituents are contending that U.S. GAAP and SEC rules do not adequately require the level of detail or clarity related to management's critical accounting measurements, auditor commentary is not the means to achieve those goals. The Board should collaborate with the FASB and SEC to clarify and/or modify U.S. GAAP through the appropriate channels.

Furthermore, the discussion of "difficult or contentious issues," including "close calls" should not be included in public disclosure. Such disclosure would certainly alter the historical management/auditor relationship and would create confusion to the users of the financial statements. It would inherently create an adversarial environment and lessen communication between management and auditor which would work contrary to the stated objectives of the Board. The disclosure would reduce transparency as management would need to manage the public disclosure risk of these items. Additionally, it is inherent in the issuance of the auditor's report that all "difficult or contentious issues" and/or "close calls" have been resolved.

Management has a responsibility to mitigate enterprise risk to preserve shareholder value. This responsibility includes the public disclosure risk, specifically reputational risk. If the disclosure of "close calls" is required, then management, in complying with its responsibilities, would become more cautious in its relationship and communication with its auditor. The result of the newly created adversarial relationship is a lengthened audit process and, consequently, increased professional fees incurred by management. Additional fees could also be incurred from other advisers engaged to reduce disclosure risk. Therefore, the transparency would be reduced by management's risk management responsibility and the relevance by the delay in public reporting. These incremental costs only detract from shareholder value without discernable benefit. Accordingly, these proposals do not meet the Board's stated objectives.

*8. Should a standard format be required for an AD&A? Why or why not?*

We do not believe that an AD&A should be required. If one was required, a standard format would be necessary for consistency and comparability. However, that in and of itself would compromise the value of the AD&A. We believe that it is moot on whether a standard format is required or not as public accounting firms would gravitate toward a standardized format that would have variations between firms based on style rather than substance, in order to mitigate their own risks associated with such disclosure.

*9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?*

As previously stated, the historical role of the auditor does not include a discussion of other risks and we believe that it should not be the future role of the auditor. Audit risk that applies to all public audit engagements is clearly defined in the auditing standards of the Board. If the Board does not believe that the current standards are adequate, then the Board should amend those standards accordingly.

As stated above, any discussion about specific audit risk related to a company would materially increase enterprise risk and alter the historical relationship between the auditor and management and run counter to the stated objectives of the Board in this Concept Release. Further, any discussions of other risks such as business, strategic and operational are management's responsibility and should remain their responsibility. These risks are already required to be disclosed in Item 1A of Form 10-K and in MD&A. Specifically, Regulation S-K 503 (c) requires that the disclosure of risks be specific to the entity. Management is required to evaluate the risks of the entity and disclose those specific risks along with an explanation of how those risks affect the Company. Furthermore, material changes in any risks disclosed in the Form 10-K are required to be disclosed in the Form 10-Q. Since an auditor is required to already read such information contained in the Form 10-K, any omission by management of a material risk would have been raised by the auditor under the requirements of Statement on Auditing Standards ("SAS") No. 8. We do not see the benefit of requiring the auditor to highlight certain or all of these disclosed risks in any separate report. Any further disclosure by the auditor of additional risks would suggest that management had not fulfilled their responsibility to properly identify and disclose the risks of the Company. Therefore, any reporting by the auditor would be redundant, or would refer to the relevant section of the 10-K where this information is already disclosed.

Further, investors should assess these risks independently of the auditor. The auditor is not tasked to be investors' advisor and it should not be in the future. Such changes to the role of the auditor would place additional material risk on the financial system as a whole, not reduce it, which we believe runs contrary to the stated objectives of the Board. The costs associated with such a change would significantly exceed any benefit.

*10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?*

We believe boilerplate language is unavoidable regardless of the regulations and/or guidance related to an AD&A. Audit firms would either likely require boilerplate language or material increases in fees to manage the additional risks associated with specific disclosures on a company by company basis. We do not believe the language would actually provide current and relevant information to investors prior to making investment decisions once interim period information was available and could increase litigation and its associated costs for companies and auditors. We also believe the threat of increased litigation risk could reduce transparency and relevance if it results in less meaningful disclosure.

*11. What are the potential benefits and shortcomings of implementing an AD&A?*

We do not anticipate any benefits in the implementation of an AD&A. Its shortcomings are numerous and delineated in detail in the previous responses. To summarize, the proposal would change the historical relationship of the financial statement auditor and management. An AD&A would also increase risk for both the company and the auditor, thus increasing compliance cost for the company and reducing enterprise value. An AD&A does not promote transparency or relevance and, therefore, should not be implemented.

*12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?*

We believe that inconsistent, or competing, information would be minimal over the long term. In general, management, which is tasked to minimize enterprise risk, will work toward virtual symmetry in the reporting of management and the auditor. There will be significant cost to companies to reach this long-term state. The result will be a less transparent disclosure by management.

13. *Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making decisions? If so, how would they be used?*

We believe that the types of matters suggested for emphasis paragraphs would not be relevant or useful. We question the extent to which financial statement users are presently reading the financial statements, related notes and other information contained in public filings. As such, a requirement by the auditor to emphasize certain aspects of the financial statements will further encourage financial statement users to focus only on what they will interpret as the most important aspects of the financial statements as highlighted by the auditor. The critical accounting policies and key estimates made by management are disclosed in detail in the critical accounting policies section of Management's Discussion and Analysis ("MD&A") and in the financial statement notes. Additionally, financial statement notes are required to explain management's significant accounting policies. These critical accounting policies and the notes referenced within, if completed in accordance with U.S. GAAP and SEC rules, sufficiently provide the reader of the financial statements with the information needed to understand the financial statement areas the auditor spends a significant amount of time on during the audit. Any other significant transactions that would be relevant during an accounting period would have been highlighted by management both in MD&A as well as the notes to the financial statements. Highlights from the auditor would not be necessary.

14. *Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?*

We do not believe that the Board should require the reporting of areas of emphasis together with key audit procedures. As discussed in our response to Question 13, the relevant and necessary information is already included in the financial statements, notes and MD&A. An emphasis paragraph would be redundant as it would be pointing out areas already discussed in the notes and MD&A. Also, this concept relies on the auditor to make key judgments as to what might be important to a financial statement user, which would likely differ from one financial statement user to the next. We do not believe that it is the auditor's responsibility to be making determinations on which matters to highlight separate and apart from the financial statements as a whole. Such emphasis, as we mentioned previously, could result in the financial statement user focusing on those areas highlighted by the auditor and encourage users not to read the financial statements and notes thereto in their entirety.

Additionally, any descriptions of the auditor's procedures could not provide sufficient detail to enable a reader to completely understand the depth of the audit procedures performed by the auditor. Those procedures without context, including a thorough understanding of internal controls over financial reporting, could be misunderstood as to sufficiency and completeness on the part of the financial statement user. The process of how the auditor assesses management's estimates and judgments is described in various publications available to the public and would not add value if disclosed in every auditor's report on a public company's financial statements. We believe that it would be more appropriate for the PCAOB and the SEC in conjunction with the AICPA to provide educational forums to better disseminate information already available to the public.

15. *What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?*

None, as noted above.

16. *What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?*

None, as noted above.

17. *How can boilerplate language be avoided in required emphasis paragraphs while providing consistency amount such audit reports?*

We believe that boilerplate language would be unavoidable. The potential legal ramifications of the auditor highlighting specific disclosures and not others would lead to high level, non-value added, boilerplate language used by every firm. Further, "boilerplate" language would be a necessity in order to promote relevancy to the financial statement users. The current comparability of the auditor's opinion is essential to financial statement users as to understand multiple companies under a common framework.

Additionally, emphasis paragraphs would change the historical role of the auditor into that of an analyst. The current marketplace already has individuals and firms who provide this market and analysis service.

18. *What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?*

We believe that there are no potential benefits, but there are numerous shortcomings to implementing required emphasis paragraphs. Most importantly, emphasis paragraphs would not provide additional value to the financial statement users because (1) they would likely be boilerplate, (2) they would encourage the financial statement users to focus on information that may or may not be relevant to them, and, (3) at best, they would be repetitive of the critical and significant accounting policies already reported. We believe that emphasis paragraphs could mislead readers by focusing the user on information the auditor believes would be most significant to a financial statement user and distract the users' attention from other important aspects of the financial statements as a whole.

*19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?*

No, we do not believe that auditor assurance on other information outside of the financial statements is necessary. Since the audit report is filed along with the financial statements in the Form 10-K, the auditor is already associated with the other information in the document containing the audited financial statements. Furthermore, the auditor is already required under SAS No. 8 to perform certain procedures. We believe that the level of responsibility under SAS No. 8 is sufficient and does not need to be expanded.

MD&A is intended to provide narrative explanation of the financial statements and other statistical data that management believes will enhance financial statement users' understanding of the financial results of the company, as well as the inclusion of forward-looking information. An auditor should not be expected to opine on forward-looking information, nor on management's judgment on what will enhance users' understanding of a company's results or what trends or uncertainties it faces. The MD&A is intended to be the view through the eyes of management, <u>not</u> the auditor. Any attempt to provide assurance of such disclosures may result in management eliminating such information that financial statements users find useful in developing their investment valuation models. An opinion by an auditor with respect to this information will not make it more reliable. In fact, an opinion by the auditor on such information would likely be misinterpreted by a financial statement user as to its reliability. Further, the cost associated with an auditor moving beyond verification of historical financial information to being responsible for forward-looking and other MD&A commentary would be burdensome, result in lengthier audits and detract from shareholder value. We believe that there is sufficient information in the financial statements and notes that provide investors with adequate disclosures about a company. If the Board does not believe that there is adequate disclosure in the current financial statement presentation, it should work through the FASB and the SEC to make the desired changes.

> *a. If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.*
>
> We do not support auditor assurance on other information outside the financial statements. We believe this has numerous negative consequences to the financial statement reporting process without any corresponding, cost effective benefit.
>
> *b. On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.*
>
> We do not support auditor assurance on information outside the financial statements.
> See comments above.
>
> *c. What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?*
>
> As we have previously discussed, the auditor is already required under SAS No. 8 to read the other information contained outside of the financial statements and consider whether such information, or the manner of its presentation, is materially inconsistent with information, or the manner of presentation appearing, in the company's financial statements. We believe that this level of responsibility is sufficient and appropriate for the auditor. We do not believe that it is appropriate, nor do we see the cost benefit of having an auditor provide a higher level of assurance. We are unclear as to why the current responsibilities of the auditor under SAS No. 8 do not meet the Board's objectives for information outside of the financial statements.

*d. If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?*

We do not support the auditor providing assurance on MD&A in part or in whole. We believe that the auditor's responsibilities under SAS No. 8 currently provide the required level of review necessary. If the Board believes that the auditor's responsibilities under SAS No. 8 are unclear to financial statement users then we believe that the Board should address that in the appropriate education forum.

*e. Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?*

We do not believe that that auditor reporting on MD&A would affect the nature or quality of MD&A components that discuss the results of operations because those disclosures are addressing the historical financial statement results. However, if the auditor would be required to opine on forward-looking statements or other commentary in the MD&A, then we would anticipate less disclosure rather than more as companies felt more constrained on providing guidance or other market-related outlook information, which would reduce transparency to the financial statement users and run counter to the goals of the Concept Release.

*f. Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?*

We believe that the requirements in the Board's attestation standard, AT sec.701 are sufficient to provide appropriate level of auditor assurance on other information outside the financial statements.

*g. If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.*

Information is presently communicated by management to investors, analysts and financial statement users through quarterly press releases, earnings calls, Form 10-Q and Form 10-K filings, proxy statements and other event-driven filings. Investors, analysts and others are using this information to make investment decisions, despite not having an opinion or other commentary by an auditor. It is inconsistent to propose that a separate reporting model on information contained outside the financial statements, or expansion of the auditor's reporting model in connection with the annual audit would provide users with a greater level of comfort over the financial statements when decision-making information is disseminated by management and used by financial statement users throughout the year. To make this Concept Release relevant to financial statement users, a year-round reporting requirement would be necessary which would be neither cost effective nor result in the dissemination of timely information to the financial statement users.

*20. What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?*

We see no benefits of implementing auditor assurance on other information outside the financial statements. We believe the objectives of the Board and the Concept Release can be met without additional auditor assurance. The shortcomings include increased audit fees and workload. This will occur regardless of company size and available financial resources. The corresponding increased internal work will continue to strain limited resources while not adding any value. Furthermore a requirement to provide assurance on qualitative disclosures would add significant time and complexity to the audit. We do not believe these changes are necessary because adequate protocols, including SAS No. 8, currently exist that allow investors to rely on information outside the financial statements.

*21. The Concept Release presents suggestions on how to clarify the auditor's report in the following areas:*

- *Reasonable assurance*
- *Auditor's responsibility for fraud*
- *Auditor's responsibility for financial statement disclosures*
- *Management's responsibility for the preparation of the financial statements*
- *Auditor's responsibility for information outside the financial statements*
- *Auditor independence*

*a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?*

We believe that certain of the above items could be clarified in the audit report. However, we do not believe that these clarifications are necessary, as the responsibilities and role of the auditor are clearly defined in auditing standards. We do not support an overhaul of the report as an auditor's full responsibility cannot be meaningfully explained in such a report. As we have mentioned previously, information regarding auditor responsibility and the standards under which an audit is conducted, are publically available for interested parties. Including them as part of the audit report would only add volume, but not clarity to users of the financial statements.

We believe that the items underlined in the following example audit report could be included in the current report, with no incremental procedures required by the auditor. A discussion of our rationale for each inclusion follows the example audit report.

Report of Independent Registered Public Accounting Firm

To the Board of Directors and Stockholders of XYZ Company:

We have audited the accompanying balance sheets of XYZ Company as of December 31, 20X3 and 20X2, and the related statements of operations, stockholders' equity, and cash flows for each of the three years in the period ended December 31, 20X3. Our audits also included the notes to the consolidated financial statements and the financial statement schedule, Schedule II-Valuation and Qualifying Accounts. These financial statements, notes to the financial statements and financial statement schedule have been prepared by and are the responsibility of the Company's management. Our responsibility is to express an opinion on the financial statements, notes to the financial statements and financial statement schedule based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable, but not absolute, assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, the financial statements referred to above and the related notes and financial statement schedule present fairly, in all material respects, the financial position of the XYZ Company as of December 31, 20X3 and 20X2, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 20X3, in conformity with U.S. generally accepted accounting principles.

As required by Statement on Auditing Standards (SAS) No. 8, we read the information in the Company's 20X3 Form 10-K ("other information") in addition to the financial statements, notes to the financial statements and financial statement schedules covered by this report. The objective of the reading was to consider whether the other information was materially inconsistent with information appearing in the financial statements. SAS No. 8 does not require that we perform, and we did not perform, any procedures to corroborate the other information and therefore we do not express an opinion on the other information. However, as a result of reading the other information, we did not conclude that there were any material inconsistencies between the other information or the manner of its presentation, and the information appearing in the financial statements or its manner of presentation.

i. Reasonable assurance

If there is any confusion on the part of financial statement users with respect to the level of assurance that is being obtained from the audit report, then expanding the discussion on how reasonable assurance is defined will not provide financial statement users with any more comfort. We believe that it would be appropriate to define reasonable assurance by what it is not: absolute assurance.

ii. Auditor's responsibility for fraud

We believe that it is appropriate that the auditor's responsibility for fraud can also be described by stating that the auditors provide reasonable assurance that the financials and corresponding schedules and notes are free of material misstatement "whether due to error or fraud."

iii. Auditor's responsibility for financial statement disclosures

While each financial statement included in a company's financial statements is required to include the statement that "the notes to the financial statements are integral to the statements," we believe that additional language could be added to the auditor's report to explicitly identify that the notes to the financial statements are covered by the audit report.

iv. Management's responsibility for the preparation of the financial statements

Although it seems that the current statement contained within the audit report that "the financial statements are the responsibility of the Company's management" sufficiently denotes responsibility to a financial statement user and also implies that management would therefore have prepared such statements (or have been responsible for the oversight of their preparation), if financial statement users would find that an explicit statement would provide additional clarity as to the party responsible for preparation, then we do not object to such an inclusion.

v. Auditor's responsibility for information outside the financial statements

Because the audit report is included along with the financial statements in the Form 10-K, the auditor becomes associated with the other information in the document containing the audited financial statements. Consequently, the auditor is already required under current SAS No. 8 to perform certain procedures. We believe that inclusion of the proposed paragraph would delineate the responsibility of the auditor between the financial statements and the other information included in the document containing such financial statements and related audit report. Since an auditor is already performing the procedures required by SAS No. 8, we do not believe that any incremental time or costs would be associated with including this standard paragraph in the audit report.

vi. Auditor independence

We believe that *Auditor Independence* should not be included in the audit report. The audit report is titled "Report of Independent Registered Public Accounting Firm." Additional discussion of independence in the audit report is therefore redundant and provides no value to the financial statement user. Furthermore, an audit firm is either independent or it is not. If a firm is no longer independent, it cannot opine on the financial statements. It is the responsibility of the audit committee and the audit firm to evaluate the auditor's independence. Any other information not already disclosed in the proxy statement would therefore not be relevant to the conclusion on independence. Financial statement users interested in an audit firm's system of controls surrounding independence may obtain that information directly from the audit firm.

*b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.*

Overall, these clarifications would not materially enhance the audit report nor would it help readers understand the audit report and the auditor's responsibilities, as we question whether financial statement users are presently reading the audit report. As we have previously discussed, the responsibility of the auditor is clearly and succinctly explained in the audit report. Further information on the specifics of conducting an audit is publicly available to interested users through the PCAOB, the SEC and the CAQ. The audit report is not the forum to explain such roles and responsibilities.

*c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?*

No other clarifications or improvements should be made to the audit report.

*d. What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?*

For the changes that we support above, there would be no changes to the scope of the audit or to the auditor's responsibilities that would be necessary. We do not support changes to the audit report that will result in incremental audit time and expense.

*22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?*

We do not believe that there are significant benefits to adding language to the audit report. Clarifications are already available to financial statement users who have an interest or desire in understanding the role and responsibility of the independent auditor through the CAQ, SEC and PCAOB.

We believe that the audit report in its current form with unqualified opinions or those containing explanatory paragraphs is appropriate. Adding length and terminology to the report would further discourage readers from reading it.

*23. This Concept Release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?*

We believe that the desire to improve auditor communication in this Concept Release will have the unintended consequence of absolving the financial statement user from the responsibility to read information already contained in financial statements and the Form 10-K and to have a comprehensive understanding of the audit process. Except for certain clarifications to the existing auditor's report as previously discussed, we do not believe the alternatives presented are appropriate.

*24. Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?*

No. We do not believe that any of the alternatives would be more effective in improving the auditor communication.

*25. What alternatives not mentioned in this concept release should the Board consider?*

If the Board believes that financial statement users require additional understanding of the audit process, the Board should collaborate with the CAQ and SEC to provide education to users of the financial statements with respect to the role of the independent auditor. User-education would eliminate the need to add already publically-available information to the audit report, and would appropriately retain the responsibility of reading and understanding the financial statements and related notes with the financial statement user.

*26. Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?*

We do not believe that this is necessary based upon our responses to the questions in this letter.

*27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?*

As discussed above, this proposal under the guise of improving auditor communication will have the unintended consequence of absolving the financial statement user from the responsibility of having a comprehensive understanding of the audit process in addition to reading information already contained in financial statements and the Form 10-K. Hence, any incremental elements to the audit report merely add "noise" to the ultimate conclusion that, at a reasonable level of assurance, the financial statements and related notes are a fair presentation and in all material respects, in accordance with U.S. GAAP. To suggest otherwise undermines the pass/fail notion of an audit. If the auditor reached the appropriate conclusion based upon the audit procedures performed, then any spectrum of pass is already determined to be materially correct (i.e., the financial statements and notes do not contain or omit material information that would impact a financial statement user).

*28. Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?*

We do not believe that users of financial statements need to be educated about the auditor's role in the performance of an audit through the audit report. Auditing standards are available to the public, and information regarding the role of the independent auditor is provided through the PCAOB, the SEC and the CAQ. There is a presumption that users of financial statements are informed and educated about the information they are reading. There is also a presumption that they are reading the audit report. Should a user of the financial statements find him/herself uninformed about the information referenced in the audit report, financial statements or filings, there are a multitude of places one could research and find the information sought.

*29. What effect would the various alternatives have on audit quality? What is the basis for your view?*

We do not believe that any of the alternatives presented would have an effect on audit quality. Audit quality is monitored both internally by the large accounting firms as well as externally by the Board. Certain of the alternatives proposed by the Board will, however, add considerable time and costs. Audit quality would only be affected if sufficient time is not allowed for the auditor to complete the incremental procedures that would be necessary for certain of the alternatives.

*30. Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the Concept Release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.*

Any changes to the audit report should apply to all entities, regardless of industry, size or filing status. However, the alternatives presented by the Board that require an increase in audit scope and procedures would add significant audit time and expense for all entities.

*31. This Concept Release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.*

*a. Are any of these considerations more important than others? If so, which ones and why?*

All of these effects are significant considerations that should be considered carefully by the Board. We believe that the changes proposed in the Concept Release will reduce shareholder value through increased professional fees without discernable benefit and heighten enterprise risk, thus leading to increased liability considerations and potentially damaging a company's ability to control the release of confidential or competitive information. The proposals in this Concept Release combined with the Board's other proposal to require the rotation of auditors[2] will lead to a significant deterioration of the relationship between the auditor and management as there will be less incentive to the auditor to collaborate with a company's management to protect a company from risk associated with disclosure of competitively harmful information.

*b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?*

Any changes to the auditor's reporting model will result in increased time and expense associated with the audit. Expanded reporting would necessitate audit firms to create or expand an internal centralized review of such reports, which increases the time and expenses associated with issuance of an audit report. Contrast this to the current unmodified report, which does not create the incremental costs, yet has appropriately and succinctly reported the results of the audit for many years. These costs will reduce shareholder value with no actualized benefits.

*c. Are there any other considerations related to changing the auditor's report that this Concept Release has not addressed? If so, what are these considerations?*

No further comments.

*d. What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?*

Not applicable

*32. The Concept Release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?*

It is clear that the many aspects of the alternatives would result in a greater number of disagreements between management and the auditor than are currently experienced in practice. The difficulty with many of the alternatives in the Concept Release is that they rely on the judgment of the auditor without objective criteria by which to evaluate those judgments. We question whether the creation of objective criteria could be accomplished, as there are numerous examples where U.S. GAAP and SEC rules lack objective criteria. These differences of opinion could result in stalemates and an inability to resolve matters, ultimately impacting the timeliness of the completion of the audit, the information management

[2] PCAOB Release No. 2011-006 Concept Release on Auditor Independence and Audit Firm Rotation

is making publicly available to users of the financial statements, and certainly the relationship between the audit committee, management and the auditor. It is certain that many of the alternatives included in the Concept Release would result in increased time spent by both management and the audit committee, both of whom are already challenged on time.

If you have any questions about our comments or wish to discuss any of these matters further, please contact me at (312) 436-4282.

Yours sincerely,

Richard H. Fleming

**Re: Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards, PCAOB Rulemaking Docket Matter No. 34**

Dear Members of the Public Company Accounting Oversight Board:

Vanguard appreciates the opportunity to comment on the Public Company Accounting Oversight Board's (the "PCAOB") *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (the "Concept Release"). We appreciate the PCAOB's focus on the concerns of investors in relation to financial statements and proposed enhancements to the auditor's reporting model and we commend the PCAOB for seeking input from various stakeholders who participate in the audit and financial reporting process, including an issuing company's management, independent auditors and investors. As discussed below, we support meaningful disclosures in annual reports that focus on matters of critical importance to investors by means of enhancements that are workable within the current regulatory reporting framework. Accordingly, we recommend the expanded use of meaningful emphasis paragraphs which identify significant risks in the financial statements and how the auditors responded to those risks, as well as clarifying language in the standard auditor's report.

As both a *consumer* of financial information and *issuer* of hundreds of financial statements, we believe that Vanguard brings a special perspective to the debate. Vanguard offers more than 170 U.S. mutual funds holding assets of approximately $1.6 trillion at August 31, 2011. Each of these mutual funds is registered with the Securities and Exchange Commission ("SEC") under the Investment Company Act of 1940 and their shares are registered with the SEC under the Securities Act of 1933. Investment companies, as issuers of securities, are required to file audited financial statements with the

SEC and mail annual and semi-annual reports to their shareholders within designated time frames under SEC rules. In addition, in their capacities as investors in the securities markets, investment companies review and analyze companies' financial statements that are filed with the SEC when making investment decisions on behalf of their investors.

Current roles of management and auditors should not change

We recognize that management is responsible for preparing a company's financial statements and, as such, management should continue to be the primary source of disclosure about the company with primary liability for errors and omissions in that disclosure. Financial statements are often lengthy and complex and typically include an extensive set of notes that describe in further detail items included on the balance sheet, income statement and cash flow statement. Because financial statements are so detailed, it can be difficult for investors reviewing financial statements to identify those areas of significant importance to understanding the results of operations and financial condition of issuers. Sophisticated investors who understand the detailed financial statements would also benefit from additional information about areas in the financial statements involving significant management estimates or judgments.

While management is responsible for preparing the financial statements, the audit process is valuable and during the course of that process auditors may gain unique and relevant insight into a company that could be useful to an investor in terms of helping the investor navigate and understand management's disclosures in the financial statements. The auditor's report is the means by which auditors communicate to investors. Given the valuable nature of the audit process, we believe that the auditor's report could be enhanced to be more informative for investors. That being said, any changes to the auditor's reporting model should be practical and implemented in a measured way that balances the benefits of any changes with the potential increased burdens on issuers and auditors within the established regulatory reporting framework. For example, on balance, it may not be practical to implement new requirements to include Auditor's Discussion and Analysis (AD&A) in annual reports. In our view, any changes that would impose significant and unnecessary burdens on issuers or auditors without meaningful disclosure enhancements would not ultimately benefit investors.

Vanguard supports meaningful emphasis paragraphs in the auditor's report

It is our view that the auditor's report accompanying the financial statements could be enhanced to the benefit of investors by expanding the use of so-called emphasis paragraphs, which direct readers of the report to areas of special interest and significance in the accompanying financial statements. Drawing on the auditor's unique insight into the company, expanded use of emphasis paragraphs, when applicable, would allow auditors to highlight for investors the area or areas that the auditor considers to be the most significant to a better understanding of the financial statements, and would identify for investors where these significant matters are more fully disclosed in the financial statements and the accompanying notes.

As proposed in the Concept Release, emphasis paragraphs could be used to highlight areas of the financial statements that include significant management judgments and estimates and areas with significant measurement uncertainty.[1] Within these emphasis paragraphs, auditors would be required to discuss the audit procedures performed on the emphasized matters. The emphasis paragraphs should be substantive and not reduced to boilerplate, which would not be helpful to investors. The expanded use of emphasis paragraphs in the auditor's report could also potentially increase the quality of management's disclosures in the financial statements.

Importantly, emphasis paragraphs would not undermine management's ultimate responsibility for the statements themselves and accompanying disclosure. The use of emphasis paragraphs would, rather, allow investors more transparency into those areas of the company's financial statements, if any, that involve significant management judgments and estimates or areas with significant measurement uncertainty. Emphasis paragraphs would provide useful guidance to investors as to how the auditors satisfied themselves that significant estimates are reasonable without being unduly costly or burdensome to either auditors or issuers.

<u>If no matters of emphasis exist, the auditor should make that affirmative statement</u>

To be useful to investors, emphasis paragraphs should be used to highlight areas in the financial statements that involve significant management judgments and estimates and areas with significant measurement uncertainty. However, the financial statements of many issuers may not be dependent upon significant management judgments and estimates and areas with significant measurement uncertainty, and under those circumstances, there will be nothing that the auditor should be *required* to emphasize. In these instances, it is our view that the use of emphasis paragraphs should not be imposed as a requirement. In addition, we believe that required emphasis paragraphs in auditor's reports could potentially cause investors to rely solely on auditors' reports, potentially limiting the extent to which investors otherwise read the financial statements, which should continue to be the primary source of investor information about the results of operations and financial condition of an issuer. Requiring emphasis paragraphs may serve to lessen the impact and effect of such paragraphs, resulting in unnecessary boilerplate that could detract from a better understanding of the accompanying financial statements, which would not benefit investors. In light of the fact that emphasis paragraphs may not be required in some annual reports, in those instances we recommend that the auditors be required to state affirmatively that the financial statements do not contain any significant management judgments and estimates or areas with significant measurement uncertainty.

[1] As acknowledged in the Concept Release, we recognize that PCAOB would need to develop new auditing standards in collaboration with the SEC and FASB to direct auditors in determining the specific types of matters that should be emphasized in the auditor's report.

We also support adding clarifying language to the existing standard auditor's report. We recognize that some investors may not fully understand the financial statement preparation process, or what an audit represents, or the related auditor responsibilities. Accordingly, we believe that providing investors with an explanation and clarification around what an audit represents, the auditor's responsibilities, and certain terminology could meaningfully increase financial statement users' understanding and knowledge of the audit process and the auditor's report.

**Subject: Docket 034, PCAOB Release No. 2011-003, CONCEPT RELEASE ON POSSIBLE REVISIONS TO PCAOB STANDARDS RELATED TO REPORTS ON AUDITED FINANCIAL STATEMENTS AND RELATED AMENDMENTS TO PCAOB STANDARDS**

To Members of the Public Company Accounting Oversight Board:

Thank you for your work and this opportunity to comment on concepts being considered for audit reports.

Most responders to this comment request have fundamental positions. Once that position is clear, the comments are better understood. My responses to each of the questions for which you seek comment are consistent with concerns I have about the public accounting profession. You may interpret my comments from the following convictions about audit firms reached several years ago:

a. Professional accounting firms are not properly governed or capitalized.
b. Nor are they committed to proper professional standards.
c. The public deserves financial and qualitative information about CPA firms.
d. Independence is routinely compromised in audit work.
e. CPA Firm ethics are diluted to the lowest level acceptable among organizations permitted to practice as part of CPA firms.
f. Regulation today is rationalization among friends, and
g. PACs and lobbying have no place in this profession.

Some of these concerns have been partially addressed. But other proposals, including those in the Concept Release, only burden a flawed foundation needing to be fixed fixed. The concept proposals will cost more in audit fees, non productive work for registrants and standard language in annual reports that satisfy legal protective concerns while blurring investors' vision. These likely results are not the objectives sought, whether or not you share my specific concerns about the profession.

The U. S. Treasury Advisory Committee on the Audit Profession had much discussion on some of the seven convictions and other structural concerns, but action to its recommendations appears to be dormant in many cases.

It is my avid wish the responses herein are taken as constructive suggestions, not criticism of efforts and ideas of others. The responses are my own, not of any organization with which I am affiliated. It would be a pleasure to discuss these observations with you if you desire. My contact information is shown above.

Sincerely,

Gilbert F. Viets

**CONCEPT RELEASE ON POSSIBLE REVISIONS TO PCAOB STANDARDS RELATED TO REPORTS ON AUDITED FINANCIAL STATEMENTS AND RELATED AMENDMENTS TO PCAOB STANDARDS**

**Answers of G. Viets**

QUESTIONS

1. Many have suggested that the auditor's report, and in some cases, the auditor's role, should be expanded so that it is more relevant and useful to investors and other users of financial statements.

a. Should the Board undertake a standard-setting initiative to consider improvements to the auditor's reporting model? Why or why not?

***Answer: No. "Fairly stated" and "in accordance with GAAP" are appropriate standards against which auditors should report. Stay focused on why failures occur in achieving these objectives.***

b. In what ways, if any, could the standard auditor's report or other auditor reporting be improved to provide more relevant and useful information to investors and other users of financial statements?

***Answer: Do not revise the standard audit report. Investors should look to management for information about the financial condition of the company. If the auditor disagrees with management, they should report the disagreement under existing standards.***

c. Should the Board consider expanding the auditor's role to provide assurance on matters in addition to the financial statements? If so, in what other areas of financial reporting should auditors provide assurance? If not, why not?

***Answer: No. The auditor reads other information in documents that include audited financial statements. If the auditor finds that such information contradicts the financial statements, they must investigate and resolve the differences to assure the statements are correct. The process improves both the audited financial information and the unaudited company information if done properly.***

2. The standard auditor's report on the financial statements contains an opinion about whether the financial statements present fairly, in all material respects, the financial condition, results of operations, and cash flows in conformity with the applicable financial reporting framework. This type of approach to the opinion is sometimes referred to as a "pass/fail model."

a. Should the auditor's report retain the pass/fail model? If so, why?

***Answer: Yes. It is simple. If the answer is "fail," the auditor can write as much as they want, and they should. If accounting principles result in unfair presentations, change those.***

b. If not, why not, and what changes are needed?

***Answer: Not applicable.***

c. If the pass/fail model were retained, are there changes to the report or supplemental reporting that would be beneficial? If so, describe such changes or supplemental reporting.

***Answer: The identification of the issuing office of the auditor is unnecessary and implies some limitation on the use of available firm resources and responsibility. Otherwise, there is nothing wrong with the report except that it is sometimes misapplied, i.e. it says the statements are correct when they are not; that is an auditor problem, not a language problem.***

3. Some preparers and audit committee members have indicated that additional information about the company's financial statements should be provided by them, not the auditor. Who is most appropriate (e.g., management, the audit committee, or the auditor) to provide additional information regarding the company's financial statements to financial statement users? Provide an explanation as to why.

   ***Answer: Management! If company management is incapable of communicating with investors, the board of directors should correct the problem. If management is prevented from communicating with investors because of some regulatory directive, it is a disservice to management and to investors. The more we look to auditors or the audit committee to provide the information, the less independent they become.***

4. Some changes to the standard auditor's report could result in the need for amendments to the report on internal control over financial reporting, as required by Auditing Standard No. 5. If amendments were made to the auditor's report on internal control over financial reporting, what should they be, and why are they necessary?

   ***Answer: Reports on internal controls are a noble objective, but need reconsideration. Consider eliminating required reports on internal control. It is a costly mandatory exercise, not based on established, commonly understood, acceptable standards, and performed by people untrained in control systems. Reports give false comfort, addressing only the past, not the future. Nearly all "material weaknesses" reports are based on material adjustments required after mistakes have occurred and damage done.***

***The requirement failed to disclose backdating of pricing stock options, large commitments on derivative instruments, bad credit standards of financial institutions, non existence of assets and non disclosure of real liabilities. Why mandate procedures that miss the obvious?***

***A change that could help companies and investors would be to orient the reports to the future, not the past. For example, if some experts were to do sufficient work to say:***

> ***"…We have studied this system and, considering what is planned and foreseeable during the next year by XYZ, Inc., the procedures provided in this system will identify all transactions and information necessary to currently and properly classify and report the necessary information for shareholder reporting under generally accepted accounting principles…"***

***Such a report, as paraphrased, may best be done by someone other than the traditional, historical financial statement auditor. This alternative, at least, reaches into the future attempting to anticipate and prevent bad things from happening rather than reporting what has already happened.***

***There should be no regulatory distinction among public companies, based on market capitalization, as to whether a review and report on internal controls is required. Complexity and risk have nothing to do with market capitalization. Public companies must accept the responsibility of timely, accurate and fair reporting.***

5. Should the Board consider an AD&A as an alternative for providing additional information in the auditor's report?

***Answer: No.***

a. If you support an AD&A as an alternative, provide an explanation as to why.

***Answer: N/A.***

b. Do you think an AD&A should comment on the audit, the company's financial statements or both? Provide an explanation as to why. Should the AD&A comment about any other information?

***Answer: N/A***

c. Which types of information in an AD&A would be most relevant and useful in making investment decisions? How would such information be used?

***Answer: N/A***

d. If you do not support an AD&A as an alternative, explain why.

***Answer: Today's financial statements for public companies are valuable documents with tremendous amounts of information if read thoroughly and thoughtfully. Good auditors test the information based on the auditor's determination of how much risk the auditor is willing to accept that something is incorrect and not discovered in the tests. An investor is challenged to digest the financial information, without also having to participate in evaluating auditors' testing decisions.***

***Unfortunately, auditors have made many bad testing decisions in the last fifteen years, and the rate of bad decisions seems to be increasing. The audit industry response is liability limitation through contracting, inadequate risk capital, entity diffusion (networks), legislation, confidential legal settlements and general lack of transparency about their own business models to investors and to their own partners. Better audit techniques have not been developed, or if developed, not applied.***

***This proposal tends to transfers auditor responsibility for scope decisions to the investor.***

e. Are there alternatives other than an AD&A where the auditor could comment on the audit, the company's financial statements, or both?
What are they?

***Answer: Yes. The present audit report is the best alternative. Also, auditors can and should comment to the audit committee. If the auditors disagree with management on important issues, they should report that disagreement. The necessary vehicles exist already if all parties do their job. Failures we have seen are not the result of lack of opportunity and responsibility to properly report and disclose what investors should be told. The PCAOB should hold audit firms responsible for doing what they are reasonably and professionally responsible to do now under existing reporting standards.***

***The PCAOB has made good progress in review of audit practices. But, the PCAOB and all would benefit from immediate attention to large known and suspected audit failures, similar to the approach used by the National Transportation Safety Board to review and preserve evidence following airplane accidents. The damage caused is great and the free market can't really afford to bury the causes in confidential legal settlements.***

6. What types of information should an AD&A include about the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., audit risk, audit procedures and results, and auditor independence)?

***Answer: N/A.***

7. What types of information should an AD&A include about the auditor views on the company's financial statements based on the audit? What is the appropriate content and level of detail regarding these matters presented in an AD&A (i.e., management's judgments and estimates, accounting policies and practices, and difficult or contentious issues, including "close calls")?

   ***Answer: N/A.***

8. Should a standard format be required for an AD&A? Why or why not?

   ***Answer: N/A.***

9. Some investors suggested that, in addition to audit risk, an AD&A should include a discussion of other risks, such as business risks, strategic risks, or operational risks. Discussion of risks other than audit risk would require an expansion of the auditor's current responsibilities. What are the potential benefits and shortcomings of including such risks in an AD&A?

   ***Answer: These risks should be discussed by management. If the auditor must be the one to discuss them, something is wrong with management's sense of responsibility to owners and investors.***

10. How can boilerplate language be avoided in an AD&A while providing consistency among such reports?

    ***Answer: N/A.***

11. What are the potential benefits and shortcomings of implementing an AD&A?

    ***Answer: There is no benefit. The shortcoming is that it makes the auditor discussion a primary focus when it should be secondary, used for exceptions to which the auditor must draw attention if management will not do so.***

    ***It is not correct to conclude that auditors do it anyway, so it shouldn't cost more. It will cost more. Wording will become crucial, and it will be diluted to defensive language that is uninteresting to read and difficult to understand. It will not be the frank memo that should exist in the file of the audit team that can and should openly discuss rumors, suspicions and other concerns and how the auditor determined disposition of the issues. Deliberations on what an AD&A should say will have a negative impact on the frankness of the memo that now exists in most audit team files for fear that conformance between the two is desirable; it isn't.***

12. What are your views regarding the potential for an AD&A to present inconsistent or competing information between the auditor and management? What effect will this have on management's financial statement presentation?

***Answer: The Annual Report to Shareholders or to the Securities and Exchange Commission is not a debate between the auditor and the company. If the auditor disagrees with management, there is ample opportunity to resolve the issue with the audit committee, and to disclose the issue if not resolved. If that is not happening, it is not because of the lack of an AD&A and it will not be corrected by adding one.***

13. Would the types of matters described in the illustrative emphasis paragraphs be relevant and useful in making investment decisions? If so, how would they be used?

    ***Answer: The opportunity for emphasis paragraphs exists now, but they should be used judiciously to achieve desired emphasis. Mandating emphasis dulls deserved attention.***

14. Should the Board consider a requirement to include areas of emphasis in each audit report, together with related key audit procedures?

    ***Answer: No.***

a. If you support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.

   ***Answer: N/A.***

b. If you do not support required and expanded emphasis paragraphs as an alternative, provide an explanation as to why.

   ***Answer: Emphasis paragraphs should be used rarely.***

   ***It does little good to require auditors to give a partial explanation, at best, of what their procedures may have been. It would mislead investors to mandate emphasis paragraphs just for the sake of choosing something to say. Auditors are trained to make the choice of what and how to audit. Investors should not get into the position of blessing procedures disclosed, through lack of objection to auditor discussion of emphasis. Auditors are not restricted in choosing to do whatever they want to do to reach conclusions on information based on their own measurement of risk they might be wrong.***

15. What specific information should required and expanded emphasis paragraphs include regarding the audit or the company's financial statements? What other matters should be required to be included in emphasis paragraphs?

    ***Answer: N/A***

16. What is the appropriate content and level of detail regarding the matters presented in required emphasis paragraphs?

    ***Answer: N/A.***

17. How can boilerplate language be avoided in required emphasis paragraphs while providing consistency among such audit reports?

***Answer:* Don't make emphasis paragraphs mandatory. As used today, emphasis paragraphs are not boilerplate. Consistency among audit reports is not necessarily a good objective. If something is said only because it is required of all, how does an investor recognize what is really different, requiring special attention?**

18. What are the potential benefits and shortcomings of implementing required and expanded emphasis paragraphs?

***Answer:* There would be little, more likely negative, benefit from mandating this reporting by auditors. It would result in misunderstanding of what the auditor does and what the full scope of the auditor responsibility is.**

***Implications of required emphasis could be personal and severe. At the extreme, an auditor might be required to discuss emphasis on individual executives because of their lifestyles, internal squabbles among executives or mental and physical health concerns of key executives. Auditors are not blind to social issues in setting their testing scopes.***

***On the other hand, is there any evidence that mandated emphasis paragraphs would have prevented the problems experienced in the last decade from back dated stock options, subprime lending, non disclosed liabilities and nonexistent assets? What could an investor have done if the audit report had discussed areas of emphasis?***

19. Should the Board consider auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model?

***Answer: No. The Board should consider the assurance that already exists. There are schedules in the Annual report to the Commission that require audit opinions and, in some cases, auditors are required to give specific procedure reports to major creditors, e.g. loan covenant compliance. Auditors review and sometimes audit quarterly financial information. Auditors must now read other information in documents containing their audit report to satisfy themselves that the other information does not contradict what is in the financial statements.***

***Further required intrusion by auditors into information and communication with shareholders shows incredibly low regard for the integrity and ability of company management and incredibly high regard for auditors' ability to be the gatekeeper for all information that anyone might want. We cannot audit our way to integrity. Auditing is a costly, non productive exercise, focused on the past rather than the future. Auditing should be used sparingly.***

a. If you support auditor assurance on other information outside the financial statements as an alternative, provide an explanation as to why.

***Answer: N/A.***

b. On what information should the auditor provide assurance (e.g., MD&A, earnings releases, non-GAAP information, or other matters)? Provide an explanation as to why.

***Answer: N/A.***

c. What level of assurance would be most appropriate for the auditor to provide on information outside the financial statements?

***Answer: Read it. Discuss it with management if it contradicts information in the audited financial statements to assure the financial statements are not misleading. Resolve issues with audit committee and report the issues in the audit report to shareholders if they are not resolved to auditor satisfaction. These procedures are already required.***

d. If the auditor were to provide assurance on a portion or portions of the MD&A, what portion or portions would be most appropriate and why?

***Answer: N/A.***

e. Would auditor reporting on a portion or portions of the MD&A affect the nature of MD&A disclosures? If so, how?

***Answer: No, not if the auditor is doing the job they are supposed to be doing in auditing the basic financial statements.***

f. Are the requirements in the Board's attestation standard, AT sec. 701, sufficient to provide the appropriate level of auditor assurance on other information outside the financial statements? If not, what other requirements should be considered?

***Answer: Yes, if it is to be done at all. In most cases, it is not necessary.***

g. If you do not support auditor assurance on other information outside the financial statements, provide an explanation as to why.

***Answer: A requirement that the auditor give formal opinions on peripheral information is a step toward further compromising auditor independence, making auditors part of management as primary providers of information. Management has a right, responsibility and fiduciary requirement to communicate with investors. Management representations in that communication are part of the evidence upon which auditors should base their conclusions about financial statements, and to a large degree evidence by which investors' should judge management. Results of following this proposal would be expensive. It would have negative value to investors by filtering managements' views through the eyes of the auditor. Investors have a right and need to know what management believes untainted by auditor authorization.***

20. What are the potential benefits and shortcomings of implementing auditor assurance on other information outside the financial statements?

    ***Answer: There is no benefit***.

    ***To find any benefit to this proposal, one must necessarily conclude that management cannot be trusted. Further, one must conclude that investors would be protected from management misinformation by having the external auditor review, correct and adjust the information to something closer to the truth. There is no study that supports such a conclusion, to my knowledge. The cost of audits would grow exponentially trying to accomplish this unsupported goal, and auditor independence would be further compromised by making it the auditors' information.***

    ***Consider, for example, would anyone benefit by having the audit partner sit on the stage at a shareholder meeting, nodding "yes" or "no" to statements by the CEO and CFO? Would it be helpful to have the audit partner deliver an "Auditor Response" in periodic investor conference calls, agreeing or disagreeing with management? These preposterous "over the top" examples are similar to what is being suggested.***

21. The concept release presents suggestions on how to clarify the auditor's report in the following areas:

    • Reasonable assurance

    • Auditor's responsibility for fraud

    • Auditor's responsibility for financial statement disclosures

    • Management's responsibility for the preparation of the financial statements

    • Auditor's responsibility for information outside the financial statements

    • Auditor independence

a. Do you believe some or all of these clarifications are appropriate? If so, explain which of these clarifications is appropriate? How should the auditor's report be clarified?

   ***Answer: No. The terms "reasonable assurance" and "independence" are good, time tested use of the words. Any attempt to clarify them produces more restrictive meaning than their common usage. Auditors may want to restrict implications of common usage for liability purposes, but that would be a disservice to investors, not an aid.***

   ***The other terms listed in the question are all preceded with the word "responsibility," by the auditor in three cases and management in another. There is abundant written material in the standards and case law about what they mean for both auditor and management. Trying to***

***further define the terms in the audit report for investors would result in narrowing responsibility, working to the benefit of auditors, not investors.***

***I respect The Center for Audit Quality but challenge its example of a new report that would supplement the efficient language of the current audit report by adding language like "…the 'total mix" of information presented in the consolidated financial statements, taken as a whole…" and "…audit evidence we obtain is often persuasive rather than conclusive…" Will the investor be even marginally enlightened to better understand "materiality" and "evidence" with these additions?***

***The auditor report is clear now and should not be changed.***

b. Would these potential clarifications serve to enhance the auditor's report and help readers understand the auditor's report and the auditor's responsibilities? Provide an explanation as to why or why not.

***Answer: The problems we have experienced are not because investors misunderstood a clear, simple audit report. The problems are because financial statements were wrong. The value of auditors' reports is diminished, not enhanced, with any attempt to clarify common terms.***

c. What other clarifications or improvements to the auditor's reporting model can be made to better communicate the nature of an audit and the auditor's responsibilities?

***Answer: As noted earlier, the identification of the issuing office of a national or international accounting firm is not necessary or helpful.***

***Consider, however, requiring disclosure of significant limitations in the auditor's contract. The contracts frequently define permitted legal avenues for the company to resolve disputes, e.g. no jury trials or that cases involving the auditor can only be prosecuted under the statutes of a state chosen by the auditor. Disclosure perhaps should include restrictions against holding non issuing network firms responsible for their portion of work by exempting the network firms from liability to third parties. As in the example report offered by the Center for Audit Quality, such restrictions usually are presented positively, e.g. "…the U.S. firm assumes full responsibility…," when the clear meaning may be that non U. S. firms cannot be held responsible even if they do the majority of the work, because only the U.S. firm signs the contract and the report. Occasionally, that disclosure is on the auditor website, unread by all who should know.***

***Consider if investors should be told of significant contractual restrictions agreed to by the company. If so, should the disclosures be relegated to the proxy statement, a separate 10-K item or some other remote location apart from the firm's report on the company financial statements? Is the website of the auditor OK?***

d. What are the implications to the scope of the audit, or the auditor's responsibilities, resulting from the foregoing clarifications?

***Answer: Clarifications of this type narrow the meaning of the words, reducing the auditor responsibility. Audit work may be reduced because audit risk becomes less. It does not serve investor interests to reduce the responsibility for auditors by narrowing the meaning of "reasonable assurance," "fairly stated" and "independent." It is reasonable for auditors to make their own judgments of risk they are willing to assume; but it is unreasonable to redefine words that otherwise broadly protect investors. If they have documented their reasoning, auditors are well down the road to convincing others of its reasonableness.***

22. What are the potential benefits and shortcomings of providing clarifications of the language in the standard auditor's report?

    ***Answer: Further clarification will dampen the creativity that auditors use to create audit plans for various scenarios that could be wrong with financial statements. Such creativity is best developed by auditors in the field who know the people, business model and controls of their clients.***

23. This concept release presents several alternatives intended to improve auditor communication to the users of financial statements through the auditor's reporting model. Which alternative is most appropriate and why?

    ***Answer: The alternatives of requiring an AD&A and emphasis paragraphs, clarifying language in the standard report and adding to the information required to be audited are all available to auditors and registrants without any action by the PCAOB. If an audit firm unilaterally decided to use the alternatives, the PCAOB would probably object to the alternative of clarifying language as too restrictive. The other three alternatives are not commonly done now for some good reason, if one believes in market driven answers: i.e. the three either do not add value or the cost is too great to justify any benefit that could be derived. Any proposal to require them in all instances, however, begins to sound like a marketing plan by accounting firms to get more work with the help of regulators.***

    ***Who believes that the Enron problem would not have happened if any or all of the alternatives had been done? Does anyone think that the backdating of stock options would not have occurred, but for lack of these alternatives? The same questions should be asked for the failure to discuss the impact of derivatives, repurchase agreements, bad loans and poorly securitized investments? All of these bad things occurred and continue to occur because management and the auditor did not do the things they are required to do under existing law, regulations and professional standards, using already existing tools.***

    ***None of these alternatives is necessary.***

24. Would a combination of the alternatives, or certain elements of the alternatives, be more effective in improving auditor communication than any one of the alternatives alone? What are those combinations of alternatives or elements?

***Answer: No.***

25. What alternatives not mentioned in this concept release should the Board consider?

***Answer: There are several.***

***Communication is far better if auditor independence is paramount and there is sufficient risk to the auditor for not communicating.***

***Anything the PCAOB can do to reinforce upon auditors their independence from company management, and the auditor's responsibility to investors, would be the first alternative. Consider how that can be done:***

> ***Should the check to pay the auditor come from a bank account maintained for the audit committee, and be signed by a member of the audit committee?***
>
> ***Should the audit fee be charged to shareholder equity, similar to a dividend, rather than be charged to operating expense, reinforcing who the customer of the auditor really is?***
>
> ***Should the audit team share all memoranda on discussions with key management with the audit committee?***

***Auditor independence is still hampered by the lack of appropriate financial commitment by audit partners in their own business. Audit partners at major firms have little capital at risk relative to the income they make and take each year from the limited liability entities in which they operate. They are driven far too much by the desire to generate cash income rather than by protecting their accumulated net worth and that of other partners in their firm. That situation did not exist until the late 1990's and it has had a very significant negative effect on audit quality. It is far too easy to "escape" from serious financial and ethical responsibility. Structuring for risk protection has been taken to the extreme by the major audit firms.***

***Auditor independence is weakened when audit firms expand their practices to include non audit, advocacy services. Any audit firm that offers lobbying services for political solutions for any industry or company or litigation support services, regardless of the merits of the issue, takes sides, compromising someone's interest. "Independence from" and "advocacy for" are concepts having significantly different approaches and they don't mix together. But, that's what the audit industry tries to do. The information developed in the U. S. Treasury Advisory Committee proceedings show the major audit firms are not primarily audit firms, but consulting firms.***

***These types of rationalization of true independence are dangerous and continue to plague this industry.***

***Finally, a deliberate focused effort should be made by the PCAOB to see if there is any possibility that communication to investors can be enhanced by reducing auditor work and words. The initiative in this concept release is totally directed at increasing communication by adding work for auditors and words to their reports. Maybe we are down the road too far trying to have auditors answer all perceived needs rather than focusing on real needs, diluting rather than improving effectiveness.***

26. Each of the alternatives presented might require the development of an auditor reporting framework and criteria. What recommendations should the Board consider in developing such auditor reporting framework and related criteria for each of the alternatives?

    ***Answer: This question assumes that an alternative or a combination of alternatives will be adopted. Today, the biggest shortfall in reporting and communication is lack of discipline following existing requirements. The best alternative is to eliminate the lack of and inconsistent application of discipline.***

27. Would financial statement users perceive any of these alternatives as providing a qualified or piecemeal opinion? If so, what steps could the Board take to mitigate the risk of this perception?

    ***Answer: This question implies there is something wrong with an auditor communication that has a qualification or is restricted to some particular fact. Qualified and piecemeal opinions can be good communication, better than communications that overstate reality. The question highlights concerns about the direction of this concept statement.***

28. Do any of the alternatives better convey to the users of the financial statements the auditor's role in the performance of an audit? Why or why not? Are there other recommendations that could better convey this role?

    ***Answer: No. The alternatives are well intended, but they attempt to over define and over report what ultimately is best left flexible and efficient. The result will be less assurance at greater cost. There are better answers including stronger enforcement of what is already required, coupled with enhanced auditor independence.***

29. What effect would the various alternatives have on audit quality? What is the basis for your view?

    ***Answer: The effect would not be good. Any of the alternatives would misdirect energy from foundational weaknesses that should be fixed. Cost would increase because hours required to do the alternatives increase. The alternatives would narrow the responsibility of auditors giving them more argument to deny responsibility where they should be responsible. The alternatives detract from necessary communication between management and investors by inserting a third party, the auditor, as a filter between the two who most need to communicate.***

***The basis for my views is thirty-five years as an auditor in a large firm including managing an office; teaching auditing at a major university; serving as an EVP and CFO at a public company; serving on two public boards; serving as chair of audit committee for two public entities; working to advise a state agency charged with auditing every agency, county, township and municipality in the state; and serving on a Special Litigation Committee for a closely held international private entity having disputes among shareholders. I experienced the personal loss and fallout of the death of Arthur Andersen after my retirement, a life changing and instructive development. These experiences cause focus on why bad things happen and what could be done better.***

30. Should changes to the auditor's reporting model considered by the Board apply equally to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others? What would be the effects of applying the alternatives discussed in the concept release to the audit reports for such entities? If audit reports related to certain entities should be excluded from one or more of the alternatives, please explain the basis for such an exclusion.

***Answer: If done at all, these changes should apply to all public entities. But, I do not support the proposed changes because they will have negative impacts on what the PCAOB is trying to achieve for investors.***

31. This concept release describes certain considerations related to changing the auditor's report, such as effects on audit effort, effects on the auditor's relationships, effects on audit committee governance, liability considerations, and confidentiality.

a. Are any of these considerations more important than others? If so, which ones and why?

***Answer: The largest effect will be on audit effort, liability and governance. Effort will increase, driving up costs to shareholders. Liability to auditors will be defined down by narrowing responsibility for auditor creativity and thoughtfulness. Governance will shift relatively from management to auditor. And, the impact to investors will be negative.***

b. If changes to the auditor's reporting model increased cost, do you believe the benefits of such changes justify the potential cost? Why or why not?

***Answer: The proposals will increase cost. Suggested benefits to investors will, in fact, be losses in terms of financial cost, without adding value to the business model of the company. Auditors' messages will be diluted.***

c. Are there any other considerations related to changing the auditor's report that this concept release has not addressed? If so, what are these considerations?

***Answer: Yes. The missing considerations are the fundamental structural changes that need to be made in the audit industry to enhance independence and what could be done to simplify meaningful auditor reporting with less work and fewer words, not more.***

d. What requirements and other measures could the PCAOB or others put into place to address the potential effects of these considerations?

***Answer: The considerations propose changes to the report of auditors. More regulatory required words from the auditor do not accomplish desirable objectives. The real objective for auditors is simple: make sure company financial statements are correct, as defined. This objective is best accomplished by insisting the auditor be completely independent and sufficiently exposed to risk of loss for not doing a good job.***

***Audit firms are private entities, generally partnerships with structurally limited risk confined to small pots of capital within geographic boundaries, seeking to privately settle all disputes using structured settlements from future earnings to ease partner pain. If the pain is too great, some form of liquidation of the small pots of capital follows. Audits continue under another banner. As presently structured, individual auditors are driven to generate revenue for the firm to be distributed currently.***

***We are running far too close to the edge with only four uninsured, undercapitalized organizations auditing nearly all public companies. This situation requires heavy external quality control, with clear, current reporting about audit failures and auditor financial information. The U. S. Treasury Advisory Committee on the Audit Profession had much good testimony on these weaknesses, but little was done with some of the key recommendations. The inevitable result is only clouded by questions of "when?" and "what will follow?"***

***We should try to answer those questions by eliminating them as a concern.***

32. The concept release discusses the potential effects that providing additional information in the auditor's report could have on relationships among the auditor, management, and the audit committee. If the auditor were to include in the auditor's report information regarding the company's financial statements, what potential effects could that have on the interaction among the auditor, management, and the audit committee?

***Answer: Confusion, redundancy and unhelpful tension would result. The proposal is a regulatory insult to management and audit committees, favoring the integrity of poorly capitalized, uninsured audit firms and showing universal disrespect to the ability of company governance to properly deal with communication between and among owners and management. That disrespect is sometimes deserved, but recent history and human nature suggest similar shortcomings at audit firms, law firms and investment banker advisors who have been involved. At great cost, the proposals in the concept release would shift responsibility from those directly responsible to investors, to those indirectly responsible to investors, not a good move for investors.***

**Via website submission: comments@pcaobus.org**
**RE: PCAOB Rulemaking Docket Matter No. 34 – *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards***

To whom it may concern:

Our bank appreciates the opportunity to comment on the proposed revisions to the PCAOB Standards related to reports on Audited Financial Statements and Related Amendments to PCAOB Standard.

ViewPoint Bank is a community savings bank that is wholly-owned by ViewPoint Financial Group, Inc. We are based in Plano, Texas and have approximately $3.0 billion in assets and over $419 million in public float. We currently operate 25 community bank offices and 12 loan production offices.

We disagree that the proposed changes to the auditor's report will provide additional information that will be useful to investors, and in fact will only increase the cost of audits to community banks without any beneficial value. Our primary concerns are outlined below:

**Cost Benefit**

We disagree that the value derived from expanding auditor procedures to include an AD&A or to provide auditor assurance on other information outside the financial statements will exceed the massive costs that would be required to perform the procedures. Such approaches will only lead to more user confusion between the different reports issued by the auditors and management and will likely increase the already-existing "expectation gap" of what audit assurance actually provides to the investor. For example, discussion of audit "close calls" may actually cause the financial statement user to question the quality of the audit work (why the auditor "caved in" on this issue) and why the amounts actually recorded should be relied upon. The focus of the audited financial statements should not be on the auditor, but on the related reporting entity.

We agree with the outreach participants that a movement away from using standardized language in the auditor's report could also require additional audit effort, such as the auditor's time and effort in preparing and reviewing the report, which would result in an increase in cost as a result of the increase in the scope of the auditor's responsibilities, requirements, and procedures.

**Usefulness of additional disclosure**

We believe that this information from the auditor, at best, will only confirm what is already disclosed in footnotes to the financial statements or the MD&A. Over time, investors may become frustrated with the auditors' language, which is likely to be carefully-crafted and self-protecting. This could eventually render most of the additional reporting as irrelevant. At worst, such reporting, especially since it relates to highly judgmental areas, could result in unwarranted uncertainty among users. Additionally, just as bank audited financial statements often include scores of pages of footnote disclosures, the emphasis paragraphs could also turn the auditor report into one of similar length, thereby diluting the emphasis objective.

We believe the PCAOB should consider ***solely*** how the auditor report can be revised to add limited **clarifying** language at minimal cost to respond to the concerns identified with the pass/fail model currently used.

Thank you for considering our comments.

Sincerely,

Patti McKee

Re: PCAOB Rulemaking Docket Matter No. 34: *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards*

Dear Office of the Secretary:

On behalf of the Accounting & Auditing Advisory Committee of the Virginia Society of CPAs (VSCPA), we have reviewed the *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (the Concept Release). The VSCPA is Virginia's leading professional association dedicated to enhancing the success of all CPAs and their profession by communicating information and vision, promoting professionalism, and advocating members' interests. The VSCPA membership consists of more than 10,000 individuals who actively work in public accounting, private industry, government agencies and educational institutions. We appreciate the opportunity to respond to this Concept Release.

While we believe that changes in auditor reporting may be beneficial as a means to narrow the expectations gap and to improve the communicative value of auditor reporting, we believe that some of the changes discussed in the Concept Release downplay the role of management and the content for which management should have the sole responsibility to report. We believe that management should be required to consider the results of the audit and the content of the two-way dialogue between the auditor and those charged with governance in preparing and/or emphasizing financial statement disclosures and management's discussion and analysis.

Recommended changes to the Report on Audited Financial Statements

Based on the PCAOB's research efforts, we agree that changes to the auditor's report could enhance the users' understanding of the nature of the procedures performed and results of the audit. Therefore, we recommend the PCAOB consider the following changes to the report on audited financial statements:

- Reconsider the current positioning of information within the standard auditor's report to ensure that it places appropriate emphasis on key information.
- Provide additional information about the meaning of standard auditing terminology such as reasonable assurance and materiality.
- Include clarifying information that the auditor's responsibility to detect fraud is limited by materiality considerations under the auditing standards.
- Provide additional **general** information about the audit process such as the risk assessment process, consideration of internal controls over financial reporting and the level of assurance provided by the auditor but not at the company-specific level of detail included in the Concept Release.
- Require a statement about the auditor's responsibilities concerning financial statement disclosures and other information in documents containing audited financial statements.

p (804) 270-5344
f (804) 273-1741
vscpa@vscpa.com
www.vscpa.com

We do not believe it is appropriate to provide information to the extent included in the auditor's discussion and analysis illustration provided in the Concept Release. We believe the level of detail suggested in the Concept Release will add confusion to the reporting model rather than provide clarification to the financial statement users. We believe users of the financial statements will lack the necessary context to understand and utilize any description by the auditor regarding detailed audit procedures and results. Further, we believe confidentiality issues are a concern if information is to be provided at the level of detail shown in the proposed illustration.

Use of Emphasis Paragraphs

The Concept Release suggests mandating the use of emphasis paragraphs in all audit reports and further expanding the emphasis paragraph to highlight the most significant matters in the financial statements and to identify where these matters are disclosed in the financial statements. We believe that the PCAOB should consider developing additional guidance to auditors mandating further use of emphasis of matter paragraphs that reference management's footnote disclosures. Also, we have concerns about the proposal to provide descriptions of the related audit procedures within the auditor's report due to the lack of context and relative impossibility of summarizing the complexity of the audit processes into a short paragraph that would be meaningful to the users of the financial statements.

Again, the VSCPA appreciates the opportunity to respond to this Concept Release. Please direct any questions or concerns to VSCPA Government Affairs Director Emily Walker at ewalker@vscpa.com or 804-612-9428.

Re: PCAOB Concept Release - Docket Matter No. 34

Ladies and Gentlemen:

As an accounting student at the University of Illinois at Urbana-Champaign, and as a hopeful future member of the auditing profession, I feel that it is my duty to express an opinion towards this concept.

I feel that all four proposed changes are valuable additions to the audit report and as a result financial statement users will feel more comfortable about the validity of the information provided. It is my assumption that auditors will not be in favor of this concept release for several reasons, but the PCAOB should be more concerned with what investors and users of financial statements want versus what the auditors want. Each of the four proposed changes will require auditors to provide their insights into the firm's inter-workings and firms will have to allow their auditors to reveal more information as compared to the current audit report format.

I feel that the PCAOB should allow publicly traded companies to choose which auditing report it wants to use. This will create a way for publicly traded companies to signal to its stakeholders that it has nothing to hide, by allowing the auditors to give a more in depth analysis. Publicly traded companies that are engaged in illegal and unethical activities will most likely decide to take cover behind the current and simple auditor's report. The article by DeFond & Lennox in the *Journal of Accounting and Economics* shows that when the Sarbanes-Oxley Act passed it placed greater regulations on auditing firms, and as a result several auditing firms left the market. The auditing firms that exited had a lower audit quality compared to those firms that remained in the market. I feel that allowing publicly traded companies the option of choosing which auditor's report to use will have the same effect. Again, publicly traded companies that are aware they are not representing all of their information fairly will most likely decide to use the current auditor's report, because it won't allow auditors to state any discrepancies they feel the publicly traded company has.

Thank you for the opportunity to comment on the Concept Release.

Sincerely yours,

Tomasz Walkosz

**Comment on PCAOB Concept Release dated June 21, 2011, PCAOB Release No. 2011-003,**

**PCAOB Rulemaking Docket Matter No. 34**

Stephen A. Zeff, Rice University

July 11, 2011

I will confine my comment to Question 2.

I have already argued in my article, "The Primacy of 'Present Fairly' in the Auditor's Report," *Accounting Perspectives*, Vol. 6, no. 1, (2007), that "present fairly" should be decoupled from "in conformity with U.S. generally accepted accounting principles." It should be the responsibility of the auditor to give a professional opinion on whether the financial statements "present fairly," without making that judgment contingent on the contents of 17,000 pages of rule-laden GAAP. Today's standard opinion is little more than an affirmation that the financial statements are in conformity with GAAP, because the quality of "present fairly" is not defined other than by reference to GAAP.

Between 1946 and 1962, Arthur Andersen & Co. gave the following decoupled opinions: the financial statements present fairly…and were prepared in accordance with generally accepted accounting opinions. See my article, "Arthur Andersen & Co. and the Two-Part Opinion in the Auditor's Report: 1946-1962," *Contemporary Accounting Research*, Spring 1992. Andersen believed that it was the professional responsibility of the auditor to give its opinion on "present fairly" without taking refuge in the rules of GAAP. Judge Henry J. Friendly, writing for the Second Court of Appeals in *U.S. v. Simon*, 425 F.2d 796 (1969), known as the Continental Vending case, ruled that the conformity of financial statements with GAAP does not necessarily mean that they present fairly. Friendly's ruling is still valid law today.

Rather than repeat my own views on this matter, I prefer to quote from Sir David Tweedie, the former Chairman (1990-2000) of the UK Accounting Standards Board and former Chairman (2000-2011) of the International Accounting Standards Board. From 1986 to 1988, he was Vice Chairman of the UK Auditing Practices Committee. In 1986, when he was the national research partner of KMG Thomson McLintock, he wrote as follows:

"The auditor's opinion in North America and in the United Kingdom in a given situation would probably be very similar. The North American position, however, appears to be more defensive and slightly more restrictive. 'Present fairly' can only be applied within the framework of generally accepted accounting principles which encompasses not only specific rules, practices and procedures relating to particular circumstances but also broad principles and conventions of general application. There appears to be less opportunity or incentive than in the UK and Ireland to use true professional judgment or to break with convention. …

"The British position makes clear, without ambiguity, the overriding importance of the true and fair view. The auditor is obliged to look not simply at the *rules* but at the *facts*. In the United Kingdom we do not relate the true and fair view to accounting standards or directly to the detailed provisions of the law.

The true and fair view is deemed to be a corpus of practices which are constantly changing and which are derived from sources similar to those of American GAAP. While the North Americans suggest that the auditor should look at substance over form, in the United Kingdom this should be rendered almost unnecessary by the fact that the true and fair view demands that the reality of a company's interaction with the economic environment is fairly portrayed in its financial statements." David Tweedie, "An International View," Chapter 5 in *APC – The First Ten Years* (London: Auditing Practices Committee of CCAB Limited, 1986), p. 57.

Tweedie's comparison between the auditor's affirmation in the UK and that in the United States is hardly flattering to the latter. It seems to me that the time has come to change the auditor's required affirmation from "present fairly" in accordance with the myriad rules of GAAP to "present fairly" standing by itself. It would be most unfortunate if the PCAOB were to ignore this challenge during its review of the auditor's reporting model.

Re: PCAOB Rulemaking Docket Matter No. 034

Dear Board Members:

The Audit Committee of the Acuity Brands Board of Directors agrees with the views and concerns expressed by management in the attached letter on PCAOB Release No. 2013-005 dated August 13, 2013 ("the Proposal") which addresses two new proposed auditing standards, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*. We understand that the objective of the new auditing standards is to make the auditor's report more informative, and, as a result, more relevant and useful to investors and other financial statement users. However, we believe that certain aspects of the Proposal will not achieve this objective and will result in increased audit time and expense without proportionate benefit.

The audit committee is responsible for the oversight of the preparation of the financial statements and the performance of the auditors. Our committee, as I am sure is true of others, takes these responsibilities very seriously. As such, we examine the significant accounting policies, the critical accounting estimates, and the critical audit matters in some detail with management as the quarterly and annual financial statements are being finalized and we discuss each of these with the independent auditors on a regular basis. As such, the Proposal seems to disregard the importance we place on these reviews by requiring the auditors to disclose information they have no responsibility in preparing and does not give any attention to the review by the company's management or its audit committee.

Likewise, including the tenure of the audit firm in The Basic Elements of the Auditor's Report seems counterproductive for the reasons stated by management. This committee annually evaluates the performance of the audit firm before making the recommendation about reappointment. The Proposal seems to ignore this important step by suggesting that tenure will alert some outside stakeholder that time is more important in evaluating the performance of the audit firm than the responsibilities regularly performed by audit committees and the full board of directors.

We appreciate the opportunity to respond to the proposed auditing standards. We are available to discuss any questions or concerns raised by this response.

Sincerely,

Robert F. McCullough

Re: PCAOB Rulemaking Docket Matter No. 034

Dear Board Members:

We are writing to provide our views on PCAOB Release No. 2013-005 dated August 13, 2013 ("the Proposal") which addresses two new proposed auditing standards, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*. We understand that the objective of the new auditing standards is to make the auditor's report more informative, and, as a result, more relevant and useful to investors and other financial statement users. However, we believe that certain aspects of the Proposal will not achieve this objective and will result in increased audit time and expense without proportionate benefit. Please see below for additional information regarding our concerns related to the proposed auditing standards.

**Proposed Auditor Reporting Standard**

***Auditor Reporting of Critical Audit Matters***

The Proposal would require auditors to communicate critical audit matters ("CAMs") — defined as matters involving the most difficult, subjective, or complex auditor judgments, including areas that posed the most difficulty to the auditor in obtaining audit evidence and/or forming an opinion on the financial statements—in the auditor's report. We oppose the disclosure of CAMs in the auditor's report for the following reasons: (i) disclosure of CAMs would require auditors to potentially describe matters which are the responsibility of management to include in the financial statements and may potentially reference original information for which there are no current disclosure requirements (e.g. significant deficiencies or misstatements identified during the course of the audit), (ii) existing disclosures and review processes are sufficient to support the auditor's opinion, (iii) inconsistencies between required current disclosures and disclosures stipulated in the Proposal could result in financial statement user confusion, and (iv) additional auditor time and expense will be required to prepare the CAMs disclosure without proportional additional benefit.

We believe strongly that our financial statements and related disclosures are the sole responsibility of management, including the current disclosure requirements related to critical accounting estimates and significant accounting policies. The expansion of auditor reports to include CAMs would require the auditor to provide additional information regarding the financial reporting of the company related to specific audit areas, and potentially require the disclosure of matters affecting a company's financial reporting for which no current disclosure requirements exist. However, we believe that it is our role as management to provide all disclosure regarding the financial reporting of the company. Many respondents to the Concept Release on this same topic dated June 21, 2011 addressed the concern that the auditors should not be the original source of information about the company's financial statements. In addition, providing information regarding specific CAMs in the auditor's opinion may imply that audit opinions are rendered on specific areas rather than on the financial statements as a whole.

In compliance with existing auditing standards related to required communications with audit committees, our critical accounting estimates, significant accounting policies, and significant audit areas are evaluated by the audit committee of our board of directors. We believe current financial statement disclosures are adequate because these disclosures already provide robust information about our accounting policies and areas that require management to rely on significant estimates and judgment. These critical accounting areas are evaluated by management, the audit committee of our board of directors, and our auditors. As a result, we believe the disclosure of CAMs would not be useful to investors given the robustness of disclosures required today.

We are also concerned that the time and effort spent on completing these disclosures will result in additional and unnecessary work for management, the audit committee of the board of directors, and our auditors. Drafting and reviewing the CAMs disclosure will divert attention from completing final reviews in an already tight filing timeframe. As noted above, we believe the current process of review of significant audit areas with the audit committee of our board of directors is sufficient.

***Basic Elements of the Auditor's Report***

We support the following matters in this section of the Proposal:

- Addition of a statement regarding the auditor's independence;
- Addition of wording to clarify that a material misstatement means whether due to error or fraud.

We do not support the addition of auditor tenure as we believe there is no negative correlation between an audit firm's tenure and the quality of the audit performed, making the disclosure irrelevant to the financial statement users.

Regarding the addition of wording about the auditor's responsibilities concerning other information, we support the addition of this language to enhance the financial statement user's understanding of the obligations of the auditor; however, we believe the language in Appendix 5 of the Proposal expands the auditor's current responsibility which we will address in the next section. We believe this wording should be a disclaimer and more strongly state that the audit scope and procedures did not include the other information.

**Reporting on Other Information**

We do not support the requirement for the auditor to "read and evaluate" (rather than "read and consider") other information in certain documents, such as selected financial data, management discussion & analysis, and proxy information incorporated by reference. We believe that the shift from "consider" to "evaluate" would require the auditor to perform additional procedures in evaluating the other information based on relevant audit evidence obtained and conclusions reached during the audit. As a result, we believe that substantial additional hours will be added to the audit engagement to evaluate the other information resulting in higher expense to the company without a significant enhancement to the assurance provided today.

In conclusion, we appreciate the opportunity to respond to the proposed auditing standards. We are available to discuss any questions or concerns raised by this response.

Sincerely,

Richard K Reece

**And Related Amendments to PCAOB Standards**

Dear Board:

Thank you for providing the Aerospace Industries Association ("AIA") an opportunity to share our views on your proposed auditing standards – *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion, The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report, and the Related Amendments to PCAOB Standards* (together the "Proposed Standards"), issued by the Public Company Accounting Oversight Board (the "Board") on August 13, 2013. AIA is the premier aerospace industry trade association, representing over 350 of the nation's major manufacturers of commercial, military and business products such as aircraft, helicopters, aircraft engines, missiles, spacecraft, and related components and equipment. Many of the AIA member companies are suppliers to the U.S. Government. AIA previously commented on the *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* ("Concept Release") issued by the Board on June 21, 2011.

As previously stated in our September 27, 2011 letter on the Concept Release, we are supportive of the Board's efforts to address the financial reporting concerns of investors and other users of financial statements. However, we continue to believe that improvements to financial reporting can best be achieved through clarifying changes to the audit report by the PCAOB coupled with targeted standard-setting by the Financial Accounting Standards Board ("FASB") or Securities and Exchange Commission ("SEC"). We believe investors and other financial statement users would benefit most from changes to the audit report that clarify the purpose of an audit, the responsibilities of management, and the responsibilities of the auditor. Further, it would be helpful for the audit report to clarify the auditor's existing responsibility with respect to financial information presented outside the financial statements and the applicable PCAOB standards governing their responsibility.

In the following paragraphs, we provide additional feedback on the Proposed Standards.

We believe that the form of the auditor's report should be limited to providing an opinion about whether the financial statements (inclusive of the related notes) present fairly, in all material respects, the financial condition, results of operations, and cash flows of reporting companies in conformity with the applicable financial reporting framework (i.e. pass/fail model).

We believe that the investor concerns cited in the Proposed Standards cannot be adequately addressed in the auditor's report. Rather, these concerns are best addressed by encouraging investors and other users of financial information to read the financial statements in their entirety including Management's Discussion and Analysis ("MD&A") in the 10-Qs and 10-Ks to obtain a complete understanding of the financial health of a company and key risks that could have an adverse impact on financial results. If information contained in the financial statements and MD&A is not useful or is difficult to understand, targeted standard setting should be considered to promote greater transparency and aid in investors' understanding of financial information.

We believe that any Proposed Standards must preserve management's ultimate responsibility for the quality of its financial information and the balance of responsibilities between management and the audit committee for reviewing and certifying the accuracy of that information. Audit committees play a critical role in providing independent review and oversight over a company's financial reporting system and its independent auditors. We firmly believe that management should be the original source of financial information about a company. Both the Management of a company and the audit committee have a very deep knowledge and understanding of its industry, business strategy, and risk factors and their impact on current and future financial results. While an auditor learns a lot about a company's accounting policies and procedures through an audit, their focus is appropriately limited to whether the financial statements are presented in conformity with prescribed accounting rules rather than identifying and classifying the broader business risks (e.g. supply chain, environmental, operational, etc.) that can impact financial results. Any proposal to expand the auditors' role must take care not to dilute or otherwise deemphasize this core responsibility of auditor firms, and it is our view that such a dramatic expansion of the auditor's report risks doing just that.

For many of these same reasons, we oppose the proposed requirement to add a discussion of Critical Audit Matters ("CAM") to the auditor's report. While we acknowledge that the CAM proposal is an improvement over the Auditor's Discussion and Analysis model presented in the Concept Release, we have significant concerns about the operability of the proposal and whether CAM will be useful to investors. Those concerns are as follows:

- We believe drafting of the CAM and documenting why other items weren't included in the CAM could take a significant amount of the auditor's and management's time at a critical point in the process. Furthermore, it could lengthen the timetable between when a company closes its books and files its financial statements with the SEC, increasing audit costs and delaying the release of much anticipated financial information. We believe the additional time and cost required to comply with the proposal would be of little or no benefit to investors.

- We believe discussion of the company's financial information by the auditor could lead to an increase in confusion for the investor by suggesting that the auditor is providing something other than an unqualified audit opinion. We believe that the issuance of an unqualified audit opinion should remain a statement to the investor that all material matters related to the audit have been resolved to the mutual satisfaction of management, the audit committee, and the auditor. We do not believe that discussion about the "most difficult" areas of an audit is relevant if all issues have been resolved to the auditor's satisfaction such that an unqualified opinion is issued. Furthermore, we feel that additional information presented by the auditor may lead to confusion as to which party is responsible for financial information and introduce additional risk for the company and audit firm.

- The definition of CAM is highly subjective and open to interpretation and the inclusion of CAM in an auditor's report may send mixed messages to investors and other users of financial statements. Different accounting firms will likely adopt different practices with respect to matters requiring disclosure as a CAM. Furthermore investors may perceive that an audit report containing no CAM suggests the company being audited has better controls, more transparent disclosures and/or less aggressive accounting positions than a company whose audit report contains multiple CAM. It could also suggest to investors that the accounting firm reporting fewer CAM is not conducting a rigorous audit. We believe that required disclosure of some number of "uncertainties" encountered during an audit – whether or not they are material – could ultimately undermine investors' confidence in financial reporting.

- We have a fundamental issue with a rule that would require the auditor to disclose certain information about a company (e.g. existence of significant deficiencies) that the company isn't required to disclose outside of the audit committee. As previously stated, we believe management should be the original source of all financial information about a company and the auditor's responsibility should be limited to ensuring that financial information is presented fairly and is materially correct.

- We believe that inclusion of CAM in the auditor's report will be, in most cases, duplicative of information already included in the financial statements and MD&A. For example, many companies disclose critical accounting estimates in MD&A based on the enhanced requirements included in a 2002 proposed SEC rule. We believe there is a sufficient amount of detail in those disclosures to let users know that these are highly judgmental areas that are sensitive to changes given certain assumptions. A user of financial statements should be able to infer from the identification of these items that the auditor will spend additional time testing the estimates and discussing assumptions and application of accounting rules with management, the audit committee and potentially the audit quality reviewer. As a result, it is unclear what incremental beneficial information the CAM would provide. Given that the SEC proposal on disclosure about the application of critical accounting policies (SEC Release No. 33-8098) was never issued, investors could benefit from targeted standard setting that would result in the issuance of a final rule applicable to all registrants.

- We believe that linkage of CAM to audit committee communications will potentially impede communications that currently take place between the auditor and the audit committee. We believe that this dialogue is a critical element of the communication process and that without it written words could be taken out of context and used incorrectly in making investment decisions. Furthermore, the knowledge that even discussing an audit matter could result in required audit report disclosure may result in accounting firms becoming more selective about the items they discuss with the audit committee. In Addition, audit committees and/or company officers may be reluctant, to raise concerns or even ask clarifying questions about audit or accounting issues. We believe that the auditor's views should be shared with the audit committee through the existing communication process and that it is ultimately up to management to ensure that disclosures are transparent and fair. Furthermore, we question the impact to the ongoing role of the audit committee if CAM is included in the auditor's report. We believe it could ultimately reduce the dynamic of open dialogue that is critical to effective governance and convert audit committee meetings into formulaic, compliance-driven "check-the-box" sessions.

- As noted above, we believe the CAM identified by the auditor for inclusion in the auditor's report is subjective in nature making it open to unnecessary, but inevitable, challenge by the PCAOB during the inspection process. We are concerned that companies could be required to re-file their financial statements due to a restatement of the audit report, which again will result in additional effort and cost to companies and the auditors, not to mention confusion and uncertainty among investors.

- Requiring disclosure of "challenging" audit matters would also expose companies to increased risk of frivolous lawsuits. Even in cases where generally accepted accounting principles were followed to the letter and any "challenging" issues were resolved to the auditors' satisfaction, the plaintiffs' bar will surely attempt to use any CAM disclosures as de facto admissions of uncertainty or even error in court proceedings. These proceedings, even if they result in no direct liability to the company or its auditors, resulting in increased legal fees to companies, higher audit fees, and investor confusion.

As noted earlier in this letter and in our September 27, 2011 letter on the Concept Release, we would support changes to the audit report that would clarify the auditor's existing responsibility with respect to financial information presented outside the financial statements (e.g., AU sec. 550) and provide reference to PCAOB audit standards or other summary documents that provide additional information about public company audits and auditors (e.g., Center for Audit Quality's published "*In-Depth Guide to Public Company Auditing: The Financial Statement Audit*"). We believe the proposal that the auditor "review and evaluate" other information outside the financial statements and the introduction of new audit procedures is problematic and a step change from what the auditor is responsible for under the current "read and consider" standard, without a demonstrated need for a change.

We are not supportive of these changes for the following reasons:

- We are concerned that the additional costs incurred by the auditor and company to comply with the proposal on other information would far outweigh any benefit received by investors and place an enormous amount of pressure on meeting already tight reporting deadlines. We believe the additional time required for the auditor to perform specific procedures will delay public filings and keep much anticipated financial information from reaching investors and other users of financial statements in a timely manner. It is also unclear as to the operability and cost of the rules as they relate to the proxy, which is typically filed after the 10-K. We are also concerned that this proposal could make the auditor and the company more vulnerable in the event of any future litigation and potentially result in increased audit and legal fees.

- We believe a change from "read and consider" to "read and evaluate" along with the introduction of specific procedures for the auditor to perform would be confusing to investors, perhaps indicating a change in auditor responsibility for other information. Frankly, we believe that this change would be misconstrued to indicate a higher level of assurance is being provided on other information, be it financial or non-financial. We believe that this could result in negative consequences for investors, auditors and registrants.

- We believe the proposals are duplicative of a company's disclosure review policies and procedures. Disclosures are already subject to multiple verification procedures, including CEO/CFO certifications, disclosure committee procedures, formal disclosure controls (subject to

SEC regulation), independent compensation committee certifications, and oversight by independent board committees. We do not understand how auditor review procedures would improve this process and, in fact, are concerned that an overreliance on the auditor could result in a less diligent internal review process.

- We believe the Proposed Standards may have an unexpected impact on the securities law liability rules. In particular, it is not clear whether the proposed "read and evaluate" requirements would expose auditors to additional liability for misstatement and omissions in non-financial disclosures, nor is it clear how new requirements might impact the ability of companies and auditors to rely on the SEC's safe harbor rules applicable to forward-looking information.

- We believe that the extension of auditor responsibility to non-financial information and information incorporated by reference (i.e. proxy) will add additional administrative burden and cost and result in little or no benefit to the investor. We are also concerned that a broadening of auditor focus to information outside their area of expertise or outdated information incorporated by reference could compromise the quality of their audit and reporting on financial information in the financial statements.

- We believe that the proposed expansion of the auditor's scope would be very difficult to implement and confusing for investors and other users. Many areas outside the financial statements are more subjective and less prescriptive than financial statements and as such pose additional challenges for auditors. We question how an auditor will evaluate forward looking information included in MD&A. For example if a company includes earnings guidance in its MD&A will investors be comforted that the auditor has "evaluated" that guidance for material misstatement of fact? Will the auditor be challenged by regulators or users of financial statements if the guidance ultimately proves unreliable? If the auditor has to consent to the reissuance of its report how will it update its commentary on CAM and areas outside of the financial statements?

With respect to auditor tenure, we oppose the proposed requirement to add a statement in the audit report regarding the year the auditor began serving consecutively as a company's auditor. Although the Board indicates that investors and other financial statement users have indicated strong interest in this information, we do not believe the information is relevant or useful in the auditor's report for the following reasons:

- We are not aware of any data indicating a correlation between audit tenure and audit quality, and believe the inclusion of this information in the audit report implies such a correlation exists. Without any context for a user regarding the relevance of this information, each user is left to determine what impact the auditor's tenure has on the conclusions reached by the auditor and expressed in their report. For some, this may simply result in confusion (i.e., they might simply pass over the information since they don't understand why it is being disclosed); however, for others, they may conclude one company's financial statements are more accurate than another's because of differences in audit quality based on one firm's tenure versus another's. In the former case, we don't believe tenure should be included in the report since confusion is certainly not an intended outcome, and in the latter case we don't believe tenure should be in the auditor's report because it could call into question the comparative quality of every audit performed by implying there are higher or lower quality audits performed by firms with different tenures. With mandatory lead and concurring partner rotations as well as the stringent internal quality mechanisms of the firms and external regulation by the PCAOB, we believe the quality of each audit should stand on its own merits regardless of the period of time one firm has been engaged consecutively with a company.

- We recognize that in some circumstances investors may have an interest in understanding the tenure of an audit firm (i.e., at a shareholder's meeting when voting on the engagement of an audit firm). In that circumstance, it would be more relevant in our view to include audit tenure information in a company's proxy statement or some other set of materials that are outside the audit report. Including such information in the audit report shifts a debate over auditor appointment decisions to a debate of the quality of the underlying audit. In our view, provided that an auditor has been engaged according to proper procedures and with adequate oversight, the audit report should be allowed to stand on its own.

With respect to auditor independence, we don't object to inclusion in the auditor's report of a statement stating that the auditor is independent but question the necessity given that the title of the report – "Report of Independent Registered Public Accounting Firm" – indicates that the auditor is independent.

Regarding the other proposed changes; we are supportive of reference to "the related notes" in the introduction paragraph, and clarifying that the financial statements are free of material misstatement, "whether due to error or fraud".

In summary, we are supportive of the Board's efforts to introduce enhancements to the audit reporting model that would meet the needs of investors and be practical for manag*ement, audit committees an*d audit firms to adopt in a cost-effective manner. We believe that the focus should not be on providing more information to investors but rather on providing a higher quality of information to investors. We believe that better information can be provided through a combination of the PCAOB clarifying changes to the audit report coupled with targeted standard-setting by the Financial Accounting Standards Board ("FASB") or Securities and Exchange Commission ("SEC").

We appreciate the opportunity to present our views on this subject and welcome the opportunity to meet in person to review them with you. Thank you for your attention and consideration.

Best regards,

Terrence R Marcinko

**PCAOB Rulemaking Docket Matter No. 34**
**PCAOB Release No. 2013-005 *Proposed Auditing Standards***

Dear Secretary:

We appreciate the opportunity to submit our comments to the Public Company Accounting Oversight Board on the above-noted proposed standards. We support the PCAOB's goal of promoting informative, accurate, and independent audit reports.

Agrium is a global producer and distributor of agricultural nutrients, generating over $15 billion in revenue annually. Listed on the Toronto and New York stock exchanges with a market capitalization of approximately $US13 billion, we employ over 14,500 people globally.

In this letter, we provide comments on certain of the PCAOB's proposals. We have based our comments on our concepts of the purpose and deliverables of the audit reporting model. These concepts are that: a) auditor's reports should be transparent as to the nature of assurance, b) management, and not auditors, are the source for financial reporting information; and c) auditors should provide assurance only on financial statements, as prepared by management. In applying these concepts in evaluating the PCAOB's proposals, we are concerned that the proposals would be confusing to readers of financial reports and auditor's reports. Readers could misinterpret the source, meaning, and significance of the proposed information. We are also concerned that some of the proposals duplicate information already required in financial reporting. Finally, we believe that the proposals will increase the cost of the audit without providing benefits, and without supporting the PCAOB's goals.

We provide below answers to selected questions from Appendix 5 and 6 of the release.

*Appendix 5*

*5. The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.*

*a) Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?*

We accept the belief, as expressed by members of the Board of Directors of the PCAOB, that there is no demonstrated correlation between audit tenure and audit quality. Accordingly, we do not believe that audit tenure is useful to investors and other financial statement users. We agree with the possible misconception expressed in the release by the PCAOB that audit tenure could unduly be perceived as affecting auditor independence. Accordingly we are strongly against the inclusion of this information.

Further, we meet with shareholders, potential investors and other stakeholders on a regular basis and we have not noted that the subject of auditor tenure is important to them. Investors that consider this information necessary to forming judgments about the relationship between an auditor and financial statement preparer can determine tenure on their own account through available public information.

*b) Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?*

We expect that companies with corporate histories that include mergers and acquisitions will face challenges in determining and reporting this information. Audit firms also have histories of mergers, which could complicate determination and presentation of this information.

*c) Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?*

We do not believe that this information provides any additional useful information to financial statement users. Further, we believe that information such as auditor tenure could distract the attention of readers of the auditor's report from the substance of the report.

*11. What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?*

Potential unintended consequences with communication of critical audit matters are:

*Investor confusion*

IFRS and U.S. GAAP currently require disclosure of critical accounting judgments and estimates in financial reporting. We believe that investors will be confused by further discussion of critical matters in the auditor's report.

Our regular interactions with our shareholders, financial statement analysts, creditors and other financial statement users have led us to believe that investors review the auditor's report to confirm that the financial statements have received a clean audit opinion. Investors may draw unwarranted inferences on the quality of the content of the financial statements from the inclusion of critical audit matters in the auditor's report.

*Impact on the relationship of financial statement preparers with auditors*

We believe that some preparers could become less forthcoming in discussing subjective or complex matters with auditors in an attempt to avoid disclosure of critical audit matters. This would impair existing relationships between auditors and their clients. Resulting impacts could be an increase in the amount of time necessary to complete the audit, and a decrease in materiality levels. Both of these impacts would increase audit costs.

*Auditor pressure*

To provide an impression of audit quality, auditors may perceive an obligation to report critical audit matters, regardless of audit complexity. Because the language in the standard defining critical audit matters is vague, i.e. matters which "involved the most difficult, subjective, or complex auditor judgments," we believe excessive latitude for interpretation of the standard exists. Accordingly, otherwise routine audit matters might be reported unnecessarily as critical audit matters.

*Potential for litigation*

We believe that the risk of litigation arising from inclusion of critical audit matters in the auditor's report could cause tension between auditors, management and the audit committee. We do not expect benefits would justify this risk.

*Appendix 6*

*2. Is it appropriate to apply the proposed other information standard to information incorporated by reference? Why or why not? Are there additional costs or practical issues with including information incorporated by reference in the scope of the proposed other information standard? If so, what are they?*

We do not believe it is appropriate to apply the proposed other information standard to information incorporated by reference. We expect significant unintended consequences with this proposal, outlined below:

*Role of the auditor*

In requiring that auditors opine on information other than the financial statements, the proposals introduce confusion as to the role of the auditor. Auditors currently audit financial statements; investors may assume that audit-level assurance applies unduly to the other information.

*Additional costs*

Requiring an auditor to expand their audit report to evaluate and comment on other information will add substantially to audit costs.

In conclusion, although we support the Board's goal to provide more useful information in the auditor's report and make the audit and auditor's report more relevant to investors, we feel the proposed amendments have significant unintended consequences which could have the opposite effect. We urge the PCAOB to consider our comments. We are encouraged by the news of a potential roundtable in early 2014 to address concerns of both auditors and preparers of financial statements.

Sincerely,

Stephen Dyer

Re: PCAOB Rulemaking Docket Matter No. 034

Dear Sir or Madam:

We appreciate the opportunity to comment on the proposed changes to audit standards in PCAOB Release No. 2013-005. AK Steel is a $6 billion producer of flat-rolled carbon, stainless and electrical steels, primarily for automotive, infrastructure and manufacturing, construction and electrical power generation and distribution markets.

We do not believe the proposal to disclose critical audit matters is appropriate. In our opinion, readers may misconstrue a listing of critical audit matters to represent a summary of the only important issues affecting the financial statements and, as such, may focus on those issues to the detriment of other important disclosures that may not be deemed to be a critical audit matter. The auditor's report should not become a summary of critical accounting issues in lieu of a thorough analysis of the financial statements and other disclosures. In addition, we believe a reader may conclude that the critical audit matters represent an opinion on a part of the financial statements at a higher level than the financial statements taken as a whole (e.g., "The financial statements have been audited, but [critical audit matter] has really been audited thoroughly and is 100% right.").

Further, the identification of critical audit matters will be subject to a great degree of judgment and the conclusion of what is and isn't a critical audit matter could differ greatly between different auditors and different companies. We are concerned that disclosure of critical audit matters might expose auditors and registrants to liability for not disclosing something as critical even though the auditors may have properly identified and audited the issue.

We believe that drafting the disclosures of the critical audit matters would also be overly time consuming and would introduce the potential for greater tension in the relationship between auditor and management and increase audit costs, outweighing any potential utility of the disclosure. In part, this may be caused by the need to disclose the considerations that led the auditor to determine that the matter is a critical audit matter. Because the auditor has greater access to privileged information than the general public, the considerations that the auditor relied on to determine a critical audit matter may include information that has not been publicly disclosed, either due to immateriality or sensitivity. For example, the existence of a significant control deficiency may increase the criticality of an audit matter in the eyes of the auditor, but that same fact is not required to be disclosed by management because it does not rise to the level of a material weakness. Thus, disclosure of critical audit matters may exceed the level of disclosures required by existing SEC requirements and U. S. generally accepted accounting principles. Attempts by the auditor and management to synchronize these disclosures will likely result in much greater time-intensive discussion and additional drafting of footnotes, audit report and other disclosures, as well as audit costs, without rendering significant benefit to the reader. Traditionally, the auditor's report has largely been standardized and generally consistent amongst audit firms. This proposal would raise the stakes of how critical matters are disclosed to the public and, as a result, management will be very concerned with how those messages are worded and whether they are consistent with how they are disclosed in other areas of the annual report. This would significantly change the process by which the auditor's report was drafted, reviewed and approved, with much greater management involvement in drafting the auditor's report. We believe a clear distinction of responsibility should be maintained—management's responsibility for preparation of the primary financial statements and related disclosures and the auditor's responsibility for testing management's financial statements and disclosures. The disclosure of critical audit matters would certainly blur that division of responsibilities due to disclosure of risk factors and other company-specific matters outside of the financial statements and notes.

If the Board proceeds with requiring a disclosure of critical audit matters, we believe that the requirement to refer to the relevant financial statement accounts and disclosures that relate to the critical audit matter may necessitate a reference to disclosures outside the audited financial statements and notes, such as reference to management's discussion and analysis or the critical accounting estimates section in the Form 10-K. The Board should consider how reference to disclosures that may not be included in the audited financial statements would affect the ability of the auditor to identify and describe critical audit matters in the auditor's report.

We note that the proposal suggests the communication of critical audit matters could help to alleviate the information asymmetry that exists between company management and investors. We believe that information asymmetry is not an issue between management and investors, but rather, an issue as to whether all investors are on equal footing. Management will *always* have more information than an investor because of their role. We believe that if a reduction of information asymmetry is desired, it is a financial reporting issue to be addressed by the FASB and the SEC, not through disclosures in the auditor's report.

We agree with your proposed additional standard language on registration with the PCAOB and the requirement for the auditor to be independent. We believe that the emphasis on the auditor's independence is desirable and hope that this helps to clarify the relationship between the company and the auditor. We also believe that the proposal to disclose the auditor's tenure may be valuable to some investors who might believe that a long tenure reduces auditor independence. However, we don't believe that including the auditor's tenure in the auditor's report is appropriate. We believe that this disclosure in the auditor's report may lead to questions of the credibility of the auditor or their conclusion if presented in this context. Ultimately, the company's audit committee and auditor must determine whether or not the auditor is independent prior to the audit and the issuance of the auditor's report. We believe that tenure information would be more appropriately disclosed in the proxy statement, where a discussion of tenure and fees can be placed in the proper context of addressing independence as part of the discussion of engagement/re-engagement of the auditor.

We believe the proposal would not make clearer the auditor's role in reviewing other information in annual reports filed with the SEC containing the financial statements and the related auditor's report. We believe that the "conclusion" proposed by the PCAOB would be misunderstood by the reader to represent a greater level of involvement by the auditor with that other information than intended. Also, we believe the incorporation by reference of the proxy statement and other items would leave the auditor in a strange position of having written a "blank check" for reporting on their involvement with other information that may not even have been drafted before the issuance of the auditor's report and that will be incorporated in the annual report in the future.

If you have any questions, please feel free to contact Roger K. Newport (513.425.5270 or roger.newport@aksteel.com) or Gregory A. Hoffbauer (513.425.2099 or greg.hoffbauer@aksteel.com).

Sincerely,

Roger K. Newport

Re: PCAOB Rulemaking Docket Matter No. 034 – *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses and Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB standards*

To Whom It May Concern:

The American Bankers Association (ABA[1]) appreciates the opportunity to comment on *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB standards (Proposed Standard*). Bankers are preparers of financial statements that are critical in the efficient functioning of the capital markets and overall economy. Bankers are also significant users of audited financial statements, as credit analysts must rely on the integrity of audited financial statements in their evaluation of overall credit risk. From a banker's perspective, there are two major aspects of the Proposed Standard: First, if approved, the Proposed Standard will change the auditor's reporting model by requiring the auditor to communicate in the auditor's report "critical audit matters" that were addressed during the audit of the current period's financial statements. Second, the Proposed Standard will add new elements to the auditor's report related to responsibility for, and evaluation of, other information in annual reports containing the audited financial statements and the related auditor's report. For all intents and purposes, this other information is included throughout a company's Form 10-K.

**Discussion of Critical Audit Matters (CAMs) Must be Reconsidered**

It is noted within the discussion related to the Proposed Standard that many investors have requested improvements in the relevance of the auditor's report and that communicating CAMs likely would provide meaningful information about the auditor's work in performing the audit. Examples of CAM in the document include the use of new financial models, a company's competitive position, the illiquid nature of relevant securities markets, and a company's internal control deficiencies. We believe providing such information as part of the auditor's report could

[1] The American Bankers Association represents banks of all sizes and charters and is the voice for the nation's $14 trillion banking industry and its two million employees.

be misconstrued as reporting on problem areas that were not resolved to the auditor's satisfaction. Moreover, CAM documents maintained in auditor work papers currently serve largely as guidance for the audit engagement partner and the related reviewing partners to ensure that they are aware of the important audit risks. ABA believes the annual report should focus on the company and not on the difficulties individual auditors have in performing the audit. With this in mind, we believe these matters do not belong in the auditor's report[2] and are concerned that implementing the Proposed Standard will introduce unintended consequences.

The objective of a registrant's annual report on Form 10-K is to assist the investor in assessing the amount, timing, and uncertainty of future cash flows of the company by providing a comprehensive overview of the company's financial condition. We acknowledge that the quality of that assessment may depend upon whether a company's internal controls are sufficient. However, even if we assume the disclosures within the Proposed Standard work as intended, with the exception of centralizing the internal control information to help investors make the assessment, we see no incremental value for the investor from requiring additional CAM information. This is because, within the annual report, this information already exists. Currently, investors receive and evaluate this information through review of a company's critical accounting policies and significant estimates (located within the audited financial statements), as well as the company's business and operating trends and financial and operating risks, and the company's assessment and the auditor's attestation of internal controls over financial reporting in accordance with the Sarbanes-Oxley Act (included elsewhere in the Form 10-K). With that in mind, however, connecting the dots can be challengingfor investors, considering the hundreds of pages of disclosures and discussion within a typical bank's annual report. Therefore, as an alternative to the proposed auditor discussion of CAMs, we recommend that an index of relevant information (such as the information referred to above) be provided by the registrant within the annual report.

We also note that a "control deficiency less severe than a material weakness" will be a common issue among CAMs. This challenges the current definition of a significant deficiency in internal control, in which there is less than a reasonable possibility that a material misstatement of the company's financial statements will not be prevented or detected on a timely basis[3]. We believe such an internal control deficiency – one that does not lead to a reasonable possibility of a material misstatement – is irrelevant to the investor's assessment regarding the reliability of the financial statements. Such a disclosure puts into question the auditor's opinion related to the overall financial statements and also, since significant deficiencies in internal controls are not necessarily disclosed in annual reports, changes the relationship the auditor and management

---

[2] Because of the nature of issues proposed to be addressed within CAMs, we believe a discussion of CAMs within an auditor's report may necessitate additional footnote disclosures within the audited financial statements – disclosures that now exist within Management's Discussion and Analysis.

.

[3] We assume that such control deficiencies that are less than material weaknesses will not qualify as significant deficiencies, as anything less than a significant deficiency would not merit attention by a company's audit committee. We, therefore recommend that, if the Proposed Standard is approved, any final guidance specifically refer to "significant deficiencies in internal control" to avoid any confusion as to its meaning.

have with investors. We believe that management should continue to be the contact point with investors related to relevant internal control issues within the annual report, rather than the auditor. The Proposed Standard appears to breach that relationship in this circumstance.

We believe these consequences are not intended by the PCAOB. We believe the PCAOB would agree with ABA that the registrant should be the focus of the annual report and that management (via the audit committee) is responsible for internal control oversight, based on information from auditors. Therefore, in order to address investor concerns about the risk of material misstatement, as we propose above, a new index of internal control-related information should enhance an investor's ability to assess the reliability of the financial statement assertions.

**Auditor Procedures Related to Other Financial Information Must be Field Tested**

A large expectation gap may currently exist with auditor procedures over other information included in a company's annual report that is outside the information included within the audited financial statements, and we support the PCAOB's efforts to examine the issue. However, we are concerned that, given the large amount of unaudited financial information found throughout an annual report which may be sourced from databases that have not been subjected to testing under Sarbanes Oxley, a greater expectation gap may be created as a result of the Proposed Standard.

Non-GAAP information, as well as subjective, forward-looking financial information may be perceived to be subject to auditor examination, when, in reality, there has only been a review for consistency with other information in the audited financial statements. Because of the Proposed Standard, we believe auditors will feel pressured to expand their review procedures, unnecessarily resulting in greater costs for auditors and preparers. We fear that an index may further be necessary to separate what has been subject to audit, what has been "evaluated" for consistency with audited information, and what is not objectively verifiable, even for consistency. Such a table would be voluminous, difficult to maintain, and, over time, provide very little incremental value to investors.

With this in mind, prior to approving a final standard, we recommend field testing be performed to determine how auditing firms will apply the guidance to publicly-held banking institutions of all sizes. While we understand that certain PCAOB staff members believe that auditor procedures related to most large banks will not increase as a result of the Proposed Standard, we are not as comfortable with that view and believe that a new standard will increase audit fees for all financial institutions. We urge the PCAOB to carefully weigh these costs and any unintended consequences identified in the field testing against the benefits the PCAOB believes investors will obtain.

Thank you for your attention to these matters and for considering our views. Please feel free to contact me (mgullette@aba.com; 202-663-4986) if you would like to discuss our views.

Sincerely,

Michael L. Gullette

Re: PCAOB Release No. 2013-005 Rulemaking Docket Matter No. 034 (Auditor's Report and Responsibility)

Dear Ms. Brown:

The American Council of Life Insurers (ACLI)[1] appreciates the opportunity to comment on the PCAOB proposals for two new audit standards, *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion* and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report.*

We support the intention of the auditor report proposal to improve the informative value of the auditor's report and to promote the usefulness and relevance of the audit and the related auditor's report.  To that end, we support the following recommended changes to the auditor's report:

- Including a statement on the independence requirements of the auditor in accordance with U.S. federal securities laws and the rules and regulations of the PCAOB,
- Clarifying language that the financial statements "and related notes" are free of material misstatement "whether due to error or fraud," and
- Providing description of responsibilities relating to other financial information accompanying the audited financial statements.

---

We do not, however, support the proposed requirement for the disclosure of critical audit matters, or CAMs, in the auditor's report. We believe that the audit report should maintain a simple, brief pass/fail approach that limits mention of items to "emphasis of a matter" in unqualified audit reports on financial statements and material weaknesses on internal controls over financial reporting. Expanding the auditor's report to include CAMs would duplicate management's disclosures on critical accounting estimates and risk factors, introduce unnecessary ambiguity to the auditor's opinion, potentially undermine the purpose of the audit committee, and increase the time and cost to develop audit reports. We are concerned about these increased costs to preparers for procedures that are duplicative to management's disclosures that already exist. Significant additional time will be incurred by audit firms, in consultation with their national professional practice offices, deliberating CAM wording, which will either detract from the time spent to perform audit procedures or result in significantly more hours and higher audit fees.

The CAMs illustrated in the proposal, included disclosure/reporting matters not promulgated by existing accounting or internal control guidance, such as:

- A control deficiency less severe than a material weakness.
- Identification of several misstatements that were corrected by the Company.

If these items were included in the auditor's CAMs, the auditor would be reporting on matters not currently required in reports to investors. There should not be information on accounting matters presented in the audit report that is not in the financial statements and there should not be information on control matters presented in the auditor's report that is not in management's report on internal control. We are also concerned that financial statement users would inappropriately view the auditor's report as a series of piece-meal opinions, which may lead to interpreting each matter as a qualification with respect to the identified critical audit matter. Furthermore, the identification of CAMs in the auditor's report could potentially be misleading to financial statement users by implying, in most cases inappropriately, that no other audit procedures were critical to the formation of their overall opinion on the financial statements. If a need for more disclosure of judgmental matters affecting the financial statements exists, those areas should be addressed within management's reporting or maintained as part of confidential communication to the audit committee and not through the auditor's report.

Finally, before issuing a standard that requires the auditor to report on more than the fairness of the financial statements, taken as a whole, and internal controls over financial reporting, we strongly recommend that field testing is performed where audit firms draft CAMs, and then auditors, preparers and users evaluate the usefulness of the information.

Further, we do not support the requirement to expand the auditor's responsibility over "other information" beyond the level of assurance given today. We also do not believe it is appropriate for the auditor to evaluate non-financial information or information that does not accompany the audited financial statements. The auditor's current responsibility is to review other financial information for material inconsistencies or material misstatements. That review includes evaluating whether quantitative and qualitative information is consistent with amounts and disclosures presented within the financial statements and audit evidence gathered in support of the audit. We have no objection for the auditor's report to include a description of the auditor's responsibility to this effect; however, "read and evaluate" may be a higher level of assurance than the "read and consider" requirement today and would, therefore, result in significantly more hours and higher audit fees. We believe increasing the level of assurance that the auditor provides over other information from "consider" to "evaluate" would provide little benefit to the users and does not justify the increased cost. Therefore, we encourage the

Board to ensure that the auditors will not be required to increase their level of assurance over other information relative to today's standard.

We hope that you will carefully consider our input and welcome your feedback and questions.

Sincerely,

M Monahan

***Re: Rulemaking Docket Matter No. 034 - Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information***

Dear Ms. Brown:

On behalf of the American Federation of Labor and Congress of Industrial Organizations ("AFL-CIO"), I appreciate the opportunity to comment on the Public Company Accounting Oversight Board (the "PCAOB") proposed auditor reporting standards as set forth in PCAOB Release No. 2013-005 dated August 13, 2013. The AFL-CIO is the umbrella federation for U.S. labor unions, including 57 unions representing more than 12 million union members. Union-sponsored and Taft-Hartley pension plans hold more than $540 billion in assets. Union members also participate directly in the capital markets as individual investors and as participants in pension plans sponsored by corporate and public-sector employers.

The ability of investors to rely on accurate and reliably audited financial statements is fundamental to ensuring the integrity of the capital markets. We commend the PCAOB for taking steps to improve the audit process, including efforts to make the report by auditors to shareholders on company financial statements more meaningful. The auditor's report is the primary means through which auditors communicate with investors regarding the audit of a company's financial statements. However, auditors' reports that consist of boilerplate are of little value to investors.

We believe that the proposed standards should be further strengthened to provide investors with useful new information. It is noteworthy that even audit firms support the need for audit reports to provide more relevant information to investors. As Dennis Nally, Chairman of PricewaterhouseCoopers, has said: “It’s not difficult to imagine a world where the combination of single reporting standards (and) more cohesive global auditing standards…lead one to consider whether it is necessary to change the content of the auditor’s report to be more relevant to the capital markets and its various stakeholders.”[1]

To reiterate the AFL-CIO’s previous comments on the PCAOB’s concept release, we believe that four key changes need to be made to the audit report. The report should include a discussion of the auditor’s assessment of the estimates and judgments made by management in preparing the financial statements, and how the auditor arrived at the assessment; a discussion of areas of high financial statement and audit risk, and how the auditor addressed those risks; a discussion of unusual transactions, restatements and other significant changes in the financial statements; and a discussion of the quality, not just the acceptability of a company’s accounting practices and policies.

While the PCAOB’s proposed auditing standards will require auditors to report on what they have identified as “critical audit matters,” we believe that reporting needs to be strengthened to address the three other areas addressed by the AFL-CIO’s previous comments. Moreover, the proposed auditing standards endorse a subjective standard of critical audit matters, leaving it to the auditor to determine what they are, rather than using an objective assessment. And, although it would be expected that there would be critical audit matters in most audits, the auditors would be free not to report any, so long as their work papers document the reasons.

Financial statements have become increasingly complex and dependent on management’s estimates of subjective values. We believe that auditors should be required to disclose their assessment of significant judgments and estimates made by management. Some might argue that by doing so, auditors are taking on the role of management. However, when an auditor has substantial doubt about a company’s ability to continue as a going concern, the auditor is required to issue a modified report – and, in so doing, the auditor is providing new information to the market. So it is not inconsistent to require auditors to disclose their assessment of significant judgments and estimates made by management.

We continue to believe that the auditor’s report should also include a discussion of unusual transactions, restatements and other significant changes in the financial

[1] Written testimony of Dennis Nally, Chairman and Senior Partner, PricewaterhouseCoopers, LLP before the Federal Advisory Committee on the Auditing Profession, U.S. Department of the Treasury, Dec. 3, 2007.

statements. Investors would benefit from knowing more about accounting misstatements, including failures in internal controls that permitted the misstatement to occur, whether those weaknesses in internal controls had been fixed, and other changes that have occurred as a result. Investors should also be provided more information about unusual transactions such as those made toward the end of a quarter, or at fiscal year-end, in order to meet financial targets. Other unusual transactions that would fall under this category include tax-shelters and related party transactions.

The auditor's report should also discuss the quality, not just the acceptability, of the issuer's accounting practices and policies. For example, auditors should describe those instances in which a management's application of accounting principles, while acceptable under GAAP, was not the preferred practice. Differences in how companies apply GAAP can have a significant impact on their financial statements.

In addition, we believe that the auditor's report should indicate the auditor's responsibility for detecting material fraud. The auditor's report should clearly state that the auditor provides reasonable assurance that the financial statements are free of material misstatement, and indicate in the report that reasonable assurance indicates a high level of assurance.

Although there is some merit to the pass/fail nature of current audit reports, we would prefer that audit reports provide more gradations than simply unmodified and modified – particularly since the large majority of audit reports issued are unmodified. For example, auditors could evaluate the quality of the issuer's accounting policies and practices (including its estimates and judgments) by assigning one of four grades: conservative, above average, average and aggressive. There will not need to be a separate failing grade because such a grade would denote non-GAAP reporting and would require the auditor to issue a modified opinion.

Requiring audit firms to issue reports with such grades could serve to meaningfully differentiate between issuers in the quality of their accounting policies and practices. Such differentiation would be useful to investors in making investment decisions, and could represent an efficient means of communicating the auditor's overall judgment about the issuer's accounting quality. Moreover, expanding the audit report choice to four categories will reduce the risk that auditor reporting devolves into boilerplate language which would provide less information to investors.

The auditor's report should identify the role of any affiliated firms in conducting the audit. We believe this is important because investors currently have no information about the extent to which the audit was performed by a foreign affiliate of a U.S. auditing firm. Investors would also benefit from the development of an information clearinghouse that identified auditors attached to public company audit engagements worldwide, listing any sanctions, suspensions and litigation against them. Investors can already obtain this type of information about brokers and investment advisers.

We are pleased that the PCAOB is also moving toward requiring lead audit engagement partners' names to be disclosed in company annual reports, although we believe it lacks the weight of requiring the engagement partner to sign his or her name on the auditor's report in addition to the audit firm's name. We find the absence of the engagement partner's signature inexplicable given that CEOs and CFOs must personally certify company financial statements.

Investors deserve more information about company audits and the auditors whose job is vital to preventing material misstatement in the financial statements of public companies, whether caused by fraud or error. Thank you again for the opportunity to comment on the proposal. If you need any additional information, please contact me at brees@aflcio.org or (202) 637-5152.

Sincerely,

Brandon Rees

Re: Request for Public Comment: Proposed Rule on the Auditor's Report and Responsibilities, PCAOB Rulemaking Docket Matter No. 034

Dear Office of the Secretary:

We are pleased to have the opportunity to provide comments on the Proposed Rule on the Auditor's Report and Responsibilities ("Proposed Rule"). The comments contained below are based upon our collective experiences as senior leaders in various business, governmental, legal, and academic organizations, including our roles as audit committee chairpersons for the indicated American Funds. The American Funds are one of the oldest and largest mutual fund families in the nation, whose investment adviser is Capital Research and Management Company. The views expressed here are our own and do not reflect those of Capital Research and Management Company.

Summary

As members of the audit committees, we are dedicated to our role of overseeing the Funds' financial statements. In carrying out this role, we exercise due care in engaging a qualified auditor to perform appropriate audit procedures in order to report to shareholders on the fairness of those financial statements. As such, we are supportive of the PCAOB's efforts to examine the rules surrounding the responsibilities of an auditor with respect to other information contained in an audited report, as well as the auditor's report itself. However, we believe that the proposed modifications to the auditor's report, in particular the disclosure of critical audit matters, will ultimately result in boilerplate disclosure, adding little value, while not recognizing the careful, thorough review and discussion that audit committee members have with the auditors during committee meetings. Furthermore, we believe the substantial disclosures surrounding critical audit matters will distract financial statement users from the central purpose of the auditor's report, which is to provide an opinion on the financial statements. As discussed in more detail below, we do not support the changes proposed in the new auditing standard on the auditor's report.

Auditor's report and critical audit matters

Audit committees have oversight over (1) the investment company's accounting and financial reporting policies, (2) its internal controls over financial reporting, and (3) the financial statements themselves. In order to carry out these oversight responsibilities, committees appoint and review the work of the auditors, as well as engage in discussions with management and in certain cases, outside counsel and/or experts. During committee meetings, members receive detailed information via written and verbal presentations from management to gain an understanding of critical accounting policies. These presentations often lead to larger, more focused comprehensive discussions with management and other parties, such as the auditors or fund custodians. In addition, committee members also meet in executive session with the auditors in order to continue to discuss the relevant issues the auditors have encountered, as well as their assessment of management.

We believe that these discussions and presentations provide committee members with the critical understanding needed to assess the complicated and detailed issues that present themselves during an audit. The proposed requirement to describe these matters in a summary fashion in the auditor's report we believe does not recognize the level of complexity or detail needed to understand the full context and resolution of an audit issue. Furthermore, we believe it ignores the valuable work done by audit committee members on behalf of the shareholders of an issuer to oversee the financial statements and auditors. We do, however, support the PCAOB's stated goal to maintain the "pass/fail" model of the existing auditor's report without this additional disclosure in order to communicate on the fairness of the financial statements.

Moreover, we are concerned about the expectation, as stated in the Proposed Rule, that most auditors would determine that there are critical audit matters that require disclosure in the new auditor's report. This expectation may create what we believe would ultimately become boilerplate language in each issuer's audit opinion that would cover a number of generic audit concepts relating to the issuer's industry. These may not provide any additional context for the reader to better understand the financial statements or the business of the issuer, and may distract the user from determining that an auditor is providing an unqualified opinion on the fairness of the financial statements and related footnotes. This may be especially true in the case of an investment company, where detailed information regarding key accounting policies, such as fair valuation (as required by ASC 820) and taxes (required by ASC 740) is already disclosed in the footnotes to the financial statements, and where a detailed schedule of investments is provided. Moreover, a comprehensive set of risk factors for investing in a fund are contained both in the annual report and in the fund's prospectus (and summary prospectus), which are sent to each shareholder. Accordingly, we do not believe the proposed additional disclosures to the auditor's report are beneficial to shareholders, and indeed bring a risk of distracting or confusing readers and thus frustrating the original intent of the Proposed Rule.

Other disclosure proposals for the auditor's report

The Proposed Rule also includes new requirements for the auditor to provide statements in the auditor's report concerning its independence, tenure, and responsibilities concerning other information. With regard to independence and tenure, we understand how users may benefit from the proposed disclosures, but would suggest more study of the exact nature of information required to be shown. We believe that audit committees are best positioned to ensure the independence of its auditors, and that financial statement users rightly assume this standard is being met by the auditor issuing an opinion. Additionally, disclosure of the tenure of the independent auditor is an easily misunderstood data point, does not consider the mandatory rotation of an audit partner, and most importantly is not indicative of audit quality. Audit committees, with their continual discussions with and assessments of the auditor, are in the best position to assess the quality of the audit; proposing to distill that to brief statements on independence and tenure for financial statement users would risk misinterpretation of the auditor's work product. Pursuant to the comments above, we believe that the PCAOB should continue to study the benefits of these proposed disclosures compared to the unintended consequences that these disclosures will be erroneously interpreted as a proxy for audit quality.

With respect to enhancing the responsibilities of auditors for other information included in documents that contain audited financial statements and an auditor's report, we recommend additional research into the cost and benefits of this approach. Under the current auditing standards, we understand that auditors currently review this "other information" (such as that contained in the adviser's letter to shareholders on fund results) to ensure consistency with audited information. In some cases, this review will include additional performed procedures to ensure consistency. We believe that creating additional responsibilities and disclosure over this information will result in significant added testing and costs to shareholders, while providing minimal additional value over the current standards. For example, investment companies annually provide information regarding the approval of its investment advisory and service agreement in the shareholder report. Review of the board proceedings and the related information, which consists of hundreds of pages of explanatory and analytical information, to approve this contract may require extensive procedures on the part of the auditor, with little relevance to the fairness of the financial statements. As such, we encourage the PCAOB to continue to study the costs and benefits of the proposed enhancements with regards to responsibilities of an auditor to review "other information."

AGA American Gas Association

December 11, 2013

Office of the Secretary
File Reference: Docket Matter No. 034
PCAOB
1666 K Street, N.W.
Washington DC 20006-2803

**File Reference:** PCAO~~B Rulemaking Do~~cket Matter No. 034

Dear Ms. Brown:

The American Gas Association ("AGA") respectfully submits our comments on the Public Company Accounting Oversight Board's ("PCAOB" or "the Board") proposed audit standards included in Release No. 2013-005 addressing both *The auditor's report on an audit of the financial statements when the auditor expresses an unqualified opinion* (the "proposed auditor reporting standard") and; *The auditor's responsibilities regarding other information in certain documents containing audited financial statements and the related auditor's report* (the "proposed other information standard").

The American Gas Association, founded in 1918, represents 202 local energy companies that deliver clean natural gas throughout the United States. There are more than 70 million residential, commercial and industrial natural gas customers in the U.S., of which almost 93 percent – more than 65 million customers – receive their gas from AGA members. AGA is an advocate for natural gas utility companies and their customers and provides a broad range of programs and services for member natural gas pipelines, marketers, gatherers, international gas companies and industry associates. Today, natural gas meets almost one-fourth of the United States' energy needs.

**Overall concerns**

The AGA appreciates the PCAOB's efforts to enhance the information provided to investors and financial statements users. We agree that financial statement users should have access to timely, accurate, objective and relevant information for purposes of making investment decisions. However, we strongly disagree with the proposed auditor reporting standard and proposed other information standard included in PCAOB Release No. 2013-005. We believe a company's financial information and the communication of that information is management's responsibility. We believe the SEC and the FASB should continue to serve as the standard setters for establishing the requirements for information to be provided to investors, and that management should be the sole party responsible for communicating such information.

The SEC has enacted various regulations over time (including designation of FASB as the organization responsible for promulgating US GAAP) on *what* information needs to be disclosed. Importantly, these rules designate management as the responsible party to determine *how* to communicate this information to most accurately reflect a company's financial results and position. The role of the external auditor is to verify that the information presented by management complies with the applicable SEC / FASB requirements and is presented fairly in all material respects. The audit committee, comprised of a company's shareholder-elected Board of Directors, is charged with oversight of both the auditor and management's financial reporting.

The SEC and PCAOB provide additional oversight of management, the audit committee and external auditors by reviewing the financial statements and the audits thereof to ensure these parties are performing their duties appropriately. If management, the audit committee, and the external auditors fulfills their respective responsibilities to communicate timely, accurate, objective and relevant information to financial statement users that is audited in accordance with existing professional standards, we believe the additional communications and requirements outlined in the proposed auditor reporting standard and the proposed other information standard are unnecessary.

In addition to these overall concerns, we provide the following specific observations regarding each proposal.

**The proposed auditor reporting standard**

Of the various requirements proposed in the auditor reporting standard, we most strongly disagree with the requirement that the auditor disclose critical audit matters (CAMs) within the audit report. As such, we have limited our response on the auditor reporting standard to this matter. We believe the proposed standard would be detrimental to the usefulness and relevance of the audit report and would undermine the role of the audit committee. Further, we believe the proposed standard would result in lack of consistency and comparability of auditors' reports across companies while increasing the cost of regulatory compliance.

*The proposal would undermine the usefulness of the audit report and the role of the audit committee*

The auditor is expected to conduct an audit to obtain reasonable assurance that the financial statements are materially correct when taken *as a whole*. The auditor's report does not include, nor do we believe it would be appropriate or practical to include, all of the factors considered by an auditor when forming the overall audit conclusion. Therefore, without the full context of a company's financial transactions, business environment and internal controls obtained by the auditor throughout the audit process, an investor may inappropriately over-emphasize the importance of a CAM when making an investment decision. Likewise, highlighting CAMs in the audit report may lead investors to over-emphasize certain risks because they are disclosed as a CAM and under-emphasize other important business risks that may not meet the proposed CAM disclosure criteria. Additionally, disclosure by the auditor of the most difficult aspects of the audit may be interpreted by some as the auditor expressing reservations in their report on those transactions or accounts affected by a CAM, or as the auditor providing a "piecemeal" opinion on the financial statements which would undermine the usefulness, authority, and credibility of the audit report.

Currently the audit committee, as part of the shareholder-elected Board of Directors, has the authority to oversee the audit and ensure the financial statements contain appropriate disclosure on behalf of shareholders. Under current rules, the auditor already discusses difficult, judgmental, complex and other key aspects of the audit with the audit committee. With its access to auditors, management and the Board of Directors, the audit committee has the requisite knowledge, perspective and authority to ensure the various risks faced by the entity are disclosed in a manner commensurate to their materiality and relevance to investors. The Board's proposal would undermine this oversight role by requiring the auditor to effectively bypass the audit committee and disclose CAMs directly to shareholders in the audit report. We believe that the auditor's role should remain that of attesting on information prepared by management, and the Audit Committee should retain its function as providing primary oversight of the audit process.

*The proposal would undermine the relevance of the audit report/financial statement disclosures*

The matters that would be required to be disclosed as CAMs are already provided in the financial statements or are not relevant to investors in making investment decisions. The proposal states that CAMs are those matters addressed during the audit that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming the opinion on the financial statements. Many of those matters meeting the criteria above relate to subjective or complex accounting areas which are already disclosed within the financial statements as required by US GAAP or SEC rules. Examples include critical management judgments, risks and uncertainties, and accounting estimates and policies. Repeating these disclosures in the audit report would result in duplicative disclosure and would undermine the relevance of either the audit report or the financial statement disclosures. Further, if the auditor identifies a significant lack of internal control as part of the audit, the audit report on internal control already describes it as a material weakness. If any additional information or disclosure is deemed necessary, such disclosure should be addressed by the SEC and the FASB as part of the financial reporting standard setting process.

The proposed standard would also require that auditors disclose certain audit matters that we do not believe would be considered relevant to investors when making investment decisions. Examples include the level of audit effort applied to a particular account, immaterial or corrected misstatements, change in auditor risk assessment, and an auditor's use of a specialist. Such items may provide information on a business's accounting operations or an auditor's approach, but do not impact the underlying economics of the business and therefore may not be considered relevant by investors.

*Auditor reporting would no longer be comparable or consistent across entities*

Under the proposed standard, the auditor's determination of what is considered to be a CAM will involve a considerable amount of professional judgment and will decrease comparability of the auditor's report. There is a risk that auditors may take a conservative approach and include numerous CAMs in order to avoid potential PCAOB inspection findings or litigation, resulting in voluminous disclosure within the audit report and thereby obscuring the overall opinion. Further, investors may incorrectly interpret longer auditors' reports as an indicator of higher investment risk rather than as a matter of an auditor's professional judgment or reporting policy. There is also the risk that each audit firm's interpretation of what meets the definition of a CAM will differ, resulting in lack of comparability between audit reports for similar companies or industries. We therefore have concerns that the auditor's subjective determination of what is considered to be a CAM could be used erroneously as the basis for, or at least influence, differences in investor decisions among otherwise comparable entities.

*Potential implementation challenges and cost considerations*

The increased costs of compliance with the proposal will outweigh any perceived benefit. A significant amount of additional time will be required by audit firms in order to develop, review and present CAMs, which will result in increased audit fees. Extensive discussion and consultation with Company management, legal and the audit committee would also be required, resulting in increased internal costs. Further, because some CAMs may not be identified until late in the audit process as the audit is performed, this additional work will be required during an already busy period within the audit and financial reporting cycle which would impact the timing of SEC filings and, consequently, the ability of investors to obtain financial information in a timely manner.

While we do not support the inclusion of CAMs in the auditor's report, if the Board ultimately determines to implement the rule as proposed, we request that the effective date be delayed to allow companies and auditors to field test how the CAM provision would be applied in practice and provide an opportunity to mitigate the potential issues identified above.

**The Other Information Standard**

We support adding language to the auditor's report that will *clarify* the auditor's procedures and responsibility for other information contained in SEC filings (such as the MD&A). We do not support *expanding* the auditor's responsibilities regarding other information, or including language in the auditor's report that could be perceived as an expansion of the auditor's responsibilities. We believe the proposal would lead to higher costs with no commensurate benefit to investors. Further, we believe the proposal as written would result in several practice issues that would result in inconsistent application among audit firms.

Management should continue to prepare and present the other information contained in the annual reports of public companies, with over-sight from the Audit Committee, without the additional costs of such information being subject to additional procedures by the auditors. We support the retention of existing procedures contained in AU sec. 550, *Other Information in Documents Containing Audited Financial Statements,* which require auditors to "read and consider" other information to ensure the information is consistent with the audited financial statements. We believe AU 550 provides an appropriate level of assurance for the other information considering both the costs and benefits of such assurance.

We believe the "read and evaluate" language included in the proposed standard implies, and is likely to result in, a level of additional procedures that is substantively different from and greater than the requirements set forth in AU sec. 550. We do not agree with this change in the proposed language as it will have far reaching impacts on the procedures currently being applied to other information. We believe that, in carrying out their professional responsibilities, auditors presently are conducting a sufficient level of review commensurate with the nature and purpose of that information.

In our opinion, the use of the term "evaluate" will prompt auditors to expand their procedures substantively beyond the existing requirements in AU sec. 550 resulting in unnecessary procedures and increased costs. Similar to the timing of CAMs, the additional work over other information will be required during an already busy period within the audit and financial reporting cycle and would lengthen the timing of a company's SEC filings to the detriment of investors.

Alternatively, we recommend that the Board retain the existing procedures in AU sec. 550 but ensure that the language presented in the auditor's report clearly communicates what those existing procedures entail. If the Board believes further clarity is warranted to differentiate the level of assurance provided within the financial statements, we request the Board consider a more cost effective approach. For example, the Board could consider adding headers or other disclaimers on each page of the audited financial statements that indicate if the information is audited.

While we disagree with the proposal, we believe several practice issues that would need to be addressed within the standard if the Board determines to adopt the standard as proposed. These practice issues include determining what information would be subjected to the expanded procedures, what procedures to perform on forward-looking statements, and how an auditor should determine materiality of non-financial information.

**Conclusion**

We appreciate the opportunity to comment on the Board's proposals. As discussed above, we do not support the inclusion of CAMs in the auditor's report or expanded audit procedures on other information contained in the annual report. We urge the Board to reconsider the proposals. We believe that auditor reporting of CAMs would decrease the relevance of the audit report, the role of the audit committee, decrease audit report comparability and increase costs of compliance all to the detriment of investors. Further, we believe guidance currently contained in AU sec. 550

appropriately addresses the audit procedures to be performed over other information contained in the financial statements and the benefits arising from any further audit scrutiny would not justify the costs.

We would be pleased to discuss our comments in further detail and provide any additional information that you may find helpful in addressing these important issues.

Very truly yours,

Joseph L. Martin

**Subject: Comments on Release No. 2013-005; PCAOB Rulemaking Docket Matter No. 034**

Dear Sir,

Thank you for giving us the opportunity to comment on your Proposed Auditing Standards - *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and The Related Auditor's Report; and Related Amendments to PCAOB Standards.* I am a banker by profession and a retail investor on the side. I have been working in banking for a number of years, have a MBA degree in finance and consider myself quite proficient in terms of identifying and analyzing investments.

As I understand that the recent proposals are designed to retain the current "pass/fail" audit report model while increasing the informational value and relevance of the report. Auditors would be required to communicate “Critical Audit Matters” (CAM) as determined by the auditor. These would be defined to be those addressed during the current-period financial statements audit that (1) involved the most difficult, subjective or complex auditor judgments, (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence, or (3) posed the most difficulty in forming the opinion on the financial statements. Presumably these would entail items such as allowance for sales returns, valuation allowance for deferred tax assets, and fair value of fixed maturity securities held as investments that are not actively traded.

The auditor, in compiling the report, would need to identify the critical audit matter, describe the considerations that led the auditor to determine that the matter is critical, and refer to the relevant financial statement accounts and disclosures related to that matter, when applicable. If it is determined that there are no critical audit matters, the auditor would state that in the report. However, this subjective nature of CAM is something that I cannot support from the perspective of an experienced investor. The risk of including additional disclosures regarding critical audit matters in the audit report is that users of the financial statements may not have enough context to appropriately interpret them. It would most likely be vague as there is no set standard or criteria. It would be open to interpretation and might vary from one auditor to another. Due to this, investors could get confused and make wrong investment decisions. Also, this brings up the possibility of raising unnecessary red flags and driving away potential investors.

On another note, public disclosure of CAM might end up driving company strategy and eventually lead to fraudulent financial report or manipulating internal controls geared to meeting analyst expectations and favorable audit reviews. It could also cause tension between auditors and their clients, by the virtue of being more subjective. Interestingly this conflicts with another new aspect of reporting tenure of auditors. It is quite possible that firms will frequent change auditors until they find the ones giving them favorable reviews even overlooking CAM section. Due to the highly subjective interpretation of critical matters, the CAM section could also instigate legal battles between competitors or for fuel the fire to existing litigations that a company might have.

With respect to each Critical Audit Matter the auditor would be required to identify the matter, describe the considerations that led the auditor to determine that the matter is critical and refer to the relevant financial statement accounts and disclosures that relate to the critical audit matter. This required disclosure would fundamentally change the content of an auditor report and could have significant implications on the audit process and the auditor/management/audit committee relationship. Currently, an auditor's judgments and views are communicated solely to management and the audit committee and the company is responsible for communicating accounting judgments to shareholders through disclosure of its accounting policies in the notes to the financial statements (which is audited). The Disclosure Proposal significantly alters this paradigm by requiring the auditor to communicate directly to shareholders its judgments with respect to these matters.

The auditor's communication of critical audit matters would be based on information known to the auditor and procedures that the auditor already performed as part of the audit. Thus, the proposal does not modify the objective of the audit of a public company's financial statements or impose new audit performance requirements, other than the determination, communication and documentation of critical audit matters.

The proposed changes to the audit report would also add a requirement to include information in the report related to auditor tenure and independence. This is another item in the proposal that I disagree with, i.e requirement for an audit firm to disclose the year it began serving as a company's auditor. Personally I would express concern about including that information in the audit report because it has not been empirically proven that there is a correlation or relationship between audit quality and length of an audit firm's tenure.

Based on these factors, I am doubtful about the impact that disclosure of critical audit matters would have on the general investor community. On one hand it may provide additional clarity to professional investors and help them analyze more. But on the other hand, the subjective nature has the risk of driving away or confusing non-professional/retail investors.

Thanks & Best Regards,

--

Re: PCAOB Rulemaking Docket Matter No. 034

Dear Board Members,

Annaly Capital Management, Inc. (Annaly, the Company, we, our) welcomes the opportunity to provide comments to the Public Company Accounting Oversight Board (the Board) regarding the *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion,* and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements (PCAOB Release No. 2013-005, August 13, 2013, PCAOB Rulemaking Docket Matter No. 034)* (the Proposal)).

Annaly owns, manages, and finances a portfolio of real estate related investments and has elected to be taxed as a real estate investment trust (REIT) for federal income tax purposes. Annaly invests in residential mortgage-backed securities (RMBS) that are issued or guaranteed by a federally chartered corporation such as Fannie Mae or Freddie Mac, or an agency of the U.S. Government, such as Ginnie Mae as well as commercial real estate loans and commercial mortgage-backed securities. Our principal business objective is to generate net income for distribution to our shareholders from our investments.

While we appreciate the Board's efforts to improve audit quality and enhance the audit report, we do not support all aspects of the proposal as further discussed below.

**Critical Audit Matters (CAMs):**
We support the Board's decision to retain the current pass/fail model of auditor reporting however we have concerns about the Board's proposal to discuss Critical Audit Matters ("CAMs") in the audit report. Our financial reports filed with the SEC include disclosures about critical accounting policies, risk factors and significant estimates. Given that these disclosures already discuss the most judgmental, subjective and complex aspects of the financial statements, we believe the information

1211 Avenue of the Americas, Suite 2902 New York, NY 10036
T: 212-696-0100
www.annaly.com

in the auditor's report would be duplicative of information already provided by management. Given the increased risk as a result of not discussing a matter, we think the auditor will be motivated to include more rather than less CAMs in the audit report. We are also concerned that highlighting audit procedures around CAMs in the auditor's report may lead financial statement users to construe this as emphasis of a matter. Additionally, we are concerned that information that is not required to be disclosed in the financial statements will be included in the audit report. While the existing audit requirement to raise issues to the audit committee provides the opportunity for the auditor to discuss issues and provide context, we are concerned that disclosure in the audit report will present summarized information to the users without the same opportunity for discussion.

**Other Information:**

We are also concerned about the auditor's increased responsibility over other information outside of the financial statements and footnote disclosures. This information would include the Management Discussion and Analysis ("MD&A") section of the SEC filed financial reports. The MD&A section includes forward-looking information based upon management's analysis and insights into the business. Based on the highly-specialized, subjective, qualitative nature of this information, it may be extremely difficult for an auditor to objectively or adequately evaluate. We believe that the proposed change to "read and evaluate" from "read and consider" as to whether the other information in the financial statements is materially consistent with the audited financial statements, will result in a challenge for issuers to discuss the most relevant and useful information at the risk of this information being too difficult or costly for an auditor to evaluate. We further believe it will be unclear to users of financial statements the level of assurance provided by an "evaluation" of the MD&A or other information and therefore potentially subject both the preparers and auditors to increased liability risk. Additionally, we believe the increased level of assurance on the MD&A or other information blurs the line of responsibility between management and the auditor. We encourage the Board to retain the existing requirement to "read and consider" other information.

**Auditor Tenor:**

We don't believe that the disclosure of auditor tenor provides useful information as we don't think there is a direct correlation between audit tenor and audit quality, particularly given the mandate under Section 203 of the Sarbanes-Oxley Act which requires mandatory rotation of both the lead audit partner and the concurring partner after five years.

We appreciate your consideration of our comments. If you have any questions or require clarification, please contact Melanie Pinto at (646) 728-7673 or Jayne Stewart at (212) 696-0100.

Sincerely,

MPinto

Re: PCAOB Release # 2013-005 August 13, 2013
PCAOB Rulemaking Docket Matter # 034

Ladies and Gentlemen:

Anworth Mortgage Asset Corporation is pleased to submit its views in response to the PCAOB's most recent request for comments on the two recent proposals – *The Auditor's Report on an Audit of Financial Statements, and The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report.*

While we commend the PCAOB for the solicitation of comments to address these issues and in its goal of trying to improve the auditors' report, we believe that the required disclosures have the potential to create misunderstanding by the investors; blur the roles between the auditors, management, and the audit committee; would be costly to implement; and may impede effective corporate governance.

In requiring disclosure of critical audit matters, we believe that this may cause misunderstanding by investors. A significant item at a company such as revenue may not be mentioned because it is relatively straight forward and does not require significant judgment, while a less significant matter may be disclosed because it requires some judgment. Investors may not understand the nature of why one item was disclosed while another item is not. Investors could become confused and draw unwarranted inferences. Auditors may feel pressure or be obligated to come up with critical audit matters in their audit report even if the audit is routine so that investors will feel they are doing a good job. Matters of significant judgment and material estimates are already disclosed in the financial statements and are discussed by the auditor with management and the audit committee.

In requiring the expansion of the auditor's report to include financial information outside of the financial statement such as the Management Discussion and Analysis, we believe that this may also confuse investors as to who is really responsible for the financial statements. It is our belief that Sarbanes-Oxley made it very clear to investors that management is responsible for the financial statements. While the auditor's role has been clearly limited to the attest function, they often do read and review the information outside of the financial statements as a service to their clients and in the preparation of comfort letters related to registration statements. Requiring an auditor to expand their audit report to evaluate and comment on such information will likely add substantially to the costs of audits. It will also place auditors in potential conflict with their clients as to what must be disclosed or reported in the information outside of the financial statements. While other governance entities (SEC, national exchanges) require that management be legally responsible for their filings, this will now make it more difficult for management of a company and its board of directors to fulfill this requirement if the auditors are now placed in the role of telling them what must be included in areas of reporting outside of the financial statements.

We would like to thank the PCAOB for the opportunity to comment on these recent proposals.

Sincerely,

Charles J. Siegel

Re: PCAOB Rulemaking Docket Matter No. 34

Board Members:

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board's proposed new auditing standards, "The Auditor's Report on the Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion" and "The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report" dated August 13, 2013 ("the proposed standards"). We previously commented on the concept release Matter No. 34 in our letter dated September 30, 2011.

Critical Accounting Matters

The proposed standards require the auditor to communicate in the auditor's report critical audit matters ("CAMs") that were addressed during the audit of the current period's financial statements. We do not support adding disclosure and discussion of CAMs in auditor reports because we do not believe they will enhance the auditor's reporting model as intended and thus will not provide any significant incremental information to financial statement users. This addition will significantly lengthen audit reports with information already provided by management in MD&A, financial statement footnotes, Section I on Form 10-K, or all three. No convincing evidence has been presented by the Board supporting the assertion that disclosure and discussion of CAMs in audit reports will benefit financial statement users or preparers. We believe including disclosure and discussion of CAMs in audit reports will unnecessarily delay financial reporting, weaken the primary objective of audit reports, and result in increased costs to companies without significant benefits to financial statement users.

Using the annual Form 10-K of Apple Inc. ("Apple" or "the Company") as way of example, MD&A in the Company's most recent annual filing, consistent with Securities and Exchange Commission rules and regulations for all public companies, includes three full pages describing critical accounting policies and facts and circumstances specific to Apple that make these accounting matters critical. As explained therein:

> *"Management considers these policies critical because they are both important to the portrayal of the Company's financial condition and operating results, and they require management to make judgments and estimates about inherently uncertain matters. The Company's senior management has reviewed these critical accounting policies and related disclosures with the Audit and Finance Committee of the Company's Board of Directors."*

The matters identified by the Company's management as critical accounting policies are described in detail in MD&A, both in a separate section dedicated to such matters and, as appropriate, in addressing the Company's results of operations and liquidity. In addition, critical accounting policies are addressed as appropriate throughout Section I of the Company's annual filing when describing its business and business risks and throughout the footnotes to its financial statements. These matters are described throughout the Company's annual filing in terms of their specific impact upon the Company's accounting, their level of materiality to Company's financial statements, and the extent to which they rely upon the judgment and estimates of management. Further, it is our experience that disclosure of critical accounting policies by other companies has generally been tailored to each company's specific facts and circumstances.

The proposed standard defines CAMs as "those matters addressed during the audit that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming the opinion on the financial statements." Based on this description, it seems likely that any accounting policies identified by management as critical that are not also identified as CAMs by the auditor will be subject to significant scrutiny after-the-fact by the PCAOB inspections staff. Therefore, we believe that in almost all cases those matters considered by a company to be critical accounting policies and those matters considered by its auditors to be CAMs will be the same. Accordingly, we believe providing disclosure of these matters by auditors in their audit reports will be redundant and of little incremental value to users of financial statements.

The FASB has been working on its Disclosure Framework project for some time with the primary aim of increasing disclosure effectiveness. At its meeting on February 13, 2012, the FASB presented a summary of the responses it received from users, auditors, and preparers to its *Invitation to Comment* on the project. Respondents believed that "disclosures had become burdensome, voluminous, and contain information that may not be relevant to users," and some respondents suggested the primary goal of the project should actually be to reduce the volume of disclosures. A central theme of the feedback received by the FASB was that unimportant or redundant disclosure damaged the actual effectiveness of the overall disclosures provided in an annual report. We concur with this general observation and believe the proposal to include disclosure of CAMs in auditor's reports is in direct conflict with some of the principal goals of the FASB's Disclosure Framework project, including reduction of disclosure redundancy and improvements to disclosure effectiveness and coordination. This is true given almost all of the information that would be contained in CAMs in the auditor's report is already included elsewhere in a company's annual report.

It is asserted multiple times in the release from the Board supporting the proposed standards ("the release") that the communication of CAMs by auditors would lead to three important benefits. First, it would provide financial statement users with previously unknown information about the audit. Second, it would reduce "information asymmetry" between company management and investors. Third, reducing information asymmetry "could result in in more efficient capital allocation" and "could lower the average cost of capital." We consider all of these assertions unproven. As described above, we believe that almost everything an auditor would include in an audit report regarding CAMs is already disclosed in annual reports. Therefore, with respect to critical accounting and auditing matters there is currently very little information asymmetry that would be addressed by implementation of this proposal.

There is no evidence provided in the release specifically supporting the notion that including CAMs in audit reports will reduce the cost of capital. The research cited in the Board's proposal supports the general notion that providing more extensive, broad and transparent disclosure and disseminating it appropriately can impact the cost of capital. The research cited however does not appear to support the argument that the cost of capital will be affected by disclosing any specific bits of information. It is our belief that implementation of this proposal would have no impact on our cost of capital.

We believe that further lengthening of annual reports by significantly expanding auditors reports with information addressing CAMs that should already be available to financial statements users in properly prepared annual reports will dilute the effectiveness of annual reports and will distract financial statement users from the primary purpose of the audit report, to provide a pass/fail evaluation that the subject financial statements are in compliance with generally accepted accounting principles.

As with most governmental regulation, the cost in time, dollars, quality, and other resources will ultimately be determined by the extent and depth government regulators influence implementation. We believe it is likely the PCAOB inspections staff will rigorously pursue implementation of this proposed standard and place significant focus on the judgment of auditor concerning disclosure of CAMs. This means the costs are unpredictable and that the full impact of implementation will be borne over multiple review cycles by the PCAOB inspections staff as they review how auditors address the proposed requirements.

There are two "cost" factors we are most concerned about. First, inclusion of CAMs in audit reports will displace the focus of auditors and management on key reporting and finance matters at a time when such matters require the most attention. The "cost" to audit and reporting quality this could have is a significant concern. Second, and most importantly, we believe if this proposal is adopted it is likely the issuance of many companies annual reports will be delayed. In Apple's case, we typically file our annual report on Form 10-K approximately 30 days after the end of our fiscal year or approximately 30 days before it is due per SEC regulations. We believe that providing our annual report as quickly as possible to be a great benefit to our investors. We currently have no way to judge how many more days will be added to our reporting cycle if this proposal is adopted. However, it seems likely significant additional time at the end of an audit will be required to accommodate our auditors identification of CAMs, their drafting of related audit report language, review of related audit documentation and report language by multiple levels of quality reviewers within the engagement team, interactions with the audit firm's national offices and in-house legal counsel to review customized report language, and review by our own management and Audit Committee of their draft audit report. Adopting the concept used by the Board in the release, any lengthening of the interval between the end of our fiscal year and the filing of our annual report negatively impacts the significant "*information asymmetry*" that exists between management and investors during that period. Adding to that interval so auditors can include customized and detailed language in their reports describing critical accounting areas disclosed elsewhere by management seems counterproductive.

Reporting in Auditor Tenure

The proposed standards include a requirement that audit reports include a statement indicating the year the auditor began serving consecutively as a company's auditor. It is indicated in the release there is no conclusive evidence as to how auditor tenure impacts audit quality or how such information would help investors. Further, it is currently not difficult for interested investors to determine if a particular firm has been auditing a company for a relatively short or relatively long period. We anticipate there will be no direct economic cost to include auditor tenure information in audit reports. However, because of the absence of an identifiable benefit, we do not support this proposal.

Reporting on Other Information

The proposed standards change the auditor's responsibility with respect to other information contained in an annual report from "read and consider" to "read and evaluate." It is not yet clear to us how this change will be interpreted by audit firms and the PCAOB inspection staff and how it would impact the procedures, costs and timing associated with an audit. Several of the major public accounting firms in their summaries of the proposed standards seem to have indicated this change could significantly add to the auditor's responsibility and possibly to the scope and cost of audit procedures. We encourage the Board to work closely with the major audit firms and the PCAOB inspection staff to ensure the full ramifications of this proposal are clear to all interested parties before a final decision is made regarding adoption.

ACCA welcomes the opportunity to comment on the proposed improvements in auditor reporting, which are concisely and clearly addressed in PCAOB Rulemaking Docket Matter No. 034. The ACCA Global Forum for Audit and Assurance[1] has considered the matters raised in the Rulemaking Docket and the views of its members are represented in the following.

Our comments draw upon our world-wide membership, which includes significant numbers of members working in all aspects of the financial reporting supply chain in a wide range of industries, the public sector and public practice.

# GENERAL COMMENTS

ACCA has carried out a body of work, in our Accountancy Futures research programme, on the value of audit and auditor reporting. This is explained on our website, which includes links to the research and reports. We would particularly draw attention to *A Framework for Extended Audit Reporting,* a report commissioned by ACCA from the Maastricht Accounting, Auditing and Information Management Research Center (MARC), Maastricht University, Netherlands.[2]

In our view, the value of the audit would be enhanced if its scope were to be extended beyond the financial statements. We support, nevertheless, the intention of the PCAOB to improve the informational value of the auditor's report to promote the usefulness and relevance of the audit and the related auditor's report within the existing context.

As the PCAOB is well aware, related auditing standards are under development by the International Auditing and Assurance Standards Board (IAASB). In November 2013, ACCA responded to an exposure draft issued by the IAASB and our comments herein are consistent with those in that response. Moreover, the agenda papers for the December 2013 meeting of the IAASB make it clear that, in relation to an update of International Standard on Auditing 720 (Revised) *The Auditor's Responsibilities Relating to Other Information* (ISA 720), the project task force wishes to obtain an understanding of the responses to the current PCAOB proposals.[3]

Although the IAASB is addressing similar issues, there are differences in the order in which subject matters are being addressed and the structure into which the proposals must fit. For example, disclosure of the name of the engagement partner and reporting aspects of going concern are integral to the IAASB's auditor reporting proposals, whereas they are separate matters for the PCAOB.

Recognising that the IAASB standards have to be written so that they may be applied in many jurisdictions and that the PCAOB standards reflect the requirements of the U.S. federal securities laws and rules, we nevertheless continue to recommend that the PCAOB develops standards with a view towards long-term convergence with those of the IAASB.

Auditor reporting and indeed the transparency of the audit are important matters that can contribute directly and indirectly to increased investor confidence and, through that, the better functioning of capital markets. We believe that it is important, therefore, that sufficient time is taken, and effort is made, by standard setters to ensure that their proposals meet investor needs and achieve change that is synonymous with progress.

We are at an unusual juncture in standard-setting, whereby standards are leading practice rather than recognising the best practice that is currently in place. It is even more important, therefore, that such standards are evidence-based to the fullest possible extent. We believe that it would be helpful if the PCAOB were to encourage field testing of its proposals in the same way that the IAASB has instigated a field test.

In subsequent sections of this response we answer the specific questions for respondents in Appendix 5 (other than those relating to proposed amendments to PCAOB standards and the audit of brokers and dealers – question 33 to 40) and in Appendix 6 (other than questions 26 through 28). We do not comment in respect of Emerging Growth Companies (Appendix 7).

# APPENDIX 5 RE PROPOSED AUDITOR REPORTING STANDARD

## QUESTION RELATED TO SECTION II

**Question 1 Do the objectives assist the auditor in understanding the requirements of what would be communicated in an auditor's unqualified report? Why or why not?**

We are content with the objectives as drafted; they are clear and consistent with the type of presentation in other recent PCAOB auditing standards. They encapsulate the requirements and should assist the auditor in developing an understanding.

## QUESTIONS RELATED TO SECTION IV

**Question 2 The proposed auditor reporting standard would require the auditor's report to be addressed at least to (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body. Are there others to whom the auditor's report should be required to be addressed?**

The requirements deal with the common addressees and are flexible enough to accommodate others if necessary in individual circumstances. We do not believe that it is necessary to require the auditor's report to be addressed to other parties.

**Question 3 The proposed auditor reporting standard retains the requirement for the auditor's report to contain a description of the nature of an audit, but revises that description to better align it with the requirements in the Board's risk assessment standards. Are there any additional auditor responsibilities that should be included to further describe the nature of an audit?**

The description of the nature of an audit should provide users with information but not overwhelm them with detail. We are reluctant, therefore, to suggest any further matters for inclusion.

29 LINCOLN'S INN FIELDS
LONDON WC2A 3EE
UNITED KINGDOM

T +44 (0)20 7059 5000
F +44 (0)20 7059 5050

www.accaglobal.com

**Question 4 The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this statement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?**

A statement in the body of the report is inherently more powerful than just using the word 'independent' in its title, as it makes it clear that being independent is a requirement.

The mention of the specific laws, rules and regulations with which the public accounting firm is required to comply is informative for users. The references are necessarily at a high level, however, so users are not able to identify the precise requirements, nor perhaps to appreciate the precise role that independence plays in the audit.

Conceivably, more detailed information could be made available to users on a website maintained by an appropriate body. This would allow for the inclusion of educational material.

Users may also be interested in the other ethical obligations of public accounting firms that are relevant to the audit. For example, when dealing with other information, ethical requirements already drive professional accountants to ensure that they are not knowingly associated with misleading information.

LONDON WC2A 3EE
UNITED KINGDOM
T +44 (0)20 7059 5000
F +44 (0)20 7059 5050
www.accaglobal.com

**Question 5 The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.**

a) **Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?**
b) **Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?**
c) **Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?**

As the PCAOB is aware, there are current proposals within the European Union to instigate mandatory firm rotation. Guidance to put audit contracts out to tender (on a comply or explain basis) has been recently introduced in the UK by the Financial Reporting Council (FRC), and the UK Competition Commission's enquiry into the statutory audit services market has led to a recommendation to the Government that tendering become mandatory, at least every ten years. In its guidance the FRC chose not to include a requirement to disclose, in the auditor's report, the length of tenure.

There is undoubted current user interest in the length of tenure of the auditor. Even where the information is separately available, disclosure of the period of tenure seems to us to be something that it is difficult to oppose other than on the grounds that the usefulness of such a disclosure is not conclusively proven.

If and when it becomes a requirement to name the engagement partner, it would be consistent to disclose how long the particular engagement partner had served in that capacity.

**Question 6 The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?**

In broad terms we agree with the inclusion, within the auditor's responsibilities, of an extended responsibility in respect of other information. We believe that users will benefit from the disclosure of the results of the auditor's evaluation.

ACCA

**Question 7 Should the Board require a specific order for the presentation of the basic elements required in the auditor's report? Why or why not?**

While there is a degree of merit in ensuring consistency between auditors' reports on different entities, the change in emphasis towards reports that are relevant to the individual entity, through the disclosure of critical audit matters, is best served through striving for innovation rather than consistency.

We feel that it is inevitable that there would need to be changes in order to accommodate different presentations depending on whether the report was, for example qualified or unqualified and depending on the number, relative importance and degree of exposition of critical audit matters.

**Question 8 What other changes to the basic elements should the Board consider adding to the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor?**

To the greatest extent possible, we suggest adopting the disclosures in the IAASB proposals. Although there are superficial differences between 'critical audit matters' and 'key audit matters' (IAASB), we would expect auditors to arrive at identical disclosures and descriptions under both standards.

We fear that users will put a negative interpretation on the disclosure of critical audit matters (or key audit matters) even though such transparency is intended to be neutral. This interpretation is likely to be intensified where the term is translated (as it often would be for companies with foreign listings, or when using IAASB standards). Neither term is easy to translate: 'key' does not have a direct translation, and 'critical' is close in meaning to 'criticism'. In such circumstances, translation is done by reference to the underlying meaning, which is 'matters that are of sufficient importance to justify disclosure'.

This leads us to the conclusion that, ideally, no new term should be created for the matters disclosed. If a term is thought necessary to allow the auditor to report succinctly that 'the auditor has determined that there are no [insert term]', the term chosen should be 'important audit matters' (or, if a more formal term is desired 'matters of audit importance'). These terms may be criticised because they do not communicate the degree of importance, apparently signified by the words 'critical or 'key'. That argument is, however, flawed as 'critical' is merely acting as a label for the matters of most importance that are disclosed. That introduces tautology, as once a matter is disclosed it is clear that it is of sufficient importance to be disclosed; labelling as 'critical' is unnecessary.

29 LINCOLN'S INN FIELDS
LONDON WC2A 3EE
UNITED KINGDOM

T +44 (0)20 7059 5000
F +44 (0)20 7059 5050

www.accaglobal.com

**Question 9 What are the potential costs or other considerations related to the proposed basic elements of the auditor's report? Are cost considerations the same for audits of all types of companies? If not, explain how they might differ.**

Inevitably, additional time will be spent determining and drafting the auditor's report. This work will involve management as well as the auditor and some of it will necessarily take place at the busy time of finalisation of the financial statements. The additional costs are unlikely to be substantial, however, as critical audit matters would already be discussed with management and the audit committee.

Such incremental costs that do occur may fall disproportionately on smaller audited entities, but it is for the market regulator to determine public policy concerning the balance between application of, and exemption from, the proposals.

QUESTIONS RELATED TO SECTION V

**Question 10 Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?**

Over the last five years, ACCA has participated in research and outreach events that have consistently confirmed the appetite of investors for additional disclosures from auditors about the audit. We support, therefore, the communication of critical audit matters.[4]

We do not suggest alternatives, as any such alternatives are likely to cross the boundary into the auditor communicating matters that should be disclosed by management.

[4] However, see our answer to question 8, in relation to the suitability of the term 'critical audit matters'.

29 LINCOLN'S INN FIELDS
LONDON WC2A 3EE
UNITED KINGDOM

T +44 (0)20 7059 5000
F +44 (0)20 7059 5050

www.accaglobal.com

**Question 11 What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?**

Through having enhanced information, financial statement users should be better placed to make economic decisions. In addition, heightened scrutiny of critical audit matters should motivate management to ensure that its reporting of related matters is of a consistently high standard.

There need be no unintended consequences of such disclosure, as it should be possible to anticipate and mitigate potentially adverse consequences. For example, possible negative investor perception of expanded report wording should be addressed by the issue of educational material during the implementation phase.

**Question 12 Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? Is the definition of a critical audit matter sufficiently clear for determining what would be a critical audit matter? Is the use of the word "most" understood as it relates to the definition of critical audit matters?**

The definition of a critical audit matter is sufficient for its purposes, albeit that the definition, at paragraph A2 of Appendix A to the proposed auditor reporting standard is in the plural. It is important that the definition allows auditors sufficient scope to justify the inclusion of matters that they wish to bring to the attention of users.

The definition of a critical audit matter is sufficiently clear for determining what would be a critical audit matter, but a definition alone will not allow full determination; as candidates for inclusion will have to be balanced one against another to determine overall what should be reported. The definition provides links to where candidate matters would ordinarily be expected to be found and it is difficult to envisage matters that would not fit into this approach.

In the definition, the use of the word 'most' is understandable as a mechanism to reduce the disclosed matters to a reasonable number.

29 LINCOLN'S INN FIELDS
LONDON WC2A 3EE
UNITED KINGDOM
T +44 (0)20 7059 5000
F +44 (0)20 7059 5050
www.accaglobal.com

**Question 13 Could the additional time incurred regarding critical audit matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have?**

We believe that the additional time incurred will have a positive effect on audit quality. The increased transparency and focus on matters that were critical to the audit will also prompt management to ensure that any related disclosures in the financial statements are of a suitably high quality.

**Question 14 Are the proposed requirements regarding the auditor's determination and communication of critical audit matters sufficiently clear in the proposed standard? Why or why not? If not, how should the proposed requirements be revised?**

The proposed requirements regarding the auditor's determination and communication of critical audit matters are sufficiently clear and understandable. As further explained in our answer to question 19 below, we feel that improvements can, nevertheless, be made.

**Question 15. Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?**

Users are unlikely to understand the audit procedures performed but could benefit from an explanation that a matter was resolved. It is important to distinguish a statement to that effect from a piecemeal opinion. The IAASB proposes introductory wording, which we support, to the effect that 'the auditor does not express an opinion on these individual matters'.

**Question 16. Are the factors helpful in assisting the auditor in determining which matters in the audit would be critical audit matters? Why or why not?**

While we agree that the factors in paragraph 9 are helpful, there is a risk that auditors will adopt a methodology that involves scoring a matter against each factor. This would give a false result, as the factors are simply listed without an indication of their relative importance.

Given that such general factors will have influenced whether a matter is treated in one of the three ways mentioned in paragraph 8, it should be possible to remove reference to such a list at this stage and merely refer to the relative importance of the matters in the specific audit.

29 LINCOLN'S INN FIELDS
LONDON WC2A 3EE
UNITED KINGDOM
T +44 (0)20 7059 5000
F +44 (0)20 7059 5050
www.accaglobal.com

**Question 17 Are there other factors that the Board should consider adding to assist the auditor in determining which matters in the audit would be critical audit matters? Why or why not?**

It may be worth recognising that the existence of a similar disclosed matter in a prior year, or in disclosures made by auditors of companies in the same industry, are strong indicators that a matter is critical. In view of the risk we identify in our answer to question 16, we suggest that a discussion of factors is more suited to being presented as guidance material, for example in an Appendix to the proposed standard.

**Question 18 Is the proposed requirement regarding the auditor's documentation of critical audit matters sufficiently clear?**

The proposed requirement, referencing Auditing Standard No. 3, is clear; but we have reservations about it, as explained in our answer to question 19.

29 LINCOLN'S INN FIELDS
LONDON WC2A 3EE
UNITED KINGDOM
T +44 (0)20 7059 5000
F +44 (0)20 7059 5050
www.accaglobal.com

**Question 19 Does the proposed documentation requirement for non-reported audit matters that would appear to meet the definition of a critical audit matter achieve the Board's intent of encouraging auditors to consider in a thoughtful and careful manner whether audit matters are critical audit matters? If not, what changes should the Board make to the proposed documentation requirement to achieve the Board's intent?**

The requirement should not be 'hidden' in a documentation section but should be dealt with as a stage of the determination. We are, however, not in favour of this as a requirement or documentation requirement. It is not easy to operate as it implicitly requires the auditor to categorise matters into three types:

1. Critical audit matter (disclosed and documentation as to why critical)
2. Matters that would appear to an experienced auditor having no previous connection to the engagement to meet the definition of a critical audit matter (documentation if not disclosed as to why not disclosed)
3. Matters of such importance that they are included in the matters required to be documented in the engagement completion document; reviewed by the engagement quality reviewer; communicated to the audit committee; or any combination of the three but would not appear to an experienced auditor having no previous connection to the engagement to meet the definition of a critical audit matter (not documented further in relation to whether they are critical audit matters)

There seems little point in introducing a separate step in which the auditor has to decide whether an experienced auditor having no previous connection to the engagement would form a particular view, in order to decide what to document.

Auditors will be tempted to respond to a perceived risk of criticism by a regulatory body by increasing the number of matters in the first two categories and so increasing the amount of documentation of items that ought to be in category 3. This will not result in improved reporting or audit quality, will not benefit users but will be costly. It should be sufficient to document the decision as to which matters of importance are reported so as to expose the logic – which may be no more than a decision that, of the matters of importance, users would not derive significant benefit from the presentation of more than eight of the most important matters.

29 LINCOLN'S INN FIELDS
LONDON WC2A 3EE
UNITED KINGDOM
T +44 (0)20 7059 5000
F +44 (0)20 7059 5050
www.accaglobal.com

**Question 20 Is the proposed documentation requirement sufficient or is a broader documentation requirement needed?**
The proposed documentation requirement is certainly sufficient and it is clear and understandable. We have, however, raised an objection to it (see our answer to question 19) and it is arguable whether there needs to be any specific documentation requirement at all; as the requirements of Auditing Standard No. 3 are sufficient to ensure that the documentation would meet the needs of an experienced auditor having no previous connection to the engagement.

**Question 21 What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of critical audit matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?**

ACCA does not answer this question in full as it is aimed primarily at auditors. We believe that the increased costs will be justified because of the value to users of the increased transparency of the audit. As they are more of a fixed nature, such costs will fall disproportionately on smaller audits.

**Question 22 What are the additional costs, including indirect costs, or other considerations for companies, including their audit committees, related to critical audit matters that the Board should take into account? Are these costs or other considerations the same for audits of both large and small companies?**

ACCA does not answer this question in full as it is aimed primarily at audited companies. We believe that the increased costs will be justified because of the value to users of the increased transparency of the audit. As they are more of a fixed nature, such costs will fall disproportionately on smaller companies.

**Question 23 How will audit fees be affected by the requirement to determine, communicate, and document critical audit matters under the proposed auditor reporting standard?**

ACCA does not answer this question because the determination of whether increased costs will be recoverable through increased audit fees is complex and depends on audit market conditions and specific auditor/client circumstances.

29 LINCOLN'S INN FIELDS
LONDON WC2A 3EE
UNITED KINGDOM
T +44 (0)20 7059 5000
F +44 (0)20 7059 5050
www.accaglobal.com

**Question 24 Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, such as in an initial public offering or in a situation involving the issuance of an auditor's report on a prior period financial statement because the previously issued auditor's report could no longer be relied upon? If so, under what circumstances?**

We believe that the focus of the communications should be on the needs of users of the current financial statements. There should not be separate requirements to report in the circumstances listed in question 24 but the auditor should consider whether critical audit matters ought to include matters arising in relation to such circumstances. Any reporting should not be in the manner that would have been appropriate in a prior year but should recognise current circumstances.

**Question 25 Do the illustrative examples in the Exhibit to this Appendix provide useful and relevant information of critical audit matters and at an appropriate level of detail? Why or why not?**

The presentation in the Exhibit of hypothetical auditing scenarios that lead to the illustrative examples is very helpful.

In general, we believe that users will be interested in outcomes, not the detail of the process followed by the auditor in relation to a particular matter. As we noted in our answer to question 15, it is important to avoid piecemeal opinions but it should be possible to indicate that potential difficulties were adequately resolved.

If this is not done for each matter, it would help user understanding if there was additional wording in the standardised introductory text to the effect that: '*The critical audit matters communicated below were satisfactorily resolved and do not alter in any way our opinion on the financial statements, taken as a whole.*'

The description of the critical audit matter in scenario #1 may be too detailed for most users. We question whether users will understand, for example the significance of consultation with 'our national office'.

29 LINCOLN'S INN FIELDS
LONDON WC2A 3EE
UNITED KINGDOM
T +44 (0)20 7059 5000
F +44 (0)20 7059 5050
www.accaglobal.com

**Question 26 What challenges might be associated with the comparability of audit reports containing critical audit matters? Are these challenges the same for audits of all types of companies? If not, please explain how they might differ.**

It is likely that users will look for comparability of reports in particular industries, or where circumstances giving rise to critical audit matters are pervasive (such as a financial crisis). In general, however, there is no need to strive for comparability as such reporting is intended to be specific to the particular audit.

**Question 27 What benefits or unintended consequences would be associated with requiring auditors to communicate critical audit matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards, such as the examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?**

We consider that the possibility of the auditor disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards will be one factor influencing the communication. We can foresee management making disclosures so that the auditor is not the only party to communicate information but, if a matter is not material to the financial statements, disclosure by the auditor in compliance with an auditing standard should afford a degree of legal privilege to such wording.[5]

**Question 28 What effect, if any, would the auditor's communication of critical audit matters under the proposed auditor reporting standard have on an auditor's potential liability in private litigation? Would this communication lead to an unwarranted increase in private liability? Are there other aspects of the proposed auditor reporting standard that could affect an auditor's potential liability in private litigation? Are there steps the Board could or should take to mitigate the likelihood of increasing an auditor's potential liability in private litigation?**

ACCA does not comment on an auditor's potential liability in private litigation in the US environment. We assume that the PCAOB will take legal advice in this regard.

---

[5] Following similar reasoning to that advanced in *Cucinotta v Deloitte & Touche LLP, 129 Nev. Adv. Op. 35 (30 May 2013).*

QUESTIONS RELATED TO SECTION VI

**Question 29 Is it appropriate for the Board to include the description of the circumstances that would require explanatory language (or an explanatory paragraph) with references to other PCAOB standards in the proposed auditor reporting standard?**

It is appropriate to include the description of the circumstances that would require explanatory language (or an explanatory paragraph) with references to other PCAOB standards in the proposed auditor reporting standard as that enables the standard to act as a comprehensive signpost to readers.

**Question 30 Is retaining the auditor's ability to emphasize a matter in the financial statements valuable? Why or why not?**

It is appropriate to retain the auditor's ability to emphasize a matter in the financial statements because such reporting satisfies a different objective to the reporting of critical audit matters.

**Question 31 Should certain matters be required to be emphasized in the auditor's report rather than left to the auditor's discretion? If so, which matters? If not, why not?**

We are in favour of retaining the existing facility regarding matters to be emphasised, as the disclosure of critical audit matters is not, of itself, a reason for change.

**Question 32 Should additional examples of matters be added to the list of possible matters that might be emphasized in the auditor's report? If so, what matters and why?**

It is appropriate to keep the list of possible matters that might be emphasized under review in order to recognise changed circumstances over the years. However, as the examples are drafted in terms that are wide ranging, we have no additional examples to add at this time.

QUESTIONS RELATED TO SECTION VII AND QUESTIONS RELATED TO SECTION VIII

ACCA does not answer questions 33 through 40.

29 LINCOLN'S INN FIELDS
LONDON WC2A 3EE

QUESTIONS RELATED TO SECTION X

**Question 41 Is the Board's effective date appropriate for the proposed auditor reporting standard? Why or why not?**

We agree with the Board's proposed effective date for the proposed auditor reporting standard as it allows sufficient time for effective implementation.

**Question 42. Should the Board consider a delayed compliance date for the proposed auditor reporting standard and amendments or delayed compliance date for certain parts of the proposed auditor reporting standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?**

We believe that a two (or more) stage implementation is not necessary and could potentially confuse users.

ACCA

# APPENDIX 6 RE PROPOSED OTHER INFORMATION STANDARD

## QUESTIONS RELATED TO SECTION I

**Question 1 Is the scope of the proposed other information standard clear and appropriate? Why or why not? Are there Exchange Act documents, other than annual reports, that the Board should consider including in the scope of the proposed other information standard?**

The scope of the standard is clear and appropriate; users are properly informed about the scope in a particular audit by virtue of the requirement to identify the annual report.

**Question 2 Is it appropriate to apply the proposed other information standard to information incorporated by reference? Why or why not? Are there additional costs or practical issues with including information incorporated by reference in the scope of the proposed other information standard? If so, what are they?**

It is appropriate to apply the proposed other information standard to information incorporated by reference. Users would expect information to be within the scope of the standard where it is incorporated by reference. We see no particular issues attaching to the form in which the information is available.

**Question 3 Is it appropriate to apply the proposed other information standard to amended annual reports? Why or why not? Are there additional costs or practical issues with including amended annual reports in the scope of the proposed other information standard? If so, what are they?**

We agree with the approach justified on page A6-4 of Appendix 6, which makes a distinction between amendments according to whether or not they cause the auditor to consider the need to update or issue a new auditor's report.

29 LINCOLN'S INN FIELDS
LONDON WC2A 3EE
UNITED KINGDOM
T +44 (0)20 7059 5000
F +44 (0)20 7059 5050
www.accaglobal.com

**Question 4 Should the company's auditor, the other entity's auditor, or both have responsibilities under the proposed other information standard regarding audited financial statements of another entity that are required to be filed in a company's annual report under Article 3 of Regulation S-X? Why or why not? Are there practical issues with applying the proposed other information standard to the other entity's audited financial statements?**

It is right to exclude such financial statements because they are separately audited and users would derive little or no value from the primary auditor addressing them as 'other information'. There would, in such cases, be considerable practical difficulties in carrying out procedures were any to be considered necessary.

QUESTION RELATED TO SECTION II

**Question 5 Do the objectives assist the auditor in performing the procedures required by the proposed other information standard to evaluate the other information and report on the results of the evaluation?**

The objectives encapsulate the requirements and are clearly drafted. They should assist the auditor in developing an understanding and hence in performing the required procedures.

QUESTIONS RELATED TO SECTION III

**Question 6 Is it appropriate to require the auditor to evaluate the other information for both a material inconsistency and for a material misstatement of fact? If not, why not?**

We support requiring the auditor to evaluate the other information for both a material inconsistency and for a material misstatement of fact. This responds to calls from investors, in particular, for more informative reporting by auditors as annual reports are becoming more complex and increasingly include qualitative disclosures.

We do not support the use of the term 'misstatement of fact'. The term has been overtaken by events; increasingly it is not the factual basis of matters that is of importance but the manner of their presentation. As inappropriate presentation can be a material misstatement, the natural language meaning of 'misstatement of fact' no longer coincides with its use as a defined term. We have suggested to the IAASB that it is simpler to drop the words 'of fact' and that has been done in the proposed revised standard forming part of the agenda papers for the IAASB's December 2013 meeting.

29 LINCOLN'S INN FIELDS
LONDON WC2A 3EE
UNITED KINGDOM
T +44 (0)20 7059 5000
F +44 (0)20 7059 5050
www.accaglobal.com

**Question 7 Would the evaluation of the other information increase the quality of information available to investors and other financial statement users and sufficiently contribute to greater confidence in the other information? If not, what additional procedures should the Board consider?**

It would be a matter for research to establish, but we expect that the procedures carried out by many auditors under a requirement to 'read and consider' would be extensive and a new requirement to 'evaluate' would not increase that effort but merely recognise that it was taking place. We nevertheless support the intention of the proposed standard as, whether it brings about improved practice or merely communicates better with users the effort employed, it should succeed in increasing confidence in other information and indeed in the financial statements themselves.

Any further procedures that might be considered by the PCAOB would likely extend assurance to the other information and this has not been called for by those commenting on earlier proposals.

**Question 8 Is the federal securities laws' definition of materiality the appropriate standard for the auditor's responsibility to evaluate the other information? Would applying this definition represent a change to the materiality considerations auditors currently use under AU sec. 550?**

In our view the definition of materiality in the federal securities laws is an appropriate standard for the auditor's responsibility to evaluate the other information. As we have represented to the IAASB, it would introduce unwarranted complications to use a different approach, such as having regard to the financial statements and the other information taken as a whole as the reference point for materiality.

**Question 9 Are the proposed procedures with respect to evaluating the other information clear, appropriate, and sufficient? If not, why not?**

The drafting of the procedures that the auditor would be required to undertake under paragraph 4 is clear. The wording is, however, repetitious, with the wording at the start of the paragraph ('based on relevant audit evidence obtained and conclusions reached during the audit') in effect repeated in subparagraphs a. to c.

We have concerns, however, about the structure of the proposed standard (beginning with paragraph 3). We discuss these in our answer to question 17 below.

LONDON WC2A 3EE
UNITED KINGDOM
T +44 (0)20 7059 5000
F +44 (0)20 7059 5050
www.accaglobal.com

**Question 10 Is it understood which amounts in the other information the auditor would be required to recalculate under paragraph 4.d.? If not, why not?**

Although procedures relating to consistency with the financial statements and relevant audit evidence are automatically constrained by considerations of materiality and risk, we are concerned that some auditors might interpret the recalculation requirement in paragraph 4.d.as one that extends to all calculations, irrespective of their significance.

**Question 11 Are there additional costs beyond those described in this Appendix related to the proposed required procedures for the evaluation of the other information? If so, what would these costs be?**

In our view the Appendix identifies all significant costs, including one-time costs of implementation.

**Question 12 Are the proposed auditor responses under paragraph 5 appropriate when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If not, why not?**

The responses are appropriate and are the same as currently proposed in the IAASB equivalent draft standard.

**Question 13 Are there additional costs beyond those described in this Appendix related to responding when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If so, what would these costs be?**

In our view there are no significant additional costs to be identified.

QUESTIONS RELATED TO SECTION IV

**Question 14 Are the proposed auditor's responses under paragraphs 8 and 9 appropriate when the auditor determines that the other information that was available prior to the issuance of the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?**

The proposed auditor's responses are appropriate, for the reasons set out in Appendix 6.

29 LINCOLN'S INN FIELDS
LONDON WC2A 3EE
UNITED KINGDOM
T +44 (0)20 7059 5000
F +44 (0)20 7059 5050
www.accaglobal.com

**Question 15 Is it appropriate for the auditor to issue an auditor's report that states that the auditor has identified in the other information a material inconsistency, a material misstatement of fact, or both, that has not been appropriately revised and describes the material inconsistency, the material misstatement of fact, or both? Under what circumstances would such a report be appropriate or not appropriate?**

The issue of an auditor's report with a statement tailored to the actual circumstances encountered is valuable as it informs users of matters that may be material to them. Unless the auditor concludes that withdrawal from the engagement is necessary in the circumstances, such reporting should be done as a matter of course. In practice, the knowledge that the auditor will draw attention to the matter may motivate management or the audit committee to act to remedy the disclosure at issue.

**Question 16 Are the proposed auditor's responses under paragraphs 10 and 11 appropriate when the auditor determines that the other information that was not available prior to the issuance of the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?**

The proposed auditor's responses under paragraphs 10 and 11 are appropriate, for the reasons set out in Appendix 6.

QUESTION RELATED TO SECTION V

**Question 17 Are the proposed auditor's responses appropriate when, as a result of the procedures performed under the proposed other information standard, the auditor determines that there is a potential misstatement in the financial statements? Why or why not?**

The proposed auditor's responses under paragraph 12 are appropriate, as they are references to requirements set out elsewhere.

We are not convinced, however, that the structure of the proposed standard is ideal. Paragraphs 6 to 11 deal with the position where, following the requirements in paragraph 5, the auditor has determined that a potential problem is really a material inconsistency, a material misstatement of fact, or both.

Paragraph 12 reverts back to a potential problem although the work under paragraph 5 could have determined that the potential problem is really a material misstatement in the audited financial statements. We understand that paragraphs 3 to 5 relate to other information, not financial statements, but the work on inconsistency is also capable of exposing deficiencies in the financial statements.

We find the structure adopted in the draft of ISA 720 to be considered in the December 2013 meeting of the IAASB to be preferable. Sections of that proposed standard deal with:

- 'Reading and [Evaluating/Considering] the Other Information'
- 'Responding to an Apparent Material Misstatement of the Other Information'
- 'Responding When There May Be a Material Misstatement in the Financial Statements'

This structure can be achieved through a small repositioning of paragraph 5 of the proposed PCAOB standard and changes to headings.

QUESTIONS RELATED TO SECTION VI

**Question 18 Is the proposed reporting, including the illustrative language, appropriate and sufficiently clear? If not, why not?**

The proposed reporting, including the illustrative language, is appropriate and clear. We address one concern, however, in our answer to question 21 below.

29 LINCOLN'S INN FIELDS
LONDON WC2A 3EE
UNITED KINGDOM
T +44 (0)20 7059 5000
F +44 (0)20 7059 5050
www.accaglobal.com

**Question 19 Should the Board consider permitting or requiring the auditor to identify in the auditor's report information not directly related to the financial statements for which the auditor did not have relevant audit evidence to evaluate against? If so, provide examples.**

Information for which the auditor did not have relevant audit evidence, or (albeit not mentioned in the question) in relation to which the auditor had insufficient experience, knowledge or competence to evaluate, may be within scope because it is in a document that is within scope. There is a danger that users will assume that the auditor has done more work relating to it than is the case. The danger can be addressed by user education or a quasi-scoping out of information by identifying it in the report.

We are not in favour of requiring the identification of such material in the auditor's report because of the potential complexity of disclosures, the underlying extra work for auditors to determine and document the treatment of information potentially falling within this category and the need for brevity to avoid unbalancing the report by including matters on which the auditor not only does not provide assurance but warns specifically that that is the case.

We see some merit in permitting identification but would not want that to become the norm.

**Question 20 What additional costs would the auditor or the company incur related to auditor reporting when the auditor identifies a material inconsistency, a material misstatement of fact, or both?**

ACCA does not answer this question in full as it is aimed primarily at auditors and audited companies. We agree with the general analysis of costs in Appendix 6. Additional costs will vary considerably depending on the individual circumstances. As they are more of a fixed nature, such costs will fall disproportionately on smaller audits.

29 LINCOLN'S INN FIELDS
LONDON WC2A 3EE
UNITED KINGDOM

T +44 (0)20 7059 5000
F +44 (0)20 7059 5050

www.accaglobal.com

**Question 21 Would the proposed reporting, including the illustrative language, provide investors and other financial statement users with an appropriate understanding of the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information? Why or why not?**

The proposed reporting, including the illustrative language, is appropriate and clear. It is important that users appreciate the constraints on the evidence and that no separate assurance is being communicated.

The illustrative language concerning not identifying a material inconsistency or a material misstatement of fact in the other information is acceptable but there is potential for a statement of this nature to be mistaken for a negative conclusion conveying limited assurance. For this reason, we prefer the less direct approach in the draft of ISA 720 to be considered in the December 2013 meeting of the IAASB, where, having stated the responsibility (*'If we identify that the other information, to a material degree, is incorrectly stated, inappropriately presented or otherwise misleading, we are required to report that fact.'*) the auditor states that *'We have nothing to report in this regard.'*

**Question 22 Are there any practical considerations that the Board should consider when an auditor identifies a material inconsistency or a material misstatement of fact in the other information that management has appropriately revised prior to the issuance of the auditor's report?**

The auditor will have carried out procedures to establish that a material inconsistency or a material misstatement of fact in the other information exits. The procedures may have revealed why the problem arose and it is consideration of such circumstances that potentially affect the auditor's approach in the audit generally.

We do not believe that it is necessary to introduce any specific requirements relating to such circumstances.

QUESTION RELATED TO SECTION VII

**Question 23 Are the proposed responsibilities of the predecessor auditor appropriate and sufficiently clear? If not, why not?**

The proposed responsibilities of the predecessor auditor are appropriate and sufficiently clear to those informed by the relevant material in Appendix 6. The proposed standard includes only a short footnote relating to the matter and we do not think that is sufficient to properly communicate the responsibilities.

29 LINCOLN'S INN FIELDS

ACCA

QUESTIONS RELATED TO SECTION VIII

**Question 24 What effect, if any, would the reporting under the proposed other information standard have on an auditor's potential liability in private litigation? Would this reporting lead to an unwarranted increase in private liability? Are there steps the Board could or should take related to the other information requirements to mitigate the likelihood of increasing an accounting firm's potential liability in private litigation?**

ACCA does not comment on an auditor's potential liability in private litigation. We assume that the PCAOB will take legal advice in this regard.

**Question 25 Would reporting under the proposed other information standard affect an auditor's potential liability under provisions of the federal securities laws other than Section 10(b) of the Exchange Act, such as Section 11 of the Securities Act? Would it affect an auditor's potential liability under state law?**

ACCA does not comment on an auditor's potential liability under the provisions of the federal securities laws or the Securities Act. We assume that the PCAOB will take legal advice in this regard.

QUESTIONS RELATED TO SECTION IX AND QUESTIONS RELATED TO SECTION X

ACCA does not answer questions 26 through 28.

QUESTIONS RELATED TO SECTION XI

**Question 29 Is the Board's effective date appropriate for the proposed other information standard? Why or why not?**

We agree with the Board's proposed effective date for the proposed standard as it allows sufficient time for effective implementation. It is appropriate for this date to be the same as that for the proposed auditor reporting standard.

**Question 30 Should the Board consider a delayed compliance date for the proposed other information standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?**

We believe that a two (or more) stage implementation is not necessary and could potentially confuse users. It is appropriate for the implementation to be done in the same way as for the proposed auditor reporting standard.

Washington, D.C. 20006-2803

Re: *PCAOB Rulemaking Docket Matter No. 034*

Dear Ms. Brown:

On behalf of the Committee on Financial Reporting of the Association of the Bar of the City of New York, I respectfully submit this letter regarding the proposed auditing standard entitled "The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report" (PCAOB Release No. 2013-005 – August 13, 2013). This letter is also supported by the Bar Association's Committee on Securities Regulation.

By way of introduction, the Committee on Financial Reporting consists of attorneys representing different roles and perspectives within the financial reporting community, including preparers, users, and auditors. An important objective of the Committee is to enhance the integrity of financial reporting systems in order to foster the objectivity, understandability, and reliability of financial reports. The Committee seeks to improve financial reporting integrity through the enhancement of the rules and regulations of financial reporting as well as the culture in which those rules and regulations are called upon to function.

We very much share the Board's objective of improving the usefulness of financial reporting and appreciate the Board's efforts to that end. And we certainly share the Board's view that information reported in audited financial statements, and "other information" included in documents containing the audited financial statements, should not be inconsistent. However, we are concerned that the proposed audit standard may prove to be counterproductive. In summary, we are concerned that a consequence of the proposed standard, insofar as it would subject "other information" to explicit auditor reporting, may be that such "other information" becomes less useful.

The basis for our concern centers on the fact that auditor processes are more effectively directed to the evaluation of objective, rather than subjective, information. It is true, of course, that much "other information" is objectively verifiable and therefore susceptible to effective auditor evaluation. Much other information, however, is significantly less so. That is particularly the case as to aspects of information regarding trends, strategy, challenges, risks, and other more judgmental aspects of business activity.

We do not understand how an auditor's normal processes would allow it to effectively evaluate and report on such information. We are concerned that, instead, a requirement of auditor evaluation and reporting may result in an inclination by preparers to facilitate auditor approval through increased emphasis upon objectively verifiable information. From the perspective of users, such an inclination would be unfortunate insofar as a commonly expressed frustration with business disclosure today involves its presentation in the form of disaggregated numerical detail at the expense of broader discussion that explains how the data fits with the company's performance and prospects.

Our concerns are exacerbated by the logistics of the modern day audit environment. Today's audit takes place in an environment of increased expectations, increased demands for documentation, and accelerated deadlines. We can readily foresee scenarios in which the difficulties of auditor evaluation of subjective information would create a risk of delay ultimately resulting in, again, an inclination by preparers to favor data that can be more readily verified.

Nor are we familiar with an underlying problem that would justify these consequences. We understand the desire of the investment community for greater transparency into management decision-making and company prospects. But we do not believe this proposed standard addresses that. Rather, the standard seems directed to an entirely different issue: the potential for inconsistency between audited financial statements and other information. But that is an issue that, at least in our experience, rarely if ever comes up. In our experience, the much more frequent complaint involves the difficulties and tediousness of review of disaggregated detail.

In terms of cost-benefit analysis, therefore, our own judgment would suggest that the costs greatly outweigh the benefits. We see little if any benefit to the standard. The costs would include not only higher audit fees but higher internal costs associated with auditor involvement in the substance of information, which is already extensively reviewed by multiple departments within the reporting entity, beyond the scope of the auditor's normal systems for evaluation.

At root, we are of the view that transparency in "other information" is best served by giving management the opportunity to describe its business activity as management sees fit constrained by the obligations to tell the truth and otherwise to fulfill legal requirements. If management does not fulfill these obligations, legal means of redress and corrective mechanisms of corporate governance already exist. The installation of an additional layer of evaluation and reporting, and with it the risk of increased emphasis upon disaggregated detail at the expense of more subjective analysis and discussion, strikes us as counterproductive. We would therefore respectfully submit that this proposed standard should not be adopted.

We thank the Board for the opportunity to submit these comments and congratulate the Board on its continuing efforts to enhance the systems of financial reporting.

Very truly yours,

Michael R. Young

Re: PCAOB Rulemaking Docket Matter No. 34

Board Members:

Microsoft's Audit Committee appreciates the opportunity to provide comments on the PCAOB's Release No. 2013-005, "The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion" and "The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report". As members of Microsoft's Audit Committee, we have a critical role in the governance and oversight of the independent auditor and company management.

We share the PCAOB's objective that auditor reporting be relevant and useful to investors and other financial statement users. However, we do not believe the proposed requirements will meet that objective and are concerned with potential unintended consequences from the proposed requirements. In particular, we are opposed to the required disclosure of critical audit matters, changes to existing requirements with regard to the role of the auditor in reviewing other information outside the financial statements, and auditor tenure. We also believe the PCAOB needs to undertake detailed field testing in order to gain a better understanding of whether the proposed requirements will actually improve the relevance of the auditor's report while not unduly burdening the financial reporting process or undermining the role of the Audit Committee.

Disclosure of Critical Audit Matters

The proposed auditor reporting standard indicates that critical audit matters ordinarily are of such importance that they are included in the matters required to be (1) documented in the engagement completion document, which summarizes the significant issues and findings from the audit; (2) reviewed by the engagement quality reviewer; (3) communicated to the audit committee; or (4) any combination of the three. Given this broad scope, we do not agree that auditors' reporting these matters will make the audit report more informative.

Rather, we believe it will lead to less useful and lengthy audit reports that include many audit matters that may not be of importance to financial statement users. The potential for disclosure overload is exacerbated by the fact that in addition to identifying these audit matters, the auditor's report will need to describe the considerations that led the auditor to determine that the matter is a critical audit matter as well as contain a reference to the relevant financial statement accounts and disclosures that relate to the matter. Furthermore, there are potential unintended consequences with requiring that auditors communicate these audit matters in the auditor's report. As indicated in the Release, the effort required to determine, prepare language for communication, and document such matters likely would occur during the final stages of the audit which might reduce the time available to the auditor for review and completion of the audit work.

We believe that for the most critical audit matters, management currently has the responsibility to disclose this information, for example in its discussion of critical accounting policies. Microsoft's critical accounting policies include revenue recognition, impairment of investment securities, goodwill, research and development costs, contingencies, income taxes, and inventories. The disclosure of these critical accounting policies comprises more than two pages of the Company's MD&A disclosures. In addition to these items, the accounting policy footnote to the financial statements discusses the principles of consolidation, estimates and assumptions, foreign currencies, cost of revenue, product warranty, sales and marketing, stock-based compensation, employee stock purchase plan, fair value measurements, allowance for doubtful accounts, property and equipment, and intangible assets. While we agree that not all of these items would rise to the level of critical audit matters as defined in the proposed rules, this extensive list of disclosures currently made by management illustrates our concern that the proposed rules will lead to less useful and lengthy audit reports that include many audit matters.

A requirement for the auditors to discuss these matters in an auditor's report could alter the fundamental roles and responsibilities of management, auditors and the Audit Committee. For example, the requirement to report matters discussed with the Audit Committee could have the unintended consequence of chilling the open and free flow of information from the auditor to the Audit Committee. Such an undesirable outcome would undermine the ability of the Audit Committee to fulfill its role and impair overall audit quality. The Audit Committee's role in overseeing financial reporting is intended to ensure that all material disclosures are included in a company's reports to shareholders based on input from management and communications with the independent auditors.

Finally, and perhaps most importantly, any lack of consistency between critical audit matters and management's disclosures will lead to confusion for financial statement users. Naturally, users will compare the critical accounting policies in the MD&A to the critical audit policies in the auditor's report. In any period we would expect differences based on changes in business, risks, and individual transactions. It is unclear how readers would reconcile two seemingly different descriptions of critical matters and whether it would be up to the company or the auditor to explain or answer questions about any apparent inconsistency.

Other Information Outside the Financial Statements

We agree with the proposal for clarification of the language in the auditor's report that would enhance users' understanding about the auditor's responsibility for other information outside the financial statements and support a statement in the auditor's report that clearly describes the auditor's role with respect to such information. However, such a requirement should not constitute a change from existing requirements with regard to the role of the auditor in reviewing such information or the level of assurance provided. PCAOB AU Section 550, "Other Information in Documents Containing Audited Financial Statements", indicates the following:

> Other information in a document may be relevant to an audit performed by an independent auditor or to the continuing propriety of his report. The auditor's responsibility with respect to information in a document does not extend beyond the financial information identified in his report, and the auditor has no obligation to perform any procedures to corroborate other information contained in a document. However, he should **read** the other information and **consider** whether such information, or the manner of its presentation, is materially inconsistent with information, or the manner of its presentation, appearing in the financial statements. [Emphasis added.]

The proposed guidance would require the auditor to evaluate the other information for a material misstatement of fact as well as for a material inconsistency with amounts or information, or the manner of their presentation, in the audited financial statements. We are concerned that the change in terminology from "consider" to "evaluate" will lead to significantly more work for the auditor, with users assuming a greater degree of responsibility by the auditor for the other information in documents containing audited financial statements.

We also believe an unintended consequence of this proposed change could be a decrease in the amount and insight of the other information provided with the audited financial statements. Much of the other information provided with the audited financial statements is based on management's insight into the business and the drivers of value creation, which may be difficult for an auditor to evaluate based on audit evidence obtained and conclusions reached during the audit.

Auditor Tenure

We believe that any disclosure about auditor tenure would more appropriately be reported in the proxy statement, where the Audit Committee reports, among other things, its oversight activities with respect to the independent auditor, and many companies submit the appointment of the independent auditor for a shareholder vote.

Field Testing

Before taking any final action, it is incumbent upon the PCAOB to undertake detailed field testing of the proposed guidance in order to understand the implications and potential unintended consequences of the proposed guidance. We believe robust field testing, including obtaining user feedback as part of field testing, will provide insights into what effect the proposed guidance might have on the audit, whether it will produce more relevant and useful information to investors, and whether the benefits of the proposed guidance exceed the quantitative and qualitative costs that will be incurred.

Sincerely,

The Audit Committee of the Board of Directors of Microsoft Corporation

The Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington D.C. 20006-2803
USA

Dear Sir:

**PCAOB Rulemaking Docket No. 034: The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report.**

The Canadian Auditing and Assurance Standards Board (AASB) is pleased to provide its comments on the Public Company Accounting Oversight Board (PCAOB) *Proposed Rule on The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*, PCAOB Rulemaking Docket No. 034 (the proposed rule). We commend the PCAOB for soliciting public comment in connection with your proposed project to deal with possible revisions to the content and form of reports on audited financial statements and we appreciate the opportunity of responding to you.

By way of general background, the AASB's mission is to serve the public interest by setting high-quality standards and guidance that enable the Canadian public accounting profession to provide effective auditing, other assurance and related services. The AASB has the authority, as reflected in federal and provincial Business Corporations Acts, and other legislation and securities regulations, to set generally accepted auditing standards (GAAS) for financial statement audits in Canada. The activities of the AASB are overseen by the Auditing and Assurance Standards Oversight Council (AASOC), an independent body consisting of business leaders and regulators and having the oversight responsibility to ensure that the public interest is properly taken into account in the development of auditing and assurance standards in Canada by the AASB.

The AASB adopts International Standards on Auditing (ISAs) and International Standards on Quality Control (ISQCs) as Canadian Auditing Standards (CASs) and Canadian Standards on Quality Controls (CSQCs) respectively on the same timetable as the International Auditing and Assurance Standards Board (IAASB). CASs and CSQCs are Canadian GAAS for audits of financial statements. The AASB only makes amendments to ISAs and ISQCs that may affect how a practitioner performs an audit of financial statements in circumstances that meet specific criteria. These criteria allow the AASB to make very limited amendments, for example, to meet Canadian rules of professional conduct and to incorporate joint protocols for communicating with the Canadian legal and actuarial professions. When amendments are made, they are clearly identified in the standards. The AASB strongly believes in the consistent application of these standards and promotes their adoption globally.

Our response to Rulemaking Docket No. 034 addresses two key points:

- The need for global consistency in auditor reporting; and
- Specific concerns with the proposed rule relating to reporting on other information.

**The need for global consistency**
Canadian entities, like those in other countries, participate in today's global capital markets. However, Canada is also in a special position in that it has approximately 340 public companies registered and reporting with the Securities and Exchange Commission (SEC) as of December 31, 2012. This is well over twice the number from any other country and over a third of all foreign registrants.

Canadian securities regulators permit Canadian SEC registrants to have their audits conducted in accordance with PCAOB standards, recognizing the strong interrelationship between Canadian and US capital markets. Although there are differences between PCAOB reporting standards and Canadian GAAS, the auditors for some SEC foreign registrants are still able to prepare a single audit report that refers to both Canadian and PCAOB GAAS. This would not be possible if the reporting standards set by the PCAOB and IAASB were to diverge significantly.

While some flexibility between PCAOB reporting standards and those of the IAASB may be needed, we are concerned that significant differences in the form and content of reports resulting from the two sets of standards would create confusion for readers of auditor's reports on financial statements of Canadian SEC registrants, particularly as these comprise many of Canada's largest companies. We believe that significantly different auditor reporting models are not in the public interest. For example, while the PCAOB proposed "critical audit matters" requirements are similar to the IAASB "key audit matters" requirements, they are not identical. We do not believe it is in the public interest for the same auditor to report different matters for the same set of financial statements for entities listed in the US and in other jurisdictions where ISAs apply. Such differences will likely not be meaningful and may be confusing to users.

For this reason, we urge the PCAOB to work together with the IAASB and other bodies such as the European Commission, not only with respect to the auditor's report on financial statements but also in relation to the auditor's responsibilities relating to other information in certain documents containing audited financial statements.

For your information, we enclose a copy of our November 22, 2013 response to the IAASB on its exposure draft *Reporting on Audited Financial Statements.* This response outlines the significant concerns and other comments we had with the IAASB's auditor reporting proposals.

**Specific concerns with the PCAOB proposed rule relating to reporting on other information**

With respect to the PCAOB's proposed auditing standard on the auditor's responsibilities regarding other information in certain documents containing audited financial statements and the related auditor's report, we have specific concerns as set out in Appendix 1 to this letter.

We hope that our comments will be helpful to you in developing the possible revisions to the reporting standards. If you have any questions or require additional information, please contact Greg Shields at (416) 204-3287.

Yours very truly,

Mark Davies, FCPA, FCA, CIA
Chair, Auditing and Assurance Standards Board (Canada)

c.c. Canadian Auditing and Assurance Standards Board Members
Canadian Auditing and Assurance Standards Oversight Council Members

enc. AASB November 22, 2013 response letter to IAASB

**Appendix 1: The auditor's responsibilities regarding other information in certain documents containing audited financial statements and the related auditor's report**

1. **Scope of the proposals**

   The definition of other information includes information incorporated by reference in the annual report if it is available to the auditor prior to the issuance of the auditor's report, or information from the proxy statement if the proxy statement is filed within 120 days after the end of the fiscal year. We believe that including within the scope of the standard certain information incorporated by reference depending on the timing of availability or timing of filing of a document will likely cause significant confusion in the market place.

   In particular, we are concerned that including within the scope of the standard other information available after the date of the auditor's report may create a misperception that the auditor is satisfied with such other information when the auditor's ability to communicate concerns relating to such other information to users of the financial statements and the auditor's report thereon is very limited after the auditor's report has been issued.

   **AASB recommendation**

   Therefore, the AASB recommends that the scope of the standard be limited to other information that is normally made available to the auditor prior to the issuance of the auditor's report.

2. **Auditor's responsibilities**

   Page 25 of the proposed rule indicates that "investors generally were not supportive of auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model because it would not be responsive to their information needs, and they saw little benefit with this type of assurance. Several commenters expressed concern that auditor assurance on information outside the financial statements would increase the time needed to perform these procedures and would not provide greater benefit than the auditor's current responsibilities related to other information outside the financial statements." The AASB is of the view that requiring the auditor to evaluate the other information and reporting on that evaluation would, in effect, imbed within the financial statement audit an unspecified type of assurance engagement related to other information. Therefore, the PCAOB's proposed approach appears to conflict with views of investors.

   Further, the AASB is concerned that the proposed approach would result in an increase in the expectations gap. The auditor may have very limited knowledge of certain aspects of the other information. For example, many companies in Canada are involved with mineral exploration. These companies may provide a great deal of technical information such as detailed geotechnical data in their annual reports. Auditors would not have addressed such technical information in the course of their audit of the financial statements. It would not be in the public interest to give users the perception that auditors have read, understood, and are in agreement with, this information as it is outside the scope of a financial statements audit engagement.

**AASB recommendations**

<u>If PCAOB intends for assurance to be provided on the other information</u>

If PCAOB intends for assurance to be provided on the other information, this should be the subject of a separate attestation standard. There is currently an attestation standard (AT) 701, *Management Discussion and Analysis*, which deals with assurance on the information in the MD&A. In the view of the AASB, assurance on the other information would be more appropriately dealt with in a separate attestation standard similar to AT 701. In the AASB's view, it would be inappropriate for a financial statements auditing standard to compel the auditor to also perform an assurance engagement on other information.

<u>If PCAOB does not intend for assurance to be provided on the other information</u>

If PCAOB does not intend for assurance to be provided on the other information, the standard should clarify the limitations of the auditor's involvement with that information. The AASB recommends that:

- The auditor be required to read the other information and consider whether there may be:
  - An inconsistency between the other information and the audited financial statements that may indicate the existence of a material misstatement in the financial statements; or
  - A material misstatement of fact in the other information.
- In specifying the auditor's responsibilities, and in reporting in the auditor's report, it should be made clear that, in reading the other information, the auditor is not required to obtain additional audit evidence beyond that required for the purposes of the audit.
- The auditor's report should be clear as to the auditor's limited knowledge of the other information (see below).

**3. Reporting**

For the reasons stated in the Auditor's Responsibilities section above, the AASB is concerned about unwarranted assurance by financial statements users arising from (a) the form of the required statement in proposed paragraph 13e that is similar to a review conclusion provided by the auditor and (b) the lack of transparency regarding the auditor's limited knowledge of the other information. The AASB believes that an appropriate description of the auditor's responsibilities relating to the other information that enhances the transparency of the auditor's limited knowledge and work effort would mitigate these concerns.

**AASB recommendations**
The AASB recommends that paragraph 13 of the proposed auditing standard be amended as follows:

1. Clarifying that the auditor did not review the other information

   The statement: "Based on our evaluation, we have not identified a material inconsistency or a material misstatement of fact in the other information" is very similar to a conclusion provided in a review engagement. This could result in confusion as to the level of work performed on the other information by the auditor. The AASB recommends that subparagraph 13(d) be expanded to state that the auditor did not perform an audit or a review engagement on the other information and therefore, does not express an opinion or a review conclusion on the other information.

2. Transparency regarding management's responsibilities

   The AASB believes that management's responsibilities for the other information must be clearly set out in the auditor's report to avoid confusion regarding management's and the auditor's respective responsibilities relating to the other information. Accordingly, the AASB suggests that the report include a statement that the completeness and adequacy of disclosures in the other information is the responsibility of management.

3. Transparency regarding the auditor's limited knowledge

   As discussed in Auditor's Responsibilities section above, the AASB recommends that the limitations of the auditor's knowledge be clearly described to enhance transparency. Accordingly, the AASB proposes that the auditor's report include a statement such as: "Our responsibilities do not require us to obtain additional audit evidence beyond that required for the purposes of the audit. Accordingly, our knowledge of certain matters in the annual report may be very limited." Paragraph 13c should be changed as follows:

   A statement that the auditor's evaluation of the other information was based on relevant audit evidence obtained and conclusions reached during the audit, that the auditor's responsibilities do not require the auditor to obtain additional audit evidence beyond that required for the purposes of the audit, and that, accordingly, the auditor's knowledge of certain matters in the other information may be very limited.

November 22, 2013

Mr. James Gunn
Technical Director
International Auditing and Assurance Standards Board
International Federation of Accountants
529 Fifth Avenue – 6th Floor [confirm address]
New York, NY 10017
U.S.A.

Dear Mr. Gunn,

***<u>Re: Exposure Draft Reporting on Audited Financial Statements</u>***

The Canadian Auditing and Assurance Standards Board (AASB) is pleased to provide its comments on the Exposure Draft (ED) *Reporting on Audited Financial Statements.* In developing our response, we considered comments provided to us by our stakeholders who showed a strong interest in this topic. We held many face-to-face and conference call meetings with various user groups, including investors, analysts, management, audit committees, directors, regulators, auditors and others, as set out in Appendix 2 to this letter.

## General Comments

While our stakeholders have broadly expressed significant concerns about a number of aspects in the proposals, the AASB and many stakeholder support the objective of enhancing the value and relevance of auditor reporting including, as appropriate, enhancing the auditor's report on the financial statements. We also support the development of an auditor reporting model including consistent use of auditor's reports that users around the world can understand, that national standard setters would adopt and that auditors would apply.

In responding to the IAASB's Invitation to Comment *Improving the Auditor's Report*, (ITC) the AASB raised a number of significant concerns based on the input received from Canadian stakeholders. We recognize that in developing the ED the IAASB made improvements compared to the ITC. Accordingly, when consulting with Canadian stakeholders about the ED, the AASB informed Canadian stakeholders about the improvements, auditor reporting developments in other jurisdictions and the potential consequences of adopting or not adopting the proposed new and revised ISAs in Canada. While Canadian stakeholders are strongly supportive of the AASB continuing to adopt ISAs as Canadian Auditing Standards (CASs), they raised a number of broadly shared significant concerns about the proposals in the ED. The AASB is extremely troubled about adopting proposals that are still causing concerns to key elements of our stakeholder community solely to maintain our commitment to adopting ISAs as CASs. Therefore, we strongly encourage the IAASB to consider the recommendations noted below, and in our response to the questions in the ED set out in Appendix 1 to this letter, as they will, in our view, provide a basis to allow the final auditor reporting standards to be operational in the Canadian environment.

The following are significant points we would like to bring to your attention:

1. The applicability of the proposed Key Audit Matters (KAM) requirements
2. Achieving consistency in reporting of KAM
3. The approach to reporting on going concern
4. The need for consistency of reporting requirements of the IAASB and the United States Public Company Accounting Oversight Board (PCAOB)
5. The effective date of the final standards

**1. The applicability of the proposed KAM requirements**

The applicability of the proposed KAM requirements is a key concern for Canadian stakeholders. Comments focused on the proposed split between listed/other than listed entities and the appropriateness of this split in a Canadian context. Of concern to many Canadian stakeholders is the proposal that KAM be required for “listed entities”. Stakeholders support limiting the scope of the KAM requirements (as discussed in paragraph 54 of the Explanatory Memorandum). Reporting KAM is a new concept in most jurisdictions and allowing a period of experience will be important before considering whether it is necessary to expand the requirements to other entities or to address areas for improvement of the standards. However, stakeholders believe that the prescription that KAM be required for audits of financial statements of “listed entities” is problematic in a Canadian context.

1. On the one hand, we believe that requiring auditor’s reports on the financial statements of all listed entities to include KAM is too broad a requirement because of the nature of the Canadian listed entity marketplace. The Canadian market is segmented into the TSX (approximately 1,500 issuers of which nearly 10% have a market capitalization of less than $10 million), and the TSXV (approximately 2,000 issuers of which nearly 75% have a market capitalization of under $10 million, are in the resource sector and in start-up mode). Stakeholders highlight that there are a limited number of companies in Canada of a sufficient size that institutional investors and analysts are actively following them; and it is institutional investors and analysts who are expected to benefit most from the reporting of KAM.

There are significant differences between the needs of users of financial statements in the different market segments in Canada. Participants in the TSXV market indicated that given the nature of many of these entities and their often limited financial resources, requiring KAM may add cost with limited benefits for investors. In addition, investors and other users of the financial statements of many early stage resource and other companies listed on the TSXV place greater emphasis on reserve reports from experts and other reporting on future prospects of the commercial success of the company in making investment decisions. Accordingly, some questioned whether such a requirement would be in the public interest given what they see as the potential adverse consequences for economic development of imposing an additional burden on the auditors, preparers and audit committees of such entities.

2. On the other hand, we believe the requirement for auditors to include KAM in their reports on the financial statements of listed entities would exclude certain Canadian entities that would otherwise be treated similarly to listed entities in terms of regulatory and accounting requirements, such as financial institutions that are not listed entities.

There are a number of other terms in general usage in Canada, whether in securities and other legislation or regulation and accounting standards, such as "reporting issuer", "publicly accountable enterprise", and "market participant". There is no one term that we could recommend that appropriately addresses our concerns.

On the assumption that other jurisdictions may also have similar concerns to those identified in Canada, we believe the application of KAM to all listed entities needs to be reconsidered.

We recommend the IAASB change the scope of application of the KAM requirements to require KAM for audits of the financial statements of listed entities but also provide national standard setters with the flexibility to add to or subtract from the audits covered by the requirement. This might be accomplished by revising paragraph 30 of proposed ISA 700 as follows:

Key Audit Matters

30. For audits of complete sets of general purpose financial statements of a listed entity, other than those listed entities specifically excluded by the national standards setter in a jurisdiction, the auditor shall communicate key audit matters in the auditor's report in accordance with proposed ISA 701….

Application material to support this requirement could be provided along the following lines:

In some jurisdictions, the term "listed entity" may result in the inclusion of entities for which the disclosure of key audit mattes is of limited value to stakeholders. Alternately, there may also be entities that are not listed but for whom disclosure of key audit matters is of significant interest to stakeholders. In order to accommodate these jurisdictional differences, national standard setters are permitted to make specific inclusions or exclusions to the entities for which auditors are required to communicate key audit matters in the auditor's report on their general purpose financial statements without affecting the ability of auditors to state that the audit was conducted in accordance with International Standards on Auditing.

A conforming amendment to paragraph 4 of proposed ISA 701 would also be required.

We believe that this approach will allow national standard setters to define the entities where there will be benefit to having KAM requirements and therefore more consistent KAM reporting.

In the event that the IAASB does not agree with this approach, the AASB believes that another approach should be implemented – develop principles to explain the nature, type and size of entities that the IAASB believes should be included in the reporting requirements rather than using the term "listed entities". The AASB acknowledges that this approach is less desirable given the challenges the IAASB has already faced in developing a global definition of public interest entities.

**2. Achieving consistency in reporting KAM**

In discussing the illustrative examples of KAM included in the ED, comments and concerns from users included the following:

- The illustrative examples demonstrate different approaches that might be taken by the auditor in describing a KAM; users questioned what the implications are, if any, when an auditor uses a different approach for some matters than for others, for example including certain audit procedures and a conclusion in some cases but not in others.
- The level of detail provided in an auditor's report will depend on the judgment of each auditor so there is the prospect that two audit reports on two identical companies may look significantly different based on individual auditor perspectives. Users were of the view that lack of consistency could inappropriately affect conclusions they might reach from reading the report.
- There was concern that auditors will likely tend to report the same matters year after year, for example because (a) the auditing standards define the matter as a significant risk (such as revenue recognition), (b) other auditors in the same industry include the matters, or (c) out of fear of their judgments being questioned in the future.
- Some users were of the view that given the expected cost of the proposals and, in their view, the limited value of the information provided in the examples, perhaps a more effective approach would be for KAM to consist of a list of the matters the auditor considered to be of most significance with a reference to the related disclosures (rather than providing further information about audit procedures or conclusions from the auditor's procedures).

We conclude from this that more guidance is needed to help auditors report on a more consistent, meaningful basis. In acknowledging the views of users, we also note that auditors identified complementary concerns in terms of determining what matters to include as KAM and how to describe such matters in the auditor's report. The AASB also acknowledges the challenges that IAASB faces in addressing these concerns and, in particular, the difficulty in addressing such concerns in advance of practice evolving. We believe, however, that it is desirable to address potential issues in advance of issuing the final standards rather than wait until poor practices emerge and then trying to change behaviour. For this reason, we recommend that the IAASB consider developing new illustrative examples of KAM using the results of the field testing that took place during the exposure period with a view to assisting auditors better apply the proposed standards.

We believe that the results of field testing will assist the IAASB in considering whether the requirements and application material dealing with determining and communicating KAM need to be refined.

In addition, we believe that the IAASB should make changes to the application material in proposed ISA 701 to:

- emphasize that the number of matters to be disclosed is intended to be the matters of most significance in the audit that are ultimately useful to the users of the financial statements so as to limit the number of KAM that are included in the auditor's report;
- prohibit the auditor from providing conclusions or opinions on individual matters as users may take inappropriate assurance on the matters; and
- explain more clearly why one approach to describing a matter may be more relevant than another.

**3. The approach to reporting on going concern**

Although the IAASB has made improvements to the proposed wording of the going concern statements as compared with the ITC, Canadian stakeholders reiterated concerns they identified when responding to the ITC, namely:

- The statements are confusing and open to misinterpretation by less-informed users, particularly with respect to material uncertainties.
- Management is not currently required under IFRSs to make an explicit statement that it has prepared the financial statements on a going concern basis. Some auditors are concerned that this might confuse users as to the respective roles of management and the auditor with respect to going concern.
- Some auditors believe that the requirements will result in additional cost because making explicit statements in the auditor's report will necessitate greater involvement of senior audit staff and quality control reviewers. It is not clear that such additional work will increase audit quality.
- Public sector auditors are concerned that the proposed going concern wording may not be appropriate in a public sector context (for example, the references to "liquidation" or "ceasing trading", which generally do not apply in a public sector context).
- Users and others also questioned whether the proposals would address the underlying objective of the proposals – to address concerns coming out of the financial crisis.

- Most users and auditors commenting on the going concern proposals believe that the current exception reporting model is more effective in highlighting going concern issues for users than the proposed statements on going concern.

Based on the comments received from our stakeholders, we believe that the proposed statements on going concern will be of limited value to users and could also increase the expectation gap rather than reduce it. We also believe that the IAASB should continue to work with accounting standard setters as part of a holistic approach to reporting on going concern.

We recommend that, as outlined in paragraph 84 of the Explanatory Memorandum, the IAASB defer finalization of reporting on going concern as part of that holistic approach. We understand that such an approach would be consistent with the direction being taken by the PCAOB on this type of reporting.

**4. The need for consistency of reporting requirements of the IAASB and the PCAOB**

We believe it is important that auditor's reports on the financial statements of companies that operate in a global environment are consistent so that readers are not confused. In particular, because of the significant number of Canadian companies that are listed in the United States, we are supportive of the IAASB working with the PCAOB to reach solutions that will result in similar auditor's reports. For example, if the PCAOB "critical audit matters" requirements are significantly different from the IAASB KAM requirements it could result in auditors of two similar companies that operate in different markets having significantly different auditor's reports. For this reason, we support the IAASB continuing to work together with other bodies that are taking an interest in auditor reporting in their jurisdictions, such as the European Commission and the PCAOB.

**5. The effective date of the final standards**

We believe that it is preferable to have an effective date that creates a clear delineation between when auditors use the old and new form of report. Given the significance of the proposed changes in the auditor's report, we believe that having different forms of report during the same time period will be extremely confusing to users and serve to create questions about the relative quality of the respective audits which are not justified. An "early adoption is permitted" approach could exacerbate this concern for the same reasons.

We recommend an effective date of periods ending on or after December 14, 2016, with early adoption not permitted, for the following reasons:

- Using a "periods beginning" effective date is problematic because it would result in auditor's reports on financial statement periods shorter than one year (say, January 1,-March 31, 2016) containing auditor's reports under the new standards whereas auditor's reports on financial statements for years ending on the same date (say, the year ending March 31, 2016) would be under the extant ISAs. Using a "periods ending" approach does not affect the fact that auditor's reports for calendar 2016 would be under the new standards (as would be the case if the effective date were for periods beginning on or after December 15, 2015).

- We believe that audit firms will need time to develop their education and internal guidance, and national standard setters will likely need time to develop implementation guidance materials and increase awareness among the preparer and audit committee communities, in advance of the new reports being used. There would likely not be enough time with an earlier effective date.
- Making the new reporting standards effective for 2016 calendar year end audits would also be closely aligned with the timing of the proposed PCAOB reporting standards.

We hope that these comments will be useful to the IAASB in developing its proposed changes to auditor reporting standards. If you have any questions or require additional information, please contact Greg Shields, Director, Auditing and Assurance Standards at (416) 204-3287.

Yours very truly

## Appendix 1: Responses to Questions in the Exposure Draft

### Key Audit Matters

1. **Do users of audited financial statements believe the introduction of a new section in the auditor's report describing the matters the auditor determined to be of most significance in the audit will enhance the usefulness of the auditor's report? If not, why?**

   There were mixed views from users on this question. Most users of audited financial statements indicated that expanding the auditor's report to introduce a new section dealing with Key Audit Matters has the potential to be an improvement over the existing pass/fail model. However, users expressed different views as to how useful this information would likely be given the costs expected to be involved. Some users were concerned that the matters included in the report may be of a boilerplate nature and repetitive from year to year with little in the way of constructive insights that would aid their decision-making. Some users also were concerned that including such matters may be misunderstood, for example, if matters raised in the auditor's report are (a) perceived to constitute a warning to users even when the auditor may be satisfied that the financial statements are not misstated, or (b) perceived as providing additional assurance about the matter when none is intended.

   Many Canadian users, preparers and auditors are satisfied with the current auditor's report. They are not convinced that readers will take the time to read the longer reports, or read all of the report. There is therefore a risk that significant matters the auditor wishes to bring to users' attention will be lost sight of. Under the current reporting model, users are able to quickly detect if the auditor has added paragraphs to the auditor's report that contain additional information of which, in the auditor's judgment, the users need to be aware.

2. **Do respondents believe the proposed requirements and related application material in proposed ISA 701 provide an appropriate framework to guide the auditor's judgment in determining the key audit matters? If not, why? Do respondents believe the application of proposed ISA 701 will result in reasonably consistent auditor judgments about what matters are determined to be the key audit matters? If not, why?**

   Canadian stakeholders are concerned that the requirements and application material in proposed ISA 701 do not provide an appropriate framework to guide the determination of key audit matters on a consistent basis for the following reasons:

   - The matters that the auditor discusses with the audit committee and that the audit committee would consider to be significant to the audit are not necessarily the same as those that are relevant to users of the financial statements because of the audit committee's greater understanding of the entity and what is important in respect of its oversight responsibilities.
   - The matters auditors are required to take into account, as set out in paragraph 8 of ISA 701, are generally matters requiring significant auditor judgment. To the extent that there is variability in auditor judgments about such matters, there is likely to be variability of inclusion of such matters in the auditor's report. Different auditors may

have different thresholds in terms of determining whether a matter is a key audit matter.

- Circumstances that require significant modification of the auditor's approach often result from something that management has done or not done as expected in the audit plan, such as a significant deficiency in internal control. Describing in the auditor's report such a deficiency may constitute disclosing original information about the entity, which some stakeholders believe is not the auditor's role. Paragraph 8(c) of proposed ISA 701 may create an expectation that if the auditor does not include a significant deficiency in internal control as a KAM then there are no significant deficiencies in internal control when, in fact, there is a significant deficiency but it is not considered important enough to be a KAM.
- Paragraph A24 of proposed ISA 701 provides a list of other considerations in determining whether a matter is a key audit matter but is not helpful in explaining how these considerations affect this determination. For example, it is not clear whether the fact that a matter is common to all companies in an industry, increases or decreases the likelihood that it should be reported as a key audit matter. Similarly, it is not clear how the fact that the auditor has obtained a written representation from management about its plans and intentions would be a key audit matter.
- Paragraph 8 and the related application material do not address how the auditor is expected to deal with uncorrected misstatements accumulated during the audit (including the effect of uncorrected misstatements of prior periods on the financial statements). Such matters are, however, required to be communicated with those charged with governance and may require significant auditor attention.

For the above reasons, the AASB believes that there will not be reasonably consistent judgments about what matters are key audit matters. Because of this, we believe there will be a tendency for auditors to include a longer list of matters to address their concern that their judgments may be questioned in the future. Matters will be included in the auditor's report subject to the variable judgments of auditors. Accordingly, for two identical entities with two different auditors, the auditor's report may contain a significantly different list of key audit matters depending on the professional judgment of each auditor. This, in our view, detracts from the information value that could be provided by reporting on key audit matters, will inhibit users from appropriately assessing audit quality and prevent reasonable comparability of reporting.

We recognize that providing a numerical limit for KAM, or some kind of range, suffers from being arbitrary. However, we believe that the guidance in paragraph A7 of proposed ISA 701 should be enhanced to encourage more strongly that the number of matters reported as KAM should be small, for example by emphasizing that the number of matters to be disclosed is intended to be the matters of most significance in the audit that are ultimately useful to the users of the financial statements. We believe that if the number of KAM can be limited it may help to address to a certain extent our concerns about potential boilerplate disclosures and lack of comparability of auditor's reports.

We recommend that the IAASB evaluate the results of field testing that has taken place during the exposure period as they may shed light on the extent to which our concerns are borne out in practice and whether there is a need to specify a limit on the number of KAM in the auditor's report in the final standard.

3. **Do respondents believe the proposed requirements and related application material in proposed ISA 701 provide sufficient direction to enable the auditor to appropriately consider what should be included in the descriptions of individual key audit matters to be communicated in the auditor's report? If not, why?**

No. From a user perspective, users who read the IAASB's illustrative report in the ED were struck by the diversity in the manner by which key audit matters might be reported. This led them to question (a) what the different approaches for describing key audit matters imply about the auditor's overall assessment of a key audit matter, (b) if two auditors describe the same key audit matter in different ways, whether this implies the auditors have applied a different work effort to the matter and (c) whether the different descriptions imply different levels of audit quality. They were therefore concerned that the underlying requirements and application material permit different possible approaches that will potentially result in inappropriately inconsistent descriptions of key audit matters.

From the auditor perspective, auditors also expressed concern about how they are expected to describe key audit matters. They recognize that there is significant flexibility provided on how this should be done which allows for innovation and professional judgment. However, many auditors feared that their judgments will be questioned in the future on why they described a matter in a particular way and why this description differed from the description used by the same auditor or other auditors in similar circumstances. This may drive practice towards less insightful, standardized wording.

The application material in paragraph A41 of proposed ISA 701 indicates that an auditor might provide a conclusion in relation to a matter. It also suggests that there is a need for the auditor to avoid giving the impression that the discussion about KAM in the auditor's report is intended to convey an opinion on individual matters. In our view, the auditor cannot control what assurance a user takes from a conclusion on a matter. In particular, we believe that the illustrative matters in the ED that include wording such as "we concluded the use of such a model was appropriate" and "based on the audit procedures performed, we did not find evidence of" could be misinterpreted as providing an opinion on the respective matters. Therefore, we believe that the IAASB should make it clear that the description of KAM should not include a conclusion on the matter as readers may take assurance from such conclusion that is not warranted.

Paragraph A37 of proposed ISA 701 provides guidance to the auditor with respect to providing original information about the entity. We recognize that there may be circumstances when the auditor may need to include such information in order to appropriately describe a KAM. Accordingly, we do not support a prohibition on the auditor providing original information about the entity if it is critical to the auditor's description of a KAM. However, paragraph A37 makes reference to the possibility that in some circumstances the disclosing of original information about the entity may be inappropriate. We note that paragraph A35 of proposed ISA 701 also refers to circumstances that may restrict the ability of the auditor to communicate KAM. It was not clear whether the circumstances in paragraph A35 are the ones considered in paragraph A37 where it would be inappropriate for the auditor to disclose original information about the entity or whether the IAASB is contemplating other circumstances not addressed in paragraph A35. We believe that this needs to be clarified.

4. **Which of the illustrative examples of key audit matters, or features of them, did respondents find most useful or informative, and why? Which examples, or features of them, were seen as less useful or lacking in informational value, and why? Respondents are invited to provide any additional feedback on the usefulness of the individual examples of key audit matters, including areas for improvement.**

Users did not find any of the illustrative examples particularly useful. They were viewed as being superficial and lacking in true insights. Many users questioned the value of including matters that, at the end of the day, did not appear to result in the identification of concerns or a misstatement of the financial statements. They believed that some matters may be misinterpreted as being a warning about potential problems when in fact that is not the case. The descriptions of audit procedures were generic in nature and likely not going to be understood by average users, whether in terms of their adequacy in addressing the related risk or the implications for quality of the audit. Users were confused as to why certain examples provide more detail (including conclusions on the matter) than others.

Specific comments from users included:

- Goodwill. This example provides factual information which is likely duplicative of disclosures in the financial statements but contains, in the view of users, no specific insights. It was considered to have limited informational value.
- Valuation of financial instruments. The discussion about valuation models is not in sufficient detail for sophisticated users who would want more information about how the model addressed specific accounting challenges of valuation of financial instruments. Preparers indicated that wording such as "We challenged management's rationale" casts negative aspersions about management which could be problematic.
- Revenue recognition. Users presume that because the fraud standard requires the auditor to assume that there is a significant risk relating to revenue recognition that revenue recognition will appear in most auditor's reports. They were not convinced that this would be useful. The example provides no indication of whether there was a problem. The fact that fraud is specifically mentioned in the matter even when none appears to have been detected may be misinterpreted as providing a warning to users in this respect.

- It was not clear whether, and to what extent, the illustrative examples included original information about the entity. It would have been helpful to know this when assessing the value of the information that the auditor is providing on a matter.

In our view, the IAASB should work to improve the illustrative examples by explaining more clearly why one approach to describing the matter may be more relevant than another. One approach to improving the examples may be by selecting from specific reports developed during the field testing phase by audit firms.

5. **Do respondents agree with the approach the IAASB has taken in relation to key audit matters for entities for which the auditor is not required to provide such communication – that is, key audit matters may be communicated on a voluntary basis but, if so, proposed ISA 701 must be followed and the auditor must signal this intent in the audit engagement letter? If not, why? Are there other practical considerations that may affect the auditor's ability to decide to communicate key audit matters when not otherwise required to do so that should be acknowledged by the IAASB in the proposed standards?**

The applicability of the proposed KAM requirements is a key concern for Canadian stakeholders. Comments focused on the proposed split between listed/other than listed entities and the appropriateness of this split in a Canadian context. Of concern to many Canadian stakeholders is the proposal that KAM be required for "listed entities". Stakeholders support limiting the scope of the KAM requirements (as discussed in paragraph 54 of the Explanatory Memorandum). Reporting KAM is a new concept in most jurisdictions and allowing a period of experience will be important before considering whether it is necessary to expand the requirements to other entities or to address areas for improvement of the standards. However, stakeholders believe that the prescription that KAM be required for audits of financial statements of "listed entities" is problematic in a Canadian context.

(a) On the one hand, we believe that requiring all auditors' reports on the financial statements of listed entities to include KAM is too broad a requirement because of the nature of the Canadian marketplace. The Canadian market is segmented into the TSX (approximately 1,500 issuers of which nearly 10% have a market capitalization of less than $10 million), and the TSXV (approximately 2,000 issuers of which nearly 75% have a market capitalization of under $10 million, are in the resource sector and in start-up mode).

Stakeholders highlight that there are a limited number of companies in Canada of a sufficient size that institutional investors and analysts are actively following them; and it is institutional investors and analysts who are expected to benefit most from the reporting of KAM.

There are significant differences between the needs of users of financial statements in the different market segments in Canada. Participants in the TSXV market indicated that given the nature of many of these entities and their often limited financial resources, requiring KAM may add cost with limited benefits for investors. In addition, investors and other users of the financial statements of many early stage resource and other companies listed on the TSXV place greater emphasis on reserve reports from experts and other reporting on future prospects of the commercial success of the company in making investment decisions. Accordingly, some questioned whether such a requirement would be in the public interest given what they see as the potential adverse consequences for economic development of imposing an additional burden on the auditors, preparers and audit committees of such entities.

(b) On the other hand, we believe the requirement for auditors to include KAM in their reports on the financial statements of listed entities would exclude certain Canadian entities that would otherwise be treated similarly to listed entities in terms of regulatory and accounting requirements, such as financial institutions that are not listed entities.

There are a number of other terms in general usage in Canada, whether in securities and other legislation or regulation and accounting standards, such as “reporting issuer”, “publicly accountable enterprise”, and “market participant”. There is no one term that we could recommend that appropriately addresses our concerns.

On the assumption that other jurisdictions may also have similar concerns to those identified in Canada, we believe the application of KAM to all listed entities needs to be reconsidered.

We recommend the IAASB change the scope of application of the KAM requirements to require KAM for audits of the financial statements of listed entities but also include criteria under which national standard setters have the flexibility to add to or subtract from the entities covered by the requirement.  This might be accomplished by revising paragraph 30 of proposed ISA 700 as follows:

Key Audit Matters

31. For audits of complete sets of general purpose financial statements of a listed entity, other than those listed entities specifically excluded by the national standards setter in a jurisdiction, the auditor shall communicate key audit matters in the auditor’s report in accordance with proposed ISA 701….

Application material to support this requirement could be provided along the following lines:

In some jurisdictions, the term “listed entity” may result in the inclusion of entities for which the disclosure of key audit mattes is of limited value to stakeholders. Alternately, there may also be entities that are not listed but for whom disclosure of key audit matters is of significant interest to stakeholders. In order to accommodate these jurisdictional differences, national standard setters are permitted to make specific inclusions or exclusions to the entities for which auditors are required to communicate key audit matters in the auditor's report on their general purpose financial statements without affecting the ability of auditors to state that the audit was conducted in accordance with International Standards on Auditing.

A conforming amendment to paragraph 4 of proposed ISA 701 would also be required.

We believe that this approach will allow national standard setters to define the entities where there will be benefit to having KAM requirements and therefore more consistent KAM reporting. Further, if the definition of listed entities included in the final standard is more narrowly defined, for example by limiting the requirements only to larger listed entities, however defined, this would more likely result in national standard setters adding to the list of entities to which KAM requirements apply, rather than subtracting from this list.

In the event that the IAASB does not agree with this approach, the AASB believes that another approach should be implemented – develop principles to explain the nature, type and size of entities that the IAASB believes should be included in the reporting requirements rather than using any specific term such as "listed entities" The AASB acknowledges that this approach is less desirable given the challenges the IAASB has already faced in developing a global definition of public interest entities.

Further, some Canadian stakeholders expressed concern with the recognition in paragraph 30 of proposed ISA 700 (Revised) that law or regulation may impose requirements for auditors to communicate key audit matters. They acknowledge that law or regulation may impose requirements on auditors. However, stakeholders expressed the view that the incidences when this will be necessary will be greater if the IAASB does not clearly articulate when it is appropriate for KAM to be included in the auditor's report.

The AASB agrees that when an auditor decides to communicate key audit matters on a voluntary basis the auditor should follow proposed ISA 701 and indicate this intent in the engagement letter. We believe it is reasonable that management and those charged with governance are made aware when the auditor plans to report in accordance with proposed ISA 701. We are not aware of any practical considerations that need to be acknowledged in the proposed standards.

6. **Do respondents believe it is appropriate for proposed ISA 701 to allow for the possibility that the auditor may determine that there are no key audit matters to communicate?**

   **(a) If so, do respondents agree with the proposed requirements addressing such circumstances?**

   **(b) If not, do respondents believe that auditors would be required to always communicate at least one key audit matter, or are there other actions that could be taken to ensure users of the financial statements are aware of the auditor's responsibilities under proposed ISA 701 and the determination, in the auditor's professional judgment, that there are no key audit matters to communicate?**

Yes. The AASB agrees that it is appropriate for proposed ISA 701 to allow for the possibility that the auditor may determine that there are no key audit matters to communicate. However, there is a disconnect between this principle and the objective of the auditor to report matters of most significance. The proposed wording of the auditor's report in this circumstance ("this section of the auditor's report is intended to describe the matters…of most significance…and the auditor has determined that there are no matters to report") does not make sense.

We suggest the wording be changed to refer to "key audit matters" rather than matters of most significance. This would avoid the potential disconnect.

We do not believe that the requirements in paragraph 13(a) and (b) proposed ISA 701 are necessary. Paragraph 20(b) of ISA 220 already requires the engagement quality control reviewer to review the financial statements and the auditor's report. Further, a key discussion at the end of the audit with the audit committee is the form and content of the auditor's report. Adding these requirements in paragraph 13 is therefore duplicative and seems to imply that the auditor's initial discussion and communication would not be effective.

Paragraph A47 of proposed ISA 701 indicates that it will be "rare" that the auditor of a listed entity would not determine at least one KAM. Given the significant number of listed entities in the Canadian TSXV that are in the early stages of development, we do not believe that this will necessarily be a rare circumstance. We believe that reference to "rare" should be removed from this paragraph. Further, we believe it would also be helpful to expand the application material to provide more guidance as to other circumstances when no key audit matters may be identified.

We do not agree that auditors should be required to always communicate at least one key audit matter as this would result in perfunctory compliance in those situations where no key audit matters in fact exist.

7. **Do respondents agree that, when comparative financial information is presented, the auditor's communication of key audit matters should be limited to the audit of the most recent financial period in light of the practical challenges explained in paragraph 65? If not, how do respondents suggest these issues could be effectively addressed?**

Yes. We agree that the auditor's communication of key audit matters should be limited to the audit of the financial statements of the current period. However, for clarity, we believe that the application material in paragraph A8 of proposed ISA 701 should make it clear that a key audit matter in the audit of the financial statements of the current period may relate to the comparative information, for example determining whether the retroactive application of a change in accounting policy in the current period is appropriate.

8. **Do respondents agree with the IAASB's decision to retain the concepts of Emphasis of Matter paragraphs and Other Matter paragraphs, even when the auditor is required to communicate key audit matters, and how such concepts have been differentiated in the Proposed ISAs? If not, why?**

Yes. We agree with the IAASB's decision to retain the concepts of Emphasis of Matter paragraphs and Other Matter paragraphs, even when the auditor is required to communicate key audit matters. We also agree with how such concepts have been differentiated in the proposed ISAs except that we believe that when a key audit matters section is presented in the auditor's report the heading for any Emphasis of Matter paragraphs should be required to include further context to clearly differentiate it from key audit matters.

We recommend that the second bullet in paragraph A15 of proposed ISA 706 (Revised) be added as a requirement in paragraph 9 of that ISA.

**Going Concern**

9. **Do respondents agree with the statements included in the illustrative auditor's reports relating to:**

   **(a) The appropriateness of management's use of the going concern basis of accounting in the preparation of the entity's financial statements?**

   **(b) Whether the auditor has identified a material uncertainty that may cast significant doubt on the entity's ability to continue as a going concern, including when such an uncertainty has been identified (see the Appendix of proposed ISA 570 (Revised))?**

   **In this regard, the IAASB is particularly interested in views as to whether such reporting, and the potential implications thereof, will be misunderstood or misinterpreted by users of the financial statements.**

No. The AASB does not agree with the statements included in the illustrative auditor's reports relating to going concern.

Although the IAASB has made improvements to the proposed wording of the going concern statements as compared with the ITC, Canadian stakeholders reiterated concerns they identified when responding to the ITC, namely:

- The statements are confusing and open to misinterpretation by less-informed users, particularly with respect to material uncertainties.
- Management is not currently required under IFRSs to make an explicit statement that it has prepared the financial statements on a going concern basis. Some auditors are concerned that this might confuse users as to the respective roles of management and the auditor with respect to going concern.
- Some auditors believe that the requirements will result in additional cost because making explicit statements in the auditor's report will necessitate the involvement of senior audit staff and quality control reviewers. It is not clear that such additional work will increase audit quality.
- Public sector auditors are concerned that the proposed going concern wording may not be appropriate in a public sector context (for example, the references to "liquidation" or "ceasing trading", which do not generally arise in a public sector context).

- Users and others also questioned whether the proposals would address the underlying objective of the proposals – to address concerns coming out of the financial crisis.
- Most users and auditors commenting on the going concern proposals believe that the current exception reporting model is more effective in highlighting going concern issues for users than the proposed statements on going concern.

Based on the comments received from our stakeholders, we believe that the proposed statements on going concern will be of limited value to users and could also increase the expectation gap rather than reduce it. We also believe that the IAASB should continue to work with accounting standard setters as part of a holistic approach to reporting on going concern.

We recommend that, as outlined in paragraph 84 of the Explanatory Memorandum, the IAASB defer finalization of reporting on going concern as part of that holistic approach. We understand that such an approach would be consistent with the direction being taken by the PCAOB on this type of reporting.

10. **What are respondents' views as to whether an explicit statement that neither management nor the auditor can guarantee the entity's ability to continue as a going concern should be required in the auditor's report whether or not a material uncertainty has been identified?**

We do not support the inclusion in the auditor's report of explicit statements about going concern. In the event that such statements are included in the auditor's report, we believe that when a material uncertainty has been identified the addition of the statement that neither management nor the auditor can guarantee the entity's ability to continue as a going concern is redundant and duplicative.

**Compliance with Independence and Other Relevant Ethical Requirements**

11. **What are respondents' views as to the benefits and practical implications of the proposed requirement to disclose the source(s) of independence and other relevant ethical requirements in the auditor's report?**

Users were of the view that this disclosure was marginally beneficial although most are satisfied with the extant requirement for the auditor's report to explain that the auditor is required to comply with relevant ethical requirements.

Auditors identified some practical implementation concerns. In Canada, for example, there are some differences in ethical requirements depending on the province in which the auditor is licensed. For Canadian audits of entities that involve auditors from different provinces, explaining the source of the ethical requirements maybe somewhat complex. Auditors also noted that this concern would be even greater for international audits. Nevertheless, we believe that these practical implementation concerns can be overcome.

**Disclosure of the Name of the Engagement Partner**

12. **What are respondents' views as to the proposal to require disclosure of the name of the engagement partner for audits of financial statements of listed entities and include a "harm's way exemption"? What difficulties, if any, may arise at the national level as a result of this requirement?**

We are not convinced that disclosing the engagement partner name would have positive behavioral implications for auditors. We are concerned that users might reach inappropriate conclusions with respect to the performance and capabilities of engagement partners on larger audits.

Auditors of Canadian entities that are registered with the US Securities and Exchange Commission indicated that disclosure of the name of the engagement partner may increase the personal liability of Canadian engagement partners in the US when they are named in documents filed with the SEC. Because there may be different legal consequences in different jurisdictions, the AASB believes that national standard setters should be provided the flexibility to decide whether the requirement to disclose the name of the engagement partner should apply in its jurisdiction.

We support there being a harm's way exemption when disclosure is reasonably expected to lead to a significant security threat to the individual.

We do not see the need for application paragraph A45 of proposed ISA 700 (Revised), which indicates that law or regulation may require that the name of the engagement partner responsible for audits of financial statements other than listed entities be included in the auditor's report. While it is a true statement, we do not believe it adds any value.

In Canada and possibly in other jurisdictions, reference in the auditor's report to the engagement partner's licence number and the location of a public register identifying the engagement partner, is sufficient to enable those who wish to do so identify the name of the engagement partner.

We recommend that proposed paragraph 46(k) be deleted. In the event that this paragraph is retained in the final standard we suggest the following:

(a) the requirement be amended to require that the engagement partner be able to be identified in the auditor's report (rather than specifying that the engagement partner's name be included in the auditor's report);

(b) national standard setters be given the flexibility to decide whether this requirement should apply in its jurisdiction; and

(c) paragraph A45 be deleted.

**Other Improvements to Proposed ISA 700 (Revised)**

13. **What are respondents' views as to the appropriateness of the changes to ISA 700 described in paragraph 102 and how the proposed requirements have been articulated?**

We support the improved description of the responsibilities of the auditor and key features of the audit in paragraphs 35-38 of proposed ISA 700 (Revised).

We agree with the requirement in paragraph 39 of proposed ISA 700 (Revised) that the description of the auditor's responsibilities shall be included within the body of the auditor's report or in an Appendix to the report. We do not agree with paragraph 40 which would permit location of such description outside the report because the description is, in our view, a key element of the auditor's report and users are less likely to read material that is located outside the auditor's report rather than within the report itself.

We recommend that paragraph 40 be deleted. In the event that paragraph 40 is retained, we believe that paragraph 39 needs to be revised. This is because paragraph 39 specifically requires the description of the auditor's responsibilities to be included in the auditor's report. As currently worded, if law or regulation permitted the auditor to refer to a website under paragraph 40, the auditor would still have to comply with paragraph 39. Accordingly, paragraph 39 needs to contain the caveat "Except in the circumstances described in paragraph 40…"

We support the requirement to describe the responsibilities of those responsible for overseeing the financial reporting process in paragraph 33 and the related application material in proposed ISA 700 (Revised).

We support the proposals dealing with other reporting responsibilities.

14. **What are respondents' views on the proposal not to mandate the ordering of sections of the auditor's report in any way, even when law, regulation or national auditing standards do not require a specific order? Do respondents believe the level of prescription within proposed ISA 700 (Revised) (both within the requirements in paragraphs 20–45 and the circumstances addressed in paragraphs 46–48 of the proposed ISA) reflects an appropriate balance between consistency in auditor reporting globally when reference is made to the ISAs in the auditor's report, and the need for flexibility to accommodate national reporting circumstances?**

The AASB does not support the proposal not to mandate the ordering of sections of the auditor's report in any way, for the following reasons:

- We do not find the IAASB's reasons for not mandating the ordering of the auditor's report to be compelling:
  - Paragraph 104 of the Explanatory Memorandum refers to "cultural reasons". We do not believe that cultural reasons justify avoidance of presenting the auditor's report in a manner that enhances audit quality. In our view, this justification for not mandating the ordering of the report would set a dangerous precedent for future standard setting activities.
  - Paragraph 105 of the Explanatory Memorandum notes that the proposal to not mandate ordering of the report is largely consistent with extant ISAs 700, 705 and 706. This may well be the case, however under the extant ISAs the auditor's report is generally six paragraphs whereas under the proposed ISAs the auditor's report could be several pages in length. We believe that these significantly different circumstances justify serious consideration of the need to mandate ordering.

- We believe there are potentially negative consequences of not mandating the ordering of the report, which may include:
  - It will be more difficult for users to compare and contrast different auditor's reports;
  - It creates the potential for disagreements between management and the auditor about the placement in the report of important matters which may not be in the best interest of users of the report;
  - It may create confusion among users about the relative significance of matters that are presented in different locations in the report; and
  - It inevitably will increase inconsistency in global reporting.

We recommend that the ordering of the report be mandated in the final standard.

We support the level of prescription of the requirements in paragraphs 20-45 of proposed ISA 700 (Revised). We also support the requirements for specific headings in the auditor's report to ensure the required reporting elements can be recognized in all reports.

With respect to paragraphs 46-48 of proposed ISA 700 (Revised) we have the following comments, which we believe would enhance the consistency and comparability of auditor reporting in the public interest while permitting an appropriate degree of flexibility:

- The paragraphs should reflect the recommendations we have made in our other responses to questions in the ED to the extent that they are relevant. For example, consistent with our views with respect to ordering of sections in the auditor's report, we believe that ordering should also be mandated in paragraphs 46-48 (unless a specific ordering is required under law or regulation).
- Paragraph 46(a) should be identical to paragraph 21 to clearly indicate that the report is the report of an independent auditor. Permitting the use of other titles could result in titles that users find confusing and/or do not appropriately reflect the auditor's independence role.
- Paragraph 46(c) should be more specific as to the form of opinion expressed by the auditor by incorporating the requirements in paragraph 24. The auditor's opinion is probably the key piece of information that users refer to when reading the report. Consistency of the wording of the opinion is critical in clearly articulating to users the auditor's conclusion from the audit.
- Paragraph 46(f) should be identical to paragraph 29. We find the words "addresses the reporting requirements in" as being open to significant interpretation. We are not supportive of including statements on going concern in the auditor's report. However, if such statements are included, we believe that permitting different wording to be used would be confusing to users, particularly when the financial statements are prepared in accordance the same international financial reporting frameworks. If paragraph 46(f) is not revised as we suggest, we recommend that the words "and is not inconsistent with" be added after "requirements".
- Paragraph 46(h) should be identical to paragraph 31. Again, we believe that permitting different wording to be used would be confusing to users. If paragraph 46(h) is not

revised as we suggest, we recommend that the words “and is not inconsistent with” be added after “requirements”.

**Appendix 2: Summary of AASB Consultations with Canadian Stakeholders re IAASB Exposure Draft**

- Twelve written responses were received including from auditors of large, medium and small firms and public sector auditors, a prudential regulator and a bank.
- Roundtable discussions in various provinces throughout Canada (Nova Scotia, Quebec, Ontario, Manitoba, Alberta and British Columbia). These were organized by the local provincial institutes of chartered professional accountants. The institutes were asked to seek participants not just of auditors but also of preparers, management, directors/audit committees and users. There were over 100 participants.
- Roundtable discussions with various CPA Canada groups. These provided access to directors, preparers and investors, as well as auditors. There were approximately 40 participants in these groups.
- A conference call with the chief accountants committee of Canadian securities regulators.
- Staff also had a discussion with various members of the national professional practices groups of public sector auditor general staff across Canada.
- A webinar was held to inform participants about the ED. There were approximately 1,000 live participants and over 2,000 registrants who could assess the webcast either live or in archive.

**RE: Proposed Auditing Standards – Rulemaking Docket Matter No. 034**

Members of the Board:

Autodesk, Inc. ("Autodesk") appreciates the opportunity to comment on *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (together the "Proposed Standards").

Autodesk is a world leading design software and services company, offering customers productive business solutions through powerful technology products and services. We serve customers in the architecture, engineering and construction; manufacturing; and digital media, consumer and entertainment industries. Our 7,300 employees work with customers in over 120 countries worldwide.

***The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion***

We support providing investors and other users of financial statements with timely, meaningful, and transparent information to better understand and assess the performance of the company. Similarly, we support the PCAOB's efforts to enhance auditor communications and information available to users of financial statements. However, we believe aspects of the Proposed Standards are duplicative of existing disclosure requirements, will unnecessarily confuse or detract the reader of an unqualified audit opinion, will be costly and time consuming for companies, and may not necessarily result in useful information to investors or other users of financial statements. We note the areas of particular concern below.

- Companies are already required to disclose areas of critical accounting based on management's assumptions, judgment and estimates within Management's Discussion and Analysis of Financial Condition and Results of Operations ("MD&A") as "critical accounting policies and estimates". These same critical accounting policies would likely be those considered for classification as critical audit matters ("CAM") under the Proposed Standards. We believe the disclosures regarding critical accounting policies, as required by the Securities and Exchange Commission ("SEC"), are more meaningful to investors than the auditor's assessment of the complexity of these areas or the degree of difficulty the auditor encountered in performing their audit procedures.

AUTODESK.

- In addition to the critical accounting policies and estimates disclosure, the SEC MD&A disclosure standards require disclosure of known events, trends and uncertainties that are reasonably likely to have a material impact on a company's financial position and results of operations. The PCAOB should not require auditors to furnish original information that is not already required by the company. Requiring disclosure based on standards that would not meet SEC disclosure requirements for companies could be misleading to investors.

- Investors may misinterpret the identification of a CAM as indicative of an issue with respect to the quality of the financial statements or as a qualification of the auditor's report. Even though it is proposed such CAM disclosures be accompanied by an auditor's report that states that the opinion on the financial statements is not modified with respect to any of the described critical audit matters, we believe this approach may lead to more investor questions than answers.

- Inclusion of the audit procedures performed, including resolution of the critical audit matters, in the auditor's report will not enhance an investor's understanding of the financial statements. In order for the auditor to convey the context around such matters, it may be necessary to include expansive details that could overwhelm the auditor's report, again detracting from the auditor's overall opinion. Additionally, information about the results of audit procedures may lead investors to believe the auditor is expressing a "piecemeal" opinion on individual matters or accounts in the financial statements.

- Inclusion of the audit procedures performed, including resolution of the critical audit matters, in the auditor's report potentially would include disclosure of consultations with an auditor's national office or other third parties. This could lead to a chilling effect on issuers seeking additional clarification and guidance, which is an important practice for companies navigating complex accounting literature. Additionally, such disclosure could be given undue weight in the context of a matter that has been resolved to the satisfaction of a company and its auditors.

- In the past several years, the disclosure requirements have exponentially increased with the result actually being less transparency to the users of financial statements. Adding further disclosures that would be largely similar but with different terminology - critical accounting policy versus critical audit matter, would undermine the FASB's efforts to reduce the complexity in financial statements and associated disclosures.

We support including a statement affirming the auditor's independence. We do not believe the tenure of the auditor has a bearing on the quality of the independent auditor's work or the adequacy of their opinion and when presented in this manner, it may suggest otherwise. However, we would not oppose this requirement. Furthermore, while we do not believe it will have an impact on the quality of the independent auditor's work, we are not opposed to the addition of the auditor's signature.

***The Auditor's Responsibilities Regarding Other Information In Certain Documents Containing Audited Financial Statements and the Related Auditor's Report***

We support including a description in the auditor's report that clarifies the auditor's responsibility for other information in documents containing financial statements. However, we do not support changing the auditor's responsibility to "evaluate" such information versus the current requirement to "read and consider" other information. We also do not support an expansion of audit procedures to include other information beyond MD&A and other schedules containing financial information that is derived from or that supports the financial statements. Finally, we do not support an extension of audit procedures to other information incorporated by reference. Such an extension would cause the auditor to review items not relevant to the financial statements, such as bylaws, proxy statements, and other documents where the costs associated with such additional procedures would not justify the benefit received.

In conclusion, we support improving communication to investors, while maintaining the scope and nature of an audit and the related responsibilities of auditors. We do not support making changes to the audit report that would require auditors to make subjective determinations or repeat information provided elsewhere in the financial statements and related disclosures. We believe the current roles and responsibilities of management, the audit committee and the auditors are the fundamental basis for the financial reporting infrastructure and certain of the proposed alternatives in the proposed auditing standards would negatively impact this structure.

We appreciate the opportunity to share our viewpoints on the Proposed Standards. If the Public Company Accounting Oversight Board has any questions regarding our comments, please contact me at (415) 507-5000.

Sincerely,

Mark J. Hawkins
Executive Vice President and Chief Financial Officer

**Re: PCAOB Release No. 2013-005**
**PCAOB Rulemaking Docket Matter No. 034**

We appreciate the opportunity to comment on the Public Company Accounting Oversight Board's ("the Board") Release No. 2013-005, *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards.*

We have an interest in increasing the effectiveness and efficiency of the audit process and are supportive of the Board's efforts to improve the audit process and enhance transparency to users of financial statements. With respect to the proposed requirement for the communication of critical audit matters, however, we do not believe that the audit process will be improved if this proposed requirement is approved.

We believe it is management's responsibility to communicate key facts about the entity and its related financial statements, including the critical accounting policies and estimates used that affect the reported amounts of assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. We believe it is the auditor's responsibility to separately opine on the facts as communicated by management. Accordingly, we believe an independent auditor commentary would be inconsistent with these fundamental principles.

Furthermore, instituting a requirement that auditors communicate critical audit matters could impede the work of both the auditors and management in the following ways:

- The effort and time that would be needed to determine, evaluate, and document critical audit matters could potentially significantly detract from the auditor's primary attestation responsibilities over the financial statements taken as a whole.

- Management and the Audit Committee would potentially need to devote a significant amount of time and resources to discuss and evaluate the critical audit matters as identified by the auditors, which could adversely impact the quality of the financial statements in the final stages of their completion.

We believe the roles of the auditor and management should not be intertwined. Management is responsible for its accounting policies, internal controls, and financial reporting and is responsible for providing transparent information and disclosure to the auditors so that they may opine on the financial statements taken as a whole. The auditor should not be the source of disclosed information that is not required to be disclosed by management. We believe a financial statement user could be confused by the need to interpret information presented by management as well as the critical audit matters presented by the auditor.

We believe a better approach to providing investors and other financial statement users with more meaningful information in forming an opinion on the financial statements taken as a whole would be to increase the auditors' attestation responsibilities surrounding critical accounting estimates. Management is responsible for the transparent disclosure of the company's critical accounting estimates in the MD&A section of its financial statements. The financial reporting process would be best served by having the auditor agree or disagree with management's determination of critical accounting estimates, the assumptions used in making those estimates, and the reasonableness of those assumptions.

We believe that this approach would result in maintaining the efficiency and effectiveness of both the audit process and management's financial reporting efforts.

We appreciate the opportunity to comment on the Board's proposal. If you have any questions, please contact me at 954-769-3145.

Sincerely,

Michael J. Stephan

Actuary

18 November 2013

- **Release No. 2013-005**
- **PCAOB Rulemaking Docket Matter No. 034**
- **Proposed Auditing Standards - The Auditor's Report on an Audit of Financial Statements When The Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and The Related Auditor's Report; and Related Amendments to PCAOB Standards**

Dear Sir.

Thank you for giving us the opportunity to comment on your Proposed Auditing Standards - The Auditor's Report on an Audit of Financial Statements When The Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and The Related Auditor's Report; and Related Amendments to PCAOB Standards. I will comment on your proposed auditor reporting standard that would require the auditor to communicate in the auditor's report "critical audit matters" that would be specific to each audit. I have already commented on similar issues at length;[1] for completeness I would suggest that you could also consider those comments in addition to these presented here.

I agree that critical audit matters are those that: 1) involved the most difficult, subjective or complex auditor judgments; 2) posed the most difficulty to the auditor in obtaining sufficient appropriate audit evidence; or 3) posed the most difficulty to the auditor in forming an opinion on the financial statements. By requiring the auditor to communicate such critical audit matters, I believe that this proposed auditor reporting standard will enhance the usefulness of

[1] See Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards, PCAOB, June 2011, and Reporting on Audited Financial Statements: Proposed New and Revised International Standards on Auditing (ISAs), IAASB, July 2013, and my comment letters thereon.

the auditor's report by improving audit transparency and increasing understanding of the audit process and its risks, reliances and limitations. However, it is important that the proposals should not mismanage expectations concerning the role of the auditor within the business and its financial reporting, and we must clearly delineate the auditor's role and responsibilities in this context.

I would also add that while I am happy with certain set language for introductory or explanatory purposes,[2] I would promote the use of specific language, tailored to the specific audit, which should be flexible enough to capture the complexities and circumstances, whilst nor becoming boilerplate over time.

Yours faithfully

C.R.B.

Chris Barnard

Re: PCAOB Rulemaking Docket Matter No. 034; Proposed Rule Under Release# 2013-005; Release Date August 13, 2013

I appreciate the opportunity to respond to the request for comments from the Public Company Accounting Oversight Board (the "PCAOB" or the "Board") on its proposed new auditing standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*. I am choosing not to respond to the other proposed auditing standard contained within the same Release (Release # 2013-005), *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report,* in this comment letter, but may submit a separate comment letter focusing on this proposed new standard before the December 2013 deadline.

My comments on the Concept Release today address the following areas:

*I. Overall Comments*

*II. Recommendations for Changes to the Auditor's Report*

*III. The Most Important Needed Change to the Auditor's Report*

*IV. Conclusion Concerning the Current Proposed Standard*

## I. Overall Comments

As a CPA dedicated to the profession and committed to our responsibility to the public for over 10 years now, I have struggled with the mindset of many within the profession who do not truly apply the principals behind our accounting and auditing standards, especially transparency, due diligence, and professional skepticism; and their impact on the audit process, including risk assessment and the creation of the audit report. I have seen the work of Deloitte with "except for" unqualified opinions, qualified opinions, and explanatory paragraphs within unqualified opinion reports, and have a very positive perception, as a result of this and my research of this firm, of the overall leadership of this firm, and its dedication to the profession, including its understood responsibility to the public. Unfortunately, I cannot assert the same perception for another Big 4 firm, and other firms, currently registered with the PCAOB and conducting audits of SEC registrants, and it would also be impractical to assume **all** Deloitte partners have never, and will never, fall prey to our human nature to apply a biased perception and allow the current conflict of interest that exist between an audit firm and its audit client to affect their objectivity in any and all circumstances, especially when personal and/or business financial interest are at stake, that is, loss of the client to bankruptcy for instances, or another firm. It is because of these other firms that I am most excited to see the PCAOB work toward improving the value of the audit report, by requiring specific findings be included to assist public investors, and I truly hope the AICPA follows suit in promoting the adoption of a similar standard for audit firms of non-publicly held entities, and move away from the existing standardized audit reports to the benefit of the public, financial institutions, and venture capitalist, which our profession has a responsibility to protect in providing a quality audit and opinion on relied upon financial statements.

Although not directly related to the above referenced proposed standard, I would be remiss, if I did not also state that I hope the next steps of the PCAOB and the SEC, in its efforts to fully implement the provisions of the Sarbanes Oxley Act as Congress expressly meant for the Act to be applied, is to remove the current conflict of interest between the audit firm and the client SEC registrant, which is a true independence issue, and the main problem leading to the lack of transparency, lack of due diligence and prudence, and lack of professional skepticism, and other issues, resulting in low quality audits and an audit report of little value. Although audit firm rotation, and full engagement team rotation, may address some of these issues to some degree, until the conflict of interest is removed of the SEC registrants paying an audit firm directly to perform the audit and render an opinion on the SEC registrant's financial statements, the risk is still too high such conflict of interest will impact the engagement team and partner's perspective, resulting in lack of transparency, lack of due diligence, lack of professional skepticism, etc. and lead to public harm, possibly the equivalent of the Enron scandal or greater as some point in the future, given the number of registered firms with the PCAOB and my known personal experience with more than one of these firms, one of which is a Big 4 firm.

Although I have grown in my professional writing since I wrote the attached paper addressing this conflict of interest (i.e. it is raw and lacks diplomacy as it was written with emotion, demonstrating my frustration with certain ones within my profession, and with the government's, and governing bodies', past and present failures to promptly and directly address the conflict of interest and other objectivity issues), the attached paper is a truly honest assessment of the problems that existed, and still exist, within our profession from someone with first-hand knowledge of what goes on behind the scenes, for which the PCAOB inspectors most likely will not become aware of in their "after the fact" review of engagement work papers. The attached is not a full report, but only highlights certain problems.

Although prepared in 2007, I submitted the attached to the SEC in the early part of 2009 as an attachment to my comments on the IFRS timetable. In considering this attachment, I do commend the PCAOB for the subsequent recent steps to make the

Sarbanes Oxley Act more effective to the benefit of the public, including recent public meetings addressing audit firm rotation, engagement team rotation, and the conflict of interest of SEC registrants paying the audit firms directly for the audit and audit opinion of their annual financial statements, when independence is required and needed for the audit report to have any value. And even though most within my profession have not, and will not, agree with my recommendations in whole or in part, because it makes their business life more difficult, and could possibly negatively affect their income levels, and even though my personal and professional life has been negatively impacted for not accepting the status quo of how audit firms have in the past, and currently, audit and report, and for being outspoken about the deficiencies with the status quo of our audit profession, I believe the protection of public interest is more important and worth the difficulties that come with needed change to mitigate known risk. With the above stated, the purpose of the attachment and its mention herein, is to remind the Board of why the PCAOB originated, and to encourage the Board to stay strong in carrying out its original objectives to the benefit of the public at large versus folding to any degree to the voices of the influential and/or majority firms and SEC registrants who want to minimize change from the status quo, which includes encouraging the Board to stay strong in adopting an audit report standard that will be of true significant benefit to the investing public, that will force SEC registrants to be that much more on top of their internal controls and financial reporting than existing rules promote, and force audit firms to be that much more mindful of the need to apply appropriate risk assessment, professional skepticism, and to produce the type report that should be issued under the circumstances.

## II. Recommendation for Changes to the Auditor’s Report

I concur with the PCAOB’s proposal of requiring auditors to communicate critical audit matters which could help investors and other financial statement users focus on aspects of the company's financial statements, which they would not know to consider otherwise in reviewing the financial statements, especially if the required disclosure, by its content, promotes a true low audit risk that a material misstatement exist and has gone undetected during the course of a quality audit in line with our professional standards. In other words, I believe the value in adding certain disclosure requirement within the audit report is possibly not only in how the information will assist public investors in their investment decisions, but possibly also in how the required disclosures would force the engagement team and partner to reevaluate the sufficiency of their evidence obtained, how they addressed findings, and whether or not their audit risk is truly low that a material misstatement exist and has gone undetected in the course of the audit, and the effect of such reevaluation on their decision of the type audit report that needs to be produced (i.e. unqualified, qualified, adverse, or disclaimer) and the content within such report (i.e. explanatory paragraphs).

In looking at the cost/benefit of adopting a standard that requires additional useful information to the investing public, the benefit of protecting the investing public far outweighs any additional cost, which should be ultimately absorbed by the SEC registrant. In other words, expected costs to audit firms and SEC registrants should not deter the PCAOB from making changes that benefit the investing public in multiple ways, including changes that promote better performance of audit firms in carrying out the audit and better performance of SEC registrants in financial reporting. Under the current payment model, the audit firm would bill the SEC registrant directly for such additional time and money involved in preparing the audit report under any new reporting model that would come with the adoption of a new standard for such by the PCAOB. However, once the existing payment model is changed to remove the existing conflict of interest between the independent audit firm and the SEC registrant, the audit firm will bill the same additional costs to the PCAOB instead, who then bills and collects from the SEC registrant. This is how I perceive the existing payment model changing, but this concept is for a separate day under a separate concept release by the Board.

In reviewing the bullet points of additional information the Board has proposed in its earlier Concept Release, I believe the following, if not apparent on the face or notes of the financial statements, have the most merit, and would benefit the investing public the most with it disclosure in the audit report.

- Areas of high financial statement and audit risk;
- Areas of significant auditor judgment;
- The most significant matters in the financial statements, such as significant management judgments, estimates, and areas with significant measurement uncertainty;
- Significant changes in or events affecting the financial statements, including unusual transactions

If any of the above areas are covered in the footnotes to the financial statements, then I believe it would benefit the investing public to require the auditor point to the footnote instead of being redundant, which has the same affect in bringing the high risk areas to the investor's attention.

## III. The Most Important Needed Change to the Auditor's Report

I believe a required disclosure of the significant audit differences, for which were either not resolved or not accepted by the SEC registrant as a proposed audit adjustment must be added to the proposed standard, ***The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion***, for such a standard to be highly effective in improving the value of the auditor's report to public investors, and ultimately improving the overall quality of audits produced by audit firms registered with the PCAOB. However, I further believe this change should be a required change for **Qualified Opinion Reports** as well. I actually believe the Board should consider adopting a standard that addresses **changing the reporting on both Unqualified and Qualified Opinion Reports versus only Unqualified Opinion Reports** for disclosure of unresolved or uncorrected significant audit differences as well as adopting some framework of reporting which addresses the bullet point items in section II above to some degree.

Review of the significant audit differences and their effect on risk assessment and the final report issued is a critical part of the audit process, and could therefore be considered a component of the “critical audit matter” part of the new standard the Board adopts. I do not believe certain matters should be left up to the auditor to decide as to whether or not it should be disclosed in the auditor’s report, or whether or not it qualifies as a critical matter. Significant audit differences is one of those matters the Board should mandate disclosure of in its upcoming new standard. My perception on its importance is due to what I have seen while working under the direction of others responsible for audit quality and opinion reports produced. I have seen significant audit differences go unaddressed or not sufficiently addressed when considering audit risk. One example includes identified premature revenue recognition the client did not want to correct, which was technically just below the SEC materiality thresholds for revenue, when considering quarterly segment revenue disclosure and trend analysis, but for which brought into question audit risk, and if I were a potential investor in this company, I would have wanted to know about this significant audit difference the SEC registrant refused to correct. Again, such a mandated disclosure would force audit firms to ensure they have reduced their audit risk to the required low and produced the right report, and possibly entice the SEC registrant to correct significant audit differences proposed as adjustments to keep their books cleaner.

In the name of transparency, maybe the same required auditor communications to management and the audit committee should be disclosed to the public as an attachment to the audit report. Although I have not read any of the comment letters from the 2011 release and this 2013 release, or yet fully read the Concept release or Proposed Standard release, for that matter, my focus is on potential investors versus existing investors in any particular SEC registrant, and believe the decisions of this Board should give more weight to the impact of its decision on potential investors (i.e. the public at large) versus the effect of the Board’s decision on any SEC registrant and its existing investors and its audit firm. With this stated, my questions is, “Why not require the required written communications to management and the audit committee, per existing and ongoing standards on such communications, be attached to the audit report and disclosed in the SEC form 10-K?”. Although I intend to read through the 2011 Concept release and the 2013 Proposed Standard release in its entirety as well as some of the comment letters for the 2011 Concept release and 2013 Proposed Standard release, and may provide an updated comment letter which excludes this proposal once read, my desire to contribute with available time, it being Labor Day, has me putting this thought, and this comment letter, to the Board now as I cannot predict my availability to contribute an updated comment letter before the December deadline as other matters currently have my priority.

## *IV.* Conclusion Concerning the Current Proposed Standard

Although I again commend the Board for its attempts to improve the audit profession and benefit the public with improvement to the audit profession’s unqualified opinion audit report, I am concerned it is mostly face value, as is, and will not benefit the public as the Board expressly desires. I do believe a standard needs to be developed by the Board to improve upon the existing reporting requirements to benefit the public and the quality of audits produced by PCAOB registered audit firms. However, the proposed standard is in need of some reconsideration and revision to accomplish the objectives of the Board, and truly add much needed value to the report in the interest of the investing public.

I apologize for just now making my comments directly known to the Board, versus bringing my comments to the Board in 2011, when the Board first brought it's concept of a change in the existing reporting model to the public for comment. However, I welcome an opportunity to participate in upcoming discussions on much needed changes to existing standards and Board rules to aid in rigorously implementing the Sarbanes Oxley Act for the best protection of investing public at large.

If you have any questions or would like to discuss these matters further, please contact me at (214) 772-5458. And I again thank you for this opportunity to comment and thank you for your consideration of these matters.

Very truly yours,

Theresa Barnett

# What and When Will the Next Steps Be?

If one were to consider the face-value activity that has occurred since the Enron scandal; such as the congressional hearings, resulting legislation, and formation of the PCAOB, one may conclude that enough has been done to reduce the risk to an acceptable low level that a scandal similar to Enron happens again. But has enough really been done? The conflict of interest between the client and audit firm engaged to report on the internal controls and financial statement of the client still exist. We are fooling ourselves if we think enough has been done and is being done currently to prevent another Enron fiasco. The PCAOB has enhanced the independence rules to some degree to help reduce this risk, but it is not enough.

This conflict of interest is at the heart of what happened with Enron; and unfortunately, in today's society it is hard to find leadership in a firm willing to quit an account on principle and/or issue a modified opinion when required per standards for fear of losing the account. This is exactly why additional measures are warranted because we can't rely on the majority of leaders in today's society to do the right thing legally, ethically, and/or morally on their own accord. Is it going to take another scandal the magnitude of Enron to get Congress (or now, the PCAOB) to move on removing the conflict of interest between independent auditors and their clients?

As I read in various Wall Street Journal articles printed prior and just after the Enron scandal, individuals and governing bodies of authority warned the SEC years prior to the Enron scandal that changes were needed. One such article noted that Arthur Levitt, chairman of the SEC in the Clinton administration, had called for reform in the 90's before the accounting scandals broke out; and before these scandals, his suggested reforms seemed unreasonable; but after the Enron scandal, these suggested reforms seemed more than reasonable. A March 5, 1996 Wall Street Journal article titled, "Who is Going to Audit the Auditors?", talked about companies, including Enron, who were taking cost cutting measures by outsourcing their internal audit departments to their own auditors. According to the article, The Institutes of Internal Auditors wanted double duty stopped and warned the SEC that double duty can lead to major problems. Instead of listening to these expressed warnings by these individuals and governing bodies of authority and taking proactive measures to prevent such problems, the SEC apparently did nothing and it took the Enron scandal and a resulting act of Congress to make a move that was reactive in nature. Let's please learn from what is now history and be proactive going forward. By putting the PCAOB in-charge of assigning the audits of these publicly held corporations and paying the auditors versus allowing these publicly held companies to pay the auditors directly, the conflict of interest is removed and true independence is obtained, thus greatly reducing the risk of another scandal such as Enron from occurring. A step such as this is what the public needs to have the right amount of real (not false) assurance to invest in the capital market.

However, removing the existing conflict of interest isn't the only additional step needed to reduce the risk to an acceptable level that the fraudulent activity the size of Enron occurs again. Objectivity is a major component of independence. You can't be considered independent if you lack objectivity. There is a natural tendency for the professional skepticism that needs to be applied each year to ensure the investors receive the quality audits they deserve to dissolve over a period of years in serving the same clients as complacency sets in with these recurring clients and objectivity becomes lacking. I observed this exact lack of objectivity and thus lack of professional skepticism of engagement team management at both the Big 4 and regional accounting firm level where the client was a recurring client for numerous years. Section 203 Audit Partner Rotation of the SOX Act required amendment to Section 10A of the Securities Exchange Act of 1934 by adding the following: (j) Audit Partner Rotation – it shall be unlawful for a registered public accounting firm to provide audit services to an issuer if the lead (or coordinating) audit partner (having primary responsibility for that audit) or the audit partner responsible for reviewing the audit has performed audit services for that issuer in each of the previous 5 fiscal years of that issuer. However, this amendment doesn't address the other members of the engagement team who have served the same client for 5 years or longer, but it should.

Third year seniors , managers and senior managers with Big 4 firms, especially those who start their audit career with the same Big 4 firm, more than likely have served the same clients since the beginning of their time with the Big 4 firm, thus they already have at least 5 years in these clients before they reach the partner level. Seniors, managers and senior managers handle the majority of the planning and supervise the fieldwork testing, in addition to performing their own testing on the more complex areas. These individuals work directly with client management as well as client accounting personnel and make the day-to-day decisions in fieldwork testing; and as such, must apply the right amount of professional skepticism to ensure a quality audit in –line with auditing standards, which the investing public deserves. It's not just the audit partner needing this professional skepticism, thus the mandatory 5 year rotation should apply to the entire engagement team and not just the audit partners.

Section 207 of the SOX Act required a study of mandatory rotation of registered public accounting firms by the Comptroller General of the United States to be completed and reported to Congress and the Senate before the end of 2003. The Comptroller General responsible for this study and resulting report was and still is David M. Walker. David became the seventh Comptroller General of the United States and began his 15-year term when he took his oath of office on November 9, 1998. However, between 1989 and 1998, Mr. Walker worked at Arthur Andersen LLP, where he was a partner and global managing director of the human capital services practice based in Atlanta, Georgia. So how does this former Anderson partner go about studying the potential effect of a mandatory audit firm rotation to help the House and Senate decide on the whether or not to make audit firm rotation mandatory? He polls the accounting firms and SEC registrant executives (i.e. CFOs and audit committees), the very same type professionals who caused the Enron downfall (& other scandals of the early decade) in the first place. How objective can their responses be? Per the GMO reported results, the majority of accounting firms and SEC registrants do not want mandatory rotation. Who would have thought such an outcome in this survey would result? Anyone who is a business person and understands the mindset of these industry executives and public accounting leaders would not be surprised by these results. Thus, one could say that a conflict of interest existed in asking these professionals for their opinion on the subject of mandatory firm rotation. Although no-one will come right out and say it, one of the main reasons the majority polled do not want this mandatory rotation is because it makes business and life more difficult for them and could hurt their own bottom line. They just do not want to make the sacrifices necessary to protect the investing public.

Two somewhat laughable responses reflected in the GMO reported survey results is the expressed concern that increased cost would result due to increased dominance by a few and the expressed concern that the first year with a new auditor would result in a lower quality audit, which could lead to missed material misstatements. First, the Big 4 already dominate the market of SEC registrants. A mandatory audit firm rotation should open up this market to fairer competition and reduce the dominance that currently exists, and thus benefit the SEC registrant in the long run. Having spent some time with smaller accounting firms which heavily compete for clients, I have first-hand knowledge that it appears to be common practice to expect additional fees from the client in the initial year of engagement to cover the warranted additional testing and considerations in the first year and the long term contracts (engagement letters) reflect this with lower estimated fees in the 2nd and subsequent years. Sure the first year with a new auditor might be a little more costly, but the long-term contracts should keep audit fees down with increased competition. Secondly, auditing standards for which all independent auditors in the United States are required to abide by dictate that auditors must have the knowledge of the industry and specific accounting issues or be able to obtain that knowledge during the course of the audit to competently complete the audit. Additionally, audit standards concerning risk (SAS 47and now SAS 107) requires the auditor to reduce to an acceptable low level the risk that material misstatements will go undetected in the course of their audit, thus the higher risk that comes with a new client is reduced with the additional time and testing required with an initial audit. With this in mind, a quality audit is as obtainable with the new successor auditor as it is with the predecessor auditor, who may lack the professional skepticism due to its possible lack of objectivity after serving the client for many years. These Big 4 firms have been serving the same audit clients for up to as many as 50+ years. As such, the PCAOB should consider a mandatory firm rotation from anywhere between 5 and 10 years after the initial audit for the protection of the investing public.

Approximately four years has past since the Comptroller General's release of its report on its study of mandatory audit firm rotation in which it stated that more time was needed to determine the effectiveness of existing implementation of the Sox Act to consider such a step in greater detail. How much more time is needed before the next steps are taking? In a March 4, 2003 Review of FASB Action Post Enron and WorldCom Hearings by the House of Reps. – It was stated, "Sarbanes Oxley represents a positive 1st step, but it will not make a real impact unless it is vigorously implemented." I believe it is time for the next steps in this continuous process to reduce the risk that another scandal the size of Enron happens again. Don't you?

Washington, D.C. 20006-2803

**RE:** PCAOB Rulemaking Docket Matter No. 034

Board Members:

Thank you for the opportunity to comment upon the PCAOB's proposed two new auditing standards, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion,* and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report.* We appreciate all the time and effort associated with the research, survey, compilation and drafting of these proposals.

The purpose of the new proposals is to make auditor's reports more informative as well as to increase the reports' relevance and usefulness to investors and other financial statement users. This purpose is well in line with the PCAOB's statutory mandate to protect investors and further the public interest in the preparation of informative, accurate and independent audit reports. All of our comments that follow are to be viewed in this light. Whether we agree or not with certain aspects of the proposals is dependent upon whether or not we believe that an investor will be better served with the adoption of specific additional requirements.

We agree that the pass/fail model for the Auditor's Report, in which the auditor states whether or not the financial statements are fairly presented and which has been relatively unchanged for the past 70 years, should be retained. Other aspects of the proposed changes to the auditor's reporting model are discussed below.

**Addressees**

Most auditor reports are addressed to shareholders and the board of directors. Requiring that addressees include, but are not necessarily limited to, (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body, is helpful in establishing consistency throughout the profession, and, more importantly, rightfully requires the identification of the appropriate parties for whom the report is written. Clearly the investor is better served by this requirement, and we support this change.

**Statement that the auditor is a public accounting firm registered with the PCAOB**

A requirement to make a statement in the auditor's report that the auditor is a public accounting firm registered with the PCAOB and is required to be independent with respect to the audited company in accordance with the United States federal securities laws and the applicable rules and regulations of the SEC and the PCAOB seems to us to create unnecessary redundancy. Since the title of the auditor's report is "Report of Independent Registered Public Accounting Firm," it seems excessive to repeat that point again in the body of the report.

While our objection is of a minor nature, we believe the auditor's report is not enhanced by this requirement. Users of the report are unlikely to gain additional comfort from this repetitive statement, and additional unnecessary language only serves to distract the reader from what is important, namely, the basis of the opinion and the opinion.

**Statement containing the year the auditor began serving consecutively as the company's auditor**

The audit committee is responsible for hiring, retaining and approving fees for the auditor. In fulfilling these responsibilities, the audit committee considers, among other things,

- The auditor's expertise in the industry
- Technical strength and experience of the audit team
- Turnover
- In an incumbent situation, the firm's relationship with the audit committee and the firm's added value in helping the audit committee fulfill their duties in overseeing the financial reporting process

The audit committee also may consider the auditor's tenure. However, in most instances, consideration of tenure is not as important as the other criteria mentioned above when the audit committee determines whether or not to retain an audit firm.

Requiring a statement of audit tenure would appear to undermine the duties of the audit committee to select the auditors based on the far more important criteria detailed above. Highlighting tenure in the auditor's report indicates to the reader that this one particular criterion retains more importance than other information about the auditor that the audit committee considers annually. In fact, numerous studies cited by the Board reach differing conclusions concerning the value of auditor tenure. As there is no consensus regarding the relationship between audit quality and auditor tenure, disclosing tenure in the auditor's report undermines the authority of the audit committee and possibly sets in motion regulation concerning audit firm rotation. Should such regulation transpire, the audit committee's authority would be undermined further. Such regulation would substitute the audit committee's sound judgment with regulatory time limits and rotation requirements. It is clear to us that investors would not be better served by this requirement.

**Statement that PCAOB standards require that the auditor plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud**

We agree that clarifying, in the Basis of Opinion section of the auditor's report, that the auditor plans and performs the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud, does help the financial statement users more fully understand the responsibilities of the auditor. We are in support of this recommended change.

**Requirements for the auditor to communicate in the auditor's report "Critical Audit Matters"**

We understand that investors are requesting improved relevance of the auditor's report, and that the Board is proposing communication of critical audit matters with the objective of providing more insight about the most significant matters that the auditor addresses in the audit. The belief is that communicating critical audit matters likely would provide meaningful information to investors and other financial statement users about the auditor's work in performing the audit and in forming an opinion on the financial statements, taken as a whole. We have a number of issues related to this perception, and they are detailed on the following page.

- The definition of critical audit matters are those matters addressed during the audit that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming the opinion on the financial statements. This definition clearly connotes that the subject matter is complex. Certain accounting rules are equally complex, as are the audit procedures designed to obtain appropriate audit evidence with respect to financial statement assertions. It is our belief that a majority of investors and financial statement users may not fully appreciate or understand disclosure and discussion of critical audit matters. Anyone who has tried to explain the significance or lack thereof of "uncorrected financial statement misstatements" to non-accountants understands this argument.

- In order to ensure, if at all possible, that the reader is not misled or misunderstands the explanation of a single critical audit matter, and certainly multiple critical audit matters, a significant amount of printed space in the auditor's report may be required. This significant use of space in the report would only distract from the importance of the auditor's opinion.

- It is the role of management to disclose critical accounting policies and discuss the important financial statement metrics with its shareholders in a company's financial statements and annual report. Added information about the same from the auditors can only blur the line between management and the independent auditor in the eyes of the financial statement user.

- Audit costs will increase, most likely significantly, during the first year identification of critical audit matters is required. Drafting language addressing critical audit matters will be a difficult project to delegate to audit staff. Drafting of critical audit matters likely will be performed by higher level members of a firm, including partners, and may involve significant hours and, thus, increased cost.

- The auditor has always discussed critical audit matters with the audit committee. Drafting language regarding these critical audit matters for inclusion in the auditor's report will require additional time spent with the audit committee developing and approving the language. Management will most likely comment on this language, increasing the likelihood of friction between management, audit committee and auditors, that would not normally exist. This friction cannot be beneficial to anyone.

- The proverbial Pandora's Box – Will financial statement users view the disclosure of more critical audit matters as better or worse than the disclosure of less critical audit matters? Will companies in the same industry with the same issues but different auditors be viewed differently if one has more critical audit matters disclosed than the other? Will auditors with different clients in the same industry with the same issues need to take care to disclose the same critical audit matters for each client, less someone making a comparison would conclude something amiss?

- Auditors may conclude from a liability point of view that more critical audit matters are better. Additionally, the proposed requirement specifically states that the use of the word "most," as in "most difficult" or "most complex," is not intended to imply that only one matter qualifies as a critical audit matter. Management may conclude that more critical audit matters reflect poorly on their company's operations. This scenario places the auditors and management in unintended conflict.

- Will audit opinions issued under generally accepted auditing standards (i.e. not under PCAOB standards) be viewed as audit opinions of a lesser quality, thus forcing all non-public audits to adapt to the same standards?

**The auditor's responsibilities regarding other information in certain documents containing audited financial statements and the related auditor's report**

We agree with the objectives of this proposed requirement and can readily understand the positive impact it can have on investors and financial statement users. However, as a firm that primarily audits registered investment companies (mutual funds), we see the potential for conflicts and problems resulting from this proposal. Registered funds file their annual reports with the SEC on form N-CSR. Fund annual reports typically contain (among other things) the following items of information that would qualify as "other information" under the proposed standard:

- A management discussion of fund performance
- Typically, a line graph of fund investment performance compared to the performance of a benchmark index or indices, accompanied by 3, 5 and 10-year or since inception average annual investment returns
- An expense example demonstrating the dollar amount of fund expenses incurred over the most recent six month period on an investment of $1,000
- A tabular or graphical representation of the fund's investment portfolio holdings
- A discussion of the factors the board of directors considered in approving the fund's investment advisory contract

While some of the information detailed above can be evaluated, recomputed and/or verified by the auditor of a fund's financial statements without obtaining additional audit evidence, much of it cannot. Further, some of the items that can be verified and some that cannot may be included in the same portion of the annual report. We feel that this may lead to investor confusion regarding which particular portions of the annual report the auditor is covering in the required statement that no material inconsistency with the financial statements or misstatement of facts were found in the other information. In particular, we see the following potential areas of conflict with respect to each of the above:

- The management discussion of fund performance will typically include items that the auditor can evaluate based upon the audit evidence already obtained, such as investment total returns for fund shares or portions of an investment portfolio invested in certain industries or specific securities. It may also contain a significant amount of information that cannot be so evaluated. This may include index performance, overweighting or underweighting in certain sectors relative to a benchmark index, general economic data such as inflation or unemployment and segmented investment performance for certain portions of a fund's portfolio, among potentially many others. Without clarifying which particular information in a management discussion of fund performance that the auditor has evaluated for inconsistency and misstatement of fact, investors could be misled.

- Similarly, the line graph will include a graphing of index performance. The auditor may or may not collect evidence on the performance of the index as part of audit procedures. Furthermore, if the auditor has only performed the audit for the most recent fiscal year or two of the fund, would he be required to obtain the investment performance for the years presented that were audited by the prior audit firm and recompute average annual returns and evaluate the line graph? In many situations, the auditor has this information included in his audit evidence, and in many he may not. This again creates inconsistency and may lead to investor confusion.

- The expense example would typically not pose any problems for an auditor to evaluate.

- The auditor may be able to evaluate the tabular or graphical display of the fund's investment portfolio if it is characterized in the same manner as it is in the fund's portfolio of investments included in the financial statements. However, in many instances this display may not be organized in the same fashion as the portfolio of investments. For example, a stock fund may categorize its portfolio by industry in the financial statements but by country or geographic region or by market cap or some other metric in the tabular or graphical presentation. Again, in certain cases, the auditor may not be able to evaluate this presentation based on the audit evidence obtained, resulting in inconsistency.

- The auditor typically has no role in the presentation of the factors the board of directors considered in approving the fund's investment advisory contract. While some information can be evaluated (fund total return, fund expense ratio), much of it cannot. This portion of the annual report is truly a disclosure for which fund counsel takes primary responsibility. Auditor evaluation of this discussion seems inappropriate.

We feel that the proposed standard on other information should be amended to either exempt the audits of registered investment companies altogether or to clarify which specific elements of the other information included in a fund's annual report the auditor will be responsible for evaluating.

We would like to thank the Board for the opportunity to respond to the proposals as addressed in PCAOB Release No. 2013-005, and we appreciate the work and effort of the Board to protect investors and further the public interest in the preparation of informative, accurate and independent audit reports.

**Sincerely,**

BBD,LLP

**Re: PCAOB Release No. 2013-005, Rulemaking Docket Matter No. 034,** *Proposed Auditing Standards - The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards (the "Release")*

Dear Board Members and Staff:

BDO USA, LLP is pleased to have the opportunity to comment on *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the "Proposed Auditor Reporting Standard")*, The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (the "Proposed Other Information Standard")*, and Proposed Amendments to PCAOB Standards Related to the Proposed Auditor Reporting standard* (together, the "Proposed Standards").

We continue to support the PCAOB's efforts to explore ways to enhance the usefulness and informational value of the auditor's report and provide transparency about the audit. We support many of the enhancements to auditor reporting set out in the Proposed Standards, such as expanding the existing language in the auditor's report related to the auditor's responsibilities for fraud and notes to the financial statements and other information, and communication of audit related matters the auditor considered critical. While we recognize that certain aspects of the Proposed Standards will likely present challenges in implementation, we expect that over time such challenges will lessen as auditors gain experience in their application.

While we are supportive of the overall direction of the Proposed Standards, we have reservations about the approach taken in some important areas, such as the identification and communication of critical audit matters, including the extent of documentation required, and the expansion of performance obligations and auditor reporting with respect to other information. Our views on these matters are more fully described in the sections below and in our response to selected questions posed in the Release.

Identification of Critical Audit Matters

We believe the identification of critical audit matters should be focused on those matters identified during the audit that required special audit consideration, such as significant risks, or areas of significant difficulty in the audit, for example, with respect to obtaining sufficient appropriate evidence. Such an approach is similar to that included within the International Auditing and Assurance Standards Board's (IAASB) proposed ISA 701, *Communicating Key Audit Matters in the Independent Auditor's Report*. This contrasts with the PCAOB's identification of critical audit matters that has in large part focused on the difficulty of an auditor judgment or matter. While the identification of critical audit matters under the PCAOB Proposed Standard is likely to result in similar matters being identified under the IAASB's proposal, we believe that the use of a risk based approach, analogous to the approach used to focus the audit on the most important matters, better articulates those matters important to users of financial statements.

Furthermore, we believe that critical audit matters should be a subset of those matters communicated to the audit committee, and should not include matters from other sources, since we believe that the matters required to be communicated to audit committees under Auditing Standard No. 16, *Communications with Audit Committees*, encompass all matters that would be pertinent for a user to understand the matters arising from the audit that were of most significance to the financial reporting process. We understand that some concern has been expressed about the possibility of an auditor failing to communicate certain matters to the audit committee to avoid communication of that matter as a critical audit matter in the auditor's report. However, such a possibility could be avoided by ensuring that Auditing Standard No. 16 included the same criteria for identifying and communicating critical audit matters as the Proposed Standard. In this way, once a matter rose to the level of a critical audit matter, it would also have risen to the level of a required audit committee communication.

Communication of Critical Audit Matters

The requirement in paragraph 11 of the Proposed Auditor Reporting Standard explains that the communication of critical audit matters should identify the matter, describe the considerations that led the auditor to determine that the matter is a critical audit matter, and provide a reference to where that matter is described in the financial statements, if applicable. However, we note that all the illustrative examples provided in Appendix 5 of the Proposed Standard include a description of audit procedures performed, although such a description is not required. We believe that in some instances, a description of audit procedures performed may help to explain why a matter is considered a critical audit matter, and suggest including in the requirement that a description of a critical audit matter may include its effect on the audit, if considered necessary, taking care not to convey that a separate opinion or conclusion is provided on the critical audit matter. In this regard, we suggest providing examples of critical audit matter paragraphs that illustrate how to report in both circumstances.

We continue to believe that the auditor should not be the source of original information about the company and should not communicate matters that management is not required to communicate. As such, we do not support auditor communication of significant deficiencies, or other matters not already required to be reported on by management. Given that critical audit matters are intended to focus on those matters the auditor addressed during the audit that involved the most difficult, subjective, or complex auditor judgments or posed the most difficulty to the auditor in obtaining sufficient appropriate evidence, we would generally expect that such matters would also be the most difficult, subjective, or complex management judgments, and would accordingly also be reported by management within the notes to the financial statements, or elsewhere in documents containing the financial statements.

Extent of Documentation

The Proposed Auditor Reporting Standard requires the auditor to document the basis for determining that a reported matter was a critical audit matter, in addition to why a non-reported matter that would appear to meet the definition of a critical audit matter was not determined to be a critical audit matter. We believe that the requirement to document why something is not a critical audit matter has the potential to result in excessive documentation and increase the cost of implementing the Proposed Auditor Reporting Standard without a corresponding benefit.

Furthermore, if critical audit matters were a subset of those matters communicated to the audit committee, as we suggest, the auditor's judgments relating to why a matter was considered to be a critical audit matter would likely be supported by the documentation already included as part of the auditor's communication with the audit committee. Conversely, that documentation would likely provide an indication of why other matters discussed with the audit committee did not rise to the level of a critical audit matter.

Other Information

Overall, we support the elements in the Proposed Other Information Standard that enhance the user's understanding of the nature of the work performed by the auditor and the information to which the auditor devoted attention. However, we do not support providing a conclusion on the work performed with respect to other information. We are concerned that the requirement for the auditor to address whether, based on reading and evaluating the other information, they have identified material inconsistencies in the other information or material misstatements of fact may be perceived by users as providing some level of assurance, which is not supported by the extremely limited procedures performed.

Moreover, we believe the use of the term "evaluate" in the Proposed Other Information Standard, in contrast to the term "consider," which is the current performance requirement under AU 550, *Other Information in Documents Containing Audited Financial Statements,* could inadvertently cause auditors to expand their procedures relating to other information, particularly if the auditor is required to provide a conclusion on the other information. The term "evaluate" has heretofore been associated with the performance of procedures to obtain either limited or reasonable assurance, which is not contemplated in the Proposed Other Information Standard; to use the term "evaluate" to describe procedures outside that context has a strong potential to mislead users about the nature of the procedures performed and the degree of comfort that users should take from the performance of the limited procedures.

Applicability of the Proposed Standards

We do not believe the provision to communicate critical audit matters should be required for audits of brokers and dealers, investment companies, or employee benefit plans (for example, employee stock purchase, savings, or similar plans). These types of issuers differ from the typical SEC issuer, and we do not believe investors or other financial statement users are demanding additional information with respect to these companies.

With respect to the Proposed Other Information Standard, we do not believe that audits of brokers and dealers or employee benefit plans should be subject to this proposal. We believe that the compliance or exemption report required to be filed by brokers and dealers and required to be reported on by auditors under the proposed *Standards for Attestation Engagements Related to Broker and Dealer Compliance or Exemption Reports Required by the U.S. Securities and Exchange Commission* provides users of their financial statements with sufficient information to make any additional reporting by the auditor unnecessary. Furthermore, employee benefit plans that file a Form 10-K contain limited other information that we do not believe is used by plan participants for investment decision making purposes, and for this reason we suggest the Proposed Other Information Standard should not apply to these audits.

As it relates to emerging growth companies, we believe that both the Proposed Auditor Reporting Standard and the Proposed Other Information Standard should be applicable to such companies, except as noted in our response to question 42 under the section, Considerations Related to Effective Date, to permit delayed compliance for smaller emerging growth companies.

Field Testing

We believe that field testing the provisions of the Proposed Standards, in particular the provisions relating to critical audit matters and the work effort relating to other information, both retrospectively and in live situations, has the potential to provide invaluable insights into the impact of these provisions on the audit, including cost benefit considerations. While we are currently engaged in performing some limited field testing of these provisions as a Firm and in conjunction with the Center for Audit Quality on a retrospective basis, we encourage the PCAOB to provide for sufficient time for the performance of both retrospective and live field testing and for the appropriate analysis of results before concluding on the matter.

Additional Commentary

We encourage the PCAOB to work with the IAASB to converge, to the greatest extent possible, the form and content of the auditor's report to increase comparability and ease of use by users so that any differences in reporting reflect genuine differences in approach. For example, the nature of the audit would seem to be largely similar between an audit performed in accordance with the International Standards on Auditing and an audit performed in accordance with the PCAOB Auditing Standards; thus we would expect that the description in the auditor's report would reflect that similarity. The greater the extent of differences, the greater the effort users will need to expend in understanding the significance of those differences when analyzing auditor reports between different jurisdictions.

Our responses to certain questions on select topics posed in the Release further expand upon our overall views expressed above, and are set out below.

**The Proposed Auditor Reporting Standard**

**<u>Basic Elements</u>**

2. **The proposed auditor reporting standard would require the auditor's report to be addressed at least to (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body. Are there others to whom the auditor's report should be required to be addressed?**

We believe the auditor's report should be addressed to the investors in the company, such as the shareholders and the board of directors, or equivalent body, and not expanded to include other third parties such as bondholders. The auditor's report on an issuer's financial statements is a general use report and as such is available to all users of those financial statements, through the SEC website. For this reason, we do not see a reason for or benefit to expanding those to whom the audit report should be addressed. There is; however, likely significant litigation costs, and potentially significant legal liability, associated with adding addressees to the report. In particular, addressing the auditor's report to third parties will likely lead to an increase in in state law claims by such third parties. It can be expected that these third parties will claim that, under a particular state law, the fact that it was listed as an addressee creates a relationship that can lead to significant state law audit firm liability. It is unclear whether a particular court would agree under the applicable state law; but, given the general use nature of the report, BDO can see no reason to create this increase in audit firm litigation costs and potential liability.

5. **The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.**
   a. **Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?**
   b. **Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?**
   c. **Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?**

We understand that investors are interested in audit tenure and we support providing such transparency. However, we do not believe that including such information within the audit report provides the appropriate context for that communication. We are concerned that including such a disclosure in the audit report may infer a correlation between audit quality and audit tenure – a correlation which we believe has not been established. We believe such disclosure would be better placed on the PCAOB's Form 2.

6. **The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?**

We believe it would be appropriate to describe the auditor's responsibility for other information in a separate paragraph of the auditor's report to enhance the informational value of the report. However, while the auditor has an existing responsibility to describe any material inconsistency between the audited financial statements and other information and whether a material misstatement of fact exists, we do not believe it is appropriate to provide an explicit statement where there is nothing to report, given the limited nature of the auditor's procedures.

7. **Should the Board require a specific order for the presentation of the basic elements required in the auditor's report? Why or why not?**

We do not believe the Board should require a specific order for the presentation of the basic elements required in the auditor's report. However, we would suggest the required use of section headings to assist users in understanding the auditor's report and making comparisons between audit reports of other issuers. Moreover, such an approach is consistent with the IAASB's exposure draft, *Reporting on Audited Financial Statements: Proposed New and Revised International Standards on Auditing (ISAs),* and we believe it will be beneficial in circumstances where an entity is required to report under both the PCAOB Auditing Standards and the ISAs.

**Critical Audit Matters**

11. **What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?**

We understand that financial statement users believe that communication of critical audit matters will provide helpful insights into the audit of the financial statements and, as such, is responsive to their demands for more information about the audit. Moreover, including this information in the auditor's report would generally provide context to those areas in the financial statements that required significant auditor attention. However, in addition to these benefits, there are certain aspects of this communication, as proposed, that may result in unintended consequences, including:

- The disclosure of information that is the responsibility of management. For example, the severity of a control deficiency that is less severe than a material weakness may be considered a critical audit matter and result in the auditor providing information that was specifically exempted from disclosure by the SEC and PCAOB;

- The disclosure of consultations with others outside the engagement team may have a cooling effect on consultations, which would be contrary to enhancing audit quality;
- The chilling effect that disclosure of critical audit matters may have on communications with audit committees;
- Financial statement users may assume the auditor has provided a separate level of assurance on specific accounts or balances referenced in the critical audit matters, or conversely undermine the auditor's opinion on the financial statements taken as a whole.

**13. Could the additional time incurred regarding critical audit matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have?**

The effect the additional time spent on identifying and communicating critical audit matters may have on audit quality is difficult to assess at this time, without the benefit of the results of field testing. However, a possible benefit could be increased attention by management and the auditor on the related financial statement disclosures. The more significant unintended consequences to audit quality include: an increased strain on resources at the end of the audit as a result of already tight filing deadlines; and a chilling effect on audit committee communications.

**16. Are the factors helpful in assisting the auditor in determining which matters in the audit would be critical audit matters? Why or why not?**

For the most part, we believe the factors in paragraph 9 of the Proposed Auditor Reporting Standard would be helpful in assisting the auditor in determining which matters should be considered in coming to a determination about whether a matter rose to the level of a critical audit matter. However, it is not clear whether once one factor is identified, on that basis alone, a matter would rise to the level of a critical audit matter. We do not believe that the intention of paragraph 9 is that the existence of one factor alone is the sole determination that a matter is a critical audit matter. If this is the case, we believe that additional guidance about how the factors are used in determining critical audit matters would be helpful. As such, we suggest moving the following guidance from page A5-29 of the Release into the proposed standard:

> Depending on the matter and its circumstances, the applicability and related degree or scope of just one factor might lead an auditor to conclude that a matter is a critical audit matter. In other cases, however, the auditor might take into consideration a combination of factors in determining that a matter is a critical audit matter.

Furthermore, while we agree that most of the factors are helpful, we do not believe that consultations outside the engagement team or use of auditor specialists should be considered factors in determining whether or not a matter rises to the level of a critical audit matter, as such consultations are often routinely performed during an engagement.

**21. What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of critical audit matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?**

As noted earlier, we believe that a more informed response about costs will be available once the results from field testing are evaluated. However, some initial thoughts on costs relating to the characteristics of the entity under audit include:

- While the content of the communications in the auditor's report are the responsibility of the auditor, as the audit issues encountered during the audit increase in difficulty and the more extensive the discussions between the auditor and the audit committee, the greater the cost will be.

- Smaller entities with fewer resources to address reporting complexities may be impacted to a greater extent than larger entities with greater resources. For this reason, we suggest the PCAOB consider a staged implementation such that larger issuers implement the standard first to afford smaller entities the opportunity to learn from the experience of their larger counterparts.

**24. Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, such as in an initial public offering or in a situation involving the issuance of an auditor's report on a prior period financial statement because the previously issued auditor's report could no longer be relied upon? If so, under what circumstances?**

We support limiting critical audit matters to only the most recent financial statement period when the current period financial statements are presented on a comparative basis with those of one or more prior periods. Nevertheless, we believe the auditor should consider communicating critical audit matters relating to the prior periods when (1) the prior period's financial statements are made public for the first time, such as in an initial public offering, or (2) issuing an auditor's report on the prior period's financial statements because the previously issued auditor's report could no longer be relied upon.

Additionally, to provide clarity about the need to include critical audit matters when a predecessor is asked to reissue a report, we recommend that the guidance from page A5-34 of the Proposed Auditor Reporting Standard be included within the body of the standard. It states:

> In situations in which a predecessor auditor has been asked to reissue his or her audit report on the financial statements of a prior period, existing standards require the auditor to consider whether the auditor's report on those statements is still appropriate after certain required procedures are performed. If the predecessor auditor determines that the auditor's report is still appropriate and is reissued, the communication of critical audit matters for the prior period need not be repeated. Since the communication of critical audit matters is only required for one year, the proposed auditor reporting standard would not require the communication of critical audit matters in the reissued report of the predecessor auditor for prior years.

**28. What effect, if any, would the auditor's communication of critical audit matters under the proposed auditor reporting standard have on an auditor's potential liability in private litigation? Would this communication lead to an unwarranted increase in private liability? Are there other aspects of the proposed auditor reporting standard that could affect an auditor's potential liability in private litigation? Are there steps the Board could or should take to mitigate the likelihood of increasing an auditor's potential liability in private litigation?**

The proposed requirements relating to critical audit matters would, in all likelihood, lead to increased litigation expense and risk of liability. In particular, plaintiffs will likely argue under the federal securities laws and/or state law that the auditor has made a "statement" that was somehow misleading (e.g., contains a material misstatement or material omission) and it relied on that statement to its detriment. The Proposed Auditor Reporting Standard's broad definitions regarding what constitutes a critical audit matter will require the auditor to engage in frequent, and significant, judgment calls. Because the auditor will exercise these judgments in determining what, if any, "statement" is made regarding a potential critical audit matter; these judgments have the potential to be the subject of persistent second guessing by plaintiffs. Proposed changes to the proposal aimed at making clearer what is, and is not, a critical audit matter will be important to defending against such second-guessing of auditor judgments. While such changes have the potential of mitigating liability, they will of course not eliminate the significant risk associated with the auditor's communication of critical audit matters under the Proposed Auditor Reporting Standard.

Furthermore, there is also the potential for claims by issuers (e.g., for disclosing client confidential information) to the extent the auditor discloses matters that go beyond what is required to be disclosed under corporate disclosure rules. As such, we believe it is extremely important to align the auditor's responsibilities to identify and communicate critical audit matters with the corporate disclosure rules. The auditor ought not to be put in the position of having to choose between potentially violating a PCAOB rule and facing a legitimate claim by an issuer for disclosing confidential and/or otherwise protected information.

**30. Is retaining the auditor's ability to emphasize a matter in the financial statements valuable? Why or why not?**

We agree that retaining the auditor's ability to emphasize a matter in the financial statements is worthwhile to address those matters that do not fall within the scope of critical audit matters but the auditor nevertheless believes is worthwhile to emphasize. It may be helpful, however, to include application guidance that distinguishes how a critical audit matter differs from an emphasis of matter, to avoid confusion.

**Considerations Related to Effective Date:**

**41. Is the Board's effective date appropriate for the proposed auditor reporting standard? Why or why not?**

We believe the results from field testing will provide essential feedback to be considered in formulating a final standard. For this reason, until the results from field testing are evaluated, we believe it is premature to comment on a possible effective date. In this regard, it may be helpful to monitor the implementation of the UK's Financial Reporting Council's recently issued ISA (UK and Ireland) 700, *The Independent Auditor's Report on Financial Statements.* This standard requires the auditor's report on entities that report on how they have applied the UK Corporate Governance Code to: (1) describe the risks of material misstatement that were identified by the auditor and which had the greatest effect on the overall strategy, the allocation of resources on the audit, and directing the effects of the engagement team, and (2) provide an overview of the scope of the audit, including an explanation of how such scope addressed the assessed risk of material misstatement. While the FRC standard differs in some respects from the PCAOB's Proposed Auditor Reporting Standard, there are sufficient similarities such that the UK and Ireland experience could inform the Board's deliberations on this matter.

**42. Should the Board consider a delayed compliance date for the proposed auditor reporting standard and amendments or delayed compliance date for certain parts of the proposed auditor reporting standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?**

Due to the significance of the changes in auditor reporting proposed in this Release, in particular as it relates to critical audit matters, we believe that a delayed compliance date for audits of smaller companies, such as non-accelerated filers, is appropriate.

**The Proposed Other Information Standard**

**Introduction and Objectives**:

**2. Is it appropriate to apply the proposed other information standard to information incorporated by reference? Why or why not? Are there additional costs or practical issues with including information incorporated by reference in the scope of the proposed other information standard? If so, what are they?**

When documents that are not yet available are incorporated by reference (e.g., the definitive proxy statement that is generally not available at the time of the issuance of the audit report), it is unclear how the auditor is to report at the audit report date and then subsequently when that document becomes available. We believe that it is inappropriate for the auditor to report on information that is not yet available, and suggest that additional guidance about how to report in such a circumstance be included within the Proposed Other Information Standard.

**Evaluating the Other Information**:

6. **Is it appropriate to require the auditor to evaluate the other information for both a material inconsistency and for a material misstatement of fact? If not, why not?**

We believe the auditor's responsibility for other information directly related to the audited financial statements should be to read and perform certain limited procedures, and based on that work report whether a material inconsistency or a material misstatement of fact is identified. However, for other information not directly related to the audited financial statements, we believe the auditor's responsibility should be consistent with AU 550, *Other Information in Documents Containing Audited Financial Statements,* which requires the auditor to read the other information and, if the auditor becomes aware of a potential material misstatement of fact in the other information, to discuss the matter with the client and request that misstatement to be corrected. Moreover, we believe the proposal should recognize that for information not directly related to the audited financial statements, the auditor may not have the expertise to assess its presentation and, accordingly, provide guidance for such circumstances.

9. **Are the proposed procedures with respect to evaluating the other information clear, appropriate, and sufficient? If not, why not?**

Paragraph 4 of the Proposed Other Information Standard requires the auditor to read and evaluate the other information based on relevant audit evidence obtained and conclusions reached during the audit. We are concerned that the phrase, "relevant audit evidence obtained and conclusions reached during the audit," has the potential to be misinterpreted to require a search of the audit documentation to determine what particular items included within other information may be included within the working papers. To address this concern, we suggest aligning the auditor's performance responsibilities in this regard to the audited financial statements or accounting records that are the subject to the audit, or that have been derived from such accounting records by analysis or computation.

**Other Considerations:**

24. **What effect, if any, would the reporting under the proposed other information standard have on an auditor's potential liability in private litigation? Would this reporting lead to an unwarranted increase in private liability? Are there steps the Board could or should take related to the other information requirements to mitigate the likelihood of increasing an accounting firm's potential liability in private litigation?**

The Proposed Other Information Standard would likely lead to an unwarranted increase in private litigation against auditors under the federal securities laws and state laws. In particular, plaintiffs would likely argue that (i) the proposed auditor obligation to "read and evaluate" such other information requires the auditor to conclude on the accuracy and sufficiency of disclosures by management in areas beyond the financial statements and the associated footnotes; (ii) the auditor's written observations with regard to such other information (proposed by the PCAOB to be an affirmative statement that it has not identified a material inconsistency or misstatement of fact in the other information) constitutes a "statement" under the federal securities laws; and (iii) they relied upon such "statements" to their detriment. The litigation risk would be expansive, and equally unwarranted, given the auditors specific role in the public markets. We have therefore proposed, and support, changes to the proposal that are aimed at avoiding this unwarranted expansion of liability. These changes would certainly not eliminate all potential liability associated with other information; but rather would more closely align this potential liability with the auditor's legitimate role.

**25. Would reporting under the proposed other information standard affect an auditor's potential liability under provisions of the federal securities laws other than Section 10(b) of the Exchange Act, such as Section 11 of the Securities Act? Would it affect an auditor's potential liability under state law?**

Please see response to question 24 above.

Subject: PCAOB Rulemaking Docket Matter No. 034

I appreciate the opportunity to comment on the proposed auditing standards, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion, and The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report.*

As background, I am the chief accounting officer for a publicly held life sciences company and an individual retail investor. I am also a former audit partner with KPMG LLP, and previously served as the chief accounting officer of a mid-cap public company and as the audit committee chairman for a community bank. I am writing this letter in my capacity as an individual investor, since the PCAOB is seeking to provide information which would be useful to investors.

The proposed auditing standards document uses many words such as "could" and "might" in its description of potential benefits to investors. Although some investors have expressed the desire for more information when surveyed, investors do not usually ask the auditors any questions at shareholder meetings, which to me indicates that investors are not normally looking for additional information from auditors. Requiring a significant change to audit reports should be based upon more factual evidence of benefit than has been presented to justify the increase in costs, which may be significant.

<u>Auditor's Report</u>
As an investor, there is significant information available to analyze for public companies. One of the biggest challenges for investors is discerning what information is the most important and relevant for decision making purposes. The current pass/fail model of reporting in the auditor's opinion enables the investor to quickly understand the audit report. Although additional information could be provided in the audit report, it does not mean that the information would be helpful for decision making by investors. Instead, the additional information regarding critical audit matters could in fact be confusing to investors, as further discussed below.

If additional information were added to the audit report, it would be largely redundant with information provided by management within the financial statements or MD&A. As an investor, I don't want to spend time reading information which is redundant. Management is responsible for providing the information about its accounting policies, its financial condition and results of operations; this information should not be reported by the auditor as this may confuse investors as to what the auditor is responsible for.

Auditing Standard No. 16, *Communications with Audit Committees*, requires auditors to communicate with audit committees regarding critical accounting estimates, overall audit strategy, significant unusual transactions, difficult or contentious matters subject to consultation outside of the audit team, and other matters. It is the audit committee's responsibility to evaluate this information, and the audit committee has sufficient financial expertise and background to do so.

While information on critical audit matters is already provided by the auditor to the audit committee, more time would be required to ensure the description of critical audit matters are correct for publication. The audit committee has the ability to ask the auditors questions about the information reported and discuss the issues, whereas investors do not. Therefore additional time will be required to ensure the critical audit matters are described properly. This additional time will primarily need to be spent during the final phase of the audit engagement and will require significant information from senior members of the audit team and senior management to ensure that there is consistency in disclosures.

Timeliness of reporting is important. Requiring lengthy audit reports would only serve to extend the time required for the reporting process as the auditors would need to spend even more time ensuring that the documentation of critical audit matters is appropriate for public reporting. This additional time delay in reporting would not be in the best interest of investors.

There are other factors to consider:

- What basis or framework does an investor have to evaluate the critical audit matters described by an auditor for one company compared to that described for another? Differences in descriptions may be due to differences in auditors but not the underlying risks of the companies involved.
- Investors may misunderstand information presented. Investors may view the number of critical audit matters as a positive or a negative, which may not be the correct conclusion. Investors may view the critical audit matter discussion as a piecemeal opinion.
- How does knowledge of the audit process actually help the investor make investment decisions?
- The focus on critical audit matters may remove the focus on the financial statements taken as a whole, which is the basis for the auditor's opinion.
- Would the descriptions of critical audit matters become boilerplate in order to address the consistency and timeliness concerns? In that case the critical audit matters would become more noise that an investor needs to wade through to find information which is useful in assessing the future prospects for a company.

In many cases the information regarding critical audit matters may not be helpful in making investment decisions. For example, accounts receivable and inventory are often considered to be critical audit matters for manufacturing companies since the audits of those accounts requires significant effort and there is judgment in the valuation allowances. A description of the critical audit matters and the audit procedures would not likely enhance the user's ability to understand the financial statements of the company.

The description of the auditor's procedures for critical audit matters may give the reader the wrong conclusion. For example, if going concern is a critical audit matter and the auditor is satisfied that the opinion does not need to be modified for this matter, the description as a critical audit matter may have either the effect of a going concern opinion, or conversely, could subject the auditor to liability due to the statements made which indicate that the auditor has overcome significant doubt about the entity's ability to continue as a going concern, as noted on page A5-42. Valuation allowances are other areas where the additional information could amount to a piecemeal opinion and give the investor more or less assurance than warranted. Difficulty in auditing assets or liabilities which are impacted by management forecasts could give investors the wrong impression, either overly positive or negative.

In the example discussion of a critical audit matter on page A5-68, regarding sales returns, how does knowledge that the auditor consulted with their national office on the design and performance of the audit procedures and evaluation of the results aid in the investor's understanding of the financial statements and future risks, beyond what was disclosed by management? The auditor provided some additional information about the company's sales channel and process; if that information was significant to understanding the financial statements, it should have been provided by management.

In the example on A5-77, the description of the critical audit matter states that the audit of the securities required "an extensive amount of audit work, including significant involvement of senior members of the engagement team and the involvement of a third party valuation specialist." How would this information help the user of the financial statements make judgments, beyond the disclosures already provided? Would users take more comfort than they should, because they may believe that this provides more assurance on a particular account? How does the reader benefit by knowing that there was "extensive audit work" and "involvement of specialists" in particular areas of the audit? This could be viewed as a piecemeal opinion by some investors.

Auditors should not be reporting internal control deficiencies which are not a material weakness. Doing so creates an unnecessary concern about something which is not material. Where does an auditor draw the line between information to report or not report? Concerns about liability would likely influence an auditor to report more rather than less information, but that will not necessarily be helpful to investors.

The exposure draft indicated that additional disclosure would lower the cost of capital – which would mean investors would be willing to accept a lower return if they had more information about the audit. There are many factors which influence the price of stocks, particularly expectations for performance of the company in the future. I don't believe that additional information about the audit would lower the cost of capital; there is not a sufficient reduction in risk to warrant a lower expectation of return by investors.

Additional audit costs either reduce the return to shareholders or reduce investments that may be made in other areas of the company, such as in R&D or marketing, for example. Are investors really better served by this additional investment in audit fees? In my opinion, they are not.

Auditor's Responsibilities Regarding Other Information

The proposed standard for auditor's responsibilities regarding other information requires the auditor to "evaluate" the other information. While the proposed standard states that the auditor does not need to perform additional work other than that performed in conjunction with the audit, it is unclear how the auditor will "evaluate" other information which is disclosed, such as non-gaap reporting and forward looking information which is provided by management in an effort to help the reader of the annual report understand not only the financial statements (which have been audited) but the underlying trends and management's expectations for the business in the future. The auditor may not have the expertise to evaluate other information contained in the document. Under the existing standards, if the auditor believes that a disclosure is incorrect or misleading, the auditor would discuss that with management and if necessary, the audit committee, so that the disclosure was revised. This provides sufficient protection for investors. The auditing standards should not be changed to require additional audit procedures and disclosures for other information.

Other Comments

The fact that the auditor is independent is already in the title of the report and need not be repeated.

Auditor tenure is not relevant to the evaluation of the financial statements or the audit. Tenure should not be reported since there is no correlation between tenure and audit quality, and reporting on tenure implies that it is useful information. If considered necessary, disclosure in the proxy would be a more appropriate place to report that. Tenure should be defined as beginning with the earliest consecutive year audited, not the initial year of engagement as suggested.

In summary, the proposed standards appear to reach farther than necessary to expand the scope and responsibilities of auditors, beyond what is needed by investors. Timeliness and cost are also important factors to investors. I appreciate the opportunity to provide comments on the proposed standards affecting audit reporting. Thank you for your consideration.

Best regards,

Carolyn D. Beaver

Rulemaking Docket No. 34

Board Members:

This letter represents my views on the proposed auditing standards dealing with the auditor's report: PCAOB Release No. 2013-005 dated August 13, 2013. I previously commented on the concepts release on this same matter through my letter dated July 21, 2011. My comments are derived primarily from perspectives gained from serving as chairman of the audit committee for five large public companies over the past twelve years.

The views that follow address a number of the provisions in the exposure draft and include both support for and recommendations related to certain provisions. However, there are two proposals that I believe should be eliminated from any final standard:

- The required disclosure of critical audit matters (CAM), and
- The required disclosure of the tenure of the audit firm

Further, while I expressed support in my earlier letter for inclusion in the report of limited auditor assurance on "other information," I have major reservations about how that matter has been treated in the exposure draft and do not support the current position.

My reasoning for these beliefs is presented later in this letter. Before getting to that, I would like to express my agreement with and appreciation for the Board's decision not to move forward with the major changes suggested in the concepts release of (1) an auditor's discussion and analysis or (2) required and expanded emphasis paragraphs. For reasons noted in my earlier letter, I did not support those changes as was true for most other commentators. I did support limited improvements to the auditor's report that are included in the exposure draft:

> Clarifying that the auditor is required to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement <u>whether caused by error or fraud</u>.
>
> Addressing the auditor's report to both shareholders and the board of directors.

Additionally:

> In my earlier letter I indicated that I was ambivalent about having the auditor's report refer to the related footnotes as well as the basic financial statements and I can certainly support it as part of the current exposure draft.
>
> In my earlier letter I indicated that the title of the report (Report of Independent Registered Public Accounting Firm) seemed sufficient and there appeared to be no reason to require a statement in the body of the report that the audit firm is independent. However, this is a minor matter and I have no serious objection to the proposed inclusion of the language.

The remainder of this letter provides my comments on what I consider the major matters in the proposal.

<u>The Pass/Fail Model</u>

While the auditor's report has undergone certain revisions during my half century in the profession, the essential pass/fail model has stood the test of time and been retained. The proposal continues that model and the release notes that many commentators support it "… because it clearly conveys the auditor's opinion regarding whether the financial statements are fairly presented. Additionally, commenters indicated support for the concise and useful message of the pass/fail model." I strongly agree with those sentiments.

However, I am concerned that the inclusion of several pages of critical audit matters as would be the case under the Board's proposal would make it more difficult for readers of the auditor's report to even locate the opinion on the financial statements and internal controls. This could be addressed in a number of ways should the Board retain the critical audit matters requirement. For example, the Board could require that the key opinion language be stated at the very outset of the report. It could be required to be presented in bold type or a subheading could be required, as the proposal suggests for the CAM section. At the extreme, the Board could require that all reports include a footnote on the first page calling attention to where the opinion can be found (e.g., "See page 11 for our opinion on the accompanying financial statements and internal control over financial reporting").

You may think I'm being a bit facetious in making these suggestions but I'm really not. I sincerely believe that most users of auditor's reports are mainly interested in whether the financial statements are fairly presented (a clean opinion), and they will look for guidance to work around lengthy auditor reports that contain information that they are not interested in. Journalists and others will provide that guidance to that vast majority of the public who simply want to find in the report whether the company has "passed." But if the PCAOB retains the critical audit matters requirement, it could make things a lot easier for users by adopting one of the ideas I just mentioned.

However, my strong preference is that the Board omits the CAM requirement from a final rule for a number of reasons mentioned in the following section.

Critical Audit Matters

As defined, critical audit matters are "Those matters the auditor addressed during the audit of the financial statements that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming an opinion on the financial statements." "Most difficult" is a common theme although the proposal also makes clear that "most" doesn't limit disclosure to a single item in a category.

The language of the proposal indicates that the Board expects multiple CAMs in most cases. "Under the proposed auditor reporting standard, it is expected that, in most audits, the auditor would determine that there are critical audit matters (page A5-27)." "The proposal anticipates that in most audits the auditor would determine that there are critical audit matters and, depending on the circumstances of an audit, there may be several critical audit matters (Statement of Board Member Jeanette M. Franzel)." Further, I believe auditors would be highly motivated to err on the side of including more rather than fewer CAMs in their reports, else the PCAOB inspections staff will second guess their judgments after the fact. In the words of Board Member Lewis H. Ferguson, "It provides a standard that audit firms, regulators like the PCAOB, and others to measure compliance with the requirements of the standard." (His earlier comments supported the Board's approach because it allows auditors "substantial latitude to exercise professional judgment in determining what items to include as CAMs but constrains that judgment by an objective standard, the reasonable and experienced auditor looking at the same evidence.") Different auditors (or different inspectors, in the case of the PCAOB) will clearly reach different judgments so why would an auditor be motivated to determine that a particular matter is not a CAM when it is a close call?

In addition to the definition of CAMs as noted above, the proposal notes that "Critical audit matters ordinarily are matters of such importance that they are included in the matters required to be (1) documented in the engagement completion document, (2) reviewed by the engagement quality reviewer, (3) communicated to the audit committee, or (4) any combination of the three." Further, the proposal's documentation requirements include "non-reported audit matters addressed in the audit that would appear to meet the definition of a critical audit matter were not critical audit matters."

The matters presently included in MD&A disclosures (see further discussion below) would almost certainly be judged as CAMs and most of them would probably fall under category (3). However, based on my experience in the auditing profession, I believe there will be many more matters included in categories (1) and (2) above and thus required to be considered as possible CAMs under the proposal. Given the need to document that matters in these categories are not CAMs, in too many cases auditors will be motivated to judge that they should be included in their reports to avoid a later challenge from the PCAOB inspections staff. Materiality considerations, of course, will come into play. But this is another issue where judgment is required and the motivation may well be to disclose more to avoid second guessing.

In a worst case scenario, auditors could even be motivated to not include matters in the engagement completion document or not communicate them to the audit committee in order to avoid the possibility of having them judged, after the fact by a PCAOB inspector, as a CAM. The PCAOB should be very careful about such possible unintended consequences that could decrease audit quality while intending to enhance communication.

I commend the Board for requesting examples of what auditors think they would include as CAMs under current circumstances. Having some realistic examples to ponder as the Board goes through its redeliberations should be very instructive. And it's equally important that the Board involve users in this exercise. Once you have a number of "real world" examples of what auditors would include in their reports, then it should be imperative to test how users would react to those disclosures and see if they would actually find them to be beneficial. The Board should be able to demonstrate some practical benefits to investors and creditors of adding these voluminous disclosures to the auditor's report <u>before the fact</u> rather than requiring all auditors and companies to incur substantial costs on the basis that they "might" be useful.

Board member Jay D. Hanson said it best in his remarks at the public meeting at which the proposal was adopted. "I would particularly like to encourage auditors to work with their client's audit committees and management to perform some voluntary mini 'field tests,' where the engagement partner, the engagement quality reviewer, management and the audit committee each independently consider what issues may constitute critical audit matters under the proposed standard. <u>Perhaps even share them with investors to obtain their views on the usefulness of the information."</u> I full agree with Mr. Hanson except for the "perhaps" language. For such field tests to be meaningful, they <u>must</u> include the reactions of the users of the auditor's report.

I have recently completed a number of years of service on large public company boards and reached the mandatory retirement age. So I'm not able to participate directly in a field test similar to that suggested by Mr. Hanson above. However, based on my experience and publicly available information, I can provide my own assumptions about what would be included in the CAMs for my two most recent board assignments, Legg Mason and Fannie Mae. Legg Mason is a Fortune 1000 asset management company and Fannie Mae is one of the largest financial services companies, guaranteeing home loans for a substantial percentage of the U.S.

For Legg Mason, the section of the most recent 10-K that reports on "Critical Accounting Policies and Estimates" includes six matters:

Consolidation (variable interest entities)

Revenue recognition

Valuation of financial instruments

Intangible assets and goodwill

Stock based compensation

Income taxes (recovery of deferred tax asset)

I think it's fair to assume that all of these would be strong candidates for consideration as CAMs by Legg Mason's auditors. And, without getting into confidential matters, it's possible that there would be others, particularly given the exposure draft's push for auditors to reach judgments on the side of disclosing more rather than less.

As noted, all of these matters are already disclosed – extensively – by the company in MD&A – as well as further in the footnotes to the financial statements. It's not clear to me what users will gain by further mention of them in the auditor's report other than perhaps confusion about the auditor's assessment thereof, as mentioned below. Depending on whether the auditor elects to include a description of the audit procedures applied, I would estimate that including the matters above as CAMs in the auditor's report for Legg Mason would add somewhere between 3-6 pages to that report.

For Fannie Mae, the section in MD&A on Critical Accounting Policies and Estimates includes only four matters:

Fair value measurement

Total loss reserves

Other-than-temporary impairment of investment securities

Deferred tax assets

However, that section is six pages long (in quite small type!) and makes reference to the financial statement footnotes as well. For a company as large and complex as Fannie Mae, it's probably reasonable to assume that the auditors would have additional judgment matters to consider as possible CAMs, although their materiality would have to be assessed. As noted, I'm concerned that the PCAOB's application of this kind of standard will be a sort of "gotcha" exercise through the inspection program so that for large, complex companies like Fannie Mae, there would be a number of potential CAMs for which the audit firm would err on the side of inclusion.

Page A5-36 of the proposal notes that, "... the proposed auditor reporting standard would not require the auditor to describe the audit procedures related to critical audit matters. It would, however, not preclude an auditor from doing so." In reading the actual proposed standard, I found it curious that there is no mention of this – the proposal is simply silent on the matter. Having read the background section first, I had expected to find some wording (perhaps at least a footnote) that would state the Board's position on this matter. Then I found it doubly curious that the three Illustrative Examples of CAMs provided by the Board on pages A5-65-78 all included illustrative language of auditing procures preformed to deal with the CAM in question. This would seem to indicate an implicit preference for inclusion of such language in spite of the wording in the background section and in spite of not dealing with the matter in the basic standard.

Of more concern than the lack of clarity on this matter, the inclusion of audit procedures language may cause readers to infer that auditors are expressing reservations in their reports about the matters in question. That is because there is no opinion stated after the audit procedures language. I'm sure the PCAOB believes that the overall opinion on the financial statements is all that is needed. And it's certainly not appropriate under current standards for an auditor to add a separate opinion in its report on each of these individual matters. But by including them in the report and then listing audit procedures for each without a conclusion, the reader may well infer a form of qualification ("subject to") for each. An easy fix would be for a final standard to simply prohibit the inclusion of discussion of audit procedures. However, I believe this is just another reason why the inclusion of CAMs in the auditor's report is a bad idea and should be dropped.

Another concern relates to the current-year only requirement. While I appreciate the Board's effort to take a cost-sensitive approach, given that the report covers three years of financial reports, inclusion of CAMs for only the current year is apt to be confusing rather than helpful in at least some cases. Expecting users to review prior year filings in order to analyze CAMs over time seems to defeat the purpose of an auditor's report comprehensively reporting on the financial statements being included in the package currently delivered to those users.

Similar to my comments about the notion about an AD&A in the Concepts Release, I believe that including CAMs in auditor's reports would likely lead to an administrative nightmare in trying to wrap up the audit given that each report would be custom made and would likely have to be cleared with a firm's national office accounting and auditing technical experts and perhaps even legal staff. Further, given that the CAMs would include matters that the company is also reporting in most cases, such as significant accounting estimates, those matters would require extensive discussion and negotiation with company finance and legal staff at a time when meeting SEC deadlines is quite challenging. Rather than spending time on procedures that really add value to the audit, audit partners would find themselves haggling over wording issues that could serve as an unnecessary distraction. This factor alone should persuade the PCAOB not to advance the notion of CAMs as Board members should already know that too much partner time is involved in pinning down minor details of financial statement footnotes and other matters that take away from involvement in more important audit tasks.

As one final matter concerning CAMs, as the Board notes on pages A5-42-3 of the proposal, in certain cases (e.g., significant deficiencies in internal controls, certain going concern considerations), the auditor would be required to disclose information in the report that would not otherwise be required to be disclosed by management. This reverses the normal relationships of management and auditor and should be avoided.

In summary with respect to CAMs, I believe that adding multiple pages to the auditor's report of what would usually be duplicative of information reported elsewhere in the MD&A or financial statement footnotes would be of questionable value to the users of financial statements and may even obscure the principal purpose of highlighting an overall opinion on those statements. Further, I have provided certain other reasons that make such CAMs problematic and should cause the Board to conclude that such a fundamental change to the auditor's report is not justified at this time.

Reporting on "Other Information"

As noted earlier, in my comment letter on the concepts release I supported "limited auditor assurance" on other information outside of the audited financial statements. By that I meant that I believed the standard auditor's report would be enhanced by incorporating the substance of AU 550 so as to inform investors and other readers of the report of the extent of the auditor's responsibility for the other information in 10-K's, etc. The auditor presently reports this to the audit committee and I believed this was one matter that could be added to the external report that would aid communications with investors with little or no change in procedures.

Thus, I would have supported an exposure draft position that adopted a reporting requirement based on procedures that auditors are already performing. In my earlier comment letter I noted that reading the non-financial statement information and considering whether it is materially consistent with the audited financial statements seems sufficient to me.

At first reading, a proposed requirement to "read and evaluate" rather than "read and consider" doesn't sound like too substantive a difference. However, after reading summaries of the proposal issued by certain of the major accounting firms, I'm concerned that the change in wording will be more than a semantic one. For example, my former firm, Ernst & Young, reported that, "The proposal would require the auditor to <u>perform additional procedures</u> and to evaluate this information based on relevant audit evidence obtained and conclusions reached during the audit." Further, EY's analysis indicated that, "We believe additional audit effort and cost would be required to comply with the proposal." Likewise, Deloitte stated, "The proposal's auditor performance provisions <u>significantly add</u> to the auditor's responsibilities for other information by introducing required audit procedures to support the auditor's conclusion about the auditor's evaluation of other information. Specifically, under AU Section 550, the auditor is required to "**read**" and "**consider**" other information, whereas under the proposal, the auditor is required to "**read**" and "**evaluate**" the other information on the basis of relevant audit evidence obtained and conclusion reached during the audit."

As I have thought about this more, I am concerned not only that auditors will require more work to be done in order to meet the new standard, but the readers of the reports may assume a great degree of accountability that is warranted. For example, the subheading specified in the sample report in the proposal is "The Auditor's Responsibilities Regarding Other Information." The following wording notes that the "evaluation" of such "responsibilities" was based on "relevant audit evidence obtained and conclusions reached during the audit." A reader could reasonably infer from that wording that procedures were specifically designed and added to the audit work performed in order to support the "evaluation" so reached. This sounds like incremental audit testing work rather than the negative assurance from already performed auditing procedures that actually underlies this paragraph of the opinion. While that paragraph appropriately ends with a disclaimer of opinion on the other information, users may well read more into the overall message than intended.

This is another aspect of the proposal that calls for a form of field testing. The Board should work with accounting firms to determine what procedures they believe they would have to perform in order to meet the requirements of the exposure draft. This should be done with enough accounting different firms and with enough different sample clients within those firms to form a representative basis of what such a new requirement would actually entail. Neither the PCAOB nor the accounting profession should want a repeat of the situation that occurred after the issuance of PCAOB Auditing Standard 2 on internal control that had to be substantially modified when it was found that auditors performed far more work than intended by the Board.

In summary, I do not support this part of the proposal as written. The Board should reconsider the possibility of incorporating the substance of AU550 with a reporting requirement in the auditor's report. If that is not considered feasible, I believe this part of the proposal should be dropped.

Auditor Tenure

A major, new addition to the auditor's report would be, "A statement containing the year the auditor began serving consecutively as the company's auditor." The background information on this matter in Appendix 5 indicates that academic research is mixed as to whether short- or long-term audit relationships are more likely to adversely affect audit quality. Nevertheless, the Board indicates that "… investors and other financial statement users have indicated strong interest in this information." A footnote reference to a Council of Institutional Investors' policy statement is used to support this assertion.

Comments by individual Board members are somewhat less effusive in their support. For example, Lewis H. Ferguson stated, "Is this tenure information relevant or useful to financial statement users? Opinion varies on that question, but providing it in the audit report should not, in my view, involve additional cost either to the auditor or the issuer, and some financial statement users may find that information to be of interest."

Board member Jeanette M. Franzel expressed much doubt about this aspect of the proposal: "…the Board has not found evidence that would allow generalized conclusions about the impact of auditor tenure on audit quality." And, "I am concerned that by including auditor tenure in the auditor's report, there may be an implication that there is an analytical basis for interpreting such information."

Further, Board member Jay D. Hanson made comments similar to those of Ms. Franzel, "I question whether it is appropriate for the Board to require disclosure in the audit report of the auditor's tenure with the particular client." And, "Thus, we do not have, at this point, any data indicating that audit tenure has any correlation with audit quality."

Taken together, the very brief comments in the Board's basis for conclusions along with the statements of the individual Board members would seem to indicate a view that (1) some users have asked for this information, (2) we've looked at a lot of research and haven't found a persuasive basis for saying whether audit longevity affects audit quality one way or the other, (3) it wouldn't hurt (or cost) anything to add this to the standard auditor's report, (4) so let's put this in the exposure draft and see what reaction we get. This sounds like a classic case of running something up the flag pole to see what people think, even when there isn't much conviction among those charged to decide the issues.

Disclosure of auditor tenure is an issue that was actually faced on one of my former corporate board assignments – Legg Mason. However, there it was in the context of disclosure in the proxy statement of information about the relationship with our external auditor for purposes of the shareholder vote on ratification of the Audit Committee selection of the auditors for the coming year. After some discussion with an interested shareholder, the company decided to provide more information, including the year in which the current audit relationship had begun, about the Audit Committee's selection of the independent auditor, oversight thereof, engagement partner rotation, etc.

Audit firm tenure information may be useful when asking shareholders to vote on an Audit Committee action, in order to give them a full understanding of the situation. However, in an auditor's report a simple statement of when the audit relationship began won't have any context and, thus, will be of limited or no value to nearly all users. Thus, I do not support this aspect of the proposal and believe it should be eliminated. Rather, it should be left to the discretion of companies in providing appropriate information in proxy statements. Or, at some point the SEC may wish to consider further required disclosures about audit relationships in proxy statements.

Other Changes in the Description of an Audit

Paragraph 6m of the exposure draft specifies that the standard auditor's report would include a statement that an audit covers certain matters concerning audit procedures performed in assessing possible material misstatements, amounts and disclosures in the financial statements, and evaluation of accounting principles and significant estimates made. An illustration of the suggested wording for the new disclosures that would result from the part of this section of the proposal that is incrementally different from the present standard is in Appendix A of the exposure draft. While I don't believe that such changes will make a profound difference in users' understanding of the work of independent auditors, the proposals appear to be straight forward and they may be of marginal value in helping describe the nature of an audit.

Conclusion

As noted in my earlier letter on the Concepts Release, I believe some improvements to the current form of the auditor's report can be made. However, including critical audit matters would be a serious mistake for many reasons noted above. I also have reservations about the positions on "other information" and auditor tenure as noted. I trust you will give appropriate consideration to my comments and would be pleased to elaborate on them as you request.

Sincerely,

Dennis R. Beresford

Re: PCAOB Rulemaking Docket Matter No. 034, Release No. 2013-005

To whom it may concern:

The Biotechnology Industry Organization (BIO) is pleased to submit comments to the Public Company Accounting Oversight Board (PCAOB) on Release No. 2013-005, on proposed auditing standards.

BIO is a not-for-profit trade association that represents more than 1,100 biotechnology companies, academic institutions, state biotechnology centers, and related organizations in all 50 states. BIO members are working toward groundbreaking cures and treatments for devastating diseases, developing technologies for advanced biofuels and renewable chemicals, and researching novel gene traits for identifying food sources that could help combat global hunger.

BIO fully supports strong auditing standards, and believes that they can enhance investor protection and confidence. BIO applauds the PCAOB for its dedication to protecting investors and fostering confidence in the market. However, overly stringent regulatory requirements can have a detrimental effect on growing biotechs by causing a diversion of capital from science to compliance.

In the biotechnology industry, it can take more than a decade and over $1 billion to bring a single life-saving treatment from laboratory bench to hospital bedside. This entire process is undertaken without the benefit of product revenue – early-stage biotech companies do not have the luxury of using the sale of one product to finance the development of another. Rather, the entire cost of drug development is borne by external investors. As such, the efficient use of investment funds is of paramount importance to a growing biotech company. Spending valuable innovation capital on costly regulatory burdens can delay scientific progress and slow the growth of a promising company.

The recent surge in biotech IPOs since the passage of the Jumpstart Our Business Startups (JOBS) Act in April 2012 has brought the compliance requirements of emerging public companies into sharp focus. More than 45 biotech companies have gone public using provisions in the JOBS Act, and they are now subject to the regulatory regime of a public company. One of the key messages of the JOBS Act was that one-size-fits-all compliance burdens are not appropriate for all market participants and can harm growing companies. BIO believes that certain items in the auditing standards proposed by the PCAOB could hurt small innovators by subjecting them to burdensome and unnecessary regulatory requirements.

The true value of biotech companies is embedded in their groundbreaking research, pipeline of product candidates, and their progress in advancing those product candidates toward regulatory approval and product sales. Investors often make decisions based on these parameters rather than a biotech company's operating results and financial disclosures; therefore, higher costs to comply with the proposed standards would outweigh any potential benefits.

BIO appreciates the opportunity to comment on the following items in the proposed auditing standards.

**Proposed Auditor Reporting Standard**

Critical Audit Matters

*The proposed critical audit matters standard is substantially similar to requiring AD&A.*

In its 2011 concept release, the PCAOB proposed requiring auditor's discussion and analysis (AD&A) in company filings. At the time, BIO commented that an AD&A requirement would "make our companies' audits more expensive, duplicate management's discussion and analysis of its business, operations, and financial results (MD&A), and potentially confuse investors and analysts." BIO believes that the proposed critical audit matters standard is substantially similar to AD&A and that it would be extremely burdensome for pre-revenue biotech issuers.

The AD&A proposal would have required a supplemental report detailing the auditor's perspective about the audit and the company's financial statements. The proposed critical audit matters standard would instead include the auditor's discussion and analysis within the auditor's report itself. Though the new standard would somewhat narrow the scope of what the auditor is asked to identify and report to investors, it remains the case that the auditor is being asked to provide a subjective look into the auditing process that will likely create additional work and expenses.

The proposed critical audit matters approach is also similar to the emphasis paragraphs proposal from the 2011 concept release. BIO opposed this requirement, noting that "emphasis paragraphs would not be relevant or useful." It appears as though the PCAOB has combined AD&A with emphasis paragraphs and titled the result "critical audit matters" – without substantially decreasing the burdens that would be placed on growing companies if the proposal is adopted.

*A critical audit matters standard would increase audit costs, is duplicative, and could confuse investors.*

The PCAOB release states that the critical audit matters standard would be "cost-sensitive" because "the auditor's determination of critical audit matters is based on the audit already performed." Yet the release also notes that the PCAOB expects "that in most audits, the auditor would determine that there are critical audit matters." The virtual certainty that critical audit matters would be identified belies the PCAOB's assertion that the new standard would not increase audit costs. Additionally, the PCAOB's reassurance that most of the critical audit matters work will be done after the audit is completed is hardly comforting, as this will likely result in a time crunch as auditors and issuers struggle to meet the reporting deadline, increasing the chance for errors or a lower-quality audit. The additional requirement will create additional work, which will be translated into an increase in audit fees to public companies. For growing biotechs, the increased fees will come directly from investment dollars intended for groundbreaking R&D, a diversion of capital that could slow scientific progress.

The problem is further exacerbated by the fact that it is unlikely that the critical audit matters standard will provide any substantial benefits to investors. Currently, auditors review and provide comments and feedback to management and the audit committee on a company's financial statement disclosures and MD&A. During the course of this dialogue, management, the audit committee, and external auditors correspond in detail about identified risks, financial disclosures, management's judgments, estimates, and accounting policies and practices. Management and the audit committee address these auditor comments and feedback and, as required, engage in collaborative discussions regarding the appropriate depth and breadth of the company's disclosures. Auditors, whose opinion is included within a company's financial statements and incorporated into the company's Securities and Exchange Commission (SEC) filings, would not permit their audit opinion to be included with such financial statements if a company's disclosures and discussion of its operating results were inappropriate, inconsistent, or incomplete. Thus, the addition of critical audit matters reporting would appear to be duplicative, of no additional value, and potentially confusing.

The proposing release notes these "unintended consequences," but BIO believes that they should be more of a cause for consternation than the PCAOB seems to give them credit for. The release mentions that the critical audit matters standard "could result in additional effort involving both one-time costs and recurring costs." Investors "could misunderstand the meaning of a critical audit matter" because they are not accustomed to reviewing or analyzing financial statements in such a manner. Lower quality audits could be the result of the reduced time available to the auditor under the new standard. These concerns are not trivial, and should give the PCAOB pause before adopting this costly and unnecessary regulation.

Because biotechs do not generate product revenue during the R&D phase, capital spent on regulatory burdens comes directly from funds earmarked for innovation. Any proposed regulatory duties should be judged in this light, particularly those with the ostensible goal of protecting the very investors providing those funds. The critical audit matters standard would increase audit fees without providing much, if any, valuable information to investors, so its costs far outweigh any alleged benefits.

*BIO believes the JOBS Act precludes application of a critical audit matters standard to EGCs.*

The PCAOB release calls for further examination and discussion of whether the proposed standards and amendments should be applied to emerging growth companies (EGCs) as defined by the JOBS Act. It is BIO's belief that the proposed critical audit matters standard should not, and cannot, be applied to EGCs.

One of the goals of the JOBS Act was to avoid a one-size-fits-all regulatory regime. The law targets growing companies during the first five years after their IPO and provides certain exemptions and allowances to ease their transition to the public market and reduce some of the cost barriers of public reporting. Applying the proposed critical audit matters standard to all issuers, regardless of EGC status, would violate the spirit of the IPO On-Ramp by subjecting smaller issuers to this costly requirement. EGCs should not be required to comply.

Further, irrespective of the costs of the critical audit matters standard to EGCs, BIO believes that the JOBS Act specifically curtails the PCAOB's authority to enact such a requirement. The proposing release notes that Section 104 of the JOBS Act requires the SEC to determine whether any new rules adopted by the PCAOB should apply to EGCs. The release solicits comment on this issue, which BIO addresses in full on page 5 of this letter. However, the release fails to mention the sentence immediately preceding the highlighted one in Section

104, which forbids the PCAOB from requiring of EGCs "a supplement to the auditor's report in which the auditor would be required to provide additional information about the audit and the financial statements of the issuer." The JOBS Act parenthetically identifies this potential supplement as AD&A, but it is clear that Congress was attempting to forestall any efforts by the PCAOB to require this type of additional information and analysis on the audit of an EGC.

Despite the name change from AD&A to critical audit matters, and the slightly narrower scope, BIO believes that these two provisions are substantially similar. The JOBS Act forbids the PCAOB from requiring additional information about an EGC's audit and financial statements, and the critical audit matters standard would do just that. As such, applying this proposed requirement to the audits of EGCs would be in direct violation of the JOBS Act. If the critical audit matters standard is adopted (and BIO's position is that it should not be), the PCAOB should provide for an exception for EGCs. This exemption is required by the JOBS Act, and following Congress's directive will prevent additional regulatory burdens from weighing down the progress of emerging biotech innovators.

**Proposed Other Information Standard**

Under current PCAOB standards, auditors must "read and consider" certain other information contained in Exchange Act annual reports and other documents to which the auditor devotes attention. The proposed other information standard would both increase the amount of information auditors are required to analyze and expand the procedures associated with reporting the other information.

A significant change in the proposal is in the amount and type of information for which auditors are responsible. The proposed standard would require auditors to review "Selected Financial Data, Management's Discussion & Analysis ("MD&A"), exhibits, and certain information incorporated by reference," among other items. Auditors are currently required to review information related to the audit in the annual report, but this expansion would substantially broaden the scope of the auditor's responsibilities. Issuers would see a corresponding increase in audit fees as auditors struggle with the new workload.

As previously noted, auditors currently review and provide comments and feedback to management and the audit committee on a company's MD&A. For other financial information included outside of an issuer's financial statements (such as an earnings release), the auditor will perform certain procedures to satisfy themselves that the information is accurate and not inconsistent with the company's financial statements. For other information included within an SEC filing that contains an audit opinion, auditors do not permit their audit opinion to be included if the other financial information is inappropriate, inconsistent, or incomplete. BIO believes that this process is sufficient, and that there is no added benefit or value to investors in having auditors expand the other information or processes for which they are responsible.

In addition to the broader definition of "other information," the proposed standard would also hold auditors accountable for a greater degree of analysis. The current "read and consider" standard is sufficient to garner relevant information and relay it to investors in a practical manner. The proposed "read and evaluate" standard increases auditor responsibility and liability – and audit fees. These new required audit procedures specified to support the auditor's conclusions with regard to the other information identified are complex and burdensome.

Under the proposed standard, the auditor must read and evaluate the other information for material inconsistencies and/or material misstatements of fact. Regardless of the auditor's findings, the auditor is required to identify the information evaluated, the auditor's responsibility regarding the other information, and the procedures used to evaluate the other information. The auditor must then communicate any conclusions in the auditor's report. This striking increase in auditor responsibility – extending so far that auditors are required to report even on information they do not believe is inconsistent or misstated – will create a new burden for auditors and issuers. The proposing release concedes that there will likely be an increase in cost and auditor effort because the proposed procedures go far beyond the current "read and consider" approach. The corresponding fees imposed on issuers could be damaging to company growth.

BIO believes that the existing other information standard is sufficient to protect investors. It balances disclosure standards with the needs of growing businesses – as directed by their investors – to efficiently use investment capital. The PCAOB should not adopt the costly, onerous other information standard described in the proposing release.

**Considerations Regarding Audits of Emerging Growth Companies**

As noted in the proposing release, Section 104 of the JOBS Act states that any new PCAOB rules "shall not apply to an audit of any emerging growth company, unless the [SEC] determines that the application of such additional requirements is necessary or appropriate in the public interest." According to the release, the PCAOB will make an initial determination as to whether it should recommend that the proposed standards and amendments be applicable to EGCs. If the PCAOB does recommend that the proposal apply to EGCs, the SEC will make a separate, binding determination on the issue. The PCAOB is soliciting comment to guide its initial determination. It is BIO's strong belief that the PCAOB should not recommend to the SEC that the proposed standards and amendments apply to the audits of EGCs.

The JOBS Act has been successful in spurring IPO activity amongst EGCs. The various provisions in the IPO On-Ramp have eased the IPO process and reduced the regulatory burden that newly-public companies face. The biotech industry has seen more than 50 IPOs since the law passed, a striking increase from the past two years when the market was essentially closed. It is clear that commonsense regulatory obligations play a part in the decision to go public. If growing companies face one-size-fits-all compliance burdens, they risk being dragged down by government red tape. These fears contribute to a reluctance to go through with an IPO and could harm a company's progress once it is public.

For EGCs in the biotech industry, an awareness of an issuer's potential regulatory burden is of paramount importance. As previously discussed, biotech companies face a decade-long, billion-dollar development timeline, and their research is supported by private investment capital rather than product revenue. Any funds spent complying with costly and complicated new audit regulations would be, by definition, lost to innovation.

Spending capital on regulatory burdens can slow the development process, increasing the time it takes to reach the important milestones that trigger new investments. Without product revenue, most biotech EGCs would be forced to ask investors to pay for the new audit requirements rather than scientific research. The cost burden of the proposed standards, and therefore the amount of capital diverted from R&D, could be significant.

These traits are shared by small businesses and growing innovators in all segments of the economy. Congress created the EGC definition as a means to protect these vital job creators and support their growth. The five year transition period onto the market, targeted specifically at small and emerging companies, circumvents the existing one-size-fits-all regulatory regime and instead implements commonsense, tailored regulations that are indicative of the unique nature of EGCs. The PCAOB should not undercut this important facet of the JOBS Act, and it should not recommend that the proposed audit standards apply to the audits of EGCs.

**Conclusion**

The proposed change to the audit report is presumably intended to inform, and therefore protect, investors, and BIO supports this goal. In the biotech industry, an informed investor is a good one. However, the information that these investors want and need does not always align with what would be disclosed under the proposed standards. The true value of a biotech company is found in scientific milestones and clinical trial advancement rather than financial disclosures.

The business model of biotechnology is simple – growing innovators take in millions of dollars to fund their research and often do not earn a single penny in product revenue for more than a decade. Their science is the complicated part of their business, and it is the most important aspect for investors to understand. Investors mainly make their decisions based on scientific results and development milestones, not financial disclosures: tracking cash and expenses is fairly straightforward. The proposed audit changes would not provide much insight for potential investors, meaning that the high cost of compliance would far outweigh its benefits.

From a scientific perspective, biotech companies are innovators expanding the world's understanding of human life. As corporations, they strive to stay as simple as possible so that the maximum amount of investment dollars can flow directly to R&D. Disrupting that flow by diverting research funds to the unnecessary and complicated proposed audit standards could slow research and hamper growth – all while failing to increase investor confidence or spur capital formation.

As such, BIO believes that the PCAOB should not adopt the proposed critical audit matters or other information standards. These onerous requirements would stall the progress of companies at all stages of scientific development. Further, BIO believes that the proposed rule in its entirety would have a unique and damaging effect on EGCs. These growing businesses, both in the biotech industry and elsewhere, have been identified by Congress for a tailored regulatory regime. The PCAOB should not revert to a one-size-fits-all approach by applying the proposed standards to EGCs.

BIO looks forward to working with the PCAOB to enhance investor protections through the audit report without impeding innovation and growth at research-intensive small businesses. If you have further questions or comments, please contact me or Charles Crain, Manager of Policy and Research, at (202) 962-9218.

Sincerely,

E. Cartier Esham
Executive Vice President, Emerging Companies
Biotechnology Industry Organization (BIO)

Public Company Accounting Oversight Board

**RE: Proposed Auditing Standards –**

***The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion***

***The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report***

***Proposed Amendments to PCAOB Standards Related to the Proposed Auditor Reporting Standard***

Members of the Board:

BlackRock, Inc. ("BlackRock") appreciates the opportunity to comment on *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*, and *Proposed Amendments to PCAOB Standards Related to the Proposed Auditor Reporting Standard* (together the "Proposed Standards"). BlackRock is a global investment manager, overseeing approximately $4.1 trillion of assets under management at September 30, 2013. BlackRock and its subsidiaries manage approximately 3,400 investment vehicles, including registered investment companies, hedge funds, private equity funds, exchange-traded funds and collective investment trusts, in addition to separate accounts. Certain of BlackRock's wholly-owned subsidiaries operate as U.S. registered broker/dealers, a U.K. registered life insurance company, a U.S. registered bank trust company and numerous investment advisory companies registered in jurisdictions throughout the world.

As an investment manager, BlackRock is in the position to provide commentary on the Proposed Standards from the perspectives of: a) a corporate preparer, b) an investment fund preparer and c) a user (i.e., BlackRock's research analysts). For purposes of this response, our comments primarily reflect those of our analysts as users of both financial statements and auditors' opinions.

**Overview**

We applaud the Public Company Accounting Oversight Board ("PCAOB" or the "Board") for undertaking this project, the goal of which is to enhance auditor communications and information useful to users of financial statements. Overall, we support the concept of communicating critical audit matters and believe that much of the framework proposed will result in useful information to users of financial statements. We wish to emphasize that certain entities, such as investment companies, have inherently less complex business models for which there may routinely be no critical audit matters. In order to avoid "boilerplate" language, we encourage the PCAOB to clarify that routine matters discussed

BLACKROCK®
55 E. 52nd Street
New York, NY 10055
Tel 212.810.5300

with boards of directors or audit committees and comprehensively disclosed in the financial statements may not require identification as a critical audit matter because, while they may require substantial audit effort, they do not require significant auditor judgment or give rise to significant audit issues.

We are concerned that some investors may misinterpret the communication of a critical audit matter as indicative of an issue with respect to the quality of the financial statements or as a qualification in the auditor's report (even though the proposed auditor's report would state that the opinion on the financial statements is not modified with respect to any of the critical audit matters described). We suggest that additional language be added to the critical audit matter section of the auditor's report to explain that critical audit matters are not necessarily indicative of a financial statement deficiency.

From a preparer's perspective, we believe there will be additional time and expense associated with interacting with and providing information to the auditors in connection with their required assessment and reporting of critical audit matters and their documentation of matters that are critical audit matters. We do not believe that the auditor should be required to document why all other possible critical audit matters were not included as critical audit matters in the auditor's report.

We continue to recommend that the description of critical audit matters in the auditor's report exclude audit procedures performed or an indication of the outcome of the auditor's procedures and significant auditor judgments. Such information may lead a user to believe that the auditor is expressing a "piecemeal" opinion on individual matters or accounts in the financial statements, and any audit procedures enumerated may be taken out of context or misunderstood given their necessarily abbreviated descriptions.

We support including a description in the auditor's report that clarifies the auditor's responsibility for other information in documents containing financial statements. We do not support changing the auditor's responsibility for other information to "evaluate" such information versus the current requirement to "consider" the information, which might imply detailed comfort letter type documentation and procedures. We also do not support an expansion of audit procedures to include other information beyond Management Discussion and Analysis ("MD&A") and other schedules containing financial information that is derived from or that supports the financial statements. We do not support an extension of audit procedures to other information incorporated by reference.

We encourage the PCAOB and the IAASB to work together to standardize, to the extent possible, the form and content of the auditor's report in order to increase comparability and ease of use for users who may be readers of reports subject to both sets of standards.

*****

The following comments primarily reflect those of our analysts are in response to certain questions set forth in the Proposed Standards.

4. **The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this statement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?**

BLACKROCK®

55 E. 52nd Street

New York, NY 10055

Tel 212.810.5300

We rely on the auditor of the financial statements to determine their independence with professional standards, and the PCAOB to ensure that all auditors of public companies are registered with the PCAOB. We do not believe that the statement in the auditor's report relating to auditor independence provides any meaningful additional comfort.

5. **The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor. Would information regarding tenure in the auditor's report be useful to investors and other financial statement users? Why or why not?**

   We do not object to inclusion in the auditor's report of the year in which the auditor began serving consecutively as the company's auditor, although it would be preferable to include such information in another public document, such as the proxy or elsewhere in a Form 10-K. It would be informative to know whether there has been a change in auditor. Such information may cause our analysts to inquire whether there were any disagreements with management as to accounting or financial statement disclosures, and may cause additional scrutiny, as new auditors may not have developed a comprehensive understanding of a new audit client, particularly when the client is complex and/or operates in multiple jurisdictions.

6. **The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?**

   We support inclusion of a statement clarifying the auditor's responsibility for other information; however, we are concerned that the Proposed Standards could result in a significant expansion of audit procedures. The Proposed Standards would include within the definition of other information documents incorporated by reference, some of which may have been partially superseded (such as loan or lease agreements), as well as other non-financial information. The Proposed Standards would require such information be read and evaluated as to consistency of amounts, manner of presentation and qualitative statements, as well as require an evaluation of other information not directly related to the financial statements as compared to relevant audit evidence obtained during the audit. Such procedures are not routinely performed on documents incorporated by reference, contrary to page 21 of the Proposed Standards, which states that "the Board believes that, in practice, some auditors currently perform procedures related to other information similar to the procedures in the proposed other information standard."

   We believe that the scope of procedures should be related solely to financial information included in the filing, such as MD&A and exhibits, and should not extend to documents incorporated by reference or other non-financial information. Furthermore, we recommend that the PCAOB clarify what audit procedures should be performed to identify information within the scope of other information, and the basis for concluding on the manner of presentation and qualitative statements.

7. **Should the Board require a specific order for the presentation of the basic elements required in the auditor's report?**

BLACKROCK®
55 E. 52nd Street
New York, NY 10055
Tel 212.810.5300

We have no preference on the order of presentation. However, we encourage the PCAOB and the IAASB to work together to standardize, to the extent possible, the form and content of the auditor's report.

**10. Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?**

We believe the auditor's communication of critical audit matters will be relevant to investors and other financial statement users by focusing their attention on issues that would be pertinent to understanding the financial statements. As users of financial statements, we find value in identifying critical audit matters, particularly matters resulting from changes in principles or areas that involve significant judgment, which therefore may require further analysis and discussion with management in order to be properly understood and reflected in analyst models.

We are concerned, however, that such matters may become recurring disclosures of routine matters with "boilerplate" language, since companies in similar industries will presumably have the same critical audit matters (e.g., loan loss reserves for a bank). We suggest such routine matters be limited to a brief description of the critical audit matters, why the auditor considered them to be significant, and a reference to their location in the financial statements and/or footnotes.

**15. Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?**

Inclusion of the audit procedures performed, including resolution of the critical audit matters, in the report would not provide information that would facilitate an understanding of the financial statements. In order for the auditor to convey the context around such matters, it may be necessary to include expansive details that could overwhelm the auditor's report. Additionally, inclusion of information about the results of audit procedures may lead a user to believe that the auditor is expressing a "piecemeal" opinion on individual matters or accounts in the financial statements. Furthermore, we are concerned that it may be difficult to succinctly convey the nature of audit procedures in a manner that provides the user with an understanding of the full scope of those procedures, and the quantitative and qualitative factors considered in reaching their decision.

We recommend that the Board clarify that highlighting audit procedures should be infrequent; however, if they are included, only the most significant procedures should be identified and then only when they are important to understanding why a matter was identified as a critical audit matter. Paragraph 11.b. does not seem to refer to disclosure of audit procedures, while the illustrative examples include such procedures. Additional guidance should be provided if the Board ultimately elects to retain the option for auditors to communicate the results of specific audit procedures.

**21. What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of**

BLACKROCK®

55 E. 52nd Street

New York, NY 10055

Tel 212.810.5300

**critical audit matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?**

We do not believe that there would be material additional costs for communication of critical audit matters as these matters already should be reviewed by the engagement quality reviewer and communicated to the board or audit committee. However, we believe there will be additional time and expense associated with a comprehensive assessment of all matters (including internal control significant deficiencies), and the determination and documentation of whether those matters are critical audit matters based on the criteria in paragraph 9 of Appendix 1. For example, we would expect that significant (but not material) control deficiencies and changes in the auditor's risk assessments will entail more comprehensive assessment and documentation than currently performed as to why they were, or were not, a critical audit matter.

**24. Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, such as in an initial public offering or in a situation involving the issuance of an auditor's report on a prior period financial statement because the previously issued auditor's report could no longer be relied upon?**

We are supportive of limiting critical audit matters to only the most recent financial statement period. Critical audit matters related to prior periods should be communicated in the auditor's report if they were not previously communicated in a public filing (e.g., an initial public offering containing audited financial statements for multiple periods) or if prior period financial statements have been re-audited because the previously issued auditor's report could no longer be relied upon.

**27. What benefits or unintended consequences would be associated with requiring auditors to communicate critical audit matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards, such as the examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?**

In substantially all situations where an auditor would disclose information not contained in the financial statements, we believe it is likely that management would elect to disclose such information in the financial statements rather than having it summarized by the auditor in the auditor's opinion (in effect, resulting in an auditor disclosing management information). However, for those situations where management may elect to not make such disclosure, such as situations involving auditor judgments (e.g., disclosure of significant control weaknesses that did not rise to the level of a material weakness or auditor consideration of going concern status), we recommend that the PCAOB provide additional factors that should be considered by the auditor prior to making such disclosure. Those factors to be considered could include whether deficiencies and uncertainties were remediated prior to issuance of the auditor's report and whether the disclosure would result in making confidential information public or disclosing information that could result in a competitive disadvantage to the company. If such disclosure could result in making confidential information public or in a competitive disadvantage to the company, it would be

BLACKROCK®
55 E. 52nd Street
New York, NY 10055
Tel 212.810.5300

appropriate to consider whether such disclosure is necessary in light of the overall financial statement presentation.

**38. Are the proposed auditor reporting standard and amendments appropriate for audits of investment companies? If yes, are there any considerations that the Board should take into account with respect to auditors' reports on affiliated investment companies, as well as companies that are part of master-feeder or fund of funds structures?**

It is generally agreed that investment companies are inherently less complex than operating companies. Most registered investment companies file under the Investment Company Act of 1940 and the Securities Act of 1933, although a small number of closed-end funds file under the Securities Exchange Act of 1934 (to which the Proposed Standards, including the evaluation of other information, would be applicable). Investments generally comprise substantially all of an investment company's assets and net equity, and its income is derived from realized and unrealized gains on these investments. Expenses are primarily comprised of formulaic contractual obligations to third parties (e.g., the investment advisor, custodian, transfer agent and professional service providers). As a result, it is likely that only fair valuation of investments would be deemed a critical audit matter.

Investment companies include extensive disclosure in their offering memorandums/ prospectuses and footnotes as to the methodology of fair valuation and they disclose fair value information pursuant to ASC 820, *Fair Value Measurements and Disclosures*. Given these disclosures, we recommend clarifying that routine audit procedures, such as testing Level 1 or 2 fair valuation inputs or verifying the existence of investments, would not be deemed critical audit matters unless there were significant required estimates or judgments therewith. Accordingly, there should be a rebuttable presumption that the auditor's report on most investment companies would state that there are no critical audit matters to communicate.

**40. Should audits of certain companies be exempted from being required to communicate critical audit matters in the auditor's report? Why or why not?**

We do not believe any companies otherwise covered by the Proposed Standards should be universally exempt from the requirement to communicate critical audit matters. Both the auditor and financial statement preparer would benefit by focusing the auditor on critical audit matters during the planning and execution phases of the audit. Exclusion of certain companies would negate this benefit.

**Additional Discussion Questions**

**1. Is the scope of the proposed other information standard clear and appropriate? Why or why not? Are there Exchange Act documents, other than annual reports, that the Board should consider including in the scope of the proposed other information standard?**

The scope of the proposed other information standard should be limited to MD&A and other exhibits containing financial information that is derived from or that supports the financial statements (e.g., ratio of earnings to fixed charges). The auditor's opinion should specifically identify the other information for which the

BLACKROCK®
55 E. 52nd Street
New York, NY 10055
Tel 212.810.5300

auditor performed an evaluation for material inconsistencies or material misstatements.

2. **Is it appropriate to apply the proposed other information standard to information incorporated by reference? Why or why not?**

   The proposed other information standard should not be extended to information incorporated by reference. Performing additional procedures on this information would be of limited value, as the documents may include partially outdated or superseded agreements, documents containing minimal financial information, and lengthy documents for which the cost of having auditors perform, evaluate and document procedures would be prohibitive (e.g., stock award and incentive plans, share agreements, historical merger and acquisition agreements, loan and borrowing agreements, lease agreements).

6. **Is it appropriate to require the auditor to evaluate the other information for both a material inconsistency and for a material misstatement of fact? If not, why not?**

   If the procedures to be performed are only with respect to MD&A and other exhibits containing financial information that is derived from or that supports the financial statements, then the “material inconsistency” and “material misstatement of fact” criteria are appropriate. However, if the procedures are applied to other non-financial information, these criteria may require significant judgment given the complexity of many corporate agreements. The costs associated with such procedures (including preparation of related audit documentation) would not justify the benefit received.

7. **Would the evaluation of the other information increase the quality of information available to investors and other financial statement users and sufficiently contribute to greater confidence in the other information? If not, what additional procedures should the Board consider?**

   Many analysts and users of financial statements already assume that MD&A and exhibits are read by the auditors for consistency with the financial statements. Accordingly, reporting on those procedures performed would clarify the auditor’s role and responsibility. We do not believe that additional procedures are necessary.

15. **Is it appropriate for the auditor to issue an auditor's report that states that the auditor has identified in the other information a material inconsistency, a material misstatement of fact, or both, that has not been appropriately revised and describes the material inconsistency, the material misstatement of fact, or both? Under what circumstances would such a report be appropriate or not appropriate?**

    It would be appropriate for the auditor to indicate in the audit report a material inconsistency or a material misstatement of fact in MD&A and/or exhibits containing financial information that is derived from or supports the financial statements. If the Proposed Standards are extended to other information incorporated by reference, the same standard should apply. However, as noted above, we do not support such an extension.

BLACKROCK®

55 E. 52nd Street

New York, NY 10055

Tel 212.810.5300

19. **Should the Board consider permitting or requiring the auditor to identify in the auditor's report information not directly related to the financial statements for which the auditor did not have relevant audit evidence to evaluate against? If so, provide examples.**

    We do not support a further extension of the auditor's procedures to information not directly related to the financial statements.

20. **What additional costs would the auditor or the company incur related to auditor reporting when the auditor identifies a material inconsistency, a material misstatement of fact, or both?**

    We would expect that the auditor and the company would both incur minimal additional costs related to the reporting of a material inconsistency or material misstatement of fact. Absent a disagreement of fact, such matters would be discussed and corrective action taken by management to correct the inconsistency or misstatement.

21. **Would the proposed reporting, including the illustrative language, provide investors and other financial statement users with an appropriate understanding of the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information? Why or why not?**

    As noted above in question 1, the auditor's report should specifically identify the other information for which the auditor performed an evaluation for material inconsistencies or material misstatements. If this identification is made, the proposed reporting would provide users with an appropriate understanding of the auditor's responsibilities for, and results of, their evaluation.

31. **Should the Board extend the application of the proposed other information standard to documents containing audited financial statements and the related auditor's report that are filed under the Securities Act? If so, are there obstacles other than those previously mentioned that the Board should consider before such a proposal is made? If not, why not?**

    We encourage the Board to defer extension of the application of the proposed other information standard to documents filed under the Securities Act until an evaluation can be made of the results from implementing the current Proposed Standards.

*****

We appreciate the opportunity to share our viewpoints on the Proposed Standards. If the Public Company Accounting Oversight Board has any questions regarding our comments, please contact Steven Buller at (212) 810-3501.

Sincerely,

Steven E. Buller

**Re: PCAOB Rulemaking Docket Matter No. 034 Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments**

Dear Members and Staff of the Public Company Accounting Oversight Board:

Booz Allen Hamilton appreciates the opportunity to respond to the request for comments from the Public Company Accounting Oversight Board (the "PCAOB" or the "Board") on its Proposed Auditing Standard – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and The Related Auditor's Report; and Related Amendments to PCAOB Standards (collectively the "Proposed Standards"). Booz Allen Hamilton is a leading provider of management consulting, technology, and engineering services to the U.S. government in defense, intelligence, and civil markets, and to major corporations, institutions, and not-for-profit organizations. Booz Allen is headquartered in McLean, Virginia, employs more than 23,000 people, and had revenue of $5.76 billion for the 12 months ended March 31, 2013. Our stock has traded on the New York Stock Exchange (NYSE: BAH) since November of 2010.

We commend the Board for undertaking this project to enhance the transparency and relevance of auditor communications provided to users of financial statements. We are supportive of any initiative that results in better information being provided to our investors and other stakeholders so that that they can make more informed decisions. We believe that improvements to financial reporting are achieved through a multi-faceted approach that include clarifying changes to the audit report by the PCAOB complimented by the continued efforts by the Financial Accounting Standards Board ("FASB") and the Securities and Exchange Commission ("SEC"). Both the FASB and the SEC have been responsive to investor and other stakeholder needs requiring additional disclosures focused on educating stakeholders, allowing them to make more informed investment decisions. The changes within the Proposed Standards could yield additional understanding but we do have concerns on how certain changes may be interpreted by the users of the financial statements.

We wish to emphasize that fundamental to any changes being contemplated by the Board, is that the financial statements and related disclosures are ultimately management's responsibility, with the auditor's role being to express an opinion on whether the financial statements are fairly presented, in all material respects, in conformity with generally accepted accounting principles ("GAAP"). Therefore it is critical that any changes to the auditor's opinion neither duplicate nor create confusion for the investing community, but rather focus on providing the investor with additional objective information. Any discussion of areas of judgment or critical accounting matters should, in our view, rest with management and the associated disclosures within the financial statements.

The preparation of our financial statements is a result of a rigorous process that involves a number of experienced executives and subject matter experts tasked with ensuring the financial statements are complete, accurate and provide a stakeholder with all necessary information upon which to make an informed investment decision. Additionally, these financial statements are prepared with the oversight of the Chief Financial Officer, Chief Executive Officer and the Audit Committee, ensuring that we address specific risks and meet all of the required FASB and SEC regulations.

We acknowledge that while our external auditors are not part of our oversight controls, the auditing of the financial statements are ultimately integral in the final product delivered to our stakeholders. We therefore generally support any changes to the auditor's opinion that further clarifies the auditor's responsibilities for the financial statement footnotes and the risk of material misstatement due to fraud. We believe investors would benefit from a deeper understanding of what the auditor does to further enhance the importance of the current "pass or fail" opinion. We do not believe any statement regarding the auditor's independence and tenure is warranted in the auditor's opinion to the financial statements. Such a statement does not add any value to our investors' decision making and much of this information is available in the proxy statement.

The proposal to identify and include in the auditor's opinion a discussion on critical audit matter(s) causes us a number of concerns:

- First, we encourage the Board to clarify the definition of what constitutes a critical audit matter. We believe this guidance is needed to ensure the appropriate balance between management's disclosures and those the auditors may be required to make. We believe matters routinely discussed with the board of directors and audit committee, or others in a governance role, and comprehensively disclosed in the financial statements should not require identification as a critical audit matter. While an area may require substantial audit effort or involvement of a subject matter expert, this may not give rise to a critical audit matter. We believe that clear guidance of what constitutes a critical audit matter will also avoid management and their auditors becoming overly excessive in their judgments in identifying critical audit matters, failure to include such guidance may cause inconsistencies with how management identifies its critical accounting policies. For example, we do not think the auditors should disclose a critical audit matter for each critical and significant accounting policy disclosed by the company.

- Second, the expanded disclosures may result in the auditor providing entity-specific piecemeal opinions on management's policies and the quality of those policies. For example, if the auditor were required to provide an opinion on management's specific policies, practices, and processes used to: account for significant unusual transactions; determine highly subjective significant assumptions applied in critical accounting estimates; and present financial statements and related disclosures, by communicating such information this could be interpreted as providing a piecemeal opinion on these specific areas.
- Third, we believe that some investors may misinterpret the communication of critical audit matters and the auditor's opinion on these matters as indicative of an issue with respect to the quality of the financial statements or as a qualification in the auditor's pass-fail opinion. For example, a Company may enter into a complex business acquisition that requires judgment on whether a portion of the purchase price is considered contingent consideration. Management makes a judgment based upon the facts and circumstances of the acquisition supported by in-depth research and interpretation of the relevant accounting literature. The auditors, consulting with their National Office, concur with management's judgment and as such issue an unqualified opinion on the financial statements, including the accounting for the business acquisition. Unless the disclosure within the auditor's opinion regarding the judgments reached by management and the auditor are specific and clearly note that no issues existed, this may lead an investor to interpret that an issue or problem existed when the Company completed the acquisition.
- Fourth, we believe there will be additional and, in some cases, duplicative time and expense associated with interacting with and providing information to the auditors in connection with their required assessment and reporting on critical auditing matters. Even further expense is likely to be incurred if the auditors have to document why certain matters are not critical audit matters to withstand inspection inquiries.
- Fifth, we believe that the Proposed Standard may have the unintended consequence of straining the relationship between management and the auditor. Clearly the difference in opinions on what may constitute a critical audit matter given the judgmental nature of such a determination and the extent of the disclosure will likely cause disagreements between the two parties. However, more importantly, we believe that cooperative management may be penalized for being open and transparent on the critical issues the company addresses on a quarterly and annual basis. The auditor may use this information to support a list of critical audit matters that they will in turn use to disclose in the financial statements. This may cause management to share less with the auditor at the risk of being less transparent in the financial statements so as to avoid a laundry list of critical audit matters being included in the auditor's opinion.

Likewise, we are concerned and do not support changing the auditor's responsibility for other information to "evaluate" such information versus the current requirement to "consider" the information, which may imply a detailed or higher level of comfort. We also do not support an expansion of audit procedures to include other information beyond the Management Discussion and Analysis ("MD&A") and other schedules containing financial information that is derived from or that supports the financial statements. We do not support an extension of audit procedures to other information incorporated by reference.

We encourage the PCAOB and the International Auditing and Assurance Standards Board to continue to work together to standardize, to the extent possible, the form and content of the auditor's opinion in order to increase comparability and ease of use for users who may be readers of reports subject to both sets of standards.

In summary, we are supportive of the Board's efforts to introduce alternatives to the audit reporting model that would meet the needs of the investors and be practical for management, audit committees and audit firms to adopt in a cost-effective manner. We believe that the focus should not be on providing more information to investors but improving the quality of information to investors. We believe that better information can be provided through a combination of clarifying changes to the audit report by the PCAOB coupled with targeted standard-setting by the FASB or SEC.

We appreciate the opportunity to present our views on this subject and welcome the opportunity to meet in person to review them with you. Thank you for your attention and consideration.

Best regards,

Kevin L. Cook

Dear Sir or Madam,

**Invitation to Comment – PCAOB Rulemaking Docket Matter No. 034**

We welcome the opportunity to comment on the PCAOB's proposed new auditing standard "The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion".

BP responded to the International Auditing and Assurance Standards Board's (IAASB) 2012 consultation "Improving the Auditor's Report". We believe that the points we made in response to that consultation are relevant to the PCAOB's proposals, and we include a copy of our response to the IAASB.

We recognize that investors are seeking further means to engage with management and auditors on the financial statements, but do not believe that "critical audit matters" are the best way of achieving that aim. Auditor reporting of critical audit matters would most likely either duplicate information presented as critical accounting policies or judgements, or would result in the auditor being the original provider of information about the company, which would violate the principles for auditor reporting that we set out in our response to the IAASB's consultation. We believe that the proposals effective in the United Kingdom this year – requiring the auditor to describe the main risks they identified and how they scoped their audit – strike a better balance.

If you would like to discuss any of the comments in this letter, we would be happy to do so. Please do not hesitate to contact me or Martin Perrie (martin.perrie@uk.bp.com).

Yours faithfully

Dear Sir or Madam,

**Invitation to Comment – Improving the Auditor's Report**

We welcome the opportunity to comment on the IAASB's Invitation to Comment – Improving the Auditor's Report (the "ITC"). I am pleased to respond on behalf of BP p.l.c. to the invitation to comment

We support the objective of making the auditor's report more readable and more relevant to users of financial statements. We also agree that the scope of the audit and the role of the auditor is not particularly well understood and that efforts to educate those whose background is not auditing would be helpful.

However, we do not agree with the proposals in the ITC regarding Auditor Commentary. We question the assertion that this is something which a significant proportion of users of financial statements are requesting, and encourage the IAASB to conduct robust research into the demand for such a change.

**Increasing complexity of financial statements**

We recognize that large multinational companies' financial statements are becoming increasingly lengthy and complex, but we do not believe that a "roadmap" provided by the auditor is an appropriate means of addressing this development. There are a number of initiatives currently under way to improve the readability and understandability of financial statements and annual reports more broadly, such as the IASB's proposed forum on improving disclosures and prioritization of their Conceptual Framework, and in Europe EFRAG and the UK FRC's discussion paper on a disclosure framework and ESMA's consultation paper on materiality in financial statements. We welcome these efforts to streamline financial reporting so that significant matters, and only significant matters, are reported.

The IAASB has an important role to play in promoting the cultural change that will be necessary to achieve these improvements, but we are not convinced that the proposed changes to auditor reporting are either necessary or sufficient to meet these aims. A better outcome may be achieved by the IAASB working together with the IASB and securities regulators to promote better, clearer, more focussed reporting by issuers.

**Principles for auditor reporting**

There are two important principles that we believe should be applied to auditor reporting:

- The auditor should not be the "original provider" of information about the entity - that is management's role; and
- The auditor should not duplicate information already provided by management.

Clearly if both these principles are applied there is only a limited amount of information that the auditor will provide. This could include information related to the audit of the entity in question, such as how the audit was scoped, how materiality is applied, and a summary of work done on significant areas, although as stated above we do question whether there is a demand for this information from investors.

We do not agree with the proposals set out in the ITC. We believe that it is management's responsibility to set out the key judgements made in the preparation of the financial statements, and under the IAASB's proposals the auditor would end up duplicating information that management has already provided. If the objective is to ensure that the significant judgements are better disclosed, then there could perhaps be a requirement to include a specific statement in the audit report that the auditors have read the significant judgements disclosed and agree that it is complete and consistent with the audit work performed.

In addition, we are not convinced that the auditor is best placed to comment on what is most important to users of the financial statements – there are many different types of user, each with different interests and needs. Furthermore, in jurisdictions such as the United Kingdom the audit report is addressed to existing shareholders, and the audit report is consequently not addressed to other users of the financial statements.

We do agree that users would find it useful to understand the nature of the discussions between management, the audit committee and the auditor. We believe that the appropriate forum for this disclosure is in the report of the audit committee, not the audit report, and this will indeed be a requirement in the UK in the near future.

**Unintended consequences**

The proposals in the ITC could significantly alter the dynamics between management, those charged with governance and the auditor. At best we could foresee a significant drain on resources as the drafting of the auditor commentary is discussed between senior management, the audit committee and senior members of the audit team; at worst the discussions between management, the audit committee and the auditor may become constrained for fear of all significant discussions being required to be published in the audit report.

A longer list of significant matters set out in the auditor commentary would, we believe, detract from fundamentally important matters which currently require disclosure in the auditor's report.

We believe that the IAASB should perform a robust impact analysis to identify any other unintended consequences, either direct or indirect, that might result from its proposals before progressing with this project.

Hi,

I am Jonathan Curtis and Chief Compliance Officer for Bridge Street Securities, LLC (CRD# 152109). Bridge Street is a boutique M&A advisory firm – we maintain no customer accounts, do not receive funds on behalf of customers, and only deal with corporate clients. Yet we still have to endure costly compliance procedures and an annual audit with fees that are only going up! In my opinion, we are a "low risk" firm...but in many ways we are treated just the same as JPMorgan, Goldman Sachs, etc.

This email is to let you know that **I support Lisa Roth's position** to exempt non-custodial, non public BDs from the PCAOB constituency.

Regards,
Jon

**RE: PCAOB Release No. 2013-005, PCAOB Rulemaking Docket Matter No. 034 – Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; the Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards**

Dear Ms. Brown:

On behalf of the California Public Employees' Retirement System (CalPERS), thank you for the opportunity to provide our comments on PCAOB Rulemaking Docket No. 34.

CalPERS is the largest public pension fund in the United States with over $291 billion in global assets and equity holdings in over 9,000 companies. CalPERS provides retirement benefits to more than 1.6 million public workers, retirees, and beneficiaries, and we rely on the quality and integrity of market information to allocate capital on behalf of our beneficiaries.

CalPERS strongly supports the PCAOB's mission to "[o]versee the audits of public companies in order to protect the interests of investors and further the public interest in the preparation of informative, accurate and independent audit reports." We are a strong advocate of reform that ensures the continual improvement and integrity of financial reporting. In our Global Principles of Accountable Corporate Governance, Principle 4 states, "[f]inancial reporting plays an integral role in the capital markets by providing transparent and relevant information about the economic performance and condition of businesses. Effective financial reporting depends on high quality accounting standards, as well as consistent application, rigorous independent audit and enforcement of those standards."

Although, the current pass/fail model provides some value, we previously shared at a March 2011 PCAOB Investor Advisory Group, an example where the current auditors' reporting model failed to provide meaningful insight. We noted that the auditor's report for 2008, 2009, and 2010, were virtually identical for a recipient of the Troubled Asset Relief Program (TARP) funds, with the 2008 report costing $119 million and the 2009 report costing $193 million. What additional work was necessary for the auditor to be able to once again provide a non-descript statement that the financial statements gave a fair presentation? We will never know.

We believe the Board's proposed auditor reporting standard, the proposed other information standard with regards to an auditor's discussion and analysis, along with required and expanded emphasis paragraphs and auditor assurance on information outside the financial statements would provide investors a better range of information about the audit.

From our perspective, users will then be able to better utilize and value the audit report, enhanced reporting, and the audit opinion. We believe the utility of the auditor's report will improve with the additions outlined in the proposed rule. These include:

- Requiring the auditor to communicate in the auditor's report critical audit matters;
- A statement regarding the auditor's existing requirements to be independent of the company and identification of the year the auditor began serving as the company's auditor (tenure);
- Identification of the auditor's responsibilities for other information and the results of the auditor's evaluation of the other information; and
- Enhanced certain standardized language which would allow the auditor to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement and an addition of the phrase "whether due to error or fraud.

**Critical Audit Matters (CAMs)**

The objective of CAMS is to provide disclosures that document the basis and determination for the auditor's opinion, along with identifying the relevant financial accounts which connect the critical audit matters. Who better positioned, than the auditor, to provide insights in how, and on what basis the auditor developed its opinion? The communication of CAMs does not fundamentally change the auditor's attestation of information prepared by management and does not blur lines of management's and audit committee's responsibilities. This three-legged communication is valued by investors to provide management's, the board of director's and the independent auditor's perspective in ensuring the overall stewardship of the company.
