We believe the proposed rule changes will provide four important attributes - transparency, relevance, reliability and credibility. PCAOB Chairman James Doty said, "This is a watershed moment for auditing in the U.S." We back the PCAOB in making a bold move by initiating meaningful change in our audit reporting model. Auditors have the ability to enhance trust, to provide additional transparency, share the significance (relevance) of their service and rebuild the credibility in the integrity of financial reporting.

We have outlined more detailed information in the supplementary appendix on the importance of the role accounting and auditing play in our capital markets and our expectations for enhanced auditor reporting.

**Independence and Tenure of the Auditor**

Confidence in company's audited financial statements are key to the efficient functioning of the markets and exist because auditors bring integrity, independence, objectivity and professional competence to the financial reporting process.

We believe that the lack of auditor independence negatively impacts the auditor's objectivity. We are concerned where an audit firm receives significant fees for non-audit services. We agree that adding a statement by the auditor on their independence from the company and board of directors reinforces investors' understanding of the auditor's obligations to be independent and objective in expressing the audit opinion.

We also support the disclosure of the tenure of the auditor to advance the Audit Committee's fiduciary responsibility in determining the appropriate maximum length of tenure to ensure the independence of the auditor. We believe that auditor rotation will advance having a fresh perspective, improve the independence and objectivity of an auditor and provide additional confidence in the integrity of financial reporting.

**Auditor's Responsibilities Regarding Other Information**

Investors require reliable in-depth information on financial reporting as well as information on strategic risks and the major operational risks related to the company's business model. The company articulates those risks through other information such as management discussion and analysis (MD&A), selected financial data and exhibits included in annual reports but not included in the audit of the financial statements. Not only do institutional investors rely heavily on management's disclosures to make sound investments decisions and to be able to act as engaged shareowners; it is additionally important to investors to understand the nature and scope of the auditor's responsibilities with respect to other information as it related to consistency and factual interpretation in the audited financial statements.

We concur with the requirement that when issuing an auditor's report, the auditor will include in a separate section explaining the auditor's responsibilities regarding other information. The auditor should provide an explicit statement evaluating other information reviewed by the auditor for material misstatement of fact and material inconsistency. The statement should not only include the auditor's review of materials, but also how materials were utilized, requiring the auditor to document and share any material inconsistencies and disagreements within the enhanced audit report.

It is imperative to outline the use and responsibilities of the auditor on other information, to improve the clarity of how other information is used in the auditor's evaluation and conclusion in the audit opinion. This inclusion would be more in line with the global development towards integrated reporting.

**Enhanced Language**

We support the proposed revision to the auditor's report to recognize the auditor's existing responsibility to obtain reasonable assurance about whether the financial statements are free of material misstatements, whether caused by error or fraud.

We applaud the work of the PCAOB, have addressed in the attachment certain questions in the proposal, and support the approach set out in the proposed rules. We refer you to the letter we submitted on the Board's concept release.

Thank you for your consideration. If you have any questions, please do not hesitate to contact me at (916) 795-9672 (Anne_Simpson@calpers.ca.gov) or James Andrus at (916) 795-9058 (James_Andrus@calpers.ca.gov).

Sincerely,

Anne Simpson

ANNE SIMPSON
Senior Portfolio Manager
Director of Global Governance

**Supplemental Responses of the California Public Employees Retirement System (CalPERS) regarding PCAOB Release No. 2013-05, PCAOB Rulemaking Docket No. 34**

Proposed Auditor Reporting Standard

*Questions related to Section II of Appendix 5*

1. Do the objectives assist the auditor in understanding the requirements of what would be communicated in an auditor's unqualified report? Why or why not?

**We believe that the objectives outlined in the proposed rule provide meaningful guidance to the auditors.**

*Questions related to Section IV of Appendix 5*

2. The proposed auditor reporting standard would require the auditor's report to be addressed at least to (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body. Are there others to whom the auditor's report should be required to be addressed?

**As shareowners such as CalPERS are the providers of capital, we believe the audit report is best addressed to shareowners. Auditors need to view investors as their ultimate client. It is imperative that a change in perspective should occur. Investors' needs should be paramount as an auditor plans, performs, reports and provides an opinion on the audited financial statements. The audit report then would address the needs of investors, and as outlined in the proposed rules would provide the auditor's perspective for the client.**

**We believe it appropriate for the audit report to be addressed to boards given their fiduciary oversight role on behalf of shareowners.**

3. The proposed auditor reporting standard retains the requirement for the auditor's report to contain a description of the nature of an audit, but revises that description to better align it with the requirements in the Board's risk assessment standards. Are there any additional auditor responsibilities that should be included to further describe the nature of an audit?

**We support the revised requirement, as outlined in Appendix 5, with the revision of better aligning the audit report with the requirements in the Board's existing standards and the eight standards (Auditing Standard Nos 8-15) that improve the description relating to an auditor's work performed in the Board's risk assessment standards.**

4. The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this statement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?

**Auditors play a unique role in our financial markets. The professional tension of skepticism is important to maintaining the balance of independence and ensuring open communication between the auditor, management and the Audit Committee. We believe**

**an affirmative statement concerning the auditor's independence could help demonstrate that the audit opinion is not simply a rubber stamp for management's financial reporting.**

5. The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.

a. Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?

**As supporters of periodic tendering and auditor rotation, we strongly support the disclosure of auditor tenure. As we have indicated previously, while we appreciate that professional skepticism is a component of auditor independence, we believe a fresh set of eyes would help enhance independence.**

b. Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?

**We would expect auditors would have no problems determining when it (or its predecessor firm) was first engaged as a company's auditor. Surely, each such firm maintains engagement records.**

c. Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?

**The easier it is for investors to locate such information, the more useful it will be. We believe the information should be included in the audit report, as well as other sources. We also believe the years of tenure may provide Audit Committees and investors a discussion topic in the annual assessment of auditor selection and ratification.**

6. The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?

**We believe there is a significant expectation gap between what information an auditor has examined and opined on and that which investors believe an auditor has examined and opined on. A description of the auditor's responsibilities for other information *would* be useful to investors if it provides a thoughtful, tailored description of the auditor's role. However, simply adding additional boilerplate language to the audit report would not be helpful. As the PCAOB considers substantial changes to the current reporting model, we would expect that PCAOB would require (through interpretative guidance and/or**

**inspections activities, as well as what is outlined in Appendix 5) descriptions relating to responsibility that are specifically tailored to a company's financial statements, other information and disclosures.**

7. Should the Board require a specific order for the presentation of the basic elements required in the auditor's report? Why or why not?

**We believe auditors should have the flexibility to present the audit report in a manner they believe most effectively conveys their views on a company's financial statements and disclosures. However, we also believe the auditor should outline when certain Critical Audit Matters (CAMs), or in their assessment and planning did not find any critical audit issues that need to be explained in the audit report.**

8. What other changes to the basic elements should the Board consider adding to the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor?

**There is merit to include CAMs for all periods presented in the financial statements and providing updates on CAMs from the prior period, and the current effect on the reporting period. The CAMs from prior periods could be referenced in an appendix.**

9. What are the potential costs or other considerations related to the proposed basic elements of the auditor's report? Are cost considerations the same for audits of all types of companies? If not, explain how they might differ.

**There will be those who argue that the cost of compliance outweigh the benefits. This is a convenient argument to make because costs can be predicted by financial models whereas the benefits to investors in the form of potential loss mitigation is impossible to predict. However, we would ask you and others to consider the benefits of a more meaningful audit reporting model with a view toward the past.**

**During the most recent financial crisis, CalPERS alone lost over $70 billion in assets.**

**Had there been greater transparency in the risks hidden in our financial system, perhaps different decisions would have been made with regard to asset allocation or corporate engagement. Perhaps this would have encouraged different decisions by companies. For example, given additional information about risks in the system, companies may have chosen not to invest in mortgage backed securities or credit default swaps. We will never know how behavior would have changed with stronger financial regulations. Moreover, we would be remiss if we did not emphasize that the audit fees and other compliance costs are ultimately paid by shareowners such as CalPERS. We would gladly support additional reasonable fees in exchange for greater assurance on a company's financial reporting.**

*Question related to Section V of Appendix 5*

| |
|---|
| 10. Would the auditor's communication of Critical Audit Matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider? |

**Yes, we believe the auditor's communication of Critical Audit Matters (CAMs) would be useful to investors and other financial statement users. We support the concept of enhanced auditor reporting or an auditor's discussion and analysis as outlined in our previous letter in 2011 as an acceptable means of communicating additional information regarding the audit findings and the audit process provided it was subject to professional accountability for quality. Our principal concern was that the information should be reported by the auditor in a way that it is not construed to be reported by management.**

**We believe communicating the Critical Audit Matters is an acceptable means of communicating additional information about the audit. And, we support PCAOB's proposed definition of Critical Audit Matters – matters that the auditor determines to be 1) the most difficult, subjective or complex audit judgments; 2) posed the most difficulty in obtaining sufficient appropriate evidence; or 3) posed the most difficulty in forming the opinion on the financial statements has the potential to inform the users of the areas of high audit risk.**

**CalPERS Global Principle 4.6 discusses our views on enhanced reporting to investors. It states:**

> **Auditors should provide a reasonable and balanced assurance on financial reporting matters to investors in narrative reports such as an Auditor's Discussion and Analysis (AD&A) or a Letter to the Shareowners. Enhanced reporting should include:**
>
> **a. Business, operational and risks believed to exist and considered;**
> **b. Assumptions used in judgments that materially affect the financial statements, and whether those assumptions are at the low or high end of the range of possible outcomes;**
> **c. Appropriateness of the accounting policies adopted by the company;**
> **d. Changes to accounting policies that have a significant impact on the financial statements;**
> **e. Methods and judgments made in valuing assets and liabilities;**
> **f. Unusual transactions;**
> **g. Accounting applications and practices that are uncommon to the industry;**
> **h. Identification of any matters in the Annual Report that the auditors believe are incorrect or inconsistent, with the information contained in the financial statements or obtained in the course of their audit;**

**i. Audit issues and their resolution which the audit partner documents in a final audit memo to the Audit Committee;**
**j. Quality and effectiveness of the governance structure and risk management; and**
**k. Completeness and reasonableness of the Audit Committee report.**

| |
|---|
| 11. What benefits or unintended consequences would be associated with the auditor's communication of Critical Audit Matters? |

**We have discussed the benefits of enhanced reporting above and we believe unintended consequences can be avoided by strong oversight by the PCAOB through inspection and enforcement.**

**We support the opinion proffered by others that insights on Critical Audit Matters could be relevant to analyzing and pricing risk. Greater transparency on Critical Audit Matters could help increase competition amongst firms. Investors could gain additional information that could enhance their ability to engage with corporate boards and/or management. And, additional insights on how a firm has addressed Critical Audit Matters could bear on investors' decisions on ratifying the auditor.**

| |
|---|
| 12. Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? Is the definition of a critical audit matter sufficiently clear for determining what would be a critical audit matter? Is the use of the word "most" understood as it relates to the definition of Critical Audit Matters? |

**As mentioned above, we believe the definition could be expanded to include those items identified in CalPERS Global Principle 4.6.**

| |
|---|
| 13. Could the additional time incurred regarding Critical Audit Matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have? |

**We do not believe significant additional time should be incurred by the auditor to identify and/or report Critical Audit Matters. This is information that the auditor routinely identifies and should be routinely reporting to audit committees.**

| |
|---|
| 14. Are the proposed requirements regarding the auditor's determination and communication of Critical Audit Matters sufficiently clear in the proposed standard? Why or why not? If not, how should the proposed requirements be revised? |

**We believe the objective of the proposal is quite clear, while providing auditors a good degree of flexibility on implementing this new reporting model. We trust the PCAOB will work to provide auditors additional guidance (through staff interpretations or inspection findings) as needed.**

15. Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of Critical Audit Matters in the auditor's report be informative and useful? Why or why not?

**We believe procedures performed should not be included in the audit report as they could distract from the primary messages in the opinion. However, we would support the inclusion of a supplemental information document that provided such information.**

16. Are the factors helpful in assisting the auditor in determining which matters in the audit would be Critical Audit Matters? Why or why not?

**We believe with deeper insights provided by the auditor through CAMs, we would expect the auditor to share:**

- **Where are the auditor's main concerns?**
- **Where does the auditor plan to spend it majority of time?**
- **What are the highest risks to the company?**
- **What keeps the auditor awake at night in concluding the audit opinion?**
- **What involved the most difficult, subjective or complex auditor judgments?**
- **What posed the most difficulty to the auditor in obtaining sufficient appropriate evidence?**
- **What posed the most difficulty to the auditor in forming the opinion on the financial statements?**

17. Are there other factors that the Board should consider adding to assist the auditor in determining which matters in the audit would be Critical Audit Matters? Why or why not?

**See answers in number 16.**

18. Is the proposed requirement regarding the auditor's documentation of Critical Audit Matters sufficiently clear?

**We trust the PCAOB will work to provide auditors additional guidance (through staff interpretations or inspection findings) as needed.**

19. Does the proposed documentation requirement for non-reported audit matters that would appear to meet the definition of a critical audit matter achieve the Board's intent of encouraging auditors to consider in a thoughtful and careful manner whether audit matters are Critical Audit Matters? If not, what changes should the Board make to the proposed documentation requirement to achieve the Board's intent?

**Yes, we believe the proposed documentation provides how auditors should consider in a thoughtful and careful manner whether audit matters are Critical Audit Matters and how to utilize and disclose such in completing their audit.**

20. Is the proposed documentation requirement sufficient or is a broader documentation requirement needed?

**From our perspective, the determination of CAMs, along with an explanation by the auditor what works was accomplished in formulating the audit opinion is necessary by the auditor. Also, the auditor may determine CAMs may provide the need to modify the audit plan and to obtain additional substantive audit evidence.**

21. What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of Critical Audit Matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?

**As noted above, we do not believe there should be significant additional costs for communicating Critical Audit Matters. This is work the auditor is already completing to substantiate and determine its audit opinion.**

22. What are the additional costs, including indirect costs, or other considerations for companies, including their audit committees, related to Critical Audit Matters that the Board should take into account? Are these costs or other considerations the same for audits of both large and small companies?

**As noted above, we do not believe there should be significant additional costs for communicating Critical Audit Matters.**

23. How will audit fees be affected by the requirement to determine, communicate, and document Critical Audit Matters under the proposed auditor reporting standard?

**We would expect auditors to continue determining and documenting critical audit procedures as required by PCAOB standards and we do not believe there should be significant additional costs for communicating these matters to investors.**

24. Are there specific circumstances in which the auditor should be required to communicate Critical Audit Matters for each period presented, such as in an initial public offering or in a situation involving the issuance of an auditor's report on a prior period financial statement because the previously issued auditor's report could no longer be relied upon? If so, under what circumstances?

**We believe current securities laws and regulations sufficiently address such issues but also believe there may be value in expressing how CAMs from prior periods where mitigated or whether because of the type of industry that previous CAMs would always be critical in determining the work to be performed as well as substantiating evidence of the audit opinion.**

25. Do the illustrative examples in the Exhibit to this Appendix provide useful and relevant information of Critical Audit Matters and at an appropriate level of detail? Why or why not?

**We support the use of illustrative examples and reiterate our request that Critical Audit Matters include those items in CalPERS Global Principle 4.6.**

26. What challenges might be associated with the comparability of audit reports containing Critical Audit Matters? Are these challenges the same for audits of all types of companies? If not, please explain how they might differ.

**We believe the challenges associated with the comparability of audit reports containing Critical Audit Matters will be limited. If fact, we agree with other commenters that if the information contained in an auditor's reports is always consistent, the potential benefits to investors would be diminished. We believe the new reporting model is an opportunity for firms to distinguish themselves through thoughtful, creative discussions of Critical Audit Matters.**

27. What benefits or unintended consequences would be associated with requiring auditors to communicate Critical Audit Matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards, such as the examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?

**Given the greater likelihood of exposure, we expect that management will be less likely to commit such acts in the first place. If they do, management will be more likely to explain rather than hide the issues. As such, investors will be better off. Under the current system, the described acts would not become known o the investors. We do not understand why that is a good thing. Greater transparency is a great thing in the long run.**

**We support the opinion proffered by others that insights on Critical Audit Matters could be relevant to analyzing and pricing risk. Greater transparency on Critical Audit Matters could help increase competition amongst firms. Investors could gain additional information that could enhance their ability to engage with corporate boards and/or management. And, additional insights on how a firm has addressed Critical Audit Matters could bear on investors' decisions on ratifying the auditor.**

28. What effect, if any, would the auditor's communication of Critical Audit Matters under the proposed auditor reporting standard have on an auditor's potential liability in private litigation? Would this communication lead to an unwarranted increase in private liability? Are there other aspects of the proposed auditor reporting standard that could affect an auditor's potential liability in private litigation? Are there steps the Board could or should take to mitigate the likelihood of increasing an auditor's potential liability in private litigation?

**We have no views on this item.**

*Questions Related to Section VI of Appendix 5*

29. Is it appropriate for the Board to include the description of the circumstances that would require explanatory language (or an explanatory paragraph) with references to other PCAOB standards in the proposed auditor reporting standard?

**We would support the inclusion of a non-exclusive description or list of circumstances that would require and explanatory paragraph. We trust the PCAOB will work to provide auditors additional guidance (through staff interpretations or inspection findings) as needed.**

30. Is retaining the auditor's ability to emphasize a matter in the financial statements valuable? Why or why not?

**We believe this option should be retained. It will provide auditors' additional flexibility to provide investors with information they believed is important.**

31. Should certain matters be required to be emphasized in the auditor's report rather than left to the auditor's discretion? If so, which matters? If not, why not?

**Yes. For example, an auditor should be required to include an emphasis paragraph when there is a material uncertainty about a company's ability to continue as a going concern.**

32. Should additional examples of matters be added to the list of possible matters that might be emphasized in the auditor's report? If so, what matters and why?

**We recommend the PCAOB conduct research based on its inspection findings to identify items for which an emphasis paragraph is required.**

*Questions Related to Section VII of Appendix 5*

33. Are the proposed amendments to PCAOB standards, as related to the proposed auditor reporting standard, appropriate? If not, why not? Are there additional amendments to PCAOB standards related to the proposed auditor reporting standard that the Board should consider?

**Yes we believe the proposed amendments are appropriate.**

34. What are the potential costs or other considerations related to the proposed amendments? Are these cost considerations the same for all types of audits? If not, explain how they might differ.

**Again, we do not believe there will be considerable costs.**

*Questions Related to Section VIII of Appendix 5*

35. Are the proposed auditor reporting standard and amendments appropriate for audits of brokers and dealers? If yes, are there any considerations that the Board should take into account with respect to audits of brokers and dealers?

**Yes, we believe this approach is applicable to the audits of brokers and dealers.**

36. Is the requirement of the proposed auditor reporting standard to communicate in the auditor's report Critical Audit Matters appropriate for audits of brokers and dealers? If not, why not?

**Yes we believe the proposed auditor reporting standard is appropriate for audits of brokers and dealers.**

37. Since a broker or dealer may elect to file with the SEC a balance sheet and related notes bound separately from the annual audited financial statements, should the Board address situations in which the auditor may issue two different reports for the same audit of a broker or dealer? Why or why not?

**We support using the same auditor reporting standard and amendments for audits of benefit plans and are not aware of other considerations that the Board should take into account with respect to audits of benefit plans.**

38. Are the proposed auditor reporting standard and amendments appropriate for audits of investment companies? If yes, are there any considerations that the Board should take into account with respect to auditors' reports on affiliated investment companies, as well as companies that are part of master-feeder or fund of funds structures?

**From our perspective, the auditor reporting standard and amendments are appropriate for audits of investment companies.**

39. Are the proposed auditor reporting standard and amendments appropriate for audits of benefit plans? If yes, are there any considerations that the Board should take into account with respect to audits of benefit plans?

**We support using the same auditor reporting standard and amendments for audits of benefit plans and are not aware of other considerations that the Board should take into account with respect to audits of benefit plans.**

40. Should audits of (emerging growth) companies be exempted from being required to communicate Critical Audit Matters in the auditor's report? Why or why not?

**We believe all issuers, including emerging growth companies, should be subject to the same financial regulations.**

*Questions Related to Section IX of Appendix 5*

41. Is the Board's effective date appropriate for the proposed auditor reporting standard? Why or why not?

**We would defer to auditors regarding the time that might be needed to develop guides and perform training on the new rules, but based upon our understanding of the implementation schedule of PCAOB's AS2/5, we believe 12-18 months lead time should be sufficient.**

42. Should the Board consider a delayed compliance date for the proposed auditor reporting standard and amendments or delayed compliance date for certain parts of the proposed auditor reporting standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?

**We believe all issuers, including emerging growth companies, should be subject to the same financial regulations.**

Proposed Other Information Standard

**As outlined in our cover letter, we generally believe the evaluation of the other information would improve the quality of information available to investors and could significantly contribute to greater confidence in the other information.**

**We believe investors will further benefit from management corrections and other improvement that may be derived from the practice of evaluating other information. By avoiding potentially inconsistent or competing information between the auditor and management, investors would benefit from the clarity and credibility of the audited financial statements.**

**Accordingly, we agree with the assertion in the release that:**

**As a result of the auditor's evaluation of other information, and communication of any potential material inconsistencies or material misstatements of fact to the company's management, the proposed other information standard could promote consistency between the other information and the audited financial statements, which in turn could increase the amount and quality of information available to investors and other financial statement users.**

Emerging Growth Companies

**We believe all issuers, including emerging growth companies, should be subject to the same financial regulations.**

Re: PCAOB Rulemaking Docket Matter No. 034

Proposed Auditing Standards –

1. The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion;
2. The Auditor's Responsibility Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report.

The Accounting Principles and Auditing Standards Committee (the "Committee") of the California Society of Certified Public Accountants ("CalCPA") respectfully submits its comments on the referenced proposal. The AP&AS Committee is the senior technical committee of CalCPA. CalCPA has approximately 40,000 members. The Committee is comprised of 53 members, of whom 47 percent are from local or regional firms, 27 percent are from large multi-office firms, 12 percent are sole practitioners in public practice, 10 percent are in academia and 4 percent are in international firms. Members of the Committee are with firms which serve a large number of public and nonpublic business entities, as well as many non-business entities such as NFP's, pension plans and governmental organizations.

**The Committee's Overall Comments**

The Committee appreciates this opportunity to comment on the PCAOB's very significant auditor reporting proposals. While the Committee has provided its responses to the specific questions set forth in the proposed reporting standards, we also want to address a global concern. The two proposed auditing standards have as their goal the retention of the current "pass-fail" audit reporting model, with significant expansion of responsibilities for reporting on critical audit matters and on other information. The Committee believes this approach is seriously flawed for the following reasons:

First, requiring the auditor to report on critical audit matters results in a perceived difference in audit quality when none should exist. Each audit conducted in accordance with PCAOB Standards includes an assessment of the business in which the entity operates and the control risk within the entity, and addresses the audit risks that result from such assessments. In reporting critical audit matters, the users of the audit report do not learn whether such assessments were properly carried out or adequately addressed, nor do they learn any more about the business or control risks than is currently reported in other information filed with the Securities and Exchange Commission (the "Commission") and made public to users. Accordingly, an audit report that identifies many critical audit matters may be perceived to be of higher quality than a report with few such matters identified when the opposite may be true. In addition, an audit report that identified many critical audit matters may be perceived to reflect more difficulty in arriving at an opinion that the financial statements are fairly presented in accordance with accounting principles generally accepted in the United States of America ("US GAAP") which may also be untrue.

Second, identifying critical audit matters would duplicate disclosures already in annual reports under risk factors, management's discussion and analysis and summary of significant accounting policies, which are often currently duplicative. Since the auditor's report will only appear in annual reports containing all these disclosures, adding critical audit matters to the auditor's report would be duplicative and unnecessary.

Third, requiring the auditor to report on the other information associated with the filing of the annual report for material inconsistencies and/or a material misstatements of fact results in perceived assurance on such information that the auditor cannot provide. PCAOB Standards require the auditor to compare such information to the audited financial statements, but there are significant additional disclosures in other information, including forward-looking information and information requiring technological, marketing and other skills not possessed by most auditors, that prevent the auditor from being able to reasonably assess whether they meet the Commission's requirements. Accordingly, an audit report that fails to identify any material inconsistencies and/or material misstatements of fact provides no assurance to the user of that other information that it is, in fact, free of misstatements.

Fourth, the proposed requirements for the auditor to report on other information are unclear as to the scope of assurance the auditor might be providing, and the proposed requirements, to the extent they deal with misstatements of fact, are beyond the professional competence of auditors.

## Auditor's Report

**Question Related to Section II Objectives:**

**1. Do the objectives assist the auditor in understanding the requirements of what would be communicated in an auditor's unqualified report? Why or why not?**

The objectives of the proposed auditor reporting standard are appropriately set forth. However, the Committee believes additional clarity is required in order to implement the Board's proposal to communicate critical audit matters, as the definition is inherently subjective, and unlikely to be consistently applied in practice.

**Questions Related to Section IV Basic Elements:**

**2. The proposed auditor reporting standard would require the auditor's report to be addressed at least to (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body. Are there others to whom the auditor's report should be required to be addressed?**

No. The report should be addressed to the Company's Board of Directors (the Audit Committee having responsibility to contract with the auditors) and the shareholders. Since the report is a publicly available document, the report does not need to be addressed to other possible users.

3. **The proposed auditor reporting standard retains the requirement for the auditor's report to contain a description of the nature of an audit, but revises that description to better align it with the requirements in the Board's risk assessment standards. Are there any additional auditor responsibilities that should be included to further describe the nature of an audit?**

   No. The Board's proposed revision regarding describing the nature of the audit is sufficient.

4. **The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this statement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?**

   No. The Board's proposal is somewhat redundant, since the title of the report already includes the word "independent", and the report goes on to state the audit was performed in accordance with PCAOB audit standards, which sets forth independence requirements.

5. **The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.**

   a. **Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?**

      No. We do not believe the information on auditor tenure is particularly useful, and serves only to satisfy idle curiosity. It is not clear what inferences can be correctly drawn from the length of an auditor's tenure, so the information is not considered useful.

   b. **Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?**

      No, but the requirement should make clear that if the auditor of an acquired entity becomes the auditor of the acquirer, its tenure be measured from when it became auditor of the acquirer.

   c. **Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?**

      No. We do not believe the information on auditor tenure is useful.

6. **The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?**

The Committee, in responding to the Concept Release, stated its opposition to the auditor providing any required assurance on other information. The Committee was concerned that any form of assurance provided to general users of the financial statements, either directly or indirectly, that the other information is complete or complies with applicable rules and regulations was likely to be misunderstood. The Committee continues to hold that view, in spite of the PCAOB's more modest current proposal, and finds the proposal's requirement to have the auditor address "misstatements" objectionable.

The Committee believes the PCAOB's proposed reporting requirement is beyond the professional competence of the auditor. Currently, the auditor is accountable for determining if there is an inconsistency between the financial statements and the other information, and reconciling them (AU 551). If requested to provide a report on the other information, the report would state that the other information "is fairly stated in all material respects in relation to the basic financial statements taken as a whole" (AU 552). The current PCAOB proposal goes a step further by requiring the auditor to state that there is no material misstatement of fact in the other information. This is a significant expansion of the auditor's responsibility, and is a far broader conclusion than can be drawn based on performing the procedures set forth in paragraph 4 on page A-2. In addition, the determination of the accuracy of the factual content of the other information is a legal matter, generally beyond the professional competence of the auditor. Further, a misstatement of fact may exist because the other information presented is wrong, or because relevant information is not presented; the auditor currently is not required to search for information that may be missing, and may not be competent to know that it is missing. Therefore, we recommend the current proposal, at a minimum; remove the requirement for the auditor to address whether the other information contains a material misstatement of fact.

"Other Information" should be limited to historical information included in or amounts derived from historical information included in the financial statements. In no circumstances should the auditor have any association with any prospective financial data.

The scope of assurance given by the auditor when saying they "have not identified any material inconsistency with the financial statements" is very unclear. There is no basis for the auditor to say that any individual amounts in the financial statements are correct, since the materiality threshold is the financial statements taken as a whole, and no other materiality threshold for the other information is set forth. Further, it is unlikely that any individual amount will, by itself, be materially inconsistent with the financial statements, so is the auditor's assurance based on a lack of a pattern of inconsistency that is in the aggregate material? While clarification might be desirable, this may be the essential flaw in the PCAOB's proposal for reporting on other information.

For the foregoing reasons, the Committee is opposed to the proposed requirement to report on other information.

7. **Should the Board require a specific order for the presentation of the basic elements required in the auditor's report? Why or why not?**

   No. The Committee believes the current proposal, which provides flexibility in the presentation of the basic elements required in the auditor's report, is appropriate.

8. **What other changes to the basic elements should the Board consider adding to the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor?**

   No additional changes need to be considered.

9. **What are the potential costs or other considerations related to the proposed basic elements of the auditor's report? Are cost considerations the same for audits of all types of companies? If not, explain how they might differ.**

   The Committee believes that audit costs will likely increase by at least ten percent or as high as twenty five percent or more as a result of reporting on critical audit matters and by a substantially greater amount if reporting on other information which contains a material misstatement of fact.

**Questions Related to Section V Critical Audit Matters:**

10. **Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?**

    No. The proposed content of the critical audit matters section of the auditor's report can be expected to duplicate all or most of the topics already covered in the "risk factors" section of periodic financial statements filed with the SEC along with the content of management's discussion and analysis and summary of significant policies. The information in these topics is already available to users of financial statements, and it does not significantly enhance the understanding of the financial statements. So, it is questionable whether the auditor's reporting of specified critical audit matters will add anything to the information already considered by the users of the financial statements and raises the additional question of whether the additional work to add critical audit matters to the auditor's report is cost-beneficial.

    It is also unclear whether adding critical audit matters to the auditor's report will be useful since the matters to which they relate will have been resolved before publication of the financial statements or will be explained in an exception in the auditor's report. The coverage of critical audit matters in the auditor's report can be expected to be brief and even cryptic; questions about critical audit matters from users can be expected to be addressed to management, who may be able to respond, but responses, particularly as to the content of the auditor's report, may be incomplete since the auditor's report is not prepared by the respondent. The auditor cannot be expected to respond beyond what is in the audit report. So, while the discussion of critical audit matters might be interesting to some users, its usefulness seems marginal at best.

**11. What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?**

The Committee sees several consequences, the first unintended, the second foreseeable and undesirable.

First, questions and comments from regulators concerning the auditor's determination of critical audit matters can be expected, perhaps with the benefit of hindsight, and these can be extremely burdensome, both to those charged with governance and to the auditors, particularly if regulators do not agree with the auditors and demand restatement of the auditor's report. Differences of professional opinion between auditors and regulators are not unusual. Client reaction is often to try to respond and satisfy the regulators, but if that process bogs down, to acquiesce to the regulators even if the regulators position is not correct. The cost of this additional regulatory involvement could significantly offset any perceived benefits of the discussion of critical audit matters.

Second, the Committee believes that critical audit matters can be expected to become a focus of the plaintiff's bar in asserting claims against auditors. The fact that something is considered "key" by the auditors in a public document raises the bar higher than it is right now where such information is found only in the audit workpapers and communication to those charged with the entity's governance. It may cause each key matter to assume a materiality of its own, outside of the context of materiality associated with the audit of the financial statements. The Committee believes this is a potential undesirable result.

In addition, and notwithstanding the use of the word "most," there is a danger that the number of critical audit matters could expand substantially beyond that apparently intended by the PCAOB. One only needs to look to the discussion of "risk factors" which has grown over time to a multi-page exposition of almost any adverse event that an issuer may encounter.

**12. (a) Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? (b) Is the definition of a critical audit matter sufficiently clear for determining what would be a critical audit matter? (c) Is the use of the word "most" understood as it relates to the definition of critical audit matters?**

The Committee believes that paragraph 8 of the proposed auditor reporting standard creates certain boundaries regarding the identification of critical audit matters as a matter that ordinarily would be included in the engagement completion memo, reviewed by the engagement quality reviewer and communicated to audit committee (or a combination of the three).

The PCAOB definition of critical audit matters focuses on various "difficulties" encountered in an audit. The actual level of difficulty can vary substantially based on the issue itself and the knowledge and experience of the auditor or the audit team, with those with less knowledge and experience likely encountering more difficulty and those with more knowledge and experience encountering no difficulty at all. The Committee recommends the Board set forth discussion of an additional factor which focuses on audit risk and significant modifications to the audit approach (indicative of audit difficulties); these are less subjective and likely would elicit more consistency in designating a matter as a critical audit matter.

In addition, the Committee believes it would be useful to resolve the inconsistency between the IAASB proposal on "key audit matters" and the PCAOB's factors, set forth in Paragraph 9, to consider in determining critical audit matters. The IAASB refers to significant audit risks, significant difficulty encountered in the audit or significant modifications in the audit approach. The PCAOB refers to matters which (1) involved the most difficult, subjective, or complex auditor judgments (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming an opinion on the financial statements. The definitions differ, and are reasonably likely to elicit the identification of different issues, which will complicate compliance by those auditors who are required to comply with both audit standards.

13. **Could the additional time incurred regarding critical audit matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have?**

The Committee believes the proposed new requirements will impact the quality of the audit and not all of the impacts will be positive. Auditors will have to spend time evaluating what matters to discuss and then carefully draft the discussion in the auditor's report. This process will undoubtedly involve the most senior level personnel on the audit team, technical departments and possibly in-house counsel. The concern for the litigation exposure resulting from not discussing a matter, or not being sufficiently robust in the discussions of matters will add significant time to the audit process and could complicate the timeline required to file timely. To allow for sufficient time for the drafting and review of the critical audit matters, the audit work process related to these matters will have to be completed earlier and probably under considerable time pressure. In general, such conditions do not result in the best audit work.

14. **Are the proposed requirements regarding the auditor's determination and communication of critical audit matters sufficiently clear in the proposed standard? Why or why not? If not, how should the proposed requirements be revised?**

The Committee believes the proposed requirements are clear enough to be operational even though inherently subjective language is used throughout.

15. **Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?**

No. The Committee believes this is a wholly unrealistic suggestion. Including the audit procedures related to the specific critical audit matters within the auditor's report could be deemed by a reader to be a separate opinion on the identified critical audit matters, which is contrary to current PCAOB audit standards.

16. **Are the factors helpful in assisting the auditor in determining which matters in the audit would be critical audit matters? Why or why not?**

Yes, but as noted previously, they are inherently subjective.

**17. Are there other factors that the Board should consider adding to assist the auditor in determining which matters in the audit would be critical audit matters? Why or why not?**

Please see the Committee's response to Question 12. Both the IAASB and PCAOB proposed requirements are reasonably clear, but it would be useful if they were the same.

**18. Is the proposed requirement regarding the auditor's documentation of critical audit matters sufficiently clear?**

Yes.

**19. Does the proposed documentation requirement for non-reported audit matters that would appear to meet the definition of a critical audit matter achieve the Board's intent of encouraging auditors to-consider in a thoughtful and careful manner whether audit matters are critical audit matters? If not, what changes should the Board make to the proposed documentation requirement to achieve the Board's intent?**

The PCAOB should not establish any specific documentation requirements beyond requiring that audit documentation be adequate in the circumstances. The exercise of the auditor's professional judgment should determine what is needed.

**20. Is the proposed documentation requirement sufficient or is a broader documentation requirement needed?**

Please see the Committee's response to questions 18 and 19.

**21. What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of critical audit matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?**

The Committee believes that incremental audit costs to be paid by clients will be proportionate and directly related to the complexity of the audit. As the Committee noted in its response to Question 9, there will be additional time incurred by the audit team and then by every layer of review from above, plus consultation time with technical reviewers, national office personnel, in-house counsel, and discussions with management, audit committees and others charged with governance. The Committee believes the nature of the costs will be the same for all audits.

The Committee would expect that audit firms will also incur substantial one-time implementation costs of developing firm internal guidance, templates and training. In addition, audit firms will likely develop outreach programs to discuss the significant changes arising from the two new reporting standards for those charged with governance. These costs would be expected to be passed on to audit clients over time.

**22. What are the additional costs, including indirect costs, or other considerations for companies, including their audit committees, related to critical audit matters that the Board should take into account? Are these costs or other considerations the same for audits of both large and small companies?**

The Committee believes that indirect costs can be considerable, but will likely fall more heavily in most cases on management, who must deal directly with the auditor on the content of the auditor's report before it is presented to the audit committee. There may not be nearly as much incremental time for the audit committee, since they likely would be informed of all or most critical audit matters under the existing PCAOB audit requirements to communicate details related to the audit plan.

**23. How will audit fees be affected by the requirement to determine, communicate, and document critical audit matters under the proposed auditor reporting standard?**

Please refer to the Committee's responses to Questions 9, 21 and 22 above.

**24. Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, such as in an initial public offering or in a situation involving the issuance of an auditor's report on a prior period financial statement because the previously issued auditor's report could no longer be relied upon? If so, under what circumstances?**

The Committee believes it is appropriate to communicate critical audit matters for all periods presented only if the audited financial statements have never been publicly available, or if they are being reissued because previously issued financial statements were no longer reliable. Critical audit matters can normally be expected to be largely the same from year to year, except for critical audit matters related to non-recurring transactions and changes in the business. Therefore, there is no need to be repetitive.

**25. Do the illustrative examples in the Exhibit to this Appendix provide useful and relevant information of critical audit matters and at an appropriate level of detail? Why or why not?**

The Committee believes the examples are generally appropriate, as they illustrate what the PCAOB has in mind. However, all three of these illustrative matters would have been discussed by the client under risk factors and significant accounting policies and also likely in the MD&A section, so the inclusion as a critical audit matter will likely add nothing to the information available to investors. The Committee believes that investors are more interested in information than in the audit process used to form the final conclusion on the individual matters.

However, the Committee believes the wording in the auditor's report examples is far too lengthy. It needs to be reduced substantially if anyone expects users to read it. Bear in mind that financial statements are already being criticized as being so long that few people actually read them.

In example C, the results of audit procedures should not be included. The inference is that there were no other errors, and that should not be something that a reader might be led to infer.

26. **What challenges might be associated with the comparability of audit reports containing critical audit matters? Are these challenges the same for audits of all types of companies? If not, please explain how they might differ.**

The Committee believes that audit reports containing critical audit matters ought to be reasonably comparable within a specific industry. Of course, the exercise of professional judgment by the auditor in evaluating the critical audit matters for significance would have to be communicated in the report. The Committee believes these challenges are similar across all industries.

27. **What benefits or unintended consequences would be associated with requiring auditors to communicate critical audit matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards, such as the examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?**

Many issues not currently subject to disclosure could be considered critical audit matters. For example, potential litigation, a fraud investigation (resolved satisfactorily), or confidential inquiries from government agencies. To expand the "disclosure" requirements, by shifting the burden to the auditor to identify and then disclose such information as a critical audit matter in the audit report, is unreasonable. Under the circumstances, the Committee believes the entity has the disclosure obligation, or there should be no disclosure. And, if there is already a disclosure obligation, then the critical audit matters add little or nothing to the information already available.

28. **(a) What effect, if any, would the auditor's communication of critical audit matters under the proposed auditor reporting standard have on an auditor's potential liability in private litigation? (b) Would this communication lead to an unwarranted increase in private liability? (c) Are there other aspects of the proposed auditor reporting standard that could affect an auditor's potential liability in private litigation? (d) Are there steps the Board could or should take to mitigate the likelihood of increasing an auditor's potential liability in private litigation?**

The Committee presents the following responses to the specific questions:

(a) The expansion of the auditor's report to include both critical audit matters and other information is highly likely to expand the risk of the auditor being drawn into private litigation if a plaintiff were to attempt to claim the auditor did not go far enough in dealing with a specific critical audit matter.
(b) Yes, consistent with our response to (a) above.
(c) The Board's proposed expansion of the audit report, under the assumption that such information will meet the investors' need for information, has limitless negative consequences to the auditor's potential liability. There is no end to what an investor can argue should have been discussed as a critical audit matter, and that the auditor is liable for either not discussing it and/or coming to the wrong conclusion.
(d) Any steps the Board, or the SEC (possible safe harbor?), could take in considering ways to mitigate the likelihood of increasing the auditor's potential liability ought to be considered.

**Questions Related to Section VI Explanatory Language:**

**29. Is it appropriate for the Board to include the description of the circumstances that would require explanatory language (or an explanatory paragraph) with references to other PCAOB standards in the proposed auditor reporting standard?**

The Committee believes it is appropriate for the Board to include this guidance.

**30. Is retaining the auditor's ability to emphasize a matter in the financial statements valuable? Why or why not?**

The Committee recommends the Board provide the auditors with the continuing ability to emphasize a particular matter, such as a material subsequent event.

**31. Should certain matters be required to be emphasized in the auditor's report rather than left to the auditor's discretion? If so, which matters? If not, why not?**

The Committee believes the examples included in paragraph 16. a-f of the proposed auditor reporting standard provide sufficient guidance, and no specific matters should be required to be emphasized.

**32. Should additional examples of matters be added to the list of possible matters that might be emphasized in the auditor's report? If so, what matters and why?**

Additional examples are not required to convey the Board's intent with regard to the matters the auditor might choose to emphasize.

**Questions Related to Section VII Conforming Amendments:**

**33. Are the proposed amendments to PCAOB standards, as related to the proposed auditor reporting standard, appropriate? If not, why not? (b) Are there additional amendments to PCAOB standards related to the proposed auditor reporting standard that the Board should consider?**

(a) Yes
(b) No

**34. What are the potential costs or other considerations related to the proposed amendments? Are these cost considerations the same for all types of audits? If not, explain how they might differ.**

Please refer to the Committee's responses to Questions 9, 21 and 22 above with regard to the overall economic costs of adopting the proposed auditor reporting standard.

**Questions Related to Section VIII Specific Entities:**

35. **Are the proposed auditor reporting standard and amendments appropriate for audits of brokers and dealers? If yes, are there any considerations that the Board should take into account with respect to audits of brokers and dealers?**

    The Committee believes the proposed auditor reporting standard should only be applied to brokers and dealers who are considered issuers as such companies have a reporting responsibility to stockholders and prospective investors. The Committee understands that most brokers and dealers are closely or privately held, and subject to specific operating rules and regulations so the proposed reporting standard would be unnecessary.

36. **Is the requirement of the proposed auditor reporting standard to communicate in the auditor's report critical audit matters appropriate for audits of brokers and dealers? If not, why not?**

    See the Committee's response to question 35 above.

37. **Since a broker or dealer may elect to file with the SEC a balance sheet and related notes bound separately from the annual audited financial statements, should the Board address situations in which the auditor may issue two different reports for the same audit of a broker or dealer? Why or why not?**

    See the Committee's response to question 35 above.

38. **Are the proposed auditor reporting standard and amendments appropriate for audits of investment companies? If yes, are there any considerations that the Board should take into account with respect to auditors' reports on affiliated investment companies, as well as companies that are part of master-feeder or fund of funds structures?**

    The Committee believes the proposed auditor reporting standard should only be applied to investment companies who are considered issuers as such companies have a reporting responsibility to stockholders and prospective investors. The Committee understands that many investment companies are closely or privately held, and subject to specific operating rules and regulations so the proposed reporting standard would be unnecessary.

39. **Are the proposed auditor reporting standard and amendments appropriate for audits of benefit plans? If yes, are there any considerations that the Board should take into account with respect to audits of benefit plans?**

    The Committee believes the proposed auditor reporting standard should only be applied to benefit plans that are considered issuers as such companies have a reporting responsibility to stockholders and prospective investors. The Committee understands that most pension plans are closely or privately held, and subject to specific operating rules and regulations so the proposed reporting standard would be unnecessary.

40. **Should audits of certain companies be exempted from being required to communicate critical audit matters in the auditor's report? Why or why not?**

    As stated in our responses to questions 35-39 above, the proposed additional reporting requirements should only be applied to companies that are considered issuers.

**Questions Related to Section X Effective Date:**

41. **Is the Board's effective date appropriate for the proposed auditor reporting standard? Why or why not?**

    The Committee believes the Board has provided sufficient time to apply the new standard.

42. **Should the Board consider a delayed compliance date for the proposed auditor reporting standard and amendments or delayed compliance date for certain parts of the proposed auditor reporting standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?**

    The Committee recommends the Board consider a delayed effective date for non-accelerated filers, and also consider soliciting feedback from the auditors and users of the initial group of accelerated filers who would initially apply the new auditor reporting standard.

## Other Information

The Committee is opposed to the proposed requirement that auditors report on other information as set forth in our response to Question 6 to the PCAOB's Auditor's Report section above.

**Questions Related to Section I Introduction:**

1. **(a) Is the scope of the proposed other information standard clear and appropriate? Why or why not? (b) Are there Exchange Act documents, other than annual reports, that the Board should consider including in the scope of the proposed other information standard?**

    (a) The Committee believes the scope of the other information standard is unclear. Much data, including that filed with the SEC, are made available on company websites, in some cases directly, in other cases by a link to the EDGAR database; it appears the former is not covered by the proposed standard, but the latter is; we question whether this makes any sense. And if the "glossy" annual report is partially incorporated by reference, readers will have difficulty sorting out what is covered and what is not; this seems to make little sense.

    (b) The Committee believes the proposed other information standard should be limited to annual reports.

2. **(a) Is it appropriate to apply the proposed other information standard to information incorporated by reference? Why or why not? (b) Are there additional costs or practical issues with including information incorporated by reference in the scope of the proposed other information standard? If so, what are they?**

    (a) The Committee believes the proposed other information standard should be restricted to information that is expressly included in the document which includes the audited financial statements.

(b) The Committee believes there are substantial incremental costs associated with requiring the auditor to include other information incorporated by reference within the scope of the proposed other information standard, along with the practical difficulties of identifying such information, which may have changed since the date the auditor's report was issued.

3. **Is it appropriate to apply the proposed other information standard to amended annual reports? Why or why not? Are there additional costs or practical issues with including amended annual reports in the scope of the proposed other information standard? If so, what are they?**

The Committee believes that unless the cause of the amendment requires the auditor to update their audit report for information that impacts the amended financial statements, it is not appropriate to apply the proposed other information standard to amended annual reports. To do so would require the auditor to continuously update their audit report which would be unduly expensive.

4. **Should the company's auditor, the other entity's auditor, or both have responsibilities under the proposed other information standard regarding audited financial statements of another entity that are required to be filed in a company's annual report under Article 3 of Regulation S-X? Why or why not? Are there practical issues with applying the proposed other information standard to the other entity's audited financial statements?**

The Committee believes the proposed requirement is unclear. If it means that audited financial statements furnished pursuant to Article 3 are considered "other information," the Committee disagrees with the requirement; audited financial statements should not be considered "other information". Further, reporting on those financial statements is the responsibility of the other entity's auditor; the company's auditor should have no responsibility for them. To require some responsibility would be a waste of time and money.

In addition, if the "other information" concerning the other entity is interspersed in the document with that of the registrant, identifying which auditor has responsibility for what information could be extremely problematic.

**Question Related to Section II Objectives:**

5. **Do the objectives assist the auditor in performing the procedures required by the proposed other information standard to evaluate the other information and report on the results of the evaluation?**

The Committee believes the stated objectives are helpful, but we disagree with the auditor being held responsible for evaluating whether the other information has a material misstatement of fact. Please refer to the Committee's response to Question 6 under the proposed auditor reporting standard.

**Questions Related to Section III Evaluating Other Information:**

6. **Is it appropriate to require the auditor to evaluate the other information for both a material inconsistency and for a material misstatement of fact? If not, why not?**

   The Committee agrees with the proposed requirement to evaluate the other information for a material inconsistency with the financial statements, but we do not agree with evaluating it for a material misstatement of fact. Please refer to the Committee's response to Questions 6 under the proposed auditor reporting standard, and the Committee's response to Question 5 above.

7. **Would the evaluation of the other information increase the quality of information available to investors and other financial statement users and sufficiently contribute to greater confidence in the other information? If not, what additional procedures should the Board consider?**

   The Committee agrees that providing an auditor evaluation may convey greater confidence in the other information. However, the Committee is doubtful the reporting requirement will have any impact on the content of the other information. No additional procedures are necessary or appropriate.

8. **Is the federal securities laws' definition of materiality the appropriate standard for the auditor's responsibility to evaluate the other information? Would applying this definition represent a change to the materiality considerations auditors currently use under AU sec. 550?**

   The Committee believes the appropriate standard of materiality to apply in the proposed other information standard is that currently stated in AU sec. 550. Auditors already consider the implications of the SEC's definition of materiality in evaluating the impact of any variances.

9. **Are the proposed procedures with respect to evaluating the other information clear, appropriate, and sufficient? If not, why not?**

   The Committee believes the proposed procedures are appropriate for evaluating inconsistency with the financial statements, but they are not appropriate for evaluating any material misstatement of fact. There may be no link between audit evidence obtained and conclusions reached during the audit with the facts included in the other information, so the auditor would have no basis for the negative assurance proposed by the PCAOB. Arguably, since the fact is not within the scope of the evaluation, there is no assurance given, but a reader would then have no way of knowing what facts are subject to assurance and what facts are not.

10. **Is it understood which amounts in the other information the auditor would be required to recalculate under paragraph 4.d.? If not, why not?**

    The requirements set forth in paragraph 4.d. appear clear. However, to the extent recalculation is based on "other audit evidence" a user will not know whether it has been recalculated because the user will not know the content of the "audit evidence."

**11. Are there additional costs beyond those described in this Appendix related to the proposed required procedures for the evaluation of the other information? If so, what would these costs be?**

If the auditors are required to deal with misstatements of fact in the manner proposed, they may feel forced to investigate the validity of facts not subject to audit evidence obtained and conclusions reached during the audit, and the cost of this could be substantial.

**12. Are the proposed auditor responses under paragraph 5 appropriate when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If not, why not?**

The Committee believes the proposed auditor responses under paragraph are appropriate.

**13. Are there additional costs beyond those described in this Appendix related to responding when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If so, what would these costs be?**

The Committee believes the increased cost of implementing the proposed other information standard would be substantial. Also refer to the Committee's response to Question 11. above.

**Questions Related to Section IV Responding to Inconsistencies and Misstatements in Other Information**

**14. Are the proposed auditor's responses under paragraphs 8 and 9 appropriate when the auditor determines that the other information that was available prior to the issuance of the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?**

The Committee believes the proposed auditor responses are appropriate.

**15. (a) Is it appropriate for the auditor to issue an auditor's report that states that the auditor has identified in the other information a material inconsistency, a material misstatement of fact, or both, that has not been appropriately revised and describes the material inconsistency, the material misstatement of fact, or both? (b) Under what circumstances would such a report be appropriate or not appropriate?**

(a) The Committee believes such reports are appropriate in the circumstances, but hope the client and auditor resolve the issues prior to the report's issuance.
(b) Such a report would always be appropriate.

**16. Are the proposed auditor's responses under paragraphs 10 and 11 appropriate when the auditor determines that the other information that was not available prior to the issuance of the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?**

The Committee believes the proposed responses are appropriate, but this situation creates a real problem. The auditor has no responsibility to investigate what occurs after its report is issued, and it is possible that a client may publish the other information without clearing it with the auditor; this is not unlikely if non-financial personnel are preparing the other information and controls over its release are not followed. As the time between the release of the auditor's report and the availability of the other information increase, the likelihood of inconsistencies increases.

**Question Related to Section V Responding if there is a Misstatement of the Financial Statements Based on Other Information**

**17. Are the proposed auditor's responses appropriate when, as a result of the procedures performed under the proposed other information standard, the auditor determines that there is a potential misstatement in the financial statements? Why or why not?**

The Committee believes the proposed responses are appropriate.

**Questions Related to Section VI Reporting in the Auditor's Report:**

**18. Is the proposed reporting, including the illustrative language, appropriate and sufficiently clear? If not, why not?**

As pointed out in the Committee's response under Auditor's Reports Question 6, the scope of assurance given by the auditor when saying they "have not identified any material inconsistency with the financial statements" is very unclear. The committee does not have a recommendation on how to fix this. For this, among other reasons discussed elsewhere in this letter, the committee is opposed to the proposed requirement that auditors report on other information.

**19. Should the Board consider permitting or requiring the auditor to identify in the auditor's report information not directly related to the financial statements for which the auditor did not have relevant audit evidence to evaluate against? If so, provide examples.**

The Committee believes that if the auditor does not have relevant audit evidence against which to evaluate certain other information (which may be relatively frequent under the PCAOB's proposal), the auditor will need to say so in its report. However, such a statement, which may run to multiple pieces of information, is bound to create confusion to the reader, which is undesirable. This potential for confusion is yet one more reason that the Committee is opposed to the proposed requirement that auditors report on other information.

**20. What additional costs would the auditor or the company incur related to auditor reporting when the auditor identifies a material inconsistency, a material misstatement of fact, or both?**

The Committee does not believe these costs will significant, and only marginally greater than incurred under the current reporting standards.

21. **Would the proposed reporting, including the illustrative language, provide investors and other financial statement users with an appropriate understanding of the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information? Why or why not?**

    The Committee believes there is a real danger that financial statement users will consider any information that the auditor refers to in its report to be "verified," "certified," "approved" or similar terminology, regardless of what the auditor actually says in its report.

22. **Are there any practical considerations that the Board should consider when an auditor identifies a material inconsistency or a material misstatement of fact in the other information that management has appropriately revised prior to the issuance of the auditor's report?**

    No, the presumption is reasonable that management will resolve the material inconsistency or material misstatement in the other information.

**Question Related to Section VII Responsibilities of a Predecessor Auditor:**

23. **Are the proposed responsibilities of the predecessor auditor appropriate and sufficiently clear? If not, why not?**

    The Committee believes the proposed responsibilities are appropriate and sufficiently clear.

**Questions Related to Section VIII Other Considerations:**

24. **(a) What effect, if any, would the reporting under the proposed other information standard have on an auditor's potential liability in private litigation? (b) Would this reporting lead to an unwarranted increase in private liability? (c) Are there steps the Board could or should take related to the other information requirements to mitigate the likelihood of increasing an accounting firm's potential liability in private litigation?**

    The Committee presents the following responses to the specific questions:

    (a) The expansion of the auditor's report to include other information is likely to expand the risk of the auditor being drawn into private litigation, although perhaps to a lesser degree than the proposed reporting of critical audit matters. Nevertheless, there is some increased risk.
    (b) It could, consistent with our response to (a) above.
    (c) Any steps the Board, or the SEC (possible safe harbor?), could take in considering ways to mitigate the likelihood of increasing the auditor's potential liability under the proposed other information standard ought to be considered.

**25. Would reporting under the proposed other information standard affect an auditor's potential liability under provisions of the federal securities laws other than Section 10(b) of the Exchange Act, such as Section 11 of the Securities Act? Would it affect an auditor's potential liability under state law?**

The Other Information reporting requirements are stated to apply only to annual reports in Exchange Act filings. However, many of those filings are incorporated by reference into Securities Act filings. It is unclear how Section 11 liability can be avoided in this situation.

We suggest that the PCAOB, possibly with the assistance of the commission's staff, carefully examine the potential effect on auditor's liabilities under the securities acts and state laws.

**Questions Related to Section IX Conforming Amendments:**

**26. (a) Are the proposed amendments to PCAOB standards, as related to the proposed other information standard, appropriate? If not, why not? (b) Are there additional amendments to PCAOB standards related to the proposed other information standard that the Board should consider?**

(a) Yes
(b) No

**27. In the situations described in the proposed amendments to existing AU sec. 508, should the Board require, rather than allow, the auditor to include statements in the auditor's report that the auditor was not engaged to examine management's assertion on the effectiveness of internal control over financial reporting and that the auditor does not express an opinion on management's report?**

The Committee believes the Board should require such statements in order to remove a possible ambiguity.

**Question Related to Section X Broker Dealers:**

**28. Are the proposed other information standard and amendments appropriate for audits of brokers and dealers? If not, why not?**

No, unless the broker/dealer is publicly held.

**Questions Related to Section XI Effective Date:**

**29. Is the Board's effective date appropriate for the proposed other information standard? Why or why not?**

The Committee recommends the Board establish a tiered effective date for accelerated and non-accelerated filers similar to our response in Question 42 related to the proposed auditor reporting standard.

**30. Should the Board consider a delayed compliance date for the proposed other information standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?**

See the Committee's response to Question 29 above.

**Questions Related to Section XII Securities Act Documents:**

**31. Should the Board extend the application of the proposed other information standard to documents containing audited financial statements and the related auditor's report that are filed under the Securities Act? If so, are there obstacles other than those previously mentioned that the Board should consider before such a proposal is made? If not, why not?**

The Committee does not believe the application of the proposed other information standard should be extended to other securities act filings containing audited financial statements. For example, in an underwritten offering, the other information external to the financial statements is usually thoroughly vetted by the underwriter and further reporting by the auditor would not add any value.

**32. Are there some elements of the proposed other information standard that the Board should consider requiring the auditor to perform related to other information contained in filings under the Securities Act, such as the auditor's responsibility to evaluate the other information? If so, which elements of the proposed other information standard should the Board consider including in the procedures currently required for Securities Act documents under AU sec. 711? If not, why not?**

The Committee does not believe the application of the proposed other information standard should be extended to other Securities Acts filings that do NOT contain audited financial statements, as the basis for reviewing such other information is the financial statements.

Further, the Committee believes the proposal should be limited to Exchange Act filings and does not believe any part of the proposal should be extended to any Securities Act filings.

**33. What costs or other challenges should the Board consider when assessing whether to propose extending some elements of the proposed other information standard to other information contained in documents filed under the Securities Act?**

As we stated in our responses to several questions above, the Board should limit the required other information standard to securities filings that contain the annual report and should not be extended to Securities Act filings.

## Emerging Growth Companies

**Questions:**

1. **Should the proposed standards and amendments be applicable for audits of EGCs? Why or why not?**

   The proposed standards and amendments should not be applied to EGC's until they are fully effective for accelerated and non-accelerated filers and they have been evaluated for effectiveness. Imposing these complex new reporting requirements on EGCs could make the capital raising process more difficult for them.

2. **Are there any other considerations related to competition, efficiency, and capital formation that the Board should take into account with respect to applying the proposed standards and amendments to audits of EGCs?**

   No.

3. **Are there any special characteristics of EGCs that the Board should consider related to the proposed auditor reporting standard, including the communication of critical audit matters?**

   No.

4. **Would audits of EGCs be more, less, or equally likely to have critical audit matters?**

   EGC's in a particular industry are no more or less likely to have critical audit matters than established companies.

5. **Are there any special characteristics of EGCs that the Board should consider related to the proposed other information standard and amendments?**

   No.

6. **What costs would audit firms incur when implementing the proposed auditor reporting standard, including the communication of critical audit matters, for audits of EGCs? How will those costs differ from the costs for audits of larger and more established companies?**

   The Committee cannot distinguish between the cost of implementing the proposed auditor reporting standard or the proposed other information standard between EGCs and established companies. However, it is likely the costs could be higher due to dealing with a newly formed company's need to establish its significant accounting policies and procedures, and may be disproportionately higher because of the relatively smaller size of EGCs.

7. **What costs would audit firms incur when implementing the proposed other information standard for audits of EGCs? How will those costs differ from the costs for audits of larger and more established companies?**

   See the response to Question 6 above.

8. **Are there particular costs or burdens applicable to EGCs that the Board should consider when determining what recommendation to provide the Commission regarding the application of the proposed auditor reporting standard and amendments to EGCs?**

   See the response to Question 6 above.

9. **Are there particular costs or burdens applicable to EGCs that the Board should consider when determining what recommendation to provide the Commission regarding the application of the proposed other information standard and amendments to EGCs?**

   See the response to Question 6 above.

10. **For auditors of both EGCs and other SEC registrants, would it be more costly not to apply the proposed standards and amendments to audits of EGCs because the firms would need to develop and maintain two audit methodologies?**

    This would not have a significant cost impact for audit firms, as PCAOB audit firms have been maintaining two audit methodologies since the formation of the PCAOB in 2003 (referring to PCAOB audit standards for publicly held clients and AICPA audit standards for non-public clients).

****

The Committee would be glad to discuss its comments further should the Board have any questions or require additional information.

**Re: PCAOB Rulemaking Docket Matter No. 034 – Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments**

Dear Members of PCAOB:

This letter is sent to you on behalf of the California State Teachers' Retirement System (CalSTRS). CalSTRS is a public pension fund that was established for the benefit of California's public school teachers over 100 years ago. CalSTRS serves the investment and retirement interests of approximately 865,000 plan participants. As of January 31, 2014, the CalSTRS portfolio was valued at approximately $180 billion with about $100 billion of the fund's assets being invested in the public equity markets, on both a domestic and an international basis. With such a large part of our investment portfolio exposed to the risks of the public equity markets, CalSTRS is supportive of the work done by the Public Company Accounting Oversight Board (PCAOB) that helps to promote investor protection.

The work performed by a corporation's external auditor is an extremely valuable means through which shareholders receive reasonable assurance that the company's financial statements are fairly presented. CalSTRS believes it is critical that the information provided by the external auditor enhances investor's confidence in the financial statements. It is for this reason that we are writing to you today concerning the PCAOB's efforts at improving auditor communications with shareholders. In particular, we would like to comment on the proposed revised auditing standards identified as *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; the Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards (Proposal).*

We generally believe that the Proposal requiring the auditor to communicate critical audit matters (CAM) in the auditor's report is an improvement compared to the current auditor's reporting model that merely states a pass or fail opinion. CalSTRS believes investors and other users of the financial statements will benefit from improved meaningful disclosure in the auditor's report. However, we have some concerns regarding what issues might constitute CAM. The Proposal defines CAM as a matter that involved the most difficult, subjective, or complex auditor judgments, posed the most difficulty to the auditor in obtaining sufficient appropriate evidence or posed the most difficulty to the auditor in forming an opinion on the financial statements. It appears the definition of CAM provides the auditors with significant latitude in determining what audit matters to communicate in the auditor's report. Instead of relying on the auditor's professional judgment in determining which CAM to report, we would suggest that the PCAOB consider providing more clarity and/or guidance in regards to what CAM to report, and in doing so, making the audit reporting process less subjective.

We think an alternative approach might include having the PCAOB establish a list of specific issues or topics for consideration as CAM for inclusion in the auditor's report. The list of potential audit issues or topics may include the following: areas involving significant estimates and judgments, an assessment of the management's critical accounting judgments and estimates; significant unusual or one-time transactions; non-routine issues communicated to the audit committee; and/or accounting policies and practices. Such a list would serve the purposes of being useful for investors in analyzing companies as well as being helpful for auditors in doing their jobs. CalSTRS believes that investors would find the list useful because they would be getting information deemed as a high concern or as a high risk area related to the company, and would be getting consistent information that allows comparability between companies. The auditors may find the list helpful because it removes some of the guesswork in determining what audit matters are deemed CAM. Thus, they may also be less inclined to purposely underreport or overload information in the auditor's report as they determine what to communicate.

To reiterate, we support improved meaningful disclosure in the auditor's report but suggest that the PCAOB offer further clarification or guidance regarding what specific CAM to communicate in the auditor's report. Without additional clarification, we are concerned that the Proposal may potentially result in voluminous disclosure that investors may not find useful, defeating the intended purpose of having the enhanced communication.

CalSTRS appreciates the opportunity to comment on the Proposal. If you have any questions please do not hesitate to contact me.

Sincerely,

Anne E. Sheehan

Washington, DC 2006-2803

**Re: Proposed Auditing Standards - PCAOB Release No. 2013-005**
**Rulemaking Docket Matter No. 034**

The Canadian Bankers Association[1] ("CBA") appreciates the opportunity to respond to the Public Company Accounting Oversight Board's ("PCAOB") proposal for two new auditing standards, *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion*, and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*, issued on August 13, 2013.

The CBA is an industry association representing 57 domestic banks, foreign bank subsidiaries and foreign bank branches operating in Canada, including 5 domestic bank members that are publically listed foreign private issuers registered with the Securities and Exchange Commission ("SEC") with a combined market capitalization over $350 billion. The CBA advocates for effective public policies that contribute to a sound and successful banking system that benefits Canadians and Canada's economy. Our members are keenly interested in maintaining and improving the efficiency and effectiveness of the capital markets both domestically in Canada and in foreign jurisdictions where our members operate. We believe that the auditor, including the format of their report, plays a key role in this regard.

We are pleased that the PCAOB is looking to improve upon the current pass/fail model. However, we believe the changes as currently proposed may not achieve these objectives and may result in unintended consequences. Specifically, we are concerned about the inclusion of critical audit matters ("CAM") within the audit report.

Audit committee members are uniquely qualified to oversee and assess the quality of the auditor and the adequacy of financial statements and related disclosures on behalf of an organization's shareholders. They have access to both management and auditors in assisting their assessment of whether CAMs are appropriately resolved, reported and disclosed.

To facilitate more efficient capital allocation, lower the average cost of capital and reduce the risk premium associated with securities, sufficient context would need to be provided in the auditor's report. Investors that do not have the same access to management and the auditors may misinterpret the new disclosures. We do not believe that the level of detail that would have to be provided to achieve this objective is practical, both from a competitive and a legal liability perspective. Instead, we expect standard disclosure templates to develop over time.

[1] The Canadian Bankers Association works on behalf of 57 domestic banks, foreign bank subsidiaries and foreign bank branches operating in Canada and their 275,000 employees. The CBA advocates for effective public policies that contribute to a sound, successful banking system that benefits Canadians and Canada's economy. The Association also promotes financial literacy to help Canadians make informed financial decisions and works with banks and law enforcement to help protect customers against financial crime and promote fraud awareness. www.cba.ca.

In an attempt to pursue this amicable objective, we anticipate significant increases in audit fees in response to the increased disclosure and additional audit effort required to evaluate other information covered by the auditor's report. These increased costs are anticipated to outweigh investors' short term benefits from additional disclosures.

Our specific comments are covered in more detail within the remainder of this letter.

**Expand the current pass/fail nature of the auditor's opinion to include a discussion of critical audit matters that would be specific to each audit**

We are not supportive of PCAOB's proposal to include a discussion of CAMs in the Auditor's Report. In our view, audit committees, which are made up of qualified individuals are elected by shareholders to represent their best interests, and are in the best position to assess whether CAMs are appropriately resolved, reported, and disclosed. Audit committees have access to both management and the auditors which enables them to have open and interactive discussions to fully understand and evaluate CAMs, and how they are addressed within the audit process. This is critical as the audit process is subjective in nature allowing for individual items and items in aggregate to be evaluated within the context of the entity, its business, and its internal control environment. CAMs must be reviewed and assessed in their totality, which is currently facilitated through audit committees.

The audit committee's function is supported by the PCAOB and other audit regulators, including the Canadian Public Accountability Board ("CPAB") by regulating required minimum communication matters by auditors to audit committees. These communications are monitored by the PCAOB, CPAB and other jurisdictional audit regulators through both audit firm reviews and file inspections. These processes assist audit committees in ensuring significant matters are discussed and evaluated.

Furthermore, we believe the information regarding disclosure of CAMs is available within the Critical Accounting Matters section of the Management Discussion and Analysis (MD&A) and the financial statement notes, including key risks of the organization and areas of significant areas of judgment including, for example:

- Special purpose entities;
- Fair value of financial instruments;
- Allowance for credit losses;
- Employee benefits;
- Goodwill and other intangibles;
- Securities impairment;
- Derecognition of financial instruments;
- Income taxes; and
- Provisions.

As a result, including the information within the auditor's report will result in additional repetitive disclosures.

The current model, supported by the provision of enhanced information by the PCAOB on audit firm reviews and file inspection results would have a more beneficial impact than updating the auditor's report with CAMs.

The PCAOB indicated in the release that the recommendations will result in more efficient capital allocation and will lower the average cost of capital for most companies, effectively reducing the risk premium investors require to invest in equities. There will need to be a delicate balance of information sharing, so as to not include proprietary client information, yet provide enough information to drive capital flow to/from the auditors' clients. From a preparer's perspective, disclosure to an outside party about the resolution of critical audit matters could result in the possibility of misinterpreting this information as there is no mechanism to enable outside users to have the same level of interactive discussions as is currently had by audit committees with their banks' independent auditors. This could have a significant impact on a

Bank, if for example an auditor included going concern as a critical audit matter which was not included in the audit reports for competitor banks. This could lead to a run on a bank, effectively eroding capital, causing a bank's failure. Since audit firms are expected to have the propensity to reduce their audit risk through increased disclosure; they are in direct conflict with the needs of preparers in certain scenarios. We expect that this will eventually lead to consistent disclosure within industry groups that pose reduced risk to audit firms. Accordingly, as time progresses, we expect any differentiation from a capital allocation and cost of capital perspective among their clients that may arise in the short run to disappear in the long run.

Expanding the matters that the auditor is required to report on will also increase an issuer's and its director's and officer's potential liability driven by the potential misinterpretation of the incremental disclosure by investors, as they have a civil liability for material misrepresentation or omissions in an issuer's annual report, including in relation to the context of expert reports.

The PCAOB proposal is similar to the International Auditing and Assurance Standards Board ("IAASB") proposal; however, some of the terms and definitions differ. For instance, the PCAOB asks for "critical audit matters" be disclosed, compared with "key audit matters" as defined by the IAASB. This could result in two different reporting models and divergent views in some instances with respect to what key matters are disclosed. This creates unnecessary complexity for both users and preparers operating in the global market and reduces comparability of financial statements across geographic regions. The PCAOB and the IAASB should consider converging the guidance to achieve a valuable global standard that all investors and prepares can adhere to and more easily interpret.

Although the information regarding critical audit matters is currently available, we believe there will be substantial costs, especially in the first year of implementation, stemming from drafting the report, oversight and review of the new report, increased validation over completeness, and accuracy of CAMs that are now not only subject to governance structures, but also public disclosure.

For the reasons noted above, we do not see incremental value in disclosing CAMs within the auditor's report, and instead see more value in continued transparency by audit committees who are responsible for the oversight of their auditors on behalf of shareholders.

**Inclusion of an auditor's statement relating to auditor independence within the Auditor's Report**

We are indifferent to this proposal, although we believe it is redundant, as the current auditor's report is labeled "Report of Independent Public Accounting Firm." In our view, investors are currently relying on audit committees to perform their fiduciary duty in assessing the qualification and independence of the auditors and the PCAOB to monitor firm's compliance with SEC and other jurisdiction's independence regulations.

**Inclusion of auditor's tenure within the report**

We anticipate investors would derive value from having information regarding auditor tenure; for example, when a change in auditor has occurred. In those instances, they may inquire of management what prompted the change (e.g., disagreement with management regarding an accounting treatment). Our preference would be to include the information within another public document as it has no impact on the auditors' opinion on the financial statements, and in particular if a statement of independence is included in the auditor's report.

**Auditor's evaluation of other information outside of the audited financial statements**

Auditors are experts in financial information and controls over financial reporting. We are concerned that expanding the scope of their responsibilities beyond financial information included in the MD&A and other documents will go beyond their current training and area of professional expertise. Currently, auditors review the MD&A and other information incorporated by reference pertaining to registration statements and prospectus filings. The focus of this review is on the financial statements, related tables, exhibits and disclosures. Any inconsistency would be investigated and corrected or reported on where appropriate.

We are supportive of clarifying this role within the auditor’s report without expanding their current responsibilities.

The proposed standard changes the auditor’s responsibility for the information presented outside the financial statements from “read” and “consider” to “read” and “evaluate” whether the other information included in documents containing audited financial statements is materially inconsistent with information appearing in the financial statements, or includes a material misstatement of fact. This change will require the auditor to obtain evidence, and as a result this will substantially increase procedures and costs. Given the additional information provided in annual reports envisioned to be covered (financial data, MD&A, exhibits, and other regulatory filings), we anticipate the costs would be significant and outweigh the benefit of these procedures. For banks in particular, there is significant disclosure regarding capital, and risk-weighted assets in the MD&A, some of which are not currently audited and would significantly increase audit costs if required to be audited. As there is no objective set of standards to which the auditors can evaluate the disclosure against, this will lead to a significant area of audit judgment. If the amount of work required to audit information not currently audited in the MD&A becomes too high, it may reduce the motivation for management to report the information in the first place.

In addition to the audit costs, we anticipate additional costs as a result of the increased liability for experts (including auditors) who have civil liability for material misrepresentations or omissions in an issuer's annual report. Expansion of the matters the auditor is required to report on and potential misinterpretation of the disclosure will increase the auditor’s potential liability. Issuers' audit costs will increase to compensate for this increased liability and/or work effort required to sufficiently mitigate their increased audit risk.

The minimal additional level of comfort to investors is not anticipated to outweigh the additional costs discussed above. As a result, we are not supportive of the proposal. As noted above, we do support clarifying the auditor’s role under current standards within the auditor’s report.

We would be pleased to discuss any questions you may have on our comments.

Sincerely,

CANADIAN PUBLIC ACCOUNTABILITY BOARD
CONSEIL CANADIEN SUR LA REDDITION DE COMPTES

150 York Street, Suite 900, Box 90, Toronto, Ontario M5H 3S5

December 18, 2013

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington D.C. 20006-2803
USA

Dear Sir:

**PCAOB Rulemaking Docket Matter No. 34: The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain documents Containing Audited Financial Statements and the Related Auditor's Report**

The Canadian Public Accountability Board (CPAB) is pleased to comment on the Public Company Accounting Oversight Board (PCAOB) *Proposed Rule on The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (the proposed standards). Investors and other financial statement users (Users) are calling for more transparency from the audit process and we commend the PCAOB for proposing amendments to their auditing standards that will require auditors to share more information, related to the audit, directly with Users.

CPAB is Canada's independent audit regulator and is responsible for overseeing firms that audit Canadian reporting issuers. Our mandate is to promote high quality independent auditing that contributes to public confidence in the integrity of reporting issuers' financial reporting. We accomplish our mandate by inspecting audit firms and audit working paper files which provides us with insights into the application of auditing standards and how they might be improved.

We believe the introduction of the critical audit matters section in the auditor's report will enhance the relevance and usefulness of auditor communications with Users. Augmenting the historic pass/fail model of the auditor's report to include a discussion of the most difficult, subjective or complex audit matters should help Users better understand the significant entity specific professional judgments the auditor made in performing the audit.

Canada has adopted the International Standards on Auditing (ISAs) as Canadian Auditing Standards. We are encouraged by the similarity between the concept of critical audit matters and the International Auditing and Assurance Standards Board (IAASB) concept of "key audit matters". While we appreciate that the PCAOB's mandate is to develop auditing standards that are relevant to the U.S. public securities market we commend the Board for considering the IAASB project on auditor reporting in developing the proposed standards. Canada has the largest number of foreign public companies registered with the Securities and Exchange Commission (SEC). As Canadian securities regulators permit SEC registrants to have their audits conducted in accordance with PCAOB standards we strongly support the Board's working together to minimize differences in global auditor reporting standards to mitigate investor confusion.

For your information, we have attached a copy of CPAB's November 22, 2013 response to the IAASB on its Exposure Draft Reporting on Audited Financial Statements. This response provides our views on the IAASB's auditor reporting proposals.

We appreciate the opportunity to respond to the proposed standards, and would be pleased to discuss our comments with you at your request.

Yours very truly,

Brian Hunt, FCPA, FCA
Chief Executive Officer

CPAB
CCRC

November 22, 2013

Technical Director
International Auditing and Assurance Standards Board
545 Fifth Avenue, 14th Floor
New York, NY 10017
USA

Dear Sir:

**Re: Exposure Draft – Reporting on Audited Financial Statements**

The Canadian Public Accountability Board (CPAB) is pleased to respond to the International Auditing and Assurance Standards Board's (IAASB's) Exposure Draft, *Reporting on Audited Financial Statements: Proposed New and Revised International Standards on Auditing (ISAs)* (the "ED"). CPAB is Canada's independent audit regulator responsible for overseeing firms that audit Canadian reporting issuers. Our mandate is to promote high quality independent auditing that contributes to public confidence in the integrity of reporting issuers' financial reporting. We accomplish our mandate by inspecting audit firms and audit working paper files which provides us with insights into the application of auditing standards and how they might be improved.

We support the need for more transparency with respect to auditor reporting. Auditors need to provide greater value by sharing more information, related to the audit, directly with financial statement users ("Users"). The requirement to disclose key audit matters in the audit report will focus the attention of auditors, management and those charged with governance on the areas of most significant risk which should enhance audit quality and contribute to improving the quality of management's financial statement disclosures, however, we are concerned that disclosure of key audit matters will become boilerplate adding little value to Users. Key audit matters need to be informative, relevant and entity-specific to be useful to Users. We encourage the IAASB to appropriately field test the disclosure of key audit matters prior to finalizing the exposure draft to ensure that the requirements and related application guidance mitigate the risk of boilerplate disclosure.

We commend the IAASB for continuing to give the auditor reporting project such high priority in its work program. Consistent with our response to the IAASB's Invitation to Comment on *Improving the Auditor's Report* (the "ITC"), it is important for bodies such as the IAASB, European Commission and United States Public Company Accounting Oversight Board ("PCAOB") to work together to devise one global solution to the perceived deficiencies in auditor reporting. Since many audit reports are read globally; a more coordinated approach will improve consistency and mitigate investor confusion. Greater divergence in auditor reporting is not in the public interest. We are encouraged by the similarity between the IAASB concept of "key audit matters" and the PCAOB concept of "critical audit matters" in its auditor reporting exposure draft. We strongly support the Board's working together to minimize differences in global auditor reporting standards.

**Key Audit Matters**

We believe the introduction of the key audit matters section in the auditor's report will enhance the usefulness of the report to Users provided there is consistent identification of these matters in practice. The degree of usefulness will be impacted by how specific the auditor is in describing the matter and why the auditor considered the matter to be one of most significance in the audit.

We support a principles based approach for identifying key audit matters but anticipate implementation issues with the requirements as proposed in the ED. Through our inspections we have noted that auditors struggle with the identification of significant risks as we see inconsistencies in the nature and number of risks being identified. While we agree that significant risks should be considered for reporting as key audit matters, more consistent identification of significant risks would be necessary if this reporting is to be useful to Users. Conceptually we agree with the other two criteria for determining key audit matters: areas in which the auditor encountered significant difficulty during the audit; and circumstances that required significant modification of the auditor's planned approach to the audit, including as a result of the identification of a significant deficiency in internal control. However, more guidance is needed in evaluating what constitutes "significant", and therefore reportable, as auditors can expect push-back from management to what is effectively public criticism of them.

The illustrative examples of key audit matters in the ED are an improvement over the example auditor commentary included in the ITC, however, the examples need to be more entity-specific to provide value added insights to Users. We thought the "Goodwill" example would be particularly useful to Users although an auditor would likely encounter significant resistance from management to the auditor's level of detail if the disclosure by management was not at the same level of detail. Similarly, Users would probably appreciate the discussion of the risk of fraud from side agreements in the "Revenue Recognition Related to Long-Term Contracts" matter but we are not sure that management and those charged with governance would agree it was a key audit matter that required disclosure if the auditor was ultimately unable to find evidence of the existence of side agreements as a result of the procedures performed. The IAASB should consider developing guidance for auditors, audit committees and management with respect to interactions on key audit matters to reduce the risk of unintended consequences for audit quality.

**Going Concern**

We are concerned the proposed auditor statements regarding both the appropriateness of management's use of the going concern assumption and whether material uncertainties related to events or conditions that may cast significant doubt on the entity's ability to continue as a going concern have been identified will increase, rather than decrease, the Users' expectation gap. While we understand why the global financial crisis has resulted in greater focus on the assessment of going concern and related disclosures we do not believe statements by the auditor based on the work effort of ISA 570, *Going Concern* will meet the needs of Users in that context.

The long standing issue with going concern is whether the disclosure of certain matters becomes a self-fulfilling prophecy - a risk that may be significantly higher for particular entities such as financial institutions. To address the lessons of the global financial crisis there may need to be different solutions for Systemically Important Financial Institutions ("SIFI") versus other commercial entities. Given the significance of SIFIs to the broader economy, CPAB would again encourage consideration of alternative approaches, such as improved communication between auditors and prudential regulators, as a more effective method of achieving the desired objective.

In our response to the ITC we supported the development of additional guidance for auditors, under ISA 570, with respect to the identification and response to material uncertainties as it is a complex and judgmental exercise and our inspections have evidenced that auditors struggle to respond appropriately. In our view the International Accounting Standards Board needs to provide more guidance on management's responsibilities for evaluating and disclosing going concern uncertainties which the auditor would then evaluate and assess as part of the audit under ISA 570.

We believe that if auditors are required by Users to report on the appropriateness of the going concern assumption then there would need to be a commensurate increase in the work effort under ISA 570 to support that reporting. We understand there may be political pressure for the IAASB to incorporate additional going concern disclosures into the audit report, however, we encourage a more holistic approach to addressing this complex issue.

**Format and Structure of the Standard Auditor's Report**

We support the need to improve the format and structure of the existing standard audit report and to do so in a manner that enhances consistency of reporting at the global level. In responding to the ITC we agreed with the IAASB that there is merit in mandating the ordering of the elements within the auditors' reports across jurisdictions, unless otherwise required by law or regulation. While it is not clear why country specific "cultural" preferences for the placement of certain elements within the audit opinion should prevail over the benefits of global consistency, we support the IAASB's position to require specific headings in the auditor's report to ensure the required reporting elements can be recognized even if they are presented in a different order.

**Involvement of Other Auditors**

We are disappointed that the IAASB has chosen not to pursue a requirement to disclose the extent of involvement of other auditors in the audit. As stated in our response to the ITC, we believe such disclosure would provide greater transparency to Users with respect to who, other than the group auditor, was involved in the audit and the extent of that involvement. In its own inspections, CPAB continues to identify issues with both the extent the group auditor has used the work performed by component auditors and the extent of involvement of the group auditor in the work of the component auditor. This is particularly important when these other participants are not registered firms or when there are legal or other regulatory barriers to them being inspected by an audit regulator. Without impacting the group auditor's sole responsibility for the audit, disclosure of the other participants would enable Users to determine the extent of use of component auditors by the group auditor and the degree of oversight the participants are subject to, including publicly available disciplinary history.

In concluding we again commend the IAASB for engaging with stakeholders on this important topic. In a continually changing global business environment, with increasingly complex financial reporting requirements, it is critical that auditor reporting evolves in a way that better meets the needs of financial statement Users and enhances the relevance and value of the audit.

In addition to our comments above, our responses to the questions posed in the ED are included in the Appendix to this letter.

We would be pleased to discuss further any of the above comments.

Yours very truly,

Brian Hunt, FCPA, FCA
Chief Executive Officer

**APPENDIX**
**Questions**

Since CPAB's mandate relates to listed entities in Canada our comments apply solely to listed entities.

**Key Audit Matters**

1. **Do users of the audited financial statements believe that the introduction of a new section in the auditor's report describing the matters the auditor determined to be of most significance in the audit will enhance the usefulness of the auditor's report? If not, why?**

   We believe the introduction of the key audit matters section in the auditor's report will enhance the usefulness of the report to Users provided there is consistent identification of these matters in practice. The degree of usefulness will be impacted by how specific the auditor is in describing the matter and why the auditor considered the matter to be one of most significance in the audit.

2. **Do respondents believe the proposed requirements and related application material in proposed ISA 701 provide an appropriate framework to guide the auditor's judgment in determining the key audit matters? If not, why? Do respondents believe the application of proposed ISA 701 will result in reasonably consistent auditor judgments about what matters are determined to be the key audit matters? If not, why?**

   We support a principles based approach for identifying key audit matters but anticipate implementation issues with the requirements as proposed in the ED. Through our inspections we have noted that auditors struggle with the identification of significant risks as we see inconsistencies in the nature and number of risks being identified. While we agree that significant risks should be considered for reporting as key audit matters, more consistent identification of significant risks would be necessary if this reporting is to be useful to Users. Conceptually we agree with the other two criteria for determining key audit matters: areas in which the auditor encountered significant difficulty during the audit; and circumstances that required significant modification of the auditor's planned approach to the audit, including as a result of the identification of a significant deficiency in internal control. However, more guidance is needed in evaluating what constitutes "significant", and therefore reportable, as auditors can expect push-back from management to what is effectively public criticism of them.

3. **Do respondents believe the proposed requirements and related application material in proposed ISA 701 provide sufficient direction to enable the auditor to appropriately consider what should be included in the descriptions of individual key audit matters to be communicated in the auditor's report? If not, why?**

   Key audit matters need to be informative, relevant and entity-specific to be useful to Users. We encourage the IAASB to appropriately field test the disclosure of key audit matters prior to finalizing the exposure draft to ensure that the requirements and related application guidance mitigate the risk of boilerplate disclosure. In performing the field testing, specific consideration should be given to whether there is sufficient guidance with respect to the circumstances where the auditor considers it necessary to indicate findings or a conclusion in relation to a matter as we do not believe that those circumstances are clear in the ED.

4. **Which of the illustrative examples of key audit matters, or features of them, did respondents find most useful or informative, and why? Which examples, or features of them, were seen as less useful or lacking in informational value, and why? Respondents are invited to provide any additional feedback on the usefulness of the individual examples of key audit matters, including areas for improvement.**

   The illustrative examples of key audit matters in the ED are an improvement over the example auditor commentary included in the ITC, however, the examples need to be more entity-specific to provide value added insights to Users. We thought the "Goodwill" example would be particularly useful to Users although an auditor would likely encounter significant resistance from management to the auditor's level of detail if the disclosure by management was not at the same level of detail. Similarly, Users would probably appreciate the discussion of the risk of fraud from side agreements in the "Revenue Recognition Related to Long-Term Contracts" matter but we are not sure that management and those charged with governance would agree it was a key audit matter that required disclosure if the auditor was ultimately unable to find evidence of the existence of side agreements as a result of the procedures performed. The IAASB should consider developing guidance for auditors, audit committees and management with respect to interactions on key audit matters to reduce the risk of unintended consequences for audit quality.

5. **Do respondents agree with the approach the IAASB has taken in relation to key audit matters for entities for which the auditor is not required to provide such communication – that is, key audit matters may be communicated on a voluntary basis but, if so, proposed ISA 701 must be followed and the auditor must signal this intent in the audit engagement letter? If not, why? Are there other practical considerations that may affect the auditor's ability to decide to communicate key audit matters when not otherwise required to do so that should be acknowledged by the IAASB in the proposed standards?**

   CPAB's mandate relates to listed entities in Canada and so our comments are intended to apply solely to listed entities.

6. **Do respondents believe it is appropriate for proposed ISA 701 to allow for the possibility that the auditor may determine that there are no key audit matters to communicate?**

   a. **If so, do respondents agree with the proposed requirements addressing such circumstances?**

   b. **If not, do respondents believe that auditors would be required to always communicate at least one key audit matter, or are there other actions that could be taken to ensure users of the financial statements are aware of the auditor's responsibilities under proposed ISA 701 and the determination, in the auditor's professional judgment, that there are no key audit matters to communicate?**

   To avoid boilerplate reporting, it is appropriate for proposed ISA 701 to allow for the possibility that the auditor may determine that there are no key audit matters to communicate. However, the statement that these circumstances are limited and expected to be rare should be incorporated into the requirements not the application guidance.

   We agree that the proposed requirements to respond to the rare circumstance when no key audit matters have been identified are appropriate.

7. **Do respondents agree that, when comparative financial information is presented, the auditor's communication of key audit matters should be limited to the audit of the most recent financial period in light of the practical challenges explained in paragraph 65? If not, how do respondents suggest these issues could be effectively addressed?**

   We agree that the auditor's communication of key audit matters should be limited to the audit of the most recent financial period in light of the practical challenges outlined in the ED.

8. **Do respondents agree with the IAASB's decision to retain the concepts of Emphasis of Matter paragraphs and Other Matter paragraphs, even when the auditor is required to communicate key audit matters, and how such concepts have been differentiated in the Proposed ISAs? If not, why?**

   We agree with the retention of the concepts of Emphasis of Matter and Other Matter paragraphs. However, in the context of Canadian listed entities, if the proposed changes to going concern disclosure in the audit report are made, we expect the use of an Emphasis of Matter paragraph to be rare and the use of Other Matter paragraphs to be limited to those situations where the prior period financial statements have been audited by a predecessor auditor.

**Going Concern**

9. **Do respondents agree with the statements included in the illustrative auditor's reports relating to:**

   a. **The appropriateness of management's use of the going concern basis of accounting in the preparation of the entity's financial statements?**

   b. **Whether the auditor has identified a material uncertainty that may cast significant doubt on the entity's ability to concern, including when such an uncertainty has been identified (see the Appendix of proposed ISA 570 (Revised)? In this regard, the IAASB is particularly interested in views as to whether such reporting, and the potential implications thereof, will be misunderstood or misinterpreted by users of the financial statements.**

   We are concerned that the proposed auditor statements regarding both the appropriateness of management's use of the going concern assumption and whether material uncertainties related to events or conditions that may cast significant doubt on the entity's ability to continue as a going concern have been identified will increase, rather than decrease, the Users' expectation gap. While we understand why the global financial crisis has resulted in greater focus on the assessment of going concern and related disclosures we do not believe statements by the auditor based on the work effort of ISA 570, Going Concern will meet the needs of Users in that context.

   The long standing issue with going concern is whether the disclosure of certain matters becomes a self-fulfilling prophecy - a risk that may be significantly higher for particular entities such as financial institutions. To address the lessons of the global financial crisis there may need to be different solutions for Systemically Important Financial Institutions ("SIFI") versus other commercial entities. Given the significance of SIFIs to the broader economy, CPAB would again encourage consideration of alternative approaches, such as improved communication between auditors and prudential regulators, as a more effective method of achieving the desired objective.

In our response to the ITC we supported the development of additional guidance for auditors, under ISA 570, with respect to the identification and response to material uncertainties as it is a complex and judgmental exercise and our inspections have evidenced that auditors struggle to respond appropriately. In our view the International Accounting Standards Board needs to provide more guidance on management's responsibilities for evaluating and disclosing going concern uncertainties which the auditor would then evaluate and assess as part of the audit under ISA 570.

We believe that if auditors are required by Users to report on the appropriateness of the going concern assumption then there would need to be a commensurate increase in the work effort under ISA 570 to support that reporting. We understand there may be political pressure for the IAASB to incorporate additional going concern disclosures into the audit report, however, we encourage a more holistic approach to addressing this complex issue.

10. **What are respondents' views as to whether an explicit statement that neither management nor the auditor can guarantee the entity's ability to continue as a going concern should be required in the auditor's report whether or not a material uncertainty has been identified?**

As noted in the response to question 9, we are concerned that the proposed statements with respect to going concern will increase rather than decrease, the Users' expectation gap. It is unlikely that an explicit statement that neither management nor the auditor can guarantee the entity's ability to continue as a going concern will mitigate this risk.

**Compliance with Independence and Other Relevant Ethical Requirements**

11. **What are respondents' views as to the benefits and practical implications of the proposed requirement to disclose the source(s) of independence and other relevant ethical requirements in the auditor's report?**

We believe there would be limited value to Users in disclosing the source of independence and other relevant ethical requirements and could create confusion if that disclosure involved multiple sources.

**Disclosure of the Name of the Engagement Partner**

12. **What are respondents' views as to the proposal to require disclosure of the name of the engagement partner for audits of financial statements of listed entities and include a "harm's way exemption"? What difficulties, if any, may arise at the national level as a result of this requirement?**

We understand the basis for the proposals to require disclosure of the name of the engagement partner in the audit report. However, we would encourage a more holistic approach to better understand the root causes of lapses in audit quality in developing solutions to improve accountability for the audit. Greater focus needs to be given to the organizational structure of audit firms and how this can be improved to build greater quality into the execution of the audit. Consideration needs to be given to how accountability can be strengthened for audit firms at the engagement level, office level and national level. A more holistic approach should also consider the role of the audit committee and explore ways in which audit committees can more effectively oversee and evaluate the quality of the audit.

**Other Improvements to Proposed ISA 700 (Revised)**

13. **What are respondents' views as to the appropriateness of the changes to ISA 700 described in paragraph 102 and how the proposed requirements have been articulated?**

    We are generally supportive of the proposed changes to ISA 700 described in paragraph 102 of the ED. However with respect to the description of the auditor's responsibilities, this should be retained within the auditor's report to ensure completeness and accessibility regardless of the technology available to the user. Therefore, we do not support the proposed option to allow a cross reference to a website but to improve the readability of the audit report and to emphasize entity specific information it would be acceptable for this standardized material to be in an appendix to the auditor's report.

14. **What are respondents' views on the proposal not to mandate the ordering of sections of the auditor's report in any way, even when law, regulation or national auditing standards do not require a specific order? Do respondents believe the level of prescription within proposed ISA 700 (Revised) (both within the requirements in paragraphs 20–45 and the circumstances addressed in paragraphs 46–48 of the proposed ISA) reflects an appropriate balance between consistency in auditor reporting globally when reference is made to the ISAs in the auditor's report, and the need for flexibility to accommodate national reporting circumstances?**

    We support the need to improve the format and structure of the existing standard audit report and to do so in a manner that enhances consistency of reporting at the global level. In responding to the ITC we agreed with the IAASB that there is merit in mandating the ordering of the elements within the auditors' reports across jurisdictions, unless otherwise required by law or regulation. While it is not clear why country specific "cultural" preferences for the placement of certain elements within the audit opinion should prevail over the benefits of global consistency, we support the IAASB's position to require specific headings in the auditor's report to ensure the required reporting elements can be recognized even if they are presented in a different order.

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington, D.C. 20006-2803

**Re: PCAOB Release No. 2013-005, Rulemaking Docket Matter No. 34**

Dear Office of the Secretary:

Capital Group Companies, Inc. (“Capital”) is one of the oldest and largest global investment management firms in the nation. We appreciate the opportunity to provide comments on the Proposed Auditing Standards, *The Auditor’s Report on an Audit of Financial Statements*, and *The Auditor’s Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor’s Report (herein referred to as “Proposed Standards”)*. These comments are informed by our experiences as preparers of audited financial statements of Capital and its affiliated companies as well as the American Funds. These comments reflect our own views and not necessarily those of Capital or other Capital associates.

We support the Public Company Accounting Oversight Board’s (the “Board”) continued efforts to increase the informational value, relevance and usefulness of the auditor’s report to investors and financial statement users. However, we believe that certain key aspects of the Proposed Standards will not achieve this objective.

**Critical Audit Matters**

The objective of an audit is to provide an opinion on the financial statements. Consistent with this objective, we support the Board's endorsement of the existing "pass/fail" model for the auditor's report as it clearly and concisely conveys the auditor's opinion regarding whether the financial statements are fairly presented. However, we are concerned that the inclusion of one or more critical audit matters ("CAMs") would not be additive to the financial statement users' understanding and obscure the actual pass/fail conclusion.

The Proposed Standard indicates "it is expected that, in most audits, the auditor would determine that there are critical audit matters". With this statement, there is an expectation created that auditors would include more rather than fewer CAMs in their audit reports. We are concerned financial statement users may misinterpret the communication of multiple CAMs as indication of an issue with the quality of the financial statements, particularly for certain entities like investment companies, which may have few or even no CAMs due to their unique characteristics.

For example, investments generally make up substantially all of an investment company's assets; and an auditor is currently required to verify the existence (shares/par) and valuation of all investments. Income and realized/unrealized gain/loss are derived from these investments; and expenses, which generally represent a small percentage of assets, are primarily based on contractual obligations. In certain cases, management estimates related to fair valuation may be required, and thus, will likely be deemed a CAM. However, investment companies already include extensive disclosure in their offering memorandums/ prospectus and financial statement footnotes related to fair valuation (pursuant to ASC 820, *Fair Value Measurements and Disclosures*). These disclosures provide financial statement users with a high degree of insight and transparency to the entity's fair valuation methodology. The addition of a CAM related to fair valuation would be duplicative of the critical accounting policies already disclosed in the notes to the financial statement, and therefore not additive to the financial statement users' understanding. We also believe that there is a risk that such disclosure in the auditor's report would over time become "boiler plate" for similar issuers in the same industry and thus be of limited value to financial statement users. Accordingly, we believe there should be a presumption that the auditor's report for most investment companies would not include disclosure of CAMs.

Additionally, as noted in our September 30, 2011 comment letter on the Concept Release related to Reports on Audited Financial Statements (Release No. 2011-003), we believe there is value in the contextual discussion that takes place between the auditors, management and the audit committee that cannot be effectively disclosed in the auditor's report. Audit committee members have the opportunity to question and clarify their understanding through interaction and discussion with the auditor and management. Attempting to capture this discussion and provide the right context within the auditor's report, without providing the opportunity for the further clarification, reduces the value of the disclosure and may lead to erroneous conclusions on the part of the financial statement user.

Lastly, we are concerned that the time and effort devoted to fulfilling the Board's proposed requirements would divert and distract valuable resources of audit firms, management, and audit committees away from the core deliverables of the audit. The inclusion of CAMs in the auditor's report will introduce a high degree of judgment and subjectivity regarding which CAMs to disclose as well as the exact language used to describe the CAM. To provide the necessary level of context surrounding each CAM, the auditor's report would need to be customized for the specific circumstances of each audit and likely require expansive details and multiple pages of disclosure. As a result, significant resources would be spent reviewing and discussing the exact language of the CAM rather than focusing on procedures that truly add value to the audit, or in the case of management, substantive oversight of controls and financial reporting.

The proposal to include CAMs in the auditor's report is expected to benefit the end user and is not designed to have any impact on audit quality. Based on the above points, we do not expect users to experience this benefit, and as such do not support the inclusion of CAMs in the auditor's report.

**Reporting on Other Information**

Under existing PCAOB standards, the auditor has the responsibility to "read and consider" the other information for material inconsistency against the audited financial statements. Whereas, under the Proposed Standard, the auditor is required to "read and evaluate" the other information and communicate, in the auditor's report, the auditor's responsibilities and results of its evaluation of the other information. We are concerned the Proposed

Standard would significantly add to the auditor's responsibilities by introducing additional required audit procedures to support the auditor's evaluation and conclusion of the other information. These additional audit procedures will likely add to the cost of an audit. In summary, we are not opposed to including a description in the auditor's report that clarifies the auditor's responsibility for the other information. However, we do not support changing the auditor's responsibility regarding the other information and believe existing requirements in AU Section 550 to "read and consider" the other information are sufficient.

* * * * *

Thank you for considering these comments. Please feel free to contact any of us should you have any questions or wish to discuss our thoughts on the Proposed Standards.

December 11, 2013

Ms. Phoebe W. Brown
Office of the Secretary
PCAOB
1666 K Street, N.W.
Washington, D.C. 20006-2803

Dear Ms. Brown:

I write to comment on PCAOB Release No. 2013-005 related to the auditor's report on financial statements when the auditor expresses an unqualified opinion. Although I am a member of the PCAOB's Investor Advisory Group (IAG), and although I will refer to the work of a sub-group of the IAG, I am writing this letter in my individual capacity as a professor of accounting, auditing, and corporate governance, and as a personal investor. I currently serve as the EY and Business Alumni professor of accounting at the University of Tennessee, where I also serve as the Executive Director of UT's Corporate Governance Center.

In evaluating the need for change to the standard audit report, I encourage the Board to evaluate the current audit report against the Board's mission – "... protect the interests of investors and further the public interest in the preparation of *informative, accurate and independent audit reports*" (emphasis added). Based on a number of surveys of investors and other financial statement users by the IAG, the Council of Institutional Investors, and the CFA Institute, among others, investors and other users clearly do not view the audit report as informative beyond simply indicating that in the auditor's opinion the financial statements are fairly presented in accordance with GAAP. Although opining on GAAP compliance is valuable, the PCAOB has a once in a generation opportunity to substantively reform the audit report so that meaningful, substantive communication occurs between the auditor and the auditor's ultimate client, investors and other users.

Before commenting on the strengths and areas needing improvement in the PCAOB's proposed auditor reporting standard, I refer the Board back to the comment letter of a sub-set of the IAG on PCAOB Release No. 2011-003 (letter dated 9-29-11). That letter describes the work of an IAG working group on the auditor's report, including reporting the results of a survey distributed to a number of institutional investors. As a result of our work, a majority of the IAG indicated that changes to the standard audit report should:

- Discuss the auditor's assessment of the estimates and judgments made by management in preparing the financial statements and how the auditor arrived at that assessment.
- Disclose areas of high financial statement and audit risk and how the auditor addressed these risk areas.
- Discuss unusual transactions, restatements, and other significant changes in the financial statements (including the notes).
- Discuss the quality, not just the acceptability, of the issuer's accounting practices and policies.

My evaluation of the PCAOB's proposed auditor reporting standard is tied to how closely the proposed standard is responsive to the above four recommendations.

In my view, the auditor's proposed auditor reporting standard is clearly an improvement over the existing report as originally promulgated in SAS No. 58. However, although the proposed standard represents an improvement, it fails to provide some of the most critical information needed by investors. Therefore, any weakening of the proposed standard in response to organized opposition by entrenched interests would likely result in a final standard that is so milquetoast that it would have been better for the PCAOB to not have pursued this project.

The heart of the PCAOB's proposed standard would require the communication of critical audit matters (CAM), with the expectation that these CAMs are customized to each audit – i.e., they should differ by company, and by year even for the same company. Avoiding boilerplate in reporting CAMs is imperative – this point simply cannot be overstated.

The proposed standard defines a CAM as a matter: (1) involving the auditor's most difficult, subjective, or complex judgments; (2) that posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; and (3) that posed the most difficulty to the auditor in forming an opinion on the financial statements. In my view, these areas almost certainly would involve areas of high financial statement and audit risk and, therefore, the inclusion of a CAM is responsive to the one of the four areas identified by the IAG for inclusion in the audit report. Although more subtle, I believe that the CAM criteria would generally require the audit report to discuss unusual transactions, restatements, and other significant changes to the financial statements. If the Board agrees with my evaluation, the inclusion of a CAM is responsive to a second of the four areas identified by the IAG for inclusion in the audit report.

Unfortunately, it is not clear to me that the proposed auditor reporting standard is responsive to the other two suggested changes made by the IAG. First, and most importantly, the proposed standard does not appear to require the auditor to discuss the estimates and judgments made by management. The auditor's evaluation of management's estimates and judgments was the most important piece of information desired by investors. If the Board believes that this information will be included in the audit report as a result of its proposed standard, it would be helpful for the Board to be more specific as to its expectation for the auditor to discuss management's estimates and judgments. Moreover, simply stating that a judgmental area (e.g., allowance for loan losses, fair value, impairments, etc.) represents a CAM is not what investors are seeking. In most instances, a knowledgeable financial statement reader would already know that these areas are critical to the audit. Investors need to know more about areas involving significant estimates and judgments. For example, investors would benefit from knowing:

- The auditor's evaluation of the process used by management in developing the estimate and, with the benefit of retrospective evaluation, the mapping of prior year estimates into subsequent year realizations.
- The auditor's evaluation of whether management's estimate is conservative, aggressive, or "down the fairway" with respect to its effect on current year income.
- The auditor's evaluation of whether a pattern exists across estimates and judgments – for example, are these estimates and judgments consistently conservative or aggressive (again with respect to current year income).

The Board can modify its proposed standard to provide the needed information relatively easily. The CAM for example #1 (the allowance for sales returns) in the proposed standard (p. A5-68) provides no information that would enable investors to assess the aggressiveness or conservatism of the allowance for sales returns, but the auditor would have a sense of how aggressive or conservative the Company's process is related to sales returns and could communicate such information to investors in the CAM. For example, the auditor could compare the allowance at 10-31 (end of the third quarter) to sales returns during the fourth quarter. Moreover, since the Company's credit terms are 120 days, any returns that relate to sales made before October 31$^{st}$ should have occurred before February 28$^{th}$ of the next year. Since the year-end date is January 31$^{st}$, the audit report would, in most cases, not have been issued by February 28$^{th}$. This type of information, through the eyes of the auditor, is what investors need, and the type of information that would spur capital formation and economic efficiency.

Finally, although investors are interested in the auditor's evaluation of the quality, and not just the acceptability, of the company's accounting policies and practices, it is not clear to me that the proposed standard would result in the auditor providing this information.

Although of less importance to the issues raised above, my other concerns with the proposed auditor reporting standard are as follows:

- The audit report should indicate, consistent with professional standards, that a reasonable level of assurance represents a high, although not absolute, level of assurance.
- The proposal would permit the auditor to state that there are no CAMs. This does not strike me as possible. It seems unlikely to me that an audit would involve no difficult, subjective, or complex auditor judgments, and that no such issues would be documented in the engagement completion document.
- As discussed by PCAOB member Steve Harris in his public comments at the Board's open meeting on August 13, 2013, the proposal appears to allow the auditor to not report a

CAM, even if the item meets the definition of a CAM, as long as the rationale for the auditor's decision is documented in the work papers. Although there may be valid reasons for not disclosing a CAM in some very limited situations (i.e., potentially due to litigation concerns or competitive business situations), the Board should more narrowly define the acceptable use of this exception.

- The proposed standard would modify paragraph #10 of AS #7 by indicating that the engagement quality reviewer (EQR) *should* (my emphasis) evaluate whether appropriate CAMs are communicated in the audit report. It seems to me that the EQR *must* or *shall* be required to do so.
- I agree that requiring the audit report to be addressed to investors is a small, but potentially significant, change, as the requirement has the potential to remind auditors who the ultimate beneficiary of the audit is intended to be.
- I agree with the Board that a significant benefit of requiring the disclosure of CAMs is that such a disclosure requirement is likely to both improve management's disclosures with respect to these items and lead to greater audit effort and focus there as well.

I close with the following observation. As of the date of my letter, there have been approximately 47 comment letters posted to the Board's web site. A number of these letters are from issuers or from audit committee members of issuers. Almost without exception, these letters oppose the inclusion of CAMs in the audit report. (As an aside, comment letters from two large institutions, BlackRock and Standard and Poor's largely support the Board's proposal, and the comment letters from individual investors also support the Board's proposal.) It is worth highlighting that issuers use shareholder monies to hire personnel who write comment letters opposing reforms that institutional investors, the majority owners of most of these companies, are seeking. Given that most investors have neither the time nor the resources to match the comment letters that will be forthcoming from the issuer community and its acolytes, I attach Exhibit A which captures the views of many institutional investors as to the need for a significantly revised audit report. Quotes appearing in Exhibit A are derived from the transcript of the PCAOB-sponsored roundtable on the auditor's reporting model held on September 8, 2011.

I compliment the Board and Marty Baumann and his staff for undertaking such a contentious, but vitally important, issue as the audit report. I believe that this topic is the single most important issue on the PCAOB's agenda. Thank you for giving me the opportunity to express my views.

Sincerely,

Joseph V. Carcello

Executive Director – Corporate Governance Center

**Exhibit A – Comments from Investors on Needed Changes to the Standard Auditor's Report**

PCAOB Roundtable – Auditor's Reporting Model – September 8, 2011

"I believe an AD&A should include, at a minimum, the independent auditor's assessment of management's critical accounting judgments and estimates. Such disclosure was supported by 86 percent of the respondents to a 2011 CFA survey and 79 percent of the respondents to the IAG survey." (Ann Yerger, Executive Director, Council of Institutional Investors, p. 22)

"I strongly believe the additional information should come from the audit firms and not management or audit committees. Audit firms are objective, third-party experts that have unique insights into companies, and it is appropriate and beneficial for the investing public to receive more information directly from these unbiased experts." (Ann Yerger, Executive Director, Council of Institutional Investors, p. 24)

"When I think about coming back to the unqualified opinion, I think about accounting due diligence reports that I've seen where, let's say, an investor would hire an auditing or accounting firm to render some form of opinion on a company's financial profile. And those reports are generally rich in information, and they provide a lot of value, whereas the audit for public and private companies opinion does not." (Mark Newsome, Managing Director, ING Capital LLC, pp. 51, 52).

"We would not object to the identification in AD&A of those areas which were – where there is significant management or auditor judgment or significant uncertainty, given their complexity and, as part of that, the attendant disclosure of some of the key inputs upon which the auditor relied. And again, part of the thesis that we believe, which is based upon the need for management to make original disclosures, we believe that will in part force management to enhance their disclosure and their financial statements, as opposed to having the auditor talk about their key inputs." (Steven Buller, Managing Director, BlackRock, p. 58).

"And I promise you and the audit firms that are represented here that the additional information you will provide will not confuse me." (Flerida Rivera-Alsing, Chief Audit Executive, Florida State Board of Administration, p. 82).

"It's probably not a mandate or specific role of the PCAOB, but we think it's important, and that's strengthening the hand of the auditors. The mere fact that there's more to say than pass or fail, we think, would give – and there was broad consensus on this – we think would give the auditors a stronger hand. They would win more arguments, and we think that would be a good thing. And that could be a good thing even if they didn't say anything at all in the emphasis paragraphs. Simply the ability to say something there as an additional tool." (Paul Haaga, Jr., Chairman of the Board, Capital Research and Management Co., pp. 86, 87).

"When you were looking at second quarter numbers for several European banks recently, you saw wildly different outcomes for the numbers that were being reported related to losses on holdings in Greek sovereign paper, just wildly different. Having auditor insight into how those ranges of potential outcome were evaluated and where, to use a golf analogy, a firm was hitting the ball in that fairway of acceptable outcomes and how the conclusion was supported and was okay I think could be just incredibly valuable to investors as they look at the numbers and think about how we want to adjust or how we want to view the numbers differently in our analysis." (Mark LaMonte, Managing Director, Chief Credit Officer – Financial Institutions Group, Moody's Investor Service, pp. 101, 102).

"And it's very important to get a better understanding of some of the judgments and assumptions that are made and how the auditors basically – especially for some of the big issuers, how the auditors got themselves comfortable with that." (Stephen Kozeracki, Principal, Co-Head of the Corporate Bond Group, The Vanguard Group, pp. 115, 116).

"So we're talking about who should be giving more information, what the information should be, and where that information should reside. And overwhelmingly, we hear from our investor members that they want to hear it from the auditor, that it needs to be from the independent expert, that, that is important, that they want to have information that's informative." (Kurt Schact, Managing Director, CFA Institute, p. 232).

PCAOB Rulemaking Docket Matter No. 034, PCAOB Release No. 2013-005, August 13th, 2013_Comments Due Back Dec. 11th, 2013

Dear Folks:

Good morning and hope all is well within your respective time zones…

Please Note: We appreciate this opportunity to submit our comments in this critical area of the American Way of Conducting Business…

Also, any stupid errors, omissions and mistakes are not my fault….it's our DNA…..therefore, it's not my fault….

Respectfully yours,

Pw Carey

Page: 43......Define each of these terms...and what constitutes an example of same, serving as a baselne via a Best Practices Business Use Case....

Also, align this proposal with Docket No. 029...(aka: Auditors name and location of all those who actually conducted the audit (what percentage)...not just the name of the Final Report signing authority......

Page: 45 - Provide baseline best practices examples of same and/or Business Use Cases of each....

Page: 46 - Identify which accounting methodology/standard was used by the entity and include a brief three sentece descriptive definition of same....

Page: 47 - Specifically address whether there were or were not flags, triggers, outliers that would indicate to a reasonable individual that a potential and/or real-time fraud exists based upon the entities; people, processes, and technology in-place at this point-in-time of the finding....

Page: A3-16 - AU sec. 341, The Auditor's Consideration of an Entity's Ability to Continue as a Going Concern....... Since the expectation placed upon the Auditor to forecast the future is a bit much, let's just provide them with the following template: "...To whom it may concern, at this point in time there are three forecasts available to me, although we are not qualified what so ever, by knowledge, background nor experience to conduct such a forecast, we offer up the following.....at this point in time they may have a chance, they may not have a chance or we don't known if they have a chance, based upon current and real-time Big Data analytics...extrapolated over multiple time lines and strategies..."

Page: 118 - Provide a Business Use Case to expand the interpretation and understanding of what a 'Critical Audit Matter' represents at this point in time....

Page:121 - Provide a Financial Statement checklist of outliers that indicate inconsistencies...or as Herbie the cockroach once said to his brother..."...You know Murphy, there's always more than one gestault in the kitchen...."

Page: 137 - Identify the entity being audited and their associated 3rd parties, the underlying systems and technology the Auditor is relying upon...including Cloud/Big Data Eco-systems and how their data is controlled for CIA (Confidentility, Integrity & Availability) and GRC (Governance, Risk & Compliance) issues and where their data is geo-located, identifying any and all 3rd parties involved with these controls by name, location and length of service....

Page: 149 - Define via Business Use Cases the tipping point(s) for either a 'pass' or a 'fail' grade...feel free to use percentages as you all see fit....

Page: 178 - Tenure can be used for good or not...however, the length of tenure often (actually quite often, as in always) drips down into the murky swamps of 'human nature'....where the longer the relationship...it becomes human nature to side with those you've worked with for a long period of time...and with and/or without conscious effort...make allowances for less than good behavior or even bad behavior..as in..."...they meant to do the right thing...they just didn't getter-done..." eg. the recent death of the oldest living animal ever discovered by scientists...as they opened it up to determine its age...a clam.....Also, who are the Auditors working for....; management, the company, the employees, or oh my guad....the real and/or perspective shareholders, pension funds for teachers, police, et al....and even hedge funds....? Editor comment provided by Pw Carey....Respectfully yours, Pw Carey

Page: 186 - Provide the auditors with the tools, guidelines and expected (baseline/minimum) best practices and follow along training via the Internet..that requires them to maintain their skills, improve their skills and thereby reduce the amount of time required to conduct an accurate, correct, independent and fair audit....Pw

Remove the most difficult, subjective, and/or complex open to interpretation topics...via Business Use Cases, guidelines, definitions and expected best practices and best strategies in the real world at this point in time.....Pw

Page: 197 - Do not delete...just reverse the order...emphasize the auditor's requirement to regularly (aka: monthly) communicate to the audit committee the on-going status of their audit and any speedbumps and/or roadblocks they've encountered in their daily efforts to conduct the audit...and identify the speedbumps by name, description and role/job title and functionality....

Page: 206 - C. Employee Stock Purchase, Savngs, and Similar Plans....should be viewed through the lens of 'Back Dating' schemes, insider trading activity and strategies, major sales and/or purchases by C-Suites...et al...Pw

Page: 208 - IX. Considerations Related to Effective....offer a pilot program for both parties at the table..and after six months of active participation, evaluate and modify the findings into a new and improved proposal...based upon the results of this pilot program...What a Great Idea Pw....yeah, but it wasn't mine alone, as are most great ideas....Respectfully yours, Pw

Page: 209 - Please See attached example of a Business Use Case here.....

Page: 210 - Note 1: Accounting Policies....Revenue Recognition...what a wonderful opportunity for fraud..eg., packing the pipe line....where product is shipped in one quarter...warehoused by the customer..then returned to the Mfg., but it's all counted as revenue...leading to a great quarter in sales and revenue...just to make the numbers look good for perspective buyer or a lazy Auditor....neat, eh?....

Page: 237 - Provide a Business Use Case example of what is at a minimum demonstrates an Auditor's Responsibility to Evaluate..otherwise human nature kicks in and less than diligent/determined-to-understand and communicate this understanding in a reasoned and understandable format will not occur...ever, well maybe not ever, but pretty more often than not....so, the Auditor should know the players, know the industry, know their competitors, markets, and what's going on in all aspects within an organization...including the good, the bad and the indifferent.....Pw

Page: A7-21......The answer to each of these questions are ..... Yes...to protect the shareholders......interests, first, last and always.....How much does a business model and/or strategy of Fraud cost...?Respectfully yours, Pw Carey

# Pw's_Current Draft, Ver. 0.1_Aug. 25Th, 2013: NBD (NIST Big Data) Finance Industries (FI) Taxonomy/Requirements WG Use Case

| | |
|---|---|
| **Use Case Title** | This use case represents one approach to implementing a BD (Big Data) strategy, within a Cloud Eco-System, for FI (Financial Industries) transacting business within the United States. |
| **Vertical (area)** | The following lines of business (LOB) include:<br>**Banking**, including: Commercial, Retail, Credit Cards, Consumer Finance, Corporate Banking, Transaction Banking, Trade Finance, and Global Payments.<br>**Securities & Investments**, such as; Retail Brokerage, Private Banking/Wealth Management, Institutional Brokerages, Investment Banking, Trust Banking, Asset Management, Custody & Clearing Services<br>**Insurance**, including; Personal and Group Life, Personal and Group Property/Casualty, Fixed & Variable Annuities, and Other Investments<br><br>**Please Note:** Any Public/Private entity, providing financial services within the regulatory and jurisdictional risk and compliance purview of the United States, are required to satisfy a complex multilayer number of regulatory GRC/CIA (Governance, Risk & Compliance/Confidentiality, Integrity & Availability) requirements, as overseen by various jurisdictions and agencies, including; Fed., State, Local and cross-border. |
| **Author/Company/Email** | Pw Carey, Compliance Partners, LLC, pwc.pwcarey@email.com |
| **Actors/Stakeholders and their roles and responsibilities** | Regulatory and advisory organizations and agencies including the; SEC (Securities & Exchange Commission), FDIC (Federal Deposit Insurance Corporation), CFTC (Commodity Futures Trading Commission), US Treasury, PCAOB (Public Corporation Accounting & Oversight Board), COSO, CobiT, reporting supply chains & stakeholders, investment community, share holders, pension funds, executive management, data custodians, and employees.<br><br>At each level of a financial services organization, an inter-related and inter-dependent mix of duties, obligations and responsibilities are in-place, which are directly responsible for the performance, preparation and transmittal of financial data, thereby satisfying both the regulatory GRC (Governance, Risk & Compliance) and CIA (Confidentiality, Integrity & Availability) of their organizations financial data. This same information is directly tied to the continuing reputation, trust and survivability of an organization's business. |
| **Goals** | The following represents one approach to developing a workable BD/FI strategy within the financial services industry. Prior to initiation and switch-over, an organization must perform the following baseline methodology for utilizing BD/FI within a Cloud Eco-system for both public and private financial entities offering financial services within the regulatory confines of the United States; Federal, State, Local and/or cross-border such as the UK, EU and China.<br><br>Each financial services organization must approach the following disciplines supporting their BD/FI initiative, with an understanding and appreciation for the impact each of the following four overlaying and inter-dependent forces will play in a workable implementation.<br><br>These four areas are:<br>1. People (resources),<br>2. Processes (time/cost/ROI),<br>3. Technology (various operating systems, platforms and footprints) |

| | |
|---|---|
| | and<br>4. Regulatory Governance (subject to various and multiple regulatory agencies).<br><br>In addition, these four areas must work through the process of being; identified, analyzed, evaluated, addressed, tested, and reviewed in preparation for attending to the following implementation phases:<br>1. Project Initiation and Management Buy-in<br>2. Risk Evaluations & Controls<br>3. Business Impact Analysis<br>4. Design, Development & Testing of the Business Continuity Strategies<br>5. Emergency Response & Operations (aka; Disaster Recovery)<br>6. Developing & Implementing Business Continuity Plans<br>7. Awareness & Training Programs<br>8. Maintaining & Exercising Business Continuity, (aka: Maintaining Regulatory Currency)<br><br>Please Note: Whenever appropriate, these eight areas should be tailored and modified to fit the requirements of each organizations unique and specific corporate culture and line of financial services. |
| **Use Case Description** | Big Data as developed by Google was intended to serve as an Internet Web site indexing tool to help them sort, shuffle, categorize and label the Internet. At the outset, it was not viewed as a replacement for legacy IT data infrastructures. With the spin-off development within OpenGroup and Hadoop, BigData has evolved into a robust data analysis and storage tool that is still undergoing development. However, in the end, BigData is still being developed as an adjunct to the current IT client/server/big iron data warehouse architectures which is better at somethings, than these same data warehouse environments, but not others.<br><br>Currently within FI, BD/Hadoop is used for fraud detection, risk analysis and assessments as well as improving the organizations knowledge and understanding of the customers via a strategy known as....'know your customer', pretty clever, eh?<br><br>However, this strategy still must following a well thought out taxonomy, that satisfies the entities unique, and individual requirements. One such strategy is the following formal methodology which address two fundamental yet paramount questions; “What are we doing”? and “Why are we doing it”?:<br><br>1). Policy Statement/Project Charter (Goal of the Plan, Reasons and Resources....define each),<br>2). Business Impact Analysis (how does effort improve our business services),<br>3). Identify System-wide Policies, Procedures and Requirements<br>4). Identify Best Practices for Implementation (including Change Management/Configuration Management) and/or Future Enhancements,<br>5). Plan B-Recovery Strategies (how and what will need to be recovered, if necessary),<br>6). Plan Development (Write the Plan and Implement the Plan Elements),<br>7). Plan buy-in and Testing (important everyone Knows the Plan, and Knows What to Do), and<br>8). Implement the Plan (then identify and fix gaps during first 3 months, 6 months, and annually after initial implementation) |

| | | |
|---|---|---|
| | | 9). Maintenance (Continuous monitoring and updates to reflect the current enterprise environment)<br>10). Lastly, System Retirement |
| **Current Solutions** | **Compute(System)** | Currently, Big Data/Hadoop within a Cloud Eco-system within the FI is operating as part of a hybrid system, with BD being utilized as a useful tool for conducting risk and fraud analysis, in addition to assisting in organizations in the process of ('know your customer'). These are three areas where BD has proven to be good at;<br>1. detecting fraud,<br>2. associated risks and a<br>3. 'know your customer' strategy.<br><br>At the same time, the traditional client/server/data warehouse/RDBM (Relational Database Management ) systems are use for the handling, processing, storage and archival of the entities financial data. Recently the SEC has approved the initiative for requiring the FI to submit financial statements via the XBRL (extensible Business Related Markup Language), as of May 13th, 2013. |
| | **Storage** | The same Federal, State, Local and cross-border legislative and regulatory requirements can impact any and all geographical locations, including; VMware, NetApps, Oracle, IBM, Brocade, et cetera.<br><br>**Please Note:** Based upon legislative and regulatory concerns, these storage solutions for FI data must ensure this same data conforms to US regulatory compliance for GRC/CIA, at this point in time.<br><br>For confirmation, please visit the following agencies web sites: SEC (Security and Exchange Commission), CFTC (Commodity Futures Trading Commission), FDIC (Federal Deposit Insurance Corporation), DOJ (Dept. of Justice), and my favorite the PCAOB (Public Company Accounting and Oversight Board). |
| | **Networking** | **Please Note:** The same Federal, State, Local and cross-border legislative and regulatory requirements can impact any and all geographical locations of HW/SW, including but not limited to; WANs, LANs, MANs WiFi, fiber optics, Internet Access, via Public, Private, Community and Hybrid Cloud environments, with or without VPNs.<br>Based upon legislative and regulatory concerns, these networking solutions for FI data must ensure this same data conforms to US regulatory compliance for GRC/CIA, such as the US Treasury Dept., at this point in time.<br>For confirmation, please visit the following agencies web sites: SEC (Security and Exchange Commission), CFTC (Commodity Futures Trading Commission), FDIC (Federal Deposit Insurance Corporation), US Treasury Dept., DOJ (Dept. of Justice), and my favorite the PCAOB (Public Company Accounting and Oversight Board). |
| | **Software** | **Please Note:** The same legislative and regulatory obligations impacting the geographical location of HW/SW, also restricts the location for; Hadoop, MapReduce, Open-source, and/or Vendor Proprietary such as AWS (Amazon Web Services), |

| | | |
|---|---|---|
| | | Google Cloud Services, and Microsoft<br><br>Based upon legislative and regulatory concerns, these software solutions incorporating both SOAP (Simple Object Access Protocol), for Web development and OLAP (Online Analytical Processing) software language for databases, specifically in this case for FI data, both must ensure this same data conforms to US regulatory compliance for GRC/CIA, at this point in time.<br><br>For confirmation, please visit the following agencies web sites: SEC (Security and Exchange Commission), CFTC (Commodity Futures Trading Commission), US Treasury, FDIC (Federal Deposit Insurance Corporation), DOJ (Dept. of Justice), and my favorite the PCAOB (Public Company Accounting and Oversight Board). |
| **Big Data Characteristics** | **Data Source (distributed/centralized)** | **Please Note:** The same legislative and regulatory obligations impacting the geographical location of HW/SW, also impacts the location for; both distributed/centralized data sources flowing into HA/DR Environment and HVSs (Hosted Virtual Servers), such as the following constructs: DC1---> VMWare/KVM (Clusters, w/Virtual Firewalls), Data link-Vmware Link-Vmotion Link-Network Link, Multiple PB of NAS (Network as A Service), DC2--->, VMWare/KVM (Clusters w/Virtual Firewalls), DataLink (Vmware Link, Vmotion Link, Network Link), Multiple PB of NAS (Network as A Service), (Requires Fail-Over Virtualization), among other considerations.<br><br>Based upon legislative and regulatory concerns, these data source solutions, either distributed and/or centralized for FI data, must ensure this same data conforms to US regulatory compliance for GRC/CIA, at this point in time.<br><br>For confirmation, please visit the following agencies web sites: SEC (Security and Exchange Commission), CFTC (Commodity Futures Trading Commission), US Treasury, FDIC (Federal Deposit Insurance Corporation), DOJ (Dept. of Justice), and my favorite the PCAOB (Public Company Accounting and Oversight Board). |
| | **Volume (size)** | Tera-bytes up to Peta-bytes**.**<br>**Please Note: This is a 'Floppy Free Zone'.** |
| | **Velocity (e.g. real time)** | Velocity is more important for fraud detection, risk assessments and the 'know your customer' initiative within the BD FI.<br><br>**Please Note:** However, based upon legislative and regulatory concerns, **velocity** is not at issue regarding BD solutions for FI data, except for fraud detection, risk analysis and customer analysis.<br><br>Based upon legislative and regulatory restrictions, **velocity** is not at issue, rather the primary concern for FI data, is that it must satisfy all US regulatory compliance obligations for GRC/CIA, at this point in time. |

| | | |
|---|---|---|
| | | |
| | **Variety (multiple data sets, mash-up)** | Multiple virtual environments either operating within a batch processing architecture or a hot-swappable parallel architecture supporting fraud detection, risk assessments and customer service solutions.<br><br>**Please Note:** Based upon legislative and regulatory concerns, **variety** is not at issue regarding BD solutions for FI data within a Cloud Eco-system, except for fraud detection, risk analysis and customer analysis.<br><br>Based upon legislative and regulatory restrictions, **variety** is not at issue, rather the primary concern for FI data, is that it must satisfy all US regulatory compliance obligations for GRC/CIA, at this point in time. |
| | **Variability (rate of change)** | **Please Note:** Based upon legislative and regulatory concerns, **variability** is not at issue regarding BD solutions for FI data within a Cloud Eco-system, except for fraud detection, risk analysis and customer analysis.<br><br>Based upon legislative and regulatory restrictions, **variability** is not at issue, rather the primary concern for FI data, is that it must satisfy all US regulatory compliance obligations for GRC/CIA, at this point in time.<br><br>Variability with BD FI within a Cloud Eco-System will depending upon the strength and completeness of the SLA agreements, the costs associated with (CapEx), and depending upon the requirements of the business. |
| **Big Data Science (collection, curation, analysis, action)** | **Veracity (Robustness Issues)** | **Please Note:** Based upon legislative and regulatory concerns, **veracity** is not at issue regarding BD solutions for FI data within a Cloud Eco-system, except for fraud detection, risk analysis and customer analysis.<br><br>Based upon legislative and regulatory restrictions, **veracity** is not at issue, rather the primary concern for FI data, is that it must satisfy all US regulatory compliance obligations for GRC/CIA, at this point in time.<br><br>Within a Big Data Cloud Eco-System, data integrity is important over the entire life-cycle of the organization due to regulatory and compliance issues related to individual data privacy and security, in the areas of CIA (Confidentiality, Integrity & Availability) and GRC (Governance, Risk & Compliance) requirements. |
| | **Visualization** | **Please Note:** Based upon legislative and regulatory concerns, **visualization** is not at issue regarding BD solutions for FI data, except for fraud detection, risk analysis and customer analysis, FI data is handled by traditional client/server/data warehouse big iron servers.<br><br>Based upon legislative and regulatory restrictions, **visualization** is not at issue, rather the primary concern for FI data, is that it must satisfy all US regulatory compliance |

| | | |
|---|---|---|
| | | obligations for GRC/CIA, at this point in time.<br><br>Data integrity within BD is critical and essential over the entire life-cycle of the organization due to regulatory and compliance issues related to CIA (Confidentiality, Integrity & Availability) and GRC (Governance, Risk & Compliance) requirements. |
| | **Data Quality** | **Please Note:** Based upon legislative and regulatory concerns, **data quality** will always be an issue, regardless of the industry or platform.<br><br>Based upon legislative and regulatory restrictions, **data quality** is at the core of data integrity, and is the primary concern for FI data, in that it must satisfy all US regulatory compliance obligations for GRC/CIA, at this point in time.<br><br>For BD/FI data, data integrity is critical and essential over the entire life-cycle of the organization due to regulatory and compliance issues related to CIA (Confidentiality, Integrity & Availability) and GRC (Governance, Risk & Compliance) requirements. |
| | **Data Types** | **Please Note:** Based upon legislative and regulatory concerns, **data types** is important in that it must have a degree of consistency and especially survivability during audits and digital forensic investigations where the data format deterioration can negatively impact both an audit and a forensic investigation when passed through multiple cycles.<br><br>For BD/FI data, multiple data types and formats, include but is not limited to; flat files, .txt, .pdf, android application files, .wav, .jpg and VOIP (Voice over IP) |
| | **Data Analytic s** | **Please Note:** Based upon legislative and regulatory concerns, **data analytics** is an issue regarding BD solutions for FI data, especially in regards to fraud detection, risk analysis and customer analysis.<br><br>However, data analytics for FI data is currently handled by traditional client/server/data warehouse big iron servers which must ensure they comply with and satisfy all United States GRC/CIA requirements, at this point in time.<br><br>For BD/FI data analytics must be maintained in a format that is non-destructive during search and analysis processing and procedures. |
| **Big Data Specific Challenges (Gaps)** | | Currently, the areas of concern associated with BD/FI with a Cloud Eco-system, include the aggregating and storing of data (sensitive, toxic and otherwise) from multiple sources which can and does create administrative and management problems related to the following:<br>• Access control<br>• Management/Administration<br>• Data entitlement and<br>• Data ownership<br><br>However, based upon current analysis, these concerns and issues are widely known and are being addressed at this point in time, via the R&D |

| | |
|---|---|
| | (Research & Development) SDLC/HDLC (Software Development Life Cycle/Hardware Development Life Cycle) sausage makers of technology. Please stay tuned for future developments in this regard |
| **Big Data Specific Challenges in Mobility** | Mobility is a continuously growing layer of technical complexity, however, not all Big Data mobility solutions are technical in nature. There are to interrelated and co-dependent parties who required to work together to find a workable and maintainable solution, the FI business side and IT. When both are in agreement sharing a, common lexicon, taxonomy and appreciation and understand for the requirements each is obligated to satisfy, these technical issues can be addressed.<br><br>Both sides in this collaborative effort will encounter the following current and on-going FI data considerations:<br>• Inconsistent category assignments<br>• Changes to classification systems over time<br>• Use of multiple overlapping or<br>• Different categorization schemes<br><br>In addition, each of these changing and evolving inconsistencies, are required to satisfy the following data characteristics associated with ACID:<br>• **Atomic-** All of the work in a transaction completes (commit) or none of it completes<br>• **Consistent-** A transmittal transforms the database from one consistent state to another consistent state. Consistency is defined in terms of constraints.<br>• **Isolated**- The results of any changes made during a transaction are not visible until the transaction has committed.<br>• **Durable**- The results of a committed transaction survive failures.<br>When each of these data categories are satisfied, well, it's a glorious thing. Unfortunately, sometimes glory is not in the room, however, that does not mean we give up the effort to resolve these issues. |
| **Security & Privacy Requirements** | No amount of security and privacy due diligence will make up for the innate deficiencies associated with human nature that creep into any program and/or strategy. Currently, the BD/FI must contend with a growing number of risk buckets, such as:<br>• AML-Anti-money Laundering<br>• CDD- Client Due Diligence<br>• Watch-lists<br>• FCPA – Foreign Corrupt Practices Act<br><br>to name a few.<br><br>For a reality check, please consider Mr. Harry M. Markopolos's nine year effort to get the SEC among other agencies to do their job and shut down Mr. Bernard Madoff's billion dollar ponzi scheme.<br><br>However, that aside, identifying and addressing the privacy/security requirements of the FI, providing services within a BD/Cloud Eco-system, via continuous improvements in:<br>• technology,<br>• processes,<br>• procedures,<br>• people and<br>• regulatory jurisdictions |

| | |
|---|---|
| | is a far better choice for both the individual and the organization, especially when considering the alternative.<br><br>Utilizing a layered approach, this strategy can be broken down into the following sub categories:<br>1. Maintaining operational resilience<br>2. Protecting valuable assets<br>3. Controlling system accounts<br>4. Managing security services effectively, and<br>5. Maintaining operational resilience<br><br>For additional background security and privacy solutions addressing both security and privacy, we'll refer you to the two following organization's:<br>• ISACA (Information Systems Audit and Control Association)<br>• isc2 (International Information Systems Security Certification Consortium, Inc.) |
| **Highlight issues for generalizing this use case (e.g. for ref. architecture)** | Areas of concern include the aggregating and storing data from multiple sources can create problems related to the following:<br>• Access control<br>• Management/Administration<br>• Data entitlement and<br>• Data ownership<br><br>Each of these areas are being improved upon, yet they still must be considered and addressed , via access control solutions, and SIEM (Security Incident/Event Management) tools.<br><br>I don't believe we're there yet, based upon current security concerns mentioned whenever Big Data/Hadoop within a Cloud Eco-system is brought up in polite conversation.<br><br>Current and on-going challenges to implementing BD Finance within a Cloud Eco, as well as traditional client/server data warehouse architectures, include the following areas of Financial Accounting under both US GAAP (Generally Accepted Accounting Practices) or IFRS (…..):<br>XBRL (extensible Business Related Markup Language)<br>Consistency (terminology, formatting, technologies, regulatory gaps)<br><br>SEC mandated use of XBRL (extensible Business Related Markup Language) for regulatory financial reporting.<br><br>SEC, GAAP/IFRS and the yet to be fully resolved new financial legislation impacting reporting requirements are changing and point to trying to improve the implementation, testing, training, reporting and communication best practices required of an independent auditor, regarding:<br>Auditing, Auditor's reports, Control self-assessments, Financial audits, GAAS / ISAs, Internal audits, and the Sarbanes–Oxley Act of 2002 (SOX). |

Dear PCAOB:

Good afternoon and hope all is well way back East.

- Please Note: We appreciate the opportunity to submit our comments to you all regarding PCAOB Docket No. 034.
- We wish you the best in your efforts to improve a bruised and damaged system and continue your efforts as they are for all the right reasons....
- Lastly, we have attached our comments to your attention, in the hope that they will move the process forward...

In closing, our best wishes for a nice and relaxing weekend...

Respectfully yours,
Regards / Met vriendelijke groet

Pw Carey

PROPOSED AUDITING STANDARDS –

THE AUDITOR'S REPORT ON AN AUDIT OF FINANCIAL STATEMENTS WHEN THE AUDITOR EXPRESSES AN UNQUALIFIED OPINION;

THE AUDITOR'S RESPONSIBILITIES REGARDING OTHER INFORMATION IN CERTAIN DOCUMENTS CONTAINING AUDITED FINANCIAL STATEMENTS AND THE RELATED AUDITOR'S REPORT;

AND RELATED AMENDMENTS TO PCAOB STANDARDS

PCAOB Release No. 2013-005
August 13, 2013

PCAOB Rulemaking
Docket Matter No. 034

Summary: The Public Company Accounting Oversight Board ("PCAOB" or the "Board") is proposing two new auditing standards, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, which would supersede portions of AU sec. 508, *Reports on Audited Financial Statements,* and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*, which would supersede AU sec. 550, *Other Information in Documents Containing Audited Financial Statements.* The Board also is proposing related amendments to PCAOB standards.

Public Comment: Interested persons may submit written comments to the Board. Such comments should be sent to the Office of the Secretary, PCAOB, 1666 K Street, N.W., Washington, D.C. 20006-2803. Comments also may be submitted by email to comments@pcaobus.org or through the Board's website at www.pcaobus.org. All comments should refer to PCAOB Rulemaking Docket Matter No. 034 in the subject or reference line and should be received by the Board no later than 5:00 PM (EST) on December 11, 2013.

Board Contacts: Martin F. Baumann, Chief Auditor (202/207-9192, baumannm@pcaobus.org), Jennifer Rand, Deputy Chief Auditor (202/207-9206, randj@pcaobus.org), Jessica Watts, Associate Chief Auditor (202/207-9376, wattsj@pcaobus.org), Lillian Ceynowa, Associate Chief

*****

## I. Introduction

The auditor's report is the primary means by which the auditor communicates with investors and other financial statement users information regarding his or her audit of the financial statements. As it exists today, the auditor's report identifies the financial statements that were audited, describes the nature of an audit, and presents the auditor's opinion as to whether the financial statements present fairly, in all material respects, the financial position, results of operations, and cash flows of the company in conformity with the applicable financial reporting framework. This type of auditor's report has been commonly described as a pass/fail model because the auditor opines on whether the financial statements are fairly presented (pass) or not (fail).[1/]

The auditor's report in the United States has changed very little since the 1940s. The existing pass/fail model is thought by many to be useful because it provides a clear indication of whether the financial statements are presented fairly.[2/] However, while the existing auditor's report provides important information about an audit in general, it does not provide information that is specific to a particular audit.

Academic research suggests that investors and other financial statement users refer to the existing auditor's report only to determine whether the opinion is unqualified

---

1/ If the financial statements are not fairly presented, the standards of the PCAOB provide that an auditor may issue a qualified opinion, adverse opinion, or disclaimer of opinion.

2/ See paragraph (c) of U.S. Securities and Exchange Commission ("SEC") Rule 2-02 of Regulation S-X, 17 C.F.R. § 210.2-02. SEC rules require the accountant to clearly express an opinion on the audited financial statements that are required to be filed as part of registration statements under the Securities Act of 1933 ("Securities Act") and Section 12 of the Securities Exchange Act of 1934 ("Exchange Act"), annual or other reports under Sections 13 and 15(d) of the Exchange Act, proxy and information statements under Section 14 of the Exchange Act, and registration statements and shareholder reports under the Investment Company Act of 1940. See also paragraph (a) of SEC Rule 1-01 of Regulation S-X, 17 C.F.R. § 210.1-01.

because it does not provide any other informational value about the particular audit.[3/] During the Board's outreach activities over the last three years, many investors have expressed dissatisfaction that the content of the existing auditor's report provides little, if any, information specific to the audit of the company's financial statements to investors or other financial statement users. During a financial statement audit, auditors obtain and evaluate important information concerning the company, the company's environment, and the preparation of the company's financial statements. Many investors have indicated that they would benefit from additional auditor reporting because they do not have access to, or may not be aware of, much of this information. Additionally, many investors indicated that auditors have unique and relevant insight based on their audits and that auditors should provide information about their insights in the auditor's report to make the reports more relevant and useful.[4/]

Several commissions examined both the auditor's responsibilities and the form of the auditor's report in the 1970s and 1980s.[5/] These commissions made several recommendations to change the auditor's report; however, only a limited number of changes were made in response to these recommendations.[6/] In 2008, the U.S. Department of the Treasury's Advisory Committee on the Auditing Profession ("ACAP") recommended that the PCAOB undertake a standard-setting initiative to consider

---

[3/] See, e.g., Glen L. Gray, Jerry L. Turner, Paul J. Coram, and Theodore J. Mock, *Perceptions and Misperceptions Regarding the Unqualified Auditor's Report by Financial Statement Preparers, Users, and Auditors*, 25 Accounting Horizons 659, 675-676 (2011); and Theodore J. Mock, Jean Bedard, Paul J. Coram, Shawn M. Davis, Reza Espahbodi, and Rick C. Warne, *The Audit Reporting Model: Current Research Synthesis and Implications*, 32 Auditing 323, 323-351 (2013).

[4/] See survey, *Improving the Auditor's Report*, which was presented by the working group of the IAG on Auditor's Report and The Role of the Auditor, (March 16, 2011), available at http://pcaobus.org/News/Events/Pages/03162011_IAGMeeting.aspx.

[5/] For example, in 1978, the Commission on the Auditors' Responsibilities (known as the "Cohen Commission") and in 1987, the National Commission on Fraudulent Financial Reporting (known as the "Treadway Commission") recommended changes to the auditor's report.

[6/] The changes expanded the discussion of attributes of an audit and management's responsibility. See Marshall A. Geiger, *Setting the Standard for the New Auditor's Report: An Analysis of Attempts to Influence the Auditing Standards Board*, 1 (1993), 38.

improvements to the auditor's standard reporting model.[7/] The ACAP report noted that "some believe…[that the] standardized wording does not adequately reflect the amount of auditor work and judgment."[8/] Similar sentiments were expressed more recently by members of the Board's Standing Advisory Group ("SAG")[9/] and IAG.[10/]

Additionally, ACAP noted that the auditor reporting model developed in the 1940s did not address the increasing complexity of global business operations that are compelling a growing use of judgments and estimates, including those related to fair value measurements, and also contributing to greater complexity in financial reporting.[11/] It was further noted that this complexity supports improving the content of the auditor's report beyond the current pass/fail model to include a more relevant discussion about the audit of the financial statements.[12/] ACAP concluded that an improved auditor's report likely would lead to more relevant information for users of financial statements and would clarify the role of the auditor in the financial statement audit.[13/]

During the Board's outreach activities, some investors noted that auditors gain knowledge about the company's financial statements during the audit that is not known to investors. These investors stated that they believe such knowledge would assist them when making their investment decisions. Academic research finds that the existing

13/ Id.

auditor's report has symbolic value in that it represents the auditor's work but that it provides little communicative value.[14/]

Additionally, the auditor's report is undergoing change globally. Several international standard setters and regulators, such as the International Auditing and Assurance Standards Board ("IAASB"), the United Kingdom's Financial Reporting Council ("FRC"), and the European Commission ("EC") have been working on similar projects to change the auditor's report.[15/]

After extensive outreach conducted over the last three years, the Board is proposing two standards under its statutory mandate to "protect the interests of investors and further the public interest in the preparation of *informative*, accurate and independent audit reports"[16/] [emphasis added]. The proposed standards are intended to increase the informational value of the auditor's report to promote the usefulness and relevance of the audit and the related auditor's report. At the same time, the Board sought a balanced approach that would not unduly burden the financial reporting process.

The two proposed standards are: *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the "proposed auditor reporting standard") and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (the "proposed other information standard"). The Board also is proposing related amendments to other PCAOB auditing standards (the "proposed amendments"). This release collectively refers to the proposed auditor reporting standard, proposed other information standard, and proposed amendments as "the proposed standards and amendments."

Briefly, the Board's proposed auditor reporting standard would retain the pass/fail model, including the basic elements of the current auditor's report, and would provide more information to investors and other financial statement users regarding the audit and the auditor. Most significantly, the proposed auditor reporting standard would require the auditor to communicate in the auditor's report "critical audit matters" that

---

[14/] See Bryan K. Church, Shawn M. Davis, and Susan A. McCracken, *The Auditor's Reporting Model: A Literature Overview and Research Synthesis*, 22 Accounting Horizons 69, 70 (2008).

[15/] See further discussion regarding the projects of these standard setters and regulators in Section II., *Board Outreach*.

[16/] Section 101(a) of the Sarbanes-Oxley Act of 2002 (the "Act").

would be specific to each audit. The auditor's required communication would focus on those matters the auditor addressed during the audit of the financial statements that involved the most difficult, subjective, or complex auditor judgments or posed the most difficulty to the auditor in obtaining sufficient appropriate audit evidence or forming an opinion on the financial statements.

The auditor's report as currently designed, and as confirmed by academic research, conveys to investors and other financial statement users little of the information obtained and evaluated by the auditor.[17/] The proposed auditor reporting standard is intended to provide investors and other financial statement users with potentially valuable information that investors have expressed interest in receiving but have not had access to in the past.[18/]

Requiring auditors to communicate critical audit matters could help investors and other financial statement users focus on aspects of the company's financial statements that the auditor also found to be challenging. Communicating critical audit matters would provide investors and other financial statement users with previously unknown information about the audit that could enable them to analyze more closely any related financial statement accounts and disclosures. The communication of critical audit matters could help to alleviate the information asymmetry[19/] that exists between company management and investors. More specifically, company management is typically aware of the auditor's most challenging areas in the audit because of regular interactions with the auditor as part of the audit, but this information is not usually known to investors. Reducing the level of information asymmetry between company management and investors could result in more efficient capital allocation and, as academic research has shown, could lower the average cost of capital.[20/] The Board is

---

17/ See Bryan K. Church, Shawn M. Davis, and Susan A. McCracken, *The Auditor's Reporting Model: A Literature Overview and Research Synthesis*, 22 Accounting Horizons 69, 70 (2008).

18/ See CFA Institute's surveys: *Usefulness of the Independent Auditor's Report* (May 4, 2011), *Independent Auditor's Report Survey Results* (February 26, 2010), and *Independent Auditor's Report Monthly Poll Results* (March 12, 2008), available at http://www.cfainstitute.org/about/research/surveys/pages/index.aspx.

19/ Economists often describe information asymmetry as an imbalance, where one party has more or better information than another party.

20/ See David Easley and Maureen O'Hara, *Information and the Cost of Capital*, 59 The Journal of Finance 1553, 1553-1583 (2004).

seeking comment on whether the information communicated in critical audit matters would be valuable to investors and could reduce information asymmetry.

The proposed other information standard would respond to investors' interests in obtaining information regarding the auditor's responsibilities for other information outside the financial statements that is contained in documents that include the audited financial statements and the related auditor's report. In considering the nature and form of auditor reporting on other information, the Board evaluated the existing auditing standard related to the auditor's responsibilities with respect to other information and determined it was appropriate to update the other information standard to support a description in the auditor's report. The proposed other information standard is intended to improve the auditor's procedures and enhance the auditor's responsibilities with respect to other information, further protecting the interests of investors. "Other information" in the proposed other information standard refers to information in a company's annual report filed with the SEC under the Exchange Act that also contains that company's audited financial statements and the related auditor's report. The proposed enhancements to the required auditor's procedures in the proposed other information standard are intended to provide a specific basis for the auditor's description in the auditor's report of the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information.

The required procedures under the proposed other information standard would focus the auditor's attention on the identification of material inconsistencies between the other information and the company's audited financial statements and on the identification of material misstatements of fact, based on relevant evidence obtained and conclusions reached during the audit. When evaluating the other information, the auditor would be in a position to identify potential inconsistencies between the other information and the company's financial statements that could be difficult for investors and other financial statement users to identify when analyzing the company's financial performance. Such inconsistencies could occur for a number of reasons, including unintentional error, managerial biases,[21/] or intentional misreporting.[22/] As a result of the

---

[21/] See, e.g., Catherine M. Schrand and Sarah L.C. Zechman, *Executive Overconfidence and the Slippery Slope to Financial Misreporting*, 53 Journal of Accounting and Economics 311, 311-329 (2012) and Paul Hribar and Holly Yang, *CEO Overconfidence and Management Forecasting*, Unpublished working paper (2013) available at http://ssrn.com/abstract=929731.

[22/] See Joseph F. Brazel, Keith L. Jones, and Mark F. Zimbelman, *Using Nonfinancial Measures to Assess Fraud Risk*, 47 Journal of Accounting Research 1135, 1135-1166 (2009).

auditor's evaluation of other information and communication of any potential material inconsistencies or material misstatements of fact to the company's management, the proposed other information standard could promote consistency between the other information and the audited financial statements, which in turn could increase the amount and quality of information[23/] available to investors and other financial statement users. In general, increasing the amount or quality of information available to investors also could facilitate more efficient capital allocation decisions.[24/] Academic research has shown that increased quality of information could result in a reduction in the average cost of capital.[25/] The Board is seeking comment on whether the proposed other information standard would increase the quality of information available to investors.

The Board anticipates that the proposed auditor reporting standard and proposed other information standard will have cost implications for both auditors and companies, including audit committees, as further discussed in this release and Appendices 5 and 6.

The remaining sections of this release describe the outreach conducted by the Board in considering possible changes to the auditor's report, the development and overview of the proposed standards and amendments, and alternatives considered. Additionally, this release includes a discussion of the applicability of the proposed standards and amendments to the audits of brokers and dealers and considerations regarding audits of emerging growth companies ("EGCs").

---

23/ The term "quality of information" is formalized by the concept of precision. Information economics frequently treats information as consisting of two components: a signal that conveys information and noise which inhibits the interpretation of the signal. Precision is the inverse of noise so that decreased noise results in increased precision and a more readily interpretable signal. See Robert E. Verrecchia, *The Use of Mathematical Models in Financial Accounting*, 20 Journal of Accounting Research 1, 1-42 (1982).

24/ See Richard A. Lambert, Christian Leuz, and Robert E. Verrecchia, *Information Asymmetry, Information Precision, and the Cost of Capital*, 16 Review of Finance 1, 1-29 (2011).

25/ Empirical research generally finds that increased public disclosure of information is associated with decreased cost of equity capital. For a review of the literature, refer to Christine A. Botosan, Marlene A. Plumlee, and Yuan Xie, *The Role of Information Precision in Determining the Cost of Equity Capital*, 9 Review of Accounting Studies 233, 233-259 (2004).

## II. Board Outreach

Over the last three years, the Board has conducted extensive outreach with investors, auditors, financial statement preparers, and others to better understand the nature of improvements that could be made to make the auditor's report more informative. In developing its proposals, the Board also sought to better understand issues related to implementing improvements, including potential costs and other economic considerations involved.

From October 2010 through March 2011, the staff of the Board's Office of the Chief Auditor ("staff") met and held discussions with investors, financial statement preparers, auditors, audit committee members, other regulators and standard setters, and representatives of academia. During this outreach, some investors indicated that one of the primary reasons that they are looking to the auditor for more information, rather than management or the audit committee, is that the auditor is an independent third party. Some investors indicated that if they had a better understanding about the audit and how the audit was conducted relative to a particular company, then they would have a better perspective regarding the potential risks of material misstatement in a company's financial statements. The staff reported its findings to the Board at an open meeting on March 22, 2011.[26/] The Board concluded from its initial outreach that changing the auditor's report could improve the informational value of the auditor's report and enhance the relevance of the auditor's reporting model. During this same period at an IAG meeting, the recent financial crisis was mentioned as an example of a situation in which expanded auditor reporting in advance of, and during, the crisis might have been helpful in assessing a company's financial statements and providing early warning signals regarding potential issues.[27/]

Subsequently, on June 21, 2011, the Board issued *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (the "concept release")[28/] to seek public

---

[26/] See meeting details and webcast for PCAOB Board Meeting on March 22, 2011, available at http://pcaobus.org/News/Webcasts/Pages/03222011_OpenBoardMeeting.aspx.

[27/] See Investor Advisory Group ("IAG") meeting details and webcast for March 2011 available at http://pcaobus.org/News/Events/Pages/03162011_IAGMeeting.aspx.

[28/] PCAOB Release No. 2011-003 (June 21, 2011) available at http://pcaobus.org/Rules/Rulemaking/Docket034/Concept_Release.pdf.

comment on potential changes to the auditor's reporting model. The objective of the concept release was to seek comment on several alternatives for changing the auditor's reporting model in order to make auditor reporting more relevant and useful to investors and other financial statement users. The alternatives presented were:

- A supplemental narrative report, described as an auditor's discussion and analysis ("AD&A");
- Required and expanded use of emphasis paragraphs;
- Auditor assurance on other information outside the financial statements; and
- Clarification of the standard auditor's report.

The concept release indicated that each of the alternatives presented would retain the pass/fail opinion of the existing auditor's report and was not intended to alter the auditor's ultimate responsibility to obtain sufficient appropriate audit evidence to support the audit opinion. The concept release also indicated that the alternatives were not mutually exclusive and that other alternatives could be considered.

The Board received 155 comment letters on the concept release.[29/] Additionally, on September 15, 2011, the Board held a public roundtable ("roundtable") to obtain insight from a diverse group of investors and other financial statement users, preparers of financial statements, audit committee members, and auditors on the alternatives presented in the concept release.[30/] The topic was further discussed at the November 2011 and 2012 SAG meetings.[31/]

Commenters generally supported the Board updating and enhancing the auditor reporting standard and largely agreed that the existing auditor's report provided little informational value about a specific audit to investors and other financial statement

---

[29/] See comment letters on the concept release available at http://pcaobus.org/Rules/Rulemaking/Pages/Docket034Comments.aspx.

[30/] See transcript of the roundtable available at http://pcaobus.org/Rules/Rulemaking/Docket034/09152011_Roundtable_Transcript.pdf.

[31/] See SAG meeting transcripts for November 2011 and 2012 available at http://pcaobus.org/Rules/Rulemaking/Docket034/11102011_SAG_Transcript.pdf, http://pcaobus.org/Rules/Rulemaking/Docket034/11162012_SAG_Transcript.pdf, and http://pcaobus.org/Rules/Rulemaking/Docket034/11152012_SAG_Transcript.pdf.

users beyond the pass/fail opinion. However, there were widely diverse views among different constituencies about the nature and extent of changes that should be made to the existing auditor's report and the potential costs associated with those changes.

Investors strongly supported the Board's initiative to enhance the existing auditor's report to provide more informative reporting about the audit, the financial statements, or both. This group of commenters generally expressed the view that the existing auditor's report was not sufficiently informative to meet the needs of investors who would benefit from further insights obtained by the auditor during the audit of the financial statements. Investors most frequently suggested additional auditor reporting on the following information:

- Areas of high financial statement and audit risk;
- Areas of significant auditor judgment;
- The most significant matters in the financial statements, such as significant management judgments, estimates, and areas with significant measurement uncertainty;
- The quality, not just the acceptability, of accounting policies and practices, for instance, management's application of accounting policies that are acceptable under the applicable financial reporting framework but are not the preferred practice;
- Significant changes in or events affecting the financial statements, including unusual transactions; and
- Identification of where significant matters are disclosed in the financial statements for investors' further information.

Some investors recognized that, if the auditor's report included this information, audit costs could increase due to the time required to draft and review such communications. However, these investors also expressed the belief that these costs, which are ultimately paid for by investors, likely would be modest since the communication would be based on the work already performed by the auditor. These commenters indicated that the benefits in terms of increased confidence in corporate reporting outweighed the costs.

Financial statement preparers, in general, did not object to the clarifications to the auditor's report described in the concept release if such clarifications would be useful to financial statement users and would increase the transparency into the audit process. The majority of these commenters, however, believed that there was little need for changes to the existing auditor's report and believed it was the responsibility of the company, not the auditors, to provide information about the company's financial statements to financial statement users. Audit committee members expressed similar views.

Auditors generally were supportive of changes to the existing auditor's report but believed that any additional auditor reporting should be objective and factual. This group of commenters also believed that certain changes to the auditor's report could provide benefits to users of the financial statements by providing additional clarification about the audit and audit process. Auditors noted that the alternatives presented in the concept release for changing the auditor's report would require additional effort, primarily related to drafting and reviewing the auditor's report, and as a result would increase audit costs and the potential for auditor liability.

Other commenters, including academics, other regulators, and other individuals and organizations, expressed a variety of views about changes to the existing auditor's report. For example, one commenter indicated that the existing auditor's report is not particularly informative and does not provide information regarding the nature and type of procedures, processes, and information used in forming the auditor's opinion. Other commenters indicated that the current pass/fail model is sufficient and that it is the responsibility of the company, and not the auditors, to provide additional disclosures about the company to investors.

One of the alternatives presented in the concept release was to require auditor assurance on other information outside the financial statements. Some commenters noted that they were uncertain as to the level of the auditor's responsibility for other information outside the financial statements. Some of those commenters supported changes to the auditor's report that describe the auditor's existing responsibilities related to information outside the financial statements to inform investors and other financial statement users of the extent of the auditor's responsibility for other information contained in a document that also contains the financial statements and the related auditor's report. A number of commenters suggested that the Board also consider requiring the auditor to include in the auditor's report the auditor's conclusions on the work performed, in addition to the description of the auditor's responsibilities regarding other information outside the financial statements.

In developing the proposed auditor reporting standard, the Board considered recent developments of (1) the IAASB's project on auditor reporting;[32/] (2) the EC's

---

[32/] See IAASB project summary at http://www.ifac.org/auditing-assurance/projects/auditor-reporting. The IAASB issued an exposure draft, *Reporting* legislative proposal and subsequent European Parliamentary report that relate to audits of public interest entities;[33/] and (3) the FRC's recently adopted revision of its auditing standard on the auditor's report.[34/] The IAASB's project, the EC's proposal and subsequent amendments, and the FRC's revised auditing standard would require auditor reporting on certain additional matters.

In developing the proposed other information standard, the Board considered the IAASB's recent proposal, *The Auditor's Responsibilities Relating to Other Information in Documents Containing or Accompanying Audited Financial Statements and the Auditor's Report Thereon*.[35/]

## III. Development and Overview of the Proposals

In developing the proposed standards and amendments, the Board considered (1) the information communicated in the current auditor's report; (2) the potential benefits that may result from auditors providing additional communications; (3) the potential costs related to the approach proposed by the Board; (4) alternative approaches (which are discussed in Section IV., *Alternatives Considered*); (5) current developments in similar projects by other standard setters; (6) relevant academic

research; and (7) significant comments received by the Board from its outreach efforts, including comments received on the concept release. In considering the nature and extent of changes to the existing auditor's report, the Board sought to respond to the needs of investors and other financial statement users by making the auditor's report more informative while not adding undue burden to the financial reporting process.

## A. Proposed Auditor Reporting Standard

The proposed auditor reporting standard, among other things, would make the following significant changes to the existing auditor's report:

- Require the auditor to communicate in the auditor's report critical audit matters that were addressed during the audit of the current period's financial statements. If the auditor determines that there are no critical audit matters, the auditor would state in the auditor's report that the auditor determined that there are no such matters to communicate.

- Add new elements to the auditor's report related to auditor independence, auditor tenure, and the auditor's responsibility for, and evaluation of, other information in annual reports containing the audited financial statements and the related auditor's report.

- Enhance certain standardized language in the auditor's report, including the addition of the phrase "whether due to error or fraud," when describing the auditor's responsibility under PCAOB standards to obtain reasonable assurance about whether the financial statements are free of material misstatements, whether due to error or fraud.

The proposed auditor reporting standard would retain the pass/fail model of the existing auditor's report. The proposed auditor reporting standard would also retain explanatory paragraphs that are required in certain circumstances and the auditor's ability to emphasize a matter in the financial statements.

### *1. Auditor Reporting of Critical Audit Matters*

In developing the proposed requirements for the communication of critical audit matters, the Board considered many investors' requests for information regarding matters related to the audit and the most significant matters in the financial statements, such as significant management judgments, estimates, and areas with significant measurement uncertainty. The concept release described as alternatives for providing additional information to financial statement users about the audit and the financial statements: (1) an AD&A and (2) required and expanded emphasis paragraphs. The

Board, however, is not proposing any of these alternatives, which are described further in Section IV., *Alternatives Considered*.

The Board, instead, is proposing requirements for the auditor to communicate in the auditor's report "critical audit matters." Critical audit matters are those matters addressed during the audit that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming the opinion on the financial statements. Use of the word most is not intended to imply that only one matter under each criteria would qualify as a critical audit matter.

The Board is proposing communication of critical audit matters in response to the requests of many investors to improve the relevance of the auditor's report by providing more insight about the most significant matters that the auditor addressed in the audit. Communicating critical audit matters likely would provide meaningful information to investors and other financial statement users about the auditor's work in performing the audit and in forming an opinion on the financial statements, taken as a whole.

The auditor would determine which matters to communicate as critical audit matters. The proposed auditor reporting standard indicates that critical audit matters ordinarily are matters of such importance that they are included in the matters required to be (1) documented in the engagement completion document,[36/] which summarizes the significant issues and findings from the audit; (2) reviewed by the engagement quality reviewer;[37/] (3) communicated to the audit committee;[38/] or (4) any combination of the three. The Board would not expect that each matter included in any one or more of these sources would be a critical audit matter. Referring to these sources can provide a cost-effective and efficient means of determining critical audit matters. Additionally, the proposed auditor reporting standard provides a list of factors for the auditor to take into account in determining the critical audit matters. The factors are intended to help the auditor determine, from the results of the audit or evidence obtained, which matters are critical audit matters.

The auditor's communication of critical audit matters would be based on information known to the auditor and procedures that the auditor has already performed as part of the audit. Thus, the proposed auditor reporting standard does not modify the

---

[36/] Auditing Standard No. 3, *Audit Documentation*.

[37/] Auditing Standard No. 7, *Engagement Quality Review*.

[38/] Auditing Standard No. 16, *Communications with Audit Committees*, and other PCAOB standards.

objective of the audit of the financial statements or impose new audit performance requirements, other than the determination, communication, and documentation of critical audit matters.

The proposed auditor reporting standard would require the auditor to determine critical audit matters in the audit of the current period's financial statements, based on the results of the audit or evidence obtained. The proposed auditor reporting standard also provides that in situations in which the auditor determines there are no critical audit matters to communicate, the auditor would state that conclusion in the auditor's report. Critical audit matters would be determined based on the facts and circumstances of each audit. It is expected that in most audits the auditor would determine that there are critical audit matters.

The description of critical audit matters in the auditor's report would:

- Identify the critical audit matter;
- Describe the considerations that led the auditor to determine that the matter is a critical audit matter; and
- Refer to the relevant financial statement accounts and disclosures that relate to the critical audit matter, when applicable.

Communication of critical audit matters in the auditor's report is intended to make the auditor's report more informative, thus increasing its relevance and usefulness to investors and other financial statement users. Academic research suggests that the prominence with which information is disclosed can have implications for investment decision making.[39/] Communication of critical audit matters in the auditor's report could focus investors' and other financial statement users' attention on challenges associated with the audit that may contribute to the information used in investment decision making. A more informative auditor's report could benefit investors and other financial statement users by increasing the prominence of potentially valuable information, thus increasing the value of the auditor's report.

Improving the auditor's report through the communication of critical audit matters also would address some commenters' concerns that it is the company's or the audit committee's responsibility, not the auditor's, to provide information, including any analysis, about the company's financial statements to financial statement users. The

---

[39/] See David Hirshleifer and Siew Hong Teoh, *Limited Attention, Information Disclosure, and Financial Reporting*, 36 Journal of Accounting and Economics 337, 337-386 (2003).

proposed communication of critical audit matters would not fundamentally change the auditor's current role from attesting on information prepared by management. Rather, the auditor would be communicating information about the audit, based on audit procedures the auditor performed.

The Board intends for the proposed communication of critical audit matters to be responsive to cost issues raised by commenters. Because critical audit matters are based on the relative complexity and difficulty of the audit, the Board anticipates that the proposed auditor reporting standard would be scalable based on the size, nature, and complexity of the audit of the company. The Board also anticipates, however, that reporting of critical audit matters in the auditor's report would have cost-related implications for auditors and companies, including audit committees. In addition to the potential cost implications, there could be potential unintended consequences associated with requiring that auditors communicate critical audit matters in the auditor's report. For example, the effort required to determine, prepare language for communication, and document critical audit matters likely would occur during the final stages of the audit which might reduce the time available to the auditor for review and completion of the audit work. The Board seeks comments on the nature and extent of those costs, as well as regarding any potential unintended consequences.

*2. Basic Elements of the Auditor's Report*

The existing auditor's report identifies the financial statements audited, describes the nature of an audit, and expresses the auditor's opinion using standardized language. The existing auditor reporting standard also provides a list of basic elements that are required to be in the auditor's report.[40/]

The concept release sought comment on whether the standardized language in the auditor's report required by the existing auditing standard is useful, whether any of the language could be clarified, and whether the auditor's report should describe the auditor's responsibilities for other information outside the financial statements. Several commenters indicated that clarifying language and certain other matters in the auditor's report could improve financial statement users' understanding of the nature of an audit, the auditor's responsibilities, and the purpose of the auditor's report. Some commenters, however, indicated that additional boilerplate language to clarify language already in the report would not be helpful. After considering the comments, the Board is proposing certain clarifications of the language in the report that the Board believes would enhance users' understanding about the audit and the auditor, including the auditor's responsibilities for other information outside the financial statements.

---

[40/] See AU secs. 508.06-.08.

The proposed auditor reporting standard primarily retains the basic elements of the auditor's report contained in existing auditor reporting standards,[41/] incorporates certain elements from existing illustrative auditor's reports, and further describes some of the auditor's existing responsibilities, such as the auditor's responsibility for the notes to the financial statements and fraud.

Additionally, the proposed auditor reporting standard adds the following new elements to the auditor's report to provide investors and other financial statement users with information about the audit and the auditor:

- Auditor independence − a statement regarding the auditor's existing requirements to be independent of the company, intended to enhance investors' and other financial statement users' understanding about the auditor's obligations related to independence and to serve as a reminder to auditors of these obligations;

- Auditor tenure − the year the auditor began serving as the company's auditor, to provide investors and other financial statement users with information about the length of the relationship between the auditor and the company; and

- Other information – the auditor's responsibilities for, and the results of, the auditor's evaluation of other information in annual reports filed with the SEC containing the financial statements and the related auditor's report, to provide investors and other financial statement users with an understanding of the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information.

The Board anticipates that these proposed changes to the auditor's report likely would have some cost-related implications for auditors and companies, including audit committees. The Board seeks comments on the nature and extent of those costs.

*3. Explanatory Language*

Under existing PCAOB standards, certain circumstances require that the auditor include explanatory language or paragraphs in the auditor's report, such as when there

---

[41/] See AU sec. 508 and Auditing Standard No. 1, *References in Auditor's Reports to the Standards of the Public Company Accounting Oversight Board*.

is substantial doubt about the company's ability to continue as a going concern[42/] or the correction of a material misstatement in previously issued financial statements. These circumstances are described in other PCAOB standards, which generally provide standardized language to be included in the auditor's report. Similar to the existing auditor reporting standard, the proposed auditor reporting standard describes those circumstances and provides references to the relevant PCAOB standards.

Additionally, the proposed auditor reporting standard retains from the existing standard the auditor's ability to include explanatory paragraphs in the auditor's report to emphasize a matter regarding the financial statements. Currently, such explanatory paragraphs are not required and may be added solely at the auditor's discretion.[43/] As described in the proposed auditor reporting standard, these explanatory paragraphs would refer only to information presented or disclosed in the financial statements. The proposed auditor reporting standard provides several examples of when an auditor might include such explanatory paragraphs.

**B. Auditor's Responsibilities Regarding Other Information**

Other information outside the financial statements may be relevant to an audit of the financial statements or to the auditor's decision to be associated with the company's annual report. The proposed other information standard describes "other information" as information, other than the audited financial statements and the related auditor's report, included in a company's annual report that is filed with the SEC under the Exchange Act[44/] and contains that company's audited financial statements and the related auditor's report. For example, other information in an annual report filed by a company on Form 10-K would include, among other items, Selected Financial Data, Management's Discussion & Analysis ("MD&A"), exhibits, and certain information incorporated by reference.

---

42/ The Board is considering a separate standard-setting project to enhance performance requirements and auditor reporting related to a company's ability to continue as a going concern.

43/ See AU sec. 508.19.

44/ Consistent with existing AU sec. 550, *Other Information in Documents Containing Audited Financial Statements*, the proposed other information standard would not apply to documents filed with the SEC under the Securities Act that contain audited financial statements and the related auditor's report. See further discussion regarding Securities Act documents in Appendix 6.

Under existing PCAOB standards, the auditor has a responsibility to "read and consider" other information in certain documents that also contain the audited financial statements and the related auditor's report; however, there is no related reporting requirement to describe the auditor's responsibility with respect to other information.

The Board began considering the existing other information standard, AU sec. 550, as part of an effort to better explain to investors and other financial statement users the auditor's responsibilities related to other information outside the financial statements. Through that consideration, the Board determined that changes were appropriate to provide a specific basis for the description in the auditor's report of the auditor's responsibilities for, and the results of, the auditor's evaluation of other information outside the financial statements.

As a result of the link between the proposed auditor reporting standard and the proposed other information standard, the financial statement user would obtain useful information such as: (1) the nature and scope of the auditor's responsibilities with respect to the other information; (2) clarification of what other information was evaluated by the auditor; and (3) a description of the results of the auditor's evaluation of the other information.

Under the existing other information standard, the auditor considers whether the other information is materially inconsistent with information in the financial statements. If the auditor concludes there is a material inconsistency between the other information and the financial statements, the existing standard provides the auditor with certain procedures to respond to the material inconsistency. Additionally, the existing standard provides that, if while reading the other information for a material inconsistency, the auditor becomes aware of a material misstatement of fact in the other information, the auditor would discuss this with management and perform other procedures based on the auditor's judgment.

The proposed other information standard, among other things, would:

- Apply the auditor's responsibility for other information specifically to a company's annual reports filed with the SEC under the Exchange Act that contain that company's audited financial statements and the related auditor's report;

- Enhance the auditor's responsibility with respect to other information by adding procedures for the auditor to perform in evaluating the other information based on relevant audit evidence obtained and conclusions reached during the audit;

- Require the auditor to evaluate the other information for a material misstatement of fact as well as for a material inconsistency with amounts or information, or the manner of their presentation, in the audited financial statements; and

- Require communication in the auditor's report regarding the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information.

The Board's existing standard has no requirements for the auditor beyond "read and consider" with respect to the other information. In contrast, the proposed other information standard includes procedures that auditors consistently would perform in evaluating the other information. The Board believes that, in practice, some auditors currently perform procedures related to other information similar to the procedures in the proposed other information standard.

The Board notes that some of the other information not directly related to the audited financial statements might be non-financial in nature or related to the company's operations and, as a result, the auditor might not have obtained evidence or reached any conclusion regarding such information during the audit. The auditor's evaluation would be based on relevant audit evidence obtained and conclusions reached during the audit. The auditor would not be required to perform procedures to obtain additional evidence regarding other information not directly related to the financial statements that was not required to be obtained during the audit.

In developing the proposed other information standard, the Board considered the additional effort and cost of implementing changes in the auditor's responsibilities regarding other information. The Board believes that the proposed approach represents a cost-sensitive approach that would be scalable to less complex companies based on the nature and extent of the information outside the financial statements for such companies as compared to companies with more extensive operations. The Board, however, anticipates that the proposed other information standard would have cost implications for auditors and companies, including audit committees. The Board requests comments regarding the nature and extent of those costs.

## IV. Alternatives Considered

Before developing the proposed standards and amendments, the Board explored alternatives through extended outreach with investors, companies, auditors, audit committee members, and others. This outreach effort was followed by issuing the concept release in 2011, analyzing comment letters, holding a roundtable, and discussions with the SAG and IAG.

The concept release described alternatives for providing additional information to financial statement users about the audit and the financial statements, specifically: (1) an AD&A; (2) required and expanded emphasis paragraphs; (3) auditor assurance on other information outside the financial statements; and (4) clarification of the standard auditor's report. The following paragraphs explain the alternatives in the concept release. The Board, however, is not proposing any of these alternatives. The Board believes that its proposed approach, which includes communicating critical audit matters, provides many of the benefits described in the concept release while, at the same time, substantially reducing the challenges and costs mentioned by commenters, as explained in Section E., *Approach Proposed by the Board*, below.

The Board also considered retaining existing AU sec. 508 related to the unqualified report and issuing a staff practice alert or other guidance regarding the potential use of existing emphasis paragraphs. The Board believes, however, that proposing a new standard with changes to the auditor's report is appropriate in relation to its mandate under the Act to promote *informative*, accurate, and independent audit reports[45/] [emphasis added]. Additionally, the Board considered retaining AU sec. 550 and describing the auditor's responsibilities under AU sec. 550 in the auditor's report. The Board believes that issuing a new standard regarding the other information is appropriate because the proposed other information standard would provide a consistent basis for the auditor's evaluation of the other information and related auditor reporting.

## A. Auditor's Discussion and Analysis

As described in the concept release, an AD&A could provide investors with a view of the audit and the financial statements "through the auditor's eyes." The intent of the AD&A alternative was to provide the auditor with the ability to write a separate, supplemental narrative report that would follow the auditor's report on the financial statements and contain an open-ended discussion of the auditor's perspectives about the audit and the company's financial statements. The concept release describes the AD&A as being among the most expansive forms of auditor reporting.

According to the concept release, an AD&A could include information about the audit, such as audit risk identified in the audit, audit procedures and results, and auditor independence, and provide the auditor with the ability to communicate to investors and other users of the financial statements the auditor's significant judgments in forming the audit opinion. The AD&A, however, also could include the auditor's perspectives regarding the company's financial statements, such as management's judgments and

---

45/ See Section 101(a) of the Act.

estimates, accounting policies and practices, and difficult or contentious issues. Also, as described in the concept release, an AD&A could provide further context to an investor's understanding of a company's financial statements and management's related discussion and analysis. In that regard, the concept release noted that the auditor's perspectives in an AD&A on certain matters could differ from those management might provide in its MD&A,[46/] possibly requiring additional time by management, the auditor, and the audit committee to resolve those differences before any views could be reflected in an AD&A or the MD&A.

Many investors indicated that additional information through an AD&A would provide more transparency into the audit and the financial statements. One commenter suggested that factors that would affect the way an auditor assesses risks of material misstatement in the financial statements might also affect how an investor views risks of investing in the company. Some commenters indicated that an AD&A would heighten the perceived value of the audit, increase competition among auditors based on audit quality, particularly with respect to auditor skepticism, and provide the firms more leverage to affect change and enhance management disclosure in the financial statements.

Other commenters, however, expressed reservations about an AD&A, as described in the concept release, primarily because they saw this form of supplemental narrative reporting as fundamentally changing the auditor's current role from attesting on information prepared by management to providing an analysis of financial statement information. These commenters were also concerned about possible undue reliance by financial statement users on an AD&A-type report to make investment decisions and the additional effort by auditors to write and review an AD&A in a compressed reporting timeframe. Some commenters were concerned that this type of auditor reporting could diminish the governance role of the audit committee over the company's disclosure of financial information by allowing auditors to make independent disclosures about the company's financial statements. Some commenters noted that an AD&A-type reporting would require auditors to draft customized language in a supplemental free-form report for public use. Additionally, commenters also noted that absent an extension from the SEC of filing and reporting deadlines, an AD&A would reduce the time available to the most senior members of the audit team for review and completion of audit work in order to identify matters to be included in an AD&A, draft customized language, and work with centralized review personnel to complete the review process.

[46/] See SEC Regulation S-K, Item 303; 17 CFR § 229.303.

## B. Required and Expanded Emphasis Paragraphs

Emphasis paragraphs are not currently required under existing PCAOB standards but may be added, solely at the auditor's discretion, to emphasize a matter regarding the financial statements.[47/] As described in the concept release, required and expanded emphasis paragraphs could highlight the most significant matters in the financial statements and identify where these matters are disclosed in the financial statements. The concept release indicated that emphasis paragraphs could be required in areas of critical importance to the financial statements, including significant management judgments and estimates, areas with significant measurement uncertainty, and other areas that the auditor determines are important for a better understanding of the financial statement presentation. The alternative in the concept release for required and expanded emphasis paragraphs was intended to provide investors with enhanced auditor reporting on much of the information investors indicated they want about the audit and the financial statements. As also explained in the concept release, for each matter of emphasis the auditor could be required to comment on the key audit procedures performed pertaining to the identified matters. The concept release indicated that this alternative was somewhat analogous to the French requirement that the auditor's report contain a "justification for the auditor's assessments."[48/]

Many commenters were supportive of using emphasis paragraphs to highlight significant matters to a reader, such as areas with significant management judgments and estimates or a high level of measurement uncertainty. Some commenters supported an emphasis paragraph approach that would inform financial statement users about important matters on which to focus in the financial statements for purposes of their investment decisions.

Many investors indicated that they did not support an auditor's report that only references the relevant financial statement disclosures because no incremental information would be provided in the emphasis paragraphs regarding the company's financial statements or the audit beyond what is already disclosed by management. Some other commenters noted that emphasis paragraphs raised concerns regarding the auditor's disclosure of original information that is not otherwise publicly known.

---

[47/] See AU sec. 508.19.

[48/] On August 1, 2003, article L823-9 of the French Code of Commerce Financial security law was enacted, which requires that the statutory auditor include in the auditor's report a "justification of the auditor's assessments."

Additionally, at the November 2012 SAG meeting, SAG members discussed a potential approach to amending the auditor's reporting model that would include required emphasis paragraphs, based on the matters communicated to the audit committee under Auditing Standard No. 16.[49/] Some SAG members were supportive of linking auditor reporting in expanded emphasis paragraphs to matters communicated to the audit committee under Auditing Standard No. 16.[50/] Other SAG members did not support expanded emphasis paragraphs that would be specifically linked to communications with the audit committee because, in their view, it might affect the nature and extent of the communications between the auditor and the audit committee.[51/]

## C. Auditor Assurance on Other Information Outside the Financial Statements

The concept release indicated that an alternative for enhanced auditor reporting could be auditor examination of, and reporting on, information outside the financial statements, such as MD&A or other selected information (for example, non-GAAP information or earnings releases). Some commenters indicated that certain information outside the financial statements, especially the MD&A, is important to investors to provide context within which the financial results and financial position can be interpreted.

However, investors generally were not supportive of auditor assurance on other information outside the financial statements as an alternative for enhancing the auditor's reporting model because it would not be responsive to their information needs, and they saw little benefit with this type of auditor assurance. Several commenters expressed concern that auditor assurance on information outside the financial statements would increase the time needed to perform these procedures and would not provide greater benefit than the auditor's current responsibilities related to other information outside the financial statements.

Several commenters suggested that they would support changes to the auditor's report that described the auditor's existing responsibilities related to other information and the auditor's conclusions related to the other information.

---

[49/] See Briefing Paper: Auditor's Reporting Model available at http://pcaobus.org/Rules/Rulemaking/Docket034/2012_11_15_SAG_BP_ARM.pdf.

[50/] See SAG meeting transcripts for November 2012 available at http://pcaobus.org/Rules/Rulemaking/Docket034/11162012_SAG_Transcript.pdf, and http://pcaobus.org/Rules/Rulemaking/Docket034/11152012_SAG_Transcript.pdf.

[51/] Id.

## D. Clarification of Terms and Responsibilities in the Auditor's Report

### *1. Reasonable Assurance*

In the concept release, the Board sought comment on whether the term "reasonable assurance" should be further described in the auditor's report. Under existing AU sec. 508, the auditor's report explicitly asserts that the audit was conducted in accordance with the standards of the PCAOB and that "those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement." An existing auditing standard describes reasonable assurance as being a "high level of assurance, but not absolute assurance."[52/]

Commenters generally did not support adding additional language to the auditor's report that would further explain the term "reasonable assurance." Commenters suggested that adding additional language would not significantly enhance financial statement users' understanding of the meaning of the term "reasonable assurance."

### *2. Management's Responsibility for the Preparation of the Financial Statements*

In the concept release, the Board sought comment on whether the auditor's report should state that management prepares the financial statements and has responsibility for the fair presentation of the financial statements.

Under existing auditing standards, the standard auditor's report includes a statement that the financial statements are the responsibility of the company's management and that the auditor's responsibility is to express an opinion on the financial statements based on his or her audit.[53/]

Some commenters supported clarification in the auditor's report with respect to management's responsibility for the preparation of the financial statements. These commenters indicated that some clarifying language could improve investors' and other financial statement users' understanding of management's responsibilities for the preparation of the financial statements. Conversely, other commenters were against such a clarification, stating that additional language is unnecessary because similar language is already included in the auditor's report and the SEC requires corporate officers' certification of the financial statements.

---

[52/] See paragraph .10 of AU sec. 230, *Due Professional Care in the Performance of Work*.

[53/] See AU sec. 508.08.c.

Because the existing language in the auditor's report is generally understood to encompass management's responsibility for both the preparation and fair presentation of the financial statements, the Board is not proposing to modify the auditor's report in this regard.

### E. Approach Proposed by the Board

The Board believes the proposed auditor reporting standard and the proposed other information standard provide many of the benefits described in the concept release regarding an AD&A, required and expanded emphasis paragraphs, and auditor assurance on information outside the financial statements. The Board also believes that its proposed approach should eliminate or reduce some of the challenges mentioned by commenters in connection with the alternatives described in the concept release.

Unlike emphasis paragraphs as described in existing AU sec. 508 that generally just point to a disclosure in the company's financial statements, the proposed auditor reporting standard would require the auditor to communicate a wider range of information about the audit. Specifically, the proposed communication of critical audit matters would provide information regarding the reason the matter or matters were considered critical.

The proposed communication of critical audit matters would not fundamentally change the auditor's current role from attesting on information prepared by management to providing an analysis of financial statement information, which was one of the concerns expressed by commenters about an AD&A. Since the auditor would be communicating information regarding the audit, the communication of critical audit matters should not diminish the governance role of the audit committee over the company's disclosure of financial information. In addition, the proposed auditor reporting standard is intended to represent a cost-sensitive approach, because the auditor's determination of critical audit matters is based on the audit already performed.

The description in the auditor's report about the auditor's responsibilities for, and results of, the auditor's evaluation of other information is intended to provide greater clarity regarding the auditor's responsibilities for other information and the results of the auditor's evaluation of other information. Finally, the proposed other information standard would provide a specific basis for the auditor describing in the auditor's report the auditor's responsibilities for, and results of, the auditor's evaluation of other information.

## V. Audits of Brokers and Dealers

Section 982 of the Dodd-Frank Wall Street Reform and Consumer Protection Act ("Dodd-Frank Act")[54/] expanded the authority of the Board to oversee the audits of brokers and dealers that are required under SEC rules. On July 30, 2013, the SEC amended SEC Rule 17a-5 under the Exchange Act, to require, among other things, that audits of brokers' and dealers' financial statements be performed in accordance with the standards of the PCAOB for fiscal years ending on or after June 1, 2014.[55/] At the publication date of this release, the final SEC rules have not been published in the Federal Register.

The Board will consider, and is soliciting comments on, whether the proposed standards and amendments are appropriate for audits of brokers and dealers. Appendices 5 and 6 include specific questions on the applicability of the proposed standards and amendments to the audits of brokers and dealers.

## VI. Economic Considerations

Economic considerations related to the proposed standards are noted in this release with Appendices 5 and 6 providing further discussion regarding the economic considerations related to each proposed standard. Appendix 7 provides further discussion of economic considerations specifically related to the audits of EGCs.

## VII. Audits of Emerging Growth Companies

Pursuant to Section 104 of the Jumpstart Our Business Startups Act ("JOBS Act"), any rules adopted by the Board subsequent to April 5, 2012, do not apply to the audits of EGCs (as defined in Section 3(a)(80) of the Exchange Act) unless the SEC "determines that the application of such additional requirements is necessary or appropriate in the public interest, after considering the protection of investors, and whether the action will promote efficiency, competition, and capital formation."[56/]

In connection with its proposals, the Board solicits views of commenters on the application of the proposed standards and amendments to audits of EGCs. As part of

55/ See SEC, *Broker-Dealer Reports*, Exchange Act Release No. 70073 (July 30, 2013), which includes the final rules available at http://www.sec.gov/rules/final/2013/34-70073.pdf.

56/ See Section 103(a)(3)(a) of the Act.

considering the potential application of the proposed standards to the audits of EGCs, the Board specifically requests comments, including information and data, to the extent available, relevant to issues relating to efficiency, competition, and capital formation, as well as the benefits and costs associated with its proposals.

## VIII. Effective Date

The proposed standards and amendments would be effective, subject to approval by the SEC, for audits of financial statements for fiscal years beginning on or after December 15, 2015. The Board seeks comment on the effective date related to each proposed standard in Appendices 5 and 6. The Board's final decision on the effective date would take into account the extent and nature of comments received on the proposals as well as the timing of Board adoption of any final standard and amendments.

## IX. Appendices

The Board's proposal includes this Release ("Release") and the following appendices:

- Appendix 1 contains the text of Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*.

- Appendix 2 contains the text of Proposed Auditing Standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*.

- Appendix 3 contains amendments related to the Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, to other PCAOB standards.

- Appendix 4 contains amendments related to the Proposed Auditing Standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*, to other PCAOB standards.

- Appendix 5 provides additional discussion of the Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, and the related amendments. Specific questions for commenters are included throughout this Appendix.

- Appendix 6 provides additional discussion of the Proposed Auditing Standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*, and the related amendments. Specific questions for commenters are included throughout this Appendix.

- Appendix 7 discusses certain other considerations related to audits of EGCs. Specific questions for commenters are included at the end of this Appendix.

Appendices 5 and 6 discuss significant comments received during the Board's outreach, provide additional background information regarding the requirements in the proposed standards and proposed amendments, and contain specific questions for commenters. Appendix 7 contains a discussion of certain considerations regarding the applicability of the proposed standards and the related amendments to the audits of EGCs and also includes specific questions for commenters.

## X. Opportunity for Public Comment

The Board is seeking comment on all aspects of the proposed standards and amendments as well as on the specific questions included in Appendices 5, 6, and 7. Among other things, the Board is seeking comment on economic considerations relating to the proposed standards and amendments, including potential costs. To assist the Board in evaluating such matters, the Board is requesting relevant information and empirical data, to the extent available to commenters, regarding the proposed standards and amendments. Commenters providing cost estimates are requested to provide the basis for any estimate provided. The Board is also requesting that commenters prepare, and forward to the Board for its consideration, examples of critical audit matters that could be communicated in the auditor's report under the proposed auditor reporting standard.[57/]

Written comments should be sent to the Office of the Secretary, PCAOB, 1666 K Street, N.W., Washington DC 20006-2803. Comments also may be submitted by email to comments@pcaobus.org or through the Board's website at: www.pcaobus.org. All comments should refer to the PCAOB Rulemaking Docket Matter No. 034 on the subject or reference line and should be received by the Board no later than 5:00 PM (EST) on December 11, 2013.

---

57/ Any such examples would be posted to the PCAOB Rulemaking Docket Matter No. 034 without edits or redactions.

The Board will consider all comments received. The Board is considering holding a public roundtable in 2014 to discuss the proposed standards and comments received. If the Board decides to hold a public roundtable, the Board will reopen the comment period related to the proposed standards and amendments.

Following the close of the comment period(s), the Board will determine whether to adopt final rules, with or without amendments. Any final rules adopted will be submitted to the SEC for approval. Pursuant to Section 107 of the Act, proposed rules of the Board do not take effect unless approved by the SEC. Standards are rules of the Board under the Act.

* * *

On the 13th day of August, in the year 2013, the foregoing was, in accordance with the bylaws of the Public Company Accounting Oversight Board,

ADOPTED BY THE BOARD.

/s/ Phoebe W. Brown

Phoebe W. Brown

Secretary

PCAOB
Public Company Accounting Oversight Board

## APPENDIX 1

## Proposed Auditing Standard

## *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*

## *Introduction*

1. This standard establishes requirements regarding the content of the auditor's written report when the auditor expresses an unqualified opinion on the financial statements[1/] (the "auditor's unqualified report").[2/]

2. The auditor is in a position to express an unqualified opinion on the financial statements when the auditor conducted an audit in accordance with the standards of the Public Company Accounting Oversight Board ("PCAOB") and concludes that the financial statements, taken as a whole, are presented fairly, in all material respects,[3/] in conformity with the applicable financial reporting framework.[4/]

---

[1/] This standard uses the term "financial statements" as used by the U.S. Securities and Exchange Commission ("SEC") to include all notes to the statements and all related schedules. See SEC Rule 1-01(b) of Regulation S-X, 17 C.F.R. § 210.1-01(b). This and other PCAOB standards often refer to the notes as disclosures; see, e.g., Auditing Standard No. 12, *Identifying and Assessing Risks of Material Misstatement*.

[2/] Paragraphs 85-98 and Appendix C, "Special Reporting Situations," of Auditing Standard No. 5, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*, address the form and content of the auditor's report when the auditor performs an audit of internal control over financial reporting.

[3/] AU sec. 411, *The Meaning of Present Fairly in Conformity with Generally Accepted Accounting Principles*, describes the basis for an auditor's responsibility for forming an opinion on whether the company's financial statements are presented fairly in conformity with the applicable financial reporting framework.

[4/] The auditor should look to the requirements of the SEC for the company under audit with respect to the accounting principles applicable to that company.

3. When the auditor conducts an audit of financial statements in accordance with the standards of the PCAOB, some circumstances require that the auditor express a qualified opinion, adverse opinion, or disclaimer of opinion on the financial statements. AU sec. 508, [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*, describes reporting requirements related to departures from unqualified opinions and other reporting circumstances.

## *Objectives*

4. The objectives of the auditor when the auditor concludes that an auditor's unqualified opinion is appropriate are to:

a. Issue a written report that expresses an unqualified opinion on the financial statements and describes the basis for that opinion; and

b. Communicate in the auditor's unqualified report **critical audit matters**[5/] relating to the audit of the financial statements or state that the auditor determined that there are no critical audit matters.

## *The Auditor's Unqualified Report*

5. The auditor's unqualified report includes:[6/]

a. The basic elements, as described in paragraph 6;

b. Communication of critical audit matters relating to the audit of the current period's financial statements, as described in paragraphs 7-14; and

c. Other explanatory language (or an explanatory paragraph), as appropriate in the circumstances, as described in paragraphs 15-16.

---

5/ This term, as defined in Appendix A, "Definitions," is set in **boldface type** the first time it appears.

6/ Appendix B provides an illustrative auditor's unqualified report.

## Basic Elements

6. The auditor must include the following basic elements in the auditor's report:[7/]

   a. The title, "Report of Independent Registered Public Accounting Firm";

   b. Addressees that include, but are not necessarily limited to, (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body;[8/]

   *Introduction*

   c. The name of the company whose financial statements were audited;

   d. A statement identifying each financial statement and related schedule, if applicable, that has been audited;[9/]

   e. The date of, or period covered by, each financial statement and related schedule, if applicable, identified in the report;

   f. A statement indicating that the financial statements, including the related notes and, if applicable, schedules, identified and collectively referred to in the report as the financial statements, were audited;

---

[7/] Laws, rules, and forms may contain requirements for auditor's reports of different types of companies. See, e.g., Investment Company Act § 30(g) and § 32(a)(4); SEC Rule 2-02 of Regulation S-X, 17 C.F.R. § 210.2-02; and Securities Exchange Act of 1934 ("Exchange Act") Rule 17a-5, 17 C.F.R. § 240.17a-5. Auditor reports on financial statements filed with the SEC are required to comply with all such applicable requirements.

[8/] For example, addressees might include other appropriate parties depending on the legal and governance structure of the company.

[9/] Various SEC rules and forms require that companies file schedules of information and that those schedules be audited if the company's financial statements are audited. See, e.g., SEC Rules 5-04, 6-10, 6A-05, and 7-05 of Regulation S-X, 17 C.F.R. §§ 210.5-04, 210.6-10, 210.6A-05, 210.7-05. See generally, SEC Rule 12-01 of Regulation S-X, 17 C.F.R. § 210.12-01, et seq., which address the form and content of certain SEC-required schedules.

g. A statement that the financial statements are the responsibility of the company's management;

h. A statement that the auditor is a public accounting firm registered with the PCAOB (United States) and is required to be independent with respect to the company in accordance with the United States federal securities laws and the applicable rules and regulations of the SEC and the PCAOB;[10/]

i. A statement containing the year the auditor began serving consecutively as the company's auditor;

> Note: For purposes of this subparagraph, references to the auditor include other firms that the auditor's firm has acquired or that have merged with the auditor's firm. If there is uncertainty as to the year the auditor began serving consecutively as the company's auditor, such as due to firm or company mergers, acquisitions, or changes in ownership structure, the auditor should state that the auditor is uncertain as to the year the auditor became the company's auditor and provide the earliest year of which the auditor has knowledge.

*Basis of Opinion*

j. A statement that the auditor's responsibility is to express an opinion on the financial statements based on the audit;

k. A statement that the audit was conducted in accordance with the standards of the PCAOB;

l. A statement that PCAOB standards require that the auditor plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud;

---

[10/] The term "United States federal securities laws" has the same meaning as "securities laws" as defined in PCAOB Rule 1001(s)(ii).

m. A statement that an audit includes:

(1) Performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks;

(2) Examining, on a test basis, appropriate evidence regarding the amounts and disclosures in the financial statements;

(3) Evaluating the accounting principles used and significant estimates made by management; and

(4) Evaluating the overall presentation of the financial statements;

n. A statement that the auditor believes that the audit provides a reasonable basis for the auditor's opinion;

*Opinion on the Financial Statements*

o. An opinion that the financial statements present fairly, in all material respects, the financial position of the company as of the balance sheet date and the results of its operations and its cash flows for the period then ended in conformity with the applicable financial reporting framework.[11/] The opinion should also include an identification of the applicable financial reporting framework;

*The Auditor's Responsibilities Regarding Other Information*

p. When other information is included in an annual report filed with the SEC under the Exchange Act that contains both the audited financial statements and the related auditor's report, a section titled "The Auditor's Responsibilities Regarding Other Information" that includes the reporting requirements of paragraphs 13 and 14 of Proposed Auditing Standard, *The Auditor's Responsibilities Regarding Other Information in Certain*

---

[11/] The terms used in the Opinion on the Financial Statements section, such as financial position, results of operations and cash flows, should be modified, as appropriate, depending on the type of company and required financial statements. If the financial statements include a separate statement of changes in stockholders' equity accounts, it should be identified in the Introduction section of the auditor's report. It need not be reported on separately in the opinion paragraph.

*Documents Containing Audited Financial Statements and the Related Auditor's Report*;[12/]

*Signature and Date*

q. The signature of the auditor's firm;[13/]

r. The city and state (or city and country, in the case of non-U.S. auditors) from which the auditor's report has been issued;[14/] and

s. The date of the auditor's report.[15/]

## Critical Audit Matters

*Determination of Critical Audit Matters*

7. The auditor must determine whether there are any critical audit matters in the audit of the current period's financial statements based on the results of the audit or evidence obtained.[16/]

Note: It is expected that in most audits, the auditor would determine that there are critical audit matters.

8. Critical audit matters ordinarily are matters of such importance that they are included in the matters required to be (1) documented in the engagement completion

---

12/ The Auditor's Responsibilities Regarding Other Information section follows the Opinion on the Financial Statements section, any explanatory paragraphs, and the Critical Audit Matters section.

13/ See SEC Rule 2-02(a) of Regulation S-X, 17 C.F.R. § 210.2-02(a).

14/ Id.

15/ See AU sec. 530, *Dating of the Independent Auditor's Report*.

16/ Auditing Standard No. 15, *Audit Evidence*, describes what constitutes evidence obtained in the audit and establishes requirements regarding designing and performing audit procedures to obtain sufficient appropriate audit evidence.

document;[17] (2) reviewed by the engagement quality reviewer;[18] (3) communicated to the audit committee;[19] or (4) any combination of the three.

9. Certain factors might affect whether a matter addressed during the audit of the financial statements (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming an opinion on the financial statements. In determining whether a matter is a critical audit matter, the auditor should take into account the following factors, as well as other factors specific to the audit:

a. The degree of subjectivity involved in determining or applying audit procedures to address the matter or in evaluating the results of those procedures;

b. The nature and extent of audit effort required to address the matter;

c. The nature and amount of available relevant and reliable evidence regarding the matter or the degree of difficulty in obtaining such evidence;

d. The severity of control deficiencies identified relevant to the matter, if any;[20]

e. The degree to which the results of audit procedures to address the matter resulted in changes in the auditor's risk assessments, including risks that were not identified previously, or required changes to planned audit procedures, if any;

---

[17] See Auditing Standard No. 3, *Audit Documentation*.

[18] See Auditing Standard No. 7, *Engagement Quality Review*.

[19] See Auditing Standard No. 16, *Communications with Audit Committees,* and other PCAOB standards.

[20] Other PCAOB standards provide auditing and reporting requirements related to the company's internal control over financial reporting. See Auditing Standard No. 5, Auditing Standard No. 12, and AU sec. 325, *Communications About Control Deficiencies in an Audit of Financial Statements.*

f. The nature and significance, quantitatively or qualitatively, of corrected and accumulated uncorrected misstatements related to the matter, if any;

g. The extent of specialized skill or knowledge needed to apply audit procedures to address the matter or evaluate the results of those procedures, if any; and

h. The nature of consultations outside the engagement team regarding the matter, if any.

*Communication of Critical Audit Matters*

10. The auditor must communicate in the auditor's report critical audit matters relating to the audit of the current period's financial statements or state that the auditor determined that there are no critical audit matters.

Note: When the current period financial statements are presented on a comparative basis with those of one or more prior periods, the auditor should consider communicating critical audit matters relating to the prior periods when (1) the prior period's financial statements are made public for the first time, such as in an initial public offering, or (2) issuing an auditor's report on the prior period's financial statements because the previously issued auditor's report could no longer be relied upon.

11. For each critical audit matter communicated in the auditor's report the auditor must:[21/]

a. Identify the critical audit matter;

b. Describe the considerations that led the auditor to determine that the matter is a critical audit matter; and

Note: For example, if the auditor identified the valuation of financial instruments with little, if any, market activity at the measurement date as a critical audit matter because the valuation involved the most difficult, subjective, or complex auditor judgments, then communication of that critical audit matter in the auditor's report must describe the considerations that led the auditor to determine that the

---

[21/] The Critical Audit Matters section follows the Opinion on the Financial Statements section and any explanatory paragraphs.

matter is a critical audit matter, which might relate to the high degree of measurement uncertainty or the significant judgments and estimates involved.

c. Refer to the relevant financial statement accounts and disclosures that relate to the critical audit matter, when applicable.

Note: Language that could be viewed as disclaiming, qualifying, restricting, or minimizing the auditor's responsibility for the critical audit matters or the auditor's opinion on the financial statements is not appropriate and may not be used.

*Language Preceding Critical Audit Matters in the Auditor's Report*

12. The following language, including the section title "Critical Audit Matters," should precede critical audit matters communicated in the auditor's report:

*Critical Audit Matters*

The standards of the PCAOB require that we communicate in our report critical audit matters relating to the audit of the current period's financial statements or state that we determined that there are no critical audit matters. Critical audit matters are those matters addressed during the audit that (1) involved our most difficult, subjective, or complex judgments; (2) posed the most difficulty to us in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to us in forming our opinion on the financial statements. The critical audit matters communicated below do not alter in any way our opinion on the financial statements, taken as a whole.

Note: If the auditor communicates critical audit matters for prior periods, the language preceding the critical audit matters should be modified to indicate the periods to which the critical audit matters relate.

13. In situations in which the auditor determines that there are no critical audit matters, the auditor should include the following language, including the section title "Critical Audit Matters," in the auditor's report:

*Critical Audit Matters*

The standards of the PCAOB require that we communicate in our report critical audit matters relating to the audit of the current period's financial statements or state that we determined that there are no critical audit matters. Critical audit matters are those matters addressed during the audit that (1) involved our most difficult, subjective, or complex judgments; (2) posed the most difficulty to us in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to us in forming our opinion on the financial statements. We determined that there are no critical audit matters.

*Documentation of Critical Audit Matters*

14. In accordance with Auditing Standard No. 3, the auditor must document the determination of critical audit matters. Auditing Standard No. 3 requires audit documentation to be prepared in such detail to provide a clear understanding of its purpose, source, and the conclusions reached.[22/] To provide sufficient detail for a clear understanding of the conclusions reached[23/] regarding the determination of critical audit matters, the audit documentation must contain sufficient information to enable an experienced auditor, having no previous connection with the engagement, to understand the basis for the auditor's determination that (1) each reported matter was a critical audit matter and (2) non-reported audit matters addressed in the audit that would appear to meet the definition of a critical audit matter were not critical audit matters.

> Note: For example, if an audit matter was included in the engagement completion document, reviewed by the engagement quality reviewer, communicated to the audit committee and, after considering the factors in paragraph 9, otherwise would appear to an experienced auditor having no previous connection to the engagement to meet the definition of a critical audit matter, then the auditor would document the basis for the determination that the matter was not a critical audit matter.

## Explanatory Language Added to the Auditor's Report

15. Other standards of the PCAOB require that, in certain circumstances, the auditor include explanatory language (or an explanatory paragraph) in the auditor's report.[24/] These circumstances include when:

---

[22/] See paragraph 4 of Auditing Standard No. 3.

[23/] Id.

[24/] An explanatory paragraph follows the Opinion on the Financial Statements section, unless otherwise required by other standards of the PCAOB.

PCAOB
Public Company Accounting Oversight Board

a. There is substantial doubt about the company's ability to continue as a going concern;[25/]

b. The auditor decides to refer to the report of other auditors as the basis, in part, for the auditor's own report;[26/]

c. There has been a change between periods in accounting principles or in the method of their application that has a material effect on the financial statements;[27/]

d. There has been a change in a reporting entity, unless the change in the reporting entity results from a transaction or event, such as the creation, cessation, or complete or partial purchase or disposition of a subsidiary or other business unit;[28/]

e. A material misstatement in previously issued financial statements has been corrected;[29/]

f. Certain circumstances relating to reports on comparative financial statements exist;[30/]

g. Selected quarterly financial data required by Item 302(a) of SEC Regulation S-K is not appropriately presented, has been omitted, or has not been reviewed;[31/]

---

[25/] See AU sec. 341, *The Auditor's Consideration of an Entity's Ability to Continue as a Going Concern*.

[26/] See paragraphs .06-.09 of AU sec. 543, *Part of Audit Performed by Other Independent Auditors*.

[27/] See paragraphs 8 and 12-15 of Auditing Standard No. 6, *Evaluating Consistency of Financial Statements* (as proposed to be amended by this standard).

[28/] See paragraph 6 of Auditing Standard No. 6.

[29/] See paragraphs 9 and 16-17 of Auditing Standard No. 6 (as proposed to be amended by this standard).

[30/] See AU secs. 508.68-.69 and .72-.74.

[31/] See paragraph .50 of AU sec. 722, *Interim Financial Information*.

PCAOB
Public Company Accounting Oversight Board

h. Supplementary information required by the applicable financial reporting framework has been omitted, the presentation of such information departs materially from the requirements of the applicable financial reporting framework, the auditor is unable to complete prescribed procedures with respect to such information, or the auditor is unable to remove substantial doubts about whether the supplementary information conforms to the requirements of the applicable financial reporting framework;[32/]

i. The auditor performs an integrated audit and issues separate reports on the company's financial statements and internal control over financial reporting;[33/] and

j. There has been a change in an investee year end that has a material effect on the company's financial statements.[34/]

16. The auditor may add an explanatory paragraph to emphasize a matter regarding the financial statements.[35/] This explanatory paragraph refers only to information presented or disclosed in the financial statements. The following are examples of matters, among others, that might be emphasized in the auditor's report:[36/]

a. Significant transactions with related parties;

---

[32/] See paragraphs .03 and .08 of AU sec. 558, *Required Supplementary Information*.

[33/] See paragraph 88 of Auditing Standard No. 5. Auditing Standard No. 5 provides additional circumstances in which the auditor includes an explanatory paragraph. If the combined report is issued, Auditing Standard No. 5 notes that the auditor should consider those circumstances as well.

[34/] See paragraph .32 of AU sec. 332, *Auditing Derivative Instruments, Hedging Activities, and Investments in Securities*.

[35/] These explanatory paragraphs follow the Opinion on the Financial Statements section in the auditor's report.

[36/] It is not appropriate for the auditor to use phrases such as "with the foregoing [following] explanation" when an explanatory paragraph to emphasize a matter regarding the financial statements is included in the auditor's report.

b. Unusually important subsequent events, such as a catastrophe that has had, or continues to have, a significant effect on the company's financial position;

c. Accounting matters, other than those involving a change or changes in accounting principles, affecting the comparability of the financial statements with those of the preceding period;

d. Retroactive application of the prospective change in accounting principle that will result in the restatement of the current year's financial statements in the future, and the effects of the prospective change are expected to be unusually material;

e. An uncertainty relating to the future outcome of significant litigation or regulatory actions; and

f. That the entity is a component of a larger business enterprise.

PCAOB
Public Company Accounting Oversight Board

## *APPENDIX A – Definition*

A1. For purposes of this standard, the term listed below is defined as follows:

A2. Critical audit matters – Those matters the auditor addressed during the audit of the financial statements that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming an opinion on the financial statements.

> Note: Use of the word "most" is not intended to imply that only one matter under each criteria would qualify as a critical audit matter. Depending on the facts and circumstances of the audit, there could be several critical audit matters. Also, an audit matter could meet one, two, or all three of the criteria in the definition.

Public Company Accounting Oversight Board

## *APPENDIX B – An Illustrative Auditor's Unqualified Report*

**[Changes from the current illustrative report are underlined]**

**Report of Independent Registered Public Accounting Firm**

To the shareholders and board of directors of X Company

[*Introduction*]

We have audited the accompanying balance sheets of X Company (the "Company") as of December 31, 20X2 and 20X1, the related statements of operations, stockholders' equity, and cash flows, for each of the three years in the period ended December 31, 20X2, and the related notes (collectively referred to as the "financial statements"). These financial statements are the responsibility of the Company's management.

We are a public accounting firm registered with the Public Company Accounting Oversight Board ("PCAOB") (United States) and are required to be independent with respect to the Company in accordance with the United States federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission ("SEC") and the PCAOB. We or our predecessor firms have served as the Company's auditor consecutively since [*year*].

[*Basis of Opinion*]

Our responsibility is to express an opinion on the Company's financial statements based on our audits. We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud.

Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures include examining, on a test basis, appropriate evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

[*Opinion on the Financial Statements*]

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of the Company as of [*at*] December 31, 20X2 and 20X1, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 20X2, in conformity with [*the applicable financial reporting framework*].

Critical Audit Matters

The standards of the PCAOB require that we communicate in our report critical audit matters relating to the audit of the current period's financial statements or state that we determined that there are no critical audit matters. Critical audit matters are those matters addressed during the audit that (1) involved our most difficult, subjective, or complex judgments; (2) posed the most difficulty to us in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to us in forming our opinion on the financial statements. The critical audit matters communicated below do not alter in any way our opinion on the financial statements, taken as a whole.

[*Include critical audit matters*]

The Auditor's Responsibilities Regarding Other Information

In addition to auditing the Company's financial statements in accordance with the standards of the PCAOB, we evaluated whether the other information, included in the annual report on [*SEC Exchange Act form type*] filed with the SEC that contains both the December 31, 20X2 financial statements and our audit report on those financial statements, contains a material inconsistency with the financial statements, a material misstatement of fact, or both. Our evaluation was based on relevant audit evidence obtained and conclusions reached during the audit. We did not audit the other information and do not express an opinion on the other information. Based on our evaluation, we have not identified a material inconsistency or a material misstatement of fact in the other information.

[*Signature*]

[*City and State or Country*]

[*Date*]

## APPENDIX 2

## Proposed Auditing Standard

## *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*

### *Introduction*

1. This standard establishes requirements regarding the auditor's responsibilities with respect to information, other than the audited financial statements[1/] and the related auditor's report, in a company's annual report that is filed with the SEC under the Securities Exchange Act of 1934 ("Exchange Act")[2/] and contains that company's audited financial statements and the related auditor's report (hereafter "other information").[3/]

---

[1/] This standard uses the term "financial statements" as used by the U.S. Securities and Exchange Commission ("SEC") to include all notes to the statements and all related schedules. See SEC Rule 1-01(b) of Regulation S-X, 17 C.F.R. § 210.1-01(b).

[2/] This standard does not apply to documents filed under the Securities Act of 1933 ("Securities Act"). When the audited financial statements and the related auditor's report are included in a registration statement under the Securities Act, the auditor has responsibilities under the federal securities laws and under AU sec. 711, *Filings Under Federal Securities Statutes*. This standard also does not modify the auditor's responsibilities under the federal securities laws or AU sec. 711. See, e.g., Section 10A(b) of the Exchange Act, 15 U.S.C. § 78j-1.

[3/] This standard does not apply to supplemental information addressed by Proposed Auditing Standard, *Auditing Supplemental Information Accompanying Audited Financial Statements*; required supplementary information addressed by AU sec. 558, *Required Supplementary Information*; and management's assertion on internal control over financial reporting in an integrated audit addressed by Auditing Standard No. 5, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*.

Note: For purposes of this standard, other information in an annual report[4/] that is filed with the SEC under the Exchange Act includes information, other than the audited financial statements and the related auditor's report, contained in the annual report and also includes (1) information incorporated by reference in that annual report that is available to the auditor prior to the issuance of the auditor's report and (2) when the annual report is a Form 10-K, information incorporated by reference from the company's definitive proxy statement filed within 120 days after the end of the fiscal year covered by the Form 10-K.[5/]

## *Objectives*

2. The objectives of the auditor are:

a. To evaluate whether the other information contains (1) a material inconsistency with amounts or information, or the manner of their presentation, in the audited financial statements ("material inconsistency");[6/] (2) a material misstatement of fact; or (3) both and, if so, to respond appropriately; and

b. When issuing an auditor's report, to communicate in the auditor's report the auditor's responsibilities for other information and whether, based on relevant audit evidence obtained and conclusions reached during the

---

4/ With respect to a company's amended annual report that contains the company's previously issued audited financial statements and the related auditor's report, the auditor would apply paragraphs 2-7 and 10-11 of this standard. When the company's amended annual report contains (1) revisions to amounts or disclosures in the previously issued audited financial statements and (2) a related auditor's report, the auditor would apply all paragraphs of this standard.

5/ With respect to other information that is incorporated by reference into an annual report on Form 10-K from a proxy statement that is filed subsequent to the issuance of the auditor's report, the auditor would apply paragraphs 2-7 and 10-11 of this standard.

6/ The requirements of this standard related to material inconsistency apply to a predecessor auditor in situations in which the predecessor auditor's report is included in an annual report containing other information.

audit, the other information contains a material inconsistency, a material misstatement of fact, or both.

## *Auditor's Responsibilities*

**Evaluating the Other Information**

3. The auditor must evaluate whether the other information contains (1) a material inconsistency; (2) a material misstatement of fact; or (3) both by performing the procedures in paragraph 4.

4. The auditor should read the other information and, based on relevant audit evidence obtained and conclusions reached during the audit, evaluate the:

a. Consistency of amounts in the other information, and the manner of their presentation, that are intended to be the same as, or to provide greater detail about, the amounts in the financial statements, with the amounts in the financial statements and relevant audit evidence;

b. Consistency of any qualitative statement in the other information, and the manner of its presentation, that is intended to represent or provide greater detail about information in the financial statements, with the financial statements and relevant audit evidence;

c. Other information not directly related to the financial statements as compared to relevant audit evidence obtained and conclusions reached during the audit; and

d. Amounts in the other information that are calculated using amounts in (1) the other information; (2) the financial statements; or (3) relevant audit evidence, by recalculating the amounts for mathematical accuracy.

Note: For example, the auditor would recalculate the amounts when the formula is described in the annual report, the formula is generally understood, or the recalculation can be performed without referring to a formula. Amounts, such as totals or percentages, that are calculated using simple mathematical operations, such as addition or division, ordinarily can be recalculated without referring to a formula.

5. If, based on the evaluation in paragraph 4, the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both, the auditor

should discuss the matter with management. The auditor also should perform additional procedures, as necessary, to determine whether there is a material inconsistency, a material misstatement of fact, or both.

**Responding When the Auditor Determines That the Other Information Contains a Material Inconsistency, a Material Misstatement of Fact, or Both**

6. If the auditor determines that the other information contains a material inconsistency, a material misstatement of fact, or both, the auditor should request management to revise the other information to address the material inconsistency, the material misstatement of fact, or both.

7. If management does not appropriately revise the other information and:

a. The other information is available to the auditor prior to the issuance of the auditor's report, the auditor should perform the applicable procedures in paragraphs 8 and 9.

b. The other information is not available to the auditor prior to the issuance of the auditor's report, the auditor should perform the applicable procedures in paragraphs 10 and 11.[7/]

*Responding When the Other Information Is Available Prior to the Issuance of the Auditor's Report*

8. If management does not appropriately revise the other information, the auditor should communicate the material inconsistency, the material misstatement of fact, or both to the audit committee in a timely manner and prior to the issuance of the auditor's report.

9. If the other information is not appropriately revised after the auditor has communicated the material inconsistency, the material misstatement of fact, or both to the audit committee, the auditor:

---

[7/] Information incorporated by reference into a Form 10-K from the company's definitive proxy statement, filed within 120 days after the end of the fiscal year covered by the Form 10-K, might not be available to the auditor prior to the issuance of the auditor's report. Additionally, other information included in an amended annual report that contains previously issued audited financial statements and the related auditor's report, would not be available to the auditor prior to the issuance of the auditor's report.

a. Must determine the auditor's responsibilities under Section 10A of the Exchange Act, 15 U.S.C. § 78j-1; AU sec. 316, *Consideration of Fraud in a Financial Statement Audit*; and AU sec. 317, *Illegal Acts by Clients*; and

b. Should determine whether to:

(1) Issue an auditor's report that states that the auditor has identified in the other information a material inconsistency, a material misstatement of fact, or both that has not been appropriately revised and describes the material inconsistency, the material misstatement of fact, or both; or

(2) Withdraw from the engagement.

Note: In addition, the auditor may withhold the use of the auditor's report for a prior reporting period.

*Responding When the Other Information Is Not Available Prior to the Issuance of the Auditor's Report*

10. If management does not appropriately revise the other information, the auditor should communicate the material inconsistency, the material misstatement of fact, or both to the audit committee in a timely manner.

11. If the other information is not appropriately revised after the auditor has communicated the material inconsistency, the material misstatement of fact, or both to the audit committee, the auditor:

a. Must determine the auditor's responsibilities under Section 10A of the Exchange Act, 15 U.S.C. § 78j-1; and

b. Should apply the procedures in AU sec. 561, *Subsequent Discovery of Facts Existing at the Date of the Auditor's Report.*

**Responding When the Auditor Determines That There Is a Potential Misstatement in the Audited Financial Statements**

12. If, as a result of procedures performed under this standard, the auditor determines that there is a potential misstatement in the audited financial statements, the auditor should refer to the requirements of:

a. Auditing Standard No. 14, *Evaluating Audit Results,* and AU sec. 508, [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*, if the auditor's report on the financial statements has not been issued; or

b. AU sec. 561 if the auditor's report on the financial statements has been issued.

## *Reporting in the Auditor's Report*

13. When issuing an auditor's report, the auditor must include, in a separate section of the auditor's report titled "The Auditor's Responsibilities Regarding Other Information,"[8/] the following:

a. A statement that, in addition to auditing the company's financial statements [and the internal control over financial reporting (if applicable)], in accordance with the standards of the Public Company Accounting Oversight Board ("PCAOB"), the auditor evaluated whether the other information contains a material inconsistency with the financial statements, a material misstatement of fact, or both;

b. Identification of the annual report that contains the other information, and the audited financial statements and the auditor's report, by referring to the SEC Exchange Act form type and the period end date of the financial statements;

c. A statement that the auditor's evaluation of the other information was based on relevant audit evidence obtained and conclusions reached during the audit;

---

[8/] This reporting requirement applies to an auditor's report other than a report to disclaim an opinion. See AU sec. 508.61.

d. A statement that the auditor did not audit the other information and does not express an opinion on the other information; and

e. A statement that, based on the evaluation, the auditor:

(1) Has not identified a material inconsistency or a material misstatement of fact in the other information;[9/] or

(2) Has identified a material inconsistency, a material misstatement of fact, or both in the other information that has not been appropriately revised and a description of the material inconsistency, the material misstatement of fact, or both.

14. The following is an example of "The Auditor's Responsibilities Regarding Other Information" section of the auditor's report:

a. Illustrative language for paragraphs 13.a.–d.:

*The Auditor's Responsibilities Regarding Other Information*

In addition to auditing the company's financial statements [and internal control over financial reporting (if applicable)], in accordance with the standards of the PCAOB, we evaluated whether the other information, included in the annual report on [*SEC Exchange Act form type*] filed with the SEC that contains both the [*period end date*] financial statements and our audit report on those financial statements, contains a material inconsistency with the financial statements, a material misstatement of fact, or both. Our evaluation was based on relevant audit evidence obtained and conclusions reached during the audit. We did not audit the other information and do not express an opinion on the other information.

b. Illustrative language for paragraph 13.e.(1) when the auditor has not identified a material inconsistency or a material misstatement of fact in the other information:

Based on our evaluation, we have not identified a material inconsistency or a material misstatement of fact in the other information.

[9/] This statement is appropriate in situations in which the auditor (1) has not identified a material inconsistency or a material misstatement of fact or (2) has identified a material inconsistency, a material misstatement of fact, or both that management has revised appropriately prior to the issuance of the auditor's report.

c. Illustrative language for paragraph 13.e.(2) when the auditor has identified a material inconsistency, a material misstatement of fact, or both in the other information:

Based on our evaluation, we identified [*a material inconsistency, a material misstatement of fact, or both*] in the other information that has not been appropriately revised. [*Describe the material inconsistency, the material misstatement of fact, or both.*] We have not identified [*a material inconsistency or material misstatement of fact* (this statement would indicate the situation that was not identified in the sentence above)] in the other information.[10/]

[10/] This sentence is appropriate only when the auditor has identified a material inconsistency or a material misstatement of fact, but not both. If the auditor identifies both a material inconsistency and a material misstatement of fact, the auditor's report should describe both the material inconsistency and the material misstatement of fact.

## APPENDIX 3

### *Proposed Amendments to PCAOB Standards Related to the Proposed Auditor Reporting Standard*

In connection with the proposed auditing standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the "proposed auditor reporting standard"), the Board is proposing amendments to several of its auditing standards to conform to the requirements of the proposed auditor reporting standard.[1/]

Language that would be deleted by the proposed amendments is ~~struck through~~. Language that would be added is <u>underlined</u>. The presentation of proposed amendments to PCAOB standards by showing deletions and additions to existing sentences and paragraphs is intended to assist readers in easily comprehending the Board's proposed changes to existing auditing standards and interpretations. The Board's proposed amendments consist of only the deletion or addition of the language that has been struck through or underlined. This presentation does not constitute or represent a reproposal of all or of any other part of a standard or interpretation that may be amended.

The proposed amendments would amend specific auditing standards to reflect changes to the auditor's unqualified report. Some of these auditing standards may need further updating, which the Board may consider under separate standard-setting projects. The proposed amendments in connection with the proposed auditor reporting standard would include:

---

[1/] PCAOB Release No. 2013-002, *Proposed Reorganization of PCAOB Auditing Standards* (March 26, 2013), PCAOB Release No. 2013-004, *Related Parties* (May 7, 2013), PCAOB Release No. 2011-005, *Auditing Supplemental Information Accompanying Audited Financial Statements* (July 12, 2011), and PCAOB Release No. 2011-007, *Improving Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards and Form 2* (October 11, 2011), include proposed amendments that would supersede, amend, or delete paragraphs for which amendments are included in this proposed auditor reporting standard. If, prior to the conclusion of this rulemaking, the Board has adopted amendments that affect the amendments proposed in this release, the Board may make conforming changes to this proposed auditor reporting standard.

- Changing the title of AU sec. 508 from "Reports on Audited Financial Statements" to [new proposed title] "Departures from Unqualified Opinions and Other Reporting Circumstances."

- Updating illustrative reports in AU sec. 508, [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances,* for the proposed basic elements of the proposed auditor reporting standard;

- Updating other reporting standards that result in the issuance of the auditor's report on the financial statement filed with the SEC for the proposed basic elements of the proposed auditor reporting standard;

- Updating references to "the auditor's standard report" and "introductory, scope, and opinion paragraphs" to reflect new terms referenced in the proposed auditor reporting standard;

- Updating Auditing Standards Nos. 7 and 16 and AU sec. 336 as a result of the new reporting requirement for critical audit matters in the auditor's report;

- Moving explanatory paragraph reporting examples from existing AU sec. 508 to the respective auditing standards that contain the related performance requirements for those circumstances; and

- Updating references to auditing standards that are being amended or superseded.

The Board is requesting comments on all aspects of the proposed amendments. Significant proposed amendments are described in more detail in Appendix 5 of this release.

## Auditing Standard No. 1, *References in Auditors' Reports to the Standards of the Public Company Accounting Oversight Board*

* * *

**~~APPENDIX~~**

**~~Illustrative Reports~~**

~~The following is an illustrative report on an audit of financial statements:~~

~~Report of Independent Registered Public Accounting Firm~~

~~We have audited the accompanying balance sheets of X Company as of December 31, 20X3 and 20X2, and the related statements of operations, stockholders' equity, and cash flows for each of the three years in the period ended December 31, 20X3. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.~~

~~We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.~~

~~In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of the Company as of [at] December 31, 20X3 and 20X2, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 20X3, in conformity with U.S. generally accepted accounting principles.~~

~~[ *Signature* ]~~

~~[ City and State or Country]~~

~~[ *Date* ]~~

~~The following is an illustrative report on a review of interim financial information:~~

~~Report of Independent Registered Public Accounting Firm~~

~~We have reviewed the accompanying [ *describe the interim financial information or statements reviewed* ] of X Company as of September 30, 20X3 and 20X2, and for the three-month and nine-month periods then ended. This (these) interim financial information (statements) is (are) the responsibility of the Company's management.~~

~~We conducted our review in accordance with the standards of the Public Company Accounting Oversight Board (United States). A review of interim financial information consists principally of applying analytical procedures and making inquiries of persons responsible for financial and accounting matters. It is substantially less in scope than~~

~~an audit conducted in accordance with the standards of the Public Company Accounting Oversight Board, the objective of which is the expression of an opinion regarding the financial statements taken as a whole. Accordingly, we do not express such an opinion.~~

~~Based on our review, we are not aware of any material modifications that should be made to the accompanying interim financial (statements) for it (them) to be in conformity with U.S. generally accepted accounting principles.~~

## Auditing Standard No. 5, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*

* * *

85. The auditor's report on the audit of internal control over financial reporting must include the following elements[18/]

a. ~~A~~ <u>The</u> title ~~that includes the word *independent*~~<u>, "Report of Independent Registered Public Accounting Firm";</u>

<u>a-1. Addressees that include, but are not necessarily limited to, (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body;[18A/]</u>

<u>[18A/] For example, addressees might include other appropriate parties depending on the legal and governance structure of the company.</u>

<u>a-2. The name of the company whose internal control over financial reporting was audited;</u>

<u>a-3. A statement that the auditor is a public accounting firm registered with the Public Company Accounting Oversight Board ("PCAOB") (United States) and is required to be independent with respect to the company in accordance with the United States federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB;</u>

a-4. A statement containing the year the auditor began serving consecutively as the company's auditor;

Note: For purposes of this subparagraph, references to the auditor include other firms that the auditor's firm has acquired or that have merged with the auditor's firm. If there is uncertainty as to the year the auditor began serving consecutively as the company's auditor, such as due to firm or company mergers, acquisitions, or changes in ownership structure, the auditor should state that the auditor is uncertain as to the year the auditor became the company's auditor and provide the earliest year of which the auditor has knowledge.

f. A statement that the audit was conducted in accordance with the standards of the PCAOB ~~Public Company Accounting Oversight Board (United States)~~;

* * *

87. The following example combined report expressing an unqualified opinion on financial statements and an unqualified opinion on internal control over financial reporting illustrates the report elements described in this section.

Report of Independent Registered Public Accounting Firm

To the shareholders and board of directors of W Company

[ ~~*Introductory paragraph*~~ *Introduction* ]

We have audited the accompanying balance sheets of W Company as of December 31, 20X8 and 20X7, and the related statements of income, stockholders' equity and comprehensive income, and cash flows for each of the years in the three-year period ended December 31, 20X8, and the related notes (collectively referred to as the "financial statements"). We also have audited W Company's internal control over financial reporting as of December 31, 20X8, based on [*Identify control criteria, for example, "criteria established in Internal Control - Integrated Framework: 2013 issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."*]. W Company's management is responsible for these financial statements, for maintaining effective internal control over financial reporting, and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying [title of management's report].

We are a public accounting firm registered with the Public Company Accounting Oversight Board ("PCAOB") (United States) and are required to be independent with respect to the Company in accordance with the United States federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission ("SEC") and the PCAOB. We or our predecessor firms have served as the Company's auditor consecutively since [ *year* ].

~~[ *Scope paragraph* ]~~ [ *Basis of Opinion* ]

Our responsibility is to express an opinion on ~~these~~ the Company's financial statements and an opinion on the company's internal control over financial reporting based on our audits. We conducted our audits in accordance with the standards of the PCAOB ~~Public Company Accounting Oversight Board (United States)~~. Those standards require that we plan and perform the audits to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud and whether effective internal control over financial reporting was maintained in all material respects.

Our audits of the financial statements included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures include examining, on a test basis, appropriate evidence ~~supporting~~ regarding the amounts and disclosures in the financial statements.~~,~~ Our audits also included evaluating ~~assessing~~ the accounting principles used and significant estimates made by management, ~~and~~ as well as evaluating the overall ~~financial statement~~ presentation of the financial statements. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audits also included performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinions.

[ *Definition* ~~*paragraph*~~ ]

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or

timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

[ *Inherent ~~limitations~~ Limitations ~~paragraph~~* ]

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

[ *Opinions on the Financial Statements and Internal Control Over Financial Reporting ~~paragraph~~* ]

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of W Company as of December 31, 20X8 and 20X7, and the results of its operations and its cash flows for each of the years in the three-year period ended December 31, 20X8 in conformity with accounting principles generally accepted in the United States of America. Also in our opinion, W Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 20X8, based on [ *Identify control criteria, for example, "criteria established in Internal Control - Integrated Framework: 2013 issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)."* ].

*Critical Audit Matters*

The standards of the PCAOB require that we communicate in our report critical audit matters relating to the audit of the current period's financial statements or state that we determined that there are no critical audit matters. Critical audit matters are those matters addressed during the audit that (1) involved our most difficult, subjective, or complex judgments; (2) posed the most difficulty to us in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to us in forming our opinion on the financial statements. The critical audit matters communicated below do not alter in any way our opinion on the financial statements, taken as a whole.

[*Include critical audit matters*]

*The Auditor's Responsibilities Regarding Other Information*

In addition to auditing the financial statements and the Company's internal control over financial reporting, in accordance with the standards of the PCAOB, we evaluated whether the other information, included in the annual report on [*SEC Exchange Act form type*] filed with the SEC that contains both the December 31, 20X8 financial statements and our audit report on those financial statements, contains a material inconsistency with the financial statements, a material misstatement of fact, or both. Our evaluation was based on relevant audit evidence obtained and conclusions reached during the audit. We did not audit the other information and do not express an opinion on the other information. Based on our evaluation, we have not identified a material inconsistency or a material misstatement of fact in the other information.

[ *Signature* ]

[ *City and State or Country* ]

[ *Date* ]

88. If the auditor chooses to issue a separate report on internal control over financial reporting, he or she should add the following paragraph (following the Opinion on the Financial Statements section) to the auditor's report on the financial statements -

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board ~~(United States)~~, W Company's internal control over financial reporting as of December 31, 20X8, based on [ *identify control criteria* ] and our report dated [ *date of report, which should be the same as the date of the report on the financial statements* ] expressed [ *include nature of opinion* ].

The auditor also should add the following paragraph (following the opinion) to the report on internal control over financial reporting -

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the [ *identify financial statements* ] of W Company and our report dated [ *date of report, which should be the same as the date of the report on the effectiveness of internal control over financial reporting* ] expressed [ *include nature of opinion* ].

* * *

B16. In situations in which the SEC allows management to limit its assessment of internal control over financial reporting by excluding certain entities, the auditor may limit the audit in the same manner. In these situations, the auditor's opinion would not be affected by a scope limitation. However, the auditor should include, either in an additional explanatory paragraph or as part of the ~~scope paragraph~~ Basis of Opinion section in his or her report, a disclosure similar to management's regarding the exclusion of an entity from the scope of both management's assessment and the auditor's audit of internal control over financial reporting. Additionally, the auditor should evaluate the reasonableness of management's conclusion that the situation meets the criteria of the SEC's allowed exclusion and the appropriateness of any required disclosure related to such a limitation. If the auditor believes that management's disclosure about the limitation requires modification, the auditor should follow the same communication responsibilities that are described in paragraphs .29 through .32 of AU sec. 722, *Interim Financial Information*. If management and the audit committee do not respond appropriately, in addition to fulfilling those responsibilities, the auditor should modify his or her report on the audit of internal control over financial reporting to include an explanatory paragraph describing the reasons why the auditor believes management's disclosure requires modification.

* * *

## Auditing Standard No. 6, *Evaluating Consistency of Financial Statements*

* * *

8. A change in accounting principle that has a material effect on the financial statements should be recognized in the auditor's report on the audited financial statements. If the auditor concludes that the criteria in paragraph 7 have been met, the auditor should add an explanatory paragraph to the auditor's report, as described in ~~AU sec. 508, *Reports on Audited Financial Statements*~~ proposed paragraphs 12-15 of this standard. If those criteria are not met, the auditor should treat this accounting change as a departure from generally accepted accounting principles and, if the effect of the change in accounting principle is material, issue a qualified or an adverse opinion ~~address the matter as described in AU sec. 508~~.[8A/]

> Note: If a company's financial statements contain an investment accounted for by the equity method, the auditor's evaluation of consistency should include consideration of the investee. If the investee makes a change in accounting principle that is material to the investing company's financial statements, the auditor should add an explanatory paragraph (following the ~~opinion paragraph~~ Opinion on the Financial Statements section) to the auditor's report, as described in ~~AU sec. 508~~paragraphs 12-15 of this standard.

[8A/] AU sec. 508, [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*, describes reporting requirements related to a qualified or an adverse opinion.

**Correction of a Material Misstatement in Previously Issued Financial Statements**

9. The correction of a material misstatement in previously issued financial statements should be recognized in the auditor's report on the audited financial statements through the addition of an explanatory paragraph, as described in ~~AU sec. 508~~paragraphs 16-17 of this standard.

10. The accounting pronouncements generally require certain disclosures relating to restatements to correct misstatements in previously issued financial statements. If the financial statement disclosures are not adequate, the auditor should address the inadequacy of disclosure as described in paragraph 31 of Auditing Standard No. 14, *Evaluating Audit Results,* and AU sec. 508, [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*.

**CHANGE IN CLASSIFICATION**

11. Changes in classification in previously issued financial statements do not require recognition in the auditor's report, unless the change represents the correction of a material misstatement or a change in accounting principle. Accordingly, the auditor should evaluate a material change in financial statement classification and the related disclosure to determine whether such a change also is a change in accounting principle or a correction of a material misstatement. For example, certain reclassifications in previously issued financial statements, such as reclassifications of debt from long-term to short-term or reclassifications of cash flows from the operating activities category to the financing activities category, might occur because those items were incorrectly classified in the previously issued financial statements. In such situations, the reclassification also is the correction of a misstatement. If the auditor determines that the reclassification is a change in accounting principle, he or she should address the matter as described in paragraphs 7,~~ and~~ 8, and ~~AU sec. 508~~12-15 of this standard. If the auditor determines that the reclassification is a correction of a material misstatement in previously issued financial statements, he or she should address the matter as described in paragraphs 9,~~ and~~ 10, and ~~AU sec. 508~~16-17 of this standard.

**REPORTING ON CONSISTENCY OF FINANCIAL STATEMENTS**

***Change in Accounting Principle***

12. A change in accounting principle that has a material effect on the financial statements should be recognized in the auditor's report on the audited financial statements through the addition of an explanatory paragraph following the Opinion on the Financial Statements section. The explanatory paragraph should include identification of the nature of the change and a reference to the note disclosure describing the change.

13. The following is an example of an explanatory paragraph for a change in accounting principle resulting from the adoption of a new accounting pronouncement:

> As discussed in Note X to the financial statements, the company has changed its method of accounting for [*describe accounting method changes*] in [*year(s) of financial statements that reflect the accounting method change*] due to the adoption of [*name of accounting pronouncement*].

14. The following is an example of an explanatory paragraph for a change in accounting principle other than a change due to the adoption of a new accounting pronouncement:

> As discussed in Note X to the financial statements, the company has elected to change its method of accounting for [*describe accounting method changes*] in [*year(s) of financial statements that reflect the accounting method change*].

15. The explanatory paragraph relating to a change in accounting principle should be included in reports on financial statements in the year of the change and in subsequent years until the new accounting principle is applied in all periods presented. If the new accounting change is accounted for by retrospective application to the financial statements of all prior periods presented, the additional paragraph is needed only in the year of the change.

***Correction of a Material Misstatement in Previously Issued Financial Statements***

16. Correction of a material misstatement in previously issued financial statements should be recognized in the auditor's report through the addition of an explanatory paragraph following the Opinion on the Financial Statements section.[10/] The explanatory paragraph should include (1) a statement that the previously issued financial statements have been restated for the correction of a misstatement in the respective period and (2) a reference to the note disclosure describing the correction of the misstatement. Following is an example of an appropriate explanatory paragraph when there has been a correction of a material misstatement in previously issued financial statements.

> As discussed in Note X to the financial statements, the 20X2 financial statements have been restated to correct a misstatement.

[10/] AU secs. 508.68-69 apply when comparative financial statements are presented and the opinion on the prior-period financial statements differs from the opinion previously expressed.

17. This type of explanatory paragraph in the auditor's report should be included in reports on financial statements when the related financial statements are restated to

correct the prior material misstatement. The paragraph need not be repeated in subsequent years.

## Auditing Standard No. 7, *Engagement Quality Review*

* * *

10. In an audit, the engagement quality reviewer should:

* * *

j. Based on the procedures required by this standard, evaluate whether appropriate critical audit matters are communicated in the auditor's report in accordance with Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*.

* * *

## Auditing Standard No. 14, *Evaluating Audit Results*

* * *

[7/] If the financial statements contain material misstatements, AU sec. 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*, indicates that the auditor should issue a qualified or an adverse opinion on the financial statements. AU sec. 508.35 discusses situations in which the financial statements are materially affected by a departure from the applicable financial reporting framework.

* * *

**APPENDIX B**

[1/] If the financial statements contain material misstatements, AU sec. 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*, indicates that the auditor should issue a qualified or an adverse opinion on the financial statements. AU sec. 508.35 discusses situations in which the financial statements are materially affected by a departure from the applicable financial reporting framework.

* * *

**APPENDIX C**

[2/] Denial of access to information might constitute a limitation on the scope of the audit that requires the auditor to qualify or disclaim an opinion. (See Auditing Standard No. 5, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements,* and AU sec. 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances.*)

## Auditing Standard No. 16, *Communications with Audit Committees*

* * *

**~~Departure from the Auditor's Standard Report~~ The Auditor's Report**

21. The auditor should ~~communicate~~ provide to and discuss with the audit committee ~~the following matters related to~~ a draft of the auditor's report~~:~~.

~~a. When the auditor expects to modify the opinion in the auditor's report, the reasons for the modification, and the wording of the report; and~~

b. ~~When the auditor expects to include explanatory language or an explanatory paragraph in the auditor's report, the reasons for the explanatory language or paragraph, and the wording of the explanatory language or paragraph.~~

* * *

[39/] See paragraphs .22-.32 of AU sec. 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances,* for a discussion of scope limitations.

* * *

## AU sec. 315, *Communications Between Predecessor and Successor Auditors*

* * *

[fn 9] See section 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*, paragraphs .70 through .74, for reporting guidance.

* * *

## AU sec. 317, *Illegal Acts by Clients*

* * *

fn 2 See section 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*.

* * *

## AU sec. 9326, *Evidential Matter: Auditing Interpretations of Section 326*

* * *

**.10** The third standard of field work requires the auditor to obtain sufficient appropriate evidential matter through, among other things, inspection and inquiries to afford a reasonable basis for an opinion on the financial statements. Paragraph 35 of Auditing Standard No. 14, *Evaluating Audit Results*, requires the auditor to obtain sufficient appropriate evidential matter about assertions in the financial statements of material significance or else to qualify or disclaim his or her opinion on the statements. Section 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*, paragraph .24, states that, "When restrictions that significantly limit the scope of the audit are imposed by the client, ordinarily the auditor should disclaim an opinion on the financial statements." Also, section 333 on *Management Representations* requires the auditor to obtain written representations from management. Section 333.06 states that specific representations should relate to the following matters, "availability of all financial records and related data," and section 333.08 states that a materiality limit does not apply to that representation. Section 333.13 states that "management's refusal to furnish a written representation" constitutes a limitation on the scope of the audit sufficient to preclude an unqualified opinion.

* * *

## AU sec. 332, *Auditing Derivative Instruments, Hedging Activities, and Investments in Securities*

* * *

fn 15 See ~~section 508, *Reports on Audited Financial Statements*, paragraphs .16–.18.~~ Auditing Standard No. 6, *Evaluating Consistency of Financial Statements.*

* * *

## AU sec. 333, *Management Representations*

* * *

fn 15 See section 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*, paragraph .71. [Footnote renumbered by the issuance of Statement on Auditing Standards No. 89, December 1999.]

* * *

## AU sec. 336, *Using the Work of a Specialist*

* * *

**.13** If the auditor determines that the specialist's findings support the related assertions in the financial statements, he or she reasonably may conclude that sufficient appropriate evidential matter has been obtained. If there is a material difference between the specialist's findings and the assertions in the financial statements, he or she should apply additional procedures. If after applying any additional procedures that might be appropriate the auditor is unable to resolve the matter, the auditor should obtain the opinion of another specialist, unless it appears to the auditor that the matter cannot be resolved. A matter that has not been resolved ordinarily will cause the auditor to conclude that he or she should qualify the opinion or disclaim an opinion because the inability to obtain sufficient appropriate evidential matter as to an assertion of material significance in the financial statements constitutes a scope limitation. (See section 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*, paragraphs .22 and .23.)

* * *

**.15** Except as discussed in paragraphs .16 and .16A, the auditor should not refer to the work or findings of the specialist. Such a reference might be misunderstood to be a qualification of the auditor's opinion or a division of responsibility, neither of which is intended. Further, there may be an inference that the auditor making such reference performed a more thorough audit than an auditor not making such reference.

**.16** The auditor may, as a result of the report or findings of the specialist, decide to add explanatory language to ~~his or her standard~~ the auditor's unqualified report or depart from an unqualified opinion. Reference to and identification of the specialist may be made in the auditor's report if the auditor believes such reference will facilitate an understanding of the reason for the explanatory paragraph or the departure from the unqualified opinion.

**.16A** Reference to the use of a specialist also may be made in the auditor's report in connection with the auditor's communication of critical audit matters, if the auditor believes such reference will facilitate an understanding of the audit matter or the considerations that led the auditor to determine that the audit matter is a critical audit matter.[fn 7]

[fn 7] Critical audit matters are described in paragraphs 7-13 of the Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*.

## AU sec. 9336, *Using the Work of a Specialist: Auditing Interpretations of Section 336*

* * *

**.21** *Interpretation*—When other relevant evidential matter exists, the auditor should consider it before reaching a conclusion about the appropriateness of management's accounting for a transfer. [fn 14] However, since the isolation aspect of surrender of control is assessed primarily from a legal perspective, the auditor usually will not be able to obtain persuasive evidence in a form other than a legal opinion. In the absence of persuasive evidence that a transfer has met the isolation criterion, derecognition of the transferred assets is not in conformity with generally accepted accounting principles and the auditor should consider the need to express a qualified or adverse opinion in accordance with section 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*, paragraphs .35 through .60. However, if permission for the auditor to use a legal opinion that he or she deems otherwise adequate is not granted, this would be a scope limitation and the auditor should consider the need to express a qualified opinion or to disclaim an opinion in accordance with section 508.22–.26 and 508.61–.63.

* * *

## AU sec. 341, *The Auditor's Consideration of an Entity's Ability to Continue as a Going Concern*

* * *

**.03** The auditor should evaluate whether there is substantial doubt about the entity's ability to continue as a going concern for a reasonable period of time in the following manner:

* * *

c. After the auditor has evaluated management's plans, he concludes whether he has substantial doubt about the entity's ability to continue as a going concern for a reasonable period of time. If the auditor concludes there is substantial doubt, he should (1) consider the adequacy of disclosure about the entity's possible inability to continue as a going concern for a reasonable period of time, and (2) include an explanatory paragraph (following the ~~opinion paragraph~~ Opinion on the Financial Statements section) in his audit report to reflect his conclusion. If the auditor concludes that substantial doubt does not exist, he should consider the need for disclosure.

* * *

**.12** If, after considering identified conditions and events and management's plans, the auditor concludes that substantial doubt about the entity's ability to continue as a going concern for a reasonable period of time remains, the audit report should include an explanatory paragraph (following the ~~opinion paragraph~~ Opinion on the Financial Statements section) to reflect that conclusion. [fn 4] The auditor's conclusion about the entity's ability to continue as a going concern should be expressed through the use of the phrase "substantial doubt about its (the entity's) ability to continue as a going concern" [or similar wording that includes the terms substantial doubt *and* going concern] as illustrated in paragraph .13. [As amended, effective for reports issued after December 31, 1990, by Statement on Auditing Standards No. 64.]

**fn 4** The inclusion of an explanatory paragraph (following the ~~opinion paragraph~~ Opinion on the Financial Statements section) in the auditor's report contemplated by this section should serve adequately to inform the users of the financial statements. Nothing in this section, however, is intended to preclude an auditor from declining to express an opinion in cases involving uncertainties. If he disclaims an opinion, the uncertainties and their possible effects on the financial statements should be disclosed in an appropriate manner (see paragraph .10), and the auditor's report should give all the substantive reasons for his disclaimer of opinion (see section 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*, paragraphs .61-.63).

**.13** An example follows of an explanatory paragraph (following the ~~opinion paragraph~~ Opinion on the Financial Statements section) in the auditor's report describing an uncertainty about the entity's ability to continue as a going concern for a reasonable period of time. [fn 5]

The accompanying financial statements have been prepared assuming that the Company will continue as a going concern. As discussed in Note X to the financial statements, the Company has suffered recurring losses from operations and has a net capital deficiency that raise substantial doubt about its ability to continue as a going concern. Management's plans in regard to these matters are also described in Note X. The financial statements do not include any adjustments that might result from the outcome of this uncertainty.

[As amended, effective for reports issued after December 31, 1990, by Statement on Auditing Standards No. 64.]

**.14** If the auditor concludes that the entity's disclosures with respect to the entity's ability to continue as a going concern for a reasonable period of time are inadequate, a departure from generally accepted accounting principles exists. This may result in either a qualified (except for) or an adverse opinion. Reporting guidance for such situations is provided in section 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*.

* * *

**.16** If substantial doubt about the entity's ability to continue as a going concern for a reasonable period of time existed at the date of prior period financial statements that are presented on a comparative basis, and that doubt has been removed in the current period, the explanatory paragraph included in the auditor's report (following the ~~opinion paragraph~~ Opinion on the Financial Statements section) on the financial statements of the prior period should not be repeated.

* * *

## AU sec. 9342, *Auditing Accounting Estimates: Auditing Interpretations of Section 342*

* * *

**.03** *Required Information Presented*—When an entity discloses in its basic financial statements only information required by FASB Statement No. 107, the auditor may issue an ~~standard~~ unqualified opinion (assuming no other report modifications are necessary). The auditor may add an ~~emphasis-of-matter~~ explanatory paragraph describing the nature and possible range of such fair value information especially when management's best estimate of value is used in the absence of quoted market values (FASB Statement No. 107, paragraph 11 [AC section F25.115D]) and the range of possible values is significant (see paragraph 16 of Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*). If the entity has not disclosed required fair value information, the auditor should evaluate whether the financial statements are materially affected by the departure from generally accepted accounting principles.

* * *

## AU sec. 9410, *Adherence to Generally Accepted Accounting Principles: Auditing Interpretations of Section 410*

* * *

**.15** Section 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*, paragraph .41 states: "Information essential for a fair presentation in conformity with generally accepted accounting principles should be set forth in the financial statements (which include related notes)." For financial statements that are prepared on the basis of accounting principles that are acceptable at the financial-statement date but that will not be acceptable in the future, the auditor should consider whether disclosure of the impending change in principle and the resulting restatement are essential data. If he decides that the matter should be disclosed and it is not, the auditor should express a qualified or adverse opinion as to conformity with GAAP, as required by section 508.41.

* * *

**.18** Even if the auditor decides that the disclosure of the forthcoming change and its effects are adequate and, consequently, decides not to qualify his opinion, he nevertheless may decide to include an explanatory paragraph in his report if the effects of the change are expected to be unusually material. The explanatory paragraph should not be construed as a qualification of the auditor's opinion; it is intended to highlight circumstances of particular importance and to aid in interpreting the financial statements (see ~~section 508.19~~paragraph 16 of Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*).

* * *

## AU sec. 411, *The Meaning of Present Fairly in Conformity With Generally Accepted Accounting Principles*

**.01** An independent auditor's report contains an opinion as to whether the financial statements present fairly, in all material respects, an entity's financial position, results of operations, and cash flows in conformity with generally accepted accounting principles. An identification of the country of origin of those generally accepted accounting principles also is required (see ~~section 508.08h~~paragraph 6.o. of Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*).

The purpose of this section is to explain the meaning of "present fairly" as used in the phrase "present fairly . . . in conformity with generally accepted accounting principles." In applying this section, the auditor should look to the requirements of the Securities and Exchange Commission for the company under audit with respect to the accounting principles applicable to that company.

* * *

## AU sec. 504, *Association With Financial Statements*

* * *

**.04** An accountant may be associated with audited or unaudited financial statements. Financial statements are audited if the accountant has applied auditing procedures sufficient to permit him to report on them as described in Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion,* and AU sec.~~tion~~ 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*. The unaudited interim financial statements (or financial information) of a public entity are reviewed when the accountant has applied procedures sufficient to permit him to report on them as described in section 722, *Interim Financial Information*.

* * *

## AU sec. 508, ~~Reports on Audited Financial Statements~~ ~~[fn *]~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*

~~[fn *] This section has been revised to reflect the conforming changes necessary due to the issuance of Statement on Auditing Standards No. 93.~~

**INTRODUCTION**

~~**.01** This section applies to auditors' reports issued in connection with audits [fn 1] of historical financial statements that are intended to present financial position, results of operations, and cash flows in conformity with generally accepted accounting principles. It distinguishes the types of reports, describes the circumstances in which each is appropriate, and provides example reports.~~

~~Note: When performing an integrated audit of financial statements and internal control over financial reporting, the auditor may choose to issue a combined report or separate reports on the company's financial statements and on internal control over financial reporting. Refer to paragraphs 85-98 of PCAOB Auditing Standard No. 5, *An Audit of*~~

~~*Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*, and Appendix C, *Special Reporting Situations*, of PCAOB Auditing Standard No. 5, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*, for direction on reporting on internal control over financial reporting. In addition, see paragraphs 86-88 of PCAOB Auditing Standard No. 5, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*, which includes an illustrative combined audit report.~~

~~fn 1 An audit, for purposes of this section, is defined as an examination of historical financial statements performed in accordance with generally accepted auditing standards in effect at the time the audit is performed. Generally accepted auditing standards include the ten standards as well as the Statements on Auditing Standards that interpret those standards. In some cases, regulatory authorities may have additional requirements applicable to entities under their jurisdiction and auditors of such entities should consider those requirements.~~

~~**.02** This section does not apply to unaudited financial statements as described in section 504, *Association With Financial Statements*, nor does it apply to reports on incomplete financial information or other special presentations as described in section 623, *Special Reports*.~~

~~**.03** Justification for the expression of the auditor's opinion rests on the conformity of his or her audit with generally accepted auditing standards and on the findings. Generally accepted auditing standards include four standards of reporting. This section is concerned primarily with the relationship of the fourth reporting standard to the language of the auditor's report.~~

~~**.04** The fourth standard of reporting is as follows:~~

~~The report shall either contain an expression of opinion regarding the financial statements, taken as a whole, or an assertion to the effect that an opinion cannot be expressed. When an overall opinion cannot be expressed, the reasons therefor should be stated. In all cases where an auditor's name is associated with financial statements, the report should contain a clear-cut indication of the character of the auditor's work, if any, and the degree of responsibility the auditor is taking.~~

~~**.05** The objective of the fourth standard is to prevent misinterpretation of the degree of responsibility the auditor is assuming when his or her name is associated with financial statements. Reference in the fourth reporting standard to the financial statements "taken as a whole" applies equally to a complete set of financial statements and to an individual financial statement (for example, to a balance sheet) for one or more periods presented. (Paragraph .65 discusses the fourth standard of reporting as it applies to comparative financial statements.) The auditor may express an unqualified opinion on~~

~~one of the financial statements and express a qualified or adverse opinion or disclaim an opinion on another if the circumstances warrant.~~

~~**.06** The auditor's report is customarily issued in connection with an entity's basic financial statements—balance sheet, statement of income, statement of retained earnings and statement of cash flows. Each financial statement audited should be specifically identified in the introductory paragraph of the auditor's report. If the basic financial statements include a separate statement of changes in stockholders' equity accounts, it should be identified in the introductory paragraph of the report but need not be reported on separately in the opinion paragraph since such changes are part of the presentation of financial position, results of operations, and cash flows.~~

~~**THE AUDITOR'S STANDARD REPORT**~~

~~**.07** The auditor's standard report states that the financial statements present fairly, in all material respects, an entity's financial position, results of operations, and cash flows in conformity with generally accepted accounting principles. This conclusion may be expressed only when the auditor has formed such an opinion on the basis of an audit performed in accordance with generally accepted auditing standards.~~

~~**.08** The auditor's standard report identifies the financial statements audited in an opening (introductory) paragraph, describes the nature of an audit in a scope paragraph, and expresses the auditor's opinion in a separate opinion paragraph. The basic elements of the report are the following:~~

~~*a.* A title that includes the word *independent*~~ ~~[fn 3]~~

~~*b.* A statement that the financial statements identified in the report were audited~~

~~*c.* A statement that the financial statements are the responsibility of the Company's management~~ ~~[fn 4]~~ ~~and that the auditor's responsibility is to express an opinion on the financial statements based on his or her audit~~

~~*d.* A statement that the audit was conducted in accordance with generally accepted auditing standards and an identification of the United States of America as the country of origin of those standards (for example, auditing standards generally accepted in the United States of America or U.S. generally accepted auditing standards)~~

~~*e.* A statement that those standards require that the auditor plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement~~

~~f. A statement that an audit includes—~~

~~(1) Examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements~~

~~(2) Assessing the accounting principles used and significant estimates made by management~~

~~(3) Evaluating the overall financial statement presentation~~ ~~[fn 5]~~

~~*g.* A statement that the auditor believes that his or her audit provides a reasonable basis for his or her opinion~~

~~*h.* An opinion as to whether the financial statements present fairly, in all material respects, the financial position of the Company as of the balance sheet date and the results of its operations and its cash flows for the period then ended in conformity with generally accepted accounting principles. The opinion should include an identification of the United States of America as the country of origin of those accounting principles (for example, accounting principles generally accepted in the United States of America or U.S. generally accepted accounting principles~~ ~~[fn 6]~~ ~~)~~

~~*i.* The manual or printed signature of the auditor's firm~~

~~j. The date~~ ~~[fn 7]~~ ~~of the audit report~~

~~The form of the auditor's standard report on financial statements covering a single year is as follows:~~

~~Independent Auditor's Report~~

~~We have audited the accompanying balance sheet of X Company as of December 31, 20XX, and the related statements of income, retained earnings, and cash flows for the year then ended. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audit.~~

~~We conducted our audit in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence~~

~~supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.~~

~~In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of X Company as of [at] December 31, 20XX, and the results of its operations and its cash flows for the year then ended in conformity with accounting principles generally accepted in the United States of America.~~

~~[*Signature*]~~

~~[*Date*]~~

~~The form of the auditor's standard report on comparative financial statements [fn 8] is as follows:~~

~~Independent Auditor's Report~~

~~We have audited the accompanying balance sheets of X Company as of December 31, 20X2 and 20X1, and the related statements of income, retained earnings, and cash flows for the years then ended. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.~~

~~We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.~~

~~In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of X Company as of [at] December 31, 20X2 and 20X1, and the results of its operations and its cash flows for the years then ended in conformity with accounting principles generally accepted in the United States of America.~~

~~[*Signature*]~~

~~[*Date*]~~

~~*k.* When performing an integrated audit of financial statements and internal control over financial reporting, if the auditor issues separate reports on the company's financial statements and on internal control over financial reporting, the following paragraph should be added to the auditor's report on the company's financial statements:~~

~~We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the effectiveness of X Company's internal control over financial reporting as of December 31, 20X3, based on [identify control criteria] and our report dated [date of report, which should be the same as the date of the report on the financial statements] expressed [include nature of opinions].~~

~~**fn 3** This section does not require a title for an auditor's report if the auditor is not independent. See section 504, *Association With Financial Statements*, for guidance on reporting when the auditor is not independent.~~

~~**fn 4** In some instances, a document containing the auditor's report may include a statement by management regarding its responsibility for the presentation of the financial statements. Nevertheless, the auditor's report should state that the financial statements are management's responsibility.~~

~~**fn 5** Section 411, *The Meaning of* Present Fairly in Conformity With Generally Accepted Accounting Principles, paragraphs .03 and .04, discuss the auditor's evaluation of the overall presentation of the financial statements. [As amended, effective for reports issued or reissued on or after June 30, 2001, by Statement on Auditing Standards No. 93.]~~

~~**fn 6** A U.S. auditor also may be engaged to report on the financial statements of a U.S. entity that have been prepared in conformity with accounting principles generally accepted in another country. In those circumstances, the auditor should refer to the guidance in section 534, *Reporting on Financial Statements Prepared for Use in Other Countries.* [Footnote added, effective for reports issued or reissued on or after June 30, 2001 by Statement on Auditing Standards No. 93.]~~

~~**fn 7** For guidance on dating the auditor's report, see section 530, *Dating of the Independent Auditor's Report*. [Footnote renumbered by the issuance of Statement on Auditing Standards No. 93, October 2000.]~~

~~**fn 8** If statements of income, retained earnings, and cash flows are presented on a comparative basis for one or more prior periods, but the balance sheet(s) as of the end of one (or more) of the prior period(s) is not presented, the phrase "for the years then ended" should be changed to indicate that the auditor's opinion applies to each period for which statements of income, retained earnings, and cash flows are presented, such~~

~~as "for each of the three years in the period ended [date of latest balance sheet]." [Footnote renumbered by the issuance of Statement on Auditing Standards No. 93, October 2000.]~~

~~**.09** The report may be addressed to the company whose financial statements are being audited or to its board of directors or stockholders. A report on the financial statements of an unincorporated entity should be addressed as circumstances dictate, for example, to the partners, to the general partner, or to the proprietor. Occasionally, an auditor is retained to audit the financial statements of a company that is not a client; in such a case, the report is customarily addressed to the client and not to the directors or stockholders of the company whose financial statements are being audited.~~

**.10** This section ~~also~~ discusses the circumstances that may require the auditor to depart from the ~~standard~~ auditor's unqualified report[fn8A] and provides reporting guidance in such circumstances. This section is organized by type of opinion that the auditor may express in each of the various circumstances presented; this section describes what is meant by the various audit opinions:

- ~~*Unqualified opinion*. An unqualified opinion states that the financial statements present fairly, in all material respects, the financial position, results of operations, and cash flows of the entity in conformity with generally accepted accounting principles. This is the opinion expressed in the standard report discussed in paragraph .08.~~

- ~~*Explanatory language added to the auditor's standard report*. Certain circumstances, while not affecting the auditor's unqualified opinion on the financial statements, may require that the auditor add an explanatory paragraph (or other explanatory language) to his or her report.~~

- *Qualified opinion*. A qualified opinion states that, except for the effects of the matter(s) to which the qualification relates, the financial statements present fairly, in all material respects, the financial position, results of operations, and cash flows of the entity in conformity with generally accepted accounting principles.

- *Adverse opinion*. An adverse opinion states that the financial statements do not present fairly the financial position, results of operations, or cash flows of the entity in conformity with generally accepted accounting principles.

- *Disclaimer of opinion.* A disclaimer of opinion states that the auditor does not express an opinion on the financial statements.

~~These opinions are discussed in greater detail throughout the remainder of this~~ This section also discusses other reporting circumstances such as reports on comparative financial statements.

[fn8A] The Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion,* establishes requirements for the auditor regarding the content of the auditor's written report when the auditor expresses an unqualified opinion on the financial statements (the "auditor's unqualified report"). Paragraphs 85-89 and Appendix C of Auditing Standard No. 5, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*, address the form and content of the auditor's report when the auditor performs an audit of internal control over financial reporting.

~~**EXPLANATORY LANGUAGE ADDED TO THE AUDITOR'S STANDARD REPORT**~~

~~**.11** Certain circumstances, while not affecting the auditor's unqualified opinion, may require that the auditor add an explanatory [fn 9] paragraph (or other explanatory language) to the standard report. [fn 10] These circumstances include:~~

~~a. The auditor's opinion is based in part on the report of another auditor (paragraphs .12 and .13).~~

~~*b.* There is substantial doubt about the entity's ability to continue as a going concern. [fn 11]~~

~~*c.* There has been a material change between periods in accounting principles or in the method of their application (paragraphs .17A through .17E).~~

~~*d.* A material misstatement in previously issued financial statements has been corrected (paragraphs .18A through .18C).~~

~~*e.* Certain circumstances relating to reports on comparative financial statements exist (paragraphs .68, .69, and .72 through .74).~~

~~*f.* Selected quarterly financial data required by SEC Regulation S-K has been omitted or has not been reviewed. (See section 722, *Interim Financial Information*, paragraph .50.)~~

~~*g.* Supplementary information required by the Financial Accounting Standards Board (FASB), the Governmental Accounting Standards Board (GASB), or the Federal Accounting Standards Advisory Board (FASAB) has been omitted, the presentation of such information departs materially from FASB, GASB, or FASAB guidelines, the auditor is unable to complete prescribed procedures with respect~~

~~to such information, or the auditor is unable to remove substantial doubts about whether the supplementary information conforms to FASB, GASB, or FASAB guidelines. (See section 558, *Required Supplementary Information*, paragraph .02.)~~

~~*h.* Other information in a document containing audited financial statements is materially inconsistent with information appearing in the financial statements. (See section 550, *Other Information in Documents Containing Audited Financial Statements*, paragraph .04.)~~

~~In addition, the auditor may add an explanatory paragraph to emphasize a matter regarding the financial statements (paragraph .19). [As amended, effective for reports issued or reissued on or after February 29, 1996, by Statement on Auditing Standards No. 79. Revised, November 2002, to reflect conforming changes necessary due to the issuance of Statement on Auditing Standards No. 100.]~~

~~**fn 9** Unless otherwise required by the provisions of this section, an explanatory paragraph may precede or follow the opinion paragraph in the auditor's report. [Footnote renumbered by the issuance of Statement on Auditing Standards No. 93, October 2000.]~~

~~**fn 10** See footnote 3. [Footnote renumbered by the issuance of Statement on Auditing Standards No. 93, October 2000.]~~

~~**fn 11** Section 341, *The Auditor's Consideration of an Entity's Ability to Continue as a Going Concern*, describes the auditor's responsibility to evaluate whether there is substantial doubt about the entity's ability to continue as a going concern for a reasonable period of time and, when applicable, to consider the adequacy of financial statement disclosure and to include an explanatory paragraph in the report to reflect his or her conclusions. [Footnote renumbered by the issuance of Statement on Auditing Standards No. 93, October 2000.]~~

**~~Opinion Based in Part on Report of Another Auditor~~**

~~**.12** When the auditor decides to make reference to the report of another auditor as a basis, in part, for his or her opinion, he or she should disclose this fact in the introductory paragraph of his or her report and should refer to the report of the other auditor in expressing his or her opinion. These references indicate division of responsibility for performance of the audit. (See section 543, *Part of Audit Performed by Other Independent Auditors*.)~~

~~**.13** An example of a report indicating a division of responsibility follows:~~

~~Independent Auditor's Report~~

~~We have audited the consolidated balance sheets of ABC Company and subsidiaries as of December 31, 20X2 and 20X1, and the related consolidated statements of income, retained earnings, and cash flows for the years then ended. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits. We did not audit the financial statements of B Company, a wholly-owned subsidiary, which statements reflect total assets of $_______ and $________ as of December 31, 20X2 and 20X1, respectively, and total revenues of $_______ and $_______ for the years then ended. Those statements were audited by other auditors whose report has been furnished to us, and our opinion, insofar as it relates to the amounts included for B Company, is based solely on the report of the other auditors.~~

~~We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits and the report of other auditors provide a reasonable basis for our opinion.~~

~~In our opinion, based on our audits and the report of other auditors, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of ABC Company and subsidiaries as of December 31, 20X2 and 20X1, and the results of their operations and their cash flows for the years then ended in conformity with accounting principles generally accepted in the United States of America.~~

*** * ***

~~**Lack of Consistency**~~

~~**.16** The auditor should recognize the following matters relating to the consistency of the company's financial statements in the auditor's report if those matters have a material effect on the financial statements:~~

~~*a.* A change in accounting principle.~~

~~*b.* An adjustment to correct a misstatement in previously issued financial statements.~~

~~**Change in Accounting Principle**~~

~~**.17A** As discussed in PCAOB Auditing Standard No. 6, *Evaluating Consistency of Financial Statements*, the auditor should evaluate a change in accounting principle to determine whether (1) the newly adopted accounting principle is a generally accepted accounting principle, (2) the method of accounting for the effect of the change is in conformity with generally accepted accounting principles, (3) the disclosures related to the accounting change are adequate, and (4) the company has justified that the alternative accounting principle is preferable.[fn 12] A change in accounting principle that has a material effect on the financial statements should be recognized in the auditor's report on the audited financial statements through the addition of an explanatory paragraph following the opinion paragraph. If the auditor concludes that the criteria in this paragraph have been met, the explanatory paragraph in the auditor's report should include identification of the nature of the change and a reference to the note disclosure describing the change.~~

~~[fn 12] The issuance of an accounting pronouncement that requires use of a new accounting principle, interprets an existing principle, expresses a preference for an accounting principle, or rejects a specific principle is sufficient justification for a change in accounting principle, as long as the change in accounting principle is made in accordance with the hierarchy of generally accepted accounting principles. See FASB Statement 154, paragraph 14.~~

~~**.17B** Following is an example of an explanatory paragraph for a change in accounting principle resulting from the adoption of a new accounting pronouncement:~~

~~As discussed in Note X to the financial statements, the company has changed its method of accounting for [*describe accounting method change*] in [*year(s) of financial statements that reflect the accounting method change*] due to the adoption of [*name of accounting pronouncement*].~~

~~**.17C** Following is an example of an explanatory paragraph when the company has made a change in accounting principle other than a change due to the adoption of a new accounting pronouncement:~~

~~As discussed in Note X to the financial statements, the company has elected to change its method of accounting for [*describe accounting method change*] in [*year(s) of financial statements that reflect the accounting method change*].~~

~~**.17D** The explanatory paragraph relating to a change in accounting principle should be included in reports on financial statements in the year of the change and in subsequent years until the new accounting principle is applied in all periods presented. If the accounting change is accounted for by retrospective application to the financial~~

~~statements of all prior periods presented, the additional paragraph is needed only in the year of the change.~~

~~**.17E**~~

~~If the auditor concludes that the criteria in paragraph .17A for a change in accounting principle are not met, the auditor should consider the matter to be a departure from generally accepted accounting principles and, if the effect of the change in accounting principle is material, issue a qualified or adverse opinion.~~

~~**Correction of a Material Misstatement in Previously Issued Financial Statements**~~

~~**.18A** Correction of a material misstatement in previously issued financial statements should be recognized in the auditor's report through the addition of an explanatory paragraph following the opinion paragraph.[fn 13] The explanatory paragraph should include (1) a statement that the previously issued financial statements have been restated for the correction of a misstatement in the respective period and (2) a reference to the company's disclosure of the correction of the misstatement. Following is an example of an appropriate explanatory paragraph when there has been a correction of a material misstatement in previously issued financial statements.~~

~~As discussed in Note X to the financial statements, the 20X2 financial statements have been restated to correct a misstatement.~~

~~[fn 13] The directions in paragraphs .68-.69 apply when comparative financial statements are presented and the opinion on the prior-period financial statements differs from the opinion previously expressed.~~

~~**.18B** This type of explanatory paragraph in the auditor's report should be included in reports on financial statements when the related financial statements are restated to correct the prior material misstatement. The paragraph need not be repeated in subsequent years.~~

~~**.18C** The accounting pronouncements generally require certain disclosures relating to restatements to correct a misstatement in previously issued financial statements. If the financial statement disclosures are not adequate, the auditor should address the lack of disclosure as discussed beginning at paragraph .41.~~

~~**Emphasis of a Matter**~~

~~**.19** In any report on financial statements, the auditor may emphasize a matter regarding the financial statements. Such explanatory information should be presented in a separate paragraph of the auditor's report. Phrases such as "with the foregoing~~

~~[following] explanation" should not be used in the opinion paragraph if an emphasis paragraph is included in the auditor's report. Emphasis paragraphs are never required; they may be added solely at the auditor's discretion. Examples of matters the auditor may wish to emphasize are—~~

- ~~That the entity is a component of a larger business enterprise.~~
- ~~That the entity has had significant transactions with related parties.~~
- ~~Unusually important subsequent events.~~
- ~~Accounting matters, other than those involving a change or changes in accounting principles, affecting the comparability of the financial statements with those of the preceding period.~~

**DEPARTURES FROM UNQUALIFIED OPINIONS**

**Qualified Opinions**

* * *

**.20A** When the auditor expresses a qualified opinion, the auditor's report must include the basic elements of the auditor's unqualified report and critical audit matters described in paragraphs 6 and 7-13, respectively, of Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*.[fn13A]

[fn13A] When the auditor expresses a qualified opinion, the section titled "The Auditor's Responsibilities Regarding Other Information"(described in paragraphs 13-14 of Proposed Auditing Standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*) also should include language that references the matter(s) for which the auditor has qualified the opinion.

**.21** When the auditor expresses a qualified opinion, he or she should disclose all of the substantive reasons for the qualified opinion in one or more separate ~~explanatory~~ "basis for departure from an unqualified opinion paragraph(s)" preceding the opinion paragraph in the Opinion on the Financial Statements section of the auditor's report. The auditor should also include, in the Opinion on the Financial Statements section ~~opinion paragraph~~, the appropriate qualifying language and a reference to the ~~explanatory~~ "basis for departure from an unqualified opinion paragraph." A qualified opinion should include the word *except* or *exception* in a phrase such as *except for* or *with the exception of*. Phrases such as *subject to* and *with the foregoing explanation* are not clear or forceful enough and should not be used. Since accompanying notes are part of the financial statements, wording such as *fairly presented, in all material respects, when read in conjunction with Note 1* is likely to be misunderstood and should not be used. [Paragraph renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995.]

> Note: The auditor would refer to Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, to determine if the matter for which the auditor qualified his or her opinion is also a critical audit matter.

**Scope Limitations**

**.22** The auditor can determine that he or she is able to express an unqualified opinion only if the audit has been conducted in accordance with ~~generally accepted auditing~~ the standards of the Public Company Accounting Oversight Board ("PCAOB") and if he or she has therefore been able to apply all the procedures he considers necessary in the circumstances. Restrictions on the scope of the audit, whether imposed by the client or by circumstances, such as the timing of his or her work, the inability to obtain sufficient appropriate evidential matter, or an inadequacy in the accounting records, may require the auditor to qualify his or her opinion or to disclaim an opinion. In such instances, the reasons for the auditor's qualification of opinion or disclaimer of opinion should be described in the report.

* * *

**.25** When a qualified opinion results from a limitation on the scope of the audit or an insufficiency of evidential matter, the auditor's report ~~situation~~ should ~~be~~ describe~~d~~ ~~in an explanatory~~ the basis for departure from an unqualified opinion in a paragraph preceding the opinion paragraph in the Opinion on the Financial Statements section and refer~~red~~ to in both the ~~scope~~ Basis of Opinion and the ~~opinion~~ Opinion on the Financial Statements ~~paragraphs~~ sections of the auditor's report. It is not appropriate for the scope of the audit to be explained in a note to the financial statements, since the description of the audit scope is the responsibility of the auditor and not that of the client. [Paragraph renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995.]

**.26** When an auditor qualifies his or her opinion because of a scope limitation, the wording in the ~~opinion paragraph~~ Opinion on the Financial Statements section should indicate that the qualification pertains to the possible effects on the financial statements and not to the scope limitation itself. Wording such as "In our opinion, except for the above-mentioned limitation on the scope of our audit . . ." bases the exception on the restriction itself, rather than on the possible effects on the financial statements and, therefore, is unacceptable. An example of a qualified opinion related to a scope limitation concerning an investment in a foreign affiliate (assuming the effects of the limitation are such that the auditor has concluded that a disclaimer of opinion is not appropriate) follows:

~~Independent Auditor's~~ Report of Independent Registered Public Accounting Firm

*To the shareholders and board of directors of X Company*

[~~*Same first paragraph as the standard report*~~ *Includes the same basic elements as the Introduction section of the auditor's unqualified report*]

[*Basis of Opinion*]

Our responsibility is to express an opinion on the Company's financial statements based on our audits. Except as discussed ~~in the following paragraph~~ below, we conducted our audits in accordance with ~~auditing~~ the standards of the PCAOB ~~generally accepted in the (United States) of America~~. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud.

Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. ~~An audit~~ Such procedures ~~includes~~ include examining, on a test basis, appropriate evidence ~~supporting~~ regarding the amounts and disclosures in the financial statements. ~~An~~ Our audits also ~~includes~~ ~~assessing~~ included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements ~~presentation~~. We believe that our audits provide a reasonable basis for our opinion.

[*Opinion on the Financial Statements*]

We were unable to obtain audited financial statements supporting the Company's investment in a foreign affiliate stated at $_______ and $_______ at December 31, 20X2 and 20X1, respectively, or its equity in earnings of that affiliate of $_______ and $_______, which is included in net income for the years then ended as described in Note X to the financial statements; nor were we able to satisfy ourselves as to the carrying value of the investment in the foreign affiliate or the equity in its earnings by other auditing procedures.

In our opinion, except for the effects of such adjustments, if any, as might have been determined to be necessary had we been able to examine evidence regarding the foreign affiliate investment and earnings, the financial statements referred to in the first paragraph above present fairly, in all material respects, the financial position of X Company as of December 31, 20X2 and 20X1, and the results of its operations and its cash flows for the years then ended in conformity with accounting principles generally accepted in the United States of America.

[Paragraph renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995.]

* * *

**.34** An auditor may be asked to report on the balance sheet only. In this case, the auditor may express an opinion on the balance sheet only. An example of an unqualified opinion on a balance-sheet-only audit follows (the report assumes that the auditor has been able to satisfy himself or herself regarding the consistency of application of accounting principles):

~~Independent Auditor's~~ Report of Independent Registered Public Accounting Firm

*To the shareholders and board of directors of X Company*

[*Introduction*]

We have audited the accompanying balance sheet of X Company as of December 31, 20XX, and the related notes (collectively referred to as the "financial statement"). This financial statement is the responsibility of the Company's management.

We are a public accounting firm registered with the Public Company Accounting Oversight Board ("PCAOB") (United States) and are required to be independent with respect to the Company in accordance with the United States federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission ("SEC") and the PCAOB. We or our predecessor firms have served as the Company's auditor consecutively since [ *year* ].

[*Basis of Opinion*]

Our responsibility is to express an opinion on this financial statement based on our audit. We conducted our audit in accordance with ~~auditing~~ the standards ~~generally accepted in the~~ of the PCAOB ~~(United States) of America~~. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the ~~balance sheet~~ financial statement is free of material misstatement, whether due to error or fraud.

Our audit included performing procedures to assess the risks of material misstatements of the financial statement, whether due to error or fraud, and performing procedures that respond to those risks. ~~An audit~~ Such procedures ~~includes~~ include examining, on a test basis, appropriate evidence ~~supporting~~ regarding the amounts and disclosures in the ~~balance sheet~~ financial statement. ~~An~~ Our audit also ~~includes~~ included assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall ~~balance sheet~~ presentation of the financial statement. We believe that our audit of the ~~balance sheet~~ financial statement provides a reasonable basis for our opinion.

[*Opinion on the Financial Statement*]

In our opinion, the ~~balance sheet~~ financial statement referred to above presents fairly, in all material respects, the financial position of X Company as of December 31, 20XX, in conformity with accounting principles generally accepted in the United States of America.

*Critical Audit Matters*

*The Auditor's Responsibilities Regarding Other Information*

[*Signature*]

[*City and State or Country*]

[*Date*]

[Paragraph renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995.]

**Departure from a Generally Accepted Accounting Principle**

**.35** When financial statements are materially affected by a departure from generally accepted accounting principles and the auditor has audited the statements in accordance with ~~generally accepted auditing~~ the standards of the PCAOB, he or she should express a qualified (paragraphs .36 through .57) or an adverse (paragraphs .58 through .60) opinion. The basis for such opinion should be stated in the report.

[Paragraph renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995.]

* * *

**.37** When the auditor expresses a qualified opinion, he or she should disclose in the Opinion on the Financial Statements section of the report, in a separate ~~explanatory "~~basis for departure from an unqualified opinion paragraph(s)~~"~~ preceding the opinion paragraph ~~of the report~~, all of the substantive reasons that have led him or her to conclude that there has been a departure from generally accepted accounting principles. Furthermore, the ~~opinion paragraph~~ Opinion on the Financial Statements section of the report should include the appropriate qualifying language and a reference to the ~~explanatory "~~basis for departure from an unqualified opinion paragraph(s).~~"~~ [Paragraph renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995.]

**.38** The ~~explanatory "~~basis for departure from an unqualified opinion paragraph(s)~~"~~ that discloses the reasons for the qualified opinion should also disclose the principal effects of the subject matter of the qualification on financial position, results of operations, and cash flows, if practicable. [fn 15] If the effects are not reasonably determinable, the report should so state. If such disclosures are made in a note to the financial statements, the ~~explanatory "~~basis for departure from an unqualified opinion paragraph(s)~~"~~ in the auditor's report may be shortened by referring to it. [Paragraph renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995.]

**.39** An example of a report in which the opinion is qualified because of the use of an accounting principle at variance with generally accepted accounting principles follows (assuming the effects are such that the auditor has concluded that an adverse opinion is not appropriate):

~~Independent Auditor's~~ Report of Independent Registered Public Accounting Firm

*To the shareholders and board of directors of X Company*

[~~*Same first and second paragraphs as the standard report*~~ *Includes the same basic elements as the Introduction and the Basis of Opinion sections of the auditor's unqualified report*]

[*Opinion on the Financial Statements*]

The Company has excluded, from property and debt in the accompanying balance sheets, certain lease obligations that, in our opinion, should be capitalized in order to conform with accounting principles generally accepted in the United States of America.

If these lease obligations were capitalized, property would be increased by $_______ and $_______, long-term debt by $_______ and $_______, and retained earnings by $_______ and $_______ as of December 31, 20X2 and 20X1, respectively. Additionally, net income would be increased (decreased) by $_______ and $_______ and earnings per share would be increased (decreased) by $_______ and $_______, respectively, for the years then ended.

In our opinion, except for the effects of not capitalizing certain lease obligations as discussed in the preceding paragraph, the financial statements referred to above present fairly, in all material respects, the financial position of X Company as of December 31, 20X2 and 20X1, and the results of its operations and its cash flows for the years then ended in conformity with accounting principles generally accepted in the United States of America.

[*Signature*]

[*City and State or Country*]

[*Date*]

[Paragraph renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995.]

**.40** If the pertinent facts are disclosed in a note to the financial statements, a separate paragraph (preceding the opinion paragraph in the Opinion on the Financial Statements section) of the auditor's report in the circumstances illustrated in paragraph .39 might read as follows:

As more fully described in Note X to the financial statements, the Company has excluded certain lease obligations from property and debt in the accompanying balance sheets. In our opinion, accounting principles generally accepted in the United States of America require that such obligations be included in the balance sheets.

[Paragraph renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995.]

* * *

**.42** Following is an example of a report qualified for inadequate disclosure (assuming the effects are such that the auditor has concluded an adverse opinion is not appropriate):

~~Independent Auditor's~~ Report of Independent Registered Public Accounting Firm

*To the shareholders and board of directors of X Company*

[~~*Same first and second paragraphs as the standard report*~~ *Includes the same basic elements as the Introduction and the Basis of Opinion sections of the auditor's unqualified report*]

[*Opinion on the Financial Statements*]

The Company's financial statements do not disclose [*describe the nature of the omitted disclosures*]. In our opinion, disclosure of this information is required by accounting principles generally accepted in the United States of America. In our opinion, except for the omission of the information discussed in the preceding paragraph, . . .

*Critical Audit Matters*

* * *

**.44** ~~The auditor is not required to prepare a basic financial statement (for example, a statement of cash flows for one or more periods) and include it in the report~~ ~~i~~If the company's management declines to present ~~the statement~~ a basic financial statement (for example, a statement of cash flows for one or more periods)~~.~~ ~~Accordingly, in these cases~~, the auditor should ordinarily qualify the report in the following manner:

~~Independent Auditor's~~ Report of Independent Registered Public Accounting Firm

*To the shareholders and board of directors of X Company*

[*Introduction*]

We have audited the accompanying balance sheets of X Company as of December 31, 20X2 and 20X1, and the related statements of income and retained earnings for the years then ended, and the related notes (collectively referred to as the "financial statements"). These financial statements are the responsibility of the Company's management. ~~Our responsibility is to express an opinion on these financial statements based on our audit.~~

We are a public accounting firm registered with the Public Company Accounting Oversight Board ("PCAOB") (United States) and are required to be independent with respect to the Company in accordance with the United States federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission ("SEC") and the PCAOB. We or our predecessor firms have served as Company's auditor consecutively since [ *year* ].

[~~*Same second paragraph as the standard report*~~ *Includes the same basic elements as the Basis of Opinion section of the auditor's unqualified report*]

[*Opinion on the Financial Statements*]

The Company declined to present a statement of cash flows for the years ended December 31, 20X2 and 20X1. Presentation of such statement summarizing the Company's operating, investing, and financing activities is required by accounting principles generally accepted in the United States of America.

In our opinion, except that the omission of a statement of cash flows results in an incomplete presentation as explained in the preceding paragraph, the financial statements referred to above present fairly, in all material respects, the financial position of X Company as of December 31, 20X2 and 20X1, and the results of its operations for the years then ended in conformity with accounting principles generally accepted in the United States of America.

*Critical Audit Matters*

*The Auditor's Responsibilities Regarding Other Information*

[*Signature*]

[*City and State or Country*]

[*Date*]

* * *

**.51** ***Departures from generally accepted accounting principles related to changes in accounting principle***. Paragraph ~~.17A~~ 7 of Auditing Standard No. 6, *Evaluating Consistency of Financial Statements* includes ~~states~~ the criteria for evaluating a change in accounting principle. If the auditor concludes that the criteria have not been met, he or she should consider that circumstance to be a departure from generally accepted accounting principles and, if the effect of the accounting change is material, should issue a qualified or adverse opinion.

**.52** The accounting standards indicate that a company may make a change in accounting principle only if it justifies that the allowable alternative accounting principle is preferable. If the company does not provide reasonable justification that the alternative accounting principle is preferable, the auditor should consider the accounting change to be a departure from generally accepted accounting principles and, if the effect of the change in accounting principle is material, should issue a qualified or adverse opinion. The following is an example of a report qualified because a company did not provide reasonable justification that an alternative accounting principle is preferable:

~~Independent Auditor's~~ Report of Independent Registered Public Accounting Firm

*To the shareholders and board of directors of X Company*

[~~*Same first and second paragraphs as the standard*~~ *Includes the same basic elements as the Introduction and the Basis of Opinion sections of the auditor's unqualified report*]

[*Opinion on the Financial Statements*]

As disclosed in Note X to the financial statements, the Company adopted, in 20X2, the first-in, first-out method of accounting for its inventories, whereas it previously used the last-in, first-out method. Although use of the first-in, first-out method is in conformity with accounting principles generally accepted in the United States of America, in our opinion the Company has not provided reasonable justification that this accounting principle is preferable as required by those principles.[fn 17]

In our opinion, except for the change in accounting principle discussed in the preceding paragraph, the financial statements referred to above present fairly, in all material respects, the financial position of X Company as of December 31, 20X2 and 20X1, and the results of its operations and its cash flows for the years then ended in conformity with accounting principles generally accepted in the United States of America.

*Critical Audit Matters*

*The Auditor's Responsibilities Regarding Other Information*

[*Signature*]

[*City and State or Country*]

[*Date*]

[Paragraph renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995.]

**fn17** Because this paragraph included in the example presented contains all of the information required in a~~n~~ ~~explanatory~~ "basis for departure from an unqualified opinion paragraph" on consistency, a separate explanatory paragraph (following the ~~opinion paragraph~~ Opinion on the Financial Statements section) as required by paragraphs ~~.17A thorough .17E of this section~~ 8 and 12-15 of Auditing Standard No. 6, *Evaluating Consistency of Financial Statements* is not necessary in this instance. A separate paragraph that identifies the change in accounting principle would be required if the substance of the disclosure did not fulfill the requirements outlined in these paragraphs. [Footnote renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995. Footnote subsequently renumbered by the issuance of Statement on Auditing Standards No. 93, October 2000.]

* * *

**.58A** When the auditor expresses an adverse opinion, in addition to including the title, "Report of Independent Registered Public Accounting Firm," and the addressees, the auditor's report must include the opinion as described in paragraph .58 and the basic elements included in the following sections of the auditor's unqualified report:[fn17A]

a. Introduction section;

b. Basis of Opinion section;

c. The Auditor's Responsibilities Regarding Other Information section;[fn17B] and

d. Signature and Date section.

> Note: Critical audit matters described in paragraphs 7-13 of Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, are not required in reports with adverse opinions.

**fn17A** Basic elements of the auditor's unqualified report are described in paragraph 6 of Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion.*

**fn17B** When the auditor expresses an adverse opinion, the section titled "The Auditor's Responsibilities Regarding Other Information" (described in paragraphs 13-14 of Proposed Auditing Standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*) also should include language that references the matter(s) for which the auditor has issued an adverse opinion.

**.59** When the auditor expresses an adverse opinion, he or she should disclose in a separate ~~explanatory~~ "basis for departure from an unqualified opinion paragraph(s)" preceding the opinion paragraph in the Opinion on the Financial Statements section of the report (*a*) all the substantive reasons for his or her adverse opinion, and (*b*) the principal effects of the subject matter of the adverse opinion on financial position, results of operations, and cash flows, if practicable.[fn18] If the effects are not reasonably determinable, the report should so state. [fn19] [Paragraph renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995.]

**fn19** When the auditor expresses an adverse opinion, he or she should also consider the need for an explanatory paragraph under the circumstances identified in paragraph ~~.11~~15~~,~~ ~~subsection (*b*), (*c*), (*d*), and (*e*)~~ of ~~this section~~ Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*. [Footnote renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995. Footnote subsequently renumbered by the issuance of Statement on Auditing Standards No. 93, October 2000.]

**.60** When an adverse opinion is expressed, the opinion paragraph in the Opinion on the Financial Statements section of the report should include a direct reference to a separate "basis for departure from an unqualified opinion paragraph" ~~that discloses the basis for the adverse opinion~~, as shown below:

~~Independent Auditor's~~ Report of Independent Registered Public Accounting Firm

*To the shareholders and board of directors of X Company*

[~~Same first and second paragraphs as the standard~~ *Includes the same basic elements as the Introduction and the Basis of Opinion sections of the auditor's unqualified report*]

[*Opinion on the Financial Statements*]

As discussed in Note X to the financial statements, the Company carries its property, plant and equipment accounts at appraisal values, and provides depreciation on the basis of such values. Further, the Company does not provide for income taxes with respect to differences between financial income and taxable income arising because of the use, for income tax purposes, of the installment method of reporting gross profit from certain types of sales. Accounting principles generally accepted in the United States of America require that property, plant and equipment be stated at an amount not in excess of cost, reduced by depreciation based on such amount, and that deferred income taxes be provided.

Because of the departures from accounting principles generally accepted in the United States of America identified above, as of December 31, 20X2 and 20X1, inventories have been increased $_______ and $_______ by inclusion in manufacturing overhead of depreciation in excess of that based on cost; property, plant and equipment, less accumulated depreciation, is carried at $_______ and $_______ in excess of an amount based on the cost to the Company; and deferred income taxes of $_______ and $_______ have not been recorded; resulting in an increase of $_______ and $_______ in retained earnings and in appraisal surplus of $_______ and $_______, respectively. For the years ended December 31, 20X2 and 20X1, cost of goods sold has been increased $_______ and $_______, respectively, because of the effects of the depreciation accounting referred to above and deferred income taxes of $_______ and $_______ have not been provided, resulting in an increase in net income of $_______ and $_______, respectively.

In our opinion, because of the effects of the matters discussed in the preceding paragraphs, the financial statements referred to above do not present fairly, in conformity with accounting principles generally accepted in the United States of America, the financial position of X Company as of December 31, 20X2 and 20X1, or the results of its operations or its cash flows for the years then ended.

*The Auditor's Responsibilities Regarding Other Information*

[Paragraph renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995.]

* * *

**.62** A disclaimer is appropriate when the auditor has not performed an audit sufficient in scope to enable him or her to form an opinion on the financial statements. [fn 20] A disclaimer of opinion should not be expressed because the auditor believes, on the basis of his or her audit, that there are material departures from generally accepted accounting principles (see paragraphs .35 through .57). When disclaiming an opinion because of a scope limitation, the auditor should state in a separate paragraph or paragraphs all of the substantive reasons for the disclaimer. He or she should state that the scope of the audit was not sufficient to warrant the expression of an opinion. The auditor should not identify the procedures that were performed nor include the paragraph describing the characteristics of an audit (that is, the ~~scope paragraph of the auditor's standard~~ Basis of Opinion section of the auditor's unqualified report); to do so may tend to overshadow the disclaimer. In addition, the auditor should also disclose any other reservations he or she has regarding fair presentation in conformity with generally accepted accounting principles. [Paragraph renumbered and amended, effective for reports issued or reissued on or after February 29, 1996, by the issuance of Statement on Auditing Standards No. 79.]

**.62A** When the auditor disclaims an opinion, in addition to including the title, "Report of Independent Registered Public Accounting Firm," and the addressees, the auditor's report must include the basic elements included in the following sections of the auditor's unqualified report,[fn20A] modified appropriately as shown in an example report in paragraph .63:

a. Introduction section; and

b. Signature and Date section.

Note: Critical audit matters described in paragraphs 7-13 of Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, are not required in reports that disclaim an opinion.

[fn20A] Basic elements of the auditor's unqualified report are described in paragraph 6 of Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion.*

**.63** An example of a report disclaiming an opinion resulting from an inability to obtain sufficient appropriate evidential matter because of the scope limitation follows:

~~Independent Auditor's~~ Report of Independent Registered Public Accounting Firm

*To the shareholders and board of directors of X Company*

[*Introduction*]

We were engaged to audit the accompanying balance sheets of X Company as of December 31, 20X2 and 20X1, and the related statements of income, retained earnings, and cash flows for the years then ended, and the related notes (collectively referred to as the "financial statements"). These financial statements are the responsibility of the Company's management. [fn 21]

We are a public accounting firm registered with the Public Company Accounting Oversight Board ("PCAOB") (United States) and are required to be independent with respect to the Company in accordance with the United States federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB. We or our predecessor firms have served as the Company's auditor consecutively since [ *year* ].

[~~*Second paragraph of standard report*~~ *Basic elements in the Basis of Opinion section of the auditor's unqualified report should be omitted*]

[*Opinion on the Financial Statements*]

The Company did not make a count of its physical inventory in 20X2 or 20X1, stated in the accompanying financial statements at $_______ as of December 31, 20X2, and at $________ as of December 31, 20X1. Further, evidence supporting the cost of property and equipment acquired prior to December 31, 20X1, is no longer available. The Company's records do not permit the application of other auditing procedures to inventories or property and equipment.

Since the Company did not take physical inventories and we were not able to apply other auditing procedures to satisfy ourselves as to inventory quantities and the cost of property and equipment, the scope of our work was not sufficient to enable us to express, and we do not express, an opinion on these financial statements.

[*Date*]

[fn21] The wording in the ~~first paragraph~~ Introduction section of the auditor's ~~standard~~ unqualified report is changed in a disclaimer of opinion because of a scope limitation.

The first sentence now states that "we were engaged to audit" rather than "we have audited" since, because of the scope limitation, the auditor was not able to perform an audit in accordance with ~~generally accepted auditing~~ the standards of the PCAOB. ~~In addition, the last sentence of the first paragraph is also deleted, because of the scope limitation, to eliminate the reference to the auditor's responsibility to express an opinion.~~ [Footnote renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995. Footnote subsequently renumbered by the issuance of Statement on Auditing Standards No. 93, October 2000.]

* * *

**REPORTS ON COMPARATIVE FINANCIAL STATEMENTS**

**.65** The fourth standard of reporting[fn21A] requires that an auditor's report contain either an expression of opinion regarding the financial statements *taken as a whole* or an assertion to the effect that an opinion cannot be expressed. Reference in the fourth reporting standard to the financial statements *taken as a whole* applies not only to the financial statements of the current period but also to those of one or more prior periods that are presented on a comparative basis with those of the current period. Therefore, a continuing auditor [fn 22] should update [fn 23] the report on the individual financial statements of the one or more prior periods presented on a comparative basis with those of the current period. [fn 24] Ordinarily, the auditor's report on comparative financial statements should be dated as of the date of completion of fieldwork for the most recent audit. (See section 530, *Dating of the Independent Auditor's Report*, paragraph .01.) [Paragraph renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995. As amended, effective September 2002, by Statement on Auditing Standards No. 98.]

**fn21A** See paragraph .02 of AU sec. 150, *Generally Accepted Auditing Standards*.

* * *

**Different Reports on Comparative Financial Statements Presented**

**.67** Since the auditor's report on comparative financial statements applies to the individual financial statements presented, an auditor may express a qualified or adverse opinion, disclaim an opinion, or include an explanatory paragraph with respect to one or more financial statements for one or more periods, while issuing a different report on the other financial statements presented. Following are examples of reports on comparative financial statements ~~(excluding the standard introductory and scope paragraphs, where applicable)~~ with different reports on one or more financial statements presented.

**~~Standard~~ The Auditor's Unqualified Report on the Prior-Year Financial Statements and a Qualified Opinion on the Current-Year Financial Statements**

~~Independent Auditor's~~ Report of Independent Registered Public Accounting Firm

*To the shareholders and board of directors of X Company*

[~~*Same first and second paragraphs as the standard*~~ *Includes the same basic elements as the Introduction and the Basis of Opinion sections of the auditor's unqualified report*]

[*Opinion on the Financial Statements*]

The Company has excluded, from property and debt in the accompanying 20X2 balance sheet, certain lease obligations that were entered into in 20X2 which, in our opinion, should be capitalized in order to conform with accounting principles generally accepted in the United States of America. If these lease obligations were capitalized, property would be increased by $_______, long-term debt by $_______, and retained earnings by $_______ as of December 31, 20X2, and net income and earnings per share would be increased (decreased) by $_______ and $_______, respectively, for the year then ended.

In our opinion, except for the effects on the 20X2 financial statements of not capitalizing certain lease obligations as described in the preceding paragraph, the financial statements referred to above present fairly, in all material respects, the financial position of ABC Company as of December 31, 20X2 and 20X1, and the results of its operations and its cash flows for the years then ended in conformity with accounting principles generally accepted in the United States of America.

[*Date*]

**~~Standard~~ The Auditor's Unqualified Report on the Current-Year Financial Statements With a Disclaimer of Opinion on the Prior-Year Statements of Income, Retained Earnings, and Cash Flows**

~~Independent Auditor's~~ Report of Independent Registered Public Accounting Firm

*To the shareholders and board of directors of X Company*

[~~*Same first paragraph as the standard*~~ *Includes the same basic elements as the Introduction section of the auditor's unqualified report*]

[*Basis of Opinion*]

Our responsibility is to express an opinion on the Company's financial statements based on our audits. Except as explained in the ~~following~~ first paragraph in the Opinion on the Financial Statements section, we conducted our audits in accordance with ~~auditing~~ the standards ~~generally accepted in the~~ of the PCAOB ~~(United States) of America~~. Those standards require that we plan and perform our audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud.

Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. ~~An audit~~ Such procedures ~~includes~~ include examining, on a test basis, appropriate evidence ~~supporting~~ regarding the amounts and disclosures in the financial statements. ~~An~~ Our audits also ~~includes~~ ~~assessing~~ included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statement ~~presentation~~. We believe that our audits provide a reasonable basis for our opinion.

[*Opinion on the Financial Statements*]

We did not observe the taking of the physical inventory as of December 31, 20X0, since that date was prior to our appointment as auditors for the Company, and we were unable to satisfy ourselves regarding inventory quantities by means of other auditing procedures. Inventory amounts as of December 31, 20X0, enter into the determination of net income and cash flows for the year ended December 31, 20X1.[fn 25]

Because of the matter discussed in the preceding paragraph, the scope of our work was not sufficient to enable us to express, and we do not express, an opinion on the results of operations and cash flows for the year ended December 31, 20X1.

In our opinion, the balance sheets of ABC Company as of December 31, 20X2 and 20X1, and the related statements of income, retained earnings, and cash flows for the year ended December 31, 20X2, present fairly, in all material respects, the financial position of ABC Company as of December 31, 20X2 and 20X1, and the results of its operations and its cash flows for the year ended December 31, 20X2, in conformity with accounting principles generally accepted in the United States of America.

[Paragraph renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995.]

* * *

**.69** If, in an updated report, the opinion is different from the opinion previously expressed on the financial statements of a prior period, the auditor should disclose all the substantive reasons for the different opinion in a separate ~~explanatory~~ paragraph(s) preceding the opinion paragraph in the Opinion on the Financial Statements section of his or her report.[fn 29] The ~~explanatory~~ paragraph(s) should disclose (*a*) the date of the auditor's previous report, (*b*) the type of opinion previously expressed, (*c*) if applicable, a statement that the previously issued financial statements have been restated for the correction of a misstatement in the respective period, (*d*) the circumstances or events that caused the auditor to express a different opinion, and (*e*) if applicable, a reference to the company's disclosure of the correction of the misstatement, and (*f*) the fact that the auditor's updated opinion on the financial statements of the prior period is different from his or her previous opinion on those statements. The following is an example of a~~n~~ ~~explanatory~~ paragraph that may be appropriate when an auditor issues an updated report on the financial statements of a prior period that contains an opinion different from the opinion previously expressed:

~~Independent Auditor's~~ Report of Independent Registered Public Accounting Firm

*To the shareholders and board of directors of X Company*

[~~*Same first and second paragraphs as the standard*~~ *Includes the same basic elements as the Introduction and the Basis of Opinion sections of the auditor's unqualified report*]

[*Opinion on the Financial Statements*]

In our report dated March 1, 20X2, we expressed an opinion that the 20X1 financial statements did not fairly present financial position, results of operations, and cash flows in conformity with accounting principles generally accepted in the United States of America because of two departures from such principles: (1) the Company carried its property, plant, and equipment at appraisal values, and provided for depreciation on the basis of such values, and (2) the Company did not provide for deferred income taxes with respect to differences between income for financial reporting purposes and taxable income. As described in Note X, the Company has changed its method of accounting for these items and restated its 20X1 financial statements to conform with accounting principles generally accepted in the United States of America. Accordingly, our present opinion on the 20X1 financial statements, as presented herein, is different from that expressed in our previous report. [fn 26]

In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of X Company as of December 31, 20X2 and 20X1, and the results of its operations and its cash flows for the years then ended in conformity with accounting principles generally accepted in the United States of America.

[Paragraph renumbered by the issuance of Statement on Auditing Standards No. 79, December 1995.]

* * *

**.74** If the financial statements of a prior period have been audited by a predecessor auditor whose report is not presented, the successor auditor should indicate in the ~~introductory paragraph~~ Basis of Opinion section of his or her report (a) that the financial statements of the prior period were audited by another auditor,[fn 29] (b) the date of his or her report, (c) the type of report issued by the predecessor auditor, and (d) if the report was other than ~~a standard~~ an auditor's unqualified report, the substantive reasons therefor.[fn 30] An example of a successor auditor's report when the predecessor auditor's report is not presented is shown below:

~~Independent Auditor's~~ Report of Independent Registered Public Accounting Firm

*To the shareholders and board of directors of X Company*

We have audited the accompanying balance sheet of ABC Company as of December 31, 20X2, and the related statements of income, retained earnings, and cash flows for the year then ended, and the related notes (collectively referred to as the "financial statements"). These financial statements are the responsibility of the Company's management.

We are a public accounting firm registered with the Public Company Accounting Oversight Board ("PCAOB") (United States) and are required to be independent with respect to the Company in accordance with the United States federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission ("SEC") and the PCAOB. We or our predecessor firms have served as the Company's auditor consecutively since [ *year* ].

[*Basis of Opinion*]

Our responsibility is to express an opinion on ~~these~~ the Company's financial statements based on our audit. The financial statements of ABC Company as of December 31, 20X1, were audited by other auditors whose report dated March 31, 20X2, expressed an unqualified opinion on those statements. We conducted our audit in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud.

Our audit included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures include examining, on a test basis, appropriate evidence regarding the amounts and disclosure in the financial statements. Our audit also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audit provides a reasonable basis for our opinion.

[~~*Same second paragraph as the standard report*~~ *Opinion on the Financial Statements*]

In our opinion, the 20X2 financial statements referred to above present fairly, in all material respects, the financial position of ABC Company as of December 31, 20X2, and the results of its operations and its cash flows for the year then ended in conformity with accounting principles generally accepted in the United States of America.

*Critical Audit Matters*

*The Auditor's Responsibilities Regarding Other Information*

[City and State or Country]

[Date]

If the predecessor auditor's report was other than ~~a standard~~ an auditor's unqualified report, the successor auditor should describe the nature of and reasons for the explanatory paragraph added to the predecessor's report or the opinion qualification. Following is an illustration of the wording that may be included in the successor auditor's report:

> . . . were audited by other auditors whose report dated March 1, 20X2, on those statements included an explanatory paragraph that described the change in the Company's method of computing depreciation discussed in Note X to the financial statements.

If the financial statements have been adjusted, the ~~introductory paragraph~~ Basis of Opinion section should indicate that a predecessor auditor reported on the financial statements of the prior period before the adjustments. In addition, if the successor auditor is engaged to audit and applies sufficient procedures to satisfy himself or herself as to the appropriateness of the adjustments, he or she may also include the following paragraph in the auditor's report:

> We also audited the adjustments described in Note X that were applied to restate the 20X1 financial statements. In our opinion, such adjustments are appropriate and have been properly applied.

~~[Paragraph renumbered and amended, effective for reports issued or reissued on or after February 29, 1996, by the issuance of Statement on Auditing Standards No. 79.]~~

## AU sec. 9508, ~~Reports on Audited Financial Statements~~ [new proposed title] Departures from Unqualified Opinions and Other Reporting Circumstances: Auditing Interpretations of Section 508

* * *

**.01** *Question*—Section 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*, paragraph .24 states that "Common restrictions on the scope of the audit include those applying to the observation of physical inventories and the confirmation of accounts receivable by direct communication with debtors. . . ." A footnote to that paragraph states: "Circumstances such as the timing of the work may make it impossible for the auditor to accomplish these procedures. In this case, if the auditor is able to satisfy himself or herself as to inventories or accounts receivable by applying alternative procedures, there is no significant limitation on the scope of the work, and the report need not include reference to the omission of the procedures or to the use of alternative procedures." Outside firms of nonaccountants specializing in the taking of physical inventories are used at times by some companies, such as retail stores, hospitals, and automobile dealers, to count, list, price and subsequently compute the total dollar amount of inventory on hand at the date of the physical count. Would obtaining the report of an outside inventory-taking firm be an acceptable alternative procedure to the independent auditor's own observation of physical inventories?

* * *

**.36** ~~Examples of~~ An example of the Introduction and the Opinion on the Financial Statements sections of an auditor's report~~s~~ on single year financial statements in the year of adoption of liquidation basis follows:[fn 1A] ~~with such an explanatory paragraph follow.~~

~~*Report on Single Year Financial Statements in Year of Adoption of Liquidation Basis*~~

[*Introduction*]

~~"~~We have audited the statement of net assets in liquidation of XYZ Company as of December 31, 20X2, and the related statement of changes in net assets in liquidation for the period from April 26, 20X2 to December 31, 20X2, and the related notes (collectively referred to as the "financial statements"). In addition, we have audited the statements of income, retained earnings, and cash flows for the period from January 1, 20X2 to April 25, 20X2, and the related notes (collectively referred to as the "financial statements"). These financial statements are the responsibility of the Company's management. ~~Our responsibility is to express an opinion on these financial statements based on our audit.~~

We are a public accounting firm registered with the Public Company Accounting Oversight Board ("PCAOB") (United States) and are required to be independent with respect to the Company in accordance with the United States federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission ("SEC") and the PCAOB. We or our predecessor firms have served as the Company's auditor consecutively since [ *year* ].

~~"We conducted our audit in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence~~

~~supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.~~

[*Opinion on the Financial Statements*]

~~"~~As described in Note X to the financial statements, the stockholders of XYZ Company approved a plan of liquidation on April 25, 20X2, and the company commenced liquidation shortly thereafter. As a result, the company has changed its basis of accounting for periods subsequent to April 25, 20X2 from the going-concern basis to a liquidation basis.

"In our opinion, the financial statements referred to above present fairly, in all material respects, the net assets in liquidation of XYZ Company as of December 31, 20X2, the changes in its net assets in liquidation for the period from April 26, 20X2 to December 31, 20X2, and the results of its operations and its cash flows for the period from January 1, 20X2 to April 25, 20X2, in conformity with accounting principles generally accepted in the United States of America applied on the bases described in the preceding paragraph."

[fn1A] The auditor's report must include other basic elements of the auditor's unqualified report and critical audit matters described in paragraphs 6 and 7-13, respectively, of Proposed Auditing Standard*, The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*.

~~*Report on Comparative Financial Statements in Year of Adoption of Liquidation Basis*~~
An example of the Introduction and the Opinion on the Financial Statements sections of an auditor's report on comparative financial statements in the year of adoption of liquidation basis follows: [fn1B]

[*Introduction*]

~~"~~We have audited the balance sheet of XYZ Company as of December 31, 20X1, the related statements of income, retained earnings, and cash flows for the year then ended, and the statements of income, retained earnings, and cash flows for the period from January 1, 20X2 to April 25, 20X2, and the related notes (collectively referred to as the "financial statements"). In addition, we have audited the statement of net assets in liquidation as of December 31, 20X2, and the related statement of changes in net assets in liquidation for the period from April 26, 20X2 to December 31, 20X2, and the related notes (collectively referred to as the "financial statements"). These financial statements are the responsibility of the Company's management. ~~Our responsibility is to express an opinion on these financial statements based on our audits.~~

We are a public accounting firm registered with the Public Company Accounting Oversight Board ("PCAOB") (United States) and are required to be independent with respect to the Company in accordance with the United States federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission ("SEC") and the PCAOB. We or our predecessor firms have served as the Company's auditor consecutively since [ *year* ].

~~"We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatements. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.~~

[*Opinion on the Financial Statements*]

~~"~~As described in Note X to the financial statements, the stockholders of XYZ Company approved a plan of liquidation on April 25, 20X2, and the company commenced liquidation shortly thereafter. As a result, the company has changed its basis of accounting for periods subsequent to April 25, 20X2 from the going-concern basis to a liquidation basis.

~~"~~In our opinion, the financial statements referred to above present fairly, in all material respects, the financial position of XYZ Company as of December 31, 20X1, the results of its operations and its cash flows for the year then ended and for the period from January 1, 20X2 to April 25, 20X2, its net assets in liquidation as of December 31, 20X2, and the changes in its net assets in liquidation for the period from April 26, 20X2 to December 31, 20X2, in conformity with accounting principles generally accepted in the United States of America applied on the bases described in the preceding paragraph.~~"~~

[fn1B] *Id.*

* * *

**12. Reference in Auditor's ~~Standard~~ Unqualified Report to Management's Report**

**.51** *Question*—One of the basic elements of the auditor's ~~standard~~ unqualified report is a statement that the financial statements are the responsibility of the Company's management. That statement is required in the auditor's report even when a document containing the auditor's report includes a statement by management regarding its responsibility for the presentation of the financial statements. When an annual shareholders' report (or other client-prepared document that includes audited financial statements) contains a management report that states the financial statements are the responsibility of management, is it permissible for the auditor's report to include a reference to the management report?

**.52** *Interpretation*—No. The statement about management's responsibilities for the financial statements required by ~~section 508, *Reports on Audited Financial Statements*~~ Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, should not be further elaborated upon in the auditor's ~~standard~~ unqualified report or referenced to management's report. Such modifications to the ~~standard~~ auditor's unqualified report may lead users to erroneously believe that the auditor is providing assurances about representations made by management about their responsibility for financial reporting, internal controls and other matters that might be discussed in the management report.

* * *

**14. Reporting on Audits Conducted in Accordance With the Standards of the PCAOB (United States) ~~Auditing Standards Generally Accepted in the United States of America~~ and in Accordance With International Standards on Auditing**

**.56** *Question*— ~~*Section 508, Reports on Audited Financial Statements*~~ Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, requires ~~states that a basic element of the auditor's report is~~ a statement that the audit was conducted in accordance with ~~generally accepted auditing~~ the standards of the PCAOB ~~and an identification of the United States of America as the country of origin of those standards~~. If the auditor conducts the audit in accordance with the standards of the PCAOB ~~generally accepted in the United States of America~~ and in accordance with the International Standards on Auditing promulgated by the International Auditing and Assurance Standards Board ~~Practices Committee~~ of the International Federation of Accountants, may the auditor so indicate in the auditor's report?

**.57** *Interpretation*—Yes. ~~Section 508~~ Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, requires that the auditor indicate in the auditor's report that the audit was conducted in accordance with ~~generally accepted auditing~~ the standards of the PCAOB ~~and an identification of the United States of America as the country of origin of those standards~~; however, ~~section 508~~ Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, does not prohibit the auditor from indicating that the audit also was conducted in accordance with another set of auditing standards. If the audit also was conducted in accordance with the International Standards on Auditing, in their entirety, the auditor may so indicate in the auditor's report. To determine whether an audit was conducted in accordance with the International Standards on Auditing, it is necessary to consider the text of the International Standards on Auditing in their entirety, including the basic principles and essential procedures together with the related guidance included in the International Standards on Auditing. ~~fn 1~~

~~fn 1 Appendix B, *Analysis of International Standards on Auditing*, identifies sections and paragraphs, if applicable, within the International Standards on Auditing that may require procedures and documentation in addition to those required by U.S. auditing standards.~~

**.58** When reporting on an audit performed in accordance with the standards of the PCAOB ~~auditing standards generally accepted in the United States of America~~ and International Standards on Auditing, the auditor should comply with the standards of the PCAOB ~~reporting standards generally accepted in the United States of America~~.

**.59** An example of reporting on an audit conducted in accordance with the standards of the PCAOB ~~auditing standards generally accepted in the United States~~ and in accordance with International Standards on Auditing follows:

[*Basis of Opinion*]

Our responsibility is to express an opinion on the Company's financial statements based on our audits. We conducted our audits in accordance with the standards of the PCAOB ~~auditing standards generally accepted in the United States of America~~ and in accordance with International Standards on Auditing. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud.

~~An~~ Our audits included~~s~~ performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures include examining, on a test basis, appropriate evidence regarding ~~supporting~~ the amounts and disclosures in the financial statements. ~~An~~ Our audits also included~~s~~ evaluating ~~assessing~~ the accounting principles used and significant estimates made by management, as well as evaluating the overall ~~financial statement~~ presentation of the financial statements. We believe that our audits provide~~s~~ a reasonable basis for our opinion.

* * *

**.61** *Interpretation*—If the prior-period audited financial statements are *unchanged*, pursuant to section 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title]

*Departures from Unqualified Opinions and Other Reporting Circumstances*, paragraph .74, the successor auditor should indicate in the ~~introductory paragraph~~ Introduction section of his or her report (*a*) that the financial statements of the prior period were audited by another auditor, (*b*) the date of the predecessor auditor's report, (*c*) the type of report issued by the predecessor auditor, and (*d*) if the report was other than ~~a standard~~ an auditor's unqualified report, the substantive reasons therefor. The successor auditor ordinarily also should indicate that the other auditor has ceased operations. Footnote 29 of section 508 indicates that the successor auditor should not name the predecessor auditor in the report. An example of the reference that would be added to the ~~introductory paragraph~~ Basis of Opinion section of the successor auditor's report is presented as follows:

The financial statements of ABC Company as of December 31, 20X1, and for the year then ended were audited by other auditors who have ceased operations. Those auditors expressed an unqualified opinion on those financial statements in their report dated March 31, 20X2.

A reference to the predecessor auditor's report should be included even if the predecessor auditor's report on the prior-period financial statements is reprinted and accompanies the successor auditor's report, because reprinting does not constitute reissuance of the predecessor auditor’s report.

* * *

**.78** AU sec. ~~Section~~ 508.42 provides an example of a report qualified for inadequate disclosure (assuming the effects are such that the auditor has concluded an adverse opinion is not appropriate). ~~as follows:~~

~~Independent Auditor's Report~~

~~[*Same first and second paragraphs as the standard report*]~~

~~The Company's financial statements do not disclose [*describe the nature of the omitted disclosures*]. In our opinion, disclosure of this information is required by accounting principles generally accepted in the United States of America.~~

~~In our opinion, except for the omission of the information discussed in the preceding paragraph, . . .~~

* * *

**.83** Following is an illustration of a ~~report that expresses a~~ qualified opinion because the Schedule of Investments fails to disclose investments constituting more than 5 percent of net assets, but in all other respects conforms to the requirements of the Guide:

~~Independent Auditor's Report~~

[~~*Same first and second paragraphs as the standard report*~~ *Opinion on the Financial Statements section*]

The Schedule of Investments included in the Partnership's financial statements does not disclose required information about the following investments, each constituting more than 5 percent of the Partnership's total net assets, at December 31, 20X2:

- Amalgamated Buggy Whips, Inc., 10,000 shares of common stock—fair value $3,280,000 (Consumer nondurable goods)
- Paper Airplane Corp., 6.25% Cv. Deb. due 20XX, $4.5 million par value—fair value $4,875,000 (Aviation)

In our opinion, disclosure of this information is required by accounting principles generally accepted in the United States of America.

In our opinion, except for the omission of the information discussed in the preceding paragraph, the financial statements and financial highlights referred to above present fairly, …

**.84** An illustration of an adverse opinion relating to failure to present the entire Schedule of Investments and all of the related required information follows. [fn 6] This illustration assumes that the auditor has concluded that it is not practicable to present all of the required information. In such circumstances, the auditor presents in his or her report the missing information, where it is practicable to do so, and describes the nature of the missing information where it is not practicable to present the information in the report:

~~Independent Auditor's Report~~

[~~*Same first and second paragraphs as the standard report*~~ *Opinion on the Financial Statements section*]

The Partnership has declined to prepare and present a Schedule of Investments and the related information as of December 31, 20X2. Accounting principles generally accepted in the United States of America require presentation of this Schedule and the related information. Presentation of this Schedule would have disclosed required information about the following investments, each constituting more than 5 percent of the Partnership's total net assets, at December 31, 20X2:

- Amalgamated Buggy Whips, Inc., 10,000 shares of common stock—fair value $3,280,000 (Consumer nondurable goods) [fn 7]

- Paper Airplane Corp., 6.25% Cv. Deb. due 20XX, $4.5 million par value—fair value $4,875,000 (Aviation)

In addition, presentation of the Schedule of Investments would have disclosed [*describe the nature of the information that it is not practicable to present in the auditor's report*].

In our opinion, because the omission of a Schedule of Investments results in an incomplete presentation as explained in the preceding paragraph, the financial statements and financial highlights referred to above do not present fairly, …

## AU sec. 543*, Part of the Audit Performed by Other Independent Auditors*

* * *

**.07** When the principal auditor decides that he will make reference to the audit of the other auditor, his report should indicate clearly, in ~~both the introductory, scope and opinion paragraphs~~ the Introduction, Basis of Opinion, and Opinion on Financial Statements sections the division of responsibility as between that portion of the financial statements covered by his own audit and that covered by the audit of the other auditor. The report should disclose the magnitude of the portion of the financial statements audited by the other auditor. This may be done by stating the dollar amounts or percentages of one or more of the following: total assets, total revenues, or other appropriate criteria, whichever most clearly reveals the portion of the financial statements audited by the other auditor. The other auditor may be named but only with his express permission and provided his report is presented together with that of the principal auditor. [fn 3]

* * *

**.09** An example of appropriate reporting by the principal auditor indicating the division of responsibility when he makes reference to the audit of the other auditor follows:

~~Independent Auditor's~~ Report of Independent Registered Public Accounting Firm

*To the shareholders and board of directors of X Company*

[*Introduction*]

We have audited the consolidated balance sheet of X Company and subsidiaries as of December 31, 20...., and the related consolidated statements of income and retained earnings and cash flows for the year then ended, and the related notes (collectively referred to as the "financial statements"). These financial statements are the responsibility of the Company's management. ~~Our responsibility is to express an opinion on these financial statements based on our audits.~~

We did not audit the financial statements of B Company, a wholly-owned subsidiary, which statements reflect total assets and revenues constituting 20 percent and 22 percent, respectively, of the related consolidated totals. Those statements were audited by other auditors whose report has been furnished to us, and our opinion, insofar as it relates to the amounts included for B Company, is based solely on the report of the other auditors.

We are a public accounting firm registered with the Public Company Accounting Oversight Board ("PCAOB") (United States) and are required to be independent with respect to the Company in accordance with the United States federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission ("SEC") and the PCAOB. We or our predecessor firms have served as the Company's auditor consecutively since [ *year* ].

[*Basis of Opinion*]

Our responsibility is to express an opinion on the Company's financial statements based on our audits. We conducted our audit in accordance with the ~~auditing~~ standards of the PCAOB ~~generally accepted in the~~ ~~(United States) of America~~. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud.

Our audit included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. ~~An audit~~ Such procedures ~~includes~~ include examining, on a test basis, appropriate evidence ~~supporting~~ regarding the amounts and disclosures in the financial statements. ~~An~~ Our audit also ~~includes~~ ~~assessing~~ included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statement ~~presentation~~. We believe that our audit and the report of the other auditors provide a reasonable basis for our opinion.

[*Opinion on the Financial Statements*]

In our opinion, based on our audit and the report of the other auditors, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of X Company as of [at] December 31, 20...., and the results of its operations and its cash flows for the year then ended in conformity with accounting principles generally accepted in the United States of America.

*Critical Audit Matters*

*The Auditor's Responsibilities Regarding Other Information*

[*Signature*]

[*City and State or Country*]

[*Date*]

When two or more auditors in addition to the principal auditor participate in the audit, the percentages covered by the other auditors may be stated in the aggregate. ~~[Revised, April 1998, to reflect conforming changes necessary due to the issuance of Statement on Auditing Standards Nos. 53 through 62. Revised, October 2000, to reflect conforming changes necessary due to the issuance of Statement on Auditing Standards No. 93.]~~

**Procedures Applicable to Both Methods of Reporting**

**.10** Whether or not the principal auditor decides to make reference to the audit of the other auditor, he should make inquiries concerning the professional reputation and independence of the other auditor. He also should adopt appropriate measures to assure the coordination of his activities with those of the other auditor in order to achieve a proper review of matters affecting the consolidating or combining of accounts in the financial statements. These inquiries and other measures may include procedures such as the following:

* * *

c. Ascertain through communication with the other auditor:

* * *

(ii)That he or she is familiar with accounting principles generally accepted in the United States of America and with the ~~generally accepted auditing~~ standards of the Public Company Accounting Oversight Board ~~promulgated by the American Institute of Certified Public Accountants~~ and will conduct his or her audit and will report in accordance therewith.

* * *

* * *

**Other Auditor's Report Departs From ~~Standard~~ Auditor's Unqualified Report**

**.15** If the report of the other auditor is other than ~~a standard~~ an auditor's unqualified report, the principal auditor should decide whether the reason for the departure from the ~~standard~~ auditor's unqualified report is of such nature and significance in relation to the financial statements on which the principal auditor is reporting that it would require recognition in his own report. If the reason for the departure is not material in relation to such financial statements and the other auditor's report is not presented, the principal auditor need not make reference in his report to such departure. If the other auditor's report is presented, the principal auditor may wish to make reference to such departure and its disposition.

* * *

## AU sec. 544, *Lack of Conformity with Generally Accepted Accounting Principles*

* * *

**.04** When financial statements of a regulated entity are prepared in accordance with a basis of accounting prescribed by one or more regulatory agencies or the financial reporting provisions of another agency, the independent auditor may also be requested to report on their fair presentation in conformity with such prescribed basis of accounting in presentations for distribution in other than filings with the entity's regulatory agency. In those circumstances, the auditor should ~~use the standard form of report (see section 508, *Reports on Audited Financial Statements*, paragraph),~~ ~~modified~~ modify the auditor's report as appropriate (see section 508, [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*, paragraphs .35 through .60 ~~.35-.60~~) because of the departures from generally accepted accounting principles, and then, in an additional paragraph to the report, express an opinion on whether the financial statements are presented in conformity with the prescribed basis of accounting. [As amended by Statement on Auditing Standards No. 62, effective for reports issued on or after July 1, 1989. As amended, effective for audits of financial statements for periods ended on or after December 31, 1996, by Statement on Auditing Standards No. 77.]

## AU sec. 551, *Reporting on Information Accompanying the Basic Financial Statements in Auditor-Submitted Documents*

* * *

**.02** The auditor's ~~standard~~ unqualified report covers the basic financial statements: balance sheet, statement of income, statement of retained earnings or changes in stockholders' equity, and statement of cash flows. The following presentations are considered part of the basic financial statements: descriptions of accounting policies, notes to financial statements, and schedules and explanatory material that are identified as being part of the basic financial statements. For purposes of this section, basic financial statements also include an individual basic financial statement, such as a balance sheet or statement of income and financial statements prepared in accordance with a comprehensive basis of accounting other than generally accepted accounting principles.

* * *

**fn 4** See paragraph .10 for guidance when there is a modification of the auditor's ~~standard~~ unqualified report on the basic financial statements.

* * *

**.10** The auditor should consider the effect of a departure ~~any modifications in his standard~~ from the auditor's unqualified report when reporting on accompanying information. When the auditor expresses a qualified opinion on the basic financial statements, he should make clear the effects upon any accompanying information as well (see paragraph .14). When the auditor expresses an adverse opinion, or disclaims an opinion, on the basic financial statements, he should not express the opinion described in paragraph .06 on any accompanying information. [fn 5] An expression of such an opinion in these circumstances would be inappropriate because, like a piecemeal opinion, it may tend to overshadow or contradict the disclaimer of opinion or adverse opinion on the basic financial statements. (See section 508.64 and section 623.14.)

* * *

**.21** The auditor may be requested to describe the procedures applied to specific items in the financial statements. Additional comments of this nature should not contradict or detract from the description of the scope of his audit in the ~~standard~~ auditor's unqualified report. Also, they should be set forth separately rather than interspersed with the information accompanying the basic financial statements to maintain a clear distinction between management's representations and the auditor's representations. [Paragraph renumbered by the issuance of Statement on Auditing Standards No. 98, September 2002.]

* * *

## AU sec. 552, *Reporting on Condensed Financial Statement and Selected Financial Data*

* * *

**.02** In reporting on condensed financial statements or selected financial data in circumstances other than those described in paragraph .01, the auditor should follow the guidance in section 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*, paragraphs .41 through .44, section 623, *Special Reports*, or other applicable Statements on Auditing Standards. [fn 2]

* * *

**.06** The following is an example of wording that an auditor may use in the circumstances described in paragraph .01(*a*) to report on condensed financial statements that are derived from financial statements that he or she has audited and on which he or she has issued ~~a standard~~ an auditor's unqualified report:

Independent Auditor's Report

We have audited, in accordance with auditing standards generally accepted in the United States of America, the consolidated balance sheet of X Company and subsidiaries as of December 31, 20X0, and the related consolidated statements of income, retained earnings, and cash flows for the year then ended (not presented herein); and in our report dated February 15, 20X1, we expressed an unqualified opinion on those consolidated financial statements.

In our opinion, the information set forth in the accompanying condensed consolidated financial statements is fairly stated, in all material respects, in relation to the consolidated financial statements from which it has been derived.

[Revised, October 2000, to reflect conforming changes necessary due to the issuance of Statement on Auditing Standards No. 93.]

**.07** A client might make a statement in a client-prepared document that names the auditor and also states that condensed financial statements have been derived from audited financial statements. Such a statement does not, in itself, require the auditor to report on the condensed financial statements, provided that they are included in a document that contains audited financial statements (or that incorporates such statements by reference to information filed with a regulatory agency). However, if such a statement is made in a client-prepared document of a public entity that is required to file, at least annually, complete audited financial statements with a regulatory agency and that document does not include audited financial statements (or does not incorporate such statements by reference to information filed with a regulatory agency), ~~fn 6~~ the auditor should request that the client either (*a*) not include the auditor's name in the document or (*b*), include the auditor's report on the condensed financial statements, as described in paragraph .05. If the client will neither delete the reference to the auditor nor allow the appropriate report to be included, the auditor should advise the client that he does not consent to either the use of his name or the reference to him, and he should consider what other actions might be appropriate. [fn 7]

~~fn 6 If such a statement is made in a client-prepared document that does not include audited financial statements and the client is not a public entity that is required to file complete audited financial statements with a regulatory agency (at least annually), the auditor would ordinarily express an adverse opinion on the condensed financial statements because of inadequate disclosure. (See section 508, *Reports on Audited Financial Statements*, paragraphs .41 through .44.) The auditor would not be expected to provide the disclosure in his report. The following is an example of an auditor's report on condensed financial statements in such circumstances when the auditor had previously audited and reported on the complete financial statements:~~

~~Independent Auditor's Report. We have audited the consolidated balance sheet of X Company and subsidiaries as of December 31, 20X0, and the related earnings, and cash flows for the year then ended (not presented herein). These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audit. We conducted our audit in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion. The condensed consolidated balance sheet as of December 31, 20X0, and the related condensed statements of income, retained earnings, and cash flows for the year then ended, presented on pages xx-xx, are presented as a summary and therefore do not include all of the disclosures required by accounting principles generally accepted in the United States of America. In our opinion, because of the significance of the omission of the information referred to in the~~

~~preceding paragraph, the condensed consolidated financial statements referred to above do not present fairly, in conformity with accounting principles generally accepted in the United States of America, the financial position of X Company and subsidiaries as of December 31, 20X0, or the results of its operations or its cash flows for the year then ended. [Footnote revised, October 2000, to reflect conforming changes necessary due to the issuance of Statement on Auditing Standards No. 93.]~~

* * *

**.10** The following is an example of an additional paragraph included after the opinion paragraph in the Opinion on the Financial Statements section of the ~~an~~ auditor's report ~~that includes an additional paragraph~~ because ~~he~~ the auditor is also engaged to report on selected financial data for a five-year period ended December 31, ~~19~~20X5, in a client-prepared document that includes audited financial statements:

~~Independent Auditor's Report~~

~~We have audited the consolidated balance sheets of ABC Company and subsidiaries as of December 31, 19X5 and 19X4, and the related consolidated statements of income, retained earnings, and cash flows for each of the three years in the period ended December 31, 19X5. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audit.~~

~~We conducted our audits in accordance with auditing standards generally accepted in the United States of America. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provided a reasonable basis for our opinion.~~

Opinion on the Financial Statements

In our opinion, the consolidated financial statements referred to above present fairly, in all material respects, the financial position of the ABC Company and subsidiaries as of December 31, 20X5 and 20X4, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 20X5, in conformity with accounting principles generally accepted in the United States of America.

We have also previously audited, in accordance with ~~auditing~~ the standards ~~generally accepted in the~~ of the PCAOB ~~(United States) of America~~, the consolidated balance sheets as of December 31, 20X3, 20X2, and 20X1, and the related statements of income, retained earnings, and cash flows for the years ended December 31, 20X2, and 20X1, and the related notes (collectively referred to as the "financial statements") (none of which are presented herein); and we expressed unqualified opinions on those consolidated financial statements. In our opinion, the information set forth in the selected financial data for each of the five years in the period ended December 31, 20X5, appearing on page xx, is fairly stated, in all material respects, in relation to the consolidated financial statements from which it has been derived.

~~[Revised, October 2000, to reflect conforming changes necessary due to the issuance of Statement on Auditing Standards No. 93.]~~

* * *

## AU sec. 560, *Subsequent Events*

* * *

**.09** Occasionally, a subsequent event of the second type has such a material impact on the entity that the auditor may wish to include in his or her report an explanatory paragraph directing the reader's attention to the event and its effects. (See ~~section 508.19~~paragraph 16 of Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*.)

* * *

## AU sec. 623, *Special Reports*

**.01** This section applies to auditors' reports issued in connection with the following:

*** * ***

Note: If any of the auditor's reports described in this section are filed with the U.S. Securities and Exchange Commission, the auditor's report is required to include the basic elements of the auditor's unqualified opinion and critical audit matters as described in paragraphs 6 and 7-13, respectively, of Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*. For qualified, adverse, and disclaimer of opinion reports, see requirements of AU sec. 508, [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*.

* * *

fn 2 In some instances, a document containing the auditor's report may include a statement by management regarding its responsibility for the presentation of the financial statements. Nevertheless, the auditor's report should state that the financial statements are management's responsibility. However, the statement about management's responsibility should not be further elaborated upon in the auditor's ~~standard~~ report or referenced to management's report.

* * *

**.06** Unless the financial statements meet the conditions for presentation in conformity with a "comprehensive basis of accounting other than generally accepted accounting principles" as defined in paragraph .04, the auditor should modify his or her report ~~use the standard form of report (see section 508, *Reports on Audited Financial Statements*, paragraph .08) modified as appropriate~~ because of the departures from generally accepted accounting principles (see AU sec. 508, [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*).

* * *

**.14** The auditor should not express an opinion on specified elements, accounts, or items included in financial statements on which he or she has expressed an adverse opinion or disclaimed an opinion based on an audit, if such reporting would be tantamount to expressing a piecemeal opinion on the financial statements (see section 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*, paragraph .64). However, an auditor would be able to express an opinion on one or more specified elements, accounts, or items of a financial statement provided that the matters to be reported on and the related scope of the audit were not intended to and did not encompass so many elements, accounts, or items as to constitute a major portion of the financial statements. For example, it may be appropriate for an auditor to express an opinion on an entity's accounts receivable balance even if the auditor has disclaimed an opinion on the financial statements taken as a whole. However, the report on the specified element, account, or item should be presented separately from the report on the financial statements of the entity.

**.15** When an independent auditor is engaged to express an opinion on one or more specified elements, accounts, or items of a financial statement, the report should include—

*** * ***

b. A paragraph that—

(1) States that the specified elements, accounts, or items identified in the report were audited. If the audit was made in conjunction with an audit of the company's financial statements, the paragraph should so state and indicate the date of the auditor's report on those financial statements. Furthermore, any departure from the ~~standard~~ auditor's unqualified report on those statements should also be disclosed if considered relevant to the presentation of the specified element, account or item.

(2) States that the specified elements, accounts, or items are the responsibility of the Company's management and that the auditor is responsible for expressing an opinion on the specified elements, accounts or items based on the audit.

* * *

* * *

**.17** The auditor should consider the effect that any departure, including additional explanatory language because of the circumstances discussed in ~~section 508, *Reports on Audited Financial Statements*,~~ paragraph ~~.11~~15 of Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, from the ~~standard~~ auditor's unqualified report on the audited financial statements might have on the report on a specified element, account, or item thereof.

* * *

**.21** When an auditor's report on compliance with contractual agreements or regulatory provisions is included in the report that expresses the auditor's opinion on the financial statements, the auditor should include a paragraph, ~~after the opinion paragraph~~ following the Opinion on the Financial Statements section, that provides negative assurance relative to compliance with the applicable covenants of the agreement, insofar as they relate to accounting matters, and that specifies the negative assurance is being given in connection with the audit of the financial statements. The auditor should also ordinarily state that the audit was not directed primarily toward obtaining knowledge regarding compliance. In addition, the report should include a paragraph that includes a description and source of any significant interpretations made by the entity's management as discussed in paragraph .20d as well as a paragraph that restricts the use of the report to the specified parties as discussed in paragraph .20e. Following are examples of reports that might be issued:

* * *

**.31** Certain circumstances, while not affecting the auditor's unqualified opinion, may require that the auditor add additional explanatory language to the special report. These circumstances include the following:

*a.* *Lack of Consistency in Accounting Principles.* If there has been a change in accounting principles or in the method of their application, [fn 35] the auditor should add an explanatory paragraph to the report (following the opinion paragraph) that describes the change and refers to the note to the financial presentation (or specified elements, accounts, or items thereof) that discusses the change and its effect thereon [fn 36] if the accounting change is considered relevant to the presentation. Guidance on reporting in this situation is contained in ~~section 508, *Reports on Audited Financial Statements*, paragraphs .16 through .18~~Auditing Standard No. 6, *Evaluating Consistency of Financial Statements*. [fns 37–38]

b. * * *

*c.* *Other Auditors.* When the auditor decides to make reference to the report of another auditor as a basis, in part, for his or her opinion, the auditor should disclose that fact in the introductory paragraph of the report and should refer to the report of the other auditors in expressing his or her opinion. Guidance on reporting in this situation is contained in section ~~508~~543, ~~*Reports on Audited Financial Statements*~~ *Part of Audit Performed by Other Independent Auditors*, paragraphs .~~12 and .13~~06-.09.

*d.* *Comparative Financial Statements (or Specified Elements, Accounts, or Items Thereof).*If the auditor expresses an opinion on prior-period financial statements (or specified elements, accounts, or items thereof) that is different from the opinion he or she previously expressed on that same information, the auditor should disclose all of the substantive reasons for the different opinion in a separate explanatory paragraph preceding the opinion paragraph of the report. Guidance on reporting in this situation is contained in section 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*, paragraphs .68 and .69.

As in reports on financial statements prepared in conformity with generally accepted accounting principles, the auditor may add an explanatory paragraph to emphasize a matter regarding the financial statements (or specified elements, accounts, or items thereof). [Revised, February 1997, to reflect conforming changes necessary due to the issuance of Statement on Auditing Standards No. 79.]

* * *

fn 22 When the auditor's report on compliance with contractual agreements or regulatory provisions is included in the report that expresses the auditor's opinion on the financial statements, the last two paragraphs of this report are examples of the paragraphs that should follow the ~~opinion paragraph~~ Opinion on the Financial Statements section of the auditor's report on the financial statements. [Footnote renumbered by the issuance of Statement on Auditing Standards No. 77, November 1995.]

* * *

## AU sec. 9623, *Special Reports: Auditing Interpretations of Section 623*

* * *

**.45** *Interpretation*~~—Section 420.06~~ Auditing Standard No. 6, *Evaluating Consistency in Financial Statements* states that changes in accounting principles and methods of applying them affect consistency and require the addition of an explanatory paragraph (following the ~~opinion paragraph~~ Opinion on the Financial Statements section) in the auditor's unqualified report on the audited financial statements. Section 623.16 states that, if applicable, any departures from the auditor's ~~standard~~ unqualified report on the related financial statements should be indicated in the special report on an element, account, or item of a financial statement.

* * *

fn 10 Generally accepted accounting principles require the use of current-value accounting for financial statements of certain types of entities (for example, investment companies, employee benefit plans, personal financial statements, and mutual and common trust funds). This interpretation does not apply to reports on current-value financial statements of such entities. The auditor engaged to report on current-value financial statements of such entities should follow the guidance in AU sec~~tion~~. 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*, Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, and the applicable industry audit guide.

* * *

**.83** *Interpretation*—No. An offering memorandum generally is a document providing information as the basis for negotiating an offer to sell certain assets or businesses or to raise funds. Normally, parties to an agreement or other specified parties for whom the special-purpose financial presentation is intended have not been identified. Accordingly, the auditor should follow the reporting guidance in section 508, ~~*Reports on Audited Financial Statements*~~ [new proposed title] *Departures from Unqualified Opinions and*

Other Reporting Circumstances, paragraphs .35–.44 and .58–.60. [Paragraph renumbered by the issuance of Statement of Position 01-5, December 2001.]

* * *

## AU sec. 634, *Letters for Underwriters and Certain Other Requesting Parties*

* * *

**.27** When the report on the audited financial statements and financial statement schedules included (incorporated by reference) in the registration statement ~~departs from the standard report~~ includes one or more explanatory paragraphs or a paragraph to emphasize a matter regarding the financial statements, ~~for instance, where one or more explanatory paragraphs or a paragraph to emphasize a matter regarding the financial statements have been added to the report~~, the accountants should refer [fn 18] to that fact in the comfort letter and discuss the subject matter of the paragraph. [fn 19] In those rare instances in which the SEC accepts a qualified opinion on historical financial statements, the accountants should refer to the qualification in the opening paragraph of the comfort letter and discuss the subject matter of the qualification. (See also paragraph .35*f*.) [Paragraph renumbered by the issuance of Statement on Auditing Standards No. 76, September 1995.]

* * *

**.30** An underwriter may also request that the accountants comment in their comfort letter on (*a*) unaudited interim financial information required by item 302(a) of Regulation S-K, to which section 722 pertains or (*b*) required supplementary information, to which section 558, *Required Supplementary Information*, pertains. Section 722 and section 558 provide that the accountants should expand the ~~standard~~ auditor's unqualified report on the audited financial statements to refer to such information when the scope of their procedures with regard to the information was restricted or when the information appears not to be presented in conformity with generally accepted accounting principles or, for required supplementary information, applicable guidelines. Such expansions of the ~~accountants' standard~~ auditor's unqualified report in the registration statement would ordinarily be referred to in the opening paragraph of the comfort letter (see also paragraph .35*f*). Additional comments on such unaudited information are therefore unnecessary. However, if the underwriter requests that the accountants perform procedures with regard to such information in addition to those performed in connection with their review or audit as prescribed by sections 722 and 558, the accountants may do so and report their findings. [Paragraph renumbered by the issuance of Statement on Auditing Standards No. 76, September 1995.]

* * *

**.35** Comments included in the letter will often concern (*a*) unaudited condensed interim financial information (see paragraphs .36 through .38), [fn 27] (*b*) capsule financial information (see paragraphs .36 and .39 through .41), (*c*) pro forma financial information (see paragraphs .42 and .43), (*d*) financial forecasts (see paragraphs .36 and .44), and (*e*) changes in capital stock, increases in long-term debt, and decreases in other specified financial statement items (see paragraphs .36 and .45 through .53). For commenting on these matters, the following guidance is important:

*** * ***

f. When the report on the audited financial statements and financial statement schedules in the registration statement departs from the auditor's ~~standard~~ unqualified report, and the comfort letter includes negative assurance with respect to subsequent unaudited condensed interim financial information included (incorporated by reference) in the registration statement or with respect to an absence of specified subsequent changes, increases, or decreases, the accountant should consider the effect thereon of the subject matter of the qualification, explanatory paragraph(s), or paragraph(s) emphasizing a matter regarding the financial statements. The accountant should also follow the guidance in paragraph .27. An illustration of how this type of situation may be dealt with is shown in example I [paragraph .64].

[Paragraph renumbered by the issuance of Statement on Auditing Standards No. 76, September 1995.]

* * *

## AU sec. 722, *Interim Financial Information*

* * *

### Form of Accountant's Review Report

**.37** The accountant's review report accompanying interim financial information should consist of:

a. ~~A~~ The title ~~that includes the word *independent*~~, "Report of Independent Registered Public Accounting Firm".

a-1. Addressees that include, but are not necessarily limited to, (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body.[fn24A]

a-2. The name of the company whose interim financial information was reviewed.

a-3. The date of, or period covered by, the interim financial information and each related schedule, if applicable, identified in the report.

*** * ***

d. A statement that the review of interim financial information was conducted in accordance with the standards ~~established by the AICPA~~ of the Public Company Accounting Oversight Board ("PCAOB") (United States).

e. * * *

f. A statement that a review of interim financial information is substantially less in scope than an audit conducted in accordance with ~~generally accepted auditing~~ the standards of the PCAOB, the objective of which is an expression of an opinion regarding the financial statements taken as a whole, and accordingly, no such opinion is expressed.

g. * * *

h. * * *

h-1. The city and state (or city and country, in the case of non-U.S. auditors) from which the accountant's review report has been issued.

* * *

In addition, each page of the interim financial information should be clearly marked as unaudited.

**fn24A** For example, addressees might include other appropriate parties depending on the legal and governance structure of the company.

**.38** The following is an example of a review report: [fn 26]

~~Independent Accountant's~~ Report of Independent Registered Public Accounting Firm

*To the shareholders and board of directors of ABC Company*

We have reviewed the accompanying [*describe the interim financial information or statements reviewed*] of ABC Company and consolidated subsidiaries as of September 30, 20X1, and for the three-month and nine-month periods then ended. This (These) interim financial information (statements) is (are) the responsibility of the company's management.

We conducted our review in accordance with the standards of the Public Company Accounting Oversight Board ("PCAOB") (United States) ~~established by the American Institute of Certified Public Accountants~~. A review of interim financial information consists principally of applying analytical procedures and making inquiries of persons responsible for financial and accounting matters. It is substantially less in scope than an audit conducted in accordance with the ~~generally accepted auditing~~ standards of the PCAOB, the objective of which is the expression of an opinion regarding the financial statements taken as a whole. Accordingly, we do not express such an opinion.

Based on our review, we are not aware of any material modifications that should be made to the accompanying interim financial information (statements) for it (them) to be in conformity with accounting principles generally accepted in the United States of America.

[*Signature*]

[*City and State or Country*]

[*Date*]

**.39** An accountant may be engaged to report on a review of comparative interim financial information. The following is an example of a review report on a condensed balance sheet as of March 31, 20X1, the related condensed statements of income and cash flows for the three-month periods ended March 31, 20X1 and 20X0, and a condensed balance sheet derived from audited financial statements as of December 31, 20X0, that were included in Form 10-Q. [fn 27]

~~Independent Accountant's~~ Report of Independent Registered Public Accounting Firm

*To the shareholders and board of directors of ABC Company*

We have reviewed the condensed consolidated balance sheet of ABC Company and subsidiaries as of March 31, 20X1, and the related condensed consolidated statements of income and cash flows for the three-month periods ended March 31, 20X1 and 20X0. These financial statements are the responsibility of the company's management.

We conducted our review in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB")~~established by the American Institute of Certified Public Accountants~~. A review of interim financial information consists principally of applying analytical procedures and making inquiries of persons responsible for financial and accounting matters. It is substantially less in scope than an audit conducted in accordance with ~~generally accepted auditing~~ the standards of the PCAOB, the objective of which is the expression of an opinion regarding the financial statements taken as a whole. Accordingly, we do not express such an opinion.

Based on our reviews, we are not aware of any material modifications that should be made to the condensed financial statements referred to above for them to be in conformity with accounting principles generally accepted in the United States of America.

We have previously audited, in accordance with ~~auditing~~ the standards ~~generally accepted in the~~ of the PCAOB ~~United States of America~~, the consolidated balance sheet of ABC Company and subsidiaries as of December 31, 20X0, and the related consolidated statements of income, retained earnings, and cash flows for the year then ended, and the related notes (collectively referred to as the "consolidated financial statements") (not presented herein); and in our report dated February 15, 20X1, we expressed an unqualified opinion on those consolidated financial statements. In our opinion, the information set forth in the accompanying condensed consolidated balance sheet as of December 31, 20X0, is fairly stated, in all material respects, in relation to the consolidated balance sheet from which it has been derived. [fn 28]

[*Signature*]

[*City and State or Country*]

[*Date*]

**.40** The accountant may use and make reference to another accountant's review report on the interim financial information of a significant component of a reporting entity. This reference indicates a division of responsibility for performing the review. [fn 29] The following is an example of report including such a reference:

~~Independent Accountant's~~ Report of Independent Registered Public Accounting Firm

*To the shareholders and board of directors of ABC Company*

We have reviewed the accompanying [*describe the interim financial information or statements reviewed*] of ABC Company and consolidated subsidiaries as of September 30, 20X1, and for the three-month and nine-month periods then ended. This (These) interim financial information (statements) is (are) the responsibility of the company's management.

We were furnished with the report of other accountants on their review of the interim financial information of DEF subsidiary, whose total assets as of September 30, 20X1, and whose revenues for the three-month and nine-month periods then ended, constituted 15 percent, 20 percent, and 22 percent, respectively, of the related consolidated totals.

We conducted our reviews in accordance with the standards of the Public Company Accounting Oversight Board (United States) ("PCAOB") ~~established by the American Institute of Certified Public Accountants~~. A review of interim financial information (statements) consists principally of applying analytical procedures and making inquiries of persons responsible for financial and accounting matters. It is substantially less in scope than an audit conducted in accordance with ~~generally accepted auditing~~ the standards of the PCAOB, the objective of which is the expression of an opinion regarding the financial statements taken as a whole. Accordingly, we do not express such an opinion.

Based on our review and the report of other accountants, we are not aware of any material modifications that should be made to the accompanying interim financial information (statements) for it (them) to be in conformity with accounting principles generally accepted in the United States of America.

[*Signature*]

[*City and State or Country*]

[*Date*]

**.41** The accountant's report on a review of interim financial information should be modified for departures from generally accepted accounting principles, ~~[fn 30]~~ which include inadequate disclosure and changes in accounting principle that are not in conformity with generally accepted accounting principles. The existence of substantial doubt about the entity's ability to continue as a going concern or a lack of consistency in the application of accounting principles affecting the interim financial information would not require the accountant to add an additional paragraph to the report, provided that the interim financial information appropriately discloses such matters. Although not required, the accountant may wish to emphasize such matters in a separate explanatory paragraph of the report. See paragraphs .44 and .45 of this section for examples of paragraphs that address matters related to an entity's ability to continue as a going concern.

~~fn 30 If the circumstances contemplated by Rule 203, *Accounting Principles*, are present, the accountant should refer to the guidance in section 508, *Reports on Audited Financial Statements*, paragraph .15).~~

* * *

**.50** The auditor ordinarily need not modify his or her report on the audited financial statements to refer to his or her having performed a review in accordance with this section or to refer to the interim financial information accompanying the audited financial statements because the interim financial information has not been audited and is not required for the audited financial statements to be fairly stated in conformity with generally accepted accounting principles. The auditor's report on the audited financial statements should, however, be modified in the following circumstances:

* * *

d. The selected quarterly financial data required by item 302(a) of Regulation S-K has not been reviewed. The following is an example of a paragraph that should be added to the auditor's report if the selected quarterly financial data required by item 302(a) has not been reviewed.

The selected quarterly financial data on page xx contains information that we did not audit, and, accordingly, we do not express an opinion on that data. We attempted but were unable to review the quarterly data in accordance with the standards ~~established by the American Institute of Certified Public Accountants~~ of the Public Company Accounting Oversight Board because we believe that the company's internal control for the preparation of interim financial information does not provide an adequate basis to enable us to complete such a review.

* * *

## APPENDIX 4

## *Proposed Amendments to PCAOB Standards Related to the Proposed Other Information Standard*

In connection with its proposed auditing standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (the "proposed other information standard"), the Board is proposing amendments to several of its auditing standards to conform to the requirements of the proposed other information standard.[1/]

Language that would be deleted by the proposed amendments is ~~struck through~~. Language that would be added is underlined. The presentation of proposed amendments to PCAOB standards by showing deletions and additions to existing sentences and paragraphs is intended to assist readers in easily comprehending the Board's proposed changes to existing auditing standards and interpretations. The Board's proposed amendments consist of only the deletion or addition of the language that has been struck through or underlined. This presentation does not constitute or represent a reproposal of all or of any other part of a standard or interpretation that may be amended.

The proposed amendments would amend specific auditing standards to reflect requirements of the proposed other information standard. Some of these auditing standards may need further updating, which the Board may consider under separate standard-setting projects. The proposed amendments in connection with the proposed other information standard primarily include updating references to auditing standards that are being amended or superseded, changing references to AU sec. 550, *Other Information in Documents Containing Audited Financial Statements,* applied by analogy, and moving the reporting example from AU sec. 9550, *Other Information in Certain Documents Containing Audited Financial Statements: Auditing Interpretations of Section 550,* to AU sec. 508, [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*, related to considerations in the auditor's report

[1/] PCAOB Release No. 2013-002, *Proposed Reorganization of PCAOB Auditing Standards* (March 26, 2013), and PCAOB Release No. 2011-005, *Auditing Supplemental Information Accompanying Audited Financial Statements* (July 12, 2011), include proposed amendments that would supersede, amend, or delete paragraphs for which amendments are included in this proposed other information standard. If, prior to the conclusion of this rulemaking, the Board has adopted amendments that affect the amendments proposed in this release, the Board may make conforming changes to this proposed other information standard.

regarding a report by management on an audit of internal control over financial reporting.

The following standard and interpretation would be superseded by this proposal:

- AU sec. 550, *Other Information in Documents Containing Audited Financial Statements*, and

- AU sec. 9550, *Other Information in Documents Containing Audited Financial Statements: Auditing Interpretations of Section 550*.

The Board is requesting comments on all aspects of the proposed amendments. Significant proposed amendments are described in more detail in Appendix 6 of this release.

## Auditing Standard No. 7, *Engagement Quality Review*

* * *

[5/] See ~~paragraphs .04-.06 of AU sec. 550~~Proposed Auditing Standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*; AU sec. 711, *Filings Under Federal Securities Statutes*.

* * *

## Auditing Standard No. 16, *Communications with Audit Committees*

* * *

[27/] *See, e.g.*, ~~AU sec. 550~~Proposed Auditing Standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* ("proposed other information standard"). In addition to ~~AU sec. 550~~ the proposed other information standard, discussion of the auditor's consideration of other information is included in AU sec. 558, *Required Supplementary Information,* and AU sec. 711, *Filings Under Federal Securities Statutes.*

* * *

**APPENDIX B**

This appendix identifies other PCAOB rules and standards related to the audit that require communication of specific matters between the auditor and the audit committee.

* * *

- ~~AU sec. 550~~Proposed Auditing Standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*, paragraphs ~~.04 and .06~~8 and 10.

* * *

## AU sec. 9324, *Service Organizations: Auditing Interpretations of Section 324*

* * *

**.37** If the service organization includes information about the design deficiencies in the section of the document titled "Other Information Provided by the Service Organization," the service auditor should read the information and ~~consider applying by analogy the guidance in section 550, *Other Information in Documents Containing Audited Financial Statements.*~~ ~~In addition, the service auditor should~~ include a paragraph in his or her report disclaiming an opinion on the information provided by the service organization. The following is an example of such a paragraph.

> The information in section 4 describing XYZ Service Organization's plans to modify its disaster recovery plan is presented by the Service Organization to provide additional information and is not a part of the Service Organization's description of controls that may be relevant to a user organization's internal control. Such information has not been subjected to the procedures applied in the examination of the description of the controls applicable to the processing of transactions for user organizations and, accordingly, we express no opinion on it.

A service auditor also may consider communicating information about the design deficiencies in the section of the service auditor's document titled "Other Information Provided by the Service Auditor."

* * *

## AU sec. 9342, *Auditing Accounting Estimates: Auditing Interpretations of Section 342*

* * *

**.09** When the unaudited voluntary disclosures are included in a client-prepared document and are located on the face of the financial statements, the footnotes, or in a supplemental schedule, the voluntary disclosures should be ~~labelled~~ labeled "unaudited." When such unaudited information is not presented on the face of the financial statements, the footnotes, or in a supplemental schedule, the auditor should consider the ~~guidance~~ auditor's responsibilities in ~~section 550~~Proposed Auditing Standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*.

* * *

## AU sec. 508, *Reports on Audited Financial Statements*

* * *

**CONSIDERATIONS IN THE AUDITOR'S REPORT REGARDING REPORT BY MANAGEMENT ON AUDIT OF INTERNAL CONTROL OVER FINANCIAL REPORTING**

**.74A** In situations in which the company has determined that it is not required to obtain, nor did the company request the auditor to perform, an audit of internal control over financial reporting, the auditor should refer to the auditor's responsibilities regarding other information in annual reports filed with the SEC under the Securities Exchange Act of 1934 that contain audited financial statements and the related auditor's report in Proposed Auditing Standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*.

**.74B** If the auditor has not been engaged to examine and report on management's assertion about the effectiveness of the company's internal control over financial reporting, the auditor may include statements in the auditor's report that:

- The company is not required to have, nor was the auditor engaged to perform, an audit of its internal control over financial reporting;

- The audit included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the company's internal control over financial reporting; and

- The auditor expresses no such opinion.

Following is an example of the Basis of Opinion section in the auditor's report that contains such statements:

[*Basis of Opinion*]

Our responsibility is to express an opinion on the Company's financial statements based on our audits. We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. The Company is not required to have, nor were we engaged to perform, an audit of its internal control over financial reporting. Our audit included consideration of internal control over financial reporting as a basis for designing audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Company's internal control over financial reporting. Accordingly, we express no such opinion.

Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures include examining, on a test basis, appropriate evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

*** * ***

## AU sec. 551, *Reporting on Information Accompanying the Basic Financial Statements in Auditor-Submitted Documents*

* * *

**.04** When an auditor submits a document containing audited financial statements to his client or to others, he has a responsibility to report on all the information included in the document. On the other hand, when the auditor's report is included in a client-prepared document [fn 2] and the auditor is not engaged to report on information accompanying the basic financial statements, his responsibility with respect to such information is described in (*a*) ~~section 550~~Proposed Auditing Standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*, and (*b*) other sections covering particular types of information or circumstances, such as section 558, *Required Supplementary Information*.

* * *

## AU sec. 558, *Required Supplementary Information*

* * *

**fn2** This section is not applicable to entities that voluntarily present supplementary information not required by GAAP. For example, entities that voluntarily present supplementary information on the effects of inflation and changes in specific prices, formerly required by FASB Statement No. 33, *Financial Reporting and Changing Prices*, are guided by ~~section 550~~Proposed Auditing Standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*. [Footnote revised, April 2000, to reflect conforming changes necessary due to the issuance of Statement on Auditing Standards No. 91. As amended, effective September 2002, by Statement on Auditing Standards No. 98.]

* * *

**.03** Some entities may voluntarily include, in documents containing audited financial statements, certain supplementary information that is required of other entities. When an entity voluntarily includes such information as a supplement to the financial statements or in an unaudited note to the financial statements, the provisions of this section are applicable unless either the entity indicates that the auditor has not applied the procedures described in this section or the auditor includes in an explanatory paragraph in his report on the audited financial statements a disclaimer on the information. [fn3]The following is an example of a disclaimer an auditor might use in these circumstances:

> The [*identify the supplementary information*] on page XX (or in Note XX) is not a required part of the basic financial statements, and we did not audit or apply limited procedures to such information and do not express any assurances on such information.

When the auditor does not apply the procedures described in this section to a voluntary presentation of required supplementary information required for other entities, the provisions of ~~section 550~~Proposed Auditing Standard, *The Auditor's Responsibilities Regarding* *Other Information in* *Certain* *Documents Containing Audited Financial Statements* *and the Related Auditor's Report*, apply, only if the annual report containing the financial statements and the related auditor's report is an annual report filed with the SEC under the Securities Exchange Act of 1934.

* * *

**.05** The auditor's responsibility for other information not required by the FASB, GASB, or FASAB but included in certain annual reports—which are client-prepared documents [fn4]—is specified in ~~section 550~~Proposed Auditing Standard, *The Auditor's Responsibilities Regarding* *Other Information in* *Certain* *Documents Containing Audited Financial Statements* *and the Related Auditor's Report*. The auditor's responsibility for information outside the basic financial statements in documents that the auditor submits to the client or to others is specified in section 551. The auditor's responsibility for supplementary information required by the FASB, GASB or FASAB (called *required supplementary information*) is discussed in the paragraphs that follow. [Revised, April 2000, to reflect conforming changes necessary due to the issuance of Statement on Auditing Standards No. 91.]

* * *

**.09** In conjunction with the audit of the financial statements, the auditor may subject the supplementary information to certain auditing procedures. If the procedures are sufficient to enable the auditor to express an opinion on whether the information is fairly stated in all material respects in relation to the financial statements taken as a whole, the auditor may expand the ~~audit~~ auditor's report to express such an opinion. ~~in accordance with section 550.07~~. ~~[Paragraph added, effective September 2002, by Statement on Auditing Standards No. 98.]~~In those circumstances, the auditor's report should describe clearly the character of the auditor's work and the degree of responsibility the auditor is taking regarding the supplementary information. The auditor may report on the supplementary information using the following examples:

a. Required supplementary information to which no qualification in the auditor's report on the financial statements applies:

Our audit was conducted for the purpose of forming an opinion on the financial statements taken as a whole. The [*identify the required supplementary information*] is presented for purposes of additional analysis and is not a required part of the financial statements. Such information has been subjected to the auditing procedures applied in the audit of the financial statements and, in our opinion, is fairly stated in all material respects in relation to the financial statements taken as a whole.

b. Required supplementary information to which a qualification in the auditor's report on the financial statements applies:

Our audit was conducted for the purpose of forming an opinion on the financial statements taken as a whole. The required supplementary information included in [*Schedules 1 and 2*] on page(s) [*XX and XX*] as of December 31, 19XX, is presented for purposes of additional analysis and is not a required part of the financial statements. The required supplementary information in such schedules has been subjected to the auditing procedures applied in the audit of the financial statements; and, in our opinion, except for [*describe reason for qualification*], such information is fairly stated in all material respects in relation to the financial statements taken as a whole.

* * *

## AU sec. 9634, *Letters for Underwriters and Certain Other Requesting Parties: Auditing Interpretations of Section 634*

* * *

**.04** The auditor may affirm to the board of directors that under generally accepted auditing standards, ~~the auditor is required to read the information~~ in addition to ~~audited~~ auditing the financial statements contained in the Form 10-K, the auditor is required to ~~for the purpose of considering~~ evaluate whether ~~such~~ the other information included in such annual reports filed with the SEC under the Securities Exchange Act of 1934 and contain audited financial statements and the related auditor's report contains (1) a material inconsistency, (2) a material misstatement of fact, (3) or both**,** and, if so, to respond appropriately, and to communicate in the auditor's report whether the other information contains a material inconsistency, a material misstatement of fact, or both (see Proposed Auditing Standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*). ~~may be materially inconsistent with information appearing in the financial statements (see section 550)~~. ~~However, the report to the board of directors should state that the auditor has no obligation to perform any procedures to corroborate such information.~~

* * *

## AU sec. 722, *Interim Financial Information*

* * *

**.18** *Inquiries and other review procedures.* The following are inquiries the accountant should make and other review procedures the accountant should perform when conducting a review of interim financial information:

*** * ***

f. Reading other information that accompanies the interim financial information and is contained in reports (1) to holders of securities or beneficial interests or (2) filed with regulatory authorities under the Securities Exchange Act of 1934 (such as Form 10-Q or 10-QSB), to consider ~~–~~whether such information or the manner of its presentation is materially inconsistent with the interim financial information or there is a material misstatement of fact in the other information.[fn 12] If the accountant concludes that there is a material inconsistency~~,~~ or ~~becomes aware of information that he or she believes is~~ a material misstatement of fact, ~~the action taken will depend on his or her judgment in the particular circumstances. In determining the appropriate course of action,~~ the accountant should consider the ~~guidance~~ requirements of ~~in~~ ~~section 550~~Proposed Auditing Standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report.* ~~paragraphs .04 through .06)~~

* * *

* * *

## APPENDIX 5

### *Additional Discussion of the Proposed Auditor Reporting Standard, Proposed Amendments to PCAOB Standards, and Comments on the Concept Release*

This Appendix discusses the Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the "proposed auditor reporting standard"), presented in Appendix 1, and the related proposed amendments to certain PCAOB auditing standards (the "proposed amendments"), presented in Appendix 3. This Appendix collectively refers to the proposed auditor reporting standard and proposed amendments as the "proposed auditor reporting standard and amendments."

Following the Board's initial outreach from October 2010 to March 2011,[1/] the Board issued on June 21, 2011 a concept release to seek public comment on potential changes to the auditor's reporting model (the "concept release").[2/] Additionally, the Board held a public roundtable[3/] on the concept release and changing the auditor's report was discussed at the Board's Investor Advisory Group ("IAG")[4/] and Standing Advisory Group ("SAG") meetings.[5/]

---

[1/] See Section II., *Board Outreach*, of the Release for further discussion regarding the Board's outreach.

[2/] *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards,* PCAOB Release No. 2011-003 (June 21, 2011), is available at http://pcaobus.org/Rules/Rulemaking/Docket034/Concept_Release.pdf.

[3/] A transcript of the public roundtable discussions is available at http://pcaobus.org/Rules/Rulemaking/Docket034/09152011_Roundtable_Transcript.pdf.

[4/] IAG meeting details and webcasts for March 2011 and 2012 are available at http://pcaobus.org/News/Events/Pages/03162011_IAGMeeting.aspx and http://pcaobus.org/News/Webcasts/Pages/03282012_IAGMeeting.aspx.

[5/] See SAG meeting transcripts for November 2011 and 2012, available at http://pcaobus.org/Rules/Rulemaking/Docket034/11102011_SAG_Transcript.pdf, http://pcaobus.org/Rules/Rulemaking/Docket034/11162012_SAG_Transcript.pdf, and http://pcaobus.org/Rules/Rulemaking/Docket034/11152012_SAG_Transcript.pdf.

This Appendix discusses significant comments received during the Board's outreach regarding the auditor's reporting model and also provides additional background information regarding the requirements in the proposed auditor reporting standard and amendments.

The Board requests comments on specific questions included in this Appendix as well as on its proposal in general. Additionally, to assist the Board in evaluating the clarity of the Board's proposal relating to the communication of "critical audit matters,"[6/] the Board requests that commenters prepare and forward to the Board for its consideration examples of critical audit matters that could be communicated in the auditor's report under the proposed auditor reporting standard.[7/]

Further, the Board is seeking comment on economic considerations related to the proposed auditor reporting standard and amendments, including potential costs. To assist the Board in evaluating such matters, the Board is requesting relevant information and empirical data, to the extent available to commenters. Commenters providing cost estimates are requested to provide the basis for any estimate provided. Finally, the Board is seeking comment on the applicability of the proposed auditor reporting standard and amendments to specific entities, including the audits of brokers and dealers, investment companies, and employee stock purchase, savings, and similar plans. Considerations related to the applicability of the proposed auditor reporting standard and amendments to audits of emerging growth companies ("EGCs") are discussed in Appendix 7.

The following sections describe the requirements in the proposed auditor reporting standard and amendments. The Exhibit to this Appendix provides three illustrative examples of communications of critical audit matters.

## I. Introduction (Paragraphs 1 – 3 of the Proposed Auditor Reporting Standard)

The proposed auditor reporting standard establishes requirements for the content of the auditor's written report when the auditor expresses an unqualified opinion on the financial statements (the "auditor's unqualified report"). The auditor is in a position to express an unqualified opinion on the financial statements when the auditor conducted

---

6/ See Section V., *Critical Audit Matters*, of this Appendix for discussion of the proposed critical audit matters.

7/ Any such examples would be posted to the PCAOB Rulemaking Docket Matter No. 034 without edits or redactions.

an audit in accordance with the standards of the PCAOB and concludes that the financial statements, taken as a whole, are presented fairly, in all material respects, in conformity with the applicable financial reporting framework.

The proposed auditor reporting standard would supersede portions of existing AU sec. 508, *Reports on Audited Financial Statements*, ("existing AU sec. 508") that primarily relate to an unqualified opinion.[8/] When the auditor is unable to express an unqualified opinion on the financial statements, resulting from, for example, a scope limitation or from the financial statements containing a material departure from the applicable financial reporting framework, the auditor would continue to refer to the requirements in existing AU sec. 508. Existing AU sec. 508 would be retitled to "Departures from Unqualified Opinions and Other Reporting Circumstances" and also would include proposed amendments resulting from issuance of the proposed auditor reporting standard.[9/]

## II. Objectives (Paragraph 4 of the Proposed Auditor Reporting Standard)

Consistent with other recently issued PCAOB auditing standards, the Board has included a section on the objectives of the auditor in the proposed auditor reporting standard to highlight the overall context for the requirements of the standard. The proposed auditor reporting standard states that when the auditor concludes that an auditor's unqualified opinion is appropriate, the objectives of the auditor are to:

- Issue a written report that expresses an unqualified opinion on the financial statements and describes the basis for that opinion; and

- Communicate in the auditor's unqualified report critical audit matters relating to the audit of the financial statements or state that the auditor determined that there are no critical audit matters.

The Board's existing AU sec. 508 does not include an objective for the auditor when expressing an opinion on the financial statements. However, existing AU sec. 508 states that the report shall contain either an expression of opinion regarding the financial statements, taken as a whole, or an assertion to the effect that an opinion cannot be expressed, and, where an auditor's name is associated with financial

---

8/ AU secs. 508.01-.09 and .11-.19 would be superseded.

9/ See Section VII., *Amendments to Other PCAOB Standards*, for a discussion of how the requirements of the proposed auditor reporting standard relate to a qualified opinion, adverse opinion, and disclaimer of opinion.

statements, the report should contain a clear-cut indication of the character of the auditor's work, if any, and the degree of responsibility the auditor is taking.[10] The objectives of the proposed auditor reporting standard include the auditor's expression of the opinion on the financial statements. Additionally, the basic elements that describe the nature of the audit and the auditor's responsibilities are similar to an indication of the character of the auditor's work.[11]

Question Related to Section II:

1. Do the objectives assist the auditor in understanding the requirements of what would be communicated in an auditor's unqualified report? Why or why not?

## III. The Auditor's Unqualified Report (Paragraph 5 of the Proposed Auditor Reporting Standard)

The proposed auditor reporting standard provides the overall framework for the auditor's unqualified report. This framework would include:

- Basic elements;
- Communication of critical audit matters; and
- Other explanatory language (or an explanatory paragraph), as appropriate in the circumstances.

Because of changes being proposed to the auditor's report, the proposed auditor reporting standard uses the term "auditor's unqualified report" to differentiate it from the "auditor's standard report" described in existing AU sec. 508. The auditor's unqualified report, as described in the proposed auditor reporting standard, not only would include certain standardized language but also would include tailored language related to the auditor's communication of critical audit matters specific to the individual audit.

---

[10] See existing AU sec. 508.04.

[11] See Section IV., *Basic Elements*, of this Appendix for discussion of the proposed basic elements.

## IV. Basic Elements (Paragraph 6 of the Proposed Auditor Reporting Standard)

The proposed auditor reporting standard retains the basic elements from existing auditor reporting standards[12/] and incorporates elements from existing illustrative reports that accompany the existing auditor reporting standards. Additionally, the proposed auditor reporting standard improves the language for certain elements in the existing auditor reporting standards. Finally, the proposed auditor reporting standard adds new elements that provide more information about the audit and the auditor, such as information regarding auditor tenure and the auditor's responsibilities regarding other information outside the audited financial statements and the results of the auditor's evaluation of the other information.

The proposed auditor reporting standard retains the pass/fail model of the existing auditor's report. Many commenters supported retaining the pass/fail model because it clearly conveys the auditor's opinion regarding whether the financial statements are fairly presented. Additionally, commenters indicated support for the concise and useful message of the pass/fail model.

The proposed basic elements are intended to improve investors' and other financial statement users' understanding about the auditor, the nature of an audit, and the auditor's responsibilities. Except for the new proposed requirement regarding the auditor's responsibilities for other information outside the financial statements, the proposed changes to the basic elements do not represent a significant departure from existing requirements and the Board does not anticipate that they would impose significant additional costs.[13/] The Board, however, would expect audit firms to incur minimal one-time costs that relate primarily to updating a firm's methodology regarding auditor reporting. These changes might not result in significant recurring costs because they involve standardized language that, once implemented, would be the same or very similar across different auditors' reports.

---

12/ See AU sec. 508 and Auditing Standard No. 1, *References in Auditor's Reports to the Standards of the Public Company Accounting Oversight Board.*

13/ Costs related to reporting regarding the auditor's responsibilities for other information outside the financial statements and the results of the auditor's evaluation of the other information are discussed in Appendix 6.

## A. Basic Elements Retained from Existing Standards and Incorporated from Existing Illustrative Reports

### *1. Basic Elements Retained from Existing Standards*

The proposed auditor reporting standard retains the existing basic elements that are currently included in the auditor's report. Commenters indicated that these elements remain important for an understanding of the audit and the auditor's opinion and provide consistency and comparability among auditors' reports.

The basic elements retained from the existing auditor reporting standards include:

- A statement identifying each financial statement and related schedule, if applicable, that has been audited (paragraph 6.d. of the proposed auditor reporting standard);
- A statement that the financial statements are the responsibility of the company's management (paragraph 6.g. of the proposed auditor reporting standard);
- A statement that the auditor's responsibility is to express an opinion on the financial statements based on the audit (paragraph 6.j. of the proposed auditor reporting standard);
- A statement that the audit was conducted in accordance with the standards of the PCAOB (paragraph 6.k. of the proposed auditor reporting standard);
- A statement that an audit includes evaluating the overall presentation of the financial statements (paragraph 6.m.(4) of the proposed auditor reporting standard);
- A statement that the auditor believes that the audit provides a reasonable basis for the auditor's opinion (paragraph 6.n. of the proposed auditor reporting standard);
- An opinion that the financial statements present fairly, in all material respects, the financial position of the company as of the balance sheet date and the results of its operations and its cash flows for the period then

ended in conformity with the applicable financial reporting framework.[14/] The opinion should also include an identification of the applicable financial reporting framework (paragraph 6.o. of the proposed auditor reporting standard);

- The signature of the auditor's firm[15/] (paragraph 6.q. of the proposed auditor reporting standard);

- The city and state (or city and country, in the case of non-U.S. auditors) from which the auditor's report has been issued[16/] (paragraph 6.r. of the proposed auditor reporting standard); and

- The date of the auditor's report (paragraph 6.s. of the proposed auditor reporting standard).[17/]

*2. Basic Elements Incorporated from Existing Illustrative Reports*

In addition to the basic elements retained from the existing auditor reporting standards, the proposed auditor reporting standard also incorporates basic elements from the illustrative reports accompanying the existing reporting standards.[18/] Although these elements were not specifically required by existing auditor reporting standards,

---

14/ The terms used in the Opinion on the Financial Statements section, such as financial position, results of operations and cash flows, should be modified, as appropriate, depending on the type of company and required financial statements. For example, in an audit of an investment company, the auditor might use such terms as "the financial position," "the results of its operations," and "changes in its net assets" in the Opinion on the Financial Statements section of the auditor's report.

15/ See also U.S. Securities and Exchange Commission ("SEC") Rule 2-02(a) of Regulation S-X, 17 C.F.R. § 210.2-02(a).

16/ Id.

17/ See AU sec. 530, *Dating of the Independent Auditor's Report*.

18/ See illustrative reports on an audit of financial statements in existing AU sec. 508.08 and the Appendix of Auditing Standard No. 1.

the Board understands that, in practice, these elements generally are incorporated by auditors in the auditors' reports on financial statements filed with the SEC.[19/]

The proposed auditor reporting standard incorporates the following elements from the existing illustrative reports:

- The title, "Report of Independent Registered Public Accounting Firm" (paragraph 6.a. of the proposed auditor reporting standard);[20/]
- The name of the company whose financial statements were audited (paragraph 6.c. of the proposed auditor reporting standard); and
- The date of, or period covered by, each financial statement and related schedule, if applicable, identified in the report (paragraph 6.e. of the proposed auditor reporting standard).

The basic elements retained from the existing auditor reporting standards and incorporated from existing illustrative reports are generally understood by investors and other financial statement users and would continue to promote consistency among auditors' reports.

## B. Changes to Certain Language in the Existing Auditor's Report

The proposed auditor reporting standard would change the language for certain elements in the existing auditor's report. As further described below, the changes are being proposed in response to comments and to align the language with other PCAOB standards.

### *1. Addressees (Paragraph 6.b. of the Proposed Auditor Reporting Standard)*

The proposed auditor reporting standard would require the auditor's report to be addressed at least to (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body. The proposed auditor reporting standard indicates

[19/] Based on the PCAOB staff's review of 125 Form 10-K filings for fiscal year 2011, all auditors' reports incorporated these basic elements.

[20/] An auditor, whether registered or not, may be legally required to, or may agree voluntarily to, perform an engagement in accordance with PCAOB standards of a non-issuer. If the proposed auditor reporting standard is adopted, PCAOB staff may issue guidance regarding such situations.

that addressees might include other appropriate parties depending on, for example, the legal and governance structure of the company. Accordingly, the auditor's report also could be addressed to others, such as bondholders.

Under existing AU sec. 508, the auditor's report may be addressed to the company whose financial statements are being audited, its board of directors, or stockholders.[21/] Because the auditor is not required to address the auditor's report to a specific group, the auditor's report is not consistently addressed to the company's investors.[22/] In some instances, auditors address the auditor's report to the board of directors, or the company, rather than the company's investors.

Many commenters referred to investors as the "key customers" of the auditor's report, "the real client of the auditor," or "ultimately the ones paying for the auditor's opinions."[23/] Additionally, commenters suggested that the auditor's report should be addressed to the shareholders of the company in addition to the board of directors. In order to promote consistency in the addressees included in the auditor's report, the Board is proposing to require the auditor's report be addressed to investors in the company. The requirement for the auditor's report to be addressed to investors might serve as a reminder to the auditor that the auditor's ultimate customer is the investor.

*2. The Auditor's Responsibility for the Financial Statements, Including the Related Notes and, if Applicable, Schedules (Paragraph 6.f. of the Proposed Auditor Reporting Standard)*

The proposed auditor reporting standard would require the auditor to identify the financial statements, including the related notes and, if applicable, schedules, as part of the financial statements that were audited.

---

[21/] See existing AU sec. 508.09.

[22/] Based on the PCAOB staff's review of 125 Form 10-K filings for fiscal year 2011, there were approximately 5 percent of auditors' reports not addressed to investors.

[23/] See comments at the September 15, 2011 public roundtable on the alternatives presented in the concept release for changing the auditor's reporting model. See also United States v. Arthur Young, 465 U.S. 805, 819 note 15 (1984), which states, in part, "The SEC requires the filing of audited financial statements in order to obviate the fear of loss from reliance on inaccurate information, thereby encouraging public investment in the Nation's industries."

The proposed auditor reporting standard uses the term "financial statements" as used by the SEC, which includes all notes to the statements and all related schedules. The notes to the financial statements provide additional information about the financial statements, such as a summary of the significant accounting policies. The proposed auditor reporting standard also includes a sentence to clarify that the proposed auditor reporting standard and other PCAOB standards often refer to the notes as disclosures.[24/]

The schedules identified as part of the financial statements depend on the SEC's requirements for the type of issuer. For example, auditors of registered investment companies would refer to SEC Regulation S-X, 17 C.F.R. § 210.6-10, for the list of schedules required to be filed with the SEC, such as the summary schedule of investments in securities of unaffiliated issuers.

The proposed auditor reporting standard would not apply to supplemental schedules pursuant to AU sec. 551, *Reporting on Information Accompanying the Basic Financial Statements in Auditor-Submitted Documents*, because those schedules are not considered part of the financial statements.[25/] The auditor should continue to look to the requirements of AU sec. 551 for the auditor's reporting responsibilities regarding supplemental schedules accompanying audited financial statements.[26/]

Under existing AU sec. 508, each financial statement audited is specifically identified in the auditor's report. Existing AU sec. 508 also describes the basic financial statements as the balance sheet, statement of income, statement of stockholders' equity, and statement of cash flows.[27/] The notes to the financial statements and, if applicable, the related schedules, are not identified as part of the financial statements under existing AU sec. 508. The proposed auditor reporting standard would require specific references to the related notes and, if applicable, schedules because those are

---

[24/] See, e.g., Auditing Standard No. 12, *Identifying and Assessing Risks of Material Misstatement.*

[25/] See AU sec. 551.03.

[26/] On July 12, 2011, the Board issued Proposed Auditing Standard, *Auditing Supplemental Information Accompanying Audited Financial Statements,* PCAOB Release No. 2011-005 (July 12, 2011) available at http://pcaobus.org/Rules/Rulemaking/Docket036/PCAOB_Release_2011-005.pdf, which, if adopted, would supersede AU sec. 551.

[27/] Existing AU sec. 508.06 describes these as the basic financial statements.

identified as part of the financial statements pursuant to SEC Rule 1-01(b) of Regulation S-X.

Many commenters supported the addition of language in the auditor's report regarding the auditor's responsibilities for financial statement notes. Some commenters noted that this change would bring the auditor's report more in line with the actual responsibilities of auditors as set out in existing auditing standards and would give more prominence to the auditor's responsibility for such disclosures.

Since the related notes and, if applicable, schedules are an integral part of the audited financial statements, the Board is proposing to make clear in the auditor's report the auditor's responsibilities for the notes to the financial statements and related schedules.

The proposed auditor reporting standard also recognizes that not every company is required by the SEC to include related schedules as part of the financial statements. If, however, these schedules are required by the SEC to be included as part of the audited financial statements, the auditor's report also would identify these schedules.

*3. The Auditor's Responsibility for Fraud (Paragraph 6.l. of the Proposed Auditor Reporting Standard)*

The proposed auditor reporting standard would revise the auditor's report to recognize the auditor's existing responsibility to plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatements, whether caused by error or fraud.[28/]

Existing AU sec. 508 does not require the auditor's report to describe the auditor's responsibility related to error or fraud in planning and performing the audit. This proposed change does not modify the auditor's existing responsibilities with respect to fraud in a financial statement audit.

Many commenters supported describing the auditor's responsibility for fraud in the auditor's report. Those commenters generally suggested modifying the language in the auditor's report to add the phrase "whether caused by error or fraud." Another commenter specifically noted that this description would help achieve the objective of enhancing communication between auditors and users of the auditors' reports.

---

[28/] See paragraph .02 of AU sec. 110, *Responsibilities and Functions of the Independent Auditor*.

In the report by the U.S. Department of the Treasury Advisory Committee on the Auditing Profession ("ACAP"), ACAP requested the PCAOB to clarify in the auditor's report the auditor's role in detecting fraud under current auditing standards.[29/] Additionally, academic research suggests that some users might benefit from a specific statement in the auditor's report regarding fraud.[30/]

*4. Description of the Nature of an Audit (Paragraph 6.m. of the Proposed Auditor Reporting Standard)*

The proposed auditor reporting standard retains the requirement for the auditor's report to contain a description of the nature of an audit but revises that description to align it better with the requirements in the Board's existing standards.

Under existing standards, the nature of an audit is described in the auditor's report as follows:[31/]

- Examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements;

- Assessing the accounting principles used and significant estimates made by management; and

- Evaluating the overall financial statement presentation.

In 2010, the Board adopted eight standards (Auditing Standard Nos. 8-15) that improve the effectiveness of the auditor's identification of, assessment of, and response to the risks of material misstatement in an audit ("risk assessment standards"). The proposed auditor reporting standard updates the description related to the nature of the

---

29/ U. S. Department of the Treasury, *Final Report of the Advisory Committee on the Auditing Profession to the U.S. Department of the Treasury* ("ACAP report"), at VII:2 (October 6, 2008), available at http://www.treasury.gov/about/organizational-structure/offices/Documents/final-report.pdf. See generally, ACAP report, at VII:13-VII:19.

30/ See Glen L. Gray, Jerry L. Turner, Paul J. Coram, and Theodore J. Mock, *Perceptions and Misperceptions Regarding the Unqualified Auditor's Report by Financial Statement Preparers, Users, and Auditors*, 25 Accounting Horizons 659, 675-676 (2011).

31/ See existing AU sec. 508.08.f.

audit to reflect the auditor's responsibilities in a risk-based audit and to align the description with the language in the Board's risk assessment standards.

The proposed auditor reporting standard includes the following description of an audit:

- Performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks;
- Examining, on a test basis, appropriate evidence regarding the amounts and disclosures in the financial statements;
- Evaluating the accounting principles used and significant estimates made by management; and
- Evaluating the overall presentation of the financial statements.

## C. New Proposed Basic Elements Requirements

The proposed auditor reporting standard adds new basic elements to the auditor's unqualified report that would enhance investors' and other financial statement users' understanding about the auditor and an audit.

### *1. Auditor Independence (Paragraph 6.h. of the Proposed Auditor Reporting Standard)*

The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report that the auditor is a public accounting firm registered with the PCAOB (United States) and is required to be independent with respect to the company in accordance with the United States federal securities laws[32/] and the applicable rules and regulations of the SEC and the PCAOB.

Currently, the only indication of auditor independence in the auditor's report is in the title of the report "Report of Independent Registered Public Accounting Firm." Aside from the title, the auditor's report provides no further information regarding auditor

[32/] The term "United States federal securities laws" has the same meaning as "securities laws" in PCAOB Rule 1001(s)(ii), *General Provisions*. "United States federal" has been added to distinguish for investors the country and governmental level (federal, state or local) of the referenced laws.

independence. The statement regarding auditor independence is not intended to affect auditor independence requirements under the securities laws, SEC rules,[33/] or PCAOB rules.[34/]

In the concept release, the Board sought comments on whether to include a statement in the auditor's report, in addition to the title, regarding the auditor's responsibilities related to independence. In general, commenters were supportive of this change with one commenter specifically noting that a stronger statement regarding auditor independence would both be informative for investors and a reminder to auditors of their obligation to be independent of the company.

According to a January 2008 U.S. Government Accountability Office report, "investors and other users of financial statements expect auditors to bring integrity, independence, objectivity, and professional competence to the financial reporting process and to prevent the issuance of misleading financial statements. The resulting sense of confidence in companies' audited financial statements, which is key to the efficient functioning of the markets for public companies' securities, can exist only if reasonable investors perceive auditors as independent and expert professionals who will conduct thorough audits."[35/] In the Board's view, adding a statement relating to auditor independence in the auditor's report could (1) enhance investors' and other financial statement users' understanding of the auditor's obligations to be independent and (2) serve as a reminder to auditors of these obligations.

*2. Auditor Tenure (Paragraph 6.i. of the Proposed Auditor Reporting Standard)*

The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor. Currently this information is not required to be communicated by the auditor (or by management or the audit committee) to investors and other financial statement users.

---

33/ See SEC Rule 2-01 of Regulation S-X, 17 C.F.R. § 210.2-01.

34/ See PCAOB Rule 3520, *Auditor Independence, et seq*.

35/ See U.S. Government Accountability Office, *Audits of Public Companies: Continued Concentration in Audit Market for Large Public Companies Does Not Call for Immediate Action*, 7 (Jan. 2008), available at http://www.gao.gov/new.items/d08163.pdf.

Auditor tenure has been the subject of discussion for decades[36/] and continues to be a topic of discussion today.[37/] Some academic research indicates that engagements with short-term tenure are relatively riskier or that audit quality is improved when auditors have time to gain expertise in the company under audit and in the related industry.[38/] Meanwhile, other academic research indicates that investors that participated in a study view long-term auditor-company relationships as adversely affecting audit quality.[39/] Other academic research suggests that both short and long tenure can have detrimental effects on audit quality.[40/]

Disclosure of auditor tenure also has been considered by other regulators and standard setters. For example, under rules adopted by the United Kingdom ("UK")

[38/] See, e.g., Joseph V. Carcello and Albert L. Nagy, *Audit Firm Tenure and Fraudulent Financial Reporting,* 23 Auditing: A Journal of Practice and Theory 55, 55–69 (2004); and Bin Srinidhi, Sidney Leung, and Ferdinand A. Gul, *Auditor Tenure and Audit Quality: The Role of the Demand for Unique Client Specific Knowledge,* (2010), unpublished working paper available at http://dx.doi.org/10.2139/ssrn.1590811.

[39/] See, e.g., Mai Dao, Suchismita Mishra, and K. Raghunandan, *Auditor Tenure and Shareholder Ratification of the Auditor*, 22 Accounting Horizons 297, 297-314 (2008).

[40/] See, e.g., Larry R. Davis, Billy S. Soo, and Gregory M. Trompeter, *Auditor Tenure and the Ability to Meet or Beat Earnings Forecasts*, 26 Contemporary Accounting Research 517, 517-548 (2009).

Financial Reporting Council, UK-listed companies are required to provide information on the length of auditor tenure in a separate section of the annual report.[41/]

Regardless of whether auditor tenure is viewed as a positive or negative influence on audit quality, investors and other financial statement users have indicated strong interest in this information.[42/] In developing the proposed requirement, the Board has not reached a conclusion regarding the relationship between audit quality and auditor tenure. The Board's inspection process has not been designed to determine a relationship between audit quality and auditor tenure. In light of the public interest in the subject of auditor tenure, the Board is proposing to include auditor tenure as a data point in the auditor's report.

In determining the year the auditor began serving consecutively as the company's auditor, the auditor would look to the year beginning when the firm signs an initial engagement letter to audit a company's financial statements or when the firm begins the audit, whichever is earlier. For example, if the auditor is appointed in January 2012 to audit a company's financial statements for the year ended December 31, 2012, and the auditor's report is dated February 28, 2013, the auditor would state 2012 as the year the auditor began serving consecutively as the company's auditor. In another example, if the auditor is appointed in January 2013 to audit a company's financial statements for the years ended December 31, 2010, 2011, and 2012, the auditor would state 2013 as the year the auditor began serving consecutively as the company's auditor.

The intent of the proposed requirement is to disclose the duration of the auditor's relationship with the company. For example, in a situation in which a company acquires another company, if the acquirer's current auditor continues serving subsequently as the company's auditor, the auditor tenure would continue. If the acquired company's auditor is selected to serve as the acquirer's auditor, the auditor tenure would begin anew.

---

41/ See UK - Financial Reporting Council Corporate Governance Code and Auditing Standards at http://www.frc.org.uk/Our-Work/Codes-Standards/Corporate-governance/UK-Corporate-Governance-Code.aspx.

42/ On April 19, 2013, the Council of Institutional Investors revised its corporate governance policies to state that "boards retaining an auditor beyond 10 years should be required to explain why doing so is in shareholders' interest." The revisions made to the Council of Institutional Investors' Policies on Corporate Governance are available at: http://www.cii.org/corp_gov_policies.

Additionally, the auditor's relationship with the company is not affected by the company's status as a public company. For instance, if a company went public but maintained its auditor, the auditor tenure would include the years the auditor served as the company's auditor both before and after the company became subject to the SEC financial reporting requirements.

The Board understands that, in some cases, the auditor may have difficulty determining the year the auditor began serving as the company's auditor, due to firm or company mergers, acquisitions, or changes in ownership structure. If the auditor is unaware of the year it became the company's auditor, the auditor could refer to publicly available information, such as the SEC's Electronic Data Gathering, Analysis and Retrieval ("EDGAR") for determining the year the auditor or the auditor's predecessor firm began serving as the company's auditor.[43/] EDGAR also may be used by investors to assess whether a company has filed a current report on Form 8-K to disclose a change in the company's auditor.[44/]

If the auditor is unable to obtain information regarding the year the auditor began serving consecutively as the company's auditor, the auditor would be required to state in the auditor's report that the auditor is uncertain as to the year the auditor became the company's auditor and provide the earliest year of which the auditor has knowledge. As noted above, this might apply in situations in which other firms were acquired by the auditor's firm or were merged with the auditor's firm, or in situations in which the company's ownership structure changed. The following is an example of such a statement that could be included in the auditor's report:

> We are uncertain as to the year we [or our predecessor firms] began serving consecutively as the auditor of the Company's financial statements; however, we are aware that we [or our predecessor firms] have been Company X's auditor [or Company X's auditor subsequent to the Company's merger] consecutively since at least 19XX.

The auditor may incur some initial costs to determine the year the auditor began serving consecutively as the company's auditor, but once the year has been determined the cost to include the disclosure about tenure should be minimal.

---

[43/] Many company's filings are available via EDGAR starting in 1994.

[44/] See Form 8-K, 17 C.F.R. § 249.308, Item 4.01 Changes in Registrant’s Certifying Accountant.

*3. Other Information (Paragraph 6.p. of the Proposed Auditor Reporting Standard)*

The proposed auditor reporting standard would require the auditor to refer to the reporting requirements contained in the Board's companion Proposed Auditing Standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*, (the "proposed other information standard") when the auditor's report is included in a company's annual report filed with the SEC under the Securities Exchange Act of 1934 ("Exchange Act") that includes other information outside the company's audited financial statements as well as the audited financial statements and the related auditor's report.

When issuing an auditor's report, the reporting requirements of the proposed other information standard would require the auditor to include in a separate section of the auditor's report titled "The Auditor's Responsibilities Regarding Other Information" the following:

a. A statement that, in addition to auditing the company's financial statements [and the internal control over financial reporting (if applicable)], in accordance with the standards of the PCAOB, the auditor evaluated whether the other information contains a material inconsistency with the financial statements, a material misstatement of fact, or both;

b. Identification of the annual report that contains the other information, and the audited financial statements and the auditor's report, by referring to the SEC Exchange Act form type and the period end date of the financial statements;

c. A statement that the auditor's evaluation of the other information was based on relevant audit evidence obtained and conclusions reached during the audit;

d. A statement that the auditor did not audit the other information and does not express an opinion on the other information; and

e. A statement that, based on the evaluation, the auditor:

(1) Has not identified a material inconsistency or a material misstatement of fact in the other information;[45/] or

---

45/ This statement is appropriate in situations in which the auditor (1) has not identified a material inconsistency or a material misstatement of fact or (2) has identified

(2) Has identified a material inconsistency, a material misstatement of fact, or both in the other information that has not been appropriately revised and a description of the material inconsistency, the material misstatement of fact, or both.

In the concept release, the Board requested comments on whether the auditor's report should describe the auditor's responsibility with respect to other information. Some commenters supported including a description of the auditor's responsibilities with respect to other information outside the financial statements in the auditor's report. Some of these commenters indicated that a description of the auditor's responsibilities would be helpful for investors' and other financial statement users' understanding of the auditor's responsibilities with respect to other information and would address any misperception that the other information is audited. A number of commenters suggested that the Board also consider requiring the auditor to include in the auditor's report the auditor's conclusions on the work performed in addition to the description of the auditor's responsibilities regarding other information.

The proposed other information standard would strengthen the audit procedures the auditor would perform related to other information outside the financial statements when such information is included in a company's annual report filed with the SEC under the Exchange Act that also contains that company's audited financial statements and the related auditor's report. The proposed other information standard would provide a basis for enhancing the auditor's report regarding the auditor's responsibilities for other information and the results of the auditor's evaluation of the other information. These changes are intended to make the auditor's report more informative.[46/]

## D. Form of the Auditor's Unqualified Report

The basic elements of the proposed auditor's unqualified report are organized and categorized into introduction, basis of opinion, opinion on the financial statements, auditor's responsibilities regarding other information, and signature and date sections in the proposed auditor reporting standard. This categorization would replace previous references in PCAOB standards to introductory, scope, and opinion paragraphs. The purpose for this change is primarily to assist readers of the proposed auditor reporting

---

a material inconsistency, a material misstatement of fact, or both, that management has revised appropriately prior to the issuance of the auditor's report.

46/ See Appendix 6 for proposed changes related to the auditor's responsibilities regarding other information.

# Page: 163

| | | | |
|---|---|---|---|

standard to understand the standard as well as to provide easy reference to specific sections within the auditor's report.

One proposed change in the form of the report involves the replacement of the "scope paragraph" in existing AU sec. 508, which describes the nature of an audit,[47/] with a "Basis of Opinion" section. The proposed change in terminology is based on the statement in the auditor's unqualified report that "we believe our audits provide a reasonable basis for our opinion."

The proposed auditor reporting standard does not require that the basic elements appear in a specific order in the auditor's report, nor does it require that section titles be included, except for the section titles regarding the auditor's responsibilities for other information and critical audit matters. The proposed auditor reporting standard does not preclude the auditor from including section titles for other sections in the auditor's report.

Questions Related to Section IV:

2. The proposed auditor reporting standard would require the auditor's report to be addressed at least to (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body. Are there others to whom the auditor's report should be required to be addressed?

3. The proposed auditor reporting standard retains the requirement for the auditor's report to contain a description of the nature of an audit, but revises that description to better align it with the requirements in the Board's risk assessment standards. Are there any additional auditor responsibilities that should be included to further describe the nature of an audit?

4. The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this statement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?

5. The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.

---

**Yes, definitely....because an auditor who has been serving consecutively for seven to ten years is becoming to familiar with the client, which will in-turn jaundice their opinions in favor of the client....Pw**

a. Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?

b. Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?

c. Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?

6. The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?

7. Should the Board require a specific order for the presentation of the basic elements required in the auditor's report? Why or why not?

8. What other changes to the basic elements should the Board consider adding to the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor?

9. What are the potential costs or other considerations related to the proposed basic elements of the auditor's report? Are cost considerations the same for audits of all types of companies? If not, explain how they might differ.

## V. <u>Critical Audit Matters (Paragraphs 7 – 14 of the Proposed Auditor Reporting Standard)</u>

The current version of the auditor's report includes the auditor's opinion on whether the financial statements are fairly presented (pass) or not (fail). Beyond the pass/fail nature of the report, the report provides little, if any, information specific to the audit of the company's financial statements. The proposed auditor reporting standard would require the auditor to communicate specific information through the auditor's

report regarding "critical audit matters," which would result in information in auditors' reports tailored to the audit.[48/]

The Board developed its proposal for communicating critical audit matters in the auditor's report in a way that should provide greater insight regarding the audit, without unduly burdening the financial reporting process. The auditor is well positioned to communicate this type of information to investors and other financial statement users through the auditor's report. Under the proposed auditor reporting standard, the auditor would determine critical audit matters by leveraging audit work already required to be performed under existing standards. The proposed auditor reporting standard does not intend to change the auditor's traditional role of attesting to matters in the financial statements and will not require auditors to provide analysis of the matters in the financial statements when communicating critical audit matters. Notably, the auditor's communication of critical audit matters would represent matters that have been addressed by the auditor in forming the opinion on the financial statements. Therefore, the communication of critical audit matters is not intended to, and should not, detract from, disclaim, or qualify the auditor's opinion.

Communication of critical audit matters in the auditor's report is intended to make the auditor's report more informative, thus increasing its relevance and usefulness to investors and other financial statement users. Academic research suggests that the prominence with which information is disclosed can have implications for investment decision making.[49/] Communication of critical audit matters in the auditor's report could focus investors' and other financial statement users' attention on challenges associated with the audit that may contribute to the information used in investment decision making. A more informative auditor's report could benefit investors and other financial statement users by increasing the prominence of potentially valuable information, thus increasing the value of the auditor's report.

Requiring auditors to communicate critical audit matters could help investors and other financial statement users focus on aspects of the company's financial statements that the auditor also found to be challenging. Communicating critical audit matters would provide investors and other financial statement users with previously unknown

---

[48/] The communication of critical audit matters also would be required in an auditor's report with a qualified opinion. See further discussion in Section VII, F. *Amendments to Existing AU sec. 508*.

[49/] See David Hirshleifer and Siew Hong Teoh, *Limited Attention, Information Disclosure, and Financial Reporting*, 36 Journal of Accounting and Economics 337, 337-386 (2003).

information about the audit that could enable them to analyze more closely any related financial statement accounts and disclosures. The communication of critical audit matters could help to alleviate the information asymmetry[50/] that exists between company management and investors. More specifically, company management is typically aware of the auditor's most challenging areas in the audit because of regular interactions with the auditor as part of the audit, but this information is not usually known to investors. Reducing the level of information asymmetry between company management and investors could result in more efficient capital allocation and, as academic research has shown, could lower the average cost of capital.[51/]

The auditor's focus on, and communication of, critical audit matters could lead to improved financial statement disclosures related to areas of the financial statements that gave rise to critical audit matters. Potential improvements to financial statement disclosures in such areas could occur because of increased attention by the auditor, management, and the audit committee to matters communicated by the auditor in the draft auditor's report regarding critical audit matters. The improvement in the related financial statement disclosures could incrementally increase the quality of the information[52/] in the financial statements. Academic research has indicated that increasing the amount or quality of information in financial reporting could result in more efficient capital allocation decisions.[53/]

Communication of critical audit matters under the proposed auditor reporting standard, however, could result in additional effort involving both one-time costs and

---

50/ Economists often describe information asymmetry as an imbalance, where one party has more or better information than another party.

51/ See David Easley and Maureen O'Hara, *Information and the Cost of Capital*, 59 The Journal of Finance 1553, 1553-1583 (2004).

52/ The term "quality of information" is formalized by the concept of precision. Information economics frequently treats information as consisting of two components: a signal that conveys information and noise which inhibits the interpretation of the signal. Precision is the inverse of noise so that decreased noise results in increased precision and a more readily interpretable signal. See Robert E. Verrecchia, *The Use of Mathematical Models in Financial Accounting*, 20 Journal of Accounting Research 1, 1-42 (1982).

53/ See Richard A. Lambert, Christian Leuz, and Robert E. Verrecchia, *Information Asymmetry, Information Precision, and the Cost of Capital*, 16 Review of Finance 1, 1-29 (2011).

recurring costs in each individual audit relative to the determination, preparation of language for communication, and documentation of critical audit matters in the auditor's report. Companies, including audit committees will likely also incur additional costs in reviewing the critical audit matters in the auditor's report. Section V.F., *Other Considerations for Critical Audit Matters,* of this Appendix provides a more detailed discussion regarding costs and related questions associated with the requirements for critical audit matters.[54/]

There also could be potential unintended consequences associated with requiring auditors to communicate critical audit matters in the auditor's report. For example, the effort required to determine, prepare language for communication, and document critical audit matters likely would occur during the final stages of the audit, which might reduce the time available to the auditor to review and complete the audit work.

Additionally, as critical audit matters in the auditor's report would not be something that investors and other financial statement users are accustomed to reviewing or analyzing, investors and other financial statement users could misunderstand the meaning of a critical audit matter. Further, investors may not understand that information important to an investment decision may not be highlighted as a critical audit matter. However, as financial statement disclosures have changed over time, investors and other financial statement users are accustomed to reviewing or analyzing new or different information. Therefore, such users should have the ability to interpret the meaning of critical audit matters communicated in an auditor's report.

## A. Definition of Critical Audit Matters (Paragraph A2 of the Proposed Auditor Reporting Standard)

The proposed auditor reporting standard defines critical audit matters as those matters the auditor addressed during the audit of the financial statements that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming an opinion on the financial statements.

---

54/ In addition, the discussion regarding costs for auditors related to critical audit matters appears in two different areas as follows: (1) recurring costs are discussed under each proposed requirement for critical audit matters throughout this Section and (2) one-time costs are discussed in Section V.F., *Other Considerations for Critical Audit Matters*, of this Appendix.

The auditor might identify either one matter or a number of matters that meet the definition of a critical audit matter. It is expected that, in most audits, there could be several matters that would meet the definition of a critical audit matter. Use of the word "most" in the definition of a critical audit matter does not imply that only one matter under each criteria would qualify as a critical audit matter. The word most also is not intended to imply that there is only one matter that surpasses all other matters; but rather to refer to the matter or matters that would stand out from the other numerous matters addressed during an audit in terms of difficulty, subjectivity, or complexity, as stated in the critical audit matters definition. Additionally, an audit matter could meet one, two, or all three of the criteria in the definition.

*1. Involved the Most Difficult, Subjective, or Complex Auditor Judgments*

The auditor exercises judgment in a variety of ways throughout an audit of financial statements. For instance, auditor judgment is used in determining the nature, timing, and extent of audit procedures; evaluating sufficient appropriate audit evidence; and forming an opinion on the financial statements.

The proposed auditor reporting standard anticipates that the auditor would determine what matters addressed during the audit involved the most difficult, subjective, or complex auditor judgment for communication in the auditor's report. The degree of difficulty, subjectivity, or complexity of auditor judgments can vary depending on the matter. For instance, matters that are subjective in nature generally would require a greater degree of auditor judgment than matters that are objective. Similarly, matters that are difficult or complex might require a greater degree of auditor judgment than matters that are relatively straightforward. For example, the auditor might determine that auditing the allowance for loan losses of a bank represented one of the areas that involved the most difficult, subjective, or complex auditor judgments because of (1) the high degree of complexity and subjectivity associated with evaluating the determination of the allowance for loan losses; (2) the significance of the assumptions in the accounting estimate, including the possibility of reasonable alternative assumptions; and (3) the high degree of uncertainty associated with the assumptions.

*2. Posed the Most Difficulty to the Auditor in Obtaining Sufficient Appropriate Evidence*

Audit evidence may be obtained by the auditor from several different sources, for example, from management; third parties, such as through confirmation; or from the auditor's own procedures, such as observation. The sufficiency of audit evidence is the measure of its quantity, whereas the appropriateness is the measure of its quality, that is, its relevance and reliability.[55/]

The auditor might experience difficulty in obtaining sufficient appropriate evidence in several ways. For instance, difficulty might result from unexpected extensive effort required by the auditor to obtain evidence. Difficulty could also result when the auditor obtains information that conflicts with audit evidence previously obtained, thereby raising questions about the reliability of the audit evidence.

Those matters arising in the audit that posed the most difficulty to the auditor in obtaining sufficient appropriate evidence would be communicated in the auditor's report under the proposed auditor reporting standard. For example, the auditor might determine that auditing fair value measurements of certain financial instruments represented one of the areas that posed the most difficulty in obtaining sufficient appropriate evidence because the auditor encountered difficulties in obtaining relevant and reliable evidence regarding observable inputs in an inactive market. In situations where there is little market activity, the auditor may need to evaluate unobservable inputs to measure fair value, which requires the auditor's assessment of the assumptions that market participants would use to price an asset or liability.[56/]

*3. Posed the Most Difficulty to the Auditor in Forming the Opinion on the Financial Statements*

Matters that posed the most difficulty to the auditor in forming the opinion on the financial statements are those matters arising from the audit that commenters described

---

[55/] See paragraphs 5 and 6 in Auditing Standard No. 15, *Audit Evidence*.

[56/] See Financial Accounting Standard Board's ("FASB") Accounting Standard Codification ("ASC") Topic 820, *Fair Value Measurements*, and International Accounting Standards Board's International Financial Reporting Standard No. 13, *Fair Value Measurement*, which define Level 3 inputs as unobservable inputs that are used to estimate the fair value of the asset or liability. Unobservable inputs should be used to measure fair value to the extent that relevant observable inputs are not available, thereby allowing a fair value measurement in situations in which there is little, if any, market activity for the asset or liability at the measurement date. Unobservable inputs should reflect the assumptions (including assumptions about risk) that market participants would use when pricing the asset or liability.

as "close calls" or matters that "kept the auditor up at night."[57] The types of matters that would meet this criteria represent matters that concerned the auditor when the auditor was making the final assessment of whether the financial statements present fairly the company's financial position, results of operations, and cash flows in conformity with the applicable financial reporting framework.[58]

Those matters arising in the audit that posed the most difficulty to the auditor in forming the opinion on the financial statements would be communicated in the auditor's report under the proposed auditor reporting standard. For example, the auditor might determine that revenue recognition represented an area that posed the most difficulty to the auditor in forming the opinion on the financial statements because the authoritative revenue recognition guidance is not directly applicable to the company's product sales raising challenges for the auditor in determining if revenue recognition principles were properly applied.

## B. Determination of Critical Audit Matters (Paragraphs 7 – 9 of the Proposed Auditor Reporting Standard)

### *1. Requirement to Determine Critical Audit Matters (Paragraphs 7 and 8 of the Proposed Auditor Reporting Standard)*

The proposed auditor reporting standard would require the auditor to determine the critical audit matters addressed in the audit of the current period's financial statements based on the results of the audit or evidence obtained.

Under the proposed auditor reporting standard, it is expected that, in most audits, the auditor would determine that there are critical audit matters. The proposed auditor reporting standard does not provide for an explicit exception from determining whether there are any critical audit matters for audits of certain types of entities. Since no two audits are alike, there may be critical audit matters even in an audit of a company with no operations or activities.

In determining the critical audit matters the auditor addressed during the audit, the auditor would leverage the work he or she already performed when conducting an

---

[57] See, e.g., comments made during the PCAOB's Roundtable on the Auditor's Reporting Model. The transcript is located at http://pcaobus.org/Rules/Rulemaking/Docket034/09152011_Roundtable_Transcript.pdf.

[58] See paragraph 1 of AU sec. 411, *The Meaning of Present Fairly in Conformity With Generally Accepted Accounting Principles.*

audit under the Board's existing standards. Those standards currently require the auditor to perform various procedures to provide a foundation for the auditor's significant judgments and conclusions on which the auditor's opinion on the financial statements is based. The audit procedures applied throughout the audit are based primarily upon an auditor's identification of, assessment of, and response to the risk of material misstatement. The proposed auditor reporting standard would result in the auditor reporting on the most difficult and challenging aspects of the audit. The proposed auditor reporting standard does not impose new audit performance requirements, other than the determination, communication, and documentation of critical audit matters.

Because critical audit matters ordinarily are matters of such importance, they would be included in the matters required to be (1) documented in the engagement completion document under Auditing Standard No. 3, *Audit Documentation*; (2) reviewed by the engagement quality reviewer under Auditing Standard No. 7, *Engagement Quality Review*; (3) communicated to the audit committee under Auditing Standard No. 16, *Communications with Audit Committees* or other PCAOB standards; or (4) any combination of the three. The auditor's documentation and activities under these standards could provide the auditor with sources for identifying critical audit matters. However, the Board would not expect that each matter included in any one or more of these sources would be a critical audit matter.

The auditor's determination and communication of critical audit matters is not intended to take the place of the auditor's existing responsibilities under other audit performance and reporting standards. For example, the auditor's responsibilities associated with the auditor's consideration of an entity's ability to continue as a going concern and the related reporting requirements,[59/] and the auditor's communication of control deficiencies related to an audit of internal control over financial reporting that is integrated with an audit of financial statements or an audit of financial statements only,[60/] among other audit performance and/or reporting requirements, continue to exist unchanged. In addition, the communication of critical audit matters is not intended to function as an alternative to a departure from an unqualified opinion on the financial statements in difficult or challenging situations.

---

[59/] See AU sec. 341, *The Auditor's Consideration of an Entity's Ability to Continue as a Going Concern,* and paragraph 15.a. of the proposed auditor reporting standard, which is being retained from the existing standard (AU sec. 508.11.b).

[60/] See Auditing Standard No. 5, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*, and AU sec. 325, *Communications About Control Deficiencies in an Audit of Financial Statements.*

Although the proposed auditor reporting standard is intended to leverage the work the auditor already performed when conducting an audit under the Board's existing standards, it could increase the auditor's focus on critical audit matters, which could result in enhancing the quality of the audit. Previous research has found that auditors increase audit hours and/or billing rates in response to audit risks.[61/] Although an increase in audit hours and/or billing rates likely would increase audit fees, an increase in focus on critical audit matters could also result in increased audit quality.[62/]

In determining critical audit matters under the proposed auditor reporting standard, auditors likely would incur recurring costs due to additional effort expended in individual audits. It is likely that senior members of the engagement teams, such as partners and senior managers, would be involved with determining the critical audit matters to be communicated in the auditor's report. In addition, reviews by others, such as the engagement quality reviewer and national office could also result in recurring costs.[63/]

*2. Factors (Paragraph 9 of the Proposed Auditor Reporting Standard)*

The proposed auditor reporting standard includes a list of factors intended to help the auditor determine, from the results of the audit or evidence obtained, which matters in the audit would meet the definition of critical audit matters. Depending on the matter and its circumstances, the applicability and related degree or scope of just one factor might lead an auditor to conclude that a matter is a critical audit matter. In other cases, however, the auditor might take into consideration a combination of factors in determining that a matter is a critical audit matter.

See also Mark F. Zimbleman, *The Effects of SAS No. 82 on Auditors' Attention to Fraud Risk Factors and Audit Planning Decisions*, 35 Journal of Accounting Research 75, 75-97 (1997).

[62/] See Gerald Lobo and Yuping Zhao, *Relation Between Audit Effort and Financial Report Misstatements: Evidence from Quarterly and Annual Restatements*, 88 The Accounting Review 1385,1385-1412 (2013).

[63/] See also Section V.F., *Other Considerations for Critical Audit Matters,* of this Appendix for a more detailed discussion regarding costs associated with the requirements for critical audit matters under the proposed auditor reporting standard.

In addition, the factors in the proposed auditor reporting standard are not intended to represent an all-inclusive list of factors pertaining to whether a matter meets the definition of a critical audit matter. There could be other factors that may be specific to the audit, which are not listed in the proposed auditor reporting standard, that affect whether a matter involved the most difficult, subjective, or complex auditor judgments, posed the most difficulty to the auditor in obtaining sufficient appropriate evidence, or posed the most difficulty to the auditor in forming an opinion on the financial statements.

The factors listed in the proposed auditor reporting standard are:

a. The degree of subjectivity involved in determining or applying audit procedures to address the matter or in evaluating the results of those procedures (paragraph 9.a. of the proposed auditor reporting standard)

A high degree of subjectivity may be involved in auditing matters that are complex or unusual, or both. For example, the arrangements pursuant to which a company recognizes revenue might be complex and require significant judgments regarding the development of estimates, such as the fair value of certain deliverables pursuant to a multiple element sales contract. In this example, determining or applying the appropriate audit procedures to test management's fair value measurements, or to evaluate whether management's estimates are reasonable, might involve one of the most subjective auditor judgments during the audit.

b. The nature and extent of audit effort required to address the matter (paragraph 9.b. of the proposed auditor reporting standard)

The nature and extent of audit effort relates to the time spent by the engagement team members performing the audit procedures; the level of knowledge, skill, and ability of engagement team members necessary to audit the matter;[64/] the extent of supervision needed based on the assessed risks of material misstatements;[65/] and the extent of discussions with management or within the firm,[66/] such as the firm's national office, or consultations outside the firm.

---

[64/] See paragraph 6.d. of Auditing Standard No. 10, *Supervision of the Audit Engagement*.

[65/] See paragraph 5.b. of Auditing Standard No. 13, *The Auditor's Responses to the Risks of Material Misstatement*.

[66/] See paragraph 19 of QC sec. 20, *System of Quality Control for a CPA Firm's Accounting and Auditing Practice*.

An area that requires extensive audit effort might be an indicator that the matter was among the most difficult during the audit or required a significant amount of judgment. Matters that required extensive audit effort could include the significant involvement of more experienced engagement team members or an increase in the amount of time incurred in (1) supervising the auditing of the matter; (2) discussing the matter with management and the audit committee; or (3) consulting with the firm's national office about the matter.

c. The nature and amount of available relevant and reliable evidence regarding the matter or the degree of difficulty in obtaining such evidence (paragraph 9.c. of the proposed auditor reporting standard)

The sufficiency and appropriateness of the audit evidence obtained to support the matter, such as when the auditor identifies contrary evidence, might contribute to the degree of difficulty in applying audit procedures to address the matter.

Delays by management, the unavailability of company personnel, or unwillingness by management to provide information needed for the auditor to perform his or her audit procedures also could create challenges associated with obtaining relevant and reliable audit evidence.[67/]

d. The severity of control deficiencies identified relevant to the matter, if any (paragraph 9.d. of the proposed auditor reporting standard)

In both an audit of the financial statements and an audit of internal control over financial reporting that is integrated with an audit of financial statements, the auditor is required to obtain a sufficient understanding of internal control over financial reporting.[68/] In an integrated audit, the auditor would be required to audit the effectiveness of internal control over financial reporting.[69/] And in a financial statement audit, the auditor would be required to reach an understanding of the internal control over financial reporting and the company's control activities sufficient to assess the risk

67/ Difficulties encountered by the auditor during the audit could represent a scope limitation, which may result in the auditor modifying the auditor's opinion or withdrawing from the engagement. See AU secs. 508.22-.32.

68/ See paragraphs 18-40 of Auditing Standard No. 12.

69/ See paragraph 1 of Auditing Standard No. 5.

of material misstatement in the financial statements and to design further audit procedures.[70/]

Because a deficiency or deficiencies in the company's internal control over financial reporting could have a significant effect on the conduct of the audit and on the level of difficulty in gathering audit evidence or forming an opinion on the financial statements, an internal control deficiency might be an indicator of a critical audit matter.

Although an auditor might determine a matter to be a critical audit matter because of the severity of an internal control deficiency, the communication of such a critical audit matter would not relieve the auditor from the auditor's existing auditing and reporting responsibilities under other PCAOB standards related to a company's internal control over financial reporting.[71/] This factor is intended to help the auditor determine which matters are critical audit matters and is not intended to supplement, replace, or create new audit requirements for matters related to internal control over financial reporting.

e. The degree to which the results of audit procedures to address the matter resulted in changes in the auditor's risk assessments, including risks that were not identified previously, or required changes to planned audit procedures, if any (paragraph 9.e. of the proposed auditor reporting standard)

The Board's risk assessment standards require the auditor to modify, among other things, the audit strategy, materiality levels, and the assessment of the risks of material misstatement if circumstances change during the course of the audit. Such changes could result from the discovery of a previously unidentified risk of material misstatement or audit evidence that contradicts the auditor's initial risk assessment. Also, the number of misstatements found by the auditor might be indicative that other misstatements might exist.

Since a matter that resulted in changes to the planned audit strategy or to changes to the risks initially identified could involve significant auditor judgment, it might be a critical audit matter.

---

70/ See paragraph 34 of Auditing Standard No. 12.

71/ See Auditing Standard No. 5, Auditing Standard No. 12, and AU sec. 325.

f. The nature and significance, quantitatively or qualitatively, of corrected and accumulated uncorrected misstatements related to the matter, if any (paragraph 9.f. of the proposed auditor reporting standard)

In forming an opinion on whether the financial statements are presented fairly, in all material respects, in conformity with the applicable financial reporting framework, the auditor's evaluation of audit results should include an evaluation of misstatements accumulated during the audit, including uncorrected misstatements.[72/] Misstatements can arise from error (that is, unintentional misstatement) or fraud.[73/]

A matter in which misstatements, either corrected or uncorrected, have been identified might lead the auditor to conclude that the matter is a critical audit matter.

g. The extent of specialized skill or knowledge needed to apply audit procedures to address the matter or evaluate the results of those procedures, if any (paragraph 9.g. of the proposed auditor reporting standard)

In auditing matters that are complex or subjective, the auditor may determine that using the work of a specialist to obtain sufficient appropriate evidence is necessary. For example, specialized skill or knowledge might be needed by the auditor in areas such as the valuation of complex financial instruments, determination of mineral reserves, actuarial determinations, or interpretation of technical requirements.

An auditor's determination that a matter required specialized skill or knowledge to obtain sufficient appropriate evidence might be an indication that the matter involved difficult, subjective, or complex auditor judgments. In such situations, the matter might be a critical audit matter.

h. The nature of consultations outside the engagement team regarding the matter, if any (paragraph 9.h. of the proposed auditor reporting standard)

Issues that are complex or unusual can arise in various stages during the audit. In such situations, the auditor might consult with the firm's national office, industry specialists, or external parties. For example, matters related to the auditor's evaluation of management's judgments, estimates, or accounting policies might lead to

---

[72/] See paragraphs 3-4 and 10-23 of Auditing Standard No. 14, *Evaluating Audit Results*.

[73/] See paragraph A2 of Auditing Standard No. 14.

consultation with others who might assist the auditor in arriving at the conclusions on which the auditor's opinion is based. Such matters might involve the most subjective or complex auditor judgments during the audit or might pose the most difficulty in forming an opinion on the financial statements. Consultation with others on a particular matter, therefore, might be an indication that the matter is a critical audit matter.

## C. Audit Period Covered by Critical Audit Matters (Paragraph 10 of the Proposed Auditor Reporting Standard)

The proposed auditor reporting standard would require the auditor to communicate critical audit matters for the audit of the current period's financial statements. While most companies' financial statements are presented on a comparative basis, and thus most audit reports cover a similar period, requiring auditors to communicate critical audit matters for the current period, rather than for all periods presented in the financial statements, would provide relevant information about the most recent audit and is intended to reflect a cost-sensitive approach to auditor reporting. In addition, investors and other financial statement users would be able to look at prior years' filings to analyze critical audit matters over time.

Because the communication of critical audit matters for prior periods also might be useful to investors and other financial statement users, the proposed auditor reporting standard states that, when the current period financial statements are presented on a comparative basis with those of one or more prior periods, the auditor should consider communicating critical audit matters relating to the prior periods when (1) the prior period's financial statements are made public for the first time, such as in an initial public offering or (2) issuing an auditor's report on the prior period's financial statements because the previously issued auditor's report could no longer be relied upon.

In situations in which a predecessor auditor has been asked to reissue his or her audit report on the financial statements of a prior period, existing standards require the auditor to consider whether the auditor's report on those statements is still appropriate after certain required procedures are performed.[74/] If the predecessor auditor determines that the auditor's report is still appropriate and is reissued, the communication of critical audit matters for the prior period need not be repeated. Since the communication of critical audit matters is only required for one year, the proposed auditor reporting standard would not require the communication of critical audit matters in the reissued report of the predecessor auditor for prior years.

---

[74/] See AU secs. 508.70-.73, which discusses the report of a predecessor auditor.

## D. Communication in the Auditor's Report of Critical Audit Matters (Paragraphs 11 – 13 of the Proposed Auditor Reporting Standard)

The proposed auditor reporting standard would require that, for each critical audit matter communicated in the auditor's report, the auditor (1) identify the critical audit matter; (2) describe the considerations that led the auditor to determine that the matter is a critical audit matter; and (3) refer to the relevant financial statement accounts and disclosures that relate to the critical audit matter, when applicable.

The Board expects that the auditor's communication of critical audit matters in the auditor's report would be presented in language and in a format that is clear, concise, and understandable to a financial statement user. The Board also expects that the communication would be tailored to the audit and thus would avoid boilerplate language and reflect the specific circumstances of the matter in relation to the audit of the company's financial statements. While the same audit matter may be determined to be a critical audit matter from one year to the next or from one audit to another, the auditor would be expected to tailor the communication of the critical audit matter to the specific facts and circumstances that existed during that particular current period's audit.

As noted previously, the auditor's communication of critical audit matters does not alter in any way the auditor's opinion on the financial statements taken as a whole. Accordingly, the proposed auditor reporting standard indicates that the auditor should not use language in the auditor's report that could be viewed as disclaiming, qualifying, restricting, or minimizing the auditor's responsibility for the critical audit matters or the auditor's opinion on the financial statements. In issuing an unqualified opinion on the financial statements, the auditor has a responsibility to plan and perform the audit to obtain reasonable assurance that the financial statements, taken as a whole, are fairly presented in all material respects. Critical audit matters in the auditor's report are matters that have been addressed by the auditor and, therefore, should not be described to imply that a critical audit matter disclaims or qualifies the auditor's opinion on the financial statements.

The following discussion presents the proposed elements of the communication in the auditor's report relative to critical audit matters in more detail.

### *1. Identify the Critical Audit Matter (Paragraph 11.a. of the Proposed Auditor Reporting Standard)*

In communicating the critical audit matter, the auditor would identify each audit matter that the auditor determined met the definition of a critical audit matter. For example, the audit of the valuation of certain complex financial instruments could be identified as a critical audit matter in the auditor's report because the matter posed the most difficulty to the auditor in obtaining sufficient appropriate evidence.

*2. Describe the Considerations That Led the Auditor to Determine That the Matter is a Critical Audit Matter (Paragraph 11.b. of the Proposed Auditor Reporting Standard)*

To enhance investors' and other financial statement users' understanding of the audit, the proposed auditor reporting standard would require the auditor to describe the considerations that led the auditor to determine that the matter is a critical audit matter. The description of considerations that led the auditor to determine a matter is a critical audit matter may be derived from one or more of the factors; however, the auditor would not be limited to the factors listed in the proposed auditor reporting standard, which also could include other factors specific to the audit. Additionally, the auditor's description should be specific to the circumstances. For instance, using the same example from above regarding certain complex financial instruments that are identified as a critical audit matter, the communication in the auditor's report might describe the auditor's considerations related to the lack of observable inputs, a high degree of measurement uncertainty, and significant judgments needed to audit the fair value assumptions. Further, when communicating critical audit matters in the auditor's report, the proposed auditor reporting standard would not require the auditor to describe the audit procedures related to critical audit matters. It would, however, not preclude an auditor from doing so.

*3. Refer to the Relevant Financial Statement Accounts and Disclosures That Relate to the Critical Audit Matter, When Applicable (Paragraph 11.c. of the Proposed Auditor Reporting Standard)*

The proposed auditor reporting standard also would require the auditor to refer to the relevant financial statement accounts and disclosures that relate to the critical audit matter, when applicable. Since the audit is of the company's financial statements, the auditor would be able to refer to the relevant financial statement accounts and disclosures in most cases. Following through on the example from above in which the critical audit matter was the valuation of certain complex financial instruments, the auditor would refer to the relevant financial statement account for financial instruments and the corresponding disclosure.

There also may be instances when a critical audit matter has a pervasive effect on the financial statements, such as an entity level control deficiency or circumstances in which there is no related financial statement account or disclosure. In such cases, the auditor would describe the matter and its effect on the audit of the financial statements, taken as a whole.

With regard to each of the proposed elements of the communication in the auditor's report, developing the language of critical audit matters to include in the auditor's report likely would result in additional recurring costs related to individual audits. These recurring costs likely would include additional time incurred by senior members of engagement teams, such as partners and senior managers. In addition, other recurring costs might relate to additional time incurred by others, such as the engagement quality reviewer and consultations with others, including national office. Further, additional time also might be incurred by the auditor as a result of discussions with management or the audit committee regarding the critical audit matters to be communicated in the auditor's report under the proposed auditor reporting standard.[75/]

*4. Illustrative Examples of Critical Audit Matters*

The Exhibit to this Appendix includes illustrative examples of communications of critical audit matters in the auditor's report. The Board has developed three different scenarios that contain background information, the company's related notes to the financial statements, determination of the critical audit matter, and the communication of the critical audit matter as it would appear in the auditor's report.[76/]

The Board is interested in obtaining other illustrative examples of communications of critical audit matters under the proposed auditor reporting standard. Thus, the Board is requesting that commenters prepare examples of communications of critical audit matters that could appear in an auditor's report under the proposed auditor reporting standard and provide those examples to the Board.[77/]

*5. Language Preceding Critical Audit Matters (Paragraphs 12 and 13 of the Proposed Auditor Reporting Standard)*

The proposed auditor reporting standard would require the auditor to include a section titled "Critical Audit Matters" and include specific language in the auditor's report both when critical audit matters are being communicated and when the auditor has determined that there are no critical audit matters to communicate. In both situations,

[75/] See also Section V.F., *Other Considerations for Critical Audit Matters,* of this Appendix for a more detailed discussion regarding costs associated with the requirements for critical audit matters under the proposed auditor reporting standard.

[76/] The examples contained in the Exhibit to this Appendix are based on hypothetical situations and have been prepared for illustrative purposes only. They are not intended to provide guidance or any suggestions regarding the accounting or disclosure required, nor any implied audit procedures, in the circumstances presented.

[77/] Any such examples would be posted to the PCAOB Rulemaking Docket Matter No. 034 without edits or redactions.

the language in the auditor's report is intended to inform investors and other financial statement users of the auditor's requirement to communicate critical audit matters and whether the auditor has determined there are any critical audit matters.

When the auditor determines that there are critical audit matters, the specific language for such situations notifies investors and other financial statement users that the auditor's communication of critical audit matters is not intended to affect the auditor's opinion on the financial statements and related disclosures, taken as a whole, and therefore, does not represent individual opinions for each critical audit matter.

In situations in which the auditor determines that there are no critical audit matters, the proposed specific language in the auditor's report would describe the auditor's responsibilities and indicate that the auditor determined that there are no critical audit matters.

## E. Documentation of Critical Audit Matters (Paragraph 14 of the Proposed Auditor Reporting Standard)

The proposed auditor reporting standard requires the auditor to document the auditor's determination of critical audit matters and refers the auditor to the documentation requirements for audits conducted under PCAOB standards (that is, Auditing Standard No. 3). To provide sufficient detail for a clear understanding of the conclusions reached by the auditor, the auditor's documentation related to critical audit matters should contain sufficient information to enable an experienced auditor,[78/] having no previous connection with the engagement, to understand the basis for the auditor's determination that (1) each reported matter was a critical audit matter and (2) non-reported audit matters that would appear to meet the definition of a critical audit matter were not critical audit matters.

As noted previously, in determining critical audit matters, the proposed auditor reporting standard anticipates that auditors would leverage the audit work already performed under existing auditing standards. This includes the information documented in the engagement completion document, matters reviewed by the engagement quality reviewer, or matters communicated to the audit committee. The auditor's documentation and activities under existing standards could provide the auditor with sources for identifying critical audit matters.

---

[78/] See note to paragraph 6 of Auditing Standard No. 3, which states that "[a]n *experienced auditor* has a reasonable understanding of audit activities and has studied the company's industry as well as the accounting and auditing issues relevant to the industry."

In fulfilling the documentation requirements under the proposed auditor reporting standard, the auditor would not be expected to provide an explanation for each matter documented in the engagement completion document, reviewed by the engagement quality reviewer, or communicated to the audit committee. The Board recognizes that documenting whether each such matter was a critical audit matter could result in an extensive amount of documentation that might be unnecessary. Accordingly, the auditor would be expected to document only those matters that were either communicated as critical audit matters or that would appear to meet the definition of a critical audit matter that were not communicated as such in the auditor's report.

*1. Audit Matters Reported as Critical Audit Matters*

As noted previously, the documentation of those matters the auditor communicated as critical audit matters would be required to meet the documentation requirements of Auditing Standard No. 3. That standard requires an auditor to prepare audit documentation that is in sufficient detail to provide a clear understanding of its purpose, source, and the conclusions reached.[79/] In addition, Auditing Standard No. 3 requires that audit documentation contain sufficient information to enable an experienced auditor, having no previous connection with the engagement, to understand the conclusions reached.[80/]

*2. Audit Matters Not Reported as Critical Audit Matters*

The Board is proposing a documentation requirement that is intended to encourage auditors to consider in a thoughtful and careful manner whether all matters that meet the definition of a critical audit matter are communicated in the auditor's report. The proposed auditor reporting standard would require the auditor to document why audit matters that would appear to meet the definition of a critical audit matter were not communicated as such by the auditor in the auditor's report.

Additionally, the Board is proposing this requirement to help the auditor and other reviewers, such as the engagement quality reviewer, have a better understanding of the basis for the auditor's determination of matters that would appear to meet the definition of a critical audit matter and were not communicated. Further, requiring documentation of the auditor's determination of such matters not communicated might have the indirect effect of preventing the omission of a critical audit matter due to potential management pressure to exclude the matter from the auditor's report.

---

[79/] See paragraph 2 of Auditing Standard No. 3.

[80/] See paragraph 6 of Auditing Standard No. 3.

The proposed documentation requirement of why audit matters that would appear to meet the definition of a critical audit matter were not communicated by the auditor in the auditor's report would reflect the requirements of Auditing Standard No. 3. For instance, if a matter was included in the engagement completion document, reviewed by the engagement quality reviewer, and communicated to the audit committee, it could appear to an experienced auditor having no previous connection to the audit, after also considering the factors in paragraph 9 of the proposed auditor reporting standard, that the matter met the definition of a critical audit matter. If the auditor determined that such a matter was not a critical audit matter, then the auditor would document the basis for the determination in the auditor's working papers with sufficient detail to explain the basis of the conclusions reached.

The auditor's documentation of critical audit matters under the proposed auditor reporting standard likely would result in additional recurring costs to the firm due to efforts expended in individual audits. These recurring costs likely would include additional time incurred to prepare documentation in sufficient detail to address the proposed requirements. This also might include additional review time incurred by others, such as senior members of the engagement team or the engagement quality reviewer.

## F. Other Considerations for Critical Audit Matters

Enhancing auditor reporting requirements necessarily will involve changes in practice, related cost implications and other challenges. Discussed below are potential economic considerations that might be relevant to auditors and companies, including audit committees. Also, discussed below are potential effects of disclosing information through the communication of a critical audit matter that otherwise would not be required to be disclosed under existing auditor or financial reporting standards, and liability considerations for auditors.

### *1. Effects of Additional Effort by Auditors and Companies, Including Audit Committees*

Based on its outreach to date, the Board anticipates that the communication of critical audit matters likely would have potential cost implications for auditors and companies, including their audit committees. Such costs would include those related to additional time to prepare and review auditors' reports.

*Auditors*

For auditors, costs might represent both one-time costs and recurring costs. The recurring costs for auditors regarding critical audit matters under the proposed auditor reporting standard have been discussed previously.[81/] The one-time costs for auditors could be incurred as a result of (1) updating firm audit and quality control methodologies to reflect the new reporting requirements and (2) developing and conducting training of firm personnel on the new reporting requirements. When updating methodologies, some firms also likely would develop new quality control processes related to additional review or consultation on the determination, communication, and documentation of critical audit matters in the draft auditor's report, which also would result in incremental one-time costs.

*Companies, Including Audit Committees*

Companies, including audit committees, could incur additional recurring costs as a result of the proposed auditor reporting standard. For instance, audit fees may increase due to the new reporting requirements in the Board's proposal. Additionally, companies might incur one-time costs in developing, and recurring costs in performing, internal processes for the review of critical audit matters in the draft auditor's report and the related interaction with auditors and others.

Audit committees might also incur additional time for the review of critical audit matters to be communicated in the auditor's report and related discussions with the auditor and management.

Companies, including audit committees, also could spend additional time comparing their auditor's report to the auditors' reports of similar companies. Even though comparability regarding the pass/fail model will continue to be maintained, the communication of critical audit matters in the auditor's report that is specific to the audit of the company's current period financial statements would make the auditor's report less comparable among companies.

The communication of critical audit matters would result in differences among auditors' reports. For instance, the communication of critical audit matters is intended to

---

[81/] See Sections V.B., *Determination of Critical Audit Matters;* V.D., *Communication in the Auditor's Report of Critical Audit Matters;* and V.E., *Documentation of Critical Audit Matters,* of this Appendix for discussion of recurring costs.

be tailored to the audit of the company; therefore, auditors' reports are not expected to be comparable from one auditor's report to the next. Such differences would relate to the auditor's determination of the matters that involved difficult judgments and difficulty in obtaining evidence or forming the opinion for a company based on that audit's particular facts and circumstances.

Company management and the audit committee might be concerned with the differences in auditors' reports because of investors' and other users' perceptions of the potential differences between the company's current period critical audit matters and those of prior periods or those of the company's competitors. However, investors have commented that they are interested in information that is specific to the audit of a company's financial statements, and therefore, would expect differences in auditors' reports among companies and reporting periods. Investors also have indicated that they are accustomed to analyzing company-specific information, such as information in financial statements or Management's Discussion & Analysis ("MD&A") that is specific to a company or a reporting period.

*2. Potential Effects of Disclosing Information that Otherwise Would Not be Required to be Disclosed*

The proposed auditor reporting standard would require the auditor to describe in the auditor's report the considerations that led the auditor to determine that the matter is a critical audit matter, in addition to identifying the matter and referencing the matter to the relevant financial statement accounts and disclosures, when applicable. The description of the considerations regarding the critical audit matter could include information about the audit or the financial statements that otherwise would not be required to be disclosed by either the auditor or the company under existing auditor reporting standards or requirements of the applicable financial reporting framework.

For example, under the proposed auditor reporting standard, the auditor could determine that a matter met the definition of a critical audit matter because it involved the most difficult, subjective, or complex auditor judgments, and, therefore, would be communicated as a critical audit matter in the auditor's report. However, under existing auditor reporting standards or requirements of the applicable financial reporting framework, such matter would not otherwise be required to be disclosed. Examples of such occurrences that might result in the communication of a critical audit matter could include situations involving (1) a deficiency in internal control over financial reporting that was not otherwise determined to be a material weakness and therefore, not required to be disclosed by management or the auditor; (2) a difficult decision by the auditor regarding a company's ability to continue as a going concern even though the auditor's ultimate decision was that substantial doubt did not exist, and therefore, did not require reporting by the auditor; or (3) a loss contingency, for which there was significant difficulty in obtaining audit evidence but that ultimately was decided by management and the auditor to not warrant disclosure by the company in the financial statements under existing financial reporting standards.

Although the Board is not seeking to constrain the information the auditor would communicate for critical audit matters under its proposal,[82/] it is seeking comments on whether there are potential issues raised by the auditor's reporting of information to investors as a result of communicating critical audit matters that otherwise would not have required disclosure under existing auditor and financial reporting standards.

*3. Liability Considerations*

Some commenters expressed concern that changes to the auditor's reporting model could result in increased liability for auditors and issuers. Liability may be imposed on auditors and issuers (as well as other securities market participants) under a number of different legal theories, depending on the specific facts and circumstances of a particular case, including pursuant to Section 11 of the Securities Act of 1933, Section 10(b) of the Exchange Act, as well as various state law causes of action. In discussing their concerns regarding potential liability, a number of commenters raised particular aspects of the Board's concept release that they viewed as troublesome from a liability perspective. For example, some commenters were critical of the auditor providing a supplement to the auditor's report containing an open-ended analysis or a discussion that could result in the auditor providing new information regarding the company, independent of the company's own disclosures in its financial statements. Further, other commenters, while recognizing potential liability concerns, suggested that the Board take a balanced approach in its rulemaking related to changes to the auditor's report.

In developing its proposal for communication of critical audit matters, the Board has sought a balanced approach that would promote more informative reporting about the audit (1) in a focused way and (2) that would not fundamentally change the auditor's current role of attesting on information prepared by management. Under the proposed auditor reporting standard, the auditor would be communicating information about the audit, based on audit procedures the auditor performed. The proposed auditor reporting

---

[82/] However, the proposed auditor reporting standard would provide that auditors should not use language that can be viewed as disclaiming, qualifying, restricting, or minimizing the auditor's responsibility for critical audit matters or the opinion on the financial statements. See further discussion regarding language in the auditor's communication of critical audit matters in Section V.D., *Communication in the Auditor's Report of Critical Audit Matters,* of this Appendix.

standard regarding critical audit matters would be guided by criteria and factors, rather than a separate free-form analysis. However, the determination of critical audit matters and the nature and extent of the communication in the auditor's report would be guided by the auditor's judgment, and the Board is not seeking to constrain the information the auditor would communicate for critical audit matters.[83/] The auditor's communication of critical audit matters would represent matters that have been addressed by the auditor in forming the opinion on the financial statements and is not intended to detract from, disclaim, or qualify the auditor's opinion.

The Board recognizes, however, that under its proposal, the auditor would be making new statements in the auditor's report that could raise potential liability concerns.

Questions Related to Section V:

10. Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?

11. What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?

12. Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? Is the definition of a critical audit matter sufficiently clear for determining what would be a critical audit matter? Is the use of the word "most" understood as it relates to the definition of critical audit matters?

13. Could the additional time incurred regarding critical audit matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have?

14. Are the proposed requirements regarding the auditor's determination and communication of critical audit matters sufficiently clear in the proposed standard? Why or why not? If not, how should the proposed requirements be revised?

**Yes the Board should consider additional protections for the Investment Community.....since the current program hasn't worked for quite some time....Pw**

15. Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?

16. Are the factors helpful in assisting the auditor in determining which matters in the audit would be critical audit matters? Why or why not?

17. Are there other factors that the Board should consider adding to assist the auditor in determining which matters in the audit would be critical audit matters? Why or why not?

18. Is the proposed requirement regarding the auditor's documentation of critical audit matters sufficiently clear?

19. Does the proposed documentation requirement for non-reported audit matters that would appear to meet the definition of a critical audit matter achieve the Board's intent of encouraging auditors to consider in a thoughtful and careful manner whether audit matters are critical audit matters? If not, what changes should the Board make to the proposed documentation requirement to achieve the Board's intent?

20. Is the proposed documentation requirement sufficient or is a broader documentation requirement needed?

21. What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of critical audit matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?

22. What are the additional costs, including indirect costs, or other considerations for companies, including their audit committees, related to critical audit matters that the Board should take into account? Are these costs or other considerations the same for audits of both large and small companies?

23. How will audit fees be affected by the requirement to determine, communicate, and document critical audit matters under the proposed auditor reporting standard?

24. Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, such as in an initial public offering or in a situation involving the issuance of an

auditor's report on a prior period financial statement because the previously issued auditor's report could no longer be relied upon? If so, under what circumstances?

25. Do the illustrative examples in the Exhibit to this Appendix provide useful and relevant information of critical audit matters and at an appropriate level of detail? Why or why not?

26. What challenges might be associated with the comparability of audit reports containing critical audit matters? Are these challenges the same for audits of all types of companies? If not, please explain how they might differ.

27. What benefits or unintended consequences would be associated with requiring auditors to communicate critical audit matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards, such as the examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?

28. What effect, if any, would the auditor's communication of critical audit matters under the proposed auditor reporting standard have on an auditor's potential liability in private litigation? Would this communication lead to an unwarranted increase in private liability? Are there other aspects of the proposed auditor reporting standard that could affect an auditor's potential liability in private litigation? Are there steps the Board could or should take to mitigate the likelihood of increasing an auditor's potential liability in private litigation?

## VI. Explanatory Language (Paragraphs 15 – 16 of the Proposed Auditor Reporting Standard)

Under existing PCAOB standards certain circumstances require that the auditor add explanatory language (or an explanatory paragraph) to the auditor's report. The proposed auditor reporting standard references those circumstances. Additionally, the auditor may add an explanatory paragraph to the auditor's report to emphasize a matter in the financial statements.[84/] This type of explanatory paragraph is not required by the

---

[84/] AU sec. 508.19 describes these types of explanatory paragraphs as "emphasis of a matter paragraphs" or "emphasis paragraphs."

proposed auditor reporting standard or other PCAOB standards. Explanatory language is added to the auditor's report to provide information about the financial statements or the audit without affecting the auditor's opinion on the financial statements. This approach is retained from existing AU sec. 508.[85/]

## A. Explanatory Language Required by Other PCAOB Standards (Paragraph 15 of the Proposed Auditor Reporting Standard)

The proposed auditor reporting standard, similar to existing AU sec. 508,[86/] provides a list of circumstances in which the auditor is required to add explanatory language to the auditor's report and provides references to other PCAOB standards in which these circumstances and related reporting requirements are described. In certain circumstances, the auditor might communicate this information in a separate paragraph, called an explanatory paragraph.

The circumstances under which the auditor is required to add an explanatory language would occur, for example, when there is substantial doubt about the company's ability to continue as a going concern,[87/] when the auditor's opinion is based in part on the report of another auditor and the auditor decides to refer to that report,[88/] or when there has been a material change between periods in accounting principles or in the method of their application.[89/] The list of circumstances that require explanatory language can serve as a single reference source for auditors regarding when explanatory language is required in the auditor's report.

The proposed requirement to communicate critical audit matters does not alter the existing requirements to add explanatory language. However, a matter that requires explanatory language, such as a restatement, also might be a matter that involved the most difficult judgments or posed the most difficulty to the auditor in forming the opinion. Therefore, the same matter – the restatement in this case – would require an explanatory paragraph in the auditor's report in accordance with Auditing Standard No.

---

85/ See existing AU secs. 508.11 and .19.

86/ See existing AU sec. 508.11.

87/ See AU sec. 341.

88/ See AU sec. 543, *Part of Audit Performed by Other Independent Auditors*.

89/ See Auditing Standard No. 6, *Evaluating Consistency of Financial Statements*.

6 and also would be communicated as a critical audit matter in accordance with the proposed auditor reporting standard. The auditor may include a cross-reference in the auditor's report as appropriate.

Further, recent academic literature finds that companies that receive unqualified audit reports containing explanatory language as described in AU sec. 508, such as a change between periods in accounting principles,[90/] are more likely to subsequently restate their financial statements.[91/] More specifically, the study states that audit reports with explanatory language could indicate a heightened risk of financial statement misstatement and that standard setters should be cautious to not require additional reporting without considering the potential of diluting information provided by currently required explanatory language in auditor reports.[92/] The proposed auditor reporting standard retains the provisions of AU sec. 508 with respect to explanatory language, such as a change between periods in accounting principles and stipulates that the communication of critical audit matters would be in addition to any explanatory language included in the auditor's report. Accordingly, the communication of critical audit matters is not intended to dilute the information that would be provided by the required explanatory language but would provide more information about the audit that might also be informative to investors and other financial statement users.

**B. Paragraphs to Emphasize a Matter Regarding the Financial Statements (Paragraph 16 of the Proposed Auditor Reporting Standard)**

The proposed auditor reporting standard retains from AU sec. 508 the ability for the auditor to add an explanatory paragraph to the auditor's report to emphasize a matter in the financial statements. Such explanatory paragraphs are currently used by auditors to emphasize (1) accounting matters, other than those involving a change in accounting principles, affecting the comparability of the financial statements and (2) other matters, such as the use of an accounting framework other than U.S. GAAP,

---

[90/] Id.

[91/] See Keith Czerney, Jaime J. Schmidt, and Anne M. Thompson, *Does Auditor 'Commentary' in Unqualified Audit Reports Reflect Financial Misstatement Risk?* Unpublished working paper (2013), available at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2245855.

[92/] Id.

litigation or regulatory matters, and certain fair value matters.[93/] Generally, an explanatory paragraph that emphasizes a matter in the financial statements points to a disclosure in the company's financial statements that discloses the matter without providing any further information.

Consistent with existing AU sec. 508, the proposed standard would not require the auditor to emphasize a matter but permits the auditor to add such explanatory paragraphs when the auditor determines that a matter presented or disclosed in the financial statements would be important to a user's understanding of the financial statements, such as a significant subsequent event.

The proposed requirement to communicate critical audit matters does not alter the auditor's ability to add an explanatory paragraph to the auditor's report to emphasize a matter in the financial statements. The auditor's communication of a critical audit matter may provide more information about the auditing aspect of the matter emphasized in the auditor's report.

Existing AU sec. 508 provides examples of matters the auditor may emphasize in the auditor's report.[94/] The proposed auditor reporting standard similarly provides a list of examples, which have been retained or enhanced from existing AU sec. 508, incorporates an additional example from the existing PCAOB standard,[95/] and adds new examples. While examples of potential matters that the auditor may emphasize in the auditor's report are provided in the proposed auditor reporting standard, the auditor also may decide to emphasize other matters in the financial statements if the auditor determines it is appropriate to do so.

Questions Related to Section VI:

29. Is it appropriate for the Board to include the description of the circumstances that would require explanatory language (or an explanatory paragraph) with references to other PCAOB standards in the proposed auditor reporting standard?

---

[93/] In the audit reports of approximately 7,000 issuers with fiscal year 2011 filings, PCAOB staff identified audit reports containing explanatory paragraphs to emphasize matters in the financial statements in approximately 4.5% of the filings.

[94/] See existing AU sec. 508.19.

[95/] See paragraph .18 of AU sec. 9410, *Adherence to Generally Accepted Accounting Principles: Auditing Interpretations of Section 410*.

30. Is retaining the auditor's ability to emphasize a matter in the financial statements valuable? Why or why not?

31. Should certain matters be required to be emphasized in the auditor's report rather than left to the auditor's discretion? If so, which matters? If not, why not?

32. Should additional examples of matters be added to the list of possible matters that might be emphasized in the auditor's report? If so, what matters and why?

## VII. Amendments to Other PCAOB Standards

The Board is proposing amendments to several of its existing auditing standards to conform to the proposed auditor reporting standard. Appendix 3 contains the proposed amendments to existing PCAOB auditing standards related to the proposed auditor reporting standard. Significant amendments are described below.

### A. Amendments to Auditing Standard No. 5

Auditing Standard No. 5 establishes requirements and provides direction when an auditor is engaged to perform an audit of management's assessment of the effectiveness of internal control over financial reporting that is integrated with an audit of the financial statements.

The Board is proposing to amend the auditor's report on internal control over financial reporting to include the following amendments to conform to the proposed auditor unqualified report:

- Conform certain required elements of the auditor's report on the audit of internal control over financial reporting[96/] to the auditor's report on the audit of the financial statements; and

- Amend the example combined report.[97/]

The proposed amendments to the required elements of the auditor's report on the audit of internal control over financial reporting, as well as to the example combined report, would require:

---

96/ See paragraph 85 of Auditing Standard No. 5.

97/ See paragraph 87 of Auditing Standard No. 5.

- The title, "Report of Independent Registered Public Accounting Firm" (this title is included in the example combined report in Auditing Standard No. 5; however, the existing requirement in Auditing Standard No. 5 only specifies that the title include the word "independent");

- Addressees that include, but are not necessarily limited to (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body;

- Name of the company whose internal control over financial reporting was audited;

- Statement that the auditor is a public accounting firm registered with the PCAOB and is required to be independent with respect to the company in accordance with the United States federal securities laws and the applicable rules and regulations of the SEC and the PCAOB; and

- Statement containing the year the auditor began serving consecutively as the company's auditor.

Since the statements regarding the auditor's requirement to be independent and the auditor tenure are included as the proposed basic elements of the auditor's unqualified report, they also might be useful to the users of the auditor's report on the audit of internal control over financial reporting.

Additionally, the example combined report in Auditing Standard No. 5 would include a section titled "The Auditor's Responsibilities Regarding Other Information" that includes the reporting requirements related to auditor's responsibilities regarding other information outside the audited financial statements and the results of the auditor's evaluation of the other information. In addition, the proposed auditor reporting standard states that if the auditor performs an audit of internal control over financial reporting that is integrated with an audit of the financial statements and chooses to issue a combined report, the paragraph in the auditor's report describing the auditor's responsibilities regarding other information should be updated to indicate that the auditor audited both the financial statements and the company's internal control.

## B. Amendments to Auditing Standard No. 6

Auditing Standard No. 6 establishes requirements for the auditor's evaluation of the consistency of the financial statements, including changes to previously issued financial statements and the effect of that evaluation on the auditor's report. Auditing Standard No. 6 requires the auditor to include explanatory language in the auditor's report to recognize a change in accounting principle or a correction of a material misstatement in previously issued financial statements if the change has a material effect on the financial statements.[98/] The related reporting requirements and illustrative paragraphs, however, are currently included in existing AU sec. 508.[99/]

The proposed auditor reporting standard would amend Auditing Standard No. 6 to include the reporting requirements and illustrative paragraphs from existing AU sec. 508.[100/] This change was made because, except for a few circumstances, the reporting requirements for explanatory language are contained in the respective standards requiring such reporting.

## C. Amendments to Auditing Standard No. 7

The proposed amendments to Auditing Standard No. 7 would require the engagement quality reviewer to evaluate whether appropriate critical audit matters are communicated in the auditor's report. The engagement quality reviewer's evaluation could be facilitated by the documentation requirement of the proposed auditor reporting standard. The proposed auditor reporting standard requires the audit documentation to include the determination of critical audit matters in accordance with Auditing Standard No. 3, which would require the auditor's documentation to contain sufficient information to enable an experienced auditor, having no previous connection with the engagement, to understand the basis for the auditor's determination that (1) each reported matter was a critical audit matter and (2) non-reported audit matters that would appear to meet the definition of a critical audit matter were not critical audit matters.

Auditing Standard No. 7 currently requires the engagement quality reviewer in an audit engagement "to evaluate the significant judgments made by the engagement team and the related conclusions reached in forming the overall conclusion on the engagement and in preparing the engagement report."[101/] Therefore, the engagement

---

98/ See paragraphs 5-10 of Auditing Standard No. 6.

99/ See existing AU secs. 508.17A through .18C.

100/ See existing AU secs. 508.17B-.17D and .18A-.18B and the proposed amendments to paragraphs 12 through 17 of Auditing Standard No. 6. In previous PCAOB standard-setting projects, the substance of current AU sec. 508.17A has been repeated in existing paragraphs 7 and 8 of Auditing Standard No. 6 and the substance of current AU sec. 508.18C has been placed in existing paragraph 10 of Auditing Standard No. 6. Therefore, the Board is proposing to supersede AU secs. 508.17A and .18C without corresponding changes to Auditing Standard No. 6.

101/ See paragraph 9 of Auditing Standard No. 7.

quality reviewer is likely to discuss the matters determined to be critical audit matters with the engagement team. The proposed amendment would require the engagement quality reviewer to evaluate the engagement team's compliance with the requirements of the proposed auditor reporting standard regarding the auditor's communication of the critical audit matters.

## D. Amendments to Auditing Standard No. 16

Auditing Standard No. 16 requires auditors to communicate certain significant audit and financial statement matters to the audit committee. Among other things, Auditing Standard No. 16 includes a requirement for the auditor to communicate to the audit committee matters related to departures from the auditor's unqualified report. Under the Board's existing standard, the auditor is required to communicate certain information when the auditor expects to (1) modify the opinion in the auditor's report and (2) include explanatory language or an explanatory paragraph in the auditor's report.[102/]

The proposed amendments to Auditing Standard No. 16 would delete the existing communication requirement regarding the auditor's report and would replace it with a requirement to provide to and discuss with the audit committee a draft of the auditor's report. Providing and discussing a draft of the report would inform the audit committee about the language in the audit report for tenure, critical audit matters, explanatory language (or explanatory paragraphs), and departures from an unqualified report. The proposed amendment to Auditing Standard No. 16, however, would not preclude the auditor from communicating with the audit committee any changes to the auditor's report prior to the preparation of the draft auditor's report.

## E. Amendment to AU sec. 336

The proposed amendment to AU sec. 336, *Using the Work of a Specialist*, would enable the auditor to reference the use of a specialist in the auditor's report in connection with the auditor's communication of critical audit matters, if the auditor believes such reference will facilitate an understanding of the audit matter or the considerations that led the auditor to determine that the audit matter is a critical audit matter. Currently, existing AU sec. 336 states that the auditor should not refer to the work or findings of a specialist, except for situations in which the auditor decides to add explanatory language to his or her report or depart from an unqualified opinion.[103/] The proposed amendment is intended to explain that the auditor is not precluded from

---

[102/] See paragraph 21 of Auditing Standard No. 16.

[103/] AU secs 336.15-.16.

referencing the specialist if the reference is related to a critical audit matter. Because of the statement in the auditor's report that communication of critical audit matters does not alter in any way the auditor's opinion on the financial statements, taken as a whole, the auditor's reference to the use of specialists should not be misunderstood as a qualification of the auditor's opinion or a division of responsibility.

## F. Amendments to Existing AU sec. 508

The proposed auditor reporting standard would supersede portions of existing AU sec. 508 that primarily relate to an unqualified opinion.[104/] The remaining portions of existing AU sec. 508 primarily address departures from the auditor's unqualified report, such as a qualified opinion, an adverse opinion, or a disclaimer of opinion. Accordingly, existing AU sec. 508 would be retitled from "Reports on Audited Financial Statements" to "Departures from Unqualified Opinions and Other Reporting Circumstances."

The proposed amendments to the remaining portions of AU sec. 508 are not intended to change the substance of the remaining provisions of AU sec. 508. The proposed amendments would primarily consist of (1) requiring the communication of critical audit matters in certain circumstances; (2) revising certain terminology to align with the proposed auditor reporting standard; and (3) amending the illustrative reports. Further updating and revision may be required to existing AU sec. 508, as amended by this proposal, which would be considered by the Board in a separate standard-setting project.

The proposed amendments to AU sec. 508 include:

### *1. Communication of Critical Audit Matters in Opinions Other Than Unqualified*

*Qualified Opinion*

A qualified opinion states that, except for the effects of the matter(s) to which the qualification relates, the financial statements present fairly, in all material respects, the financial position, results of operations, and cash flows of the company in conformity with generally accepted accounting principles.[105/] Existing AU sec. 508 requires that when the auditor expresses a qualified opinion, he or she discloses all of the substantive reasons in a separate paragraph.

---

[104/] AU secs. 508.01-.09 and .11-.19 would be superseded.

[105/] See AU sec. 508.20.

The proposed amendments would require that when the auditor expresses a qualified opinion, the auditor's report also include, among other things, communication of critical audit matters. The Board would expect in most circumstances that the reason for the qualification of the auditor's report would also give rise to a critical audit matter. In that case, the auditor may include a cross-reference in the auditor's report as appropriate. However, in such an audit, there may be other matters meeting the criteria of a critical audit matter; therefore, requiring the communication of critical audit matters would be considered appropriate.

*Adverse Opinion*

An adverse opinion states that the financial statements do not present fairly the financial position, results of operations, or cash flows of the entity in conformity with generally accepted accounting principles.[106/] The existing requirements related to an adverse opinion were not amended to require the auditor to communicate critical audit matters. If the financial statements are not presented fairly, existing AU sec. 508 requires the auditor to explain the auditor's reason for the adverse opinion. Requiring the auditor to communicate additional critical audit matters was not considered necessary because the most important matter to investors and other financial statement users would be the reason for the adverse opinion.

*Disclaimer of Opinion*

A disclaimer of opinion states that the auditor does not express an opinion on the financial statements.[107/] The existing requirements related to a disclaimer of an opinion were not amended to require the auditor to communicate critical audit matters because the auditor is unable to form or has not formed an opinion as to the fairness of presentation of the financial statements. Because the auditor is not able to complete the audit and form an opinion on the financial statements, the auditor would not be able to determine the matters that involved the most difficult, subjective, or complex auditor judgments, posed the most difficulty in obtaining sufficient appropriate audit evidence, or posed the most difficulty in forming the opinion on the financial statements.

*2. The Term "Explanatory Paragraph"*

Existing AU sec. 508 includes references to the term "explanatory paragraph" that describe the auditor's responsibility to provide the reason for a departure from an

---

106/ See AU sec. 508.58.

107/ See AU sec. 508.61.

unqualified opinion. This term would be amended to "basis for departure from unqualified opinion paragraph" to differentiate this paragraph from an explanatory paragraph, as described in the proposed auditor reporting standard.

*3. Illustrative Reports*

Existing AU sec. 508 includes illustrative reports related to qualified opinions, adverse opinions, and disclaimers of an opinion. These reports would be amended to reflect the proposed basic elements of the auditor's unqualified report, as applicable in the particular reporting circumstances.

## G. Amendments to AU sec. 623

AU sec. 623, *Special Reports*, includes the reporting requirements for various types of special reports, such as reports on specified elements, accounts, or items of a financial statement. Since many of these reports are not required to be filed with the SEC, the Board did not amend the illustrative reports included in AU sec. 623. However, a note is proposed to be added to AU sec. 623 indicating that if any of the reports are to be filed with the SEC, the auditor would include the basic elements of the auditor's unqualified opinion and critical audit matters as described in paragraphs 6 and 7-14, respectively, of the proposed auditor reporting standard. For qualified, adverse, and disclaimer of opinion reports, AU sec. 623 also would be amended to include a reference to the requirements of AU sec. 508, [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances*.

## H. Other Amendments

The proposed amendments to other PCAOB standards primarily relate to:

- Updating references as a result of auditing standards that are being amended or superseded. For example, for references in the auditing standards to AU sec. 508, the proposed amendment would change the title from "Reports on Audited Financial Statements" to "Departures from Unqualified Opinions and Other Reporting Circumstances;"

- Updating illustrative reports for the basic elements of the proposed auditor reporting standard for the reports that are filed with the SEC. For example, updating the example report in AU sec. 543 that illustrates appropriate reporting by the principal auditor indicating the division of responsibility when the auditor makes reference to the audit of the other auditor; and

- Updating AU sec. 722, *Interim Financial Information*, for the basic elements of the proposed auditor reporting standard.

Questions Related to Section VII:

33. Are the proposed amendments to PCAOB standards, as related to the proposed auditor reporting standard, appropriate? If not, why not? Are there additional amendments to PCAOB standards related to the proposed auditor reporting standard that the Board should consider?

34. What are the potential costs or other considerations related to the proposed amendments? Are these cost considerations the same for all types of audits? If not, explain how they might differ.

## VIII. Considerations Related to Audits of Specific Entities

The Board is seeking comment on the applicability of the proposed auditor reporting standard and amendments to the audits of specific entities, including brokers and dealers, investment companies, and employee stock purchase, savings, and similar plans.

### A. Brokers and Dealers

*1. Background Information*

As Exchange Act Rule 17a-5 ("Rule 17a-5") requires that audits of brokers and dealers be conducted in accordance with PCAOB standards for fiscal years ending on or after June 1, 2014,[108/] the proposed auditor reporting standard and amendments, if adopted by the Board and approved by the SEC, would be applicable to such audits. At the publication date of the Board's proposal, the final SEC rules have not been published in the Federal Register.

Pursuant to Rule 17a-5, brokers and dealers are generally required to file with the SEC and other regulators annual audited financial statements.[109/] All of the statements contained in the annual audited financial statements of the broker or dealer are public, except that if the statement of financial condition is bound separately from the balance of the annual audited financial statements, the balance of the annual

---

108/ See SEC, *Broker-Dealer Reports*, Exchange Act Release No. 70073 (July 30, 2013), which includes the final rules available at http://www.sec.gov/rules/final/2013/34-70073.pdf. Citations in this Section are to SEC Rule 17a-5 under the Exchange Act, as revised in Exchange Act Release No. 70073.

109/ See SEC Rule 17a-5 of the Exchange Act, 17 C.F.R. § 240.17a-5.

audited financial statements is deemed confidential and thus available for use only by the SEC and others to whom the SEC gives authorization.[110/] Therefore, in situations in which the broker or dealer binds separately the statement of financial condition from the balance of the annual audited financial statements, the auditor generally would issue two separate auditor's reports that would have different content: (1) an auditor's report on the statement of financial condition that would be available to the public and (2) an auditor's report on the complete audited financial statements that, along with the audited financial statements, would be confidential and not available to the public.[111/]

There were approximately 4,230 brokers and dealers that filed annual audited financial statements with the SEC for fiscal periods ended during 2012.[112/] Based on research conducted by the PCAOB's Office of Research and Analysis ("ORA"), approximately 45% of these brokers and dealers filed a statement of financial condition that was bound separately from the balance of the annual audited financial statements. For those brokers and dealers, only the statement of financial condition, with the related auditor's report, is publicly available, while the complete annual audited financial statements, with the related auditor's report, are confidential. For the remaining 55% of the population of brokers and dealers, the complete annual audited financial statements and the related auditor's report are publicly available.[113/]

ORA's research also indicates that there are no issuers among the approximately 4,230 brokers and dealers that filed annual audited financial statements with the SEC for fiscal periods ended during 2012. Approximately 9% of the 4,230 brokers and dealers are subsidiaries of issuers. The remainder are not owned by issuers.

According to ORA's research, for the population of brokers and dealers that are not subsidiaries of issuers (1) approximately 90% are directly owned by an individual or an entity that owns more than 50% of the broker or dealer and (2) approximately 75% have five or fewer direct owners. A review of the title or status of the brokers' or dealers'

---

110/ See SEC Rule 17a-5(e).

111/ See also SEC Rule 17a-5(c)(2) regarding audited statements required to be provided to customers.

112/ This information is based on the number of brokers and dealers that filed annual audited financial statements with the SEC through May 1, 2013 for fiscal periods ended during 2012.

113/ ORA obtained information from the SEC's EDGAR database on brokers and dealers that filed public and confidential annual audit reports with the SEC.

direct owners who are individuals suggests that these owners are generally part of the broker's or dealer's management.

In summary, ORA's research indicates that ownership of brokers and dealers is primarily private, with individual owners generally being part of the management team.

*2. Comments on Concept Release*

The Board's concept release included a question about whether the changes to the auditor's reporting model should apply to all audit reports filed with the SEC, including those filed in connection with the financial statements of brokers and dealers. Many commenters who responded to this question in the concept release supported requiring the same reporting for all companies.

The Board received additional comments that were specific to audits of brokers and dealers from a small number of commenters. Some of those commenters suggested that the Board take into account the special characteristics of brokers and dealers in considering whether the changes to the auditor's report should apply to audits of brokers and dealers. Other commenters thought that certain changes, for example clarifications to language in the auditor's report, may be applicable to auditors' reports for brokers and dealers, but other changes to the auditor's report should not apply to audits of brokers and dealers. One commenter on the concept release noted that amendments to Rule 17a-5 proposed by the SEC would provide users of brokers' and dealers' financial statements with sufficient information that would make additional auditor reporting unnecessary.

## B. Investment Companies

*1. Background Information*

The proposed auditor reporting standard and amendments, if adopted by the Board and approved by the SEC, would be applicable to the audits of investment companies. The Investment Company Act of 1940 ("Investment Company Act") generally defines an investment company as any issuer that is engaged primarily in the business of investing, reinvesting, or trading in securities.[114/] Investment companies registered with the SEC under the Investment Company Act are required to file with the SEC, on Form N-CSR, annual reports containing audited financial statements.[115/]

---

[114/] See Section 3(a)(1) of the Investment Company Act.

[115/] See SEC Rules under Section 30(e) of the Investment Company Act.

An investment company (1) is generally organized by an outside "sponsor" (also known as promoter[116/]), such as a bank or an insurance company and (2) has an investment adviser,[117/]which manages the investment company's portfolio securities for a fee. A sponsor might register many investment companies that generally would have the same or related investment advisers. Such investment companies are referred to as affiliated. Annual shareholder reports of affiliated investment companies that have the same fiscal year-end might be filed with the SEC in one Form N-CSR. This document generally contains a single auditor's report that refers to the financial statements of each audited investment company. The financial statements of the affiliated investment companies might contain some disclosures that would be similar across the affiliated investment companies, such as the management fee arrangements, because of the common investment adviser. Other disclosures might be different, such as disclosures related to the use of derivatives, because of the different investment strategies of each investment company.

Investment companies can also be part of master-feeder or fund of funds capital structures.[118/] In master-feeder structures, feeder investment companies invest all their assets in another investment company, known as the master fund, and own proportionate shares of the net assets of the master fund. Master-feeder accounting involves allocating the master's income, expenses, and realized and unrealized gains and losses among the feeder funds. Additionally, accounting policies of the master fund, such as valuation of investments of the master fund, may affect the feeder funds. A master and feeder fund may not be affiliated, may have different auditors, and different fiscal year ends. As described in SEC staff guidance, the annual report of each feeder fund generally contains the financial statements of both the master and the feeder fund.[119/]

Funds of funds are investment companies that invest in other investment companies. A fund of funds' structure is similar to that of a master-feeder, except that it

---

[116/] See Section 2(a)(30) of the Investment Company Act.

[117/] See Section 2(a)(20) of the Investment Company Act.

[118/] See Section 12(d)(1) of the Investment Company Act, which describes investment companies involved in such structures as acquiring company and acquired company.

[119/] See SEC "Dear CFO" letters at http://www.sec.gov/divisions/investment/noaction/1997/cfo110797.pdf and http://www.sec.gov/divisions/investment/noaction/1995/accountingcomment110295.pdf.

generally invests its assets in more than one other fund. Because of certain limitations under the Investment Company Act,[120/] an issuer fund of funds and the investee funds are often affiliated, but may have different auditors and fiscal year ends.

In January 2009, the SEC adopted amendments to Form N-1A that require every open-end management investment company prospectus to include a summary section consisting of key information about the investment company.[121/] The SEC described these amendments as intended to help investors to access key information that is important to an informed investment decision.[122/] In describing the rationale for the adopted amendments, the SEC stated that there was consensus among roundtable participants and other commenters that the key information that investors need to make an investment decision about an investment company includes information about the investment company's investment objectives and strategies, risks, costs, and performance.[123/] The investment company's costs and performance calculations are subject to audit and are included in the financial highlights, which are referred to in the auditor's report.

*2. Consideration of Comments on Concept Release*

The Board's concept release included a question about whether the changes to the auditor's reporting model should apply to all audit reports filed with the SEC, including those filed in connection with the financial statements of investment companies. Many commenters who responded to this question of the concept release supported requiring the same reporting for all companies.

The Board received comments that were specific to audits of investment companies from a small number of commenters. Those commenters generally expressed the view that additional auditor reporting should not apply to audits of investment companies. These commenters viewed investment companies' financial

---

120/ See Section 12(d)(1) of the Investment Company Act.

121/ See SEC, *Enhanced Disclosure and New Prospectus Delivery Option for Registered Open-End Management Investment Companies,* Securities Act Release No. 8998 (Jan. 13, 2009), at 7.

122/ See SEC Release No. 8998, at 14-15.

123/ See SEC Release No. 8998, at 9-11. See also ICI, *Understanding Investor Preferences for Mutual Fund Information* (Aug. 2006), at 2-3, available at http://www.ici.org/pdf/rpt_06_inv_prefs_full.pdf.

statements as inherently less complex than operating companies' financial statements and argued that the limited nature of an investment company's operations entails fewer estimates and judgments.

## C. Employee Stock Purchase, Savings, and Similar Plans

### *1. Background Information*

The proposed auditor reporting standard and amendments, if adopted by the Board and approved by the SEC, would be applicable to the audits of employee stock purchase, savings, and similar plans ("benefit plans"). Benefits plans that purchase and hold securities of the plan sponsor using participants' contributions are generally required to file with the SEC an annual report on Form 11-K[124/] that includes the benefit plan's audited financial statements and the related auditor's report.[125/] The audit of the financial statements included in a filing on Form 11-K is performed in accordance with the standards of the PCAOB. Benefit plans are also generally subject to the financial reporting requirements of the Employee Retirement Income Security Act of 1974 ("ERISA"), including the U.S. Department of Labor's ("DOL") rules and regulations for disclosure under ERISA.[126/]

In general, the primary objective of the financial statements of a benefit plan is to provide information about the plan's assets, liabilities, and ability to pay benefits. Defined-contribution benefit plan participants do not invest directly in a benefit plan; rather they select their investments outside of the benefit plan, with the plan holding the investments as its assets.

---

124/ See Section 15(d) of 1934 Act.

125/ A benefit plan's audited financial statements may also be included as part of the annual report of the issuer sponsoring the benefit plan. See SEC Rule 15d-21, C.F.R §240.15d-21.

126/ See FASB ASC 960-10-05-6. Benefit plans subject to ERISA also file with the DOL an annual report on form 5500, including audited financial statements and an auditor's report. Pursuant to DOL requirements, the audit of the financial statements is performed under auditing standards generally accepted in the U.S., that is, not under PCAOB standards. ERISA-related information is available at the DOL website at http://www.dol.gov/compliance/laws/comp-erisa.htm#applicable_laws.

*2. Consideration of Comments on Concept Release*

The Board's concept release included a question about whether the changes to the auditor's reporting model should apply to all audit reports filed with the SEC. Many commenters who responded to this question of the concept release supported requiring the same reporting for all companies.

The Board received comments that were specific to audits of benefit plans from a small number of commenters. One commenter thought the Board should proceed with caution regarding employee benefit plans that file a Form 11-K. Another commenter said that users of pension plans' financial statements are not requesting or in need of an expanded auditor reporting model.

<u>Questions Related to Section VIII</u>:

35. Are the proposed auditor reporting standard and amendments appropriate for audits of brokers and dealers? If yes, are there any considerations that the Board should take into account with respect to audits of brokers and dealers?

36. Is the requirement of the proposed auditor reporting standard to communicate in the auditor's report critical audit matters appropriate for audits of brokers and dealers? If not, why not?

37. Since a broker or dealer may elect to file with the SEC a balance sheet and related notes bound separately from the annual audited financial statements, should the Board address situations in which the auditor may issue two different reports for the same audit of a broker or dealer? Why or why not?

38. Are the proposed auditor reporting standard and amendments appropriate for audits of investment companies? If yes, are there any considerations that the Board should take into account with respect to auditors' reports on affiliated investment companies, as well as companies that are part of master-feeder or fund of funds structures?

39. Are the proposed auditor reporting standard and amendments appropriate for audits of benefit plans? If yes, are there any considerations that the Board should take into account with respect to audits of benefit plans?

40. Should audits of certain companies[127/] be exempted from being required to communicate critical audit matters in the auditor's report? Why or why not?

## IX. Considerations Related to Effective Date

The proposed auditor reporting standard and amendments would be effective, subject to approval by the SEC, for audits of financial statements for fiscal years beginning on or after December 15, 2015. The Board's final decision on the effective date would take into account the extent and nature of comments received on the proposal as well as the timing of Board adoption of any final standard and amendments. Additionally, some commenters suggested that, depending on the extent of changes to the auditor's report, the Board consider a delayed compliance date depending on the size of the company. The Board is seeking comment on whether any special consideration should be given to a delayed compliance date for the proposed auditor reporting standard, such as for the audits of smaller companies.

Questions Related to Section X:

41. Is the Board's effective date appropriate for the proposed auditor reporting standard? Why or why not?

42. Should the Board consider a delayed compliance date for the proposed auditor reporting standard and amendments or delayed compliance date for certain parts of the proposed auditor reporting standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?

---

127/ See Appendix 7 for a discussion on costs and other considerations related to EGCs.

## Exhibit – Illustrative Examples of Critical Audit Matters

This Exhibit contains three illustrative examples of communications of critical audit matters in an auditor's report. Each of the three illustrative examples contain background information, the company's related notes to the financial statements, determination of the critical audit matter, and the communication of the critical audit matter as it would appear in the auditor's report.

All three examples are based on hypothetical situations and have been prepared for illustrative purposes only. They are not intended to provide guidance or any suggestions regarding the accounting or disclosure required, nor any implied audit procedures, in the circumstances presented.

### A. Hypothetical Auditing Scenario #1 – Allowance for Sales Returns

#### *1. Background*

In the year ended January 31, 2013 ("fiscal 2013"), an established brick-and-mortar retail company ABC Retailer ("ABC" or the "Company") implements a strategic decision to expand its product offerings concurrent with developing a significant on-line sales channel. Simultaneously, it lengthens its existing 30-day sales returns policy to 60 days. This change in returns policy, along with the expanded product offerings and new on-line presence, are announced in a fiscal 2013 advertising campaign.

ABC's management projects a significant increase in sales and an increase in returns in fiscal 2013 as a result of these changes. The Company designs and implements new or enhanced procedures, processes, and systems during fiscal 2013 to address the product expansion, the on-line distribution channel, and the expected increase in customer returns.

ABC has significant historical experience to estimate sales allowances based on its traditional products and sales channel. Because of the strategic changes and longer sales return period, management performs an in-depth analysis of how changes in product mix, customer demographics, and the use of on-line "stores" to sell merchandise are likely to affect historical experience in sales returns. Management uses industry data and other sources, including the results of its own market research, to perform this analysis. Management also implements new systems to improve the identification, processing, and tracking of sales returns and develops a statistical model to estimate future returns. The statistical model relies on a number of inputs and assumptions derived from the sales return tracking system. As a result, management believes its historical experience in combination with the new systems and statistical model allow management to make reasonable estimates of sales returns for fiscal 2013.

During fiscal 2013, ABC's management decides to significantly lengthen the 60-day returns policy without publicly announcing a change to the stated policy. In response to on-line customer complaints about the Company's returns policy in the past, full refunds are given "no questions asked" for returns within 90 days and in specific circumstances for returns within 120 days. To reflect the lengthened sales returns policy, management makes adjustments to the sales returns allowance determined by the statistical model. These adjustments are partly based on data generated by the sales returns tracking system and partly based on management's judgment about how recent sales activity and other factors such as seasonality, recent promotions, and the nature and frequency of customer complaints are affecting ABC's application of its stated sales returns policy. Disclosure of management's actions regarding its sales returns policy was made in the MD&A.

*2. Excerpts From the Company's Notes to the Financial Statements*[128/]

***Note 1: Accounting Policies***

***Revenue Recognition***

We recognize revenue when the following criteria are met: persuasive evidence of an arrangement exists; delivery has occurred; the selling price is fixed or determinable; and collectability is reasonably assured. For sales made at our retail stores, we generally recognize revenue at the time of a sale to a customer. For sales made through our website, we generally recognize revenue at the time the merchandise is shipped to a customer. As part of our customer service strategy, we offer customers the right to return undamaged merchandise for a full refund if they are not satisfied with their purchase. We record an allowance for estimated returns as a reduction of gross revenues and cost of goods sold, and as an accrued current liability based on historical experience and trends. If we are unable to make reasonable estimates of future returns, revenue is deferred until the return period expires. In fiscal 2011, 2012, and 2013, no revenues were deferred due to an inability to make reasonable estimates of future returns.

Beginning in fiscal 2013, we use a statistical model that utilizes our historical experience to estimate future returns. Inputs and assumptions to our model include, among other factors: historical experience based on sales of similar products; the

---

[128/] Only financial statement information relating to the disclosure and determination of the revenue recognition relative to the allowance for sales returns is presented. Other required notes to the financial statements have been omitted from this example.

relative risk of returns based on the nature of the product, such as susceptibility to changes in technology or changes in demand due to new product introductions; historical data related to the effect that special promotions and/or seasonality has on returns; and the relative risk of returns based on the selling price of the merchandise and the sales channel that the customer used to make a purchase. We also incorporate expected changes, if any, in our returns policies and practices as well as changes in economic and buying trends that might impact customer demand and behavior. If actual returns are not consistent with our estimates, we factor the new information into our statistical model and adjust our previous estimate in the period new information becomes available.

*3. Determination of the Critical Audit Matter*

The auditor determined that the evaluation of the allowance for sales returns is a critical audit matter in the audit of ABC's fiscal 2013 financial statements.

Specific considerations, which led the auditor to determine that the auditor's evaluation of the allowance for sales returns is a critical audit matter, included:

- Extensive changes to the Company's business strategy, including changes to the Company's distribution channel through the use of on-line "stores" to sell merchandise;

- Significant lengthening of the Company's sales return policy (from 30 to 60 days) and flexible application of it (90 – 120 days);

- The development of a new statistical model to estimate future sales returns, which included management adjustments to the statistical model to reflect the flexible application of the sales return policy;

- Significant increase in the Company's expected sales returns;

- The extensive amount of consultation with the audit firm's national office regarding the design of appropriate audit procedures, evaluation of the results of those procedures, and assessment of compliance with U.S. GAAP relative to the audit of the allowance for sales returns;

- The significant difficulty in obtaining sufficient appropriate audit evidence to support management's subjective adjustments to the allowance computed by the statistical model; and

- The complexity and difficulty of evaluating whether the Company had a sufficient basis to make a reasonable estimate of sales returns.

*4. Communication of Critical Audit Matter in the Auditor's Report*

Critical Audit Matter

The standards of the PCAOB require that we communicate in our report critical audit matters relating to the audit of the current period's financial statements or state that we determined that there are no critical audit matters. Critical audit matters are those matters addressed during the audit that (1) involved our most difficult, subjective, or complex judgments; (2) posed the most difficulty to us in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to us in forming our opinion on the financial statements. The critical audit matters communicated below do not alter in any way our opinion on the financial statements, taken as a whole.

We determined that our evaluation of the Company's allowance for sales returns was a critical audit matter in the audit of the Company's financial statements as of and for the fiscal year ended January 31, 2013. The Company developed a new on-line sales channel. This new sales channel could have significantly different return experience than sales through its more established retail stores. In addition, the Company simultaneously lengthened its return policy. The Company developed new models with different assumptions to reflect these changes in its estimate of the allowance for sales returns, a key element in recording revenue. The lack of historical experience with the new assumptions resulted in a high degree of measurement uncertainty in estimating the allowance for sales returns.

Because of these changes in the Company's distribution channel and sales return policy, our audit of the Company's allowance for sales returns (1) involved our difficult and subjective judgments in evaluating whether the Company had a sufficient basis to make a reasonable estimate of sales returns and (2) posed difficulty to us in obtaining sufficient appropriate evidence to support management's adjustments to the allowance for sales returns. We consulted with our national office on (1) the design and performance of audit procedures to test the data underlying management's assumptions used to estimate future sales returns and (2) our evaluation of the results of those procedures, including our assessment of the reasonableness of management's judgments regarding the effect that changes in the Company's return policies and practices, as well as changes in economic and buying trends that affect customer behavior, have on the estimate of future sales returns. The Company's accounting policy for sales returns is discussed in Note 1 to the financial statements.

## B. Hypothetical Auditing Scenario #2 – Valuation Allowance for Deferred Tax Assets

### *1. Background*

As of the year ended June 30, 2013 ("fiscal 2013"), XYZ Technology Company ("XYZ" or the "Company") has been in business for 10 years. In its first three years, as its "first generation" products were being developed and commercialized, the Company incurred losses for both financial reporting and federal income tax purposes. For income tax purposes, the losses are carried forward and subsequently utilized to reduce federal income taxes that otherwise would have been payable. By its sixth year of operations, XYZ is profitable for tax purposes, has no remaining net operating loss carryforwards, and has repaid its borrowings. Cash flows from operations are strong.

By fiscal 2010 (its seventh year of operations), competition begins to erode the Company's market share. XYZ reports breakeven results for financial reporting purposes and a small loss for income tax purposes in fiscal 2010. The loss is carried back for income tax purposes. The Company returns to profitability in fiscal 2011 by carefully controlling costs and by offering some "add-ons" to its "first generation" products that boost revenues.

During fiscal 2012 (its ninth year of operations), XYZ raises equity capital to provide additional liquidity for its ongoing development of "next generation" products (targeted to be introduced in fiscal 2014-2015). Due to the significant increase in development costs combined with continuing pressure on sales prices and unexpected cost increases in a critical component, XYZ reports a loss for both financial reporting and federal income tax purposes in fiscal 2012. A portion of the loss in fiscal 2012 creates a net operating loss carryforward. The Company's cash position remains strong.

During the year ended June 30, 2013, XYZ recalls one of its products due to a defect in a component supplied by a third party. Although the supplier is contractually obligated to reimburse the Company for the costs to recall and repair the defective products, the supplier disputes the role its component played in the product failure that led to the recall. Product development and marketing costs increase in preparation for the targeted 2014-2015 introduction of the "next generation" products. Additionally, costs are incurred (1) to exit certain unprofitable, peripheral product lines that are no longer consistent with XYZ's strategy and (2) to relocate its corporate office. The Company is able to somewhat mitigate the fiscal 2012 cost increase in a critical component but does not expect the cost of the component to return to historic levels in the near term.

As a result of these various circumstances, the Company incurs a significant pre-tax loss in the year ended June 30, 2013, for both financial reporting and federal income tax purposes. In combination with other book-tax differences and the net operating loss carryforward from fiscal 2012, XYZ reports net deferred tax assets as of June 30, 2013.

As required by U.S. GAAP, management evaluates whether the recorded amount of deferred tax assets as of June 30, 2013 is realizable. In evaluating the need for a valuation allowance, management evaluates both negative and positive evidence to determine whether it is more likely than not that its deferred tax assets will be realized. From management's perspective, negative evidence includes losses in 2013 and 2012. However, management determined that it has not incurred cumulative losses in recent years[129/] when evaluated over a three-year time frame.[130/] Management's positive evidence includes the Company's historical ability to utilize operating loss carryforwards, a 15-year carryforward period, and a forecast of increased revenues and profits in the next three years. That forecast includes the following expectations: (1) favorable settlement with the supplier related to the recall; (2) elimination of certain unprofitable, peripheral product lines; (3) decline in the level of product development spending; and (4) commercialization of the "next generation" products.

Management also considers that some of the current year loss is the result of the product recall, the exiting of certain product lines, and the relocation of the corporate office, events that are not expected to recur in the future. Further, management considers XYZ's strong cash position. Lastly, management does not identify any qualifying tax-planning strategies. Based on the weight of all available evidence, both positive and negative, management concludes that no valuation allowance is required.

---

129/ See FASB ASC paragraph 740-10-30-16 through 30-24, *Income Taxes – Overall – Initial Measurement – Establishment of a Valuation Allowance for Deferred Tax Assets*, for the accounting requirements of a valuation allowance for deferred income tax assets including discussion regarding "cumulative losses in recent years."

130/ ASC Topic 740-10-30-23 indicates that "[a]n entity shall use judgment in considering the relative impact of negative and positive evidence. The weight given to the potential effect of negative and positive evidence shall be commensurate with the extent to which it can be objectively verified. The more negative evidence that exists, the more positive evidence is necessary and the more difficult it is to support a conclusion that a valuation allowance is not needed for some portion or all of the deferred tax asset. A cumulative loss in recent years is a significant piece of negative evidence that is difficult to overcome."

2. *Excerpts From the Company's Notes to the Financial Statements*[131/]

***Note 2: Accounting Policies***

**Income Taxes**

We account for income taxes under the asset and liability method. Deferred taxes are determined based on the temporary differences between the financial statement and tax basis of existing assets and liabilities using tax rates that under current tax law would be in effect in the years in which the differences are expected to reverse. The effect of a change in tax rates on deferred taxes is recognized in the period that includes the enactment date.

We make judgments regarding the realizability of our deferred tax assets. We consider our deferred tax assets to be realizable when we believe it is more likely than not that we will generate sufficient future taxable income to realize our deferred tax assets after consideration of all available evidence. We record a valuation allowance to reduce our deferred tax assets to the amount that we believe more than 50 percent likely to be realized. In assessing the need for a valuation allowance, we consider all positive and negative evidence, including the expected timing of reversals of existing temporary differences, projected future taxable income, tax planning strategies, and recent financial performance. The more negative evidence that exists, the more positive evidence is necessary and the more difficult it is to support a conclusion that a valuation allowance is not needed for some portion or all of the deferred tax asset. A cumulative loss in recent years is generally a significant piece of negative evidence that is difficult to overcome in determining that a valuation allowance is not needed.

***Note 12: Income Taxes***

As of June 30, 2013, our deferred tax asset of $XXX million related to federal net operating loss carryforwards will expire in approximately 14 to 15 years if not utilized. The determination of whether it is more than 50 percent likely that we will realize the full benefit of all our deferred tax assets, including the deferred tax asset related to the net operating loss carryforwards, requires significant judgment. That judgment includes evaluation of negative evidence, such as recent losses, and positive evidence, including projections of future taxable income during the carryforward period. As required by the accounting literature, more weight is given to objective evidence. Negative objective

---

131/ Only financial statement information relating to the disclosure and determination of deferred tax assets is presented. Other required notes to the financial statements have been omitted from this example.

evidence includes our losses in 2013 and 2012. However, we do not have cumulative losses in recent years when evaluated over a three-year time frame. Positive objective evidence that we considered in making our judgment included: (1) the effect of eliminating certain product lines and (2) the expectation that product recall costs and relocation costs will not recur in the future. Projections of future taxable income are subject to uncertainty due to various factors, including the general economic environment, industry and competitive conditions, timing of product enhancements and new product introductions, and the length of time of the projections included in the analyses. If our actual results are less favorable than current estimates and we revise our projections downward in future analyses, a valuation allowance may be required with a corresponding adjustment to earnings in the period in which such determination is made. As of June 30, 2013, based upon our estimates, we believe it is more likely than not that the Company will realize the full benefit of the existing deferred tax assets.

*3. Determination of the Critical Audit Matter*

The auditor determined that its assessment of management's evaluation of the realizability of deferred taxes is a critical audit matter.

Specific considerations, which led the auditor to determine that its assessment of management's evaluation of the realizability of deferred taxes is a critical audit matter, included:

- The auditor's prior experience with management's forecasts of future revenues and costs, which indicated that actual revenues and income typically differed from forecasted amounts;

- The subjectivity involved in evaluating whether the weight of the Company's positive evidence is sufficient to overcome the negative evidence;

- The extensive amount of consultations with the firm's National Office regarding: (a) the design and evaluation of the results of its audit procedures related to management's forecasts of improved profitability; (b) the appropriate application of the criteria under U.S. GAAP for recording a valuation allowance; (c) the assessment of management's judgments regarding the identification and evaluation of negative and positive evidence; and (d) the adequacy of XYZ's disclosure regarding risks and uncertainties that could significantly affect deferred tax assets in the near term; and

- High degree of difficulty auditing management's forecast of future revenues and income due to significant difficulty in obtaining objective evidence to support management's key judgments about (1) the timing, demand and pricing of "next generation" products, (2) the ongoing demand for (and the life cycle of) existing products, (3) the level of future development spending, (4) the amount of marketing costs associated with the commercialization of new products, (5) the outcome of the supplier dispute regarding recall costs, and (6) future cost increases or decreases in the cost of critical components.

*4. Communication of Critical Audit Matter in the Auditor's Report*

Critical Audit Matter

The standards of the PCAOB require that we communicate in our report critical audit matters relating to the audit of the current period's financial statements or state that we determined that there are no critical audit matters. Critical audit matters are those matters addressed during the audit that (1) involved our most difficult, subjective, or complex judgments; (2) posed the most difficulty to us in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to us in forming our opinion on the financial statements. The critical audit matters communicated below do not alter in any way our opinion on the financial statements, taken as a whole.

We determined that our assessment of the Company's evaluation of the realizability of deferred tax assets was a critical audit matter in the audit of the Company's financial statements for the fiscal year ended June 30, 2013. Considerations that led to our determination, included the following:

- The Company exercised significant judgment in weighing positive and negative evidence regarding the realizability of the company's deferred tax assets, including in developing forecasts of projected future taxable income.

- The Company continues to experience increased competition with its "first generation" products which reduced revenue growth, sales prices and profitability. Further, the Company experienced an unexpected cost increase in a critical product component and does not anticipate that cost returning to historical levels;

- A return to profitability by the Company is dependent upon launching "next generation" products in the future; and

- The Company is experiencing increases in product development and marketing costs in preparation for its "next generation" products.

Because of these considerations, our assessment of the Company's evaluation of the realizability of deferred tax assets: (1) involved subjective auditor judgments in evaluating whether management's judgments regarding the weight given to positive and negative evidence is appropriate; (2) involved difficult auditor judgments in designing audit procedures to test the data underlying management's forecasts of its future taxable income; (3) posed difficulty in obtaining sufficient appropriate evidence to support management's forecasts of the timing and amount of future taxable income due to the lack of objective evidence; and (4) posed difficulty in forming an opinion on the financial statements because of the significance to the financial statements, taken as a whole, of the Company's determination regarding the recognition of a valuation allowance for its deferred tax assets.

We consulted with others outside the engagement team regarding: (1) compliance with U.S. GAAP; (2) the design and performance of audit procedures to test management's forecasts; and (3) our evaluation of the results of those procedures, including our assessment of the reasonableness of management's judgments and forecasts in light of independent assessments of future trends in the industry, analyst reports and publicly available information regarding relevant trends by key competitors. The Company's accounting policy for deferred taxes and its evaluation of the realizability of deferred tax assets are discussed in Notes 2 and 12 to the financial statements.

## C. Hypothetical Auditing Scenario #3 – Fair Value of Fixed Maturity Securities Held as Investments That are Not Actively Traded

### *1. Background*

JLE Financial Institution ("JLE" or the "Company") holds fixed maturity securities in its investment portfolio. As of December 31, 2012 ("fiscal 2012"), the Company's investment portfolio includes U.S. corporate and state and local government securities. In addition, approximately 35% of the portfolio consists of private label mortgage-backed securities and collateralized loan obligations, which have very little or no trading activity. All of these securities are classified as "available for sale" and reported at fair value in the Company's statement of financial position under U.S. GAAP.

In measuring the fair value of available for sale securities, the Company utilizes third party pricing services for its U.S. corporate and state and local government securities. JLE's process requires that it obtain an understanding of the pricing service's valuation techniques, assumptions, and other inputs important to the fair value estimate. Further, JLE has controls over information received from third party pricing services.

The process to determine the fair value of the Company's private label mortgage-backed securities and collateralized loan obligations valued primarily using in-house valuation models involves a significant amount of judgment, in large part because of the inherent imprecision in measuring the fair value of securities for which observable market prices are not available and the subjective nature of some of the inputs to the valuation model. In testing JLE's controls related to fair value estimates determined by in-house valuation models the auditor noted a control deficiency less severe than a material weakness relating to the controls employed by the pricing and valuation committee. As a result of the control deficiency, the auditor expanded the planned audit procedures for securities for which the control applied. In performing additional audit procedures on the population of securities for which the control applied, the auditor identified several misstatements due to JLE's recorded amounts falling outside of the range of reasonable estimates developed by the auditor's specialist.

*2. Excerpts From the Company's Notes to the Financial Statements*[132/]

***Note 6: Fair Value***

**Recurring Fair Value Measurements**

When observable inputs are not available, JLE's valuation methodologies rely on inputs that are significant to the estimated fair value that are not observable in the market or cannot be derived principally from, or corroborated by, observable market data. These unobservable inputs can be based in large part on management's judgment or estimation and cannot be supported by reference to recent market activity. Even though these inputs are unobservable, management believes they are consistent with what other market participants would use when pricing such securities and are considered appropriate given the circumstances. Securities that are valued using significant unobservable inputs or assumptions are classified as Level 3 in the fair value hierarchy.

While JLE believes its valuation methods are appropriate and consistent with other market participants, the use of different methodologies or assumptions to determine the fair value of certain financial instruments could result in a different estimate of fair value at the reporting date. During fiscal 2012, there were no changes to the valuation techniques that had a material impact on the Company's consolidated financial position or results of operations.

---

[132/] Only financial statement information relating to the disclosure and determination of the fair value of Level 3 fixed maturity investment securities is presented. Other required notes to the financial statements have been omitted from this example.

*U.S. corporate securities*

Valuations are based primarily on matrix pricing or other similar techniques that utilize observable inputs that are derived from, or corroborated by, observable market data, including quoted prices for identical or similar securities. In other cases, valuation is based primarily on quoted prices for identical or similar securities.

*State and local government securities*

These securities are principally valued using the market approach. Valuation is based primarily on matrix pricing using market observable inputs, including benchmark U.S. Treasury yields or other yields, issuer ratings, broker-dealer quotes, credit spreads and reported trades of similar securities.

*Private label mortgage-backed securities and collateralized loan obligations*

Valuation is based on in-house valuation models, discounted cash flow methodologies, or other techniques that utilize inputs that cannot be derived from, or corroborated by, currently observable data, including credit spreads that reflect specific credit-related issues. The pricing and valuation committee review the inputs used for each security for which the fair value is determined based on in-house valuation models.

*3. Determination of the Critical Audit Matter*

The auditor determined that the evaluation of management's fair value estimates of private label mortgage-backed securities and collateralized loan obligations measured using valuation models, is a critical audit matter.

Specific considerations, which led the auditor to determine that evaluation of management's fair value estimates of these securities, measured using valuation models, is a critical audit matter, included:

- The materiality of the private label mortgage-backed securities and collateralized loan obligations;

- The valuation techniques used to estimate the fair value of these securities which were based primarily on in-house models to estimate fair value;

- The control deficiency relating to the review by the pricing and valuation committee;

- The highly subjective nature of the judgments involved regarding unobservable inputs to the fair value measurements for these securities;

- The extensive amount of audit work required to obtain sufficient appropriate evidence to form a conclusion, including significant involvement of senior members of the engagement team;

- The use by the auditor of the work of a third party specialist with expertise in the valuation of complex financial instruments to develop independent estimates of fair value for corroborative purposes;

- The auditor's expansion of the planned audit procedures relating to the valuation of the mortgage-backed securities and collateralized loan portfolio as a result of contradictory evidence obtained from those audit procedures; and

- The auditor's proposed adjustments to the valuation of the mortgage-backed securities and collateralized loan obligations.

*4. Communication of Critical Audit Matter in the Auditor's Report*

Critical Audit Matter

The standards of the PCAOB require that we communicate in our report critical audit matters relating to the audit of the current period's financial statements or state that we determined that there are no critical audit matters. Critical audit matters are those matters addressed during the audit that (1) involved our most difficult, subjective, or complex judgments; (2) posed the most difficulty to us in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to us in forming our opinion on the financial statements. The critical audit matters communicated below do not alter in any way our opinion on the financial statements, taken as a whole.

Approximately 35% of the Company's investment portfolio is comprised of private label mortgage-backed securities and collateralized loan obligations. Our audit of the Company's fair value of these securities in the audit of the Company's financial statements as of and for the fiscal year ended December 31, 2012 involved difficult and complex auditor judgments because these securities (1) trade less frequently and (2) were valued using in-house valuation models based on unobservable inputs, which are subject to a wide range of measurement uncertainty. Our audit of these securities required an extensive amount of audit work, including significant involvement of senior members of the engagement team and the involvement of a third party valuation specialist. Further, it was necessary to expand the planned audit procedures due to a control deficiency less severe than a material weakness noted in the Company's internal control system regarding fair value estimates, valued using in-house valuation models. Specifically, a control deficiency was determined relating to the controls employed by the pricing and valuation committee. Our audit procedures resulted in our identification of several misstatements that were corrected by the Company. The Company's disclosures related to nature and fair values of these securities and the methods the Company used to determine those fair values are in Note 6 to the financial statements.

## APPENDIX 6

## *Additional Discussion of the Proposed Other Information Standard, Proposed Amendments to PCAOB Standards, and Comments on the Concept Release*

This Appendix discusses the Proposed Auditing Standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (the "proposed other information standard"), presented in Appendix 2, and the related proposed amendments to certain PCAOB auditing standards (the "proposed amendments") presented in Appendix 4. This Appendix collectively refers to the proposed other information standard and proposed amendments as the "proposed other information standard and amendments." The proposed other information standard would supersede AU sec. 550, *Other Information in Documents Containing Audited Financial Statements,* and AU sec. 9550, *Other Information in Documents Containing Audited Financial Statements: Auditing Interpretations of Section 550*.

Following the Board's initial outreach from October 2010 through March 2011,[1/] the Board issued on June 21, 2011 a concept release to seek public comment on potential changes to the auditor's reporting model (the "concept release").[2/] Additionally, the Board held a public roundtable[3/] on the concept release and changing the auditor's report was discussed at the Board's Investor Advisory Group ("IAG")[4/] and Standing

---

[1/] See Section II., *Board Outreach*, of the Release for further discussion regarding the Board's outreach.

[2/] *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards,* PCAOB Release No. 2011-003 (June 21, 2011) is available at http://pcaobus.org/Rules/Rulemaking/Docket034/Concept_Release.pdf.

[3/] A transcript of the public roundtable is available at http://pcaobus.org/Rules/Rulemaking/Docket034/09152011_Roundtable_Transcript.pdf.

[4/] IAG meeting details and webcasts for March 2011 and 2012 are available at http://pcaobus.org/News/Events/Pages/03162011_IAGMeeting.aspx and http://pcaobus.org/News/Webcasts/Pages/03282012_IAGMeeting.aspx.

Advisory Group ("SAG") meetings.[5/] Some commenters supported changes to the auditor's report that describe the auditor's existing responsibility related to information outside the financial statements to inform investors and other financial statement users of the extent of the auditor's responsibility for other information contained in a document that also contains the financial statements and the related auditor's report.

This Appendix discusses significant comments received during the Board's outreach regarding other information in documents containing audited financial statements and the auditor's report. It also provides additional background information regarding the requirements in the proposed other information standard and amendments.

The Board requests comments on specific questions included in this Appendix as well as on its proposal in general. Additionally, the Board is seeking comment on economic considerations related to the proposed other information standard and amendments, including potential costs. To assist the Board in evaluating such matters, the Board is requesting relevant information and empirical data, to the extent available to commenters. Commenters providing cost estimates are requested to provide the basis for any estimate provided. Finally, the Board is seeking comment on the applicability of the proposed other information standard and amendments to the audits of brokers and dealers. Considerations related to the applicability of the proposed other information standard and amendments to audits of emerging growth companies are discussed in Appendix 7.

The following sections describe the requirements in the proposed other information standard and amendments.

## I. Introduction (Paragraph 1 of the Proposed Other Information Standard)

The proposed other information standard establishes requirements regarding the auditor's responsibilities with respect to the other information in certain documents containing audited financial statements and the related auditor's report. As more fully described later in this section, the introduction to the proposed other information standard provides a description of "other information," as used in the proposed other

---

[5/] SAG meeting transcripts for November 2011 and 2012 are available at http://pcaobus.org/Rules/Rulemaking/Docket034/11102011_SAG_Transcript.pdf, http://pcaobus.org/Rules/Rulemaking/Docket034/11162012_SAG_Transcript.pdf, and http://pcaobus.org/Rules/Rulemaking/Docket034/11152012_SAG_Transcript.pdf.

information standard, including (1) the documents to which the proposed other information standard would apply and (2) the information to which the proposed other information standard would not apply.

## A. Description of Other Information and Applicability of the Proposed Other Information Standard

### *1. Description of Other Information*

The proposed other information standard describes "other information" as information, other than the audited financial statements[6/] and the related auditor's report, in a company's annual report that is filed with the SEC under the Securities Exchange Act of 1934 ("Exchange Act") and contains that company's audited financial statements and the related auditor's report. The auditor's responsibilities with respect to other information outside the financial statements would thus focus on other information contained in annual reports filed with the SEC, such as Form 10-K. Annual reports filed with the SEC contain other information that is relevant and of interest to investors and other financial statement users.

Annual reports filed with the SEC under the Exchange Act may include information incorporated by reference from other SEC filings. Under the proposed other information standard, other information includes information contained in the annual report that is filed with the SEC under the Exchange Act as well as specific information that is incorporated by reference into the annual report.

Specifically, a note to the introduction of the proposed other information standard clarifies when information that is incorporated by reference would be included in the scope of the proposed other information standard. The note provides that other information includes information incorporated by reference into the Exchange Act annual report when the information is available to the auditor prior to the issuance of the auditor's report. Additionally, when the annual report is a Form 10-K, the other information in the annual report includes specific information incorporated by reference that is available to the auditor subsequent to the issuance of the auditor's report when that information is contained in the company's definitive proxy statement filed within 120

---

[6/] This standard uses the term "financial statements" as used by the U.S. Securities and Exchange Commission ("SEC") to include all notes to the statements and all related schedules. See SEC Rule 1-01(b) of Regulation S-X, 17 C.F.R. § 210.1-01(b).

days after the end of the fiscal year covered by the Form 10-K. No other information incorporated by reference in the annual report that is not available to the auditor prior to the issuance of the auditor's report is included in the scope of the proposed other information standard.

Annual reports filed with the SEC under the Exchange Act may be amended from time to time, including when there are revisions to amounts or disclosures in the previously issued audited financial statements. Amended annual reports, such as the Form 10-K/A, that contain the company's audited financial statements and the related auditor's report, are included in the scope of the proposed other information standard.

When an amended annual report contains revisions to amounts or disclosures in the previously issued financial statements that affect the auditor's report that was filed with the initial Form 10-K, then the amended annual report would be treated similar to an initial filing on Form 10-K. In this situation, because the auditor essentially is considering whether to update or issue a new auditor's report,[7/] the auditor would perform all the procedures under the proposed other information standard.

When an amended annual report does not contain revisions to amounts or disclosures in the previously issued financial statements that affect the auditor's report that was filed with the initial Form 10-K, then the auditor would treat the other information in the amended filing as not available prior to the issuance of the auditor's report.[8/]

The scope of the proposed other information standard contains some similarities to, and some differences from, the Board's existing auditing standard relating to other information, AU sec. 550.

AU sec. 550 currently applies to other information contained in (1) annual reports to holders of securities or beneficial interests, annual reports of organizations for charitable or philanthropic purposes distributed to the public, and annual reports filed with regulatory authorities under the Exchange Act or (2) other documents to which the

---

7/ See AU sec. 530, *Dating of the Independent Auditor's Report*.

8/ See Section IV.D., *Responding When the Other Information Is Not Available Prior to the Issuance of the Auditor's Report*.

auditor, at the client's request, devotes attention.[9/] Existing AU sec. 550 does not specifically mention information incorporated by reference into an annual report.

Thus, consistent with existing AU sec. 550, the proposed other information standard would apply to annual reports filed under the Exchange Act. However, certain other annual reports included in the scope of the existing standard, such as a company's annual report to security holders that is provided to, but not filed with, the SEC (sometimes referred to as the "glossy" annual report because it may appear as a glossy publication) would not be within the scope of the proposed other information standard. As discussed further below, in some cases, a glossy annual report may be incorporated by reference, either in whole or in part, into a company's Form 10-K prior to the issuance of the auditor's report. In those circumstances, the portions of the glossy annual report, other than the financial statements, that are incorporated by reference would be considered other information under the proposed other information standard.

Additionally, unlike existing AU sec. 550, the proposed other information standard would not apply to other documents to which the auditor, at the company's request, devotes attention. The proposed other information standard does not preclude the auditor from applying the procedures in the standard to such other documents. Also, the proposed other information standard does not preclude the auditor from applying additional procedures not described in the proposed other information standard to the other information.

Finally, the proposed other information standard is consistent with existing AU sec. 550 in that it would not apply to documents filed with the SEC under the Securities Act of 1933 ("Securities Act").[10/] The proposed other information standard, like AU sec. 550, refers the auditor to AU sec. 711, *Filings Under Federal Securities Statutes*, and the auditor's responsibilities for Securities Act filings under the federal securities laws.[11/] The Board recognizes, however, that certain Securities Act filings may incorporate by reference annual reports containing audited financial statements and audit reports that are filed with the SEC under the Exchange Act. For a further discussion regarding the Board's considerations related to Securities Act documents, see Section XII, *Considerations Related to Securities Act Documents*.

---

[9/] See AU sec. 550.02.

[10/] See AU sec. 550.03.

[11/] See, e.g., Section 11(a) of the Securities Act, 15 U.S.C. § 77k(a).

*2. Applicability to Annual Reports Filed with the SEC under the Exchange Act That Contain Other Information*

As noted above, the proposed other information standard would apply to annual reports that are filed with the SEC under the Exchange Act that contain audited financial statements and the related auditor's report.

The proposed other information standard would apply to the version of the annual report document filed with the SEC either electronically using the Electronic Data Gathering, Analysis and Retrieval ("EDGAR") system[12/] or as a paper filing.[13/] Because the proposed other information standard is limited to annual reports that are filed with the SEC, the auditor's responsibilities would not extend to annual reports that are distributed by other means, such as corporate websites or social media. Information on websites, such as a company's own website, might contain audited financial statements, the related auditor's reports, or data derived from SEC filings. Consistent with existing AU sec. 9550,[14/] the proposed other information standard would not require auditors to evaluate information contained in electronic sites.

The annual reports covered by the proposed other information standard would include annual reports filed on Forms 10-K, 20-F, 40-F, and N-CSR, among others. The other information contained in these annual report filings can vary depending on the requirements of the SEC form on which the filing is made. For example, other information in a company's annual report filed on Form 10-K would include, among other items, Risk Factors; Selected Financial Data; Management's Discussion and Analysis of Financial Condition and Results of Operations ("MD&A"); Certain Relationships and Related Transactions, and Director Independence; and exhibits.[15/]

---

[12/] See SEC Rule 301 of Regulation S-T, 17 C.F.R. § 232.301. EDGAR currently provides an electronic filing process for submitting documents under the Securities Act, the Exchange Act, the Trust Indenture Act of 1939, and the Investment Company Act of 1940.

[13/] See SEC Rule 101 of Regulation S-T, 17 C.F.R. § 232.101. For example, employee stock purchase, savings and similar plans may choose to file their annual reports with the SEC in electronic or paper format.

[14/] See AU secs. 9550.16-.18.

[15/] Any documents contained in the list of exhibits to the annual report would be considered other information in an annual report under the proposed other

Other information filed by an investment company issuer on Form N-CSR would include, among other items, Code of Ethics and Management's Discussion of Fund Performance ("MDFP").[16/]

Additionally, under the proposed other information standard, management's assertion on internal control over financial reporting would be considered other information when that assertion is included in an annual report filed with the SEC that contains audited financial statements and the related auditor's report, and management's assertion is not subject to an auditor's attestation under Auditing Standard No. 5, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*. The auditor's responsibilities under the proposed other information standard regarding management's assertion on internal control over financial reporting generally would be consistent with existing AU sec. 9550.[17/] AU sec. 9550 states that, because an auditor is required to consider internal control in an audit of the financial statements, the auditor may be familiar with matters covered in management's assertion on internal control over financial reporting.

*3. Applicability to Information Incorporated by Reference in Annual Reports Filed with the SEC under the Exchange Act*

In many cases, the information incorporated by reference into an annual report filed with the SEC is available to the auditor prior to the issuance of the auditor's report. For example, as discussed above, the entire or portions of a company's glossy annual report may be incorporated by reference[18/] into a company's Form 10-K.[19/] Under the

---

information standard. The proposed other information standard would not apply to information formatted in eXtensible Business Reporting Language ("XBRL") that is furnished with the SEC as an exhibit or otherwise. See SEC, *Interactive Data to Improve Financial Reporting*, Release No. 33-9002 (Jan. 30, 2009) at 94-95 and 101.

[16/] See Item 27(b)(7) of SEC Form N-1A for open-end investment companies. Money market investment companies are exempt from this requirement to provide MDFP. Form N-2, which sets reporting requirements for closed-end funds, does not require MDFP.

[17/] See AU sec. 9550.07-.11.

[18/] See Form 10-K, 17 C.F.R. § 249.310, General Instructions G, "Information to Be Incorporated by Reference," paragraph (2). See also SEC Exchange Act Rule 12b-23, 17 C.F.R. § 240.12b-23.

[19/] Glossy annual reports may also be included as part of a combined report filed on Form 10-K. In this case, information from glossy annual reports, other than the proposed other information standard, information incorporated by reference that is available to the auditor prior to the issuance of the auditor's report would be considered other information and covered by the proposed other information standard. The auditor's responsibilities for other information that is incorporated by reference and is available prior to the issuance of the auditor's report would be the same as the auditor's responsibilities for other information contained in the document filed with the SEC.

Under the proposed other information standard, with one exception, the auditor would not be responsible for information incorporated by reference that is not available to the auditor prior to the issuance of the auditor's report. Specifically, the proposed other information standard would apply to information incorporated by reference in a Form 10-K from the company's definitive proxy statement filed within 120 days after the end of the fiscal year covered by the Form 10-K.[20/] Though this information may be filed subsequently, it is an essential part of the company's annual report on Form 10-K and is necessary to make the document complete.[21/]

---

audited financial statements, would be considered other information under the proposed other information standard. See Form 10-K, 17 C.F.R. § 249.310, General Instructions H, "Integrated Reports to Security Holders."

[20/] The information required by Part III of Form 10-K (i.e., Item 10. Directors, Executive Officers and Corporate Governance; Item 11. Executive Compensation; Item 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters; Item 13. Certain Relationships and Related Transactions, and Director Independence; and Item 14. Principal Accountant Fees and Services) may be incorporated by reference from a proxy statement. See SEC Exchange Act Rule 12b-23, 17 C.F.R. § 240.12b-23. See also Form 10-K, 17 C.F.R. § 249.310, General Instructions G, "Information to Be Incorporated by Reference," Paragraph (3).

[21/] The standard also would apply to the other information that was to be incorporated by reference from the proxy statement but was instead filed as an amendment to the Form 10-K. If a proxy statement is not filed with the SEC within 120 days after the end of the fiscal year covered by the Form 10-K, the information that was to be incorporated by reference from the proxy statement is instead filed as an amendment to the Form 10-K. See Form 10-K, 17 C.F.R. § 249.310, General Instructions G, "Information to Be Incorporated by Reference," paragraph (3).

## B. Information Included in Annual Reports Containing Audited Financial Statements and the Related Auditor's Report to Which the Proposed Other Information Standard Would Not Apply

Consistent with AU sec. 550,[22/] the proposed other information standard would not apply to (1) supplemental information addressed by Proposed Auditing Standard, *Auditing Supplemental Information Accompanying Audited Financial Statements*,[23/] and (2) required supplementary information addressed by AU sec. 558, *Required Supplementary Information*. The proposed other information standard also would not apply to management's assertion on internal control over financial reporting in an audit of internal control over financial reporting that is integrated with an audit of the financial statements.[24/] The information described in these circumstances would be subject to audit or other procedures under other PCAOB standards named above. Therefore, there is no need to impose the requirements of the proposed other information standard on that information because the auditor's responsibilities are already described in the other PCAOB standards.

The proposed other information standard would apply to the other information in the annual report of the company that is making the filing. Audited financial statements of an entity other than the company, such as a business acquired or to be acquired, may be required to be included in the company's annual report.[25/] The Board does not intend for the other entity's financial statements to be considered other information in the company's annual report, under the proposed other information standard, because they are not the company's financial statements and were already subject to a separate audit. Although the Board does not intend for the proposed other information standard to apply in such situations, the Board is seeking comment on whether the proposed other information standard should apply to audited financial statements of another entity that are required to be filed in a company's report under Article 3 of Regulation S-X and whether there are practical issues of doing so.

---

[22/] See AU sec. 550.03.

[23/] See *Proposed Auditing Standard, Auditing Supplemental Information Accompanying Audited Financial Statements, and Related Amendments to PCAOB Standards*, PCAOB Release No. 2011-005 (July 12, 2011).

[24/] See Auditing Standard No. 5.

[25/] See Article 3 of Regulation S-X.

Questions Related to Section I:

1. Is the scope of the proposed other information standard clear and appropriate? Why or why not? Are there Exchange Act documents, other than annual reports, that the Board should consider including in the scope of the proposed other information standard?

2. Is it appropriate to apply the proposed other information standard to information incorporated by reference? Why or why not? Are there additional costs or practical issues with including information incorporated by reference in the scope of the proposed other information standard? If so, what are they?

3. Is it appropriate to apply the proposed other information standard to amended annual reports? Why or why not? Are there additional costs or practical issues with including amended annual reports in the scope of the proposed other information standard? If so, what are they?

4. Should the company's auditor, the other entity's auditor, or both have responsibilities under the proposed other information standard regarding audited financial statements of another entity that are required to be filed in a company's annual report under Article 3 of Regulation S-X? Why or why not? Are there practical issues with applying the proposed other information standard to the other entity's audited financial statements?

## II. Objectives (Paragraph 2 of the Proposed Other Information Standard)

Consistent with other recently issued PCAOB auditing standards, the Board has included a section on the objectives of the auditor in the proposed other information standard to highlight the overall context for the requirements of the standard. Providing an overarching concept as audit objectives for the auditor to take into account can assist the auditor in performing the procedures required by the proposed other information standard and evaluating the results of those procedures.

The proposed other information standard states that the objectives of the auditor are:

- To evaluate whether the other information contains (1) a material inconsistency with amounts or information, or the manner of their presentation, in the audited financial statements ("material inconsistency");

(2) a material misstatement of fact; or (3) both and, if so, to respond appropriately; and

- When issuing an auditor's report, to communicate in the auditor's report the auditor's responsibilities for other information and whether, based on relevant audit evidence obtained and conclusions reached during the audit, the other information contains a material inconsistency, a material misstatement of fact, or both.

The Board's existing standard, AU sec. 550 does not specifically identify an objective for the auditor regarding other information.

Question Related to Section II:

5. Do the objectives assist the auditor in performing the procedures required by the proposed other information standard to evaluate the other information and report on the results of the evaluation?

## III. Evaluating the Other Information (Paragraphs 3 – 5 of the Proposed Other Information Standard)

The proposed other information standard would require the auditor to evaluate whether the other information contains (1) a material inconsistency, (2) a material misstatement of fact, or (3) both. As more fully described later in this section, the auditor's evaluation would include reading the other information and performing specific procedures based on relevant audit evidence obtained and conclusions reached during the audit.

AU sec. 550 currently requires the auditor to read the other information and consider whether such information, or the manner of its presentation, is materially inconsistent with information, or the manner of its presentation, appearing in the financial statements.[26/] Additionally, if, while reading the other information for a material inconsistency, the auditor becomes aware of information that the auditor believes is a material misstatement of fact, that is not a material inconsistency, the auditor is required to discuss the matter with management.[27/] Existing AU sec. 550 does not specify the procedures that the auditor should perform when considering the other information, but the standard describes the auditor's responsibilities for responding to identified material inconsistencies or material misstatements of fact.

---

[26/] See AU sec. 550.04.

[27/] See AU sec. 550.05.

## A. Material Inconsistency (Paragraph 3 of the Proposed Other Information Standard)

The proposed other information standard generally retains the description of material inconsistency under existing AU sec. 550. A material inconsistency would exist under the proposed other information standard when the other information is materially inconsistent with amounts or information, or the manner of their presentation, in the audited financial statements. The other information often includes amounts or qualitative statements that are directly related to the financial statements because they are intended to be the same as, or to provide greater detail about, amounts or information in the financial statements.

A material inconsistency would involve an inconsistency between amounts in the financial statements and amounts in the other information that have a direct relationship to the company's financial statements, such as quantitative information in the Selected Financial Data or MD&A sections, among others, of an annual report on Form 10-K, but would not be limited to only quantitative information. Qualitative statements, such as the description of the company's critical accounting policies, estimates, and related assumptions in the other information of an annual report on Form 10-K, also would be directly related to accounts and disclosures in the financial statements and thus might involve a material inconsistency.

## B. Material Misstatement of Fact (Paragraph 3 of the Proposed Other Information Standard)

The proposed other information standard also retains the concept of material misstatement of fact in AU sec. 550. Similar to the existing standard, the proposed other information standard does not define material misstatements of fact, but describes the concept of material misstatements of fact in the context of the auditor's responsibilities.

Material misstatements of fact could relate to, among others, statements about the company's competitive environment, technological developments, or supplier relationships. Although such statements in the other information do not directly relate to the accounts and disclosures in the financial statements, the auditor might have knowledge of such information as part of obtaining audit evidence or reaching conclusions during the audit.[28/] Such statements also might be an important driver of the company's stock market value or be of particular importance to investors.

---

[28/] For example, during the audit, the auditor may obtain such information as audit evidence in connection with obtaining an understanding of the company and its

For example, management might state in the other information that the company has the largest market share in the company's industry. This information could be material to an investor's decision about the company. The auditor might be aware, based on relevant audit evidence obtained during the audit, that the company does not have the largest share in the relevant industry. The proposed other information standard would require the auditor to evaluate whether management's statement represents a material misstatement of fact.

### C. Auditor's Responsibility to Evaluate (Paragraph 4 of the Proposed Other Information Standard)

The proposed other information standard would require the auditor to read the other information and, based on relevant audit evidence obtained and conclusions reached during the audit, evaluate the other information. In order to strengthen the auditor's performance responsibilities to provide a basis for the auditor to evaluate the other information, the proposed other information standard provides specific procedures the auditor would perform related to the other information. The procedures set forth in paragraph 4 of the proposed other information standard involve using information and evidence already obtained by the auditor rather than procedures to obtain additional evidence.

In evaluating whether the other information contains a material inconsistency, a material misstatement of fact, or both, the auditor would refer to the definition of materiality under the federal securities laws. In interpreting those laws, the United States Supreme Court has held that a fact is material if there is "a substantial likelihood that the . . . fact would have been viewed by the reasonable investor as having significantly altered the 'total mix' of information made available."[29/] As the Supreme Court has further explained, determinations of materiality require "delicate assessments of the inferences a 'reasonable shareholder' would draw from a given set of facts and the significance of those inferences to him . . .."[30/]

Since the purpose of evaluating the other information is to assess whether the other information contains a material inconsistency, a material misstatement of fact, or

---

environment. See paragraph 9 of Auditing Standard No. 12, *Identifying and Assessing Risks of Material Misstatement*.

29/ TSC Industries v. Northway, Inc., 426 U.S. 438, 449 (1976). See also, Basic, Inc. v. Levinson, 485 U.S. 224, 231 to 232 (1988).

30/ TSC Industries, 426 U.S. at 450.

both, the Board believes that it is appropriate for the auditor to use the established definition of materiality under the federal securities laws applicable to corporate reporting for this evaluation. Auditors should be familiar with this definition because, among other things, it is used to evaluate whether uncorrected misstatements detected during the audit are material.[31/] The Board understands that MD&A and other parts of the other information may contain information that does not reach the quantitative materiality level established for purposes of planning the audit[32/] and that the auditor accordingly may not have obtained audit evidence concerning those matters. As discussed above, the auditor's responsibility to evaluate such information would be based on relevant audit evidence obtained and conclusions reached during the audit. If, however, on that basis, the auditor identifies a potential inconsistency or misstatement of fact in the other information, the auditor should assess its materiality under the federal securities laws' definition of that term.

*1. Auditor's Responsibility to Read*

As noted above, the proposed other information standard retains the requirement of existing AU sec. 550 for the auditor to read the other information. The requirement "to read" in the proposed other information standard has the same meaning as in AU sec. 550 and other PCAOB standards, such as reading interim financial information,[33/] board minutes,[34/] prospectuses and registration statements,[35/] and other information by the engagement quality reviewer or during a review of interim financial information.[36/]

---

[31/] See paragraph 17 of Auditing Standard No. 14, *Evaluating Audit Results.*

[32/] See Auditing Standard No. 11, *Consideration of Materiality in Planning and Performing an Audit.*

[33/] See, e.g., paragraphs .11 and .18.e. of AU sec. 722, *Interim Financial Information*.

[34/] See, e.g., AU secs. 722.18.a. and .19.

[35/] See, e.g., AU secs. 711.08-.11.

[36/] See, e.g., paragraphs 10.g. and 15.e. of Auditing Standard No. 7, *Engagement Quality Review,* and AU sec. 722.18.f.

### 2. *Auditor's Responsibility to Evaluate*

The proposed other information standard describes the auditor's responsibility as "should evaluate" the other information. Existing AU sec. 550 states that the auditor "should consider" whether the other information is materially inconsistent with the financial statements. AU sec. 550 further indicates that if the auditor concludes that there is a material inconsistency with the financial statements based on the auditor's reading and considering, then the auditor should perform certain procedures.[37/]

The proposed other information standard does not retain the term "should consider." PCAOB Rule 3101, *Certain Terms Used in Auditing and Related Professional Practice Standards,* indicates that if a Board standard provides that the auditor "should consider" an action or procedure, consideration of the action or procedure is presumptively mandatory while the action or procedure is not. As used in AU sec. 550, "should consider" is not followed by a specific action or procedure, but rather is described as a stand-alone requirement without further context regarding the action or procedure. "Should evaluate" is used in other PCAOB standards when the auditor is expected to come to a conclusion based on the performance of certain procedures.[38/]

The proposed other information standard differs from AU sec. 550 in that it requires the auditor to evaluate the other information for both a material inconsistency and a material misstatement of fact. Under existing AU sec. 550, the auditor's responsibility for a material misstatement of fact is conditioned on the auditor "becoming aware" of a material misstatement of fact while reading the other information for a material inconsistency. AU sec. 550 also currently states that, if the auditor becomes aware of information that he or she believes is a material misstatement of fact, that is not a material inconsistency, the auditor should consider that he or she may not have the expertise to assess the validity of the statement, that there may be no standards by which to assess its presentation, and that there may be valid differences of judgment or opinion.[39/]

The proposed other information standard would require the auditor to evaluate the other information for a material inconsistency and for a material misstatement of fact

---

[37/] See AU sec. 550.04.

[38/] See, e.g., Auditing Standard No. 7 and Auditing Standard No. 12.

[39/] See AU sec. 550.05.

based on relevant audit evidence obtained and conclusions reached during the audit. A consistent requirement to evaluate the other information for both material inconsistencies and for material misstatements of fact is appropriate because the auditor's evaluation would be based on the same factors – relevant audit evidence obtained and conclusions reached during the audit.

*3. Performing Procedures to Evaluate the Other Information*

In addition to reading the other information, the auditor's evaluation under the proposed other information standard would include performing procedures intended to help the auditor identify whether the other information contains material inconsistencies and material misstatements of fact. Existing AU sec. 550 does not specify any procedures for the auditor to perform in considering the other information.

The required procedures in the proposed other information standard set forth the nature and extent of the auditor's work to evaluate the other information. The procedures in paragraph 4 of the proposed other information standard involve using information and evidence already obtained by the auditor rather than procedures to obtain additional evidence. Specifically, the auditor's evaluation would be based on relevant audit evidence obtained and conclusions reached during the audit. Under other PCAOB standards, the auditor is required to obtain sufficient appropriate audit evidence[40/] and reach conclusions during the audit.[41/] These existing responsibilities provide the basis for the auditor's evaluation of the other information under the proposed other information standard.

Some commenters on the concept release indicated that they are aware that some auditors perform certain procedures related to the other information, such as comparing numbers in the other information to the audited financial statements, recalculating percentages, and providing input to management regarding the other information. Similarly, the Commission on the Auditors' Responsibilities established by the American Institute of Certified Public Accountants (known as the "Cohen Commission"), which examined the auditor's responsibilities and the form of the auditor's report, recommended in 1978 – prior to the establishment of the PCAOB – that the auditing standard for other information be revised to require the auditor to (1)

---

[40/] See Auditing Standard No. 15, *Audit Evidence*.

[41/] See Auditing Standard No. 14 and paragraphs 62-73 of Auditing Standard No. 5.

compare the other information to the financial statements and the audit work papers for inconsistencies with the auditor's knowledge as a result of the audit and (2) recompute percentages or information presented in a manner different from that in the financial statements.[42/] These recommendations of the Cohen Commission have never been adopted as requirements for the auditor.

Because existing AU sec. 550 does not require procedures other than to "read and consider" the other information, the application of the auditor's responsibilities regarding other information among accounting firms may not be consistent. While the Board believes that, in practice, some auditors currently perform procedures related to other information similar to the procedures in the proposed other information standard, the Board's proposal is designed to promote a consistent basis for the auditor's evaluation of other information. The required procedures are discussed in Subsections a.–d. of this Section.

The proposed procedures are more specific than the "read and consider" approach in existing AU sec. 550 and thus likely would increase auditor effort and, therefore, costs for firms, particularly those firms that might not currently be performing similar procedures on the other information. Also, enhancing the auditor's responsibilities from "becoming aware" of a material misstatement of fact under existing AU sec. 550[43/] to performing specific procedures to evaluate whether the other information contains a material misstatement of fact might result in additional auditor effort. It is also anticipated that auditors would incur one-time costs related to the proposed other information standard, such as updating firm audit methodologies to reflect the new performance and reporting requirements and training firm personnel.

The required procedures under the proposed other information standard would focus the auditor's attention on the identification of material inconsistencies between the other information and the company's financial statements and on the identification of material misstatements of fact, based on relevant audit evidence obtained and conclusions reached during the audit. When evaluating the other information, the auditor would be in a position to identify potential inconsistencies between the other information and the company's financial statements that could be difficult for investors

---

[42/] See AICPA, *The Commission on the Auditors' Responsibilities: Report, Conclusions and Recommendations* (1978) at 69 available at http://www.sechistorical.org/collection/papers/1970/1978_0101_CohenAuditors.pdf.

[43/] See AU sec. 550.05.

and other financial statement users to identify when analyzing the company's financial performance. Such inconsistencies could occur for a number of reasons, including unintentional error, managerial biases,[44/] or intentional misreporting.[45/] As a result of the auditor's evaluation of other information, and communication of any potential material inconsistencies or material misstatements of fact to the company's management, the proposed other information standard could promote consistency between the other information and the audited financial statements, which in turn could increase the amount and quality of information[46/] available to investors and other financial statement users. In general, increasing the amount or quality of information available to investors also could facilitate more efficient capital allocation decisions.[47/] Academic research has shown that the increased quality of information could result in a reduction in the average cost of capital.[48/]

[44/] See, e.g., Catherine M. Schrand and Sarah L.C. Zechman, *Executive Overconfidence and the Slippery Slope to Financial Misreporting*, 53 Journal of Accounting and Economics 311, 311-329 (2012) and Paul Hribar and Holly Yang, *CEO Overconfidence and Management Forecasting,* Unpublished working paper (2013) available at http://ssrn.com/abstract=929731.

[45/] See Joseph F. Brazel, Keith L. Jones, and Mark F. Zimbelman, *Using Nonfinancial Measures to Assess Fraud Risk*, 47 Journal of Accounting Research 1135, 1135-1166 (2009).

[46/] The term "quality of information" is formalized by the concept of precision. Information economics frequently treats information as consisting of two components: a signal that conveys information and noise which inhibits the interpretation of the signal. Precision is the inverse of noise so that decreased noise results in increased precision and a more readily interpretable signal. See Robert E. Verrecchia, *The Use of Mathematical Models in Financial Accounting*, 20 Journal of Accounting Research 1, 1-42 (1982).

[47/] See Richard A. Lambert, Christian Leuz, and Robert E. Verrecchia, *Information Asymmetry, Information Precision, and the Cost of Capital*, 16 Review of Finance 1, 1-29 (2011).

[48/] Empirical research generally finds that increased public disclosure of information is associated with decreased cost of equity capital. For a review of the literature, see Christine A. Botosan, Marlene A. Plumlee, and Yuan Xie, *The Role of*

a. Amounts in the Other Information Related to the Financial Statements (Paragraph 4.a. of the Proposed Other Information Standard)

For amounts in the other information that are intended to be the same as, or provide greater detail about, amounts in the financial statements, the auditor would be required to evaluate the consistency of the amounts and the manner of their presentation with the financial statements or relevant evidence obtained during the audit. If the amounts in the other information are at the same level of detail as those in the financial statements, for example, amounts in the Selected Financial Data section, among others, of an annual report on Form 10-K, the auditor would evaluate the consistency of the amounts with amounts in the financial statements.

The other information also might contain amounts that are more disaggregated than the amounts in the financial statements. For example, amounts related to Results of Operations in the MD&A section, among others, of Form 10-K might be presented in a way that provides greater detail on a geographic or product basis than the amounts presented in the financial statements. In those situations, the auditor would evaluate the consistency of the amounts in the other information and the manner of their presentation with relevant evidence obtained during the audit that includes disaggregated information.

b. Qualitative Statements in the Other Information Related to the Financial Statements (Paragraph 4.b. of the Proposed Other Information Standard)

For any qualitative statement in the other information that is intended to represent, or provide greater detail about, information in the financial statements, the auditor would evaluate the consistency of the information and the manner of its presentation with the financial statements, including the financial statement disclosures, and with relevant audit evidence. Such qualitative other information might appear in the MD&A section, among others, of Form 10-K and relate to, for example, critical accounting policies, practices, and estimates or the description of off-balance sheet arrangements.

---

*Information Precision in Determining the Cost of Equity Capital,* 9 Review of Accounting Studies 233, 233-259 (2004).

c. Other Information That Is Not Directly Related to the Financial Statements (Paragraph 4.c. of the Proposed Other Information Standard)

With respect to other information that is not directly related to the financial statements, the auditor would compare the information to relevant audit evidence obtained and conclusions reached during the audit. Other information that is not directly related to the financial statements might appear in the Business, Risk Factors, or Quantitative and Qualitative Disclosures about Market Risk sections, among others, of an annual report on Form 10-K[49/] or the MDFP section of an annual report on Form N-CSR.[50/]

d. Recalculation of Amounts in the Other Information (Paragraph 4.d. of the Proposed Other Information Standard)

The proposed other information standard also would require the auditor to evaluate certain amounts in the other information by recalculating the amounts for mathematical accuracy. The amounts that would be subject to this procedure would be amounts in the other information that are calculated using amounts in (1) the other information; (2) the financial statements; or (3) relevant audit evidence.

For example, this requirement of the proposed other information standard would apply to amounts in the other information that the auditor can recalculate without the need to refer to a formula or when the formula is generally understood. The above-mentioned requirement would include amounts, such as totals or percentages, which are ordinarily calculated using simple mathematical operations that do not require a formula, as well as generally understood ratios, such as the current ratio. If the auditor needs to refer to a formula for the recalculation of an amount, such as for return on capital employed, the auditor would be required to recalculate the amount only when the formula is provided or described in the annual report. However, the auditor would not be required to evaluate the appropriateness or sufficiency of the formula used in the calculation.

---

[49/] See Instructions to Form 10-K available at http://www.sec.gov/about/forms/form10-k.pdf.

[50/] See Item 27(b)(7) of SEC Form N-1A for open-end investment companies. Money market investment companies are exempt from this requirement to provide MDFP.

## D. Responding When the Auditor Identifies a Potential Material Inconsistency, A Potential Material Misstatement of Fact, or Both (Paragraph 5 of the Proposed Other Information Standard)

As a result of performing the evaluation procedures under paragraph 4 of the proposed other information standard, the auditor might identify a potential material inconsistency, a potential material misstatement of fact, or both. If so, the proposed other information standard would require the auditor to discuss the matter with the company's management. The proposed other information standard also would require that the auditor perform additional procedures, as necessary, to determine whether there is a material inconsistency, a material misstatement of fact, or both. Such additional procedures might include (1) requests for additional documentation and (2) consultations outside of the engagement team, such as a national office or other parties with appropriate expertise. The procedures would vary based on the auditor's evaluation of the relevant facts and circumstances.

It is anticipated that, in many situations, the auditor's discussion with management and the results of the additional procedures would provide the auditor with additional information that could be sufficient to enable the auditor to determine if there is a material inconsistency, a material misstatement of fact, or both. If the auditor determines that there is a material inconsistency between the other information and the audited financial statements, the auditor also would determine whether the financial statements or the other information would require revision. A material misstatement of fact generally would require revision of the other information, not the financial statements, because a material misstatement of fact in the other information is not directly related to the financial statements.

Existing AU sec. 550 does not specify the procedures to be performed when the auditor identifies a potential material inconsistency but has not reached a conclusion about the material inconsistency. AU sec. 550 describes the auditor's responsibilities once the auditor has reached a conclusion that a material inconsistency exists. However, when the auditor becomes aware of information that the auditor believes is a material misstatement of fact, and prior to reaching a conclusion about the material misstatement of fact, AU sec. 550 currently requires the auditor to discuss the matter with management.[51/] The requirement in the proposed other information standard to discuss the matter with management is similar to the requirement in AU sec. 550 regarding a material misstatement of fact.

---

[51/] See AU sec. 550.05.

If the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both, and the auditor performs additional procedures, as necessary, the additional procedures likely would result in additional auditor effort as compared to the existing requirements in AU sec. 550.

Questions Related to Section III:

6. Is it appropriate to require the auditor to evaluate the other information for both a material inconsistency and for a material misstatement of fact? If not, why not?

7. Would the evaluation of the other information increase the quality of information available to investors and other financial statement users and sufficiently contribute to greater confidence in the other information? If not, what additional procedures should the Board consider?

8. Is the federal securities laws' definition of materiality the appropriate standard for the auditor's responsibility to evaluate the other information? Would applying this definition represent a change to the materiality considerations auditors currently use under AU sec. 550?

9. Are the proposed procedures with respect to evaluating the other information clear, appropriate, and sufficient? If not, why not?

10. Is it understood which amounts in the other information the auditor would be required to recalculate under paragraph 4.d.? If not, why not?

11. Are there additional costs beyond those described in this Appendix related to the proposed required procedures for the evaluation of the other information? If so, what would these costs be?

12. Are the proposed auditor responses under paragraph 5 appropriate when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If not, why not?

13. Are there additional costs beyond those described in this Appendix related to responding when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If so, what would these costs be?

## IV. Responding When the Auditor Determines That the Other Information Contains a Material Inconsistency, a Material Misstatement of Fact, or Both (Paragraphs 6-11 of the Proposed Other Information Standard)

### A. Communication with Management (Paragraph 6 of the Proposed Other Information Standard)

If the auditor determines that the other information contains a material inconsistency, a material misstatement of fact, or both, the proposed other information standard would require the auditor to request management to revise the other information. This requirement was retained from AU sec. 550 with respect to a material inconsistency.[52/] However, with respect to a material misstatement of fact, AU sec. 550 does not include an explicit requirement for the auditor to request that management revise the other information. Rather, AU sec. 550 includes a requirement for the auditor to propose that management consult with other parties, such as legal counsel.[53/]

### B. The Auditor's Response If Management Does Not Appropriately Revise the Other Information (Paragraph 7 of the Proposed Other Information Standard)

If management does not appropriately revise the other information, the auditor's response under the proposed other information standard would vary depending on whether the other information had been available to the auditor prior to the issuance of the auditor's report. When the other information is available to the auditor prior to the issuance of the auditor's report and management, in response to a request by the auditor, does not revise appropriately the other information to address a material inconsistency, a material misstatement of fact, or both, then the auditor would be required to perform certain procedures that are described in paragraphs 8 and 9 of the proposed other information standard and in Section IV.C., *Responding When the Other Information Is Available Prior to the Issuance of the Auditor's Report*, below. Additionally, when the other information is not available to the auditor prior to the issuance of the auditor's report and the other information is not appropriately revised by management, then the auditor would be required to perform other procedures described in paragraphs 10 and 11 of the proposed other information standard and in Section

---

52/ See AU sec. 550.04.

53/ See AU sec. 550.05.

IV.D., *Responding When the Other Information Is Not Available Prior to the Issuance of the Auditor's Report* below.

## C. Responding When the Other Information Is Available Prior to the Issuance of the Auditor's Report (Paragraphs 8-9 of the Proposed Other Information Standard)

Paragraphs 8-9 of the proposed other information standard set forth the auditor's response when (1) the auditor has determined that the other information available to the auditor prior to the issuance of the auditor's report contains a material inconsistency, a material misstatement of fact, or both and (2) the information is not appropriately revised by management. When the other information is available prior to the issuance of the auditor's report, the auditor's response would be the same whether the information is contained in the annual report or is incorporated by reference in it.

### *1. Communication with the Audit Committee (Paragraph 8 of the Proposed Other Information Standard)*

If management does not appropriately revise the other information after the auditor's request, the proposed other information standard would require the auditor to communicate the material inconsistency, the material misstatement of fact, or both, to the audit committee in a timely manner and prior to the issuance of the auditor's report.

Under existing AU sec. 550, if the other information is not revised to eliminate the material inconsistency, the auditor is required to communicate the material inconsistency to the audit committee.[54/] Additionally, if the auditor has concluded that a material misstatement of fact remains after communication to management, AU sec. 550 states that the auditor should communicate the material misstatement of fact to the audit committee, in writing.[55/]

The proposed other information standard would retain the requirements for the auditor to communicate to the audit committee, but would not require the communications regarding a material misstatement of fact to be in writing. This is consistent with the approach taken to communications to the audit committee under Auditing Standard No. 16, *Communications with Audit Committees,* which allows the

---

[54/] See AU sec. 550.04.

[55/] See AU sec. 550.06.

communication to be oral or written.[56] Auditing Standard No. 16, however, requires the auditor to document communications with the audit committee in the work papers, whether such communications took place orally or in writing.[57]

*2. Responding When the Other Information Is Not Appropriately Revised (Paragraph 9 of the Proposed Other Information Standard)*

If the other information is not appropriately revised after the auditor's communication with the audit committee, the proposed other information standard would require the auditor to determine his or her responsibilities under Section 10A of the Exchange Act ("Section 10A");[58] AU sec. 316, *Consideration of Fraud in a Financial Statement Audit*; and AU sec. 317, *Illegal Acts by Clients*. This would direct the auditor to his or her responsibilities under federal securities laws and other PCAOB standards.

Section 10A includes requirements that apply when the auditor detects or otherwise becomes aware of information indicating that an illegal act (whether or not perceived to have a material effect on the financial statements) has or may have occurred.[59] AU sec. 316 provides requirements regarding the auditor's responsibilities related to fraud in the audit of financial statements. AU sec. 317 provides the nature and extent of the auditor's consideration in the audit of financial statements of the possibility for an illegal act by the company.

Additionally, if the other information is not appropriately revised after the auditor's communication to the audit committee, the proposed other information standard would require the auditor to determine whether to (1) issue an auditor's report that states that the auditor has identified in the other information a material inconsistency, a material misstatement of fact, or both that has not been appropriately revised and describes the material inconsistency, the material misstatement of fact, or both or (2) withdraw from the engagement. In determining whether to issue an auditor's report when the other information is not appropriately revised after the auditor's communication to the audit committee, the auditor would consider, among other things, the implications of being associated with an annual report that contains a material inconsistency, a material

---

[56] See paragraph 25 of Auditing Standard No. 16.

[57] Id.

[58] 15 U.S.C. § 78j-1.

[59] See Section 10A(b) of the Exchange Act, 15 U.S.C. § 78j-1(b).

misstatement of fact, or both. The Board is seeking comments regarding the appropriateness of issuing an auditor's report that states that the auditor has identified in the other information a material inconsistency, a material misstatement of fact, or both, that has not been appropriately revised and describes the material inconsistency, the material misstatement of fact, or both.

The proposed other information standard requires the same response and reporting by the auditor for both a material inconsistency and a material misstatement of fact in the other information because the auditor's evaluation of other information would be based on the same factors – relevant audit evidence obtained and conclusions reached during the audit. Investors are likely to be interested in matters that the auditor determined are material inconsistencies or material misstatements of fact in the other information. Additionally, investors might consider the other information that is directly related to the financial statements, as well as the other information that is not directly related to the financial statements, important in their investment decision making.[60/] Therefore, the proposed other information standard aligns the reporting responsibilities for both a material inconsistency and a material misstatement of fact.

There may be circumstances in which the auditor determines that issuing an auditor's report is not appropriate. Similar to existing AU sec. 550,[61/] such circumstances may arise when the nature of the material inconsistency or material misstatement of fact is such that it may affect the auditor's decision to be associated with the annual report. Under the proposed other information standard, such circumstances would require the auditor to determine whether to withdraw from the

---

[60/] See, e.g., IAG survey, *Role, Relevancy, and Value of the Audit.* The responses to survey question 13 indicate that investors often use other information, such as (1) MD&A, (2) Business Description, (3) Risk Factors, and (4) Proxy Information, to make investment decisions. The survey results were presented at the March 2012 IAG meeting and are available at http://pcaobus.org/News/Events/Documents/03282012_IAGMeeting/Audit_Firm_Practice_Survey_Summary.pdf.

[61/] See AU sec. 550.04, which states, in part, that "[o]ther information in a document may be relevant to an audit performed by an independent auditor or to the continuing propriety of his report." It further states that if the other information is not revised to eliminate the material inconsistency "[t]he action he takes will depend on the particular circumstances and the significance of the inconsistency in the other information."

engagement. Consideration of similar actions is currently required by AU sec. 550 with respect to material inconsistency,[62] but that standard does not specify the auditor's responses with respect to a material misstatement of fact.

The proposed other information standard notes that the auditor may withhold the use of the auditor's report for a prior reporting period. If the auditor determines that it is not appropriate to issue an auditor's report for the current reporting period, the auditor also may withhold the use of the auditor's report for a prior reporting period. This is similar to existing AU sec. 550, which states that the auditor should consider actions such as withholding the use of the auditor's report in the annual report, if the other information is not revised to eliminate the material inconsistency.[63] AU sec. 550, however, does not specify the period for which the report may be withheld.

## D. Responding When the Other Information is Not Available Prior to the Issuance of the Auditor's Report (Paragraphs 10-11 of the Proposed Other Information Standard)

Paragraphs 10-11 of the proposed other information standard set forth the auditor's response when (1) the auditor has determined that certain other information, that is not available to the auditor prior to the issuance of the auditor's report, contains a material inconsistency, a material misstatement of fact, or both and (2) the information has not been appropriately revised by management.[64]

---

[62] See AU sec. 550.04.

[63] Id.

[64] With respect to other information in an amended annual report that contains previously issued audited financial statements and the related auditor's report, the auditor would apply paragraphs 2-7 and 10-11 of the proposed other information standard. Those paragraphs also would apply to (1) information incorporated by reference in a Form 10-K from the company's definitive proxy statement filed within 120 days after the end of the fiscal year covered by the Form 10-K and (2) other information that was to be incorporated by reference from the company's definitive proxy statement but was instead filed as an amendment to the Form 10-K.

1. *Communication with the Audit Committee (Paragraph 10 of the Proposed Other Information Standard)*

If, after the auditor's request, management does not appropriately revise the other information that was not available prior to the issuance of the auditor's report, the proposed other information standard would require the auditor to communicate the material inconsistency, the material misstatement of fact, or both to the audit committee in a timely manner. This requirement is similar to the requirement when the other information is available prior to the issuance of the auditor's report.

2. *Responding When the Other Information Is Not Appropriately Revised (Paragraph 11 of the Proposed Other Information Standard)*

If the other information is not appropriately revised after the auditor's communication of the material inconsistency, material misstatement of fact, or both to the audit committee, and the auditor's report has been issued, the proposed other information standard would require the auditor to determine his or her responsibilities under Section 10A.[65/] Section 10A includes requirements that apply when the auditor detects or otherwise becomes aware of information indicating that an illegal act (whether or not perceived to have a material effect on the financial statements) has or may have occurred.[66/]

Additionally, the proposed other information standard would require the auditor to apply the procedures in AU sec. 561, *Subsequent Discovery of Facts Existing at the Date of the Auditor's Report.* AU sec. 561 provides procedures for the auditor when, subsequent to the date of the auditor's report, the auditor becomes aware that facts may have existed at that date which might have affected the auditor's report if the auditor had been aware of them.[67/]

The procedures in AU sec. 561 would apply in a situation in which the other information that was not available prior to the issuance of the auditor's report was not revised to eliminate a material inconsistency, a material misstatement of fact, or both.[68/]

---

[65/] 15 U.S.C. § 78j-1.

[66/] See Section 10A(b) of the Exchange Act, 15 U.S.C. § 78j-1(b).

[67/] See AU sec. 561.01.

[68/] See AU secs. 561.05 and .08-09.a.

For example, if the auditor identified a material inconsistency, a material misstatement of fact, or both in the related party information in a proxy statement covered by this standard, the auditor would:

- Determine the effect on the auditor's report if (1) the material inconsistency between the information about related parties in the other information and the audited financial statements, (2) the material misstatement of fact in the other information about related parties, (3) or both had been known to the auditor prior to the issuance of the auditor's report;[69/] and

- Notify each member of the company's board of directors of the material inconsistency, material misstatement of fact, or both, in the related party information and that if the other information is not appropriately revised, the auditor would take steps to prevent future reliance on the auditor's report.[70/]

If the other information is not appropriately revised after the auditor's notification to the board of directors, in this example the auditor would:

- Notify management and the audit committee that the auditor's report must no longer be associated with the financial statements;[71/] and

- Notify the SEC that the auditor's report should no longer be relied upon.[72/] This notification also would describe the effect the material inconsistency, material misstatement of fact, or both in the related party information would have had on "The Auditor's Responsibility Regarding Other Information" section in the auditor's report if it had been known to the

---

[70/] See AU sec. 561.08. See also the auditor's communication requirements in Section 10A(b) of the Exchange Act, 15 U.S.C. § 78j-1(b), and AU sec. 317.

[71/] See AU sec. 561.08a.

[72/] See AU sec. 561.08b. See also the auditor's communication requirements in Section 10A(b) of the Exchange Act, 15 U.S.C. § 78j-1(b), and AU sec. 317.

auditor prior to the issuance of the auditor's report and describe the material inconsistency, material misstatement of fact, or both.[73/]

The auditor's responsibilities under AU sec. 561 are not affected when the auditor has resigned or been discharged.[74/] The auditor's responsibilities under the proposed other information standard to apply the procedures in AU sec. 561 similarly would not be affected by the auditor's resignation or dismissal.

Questions Related to Section IV:

14. Are the proposed auditor's responses under paragraphs 8 and 9 appropriate when the auditor determines that the other information that was available prior to the issuance of the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?

15. Is it appropriate for the auditor to issue an auditor's report that states that the auditor has identified in the other information a material inconsistency, a material misstatement of fact, or both, that has not been appropriately revised and describes the material inconsistency, the material misstatement of fact, or both? Under what circumstances would such a report be appropriate or not appropriate?

16. Are the proposed auditor's responses under paragraphs 10 and 11 appropriate when the auditor determines that the other information that was not available prior to the issuance of the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?

## V. Responding When the Auditor Determines That There Is a Potential Misstatement in the Audited Financial Statements (Paragraph 12 of the Proposed Other Information Standard)

The procedures in the proposed other information standard would require the auditor to evaluate the consistency of the other information to the audited financial

---

73/ See AU sec. 561.09a.

74/ See AU sec. 9561, *Subsequent Discovery of Facts Existing at the Date of the Auditor's Report: Auditing Interpretations of Section 561*.

statements. These procedures would provide an increased auditor focus on other information, which could improve the auditor's identification of potential misstatements in the financial statements. Academic research indicates that comparing non-financial measures commonly found in the other information, such as number of properties and employee headcount, among others, to audited financial statements can help the auditor identify red flags for fraudulent financial reporting.[75/] To the extent that discrepancies between non-financial measures and reported financial performance are red flags for possible financial reporting issues, including fraud, requiring auditors to evaluate other information could help them detect misstatements.

As a result of procedures performed under paragraphs 4 and 5 of the proposed other information standard, the auditor might determine that there is a potential misstatement in the audited financial statements. If the auditor's report on the financial statements has not been issued, the auditor would refer to the requirements of Auditing Standard No. 14 and amended AU sec. 508, [new proposed title] *Departures from Unqualified Opinions and Other Reporting Circumstances,* in this situation.

Auditing Standard No. 14 establishes requirements regarding the auditor's evaluation of audit results and the determination of whether the auditor has obtained sufficient appropriate audit evidence. The auditor's evaluation includes, among other things, an evaluation of misstatements accumulated during the audit.[76/] Proposed amendments to AU sec. 508, as reflected in Appendix 3, would describe the reporting requirements related to departures from an unqualified opinion, such as a qualified opinion, an adverse opinion, or a disclaimer of opinion.

If the auditor's report has already been issued, the proposed other information standard refers the auditor to the procedures in AU sec. 561. AU sec. 561 provides procedures for the auditor when, subsequent to the date of the auditor's report, the auditor becomes aware that facts may have existed at that date that might have affected the auditor's report if the auditor had been aware of them.[77/] Under AU sec. 561, the auditor is required to perform procedures to determine whether the information

---

[75/] See Joseph F. Brazel, Keith L. Jones, and Mark F. Zimbelman, *Using Nonfinancial Measures to Assess Fraud Risk*, 47 Journal of Accounting Research 1135, 1135-1166 (2009).

[76/] See paragraph 4 of Auditing Standard No. 14.

[77/] See AU sec. 561.01.

is reliable and whether the facts existed at the date of the auditor's report, including discussing the matter with company management and the board of directors.[78] The auditor's further responsibilities under AU sec. 561 depend on several factors, including, among others, the effect on the audited financial statements and the auditor's report.[79]

Question Related to Section V:

17. Are the proposed auditor's responses appropriate when, as a result of the procedures performed under the proposed other information standard, the auditor determines that there is a potential misstatement in the financial statements? Why or why not?

## VI. Reporting in the Auditor's Report (Paragraphs 13-14 of the Proposed Other Information Standard)

The proposed other information standard provides a basis for the auditor to report regarding the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information. Reporting on the results of the auditor's evaluation of the other information would provide potentially significant information to investors.

The proposed other information standard would require that, when issuing an auditor's report, the auditor include specific statements regarding the auditor's responsibilities for, and the results of, the auditor's evaluation of other information. The auditor would be required to make these statements in a separate section of the auditor's report titled "The Auditor's Responsibilities Regarding Other Information."[80]

Regardless of whether the auditor identifies a material inconsistency, a material misstatement of fact, or both, when issuing an auditor's report, the auditor would be required to provide in the report the following:

- A statement that, in addition to auditing the company's financial statements [and the internal control over financial reporting (if applicable)],

---

[78] See AU sec. 561.05.

[79] See AU secs. 561.05-.08.

[80] The proposed auditor reporting standard refers the auditor to the reporting requirements of the proposed other information standard related to the auditor's responsibilities for and results of the auditor's evaluation of the other information.

in accordance with the standards of the PCAOB, the auditor evaluated whether the other information contains a material inconsistency with the financial statements, a material misstatement of fact, or both;

- Identification of the annual report that contains the other information, and the audited financial statements and the auditor's report, by referring to the SEC Exchange Act form type and period end date of the financial statements;

- A statement that the auditor's evaluation was based on relevant audit evidence obtained and conclusions reached during the audit of the financial statements; and

- A statement that the auditor did not audit the other information and does not express an opinion on it.

In addition, depending on whether the auditor has identified a material inconsistency, a material misstatement of fact, or both, when issuing an auditor's report, the auditor would be required to provide a statement that:

- The auditor has not identified a material inconsistency or a material misstatement of fact in the other information; or

- The auditor has identified a material inconsistency, a material misstatement of fact, or both, in the other information that has not been appropriately revised and a description of the material inconsistency, the material misstatement of fact, or both.

A statement in the auditor's report that the auditor has not identified a material inconsistency or a material misstatement of fact in the other information is appropriate in situations in which (1) the auditor has not identified a material inconsistency or a material misstatement of fact based on the auditor's evaluation of the other information and (2) the auditor has identified a material inconsistency, a material misstatement of fact, or both, that the auditor requested management to revise and management appropriately revised prior to the issuance of the auditor's report. In situations when management has revised the other information at the auditor's request because the auditor identified material inconsistencies or material misstatements of fact, and the auditor determines that appropriate revisions have been made, then the auditor's report would state that the auditor has not identified a material inconsistency or a material misstatement of fact in the other information since the annual report that is ultimately filed with the SEC no longer contains such inconsistencies or misstatements.[81/]

The proposed other information standard also provides illustrative language for the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information.

The reporting requirements under the proposed other information standard are generally new. Existing AU sec. 508 does not require any statement in the auditor's report regarding the auditor's responsibilities with respect to other information. However, the proposed reporting responsibility when the auditor identified a material inconsistency that was not appropriately revised is similar to existing AU sec. 550 regarding a material inconsistency.[82/] Under AU sec. 550, if the other information is not revised to eliminate a material inconsistency, then the auditor is required to consider actions such as revising the report to include an explanatory paragraph describing the material inconsistency.

AU sec. 550 does not include a reporting responsibility regarding explanatory language for a material misstatement of fact in the other information. However, as noted above, the auditor's evaluation of the other information that is not directly related to the financial statements also might be important to investors in their investment decision making. Therefore, the proposed other information standard proposes the same reporting responsibilities for both a material inconsistency and a material misstatement of fact.

Some commenters supported including in the auditor's report a description of the auditor's responsibilities for other information. They generally indicated that such a description in the auditor's report would help users understand the auditor's responsibilities with respect to other information and address the misperception that the other information is audited. Additionally, some commenters suggested that the Board also consider requiring the auditor to include in the auditor's report the auditor's

---

81/ In a situation in which the auditor identified a material inconsistency, a material misstatement of fact, or both that management subsequently revised, the auditor also has other responsibilities under other PCAOB standards, such as paragraphs 20-22 of Auditing Standard No. 14.

82/ See AU sec. 550.04. See also existing AU sec. 508.11.h.

conclusions on the work performed in addition to the description of the auditor's responsibilities regarding other information.

The report of the Cohen Commission states that "[t]he lack of explicit acknowledgement of the auditor's responsibility for other information in the annual report has the potential to create user confusion . . .."[83/] Similar to the Board's proposal, the Cohen Commission recommended auditor reporting that includes a description of the auditor's work performed over the other information and the auditor's conclusions.[84/]

The Board notes that some of the other information not directly related to the audited financial statements might be non-financial in nature or related to the company's operations and, as a result, the auditor might not have obtained evidence or reached any conclusion regarding such information during the audit. The auditor's evaluation would be based on relevant audit evidence obtained and conclusions reached during the audit. The auditor would not be required to perform procedures to obtain additional evidence regarding other information not directly related to the financial statements that was not required to be obtained during the audit.

Requiring the auditor to state that he or she has identified a material inconsistency, a material misstatement of fact, or both that has not been appropriately revised would result in additional costs for the auditor related to situations in which a material inconsistency or a material misstatement of fact is identified, including the cost of conducting procedures to resolve and to report on such matters. Also, costs likely would arise for the company and its audit committee as a result of additional discussions with the auditor and others in connection with the description in the auditor's report.

Costs related to reporting under the proposed other information standard regarding a material inconsistency should be similar to those incurred under the existing AU sec. 550 because the requirements of the two standards are similar in this respect. Currently, the Board is not aware of any specific instance of an auditor's report being issued under the existing auditing standards[85/] and filed with the SEC that contains

---

83/ AICPA, *The Commission on the Auditors' Responsibilities: Report, Conclusions and Recommendations* (1978) at 69 available at http://www.sechistorical.org/collection/papers/1970/1978_0101_CohenAuditors.pdf.

84/ Id.

85/ See AU sec. 550.04. See also existing AU sec. 508.11.h.

explanatory language regarding a material inconsistency.[86/] This suggests that instances of material inconsistency generally are resolved between the auditor and the company. Therefore, the related reporting costs might be low.

Questions Related to Section VI:

18. Is the proposed reporting, including the illustrative language, appropriate and sufficiently clear? If not, why not?

19. Should the Board consider permitting or requiring the auditor to identify in the auditor's report information not directly related to the financial statements for which the auditor did not have relevant audit evidence to evaluate against? If so, provide examples.

20. What additional costs would the auditor or the company incur related to auditor reporting when the auditor identifies a material inconsistency, a material misstatement of fact, or both?

21. Would the proposed reporting, including the illustrative language, provide investors and other financial statement users with an appropriate understanding of the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information? Why or why not?

22. Are there any practical considerations that the Board should consider when an auditor identifies a material inconsistency or a material misstatement of fact in the other information that management has appropriately revised prior to the issuance of the auditor's report?

## VII. Responsibilities of a Predecessor Auditor

Under existing auditing standards, before reissuing an auditor's report on the financial statements of a prior period, when those financial statements are to be presented on a comparative basis with audited financial statements of a subsequent

---

[86/] In the audit reports of approximately 7,000 issuers with fiscal year 2011 filings, PCAOB staff did not identify any audit report containing explanatory language regarding a material inconsistency in the other information. PCAOB staff performed additional searches of SEC filings for other fiscal years and did not identify any audit report containing explanatory language regarding a material inconsistency in the other information.

period, a predecessor auditor should consider whether the auditor's report is still appropriate.[87/] Prior to reissuing the auditor's report the predecessor auditor is required to (1) read the current period financial statements; (2) compare the current period financial statements to the prior period financial statements being presented; and (3) obtain representation letters from management and the successor auditor.[88/]

In connection with the reissuance of a predecessor auditor's report, the proposed other information standard notes that the requirements of the standard related to a material inconsistency would apply to a predecessor auditor in situations in which the predecessor auditor's report is included in an Exchange Act annual report containing other information filed with the SEC.[89/] The proposed other information standard would apply to a predecessor auditor only with respect to a material inconsistency between the other information and the financial statements for the period audited by the predecessor auditor. The requirements in the proposed other information standard with respect to a predecessor auditor are similar to those of AU sec. 550.[90/]

As described in existing AU sec. 508.73, a predecessor auditor's knowledge of the current activities of the company would be limited in the absence of a continuing relationship. Additionally, the procedures required of the predecessor auditor prior to reissuing the auditor's report[91/] do not provide the predecessor auditor with additional audit evidence or new conclusions related to the previous audit. Therefore, the predecessor auditor would not be able to evaluate other information not directly related to the prior period financial statements that is contained in the current period Exchange Act annual report filed with the SEC. For this reason, the proposed other information standard, consistent with existing AU sec. 550,[92/] does not include a responsibility for the predecessor auditor with respect to a material misstatement of fact.

---

87/ See AU sec. 508.71.

88/ Id.

89/ See footnote 6 of the proposed other information standard.

90/ See footnote 2 of AU sec. 550.

91/ See existing AU sec. 508.71.

92/ See footnote 2 of AU sec. 550.

The proposed other information standard would require the predecessor auditor to perform the procedures with respect to a material inconsistency based on relevant audit evidence obtained and conclusions reached during the predecessor auditor's previous audit. Therefore, the predecessor auditor's procedures would include reading and evaluating the other information in the current period annual report filed with the SEC for any material inconsistencies with the audited financial statements for the prior period. The predecessor auditor's procedures are not intended as an evaluation, with the benefit of hindsight, of the accuracy of the estimates and assumptions used in preparing the prior period's financial statements.

If the predecessor auditor concludes that there are no material inconsistencies, the predecessor auditor's report may be reissued. If, after communication with management and the audit committee, the predecessor auditor determines that the other information contains a material inconsistency, the predecessor auditor would be required to determine his or her responsibilities under federal securities laws and PCAOB standards. The predecessor auditor also may withhold the use of the auditor's report for the prior period.

Question Related to Section VII:

23. Are the proposed responsibilities of the predecessor auditor appropriate and sufficiently clear? If not, why not?

## VIII. Other Considerations

Liability may be imposed on auditors and issuers (as well as other securities market participants) under a number of different legal theories, depending on the specific facts and circumstances of a particular case, including pursuant to Section 11 of the Securities Act,[93/] Section 10(b) of the Exchange Act, as well as various state law causes of action. The Board is interested in the effect of such liability considerations and, accordingly, requests comments on the potential legal liabilities associated with the performance and reporting requirements under the proposed other information standard.

---

93/ For example, the proposed reporting of the results of the auditor's evaluation of the other information may raise for auditors possible liability considerations under Section 11 of the Securities Act when the document filed under the Exchange Act that contains the proposed enhanced auditor's report is incorporated by reference into a registration statement filed under the Securities Act.

The Board's proposed other information standard includes three key elements: (1) adding a description in the auditor's report of the auditor's responsibilities relating to other information; (2) including specific procedures for the auditor to perform with respect to evaluating the other information; and (3) providing for specific responses to the results of the auditor's evaluation of the other information, including reporting in the auditor's report. The following discussion is intended to highlight some key Board considerations in developing each element.

The first element of the Board's proposal would require the auditor to describe, in the auditor's report, the auditor's responsibilities for other information in annual reports containing audited financial statements and the related auditor's report filed with the SEC under the Exchange Act. Many commenters suggested that including a description in the auditor's report would provide useful information to investors.

The second element of the Board's proposal involves specific procedures, based on relevant audit evidence and the auditor's conclusions, for (1) assessing the consistency of the other information with the amounts, information, and presentation of the financial statements and (2) identifying material misstatements of fact. Under the proposed other information standard, the auditor would evaluate the other information for consistency with the financial statements and for potential misstatements of fact because the auditor is knowledgeable about the company's financial statements and the audit evidence obtained during the audit.

In developing this aspect of its proposed approach, the Board took note of relevant comments on the concept release. Some commenters noted that auditors have responsibilities under existing PCAOB standards to read and consider information outside of the financial statements and that auditors have developed procedures and routinely review other information for consistency with the financial statements. Other commenters suggested that performing procedures over information prepared by the company is a traditional role for the auditor that maintains the appropriate line of accountability between the auditor and the company. The Board's proposal (1) incrementally strengthens the auditor's traditional role with respect to other information and (2) provides a specific basis for describing the auditor's responsibilities in the auditor's report.

Third, the Board is proposing specific responses and reporting based on the results of the auditor's evaluation. For example, when the auditor has not identified a material inconsistency or material misstatement of fact as a result of the evaluation of the other information, the auditor's report would describe the auditor's responsibilities and note that no material inconsistencies or material misstatements of fact were identified. However, when the auditor has identified a material inconsistency, a material misstatement of fact, or both that has not been appropriately revised by management, the auditor would be required to describe the material inconsistency, material misstatement of fact, or both in the auditor's report, if the auditor determined it was appropriate to issue the auditor's report. The proposed other information standard also would refer the auditor to existing PCAOB standards, such as AU secs. 316 and 317, and to federal securities law requirements that are already familiar to auditors. The proposed other information standard also includes other responses for the auditor.

While the Board did not specifically seek comment in the concept release related to reporting on other information in the auditor's report, the Board received some related comments during its outreach and considered them in developing the proposed other information standard. In connection with adding the description of the auditor's responsibilities in the auditor's report, some commenters suggested that the Board also consider requiring the auditor to include in the auditor's report the auditor's conclusions on the work performed, in addition to the description of the auditor's responsibilities regarding other information. A commenter on the auditor assurance alternative presented in the concept release noted that auditors today would not permit their audit opinion to be included in a filing if the other information was inappropriate or incomplete.

The Board received other comments suggesting that reporting relating to the auditor's involvement with other information should be in a separate section of the auditor's report and include an introduction that described the different nature of the auditor's work and that the auditor was not auditing the other information. Accordingly, the Board is proposing that the auditor's statements regarding other information be in a separate section of the auditor's report, and also is proposing language to make it clear that the auditor is not expressing an opinion on the other information.

The Board recognizes, however, that, under its proposal, the auditor would be making new statements in the auditor's report about the auditor's responsibilities for evaluating other information and the results of the evaluation of the other information, which could raise potential liability considerations.

Questions Related to Section VIII:

24. What effect, if any, would the reporting under the proposed other information standard have on an auditor's potential liability in private litigation? Would this reporting lead to an unwarranted increase in private liability? Are there steps the Board could or should take related to the

other information requirements to mitigate the likelihood of increasing an accounting firm's potential liability in private litigation?

25. Would reporting under the proposed other information standard affect an auditor's potential liability under provisions of the federal securities laws other than Section 10(b) of the Exchange Act, such as Section 11 of the Securities Act? Would it affect an auditor's potential liability under state law?

## IX. Proposed Amendments to PCAOB Standards

The Board is proposing amendments to several of its existing auditing standards to conform to the proposed other information standard. Appendix 4 provides the proposed amendments related to the proposed other information standard. Significant amendments are described below.

### A. Amendments to Existing AU sec. 508

In situations in which the company has determined that it is not required to obtain, nor did the company request the auditor to perform, an audit of internal control over financial reporting, AU sec. 9550 states that the auditor may consider adding statements to the auditor's report that the auditor was not engaged to examine management's assertion on the effectiveness of internal control over financial reporting and that the auditor does not express an opinion on management's assertion.[94/] Because AU sec. 9550 would be superseded by the proposed other information standard, existing AU sec. 508 would be amended to allow the auditor to continue including such statements in the auditor's report.[95/] Existing AU sec. 508 also would be expanded to include an example of the "Basis of Opinion" section in the auditor's report that contains such statements.

In order to make this information consistently available to investors, the Board is interested in commenters' views about requiring, rather than allowing, statements in the auditor's report that the auditor was not engaged to examine management's assertion

---

[94/] See AU sec. 9550.10.

[95/] See proposed paragraphs .74A-B of AU sec. 508 in Appendix 4.

on the effectiveness of internal control over financial reporting and that the auditor does not express an opinion on management's report.[96/]

**B. Amendments to AU sec. 558**

AU sec. 558 includes a reference to AU sec. 550, which permits the auditor to express an opinion on certain other information if that information has been subjected to auditing procedures. If the auditor decides to report on such information, AU sec. 558 references the reporting requirements of AU sec. 551, *Reporting on Information Accompanying the Basic Financial Statements in Auditor-Submitted Documents*.

Since the proposed other information standard would supersede AU sec. 550 and the Proposed Auditing Standard, *Auditing Supplemental Information Accompanying Audited Financial Statements*,[97/] would supersede AU sec. 551, the Board is proposing to add the relevant substantive requirements, which otherwise would be superseded, directly to AU sec. 558. Accordingly, the Board is proposing to amend paragraph .09 of AU sec. 558 to include the elements of paragraph .07 of AU sec. 550 and paragraphs .12 and .14 of AU sec. 551 related to expressing an opinion on other information that has been subjected to auditing procedures. Because AU sec. 550 would be superseded, the proposed amendment to AU sec. 558 would apply only to situations involving required supplementary information.

---

96/ In July 2013, the U.S. Government Accountability Office ("GAO") issued a report in which it recommended that the SEC consider requiring public companies, where applicable, to explicitly disclose whether they obtained an auditor attestation of their internal controls. The GAO's report concluded that "explicit disclosure would increase transparency and investor protection by making investors readily aware of whether a company has obtained an auditor attestation on internal controls. The disclosure could serve as an important indicator of the reliability of a company's financial reporting, which may influence investors' decisions." See GAO, *Internal Controls: SEC Should Consider Requiring Companies to Disclose Whether They Obtained an Auditor Attestation* (GAO-13-582) (July 3, 2013) at 37, available at http://www.gao.gov/assets/660/655710.pdf.

97/ See PCAOB Release No. 2011-005 (July 12, 2011).

### C. Amendments to AU sec. 722

AU sec. 722 includes a list of interim review procedures the auditor should perform when conducting a review of interim financial information. AU sec. 722 requires the auditor to "read and consider" the other information that accompanies the interim financial information and directs the auditor to consider AU sec. 550, which would be superseded by the proposed other information standard. AU sec. 722 would be amended to direct the auditor to consider the requirements of the proposed other information standard, if the auditor concludes that there is a material inconsistency, a material misstatement of fact, or both.

Questions Related to Section IX:

26. Are the proposed amendments to PCAOB standards, as related to the proposed other information standard, appropriate? If not, why not? Are there additional amendments to PCAOB standards related to the proposed other information standard that the Board should consider?

27. In the situations described in the proposed amendments to existing AU sec. 508, should the Board require, rather than allow, the auditor to include statements in the auditor's report that the auditor was not engaged to examine management's assertion on the effectiveness of internal control over financial reporting and that the auditor does not express an opinion on management's report?

## X. Considerations Related to Audits of Brokers and Dealers

As Exchange Act Rule 17a-5 ("Rule 17a-5") requires that audits of brokers and dealers be conducted in accordance with PCAOB standards for fiscal years ending on or after June 1, 2014,[98] the proposed other information standard and amendments, if adopted by the Board and approved by the SEC, would be applicable to such audits. At the publication date of the Board's proposal, the final SEC rules have not been published in the Federal Register.

---

[98] See SEC, *Broker-Dealer Reports*, Exchange Act Release No. 70073 (July 30, 2013), which includes the final rules available at http://www.sec.gov/rules/final/2013/34-70073.pdf. Citations in this Section are to SEC Rule 17a-5 under the Exchange Act, as revised in Exchange Act Release No. 70073.

Pursuant to Rule 17a-5, brokers and dealers are generally required to file with the SEC and other regulators annual audited financial statements on form X-17A-5.[99/] Form X-17A-5 includes, as part of the broker or dealer's filing, an oath or affirmation signed by an officer of the broker or dealer[100/] that the financial statements and supporting schedules[101/] are true and correct. Auditors of a broker's or a dealer's financial statements would read the oath or affirmation as part of the annual report filed with the SEC under the Exchange Act that contains audited financial statements and the related auditor's report, and evaluate the information in that oath or affirmation in accordance with the procedures in the proposed other information standard, as appropriate.

Rule 17a-5 also requires the broker or dealer to file a compliance report or an exemption report.[102/] The proposed other information standard would not apply to compliance or exemption reports by brokers or dealers as those reports and the related auditor reporting are addressed by *Proposed Standards for Attestation Engagements Related to Broker and Dealer Compliance or Exemption Reports Required by the U.S. Securities and Exchange Commission*.[103/]

The Board's concept release included a question about whether the changes to the auditor's reporting model should apply to all audit reports filed with the SEC, including those filed in connection with the financial statements of brokers and dealers. Many commenters who responded to this question in the concept release supported requiring the same reporting for all companies.

---

99/ See SEC Rule 17a-5 of the Exchange Act, 17 C.F.R. § 240.17a-5.

100/ See SEC Rule 17a-5(e)(2) of the Exchange Act, 17 C.F.R. § 240.17a-5e2.

101/ The proposed other information standard would not apply to supporting schedules required by Rule 17a-5. These schedules are addressed by Proposed Auditing Standard, *Auditing Supplemental Information Accompanying Audited Financial Statements.* See PCAOB Release No. 2011-005 (July 12, 2011).

102/ See SEC Rule 17a-5(d)(1)(i)(A) and (B), 17 C.F.R. § 240.17a-5d1iA and B.

103/ See *Proposed Standards for Attestation Engagements Related to Broker and Dealer Compliance or Exemption Reports Required by the U.S. Securities and Exchange Commission,* PCAOB Release No. 2011-004 (July 12, 2011).

The Board received additional comments that were specific to audits of brokers and dealers from a small number of commenters. Some of those commenters suggested that the Board take into account the special characteristics of brokers and dealers in considering whether the changes to the auditor's report should apply to audits of brokers and dealers. One commenter on the concept release noted that amendments to Rule 17a-5 proposed by the SEC would provide users of brokers' and dealers' financial statements with sufficient information that would make additional auditor reporting unnecessary.

Question Related to Section X:

28. Are the proposed other information standard and amendments appropriate for audits of brokers and dealers? If not, why not?

## XI. Considerations Related to Effective Date

The proposed other information standard and amendments would be effective, subject to approval by the SEC, for audits of financial statements for fiscal years beginning on or after December 15, 2015. The Board's final decision on the effective date would take into account the extent and nature of comments received on the proposals as well as the timing of Board adoption of any final standard and amendments. Additionally, some commenters suggested that, depending on the extent of changes to the auditor's report, the Board consider a delayed compliance date depending on the size of the company. The Board is seeking comment on whether any special consideration should be given to a delayed compliance date for the proposed other information standard, such as for the audits of smaller companies.

Questions Related to Section XI:

29. Is the Board's effective date appropriate for the proposed other information standard? Why or why not?

30. Should the Board consider a delayed compliance date for the proposed other information standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?

## XII. Considerations Related to Securities Act Documents

The Board's proposed other information standard includes three key elements: (1) adding a description in the auditor's report of the auditor's responsibilities relating to other information contained in an annual report that includes audited financial statements and related auditor's report filed under the Exchange Act; (2) specifying procedures for the auditor to perform with respect to evaluating this other information; and (3) providing for specific responses to the results of the auditor's evaluation of the other information, including reporting in the auditor's report of the results of the auditor's evaluation. The proposed other information standard would supersede AU sec. 550 and AU sec. 9550. The proposed other information standard would not apply to documents containing audited financial statements and the related auditor's report that are filed with the SEC under the Securities Act, which is consistent with the approach in AU sec. 550.

Currently, AU sec. 550 refers the auditor to AU sec. 711 with respect to the auditor's responsibilities for filings under the Securities Act.[104/] AU sec. 711 refers the auditor to the provisions of Section 11 of the Securities Act.[105/] Section 11 imposes liability, subject to a due diligence defense, for material misstatements and omissions in a registration statement on "every accountant . . . who has with his consent been named as having prepared or certified any part of the registration statement, or as having prepared or certified any report or valuation which is used in connection with the registration statement, with respect to the statement . . . which purports to have been prepared or certified by him."[106/] Separately, Section 7 of the Securities Act[107/] requires issuers to file the consent of any accountant who is named as having prepared or

---

[104/] See AU sec. 550.03. This paragraph also refers the auditor to AU sec. 634, *Letters for Underwriters and Certain Other Requesting Parties,* which provides guidance to auditors for performing and reporting on the results of engagements to issue letters (commonly referred to as "comfort letters") regarding the other information contained in registration statements filed with the SEC.

[105/] See AU sec. 711.02. See also AU sec. 711.03 regarding the auditor's responsibilities as an expert and the burden of proof that the auditor must meet under Section 11(b) of the Securities Act when the auditor's report is included in a registration statement.

[106/] 15 U.S.C. § 77k(a)(4).

[107/] 15 U.S.C. § 77g.

certified any part of the registration statement or any valuation or report included in the registration statement.

Audit procedures contained in AU sec. 711 require the auditor to read relevant portions of the prospectus to make sure that (1) the auditor's name is not being used in a way that indicates greater responsibility than intended, and (2) the prospectus does not imply that the financial statements have been prepared by the auditor.[108/] Additionally, auditors perform certain procedures described under AU sec. 711 to identify any subsequent events that may impact the auditor's report included in the company's registration statement from the date of the auditor's report up to or shortly before the effective date of the registration statement as part of conducting a "reasonable investigation" pursuant to Section 11 of the Securities Act.[109/] When a company's annual report on Form 10-K is incorporated by reference into a shelf registration statement on Form S-3, AU sec. 711 requires that the auditor perform procedures with respect to subsequent events to a date as close to the date of the filing of the Form 10-K as is reasonable and practicable in the circumstances.[110/]

As previously described in this release, the proposed auditor reporting standard and the proposed other information standard are intended to increase the informational value of the auditor's report to promote the usefulness and relevance of the audit and the related auditor's report. Specifically, the proposed other information standard would respond to investor's interests in obtaining information regarding the auditor's responsibilities for other information that is contained in documents that include the audited financial statements and the related auditor's report. The Board began considering the existing auditing standard on other information in documents containing audited financial statements, specifically AU sec. 550, as part of its effort to develop a

---

[108/] See AU sec. 711.08.

[109/] See AU secs. 711.10-.11. See also AU secs. 711.12-.13 regarding the auditor's responsibilities if the auditor discovers or becomes aware of facts upon performing procedures subsequent to the date of the auditor's report.

[110/] See AU secs. 711.10-.11 and paragraph .07 of AU sec. 9711, *Filings Under Federal Securities Statutes: Auditing Interpretations of Section 711*. See also AU sec. 9711.05 regarding the auditor's responsibility to perform the procedures in AU secs. 711.10 and .11 when (1) a post-effective amendment to the shelf registration statement is filed as allowed under SEC Rule 430B of Regulation C, 17 C.F.R. § 230.430B or (2) an Exchange Act filing that includes or amends audited financial statements is incorporated by reference into the shelf registration statement.

description in the auditor's report regarding the auditor's responsibilities for other information in certain documents filed with the SEC. Through that consideration, the Board determined that changes were appropriate to provide a specific basis for the description in the auditor's report of the auditor's responsibilities for, and the results of, the auditor's evaluation of other information outside the financial statements.

The Board considered proposing to extend the applicability of the proposed other information standard to documents containing audited financial statements and the related auditor's report that are filed under the Securities Act. However, the Board has identified obstacles to applying the reporting requirements under the proposed other information standard to documents filed under the Securities Act. For example, a company will file a registration statement on Form S-1 with the SEC containing information required under the Securities Act and SEC rules and regulations as well as the company's audited financial statements and the related auditor's report. The SEC may require the company to file several amendments to the Form S-1 to update the information disclosed in the registration statement before it is declared effective by the SEC. Under current Securities Act rules, the auditor's report is not required to be updated for amendments to the registration statement, unless certain circumstances occur.[111/] Rather, the auditor consents to the continued use of the auditor's report in the registration statement.[112/] The filing of the auditor's consent with the company's registration statement does not change the date or content of the auditor's report filed with the original registration statement. Because an auditor is not required to update the auditor's report prior to the effective date of the company's registration statement, the auditor's report contained in the registration statement would reflect only the evaluation performed under the proposed other information standard of the other information as of the date of the auditor's report and not reflect the auditor's procedures under AU sec. 711 between the date of the auditor's report and the effective date of the registration statement.

The Board recognizes that a similar obstacle with the proposed other information standard would apply in the case when a company files a registration statement and incorporates by reference information from the company's annual report previously filed with the SEC. For example, under the proposed other information standard, an auditor

---

111/ Under PCAOB standards, the auditor would be required to update the auditor's report under certain circumstances.

112/ See SEC Rules 436 and 439 of Regulation C, 17 C.F.R. §§ 230.436 and 230.439.

would evaluate the other information contained in a company's annual report filed on Form 10-K and include a separate section in the auditor's report that stated the auditor's responsibilities for, and the results of, the auditor's evaluation of other information contained in the company's annual report. When the company later files a shelf registration statement on Form S-3 and incorporates by reference the company's previously filed annual report into the registration statement, the auditor would perform procedures on the other information contained in the shelf registration statement, as required under AU sec. 711. Similar to the reporting framework described above, the auditor is not required to update the auditor's report on the financial statement contained in the company's previously filed annual report that is incorporated by reference into the company's registration statement, but rather, the auditor consents to the continued use of the auditor's report.[113/] Therefore, the auditor's report that is part of the company's registration statement would reflect only the results of the auditor's evaluation under the proposed other information standard of the other information contained in the company's previously filed annual report and not reflect the auditor's procedures under AU sec. 711 on the portions of the shelf registration statement other than the previously filed annual report. As such, it is difficult to propose a meaningful auditor reporting requirement for the results of the auditor's evaluation of other information under the existing SEC reporting framework for Securities Act filings.

The Board acknowledges that investors and other financial statement users may believe that the auditor's level of involvement with, and related reporting on, other information in a document filed under the Securities Act, such as a registration statement for an initial public offering, should be no different than the auditor's responsibilities regarding other information contained in an annual report filed under the Exchange Act. The Board continues to assess whether it is possible to propose applying some of the elements of the proposed other information standard regarding the auditor's responsibilities over other information contained in documents filed under the Securities Act. For example, the Board considered proposing only the performance aspects of the proposed other information standard to Securities Act filings. However, the enhancements proposed in the other information standard were driven largely to enable auditor reporting on other information in annual reports filed under the Exchange Act. Additionally, the auditor already has responsibilities to perform procedures under AU sec. 711 for Securities Act filings. As such, the Board is requesting comments and information on the application of the proposed other information standard to Securities Act filings, including possible approaches to applying the reporting aspects of the proposed other information standard or the possible need for additional procedures regarding the auditor's responsibility for other information. The Board is particularly

---

[113/] Id.

interested in receiving comments on whether or not additional procedures under AU sec. 711 are necessary or appropriate.

Questions Related to Section XII:

31. Should the Board extend the application of the proposed other information standard to documents containing audited financial statements and the related auditor's report that are filed under the Securities Act? If so, are there obstacles other than those previously mentioned that the Board should consider before such a proposal is made? If not, why not?

32. Are there some elements of the proposed other information standard that the Board should consider requiring the auditor to perform related to other information contained in filings under the Securities Act, such as the auditor's responsibility to evaluate the other information? If so, which elements of the proposed other information standard should the Board consider including in the procedures currently required for Securities Act documents under AU sec. 711? If not, why not?

33. What costs or other challenges should the Board consider when assessing whether to propose extending some elements of the proposed other information standard to other information contained in documents filed under the Securities Act?

# APPENDIX 7

## *Considerations Regarding Audits of Emerging Growth Companies*

### I. Introduction

The Board is proposing two new standards and related amendments[1/] pursuant to its mission to protect the interests of investors and further the public interest in the preparation of informative, accurate, and independent audit reports. The proposed standards and amendments are intended to (1) increase the informational value of the auditor's report to promote the usefulness and relevance of the audit and the related auditor's report and (2) improve the auditor's procedures and enhance the auditor's responsibilities with respect to information outside the financial statements.

The Board's proposed auditor reporting standard would retain the pass/fail model, including the basic elements of the current auditor's report, and would provide more information to investors and other financial statement users regarding the audit and the auditor. Most significantly, the proposed auditor reporting standard would require the auditor to communicate in the auditor's report "critical audit matters" that would be specific to each audit. The auditor's required communication would focus on those matters the auditor addressed during the audit of the financial statements that involved the most difficult, subjective, or complex auditor judgments or posed the most difficulty to the auditor in obtaining sufficient appropriate audit evidence or forming an opinion on the financial statements.

Other proposed changes in the auditor's report would require a description of certain of the auditor's responsibilities, such as the auditor's responsibility to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. The proposed auditor reporting standard

---

[1/] The Board's proposals include: (1) Proposed Auditing Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the "proposed auditor reporting standard"); (2) Proposed Auditing Standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (the "proposed other information standard"); and (3) related proposed amendments to PCAOB standards (the "proposed amendments"). The Board's proposals are also referred to collectively as the "proposed standards and amendments."

also would add to the auditor's report new information regarding the audit and the auditor, such as statements about the auditor's responsibility to be independent, the length of the auditor's tenure as the company's auditor, and the auditor's responsibilities for, and the results of, the auditor's evaluation of information outside the financial statements.

As more fully described in the Release and Appendix 5, the Board is proposing an approach that it believes would increase the relevance and informational value of the auditor's report, including by requiring the auditor to provide specific insight into the audit of the company's financial statements.[2/] The proposed approach would be aligned with the Board's mission and is intended to be implemented in a cost-effective way. For example, because critical audit matters are determined based on the relative complexity and difficulty of the audit, the Board anticipates that the proposed auditor reporting standard would be scalable based on the size, nature, and complexity of the audit of the company. The Board also anticipates, however, that some of the enhanced basic elements and communication of critical audit matters in the auditor's report would have cost-related implications for auditors and companies, including audit committees.[3/]

The proposed other information standard is intended to improve the auditor's procedures and enhance the auditor's responsibilities with respect to "other information," that is, information other than the audited financial statements and the auditor's report, in a company's annual report filed with the U.S. Securities and Exchange Commission ("SEC" or "Commission") under the Securities Exchange Act of 1934 ("Exchange Act"). The proposed enhancements to the required auditor's procedures are intended to provide a specific basis for the auditor's description in the auditor's report of the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information. As a result of the linkage between the proposed auditor reporting standard and the proposed other information standard, investors and other financial statement users would obtain useful information such as: (1) the nature and scope of the auditor's responsibilities with respect to the other information; (2) clarification of what other information was evaluated by the auditor; and (3) a description

---

[2/] The Board's approach to increase the relevance and informational value of the auditor's report is discussed more fully in Appendix 5, specifically Sections IV., *Basic Elements*; V., *Critical Audit Matters*; and VI., *Explanatory Language*.

[3/] The potential costs related to the proposed auditor reporting standard are discussed more fully in Appendix 5, specifically Sections IV., *Basic Elements*, and V.F., *Other Considerations for Critical Audit Matters*.

of the results of the auditor's evaluation based on the auditor's procedures on the other information.

As described in the Release and Appendix 6, the required procedures under the proposed other information standard are intended to provide consistency and improve the auditor's evaluation of other information, which could be of importance to investment decision making.[4/] The Board believes that the proposed approach to the auditor's responsibilities for other information would be scalable to less complex companies, based on the nature and extent of the information outside the financial statements for such companies as compared to companies with more extensive operations. The Board, however, also anticipates that the proposed other information standard would have cost implications for auditors and companies, including audit committees.[5/]

In developing the proposed standards and amendments, the Board considered (1) the information communicated in the current auditor's report; (2) the potential benefits that may result from auditors providing additional communications; (3) the potential costs related to the approach proposed by the Board; (4) alternative approaches; (5) current developments in similar projects by other standard setters;[6/] (6) relevant academic research; and (7) significant comments received by the Board from its outreach efforts. In considering the nature and extent of changes to the existing

---

[4/] The Board's approach to improve the auditor's evaluation of other information is discussed more fully in Appendix 6, specifically Sections III., *Evaluating the Other Information*; and V., *Responding When the Auditor Determines That There is a Potential Misstatement in the Audited Financial Statements*.

[5/] The potential costs related to the proposed other information standard are discussed more fully in Appendix 6, specifically Sections III.C.3., *Performing Procedures to Evaluate the Other Information*; VI., *Reporting in the Auditor's Report*; and VIII., *Other Considerations*.

[6/] The International Auditing and Assurance Standards Board ("IAASB") has similar projects related to changes to the auditor's report and the auditor's responsibilities regarding other information. In addition, there are a legislative proposal by the European Commission ("EC") and a subsequent European Parliamentary report that relate to audits of public interest entities. Most recently, the United Kingdom's Financial Reporting Council ("FRC") adopted revisions to its auditor reporting standard. The IAASB's projects, the EC's proposal and subsequent report, and the FRC's revised standard would require auditor reporting on certain additional matters.

auditor's report and the auditor's responsibilities for other information, the Board sought to respond to the needs of investors and other financial statement users by making the auditor's report more informative while not adding unnecessary burden to the financial reporting process.

## II. Statutory Background

The Board is considering the proposed standards and amendments pursuant to its authority under the Sarbanes-Oxley Act of 2002 ("Act").[7/] If ultimately approved by the Board, the proposed standards and amendments will be filed for approval by the Commission. Pursuant to Section 107(b)(3) of the Act, the Commission shall approve a proposed standard if it finds that the standard is "consistent with the requirements of [the] Act and the securities laws, or is necessary or appropriate in the public interest or for the protection of investors."

The Act was amended by Section 104 of the Jumpstart Our Business Startups Act ("JOBS Act")[8/] to provide that any additional rules adopted by the Board subsequent to April 5, 2012 do not apply to the audits of "emerging growth companies" ("EGCs")[9/] unless the SEC "determines that the application of such additional requirements is necessary or appropriate in the public interest, after considering the protection of

---

7/ Pub. L. No. 107-204. Pursuant to Section 101 of the Act, the mission of the Board is to oversee the audits of companies that are subject to the securities laws, and related matters, in order to protect the interests of investors and further the public interest in the preparation of informative, accurate, and independent audit reports. Section 103 of the Act authorizes the Board to adopt auditing standards for use in public company audits "as required by this Act or the rules of the [Securities and Exchange] Commission, or as may be necessary or appropriate in the public interest or for the protection of investors." In addition, Section 982 of the Dodd-Frank Wall Street Reform and Consumer Protection Act expanded the authority of the PCAOB to oversee the audits of registered brokers and dealers, as defined in the Exchange Act. See Pub. L. No. 111-203. The term "registered broker or dealer" is defined in Section 3(a)(48) of the Exchange Act.

8/ Pub. L. No. 112-106 (April 5, 2012).

9/ Section 3(a)(80) of the Exchange Act defines the term "emerging growth company."

investors and whether the action will promote efficiency, competition, and capital formation."[10/]

In addition, the JOBS Act specified that "[a]ny rules of the Board requiring…a supplement to the auditor's report in which the auditor would be required to provide additional information about the audit and the financial statements of the issuer (auditor discussion and analysis) shall not apply to an audit of an emerging growth company…".[11/] The proposed standards and amendments, if adopted, will be subject to a separate determination by the SEC regarding their applicability to audits of EGCs. Before adoption, the proposed standards and amendments will be subject to an evaluation as to whether the Board should recommend to the SEC that the proposed standards and amendments be applicable to the audits of EGCs and the SEC will make a separate determination regarding the applicability of the proposed standards and amendments to the audits of EGCs. At this time no determination has been made about the applicability of the proposed standards and amendments to the audits of EGCs.

This Appendix contains a discussion of considerations relating to EGCs and includes data on EGCs. This Appendix also includes specific questions and requests relevant information, including potential costs, and empirical data, to the extent available to commenters, regarding the potential application of the proposed standards and amendments to the audits of EGCs. Commenters providing cost estimates are requested to provide the basis for any estimate provided. The Board is requesting commenters' views on the applicability of the proposed standards and amendments to the audits of EGCs and responses to specific questions in order to provide information to enable the Board to assist the SEC in making its determination regarding the applicability of the proposed standards and amendments to the audits of EGCs.

---

[10/] See Section 103(a)(3)(C) of the Act, as added by Section 104 of the JOBS Act.

[11/] Id. An auditor's discussion and analysis ("AD&A") currently does not exist in auditing standards but was described as one of several conceptual alternatives for changing the auditor's reporting model in the PCAOB's *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (the "concept release"), PCAOB Release No. 2011-003 (June 21, 2011). Section IV.A., *Auditor's Discussion and Analysis,* of this Release describes an AD&A and related comments received on the concept release.

The Board's Release, as well as Appendices 5 and 6, provide related information regarding the proposed standards and amendments, including discussions of the following areas (1) the background of and reasons for the proposed standards and amendments; (2) the Board's approach, including consideration of alternatives; (3) key changes and improvements from existing requirements; and (4) potential costs related to the proposed standards and amendments. Economic considerations related to the proposed standards and amendments are noted in the Release and this Appendix, with Appendices 5 and 6 providing further discussion regarding the economic considerations related to each proposed standard.

## III. Characteristics of Self-Identified EGCs

The PCAOB has begun to monitor implementation of the JOBS Act in order to better understand the characteristics of EGCs[12/] and inform the Board's considerations regarding whether it should request that the SEC apply the proposed standards and amendments to audits of EGCs. To assist commenters, the Board is providing the following information regarding EGCs that it has compiled from public sources.[13/]

---

[12/] In general terms, an issuer qualifies as an EGC if it has total annual gross revenue of less than $1 billion during its most recently completed fiscal year (and its first sale of common equity securities pursuant to an effective registration statement under the Securities Act of 1933 ("Securities Act") did not occur on or before December 8, 2011). See JOBS Act Section 101(a), (b), and (d). Once an issuer is an EGC, the issuer retains its EGC status until the earliest of: (1) the first year after it has total annual gross revenue of $1 billion or more (as indexed for inflation every five years by the SEC); (2) the end of the fiscal year after the fifth anniversary of its first sale of common equity securities under an effective Securities Act registration statement; (3) the date on which the company issues more than $1 billion in non-convertible debt during the prior three-year period; or (4) the date on which it is deemed to be a "large accelerated filer" under the Exchange Act (generally, a company that has been public for at least one year and has an equity float of at least $700 million). See Section 3(a)(80) of the Exchange Act.

[13/] To obtain data regarding EGCs, the PCAOB's Office of Research and Analysis reviewed registration statements and Exchange Act reports filed with the SEC with filing dates between April 5, 2012, and May 15, 2013, for disclosures by companies related to their EGC status. Companies with filings indicating that they are no longer EGCs are not included in this analysis. Any filings subsequent to May 15, 2013 are not included in this analysis. The PCAOB has not validated these companies' self-identification as EGCs. The information presented also does not include data for

As of May 15, 2013, based on the PCAOB's research, 909 SEC registrants have identified themselves as EGCs in SEC filings.

These companies operate in diverse industries. The five most common Standard Industrial Classification ("SIC") codes applicable to these companies are: blank check companies; pharmaceutical preparations; real estate investment trusts; prepackaged software services; and computer processing/data preparation services.

The five SIC codes with the highest total assets as a percentage of the total assets of the population of EGCs are: federally chartered savings institutions; real estate investment trusts; national commercial banks; state commercial banks; and natural gas transmission. Total assets of EGCs in these five SIC codes represent approximately 42% of the total assets of the population of EGCs. EGCs in three of these five SIC codes represent financial institutions (that is, federally chartered savings institutions, national commercial banks, and state commercial banks) and the total assets for these three SIC codes represent approximately 28% of the total assets of the population of EGCs.

A majority of the companies that have identified themselves as EGCs have begun reporting information under the securities laws since 2012. Of these companies, approximately:

- 25% identified themselves in registration statements and were not reporting under the Exchange Act as of May 15, 2013.

- 55% of the companies that have identified themselves as EGCs began reporting under the Exchange Act in 2012 or later.

- 20% of the companies have been reporting under the Exchange Act since 2011 or earlier.

Approximately 20% of these companies have securities listed on a U.S. national securities exchange as of May 15, 2013.

---

companies that have filed confidential registration statements and have not subsequently made a public filing.

Approximately 65% of the companies that have identified themselves as EGCs and filed an Exchange Act filing indicated that they were smaller reporting companies.[14/]

Audited financial statements were available for nearly all of the companies that have identified themselves as EGCs.[15/] For those companies for which audited financial statements were available and based on information included in the most recent audited financial statements filed as of May 15, 2013:

- The reported assets ranged from zero to approximately $18.2 billion. The average and median reported assets were approximately $183.7 million and approximately $0.3 million, respectively.[16/]
- The reported revenues ranged from zero to approximately $959.1 million. The average and median reported revenues were approximately $56.3 million and zero, respectively.

---

[14/] The SEC adopted its smaller reporting company rules in *Smaller Reporting Company Regulatory Relief and Simplification*, Securities Act Release No. 8876 (Dec. 19, 2007). Generally, companies qualify to be smaller reporting companies and, therefore, have scaled disclosure requirements if they have less than $75 million in public equity float. Companies without a calculable public equity float will qualify if their revenues were below $50 million in the previous year.

[15/] Audited financial statements were available for 897 of the 909 self-identified EGCs. Audited financial statements were not available for some EGCs that have filed registration statements that have not been declared effective.

[16/] For purposes of comparison, the PCAOB compared the data compiled with respect to the population of companies that identified themselves as EGCs with companies listed in the Russell 3000 Index in order to compare the EGC population with the broader issuer population. The Russell 3000 was chosen for comparative purposes because it is intended to measure the performance of the largest 3,000 U.S. companies representing approximately 98% of the investable U.S. equity market (as marketed on the Russell website). The average and median reported assets of issuers in the Russell 3000 were approximately $12.1 billion and approximately $1.5 billion, respectively. The average and median reported revenues from the most recent audited financial statements filed as of May 15, 2013 of issuers in the Russell 3000 were approximately $4.6 billion and $717.2 million, respectively.

- The average and median reported assets among companies that reported revenues greater than zero were approximately $365.8 million and $59.9 million, respectively. The average and median reported revenues among companies that reported revenue greater than zero were approximately $113.5 million and $17.2 million, respectively.
- Approximately 48% identified themselves as "development stage entities" in their financial statements.[17/]
- Approximately 35% were audited by firms that are annually inspected by the PCAOB (that is, firms that have issued audit reports for more than 100 public company audit clients in a given year) or are affiliates of annually inspected firms. Approximately 65% were audited by triennially inspected firms (that is, firms that have issued audit reports for 100 or fewer public company audit clients in a given year) that are not affiliates of annually inspected firms.
- Approximately 55% had an explanatory paragraph included in the auditor's report on their most recent audited financial statements describing that there is substantial doubt about the company's ability to continue as a going concern.[18/]

Approximately 40% of the self-identified EGCs that provided a management report on internal control over financial reporting stated in the report that the company's internal control over financial reporting was not effective.[19/]

---

17/ According to Financial Accounting Standards Board ("FASB") standards, development stage entities are entities devoting substantially all of their efforts to establishing a new business and for which either of the following conditions exists: (a) planned principal operations have not commenced or (b) planned principal operations have commenced, but there has been no significant revenue from operations. See FASB Accounting Standards Codification, Subtopic 915-10, Development Stage Entities – Overall.

18/ Approximately 1% of the population of companies in the Russell 3000 Index have an explanatory paragraph describing that there is substantial doubt about the company's ability to continue as a going concern.

19/ Approximately 4% of the population of companies in the Russell 3000 Index provided a management report on internal control over financial reporting stating that the company's internal controls over financial reporting were not effective.

The JOBS Act includes a provision that allows Securities Act registration statements of EGCs to include two years of audited financial statements instead of three years for the initial public offering of common equity securities. Approximately 750 of the self-identified EGCs would not be required to present more than two years of financial statements regardless of the JOBS Act relief.[20/] Approximately 75% of the remaining portion of the EGC population have opted out of the provision by providing in their registration statements audited financial statements for three years instead of two. Some of the EGCs that opted out of this provision described in their filings risks related to taking advantage of some of the JOBS Act provisions. Risks described included the company's common stock becoming less attractive to investors and their financial statement disclosures not being comparable to those of similar companies.

## IV. Economic Considerations

The economic considerations summarized below are addressed in the Release, Appendix 5, and Appendix 6, and could apply to both small and large companies. A number of these considerations are relevant to efficiency, competition, and capital formation.

### A. Proposed Auditor Reporting Standard

The proposed auditor reporting standard would require the auditor to communicate in the auditor's report critical audit matters. Critical audit matters ordinarily are matters of such importance in the audit that they would be included in the matters required to be (1) documented in the engagement completion document under Auditing Standard No. 3, *Audit Documentation*; (2) reviewed by the engagement quality reviewer under Auditing Standard No. 7, *Engagement Quality Review*; (3) communicated to the audit committee under Auditing Standard No. 16, *Communications with Audit Committees* or other PCAOB standards; or (4) any combination of the three. Thus, the proposed auditor reporting standard is intended to leverage the work the auditor already performed when conducting an audit under the Board's existing standards and does not impose new audit performance requirements, other than the determination, communication, and documentation of critical audit matters.

---

[20/] Some EGCs (1) are already afforded such relief as smaller reporting companies, (2) have existed for less than three years, (3) follow the reporting requirements of development stage entities which require an income statement since inception, or (4) have not filed a Securities Act registration statement yet, and thus have not availed themselves of this relief.

The Board believes that auditor reporting linked to matters identified during the audit that involved the most difficult judgments or the most difficulty in obtaining evidence or forming the opinion is responsive to the requests of many investors for information that should provide a greater degree of insight into the audit. Communication of critical audit matters is expected to result in information specific to each audit of a company's financial statements, and would highlight important aspects of the audit.

Additionally, the proposed auditor reporting standard would add to the auditor's report new information regarding the audit or the auditor, such as statements about the auditor's responsibility to be independent, the length of the auditor's tenure as the company's auditor, and the auditor's responsibilities for, and the results of, the auditor's evaluation of information outside the financial statements. This new information generally would be standardized language about the audit or the auditor and would be the same or very similar among different auditors' reports.

The proposed auditor reporting standard retains from the existing standard[21/] the use of explanatory paragraphs in the auditor's report, including the auditor's ability to emphasize a matter regarding the financial statements.

The Board also anticipates that some of the enhanced basic elements and communication of critical audit matters in the auditor's report would have cost-related implications for auditors and companies, including audit committees, such as:[22/]

- One-time costs that relate primarily to updating an audit firm's methodology and training regarding auditor reporting for basic elements and critical audit matters. Additionally, the auditor may incur some initial costs to determine the year the auditor began serving consecutively as the company's auditor;

- Recurring costs in each individual audit relative to the determination, communication in the auditor's report, and documentation of critical audit matters; and

---

21/ AU sec. 508, *Reports on Audited Financial Statements*.

22/ The potential costs related to the proposed auditor reporting standard are discussed more fully in Appendix 5, specifically Sections IV., *Basic Elements,* and V.F, *Other Considerations for Critical Audit Matters*.

- Recurring costs for the company, including the audit committee, for reviewing the critical audit matters included in the draft auditor's report.

There could be potential unintended consequences associated with requiring auditors to communicate critical audit matters in the auditor's report. For example, the effort required to determine, prepare language for communication, and document critical audit matters likely would occur during the final stages of the audit, which might reduce the time available to the auditor to review and complete the audit work.

Requiring auditors to communicate critical audit matters could help investors and other financial statement users focus on aspects of the company's financial statements that the auditor also found to be challenging. Communicating critical audit matters would provide investors and other financial statement users with previously unknown information about the audit that could enable them to analyze more closely any related financial statement accounts and disclosures. The communication of critical audit matters could help to alleviate the information asymmetry[23/] that exists between company management and investors. More specifically, company management is typically aware of the auditor's most challenging areas in the audit because of regular interactions with the auditor as part of the audit, but this information is not usually known to investors. Reducing the level of information asymmetry between company management and investors could result in more efficient capital allocation and, as academic research has shown, could lower the average cost of capital.[24/]

The auditor's focus on, and communication of, critical audit matters could lead to improved financial statement disclosures related to areas of the financial statements that gave rise to critical audit matters. Potential improvements to financial statement disclosures in such areas could occur because of increased attention by the auditor, management, and the audit committee of matters communicated by the auditor in the draft auditor's report regarding critical audit matters. The improvement in the related financial statement disclosures could incrementally increase the quality of the information[25] in the financial statements. Academic research has indicated that

---

23/ Economists often describe information asymmetry as an imbalance, where one party has more or better information than another party.

24/ See David Easley and Maureen O'Hara, *Information and the Cost of Capital*, 59 The Journal of Finance 1553, 1553-1583 (2004).

25/ The term "quality of information" is formalized by the concept of precision. Information economics frequently treats information as consisting of two components: a increasing the amount or quality of information in financial reporting could result in more efficient capital allocation decisions.[26/]

Auditor's reports that include critical audit matters would be specific to the audit of the company. Therefore, auditors' reports would be different between the company's current period critical audit matters and those of prior periods or those of the company's competitors. Some investors have commented that they are interested in information that is specific to the audit of a company's financial statements, and therefore, would expect differences in auditors' reports among companies and reporting periods. Critical audit matters, however, would not necessarily include all the information important to an investment decision.

Additionally, as critical audit matters in the auditor's report would not be something that investors and other financial statement users are accustomed to reviewing or analyzing, investors and other financial statement users could misunderstand a critical audit matter or the meaning of a critical audit matter. However, as financial statement disclosures have changed over time, investors and other financial statement users are accustomed to reviewing or analyzing new or different information. Therefore, such users should have the ability to interpret the meaning of critical audit matters communicated in an auditor's report.

Some comments regarding alternatives presented in the concept release indicated that more information about the audit in the auditor's report could lead to more efficient pricing of equity securities, either through changes in expected future earnings or changes in the discount rate used to value future earnings, or both.

As previously noted, the Board anticipates that the communication of critical audit matters would result in auditor's reports that could vary significantly – both among companies and reporting periods. Academics that conducted a study of financial

---

signal that conveys information and noise which inhibits the interpretation of the signal. Precision is the inverse of noise so that decreased noise results in increased precision and a more readily interpretable signal. See Robert E. Verrecchia, *The Use of Mathematical Models in Financial Accounting*, 20 Journal of Accounting Research 1, 1-42 (1982).

[26/] See Richard A. Lambert, Christian Leuz, and Robert E. Verrecchia, *Information Asymmetry, Information Precision, and the Cost of Capital*, 16 Review of Finance 1, 1-29 (2011).

analysts to assess how they use an auditor's report as part of a company evaluation found that the variability of information content would mean that the information would not be just confirming prior beliefs about financial statement quality but would be more likely to affect user decision making and increase the perceived quality of the audit.[27/]

Communication of critical audit matters in the auditor's report is intended to make the auditor's report more informative, thus increasing its relevance and usefulness to investors and other financial statement users. Academic research suggests that the prominence with which information is disclosed can have implications for investment decision making.[28/] Communication of critical audit matters in the auditor's report could focus investors' and other financial statement users' attention on challenges associated with the audit that may contribute to the information used in investment decision making. Making the auditor's report more informative can benefit investors and other financial statement users by increasing the prominence of potentially valuable information, thus increasing the value of the auditor's report.

The auditor's focus on, and communication of, critical audit matters could lead to improved financial statement disclosures related to areas of the financial statements that gave rise to critical audit matters. Potential improvements to financial statement disclosures in such areas could occur because of increased attention by the auditor, management, and the audit committee of matters communicated by the auditor in the draft auditor's report regarding critical audit matters. The improvement in the related financial statement disclosures could incrementally increase the amount or quality of the information in the financial statements. Academic research has indicated that increasing the amount or quality of information in financial reporting could result in more efficient capital allocation decisions.[29/]

## B. Proposed Other Information Standard

The proposed other information standard includes three key elements: (1) adding a description in the auditor's report of the auditor's responsibilities relating to other information; (2) including specific procedures for the auditor to perform with respect to evaluating the other information; and (3) providing for specific responses to the results of the auditor's evaluation of the other information, including reporting in the auditor's report.

The proposed other information standard would respond to investors' interests in obtaining information regarding the auditor's responsibilities for other information outside the financial statements that is contained in documents that include the audited financial statements and the related auditor's report. The proposed other information standard is intended to improve the auditor's procedures and enhance the auditor's responsibilities with respect to other information, further protecting the interests of investors. The proposed other information standard includes specific procedures designed to improve the auditor's evaluation of the other information. These procedures are intended to provide consistency in practice among auditors when evaluating the other information or responding to material inconsistencies or material misstatements of fact identified in the other information. These proposed procedures also are intended to provide a specific basis for the auditor's description in the auditor's report of the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information. The Board, however, also anticipates that the proposed other information standard would have some cost implications for auditors and companies, including audit committees, such as:[30/]

- One-time costs, for example, updating audit firm methodologies to reflect the new performance and reporting requirements and training firm personnel;

- Recurring costs related to increased auditor effort to evaluate the other information, particularly for firms that might not currently be performing evaluation procedures on the other information similar to those in the proposed other information standard;

---

[30/] The potential costs related to the proposed other information standard are discussed more fully in Appendix 6, specifically Sections III.C.3., *Performing Procedures to Evaluate*; VI., *Reporting in the Auditor's Report;* and VIII., *Other Considerations*.

- Costs for the auditor related to situations in which a material inconsistency or a material misstatement of fact is identified, including costs related to performing procedures to respond to, and report on, such material inconsistency, material misstatement of fact, or both;[31/] and

- Costs that might also arise for the company and its audit committee as a result of additional discussions with the auditor and others in connection with the description in the auditor's report.

The enhanced reporting requirements regarding other information are designed to provide investors and other users of financial information with an understanding of the auditor's responsibilities related to the other information as well as the results of the auditor's evaluation of the other information.

The required procedures under the proposed other information standard would focus the auditor's attention on the identification of material inconsistencies between the other information and the company's financial statements and on the identification of material misstatements of fact. When evaluating the other information, the auditor would be in a position to identify potential inconsistencies between the other information and the company's financial statements that could be difficult for investors and other financial statement users to identify when analyzing the company's financial performance. Such inconsistencies could occur for a number of reasons, including unintentional error, managerial biases,[32/] or intentional misreporting.[33/] As a result of the auditor's evaluation of other information and communication of any potential material inconsistencies or material misstatements of fact to the company's management, the

---

[31/] Costs related to reporting under the proposed other information standard regarding a material inconsistency should be similar to those incurred under the existing standard because the requirements of the two standards are similar in this respect.

[32/] See, e.g., Catherine M. Schrand and Sarah L.C. Zechman, *Executive Overconfidence and the Slippery Slope to Financial Misreporting*, 53 Journal of Accounting and Economics 311, 311-329 (2012) and Paul Hribar and Holly Yang, *CEO Overconfidence and Management Forecasting,* Unpublished working paper (2013) available at http://ssrn.com/abstract=929731.

[33/] See Joseph F. Brazel, Keith L. Jones, and Mark F. Zimbelman, *Using Nonfinancial Measures to Assess Fraud Risk*, 47 Journal of Accounting Research 1135, 1135-1166 (2009).

proposed other information standard could promote consistency between the other information and the audited financial statements, which in turn could increase the amount and quality of information[34/] available to investors and other financial statement users. In general, increasing the amount or quality of information available to investors could also facilitate more efficient capital allocation decisions.[35/] Academic research has shown that the increased quality of information could also result in a reduction in the average cost of capital.[36/]

## V. Request for Comment on the Applicability of the Proposed Standards and Amendments to Emerging Growth Companies

The Board is in the process of considering how the proposed standards and amendments might affect audits of EGCs.

Based on the data outlined in Section III, *Characteristics of Self-Identified EGCs*, above, EGCs generally appear to be smaller and newer public companies. Although it may be often assumed that such companies would have operations, and respectively audits, that are less complex, this may not be true for many EGCs.

As noted in Section III above, financial institutions represent approximately 28% of the total assets of EGCs. Given the nature of the operations of financial institutions, the audits of these EGCs might involve subjective or complex areas, such as the auditor's evaluation of the determination of the allowance for loan losses or the valuation of financial instruments with little market activity. Therefore, in the audits of these EGCs, the auditor might be addressing matters that meet the definition of critical audit matters because they involved difficult, subjective, or complex auditor judgments.

Number: 1 Author: Pw_Carey_Senior IT GRC Auditor, (CISA, CISSP), Compliance Partners, LLC Subject: Tuesday, March 25th, 2014
Date: 5/2/2014 3:24:50 PM

**EGC's are a Safe Harbor for fraud....an inept and possibly fraud induced attempt for certain sectors of the country....(aka: Left Coast comes to mind....) Respectfully yours, Pw Carey......**

The data presented in Section III above also suggests that EGCs are 10 times more likely than the population of companies in the Russell 3000 Index to have a management report on internal control over financial reporting stating that the company's internal control over financial reporting was not effective. As a result, in the audits of EGCs, the auditor might be presented with control deficiencies of high severity which likely would be a consideration in the auditor's determination of critical audit matters because the control deficiencies might, for example, pose difficulty to the auditor in obtaining sufficient appropriate audit evidence.

Further, the data presented in Section III above indicates that for 55% of the EGCs the auditor's report on the most recent audited financial statements includes an explanatory paragraph describing that there is substantial doubt about the company's ability to continue as a going concern, as compared to 1% for the population of companies in the Russell 3000 Index. This suggests that for the majority of EGCs the auditor is evaluating whether there is substantial doubt about the company's ability to continue as a going concern. Depending on the facts and circumstances, the auditor's evaluation might meet the definition of critical audit matters.

As described in Section III above, a review of SEC filings of EGCs indicates that three quarters of the EGCs that could have taken advantage of a JOBS Act provision to present two years of financial statements in their registration statements have chosen not to avail themselves of this provision and instead presented three years, which is generally required of non-EGC companies. Discussion included in EGC filings suggests that taking advantage of JOBS Act provisions that allow more limited disclosures in a company's filings is viewed by at least some EGCs as presenting risks that they are unwilling to take.

The application of the proposed auditor reporting standard, specifically the requirement to communicate critical audit matters, may be beneficial to EGCs because critical audit matters would provide more information about the company's audit to investors and other financial statement users. In general, there is less information available in the market about smaller and newer companies than there is about larger, more established companies. For example, smaller companies have very little, if any, analyst coverage which lessens the entire mix of information made available to investment bankers, fund managers, and individual investors which makes markets less efficient.[37/] The communication of critical audit matters would provide more information

37/ See SEC, *Final Report of the Advisory Committee on Smaller Public Companies to the U.S. Securities and Exchange Commission*, (April 23, 2006) at 73, available at http://www.sec.gov/info/smallbus/acspc.shtml.

to investors and provide insight about the most difficult, subjective, or complex matters that the auditor addressed in the audit. Providing meaningful information about the audit, such as the communication of critical audit matters in the auditor's report, could thus be particularly beneficial to smaller and newer companies. The availability of such information could contribute toward investors making more informed decisions, resulting in more efficient capital allocation and lower average cost of capital.

As noted in Section III above, many EGCs have identified themselves as smaller reporting companies. Smaller reporting companies generally apply the SEC's scaled disclosure rules.[38/] Therefore, these companies have less other information for the auditor to evaluate under the proposed other information standard than larger companies. Thus, EGCs that are smaller reporting companies may incur less cost related to the evaluation of the other information than larger companies.

As the Board's considers whether it should request the SEC to apply the proposed standards and amendments to the audits of EGCs, the Board reviewed relevant comments received in response to the concept release and from the Board's Standing Advisory Group ("SAG"). The concept release, which was issued before the JOBS Act became law, included a question about whether the changes to the auditor's reporting model should apply to all audit reports filed with the SEC, including those filed in connection with the financial statements of public companies, investment companies, investment advisers, brokers and dealers, and others. Commenters diverged on whether certain types of companies should be excluded from the scope of changes to the auditor reporting model.

Some commenters that responded to this question in the concept release suggested that, depending on the nature and extent of changes to the auditor's report, the Board give different consideration to the auditors' reports of smaller companies, which would include many EGCs. Suggested examples of such considerations include a phased-in implementation depending on the size of the company; application of any new requirements only to larger companies followed by consideration of expanding the requirements to smaller companies; and total exemption for companies under certain market capitalization. The reasons for the suggested different considerations include

---

[38/] The SEC adopted a new system of disclosure rules for smaller reporting companies. The new rules were effective February 4, 2008. They are scaled to reflect the characteristics and needs of smaller companies and their investors. See SEC, *Smaller Reporting Company Regulatory Relief and Simplification,* Securities Act Release No. 8876 (Dec. 19, 2007).

greater cost constraints typically experienced by smaller companies; differences in corporate structure, complexity, and the types of users of smaller companies' financial information; and statutory exemptions for certain smaller companies from the requirement for an auditor's report on internal control over financial reporting.

In contrast, other commenters that responded to this question in the concept release supported requiring the same reporting for all companies regardless of nature or size. The primary reason of these commenters' views was better consistency and comparability of auditors' reports across companies.

Likewise, some participants at the May 2012 SAG meeting commented that they do not support the development of separate auditing standards for EGC and non-EGC public companies because it would be very difficult for the auditor to apply an "on/off switch" with respect to the auditor's responsibilities.[39/] Those participants described a differential approach to EGCs as challenging and resulting in unnecessary complications for audits of EGCs. These participants did not clarify whether their comments relate to audit performance standards, reporting standards, or both. This concern of having different auditing standards for EGCs may be mitigated to the extent that reporting on critical audit matters is a discrete and separable task.

As noted previously, approximately 65% of EGCs were audited by triennially inspected firms that are not affiliated with annually inspected firms. Approximately 76% of triennially inspected firms audit 10 or fewer issuers[40/] which could indicate that these are small firms with more limited resources. Therefore, developing and maintaining different methodologies for audits of EGCs and non-EGCs, as well as the related staff training, could have a disproportionately negative effect on triennially inspected firms because of higher costs in relation to their income.

Exempting EGCs from the proposed standards and amendments might put them at an informational disadvantage compared to larger and more established companies that would be subject to the proposed standards and amendments. For example, if the

---

39/ See May 2012 SAG meeting available at http://pcaobus.org/News/Webcasts/Pages/05172012_SAGMeeting.aspx.

40/ See Exhibit 1 of *Report on 2007-2010 Inspections of Domestic Firms That Audit 100 or Fewer Public Companies*, PCAOB Release No. 2013-001 (Feb. 25, 2013) available at http://pcaobus.org/Inspections/Documents/02252013_Release_2013_001.pdf.

standards do not apply to audits of EGCs, but are applicable to audits of larger and more established companies, the potential disparity between the two groups of companies in the amount and quality of public information available for investment decision making could increase. To the extent that market participants perceive adoption of the proposed standards and amendments as a step toward lowering information asymmetry between company management and investors, exempting EGCs from the proposed standards and amendments may also put them at a disadvantage. Exempting EGCs from the proposed standards and amendments could cause investors to perceive additional risk and uncertainty with EGCs, which could put EGCs at a competitive disadvantage compared to non-EGCs in attracting available capital.

The Board is interested in commenters' views on the impact of the proposed standards and amendments on audits of EGCs. The Board is soliciting comments generally on issues it should consider relating to the applicability of the proposed standards and amendments to EGCs, as well as responses to the specific questions below.

Questions:

1. Should the proposed standards and amendments be applicable for audits of EGCs? Why or why not?

2. Are there any other considerations related to competition, efficiency, and capital formation that the Board should take into account with respect to applying the proposed standards and amendments to audits of EGCs?

3. Are there any special characteristics of EGCs that the Board should consider related to the proposed auditor reporting standard, including the communication of critical audit matters?

4. Would audits of EGCs be more, less, or equally likely to have critical audit matters?

5. Are there any special characteristics of EGCs that the Board should consider related to the proposed other information standard and amendments?

6. What costs would audit firms incur when implementing the proposed auditor reporting standard, including the communication of critical audit matters, for audits of EGCs? How will those costs differ from the costs for audits of larger and more established companies?

7. What costs would audit firms incur when implementing the proposed other information standard for audits of EGCs? How will those costs differ from the costs for audits of larger and more established companies?

8. Are there particular costs or burdens applicable to EGCs that the Board should consider when determining what recommendation to provide the Commission regarding the application of the proposed auditor reporting standard and amendments to EGCs?

9. Are there particular costs or burdens applicable to EGCs that the Board should consider when determining what recommendation to provide the Commission regarding the application of the proposed other information standard and amendments to EGCs?

10. For auditors of both EGCs and other SEC registrants, would it be more costly not to apply the proposed standards and amendments to audits of EGCs because the firms would need to develop and maintain two audit methodologies?

Pw Carey's snid thoughts SLASH Comments regarding PwC's sillyness...May 2nd, 2014

Re: PCAOB Docket No. 034 Comments

********PwC******************

We believe that certain

We are in the process of conducting field testing to evaluate the benefits and challenges of certain aspects of the proposals, including whether application of the framework to identify and communicate critical audit matters can be executed in a consistent manner; practical issues that may arise; unintended consequences that may occur; and the audit effort and costs required in executing the proposals. We hope to share any relevant information from our field testing as the Board continues to evaluate the feedback on the proposals.

Possible illegal acts: Section 10A of the Securities Exchange Act of 1934 establishes protocols for auditors to communicate potential illegal acts, including fraud, to the appropriate level of management and the audit committee and to escalate the matter when timely and appropriate remedial action is not taken. We believe including such matters in the auditor's report would undermine the proper functioning of these established processes.

Specific concerns related to fraud risk: As part of the auditor's annual risk assessment, the auditor is required to identify factors that may be indicative of a fraud risk and to plan and perform an appropriate audit response. Auditors may identify a fraud risk based upon limited information because they want to perform additional testing to evaluate whether a fraud is occurring. Due to the sensitivity of these risks, they are typically discussed only with senior level executives and/or the audit committee to avoid compromising the audit. Because fraud risks may involve the most difficult, subjective or complex auditor judgments, they would appear to meet the proposed definition of a critical audit matter regardless of whether a fraud actually occurred. We believe communicating such a matter in the auditor's report would have a negative impact on audit quality because it would reveal where the auditor is considering the risks of fraud, which will make the detection of fraud more difficult. Auditor reporting of fraud risks might also be misinterpreted by users to imply that a fraud has occurred and/or that the fraud materially impacts the entity's financial statements, when in fact there would be no basis for such a conclusion.

Obviously, the discovery, identification and reporting of fraud is way beyond the intelligence, deductive reasoning, acumen, experience and expertise of the Auditor for the following irrefutable reasons. To raise the investment communities Auditors expectations is a silly notion, since the Auditor is incapable of identifying fraud when they smell it, as opposed to the Chinese phrase..." A rotting fish begins at the head...". Opposed to this opinion we are faced with an Auditor's integrity and capability

during the enactment of an Audit Charter to recognize and report on a culture of fraud, acts of fraud and managed fraud for the following axioms written in stone by the Audit Industry
:

Fraud is way too challenging for the poor auditor to recognize...
Fraud is way too subjective and/or all together now....way too complex for the poor simple minded Auditor to identify and report (we apologize for the redundancy here....(aka: simple minded and Auditor)...

The PCAOB must put in place fines and penalties and the supporting maintenance mechanism via rules and regulations for the discovery, detection, identification and reporting of fraud...

Involved the most challenging, subjective, or complex auditor judgments, posed the greatest challenge to the auditor in obtaining sufficient appropriate audit evidence, or posed the greatest challenge to the auditor in forming an opinion on the financial statements, and

We anticipate that our field testing will provide some insight to the potential costs and impact on audit quality, but we also recommend that the Board perform a robust cost/benefit analysis on these significant changes to the auditor's report.

******here's a cost benefit analysis....Madoff's/Enron's/WaMu's/Libor's/BoA's/JP Morgan's/Chase/Goldman Sachs/CitiBank's....et al....***** lets just clawback the fees each individual auditor received for the efforts, rather their lack of same....that should more than cover any and all ROIs....no?

***************

In addition, we agree with commenter's that the financial statements of investment companies are less complex than operating companies' financial statements and that the limited nature of an investment company's operations entails fewer estimates and judgments. Similarly, we agree that the primary objective of the financial statements of a benefit plan is to provide information about the plan's assets, liabilities, and ability to pay benefits, and we believe the plan financial statements meet this objective without the auditor reporting critical audit matters. For these reasons, we believe the aforementioned entities should be excluded from the scope of the requirement to communicate critical audit matters in the auditor's report.

Sincerely yours,

Pricewatershousecoopers, LLP

Appreciate the help P, help in identifying another couple of industries where fraud does not exist...thanks, man....

Respectfully yours,

Pw Carey, Senior IT Auditor (GRC)

Docket No. 034 or What one audit industry leader said, regarding the efforts of the PCAOB to make audits more useful and relevant to the investment community....

1Robert G. Wing and Katherine Norman, SEC Receivers: What Are They and What Do They Do?, Utah State Bar Journal (Nov. 2007), available at http://webster.utahbar.org/barjournal/2007/11/sec_receivers_what_are-_they_an.html.

Rick further publishes the "International Asset Recovery Blog", (www.internationalassetrecovery.com), where he writes about recovery claims/assets around the world.

The Idaho UFTA (Uniform Fraudulent Transfer Act) is identical to California's statute.

25 Official Comm. Of Unsecured Creditors of Allegheny Health Educ. & Research Found. v. PriceWaterhouseCoopers, LLP, 989 A.2d 313, 339 (Pa. 2010) ("This effectively forecloses an in pari delicto defense for scenarios involving secretive collusion between officers and auditors to misstate corporate finances to the corporation's ultimate detriment.").

26Thabault v. Chait, 541 F.3d at 529 (holding that the auditor was not a victim of the agent's fraud and that "allowing the auditor to invoke the in pari delicto doctrine would not serve the purpose of the doctrine—to protect the innocent."); Freeman v. BDO Seidman, LLP (In re E.S. Bankest, L.C.), 2010 Bankr. LEXIS 1288, at *31 (Bankr. S.D. Fla. Apr. 6, 2010) ("BDO's agreement to detect fraud as Bankest's auditor precludes BDO from using that fraud it failed to detect to assert the imputation/in pari delicto defense as a shield to Plaintiff's claims").

In pari delicto is a Latin term meaning "in equal fault". It's a legal doctrine that bars a plaintiff who has participated in wrongdoing from recovering damages for loss resulting from the wrongdoing.

In contract law, neither party can claim breach of contract by the other if the fault is more or less equal. In criminal law, a defendant who is found equally at fault with other defendants will have difficulty asserting that he/she was induced to commit the crime by another defendant. However, sometimes the defense is sometimes not applied in the interests of protecting the public, such as a suit by someone who sought to gain on trading stocks using inside information which is brought against the person who gave the inside tip.

| **Date:** | Wednesday, December 11, 2013 8:15:37 PM |
| **Importance:** | High |

Dear Board Members:

Thank you for the opportunity to comment on the rulemaking referenced above.

I am the Managing Partner of a firm that has been regulated by the FINRA (and previously by the NASD) for over 12 years. Like many other firms, our business does not deal directly with the "public", does not maintain accounts, does not underwrite securities, does not commit capital—in short, we post ZERO risk to market integrity on a micro or macro level.

We are a small business. There are three partners and no employees. The additional work that the new rules would impose would be highly onerous for our business and would serve no public or private benefit. These rules should not apply to firms like ours. There should be a reasonable exemption for firms like ours.

I believe it is entirely consistent with the PCAOB mission for the Board to exercise its authority under the Dodd Frank Act, and exempt the auditors of small, privately held, non-custodial broker-dealers from its oversight.

Best Regards,

Ron

CENTER FOR AUDIT QUALITY
*Serving Investors, Public Company Auditors & the Markets*

December 11, 2013

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington, D.C. 20006-2803

**Re: PCAOB Rulemaking Docket Matter No. 034:** *Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments*

Dear Office of the Secretary:

The Center for Audit Quality (CAQ) is an autonomous public policy organization dedicated to enhancing investor confidence and public trust in the global capital markets. The CAQ fosters high quality performance by public company auditors, convenes and collaborates with other stakeholders to advance the discussion of critical issues requiring action and intervention, and advocates policies and standards that promote public company auditors' objectivity, effectiveness, and responsiveness to dynamic market conditions. Based in Washington, D.C., the CAQ is affiliated with the American Institute of Certified Public Accountants.

The CAQ welcomes the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB or the Board) *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (proposed auditor reporting standard); *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (proposed other information standard); and *Related Amendments to PCAOB Standards* (collectively, the proposal). This letter represents the observations of the CAQ, but not necessarily the views of any specific firm, individual, or CAQ Governing Board member.

The CAQ is supportive of the PCAOB's efforts to update and enhance the auditor's reporting model to provide additional information in an increasingly complex and global environment. This is an important project of great interest to many different stakeholders and one that will require careful deliberation and extensive outreach to develop an approach that can be practically applied. We commend the Board's consideration of international efforts, in particular those of the International Auditing and Assurance Standards Board (IAASB), in developing the proposal. We also commend the Board for considering the results of outreach conducted and the comment letters received from the CAQ and others, particularly in response to the PCAOB's June 2011 *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (Concept Release).[1]

[1] See the PCAOB's Concept Release (link).

Over the past three years, the CAQ has shared its perspectives and views on the topic of auditor reporting through comment letters to both the PCAOB and the IAASB.[2] The CAQ recognizes that enhancing the information communicated by the auditor is a worthy and warranted objective. In response to the PCAOB's proposal, we have initiated a coordinated and collaborative effort with members of the public auditing profession to field-test the proposal in order to help inform our views and our comments to the PCAOB. It will take several months for those members to conclude the field-test and analyze the results, but we hope to share insights next year in advance of the PCAOB's expected Spring 2014 roundtable related to the auditor's reporting model.

We believe that changes of this magnitude present challenges that must be carefully considered. Our suggestions are aimed at addressing such considerations, while helping to achieve the objectives of the Board as articulated in the proposal. In developing our suggested changes, we were guided by a set of principles that we believe are most relevant to the proposal, including:

- Auditors should avoid providing information about the company's financial statements and other financial information or its system of internal control over financial reporting that is the responsibility of the company's management to consider for disclosure.[3]
- Any changes to the auditor's reporting model should enhance, or at least maintain, audit quality.
- Any changes to the auditor's reporting model should narrow, or at least not expand, the expectation gap.
- Any changes to the reporting model should add value and not create investor misunderstanding. Specifically, any revisions should not require investors to sort through "dueling information" provided by management, the audit committee, and independent auditors.

Among our suggestions, we propose streamlining the auditor's process for determining critical audit matters (CAMs), in part, through leveraging the auditor's existing required communications with the audit committee, and focusing the auditor's determination of CAMs on the most important matters conveyed in such communications. With respect to other information, we suggest that the auditor's report be revised to articulate the auditor's responsibility for other information inclusive of the need to report unresolved material inconsistencies or material misstatements of fact, rather than requiring the auditor's report to contain a specific conclusion. Our suggested changes to the performance requirements related to other information comport with our understanding of the PCAOB's intent in revising the extant guidance, in a cost-effective way. We believe our suggested approach will provide users with a better understanding of the auditor's responsibilities with respect to other information, while creating less incremental litigation risk.

To further the Board's objectives, we also offer a number of suggestions related to the standard language in the auditor's report. We believe such changes will help clarify the report in a number of ways, including more clearly articulating the responsibilities of the auditor, management, and the audit committee, and providing context around important terms such as "reasonable assurance." Finally, as requested by the PCAOB, we discuss the liability risks associated with the proposal, and how our suggested changes to the proposal may help to mitigate these risks. We have organized our suggestions into the following sections:

I. Critical Audit Matters
II. Other Information
III. Auditor Tenure
IV. Auditor's Unqualified Report and Clarifying Language Changes
V. Applicability
VI. Cost-Benefit Considerations

---

[2] See CAQ comment letters to the IAASB dated October 8, 2012 (link) and September 15, 2011 (link) and the PCAOB dated September 30, 2011 (link) and June 28, 2011 (link).
[3] Similar views were expressed by stakeholders who participated in the CAQ's "Role of the Auditor" roundtable discussions. See the CAQ's *Observations on the Evolving Role of the Auditor: A Summary of Stakeholder Discussions* (link).

VII. Appendices
   A. Illustration of Suggested Changes to the Proposed Auditor Reporting Standard and Examples
   B. Illustration of Suggested Changes to the Proposed Other Information Standard
   C. Illustration of an Unqualified Auditor's Report
   D. Legal Considerations

We draw your attention to Appendices A through C, which illustrate our suggested changes to the proposed auditor reporting and other information standards, and our suggested clarifying language changes related to the auditor's report. We stand ready to assist the Board in the coming months as it reviews comments on the proposal, conducts additional outreach, considers the results of field-testing efforts, and deliberates next steps.

## I. <u>Critical Audit Matters</u>

***Overall Comments***

We support the overall efforts of the PCAOB to improve the information communicated to financial statement users through the auditor's report, and we agree with the PCAOB that CAMs "…could help investors and other financial statement users focus on aspects of the company's financial statements that the auditor also found to be challenging" and "…could enable them to analyze more closely any related financial statement accounts and disclosures."[4] We believe that the PCAOB's proposal represents a constructive approach in this regard. However, there are areas that present important implementation issues that require further consideration. We discuss these areas below, and present suggestions for consideration that we believe could enhance the PCAOB's proposed approach.

*CAM Determination*

We note that the PCAOB's approach for the determination of CAMs includes consideration of matters in the engagement completion document, matters reviewed by the engagement quality reviewer, and matters communicated to the audit committee. We believe that these criteria are overly broad and largely duplicative and would potentially result in an excessive number of CAMs communicated in the auditor's report. Such an outcome would dilute the significance of the matters identified in the report and be contrary to the PCAOB's stated intent for the auditor's report to highlight the matters that were the most important to the audit. We believe matters that are important enough to merit communication with the audit committee represent the appropriate starting point for an auditor's consideration of CAMs, given the audit committee's oversight of the audit and role in representing the interests of shareholders. We have suggested additional changes to the proposed determination criteria which we believe will help provide for the identification of the most relevant of these matters.

*CAM Communication*

We note that paragraph 11 of the proposed auditor reporting standard requires the auditor to describe the considerations that led the auditor to determine that a particular matter is a CAM. The example CAM sections provided in the proposal appear to interpret this requirement to mean that the auditor's descriptions of each CAM are expected to address each of the specific factors included in paragraph 9 that were present. To the extent this reflects the PCAOB's intent, this raises several potential issues. First, having to describe each of the particular factors in paragraph 9, such as consultations with the national office or specialists, would obscure the more significant factors in the auditor's description of why the matter was critical to the audit and may contribute to user misunderstanding. In this regard, we note that events such as consultations with a firm's national office or engagement of firm specialists may be a response to a challenging audit issue, but are not a factor used in determining that the matter is challenging or critical. Second, the proposal as reflected in the example CAM reporting will likely lead to instances of an auditor providing original

[4] See the proposal pages A5-22 through A5-23.

information[5] that is currently not required to be disclosed by the company (e.g., control deficiencies less severe than a material weakness, and corrected and accumulated uncorrected misstatements). This would blur the roles of management and the auditor, and potentially widen the expectation gap.

*CAM Documentation*

We note that paragraph 14 of the proposed auditor reporting standard requires the auditor to document why "non-reported audit matters addressed in the audit that would appear to meet the definition of a critical audit matter were not critical audit matters." We do not believe that such a requirement is operational, as it is unclear how an auditor could effectively demonstrate that such matters *are not* CAMs. This documentation requirement may result in auditors communicating a significant number of matters in the auditor's report, in anticipation of potential second guessing that could occur subsequent to its issuance. We believe this outcome is contrary to the intent of the proposal. In addition, we believe this requirement would add significant costs to the audit process without a corresponding benefit.

***Suggested Changes to the Proposed Auditor Reporting Standard***

We have developed suggested changes to the proposed auditor reporting standard that we believe will provide for the auditor's determination and communication of CAMs while addressing the areas noted above. We provide our suggestions and rationale below. Appendix A reflects these suggested changes in paragraphs 7 through 14 of the proposed auditor reporting standard, along with related revisions to the three illustrative examples included in the proposal.

*CAM Determination*

When determining the matters that represent CAMs, we believe that the auditor should initially identify matters that were significant to the audit of the financial statements (significant audit matters). Such matters would be derived from (and would be a subset of) those matters communicated to the audit committee under PCAOB Auditing Standard No. 16, *Communications with Audit Committees* (AS 16). In the adopting release for AS 16, the Board noted (emphasis added):

> "Auditing Standard No. 16 is intended to improve the audit by fostering constructive dialogue between the auditor and the audit committee about *significant audit and financial statement matters*. The standard requires the auditor to communicate certain matters regarding the audit and the financial statements to the audit committee, which should assist the audit committee in fulfilling its oversight responsibilities regarding the financial reporting process."

Given the nature of these required communications, we believe that matters required to be communicated to the audit committee pursuant to AS 16 would be an appropriate starting point for the determination of any audit matter that would be important enough to the audit to be a CAM. Additionally, this approach would more closely align the PCAOB's CAM approach with the IAASB's *key audit matters* approach, which begins with matters communicated to those charged with governance, and would result in greater global consistency across auditors' reports.[6]

When determining which matters required to be communicated to the audit committee were significant audit matters, we believe that auditors should take into account the eight factors identified by the PCAOB in paragraph 9 of the proposed auditor reporting standard. The auditor would then need to determine which of the significant audit matters are CAMs, by identifying those matters that, in the auditor's judgment: a) were

[5] For the purpose of our response to the Board's proposed auditor reporting standard, original information is information about a company's financial statements and other financial information or its system of internal control over financial reporting that is the responsibility of the company's management to consider for disclosure.

[6] See the IAASB's ED, Proposed ISA 701, *Communicating Key Audit Matters in the Independent Auditor's Report* (Proposed ISA 701), paragraph 8.

material to the financial statements; b) involved the most challenging, subjective, or complex auditor judgments, posed the greatest challenge to the auditor in obtaining sufficient appropriate audit evidence, or posed the greatest challenge to the auditor in forming an opinion on the financial statements; and c) resulted in the most significant interaction (in terms of nature or extent) with the audit committee. Our rationale for determining CAMs in this manner is as follows:

a) We agree with the PCAOB that CAMs could enable users to focus on certain aspects of the company's financial statements and analyze more closely the related financial statement accounts and disclosures. We believe this is the appropriate focus of CAMs and as such, we believe that matters that are not material[7] to a company's financial statements should not be CAMs.

b) We share the PCAOB's view that CAMs can be differentiated from other audit matters by their relative complexity and the challenges[8] they present to the audit.[9] As such, we suggest retaining much of what the PCAOB proposed in paragraph 9.

c) Given the audit committee's oversight role, we believe the auditor's determination of CAMs should consider the nature and extent of the interaction between the auditor and the audit committee. In our view, auditors and audit committees tend to spend the most time focusing on matters that have the characteristics, as generally contemplated in the proposal, of CAMs. As such, we believe the ultimate standard should be reflective of current practice, and the extent of the auditor's interaction with the audit committee on the various matters that arise during the execution of an audit should be an important factor in the determination of CAMs. This approach is responsive to investor requests for further insights into auditor-audit committee communications and is consistent with the audit committee's role representing the interests of shareholders.

Finally, we believe that care should be taken to provide that auditors communicate only the most important matters, as including too many matters would minimize the intended emphasis. Accordingly, we believe that the final step in the determination of CAMs should reflect an explicit provision that if an auditor has initially identified a large number of matters for potential communication in the auditor's report, the auditor may consider reassessing whether each of these matters meets the definition of a CAM.

*CAM Communication*

As noted above, we do not believe that the auditor's description of the CAM needs to include each of the factors that relate to a particular matter. We believe that requiring the auditor to describe the *principal* consideration(s) that led the auditor to conclude the matter was a CAM would allow the auditor to utilize his or her professional judgment to describe the factors that were most important to the determination that a matter was a CAM and tailor such communication to provide users with useful information about the identified matters relative to the audited financial statements.

We also note that while the proposed auditor reporting standard does not require the auditor to describe the CAM's effect on the audit, each of the PCAOB's three examples of CAM reporting[10] include such descriptions. We believe that in some cases describing the CAM's effect on the audit may help to explain why a matter was a CAM. While we acknowledge that the proposed auditor reporting standard does not prohibit the auditor from providing such descriptions,[11] we believe it would be improved by explicitly stating that the auditor may provide a description of the CAM's effect on the audit if the auditor considers it

[7] Although the concept of materiality is not mentioned in connection with the determination of critical audit matters in the proposal, we note that such a concept is listed in one of the examples regarding the auditor's determination of critical audit matters. See page A5-76 of the proposal.
[8] We suggest the word "challenging" instead of "difficult" as the latter can have a more negative connotation.
[9] See the proposal page A5-25.
[10] See the proposal pages A5-65 through A5-78.
[11] On page A5-36 of the proposal, the Board states that "…when communicating critical audit matters in the auditor's report, the proposed auditor reporting standard would not require the auditor to describe the audit procedures related to critical audit matters. It would, however, not preclude an auditor from doing so."

necessary in describing why a matter is a CAM.[12] We believe such a provision would clarify the Board's intent with respect to this important area, and would provide auditors with the ability to describe the CAMs in a manner that best emphasizes why a matter is considered a CAM.

We also acknowledge the possibility that describing the CAM's effect on the audit could imply to financial statement users that the auditor is providing a separate opinion on specific accounts or balances referenced in the CAM (i.e., "piecemeal opinions") or, conversely, undermine the auditor's opinion on the financial statements taken as a whole. As such, we believe that the language preceding the communication of CAMs in the auditor's report must specify that while an audit includes the performance of procedures designed to address the risks of material misstatement associated with any identified CAMs, such procedures were designed in the context of the audit of the financial statements taken as a whole, and do not provide a separate opinion on individual accounts or disclosures. Moreover, the auditor's description of a specific CAM's effect on the audit (if included based on the auditor's judgment) should be a brief, high-level summary of the audit procedures performed to address the principal considerations that led the auditor to conclude that the matter is a CAM. We agree with the PCAOB that language that could be viewed as disclaiming or qualifying the auditor's opinion on the financial statements due to the existence of a CAM is not appropriate and must not be used. In addition, we suggest including an explicit requirement that the audit opinion must not convey that the auditor is providing a separate opinion or conclusion on the critical audit matters.

Consistent with the overarching principles articulated above, we believe that the auditor should not be the original source of information about the company. However, we acknowledge that there may be rare circumstances where, in the auditor's judgment, such information is necessary to the auditor's description of the CAM. In these situations, we believe that communication of such information would be appropriate, provided it is otherwise not prohibited by law or regulation.[13] In such circumstances, the auditor can encourage management to make relevant disclosures, rather than the auditor being the source of such information.

*CAM Documentation*

While we agree that the auditor should be required to document the determination of CAMs, we do not believe the documentation requirements included in the proposed auditor reporting standard are operational. It appears that much of the documentation focus in the proposal is centered on matters the auditor ultimately concludes are not CAMs. It is often very challenging to "prove a negative" in any setting and we believe this will be particularly difficult in this area. Leveraging the suggestions noted above, we believe a more practical approach would be to require documentation of the auditor's basis for (a) identifying those matters that were communicated to the audit committee that were determined to be significant audit matters, and (b) determining which significant audit matters were CAMs. We believe this approach will help address the practical challenges associated with documenting matters that "appear to be CAMs."

## II. <u>Other Information</u>

***Overall Comments***

As noted previously,[14] the CAQ supports enhancements to the auditor's report that provide transparency regarding the auditor's responsibility with respect to other information. However, we believe there are several provisions within the proposed other information standard that should be modified. Our observations and suggested changes to the proposed other information standard are discussed below.

---

[12] This would further align the PCAOB's proposal with the IAASB's. See the IAASB's ED, Proposed ISA 701, paragraphs 10 and A38 through A41.
[13] This improves alignment with the IAASB's ED, see Proposed ISA 701, paragraph A37.
[14] See the CAQ's September 30, 2011 comment letter to the PCAOB (link).

*Performance Responsibilities*

The proposed other information standard expands the auditor's performance responsibilities from "read and consider" under AU section 550, *Other Information in Documents Containing Audited Financial Statements* (AU 550), to "read … and, based on relevant audit evidence obtained and conclusions reached during the audit, evaluate"[15] the other information for a material inconsistency, a material misstatement of fact, or both. The term "evaluate" is extensively used within the PCAOB's auditing standards in relation to the auditor reaching an opinion (i.e., a reasonable assurance performance standard) or performing procedures to support the audit opinion.[16] We believe the use of "evaluate," in the context of the proposed other information standard, expands the auditor's performance responsibilities. In addition, an auditor may need to perform additional procedures, outside those described within the proposed other information standard, in order to support a conclusion based on an evaluation of the other information. Additionally, the ambiguity created by the use of "evaluate" would increase the risk of undue litigation against auditors, as discussed in Appendix D.

The proposed other information standard also requires the auditor to read and evaluate other information not directly related to the financial statements. Given that the auditor may not have accumulated any information from the audit that would provide a basis for evaluating other information not directly related to the financial statements, we believe it would be inappropriate for the auditor to be required to conclude on such information.

Further, the proposed other information standard states that the auditor's evaluation is based upon "relevant audit evidence obtained and conclusions reached during the audit."[17] This is also an expansion from AU 550 where the auditor's responsibility relates to the financial information that is identified in the auditor's report.[18] We believe "relevant audit evidence obtained and conclusions reached during the audit" could be interpreted as requiring an extensive search for documentation within the audit workpapers to determine if the other information had been addressed in the relevant audit evidence, and may imply the inclusion of all information gathered during the audit, not just the financial information subject to audit procedures.

*Reporting Responsibilities*

Requiring the auditor to communicate in the auditor's report that the auditor has evaluated the other information and conclude whether the auditor has identified a material inconsistency, a material misstatement of fact, or both, would imply a level of assurance that is inconsistent with the proposed procedures. This may cause users of the financial statements to perceive the auditor's "conclusion" on the entirety of other information as a form of reasonable assurance on such information, despite the auditor making an explicit statement in the auditor's report that he or she did not audit the other information and does not express an opinion on the other information. We believe this will lead to a widening of the expectation gap. Further, requiring the auditor to state whether he or she has identified a material inconsistency, a material misstatement of fact, or both, would create significant incremental litigation risk for auditors, as discussed in Appendix D. Our suggested changes discussed below include reporting of the auditor's responsibilities with respect to other information and procedures performed and, where applicable, describing any unresolved material inconsistencies or material misstatements of fact. This approach makes more explicit an auditor's present responsibilities and we believe it will help address certain legal risks inherent in the proposed other information standard.

[15] See the proposed other information standard paragraph 4.
[16] For example, paragraph 6 of PCAOB Auditing Standard No. 17, *Auditing Supplemental Information Accompanying Audited Financial Statements* (pending final SEC approval), "To form an opinion on the supplemental information, the auditor should evaluate…"; paragraph 9 of PCAOB Auditing Standard No. 7, *Engagement Quality Review*, "the engagement quality reviewer should evaluate the significant judgments made by the engagement team and the related conclusions reached in forming the overall conclusion on the engagement and in preparing the engagement report"; and paragraph 8 of PCAOB Auditing Standard No. 12, *Identifying and Assessing Risks of Material Misstatement*, "In obtaining an understanding of the company, the auditor should evaluate whether significant changes in the company from prior periods, including changes in its internal control over financial reporting, affect the risks of material misstatement."
[17] See the proposed other information standard paragraph 4.
[18] AU 550, paragraph 4.

***Suggested Changes to the Auditor's Performance Responsibilities***

As described below, we have developed suggested changes that we believe will help achieve the Board's objectives, while addressing the considerations described above. In articulating our suggested changes, we recognize the fundamental difference between other information that is directly, and not directly, related to the audited financial statements and the need for different procedures for each of these types of other information. Appendix B reflects our suggested changes to the Objectives and Auditor's Responsibilities sections of the proposed other information standard.

*"Evaluate" Other Information*

To more clearly define the auditor's performance responsibilities regarding other information, we suggest replacing "evaluate" with "perform certain limited procedures," and that the expected limited procedures be identified in the standard. These limited procedures (which include reading the other information) provide a "plain English" description of the performance expectations that more closely align the performance requirements with the extant standard and, as a result, will be more operational in practice and better understood by users. Further, to focus the auditor's performance responsibilities regarding financial statement-related information, we believe the limited procedures that extend beyond reading should only apply to other information directly related to the audited financial statements. In the context of our suggested changes, we are using a definition for other information directly related to the audited financial statements that focuses on other information derived either (1) from the financial statements or (2) from accounting records subject to the audit. We encourage the Board to consider incorporating the suggested definition within the standard.

Additionally, in identifying other information that falls within the scope of the auditor's performance responsibilities, it is critical to include the consideration of materiality. Therefore, we recommend that any procedures, beyond reading the other information, apply only to *material* other information that is directly related to the audited financial statements.

*Relevant Audit Evidence and Conclusions Reached During the Audit*

We believe the auditor's performance responsibilities regarding material other information directly related to the audited financial statements should be related to (1) the financial statements or (2) accounting records that are subject to the audit, or have been derived directly from such accounting records by analysis or computation. We believe this could also limit the auditor from having to perform extensive searches within the audit workpapers to determine if other information had been addressed in the audit.

*Certain Limited Procedures*

Based on our suggestions above, we have recommended modifications to the proposed other information standard to describe the certain limited procedures the auditor would perform. These limited procedures include reading all of the other information, and for material other information directly related to the audited financial statements, performing the following:

a) Comparing the amounts in the other information, and the consistency of the manner of their presentation, that are the same as, or provide greater detail about, the amounts in the financial statements, to (1) the amounts in the financial statements, or (2) accounting records that are subject to the audit, or have been derived directly from such accounting records by analysis or computation;
b) Comparing qualitative statements that represent, or provide greater detail about, information in the financial statements, to (1) the financial statements, or (2) accounting records that are subject to the audit, or have been derived directly from such accounting records by analysis or computation; and
c) Recalculating the mathematical accuracy of the amounts in the other information that are calculated using amounts in (1) the other information, (2) the financial statements, or (3) accounting records that

are subject to the audit, or have been derived directly from such accounting records by analysis or computation.

*Other Information Not Directly Related to the Financial Statements*

We believe the auditor's performance responsibilities for other information not directly related to the audited financial statements should be consistent with AU 550, which requires the auditor to read the other information and, if the auditor becomes aware of a potential material misstatement of fact in the other information, to respond appropriately.[19] Further, we believe the auditor's identification of potential material misstatements of fact should be based on knowledge gained in the course of conducting the audit, in order to link the auditor's performance responsibilities to the audited financial statements. Finally, since the auditor performs different procedures depending on whether the other information is directly, or not directly, related to the financial statements, we have separated these procedures within our suggested approach.

***Suggested Changes to the Auditor's Reporting Responsibilities***

As noted above, we support changes to the auditor's report that provide transparency about the auditor's responsibility with respect to other information. Specifically, we believe the auditor's reporting should describe the auditor's responsibilities to perform certain limited procedures on the other information, and emphasize that these limited procedures do not constitute an audit or review of the other information. The auditor's report should also include:

a) A statement that in the event the auditor becomes aware, based on the limited procedures performed, that the other information contains a material inconsistency with the audited financial statements, a material misstatement of fact, or both, that has not been appropriately revised, the auditor is required to describe the inconsistency or misstatement, or both, in the auditor's report; and

b) In situations where the auditor has become aware of a material inconsistency with the audited financial statements, a material misstatement of fact in the other information, or both, that has not been appropriately revised, a description of the material inconsistency, the material misstatement of fact, or both.

We believe that this reporting would clearly communicate the auditor's responsibilities regarding other information, and whether the auditor was aware of an unresolved material inconsistency with the audited financial statements or a material misstatement of fact in the other information, while helping to mitigate certain of the litigation risks discussed in Appendix D. This reporting is illustrated in the context of an unqualified auditor's report in Appendix C, and is addressed by paragraphs 13 and 14 in Appendix B.

***Other Information Documentation Requirements***

The proposed other information standard does not provide guidance regarding the nature and extent of documentation that would be required with respect to the fulfillment of the auditor's performance responsibilities. The expansion to a "read and evaluate" performance responsibility could expand the auditor's efforts to document the procedures performed, including documenting the source of each qualitative or quantitative statement or number (irrespective of whether it relates to the financial statements). Our recommendations above will assist in focusing the auditor's documentation efforts, by more clearly articulating the auditor's performance requirements, outside reading the other information, to material other information directly related to the audited financial statements. However, to promote consistency in practice, we recommend that the PCAOB provide guidance within the other information standard on how the auditor should document the procedures performed addressing other information.

[19] AU 550, paragraph 5.

***Scope of Other Information***

The proposed other information standard defines other information broadly as information in the annual report, other than the audited financial statements and the related auditor's report, and includes documents contained in the list of exhibits to[20] – and information incorporated by reference in – the annual report.[21] We believe auditors would benefit from clarification regarding what exhibits would fall within the scope of the auditor's performance responsibilities. For instance, certain exhibits (e.g., plan(s) of acquisition or material contracts) may have been subject to audit procedures due to their relevance to the audit of the financial statements, and it may not be appropriate to subject these exhibits to the procedures within the proposed other information standard.

Further, the proposed other information standard would require the auditor to evaluate other information included in the proxy statement, which may not be filed until 120 days after year end.[22] It is unclear how this requirement can be applied in practice, as this information may not be prepared or available until after the respective Form 10-K is filed, and we do not believe it would be appropriate for the auditor to conclude in the auditor's report on information that is not available at the time the auditor's report is issued. Further, it is unclear from the proposed other information standard what impact the auditor's responsibility to perform certain procedures on this other information would have on the previously filed auditor's report. For example, when the proxy statement is filed subsequent to the Form 10-K, is the auditor required to provide a dual-dated audit opinion to reflect the performance of the required procedures on the other information in the proxy statement, subsequent to the issuance of the initial auditor's report?

We believe that describing the auditor's performance responsibilities in the auditor's report, rather than stating a conclusion, will help mitigate some of the scope matters discussed above. However, if the Board does not agree with the suggested changes, and requires a conclusion in the auditor's report, we believe the final other information standard should either exclude documents that do not exist at the date of the auditor's report (including the proxy statement) or clarify the auditor's reporting responsibilities for this information, including the impact on the previously issued auditor's report.

## III. Auditor Tenure

As noted in the proposal, the PCAOB has not found a correlation between audit quality and auditor tenure.[23] We believe that including auditor tenure in the auditor's report would create the false impression that such a correlation exists and would give undue prominence to this information. Accordingly, we do not believe that auditor tenure should be included in the auditor's report.

However, we do support other ways of making auditor tenure more transparent. For example, as noted in a recent study, a growing number of audit committees of Fortune 100 companies have decided to disclose the tenure of their auditors.[24] The CAQ, in collaboration with several governance organizations, encouraged all audit committees to consider such disclosures in a recent "Call to Action."[25]

Additionally, the PCAOB could require auditors to provide this information on the PCAOB's Form 2,[26] which would be a more appropriate place for this disclosure than the auditor's report given the lack of nexus between auditor tenure and audit quality.

## IV. Auditor's Unqualified Report and Clarifying Language Changes

The CAQ joins the Board in recognizing the value of the "pass/fail" opinion in the auditor's report. We also believe that standardized language in the auditor's report represents a significant benefit to financial statement users as it serves to narrow the expectation gap through an enhanced understanding of the auditor's role and responsibilities, the audit process, and responsibilities of others in the financial reporting supply chain. Standardized language also promotes consistency in practice across auditors' reports, because it serves to mitigate potential financial statement user misunderstanding that could occur through the use of inconsistent language.

***Basic Elements***

We appreciate the Board's consideration of input received on the Concept Release related to clarifying language and we support proposed changes to enhance the wording of the auditor's report in relation to independence and the auditor's responsibilities regarding the notes to the financial statements and material misstatement, whether due to error or fraud. We also support proposed changes to better align the description of the nature of an audit with the Board's risk assessment standards.

We agree with the Board's decision not to require that the basic elements appear in a specific order in the auditor's report, other than the requirement that CAMs follow the opinion and any explanatory paragraphs. We do, however, recommend requiring the use of consistent paragraph captions regarding the basic elements of the auditor's report (e.g., the introduction, the basis of opinion, and the opinion on the financial statements), as such captions will assist financial statement users in better understanding the auditor's report.

We do not, however, support addressing the auditor's report to parties other than shareholders and the board of directors (or an equivalent body). As noted in Appendix D, we believe this would create additional litigation risk and would not improve the communicative value of the auditor's report.

***Addition of Clarifying Language to the Standard Auditor's Report***

The CAQ suggests that the PCAOB consider incorporating into its final auditor reporting standard five elements of clarifying language that are generally consistent with the IAASB's exposure draft[27] and with suggestions we provided in our 2011 letters to the PCAOB.[28] We continue to believe that these changes would enhance users' understanding of the auditor's role and responsibilities, the audit process, and the responsibilities of others in the financial reporting supply chain, and would promote consistency of auditor reporting globally. These additional elements take on added importance in the context of the contemplated changes to the auditor's report related to CAMs and other information.

1. *Management and Audit Committee Responsibilities* - Provide an expanded discussion covering management and the audit committee's responsibilities for the financial statements.
2. *Auditor's Responsibility for the Financial Statements* - Explicitly identify that the auditor is responsible for expressing an opinion on the financial statements "taken as a whole" when referring to those financial statements throughout the auditor's report.
3. *Reasonable Assurance* - Describe what is meant by the term "reasonable assurance."
4. *Professional Judgment and Professional Skepticism* - Highlight the necessity of using professional judgment in assessing audit risk, selecting audit procedures, and considering the issuer's internal control over financial reporting when responding to such risks. State that the auditor is responsible for maintaining professional skepticism throughout the planning and performance of the audit.
5. *Audit Evidence* - Refer to "the procedures performed and the audit evidence obtained" as providing the reasonable basis for an audit opinion.

[27] See IAASB ED, illustrative auditor's report on pages 13 through 16.
[28] See CAQ comment letters to the PCAOB dated September 30, 2011 (link) and June 28, 2011 (link).

Appendix C illustrates these proposed changes in the context of an auditor's unqualified report.

## V. Applicability

*Critical Audit Matters*

We believe that auditors of brokers and dealers, investments companies, and employee benefit plans (i.e., employee stock purchase, savings, and similar plans) should not be subject to the identification, communication, and documentation of critical audit matters under the proposed auditor reporting standard. Benefit plans and registered investment companies are typically designed for a specified purpose and, as a result, would likely have similar critical audit matters. For example, CAMs for these entities would likely include auditing hard-to-value investments. There are already extensive disclosure requirements regarding the fair value of investments pursuant to Accounting Standards Codification 820, *Fair Value Measurement*. We believe that financial statement users understand that financial instrument fair value issues are important to both the preparation and audit of such financial statements. We question whether the inclusion of CAMs in the audit reports for these entities would add much value.

In addition, as noted in the PCAOB Release, the ownership of brokers and dealers is primarily closely held (per the PCAOB's Office of Research and Analysis, approximately 75% of the brokers and dealers have five or fewer direct owners), and the direct owners are generally part of the entity's management. Accordingly, we believe that requiring the auditors of these entities to communicate critical audit matters would not provide investors or other financial statements users with additional relevant information to justify the incremental cost.

*Other Information*

In our view, brokers and dealers and employee benefit plans should be excluded from the scope of the proposed other information standard. We believe that the compliance or exemption report required to be filed by brokers and dealers under Exchange Act Rule 17a-5[29] and required to be reported on by auditors under the *Standards for Attestation Engagements Related to Broker and Dealer Compliance or Exemption Reports Required by the U.S. Securities and Exchange Commission*[30] provides users of their financial statements with sufficient information to make any additional reporting by the auditor for such entities under the proposed other information standard unnecessary.

Employee benefit plans that file a Form 11-K with the SEC are also required to file their financial statements and auditor's report with the U.S. Department of Labor, which requires an audit conducted in accordance with U.S. generally accepted auditing standards. Requiring employee benefit plan audits to be subject to the scope of the proposed other information standard could create the potential for two very different auditor's reports to be issued for the same plan. Moreover, employee benefit plans that file a Form 11-K contain a limited amount of other information, which is not the predominant source of information used by plan participants to make investment decisions.

*Emerging Growth Companies*

We believe that both the proposed auditor reporting standard and the proposed other information standard should be applicable to emerging growth companies (EGCs). As we have noted previously,[31] certain financial reporting risks can be more prevalent with EGCs than other public companies because of the size, nature, and complexity of their business model, capital structure, business processes and controls, and regulatory environment.

## VI. Cost-Benefit Considerations

While there are clear benefits to the Board's proposal, there will be added costs and implementation challenges associated with a project of this magnitude. We have offered suggested changes to the proposal that we believe will retain or increase the benefits expected to be realized by the proposal, while helping to reduce the associated costs.

*Critical Audit Matters*

Our approach streamlines the auditor's process for determining CAMs and related documentation requirements by leveraging the auditor's required communications with the audit committee under AS 16. A key benefit of our approach is that it is designed around how audits are currently conducted, how matters are communicated to the audit committee, and how matters are documented in the audit workpapers, which will reduce the incremental effort and costs associated with application of the final auditor reporting standard.

As anticipated by the Board,[32] we believe that auditor reporting of CAMs will result in additional effort by the auditor, as well as by those who prepare and review a company's financial statements (e.g., management and the audit committee). Much of this work will occur at the end of the audit, when remaining issues are being resolved and final reviews are occurring. We anticipate that our field-testing effort will provide some insights into what effect this might have on the audit, but we also encourage the Board to conduct a robust analysis of the costs and benefits of the proposed auditor reporting standard that addresses the potential effect on key stakeholders including companies, audit committees, and investors.

*Other Information*

As discussed above, the proposed other information standard requires the auditor to evaluate other information based on relevant audit evidence obtained and conclusions reached during the audit. The proposed other information standard does not differentiate between information that is directly related to the financial statements and information that is not. Without making these distinctions, we believe the proposed other information standard would result in significant incremental effort and cost, particularly as it relates to non-financial information, which would far exceed the benefits. We believe our recommendations build upon the benefits that exist today with a lower impact on costs.

The proposed other information standard would require an auditor to conclude in each auditor's report whether the auditor identified a material inconsistency or a material misstatement of fact in the other information.[33] We believe that auditor reporting solely with respect to unresolved material inconsistencies with the financial statements or material misstatements of fact in the other information, coupled with a clear description of the auditor's responsibilities related to other information, will achieve the desired transparency without an unnecessary increase in litigation risks.

We believe it will be essential for investors and other financial statement users to have an understanding of the effect the proposed other information standard will have on the auditor's current responsibilities related to other information, audit costs, and the company's financial reporting process. Our field-testing effort is expected to help inform this discussion, but we encourage the PCAOB to carefully consider these factors in its analysis of the costs and benefits of the proposed other information standard.

*Legal Considerations*

The proposal requests comments on the liability risks associated with the proposal, noting in respect of both CAMs and other information that "the auditor would be making new statements in the auditor's report" which

[32] See the proposal page 17.
[33] See the proposed other information standard paragraph 14.

could raise potential liability concerns or considerations.[34] The risk of increased liability that accompanies the form of report contemplated by the proposal is real and substantial, as described further in Appendix D. We believe that our proposed changes to the PCAOB's approach would help to mitigate the potentially significant additional liability exposure inherent in the proposal, while at the same time providing more information to financial statement users and resulting in auditing standards that can be applied consistently.

****

We fully support the Board's efforts to enhance the information communicated by the auditor in the auditor's report and we embrace calls for change. We appreciate the opportunity to comment on the proposal and would be pleased to discuss our comments or answer any questions that the PCAOB staff or the Board may have regarding the views expressed in this letter.

Sincerely,

Cynthia M. Fornelli

**Appendix A – Illustration of Suggested Changes to the Proposed Auditor Reporting Standard and Examples**

Note: *This appendix reflects our suggested changes to paragraphs 7 through 14 of the proposed auditor reporting standard, and example CAM reporting to illustrate these changes.*

**Critical Audit Matters**

*Determination of Critical Audit Matters*

7. The auditor must determine whether there are any critical audit matters in the audit of the current period's financial statements based on the results of the audit or evidence obtained.

Note: It is expected that in most audits, the auditor would determine that there are critical audit matters.

8. As a first step in the determination of critical audit matters (see paragraph 9), the auditor identifies matters that are significant to the audit of the financial statements, and communicated to the audit committee pursuant to Auditing Standard No. 16 ("significant audit matters"). In identifying significant audit matters, the auditor should take into account the following general factors, as well as other factors specific to the audit:

a. The degree of subjectivity involved in determining or applying audit procedures to address the matter or in evaluating the results of those procedures;
b. The nature and extent of audit effort required to address the matter;
c. The nature and amount of available relevant and reliable evidence regarding the matter or the degree of difficulty in obtaining such evidence;
d. The severity of control deficiencies identified relevant to the matter, if any;[35]
e. The degree to which the results of audit procedures to address the matter resulted in changes in the auditor's risk assessments, including risks that were not identified previously, or required changes to planned audit procedures, if any;
f. The nature and significance, quantitatively or qualitatively, of corrected and accumulated uncorrected misstatements related to the matter, if any;
g. The extent of specialized skill or knowledge needed to apply audit procedures to address the matter or evaluate the results of those procedures, if any; and
h. The nature of consultations outside the engagement team regarding the matter, if any.

9. Critical audit matters are those significant audit matters that, in the auditor's judgment, a) were material to the financial statements, b) involved the most challenging, subjective, or complex auditor judgments, posed the greatest challenge to the auditor in obtaining sufficient appropriate audit evidence, or posed the greatest challenge to the auditor in forming an opinion on the financial statements, and c) resulted in the most significant interaction (in terms of nature or extent) with the audit committee.

In general, the greater the number of matters thought to represent critical audit matters, the less useful the auditor's communication of such matters may be. If an auditor has initially identified a large number of matters for potential communication in the auditor's report, the auditor may consider reassessing whether each of these matters meets the definition of a critical audit matter.

[35] Other PCAOB standards provide auditing and reporting requirements related to the company's internal control over financial reporting. See Auditing Standard No. 5, Auditing Standard No. 12, and AU section 325, *Communications About Control Deficiencies in an Audit of Financial Statements.*

*Communication of Critical Audit Matters*

10. The auditor must communicate in the auditor's report critical audit matters relating to the audit of the current period's financial statements or state that the auditor determined that there are no critical audit matters.

> Note: When the current period financial statements are presented on a comparative basis with those of one or more prior periods, the auditor should consider communicating critical audit matters relating to the prior periods when (1) the prior period's financial statements are made public for the first time, such as in an initial public offering, or (2) issuing an auditor's report on the prior period's financial statements because the previously issued auditor's report could no longer be relied upon.

11. For each critical audit matter to be communicated in the auditor's report, the auditor must:

a. Identify the critical audit matter;
b. Describe the principal consideration(s) that led the auditor to conclude that the matter was a critical audit matter and, if the auditor considers it necessary as part of the explanation, include a brief description of its effect on the audit; and
c. Refer to the relevant financial statement accounts and disclosures that relate to the critical audit matter, when applicable.

Each description should be succinct, objective, and fact-based. Language that could be viewed as disclaiming or qualifying the auditor's opinion on the financial statements due to the existence of a critical audit matter is not appropriate and must not be used. Additionally, the audit opinion must not convey that the auditor is providing a separate opinion or conclusion on critical audit matters.

In describing the principal consideration(s) that led the auditor to conclude that the matter was a critical audit matter, the auditor should avoid providing information about the company's financial statements and other financial information or its system of internal control over financial reporting that is the responsibility of the company's management to consider for disclosure unless, in the auditor's judgment, such information is necessary to the auditor's description and providing such information is not prohibited by law or regulation. In such circumstances, the auditor can encourage management to make relevant disclosures rather than the auditor being the source of such information.

*Language Preceding Critical Audit Matters in the Auditor's Report*

12. The following language, including the section title "Critical Audit Matters," should precede critical audit matters communicated in the auditor's report:

> *Critical Audit Matters*
>
> The standards of the PCAOB require that we communicate in our report critical audit matters relating to the audit of the current period's financial statements or state that we determined that there are no critical audit matters. Critical audit matters are matters that, in our judgment, a) were material to the financial statements, b) involved our most challenging, subjective, or complex judgments, posed the greatest challenge to us in obtaining sufficient appropriate audit evidence, or posed the greatest challenge to us in forming an opinion on the financial statements, and c) resulted in the most significant interaction (in terms of nature or extent) with the audit committee. Our audit included performing procedures designed to address the risks of material misstatement associated with the matter(s) described below. Such procedures were designed in the context of our audit of the financial statements, taken as a whole, and do not provide a separate opinion on individual accounts or disclosures. The

communication below is not intended to identify all matters we considered to be significant to our audit. Other matters, that we determined were not critical audit matters, were discussed with the audit committee during the course of our audit.

Note: If the auditor communicates critical audit matters for prior periods, the language preceding the critical audit matters should be modified to indicate the periods to which the critical audit matters relate.

13. In situations in which the auditor determines that there are no critical audit matters, the auditor should include the following language, including the section title “Critical Audit Matters,” in the auditor’s report:

*Critical Audit Matters*

The standards of the PCAOB require that we communicate in our report critical audit matters relating to the audit of the current period’s financial statements or state that we determined that there are no critical audit matters. Critical audit matters are matters that, in our judgment, a) were material to the financial statements, b) involved our most challenging, subjective, or complex judgments, posed the greatest challenge to us in obtaining sufficient appropriate audit evidence, or posed the greatest challenge to us in forming an opinion on the financial statements, and c) resulted in the most significant interaction (in terms of nature or extent) with the audit committee. We determined that there are no critical audit matters. Other matters, that we determined were not critical audit matters, were discussed with the audit committee during the course of our audit.

*Documentation of Critical Audit Matters*

14. In accordance with Auditing Standard No. 3, the auditor must document the determination of critical audit matters. Auditing Standard No. 3 requires audit documentation to be prepared in such detail to provide a clear understanding of its purpose, source, and the conclusions reached. To provide sufficient detail for a clear understanding of the conclusions reached regarding the determination of critical audit matters, the audit documentation must contain sufficient information to enable an experienced auditor, having no previous connection with the engagement, to understand the basis for the auditor’s:

a. Identification of matters communicated to the audit committee that were significant audit matters; and
b. Determination of which significant audit matters were critical audit matters.

**<u>Illustrative Examples of CAM Reporting</u>**

The revised CAM examples below are based on the same facts provided by the PCAOB on pages A5-65 through A5-78 of the proposal. The reporting in these revised examples is consistent with the approach suggested above. In this regard, we believe the suggested communication is fulsome and informative. The circumstances in each example may not lend themselves to an auditor determining to provide a further description of the CAM’s effect on the audit. However, we offer, in the bracketed text, what such further disclosure might look like. Such illustrations may be helpful in developing language for situations where an auditor’s discussion of a CAM’s effect on the audit might, in the auditor’s judgment, be more relevant. As we review the results of the field-testing effort, we will consider developing one or more additional example CAMs to better illustrate when the auditor might describe the CAM’s effect on the audit in accordance with paragraph 11(b) above.

As required by paragraph 12 above, the text directly below would precede the critical audit matters communicated in the auditor's report:

The standards of the PCAOB require that we communicate in our report critical audit matters relating to the audit of the current period's financial statements or state that we determined that there are no critical audit matters. Critical audit matters are matters that, in our judgment, a) were material to the financial statements, b) involved our most challenging, subjective, or complex judgments, posed the greatest challenge to us in obtaining sufficient appropriate audit evidence, or posed the greatest challenge to us in forming an opinion on the financial statements, and c) resulted in the most significant interaction (in terms of nature or extent) with the audit committee. Our audit included performing procedures designed to address the risks of material misstatement associated with the matter(s) described below. Such procedures were designed in the context of our audit of the financial statements, taken as a whole, and do not provide a separate opinion on individual accounts or disclosures. The communication below is not intended to identify all matters we considered to be significant to our audit. Other matters, that we determined were not critical audit matters, were discussed with the audit committee during the course of our audit.

**Example 1 — Allowance for Sales Returns**

The Company developed a new on-line sales channel, which could have a significantly different return experience than sales through its more established retail stores. In addition, the Company simultaneously lengthened its return policy and developed new models with different assumptions to reflect these changes in its estimate of the allowance for sales returns, which is a key element in determining revenue.

We determined that our evaluation of the Company's allowance for sales returns was a critical audit matter in the audit of the Company's financial statements as of and for the fiscal year ended January 31, 2013. This was due to the changes in the Company's distribution channel and sales return policy and the Company's lack of historical experience with the new on-line sales channel, which resulted in a high degree of measurement uncertainty in estimating the allowance for sales returns. The Company's accounting policy for sales returns is discussed in Note 1 to the financial statements.

[Our audit involved challenging and subjective judgments in evaluating whether the Company had a sufficient basis to make a reasonable estimate of sales returns. We designed and performed procedures to test management's assumptions and the data underlying the Company's estimate of future sales returns related to the new on-line sales channel. Our procedures included, among others, assessing the reasonableness of management's judgments regarding the effect of changes in the Company's return policies and practices, as well as the changes in economic and buying trends that affect customer behavior.]

**Example 2 — Valuation Allowance for Deferred Tax Assets**

The Company recorded a deferred tax asset balance of $XXX million related to federal net operating loss carryforwards, as of June 30, 2013. In recognizing its deferred tax asset balance, the Company concluded that no valuation allowance was required. The Company exercised significant judgment in evaluating the realizability of its deferred tax assets, which included consideration of the losses in recent periods and an unexpected cost increase in a critical product component in 2013. The Company's analysis also considered other evidence, such as the expected timing of reversals of existing temporary differences, forecasts of future taxable income, and tax planning strategies.

We determined that our assessment of the Company's evaluation of the realizability of its deferred tax asset balance was a critical audit matter in the audit of the Company's financial statements as of and for the year ended June 30, 2013. This was due to the complexity and subjectivity involved in management's judgments regarding the reasonableness of the weight given to the positive and negative evidence, including the data underlying management's forecasts of its future taxable income. The Company's accounting policy and its evaluation of the realizability of deferred tax assets are discussed in Notes 2 and 12 to the financial statements.

[Our audit involved challenging management's estimate of the realizability of its deferred tax assets, including procedures to evaluate the reasonableness of the Company's forecasts of future taxable income. This included evaluating the sensitivity of the Company's forecasts based on the general economic environment, the Company's industry and competitive conditions, and the length of time associated with the Company's forecasts. This also included an evaluation of the timing and potential impact of product enhancements and new product introductions, the effect of eliminating certain product lines, and the expectation regarding the level of product recall and relocation costs.]

**Example 3 — Fair Value of Fixed Maturity Securities Held as Investments That are Not Actively Traded**

Approximately 35% of the Company's investment portfolio is comprised of private label mortgage-backed securities and collateralized loan obligations. The process to determine the fair value of these investments primarily utilizes in-house valuation models, discounted cash flow methodologies, or other techniques that utilize inputs that cannot be derived from, or corroborated by, currently observable data, including credit spreads that reflect specific credit-related issues.

We determined that the valuation of the Company's private label mortgage-backed securities and collateralized loan obligations was a critical audit matter in the audit of the Company's financial statements as of and for the year ended December 31, 2012. This was because of the high degree of estimation uncertainty due to the lack of observable inputs used in determining the fair value of these investments. The Company's disclosures related to the nature and fair value of these securities and the methods the Company used to determine those fair values are in Note 6 to the financial statements.

[Our audit involved evaluating the reasonableness of the Company's valuation methodologies and whether they were consistently applied. We performed tests of the Company's fair value determination by (a) testing management's significant assumptions, the Company's valuation model, and the underlying data, (b) developing independent fair value estimates for corroborative purposes, and (c) considering subsequent events and transactions.]

**Appendix B – Illustration of Suggested Changes to the Proposed Other Information Standard**

Note: *This appendix reflects our suggested changes to the Objectives, Auditor's Responsibilities, and Reporting in the Auditor's Report sections of the proposed other information standard.*

**Objectives**

2. The objectives of the auditor are:

a. To perform certain limited procedures on other information, and determine whether he or she is aware of (1) a material inconsistency between amounts or information, or the manner of their presentation, and the audited financial statements ("material inconsistency with the audited financial statements"); (2) a material misstatement of fact in the other information; or (3) both, and if so, to respond appropriately; and

b. When issuing an auditor's report, to communicate in the auditor's report:

   i. The auditor's responsibilities to perform certain limited procedures on other information;
   ii. In the event the auditor becomes aware, based on the limited procedures performed, that the other information contains a material inconsistency with the audited financial statements, a material misstatement of fact, or both, that has not been appropriately revised, the auditor is required to describe the inconsistency or misstatement in the auditor's report; and
   iii. That the auditor has not audited or reviewed the other information.

**Auditor's Responsibilities**

3. The auditor should read the other information, and with respect to material other information directly related to the audited financial statements, perform the following additional procedures:

a. Compare the amounts in the other information, and the consistency of the manner of their presentation, that are the same as, or provide greater detail about, the amounts in the financial statements, to (1) the amounts in the financial statements, or (2) accounting records that are subject to the audit, or have been derived directly from such accounting records by analysis or computation;

b. Compare qualitative statements that represent, or provide greater detail about, information in the financial statements (e.g., critical accounting estimates, or the description of off-balance sheet arrangements), to (1) the financial statements, or (2) accounting records that are subject to the audit, or have been derived directly from such accounting records by analysis or computation;

c. Recalculate the mathematical accuracy of the amounts in the other information that are calculated using amounts in (1) the other information, (2) the financial statements, or (3) accounting records that are subject to the audit, or have been derived directly from such accounting records by analysis or computation.

   Note: For example, the auditor would recalculate the amounts when the formula is described in the annual report, the formula is generally understood, or the recalculation can be performed without referring to a formula. Amounts, such as totals or percentages, that are calculated using simple mathematical operations, such as addition or division, ordinarily can be recalculated without referring to a formula. If the auditor needs to refer to a formula for the recalculation of an amount, such as for return on capital employed, the auditor would be required to recalculate the amount only when the formula is provided, or described in the annual report. However, the auditor would not be required to evaluate the appropriateness or sufficiency of the formula used in the calculation.

4. In reading other information not directly related to the audited financial statements, if, based on knowledge gained in the course of conducting the audit, the auditor becomes aware of a potential material misstatement of fact in the other information, the auditor should perform the procedures in paragraph 5.[36]

5. If, based on the procedures performed in paragraphs 3 and 4, the auditor becomes aware of a potential material inconsistency with the audited financial statements, a potential material misstatement of fact in the other information, or both, the auditor should discuss the matter with management. The auditor also should perform additional procedures, as necessary, to determine whether there is a material inconsistency with the audited financial statements, a material misstatement of fact in the other information, or both.

**Reporting in the Auditor's Report**

13. When issuing an auditor's report, the auditor must include, in a separate section of the auditor's report titled "The Auditor's Responsibilities Regarding Other Information," the following:

a. A statement that, in order to issue an audit report under the standards of the Public Company Accounting Oversight Board ("PCAOB"), the auditor is required to perform certain limited procedures on other information and determine whether he or she is aware of a material inconsistency with the audited financial statements, a material misstatement of fact in the other information, or both, that has not been appropriately revised;
b. Identification of the annual report that contains the other information, and the audited financial statements and the auditor's report, by referring to the SEC Exchange Act form type and the period end date of the financial statements;
c. A statement that the limited procedures included reading the other information, and with respect to material other information directly related to the audited financial statements, comparing the other information to (1) the financial statements or (2) accounting records that are subject to the audit or have been derived directly from such accounting records by analysis or computation, and, where applicable, recalculating the mathematical accuracy of the other information;
d. A statement that these limited procedures do not constitute an audit or review of the other information;
e. A statement that in the event the auditor becomes aware, based on the limited procedures performed, that the other information contains a material inconsistency with the audited financial statements, a material misstatement of fact, or both, that has not been appropriately revised, the auditor is required to describe the inconsistency or misstatement, or both, in the auditor's report; and
f. In situations where the auditor has become aware of a material inconsistency with the audited financial statements, a material misstatement of fact in the other information, or both, that has not been appropriately revised, the auditor should provide a description of the material inconsistency, the material misstatement of fact, or both.

14. The following is an example of "The Auditor's Responsibilities Regarding Other Information" section of the auditor's report:

a. Illustrative language for paragraphs 13.a.– e.:

*The Auditor's Responsibilities Regarding Other Information*

In order to issue an audit report on the Company's financial statements, in accordance with the standards of the PCAOB, we are required to perform certain limited procedures on other information, included in the annual report on [SEC Exchange Act form type] filed with the SEC that contains both the [period end date] financial statements and our audit report on those financial statements, and determine whether we are aware of a material inconsistency

[36] This represents paragraph 4(c) of the proposed other information standard, incorporated into a separate paragraph.

with the audited financial statements, a material misstatement of fact in the other information, or both. These limited procedures do not constitute an audit or review of the other information. Such procedures include reading the other information and, with respect to the material other information directly related to the audited financial statements, comparing it to (a) the financial statements or (b) accounting records that are subject to the audit or have been derived directly from such accounting records by analysis or computation, and, where applicable, recalculating the mathematical accuracy of the other information. In the event we become aware, based on the limited procedures performed, that the other information contains a material inconsistency with the audited financial statements, a material misstatement of fact, or both, that has not been appropriately revised, we are required to describe the inconsistency, misstatement, or both, in our audit report.

b. Illustrative language for paragraph 13.f. when the auditor has become aware of a material inconsistency with the audited financial statements, a material misstatement of fact in the other information, or both, that has not been appropriately revised:

Based on performing certain limited procedures, we became aware of [a material inconsistency with the audited financial statements, a material misstatement of fact in the other information, or both] that has not been appropriately revised. [Describe the material inconsistency with the audited financial statements, the material misstatement of fact in the other information, or both.]

**Appendix C – Illustration of an Unqualified Auditor's Report**

*Note:* *This appendix illustrates our suggested changes to the Illustrative Auditor's Unqualified Report on pages A1-15 and A1-16 of the proposed auditor reporting standard. Suggested additions are underlined; suggested deletions are struck through.*

**Report of Independent Registered Public Accounting Firm**

To the shareholders and board of directors of X Company

Introduction

We have audited the accompanying balance sheets of X Company (the "Company") as of December 31, 20X2 and 20X1, the related statements of operations, stockholders' equity, and cash flows for each of the three years in the period ended December 31, 20X2, and the related notes (collectively referred to as the "financial statements"). ~~These financial statements are the responsibility of the Company's management.~~

We are a public accounting firm registered with the Public Company Accounting Oversight Board ("PCAOB") (United States) and are required to be independent with respect to the Company in accordance with the United States federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission ("SEC") and the PCAOB. ~~We or our predecessor firms have served as the Company's auditor since [year].~~

Management and Audit Committee Responsibilities for the Financial Statements

Management is responsible for the preparation and fair presentation of these financial statements in accordance with [applicable financial reporting framework], and for establishing and maintaining adequate internal control over financial reporting to enable the preparation of financial statements that are free of material misstatement, whether due to error or fraud.

The audit committee oversees the Company's financial reporting process and its internal control over financial reporting, areas for which management has the primary responsibility. Additionally, the audit committee is directly responsible for our appointment and compensation, and the oversight of our work (including resolution of any disagreements with management regarding financial reporting) for the purpose of preparing or issuing an audit report or related work.

Basis of Opinion

Our responsibility is to express an opinion on the Company's financial statements, taken as a whole, based on our audits. We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. In this context, reasonable assurance, although representing a high level of assurance, is not absolute and consequently an audit conducted in accordance with PCAOB standards may not always detect a material misstatement.

Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures include examining, on a test basis, appropriate evidence regarding the amounts and disclosures in the financial statements. In the course of completing our audits, the audit evidence we obtain is often persuasive rather than conclusive. The procedures selected for performance depend on our judgment, including our assessment of the risks of material misstatement of the financial statements, whether due to error or fraud. In making those risk assessments, we consider internal controls relevant to the Company's preparation and fair presentation of the financial statements in conformity with [applicable financial reporting framework] in order to design audit procedures that we believe are appropriate in the circumstances. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We maintain professional skepticism throughout the planning and performance of the audit. We believe that the procedures performed and the audit evidence obtained provide ~~our audits provide~~ a reasonable basis for our opinion.

Opinion on the Financial Statements

In our opinion, the financial statements, taken as a whole, referred to above present fairly, in all material respects, the financial position of the Company as of December 31, 20X2 and 20X1, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 20X2, in conformity with [applicable financial reporting framework].

Critical Audit Matters

The standards of the PCAOB require that we communicate in our report critical audit matters relating to the audit of the current period's financial statements or state that we determined that there are no critical audit matters. Critical audit matters are ~~those~~ matters ~~addressed during the audit~~ that, in our judgment, a) were material to the financial statements, ~~(1)~~b ) involved our most ~~difficult~~ challenging, subjective, or complex judgments,~~; (2)~~ posed the ~~most difficulty~~ greatest challenge to us in obtaining sufficient appropriate evidence,~~;~~ or ~~(3)~~ posed the ~~most difficulty~~ greatest challenge to us in forming ~~our~~ an opinion on the financial statements, and c) resulted in the most significant interaction (in terms of nature or extent) with the audit committee. ~~The critical audit matters communicated below do not alter in any way our opinion on the financial statements, taken as a whole.~~ Our audit included performing procedures designed to address the risks of material misstatement associated with the matter(s) described below. Such procedures were designed in the context of our audit of the financial statements, taken as a whole, and do not provide a separate opinion on individual accounts or disclosures. The communication below is not intended to identify all matters we considered to be significant to our audit. Other matters, that we determined were not critical audit matters, were discussed with the audit committee during the course of our audit.

[*Include critical audit matters*]

The Auditor's Responsibilities Regarding Other Information

In order to issue an audit report on the Company's financial statements in accordance with the standards of the PCAOB, we ~~evaluated whether the~~ are required to perform certain limited procedures on other information, included in the annual report on [*SEC Exchange Act form type*] filed with the SEC that contains both the December 31, 20X2 financial statements and our audit report on those financial statements, ~~contains a~~ and determine whether we are aware of a material inconsistency with the audited financial statements, a material misstatement of fact in the other information, or both. ~~Our evaluation was based on relevant audit evidence obtained and conclusions reached during the audit. We did not audit the other information and do not express an opinion on the other information. Based on our evaluation, we have not identified a material inconsistency or a material misstatement of fact in the other information.~~ These limited procedures do not constitute an audit or review of the other information. Such procedures include reading the other information and, with respect to the material other information directly related to the audited financial statements, comparing it to (a) the financial statements or (b) accounting records that are subject to the audit or have been derived directly from such accounting records by analysis or computation, and, where applicable, recalculating the mathematical accuracy of the other information. In the event we become aware, based on the limited procedures performed, that the other information contains a material inconsistency with the audited financial statements, a material misstatement of fact, or both, that has not been appropriately revised, we are required to describe the inconsistency, misstatement, or both, in our audit report.

[*Date*]

**Appendix D – Legal Considerations**

<u>Note:</u> *This appendix presents our response to the questions in the proposal regarding the liability risks associated with the proposed standards.*

The proposal notes in respect of both CAMs and other information that "the auditor would be making new statements in the auditor's report" which could raise potential liability concerns or considerations.[37] The risk of increased liability that accompanies the form of report contemplated by the proposal is real and substantial. As discussed below, any expansion of the auditor's report is almost certain to lead to additional liability exposure for the independent auditor. The proposal creates more statements that would be directly attributable to the auditor and which a financial statement user – for example, a shareholder that suffers a loss following a decline in an issuer's stock price – could claim were materially misleading or omitted required information. Accordingly, these changes are likely to lead to an increase in the number of cases being filed against issuers and their auditors generally, and an increase in the number of claims that may be asserted in any individual case.

Although it is not possible to quantify the magnitude of the incremental risk, we do believe it will be significant. We believe that our suggested changes would help to mitigate (at least, to some extent) the potentially significant additional liability exposure inherent in the PCAOB's proposal, while at the same time providing more information to financial statement users and resulting in auditing standards that can be applied consistently.

*Critical Audit Matters*

A requirement to identify and report on CAMs would increase an auditor's liability risk under both federal and state law. A user that suffers a loss in connection with his or her investment in an issuer's securities may claim that the auditor should bear some responsibility because the investor relied on statements made by the auditor about CAMs. Such a claim would most likely suggest that the auditor either (i) materially misstated a CAM or (ii) failed to include a CAM in the auditor's report. There is a risk that whatever the auditor says will be challenged after the fact – as communicating too little, or too much, or characterizing the information in the wrong way.

The liability risk presented by including a description of CAMs in the auditor's report is exacerbated by the scope of matters that would be considered in the auditor's determination of CAMs. The factors that may make an audit matter "critical" are broadly defined, and many judgments made during the course of an audit would touch on one or more of those factors. This lack of clarity will add further uncertainty to how a lawsuit will unfold, which will increase litigation costs by making early resolution difficult. The proposed requirement that auditors document matters that appear to be CAMs but are not, further adds to those risks. Our suggested changes to the proposed auditor reporting standard attempt to mitigate these risks by providing greater clarity regarding the auditor's process for determining CAMs.

This risk increases to the extent the proposed auditor reporting standard introduces novel concepts to the regulatory landscape. The concept of materiality currently underlies the liability regime under the federal securities laws, and is defined in respect of the "total mix" of information available to investors. The proposed auditor reporting standard introduces an additional concept: matters that were critical to the audit, but which (as is clear from the examples set out in the proposal) may not be "material" as that term is applied under the securities laws.[38] The changes we suggest attempt to mitigate this risk by incorporating the concept

[37] See the proposal pages A5-44 and A6-40.

[38] By way of example, the auditor in example 3 identifies a control deficiency, but not one significant enough to be a material weakness, or presumably require an adverse opinion under PCAOB Auditing Standard No. 5, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*, so it does not separately require disclosure.

of materiality in the determination of CAMs, thereby aligning the auditor's reporting model with existing concepts governing liability under the federal securities laws.

Different risks are created by the fact that someone, after the fact, can claim that there was a material misstatement or omission with respect to an item which was identified as a CAM. An investor might allege that the auditor should have said more in its reporting of CAMs, claiming that some detail known to the auditor should have been communicated, or that it was not communicated with sufficient clarity. On the other hand, the company might object that these additional details disclose a client confidence or competitive information, or might raise confidentiality concerns under other regulatory regimes (e.g., bank regulatory requirements). By requiring the auditor to describe the *principal* consideration(s) that led the auditor to conclude that a matter was a CAM, and aligning the auditor's statements about a CAM with the existing rules governing corporate disclosure, our suggested changes to the proposed auditor reporting standard help mitigate the possibility that such situations will arise.

Although we support an express provision allowing the auditor to explain the CAM's effect on the audit, if the auditor considers it necessary, we should note that this by itself could expand liability risk. Plaintiffs in federal securities fraud lawsuits are required to plead fraud "with particularity" when bringing claims under Rule 10b-5, and an inability to do so requires the dismissal of the lawsuit at the outset. A description of audit steps taken by the auditor can enable plaintiffs to support meritless claims by including these details in their pleadings, which could cause courts to hesitate in dismissing such claims. Our suggested approach helps limit this risk, but does not eliminate it. For example, where the auditor does not describe audit procedures related to the CAM(s), plaintiffs may allege instead that the description of the CAM should have been more fulsome.

*Other Information*

Two aspects of the proposed other information standard are likely to significantly increase the risk of litigation for auditors. The first aspect is the proposed wording of the new performance responsibilities. The proposed other information standard would change the "read and consider" requirement under paragraph 4 of AU 550 to a "read and evaluate" requirement, which we believe could be read to impose a substantially greater set of obligations on the auditor. Indeed, the proposal states that the Board opted for the phrase "should evaluate" because, unlike "should consider," it requires the auditor to "*come to a conclusion* based on the performance of certain procedures (emphasis added)."[39] On this basis, plaintiffs will likely allege that the word "evaluate" makes the auditor responsible for what is and is not said by the issuer in MD&A and elsewhere. We are particularly concerned that this increased obligation makes the auditor responsible not only for what the issuer discloses but also for omissions.

The second aspect is the requirement that the auditor state in the auditor's report that the auditor has not identified a material inconsistency or a material misstatement of fact in the other information, when such is the case. This affirmative statement reads as if it is an opinion or conclusion that the other information is not misleading – even though under the proposed other information standard the auditor would also state that it is not, in fact, expressing an opinion.

The U.S. Supreme Court has issued several opinions addressing Rule 10b-5 secondary liability (which in the past was often applied to auditors). Beginning with *Central Bank*[40] in 1994 and extending more recently to *Janus Capital Group v. First Derivative Traders*,[41] the Court has made clear that persons cannot be held liable under Section 10(b) and Rule 10b-5 unless they actually "make" a statement. These decisions make clear that while an auditor may be liable for misstatements in its audit reports on financial statements or internal control, its liability is confined to such reports and cannot be extended to other documents or

[39] See the proposal page A6-15.
[40] *Central Bank of Denver v. First Interstate Bank of Denver*, 511 U.S. 164 (1994).
[41] *Janus Capital Group v. First Derivative Traders*, 131 S. Ct. 2296 (2011).

information as to which it has not opined. Under the PCAOB's proposed other information standard, however, the auditor would make affirmative statements about the other information, increasing the likelihood that allegations of liability would be made.

Even under our suggested approach, we note the auditor will still face increased risk for having made a statement about the other information. This is because the auditor's report would provide a description of the auditor's responsibilities for the other information (e.g., comparing the other information to the financial statements or the accounting records). Accordingly, the potential for increased litigation would remain. For example, a plaintiff might allege that the auditor knew the company misstated a material fact in MD&A; that the auditor failed to take adequate steps to correct that misstatement; and that, from the description of the auditor's responsibilities in the auditor's report, a reasonable investor would conclude that the auditor affirms that no such misstatement existed. Our suggested changes, in short, may reduce the additional liability risk, but would not eliminate it.

*Additional Addressees in the Auditor's Report*

The proposed auditor reporting standard would require addressees of the auditor's report to include "(1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body."[42] The proposal further suggests, however, that the report "could" be addressed to others, such as bondholders.[43] It is unclear whether the PCAOB is contemplating requiring the auditor to consider whether it must address the auditor's report to others (beyond shareholders and the board), or is merely suggesting that auditors consider doing so depending on the circumstances.

While many auditing firms currently address their auditor's reports to shareholders and the board, we do not see a basis for requiring – or even suggesting – that the report be addressed to additional parties. Any such addition to the addressees might permit such parties to assert that they are owed a duty of care by the auditor, which would expand the auditor's liability risk.

Under applicable state law, an audit firm and the client who engages it have a relationship of privity, which gives the client legal rights that others do not have. However, a particular third party may, under the law in some states, be able to establish the existence of a relationship with the auditor giving it the same rights as a client by demonstrating (1) that the audit firm knew the third party's identity and that it was relying on the auditor's report, and (2) conduct by the auditor linking it to the third party and its reliance. Even though the addressing of the auditor's report is not intended to create such a relationship, a court may find that one in fact existed based, at least in part, on including a third party as an addressee of the report, thereby creating undue incremental litigation risk without increasing the value of the report to users.[44] Adding addressees to the auditor's report will not affect those with access to it: the auditor's report is a general use report available to all capital market participants – shareholders, bondholders, rating agencies, analysts, and others – that the issuer can distribute without restriction, and to which third parties have ready access via the issuer's SEC filings.

**Re: PCAOB Rulemaking Docket Matter No. 034:** *Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments*

Dear Office of the Secretary:

The Center for Audit Quality (CAQ) is an autonomous public policy organization dedicated to enhancing investor confidence and public trust in the global capital markets. The CAQ fosters high quality performance by public company auditors, convenes and collaborates with other stakeholders to advance the discussion of critical issues requiring action and intervention, and advocates policies and standards that promote public company auditors' objectivity, effectiveness, and responsiveness to dynamic market conditions. Based in Washington, D.C., the CAQ is affiliated with the American Institute of Certified Public Accountants.

As noted in the CAQ's December 11, 2013 comment letter[1] to the PCAOB regarding the auditor's reporting model and the auditor's responsibilities regarding other information (collectively, the proposal), we have initiated a coordinated and collaborative effort with members of the public auditing profession to field-test the proposal in order to help inform our views and our comments to the PCAOB. These field testing efforts were initiated during the fourth quarter of 2013 and are expected to conclude in the next two to three months. We plan to analyze the results and prepare a summary of findings near the end of May 2014.

1155 F Street NW, Suite 450, Washington, DC 20004, (202) 609-8120 www.thecaq.org

We continue to hope that we will be able to share meaningful insights related to this effort in advance of, or in connection with, the PCAOB's expected spring 2014 roundtable on the auditor's reporting model. We respectfully request that the PCAOB consider the progress of these efforts in developing the timing of the planned roundtable, as we believe the roundtable discussions would be greatly informed by the field testing described above. If the timing of the roundtable does not accommodate the incorporation of the profession's field testing results, we would be happy to present these insights at the PCAOB's Standing Advisory Group meeting currently scheduled for June 24 and 25, or any other venue the Board would find helpful.

We continue to fully support the Board's efforts to enhance the information communicated by the auditor in the auditor's report and we would be pleased to answer any questions that the PCAOB staff or the Board may have regarding the profession's field testing efforts.

Sincerely,

Cynthia M. Fornelli

**Re: PCAOB Rulemaking Docket Matter No. 034:** *Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments*

Dear Office of the Secretary:

The Center for Audit Quality ("CAQ") is an autonomous public policy organization dedicated to enhancing investor confidence and public trust in the global capital markets. The CAQ fosters high quality performance by public company auditors, convenes and collaborates with other stakeholders to advance the discussion of critical issues requiring action and intervention, and advocates policies and standards that promote public company auditors' objectivity, effectiveness and responsiveness to dynamic market conditions. Based in Washington, D.C., the CAQ is affiliated with the American Institute of Certified Public Accountants.

The CAQ continues to support the Public Company Accounting Oversight Board's ("PCAOB" or "the Board") efforts to update and enhance the auditor's reporting model. In our January 30, 2014 and December 11, 2013 comment letters submitted in response to the PCAOB's proposed auditor reporting standard and proposed other information standard (collectively, the "proposals"), we indicated that we would share with the PCAOB the results of a collaborative effort by members of the public accounting profession to field test certain aspects of the proposals. This field-testing initiative has been completed, and we have prepared the following summary of the observations and related recommendations for the PCAOB's consideration. We have organized our letter into the following sections:

I. Executive Summary
II. Objectives of Field Testing
III. Composition of Field Testing
IV. Critical Audit Matters Field Testing
V. Other Information Field Testing
VI. Conclusion
VII. Appendices
   A. Distribution of Market Capitalization for CAM Field Testing
   B. Primary Industry Classification for CAM Field Testing
   C. Potential CAMs by Market Capitalization Group

We believe the information in this letter may be helpful to the PCAOB as it continues to evaluate and develop the proposals.

## I. Executive Summary

The CAQ commends the PCAOB for considering the results of outreach conducted and the comment letters received from the CAQ and others in advancing the proposals. As described in greater detail below, results from the field-testing initiative identified areas within the proposals where there may be an opportunity for revision and refinement.

With respect to critical audit matters ("CAMs") field testing, certain enhancements could be made to the proposed auditor reporting standard that we believe would make it more operational in practice and more aligned with the PCAOB's stated objectives for this aspect of the proposals.

First, we believe the process of determining CAMs could be made more effective and efficient by refining the sources and factors to be considered when determining whether a matter is a CAM to focus only on matters communicated to the audit committee. In addition, an explicit requirement to include the concept of materiality, as a relevant consideration in CAM determination, would be constructive and help auditors finalize the list of potential CAMs to those matters ultimately determined to be a CAM.

Second, the field testing noted that some audit engagement teams believed they should document all items identified through application of paragraphs 8 or 9, while others only documented the matters that they determined to be actual CAMs. Additional clarification regarding how an auditor would effectively document why certain matters identified in the process were ultimately not determined to be CAMs would help mitigate the diversity in application that was observed in our field testing.

Finally, with respect to the communication of CAMs in the auditor's report, the field testing noted diversity in the length, detail and range or specific subject matters covered in CAM communications. Therefore, we believe the Board should consider clarifying how an auditor would effectively communicate those factors that were most important to the determination that a matter was a CAM.

With respect to the topic of other information ("OI"), feedback from the field testing indicated that the use of the term "evaluate" will likely give rise to additional work by auditors, compared to current practice, and that there is uncertainty and diversity of views as to what is required. If it is the Board's intent to capture what is currently being done in practice today, the Board might consider clarifying "evaluate" by providing a more specific identification of the nature and extent of procedures to be performed on the OI. Additionally, it may be helpful for the Board to consider the direction of the International Auditing and Assurance Standards Board ("IAASB") related to their re-proposal of International Standard on Auditing ("ISA") 720 (revised), *The Auditor's Responsibilities Relating to Other Information*,[1] which would require, among other matters, the auditor to perform only limited procedures to evaluate the consistency of the OI with the financial statements.

## II. Objectives of Field Testing

The objectives of our field-testing initiative were to:

1. Provide first-hand observations from accounting firms about the effects of the proposals. Secondarily, observations from management and audit committees were obtained; however our field-testing initiative was not able to solicit the perspectives of the investor community.
2. Develop perspectives on ways the proposals could be implemented and might be improved.

[1] See IAASB ISA 720 Re-Proposal (link)

Participants[2] in our field-testing initiative focused their efforts on testing the Board's proposals as drafted. We believe the results of the field testing could be helpful to the Board by providing additional insights regarding whether the proposals would be operational in practice and the incremental time and effort that may be involved in implementing the proposals.

## III. Composition of Field Testing

Nine registered public accounting firms ("accounting firms"), of various sizes, participated in the CAQ's CAM field testing and six accounting firms participated in the OI field testing. The national offices of these accounting firms were provided with suggested criteria or characteristics for selecting field-testing participants. The issuers selected to participate in the field testing initiative consisted primarily of fiscal year 2012 audits of domestic SEC issuers of various sizes and a broad range of industries. There were no Emerging Growth Companies in the field testing. See Appendices A and B for additional information related to issuers participating in the CAM field testing.

Field testing of the proposed auditor reporting standard as it relates to CAMs included 51 audit engagements. Field testing of the proposed other information standard included 15 audit engagements. Additional input related to the proposed other information standard was obtained from five audit partners.

When selecting participants for OI field testing, the accounting firms were asked to consider the degree of complexity associated with "other information" as a result of factors such as, but not limited to, the nature, extent or number of schedules, exhibits and other information included in the Form 10-K (including information incorporated by reference). In some cases, participants selected for OI field testing were different from those participants selected for CAM field testing.

Audit engagement teams were provided with instructions by their respective national offices on how to execute the field-testing initiative, as well as a standard template that was used to summarize their observations. The national offices were responsible for selection of issuers and oversight of the field-testing process, including analyzing and communicating observations from the field testing to the CAQ. In addition to the involvement of the audit engagement teams, the field-testing initiative involved interaction with the respective audit committees and management in order to obtain their perspectives on the CAMs identified and the related proposed CAM communications portion of the auditor's report.

## IV. Critical Audit Matters Field Testing

The CAQ observed a number of trends in the feedback received from the accounting firms regarding areas where the proposed auditor reporting standard could provide more clarity, make it more operational in practice, and help avoid unintended consequences. Based on the results of the CAM field testing, we have the following observations:

- CAM Determination:
  - Source of CAMs – Potential CAMs identified through the application of paragraph 8 of the proposed auditor reporting standard resulted in duplication and a broad population of matters. In many instances, the inventory of potential CAMs was substantial, and in some cases the same matters were identified through application of each of the three sources included in paragraph 8. Audit engagement teams observed that using matters communicated to the audit committee as the only source for identification of CAMs

[2] The term "participants" is used throughout this letter to reference those issuers who volunteered to participate in the field-testing initiative, their respective audit committees and management, and the respective audit engagement teams.

might be more effective and may result in the identification of those matters important to the audit in a more effective and efficient manner.

- Use of CAM Factors – The factors in paragraph 9 of the proposed auditor reporting standard were inconsistently applied due to the lack of clarity regarding how an auditor should refine the number of potential CAMs to those that are determined to be CAMs ("actual CAMs"), particularly when considering the broad initial population derived from the sources in paragraph 8.

- CAM Communication – There were inconsistencies in applying the proposed auditor reporting standard when communicating CAMs. For example, the length of the CAM descriptions ranged from one sentence to several paragraphs.

- CAM Documentation – There was confusion among audit engagement teams related to the requirements (including which matters would require documentation and how they should be articulated in the workpapers) for documenting those matters that were initially considered potential CAMs, but which ultimately were determined not to be actual CAMs.

- Additional Time and Effort – Feedback from audit engagement teams, as well as management and audit committees, was that the additional time and effort was likely to be incurred during the completion phase of the audit by senior members of the audit engagement teams. Additionally, while it is clear that incremental time will be required to implement this aspect of the proposals, it was challenging for audit engagement teams to estimate the specific level of additional time and effort required, as the field testing was performed on a retrospective basis and the effort will not be consistent with implementing in a live audit environment.

A. <u>CAM Determination</u>

One of the primary focus areas of our CAM field testing was to better understand how accounting firms would identify a potential CAM, and then refine the list of potential CAMs to those matters determined to be actual CAMs. Paragraph 9 of the proposed auditor reporting standard identifies CAMs as those matters that "(1) involved the most difficult, subjective or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming an opinion on the financial statements." Paragraph 9 also provides a list of eight specific factors that the auditor should take into account in determining whether a matter is a CAM, but it does not explicitly require consideration of materiality.

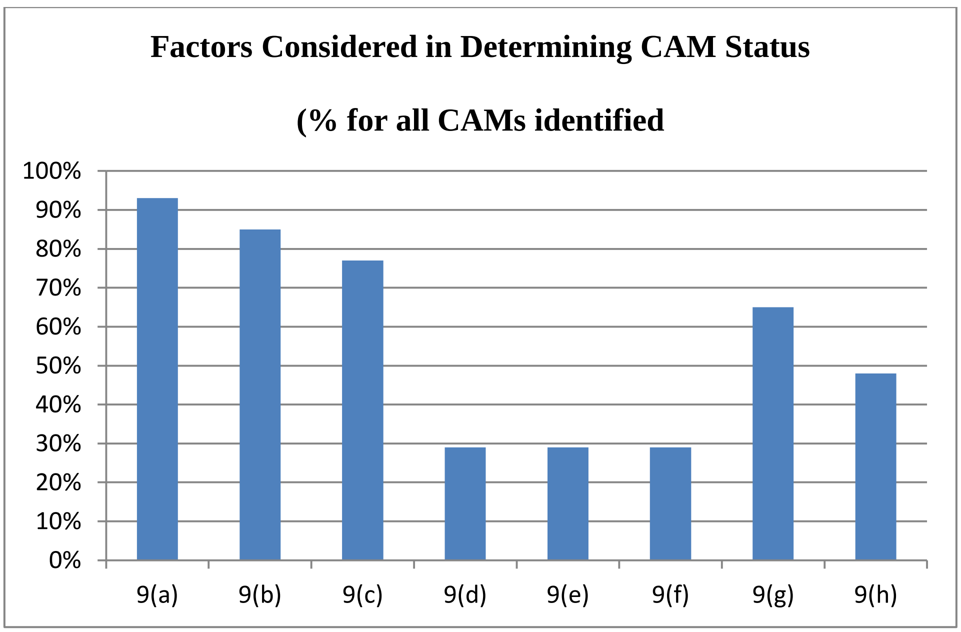
*i. Sources of CAMs*

The field testing observations suggest the paragraph 8 criteria for identifying CAMs should be revised to be aligned with communications and interactions on important matters with the audit committee and that this approach may provide a more effective and efficient method of determining CAMs. Audit engagement teams considered the population of matters included from all sources identified in paragraph 8 (i.e., engagement completion document, reviewed by the engagement quality reviewer, or communicated to the audit committee), and they indicated that 98% of the actual CAMs identified during the course of field testing were previously communicated to the audit committee.

*ii. Use of CAM Factors*

The factors in paragraph 9 of the proposed auditor reporting standard were also the subject of significant feedback from our field testing. In many cases, the accounting firms noted that the audit engagement teams considered materiality [3] (for example, whether a matter was itself material, or was likely to give rise to a material misstatement in relation to the financial statements taken as a whole) in determining whether a potential CAM should be an actual CAM. A number of accounting firms recommended that the process for determining a CAM should explicitly include the concept of materiality.

Observations from field testing also suggested that certain factors listed in paragraph 9 were more relevant in determining whether a matter was a CAM. In the event that multiple factors were used in the determination of a particular CAM, audit engagement teams were asked to report all factors that were used in the determination. As illustrated below, the three most common factors that led to the determination that a matter was a CAM were 9(a) (the degree of subjectivity involved in determining or applying audit procedures to address the matter or in evaluating the results of those procedures), 9(b) (the nature and extent of audit effort required to address the matter), and 9(c) (the nature and amount of available relevant and reliable evidence regarding the matter or the degree of difficulty in obtaining such evidence).[4] Additionally, for 100% of the CAMs where factors 9(d), 9(e), or 9(f) were identified, 9(a), 9(b), or 9(c) were also determining factors and for 98% of CAMs where 9(g) or (9h) were identified, 9(a), 9(b), or 9(c) were also determining factors.



Accounting firms also questioned whether there were some matters that should presumptively be considered a potential CAM (e.g., significant risk of material misstatement or matters addressed by an issuer's critical accounting estimates in MD&A). The proposed auditor reporting standard does not explicitly address such matters and we believe the Board should clarify that not all significant risks of material misstatement (e.g.,

[3] It appears the only time the concept of materiality is implied to be a factor in the proposed auditor reporting standard, is in one of the illustrative communications in appendix 5.

[4] Other factors listed in paragraph 9 of the proposed auditor reporting standard are: 9(d) – The severity of control deficiencies identified relevant to the matter, if any; 9(e) – The degree to which the results of audit procedures to address the matter resulted in changes in the auditor's risk assessments, including risks that were not identified previously, or required changes to planned audit procedures, if any; 9(f) – The nature and significance, quantitatively or qualitatively, of corrected and accumulated uncorrected misstatements related to the matter, if any; 9(g) – The extent of specialized skill or knowledge needed to apply audit procedures to address the matter or evaluate the results of those procedures, if any; and 9(h) – The nature of consultations outside the engagement team regarding the matter, if any.

management override and presumed risk of fraud in revenue recognition) or matters identified as critical accounting estimates should be presumed to be CAMs, as this determination should be based on the facts and circumstances specific to each issuer.

Another trend identified by the field testing was that, in many cases, the audit engagement teams initially identified a large number of potential CAMs, which were then narrowed to a much smaller number of actual CAMs. Additionally, some of the audit engagement teams noted that the criteria in paragraphs 8 and 9 made it difficult to document the rationale for matters that were potential CAMs, but not deemed to be actual CAMs. These numbers varied significantly from engagement to engagement, with the number of potential CAMs per issuer ranging from one to forty-five, while the number of actual CAMs per issuer ranged from zero to eight. See Appendix C for additional information on potential CAMs and actual CAMs by issuer and market capitalization. As noted above, we believe focusing the source for identifying CAMs only to matters communicated to the audit committee and incorporating the concept of materiality into the CAM determination could help to appropriately focus the auditors' attention on those matters that would be the most critical.

The field testing also identified a lack of clarity as to whether CAMs are only meant to be matters related to accounting and financial reporting, or if they would also include matters related to the conduct of the audit or the auditor. While these matters are related, some audit engagement teams expressed confusion as to how certain matters important to the planning of the audit should be considered in the determination of CAMs. For example, questions were raised as to whether matters such as audit scoping considerations or matters related to auditor independence should be considered "critical." Although these do not appear to meet the definition of a CAM, some audit engagement teams considered these matters to be CAMs. This suggests that additional clarification in this area may be useful in avoiding inconsistent application of the final auditor reporting standard.

*iii. Judgment*

Accounting firms observed that there could be different perspectives and viewpoints among the various audit engagement teams involved in the determination of CAMs. For example, some potential CAMs might not have been determined to be actual CAMs despite the presence of several of the paragraph 9 factors, while other potential CAMs were determined to be actual CAMs even though only one of the paragraph 9 factors was present. One of the key considerations noted by accounting firms in connection with addressing such situations was whether the matter related to a "material" item. For example, accounting firms noted that some matters appeared to meet the definition of a CAM, but were not included as a CAM based on relative materiality to the financial statements taken as a whole.

In addition, other considerations identified by the field testing (relative to the determination of CAMs) were the level of effort and judgment involved in the audit procedures and whether the item was already identified by management as a critical accounting estimate. Some audit engagement teams identified all areas that involved extensive audit effort as CAMs, while other teams considered not only the time spent auditing an area, but also the judgments involved when auditing those areas. Some audit engagement teams also considered those areas that management identified as critical accounting estimates as CAMs. Therefore, it may be possible to reach different conclusions as to whether or not a potential CAM is an actual CAM, given a similar set of facts and circumstances.

We applaud the Board's efforts to develop professional standards that allow for the use of professional judgment. However, as noted above, we believe that diversity in application of the proposed auditor reporting standard may arise and could lead users to draw inappropriate inferences about the issuer. Based on the results of the field testing, this is an area where further consideration from the Board could be helpful.

B. CAM Communication

The field-testing initiative highlighted two elements related to the communication of CAMs. The first is preparing the description of the CAM to be included in the auditor's report; the second is discussing that description with the issuer's management and audit committee.

*i. Description of CAMs*

Most of the audit engagement teams used the examples provided in the proposed auditor reporting standard as the starting point for drafting the communication of the CAM. Most accounting firms indicated that, in general, their CAM descriptions were similar to the PCAOB examples in format and approach. However, in a number of cases the length of the description of CAMs on similar topics varied significantly, not only between accounting firms, but also between participating audit engagement teams within the same firm. One accounting firm noted that a majority of the CAM descriptions included information that was duplicative of information included in management's disclosure of critical accounting estimates. Additionally, accounting firms indicated that some CAM descriptions included "original" information,[5] however due to the subjective nature of this determination, measuring the number of CAMs in the field-testing initiative that included "original" information proved challenging.

*ii. Discussions with Management and the Audit Committee*

The other element of communicating CAMs involved discussions with management and the audit committee regarding the determination of and language used to describe the CAMs. Most of the accounting firms indicated that management and the audit committee voiced concern about the potential need for management to revise disclosures to respond to CAM descriptions that include "original" information about the issuer and to involve disclosure committees and outside counsel in the CAM process to evaluate these potential changes to the issuer's financial statements.

C. CAM Documentation

While the objectives of the field testing did not include a detailed assessment of the relative time and effort of the documentation requirements regarding why a matter was not an actual CAM, field testing revealed that given the significant number (and range) of potential CAMs (compared to those determined to be actual CAMs),[6] there could be an unnecessary burden, in terms of effort and complexity. For example, some audit engagement teams interpreted the requirements of the proposed auditor reporting standard to be that if a matter was identified in any of the paragraph 8 sources, or met any of the paragraph 9 factors, documentation was required to justify why a matter was determined not to be a CAM.

Given the variation in the interpretation as to how audit engagement teams identified potential CAMs as well as the challenges inherent in making this determination, we recommend that the Board provide additional clarification regarding how an auditor should document why certain matters identified in the process were ultimately determined not to be CAMs. This clarification would also help mitigate the risk that the proposed auditor reporting standard is applied inconsistently.

---

[5] Original information is information about an issuer's financial statements and other financial information or its system of internal control over financial reporting that is the responsibility of the issuer's management to consider for disclosure (e.g., a new IT system implementation or control deficiencies that did not result in a material weakness).
[6] See Appendix C for additional information on potential CAMs and actual CAMs by issuer from the field testing.

D. Additional Time and Effort

On average, accounting firms, management, and audit committees believed that there is likely to be an increase in the audit effort, specifically as it relates to CAMs. For example, additional time incurred will most likely be related to initial implementation efforts, training, and ongoing monitoring. Expanded discussions with management and the audit committee may also require additional time and effort in a "live" audit environment versus the retrospective environment in which the field testing was conducted. Additionally, the time the accounting firms would incur to document the potential CAMs that were determined not to be actual CAMs may lead to on-going time and effort burdens (many audit engagement teams noted this would lead to additional time and effort, but did not actually complete the documentation during field testing).

Two additional observations related to the additional time and effort considerations are as follows:

- A majority of the additional time is likely to be incurred during the wrap-up phase of the audit, (i.e., once most of the audit work has been finalized, so that the auditor can determine what the actual CAMs are), despite efforts to start the process earlier in the audit. This could occur at a time when auditors, management and audit committees are focused on a number of other issues in connection with a particular filing, and the finalization of CAM communications may delay, or cause distractions in, the resolution of these issues.

- CAM related discussions with management and the audit committee are likely to involve senior members of the audit engagement team and may require national office consultations, thus requiring additional effort by key audit resources at the end of the audit.

Finally, many of the accounting firms expressed the view that the incremental time required may not decrease significantly in future years, given (1) that one of the stated objectives of the proposed auditor reporting standard is to avoid boilerplate descriptions and (2) the need to address new potential CAMs each year as a result of transactions or other changing business or financial reporting dynamics.

We continue to encourage the PCAOB to conduct a robust analysis of the costs and benefits of the proposed auditor reporting standard that addresses the potential effect on key stakeholders, including investors, issuers, audit committees, and accounting firms. In addition, we believe the changes suggested in the CAQ's previous comment letters on the proposed auditor reporting standard will retain or increase the benefits expected to be realized while helping to reduce the associated costs.

## V. Other Information Field Testing

OI field testing resulted in two primary areas of observation. First, the specific scope of responsibility of the auditor was not clear to the audit engagement teams. Many audit engagement teams stated that it is unclear whether the term "evaluate" is a higher threshold than the term "consider" as used in current guidance. Some audit engagement teams thought the scope of the proposed other information standard may require auditors to perform a number of additional procedures, while other audit engagement teams thought the scope was not substantially different from current practice under AU 550, *Other Information in Documents Containing Audited Financial Statements*. Consistent with our prior comment letters, we believe clarification of the procedures to be performed would help mitigate the confusion and potential diversity in the application of any final standard.

Second, several of the accounting firms participating in the OI field testing expressed concern about the ambiguity of the information that may be included in the scope of OI, the procedures to be performed related to this information, and the related documentation required. Accounting firms noted that it was not entirely clear whether the proposed other information standard required firms to evaluate the OI based on information they had already received in connection with the audit, or whether they would be required to gather additional information to support the OI. Most audit engagement teams, however, noted their belief that the level of effort necessary to document compliance with the proposed other information standard's performance requirements is an increase from what is required today.

We believe it would be helpful for the Board to clarify the procedures to be performed or consider the IAASB re-proposal that requires the auditor to read the OI and 1) consider whether there is a material inconsistency between the OI and the financial statements by performing limited procedures to "evaluate" the consistency between the OI and the financial statements, 2) consider whether there is a material consistency between the OI and the auditor's knowledge obtained during the course of the audit, and 3) remain alert for other indications that the OI appears to be materially misstated.

## VI. Conclusion

The CAQ supports the Board's ongoing initiatives to update and improve the auditor's reporting model and believes these field-testing observations provide insight into implementation of the proposals and identify some areas for the Board's continuing consideration. Although some of the observations from the field testing may not align with initial feedback from other initiatives to enhance auditor reporting around the globe, we believe it is important to consider the uniqueness of both the regulatory and oversight environments in the United States.

As it relates to CAMs, certain of the observations and suggestions noted above may mitigate some of the challenges identified. In particular, (1) focusing the source of CAMs only to those matters communicated to the audit committee may be more effective and efficient, (2) explicitly including materiality relative to the financial statements as a factor to be considered in the determination of CAMs may help with the consistent communication of CAMs that are considered "most difficult" and more consistent with the issuer's disclosure framework, (3) additional clarification appears to be needed regarding how an auditor would effectively document why certain matters identified in the process were not ultimately determined to be CAMs, and (4) clarification regarding how an auditor would effectively communicate those factors that were most important to the determination that a matter was a CAM would help to promote consistent application.

With respect to field testing of OI, there was uncertainty as to whether "evaluate" is a higher threshold than the extant standard, which may lead to challenges in the consistency of application by auditors and the interpretation of this term by users of the financial statements. We believe it may be helpful for the Board to consider the direction the IAASB is pursuing with the re-proposal of ISA 720 (revised), in defining the auditor's responsibilities in this area.

Finally, we encourage the PCAOB to consider a phased transition of the final standards based on the size of the issuer. Larger issuers and their auditors generally will have the resources necessary to more timely address the requirements of the new standards. While we ultimately support implementation by all issuers, we believe, a phased transition based on the size of the issuer will also allow smaller issuers and their auditors to benefit from the experiences of larger issuers. If the Board were to consider a phased transition, it could look to the experiences of the United Kingdom's Financial Reporting Council (FRC) as a starting point. When the FRC amended International Standard on Auditing (UK and Ireland) 700, *The Independent Auditor's Report on Financial Statements* ("ISA (UK and Ireland) 700"), it required that audits of only a specified group of large issuers[7] adopt the amendments. Panelists at the PCAOB's roundtable[8] spoke favorably of the ISA (UK and Ireland) 700 adoption requirements.

[7] Only FTSE 350 companies and companies that voluntarily follow the UK Corporate Governance Code are currently required to apply the new provisions of ISA (UK and Ireland) 700.
[8] The PCAOB hosted a public roundtable on April 2-3, 2014 to obtain further input from constituents on the proposals.

****

We continue to appreciate the opportunity to provide additional input on the proposals, and would be pleased to discuss our comments or answer any questions that the PCAOB staff or the Board may have regarding the information provided in this letter.

Sincerely,

Cynthia M. Fornelli

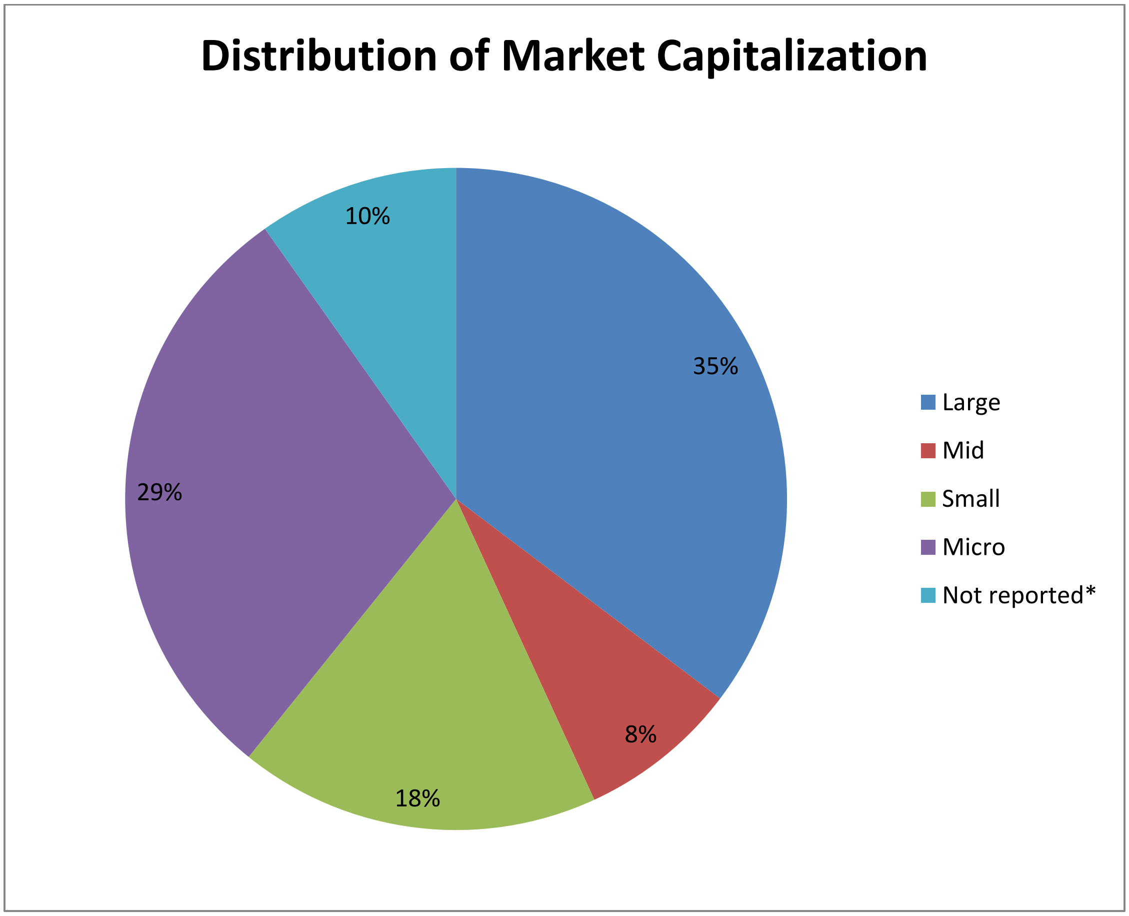
**Appendix A – Distribution of Market Capitalization for CAM Field Testing**[9]



*Some accounting firms opted not to provide this data as they believed it could lead to the issuer being identified.

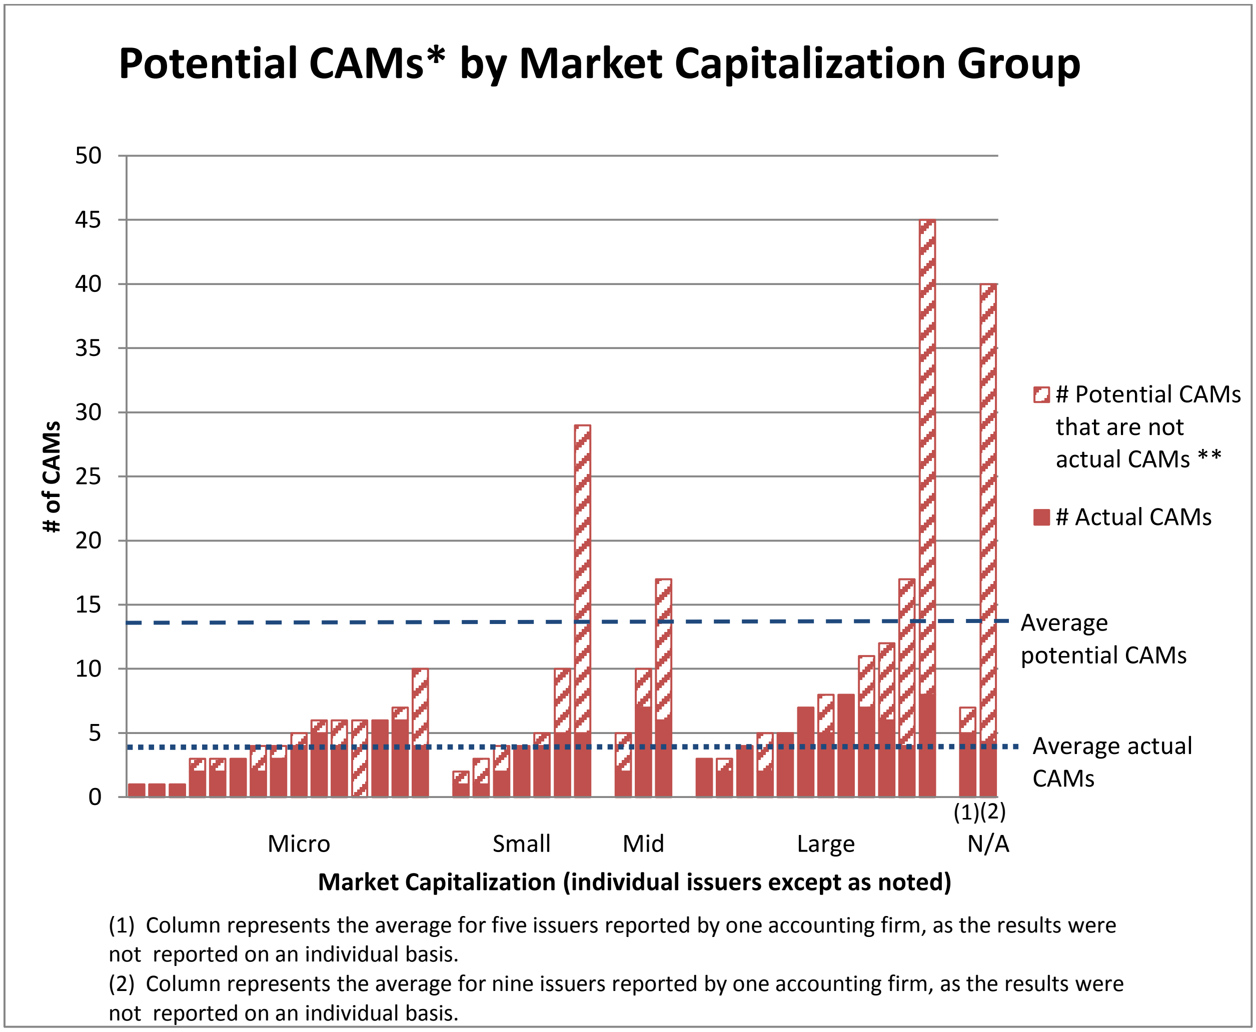
[9] Large-cap companies are those whose market capitalization value is more than $10 billion, mid-cap companies are those whose market capitalization value is between $2 billion and $10 billion, and small-cap companies are those whose market capitalization value is between $250 million and $2 billion. Micro-cap companies are those with a market capitalization value of less than $250 million.

**Appendix B – Primary Industry Classification for CAM Field Testing**

| Industry | Number of Issuers |
|---|---|
| Industrial & Consumer Goods | 8 |
| Financial Services | 8 |
| Pharmaceuticals & Biotech | 6 |
| Oil & Gas | 4 |
| Technology | 4 |
| Retail | 3 |
| Communications and Electronic Components | 2 |
| Professional Services | 2 |
| Real Estate Investment Trusts | 2 |
| Healthcare | 1 |
| Life Sciences | 1 |
| Publishing Services | 1 |
| Not Reported* | 9 |
| **Total** | **51** |

*Some accounting firms opted not to provide this data as they believed it could lead to the issuer being identified.

**Appendix C – Potential CAMs by Market Capitalization Group**



* "Potential CAMs" represents the entire population of matters considered in the process to determine CAMs, including those matters determined to be actual CAMs.

** "Potential CAMs that are not actual CAMs" represents the population of matters considered in the process to determine, CAMs but are determined not to be an actual CAM.

**Re: Auditor's Reporting Model**

CFA Institute,[1] in consultation with its Corporate Disclosure Policy Council ("CDPC"),[2] appreciates the opportunity to comment on the Public Company Accounting Oversight's (PCAOB) and the International Auditing and Assurance Standards Board's (IAASB) (collectively referred to as "Boards") proposals to reform the auditor's reporting model.

CFA Institute is comprised of more than 100,000 investment professional members, including portfolio managers, investment analysts, and advisors, worldwide. CFA Institute seeks to promote fair and transparent global capital markets and to advocate for investor protections. An integral part of our efforts toward meeting those goals is ensuring that the quality of corporate financial reporting and disclosures provided to investors and other end users is of high quality.

## GENERAL COMMENTS

The IAASB and the PCAOB have issued separate proposals to improve the Standard Auditor's Report (SAR). CFA Institute is responding with a single letter to the Boards on these proposals since there are a number of overlapping issues and we believe that there should be a single globally relevant report to the extent possible. This would allow investors to compare audits of companies no matter in which region of the globe the auditor issues their report.

Our response is organized into discussions about what we see as the improvements needed to develop a single informative SAR. We observe that in many respects the individual proposals are similar but still contain some notable differences. For example, the PCAOB model does not contain provisions for going concern reporting and disclosure of engagement partner. The IAASB model anticipates future additional reporting for auditor responsibility and findings related to "other information", which is currently being considered in another project. The PCAOB model currently presents proposals for "other information" in their model. Although these matters are being addressed in separate standard setting initiatives, we

**1** With offices in Charlottesville, New York, Hong Kong, and London, CFA Institute is a global, not-for-profit professional association of more than 116,000 investment analysts, portfolio managers, investment advisors, and other investment professionals in 137 countries, of whom more than 108,000 hold the Chartered Financial Analyst® (CFA®) designation. The CFA Institute membership also includes 138 member societies in 60 countries and territories.

**2** The objective of the CDPC is to foster the integrity of financial markets through its efforts to address issues affecting the quality of financial reporting and disclosure worldwide. The CDPC is comprised of investment professionals with extensive expertise and experience in the global capital markets, some of whom are also CFA Institute member volunteers. In this capacity, the CDPC provides the practitioners' perspective in the promotion of high-quality financial reporting and disclosures that meet the needs of investors.

believe that because they relate most directly to and are most consistent with a coordinated global approach.

Our response addresses the following areas:

- Investor/User support for enhancing the Standard Auditor's Report
- Retention of pass/fail model
- Key audit matters (IAASB)/Critical audit matters (PCAOB)
- Conclusions regarding going concern
- Auditor's statement regarding "other information"
- Identification of engagement partner

Responses to selected questions from each of the proposals are presented in Appendices A and B.

**Support for Enhancing the Standard Auditor's Report**

*CFA Institute Support for Changes to the Auditor's Reporting Model*

CFA Institute members have consistently supported efforts to enhance the quality, relevance and value of auditor reporting. As previously articulated in our letters to the IAASB and PCAOB we believe that improvements to the SAR are needed to advance a seriously outdated model for communication of important information to investors and other users regarding the auditor's professional examination of a company's financial statements. It is our belief that the SAR along with the financial statements and other narrative sections of an entity's financial report (i.e. management commentary, operating and financial review, etc.) should be considered part of a holistic communication of relevant information to investors to make informed capital allocation decisions. Significant efforts and investor-paid costs go into an audit, yet investors are provided very little information under the current SAR. Through increased transparency, a revised SAR will facilitate better analysis and heighten user confidence in the audited financial statements.

*CFA Institute Surveys Support Changes to the Auditor's Reporting Model*

CFA Institute has conducted multiple surveys[3] of our membership over several years on the importance of the SAR to investors and its information content. These surveys have consistently shown that the auditor's report is central to the analysis of financial statements, and should provide more information about the basis for the auditor's opinion.

The more significant survey findings regarding changes to the SAR are:

- Fifty-eight percent of respondents indicated that the auditor's report needs to provide more specific information about how the auditor reaches their opinion.
- Seventy-five percent of respondents believe that risk factors associated with measurement uncertainties in an entity's financial statements should be included in the independent auditor's report.
- A large majority of respondents indicated that more information regarding materiality, the auditor's independence, management's critical accounting judgments and estimates, and key areas of risk is important.

[3] CFA Institute, Usefulness of the Independent Auditor's Report, March 2011
http://www.cfainstitute.org/Survey/usefulness_of_independent_auditors_report_survey_results_march_2011.pdf
CFA Institute, Independent Auditor's Report Survey Results, March 2010
http://www.cfainstitute.org/Survey/independent_auditors_report_survey_results.pdf

These surveys consistently indicate that investors are not satisfied with the current "bare-bones" SAR and seek much more useful and qualitative information about the audit findings and process. Importantly, they also confirm that additional information from the professional auditor in the SAR is of much higher interest and value to an investor in addition to hearing more from the audit committee.

**CFA Institute Support for Retention of the Pass/Fail Reporting Model**
The current SAR has been commonly described as a pass/fail model since the auditor expresses an opinion on whether the financial statements are fairly presented (pass) or not (fail). This aspect of the SAR is beneficial because it is brief, clear, consistent and comparable. It benefits those investors who want to quickly scan the SAR for departures from the unqualified report. However, it has limited utility for those who desire a more thorough and complete understanding of the audit findings and the audit process. For this reason, we believe that the pass/fail element of the model should be augmented with substantive informative enhancements, explained below. Given the continued significance and relevance of departures from the pass/fail opinion, we believe that this should continue to be presented near the beginning of the audit report.

**Key Audit Matters (IAASB)/Critical Audit Matters (PCAOB)**
*Requirement to Report Critical Audit Matters*
Both of the Boards' proposals indicate that determining the audit matters to be reported is based on the auditor's professional judgment. The PCAOB model states that ordinarily these matters are of such importance that they are required to be (1) documented in the engagement completion document, (2) reviewed by the engagement quality reviewer, (3) communicated to the audit committee; or (4) any combination of the three. Specified audit guidance is provided for each of these items (i.e., AS No. 3 *Audit Documentation*, AS No. 7 *Engagement Quality Review* and AS No. 16 *Communications with Audit Committees*). The IAASB model specifies that the audit matters would be selected from a smaller number of matters, from the matters communicated with those charged with governance, based on the auditor's judgment about which matters were of most significance in the audit. This is also subject to specified audit guidance (i.e., ISA 260 (Revised) *Communication with Those Charged with Governance*).

Our principal concern is that the language used in the proposals prescribes a more subjective approach—what the auditor determines "key" or "critical" to be—rather than a more objective approach. The proposed subjective approach might easily allow an artful avoidance of providing any additional information whatsoever to investors. We fear the Lake Wobegone syndrome, where all issuers suddenly become above average and unremarkable from an audit perspective. Investors have been seeking specific information from the auditor for years, and giving more objective, prescriptive guidance is necessary to ensure that those specific matters are conveyed by the auditor.

The statements of PCAOB Member Steven Harris noted similar concerns:

> *Indeed, having the auditor concisely discuss a precise list of issues of interest to investors as suggested in the IAG survey and similar surveys by the CFA Institute, may well be preferable to a discussion of only issues that auditors, in their discretion, determine to be the most difficult, subjective or complex ones in an audit. Of course the two sets of issues may overlap, but they well may not. I believe we should be seriously considering a requirement that the auditors also report on "any matter that would otherwise be of greatest significance to a reasonable investor in understanding the import of the financial statements.*
>
> *Sir David Tweedie, the former Chairman of the International Accounting Standards Board and national technical partner of KPMG, suggested that investors should learn through the report: (i) what kept the auditor awake at night, (ii) what arguments the auditor had with the CFO, (iii)*

*what the big estimates are, (iv) what the contentious accounting policies are, and (v) what the going concern assumptions are?*

While these comments were made in the context of the release of the PCAOB proposal, we believe the concerns expressed equally apply to the IAASB proposal. We encourage the Boards to develop clear guidance that would not allow for important matters to go unreported.

*Comments on Content of Key Audit Matters (IAASB) and Critical Audit Matters (PCAOB)*
In previous proposals, the Boards considered a form of reporting on the audit by means of auditor commentary (IAASB) or auditor's discussion and analysis (PCAOB). We supported this in our previous letters as an acceptable means of communicating additional information regarding the audit findings and the audit process provided it was subject to professional accountability for quality. Our principal concern is that the information should be reported by the auditor, not the audit committee or otherwise construed to be reported by management.

Although we prefer an auditor commentary which we expect would draw in specific matters of importance in non-boilerplate language, we are supportive of the communication of key audit matters (IAASB) or critical audit matters (PCAOB) (herein, both are considered "audit matters") as an acceptable alternative means of communicating information about the audit.

In our previous letters, we indicated that investors would benefit from the information often contained in what is commonly referred to as the "audit completion document" wherein the auditor identifies all significant findings or issues and incorporates this upon completion of the audit. Our request was to have the auditor report the most relevant of these same matters, whether we refer to them as key or critical, in plain, non-boilerplate language. With this approach there would not be an increase in audit scope or additional procedures, rather the auditor would simply report what was done in the audit, using information already contained in the audit completion memo. As a cost/benefit matter, enhancing the SAR in this way, should not result in a materially significant increase in the cost of audit services. We would support the Boards' specific review and assessment of this issue.

Also as earlier expressed, CFA Institute believes that the following elements in addition to others as outlined in our previous letter should be considered key or critical and routinely reported:

- Audit Risk - Provide a discussion of significant risks identified by the auditor and include factors the auditor evaluated in determining which risks are significant and how they were audited and assessed. This risk assessment should include not only specific financial statement risks, but also the auditor's overall client risk assessment factors. Also discuss why the auditor views these risks as significant. We recommend the Boards present an objective list of audit risks, as a first step towards a type of risk-rating of audits that would be comparable across auditors and countries.
- Auditor Independence - Provide a discussion of any matters that were reported and discussed with the audit committee concerning independence of the audit partner or firm -presumably limited to negative issues.
- Auditor Materiality - Provide details about the quantitative and qualitative materiality levels and factors the auditor considered in establishing materiality levels.
- Assessment of Management's Critical Accounting Judgments and Estimates - Provide a discussion of the critical accounting estimates that were discussed with management or the audit committee, the assumptions underlying the critical accounting estimates, and the auditor's assessment of and findings associated with the evaluation of these critical estimates. This could also include a discussion of movements and ranges around critical estimates.

- Accounting Policies and Practices - Provide a discussion of:
  a. Discretionary changes in accounting principles or estimates affecting the consistency of reported amounts.
  b. Qualitative aspects of the company's accounting practices, financial statements and disclosures discussed with the audit committee or management.
  c. Material matters that, while in technical compliance with the financial reporting framework, could have enhanced disclosures to improve investor understanding of the matters.
  d. Significant unusual transactions in the current reporting period.
- Difficult or Contentious Issues, Including "Close Calls"- Discuss any difficult or contentious issues or "close calls" that arose during the audit and the final resolution of each issue.

*Comments on Instances Where There are No Critical/Key Audit Matters*
Both the IAASB and the PCAOB acknowledge that except in certain limited circumstances (expected to be rare), the auditor would not determine at least one audit matter to be reported. CFA Institute agrees that these conditions should be rare, however, each issuer should have at least one audit matter that would be deemed key or critical. Prescribing certain required communications as noted above may result in less transparent auditor reporting.

**Conclusions Regarding Going Concern**
CFA Institute agrees with the IAASB proposal that the auditor shall evaluate whether sufficient appropriate audit evidence has been obtained and conclude regarding the appropriateness of management's use of the going concern basis of accounting in the preparation of the financial statements. We agree that conclusions and observations regarding going concern should be separately and clearly identified in the audit report. A CFA Institute survey of the membership in March 2012 indicated that 92% of respondents supported this separate mention of going concern matters in the SAR. When the going concern basis is inappropriate or whether there is a material uncertainty has been identified that the auditor's report should qualitatively describe the uncertainties, conditions or events that have given rise to the doubt.

**Auditor's Statement Regarding "Other Information"**
CFA Institute supports additional reporting in the SAR for other information that would require the auditor to determine whether other information contains (1) a material inconsistency, (2) a material misstatement of fact, or (3) both. We believe that the auditor's determination should be limited to reading and considering other information and performing certain specific procedures based on relevant audit evidence obtained and conclusions reached during the audit. We understand that this is routine industry practice currently in the context of a standard integrated audit. We are not in favor of extending the auditor's responsibilities to providing separate assurance. If the auditor determines that there are material inconsistencies or misstatements of fact that are unresolved prior to issuance of the financial statements, these differences should be clearly communicated within the body of the auditor's report. We expect that there will be rare instances where differences will be unresolved.

We believe that clarifying the auditor's responsibilities and findings related to other information further enhances to usefulness of the auditor's report.

**Identification of Engagement Partner**
CFA Institute **is strongly in favor of mandating the disclosure of the engagement partner** (preferably by signature) in the auditor's report for audits of all entities. We agree with the IAASB's conclusion that disclosing the engagement partner's name improves transparency for users and perhaps more importantly, instills a greater sense of responsibility and accountability which ultimately translates to improved audit quality. This disclosure is already required in many jurisdictions throughout the world and standardizing this requirement will lead to further accountability.

CFA Institute has previously articulated our support for disclosing the engagement partner in our letter to the PCAOB in response to their Concept Release to require disclosure of the engagement partner. We refer you to that letter for a complete response and CFA Institute's rationale.

We urge both the IAASB and the PCAOB to require disclosure of the engagement partner. It is our preference that this disclosure be prominently displayed in the auditor's opinion, rather than through a link to the entity's website or included in some other regulatory filing. Investors and other users should have easy access to the information. We also believe that attaching it to the opinion, further accountability would be established.

**Improvements to the Auditor's Reporting Model Will Require a Cultural Shift**
In our previous letters to the Boards, we stressed that investor needs should be paramount when considering revisions to the auditor's reporting model. Requirements should be set with a view toward providing transparency and the most pertinent information possible for investors.

We believe that for meaningful changes to be effective, the reporting mindset of the audit committee, management, and independent auditors will need to undergo a cultural shift. The historical reporting relationship has tended to be viewed as the auditor reporting to the audit committee and to management, rather than as a communication to investors. Instead, the reporting considerations of the auditor should be directed to the user, since it is the users (i.e. investors) who foot the bill and approve the retention of the auditor, not management.

We appreciate the Boards' initiative in moving these proposals forward. They provide a vision and a workable path toward more useful and practical tools for finance professionals and investors around the globe. We acknowledge the transformational nature of these shifts and the inevitable industry resistance to change. Yet the markets and the world of finance have advanced so dramatically in terms of the complexity and speed of information in the past decade that all parts of the financial chain must improve and adapt. Auditing services should be no exception. We urge the Boards to be resolved in making these important improvements and stand ready to help as needed.

**Closing Remarks**

We thank the Boards for the opportunity to express our views on the Standard Auditor's Report. If the Boards have questions or seek further elaboration of our views, please contact Matthew M. Waldron by phone at +1.212.705.1733, or by e-mail at matthew.waldron@cfainstitute.org.

Sincerely,

**PCAOB Questions** **Appendix A**

**Objectives**

1. ***Do the objectives assist the auditor in understanding the requirements of what would be communicated in an auditor's unqualified report? Why or why not?***
   We believe that objectives as stated should be sufficient to enable the auditor to understand the requirements for the audit report. However, we also believe that the objective should specifically identify that the investor is the main recipient of the report and that the report is intended to communicate entity-specific information. By highlighting an entity-specific approach boilerplate information will be reduced and/or eliminated.

**Basic Elements**

2. ***The proposed auditor reporting standard would require the auditor's report to be addressed at least to (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body. Are there others to whom the auditor's report should be required to be addressed?***
   We believe that the auditor's report should be appropriately addressed to both the shareholders and the company board of directors.

3. ***The proposed auditor reporting standard retains the requirement for the auditor's report to contain a description of the nature of an audit, but revises that description to better align it with the requirements in the Board's risk assessment standards. Are there any additional auditor responsibilities that should be included to further describe the nature of an audit?***
   We agree that any new standard on auditor reporting should retain the requirement for the report to contain a description of the audit. We agree with the PCAOB aligning this with the established risk assessment standards.

4. ***The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this statement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?***
   The proposal calls for the auditor to state that they are "required" to be independent with respect to the company in accordance with the United States federal securities laws and applicable rules and regulations of the PCAOB and SEC. We believe that a statement regarding independence is useful to investors and establishes a heightened sense of professional accountability.

   However, we note that stating that the auditor is "required" to be independent, rather than is "in fact" independent is a less than optimal positive statement. We believe a more definitive statement is preferable and adds further assurance that the auditor is independent.

5. ***The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.***

   a. ***Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?***
   We believe that auditor tenure is useful information to the investor, in that there could be instances where in the case of a newly appointed auditor, an investor may feel that the audit contains more risk. This may especially be the case where the new auditor may not have developed a complete understanding of the entity. Or in the case of a longstanding audit relationship, an investor may

question whether the auditor is as objective as possible. In other words, if the company has been a client for numerous years, the existing audit partner may not want to lose the client under his responsibility. This could render him less than objective when confronted with difficult or contentious issues.

b. ***Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?***
No comment.

c. ***Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?***
We are in favor of including the tenure information in the auditor's report in addition to EDGAR. This makes it less difficult for investors to access the information.

6. ***The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?***
We agree that the auditor's responsibilities for other information and the results of their evaluation should be clarified in the standard auditor's report. We emphasize that we are not in favor of expanding the auditor's responsibilities to provide assurance on the information, rather simply explain what they are presently required to do—and where there are material misstatements or inconsistencies, to explain them in appropriate detail. We believe that these instances will be rare since management is likely to correct the misstatements.

7. ***Should the Board require a specific order for the presentation of the basic elements required in the auditor's report? Why or why not?***
We do not think that the ordering of the presentation of the basic elements required by the auditor's report is critical, provided that there are clear headings are used to indicate each section. We encourage the PCAOB and the IAASB to work together to arrive at a standard for both form and content.

8. ***What other changes to the basic elements should the Board consider adding to the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor?***
No comment.

9. ***What are the potential costs or other considerations related to the proposed basic elements of the auditor's report? Are cost considerations the same for audits of all types of companies? If not, explain how they might differ.***
We are aware that some respondents may argue that the costs of implementing the proposed standards will result in an inordinate increase in costs. We agree with the following from the PCAOB proposal regarding costs:

*The Board would expect audit firms to incur minimal one-time costs that relate primarily to updating a firm's methodology regarding auditor reporting. These changes might not result in significant recurring costs because they involve standardized language that, once implemented, would be the same or very similar across different auditors' reports.*

We understand that initially the enhanced reporting could lead to an increase in costs as the auditor works through the language in the report with entity management and legal counsel. However, as noted in our previous letters, in accordance with the PCAOB Auditing Standard No. 3 paragraph 13, the auditor must identify all significant findings or issues in an engagement completion document. This document identifies and discusses the significant findings or issues and the basis for conclusions reached in connection with each engagement. We believe that the information in the completion memo should serve as the basis for identifying and reporting the information in the critical audit matters. Therefore, we are not suggesting any change in audit scope or additional procedures, rather that the auditor simply report what was done in conducting the audit, using information already largely contained in the audit completion memo. Increased costs in this regard ought to be minimal.

Finally with regard to costs, audit fees are paid for ultimately by the shareholders so to the extent that additional useful qualitative information can be supplied, investors would support reasonable additional fees.

**Critical Audit Matters**

10. ***Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?***
As noted in our opening remarks, we preferred reporting on the audit by means of an auditor's discussion and analysis. We supported this in our previous letter as an acceptable means of communicating additional information regarding the audit findings and the audit process provided it was subject to professional accountability for quality. Our principal concern was that the information should be reported by the auditor in a way that it is not construed to be reported by management.

We are supportive of the communicating the critical audit matters as an acceptable alternative means of communicating additional information about the audit. We believe that these key/critical matters that the auditor determines to be 1) the most difficult, subjective or complex audit judgments; 2) posed the most difficulty in obtaining sufficient appropriate evidence; or 3) posed the most difficulty in forming the opinion on the financial statements has the potential to inform the users of the areas of high audit risk. Discussing the critical audit matters in an entity specific, non-boilerplate manner will focus attention on issues that are essential to understanding the audit.

We question how the auditor will apply the guidance with respect to discussing the "most difficult" matters. For example, we think that the test should be those audit areas that were the most "significant". We are concerned that given the deep expertise most audit firms have, that "difficulty" could be too subjectively determined. However, "significant" could be a more reasonable threshold to apply. To this point, we believe that the IAASB proposal for "significant" matters appears to strike the right balance.

We are also concerned that the critical audit matters must not become routine boilerplate language. Industry similarities could result in similar or identical audit challenges, so that these should be limited to few matters.

11. ***What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?***
No comment.

12. ***Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? Is the definition of a critical audit matter sufficiently clear for determining what***

***would be a critical audit matter? Is the use of the word "most" understood as it relates to the definition of critical audit matters?***

As mentioned above, we believe that using the word "difficult" could lead to a subjective application of the threshold. We believe that "significant" as defined by the IAASB would be a better determinant.

13. ***Could the additional time incurred regarding critical audit matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have?***
    We believe that there should not be any significant additional time incurred by the auditor to identify and/or report critical audit matters. These matters should be identified as part of the normal course of conducting a high quality audit. One would expect that in today's environment that identifying these matters would not necessarily enhance audit quality given that they are a component of conducting the audit. However, by elevating these to specific reporting, overall quality should be enhanced.

14. ***Are the proposed requirements regarding the auditor's determination and communication of critical audit matters sufficiently clear in the proposed standard? Why or why not? If not, how should the proposed requirements be revised?***
    Applying the requirements will require a significant amount of judgment. As mentioned we believe that there should be set requirements to report matters as noted in our General Comments. Users essentially want to hear directly from the auditor what is keeping them up at night written in an entity specific manner.

15. ***Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?***
    We are not in favor of the PCAOB prescribing that audit procedures be included as they relate to critical audit matters. The PCAOB should not necessarily exclude them; rather they should draft a standard which emphasizes that the auditor use their professional judgment on what should be included in the explanation of the critical audit matter. However, some brief explanation regarding how the critical audit matter was resolved could be beneficial to the users.

16. ***Are the factors helpful in assisting the auditor in determining which matters in the audit would be critical audit matters? Why or why not?***
    No comment

17. ***Are there other factors that the Board should consider adding to assist the auditor in determining which matters in the audit would be critical audit matters? Why or why not?***
    No comment.

18. ***Is the proposed requirement regarding the auditor's documentation of critical audit matters sufficiently clear?***
    No comment.

19. ***Does the proposed documentation requirement for non-reported audit matters that would appear to meet the definition of a critical audit matter achieve the Board's intent of encouraging auditors to consider in a thoughtful and careful manner whether audit matters are critical audit matters? If not, what changes should the Board make to the proposed documentation requirement to achieve the Board's intent?***
    No comment.

20. ***Is the proposed documentation requirement sufficient or is a broader documentation requirement needed?***
    No comment.

21. ***What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of critical audit matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?***
    We do not believe that would be material additional costs for communicating critical audit matters. These matters should have already been elevated through the audit firm to the appropriate level of responsibility including the engagement quality reviewer. Furthermore, these matters should have been also communicated to those charged with governance (i.e., Board of Directors, Audit Committee, etc.).

22. ***What are the additional costs, including indirect costs, or other considerations for companies, including their audit committees, related to critical audit matters that the Board should take into account? Are these costs or other considerations the same for audits of both large and small companies?***
    No comment.

23. ***How will audit fees be affected by the requirement to determine, communicate, and document critical audit matters under the proposed auditor reporting standard?***
    See previous comments.

24. ***Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, such as in an initial public offering or in a situation involving the issuance of an auditor's report on a prior period financial statement because the previously issued auditor's report could no longer be relied upon? If so, under what circumstances?***
    We believe that there should be no differential reporting of critical audit matters in the cases of initial public offerings or for prior periods audited by other audit firms.

25. ***Do the illustrative examples in the Exhibit to this Appendix provide useful and relevant information of critical audit matters and at an appropriate level of detail? Why or why not?***
    We believe that including realistic examples in the proposed standard should enable auditors to better apply the specific requirements. It is essential that the PCAOB test how users view the example disclosures as part of their re-deliberations. The examples shown in the Exhibit to Appendix 5of the Proposal on the surface appear reasonable and informative, but more extensive testing is essential with preparers, auditors and users.

26. ***What challenges might be associated with the comparability of audit reports containing critical audit matters? Are these challenges the same for audits of all types of companies? If not, please explain how they might differ.***
    No comment.

27. ***What benefits or unintended consequences would be associated with requiring auditors to communicate critical audit matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards, such as the examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?***

No comment.

28. ***What effect, if any, would the auditor's communication of critical audit matters under the proposed auditor reporting standard have on an auditor's potential liability in private litigation? Would this communication lead to an unwarranted increase in private liability? Are there other aspects of the proposed auditor reporting standard that could affect an auditor's potential liability in private litigation? Are there steps the Board could or should take to mitigate the likelihood of increasing an auditor's potential liability in private litigation?***
    No comment.

**Explanatory Language**

29. ***Is it appropriate for the Board to include the description of the circumstances that would require explanatory language (or an explanatory paragraph) with references to other PCAOB standards in the proposed auditor reporting standard?***
    No comment.

30. ***Is retaining the auditor's ability to emphasize a matter in the financial statements valuable? Why or why not?***
    We believe that this option should be retained where matters should be highlighted that are not critical audit matters. Investors benefit from understanding an important matter deserving of emphasis and where it is disclosed in the financial statements.

31. ***Should certain matters be required to be emphasized in the auditor's report rather than left to the auditor's discretion? If so, which matters? If not, why not?***
    Since the PCAOB has deferred a decision on communications regarding going concern, we believe that material uncertainties regarding going concern should be communicated.

32. ***Should additional examples of matters be added to the list of possible matters that might be emphasized in the auditor's report? If so, what matters and why?***
    No comment.

**Amendments to Other PCAOB Standards**

33. ***Are the proposed amendments to PCAOB standards, as related to the proposed auditor reporting standard, appropriate? If not, why not? Are there additional amendments to PCAOB standards related to the proposed auditor reporting standard that the Board should consider?***
    No comment.

34. ***What are the potential costs or other considerations related to the proposed amendments? Are these cost considerations the same for all types of audits? If not, explain how they might differ.***
    No comment.

**Considerations Related to Audits of Specific Entities**

**Additional Discussion Related to the Proposed Other Information Standard**
CFA Institute supports additional reporting in the SAR for other information that would require the auditor to determine whether other information contains (1) a material inconsistency, (2) a material misstatement of fact, or (3) both. We believe that the auditor’s determination should be limited to reading and considering other information and performing certain specific procedures based on relevant audit evidence obtained and conclusions reached during the audit. We are not in favor of extending the

auditor's responsibilities to providing separate assurance. If the auditor determines that there are material inconsistencies or misstatements of fact that are unresolved prior to issuance of the financial statements, these differences should be clearly communicated within the body of the auditor's report. We expect that there will be rare instances where differences will be unresolved.

We believe that clarifying the auditor's responsibilities and findings related to other information further enhances to usefulness of the auditor's report.

**IAASB Questions** **Appendix B**

**Key Audit Matters**

1. ***Do users of the audited financial statements believe that the introduction of a new section in the auditor's report describing the matters the auditor determined to be of most significance in the audit will enhance the usefulness of the auditor's report? If not, why?***
As mentioned in our opening remarks that we prefer a more comprehensive auditor's commentary to provide entity-specific information regarding the audit. However, we believe that the identification of key audit matters selected from matters communicated with those charged with governance should provide users with more information about the most significant matters confronted by the auditor. We believe that this discussion will assist users in understanding the areas of significant management judgment, uncertainties, risks, etc.

   We do not believe that the standard should be overly prescriptive, but as mentioned in the opening remarks, we believe that certain matters should be discussed (e.g., audit risk, assessment of management's critical accounting judgments and estimates, auditor materiality, modifications of planned audit approach, etc.)

   Our principal concern is that the new standard is written in such a way so that the auditor would be required to disclose key audit matters.

2. ***Do respondents believe the proposed requirements and related application material in proposed ISA 701 provide an appropriate framework to guide the auditor's judgment in determining the key audit matters? If not, why? Do respondents believe the application of proposed ISA 701 will result in reasonably consistent auditor judgments about what matters are determined to be the key audit matters? If not, why?***
No comment.

3. ***Do respondents believe the proposed requirements and related application material in proposed ISA 701 provide sufficient direction to enable the auditor to appropriately consider what should be included in the descriptions of individual key audit matters to be communicated in the auditor's report? If not, why?***
No comment.

4. ***Which of the illustrative examples of key audit matters, or features of them, did respondents find most useful or informative, and why? Which examples, or features of them, were seen as less useful or lacking in informational value, and why?***

   ***Respondents are invited to provide any additional feedback on the usefulness of the individual examples of key audit matters, including areas for improvement.***
We found that the examples of the key audit matters provided a reasonable explanation of the significant matters. We suggest that the IAASB field test the examples and solicit specific input from investors regarding the usefulness of the disclosure.

5. ***Do respondents agree with the approach the IAASB has taken in relation to key audit matters for entities for which the auditor is not required to provide such communication – that is, key audit matters may be communicated on a voluntary basis but, if so, proposed ISA 701 must be followed and the auditor must signal this intent in the audit engagement letter? If not, why?***

***Are there other practical considerations that may affect the auditor's ability to decide to communicate key audit matters when not otherwise required to do so that should be acknowledged by the IAASB in the proposed standards?***
We believe that key audit matters should be required for all entities, however, if the matters are voluntarily disclosed, we believe that they should be subject to the requirements.

6. ***Do respondents believe it is appropriate for proposed ISA 701 to allow for the possibility that the auditor may determine that there are no key audit matters to communicate?***
We believe that every audit should have at least one key audit matter to report. If an auditor determines that there are no key audit matters, this fact should be disclosed and the rationale. We also believe that these instances should be very rare.

***(a) If so, do respondents agree with the proposed requirements addressing such circumstances?***
We believe that by definition, each audit should have at least one key audit matter to communicate. However, should the IAASB determine that this will be permissible in very limited circumstances, then the auditor should expressly state that there were no such matters to report.

***(b) If not, do respondents believe that auditors would be required to always communicate at least one key audit matter, or are there other actions that could be taken to ensure users of the financial statements are aware of the auditor's responsibilities under proposed ISA 701 and the determination, in the auditor's professional judgment, that there are no key audit matters to communicate?***
We believe by definition, there should always be at least one key audit matter to report.

7. ***Do respondents agree that, when comparative financial information is presented, the auditor's communication of key audit matters should be limited to the audit of the most recent financial period in light of the practical challenges explained in paragraph 65? If not, how do respondents suggest these issues could be effectively addressed?***
Financial statement users are interested in comparability and as such, key audit matters should be discussed covering all periods presented. We believe updating the previous period key audit matters provide additional comfort to the user about the quality of the previous period presented.

8. ***Do respondents agree with the IAASB's decision to retain the concepts of Emphasis of Matter paragraphs and Other Matter paragraphs, even when the auditor is required to communicate key audit matters, and how such concepts have been differentiated in the Proposed ISAs? If not, why?***
We agree that the Emphasis of Matter paragraphs and Other Matter paragraphs should be retained to provide a mechanism to alert users to matters that would not otherwise be considered key audit matters. It is especially important that when these paragraphs are used, that they clearly clarify how they differentiate from the key audit matters. We agree that the most widespread use of this paragraph is normally associated with the material uncertainties associated with "going concern" assumptions which under the new proposal will be replaced by the going concern disclosure. However, we believe that Emphasis of Matter paragraphs are an appropriate means of highlighting where management discloses an important matter.

**Going Concern**

9. ***Do respondents agree with the statements included in the illustrative auditor's reports relating to:***

   ***(a) The appropriateness of management's use of the going concern basis of accounting in the preparation of the entity's financial statements?***

   ***(b) Whether the auditor has identified a material uncertainty that may cast significant doubt on the entity's ability to concern, including when such an uncertainty has been identified (see the Appendix of proposed ISA 570 (Revised))?***

   ***In this regard, the IAASB is particularly interested in views as to whether such reporting, and the potential implications thereof, will be misunderstood or misinterpreted by users of the financial statements.***

   CFA Institute is strongly in favor of expanded reporting by the auditor to include a specific section regarding going concern. In a survey conducted in March 2012, 81% of respondents said that the accounting concept of going concern is important in their analysis of a company. Also, 92% of respondents think that the independent auditor's report should identify the basis and reasons for their conclusion that the entity may not continue as a going concern. These disclosures are especially important in light of the global financial crisis.

   Disclosures in the auditor's report should include the following elements:

   - disclosures of risks that directly or indirectly affect the determination that there is a question as to whether the entity is a going concern.
   - disclosures on the expected courses of action that bear on the financial flexibility of the entity, and a reasonably detailed discussion of the entity's ability to generate sufficient cash to support its operations during at least the 12 months from the date of the financial statements.

10. ***What are respondents' views as to whether an explicit statement that neither management nor the auditor can guarantee the entity's ability to continue as a going concern should be required in the auditor's report whether or not a material uncertainty has been identified?***
    We are in favor of an explicit statement that neither management nor the auditor can guarantee the entity's ability to continue as a going concern. A statement such as this should narrow any expectations gap for users.

    We recognize that the accounting standard setters have active projects addressing going concern and that the active timelines for resolving these issues are still unclear. However, we believe that the IAASB and the PCAOB should continue to move forward with additional auditor reporting in this area and consider any accounting standards outcomes in the final decision for the auditor's report.

**Compliance with Independence and Other Relevant Ethical Requirements**

11. ***What are respondents' views as to the benefits and practical implications of the proposed requirement to disclose the source(s) of independence and other relevant ethical requirements in the auditor's report?***

We agree that the auditor's report be changed to include a statement that the auditor is independent of the entity within the meaning of the relevant ethical requirements or applicable law or regulation and has fulfilled their ethical responsibilities under those requirements.

**Disclosure of the Name of the Engagement Partner**

12. ***What are respondents' views as to the proposal to require disclosure of the name of the engagement partner for audits of financial statements of listed entities and include a "harm's way exemption"? What difficulties, if any, may arise at the national level as a result of this requirement?***
CFA Institute is strongly in favor of mandating the disclosure of the engagement partner (preferably in the form of signature) in the auditor's report for audits of all entities. We agree with the IAASB's conclusion that disclosing the engagement partner's name improves transparency for users and perhaps more importantly, instills a greater sense of responsibility and accountability which ultimately translates to improved audit quality. This disclosure is already required in many jurisdictions throughout the world, therefore standardizing this requirement leads to further accountability.

**Other Improvements to Proposed ISA 700 (Revised)**

13. ***What are respondents' views as to the appropriateness of the changes to ISA 700 described in paragraph 102 and how the proposed requirements have been articulated?***
CFA Institute agrees with the other improvements to the auditor's report which include:
- Improved description of the responsibilities of the auditor and key features of the audit.
- Reference to whom the entity is responsible for overseeing the entity's financial reporting process.
- Other reporting responsibilities to allow additional flexibility for national standard setters to determine how best to place the auditor's communication about the enhanced reporting requirements (i.e., key audit matters, going concern, other information, etc.).

We also agree that the IAASB should not mandate the ordering of the elements of the auditor's report, however each area should be specifically identified with headings.

14. ***What are respondents' views on the proposal not to mandate the ordering of sections of the auditor's report in any way, even when law, regulation or national auditing standards do not require a specific order? Do respondents believe the level of prescription within proposed ISA 700 (Revised) (both within the requirements in paragraphs 20–45 and the circumstances addressed in paragraphs 46–48 of the proposed ISA) reflects an appropriate balance between consistency in auditor reporting globally when reference is made to the ISAs in the auditor's report, and the need for flexibility to accommodate national reporting circumstances?***
We agree that the ordering of the sections of the auditor's report should not be mandated. We understand that this flexibility is needed in order to comply with the many different jurisdictions subject to the auditor's reporting model. We do not think that the ordering of the presentation of the basic elements required by the auditor's report is critical, provided that they are all contained in the auditor's report and clear headings are used to indicate each section.

We encourage the PCAOB and the IAASB to work together to arrive at a standard for both form and content.

**Re: PCAOB Release No. 2013-005, PCAOB Rulemaking Docket Matter No. 34**
*THE AUDITOR'S REPORT ON AN AUDIT OF FINANCIAL STATEMENTS WHEN THE AUDITOR EXPRESSES AN UNQUALIFIED OPINION; THE AUDITOR'S RESPONSIBILITIES REGARDING OTHER INFORMATION IN CERTAIN DOCUMENTS CONTAINING AUDITED FINANCIAL STATEMENTS AND THE RELATED AUDITOR'S REPORT; AND RELATED AMENDMENTS TO PCAOB STANDARDS*

Dear Members and Staff of the Public Company Accounting Oversight Board:

Cherry Bekaert LLP welcomes the opportunity to comment on the Public Company Accounting Oversight Board’s (the PCAOB or Board) Release No. 2013-005, *The Auditor’s report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor’s Responsibilities Regarding Other Information in Certain Documents Containing audited Financial Statements and the Related Auditor’s Report; and Related Amendments to PCAOB Standards* (the Release). We recognize the desire of investors to receive additional information that might be useful to their decision making process and the unique roll and assurance that only the independent auditor can provide. We are committed to actively participating in efforts to improve audit quality that will enhance investor confidence in and their understanding of the audit process and the auditor’s responsibilities. However, we do not support all of the current proposals.

## A. Proposed Auditor Reporting Standard

### *1) Auditor Reporting of Critical Audit Matters (“CAMs”):*

We are concerned that the Board’s proposal to discuss critical audit matters (“CAMs”) in the auditor’s report will have an opposite effect on the Board’s desired objective to increase investor confidence through providing additional information. By highlighting those matters the auditor believes are most critical, it could be inferred by the user that the level of assurance for these matters is lower. However, the very purpose of the auditor’s risk assessment procedures including the analysis of significant management estimates and judgments is to develop audit procedures that will lower the risk to an acceptable level. The proposal does not require nor would we recommend that the auditor disclose what procedures the auditor performed to lower the risk. Rather the proposal only requires identification of the CAM, a description of why the auditor determined it was a CAM, and a reference to the accounts and disclosures in the financial statements. This is juxtaposed to the communication requirements of the recently effective PCAOB Auditing Standard 16 which requires communication to the audit committee among other things unusual transactions, significant estimates, and critical accounting policies which can raise a reader’s concern but also allows for a two-way iterative process whereby these concerns can be alleviated. Whereas the proposed changes to the auditor’s report could raise concern with no avenue for resolution. Thus the effect would only be to raise investor’s uncertainty while providing no additional assurance. In addition, we believe that in most circumstances, an informed investor should already be able to read the financial statements and reach their own judgment about the areas that an auditor would have considered more difficult to audit based on the degree of judgment necessary to develop the amount included in the financial statements or the complexity of the matter involved.

In addition, by highlighting only those matters that the auditor believes are critical the auditor is implying that other areas are not as critical which could be construed as stating that the other matters not explicitly noted do not have audit risk and are not important to an investor's decision. In the studies cited by the board (FN 39) the board acknowledges that the prominence of which information is displayed has investing implications. It is not the responsibility of the auditor nor should it be the responsibility of the auditor to inform investors as to what information is most important to their decision making. Providing or appearing to provide such information will likely lead to unanticipated reliance and potentially inappropriate litigation. Rather the auditor's responsibilities and the auditor's report has always been and should always be factual in nature. The purpose of the required disclosures in the codified accounting standards and those additional disclosures required by regulators is to provide useful information to investors. The purpose of the auditor is to attest to the material accuracy of that information and it is investor's responsibility to decide which information is most useful to their decision making. Moreover, under existing guidance those matters which are considered critical accounting policies and significant estimates are already required to be disclosed and audited.

The proposal also provides guidance on the source of CAMs including those matters documented in the engagement completion document, reviewed by the engagement quality reviewer, and those matters communicated to the audit committee. Yet the proposal also states that each matter noted in the aforementioned would not necessarily be considered a CAM. We believe that given the litigious nature of the U.S. operating environment and the risk adverse and conservative nature of our profession this requirement would lead auditors to conclude that all of the matters noted in the aforementioned audit documentation are critical thus increasing the length and complexity of the auditor's report thus decreasing the usefulness of the auditor's report or  potentially the reverse could happen and auditors would exclude such matters from quality review or communication to the audit committee so as to reduce risk of litigation. This correlation between risk adversity and excess disclosure is evidenced by the ever increasing risk factors included in many filers MD&A.

In addition the proposal would require auditors to document the rebuttable presumption that matters noted in the aforementioned audit documentation are not critical matters. Such increased documentation would be difficult and costly to create as it would require auditors to document why such matters were critical enough for quality review or communication to the audit committee yet not critical to enough to communicate the end users of the financial statements. A seemingly contradictory position especially considering the key purpose of this standard is to alleviate information asymmetry. The mostly likely result would be to include all such matters or incur significant costs in documenting such conclusions including multiple layers of review.

Lastly, the public disclosure and potentially negative perceptions of CAMs would likely lead management to prefer minimizing their inclusion in the auditor's report. This would likely lead to sharply contested discussions between management and the auditors regarding which CAMs to include in the auditor's report. The knowledge that these critical matters might potentially be disclosed will also likely impede the open dialog with management concerning problematic accounting issues which takes place during risk assessment and planning.

Given these concerns we cannot support the Board's proposal related to the inclusion of critical audit matters in the auditor's report.

### *2) Basic Elements of the Auditor's Report:*

We fully support improving the auditor's report by adding elements clarifying auditor independence requirements and the auditor's responsibilities regarding other information filed with the auditor's report and financial statements. We understand that some investors might not be aware of such requirements and responsibilities and an informative statement clarifying such would be helpful and inexpensive to implement. However, we disagree with the proposal to include information concerning auditor tenure. Such information is already available via review of historical filings including the required 8-K communications whenever a change in auditor occurs. In addition, such information can only serve to decrease investor confidence whether it be an investor that notes a short tenure thus potentially leading the investor to believe that the auditor lacks sufficient knowledge about the entity to conduct a thorough and quality audit or whether it be an investor that notes a long tenure thus potentially leading the investor to believe that the auditor lacks independence or professional skepticism. Moreover, it is the audit committee's responsibility to make judgments concerning the risk associated with auditor tenure. We believe that such a disclosure could potentially lead to an undue increase in auditor rotation. If more frequent rotation is a result of the inclusion of this information, we believe many firms that currently audit a small number of public entities may choose to exit this market due to the much higher costs imposed on them by more frequent rotation. This in turn will have the effect of reducing the level of competition and reduce the number of options available to Registrants when selecting their audit firm as well as increasing fees and ultimately the cost of capital.

## B. Auditor's Responsibilities Regarding Other Information

Our firm already performs many of the additional responsibilities noted in the proposal regarding other information contained in a document containing the auditor's report and financial statements. As part of the current requirement to "read and consider" we typically test the mathematical accuracy of computations and agree those amounts presented in such other information to the audited financial statements and footnotes when applicable. From this perspective the proposal would have little additional change or costs to our firm.

However, what is considered other information is disconcerting. Specifically, the inclusion of 1) All information incorporated by reference (exhibits); 2) All information incorporated by reference from the definitive proxy statement; and 3) Qualitative statements in the other information. We believe that inclusion of information incorporated by reference would create an undue burden on the auditor and increase the cost of providing audit services. Many times the information incorporated by reference is several years old, sometimes pertains to a period of time covered by the predecessor auditor, or relates to 8-Ks or other filings which currently auditors are not responsible to perform procedures over. The inclusion of qualitative statements is especially disconcerting because often times information contained in the MD&A and other information are more subjective or forward looking and not objectively verifiable. In addition, it is possible that this expansion of information to qualitative information may well lead to the auditor being held to a higher standard than management who actually authors the MD&A. Management has been provided a number of safe harbors with respect to certain types of information and, by expanding the auditor's role and responsibility to this information we perceive that there is a risk that the auditor may have some responsibility to information for which safe harbor rules with respect to management may apply.

Moreover, we expect that many firms and Registrants will find it costly and cumbersome to implement the proposed new requirement that other information not only be compared to the audited financial statements and footnotes but also that other information not directly related to the audited financial statements be compared to audit evidence obtained. During the course of an audit an enormous amount of information is obtained. Not all such information is useful to the audit of the financial statements. If the Board is proposing that all information outside of the financial statements and footnotes be tested for material misstatement of fact by comparing to any information obtained during the audit then this will likely lead to auditors testing all such information. Rather than risk that support for other information was indirectly obtained as part of normal audit procedures to test other balances and not used to test the other information because the auditor was unaware that it had such support auditors will instead audit all such other information in the document. For example, if a detailed general ledger was obtained as part of journal entry testing then would it be the auditor’s responsibility to test the material misstatement of fact for anything presented in the other information that can be agreed to the detailed general ledger or other support even if not presented in the financial statements or footnotes? This scenario would essentially require that all information presented be agreed to support. This will lead auditors to perform procedures similar to those employed in comfort letters for all amounts included in the MD&A and we believe this will increase audit costs.

We appreciate the opportunity to comment on the proposal. If you have any questions, please contact us at (704) 377-1678.

Sincerely,

Cherry Bekaert LLP

**Re: PCAOB Rulemaking Docket Matter No. 34 – Release No. 2013-005**

Chevron Corporation (Chevron) appreciates the opportunity to provide comments to the Public Company Accounting Oversight Board (PCAOB) on the two new proposed auditing standards and related amendments to current standards addressing the auditor's reports on audited financial statements – Rulemaking Docket Matter No. 34: *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Position; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; And Related Amendments to PCAOB Standards.*

Chevron is a global, integrated energy company based in San Ramon, California. The company explores for, produces and transports crude oil and natural gas; refines, markets and distributes transportation fuels and other energy products; manufactures and sells petrochemical products; generates power and produces geothermal energy; provides energy efficiency solutions; and develops the energy resources of the future, including biofuels. The company's activities are widely dispersed geographically with operations in North America, South America, Africa, Asia, Australia and Europe.

We support the PCAOB's efforts to develop audit standards that enhance the usefulness of corporate reporting to the investor. Re-iterating the core principle put forth in our September 21, 2011 comment letter on the concept release, while there may be some opportunity for improvement within the current auditor's report to clarify what an audit represents and what an independent auditor's responsibilities are, we strongly believe that it is management's responsibility to provide investors with information about the company and the financial statements. We believe that the proposal requiring the audit report to include Critical Audit Matters (CAMs) does not support that core principle and would not provide value-added information to the investor. We are also concerned that the proposed extension of the auditor's report to include the evaluation of information, such as the Management Discussion and Analysis (MD&A), in the annual report other than core financial statements would expand evaluation to strategies, forward looking statements, risks and litigation, which are difficult to audit.

**Critical Accounting Matters**

We support the PCAOB's decision to retain the "pass/fail model" and believe that the current requirements regarding the auditor's reporting of material items are functioning effectively. However, we do not believe the auditor's report should include CAMs, when the opinion overall is unqualified, for the following reasons:

The proposed structure for the CAMs would mean that the auditor's report would contain discussion on matters that were fully resolved through the established channels of internal control including internal and external audit, the Board Audit Committee, and management certification of the report. We do not believe that calling out key events and difficult judgments separately in the auditor's report would serve to clarify the technical and subjective matters to the investor or support the corporate reporting function. Highlighting only a few matters for discussion in the auditor's report would suggest to the investor those are areas where the results reviewed and approved by management are not as certain.

We also believe the company-specific factors proposed to be communicated via the CAMs are covered in both the Management's Discussion and Analysis portion and in the Notes to the Consolidated Financial Statement section of annual report, including discussions of Critical Accounting Estimates and Assumptions, Summary of Significant Accounting Policies, New Accounting Standards, and in the Results of Operations. We do not believe that this proposed format will provide new or meaningful information to the investor. In addition, including CAMs in the auditor's report conflicts with the expressed interest by both the FASB and SEC for companies to produce annual reports with more concise and meaningful content.

We are also concerned that the additional processes to determine and fully document which of the matters should be included as a CAM and why each was, or was not, included in the auditor's report would require significant additional effort by the audit staff, external reporting, management and the Board Audit Committee. This could not be accomplished within the window for filing without reducing the time available to assure the quality of the financial audit and the core reporting. We also expect these proposals would result in significant additional costs to the company given the extra time and resources required to meet the requirements from both external audit and corporate staffs.

**Reporting on Other Information**

The proposed standard addressing the expansion of auditor's responsibility from the "read and consider" if other information is materially consistent with the annual report to "read and evaluate" and further, to include a summary evaluation in the auditor's report, may pose more questions than answers. For example, an evaluation of the information in the MD&A section would cover many different types of data including strategies, forward-looking statements, risks and litigation. This type of data is not conducive to normal evaluation procedures as it is based on the best judgment of management and is often difficult to predict, unlike the audit of the financial statements and corresponding notes which reflect the actual transactions based on accounting standards. We believe it would be very difficult to communicate in the auditor's report precisely which data and statements were evaluated. In addition, following on the comment above, this would add steps to be accomplished during a limited window and we do not believe these steps would improve the overall quality of the results.

To summarize, we believe the core role of the independent auditor should continue to focus on completing the audit effectively and enhancing its communication with management and the Board Audit Committee, within existing standards, which we believe to be adequate.

* * *

If you have any questions on the content of this letter, please contact Al Ziarnik, Assistant Comptroller, at (925) 842-5031.

Very truly yours,

Matthew J. Foehr

Washington, DC 20006-2803

RE: PCAOB Rulemaking Docket Matter No. 34

Dear Board Members,

Cirrus Logic appreciates the opportunity to comment on the PCAOB Rulemaking Docket Matter No. 34 – *"Concept Release on Possible Revisions to PCAOB Standard Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards"* dated June 21, 2011.

We appreciate the Board's efforts to consider changing the audit reports for financial statements to enhance the usefulness for the investor community. We acknowledge the concerns addressed in the concept release and agree that investors should receive useful and relevant financial information on a timely basis. However, we do not support the Board's proposals in their current form.

We are concerned that the Board's proposal to discuss critical audit matters (CAM) in the auditor's report may be construed as an implicit qualification of the audit creating a perception that there may be weaknesses or deficiencies in management's judgment, financial statement estimates or internal control environment. The pass/fail model has served constituents well precisely because an opinion is expressed on the financial statements taken as a whole. While we strongly support the decision to retain the pass/fail model, the subjective nature of the definition, interpretation and ultimately the description in the auditor's report of CAM's increases the likelihood that users may perceive different levels of assurance on different areas of the financial statements. If the perception of the auditor opinion is compromised, all stakeholders will be ill-served as corporate governance, auditor independence and user investment decisions could be adversely impacted.

Intelligent users of financial statements understand that extensive information related to matters that may qualify CAMs is already available in existing disclosures. Quarterly and annual financial reports filed with the SEC already include extensive disclosures of critical accounting policies, significant estimates, business and operating trends, as well as financial operating risks. Given the litigious environment in the U.S., preparers are often reluctant to remove existing disclosures. Moreover, due to the nature and sheer volume of these disclosures, a meaningful portion may occur outside of the periodic SEC filings. While sophisticated users understand and know how to find these disclosures, all of this contributes to a complex patchwork of disclosures that may hinder the casual user's ability to fully comprehend the information that is readily available. Accordingly, we believe any user frustration regarding the audit process is symptomatic of a larger issue, disclosure overload, that the Board should address with the SEC and other standard setters and regulators to develop a more robust, transparent and user friendly disclosure framework.

Many entities operate in complex industries with unique challenges based on the prevailing business or economic climate. During the course of an audit, auditors naturally many encounter areas that involve difficult, subjective or complex judgments that require communication to the audit committee, consultation with experts or require extensive documentation. We are concerned that the practical application of the identification, documentation and justification of conclusions regarding inclusion of CAMs in the auditor's report will result in an overabundance of caution by the auditors. In other words, auditors will be motivated to include more rather than less CAMs in the auditor's report to avoid being second guessed during the PCAOB inspection process. Consequently, the auditor's report, at the expense of clarity of the auditor's opinion, will inappropriately become a mechanism to communicate matters of importance or significance related to an entity's financial reporting.

Financial statement users may confuse the roles of the auditor, management and the audit committee. Management is responsible for preparing and filing all financial reports. The financial reporting process is overseen by the audit committee, which oversees a reporting entity's accounting policies, internal controls, financial reports and the audit process. The auditor should never be the first source of information, provide disclosure of information that is not otherwise required to be disclosed by management or have the appearance that it is making financial reporting decisions on behalf of management. Any confusion of these roles could undermine both the reporting entity's corporate governance as well as the auditor independence.

It is also likely that reporting entities will incur incremental costs associate with the increased documentation requirements as auditors will now be compelled to justify in their work papers why certain items either qualify or do not qualify as CAMs. When coupled with the potential harm to investors, corporate governance and auditor independence, we do not see any incremental benefit to users from the Board's proposal. Notwithstanding the Board's stated objective, it appears that the practical purpose of the Board's proposal is to highlight significant disclosures and risks for users of financial statements. Given the level of disclosure information that is already available to users and the cost involved, we cannot support the Board's proposal.

A second point in the proposed audit standard relates to reporting on other information. We agree that users may benefit from a clearer articulation in the auditors' report of the auditors responsibility for the other information in annual reports filed with the SEC. However, we are concerned that the Board has proposed a more stringent standard of auditor involvement with other information. Rather than "read and consider," the auditor is required to "read and evaluate" whether other information is materially consistent with the audited financial statements. It is unclear to what extent the Board intended to substantively change the auditor's responsibilities relate to other information or if the Board simply intends to enhance users' understanding of auditors' existing responsibilities related to other information. If it is the Board's intent to substantively change the auditors existing responsibilities, we encourage the Board to consider whether it is necessary for users to expect auditors to provide incremental assurance on other information as rigorous and effective procedures already exist to ensure other information is materially consistent with the audited financial statements.

Current laws and regulations require CEO and CFO certification of disclosure required in the annual and quarterly reports, as well as the establishment of disclosure controls. Public companies are subject to independent audit committee oversight of annual and quarterly financial reporting. Moreover, many disclosures outside of the primary financial statements, such as in the MD&A, are more subjective or forward looking. These disclosures are based on management's analysis and insights and often may not be objectively verifiable. We believe it would be extremely difficult for the auditors to evaluate this information effectively. Given the inherent limitations associated with such an increase in the auditor's scope, and the difficulties this would pose to both auditors and management, it may be necessary to curtail the amount or type of information disclosed in the MD&A, ultimately reducing the overall insight and benefit to users. Lastly, questions regarding the auditor's independence may also surface as an increased level of assurance on subjective or forward looking information may be seen as advocating or challenging the decisions of management.

We do not believe the increase in audit fees, as they would invariably be raised due to these increased requirements by the auditors, as well as any indirect costs related to increased management time and focus, justify a change in scope. While we support clarification of the auditor's report to explain the auditor's responsibilities related to other information, we do not support the proposal as written. We encourage the Board to retain the existing requirement to "read and consider" and revised the proposed language in the auditor's report accordingly.

We appreciate the opportunity to comment on the proposal. If you have any questions, please contact me directly at 512-851-4547.

Subject: *PCAOB Rulemaking Docket Matter No. 034*

Dear Board:

The Audit Committee of Cisco Systems, Inc. ("Cisco") appreciates the opportunity to comment on the PCAOB's proposed two new auditing standards, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*, and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*, and in addition, the related amendments to existing PCAOB standards (the "proposals").

As members of the audit committee of a large U.S. public company, we are responsible for ongoing oversight and independent appraisal of the financial reporting process and have a critical role in corporate governance. Therefore, we are very focused on ensuring that financial information is understandable, transparent, accurate and reliable. Similarly, we strongly support effective communication of financial information and understand that high-quality information is foundational to enhancing investor confidence.

The proposals are intended to "provide information that is specific to a particular audit" and "increase the informational value of the auditor's report to promote the usefulness and relevance of the audit and the related auditor's report". Outreach performed by the PCAOB has indicated that some investors are not satisfied with the content of the existing auditor's report, but believe the "auditors have unique and relevant insight" to provide "early warning signals regarding potential issues" and "knowledge that would assist them when making their investment decisions."

**Overview**

We support the PCAOB's decision to retain the existing pass/fail model on opinions on financial statements, which will continue to provide a clear and unambiguous message for investors and other users of financial information. While we also support the PCAOB's objectives to improve the informational value of the auditor's report and to include additional language that clarifies the nature and scope of the audit, we do not support proposals that would alter existing reporting responsibilities for disclosing information about the company. We are concerned that the proposals may have the unintended effect of reducing transparency and critical dialogue within the corporate governance framework. Similarly, while some of the proposals are not intended to require additional audit effort, we expect that these proposals will result in significant additional audit procedures in the aggregate, which would unnecessarily lead to a combination of increased costs, added pressure on reporting deadlines, and potential dilution of audit quality resulting from the auditor's broader scope.

**Critical Audit Matters**

The proposals would require the auditor to communicate in the auditor's report "critical audit matters" addressed during the audit. Critical audit matters include matters that (1) involved the most difficult, subjective or complex auditor judgments, (2) posed the most difficulty to the auditor to obtain sufficient audit evidence, or (3) posed the most difficulty to the auditor in forming an opinion on the financial statements. This communication is intended to provide investors and other financial statement users with "previously unknown information about the audit."

Within the existing corporate governance framework, the audit committee has a very active role in the financial reporting process. At Cisco, we have a robust process for reviewing financial information each quarter, which includes regular interaction with management and our auditors through ongoing, open communication. Each quarter, Cisco's disclosure committee meets three times to review the Form 10-Q/10-K prior to filing with the Securities and Exchange Commission (SEC). The disclosure committee is comprised of senior management from several functional areas, the Chief Accounting Officer, internal counsel, investor relations, and various finance and other functions of the company and includes reviews with the Chief Executive Officer and Chief Financial Officer. Additionally, both our external counsel and auditors attend the disclosure committee meetings. The audit committee also meets twice a quarter with management and our auditors to review the financial information prior to filing. This process ensures that all relevant information about material items is readily available and thoroughly discussed among key stakeholders.

In our view, requiring auditors to independently report critical audit matters may result in some unintended consequences such as limiting the information exchange and the level of involvement by both the audit committee and the auditors in disclosure committee meetings if management is concerned that information may be separately reported in a manner or format that does not appropriately convey the needed context or detail. Additionally, as judgment is required to identify critical audit matters, we are concerned that inconsistencies would exist in the nature or extent of topics discussed.

It is also important to consider that the disclosure of Critical Accounting Estimates is an existing component of Management's Discussion and Analysis (MD&A). It is highly likely that a disclosure of critical audit matters would include some or all of the areas involving critical accounting estimates. Repeating the same information in the auditor's report does not add significant value for users and may actually create confusion. As noted in the proposals, existing PCAOB standards provide for emphasis paragraphs that can be utilized today by auditors to highlight critical audit matters.

We would also like to emphasize that it is the responsibility of the company's management to provide information about the company. The role of the auditor is to attest to this information. To the extent investors and users of financial statements have information needs that are not currently met through established financial reporting requirements, those needs should be raised for consideration in future standard setting and policy-making initiatives through the appropriate regulatory bodies. It is key to understand that the independent audit firm is involved in the financial reporting process and their feedback and perspectives are integrated and reflected in the company's filings.

**Auditor Reporting on Other Information**

The proposals are intended to "improve the auditor's procedures and enhance the auditor's responsibilities" with respect to information outside the financial statements within an annual report filed with the SEC under the Exchange Act (including Selected Financial Data, MD&A, exhibits, and certain information incorporate by reference). This would be accomplished by focusing the auditor's attention on the identification of material misstatements of fact or material inconsistencies between the information outside the financial statements and the company's audited financial statements.

We do not support increased audit procedures or reporting beyond those currently required to "read and consider" other information in certain documents that also contain the audited financial statements and the related auditor's report. Beyond the increased costs that would result from any incremental audit procedures, we are concerned that investors and other users will not properly understand the limitations associated with the "evaluation" of other information, especially in the context of non-financial, qualitative and forward-looking information in the MD&A. Until there is clear evidence of demand among investors and other users for additional audit procedures on information outside the financial statements, we believe the auditor's report should not be modified to suggest additional audit procedures beyond those currently required under existing PCAOB standards. We do not believe that it is in the best interest of shareholders to burden them with increased costs without a clear understanding of the problem statement and benefits that will be attained.

## Elements of the Auditor's Report

The proposals would include "Auditor tenure" as a new element of the auditor's report and require disclosure of the year that the auditor began serving as the company's auditor. Consistent with our feedback on the PCAOB's Concept Release on *Auditor Independence and Audit Firm Rotation*, we are not aware of a clear linkage between the tenure of an audit firm and that firm's independence. Likewise, we do not believe that audit tenure is an indicator of audit quality and do not believe that this new element will bring added value to the auditor's report.

On the other hand, we do support clarifications to existing elements of the auditor's report that would improve users understanding of the nature of an audit, the auditor's responsibilities, and the purpose of the auditor's report. However, we suggest that the PCAOB not only improve the wording in the auditor's report, but also consider other mechanisms to raise public awareness of these important aspects.

## Concluding Remarks

We support the PCAOB's continued outreach activities and encourage additional public roundtables with stakeholders to further discuss the merits of the proposals. These discussions are of utmost importance not only from a cost/benefit perspective, but also to ensure that the role of the audit committee and auditors is neither compromised nor diminished inadvertently. It is equally important to clearly demonstrate to investors and other users of financial statements that it is management's responsibility to communicate information about the company.

We thank the PCAOB for the opportunity to provide our comments on the proposals. If you have any questions regarding our response or would like to discuss our views in further detail, please feel free to contact us.

Sincerely,

Steven M. West

On behalf of the Audit Committee of Cisco:
Steven M. West, Chair
Roderick C. McGeary
Arun Sarin, KBE
M. Michele Burns

Ladies and Gentlemen:

Citrin Cooperman & Company, LLP ("Citrin Cooperman") is pleased to provide comments on the Public Company Accounting Oversight Board's (the "PCAOB" or the "Board") Proposed Auditing Standards (collectively the "Proposed Standards"): *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion* (the "proposed auditor reporting standard") and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (the "proposed other information standard").

Citrin Cooperman respects and supports the Board's mandate to protect the interests of investors and further public interest in the preparation of informative, accurate and independent reports.

Thank you for the opportunity to provide you with our viewpoints on the Proposed Standards. We would be pleased to discuss our comments with members of the Board or its staff.

Very truly yours,

Citrin Cooperman & Company, LLP

**OVERVIEW**

We have summarized our views on three areas of the Proposed Standards. Our thoughts supporting these views are further discussed in the section entitled "Our answers to specific questions."

**1. Critical audit matters**

We find the Board's proposed auditor reporting standard to be thought-provoking. However, we are concerned that the outcome is likely to be additional paragraphs in an auditor's opinion that are lengthy and may become "boiler plate" over time. For the reasons discussed in the section of this response entitled "Our answers to specific questions," we believe that the proposed auditor reporting standard will unnecessarily focus investors' attention on specific areas of the audit without enabling investors to gauge the efficacy of the auditor's response to those "problematic" audit areas. Further, we believe that the added disclosures of critical audit matters may have the unintended consequence of diluting the value of the "pass/fail" opinion model. Finally, we are concerned that focusing investors on selected critical audit matters could expose the auditor to unintended litigation issues.

While we agree that enhanced communication of matters deemed significant to the financial reporting process is warranted, we would like to see the regulatory community, including the Securities and Exchange Commission ("SEC") and the PCAOB, develop a platform that would enable investors to communicate directly with issuer management in a forum that provides a reasonable framework for issuer management to respond to such direct inquiries in a questions and answers ("Q&A") format, and that this be made available on an issuer's website or a website sponsored by the issuer.

**2. The evaluation of other information by the auditor**

We do not support the Board's proposed other information standard. The proposed other information standard would, in our judgment, expand the auditor's role with respect to the evaluation of other information in the documents that accompany financial statements, and we don't believe that the Board's overall desire to help achieve a reduction in the information asymmetry between issuer management and the public or increasing the informational value of the auditor's report would be achieved by the proposed other information standard.

**3. Applying the Proposed Standards to other registered businesses**

The Board has asked for comments on three types of businesses that we feel well-suited to comment upon: registered brokers and dealers, registered investment advisors, and Emerging Growth Companies.

Registered brokers and dealers are unique because of the high level of interaction with regulators and the high level of disclosure to the public. We believe that it is appropriate to assume that investors can identify important facts and trends about brokers and dealers, including their track record of compliance and complaints. This information is useful in evaluating the management environment and serves to mitigate the need for additional disclosures in the auditor's report. We also believe that due to the unique nature of brokers and dealers, it is again appropriate to believe that financial statement users have been made aware of critical audit matters that are addressed through existing financial statement disclosure and presentation requirements.

Investment companies are unique because the nature of their business is focused on investments. As a result, many of the financial statement disclosures about investment companies emphasize the risks inherent in the investment portfolio of the investment company.

We feel that the PCAOB need not apply the Proposed Standards to brokers and dealers and/or investment companies for the reasons stated in our responses to questions 35 and 38, which are in addition to our comments described above concerning critical audit matters and other information.

Without altering our views expressed herein with respect to the Proposed Standards, we support the application of the Proposed Standards, in their final form, to Emerging Growth Companies. Investors in these companies deserve and need the same disclosures as are provided by other issuers.

## OUR ANSWERS TO SPECIFIC QUESTIONS

The following comments reflect our views in response to certain questions raised by the PCAOB.

### Questions and Responses Related to Section III

**Question 6:** Is it appropriate to require the auditor to evaluate the other information for both a material inconsistency and for a material misstatement of fact? If not, why not?

**Response:** We believe that the PCAOB should not require the auditor to evaluate the other information for material inconsistency or material misstatement of fact.

We acknowledge the PCAOB's comment on page 20 of PCAOB Release No. 2013-005 (the "Release"):

> "Under existing PCAOB standards, the auditor has a responsibility to 'read and consider' other information in certain documents that also contain the audited financial statements and the related auditor's report; however, there is no related reporting requirement to describe the auditor's responsibility with respect to other information."

However, we believe that it would become necessary for the auditing profession to develop standards or best practices to perform procedures that would be appropriate to document the evaluation of additional information, including, but not limited to, its accuracy and completeness. This would, in our judgment, entail a very significant amount of additional work to be performed, and we do not see this additional work reducing the information asymmetry between issuer management and the public or increasing the informational value of the auditor's report.

In addition, it is not clear what the term "evaluate" is intended to convey to the reader of the auditor's report. We have read the illustrative language for the auditor's comments on other information on page A1-16 of the Release. We believe that the illustrative paragraph, as drafted by the Board, could be misunderstood by investors and other financial statement users by implying that the auditor did more work with respect to the other information than is intended to convey. The paragraph offers the reader a form of negative assurance, which is based on evidence and conclusions.

### Question and Responses related to Section V

**Question 10:** Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?

**Response**: We believe that the Proposed Standards, which have been written by the PCAOB after thoughtful discussion and consideration, include innovative ideas. The goal, which is to promote more efficient capital allocation and lower the average cost of capital, is a positive one. The method of achieving that goal, to reduce the level of information asymmetry between management and investors with the intent of increasing the relevance and usefulness of the auditor's report, is also positive.

However, we have the following concerns about the proposed requirement to disclose critical audit matters in the auditor's report:

1. We do not believe that the auditor should be disclosing information to financial statement readers about the registrant that hasn't previously been reported by management.

2. Readers of the auditor's comments about critical audit matters may begin to view the opinion as a "piecemeal opinion." This is because the auditor's report will begin to emphasize specific audit areas rather than the financial statements taken as a whole.

3. The public is likely to misunderstand critical audit matters. Critical audit matters may be interpreted as problems when in fact the auditor believes that the audit procedures have sufficiently addressed these risk areas. The public is likely to lose sight of the fact that if the auditor cannot perform sufficient procedures in order to obtain proper audit evidence, a modification to the auditor's report would be required.

4. The intention of communicating critical audit matters is to provide the reader with a focus on aspects of the registrant's financial statements that the auditor found to involve the most difficult, subjective, or complex auditor judgments or posed the most difficulty to the auditor in obtaining sufficient appropriate audit evidence or forming an opinion on the financial statements. We refer the Board to the response by Mr. Beresford. We agree with Mr. Beresford's comments on this topic.

We believe that there are significant similarities between the requirements that management must disclose in their required management discussion and analysis ("MD&A") section and critical audit matters. Management is already required to disclose in the MD&A a separate section relating to accounting estimates and assumptions that may be material to accounting measurements. As a result, we believe critical audit matters would encompass all significant disclosures in the MD&A concerning accounting matters. This is likely to result in the disclosure of more critical audit matters than are needed out of concern that an auditor's judgment will be second guessed by regulators.

As a result of these concerns, we cannot support the disclosure of critical audit matters in the auditor's opinion.

**Question 11:** What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?

**Response**: Benefits: We agree that a reader of financial statements may learn facts about the issuer and its management that they might not otherwise have known.

Unintended consequences are difficult to know in advance. However, we believe that there is a likelihood that:

- Investors may be misdirected by comments in the "critical audit matters" narrative. It is likely that some investors may inappropriately perform less due diligence to understand an investment. An investor may focus on an audit risk detailed in the critical audit matters and fail to perform sufficient research to identify other business risks that are no less important.

- We believe that management, audit committees and auditors will face new challenges in terms of how much proprietary information should be disclosed. While management, audit committees and auditors are likely to agree upon reasonable disclosures for the investing public, there is a another group, the investors, who may demand more information than issuers and their auditors believe is appropriate to disclose. The boundaries for these disclosures are not known and could easily result in costly litigation to resolve.

**Question 15:** Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?

**Response**: Without altering our views expressed in question 10, we feel it would be helpful for us to respond to this question in the event that the disclosure of critical audit matters is required by the Board. The actual audit procedures that are performed are a matter of auditor judgment. We do not believe that a reader's understanding of a critical audit matter will be enhanced by the disclosure of the auditor's procedures. Also, we believe that it is unlikely that the goal of reducing the level of information asymmetry between issuer management and investors will be furthered by such a disclosure.

**Question 28:** What effect, if any, would the auditor's communication of critical audit matters under the proposed auditor reporting standard have on an auditor's potential liability in private litigation? Would this communication lead to an unwarranted increase in private liability? Are there other aspects of the proposed auditor reporting standard that could affect an auditor's potential liability in private litigation?

**Response**: Although liability in private litigation cannot be predicted, we feel that the potential for exposure to liability would increase significantly. We believe this is why commenters have already written that auditors will be inclined to write lengthy disclosures in a boiler plate fashion with the goal of reducing the risk of litigation.

### Questions and Responses Related to Section VIII

**Question 35:** Are the proposed auditor reporting standard and amendments appropriate for audits of brokers and dealers? If yes, are there any considerations that the Board should take into account with respect to audits of brokers and dealers?

**Response**: We do not feel it is appropriate for audits of brokers and dealers to be subject to the Proposed Standards. To the credit of the SEC and self-regulatory organizations such as Financial

Industry Regulatory Authority ("FINRA"), there are a number of regulatory activities that take place that are designed to protect the investing public.

1. Brokers and dealers are not issuers.

   As a practical matter, brokers and dealers are not issuers. As stated on pages A5-58 and A5-59 of the Release, the PCAOB's Office of Research and Analysis ("ORA") stated that their research indicated:

   > "There are no issuers among the approximately 4,230 brokers and dealers that filed annual audited financial statements with the SEC for fiscal periods ended during 2012."
   >
   > "That ownership of brokers and dealers is primarily private, with individual owners generally being part of the management team."

   These facts indicate that the users of financial statements are generally not making decisions to invest in brokers and dealers as issuers, but are often using the annual audited financial statements to be assured that it is safe to use the broker or dealer to conduct its investment transactions and in some cases that it is safe to permit the broker-dealer to have custody of their funds and securities. We respectfully believe that the Board should consider the broker dealers' interaction with and oversight from regulators, described below, as a safeguard that provides enhanced protection to the users of financial statements of brokers and dealers.

2. Interaction with and oversight from regulators.

   There is significant interaction with and oversight from regulators, such as the SEC and FINRA, surrounding brokers and dealers. In addition, there is a high level of public disclosure about businesses and individuals that deal with the public.

   Brokers and dealers file Financial and Operation Combined Uniform Single Report (FOCUS reports) at least quarterly; many file monthly if their minimum net capital is at a high level. The level of minimum net capital is a reflection of perceived operational risk. FOCUS reports include balance sheets, income statements and other operational measurements of financial condition. In addition, all brokers and dealers file quarterly Statements of Supplemental Income that include more details about results of operations. It is not unusual for responsible personnel at brokers and dealers to receive inquiries from regulators about the reasons for fluctuations and unusual amounts that are disclosed in these reports.

   We are not stating that the involvement of regulators is a substitute for audit procedures. But we do ask that the PCAOB consider these two items: 1) the requirement that financial statements of brokers and dealers be audited; plus 2) the benefits to the public arising from the regulatory interaction with brokers and dealers, which results in important disclosures to investors. We ask that the PCAOB consider that these two items be viewed as a combination of factors that mitigates the need for the Proposed Standards as they may relate to brokers and dealers.

For the above reasons, we do not agree that the Proposed Standards should apply to brokers and dealers. We would encourage the Board to consider these processes of interaction and disclosure. They are in place to protect the public.

While we do not agree that the Proposed Standards should apply to brokers and dealers, we do believe that if the PCAOB decides that the Proposed Standards should apply, they should only be applied to those brokers and dealers that have custody of customer funds or securities.

**Question 38:** Are the proposed auditor reporting standard and amendments appropriate for audits of investment companies? If yes, are there any considerations that the Board should take into account with respect to auditors' reports on affiliated investment companies, as well as companies that are part of master-feeder or fund of funds structures?

**Response**: Investment companies are currently required to include as part of their financial statements a Condensed Schedule of Investments, as well as Financial Highlights particular to the funds. In addition, there are significant disclosures about the valuation of the assets pursuant to ASC 820 which are clearly important to the reader. We believe that it is reasonable for investors and the public to believe that these significant areas have been addressed by the auditors, and that restating these items as critical audit matters in the auditor's report is unlikely to provide additional benefits to the users of the financial statements.

Accordingly, we are not certain that the Proposed Standards' additional disclosures in the auditor's report would add value to the investor.

For purposes of the Proposed Standards, affiliated investment companies are defined on page A5-60 of the Release as other investment companies registered by a sponsor that generally would have the same or related investment advisers. The document containing annual shareholder reports of investment companies will have the same fiscal year-end and will generally contain a single auditor's report that refers to the financial statements of each audited investment company. We believe that the conclusions that we reached in the preceding paragraphs would be the same for affiliated investment companies, for the same reasons.

With respect to master-feeder funds or fund of funds capital structures, page A5-60 of the Release also notes that SEC Staff guidance requires that the annual report of each feeder fund generally contain financial statements of both the master and the feeder fund. Once again, our conclusion is that it is reasonable for investors and the public to believe that the significant areas related to the risks inherent in the investment portfolio of investment companies have been addressed by the auditors.

## Questions and Responses Related to Section XI

**Question 29:** Is the Board's effective date appropriate for the proposed other information standard? Why or why not?

**Response**: The Proposed Standards and amendments would be effective, subject to approval by the SEC, for audits of financial statements for fiscal years beginning on or after December 15, 2015. We believe that such timing should be sufficient for issuer managements and auditors to consider the implementation of the Proposed Standards once they are finalized, assuming a timely release of the final standard. We encourage the Board to consider establishing an effective date that allows at least eighteen months to implement. For example, if the final standard is published on June 15, 2015, we believe it would be appropriate for fiscal years beginning on or after December 15, 2015.

## Appendix 7 – Emerging Growth Companies ("EGCs")

**Question 1:** Should the Proposed Standards and amendments be applicable for audits of EGCs? Why or why not?

**Response**: We feel that investors in EGCs, as defined in the JOBS Act, are entitled to the same protections as afforded to investors in other registrants. The JOBS Act takes important steps to enable qualified new businesses to reach out to investors. These newly qualified investors will be taking investment risks. Therefore, we see no reason to provide less information to investors in EGCs than is available to investors in other issuers should the PCAOB implement all or parts of its Proposed Standards.

December 5, 2013

Dear Board Members,
I am writing to express my support for the PCAOB proposed rules regarding enhanced disclosures to investors with respect to information provided in the independent audits of issuers. I believe that these rules, particularly those relating to critical audit issues, would enable investors to better understand the financial reports they receive.

I express these views from the perspectives gained from 32 years experience as former Chief Investment Counsel, with TIAA-CREF, the largest pension system in the world with over $500 Billion in assets. As former Chairman of the International Corporate Governance Network for a 3-year period, I was able to see how global investors look at the role of the auditor and the importance of their independence to investor protection. Over the past 20 years, there have been many instances of failure. Although there have been vast regulatory changes over this period, many investors still see the need for further improvements in the regulation of audit firms and how the audit is performed. The proposed rules are well crafted to achieve enhanced audits for the benefit of investors.

I do wish to comment more particularly on the new item being proposed, which would inform investors how long a period the audit firm has served. It is obvious that such a requirement imposes no additional cost to anyone in the audit chain. In assessing audit firm independence, many investors, including this investor, consider the tenure of the audit firms to be important information. So, why not provide it?

Some commentators who approach the issues from professional disciplines or experience other than the investment field argue that investors do not need this information, or worse yet, would be unable to properly understand the significance of the information. With due respect, I suggest that such views underestimate the ability of investors to decide what is relevant information to them and how to use such information in the investment process. To make the point more clearly: investors, not others, should decide which information is important and valuable to investors. Of course, on many issues, costs to provide certain information must be taken into account. On this issue, however, there are no costs.

In conclusion, I support the proposed additional disclosures to investors as advancing investor protection. I also believe auditor tenure is an important issue and see no countervailing consideration that should prevent such information from being disclosed.

Respectfully submitted,

Peter Clapman

Re: PCAOB Release No. 2013-005; Rulemaking Docket Matter No. 034; *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards*

Ladies and Gentlemen:

The Public Company Accounting Oversight Board (the "Board" or "PCAOB") has solicited public comment on two proposed auditing standards and other matters discussed in PCAOB Release No. 2013-005 (the "Release") dated August 13, 2013. We appreciate the opportunity to comment on the Release and the important issues it raises.

## I. Introduction

We welcome the Board's continued efforts to make the financial statements and the related auditor's report more relevant to investors. As we discussed in our prior comment letter in respect of PCAOB Release No. 2011-003, *Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (June 21, 2011) (the "2011 Release"),[1] our perspective on these matters is informed by our role as legal advisers that represent issuers and others in connection with a wide variety of matters. These matters include advising issuers on their reporting obligations (including

[1] Comment letter of Cleary Gottlieb Steen & Hamilton (Oct. 14, 2011) (the "2011 Comment Letter"), available at http://pcaobus.org/Rules/Rulemaking/Docket034/149_Cleary_Gottlieb.pdf .

financial disclosures); advising issuers and underwriters in connection with a wide variety of capital markets transactions; and advising issuers, investors, acquirors, financial advisors and others in various corporate transactions. Financial reporting, including its reliability and relevance, is often a critical element of these matters, and our involvement requires us to be intimately familiar with (and, frequently, closely involved in) the financial reporting process.

The Board's two proposed auditing standards set out in the Release would significantly affect the role that auditors play in providing information about public companies to investors and other users of financial statements. The proposed standards are, first, a standard addressing the auditor's report on an audit of financial statements (the "proposed auditor reporting standard"), which would modify the content and format of the existing auditor's report and would, in particular, require the auditor to provide information with respect to both "critical audit matters" and its evaluation of "other information"; and second, a standard addressing the auditor's responsibilities regarding "other information" in certain documents that contain audited financial statements (the "proposed other information standard"), which sets out the responsibilities an auditor would have to review and evaluate such other information.

As we stated in the 2011 Comment Letter, in all of the contexts in which we consider financial reporting matters, we are dedicated to the full and fair disclosure – including, in particular, financial disclosure and reporting – called for by the federal securities laws, transparency to investors and markets, and the improvements in financial disclosure and reporting that are fostered by the application of robust auditing standards by independent external auditors. Like the 2011 Release before it, the Release identifies the investment community's concern that auditors may possess information that is useful to investors and other financial statement users that is not communicated in the existing auditor's report. And we believe that attempting to improve the relevance of the disclosures made by auditors continues to be a laudable objective.

As we separately noted in the 2011 Comment Letter, however, we also strongly believe the Board should keep in mind several important principles when considering any changes to the auditor's report and the processes and interactions that may result from those changes:

- First, any change to the auditor's role or report must have a significant probability of improving financial reporting or investors' understanding of an issuer's financial reporting;

- Second, if there is additional original information regarding an issuer that should be disclosed, that disclosure should be the responsibility of, and should come from, the issuer and not the auditor or any other third party;

- Third, any change to the auditor's reporting model should not adversely impact the relationship and the structure of interactions among management, the audit committee and auditors as they have developed since the enactment of the Sarbanes-Oxley Act of 2002 and the related implementation of regulations and standards adopted by the Securities and Exchange Commission (the "Commission") and the PCAOB;

- Fourth, while the Board is seeking to enhance the value of the auditor's report, the importance of the current pass/fail model should not be underestimated, and any changes to the auditor's report should not undermine the pass/fail model; and

- Fifth, the benefits of any path pursued by the PCAOB should outweigh the costs.

For various reasons, we are concerned the proposed auditor reporting standard, while in some ways representing an improvement from certain of the possible approaches discussed in the 2011 Release, continues in certain important respects to depart from these principles. The proposed other information standard – which goes significantly beyond the audit standard currently applicable to such information – raises particular concerns for a number of reasons, including an uncertain benefit to investors, ambiguous scope, increased costs and heightened litigation risk. We describe our concerns with both proposals in greater detail in Section II below. In Section III below, we propose an alternative to the proposals, which we request the PCAOB consider rather than adopting the standards as proposed. In particular, we believe revising the auditors' reporting model to encompass a review of what issuers disclose regarding critical accounting policies and estimates would, as discussed in Section III, be of far greater value to investors; preserve the primacy of issuer, rather than auditor, disclosures; avoid undermining the value of the pass/fail model; create fewer liability concerns; and be much less costly to implement.

## II. The Proposed Audit Standards Raise a Number of Significant Concerns

We are concerned the Board's two new auditing standards, as proposed, would have a number of serious, negative implications for auditors, issuers and, in some cases, even users of financial statements. These concerns relate to, among other things: the likelihood an auditor would be required to provide additional original information about the issuer, including immaterial or unnecessarily prejudicial disclosures, in responding to the proposed standards; undermining the existing pass/fail auditor's report model; chilling communications between an issuer's auditor and its management and audit committee; potential confusion among users of financial statements as to the scope and materiality of any new disclosures; heightened litigation exposure for both auditors and issuers; and the likelihood of significantly increased costs without commensurate benefits in terms of more meaningful financial reporting.

### *A. The Proposed Auditing Standards Would Represent a Significant Expansion of Existing Disclosure Regarding Issuers that Would Be the Auditor's, Rather than the Issuer's, Responsibility and, Worse Still, Would Require Disclosures that May Not Be Material to Investors or Are Unduly Prejudicial to the Issuer.*

One of our greatest concerns with the proposed standards is that, as proposed, they would require the auditor to disclose, and to be the source of, a significant amount of additional original information about an issuer. Indeed, this would appear to be an unavoidable consequence of the proposed requirement to include in the report information regarding critical audit matters. By contrast, under the existing auditor reporting model, original disclosures by an auditor (for example, a qualified opinion or an attestation that internal controls over financial reporting are not effective) generally occur only if an issuer has not complied with accounting principles or disclosure requirements.[2] Any change to the auditor reporting model should, we believe, otherwise keep the responsibility for disclosure about an issuer where it belongs, with the issuer.[3]

In addition, we are concerned that, as specifically contemplated by the Release, the additional disclosures an auditor would be making may be either not material to investors or unnecessarily prejudicial to issuers. In the Release, the Board stated that describing considerations around a critical audit matter could require the auditor to disclose "information about the audit or the financial statements that otherwise would not be required to be disclosed by either the auditor or the company under existing auditor reporting standards or requirements of the applicable financial reporting framework."[4] This result would be unfortunate. It would result in required disclosure by auditors (rather than issuers) not simply of information about issuers, but of information about issuers that may be neither material nor statutorily required, and that should not be required to be disclosed *by anyone* under *any* requirement, including a PCAOB standard.

*1. Information Disclosed Pursuant to the Proposed Auditor Reporting Standard May Not Be Material to Investors.*

Issues relating to "new" disclosures being made by the auditor will unavoidably arise insofar as the proposed auditor reporting standard requires the communication in the revised auditor's report of "critical audit matters."[5] As stated in the Release's proposed definition of critical audit matters, that disclosure would focus on the matters the auditor addressed during the relevant audit that involved the most difficult, subjective or complex auditor judgments, or posed the greatest difficulty to the auditor in obtaining sufficient appropriate evidence or in forming its opinion on the financial statements. Paragraph 9 of the proposed auditor reporting standard sets out a non-exclusive list of factors the auditor would need to take into account when determining whether a matter is a critical audit matter.

But the importance or materiality of an audit matter to what is reported in the issuer's financial statements is not specified as a factor in determining whether an audit matter is significant or critical. Indeed, most of the factors specified in proposed paragraph 9 relate to matters having to do with the audit process generally, rather than matters related to the significance of the impact of the audit matter on the financial statements.[6] As a result, under the

[2] We believe the "going concern" qualification, which can be original information in an auditor's report, is anomalous and in any event should not be viewed as the basis for wholesale inclusion of additional original information in an auditor's report.
[3] As we noted in the 2011 Comment Letter, the Treadway Commission's 1987 report squarely placed the primary responsibility for an issuer's financial statements on management, and made clear that independent public accountants play a secondary role.
[4] Appendix 5 of the Release, p. A5-42.
[5] For the reasons set out in Section II.D below, we think auditors will rarely if ever make "new" substantive disclosures about the issuer under the proposed other information standard.
[6] For example, the proposed factors include the degree of subjectivity involved in determining or applying audit procedures, the nature and extent of audit effort required and the nature and amount of available relevant and reliable evidence, as well as matters such as the extent of specialized skills needed to apply audit procedures and the nature of consultations outside the audit engagement team. Release, p. A1-7.

proposed definition, matters may be determined to be critical audit matters that are not material – and may not even be particularly meaningful – to the financial reporting or other financial disclosure of the issuer. It may not even be possible for an investor to distinguish whether a critical audit matter is, in fact, material from the issuer's standpoint.[7]

An appropriate "fix" for this consequence of the proposal would be to require explicitly in the process for identifying critical audit matters that the auditor consider the materiality of the impact of the audit matter on the issuer's financial statements and other financial disclosure, and conclude the audit matter relates to material elements of that disclosure, in order to be a critical audit matter. Such a change would not, however, address the broader point regarding auditor disclosure of original information about issuers.

*2. Information Not Otherwise Required to Be Disclosed or that May Be Unduly Prejudicial to Issuers Could Be Disclosed by Auditors Pursuant to the Proposed Auditor Reporting Standard.*

Regardless of whether a particular piece of information currently held by the auditors might in some way be probative, we believe disclosure of that information by the auditor should not be required if that disclosure would be more harmful or prejudicial to the issuer than its probative value. The Release states explicitly – and illustrates, via PCAOB-prepared sample disclosure – that an auditor may be required to make new disclosures beyond those mandated under the current financial reporting framework, including disclosures that apparently run contrary to current regulatory intent. We believe this would be an unfortunate and inappropriate result.

In Hypothetical Auditing Scenario #3,[8] the issuer has experienced a control deficiency less severe than a material weakness. The sample disclosure of the critical audit matter explicitly references that deficiency, stating that "…it was necessary [for the auditor] to expand the planned audit procedures due to a control deficiency less severe than a material weakness …. Specifically, a control deficiency was determined relating to the controls employed by the pricing and valuation committee."[9] The current rules of the Commission and those of the PCAOB, however, do not contemplate disclosure by an issuer (or an auditor) of a significant deficiency (or any other control deficiency not rising to the level of a material weakness). In fact, when proposing to define "significant deficiency," the Commission noted that "[t]he purpose of management's obligations with respect to significant deficiencies … is to disclose those matters relating to [internal control over financial reporting ("ICFR")] that are of sufficient importance that they should be reported to the external auditor and to the audit committee so that these parties can more effectively carry out their respective responsibilities with regard to the company's financial reporting, but which do not require disclosure to

[7] We believe it likely that, under the proposed standard, even if a critical audit matter addresses immaterial aspects of financial reporting, both issuers and auditors will prefer the auditor not be the sole source of the information disclosed in the auditor's report, which in many cases may lead issuers to revise their disclosures to include a discussion of any matter identified as a critical audit matter, regardless of materiality.
[8] Appendix 5 of the Release, p. A5-74 *et seq.*
[9] Appendix 5 of the Release, p. A5-78.

investors. (*Emphasis added.*)"[10] The Commission's expressed intent under the ICFR disclosure framework is that a control deficiency that rises only to the level of a significant deficiency is not required to be disclosed in a company's public filings. That conclusion is entirely consistent with the overall tenor of the discussions around ICFR disclosure, that public disclosures be limited to material weaknesses to avoid conflating material and immaterial disclosures to investors. The proposed auditor reporting standard would, however, apparently represent a "back door" requirement of the PCAOB for disclosure contrary to a settled disclosure policy. Further, there is no reason the same approach suggested in Scenario #3 would not be applied to a control deficiency that does not represent even a significant deficiency, the disclosure of which would be even less likely to be consistent with existing rules. By going beyond the approach reflected in the current requirements, this result would risk the same conflating of material and immaterial matters that has heretofore appropriately been avoided. And this auditor disclosure requirement about an issuer's ICFR would be imposed even if the issuer itself had determined the disclosure was unnecessary.

Another example where the proposed disclosure of a critical audit matter could add to the mix of information about an issuer that is publicly available, but in a way that is more prejudicial to the issuer than probative, is in the context of disclosures around potential loss contingencies. Under the current standard set forth in Financial Accounting Standards Board ("FASB") Accounting Standards Codification Topic 450 and related FASB interpretations, a company must accrue a liability for a loss contingency if available information indicates it is probable a loss has been incurred and the amount of the loss can be reasonably estimated. If the estimate is a probable range of loss, the best estimate within that range (or, in some cases, the minimum amount in the range) must be accrued. Recent proposals to update this standard were widely debated and roundly criticized for failing to adequately take into account the realities of today's litigation environment, because they required a company to disclose quantitative and qualitative information that could be highly prejudicial to its litigation posture.[11] The process of auditing loss contingencies often involves difficult, subjective or complex auditor judgments, and privilege and other concerns can pose challenges for issuers in providing evidence relating to determinations about loss contingencies made by issuers. At the same time, however, the very same issues that were raised by the recent FASB proposal would apply to the disclosures an auditor might be required to make in explaining in its auditor's report why this determination is a critical audit matter. Indeed, the proposed auditor reporting standard will likely raise additional concerns, because it might require (or be interpreted as requiring) an auditor to describe loss contingencies for which the issuer had determined neither an accrual nor disclosure of reasonably possible loss was required.

---

[10] SEC Rel. No. 33-8811; 34-55930, p. 5 (June 20, 2007). In the related adopting release, the Commission stated that "[i]n proposing the definition, we believed that the focus of the term 'significant deficiency' should be on the communications required to take place among management, audit committees and independent auditors." SEC Rel. No. 33-8829; 34-56203, p. 9 (Sept. 10, 2007). The PCAOB's relevant Auditing Standard No. 5, *An Audit of Internal Control Over Financial Reporting That Is Integrated with An Audit of Financial Statements*, similarly requires the auditor to communicate any significant deficiencies identified only to the audit committee.

[11] *See, e.g.*, FASB, Exposure Draft, Proposed Accounting Standards Update, Contingencies (Tope 450), Disclosure of Certain Loss Contingencies, File Reference No. 1840-100 (July 20, 2010), and the summary of the 339 comment letters received on the proposal published by the FASB as of October 26, 2010, both available on the FASB's website at www.fasb.org.

The auditor reporting standard as proposed thus has the potential to (or, more accurately, is designed to) require an auditor to disclose original information about an issuer, even if that information may only be relevant to the audit process and not material to the financial statements or other financial reporting of the issuer or is otherwise too prejudicial to the issuer to justify incremental disclosure.

### *B. Disclosure of Critical Audit Matters Will Necessarily Undermine the Pass/Fail Nature of the Current Auditor's Report.*

The negative, though speculative, implications of the new critical audit matter disclosure will necessarily undermine the pass/fail nature of the current auditor's report. Although the Release makes clear that auditors are prohibited from including language in their reports that could be viewed as disclaiming, qualifying, restricting or minimizing the auditor's responsibility for matters deemed critical audit matters, or on the auditor's opinion regarding the financial statements, it is far from clear how that would work in practice or whether it would address our concern regarding preservation of the value of the pass/fail model. If, for example, a critical audit matter involves a valuation requiring an exceptional amount of professional judgment and few (or no) clearly identifiable data points, should that be viewed as an appropriate description of the circumstances surrounding the identification of a critical audit matter, or would it be viewed as a disclaimer?

In short, we are concerned the discussion of critical audit matters is likely implicitly to qualify the pass/fail nature of the current auditor's report, by calling into question the reliability of the information that is the subject of a company's critical audit matters. Notwithstanding the uncertainty as to what these disclosures would mean, they can be expected at least to convey that caution (whether warranted or not) should be applied regarding financial disclosures that were difficult to verify.

### *C. Disclosure of Critical Audit Matters May Weaken Comparability of Disclosures Among Issuers and Inappropriately Shift Investor Focus.*

The inherent variability in the number, subject matter and, most importantly, materiality of the critical audit matters disclosed by each issuer may cause investors to focus unduly on those matters and to inappropriately compare issuers on the basis of whether and the extent to which those matters have been identified. Because each critical audit matter would be determined based on unique facts and circumstances, disclosures may vary significantly between an issuer and its competitors, or from period to period with respect to the same issuer. Even when the same critical audit matter is identified across multiple issuers, there may still be no way to determine whether such a matter is material to some, none or all of them, or merely involves a similar set of difficult-to-determine factors driving the criticality determination. Again, notwithstanding the uncertainty as to the meaning of these disclosures, we are concerned about the provision to investors of information in the auditor's report that calls comparability into question, whether or not these distinctions are significant (and, indeed, the distinctions are in the last analysis necessarily insignificant in importance where the auditor provides an unqualified opinion).

***D. The Requirement to Disclose Critical Audit Matters May Chill Auditor/Board Communications.***

As described in greater detail above, the proposed auditor reporting standard would potentially require the auditor to disclose "new" information about an issuer that management has affirmatively chosen not to disclose and is not otherwise required to be disclosed under the securities laws or the Commission's regulations. Such information may be quite sensitive. Anything that risks interfering with the most open and robust communications among management, audit committees and auditors would be to the detriment of the relationship between issuers and auditors, and ultimately potentially to the detriment of investors. We strongly believe maximizing the openness of communications between management, audit committees and auditors is more likely to produce better financial reporting and disclosure than the questionable benefits of the additional disclosure provided by the proposed standard.

***E. The Proposed Other Information Standard Generally Will Not Give Rise to Additional Disclosure; Not Enable Financial Statement Users to Know What Information Has Been Evaluated; and Requires Auditors to Pass On Matters Outside the Scope of their Expertise.***

The proposed auditor reporting standard would require disclosure of the auditor's responsibility for, and evaluation of, certain other information,[12] pursuant to the proposed other information standard. This would represent a significant departure from the current auditor's report, which only requires the auditor to express an opinion as to whether the financial statements present fairly, in all material respects, the financial position of the company in conformity with generally accepted accounting principles. The proposed standards, by contrast, would require the auditor to expressly state both that it had evaluated the other information and whether or not it has identified any material inconsistency with the financial statements or material misstatement of fact.[13] But the likely result in almost every circumstance will be the same as under the current standard – if auditors have concerns about disclosure, they will discuss them with issuers; issuers, which can revise their disclosures at any time before the auditor issues its report, will make such changes, if any, as are appropriate; and the auditor's report will state that no such item has been identified, thus requiring no additional disclosure to be made by the auditor.

---

[12] "Other information" is defined in the Release to include information (other than the audited financial statements and the related auditor's report, but including certain specified information that is incorporated by reference) included in a company's annual report filed with the Commission under the Securities Exchange Act of 1934 (the "Exchange Act") (*i.e.*, its Form 10-K, Form 20-F or similar form). The Release notes, however, that this evaluation is based on "relevant evidence obtained and conclusions reached during the audit." Release, p.7. Accordingly, if such "other information" is not directly related to the audited financial statements, is non-financial in nature or is related to the company's operations, the auditor may not have obtained evidence or reached any conclusion regarding that information during the audit – and, accordingly, would not be required to reach any conclusion with respect to it.

[13] Under the proposed standard, if the auditor has identified a material inconsistency with the financial statements or a material misstatement of fact, it must discuss the issue with management and may, depending on management's response and the circumstances of the statement or inconsistency, be required to advise the audit committee; consider any obligations it may have under Section 10A of the Exchange Act; withdraw from the audit engagement; or include appropriate disclosure in its auditor's report.

This change would, we believe, adversely impact the current auditor reporting model, with no likely benefit for the reasons stated above. Existing AU Section 550, *Other Information in Documents Containing Audited Financial Statements* ("AU 550"), already provides a sufficient check by the auditor on inaccurate disclosure and strikes an appropriate balance by requiring the auditor to read and consider the "other information" contained in issuer filings and, if it identifies concerns regarding that information, to report those concerns to management (and, if necessary, the audit committee, or, in particularly problematic cases, to consult with counsel or withdraw from the audit engagement). But AU 550 does not require the auditor to notify third parties of any concerns it may identify, nor does it place the auditor in the role of "evaluating" non-financial information. And since the auditor communicates its findings under AU 550 only to the issuer, the current standard has no need to define "other information" or to distinguish between financial and non-financial information (nor does it attempt to do so).

*1. As a Practical Matter, the Proposed Other Information Standard Will Rarely if Ever Give Rise to Additional Disclosure.*

The Release makes clear that an auditor may state it has not identified a material inconsistency with the financial statements or a material misstatement of fact in the other information in circumstances where the auditor identifies something in the course of the audit process and management subsequently makes what the auditor considers appropriate revisions before the auditor's report is issued.[14] In reality, therefore, in all but the most extreme cases the auditor will be in a position to state that no material inconsistency or material misstatement has been identified at the time the auditor's report is issued. Auditors and issuers will work together to rectify any errors that may be uncovered (as they do today in connection with inconsistencies or misstatements identified in connection with the procedures required under AU 550). As a result, in few if any cases will the proposed other information standard result in additional information for investors.

*2. Investors Will Have No Way to Determine What "Other Information" in an Issuer's Filings Has Been Evaluated by the Auditor.*

Because, as noted above, the proposed standard contains an unnecessary public disclosure requirement, it becomes necessary to define "other information," but the proposed definition of "other information" is broad, vague and non-specific.[15] The precise contours of the other information the auditor is actually evaluating will be, at best, extremely opaque to investors (apart from the obvious, *e.g.*, selected financial information, or recitals of GAAP financial data). The Release notes several less-obvious disclosures that could be covered in certain circumstances – such as statements about the company's competitive environment, technological developments, or supplier relationships – and describes a situation where the auditor might have knowledge, based on relevant audit evidence obtained during the audit, that contrary to a company's claims it does not have the largest market share in its industry. In each such case, however, the auditor's knowledge will necessarily derive from the facts and circumstances of a particular audit, which will of course vary from issuer to issuer, and may even vary from year to

[14] Release, Appendix 6, p. A6-33; paragraph 13.e of the proposed other information standard.
[15] *See* note 11 above.

year for the same issuer. Due to these variables, it will be impossible for investors to determine the extent to which "other information" in an annual report has actually been evaluated.

Take the market share example described in the Release.[16] For the sake of the following discussion, let us assume the issuer's market share disclosure is material. If a competitor of the issuer makes the same (incorrect) claim, but contrary information is not part of the audit evidence obtained by its auditor (and there is no reason, in our view, to expect that such information will necessarily be obtained by an auditor, unless the auditor would be expected, contrary to even the proposed standard and at even greater expense, to collect evidence related to "other information" as part of the audit), then, in that case, the statement is not subject to evaluation, even though the second auditor makes exactly the same recitation as the first auditor as to "other information" generally. Similarly, there could be different results of the evaluation of other information in different years, depending on information obtained. Another example might involve a comparison of a plant's actual production against its production capacity. An auditor might be able to determine, based on audit evidence, what goods a factory actually produced during a given year, but at the same time have no audit-evidence-based knowledge of the plant's capacity.

This concern as to whether a user of financial statements could determine whether particular statements are, or even could be, evaluated by the auditor – where the answers may vary significantly based on factors invisible to those users – is real and troublesome. Moreover, this concern is not necessarily isolated but could extend to every item of information included in the relevant filing.[17]

*3. Any Requirement to "Evaluate" Other Information Beyond Financial Information Would Exceed Auditors' Expertise.*

One of the significant issues auditors would face in applying the proposed other information standard with respect to information other than financial information is whether doing so is consistent with the auditor's role and core expertise. As we noted in our 2011 Comment Letter, auditor expertise centers on financial information, financial reporting, auditing and related matters, and generally does not extend to evaluating business strategy and trends, analyzing risk (other than risks regarding financial reporting) or predicting future performance. The Release does not go as far as the 2011 Release in suggesting as a possible approach that auditors affirmatively attest to the content of MD&A or information contained elsewhere in a company's annual report. We believe, however, that if auditors are required to do more than, at most, evaluate specified financial information disclosed in the annual report, that would increase audit costs while appearing to provide comfort regarding accuracy that is unjustified.

*4. The Proposed Standard Is Not Consistent with the Procedures Applied by Auditors in Connection with Comfort Letters.*

[16] Release, p. A6-13.

[17] One way the Board might try to narrow the proposed standard would be to limit "other information" to information contained in or derived from the issuer's financial records. This would allow auditors to focus their evaluation efforts, rather than taking a costly, scattershot approach, while benefitting investors by enabling them to determine what information the auditor had (and, more importantly, had not) evaluated. This, however, would not by itself address our concerns with the proposed standard.

The proposed standard would also represent a significant departure from procedures an auditor would perform under AU Section 634, *Letters for Underwriters and Certain Other Requesting Parties* ("AU 634"), in connection with a comfort letter provided to an underwriter in connection with an offering of securities. In that context, with respect to information that would be "other information" under the proposed standard, the auditor performs limited procedures only on information identified specifically by the underwriter, rather than performing procedures generally on all such information. And the content of each comfort letter, and the procedures performed on particular disclosure items, is frequently the subject of significant negotiations between the underwriter and the auditor, and in all events is limited to information derived from the company's books and records that are subject to an ICFR framework.

### *F. The Proposed Auditing Standards Are Likely to Heighten Litigation Exposure for Both Auditors and Issuers*

Another significant concern raised by both proposed standards is the cost imposed on both auditors and issuers in terms of heightened litigation exposure under the securities laws. The proposed other information standard, in particular, will significantly increase litigation exposure by requiring auditors to make an affirmative statement as to their findings, even in cases where nothing has been found. We emphasize that we are not merely raising the generalized concerns regarding auditor liability, or increases therein, that are often raised in discussions of the role of the auditor in public company financial reporting and audits. Rather, the proposed new standards, because of the combination of additional affirmative statements by auditors, the possible applicability of the *Janus* decision discussed below, and the possible implications of the proposal in respect of liability under the Securities Act of 1933 (the "Securities Act"), raise specific and serious issues we discuss more fully below.

#### *1. There Is a Significant Likelihood the Potential for Auditor Liability Would Increase Due to the Proposed Audit Standards.*

Under the federal securities laws, auditors face potential liability under various statutes, including in particular Sections 10 and 18 of the Exchange Act and Section 11 of the Securities Act. One of the claims most frequently made against auditors is under Section 10(b) of the Exchange Act and Rule 10b-5 thereunder. Under those provisions, an auditor can be liable if it makes a statement in its auditor's report that is misleading when made and the requisite scienter standard is met. The proposed audit standards require auditors to make several new statements in connection with their auditors' reports, including a statement as to whether or not the auditor has identified any material inconsistencies with the financial statements or material misstatements of fact in the other information included or incorporated by reference in the relevant annual report, as well as statements identifying critical audit matters.

The requirement under the proposed other information standard that the auditor make a public statement it has affirmatively evaluated the other information but did not discover any such inconsistencies or misstatements seems particularly problematic, both because the required evaluation procedures have the potential to involve a significant volume of evidence – including evidence that may or may not be related to financial statements or financial reporting –

and because the scope of "other information" is inherently broad and uncertain.[18] As a result, any qualitative statement relating to information as to which an auditor might have developed evidence during the course of the audit process has at least the potential to become the subject of a lawsuit. And because the auditor is making an affirmative statement, under the Supreme Court's decision in *Janus Capital Group, Inc. v. First Derivative Traders*,[19] the auditor could be subject to a private right of action under Rule 10b-5 predicated on the material inaccuracy of its statement, to which it would not have been subject had the statement, as under AU 550, been made only to the issuer. While it might be possible to attempt to distinguish the inclusion of this statement in the auditor's report on several grounds (including that the report would indicate the other information was not audited and the auditor was not expressing an opinion on it), there is no certainty that would be the case and even less likelihood that the auditor would entirely avoid litigation as a result.

Under the proposed auditor reporting standard, the auditor would similarly be required to make a number of publicly available additional statements in its auditor's report. In particular, the auditor would be required to identify the critical audit matters associated with the audit.[20] The disclosure (or non-disclosure) of these matters could create significant opportunities for a plaintiff to bring suit against an auditor following the revelation of a misstatement or omission that, particularly in hindsight, can be alleged to have been material. If the underlying issue relates to a critical audit matter, but was not discovered, the plaintiff may assert the auditor was reckless in not discovering the issue. If the underlying issue relates to a matter that was not considered as having the potential to be a critical audit matter, the plaintiff may assert the auditor was reckless in failing to identify the critical audit matter in question. Or, finally, if the underlying issue relates to a matter the auditor considered as a possible critical audit matter, but where it affirmatively determined the matter was not critical, the plaintiff may assert that determination was itself reckless.

In light of the heighted risk of litigation, another aspect of the proposed auditor reporting standard that should be reconsidered is the requirement for the auditor to retain audit documentation with sufficient information to enable an experienced auditor who has no previous connection with the engagement to understand the basis for the auditor's determination that each <u>non-reported</u> audit matter that would appear to meet the definition of a critical audit matter was, in fact, not a critical audit matter. While the Board notes several reasons why this would be important to the process of determining critical audit matters (including enabling the PCAOB inspection staff to determine whether this aspect of the proposed new standard is being properly implemented), it also creates (and requires an auditor to retain) a detailed documentary record of the auditor's determination that a matter was <u>not</u> "critical." If this would require an auditor to retain work papers or materials beyond those that would have been separately required to document the auditor's audit determinations, this requirement would seem to accomplish little of

[18] *See* note 11 above.

[19] 131 S. Ct. 2296 (June 13, 2011).

[20] We note the proposed auditor reporting standard would also require auditors to make affirmative statements regarding a number of other matters, including that it is a public accounting firm registered with the PCAOB (United States) and is required to be independent with respect to the company, and the year that it began serving as the company's auditor. Because these are more focused, factual statements about matters with which the auditor is readily familiar, they do not raise a liability concern.

benefit to investors while giving rise to increased litigation risk with respect to any "identified but not determined to be critical" matter.

*2. As Proposed, the Standards Appear to Create at Least Some Potential for Liability under the Securities Act.*

Both the proposed auditor reporting standard and the proposed other information standard appear to have the potential to increase auditors' liability exposure with respect to offerings conducted under the Securities Act. The more difficult analysis of this question, however, involves the proposed other information standard. The Release explicitly notes that, consistent with existing AU 550, the proposed standard would not apply to documents that are filed with the Commission under the Securities Act, and that an auditor's responsibilities with respect to Securities Act filings are governed by its responsibilities under Section 11 of the Securities Act and AU Section 711, *Filings Under Federal Securities Statutes*.

But while the Release discusses in some detail various obstacles to applying the reporting requirements under the proposed other information standard to documents filed under the Securities Act, in our view the Release does not squarely address the implications for incremental auditor liability that arise from including the additional information required by the proposed audit standards, particularly with regard to other information, in auditors' reports incorporated by reference from annual reports into registration statements (including, but not limited to, liability for that information as an "expert" under Section 11 of the Securities Act, if that additional information is viewed as having been expertized). This is currently not of concern under AU 550 because, as noted in Section II.E above, that standard does not require the auditor to communicate the results of its work to any person other than the issuer. While the PCAOB may not intend to impose expert liability on the auditor with respect to the auditor's statement regarding other information, and also may not intend to impose such liability on the descriptions of critical audit matters under the proposed auditor reporting standard, that will not necessarily be the uniform outcome if the issue is widely litigated, as could be the case.

*3. Any Expansion of Required Addressees of the Auditor's Report Is Inappropriate Given the Increased Litigation Exposure.*

The Board also asked, in connection with the proposed auditor reporting standard, whether (and the extent to which) the list of persons to whom an auditor's report is addressed should be expanded. In the Release, the PCAOB noted that many auditors currently address their reports to an issuer's shareholders (as *permitted* under the existing audit standard). The proposed standard, however, would require the report be addressed, at a minimum, to "investors in the company, such as shareholders" and would require auditors to determine whether any non-equity investors are appropriate addressees.[21]

Under various circumstances, an auditor currently may be liable to a third party with whom it does not have a contractual relationship in respect of the statements it makes in its auditor's report, although in at least some cases that determination may require the third party to demonstrate the auditor knew, or should have known, the third party was relying on its report or

[21] Release, p. A5-9.

on the related financial statements.[22] There are, however, currently at least some situations where an auditor is less likely be liable to others, including in the case of mere negligence.[23] Expanding the pool of addressees to include non-equity investors would have the effect of increasing the potential liability of auditors by expanding the number of persons able to demonstrate they were entitled to rely on the report in those contexts. Moreover, while the existing reporting standard *permits* auditor reports to be addressed to shareholders, in light of the increased risk of auditor liability if the proposals are adopted, we anticipate auditors would likely wish to address their report solely to the issuer and its board of directors.

## III. An Alternative Approach for Consideration – Auditor Evaluation of Critical Accounting Policies and Estimates

In Section II, we have highlighted our concerns regarding the proposed standards, including in particular that an auditor will unavoidably be required to disclose original additional information about an issuer, including immaterial or unnecessarily prejudicial information; the revised auditor's report would undermine the existing pass/fail model; the procedures required by the proposals could chill communications between auditors, management and audit committees; the proposed other information standard would generally give rise to no new disclosure while simultaneously giving rise to uncertainty among investors; and heightened litigation exposure. We believe these concerns can largely be eliminated if, instead of the current proposals, the PCAOB modified its approach and auditors were asked to provide a supplemental statement regarding an issuer's disclosures relating to critical accounting policies and estimates.

Disclosure by issuers of critical accounting policies and estimates in their MD&A is now almost universal. Nonetheless, as referenced in the 2011 Comment Letter, we believe enhancing disclosure <u>by issuers</u> of the impact of accounting estimates and judgments on their financial statements and reporting may be desirable. Each issuer's financial reporting framework includes a significant number of estimates that could cause results to vary significantly; rarely if ever are these matters discussed in detail in an issuer's financial statements or other reporting.[24]

In the 2001 Guidance, the Commission suggested issuers should disclose in the MD&A the "accounting policies that management believes are most 'critical' – that is, they are

---

[22] *See, e.g.*, *Credit Alliance Corp. v. Arthur Anderson & Co.*, 483 N.E.2d 110 (N.Y. 1985); *Utramares Corp. v. Touche*, 174 N.E. 441 (N.Y. 1931). Under these and other, similar cases, an auditor typically has a duty to a non-client if (i) the auditor was aware the report was to be used for a particular purpose; (ii) a known third party was intended to rely on the report to further that purpose; and (iii) some conduct by the auditor links it to the third party.

[23] *See, e.g.*, Restatement (Second) of Torts: § 552, Information Negligently Supplied for the Guidance of Others, comment h (1977) ("The rule stated in this Section subjects the negligent supplier of misinformation to liability only to those persons for whose benefit and guidance it is supplied. In this particular his liability is somewhat more narrowly restricted than that of the maker of a fraudulent representation, which extends to any person whom the maker of the representation has reason to expect to act in reliance upon it.").

[24] The Commission's guidance to date in this area includes the following: two releases discussing critical accounting policies in December 2001 (SEC Rel. No. 33-8040; 34-45149 (Dec. 2001)) (the "<u>2001 Guidance</u>") and January 2002 (SEC Rel. No. 33-8056; 34-45321 (Jan. 2002)) and guidance on critical accounting policy disclosure in its December 2003 interpretive release on MD&A (SEC Rel. No. 33-8350; 34-48960 (Dec. 2003)) (the "<u>2003 Guidance</u>"). The Commission also proposed rules on critical accounting policies in May 2002, but has not adopted them. SEC Rel. No. 33-8098; 34-45907 (May 2002) (the "<u>2002 Rule Proposal</u>").

both most important to the portrayal of the company's financial condition and results, and they require management's most difficult, subjective or complex judgments, often as a result of the need to make estimates about the effect of matters that are inherently uncertain."[25] The Commission noted that both the issuer's management and its auditor should "bring particular focus" to evaluating the critical accounting policies. Subsequently in the 2003 Guidance, the Commission also focused on materiality, noting issuers should disclose in their MD&A "accounting estimates or assumptions where the nature of the estimates or assumptions is material due to the levels of subjectivity and judgment necessary to account for highly uncertain matters or the susceptibility of such matters to change; and the impact of the estimates and assumptions on financial condition or operating performance is material."[26] The Commission went on to say issuers "should provide quantitative as well as qualitative disclosure when quantitative information is reasonably available and will provide material information for investors. (*Emphasis added.*)" In addition, as the Commission separately noted in its 2002 Rule Proposal, an issuer's auditor is already responsible for evaluating the reasonableness of the accounting estimates made by management in the context of the financial statements taken as a whole.[27]

We believe the adoption of a narrowly focused auditor review standard in this context could improve issuer disclosure and thus provide greater insight to investors. The auditor could, for example, be asked to provide negative assurance that, based on its work on and evidence compiled during the audit, nothing has come to its attention that causes it to believe (a) the disclosure included in the document that contains financial statements that were subject to the audit fails to address all critical accounting estimates or policies that are required to be disclosed, or (b) the disclosure regarding the critical accounting estimates or policies included in the document is not accurate in all material respects.

This approach would, in our view, represent a significant improvement over the proposed standards. In particular, it would have the benefit of addressing matters that are material to an issuer's financial reporting generally, not to the audit specifically. In addition, it avoids any requirement that the auditor be a source of original disclosure about the issuer, as the auditor would be commenting on issuer disclosure and would not be making additional disclosure (assuming that, if the auditor identifies modifications necessary for the issuer to make in order to meet the requirements, the issuer makes those modifications). It also does not call

[25] 2001 Guidance, p. 2.

[26] 2003 Release, p. 18. The Commission went on in the 2003 Guidance to suggest that factors issuers might choose to address in this disclosure could include how management arrived at the estimate, how accurate the estimate/assumption had been in the past, how much the estimate/assumption has changed in the past, and whether the estimate/assumption is reasonably likely to change in the future, but noted that these factors should analyzed "to the extent material." Id.

[27] See 2002 Rule Proposal, pp. 26-27. See also AU Section 342, *Auditing Accounting Estimates*, paragraph 4 ("AU 342"). In making that evaluation, the auditor must obtain evidence sufficient to provide reasonable assurance that all accounting estimates that could be material to the financial statements have been developed, that those estimates are reasonable in the circumstances and that those estimate are presented in conformity with applicable accounting principles and are properly disclosed. AU 342, paragraph 7.

In the 2002 Rule Proposal, the Commission also indicated it was considering whether to adopt a requirement that an independent auditor must examine, in accordance with attestation standards, the MD&A disclosure relating to critical accounting estimates. The Commission has not adopted the 2002 Rule Proposal, and we do not believe there is a need for it to do so at this time.

into question the pass/fail model, as it does not raise any concern about audit judgments, nor does it implicitly raise questions about the reliability of the financial statements. Finally, it requires the auditor to evaluate only accounting matters, rather than other matters that may be beyond the scope of the auditor's expertise, which means it should both be meaningful and more cost-effective to implement.

We strongly believe the problems surrounding both the proposed auditor reporting standard and the proposed other information standard, as discussed in Section II above, effectively mean the risks, costs and uncertainties associated with the proposals outweigh their benefits to investors, and that the new standards should not be adopted as proposed. As an alternative, we strongly encourage the PCAOB to consider our proposal relating to existing critical accounting policies and estimates disclosure, as set out above. In any event, we strongly encourage the Board to address the serious concerns we and other commenters have raised regarding the proposed audit standards to help ameliorate their potentially significant negative consequences before adopting any final standards.

## IV. Phase-In Period

The Board has raised, in the Release, the issue of whether and to what extent it would be appropriate to implement a delayed compliance period for either or both of the proposed audit standards (including, for example, whether there should be a delay in the implementation of the proposal for smaller companies). In light of the significant changes the Board is proposing and the various concerns expressed by commenters, we believe a staged or delayed implementation of any adopted proposals would be beneficial, in part because that would permit the PCAOB to adjust the process were issues to arise while new standards were being implemented. The Board might also consider whether a voluntary pilot program covering a relatively small number of larger issuers might be useful in assisting the Board in determining whether there are benefits to the proposed new standards and identifying either general or specific issues during the process.

* * * * *

We thank you for the opportunity to submit this comment letter. Please do not hesitate to contact Leslie N. Silverman, Alan L. Beller, Nicolas Grabar or James D. Small (212-225-2000) if you would like to discuss these matters further.

Very truly yours,

RE: PCAOB Rulemaking Docket Matter No. 034

We appreciate the opportunity to comment on Public Company Accounting Oversight Board (PCAOB) Release No. 2013-005, *Proposed Auditing Standards – The Auditor's Report On an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards* (the Proposed Standards). This letter contains the comments of both CMS Energy Corporation and Consumers Energy Company.

CMS Energy Corporation, whose common stock is traded on the New York Stock Exchange, is a domestic energy company engaged in electric and natural gas utility services and independent power production, operating through subsidiaries in the U.S., primarily in Michigan. CMS Energy Corporation's consolidated assets are $17 billion and annual operating revenues are over $6 billion. Consumers Energy Company, the principal subsidiary of CMS Energy Corporation, provides electricity and/or natural gas to more than 6 million of Michigan's 10 million residents and serves customers in all 68 counties of Michigan's Lower Peninsula.

We recognize that some investors have suggested that the auditor's report would be more useful and relevant if it contained more information. In response, the PCAOB previously issued Release No. 2011-003, *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements* (the Concept Release), and has now issued the Proposed Standards. While we are pleased with the PCAOB's decision to move away from the major provisions of the Concept Release (i.e., proposed requirements for an Auditor's Discussion and Analysis and/or the expanded use of emphasis paragraphs in audit opinions), we do not believe that auditor reporting of critical audit matters will achieve the PCAOB's stated objective of increasing the informational value of the auditor's report. Rather, we believe that auditor reporting of critical audit matters could:

1. Decrease comparability among audit reports;
2. Confuse investors;
3. Lead the auditor to disclose non-public information about the company's business; and
4. Cast a shadow of doubt over the auditor's unqualified opinion as well as over the company's financial statements.

*Decreased Comparability:* The Proposed Standards would require the auditor to communicate in the auditor's report "critical audit matters", which are those matters addressed during the audit of the financial statements that:

1. Involved the most difficult, subjective, or complex auditor judgments;
2. Posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or
3. Posed the most difficulty to the auditor in forming an opinion on the financial statements.

Determining which audit matters are "critical audit matters" would be a highly subjective exercise for the auditor and would result in markedly decreased comparability among audit reports. Different auditors could reach very different conclusions on which audit matters are critical as well as how many such matters to communicate in the auditor's report. In many cases, whether an audit matter is considered critical will depend **not** on the quality or reasonableness of the company's accounting policies and practices, but rather on the expertise and experience of the auditor. Depending on experience level, what is complex to one auditor may not be complex to another. For example, a newly engaged auditor might need to devote a substantial amount of time and effort to developing audit procedures and gaining comfort with an industry- or company-specific accounting matter, while a tenured auditor would not. Given the difficulty involved in assessing the accounting matter, the newly engaged auditor might communicate this matter as a critical audit matter, while the tenured auditor might not. As a result, an investor reading the newly engaged auditor's report could reach a different (and perhaps inappropriate) conclusion regarding the quality of the company's accounting policies and practices compared with an investor reading the tenured auditor's report. As illustrated in this example, the subjectivity in determining critical audit matters will lead to decreased comparability among audit reports. In our view, this could diminish the usefulness and relevance of the auditor's report.

*Investor Confusion:* Our second concern with the proposal is that it could lead to duplicative discussion of certain accounting matters – once by company management and again by the auditor. Accounting matters deemed to be critical audit matters by the auditor are likely to be discussed in the "Critical Accounting Policies and Estimates" section of the Management's Discussion & Analysis, as well as in the notes to the financial statements. As we stated in our comment letter on the Concept Release, we believe that commentary on a company's financial statements should come from a single source, rather than from both management and the auditor. Providing two perspectives on a single set of financial statements has the potential to confuse users and to reduce confidence in reported information. Furthermore, we believe that management is the best source of commentary on a company's business and financial statements. Though an auditor's understanding of a company's financial statements is more extensive than that of other third parties, it is still less complete than that of management. The degree to which the auditor must gain an understanding of the company's business, industry, transactions, and financial statements in order to render an audit opinion is substantially less than the depth of understanding required of the company's management. Correspondingly, the time the auditor devotes to gaining an understanding of these matters is a small fraction of the time invested by management. For these reasons we believe that, in order to provide users with clear and reliable information, management should be the sole source of commentary on a company's business and financial statements.

*Disclosure of Non-Public Information:* Another concern is the possibility that the auditor will disclose non-public information about the company's business when explaining its determination of a critical audit matter. In reading the *Illustrative Examples of Critical Audit Matters* provided in Appendix 5 of the Proposed Standards, we noted several examples within the communications of critical audit matters in the auditor's report where the auditor may have been disclosing information not previously made public by management and not required to be disclosed in the company's audited financial statements. Again, as discussed above, we believe that any information about the company's business and financial statements should come from management, not the auditor.

*Shadow of Doubt:* Our final concern with the proposal is that investors could perceive the auditor's discussion of critical audit matters as "qualifying an unqualified opinion". While we understand the PCAOB does not intend that the auditor's communication of critical audit matters be viewed as disclaiming, qualifying, restricting, or minimizing the auditor's opinion on the financial statements, that does not change how investors may perceive the communication. We noted that the *Illustrative Examples of Critical Audit Matters* included extensive discussion of why the auditor deemed the audit matter to be a critical audit matter as well as the additional audit procedures the auditor performed as a result. Following this extensive discussion, however, there is no clear statement of the auditor's final conclusion on the critical audit matter. The reader may be left with the basic question: Did the auditor become comfortable with the critical audit matter? We realize that, by virtue of providing an overall unqualified opinion, the auditor has reached satisfactory conclusions regarding all the critical audit matters communicated. We believe, however, that the context of the discussion could cause an investor to infer that the auditor has reservations about a particular matter or, in other words, that the auditor is, in essence, qualifying its unqualified opinion. For an investor, this could cast a shadow of doubt over the auditor's unqualified opinion as well as over a company's financial statements.

It may be suggested that, to overcome this perception, the auditor's communication of critical audit matters could simply include a statement that it did indeed gain comfort with the critical audit matter. In doing so, however, the auditor would be stepping into the realm of providing a piecemeal audit opinion, placing more emphasis on certain accounting matters when it should be providing an opinion on the overall financial statements. In addition, as more and more discussion is added to the auditor's opinion, the auditor's report begins to depart from the simple pass/fail model, which many commenters have lauded as providing a "concise and useful message."

In conclusion, we believe that the proposal to require auditor reporting of critical audit matters would not achieve the PCAOB's stated objective of increasing the informational value of the auditor's report, but would in fact have the opposite effect.

Thank you for the opportunity to comment on the Proposed Standards.

Sincerely,

Glenn P. Barba

**RE:** PCAOB Rulemaking Docket Matter No. 34 – *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses and Unqualified Opinion, The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report, and Proposed Amendments to PCAOB Standards Related to the Proposed Audit Reporting Standard.*

Coca-Cola Enterprises, Inc. (CCE, the Company, we, our, or us) appreciates the opportunity to respond to the Public Company Accounting Oversight Board (PCAOB) regarding the August 13, 2013 proposed changes to the Auditor's Reporting Model and Responsibilities for Other Information.

With over $8 billion in revenues in 2012, CCE is the leading Western European marketer, distributor, and producer of bottle and can nonalcoholic beverages and one of the largest independent Coca-Cola bottlers. CCE is the sole licensed bottler for products of The Coca-Cola Company in Belgium, continental France, Great Britain, Luxembourg, Monaco, the Netherlands, Norway, and Sweden. CCE is a public company and is registered with the New York Stock Exchange.

While we support the PCAOB's efforts to increase the value of the auditor's report to analysts, investors, and other financial statement users, we do not support the Board's proposal in its current form. Our viewpoints of the primary changes to the Auditor's Reporting Model, which are consistent with comments previously provided by the majority of respondents to this proposed rule, are as follows:

*Critical Audit Matters ("CAMs"):*
The proposed standard would require auditors to include in their report a discussion of matters they consider to be "critical" to the audit. As a multinational reporting company, we frequently enter into complex business transactions which require judgment in interpreting and implementing appropriate accounting guidance. These transactions are often discussed with our auditors and our Audit Committee. Many of these transactions are neither individually material to the overall financial statements, nor core to our day-to-day business operations. Our concerns fall into three broad areas. First, mandatory disclosure of these accounting matters could cause misunderstanding as to the magnitude and/or importance of these transactions in reference to the company's overall financial performance. Sophisticated users of financial statements likely already understand where to find information within existing disclosures. For the casual users, the addition of disclosures of potentially complex matters would negatively impact their ability to interpret the core financial information. Second, the use of CAMs also has potential to become an area of undue caution for auditors. This could lead to an abundance of matters designated as CAMs, which could place unnecessary importance on these items and result in significant variation

in the selection, interpretation and explanation of these items across their registrant clients. Third, we strongly support maintaining the pass/fail model as it focuses on the presentation of the financial statements as a whole. This pass/fail model is both effective and well understood by financial statement users. The disclosure of CAMs, however, undermines the value of the pass/ fail model by highlighting specific areas of the financial statements rather than only evaluating the financial statements as a whole. We believe the proposed changes to the auditor's report, if implemented, could be interpreted to provide different levels of assurance on different areas of the financial statements.

We also believe, in some circumstances, the possibility exists that the CAMs disclosure represent the sole discussion of certain accounting matters, and we do not support the use of the auditor's report as the primary source of accounting disclosure. An original or sole disclosure in the auditor's report blurs the responsibility of financial information communication between the corporation and the auditors. Management is responsible for all aspects of the preparation of disclosures. We caution the Board to consider the potential for CAMs to represent an original source of disclosure.

In the current regulatory environment it is likely that auditors will perform additional procedures documenting their justification for whether or not matters classify as CAMs which will, in turn, result in increased audit costs. Given the level of disclosures already available to financial statement users we do not believe this incremental cost would be justified.

*Reporting on Other Information:*
We support enhancements to the auditor's report which clarify the responsibility of the auditor in regards to the notes to the financial statements, fraud, and independence to the extent the enhancements provide improved information to the users of financial statements as to the meaning and relevance of the auditor's opinion. However, we are concerned the Board's current proposal increases auditor responsibility for information beyond the financial statements. Our company's information outside of the financial statements is often the result of subjective, forward-looking internal analysis. The use of the auditor to evaluate this information would prove difficult without further insight into the detailed and subjective decision-making of management. It is also our understanding that some accounting firms believe significant incremental procedures would be necessary to "evaluate" information within management's discussion and analysis, selected financial data, and other information incorporated by reference, such as proxy statements. Compliance with this proposal could result in a substantial increase in audit costs. We believe the current requirement to "read and consider" other information for consistency and material misstatement of facts is sufficient and the potential benefits of this proposal do not outweigh the additional costs.

*Auditor Tenure Disclosures:*
We believe that the quality of our audit increases over time with the use of an experienced auditor as the auditor is able to learn our business in more depth, and is therefore able to perform a more thorough audit. Disclosure of auditor tenure in the audit report could be interpreted by the reader as having a bearing on the independence of the auditor or the audit quality. We believe the auditor tenure is best disclosed elsewhere in annual Securities and Exchange Commission filings, such as the proxy statement, and we currently express this information therein.

In Summary, while we support the PCAOB's efforts to increase the value of the auditor's report to analysts, investors and other financial statement users, we do not support the Board's proposal in its current form due to the considerations detailed above.

Thank you for your consideration of our comments on these matters. If you have any questions, comments, or would like further information regarding this submission, please contact Janelle Tzanetakos at 678-260-3000.

Sincerely,

**Janelle Tzanetakos**

Re: PCAOB Rulemaking Docket Matter No. 034, Proposed Auditing Standards

Dear Ms. Brown:

CohnReznick LLP ("CohnReznick") appreciates the opportunity to comment on the proposed auditing standards, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (The Reporting Standard), and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (The Other Information Standard).

CohnReznick is the 11th largest accounting firm in the U.S., with its origins dating back to 1919. We are committed to serving clients that access the capital markets, and we recognize the significant role we have in facilitating efficient capital formation. We support the Board's intent to increase the informational value of the auditor's report in order to promote the usefulness and relevance of the audit and the related auditor's report. We support making changes to the auditor report that preserve and enhance the important role auditors have in serving the users of financial statements. While our domestic and international capabilities (through our Nexia International membership) allow us to serve a broad array of clients, we are a significant provider of services to the smaller and middle market. Our desire is that our response to the exposure draft will give you perspective into the unique impact these changes might have on small and medium size entities and their ability to attract capital.

Our comments in this letter are consistent with the messages we delivered to the IAASB in our letter dated November 22, 2013, responding to the Exposure Draft, *Reporting on Audited Financial Statements: Proposed New and Revised International Standards on Auditing (ISAs)*.

The observations and recommendations we are providing in the attachment to this letter are intended to help the Board arrive at changes to the auditor reporting model that achieve the objectives of the proposal, without impairing the understandability of the auditor's report or changing the distinction between the roles of management and the auditor.

The Board proposed the performance of field studies of the proposed standard, and we recognize the importance of the results that would come out of such a study. We believe these efforts will generate useful insights about the how the proposed changes would impact companies that access capital markets, as well as alert us to any previously undiscovered benefits or consequences of the changes.

Our responses to specific questions on which the Board is seeking comment are included in the attachment to this letter.

If you have any questions concerning our comments or would like to discuss any of our responses or recommendations in more detail, please feel free to contact Kurtis Wolff at 770-330-1167.

Yours truly,

CohnReznick LLP

CohnReznick LLP

## BASIC ELEMENTS AND OTHER CHANGES

We commend the Board on undertaking the effort to update the audit report to improve the informational value the report provides, and we recognize that the proposed changes to the basic elements and the format of the report are intended to further such improvements. We have the following comments and observations about the proposed changes to the basic elements of the audit report:

- We find the objectives of the proposed Reporting Standard to be clear, and agree that, as written, they would assist the auditor in understanding what would be communicated in the audit report under the standard.
- We believe it would not be appropriate to address the audit report to others than the shareholders and board of directors of the company or their equivalents.
- We support the alignment of the description of the nature of an audit with the Board's risk assessment standards, and there are no additional auditor responsibilities that we believe should be included to further describe the nature of an audit.
- We believe that the statement relating to the auditor's responsibility to be independent will clarify the meaning of independence for the understanding of users of the financial statements, and is a beneficial addition to the auditor's report.
- We believe that the emphasis of a matter paragraph has a different purpose than the intended objectives of critical audit matters, and the retention of the emphasis of a matter paragraph is valuable.

We believe that changes to the basic elements of the audit report do not have material incremental cost considerations. However, we are commenting on what we believe to be some of the more significant cost considerations pertaining to critical audit matters and other information where appropriate in this letter.

Evidence has not demonstrated that auditor tenure impacts audit quality, as acknowledged in the Board's proposal. In fact, as was commented on by Marty Bauman at the AICPA SEC and PCAOB conference in Washington D.C. on December 10, 2013, some believe there is a greater risk to audit quality in the initial years of a new client/auditor relationship as opposed to a long term relationship. Without empirical evidence regarding tenure (near term or long term), we believe that adding information about auditor tenure to the audit report would inevitably lead a user to draw a conclusion about audit quality, and such a conclusion would ultimately be based on the undemonstrated premise that tenure and audit quality are related. As such, we believe that including the proposed statement on the year the auditor began serving the entity would not be useful to the reader, and might in fact be contrary to the intent of the proposed standard. Similarly, we believe that auditor tenure could not be useful to investors or other financial statement users if included in EDGAR or other sources, and would lead to frivolous litigation based on tenure or the lack thereof, increasing the cost of the proposed standard and hindering the efficiency of capital formation.

We believe the Board should not consider a delayed compliance for the proposed auditor reporting standard and amendments or delayed compliance date for certain parts of the proposed auditor reporting standard and amendments for audits of smaller companies. Our viewpoint is informed by the history of the implementation of the requirements of the Sarbanes Oxley Act for SEC registrants, and the confusion that was created for all financial reporting stakeholders, as well as the costs and other unintended consequences during the period when compliance was deferred.

## CRITICAL AUDIT MATTERS

We understand and agree with the benefits of critical audit matters. In particular, we believe the user having knowledge and comprehension of the significant risks and areas where auditor judgment must be applied will make the user more knowledgeable of the entity's business, and allow the user to make more informed decisions. Furthermore, we see this transition as a positive development in the effort to communicate the value that the audit provides to the public. We support efforts that will improve the perception by the public that the public company audit process is transparent. Ultimately, we agree that all of these benefits will be conveyed to capital markets.

### COMMUNICATIONS WITH THE AUDIT COMMITTEE

Our perspective is that the objectives and requirements for identification and communication of critical audit matters should align with the type of information that has demonstrable value to the users, should be material to the financial statements, and should avoid adding information to the report that either would be of no interest or that might lead to confusion for non auditors. We would particularly like to emphasize the point that excessive or unnecessary information provided through the critical audit matters section of the audit report would be contrary to the Board's intent in creating the standard. We refer you to comments made on October 15, 2013, by Mary Jo White, Chairwoman of the Securities and Exchange Commission:

> *"When disclosure gets to be "too much" or strays from its core purpose, it could lead to what some have called "information overload" – a phenomenon in which ever-increasing amounts of disclosure make it difficult for an investor to wade through the volume of information she receives to ferret out the information that is most relevant."*

Having the observation above in mind, we believe that additional information provided through the reporting of critical audit matters is appropriate. However, our preferred approach to addressing the marketplace desire for more relevant and useful information from the audit would be to have the Audit Committee provide in their own disclosure more insight stemming from their communications with the auditor. Such an approach would preserve the distinction between the roles and maintain that the primary responsibility for reporting of original information regarding significant audit considerations rests with the company, not the auditor. We are concerned that there is the potential for the auditor to report original information about the company, which management has not shared, and that this will cause readers to increasingly look to the auditors for incremental information. The practice would further blur the roles between those charged with governance and the auditor. We believe that would be counter to the underlying premise of the objectivity of the independent auditor.

Recently, a group of nationally recognized U.S. corporate governance and policy organizations known as the Audit Committee Collaboration, released "Enhancing the Audit Committee Report, A Call to Action." The document emphasizes the opportunity that audit committees have in reporting on significant matters discussed with the auditor as part of the audit, indicating:

> "*The audit committee should also consider whether additional disclosure about its general oversight of the external auditor – either through descriptions of processes or specific activities – would provide shareholders and potential investors with useful context. These might include discussions of the degree of the audit committee's interaction with the external auditor (including the nature or number of meetings outside the presence of management), the types of issues discussed at those meetings, and other activities that are central to the audit committee's oversight.*"

Under this approach that preserves the entity's responsibility for disclosure of original information, the auditor might then acknowledge in the audit report the communications described in the audit committee's disclosure, treated similarly to the auditor's response in the proposed other information standard.

We believe that matters described in a critical audit matters section in the audit report should expand on matters discussed with the Audit Committee. Such disclosure should not introduce additional matters, which could call into question the completeness of the these communications. Making matters discussed with the audit committee the starting point for identification of critical audit matters aligns the proposed standard with the guidance provided through Auditing Standard No. 16. The definition of critical audit matters in paragraph 8 of the proposed Reporting Standard, i.e., *matters required to be (1) documented in the engagement completion document; (2) reviewed by the engagement quality reviewer; (3) communicated to the audit committee; or (4) any combination of the three*, is clear as the source for the selection of matters that might be considered critical audit matters. However, our view is that all critical audit matters should be those matters the auditor has communicated (or plans to communicate) to the audit committee. This is consistent with the proposal from the IAASB, which indicates key audit matters are from those matters communicated with those charged with governance. We would like to see congruence between what the SEC will require of audit committees in public company filings, and what the auditing standards require of the auditor. More transparency about communication between the audit committee and the auditor, we believe, will produce the best flow of relevant information to the capital markets.

DEFINING CRITICAL AUDIT MATTERS AND CRITERIA

We believe that the inclusion of the illustrative examples provides substantial insight into the expectations of the Board, and helps the auditor interpret the requirements of the proposed standard. However, we noted that the illustrative examples make use of descriptions of the auditing procedures performed. Our view is that describing the audit procedures performed may in fact confuse users who are not familiar with the selection and application of audit procedures. For example, describing audit procedures performed specifically to address an increased risk of fraud for an account balance has the potential to cause a reader without an audit background to conclude fraud is likely occurring. For a small or medium size entity, auditing a particular area may require proportionally greater effort by the auditor through the selection of specific substantive procedures. However, we question whether such information is relevant or useful to a user. Some of the consideration factors described in paragraph 9 of the proposed standard, as depicted in the illustrative critical audit matters, would be problematic for an auditor to describe in the audit report without confusing a user who does not possess an audit background, especially corrected and accumulated uncorrected misstatements, the use of specialists, and consultations made outside the engagement team.

We are also concerned that communication of specific auditing procedures or responses to significant risks will lead to inconsistencies in reporting, which would likely lead to more user confusion. For example, auditors can respond to significant risks in various ways. Such responses can be influenced by matters that users may not understand, such as auditor or firm policies and preferences. Ultimately, the auditor is charged with responding to significant audit risks as necessary to reduce the risk of material misstatement to an appropriately low level; how the auditor accomplishes that objective varies. Communicating such information does not enhance the user's understanding of the entity being audited. Additionally, firms that focus on a given industry likely have developed proprietary approaches to auditing critical risk areas. Describing those procedures outside the context of the audit as a whole could be confusing even to those within the profession. A desire to protect such proprietary approaches would likely lead to “boiler plate” responses adding length, but no value, to the auditor’s report.

Further, requiring disclosures related to increased audit difficulties resulting from other issues, such as internal control, mistakes, talent or competency levels of management, or the quality of oversight provided by those charged with governance could result in smaller entities suffering a market perception that they were riskier or more difficult to audit. While such a perception might be warranted, it would increase the risk profile of such entities when, in fact, such risk is an audit risk, not a company or operational risk. We believe that this is a probable outcome, that is audit risk and even financial reporting risk will be assumed to be indicators of operational risk for the entity. Even so, we continue to support the concept of disclosing critical audit matters in the audit report.

We are also concerned that reporting by auditors of areas where the application of extended auditing procedures was required as a result of deficiencies in internal controls over financial reporting could cause smaller entities to feel increased pressure to eliminate such deficiencies. Many smaller entities may not be able to afford more robust internal control systems, and such systems would not necessarily be warranted to accomplish reliable and transparent financial reporting, but rather would only be implemented in order to avoid emphasis of an area in the auditor’s report. Such would be a costly unintended consequence of these proposed requirements. Likewise, requiring smaller entities to adopt and report on the effectiveness of their internal control systems was hotly debated in connection with implementation of section 404b of Sarbanes-Oxley. Ultimately, the requirement that the auditor’s report on the effectiveness of the internal control systems of smaller entities under section 404b of Sarbanes-Oxley was not implemented. Such issues should not be reopened through the auditor’s communication of audit difficulties arising from deficiencies in internal controls. We believe that companies should benefit from the lessons learned in placing such non-scalable reporting requirements on smaller and medium size entities, and the negative consequences and confusion that was created for all financial reporting stakeholders as a result.

The definition of a critical audit matter, as further explained in paragraph 9 of the proposed standard, is sufficiently clear. However, we have additional observations about the definition that we would like the Board to consider. The Board sought comment as to whether the use of the word “most” is understood as it pertains to the concept of judgments, and we believe that it is understood with respect to the use of auditor judgment. However, because “most difficult” is in our view a much more subjective concept, we are concerned the definition could lead to inconsistency about what matters are determined to be the critical audit matters. Furthermore, communication of matters that posed the most difficulty for the auditor to obtain sufficient appropriate evidence or that posed the most difficulty in forming an opinion may be inferred by the users of the financial statements as a separation of the audit opinion into matters in which the auditor is more and less confident. The information communicated in the auditor's report should be reported in a manner which does not cast doubt on whether the audit was performed satisfactorily. The current auditor reporting model has always reflected a high standard of not implying piecemeal opinions (in fact such opinions are prohibited). Disclosing information regarding how difficult it was to achieve that standard could be viewed by users incorrectly as a qualification of whether that standard was achieved. Consequently, users could perceive an audit with reported difficulties as being indicative of a lower quality audit than an audit without reported difficulties. Such a perception would be misleading and could actually damage the entity being audited if a communicated audit difficulty is viewed by users as a perceived risk regarding the entity.

We believe that the factors described in paragraph 9 of the proposed Reporting Standard are helpful in leading the auditor to consider what matters might be included in those matters communicated as critical audit matters. However, we are concerned these factors might be applied in such a way that could lead the auditor to communicate matters as critical that are not useful to the users of the financial statements Put another way, the factors described in paragraph 9 make a good starting point for *identification*, but not good criteria for *determination*. Without clear guidance regarding which identified matters should rise to the level of being reported, we believe there will be an excessive number of critical audit matters identified, and the objective of the standard will not be achieved. We believe the determination of what will be communicated as critical audit matters should not alter the fundamental responsibility of the company's management to determine what should be disclosed about the entity, and the factors should be applied through that requirement. Users are ill-equipped to conclude on the impact any identified audit matters may have had in forming the basis for the auditor's opinion. Without correlation to the information reported by the audit committee, such users may infer incorrectly that auditor communications are an extension of entity communications, or somehow reflect operational insights.

With the above in mind, we believe the following criteria should also be a part of the determination of what matters are communicated as critical in the audit report:

1) Matters that would be clearly relevant for the users to have a clear understanding
2) Matters that are material to the audited financial statements
3) Matters that will not cause unintended confusion, especially where communication of such matters might harm the entity

We believe that the proposed requirement regarding documentation of critical audit matters is sufficiently clear, and is consistent with the requirements of Auditing Standard No. 3. We believe that the proposed requirement regarding documentation of critical audit matters is sufficiently broad, and that it can be adhered to in a scalable manner, appropriate to the circumstances of the engagement. However, we believe any documentation requirement for non-reported audit matters should be limited to matters discussed with the audit committee, but ultimately not included in the reported matters. We believe documentation of other matters not included in the critical audit matters would create a costly additional layer of effort that may potentially drive auditors to make inappropriate additions to what is included in the critical audit matters out of concern over their ability to defend why matters were not reported.

COSTS

We have several considerations to present to the Board with respect to costs of the proposed standards. We view the considerations presented herein as ongoing and recurring cost matters, as opposed to one-time items. It was acknowledged in the proposal that significant audit matters will be handled by the most experienced members of the audit firm and the more senior members of those charged with governance, and they will therefore generally consume the time of the most costly resources. There is a clear opportunity cost in time spent discussing the wording of critical audit matters communication that would otherwise be spent addressing audit and financial reporting risks, especially during the final time period of the audit and reporting period. This is one of the most compelling reasons to ensure that critical audit matters are defined in such a way to allow the auditor to avoid communicating information through the audit report that management would otherwise not discuss with outside parties, such as contingencies or internal control deficiencies less severe than a material weakness.

In a smaller engagement team and smaller company environment, those higher level resources are less likely to be able to leverage their time to other members of either of those parties. Therefore, the smaller environment will disproportionately bear a greater burden of the costs of this additional reporting. Also, because we expect a higher number of critical audit matters for small and medium sized entities, the exposure risk to public accounting firms of accepting and issuing opinions for those companies may turn cost-prohibitive, making audit partners less willing to perform audits, reducing those companies' access to auditing firms and result in higher fee models for such companies.

We believe the communication of critical audit matters in the audit report will significantly increase the frequency of involvement of the audit firm's legal counsel prior to audit issuance. Because we expect small and medium size entities will have a greater number of identified critical audit matters to be reported by the auditor, the costs of audit reports for those entities will therefore be disproportionately impacted by such additional reporting costs.

At the conclusion of our field testing process, we believe we will have a more complete evaluation of the significance of these cost considerations.

LEGAL LIABILITY

We also have considerations for the Board with respect to the legal liability impact of the proposed standard regarding to the disclosure of critical audit matters. The proposed standard will require more information to be presented in the audit report than is currently required. This will inevitably serve to increase potential liability (and its corresponding costs), as there will be additional information in the audit report for private litigants to challenge. We believe that the auditor would be required to apply subjective judgments to determine what is useful to users of the financial statements in determining what should be communicated as critical audit matters. The communication about why matters were included in critical audit matters will raise questions about matters that were not included. We believe that there will be an increase in private litigation resulting from an auditor's decision to not include a matter in critical audit matters. In an effort to avoid potential litigation, the auditor could also decide that the proposed standard requires disclosure of additional non-essential information. The auditor may conclude that it is preferable to err on the side of excess in determining critical audit matters in order to meet the perceived level of risk tolerance. As such, a risk-averse auditor may choose to broadly interpret the definition of critical audit matters, resulting in an excessively detailed report. As previously indicated, the resulting audit report would effectively defeat one of the stated rationales behind the proposed standard by disclosing so much information as to be of minimal usefulness to all but the most sophisticated users of the financial statements.

OTHER CONSEQUENCES

In its letter dated March 21, 2013 to the Chairman of the SEC, the Advisory Committee on Small and Emerging Companies wrote:

> *"The Committee believes that current U.S. equity markets often fail to offer a satisfactory trading venue for the securities of small and emerging companies because they fail to provide sufficient liquidity for such securities and because the listing requirements are too onerous for such companies".*
>
> *"The frequent failure of U.S. equity markets to offer a satisfactory trading venue for small and emerging companies has discouraged initial public offerings of the securities of such companies, undermines entrepreneurship, and weakens the broader U.S. economy"*

We believe particular care should be taken to ensure that reporting of critical audit matters does not create an environment where discussions between management and the auditor are inhibited because of concerns about how such information might be communicated in the audit report.

More specifically, we believe that the introduction of the critical audit matters section to the report may make audit committees and management reluctant to discuss broader matters with the auditor, such as contingent liabilities, or activity within the entity's fraud monitoring. Entities may be reluctant to work with the auditor's internal specialists. We furthermore envision pushback when it becomes known that the auditor is consulting its national office on a matter. All of these potential consequences we believe should be addressed by carefully defining what is determined to be critical audit matters, striking a balance between improving the value of information provided through the audit with preserving the role of the auditor and the relationship of the auditor to the financial reporting stakeholders.

Comparability, a necessary part of making the audit report useful, ordinarily requires that audit reports should contain similar information for similar entities, especially for entities in the same industries. We believe small and medium size entities more likely lack the robust infrastructure for financial reporting we see in place at larger companies. Such a circumstance will undoubtedly impact the nature and frequency of the critical audit matters identified for small and medium size entities, especially in areas that would otherwise be considered significant risk areas in a company of any size. Therefore, we perceive an inverse relationship between the size of the entity and the frequency with which critical audit matters will be described under the proposed requirements. We note this relationship could put such smaller entities at a competitive disadvantage in attracting capital.

We believe that small and medium sized entities have a greater frequency of going concern matters, audit adjustments, and internal control deficiencies. Therefore, our expectation is that small to medium sized public entities will also have a greater frequency of critical audit matters. The result will be critical audit matters between two different sized entities in the same industry could be significantly different, without the reader necessarily having the appropriate context to understand why they are different. Furthermore, we believe there are critical audit matters that would likely be consistently identified and communicated by the same auditor for any company within specific industries. It would be difficult to prevent the auditor reporting of such critical audit matters from becoming boilerplate for the industry, which could lead to a potentially erroneous conclusion by users that the audit was substandard or failed to address "expected" matters.

## OTHER INFORMATION

We support the Other Information Standard, but we have recommendations that we believe will help the proposed standard better achieve what we understand to be the Board's intent. The recommendations are:

- Replace the term "evaluate" in the audit report with a description of the procedures required by the proposed standard
- Require a statement in the audit report that the auditor has not audited or reviewed the other information, and that the aforementioned described procedures do not provide the assurance of an audit
- Include an unambiguous description in the report of the other information on which the aforementioned described procedures were performed

Additional considerations about our recommendations and responses to specific questions asked by the Board are provided below.

Our overall view on the Other Information Standard is that it accomplishes the Board's desire to increase the perceived transparency of the auditor's responsibility with respect to other information. We see the intent of the proposed standard as more fully describing the auditor's responsibility under the existing AU sec. 550, and reasonably specify and strengthen the auditor's performance responsibilities, without extending a level of assurance to the other information. Continuing from that perspective, we believe that the audit report should not conclude on the other information, but should only state the auditor's responsibilities, including the responsibility the auditor would have if a material inconsistency, a material misstatement of fact, or both were identified. However, if the Board has the view that a greater level of assurance over information included with the audited financial statements is needed, we would suggest exploring the use of procedures under the attestation standards on such other information.

We believe that a description of the auditor's responsibility for other information would be most helpful to the user of the audit report when such a description is unambiguous about what defines other information, and clearly indicates what other information is not addressed by the limited procedures prescribed by the proposed standard. We believe the other information for which the auditor has responsibility should be discretely identified within the standard. We note that any ambiguity has the potential to increase the cost volatility associated with adopting the standard.

The Board sought comment as to whether it is appropriate to apply the standard to information incorporated by reference. We understand that the proposed requirement includes a note to the introduction of the standard which indicates information that does not become available to the auditor until after the issuance of the audit report when such information is included in the company's definitive proxy statement filed within 120 days of the end of its fiscal year is in the scope of the proposed standard. We do not believe that it is appropriate to apply the proposed other information standard to information incorporated by reference in such circumstances, because we believe such a practice would devalue the public's confidence in the auditor if the auditor were to comment on information on which he has not been able to apply the procedures described in the standard. Re-issuances of the auditor's report may become necessary after the information becomes available, and we believe such re-issuances would clearly undermine the public's trust in the audit profession.

We believe that the word "evaluate" does not correctly describe the objectives of the standard, because that term implies a level of assurance achieved similar to that when forming an opinion. A statement should be included in the text of the report that makes it clear these procedures are not the same as, nor do they provide the same level of assurance as an audit. The Board sought comment on whether the objectives assist the auditor in understanding the requirements of what would be communicated in an unqualified auditor's report. Our view is the objectives should be closely aligned with the specific procedures required by the proposed standard. We believe the proposed wording in the audit report should replace the concept of "evaluate" with a definition of the procedures performed with respect to other information, and that doing so will provide an appropriate understanding of the auditor's responsibilities.

However, we believe the objectives should also include providing a statement that the auditor has not audited or reviewed the other information. We further believe the objectives should clarify that the auditor's considerations are based upon audit evidence pertaining to the audited financial statements, and not on audit evidence gathered about the other information.

We believe the auditor should read and apply specific limited procedures to other information to identify a material inconsistency or a material misstatement of fact, or both. The proposed procedures are clear, appropriate, and sufficient. It is understood which amounts in the other information the auditor would be required to recalculate based on the proposed standard. For the reasons previously indicated, we do not believe the proposed standard should use the word "evaluate" in the description of the auditor's responsibilities.

We agree with the Board's assessment of the additional costs associated with the proposed required procedures. Beyond those described in the appendix, we do not believe there would be additional costs, provided the definition of what other information is clear and unambiguous. Also, beyond those described in the appendix, we believe there would not be additional costs when the auditor identifies a material inconsistency, a misstatement of fact or both. We believe there would be potentially recurring additional costs if it were left in doubt what information the auditor is required to perform the prescribed procedures on, or if the word "evaluate" is used to describe the auditor's responsibility with respect to the other information.

We believe the proposed auditor responses are appropriate when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both, in the scenarios described in the proposed standard. We do not believe there are circumstances where it would be appropriate for an auditor to issue a report that states that the auditor has identified in the other information a material inconsistency, a material misstatement of fact, or both, that has not been appropriately revised and describes the material inconsistency, the material misstatement of fact, or both. While we believe it would be appropriate for the auditor to address uncorrected matters in other information, we cannot imagine such a situation remaining unresolved.

## EMERGING GROWTH COMPANIES

We believe that the Board should recommend to the SEC that the standards, as ultimately issued, should apply to Emerging Growth Companies (EGCs) without delayed implementation. We believe the changes will be unlikely to impact an EGC's financial position or results of operations, and will add to the transparency of their financial reporting. We believe EGCs will, by their nature, have a higher frequency of matters of the sort that users of the financial statements would seek a better understanding of from the perspective of the independent auditor. Likewise, we believe the audit of an EGC would benefit from the performance of the procedures described in the Other Information Standard, because of the maturity stage of the EGC's financial reporting processes. It is important to note that our recommendation in this matter is not severable from the other recommendations we have made in our letter. We believe that without a narrower definition of critical audit matters focused on significant inherent risks and areas of auditor judgment, the proposed reporting standard would have the potential to make listing requirements onerous, hindering capital formation, and this is especially true for EGCs, as echoed in the aforementioned comments by the Advisory Committee on Small and Emerging Companies to the SEC.

## BROKER DEALERS, INVESTMENT COMPANIES and BENEFIT PLANS

We believe that the requirements in the proposed standards related to critical audit matters should not be required for audits of brokers and dealers, investment companies, or benefit plans. We believe the significant inherent risks and areas of auditor judgment for these entities would likely be the same. As a result, critical audit matters described for these types of entities would not meet the criteria of being useful and relevant to the users of the financial statements, and thus the costs of applying the proposed requirements would not be justified.

**Subject:** PCAOB Rulemaking Docket Matter No. 034 Proposed Auditing Standards The Auditor"s Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and
**Date:** Wednesday, December 11, 2013 12:15:49 PM

---

Thank you for the opportunity to comment on the rulemaking referenced above. My comments are written from the perspective as an owner and operator of a small nonpublic, non-custodial broker-dealers.

My Firm is one of approximately 4000 firms that are not public companies. I own 100% of my firm and am fully responsible for its success or failure. I have seven home office employees and 68 registered representatives providing investment services.

The proposed rules will inflict significant additional costs, with little or no relevance to the mission of the PCAOB, which is to protect the interests of public investors and to promote investor protection. Public investors do not review the audits of my company. I am the sole investor in my firm.

I believe it is appropriate and consistent with the PCAOB mission for the Board to exercise its authority under the Dodd Frank Act, and exempt the auditors of small, privately held, non-custodial broker-dealers, such as my firm, from its oversight. It is important that regulation for small firms remain relevant to the business model and investing public; we encourage the Board to seriously consider the matter of small firm exemption.

Thank you for your consideration

Dear PCAOB:

We are submitting the following comments for the PCAOB's consideration in response to a request for comments on the proposed Auditor's Reporting Model (PCAOB Release No, 2013-005). These comments represent my perspective as an institutional investor for a large public pension plan representing more than 500,000 current and retired members and over $43 billion in assets.

I am pleased to see the PCAOB move forward with a proposal. Recognizing that there was no proposal that would completely satisfy all stakeholders, I believe the PCAOB has structured a well-balanced proposal that will ultimately benefit all stakeholders.

Of the many important efforts the PCAOB has made to improve the audit process for shareholders, I believe the proposed addition of critical audit matters to the auditor's report will be one of the most significant. I see parallels between the critical audit matters requirements in the auditor's report with the management discussion and analysis (MD&A) requirements in the annual report. The MD&A has not only become a powerful resource for investors, but I believe its introduction has helped to foster a stronger relationship between management and their investors. The MD&A helped to foster a culture where management was more welcoming of investor communication and disclosure with numerous benefits.

The MD&A was revised over time and it would be helpful if this proposal contains the essence of what the PCAOB would like to accomplish and need little revision over time. While the overall proposal is excellent, we would like to see a stronger requirement for auditors to disclose their evaluation on management's estimates and judgments, an issue of meaningful uncertainty for investors. Management's estimates can be the cause of inaccurate financial reporting, and a greater level of disclosure and discourse between management, auditors, and investors about estimates and judgments, will strengthen financial reporting and improve our capital markets.

We appreciate the PCAOB for giving us the opportunity to comment on potential changes of the auditor's reporting model, and would welcome additional opportunities to provide input to the PCAOB as this process continues.

Sincerely,

Jennifer Paquette

**Re: PCAOB Rulemaking Docket Matter No. 034**

Submitted via comments@pcaobus.org

Comcast Corporation appreciates the opportunity to comment on the Public Company Accounting Oversight Board's (the "Board" or "PCAOB") *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the "Proposed Auditor Reporting Standard"); *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (the "Other Information Standard")*; and Related Amendments to PCAOB Standards* (collectively, the "Proposal").

Comcast is a global media and technology company with two primary businesses, Comcast Cable Communications and NBCUniversal. During 2012, we generated approximately $63 billion of revenue and approximately $12 billion of operating income.

While we support the Board's underlying objective in proposing changes to enhance the informational value, usefulness and relevance of the auditor's report and agree with including clarifying language in the existing standard auditor's report that enhances investors' and users' understanding of the scope of the audit, the work performed, and the inherent limitations of the audit process, we have significant concerns about the Proposal as noted below.

* * * * *

**Critical Audit Matters**

We believe the Proposal is fundamentally flawed as it relates to the processes and procedures surrounding the identification and public reporting of Critical Audit Matters ("CAMS"), which we believe may have the unintended consequence of altering the roles and responsibilities of management, auditors and the audit committee. Our specific concerns with the CAMS include: (i) the potential for putting auditors in the position of communicating original information that has not been separately disclosed, or is not otherwise required to be disclosed, by the company (e.g., significant deficiencies); (ii) the potential for a perception that auditors are providing piecemeal opinions on those matters; (iii) the potential adverse effect on the clarity of responsibility for preparation of the financial statements; (iv) the potential undermining of the existing corporate governance structure among the audit committee, the auditors and management; (v) the potential for confidential discussions between the auditor and audit committee to be publically disclosed; (vi) increased time and associated audit fees resulting from the process of identifying, evaluating and documenting (both within the audit firm and with the company and audit committee) the CAMS, especially those ultimately determined to be audit matters not considered critical; and (vii) the timing of such procedures occurring at the most hectic or critical time in the annual reporting process. We believe the costs of the additional procedures to comply, as currently proposed; will greatly exceed any potential benefits.

Accordingly, for the reasons set forth above, we do not agree with the Board's Proposal for auditor's to identify and publicly report CAMS. If, after considering the costs and benefits, the Board nonetheless decides to retain the concept of CAMS, we believe the identification of CAMS should be limited to those items required to be communicated to the audit committee under AS 16, *Communications with Audit Committees* ("AS 16"). Under AS 16, auditors are currently required, among other things, to communicate the following (i) audit strategy, including the identification of significant audit risks and audit procedures to address fraud risk; (ii) significant accounting policies and practices; (iii) critical accounting policies and practices; (iv) critical accounting estimates; and (v) significant unusual transactions. We propose that these items should form the "population" of potential CAMS, but the independent auditors should not be required to finalize the CAMS until following a timely discussion with the audit committee. We believe the identification, reporting and discussions of CAMS by auditors should stop with timely communications to the audit committee, where they can be discussed by experienced financial professionals.

With that said, if the Board can conclude that any potential benefit to investors outweighs the burdens and requires that CAMS be publically reported, we believe it would be more appropriate to require such disclosure in the audit committee report of a company's proxy statement and that such disclosure be limited to the fact that the audit committee has discussed CAMs with the auditors. We believe this approach would provide investors with the assurance that the auditors and audit committees are discussing CAMS, while maintaining the existing corporate governance framework among the audit committee, the auditors and management. As such, we would encourage the Board to solicit the feedback of the SEC on the feasibility of amending the requirements of Reg. S-X Rule 2-07 related to this potential alternative.

**Other Information**

Although we support the underlying objective of adding clarifying language around the auditor's responsibilities with regard to information outside of the financial statements, we believe that, as proposed, the standard would lead to significant additional audit work, and therefore issuer costs, by requiring that the auditor "evaluate" the information and expand the scope of their work to other information beyond their area of professional expertise. We would, however, support a standard that conformed the auditor's responsibility to the current requirement of a "read and consider" level of performance and limited the auditor's responsibility to read and consider other information directly related to the financial statements.

**Auditor Tenure**

Finally, we believe that disclosures regarding auditor tenure would be more suitably placed in the proxy statement, where many companies submit to a vote of their shareholders ratification of the reappointment of the independent auditor.

We have reviewed this letter with our audit committee and they agree with our comments and recommendations.

We appreciate the opportunity to express our views on this proposed auditing standard.

Sincerely,

Lawrence J. Salva

**Re: PCAOB Rulemaking Docket Matter No. 034**

Submitted via comments@pcaobus.org

I am Chairman of the Audit Committee of Comcast Corporation. I have read Comcast's submission of comments on this proposal (copy attached) and I am in full agreement with the views expressed therein concerning critical audit matters, other information and auditor tenure.

* * * * *

In support of the Comcast recommendation that critical audit matters be communicated to the audit committee rather than directly to investors, I believe the following considerations are most important:

Timeliness

Communicating critical matters in the auditor's report on annual financial statements will be too late to be of real value and relevance. If it is important for someone to know "what kept the auditors up at night," that can only be meaningful if that information is communicated on a timely basis, as such matters are identified, not two or three months after the year is over and the audit is completed.

Critical audit matters known at the time of preparation of the annual audit plan should be communicated to the audit committee in that plan. Critical audit matters identified thereafter should be communicated to the audit committee in a timely manner as they arise.

Communication to the Audit Committee

It is important that critical audit matters be communicated to the right people (the audit committee) at the right time (on a timely basis) so that appropriate questions can be asked, concerns expressed and discussed, and, if appropriate, action taken in response to the CAMs identified. The audit committee is knowledgeable about the Company's financial reporting and internal controls and about the audit process; they are, obviously, the group to receive this information and to act on it in cooperation with the auditors and company management.

* * * * *

Cost and Benefit

In my opinion, the proposal will impose significant costs, quantitative and qualitative, with little or no meaningful benefits.

Costs of implementing the proposed standard would include:

1. Significant monetary costs to be borne by auditors, registrants and, ultimately, investors.
2. A distraction of the time and attention of senior audit management at a critical stage of the audit process.
3. The likelihood that the presentation of numerous CAMs will dilute and perhaps obscure the critical audit conclusion – the result of the so-called "pass-fail test" that is the essential result of the audit.
4. Other concerns frequently mentioned – auditor communication in lieu of management which has primary responsibility for financial reporting; inference of piecemeal opinions; disclosure of other information not otherwise required to be disclosed by present standards - - to cite a few of the most significant.

Benefits

The objective of the standard is enhanced value of information communicated to investors. As indicated above, I believe that if such communications are not timely and not actionable, they are of limited relevance and questionable value.

In addition, while not objectively determinable at this stage, I strongly believe that this information will to be, perhaps from the outset, standardized "boiler plate," of little substantive value to anyone.

I appreciate the opportunity to express my views on this important matter.

Sincerely,

J. Michael Cook

**Re: PCAOB Rulemaking Docket Matter No. 034**

Submitted via comments@pcaobus.org

Comcast Corporation appreciates the opportunity to comment on the Public Company Accounting Oversight Board's (the "Board" or "PCAOB") *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the "Proposed Auditor Reporting Standard"); *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (the "Other Information Standard")*; and Related Amendments to PCAOB Standards* (collectively, the "Proposal").

Comcast is a global media and technology company with two primary businesses, Comcast Cable Communications and NBCUniversal. During 2012, we generated approximately $63 billion of revenue and approximately $12 billion of operating income.

While we support the Board's underlying objective in proposing changes to enhance the informational value, usefulness and relevance of the auditor's report and agree with including clarifying language in the existing standard auditor's report that enhances investors' and users' understanding of the scope of the audit, the work performed, and the inherent limitations of the audit process, we have significant concerns about the Proposal as noted below.

* * * * *

**Critical Audit Matters**

We believe the Proposal is fundamentally flawed as it relates to the processes and procedures surrounding the identification and public reporting of Critical Audit Matters ("CAMS"), which we believe may have the unintended consequence of altering the roles and responsibilities of management, auditors and the audit committee. Our specific concerns with the CAMS include: (i) the potential for putting auditors in the position of communicating original information that has not been separately disclosed, or is not otherwise required to be disclosed, by the company (e.g., significant deficiencies); (ii) the potential for a perception that auditors are providing piecemeal opinions on those matters; (iii) the potential adverse effect on the clarity of responsibility for preparation of the financial statements; (iv) the potential undermining of the existing corporate governance structure among the audit committee, the auditors and management; (v) the potential for confidential discussions between the auditor and audit committee to be publically disclosed; (vi) increased time and associated audit fees resulting from the process of identifying, evaluating and documenting (both within the audit firm and with the company and audit committee) the CAMS, especially those ultimately determined to be audit matters not considered critical; and (vii) the timing of such procedures occurring at the most hectic or critical time in the annual reporting process. We believe the costs of the additional procedures to comply, as currently proposed; will greatly exceed any potential benefits.

Accordingly, for the reasons set forth above, we do not agree with the Board's Proposal for auditor's to identify and publicly report CAMS. If, after considering the costs and benefits, the Board nonetheless decides to retain the concept of CAMS, we believe the identification of CAMS should be limited to those items required to be communicated to the audit committee under AS 16, *Communications with Audit Committees* ("AS 16"). Under AS 16, auditors are currently required, among other things, to communicate the following (i) audit strategy, including the identification of significant audit risks and audit procedures to address fraud risk; (ii) significant accounting policies and practices; (iii) critical accounting policies and practices; (iv) critical accounting estimates; and (v) significant unusual transactions. We propose that these items should form the "population" of potential CAMS, but the independent auditors should not be required to finalize the CAMS until following a timely discussion with the audit committee. We believe the identification, reporting and discussions of CAMS by auditors should stop with timely communications to the audit committee, where they can be discussed by experienced financial professionals.

With that said, if the Board can conclude that any potential benefit to investors outweighs the burdens and requires that CAMS be publically reported, we believe it would be more appropriate to require such disclosure in the audit committee report of a company's proxy statement and that such disclosure be limited to the fact that the audit committee has discussed CAMs with the auditors. We believe this approach would provide investors with the assurance that the auditors and audit committees are discussing CAMS, while maintaining the existing corporate governance framework among the audit committee, the auditors and management. As such, we would encourage the Board to solicit the feedback of the SEC on the feasibility of amending the requirements of Reg. S-X Rule 2-07 related to this potential alternative.

**Other Information**

Although we support the underlying objective of adding clarifying language around the auditor's responsibilities with regard to information outside of the financial statements, we believe that, as proposed, the standard would lead to significant additional audit work, and therefore issuer costs, by requiring that the auditor "evaluate" the information and expand the scope of their work to other information beyond their area of professional expertise. We would, however, support a standard that conformed the auditor's responsibility to the current requirement of a "read and consider" level of performance and limited the auditor's responsibility to read and consider other information directly related to the financial statements.

**Auditor Tenure**

Finally, we believe that disclosures regarding auditor tenure would be more suitably placed in the proxy statement, where many companies submit to a vote of their shareholders ratification of the reappointment of the independent auditor.

We have reviewed this letter with our audit committee and they agree with our comments and recommendations.

We appreciate the opportunity to express our views on this proposed auditing standard.

Re: PCAOB Release No. 2013-005, Rulemaking Docket Matter No. 034

Dear Madam:

The Committee on Capital Markets Regulation (the "**Committee**") is grateful for the opportunity to comment on the recently proposed standards issued by the Public Company Accounting Oversight Board (the "**PCAOB**"), including *The Auditor's Report on an Audit of the Financial Statements When the Auditor Expresses an Unqualified Opinion* (the "**Proposed Auditor Reporting Standard**") and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (the "**Proposed Other Information Standard,**" and together with the Proposed Auditor Reporting Standard, the "**Proposed Standards**").

Founded in 2006, the Committee is dedicated to enhancing the competitiveness of U.S. capital markets and ensuring the stability of the U.S. financial system. Our membership includes thirty-two leaders drawn from the finance, investment, business, law, accounting, and academic communities. The Committee is chaired jointly by R. Glenn Hubbard (Dean, Columbia Business School) and John L. Thornton (Chairman, The Brookings Institution) and directed by Hal S. Scott (Nomura Professor and Director of the Program on International Financial Systems, Harvard Law School). The Committee is an independent and nonpartisan 501(c)(3) research organization, financed by contributions from individuals, foundations, and corporations.

The Proposed Standards follow an initial concept release issued by the PCAOB in June of 2011, and broadly seek to improve the form of the auditor's report, which has changed little in the United States since the 1940's. Specifically, the Proposed Standards aim to address concerns that the current form of auditor's report provides little specific information about a particular company to financial statement end users.[1] The Committee applauds the PCAOB's goal of enhancing auditor communications and making financial statements more useful for end users. However, we believe several of the proposed changes may not serve this goal and, in fact, may lead to confusion by investors and unnecessary effort and expense on the part of both auditors and companies in producing financial statements, without recognizable benefit.

[1] Proposed Auditing Standards: The Auditor's Report on an Audit of the Financial Statements When the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards, PCAOB Release No. 2013-005, Rulemaking Docket Matter No. 034 (proposed August 13, 2013), p. 5.

First, we believe the discussion of "critical audit matters" should not be included in a final rulemaking. The Proposed Auditor Reporting Standard provides for disclosure of such matters, including "those matters addressed during the audit that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming the opinion on the financial statements."[2] Critical audit matters include subjects that under current PCAOB requirements would be documented and/or communicated to the audit committee, although not all such matters would rise to the level of "critical audit matters." The proposal provides a list of factors auditors should take into account when determining critical audit matters.

Disclosing all "critical audit matters" is problematic for several reasons. Certain investors may misinterpret discussion of these issues as an indication of a problem, even if the audit results in a clean audit opinion – the additional disclosure has the potential to make mountains out of molehills. Inclusion of critical audit matters may be viewed by end users as an implicit qualification of the audit, and could lead users to perceive different levels of assurance on different areas of the financial statements. The mere fact that auditors and a board have spent significant time on an issue does not suggest it should be of particular interest to investors, and conversely, not all issues of interest should be considered "critical audit matters." What is of concern to investors is what the accounting policies and treatment are, not how they have been devised through discussion between auditors and issuers. The proposed additional information will not permit a more insightful evaluation of the fairness of the accounting reflected in the financials.

In addition, drafting disclosure of critical audit matters will likely require significant additional time and effort on the part of the auditors. Disclosure is likely to be voluminous, in particular as auditors seek to convey "critical audit matters" to investors not familiar with topics that, while complex and difficult to address, may routinely arise during public company audits. Auditors will likely take longer in producing their reports to address items that are not of clear informational value. Finally, and most importantly, a requirement to disclose "critical audit matters" would likely result in less open discussion between auditors and issuers and auditors and boards, as issuers and directors constantly will be mindful that any issue they discuss could be subject to disclosure.

Secondly, we believe the Proposed Other Information Standard is too broad and, at the least, should be limited to cover information derived from accounting records and subject to an internal control framework. The Proposed Other Information Standard would require that auditors perform specific procedures in evaluating "other information" taken from a company's public reporting, and that auditors provide an affirmative statement in their reports that they have not identified material inconsistencies or material misstatements of facts in the other information. "Other information" includes all company information, not just financial-related disclosures. The PCAOB says these inconsistencies could be the result of "unintentional error, managerial biases, or intentional misreporting."[3] Under existing standards, auditors already have an obligation to read and consider such other information, but there is no obligation to report their findings.[4]

[2] Proposed Standards, p. 15.
[3] Proposed Standards, p. 7.
[4] Proposed Standards, p. 20.

Requiring an affirmative attestation by auditors will result in auditors taking significant additional time and effort to review "other information" in public company filings, as they seek to protect themselves against potential 10b-5 liability. Particularly where this "other information" is unrelated to financial statements, we do not believe this is an efficient use of auditors' time and expertise. Much of the disclosure provided outside the financial statements and related notes is subjective and forward-looking, and accordingly, it will be difficult for auditors to evaluate this information or objectively to verify it. To avoid these concerns, registrants may curtail the amount or nature of information in their disclosures.

Furthermore, current law, including the Sarbanes-Oxley Act, requires the CEO and CFO of a public company to make certifications in their annual and quarterly reports, and stock exchange listing rules also require independent audit committee supervision of these reports. Management and the company audit committee are certainly better equipped to certify non-financial information than auditors. The Proposed Other Information Standard will result in significant expense with no clear benefit to investors.

Finally, we encourage the PCAOB to clarify how auditor tenure should be disclosed for registered investment companies. Mutual funds are often legally structured as a series of individual funds under a single legal entity (the "umbrella fund"), and their financial statements are issued at the umbrella fund level. Disclosure of the auditor's tenure for each individual fund may be voluminous, confusing and less relevant to end users than the auditor's tenure for the entire family of funds. We hope the PCAOB will consider the unique structure of registered investment companies and clarify an approach that provides maximum benefit to end users.

* * *

Thank you very much for your consideration of the Committee's opinion. Should you have any questions or concerns, please do not hesitate to contact the Committee's Director, Prof. Hal S. Scott (hscott@law.harvard.edu), or its Executive Director of Research, C. Wallace DeWitt (cwdewitt@capmktsreg.org), at your convenience.

Respectfully submitted,

**Re : Comments on PCAOB Rulemaking Docket Matter No. 034 – Proposed Auditing Standards Regarding the Auditor's Report and the Auditor's Responsibilities Regarding Other Information**

Dear Sir or Madam,

The Compagnie Nationale des Commissaires aux Comptes (CNCC) and the Conseil Supérieur de l'Ordre des Experts-Comptables (CSOEC) welcome the opportunity to comment on the proposed auditing standards regarding the auditor's report and the auditor's responsibilities regarding other information. Because of the economic links between France and the USA (and more generally between the European Union and the USA) and because of the very active involvement of the French Institutes in the IAASB, we are of course very interested in the PCAOB's initiative. Some French statutory auditors are registered with the PCAOB and carry audits and issue reports under PCAOB GAAS for French Issuers on the American market and this is another reason why we want to provide comments on the PCAOB's exposure draft.

Indeed, the reform of the auditor reporting that is currently being addressed by the PACOB is also being discussed on the other side of the Atlantic by the European Union[1] and at international level by the IAASB.

The auditor's report is the primary means by which the auditor communicates to investors and other users of financial statements information regarding his audit of the financial statements. This is why these projects are of the utmost importance and convergence among major constituencies is vital.

COMPAGNIE NATIONALE DES COMMISSAIRES AUX COMPTES

ORDRE DES EXPERTS-COMPTABLES
Conseil Supérieur

We are pleased to provide you hereafter with our general comments on these two proposed auditing standards, respectively *The Auditor's Report on an Audit of the Financial Statements When the Auditor Expresses an Unqualified Opinion* and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*.

If you have any further questions about our views on these matters, please do not hesitate to contact us.

Yours faithfully,

Yves NICOLAS
President of CNCC

Joseph ZORGNIOTTI
President of CSOEC

## 1. General comments on the Proposed Auditing Standard - *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*

We strongly support the proposed communication in the auditor's report of critical audit matters ("CAM") describing the matters the auditor determined to be of most significance and we believe that it will enhance the value and usefulness of the auditor's report.

We already have in France a very similar mechanism, called "justification of assessments" which was introduced in the auditor's report by the Financial Security Act (Loi de sécurité financière, LSF) of August 1, 2003 to "enable the user of the report to obtain a better understanding of the reasons behind the statutory auditors' opinion on the financial statements". We have been able to operationalize such system and that has proved to be useful[2]. We note that the PCAOB has made reference in its earlier papers to the French "justification of assessments" as a mechanism that was worth exploring and we are glad to see that the PCAOB proposal is, in substance, similar to the French "justification of assessments".

Convergence of auditor's report between the PCAOB, the IAASB and the European Union will enhance the communicative value of such report across various jurisdictions. As some entities require audit reports under both PCAOB and IAASB standards (and in the future may also need to comply with European requirements regarding auditor's report), it is important that there is consistency in the structure, content and format of the auditor's reports even of auditing standards applied differ to some extent.

We welcome the PCAOB convergence efforts with the IAASB proposed auditing standard on the auditor's report. However, we note some remaining differences:

– Different terminology to label the matters that were of most significance in the audit

The PCAOB proposes to use the words "Critical Audit Matters" ("CAM") versus "Key Audit Matters" ("KAM") in the IAASB proposed Auditing Standard. Different words to address a similar concept may be confusing for the users of the auditor's report, especially in the cases of entities that require audit reports under both PCAOB and IAASB standards, and may therefore limit the communicative value of the auditor's reports.

We consider that the term "Critical", which could be perceived as "negative" (it means "crucial" but also could mean "containing or making negative judgments" or even "involving a criticism"), may provoke anxiety for users of auditor's report. It may also generate potential translation issue, for entities which have to translate the PCAOB report into another language.

– Different content of the "CAM" / "KAM" section

We consider that the absence of information on the audit procedures performed by the auditor and the conclusion reached may also create anxiety for users of the auditor's report who may not understand whether the matter has been resolved to the auditor's satisfaction or not. In line with our comment letter to the IAASB Exposure Draft on *"Reporting on Audited Financial Statements: Proposed New and revised International Standards on Auditing"*[3], we suggest that the PCAOB should mandate a developed content and structure of the "CAM", i.e. specify that the description of each "CAM" should include the following information:

- the reason of the selection of a matter as a CAM,
- a brief overview of procedures performed or the auditor's approach to the matter, and
- an indication of the outcome of the auditor's procedures with respect to the matter,

---

[2] Study independently conducted by FootprintConsultant (P. Manière) with a view to examine the perception of the statutory auditor's "justification of assessments" by users of the auditor's report : http://www.cncc.fr/download/footprintconsultant_reportstudy_va_cncc_fev2011.pdf

[3] Our comment letter is accessible at : https://www.ifac.org/sites/default/files/publications/exposure-drafts/comments/CNCCCSOEC_0.pdf

- a clear reference to the related disclosure in the financial statements (the auditor should not be the original source of information about the entity).

- We also note that the PCAOB has not provided any illustrative examples for the "CAM" section in the proposed PCAOB auditing standard

On the contrary, in its proposed auditing standard on *"Reporting on Audited Financial Statements"*, the IAASB provides 4 examples to illustrate the KAM section. We encourage the PCAOB to also provide examples of CAM in support of its proposal, at least for educational purposes.

- Going concern issue

We note that the PCAOB has not addressed the going concern issue, when this issue is indeed addressed in the proposed IAASB auditing standard on *"Reporting on Audited Financial Statements"* and in the currently discussed reform of the auditor-related EU legislation[4]. We encourage the PCAOB to tackle this issue. A lack of convergence on that precise issue would be detrimental to the communicative value of the auditor's report across both sides of the Atlantic.

## 2. <u>General comments on the Proposed Auditing Standard – *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Relatde Auditor's Report*</u>

We support the enhanced work effort with respect to other information and the communication in the auditor's report regarding the auditor's responsibilities for, and the results of, the auditor's evaluation/consideration of the other information. Here again, we believe that convergence between the PCAOB, the IAASB and the EU[5] is essential.

We support the concept developed in paragraph 4 of the appendix A2, i.e. "read the other information based on relevant audit evidence obtained and conclusions reached during the audit". However we believe that the work effort developed in bullet points (a) to (b) is not "principle based" enough. It does not entail any concept of materiality. In addition, it is also difficult to understand the note to bullet point (d).

We wonder whether the terminology "read and evaluate" in the proposed PCAOB auditing standard is actually appropriate in light of the work effort required which does not seem to lead to an "evaluation" and we question the difference with the concept of "read and consider" in the proposed IAASB auditing standard[6]. We therefore encourage the PCAOB to provide additional guidance to illustrate this "evaluation" requirement.

---

[4] Directive of the European parliament and of the council on statutory audits of annual accounts and consolidated accounts, Regulation of the European parliament and of the council on specific requirements regarding the statutory audit of public-interest entities

[5] For information, a new European requirement has recently been voted in the recast of the Accounting Directive. As stated in Article 34:

"[In addition to statutory audits on the basis of Directive 2006/43/EC], the statutory auditor(s) or audit firm(s) shall also:

(a) express an opinion on:

(i) whether the management report [which is often used as a proxy for other information] is consistent with the financial statements for the same financial year, and

(ii) whether the management report has been prepared in accordance with the applicable legal requirements;

(b) state whether, in the light of the knowledge and understanding of the undertaking and its environment obtained in the course of the audit, he, she or it has identified material misstatements in the management report, and shall give an indication of the nature of any such misstatements."

The approved Directive is accessible at:

http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2013:182:0019:0076:EN:PDF

[6] ISA 720 - *The auditor's reponsibilities relating to other information*

We do not support the distinction made by the PCAOB between the two following concepts, i.e. "material misstatements of fact" and "material inconsistency". We believe that this distinction is not useful for the users of the auditor's report who are rather interested to understand whether there is "something wrong" with the other information, irrespective of whether this "something wrong" comes from an inconsistency with the financial statements or with the audit evidence obtained and conclusion reached during the audit. Using a generic term such as "material misstatement of the other information" would certainly simplify the reporting on the other information. We also find it difficult to have in the standard the concept of "material misstatement of fact" without defining it. Does it include omissions for example?

**Re: Rulemaking Docket Matter No. 034, Proposed Auditing Standards – *The Auditor's Report on an Audit of the Financial Statements When the Auditor Expresses an Unqualified Opinion*; *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*; and Related Amendments to PCAOB Standards.**

Dear Mr. Doty,

ConocoPhillips appreciates the opportunity to comment on the Public Company Accounting Oversight Board (PCAOB) Proposed Auditing Standards - *The Auditor's Report on an Audit of the Financial Statements When the Auditor Expresses an Unqualified Opinion*; *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*; and Related Amendments to PCAOB Standards (the Proposed Auditing Standards). ConocoPhillips is the world's largest independent exploration and production company, based on proved reserves and production of liquids and natural gas. Headquartered in Houston, Texas, our global operations involve the exploration, production, transportation, and marketing of crude oil, bitumen, natural gas, liquefied natural gas, and natural gas liquids in 29 countries. As of September 30, 2013, ConocoPhillips had $55 billion in annualized revenue, $120 billion of total assets, and approximately 18,000 employees worldwide. Our success as a large accelerated filer fundamentally depends on the integrity, accuracy and timeliness of the information presented in our financial reports, as well as the working relationship among our management, board of directors and external audit firm. Accordingly, the Proposed Auditing Standards are of critical importance to the Company.

We commend the PCAOB's efforts to make the auditor's report more informative, thus promoting its relevance and usefulness to investors and other financial statement users. With respect to proposed enhancements to the auditor's report regarding the auditor's responsibilities for fraud and notes to the financial statements, as well as auditor independence and clarification of the *current* auditor responsibilities to read and consider other information – to the extent these matters advance this objective, we are supportive. However, we are troubled by the provisions in the Proposed Auditing Standards requiring additional disclosures concerning critical audit matters as determined by the auditor, disclosure of audit firm tenure, and enhancing the auditor's responsibility with respect to other information outside the audited financial statements. We believe these provisions have the potential to improperly shift the responsibilities of management and the audit committee to the auditor; create substantial confusion among investors and other users of the financial statements; and impose significant implementation and recurring costs which will considerably surpass any benefits.

Our key concerns are further elaborated below.

## Shift of Responsibility from Management and the Audit Committee to the Auditor

Financial reporting standards and Securities and Exchange Commission (SEC) rules provide a clear framework that preparation and reporting of financial statements are the responsibility of the company's management. A requirement for the communication of critical audit matters by the auditor would be entirely inconsistent with this framework. Management bears responsibility for and certifies to the completeness and accuracy of the financial statements. Existing authoritative literature, including the Financial Accounting Standards Board (FASB) Accounting Standards Codification (ASC) as well as SEC rules and interpretive guidance, requires management to discuss its critical accounting estimates and general accounting policies in pronounced detail. If any additional information regarding matters of significant judgment is deemed necessary for users of the financial statements, this additional information should be provided by management. Similarly, it should be addressed by new or enhanced enforcement of existing financial reporting standards and SEC rules, rather than new auditing standards.

### *Responsibilities of Management*

The FASB guidelines in *ASC 235 – Notes to Financial Statements* require management to describe all significant accounting policies of the reporting entity. These policies identify and describe the accounting principles followed by the reporting entity and the methods of applying those principles that materially affect the determination of financial position, cash flows or results of operations. In general, the disclosures encompass important judgments as to the appropriateness of principles, encompassing a selection from existing acceptable alternatives, principles and methods peculiar to the industry in which the reporting entity operates, and the application of generally accepted accounting principles to unusual or innovative situations.

The SEC's interpretive guidance (Release Nos. 33-8350; 34-48960; FR-72) regarding Management's Discussion and Analysis of Financial Condition and Results of Operations (MD&A), which is required by Item 303 of Regulation S-K, requires management to disclose information concerning Critical Accounting Estimates. These are estimates and assumptions that are both a) material by nature due to the levels of subjectivity and judgment necessary to account for highly uncertain matters or the susceptibility of such matters to change and b) material based on their impact to a company's financial condition or operating performance.

As the SEC notes in its releases, such disclosures are made with the intent of presenting a company's analysis of the uncertainties involved in applying a principle at a given time or the variability that is reasonably likely to result from its application over time. Companies are required to address questions that arise once the critical accounting estimate has been identified by analyzing such factors as how they arrived at the estimate, how accurate the estimate has been in the past, how much the estimate has changed in the past, and whether the estimate is reasonably likely to change in the future. Further, companies are required to analyze specific sensitivity to change for critical accounting estimates, providing quantitative analysis and qualitative disclosure.

The SEC further notes that management's discussion of critical accounting estimates supplements the description of accounting policies required by the FASB. Accounting policy notes in the financial statements describe the method used to apply an accounting principle, whereas the discussion in MD&A presents a company's analysis of the uncertainties involved in applying a principle at a given time or the variability that is reasonably likely to result from its application over time.

Considering management's standing requirements to discuss accounting policies and critical accounting estimates in comprehensive detail, we believe financial statement users will not benefit from additional discussion of complex accounting and auditing matters by the auditor. Management has deeper knowledge, closer involvement with the business, and more complete information about the company than the auditor. The responsibility of management to prepare and disclose information regarding critical matters should be maintained. We do not believe an auditor's discussion of critical audit matters would add value to the discussion provided by management regarding critical accounting estimates and accounting policies. We are disappointed PCAOB Release 2013-005 (PCAOB Release) on Proposed Auditing Standards fails to provide a meaningful analysis regarding the manner in which an auditor's discussion of critical audit matters would supplement existing FASB and SEC requirements.

*Responsibilities of the Auditor*

While the financial statements are explicitly the responsibility of management, the responsibility of the auditor is to attest and verify the information prepared and presented by management. The provisions of the Proposed Auditing Standards will inappropriately expand the role of the auditor into financial reporting related to a company's accounting policies and estimates in addition to attesting on the company's financial statements. This is inconsistent with the expectation the auditor should not be the original source of disclosures about an entity.

*Responsibility of the Audit Committee*

The audit committee plays a significant role in the oversight of a company's internal controls, the integrity of its financial reporting processes, and the approval and independence of the external auditor. SEC rules require management to annually disclose whether its board of directors has at least one audit committee financial expert who is independent of management. The expert must have a thorough understanding of the audit committee's oversight role, expertise in accounting matters, understanding of financial statements, and the ability to ask the right questions to determine whether the company's financial statements are complete and accurate. This requirement places notable importance on the governance role provided by the audit committee.

Auditors communicate significant audit risks to a company's audit committee. These may include critical accounting policies and practices and critical accounting estimates, among other items which may be considered critical auditing matters. Requiring the auditor to further clarify and provide public discussion regarding these matters autonomously in its audit report unavoidably reduces the importance of the governance role performed by the audit committee, as greater oversight responsibility is undertaken by the auditor instead. We believe the information included in the auditor's working papers regarding significant judgments involved in the audit should appropriately be communicated to the members of the audit committee, who have the opportunity for robust dialogue with the auditor. The audit committee can then analyze this information in the appropriate context and ensure the company's financial statement disclosures appropriately present these matters in a manner that is not confusing to investors. This is another area we do not believe a requirement for an auditor to discuss critical audit matters adds value beyond the existing regulatory framework.

*Relationship of Management, the Audit Committee and the Auditor*

In the current regulatory environment, the relationship between management, the audit committee, and the auditor typically has a healthy level of tension, which leads to disclosure of constructive financial information that benefits financial statement users. The appropriate level of tension in these relationships has a very delicate balance which should be maintained. We have serious concerns the expansion of the auditor's role will place a significant strain on these relationships. Placing a requirement on the auditor to disclose critical accounting and auditing matters independently of management and the audit committee raises concerns about confidentiality. It also may discourage certain management teams and audit committees from discussing various matters with the auditor due to apprehension about additional public disclosure. This may lead to an unproductive level of confrontation, as each party disputes the types of critical matters which should or should not be included in the auditor's report and the language with which these should be conveyed. We do not believe there is a need for dissemination of complex, judgmental audit information to extend beyond the audit committee and management.

**Potential Confusion among Financial Statement Users**

We are concerned that additional disclosures made by the auditor regarding critical audit matters will likely create confusion among financial statement users. The result will be overlapping, conflicting, inconsistent and onerous information added by both management and the auditor. Many financial statement users do not have the appropriate context to properly interpret the matters requiring the most complex auditor judgments that the audit committee has. This context includes live interaction with the auditor and deep background knowledge of the company's financial reporting processes integral to the audit committee's oversight role.

*Confusing, Lengthy Information within the Audit Report*

The Proposed Standards define critical auditing matters as those matters that involved the most difficult, subjective, or complex auditor judgments; posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; and posed the most difficulty to the auditor in forming an opinion on the financial statements. Users who read an unqualified audit opinion followed by detailed discussion of critical auditing matters may misinterpret the language as demonstrating the auditor had reservations about the opinion provided, and consequently undermine the audit opinion. Far worse, they may incorrectly conclude they should not place reliance upon financial information in these areas. Even if the audit report is extended multiple pages, it is characteristically impossible for an auditor of a global company to accurately convey the audit effort related to all complex audit areas without leading to misconceptions by financial statement users who lack the perspective of the audit committee and also lack the opportunity for active dialogue with the auditor. We also believe auditors may include tedious legal disclaimers to avoid liability that could be associated with their expanded reports. We question whether this addition of lengthy and possibly confusing materials to the audit report adds value to investors who are already encumbered with voluminous financial disclosures.

We are also concerned that requiring the auditor to read and evaluate other information outside the audited financial statements, rather than read and consider this information as currently required under AU Section 550, will create further confusion about who is accountable for the financial statements and related information. Specifically, users may conclude that the auditor, rather than management, has responsibility for this other information, which includes forward looking statements, operating statistics, discussion of business performance, and analysis of the business outlook and environment "through the eyes of management" as required by SEC rules. Moreover, we question how an auditor could evaluate certain other information, such as material incorporated by reference from the Proxy Statement, when that content is not yet available at the time the audit report is issued.

Auditors currently read financial information in the MD&A, earnings releases, and other sources for inconsistencies with the audited financial statements. We understand investors may not fully realize these additional procedures currently being performed by the auditor. To the extent investors require additional clarification over the auditor's current responsibilities regarding other information outside the audited financial statements; we support the inclusion of a statement in the auditor's report clarifying this role.

*Disclosure of Duplicative, Conflicting and Confidential Information*

The expansion of the auditor's responsibilities also poses a significant risk for disclosure of duplicative, conflicting and confidential or competitively sensitive information. The matters currently included in the MD&A disclosures will almost certainly be judged as critical audit matters that are communicated to the audit committee. In addition, auditors may have numerous other matters included in the engagement completion documents or reviewed by the engagement quality reviewer that warrant consideration for disclosure as critical audit matters as defined in the Proposed Auditing Standards. Information underlying these complex auditing matters and conclusions reached should be clearly documented in the auditor's supporting working papers, which are currently subject to both PCAOB investigations and peer review. We are concerned that auditors, who anticipate inspection and peer review findings, may disclose more of these matters, as well as more information on the matters currently discussed by management, than investors would find useful. Accordingly, in addition to duplication, there may also be significant discrepancies between the critical auditing matters disclosed in the audit report and the critical accounting estimates and accounting policies disclosed by management. This could raise the level of confusion and lead to potential issues regarding confidentiality.

**Significant Costs Overshadowing Negligible Benefits**

When new regulations are considered, a thorough cost/benefit analysis should be performed to ensure financial statement users receive benefits which outweigh the costs of implementation and compliance. As the PCAOB notes in Appendix 5 V.F.1. of the PCAOB Release, companies and their audit committees will incur additional recurring costs due to audit fee increases, additional time for review of critical audit matters and discussion with the auditor, and time spent comparing the critical audit matters identified by auditors of industry peers.

We believe these costs will be significant and can easily be underestimated. Based on preliminary discussions, it appears likely our audit fees will increase by no less than 5% due to time spent on critical auditing matters and procedures performed evaluating other information outside the audited financial statements. While this percentage may not appear substantial, when it is applied to a consolidated audit fee of $14.4 million, as disclosed in our 2013 Proxy Statement, the dollar amount is not trivial. Further, we believe the extended length of the financial reports, the additional time incurred and resources involved reviewing and discussing critical audit matters, as well as the costs associated with disclosure risk of confidential information and investor confusion, warrant seriously challenging the appropriateness of the suggested changes.

The Chair of the SEC, Mary Jo White, in her October 2013 speech to the National Association of Corporate Directors, questioned whether investors are well-served by the existing burdensome disclosure, described as "information overload," in financial filings. In addition, the FASB has taken up a formal project to improve the effectiveness of disclosures by clearly communicating the information that is most important to users of each entity's financial statements. The implementation of auditing standards that further duplicate disclosures and add new disclosures will be burdensome to financial statement users. This fundamentally violates the principles underlying the SEC and FASB objectives for more resourceful and streamlined financial information.

Auditor evaluation and reporting on information outside of the audited financial statements will increase the scope of the auditor's assurance responsibilities, adding further procedures and increasing the amount of time spent in an already time-consuming process for both the auditor and management. We are concerned with the amount of time needed to complete these additional procedures within existing reporting deadlines. We are also apprehensive that increasing the scope of the auditor's assurance responsibilities will result in the development of still more auditing standards and additional regulatory efforts in an industry that is already burdened with abundant rules.

We are further perplexed by the PCAOB's intent to require disclosure of audit firm tenure in audit reports. As the PCAOB admits in the Release, "the Board has not reached a conclusion regarding the relationship between audit quality and audit firm tenure." The limited number of empirical studies, of which we are aware, addressing the relationship between audit firm tenure and audit quality indicate audit quality is positively correlated with audit firm tenure. The PCAOB states that financial statement users have indicated a strong interest in this information, yet the Release provides only narrow discussion regarding one shareholder activist group. We would expect the PCAOB to provide more comprehensive dialogue in this area, including results of its own empirical studies and cost/benefit analysis, rather than focusing the debate on a limited group of activists. After more vigorous due process, if the final conclusion is audit firm tenure should be disclosed, we strongly believe this additional information should be provided by management. Likewise, management should have the opportunity to provide related narrative so financial statement users do not reach an inappropriate conclusion regarding the correlation between audit quality and audit firm tenure.

Given the substantial and definitive costs of compliance with the Proposed Auditing Standards, the PCAOB Release, comprising nearly 300 pages of material, explained the potential benefits of these standards in merely a few short paragraphs. The discussion of benefits is largely conditional, using language such as "a more informative auditor's report could benefit investors," and the discussion wholly lacks any form of specificity. We do not believe additional disclosure of critical auditing matters by the auditor provides value to financial statement users as a whole, and we doubt whether a requirement for auditor evaluation of other information adds any value beyond that already provided by the requirements of AU Section 550. It certainly suggests the proposed standard would be challenged to withstand a rigorous cost/benefit analysis.

We respectfully disagree with the PCAOB's conclusions investors would benefit from further insights obtained by the auditor during the audit of the financial statements. We question whether purported benefits in terms of increased confidence in corporate reporting outweigh the costs. An extended audit report and the expanded role of the auditor into a preparer of financial information provides no perceived enhancement to corporate governance, no reduction of investor risk and no additional comparability of reports. We see no provisions to ensure consistency of application across audit reports, and this lack of comparability will cause further confusion. We question the unsubstantiated presumption that users of financial statements will find this greater volume of disclosure from the auditor helpful, in addition to the existing detailed disclosures from management already required by the present authoritative literature. The Proposed Auditing Standards appear to be a solution in search of a problem, and we request a much more comprehensive analysis of the specific benefits.

**Summary and Conclusion**

We commend the PCAOB's efforts to make the auditor's report more informative, thus promoting its relevance and usefulness to investors and other financial statement users. With respect to proposed enhancements to the auditor's report regarding the auditor's responsibilities for fraud and notes to the financial statements, as well as auditor independence and clarification of the *current* auditor responsibilities to read and consider other information – to the extent that these matters promote this objective, we are supportive. We believe the PCAOB needs to more strongly consider the negative impacts caused by the provisions in the Proposed Auditing Standards requiring additional disclosures concerning critical audit matters as determined by the auditor, disclosure of audit firm tenure, and enhancing the auditor's responsibility with respect to other information outside the audited financial statements. The negative consequences of shifting the responsibilities of management and the audit committee to the auditor; creating confusion among users of the financial statements; and imposing implementation and ongoing costs which significantly overshadow negligible benefits warrant heavier consideration. Considerable effort must be made to identify more specific benefits which outweigh these substantial, definitive costs. We strongly believe any additional information deemed necessary for users of the financial statements should be provided by management, and it should be addressed by financial reporting standards and SEC rules rather than new auditing standards.

We thank you for the opportunity to offer our comments on the Proposed Auditing Standards, and we hope that you find our comments helpful. Please contact Ken Seaman, Assistant Controller, by telephone at (281) 293-5628 or by e-mail at Ken.W.Seaman@conocophillips.com if you have any questions or wish to discuss our comments further.

Sincerely,

Glenda M. Schwarz

**Re: Rulemaking Docket Matter No. 034 – Proposed Auditing Standards**

Dear Mr. Doty,

I appreciate the opportunity to comment on the Rulemaking Docket Matter No. 034 as discussed in PCAOB Release No. 2013-005 from August 13, 2013 (the Proposed Standards). Over the course of my 46-year career, I have served various industries in numerous leadership roles. I currently serve as a director of four companies, including Chair of the Audit & Finance Committee of ConocoPhillips, a Fortune 50 entity. I was a former director of Coca-Cola Enterprises, Inc. from 2003-2008, and also served as the former Chief Executive Officer of Deloitte, one of the largest international accounting firms, from 1999-2003. In addition, I previously served as Senior Fellow for Corporate Governance with the U.S. Chamber of Commerce and as a Global Scholar with the Robinson School of Business at Georgia State University.

I appreciate the PCAOB's efforts to increase the informational value of the auditor's report in order to promote its usefulness and relevance. To the extent that enhanced language on auditor independence, as well as the auditor's responsibility for fraud and the notes to the financial statements, promotes this objective, I am supportive. However, I have significant reservations regarding the provisions in the Proposed Standards requiring additional disclosures with respect to critical audit matters as determined by the auditor, enhancing the auditor's responsibility concerning other information outside the audited financial statements, and disclosure of audit firm tenure. I believe these provisions may blur the roles of the auditor with those of the audit committee and management; may cause considerable misunderstanding among financial statement users; and will impose substantial costs which will exceed minimal benefits. These provisions should be discarded or substantially revised to eliminate the potentially negative consequences.

The Importance of the Audit Committee's Oversight Role

I have seen the role of the audit committee evolve during the course of my experience. In the 1970s, the perceived role of the audit committee lacked significance. It was a role of narrow, functional supervision over management's compilation and presentation of accurate financial records. More recently, the audit committee has taken an extensive and critical position in securing the interests of investors through the broad oversight of each entity's financial reporting processes, internal controls, and the approval and independence of the external audit firm.

The importance of the governance role provided by the audit committee is highlighted by inclusion of at least one audit committee financial expert who is independent of management. The financial expert must have proficiency in accounting and financial matters, the aptitude to make appropriate inquiries to determine whether the company's financial statements are complete and accurate, and a deep understanding of the audit committee's oversight role. Currently, auditors communicate significant audit risks to a company's audit committee. These include critical accounting policies and practices and critical accounting estimates, among other items which may be considered critical auditing matters. As an audit committee financial expert, I have the opportunity for live discourse with the auditor, as well as deep background knowledge of the company's financial reporting processes, which is fundamental to my governance role. I, along with the rest of the audit committee, can analyze the auditor's communications in the appropriate context and ensure the company's financial statement disclosures present these matters in a manner that is not confusing to financial statement users.

Recently, I have noted a worrying trend of regulations that impose significant costs while providing questionable benefits. I believe the added prominence of the audit committee is one of the few benefits achieved by these regulations; however, whether other meaningful benefits have been obtained remains debatable, in light of the definitive costs of compliance. Not only do the additional costs imposed by the Proposed Standards expand upon this unfortunate trend, but the consequences of the critical audit matters provision contradict one of the few benefits achieved by these regulations. The governance responsibility of the audit committee and its financial expert may essentially be usurped by the auditor, who is required to further clarify and provide public discussion regarding critical matters autonomously in the audit report. This provision intentionally and improperly magnifies the role of the auditor. The responsibility of the auditor is to attest and corroborate the financial information prepared and presented by management. The Proposed Standards will inappropriately expand the role of the auditor into independently reporting on accounting policies and estimates, rather than purely attesting to the company's financial statements. This is inconsistent with the fundamental approach the auditor should not be an independent source of disclosures about an entity.

I am also concerned this additional responsibility assumed by the auditor will unproductively strain the dynamics of the relationships among the audit committee, management and the auditor. The well-balanced level of tension in these relationships, which currently benefits financial statement users, will be severely disturbed. I fear the shift of the auditor's role will lead to ineffective confrontation between the auditor and management and will allow the auditor an inappropriate level of oversight ability, which should remain the responsibility of the audit committee.

Misunderstanding among Financial Statement Users

I have concerns many financial statement users may lack the context, background and opportunity for live dialogue with the auditor to properly understand the matters requiring the most complex auditor judgments. Therefore, I believe a change this significant to our existing framework will lead to substantial misconception of critical audit matters. For instance, users who read an unqualified audit opinion, followed by detailed discussion of critical auditing matters, may misinterpret the language as demonstrating the auditor had reservations about the opinion provided or that less reliance should be placed on the financial information presented.

The rules defining critical audit matters also pose a noteworthy risk for disclosure of inconsistent and lengthy information. Most of the items meeting the definition of critical auditing matters are already communicated to the audit committee and currently disclosed in financial reports. However, auditors may have numerous other matters reviewed by the engagement quality reviewer or included in the engagement completion documents that must be deliberated as potential critical audit matters. By including these recommended guidelines in the Proposed Standards, there is a risk of significant discrepancies between the critical auditing matters disclosed in the audit report and those disclosed by management. Furthermore, I am concerned that auditors, who expect peer review and PCAOB inspection, may apply conservative judgment and disclose more of these matters, as well as more information on matters already discussed by management, than financial statement users would find valuable. In addition, auditors may include supplementary legal qualifications to mitigate liability, adding to the length of the audit report.

Costs

The substantial costs associated with the Proposed Standards demand a rigorous analysis of the benefits to be achieved. These costs include increased audit fees, the extended length of financial reports, additional resources involved and time spent deliberating and reviewing critical audit matters, and the risk of misunderstanding by financial statement users. I am disappointed the PCAOB has not provided as robust an examination of the benefits as I would expect.

I am confused by the PCAOB's inclusion of a requirement for disclosure of audit firm tenure. There is conflicting evidence of the correlation between audit firm tenure and audit quality – some academic studies show that longer audit firm tenure leads to higher audit quality, while some show the inverse. In the absence of any conclusive evidence regarding this relationship, it is unclear to me how disclosure of this information would benefit financial statement users. I also would challenge the PCAOB's statement that financial statement users have indicated a strong interest in this information. The Release makes reference to only one shareholder activist group in support of this claim. I would like to see a broader discussion on this topic, including a more representative selection of financial statement users as a whole. A final decision about disclosure of audit firm tenure should only be made after a more solid examination is performed. If such a conclusion is determined, management, rather than the auditor, should disclose this information and provide accompanying clarification to avoid any inappropriate conclusions regarding the correlation between audit firm tenure and audit quality.

Auditor evaluation and reporting on information outside of the audited financial statements will increase the scope of the auditor's assurance responsibilities and the amount of time spent in an already laborious process for the auditor, management and the audit committee. As a director serving on multiple audit committees, I am concerned with the amount of time needed to complete these additional procedures within existing reporting deadlines. I am also worried that this unnecessary increase in the scope of the auditor's assurance responsibilities will lead to the development of even more auditing standards and additional regulations.

An extended audit report and the expanded role of the auditor into a preparer of financial information on accounting policies and estimates provides no apparent improvements to corporate governance, no additional comparability of reports and no reduction of investor risk. I do not believe users of financial statements will find this greater volume of disclosure from the auditor helpful. Financial statement users may actually find these additional disclosures obstructive if they lead to misunderstanding.

I commend the PCAOB's efforts to increase the informational value of the auditor's report in order to promote its usefulness and relevance. To the extent that enhanced language on auditor independence, as well as the auditor's responsibility for fraud and the notes to the financial statements, promotes this objective, I am supportive. My concerns regarding the Proposed Standards require your consideration – specifically, the provisions requiring additional disclosures with respect to critical audit matters as determined by the auditor, enhancing the auditor's responsibility concerning other information outside the audited financial statements, and disclosure of audit firm tenure. These provisions may blur the roles of auditor and audit committee; may cause considerable misunderstanding among financial statement users; and will impose substantial costs which exceed minimal benefits. These provisions should be discarded or substantially revised to eliminate the potentially negative consequences.

Thank you for the opportunity to offer comments on the Proposed Standards, and I hope that you find my comments helpful.

Sincerely,

James E. Copeland, Jr., CPA

**Consumer Federation of America**

Office of the Secretary
PCAOB
1666 K Street, N.W.
Washington, D.C. 20006-2803

Re: Rulemaking Docket Matter No. 034

Dear Sir or Madam:

I am writing on behalf of the Consumer Federation of America (CFA)[1] to express our support for the proposal to revise and expand the auditor's report and to urge the Board to do more to make the auditor's report a useful document for investors. Investors have made clear their dissatisfaction with the current auditor reporting model, which provides no real information of value beyond an up or down opinion as to whether the audited financial statements present fairly, in all material respects, the financial position, results of operations, and cash flows of the company in conformity with the applicable financial reporting framework. As currently designed, the report does nothing to distinguish between the audits of companies with straight-forward financial statements and those that present a number of auditing challenges, for example. Nor does it distinguish between those that take a relatively conservative approach to complex accounting issues and those that are more aggressive in their approach. This proposal represents a welcome step toward addressing critical shortcomings in the current auditor's reporting model which will, in turn, enable investors to better assess companies' financial reporting.

**Background**

More than two years ago, CFA joined with other members of the PCAOB's Investor Advisory Group in writing to the Board to urge more extensive revisions to the auditor's report.[2] While we appreciate that the current proposal reflects a partial response to that request, we are nonetheless disappointed that key aspects of our recommendations have not been included in the

[1] CFA is a non-profit association of nearly 300 national, state and local pro-consumer organizations. I was founded in 1968 to represent the consumer interest through research, advocacy and education.

[2] See, September 29, 2011 letter from twelve members of the PCAOB Investor Advisory Group to the PCAOB Office of the Secretary regarding PCAOB No. 2011-003, Rulemaking Docket No. 34, "Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards." We incorporate that letter by reference.

Board's proposal. As a result, the current proposal falls short, in our view, of what could and should be done to transform the auditor's report into a document that provides investors with valuable information to consider in evaluating their current and potential investments. We therefore urge the Board to reconsider those approaches recommended by investors but absent from this proposal. At a minimum, the Board must resist pressure from some issuers and auditors to further scale back the current welcome, but modest proposal.

The fact that investors want additional information from auditors and that it is both feasible and affordable for auditors to provide that information ought to ensure the proposal's adoption. After all, investors have said that receiving more information about the audit would allow them to make more informed investment decisions. More informed investment decisions lead to better and more efficient allocation of capital, and that benefits not only investors but also the health of the financial markets as a whole.

Revision of the auditor's report can help to address other important policy goals as well. For example, both Board members and leaders at the SEC have expressed concern in recent years over a lack of professional skepticism in the audits of public companies. At the same time, evidence has mounted that many audit committees do not effectively serve their audit oversight function.[3] And, past experience has shown that there will always be companies that will test the limits of acceptable financial reporting and auditors who will let them cross that line. While far from a silver bullet, a well-designed expanded auditor's report has the potential to help address each of these problems. At the simplest level, expanding the auditor's report can serve as a much needed reminder that it is the investors, and not management, who are the real audit clients and that it is their interests that the audit is intended to serve.

Consistent with the theory that sunlight is the best disinfectant, requiring a discussion of critical audit matters and how they were addressed in the audit can also have a salutary effect on the conduct of both issuers and auditors. Those issuers who are most aggressive in their approach to financial reporting may be reluctant to have that tendency highlighted in the audit report through a discussion of the audit challenges that resulted. Whereas the current audit report creates an incentive for such issuers to adopt the most aggressive reporting consistent with an unqualified opinion, an expanded discussion of critical audit matters may provide a counter incentive to adopt more conventional, widely accepted financial reporting approaches. At the same time, auditors who realize they will be required to report publicly on their handling of such issues may be more likely to demonstrate the professional skepticism necessary to promote a high quality of financial reporting. Thus, the required reporting may strengthen the auditor's hand in negotiating contentious issues with management. In each of these examples, the auditor's report would better serve this function if, as we have previously recommended, it also included a discussion of management's estimates and judgments and how the auditor arrived at its assessment of those estimates and judgments and an opinion on the quality, and not just the acceptability, of the company's accounting.

[3] See, for example, the discussion at the October 16, 2013 meeting of the PCAOB Investor Advisory Group, which suggested that, because of weaknesses in the board election process and in the definition of financial expert, many audit committees may lack both the independence and financial expertise necessary to provide effective oversight.

The following discusses key issues related to this proposal in greater detail. This comment is focused exclusively on the proposal to include a discussion of critical audit matters in the audit report.

1) Investors and other users of financial statements want more information from auditors than they currently receive.

Extensive evidence exists that investors and other users of the audit report want more information from auditors than the current audit report provides. Improving the content of the audit report has been identified as a priority by members of the PCAOB's Investor Advisory Group (IAG). As part of its consideration of the issue, the IAG weighed results of surveys conducted by the CFA Institute in 2008 and 2010 which indicated that a large majority of analysts want more information from the auditor's report.[4] To further its understanding of the issue, the IAG itself conducted a survey of investors in advance of its March 2011 meeting, the results of which were reported on at that meeting. The IAG survey sought input both on investors' perceptions of the value of the current audit report and on their views regarding needed changes. The IAG survey identified the following as the four most highly desired changes to the audit report:

- a discussion of the auditor's assessment of the estimates and judgments made by management in preparing the financial statements and how the auditor arrived at that assessment (desired by 79 percent of survey respondents);

- disclosure of areas of high financial statement and audit risk and how the auditor addressed these risk areas in planning and conducting the audit (desired by 77 percent of survey respondents);

- discussion of unusual transactions, restatements, and other significant changes in the financial statements (desired by 67 percent of survey respondents); and

- discussion of the quality, not just the acceptability, of the issuer's accounting practices and policies (desired by 65 percent of survey respondents).

The analysts and institutional investors surveyed by CFA Institute and the IAG respectively are among the primary users of financial statements and, by extension, the audit report. As such, their views should carry particular weight with the Board. They have made clear in this and other contexts that they believe that expanded communications from the auditor would help them to better evaluate the financial statements of the companies in which they invest.

2) The proposal delivers some, but not all of the information investors would like to receive from auditors.

The Board's proposal takes a related but somewhat different approach than investors have suggested by requiring disclosure of "critical audit matters" specific to the particular audit

[4] CFA Institute. 2008. February Monthly Question Results. Cited in *Final Report of the Advisory Committee on the Auditing Profession*. VII: 16; CFA Institute. 2010. *Independent Auditor's Report Survey Results*.

that is the subject of the report. As described in the proposing release, the auditor's required communication would focus on "those matters the auditor addressed during the audit of the financial statements that involved the most difficult, subjective, or complex auditor judgments or posed the most difficulty to the auditor in obtaining sufficient appropriate audit evidence or forming an opinion on the financial statements." The proposal further notes that these would generally be "matters of such importance that they are included in the matters required to be (1) documented in the engagement completion document, which summarizes the significant issues and findings from the audit; (2) reviewed by the engagement quality reviewer; (3) communicated to the audit committee; or (4) any combination of the three." Based on this description, there would appear to be significant overlap between the "critical audit matters" covered by the proposal and the information investors have previously indicated they want to receive. In particular, areas of financial statement and audit risk ought clearly to be covered under the Board proposal. Information about estimates and judgments and about unusual transactions could also be covered where they rise to the level of importance and posed the degree of audit challenge that would meet the standards for critical audit matters identified in the proposal.

Arguably the biggest divergence between the proposal and the information requested by investors is that the proposal focuses exclusively on information about the audit and avoids any discussion of the auditor's assessment of the financial statements, either with regard to estimates and judgments or more generally with regard to the overall quality of the financial reporting. This appears to reflect a conscious choice by the Board to avoid any changes that would put auditors in the position of providing "information, including any analysis, about the company's financial statements to financial statement users." We strongly object to this proposed limitation on auditor communications. There is no statutory reason that we are aware of why auditors should be precluded from discussing with investors their chief impressions of the quality of a company's financial reporting. Moreover, by failing to include this sort of assessment in its proposed revisions, the Board diminishes the proposal's most important potential benefit – its potential to improve the quality of financial reporting. The Board has not provided sufficient justification for the narrowed focus of this proposal (as we discuss further below).

Despite these significant limitations, the Board has in our view otherwise done a good job of designing the proposed additions to the audit report. Whenever new disclosures are proposed, a key consideration is whether the information will be communicated in a manner that truly promotes enhanced investor understanding. In this instance, the Board has proposed an approach to disclosing critical audit matters that, properly implemented, should provide valuable information to the users of financial statements. The specific sample disclosures provided by the Board make clear that the new disclosures can and should be presented in a way that provides genuine insights into the most challenging issues that arose in the course of the audit and how they were addressed. Despite the best intentions of the Board, however, there is an unavoidable risk that audit firms will implement the new requirement through the provision of boilerplate or cursory disclosures. There is a similar risk that auditors, who will have ultimate responsibility for determining what issues to disclose, will be too narrow in their approach.

In both these instances, the Board will need to provide effective supervision and enforcement of the proposed rule's implementation to ensure that it delivers the intended benefits. We nonetheless agree that the facts-and-circumstances based approach to determining what must be disclosed is the appropriate approach for the Board to adopt. Moreover, the guidance provided in the release, which suggests that most audits would be expected to involve critical audit matters, helps to send the right message about appropriate implementation.

3) It is both feasible and affordable for auditors to provide the information investors want in the audit report.

In determining whether to move forward with this proposal, the key questions the Board should address are: What information do investors want? And is it possible to provide the information investors want at a reasonable cost? As the Board notes in the proposing release, the proposed revisions to the auditor's report would not require auditors to gather much if any additional information. Furthermore, as the proposing release makes clear, critical audit matters are by definition matters that auditors are almost always already communicating in the engagement completion document, to the audit quality reviewer, and/or to audit committees. Thus any additional incremental cost of providing a brief summary of the information in the audit report should be minimal and far outweighed by the benefits to investors and to efficient capital allocation.

The same holds true for the information that investors have sought that is *not* included in the current proposal. This includes the auditor's assessment of key estimates and judgments in the financial statements, as well as the auditor's assessment of the quality, and not just the acceptability, of the company's financial reporting. An auditor could not complete a quality audit without reaching conclusions on these matters. Here again, auditors are already collecting this information and communicating it to audit committees. For example, AU ¶ 380.08 requires the auditor to ensure that the audit committee is informed "about the process used by management in formulating particularly sensitive accounting estimates and about the basis for the auditor's conclusions regarding the reasonableness of those estimates." Similarly, AU ¶ 380.11 requires that, "In connection with each SEC engagement, the auditor should discuss with the audit committee the auditor's judgments about the quality, not just the acceptability, of the entity's accounting principles as applied in its financial reporting." Thus, a decision not to include the further information investors desire in the current proposal cannot be justified on cost grounds.

4) The proposal should be strengthened.

The Board proposal represents a positive step toward delivering the information investors desire, but it stops well short of providing the full range of information investors have indicated they would like to receive from auditors (as discussed further above). The limitations of the proposal in this regard appear to be driven by a desire on the part of the Board to address concerns raised by issuers and auditors over having auditors report on the quality of financial reporting rather than on an evaluation of the proposals on their own merits. The resulting narrow focus on issues directly related to the audit limits the potential effectiveness of the proposed changes.

The decision-making process reflected here also represents a fundamental misunderstanding of the Board's proper role. Specifically, the Board's responsibility is not to negotiate a compromise between issuers, auditors, and investors, but to serve the public interest.

The Board can best achieve that by adopting standards that make auditors more accountable to the investing public, enhance auditor independence and professional skepticism, and improve the quality of financial reporting. An expanded auditor's report has the potential to contribute to all three goals. Thus, in a case such as this where the potential benefits are significant and investors have made their preferences clear, the Board should see its obligation as delivering those changes viewed as beneficial by investors that can be accomplished at a reasonable cost and consistent with the relevant securities laws.

Such an analytical approach would clearly support not just the existing proposal, but also the broader reforms advocated by investors. For example, on what policy grounds has the Board concluded that it would be inappropriate for auditors to communicate to investors their assessment of management estimates and judgments? On what policy grounds has the Board concluded that it would be inappropriate to put auditors in the role of commenting on the quality of a company's financial reporting? The fact that some issuers and auditors are uncomfortable with that approach is not sufficient justification.

Another argument that has been put forward is that having auditors communicate such matters directly with investors would somehow weaken the role of audit committees. This is patently absurd. Good corporate boards and audit committees will continue to conduct their oversight functions effectively. At companies where board oversight has been less than effective, however, knowing that there will be greater public accountability could serve to reinvigorate audit committee oversight of the audit as well as broader board oversight of the financial reporting process. At a minimum, it would help to reduce the risk that investors will pay the price when boards fail to perform their governance functions effectively.

Similarly, some opponents of the proposed changes have argued that investors might be confused by the information provided. They offer no explanation, however, why this information would be any more confusing than the information provided in financial statements and other disclosure documents relied on by investors when making investment decisions. Moreover, this argument would seem to suggest that auditors and issuers believe they know better than investors what information they would find valuable. We reject that notion, and urge the Board to do so as well.

In short, given the strong preference among investors for expanded disclosures from auditors, the significant potential benefits of providing that information, the weak and self-serving arguments against expanded disclosures, and the feasibility of adopting the proposed changes at minimal cost, we believe the clear imperative for the Board is to move forward with the proposed changes.

**Conclusion**

The primary and laudable goal of this proposal is to transform the auditor's report into a document that provides investors with information that assists them in making informed investment decisions. That directly benefits investors, but it also improves the capital formation process and thus enhances the overall health of the markets. Thus the proposed changes – and the broader changes advocated by investors – can be justified on these grounds alone.

But changing the auditor's reporting model should also be seen as one part of a broader reform agenda designed to make auditors more accountable to the investing public, to enhance auditors' professional skepticism, and to strengthen their hand in negotiating contentious financial reporting issues with management. While the proposal to include a discussion of critical audit matters in the audit report provides modest additional benefits in these areas, these goals would be better served by a broader reform of the audit report to include the auditor's assessment of the company's financial reporting, including in the area of estimates and judgments. Investors have expressed a strong interest in receiving this information. Thus, while we support the current proposal to add a discussion of critical audit matters to the audit report, we urge the Board to go further and incorporate the additional disclosures sought by investors in its revisions to the auditor's reporting model.

Re: PCAOB Rulemaking Docket Matter No. 034 Proposed Auditing Standards The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and The Auditors' Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report

Dear Board Members;

Thank you for the opportunity to comment on the rulemaking referenced above. My comments are written from the perspective of specific constituents of the PCAOB: small, independently owned, non-public, non-custodial broker-dealers.

These firms, numbering approximately 4000, are not public companies. They are privately owned and operated small businesses. Approximately 1800 of these firms generate less than $1mm in annual revenues. Many of these firms have fewer than 50 employees.

For these small independent businesses, the proposed rules will inflict significant additional costs, with little or no relevance to the mission of the PCAOB, which is to protect the interests of public investors and to promote investor protection. Public investors do not review the audits of these privately held companies. The investors in these small businesses are the owners themselves.

I believe it is entirely consistent with the PCAOB mission for the Board to exercise its authority under the Dodd Frank Act, and exempt the auditors of small, privately held, non-custodial broker-dealers from its oversight.

Best regards,

//Lisa Roth//

**RE: PCAOB Rulemaking Docket Matter No. 034**

Members of the Board:

Costco Wholesale Corporation (Costco) appreciates the opportunity to comment on *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (together, the Proposed Standards).

Costco operates an international chain of membership warehouses that carry quality, brand-name and private-label merchandise at lower prices than are typically found at conventional wholesale or retail sources. Costco currently has approximately 71 million members, and we operate 648 warehouses in the United States and Puerto Rico, Canada, Mexico, the United Kingdom, Japan, Taiwan, Korea and Australia, employing approximately 185,000 full and part-time employees. In fiscal 2013, we reported total revenue of $105 billion and net income of $2 billion. Our stock trades on the NASDAQ Global Select Market under the symbol "COST."

A fundamental tenet of financial reporting and generally accepted accounting principles (GAAP) in the United States is that the financial statements and related disclosures are the responsibility of management; the auditor's role is to express an opinion on whether such financial statements are fairly presented, in all material respects, in conformity with GAAP. Costco strives to provide timely, relevant, thorough and transparent financial reporting to our investors. We, including the members of our Audit Committee, take this responsibility very seriously and continually seek to ensure that our investors have the appropriate insights into our business, the key metrics that measure the health of our operations, and the information necessary to make informed investing decisions. We believe that the Proposed Standards, specifically the reporting of "Critical Audit Matters" and the requirement of the auditor to "evaluate" other information contained in a company's annual filings, represent an undesirable change to existing principles. These elements of the Proposed Standards should not be adopted.

999 Lake Drive • Issaquah, WA 98027 • 425/313-8100 • www.costco.com

**Critical Audit Matters**

Our Audit Committee takes very seriously its role and responsibility of reviewing and understanding the critical accounting policies, judgments, and estimates. Our auditors review their audit plan with the Committee and, together with management, they assess risk, design appropriate audit procedures, and communicate final results. We believe that the responsibility and review of such matters and related conclusions lies with management and the Audit Committee.

We do not agree that requiring auditors publicly to communicate "Critical Audit Matters" (CAM) would help investors and other financial statement users. Items that would likely be considered CAMs are often complex in nature and can require extensive background information and context to evaluate. We believe that disclosure of CAMs will increase confusion, speculation and could result in investors drawing incorrect conclusions. Variability in the quantity and extent of CAMs in a registrant's audit opinion relative to other similar filers may cause investors to draw inappropriate conclusions regarding audit quality, earnings quality, and level of assurance provided by the audit opinion. An audit opinion containing a larger number of CAMs could result in the incorrect perception that the underlying audit was somehow more robust or that alternatively, although an unqualified opinion was reached, the auditor had concerns regarding the quality of the financial statements. In reality, a larger number of CAMs may have been driven by the views taken by a particular audit engagement team in the selection of matters to disclose as CAMs or the complexity surrounding certain audit areas. To the extent that the complex areas are material, the policy and judgments would already be disclosed by the registrant under current requirements. Should the drivers behind a particular CAM be attributable to a deficiency in combination with other factors, the discussion of such a deficiency or deficiencies, which did not reach the level of a material weakness, would not otherwise be required to be disclosed by existing SEC rules. Discussion of deficiencies may also confuse readers regarding the quality of the control environment, when an otherwise clean internal control audit opinion was issued by the audit firm. Furthermore, although the Proposed Standards maintain the current requirement for auditors to issue an opinion on the financial statements as a whole, discussion of such CAMs may give the illusion that other levels of assurance are being provided on those items.

We believe that the responsibility of reducing what the Proposed Standards refer to as "information asymmetry" is that of management through improved disclosure; not the responsibility of the auditors. We continuously review our critical accounting policy disclosures to ensure that we are providing the readers of our financial statements with the information helpful to understanding and evaluating our financial performance.

In our research and consideration of these Proposed Standards, we evaluated the items included in the final Audit Committee communication from our auditors as a sample of potential CAMs. We compared those items to disclosures contained in our critical accounting policies and footnotes. We believe that the information provided in these disclosures was complete and transparent in providing our readers the necessary information to understand these matters. In our opinion, the disclosure of CAMs in the audit opinion would be redundant with what we provided in our existing disclosures, which are already audited and covered by the audit report.

We are concerned that if auditors are required to disclose CAMs, they could be inclined to err on the conservative side and "over disclose" items, in an effort to avoid being second guessed. This will lead to additional burdensome disclosure overload, which preparers and investors are already facing, and which the FASB is currently working to address.

We believe that the additional disclosure requirements related to CAMs would significantly increase the time required at the final stages of the audit for the determination, drafting and review of CAMs, thereby reducing the timeliness of our reporting, while also increasing audit fees, with no countervailing benefit to shareholders.

**Auditor's Responsibility for Other Information**

We believe that the expertise of the auditor is related to the audit of the company's financial statements and related footnotes, and that is where their focus should remain. The current audit opinion states clearly that the audit covers the financial statements and the related footnotes. We do not believe that investors think that auditors have responsibilities for disclosures beyond the financial statements and the footnotes. Nor do we believe that modifying the PCAOB rules to require auditors to "evaluate," instead of the current "read and consider" requirement, will increase the quality of the other information reported by registrants.

The Proposed Standard increases the auditor's responsibility for other information in filings by requiring the auditor to "evaluate" the other information contained in the filing. We believe that the current "read and consider" expectation is clear and appropriate and any marginal additional work performed by the auditor as a result of the Proposed Standards would not materially alter the other information reported. We believe it is management's responsibility to ensure that information discussed in Management's Discussion and Analysis of Financial Condition and Results of Operations (MD&A) and other sections is materially correct and consistent with the information contained in the financial statements and footnotes. We appreciate the current reading that our auditors perform on the other sections in our filings, such as MD&A, and thoughtfully consider and address all comments they provide us.

Increasing the requirement to "evaluate" the other information is unnecessary and any perceived benefit would not outweigh the additional time and costs incurred, which could be substantial.

In summary, we do not believe that the Proposed Standards regarding the disclosure of Critical Accounting Matters and the expansion of the auditors responsibility to information outside the financial statements and footnotes should be adopted.

**Auditor Independence**

While we do not disagree with the new elements proposed for the auditor's report related to independence, our belief is that the investor community is well versed with respect to the requirements and expectations regarding auditor independence. Furthermore, reinforcing or reminding the auditors of their responsibility by requiring these new elements, in our opinion, will not prevent or detect instances where an auditor misleads the public in this regard.

**Audit Tenure**

We do not oppose the disclosure of audit tenure, and in fact we already provide this information to our investors in our Proxy statement. We believe that this is a more appropriate location for such information. Including this information in the audit opinion itself would be a distraction from the purpose of the audit opinion.

Thank you for the opportunity to comment on this important topic. Please feel free to contact us to discuss our comments.

Respectfully,

Richard Galanti
Executive Vice President and

*Re: PCAOB Rulemaking Docket Matter No. 034*[1]

Dear Ms. Brown:

I am writing on behalf of the Council of Institutional Investors, ("CII") a non-profit association of pension funds, other employee benefit funds, endowments and foundations with combined assets that exceed $3 trillion. CII is the leading voice for effective corporate governance and strong shareowner rights.[2]

The Council appreciates the opportunity to respond to the Public Company Accounting Oversight Board's ("PCAOB" or "Board") *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion; the Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Amendments to PCAOB Standards* ("Release").[3] We commend the Board for continuing to pursue one of the most important recommendations contained in the U.S. Department of Treasury's *Final Report of the Advisory Committee on the Auditing Profession* – "to consider improvements to the auditor's standard reporting model."[4] Our detailed responses to select questions contained in the Release are included as an Attachment to this letter.

Our views on the Release are generally consistent with the views we expressed in response to the Board's 2011 *Concept Release on Possible Revisions to the PCAOB Standards Relating to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards.*[5] These views are derived from our membership-approved policies.

Our policies have long reflected the principle that "investors are the key customer of audited financial reports and, therefore, the primary role of audited financial reports should be to satisfy

in a timely manner investors' information needs."[6] Last fall, our membership reaffirmed that principle when approving substantial revisions to our policies on *Auditor Independence.*[7] Those policies include the following provisions that we believe are relevant to issues raised by the Release:

> 2.13 Auditor Independence
>
> 2.13a Audit Committee Responsibilities Regarding Independent Auditors: The audit committee should fully exercise its authority to hire, compensate, oversee and, if necessary, terminate the company's independent auditor. In doing so, the committee should take proactive steps to promote auditor independence and audit quality. Even in the absence of egregious reasons, the committee should consider the appropriateness of periodically changing the auditor, bearing in mind factors that include, but are not limited to:
>
> - the auditor's tenure as independent auditor of the company …
> - the incidence and circumstances surrounding the reporting of a material weakness in internal controls by the auditor
> - the clarity, utility and insights provided in the auditor's report …
>
> The audit committee report should provide meaningful information to investors about how the committee carries out its responsibilities…The report should include a fact specific explanation for not changing the company's auditor if the committee chooses to renew the engagement of an auditor with more than 10 consecutive years of service ….
>
> 2.13b Competitive Bids:
> The audit committee should seek competitive bids for the external audit engagement at least every five years.
>
> 2.13f Shareowner Votes on the Board's Choice of Outside Auditor: Audit Committee charters should provide for annual shareowner votes on the board's choice of independent, external auditor.[8]

---

[6] CII Statement on Independence of Accounting and Auditing Standard Setters (adopted Oct. 7, 2008), *available at* http://www.cii.org/policies_other_issues#indep_acct_audit_standards.
[7] CII, Policies on Corporate Governance § 2.13 Auditor Independence (updated Sept. 27, 2013), *available at* http://www.cii.org/corp_gov_policies#BOD ("Investors are the 'customers' and end users of financial statements and disclosures in the public capital markets.").
[8] *Id.*

In applying the above referenced policies, including the intent and basis thereof, to the issues raised by the Release, we have reached the following conclusions:

Proposed Auditor Reporting Model

We generally support the proposed auditor reporting model that requires the independent auditor to communicate in the auditor's report critical audit matters. However, we would revise the proposed model to provide that the auditor is required to communicate, at a minimum, an assessment of management's critical accounting judgments and estimates based on the audit procedures the auditor performed.[9] We generally believe that this modest revision to the proposed model would result in an auditor's report that provides the kind of insights that are more responsive to investor's information needs and, therefore, more likely to achieve the Board's worthy goal of "increasing [the auditor's report] relevance and usefulness to investors and other financial statement users."[10]

Proposed Other Information Standard

We also generally support the proposed other information standard. However, we generally believe that the proposed standard's greatest benefit to investors is not from the additions to the auditor's report relating to other information, but rather from the proposed specific procedures for the auditor to perform with respect to evaluating the other information. We generally agree with the Board that those procedures and the resulting communication of any potential material inconsistencies or misstatements of fact to the company's management "could promote consistency between the other information and the audited financial statements, which in turn could increase the amount and quality of information available to investors and other financial statement users."[11]

Proposed Standards and Amendments to Emerging Growth Companies

We generally believe that the proposed standards and amendments, as improved by our comments, should be applicable to audits of all public companies, including emerging growth companies ("EGC"). We are currently unaware of any legitimate basis for excluding an EGC from the proposed standards and amendments. We generally agree with the Board that the application of the proposed standards and amendments to EGCs could provide useful information that "could contribute toward investors making more informed decisions, resulting in more efficient capital allocation and lower average cost of capital."[12]

CII appreciates the opportunity to comment on the Release. We thank you for considering our views. We stand ready to continue to assist you in your efforts to improve the standard auditor's reporting model so that it is more responsive to the information needs of its key customer—investors.

---

[9] Letter from Jeff Mahoney at 1-7 (Attachment) (providing a basis, with supporting citations, for the view that that investors believe the standard auditor's report should be improved to provide, at a minimum, the independent auditor's assessment of management's critical accounting judgments and estimates).

Responses of the Council of Institutional Investors ("CII") to Select Questions Contained in the Proposed Auditing Standards
PCAOB Rulemaking Docket Matter No. 034[1]
December 16, 2013

**Proposed Auditor Reporting Model**

**<u>Questions Related to Section IV:</u>**

2. **The proposed auditor reporting standard would require the auditor's report to be addressed at least to (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body. Are there others to whom the auditor's report should be required to be addressed?[2]**

CII generally believes that that the final auditor reporting standard should require that the auditor's report be addressed to investors in the company. We note that our membership approved corporate governance policies have long reflected the principle that "investors are the key customer of audited financial reports and, therefore, the primary role of audited financial reports should be to satisfy in timely manner investors' information needs." [3] Our membership reaffirmed that principle last April when approving substantial revisions to our membership-approved policy on "Auditor Independence*."*[4] That policy includes the following provision:

> Investors are the "customers" and end users of financial statements and disclosures in the public capital markets. Both the audit committee and the auditor should recognize this principle.[5]

Consistent with our policies, we generally agree with the Public Company Accounting Oversight Board ("PCAOB or "Board") that "the requirement for the auditor's report to be addressed to investors might serve as a [helpful] reminder to the auditor that the auditor's ultimate customer is the investor."[6]

---

[1] PCAOB Release No. 2013-005 (Aug. 13, 2013), *available at* http://pcaobus.org/Rules/Rulemaking/Docket034/Release_2013-005_ARM.pdf.
[2] *Id.* at A5-20.
[3] CII Statement on Independence of Accounting and Auditing Standard Setters 2 (adopted Oct. 7, 2008), *available at* http://www.cii.org/policies_other_issues#indep_acct_audit_standards.
[4] CII, Corporate Governance Policies § 2.13 Auditor Independence (last updated Sept. 27, 2013), *available at* http://www.cii.org/files/committees/policies/2013/09_27_13%20CII%20Corp%20Gov%20Policies%20Full%20and%20Current%20%20FINAL.pdf.
[5] *Id.*
[6] PCAOB Release No. 2013-005 at A5-9.

4. **The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this statement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?[7]**

CII generally believes that a statement in the auditor's report relating to auditor independence would provide useful information regarding the auditor's responsibility to be independent. As indicated in response to question 2, our membership-approved corporate governance policies relating to the audit are included under a single heading, entitled "Auditor Independence," a sign of the great weight that our members ascribe to the independence of the external auditor.[8] We, therefore, generally agree with "the Board's view [that] . . . adding a statement relating to auditor independence in the auditor's report could . . . serve as a reminder to auditors of these obligations."[9]

5. **The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.**

   a. **Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?**

   b. **Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?**

   c. **Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?[10]**

CII generally believes that information regarding auditor tenure in the auditor's report would be useful to investors and other financial statement users. We note that our membership-approved corporate governance policies on "Auditor Independence" contain the following three explicit references to auditor tenure:

(1) In connection with the audit committee's consideration of the appropriateness of periodically changing the auditor;[11]

---

[7] *Id.*
[8] § 2.13 Auditor Independence.
[9] PCAOB Release No. 2013-005 at A5-14.
[10] *Id.* at A5-20 to 21.
[11] § 2.13a Audit Committee Responsibilities Regarding Independent Auditors.

(2) In connection with the audit committee's consideration of what should be reported to shareowners as an explanation for not changing the company's auditor;[12] and
(3) In connection with the audit committee's consideration of when it should seek competitive bids for the external audit engagement.[13]

We generally agree with the Board that there is "strong interest in this information" from investors.[14]

The ability for shareowners to oversee and evaluate the audit committee's activities regarding the above referenced three best practices would likely be enhanced if information regarding the duration of the auditor's relationship with the company were disclosed. Moreover, disclosure of auditor tenure would also be useful to shareowners when seeking to develop a basis upon which to cast votes in connection with the ratification of the audit committee's selection of the external auditor. That vote, consistent with our membership approved policies,[15] is held annually at most public companies.[16]

Finally, since the auditor's report "is the primary means by which the auditor communicates with investors and other financial statement users,"[17] it seems entirely appropriate to us that certain information about the auditor that investors and other financial statement users find particularly useful, including information about auditor tenure, should be disclosed in the auditor's report.

**6. The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?[18]**

CII generally believes that the proposed auditor reporting standard requiring the auditor to describe the auditor's responsibilities for other information would not, with the exception of the reporting of the results of the evaluation, necessarily make the auditor's report more informative and useful to investors.[19] Disclosure of a largely boilerplate description of the auditor's responsibilities for other information is not, in our view, responsive to investors' information needs regarding improvements to the

[12] *Id.*
[13] *Id.* § 2.13b Competitive Bids.
[14] PCAOB Release No. 2013-005 at A5-16.
[15] § 2.13f Shareowner Votes on the Board's Choice of Outside Auditor.
[16] *See, e.g.*, ISS Link database: link.issgovernance.com (last viewed Dec. 13, 2013) (In 2013, 2,769 of the Russell 3000 companies held a shareowner vote to ratify the choice of independent external auditor).
[17] PCAOB Release No. 2013-005 at 2.
[18] *Id.* at A5-21.
[19] Letter from Jeff Mahoney, General Counsel, Council of Institutional Investors, to Office of the Secretary, PCAOB 17-18 (Sept. 19, 2011) (Attachment), *available at* http://pcaobus.org/Rules/Rulemaking/Docket034/015_CII.pdf [hereinafter 2011 Letter].

auditor's reporting model.[20] On this issue, we generally agree with noted analyst/investor Jack Ciesielski who recently commented:

> *[T]here's not a lot of new ground-breaking information provided to financial statement users in the report on other information. The only time it would really be of interest to financial statement users is when the auditor really has identified problems with the OFI and states so in the report. That's a situation that should be exceedingly rare; the ability of the auditor to contradict management in their own report is a powerful lever that should persuade managers to appreciate the auditor's point of view.*[21]

**<u>Questions Related to Section V:</u>**

**10. Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?[22]**

CII generally believes that the auditor's communication of critical audit matters would be more relevant and useful to investors and other financial statement users if the proposed communication were revised to require that the auditor communicate, at a minimum, an *assessment of management's critical accounting judgments and estimates* based on procedures the auditor performed. We generally believe that, as revised, the auditor's communication of critical accounting matters would be more responsive to investors' information needs.

Our membership-approved policies generally support the view that the auditor's report should be responsive to investor information needs and include insights from the independent external auditor.[23] Consistent with that view, the Board found that "many investors indicated that auditors have unique and relevant insight based on their audits and that auditors should provide information about their insights in the auditor's report to make the report more relevant and useful."[24]

The Board also acknowledged that one of the most frequently suggested areas for additional auditor reporting by investors is "matters in the financial statements, such as significant management judgments, estimates, and areas with significant measurement uncertainty."[25] We continue to believe that this area is the most common category of insights that investors consistently demand, and therefore,

[25] *Id.* at 11.

should be required to be included in the auditor's communication of critical audit matters.[26]

**11. What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?[27]**

CII generally believes that there are many potential benefits that would be associated with the auditor's communication of critical audit matters, if the communication reflects the revision described in response to question 10. As indicated in our September 2011 Letter, in response to the Board's earlier *Concept Release on Possible Revisions to the PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* ("2011 Letter"), we generally believe that, consistent with our membership-approved policies, the benefits of the communication would:

> [First,] provid[e] investors with information relevant to analyzing and pricing risks and making informed investment decisions because (a) the auditor's extensive knowledge of the company and industry obtained through the audit process and the auditor's experiences with other companies in similar industries; (b) the auditor is an independent third party that could provide an unbiased view of the company's financial statements; and (c) the auditor could use the disclosure requirement to "'leverage to effect change and enhance management disclosure in the financial statements, thus increasing transparency to investors."
>
> Second … increas[e] quality competition among audit firms, particularly in the area of professional skepticism, and, thereby, enhance the value of the audit to investors and the confidence in audited financial reports.
>
> Third … assist[investor/shareowners] … in their responsibilities for overseeing company directors and management. For example, information provided by the auditor providing insight into any disconnect between the company's and the auditor's assumptions would provide investor/shareowners a better sense of management, and perhaps management's willingness to engage in aggressive accounting.

---

[26] *See* 2011 Letter, *supra* note 19, at 1-7 (providing a basis, with supporting citations, for the view that that investors believe the standard auditor's report should be improved to provide, at a minimum, the independent auditor's assessment of management's critical accounting judgments and estimates).
[27] PCAOB Release No. 2013-005 at A5-44.

> Finally … assist[investor/shareowners] … in making an informed vote on the board's choice of the external independent auditor.[28]

We generally agree with the Board that the benefits that would be associated with the auditor's communication of critical audit matters could also include:

> [F]ocusing investors' and other financial statement users' attention on challenges associated with the audit that may contribute to the information used in investment decision making….
>
> [H]elp[ing] investors and other financial statement users focus on aspects of the company's financial statements that the auditor also found to be challenging. . . . [P]rovid[ing] investors and other financial statement users with previously unknown information about the audit that could enable them to analyze more closely any related financial statement accounts and disclosures…. Reducing the level of information asymmetry between company management and investors could result in more efficient capital allocation and, as academic research has shown, could lower the average cost of capital.
>
> . . . [I]increasing the amount or quality of information in financial reporting could result in more efficient capital allocation decisions.[29]

**12. Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? Is the definition of a critical audit matter sufficiently clear for determining what would be a critical audit matter? Is the use of the word "most" understood as it relates to the definition of critical audit matters?[30]**

As indicated in response to question 10, CII generally believes that the definition of a critical audit matter would be sufficient for purposes of providing relevant and useful information to investors and other financial statement users in the auditor's report, if the definition were revised so that critical audit matters would be required to include, at a minimum, an assessment of management's critical accounting judgments and estimates based on procedures the auditor performed.

---

[28] 2011 Letter, *supra* note 19, at 9-10 (Attachment) (footnotes omitted).
[29] PCAOB Release No. 2013-005 at A5-22 to 23 (footnotes omitted).
[30] *Id.* at A5-44.

**13. Could the additional time incurred regarding critical audit matters have an effect on the quality of the financial statements? What kind of an effect on quality of the audit can it have?[31]**

As indicated in response to question 11, CII generally believes there are at least four reasons why the additional time incurred regarding critical audit matters could have a positive effect on audit quality. We also generally agree with the Board that "it could increase the auditor's focus on critical audit matters, which could result in enhancing the quality of the audit."[32]

**15. Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not? [33]**

CII generally believes that including the audit procedures performed in the communication of critical audit matters in the auditor's report would not, with the exception of the reporting of the resolution of the critical audit matter, necessarily make the auditor's report more informative and useful to investors. As indicated in response to question 10, our membership-approved policies generally support the view that the auditor's report should be responsive to investor information needs and include insights from the independent external auditor. Disclosure of audit procedures performed is not, in our view, the kind of insight that would be responsive to investors' information needs regarding improvements to the auditor's reporting model.

**17. Are there other factors that the Board should consider adding to assist the auditor in determining which matters in the audit would be critical audit matters? Why or why not?[34]**

CII generally believes that, consistent with our membership-approved policies, the Board should consider adding a factor that focuses the auditor on the key customer of audited financial reports – the investor. We note that a recent independent study commissioned by the Standards Working Group of the Global Public Policy Committee indicates that the appropriate application of professional skepticism could be enhanced if standard setters infuse standards with judgment frames requiring the auditor to consider issues from the perspective of other parties, including investors.[35] Consistent with the study's results and our policies, we believe the Board should consider adding a factor requiring the auditor to consider the most significant matters in the financial statements from the point of view of a reasonable investor.[36]

**21. What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of critical audit matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?[37]**

CII generally believes that one indirect cost that the Board should take into account relating to the auditor's determination, communication, and documentation of critical audit matters is that the communication would expand the length of the current auditor's report and, therefore, make it more difficult for investors to quickly and easily identify departures from the standard unqualified report.[38] We, however, believe this indirect cost would be far exceeded by the many benefits to investors of the auditor's communication, if the communication were viewed as responsive to the needs of investors for more relevant and useful information from the auditor. As indicated in response to question 10, we believe the auditor's communication of critical audit matters would be more responsive to the information needs of investors if it is required to include, at a minimum, the independent auditor's assessment of management's critical accounting judgments and estimates.

**25. Do the illustrative examples in the Exhibit to this Appendix provide useful and relevant information of critical audit matters and at an appropriate level of detail? Why or why not?[39]**

As indicated in response to question 10, CII generally believes that the examples in the Exhibit would provide more useful and relevant information to investors if the examples provided more information about the independent auditor's insights, including their assessment of management's critical accounting judgments and estimates based on procedures the auditor performed. More specifically, we generally believe that the illustrative examples should include, for each critical audit matter, the auditor's assessment and insights about where on a continuum of aggressive to cautious management's key judgments and estimates fall, and whether the related reported amount is within a reasonable range according to the auditor's beliefs.[40]

---

considering a requirement that auditors also report on 'any matter that would otherwise be of greatest significance to a reasonable investor in understanding the import of the financial statements.'").

[37] PCAOB Release No. 2013-005 at A5-45.

[38] *See* 2011 Letter, *supra* note 19, at 18 ("the clarifications, at least in combination, would likely diminish the value of the existing auditor's report by making it more difficult for investors to quickly discern whether the report departs from the standard unqualified report").

[39] PCAOB Release No. 2013-005 at A5-46.

[40] *See* 2011 Letter, *supra* note 19, at 6-7 (describing investor survey results and a Financial Reporting Council paper supportive of greater transparency surrounding estimates and judgments); *see also* Andrew Sawers, *Suddenly, Audit Reports Get Sexy*, CFO.com, June 27, 2012, at 1, *available at* http://ww2.cfo.com/auditing/2012/06/suddenly-audit-reports-get-sexy/ ("Instead of an audit firm approving a set of accounts, signing off on them through gritted teeth after wrangling over some edge-of –the-envelope valuations pushed hard by its fee paying client, the audit firm could have the ability—in fact, the requirement—to reveal that the assumptions underlying the financial statements are far from

We also continue to generally believe that the appropriate level of detail for the disclosure "should generally be consistent with the information currently required to be communicated to the audit committee, or the information required to be included in the summary memorandum prepared by the engagement partner for the audit work papers describing the major risks of the audit.''[41]

**26. What challenges might be associated with the comparability of audit reports containing critical audit matters? Are these challenges the same for audits of all types of companies? If not, please explain how they might differ.[42]**

CII generally believes the challenges that might be associated with the comparability of audit reports containing critical audit matters are limited. We generally agree with those investors who have commented to the Board "that they are interested in information that is specific to the audit of a company's financial statements, and, therefore, would expect differences in auditors' reports among companies and reporting periods."[43] As we indicated in our 2011 Letter, "if the information contained in the [auditor's] reports is always consistent, the potential benefits to investors would be diminished."[44]

**27. What benefits or unintended consequences would be associated with requiring auditors to communicate critical audit matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards, such as the examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?[45]**

CII generally believes that the benefits that would be associated with requiring auditors to communicate critical audit matters are, at least in part, dependent upon the required disclosure of information that otherwise would not have been disclosed under existing auditor and financial reporting standards. As indicated in response to question 11, the potential benefits of such a disclosure are many.

**Proposed Other Information Standard**

**<u>Questions Related to Section III</u>:**

---

conversative, though they may just fall within what the auditor regards as an acceptable range of valuations.").

[41] *See* 2011 Letter, *supra* note 19, at 12.

7. **Would the evaluation of the other information increase the quality of information available to investors and other financial statement users and sufficiently contribute to greater confidence in the other information? If not, what additional procedures should the Board consider?[46]**

CII generally believes that the evaluation of the other information would increase the quality of information available to investors and other financial statement users and sufficiently contribute to greater confidence in the other information. In our view, if the evaluation of the other information results in management correcting or improving the other information "to avoid potentially inconsistent or competing information between the auditor and management, *investors would . . . benefit as a result of the 'enhanced management disclosure in the financial statements, thus increasing transparency….*''[47] We, therefore, generally agree with the Board that:

> As a result of the auditor's evaluation of other information, and communication of any potential material inconsistencies or material misstatements of fact to the company's management, the proposed other information standard could promote consistency between the other information and the audited financial statements, which in turn could increase the amount and quality of information available to investors and other financial statement users.[48]

**Questions Related to Section VI:**

21. **Would the proposed reporting, including the illustrative language, provide investors and other financial statement users with an appropriate understanding of the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information? Why or why not?[49]**

CII generally believes that the proposed reporting, including the illustrative language, would provide investors and other financial statement users with an appropriate understanding of the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information. However, disclosure of a largely boilerplate description of the auditor's responsibilities for other information is not, in our view, responsive to investors' information needs regarding improvements to the auditor's reporting model.[50]

**Questions Related to Section IX:**

---

[4646] *Id.* at A6-22.
[47] 2011 Letter, *supra* note 19, at 14 (emphasis added); *see* Jack T. Ciesielski at 5 ("the ability of the auditor to contradict management in their own report is a powerful lever that should persuade managers to appreciate the auditor's point of view").

**27. In the situations described in the proposed amendments to existing AU sec. 508, should the Board require, rather than allow, the auditor to include statements in the auditor's report that the auditor was not engaged to examine management's assertion on the effectiveness of internal control over financial reporting and that the auditor does not express an opinion on management's report?[51]**

CII generally believes that the Board should require the auditor to include statements in the auditor's report that the auditor was not engaged to examine management's assertion on the effectiveness of internal control over financial reporting, and that the auditor does not express an opinion on management's report. We have been long-time proponents of requiring auditors of all public companies to examine and express an opinion on management's assertion of the effectiveness of internal control over financial reporting because we believe that, among other benefits, such assurance is an important and effective "driver of confidence in the integrity of financial reporting and in the fairness of the capital markets."[52] We generally agree with the U.S. Government Accountability Office's recommendation that the proposed disclosure "could serve as an important indicator of the reliability of a company's financial reporting, which may influence investors' decisions."[53]

**Emerging Growth Companies**

**<u>Questions:</u>**

**1. Should the proposed standards and amendments be applicable for audits of EGCs? Why or why not?[54]**

CII generally believes that the proposed standards and amendments, if revised in response to our comments, should be applicable for audits of EGC. We are currently unaware of any basis for excluding an EGC from the proposed standards and amendments.

We generally agree with the Board that the application of the proposed standards and amendments to EGCs would provide useful information that "could contribute

Dear Ms. Brown:

The purpose of this letter is to follow-up on a question I was asked as a panelist at the Public Company Accounting Oversight Board's ("Board") April 2, 2014 meeting on the Auditor's Reporting Model ("Meeting"). The question sought more details on the Council of Institutional Investors' ("CII") proposed "modest revision"[2] to the Board's *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* ("Proposal").[3]

Attached to this letter is a marked version of paragraphs 7, 11b, and A2 of the Proposal.[4] The proposed revisions to those paragraphs illustrate the modest revision described in my opening statement at the Meeting,[5] and in CII's comment letter in response to the Proposal.[6]

Please feel free to contact me directly with any questions at 202.261.7081 or jeff@cii.org.

Sincerely yours,

Jeff Mahoney

## Critical Audit Matters

*Determination of Critical Audit Matters*

7. The auditor must determine whether there are any critical audit matters in the audit of the current period's financial statements based on the results of the audit or evidence obtained.[16/]

> Note: It is expected that in most audits, the auditor would determine that there are critical audit matters~~.~~ and that those matters would include, at a minimum, management's significant accounting judgments and estimates.

. . . .

11. For each critical audit matter communicated in the auditor's report the auditor must:[21/]

   a. Identify the critical audit matter;

   b. Describe the considerations that led the auditor to determine that the matter is a critical audit matter; and

      Note 1: For example, if the auditor identified the valuation of financial instruments with little, if any, market activity at the measurement date as a critical audit matter because the valuation involved the most difficult, subjective, or complex auditor judgments, then communication of that critical audit matter in the auditor's report must describe the considerations that led the auditor to determine that the matter is a critical audit matter, which might relate to the high degree of measurement uncertainty or the significant judgments and estimates involved.

      Note 2: For management's significant accounting judgments and estimates, communication of those critical audit matters in the auditor's report also must describe the auditor's insights on, and assessments of, management's significant accounting judgments and estimates, including the degree of aggressiveness or conservatism of those judgments and estimates, and whether the related reported amounts are, in the auditor's judgment, within a reasonable range.[22/]

---

[22] See Report and Recommendations of the Blue Ribbon Committee on Improving the Effectiveness of Corporate Audit Committees 15 (1999), http://www.chugachelectric.com/pdfs/agenda/fcagenda_051403_ixd.pdf (Recommending that "outside auditor discuss with the audit committee . . . such issues as . . . [the] degree of aggressiveness or conservatism of the company's . . . underlying estimates and other significant decisions made by management in preparing the financial disclosure and reviewed by outside auditors.").

c. Refer to the relevant financial statement accounts and disclosures that relate to the critical audit matter, when applicable.

. . . .

## *APPENDIX A – Definition*

A1. For purposes of this standard, the term listed below is defined as follows:

A2. Critical audit matters – Those matters the auditor addressed during the audit of the financial statements that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming an opinion on the financial statements.

Note 1: “Critical audit matters,” as defined, would include, at a minimum, management’s significant accounting judgments and estimates.

Note 2: Use of the word “most” is not intended to imply that only one matter under each criteria would quality as a critical audit matter. Depending on the facts and circumstances of the audit, there could be several critical audit matters. Also, an audit matter could meet one, two, or all three of the criteria in the definition.

Re: PCAOB Rulemaking Docket Matter No. 034

Dear Secretary of PCAOB:

As a member of the financial community and potential investor, I am writing to recommend the following revisions to improve the auditor's communication through the auditor report to better inform financial statement users through reporting on critical audit matters.

To do so, I will address the Critical Audit Matters Questions 10-28 specifically listed in Appendix 5, Section 5:

10. Yes, the auditor's communication of critical audit matters would be extremely relevant and useful to investors and other financial statement users who examine cash flows, assets and liabilities and overall financial health of companies. They are especially interested in errors and fraudulent issues in financial statements to which auditors may be privy.

11. The auditor's communication of critical audit matters would benefit investors and other financial statement users by shedding more light into potential areas of risk, the most significant matters found by auditors, the quality of accounting policies and practices, significant changes and events impacting the financial statements, and the areas where significant matters are disclosed in the financial statements. Furthermore, due to their regular interactions with management and by drawing more attention to critical audit matters, auditors may improve the quality of the audit.

On the other hand, unintended consequences include potentially higher audit fees and additional time needed for the auditor to determine and communicate critical audit matters. The Board should continue to ensure that the inclusion of critical audit matters does not compromise the quality of the audit report.

12. Yes, the definition of a critical audit matter is sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report. It also is sufficiently clear for determining what would be a critical

audit matter. Yes, the use of the word “most” is understood as it relates to the definition of critical audit matters.

13. Yes, providing that all current procedures are kept intact, the additional time incurred regarding critical audit matters is likely to improve the quality of the audit of the financial statements as auditors spend more time on these matters.

14. Yes, the proposed requirements regarding the auditor’s determination and communication of critical audit matters are sufficiently clear in the proposed standard. Determining and communicating critical audit matters will not expand beyond the scope of the auditing process and procedures, but rather be determined and communicated from the work already performed.

15. Yes, it would be informative and useful to include the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report. This would provide financial statement users with more background on the critical audit matter facing the company, which allows for deeper understanding of the business and risks associated.

16. Yes, the factors are helpful in assisting the auditor in determining which matters in the audit would be critical audit matters. Specifically, “the degree of subjectivity,” “the nature and extent of audit effort required”, “the nature and amount of available relevant and reliable evidence,” “the degree of difficulty in obtaining such evidence,” “the severity of control deficiencies,” resulting “changes in the auditor's risk assessments,” “the nature and significance of misstatements,” “the extent of specialized skill or knowledge” required, and “the nature of external consultations” all provide more background on the financial health of a company.(Appendix 5) I recommend all factors be included.

17. No, there are no other factors that the Board should consider adding to assist the auditor in determining which matters in the audit would be critical audit matters. Documenting and communicating critical audit matters will require incrementally greater financial and staffing resources, so I recommend limiting the factors included to those already addressed in the document.

18. Yes, the proposed requirement regarding the auditor's documentation of critical audit matters is sufficiently clear. It outlines the need for enough detail for the conclusions by the auditor to be clearly understood by any experienced auditor and differentiates critical audit matters reported and not reported as well as mentions potential management pressures and additional recurring costs that could arise.

19. Yes, the proposed documentation requirement for non-reported audit matters that would appear to meet the definition of a critical audit matter encourages auditors to consider in a thoughtful and careful manner whether audit matters are critical audit matters. This provides reasoning for omission and the basis for determination of seemingly critical audit matters by the auditor in the auditor's report. It also notifies auditors of potential management pressures to exclude such matters from the auditor's report.

20. Yes, the proposed documentation requirement is sufficient. The Board should consider broader documentation after the initial implementation of the critical audit matters in auditors' report.

21. & 22. The additional costs related to the auditor's determination, communication, and documentation of critical audit matters that the Board should take into account revolve around time needed for preparation and review to include critical audit matters, both one-time costs and recurring costs, and vary given the types of audits being performed. As quality may improve in the auditor report, the Board should expect new quality control processes to arise as well as the need for additional training. These costs will affect auditors, companies and audit committees. The impact on companies will vary given size, as larger companies having more information available in the market than smaller companies. Thus, the inclusion of critical audit matters will reduce the market information asymmetry due to company size and potentially lower the cost of capital for smaller companies as lenders and investors gain more insight and confidence into financially sound small companies.

23. Audit fees will increase given the requirement to determine and communicate critical audit matters under the proposed auditor reporting standard. However, the quality of the auditors' reports is likely to increase.

24. Yes, special events encountered by a company should trigger the requirement of critical audit matters to be communicated by the auditor each period presented. The circumstances of the special events would need to directly impact the financial health of companies in order to trigger this requirement.

25. Yes, the illustrative examples provided offer useful and relevant information of critical audit matters and at an appropriate level of detail. Each of the three examples details the background, excerpts from company's notes to financial statements, determination and communication from the auditor. This provides a thorough way to understand how an auditor would determine and communicate the critical audit matter. I recommend that the examples be included.

26. The challenges associated with the comparability of audit reports containing critical audit matters include the type of audit performed, different auditors, varying levels of interactions with management of the auditors, and changes in accounting practices.

27. There are benefits and unintended consequences associated with requiring auditors to communicate critical audit matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards. Users of financial statements and investors generally may benefit from understanding the critical audit matters faced by the auditor in greater detail and, in doing so, improve their financial analysis of companies and investment decisions. But, an unintended consequence may be that the market overemphasizes the significance of the critical audit matter. When companies encounter economic, business or profitability issues, there may be a flight of capital away from companies reporting critical audit matters that the market deems too risky. The Board should not make changes to overcome this unintended consequence, but rather allow the market to react to the information with a hands-off policy.

28. The auditor's communication of critical audit matters under the proposed auditor reporting standard may increase the auditor's potential liability in private litigation. This communication should not lead to an unwarranted increase in private liability provided that the auditor does not misuse the critical audit matters as a way to influence investors and users of financial statements. The proposed steps the Board has outlined to mitigate the likelihood of increasing an auditor's potential liability in private litigation, including a description of the auditor's responsibilities, specific procedures, and specific responses, should be implemented.

Thank you for the opportunity to provide comments on PCAOB Rulemaking Docket Matter No. 034.

Best regards,

Lauren Craft

Crowe Horwath.

RE: PCAOB Rulemaking Docket Matter No. 034,
Proposed Auditing Standards—*The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses and Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards*

Office of the Secretary:

Crowe Horwath LLP appreciates the opportunity to comment on the Public Company Accounting Oversight Board's Proposed Auditing Standards—*The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses and Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards* (Proposed Standards or Proposed Amendments, as applicable).

We support the Board's efforts to improve audit quality by enhancing existing auditing standards, and to provide additional information to investors for decision-making. Further, we agree with the Board's decision to retain the current "pass/fail" model for the auditor's report as the current report provides objective information with clarity. We also encourage the Board to ensure that the Proposed Standards do not increase the expectation gap between auditors and users of financial statements. We are pleased to provide our observations regarding areas where we believe the Proposed Standards and Proposed Amendments could be modified to provide more clarity for investors and other users, and to address other matters.

**Proposed Standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion***

Alternative Approach

We are providing for the Board's consideration an alternative approach for reporting critical audit matters. We believe it is the role of management to provide information regarding the issuer's financial reporting to financial statement users, and it is the role of the audit committee to provide oversight of the financial reporting process. The auditor's role is to provide assurance on information provided by management. To alleviate the auditor from reporting original information, including critical audit matters that, under the Proposed Standard, might be included in the auditor's report, and to avoid a time-consuming process of determining the content of the auditor's report, generally occurring at a time of year that is critical to completion of audit engagements, we suggest that appropriate rulemaking require disclosure of critical audit matters by an issuer's audit committee, rather than the auditor. As part of the audit committee's role in corporate governance and oversight of the financial reporting process, and following discussions with the audit committee by the issuer's auditor under PCAOB Auditing Standard No. 16, *Communications with Audit Committees* (AS 16), the audit committee is in a position to understand and report on critical audit matters. The auditor would then be able to report on the critical accounting matters disclosed by the issuer's audit committee, and maintain the fundamental role of providing assurance on such information. If the audit committee is responsible for disclosing the critical audit matters, the auditor's report could indicate that the auditor read the critical audit matters disclosed by the audit committee, and report on whether there were any inconsistencies in the matters reported, as compared to the auditor's communications with the audit committee. Under this alternative approach, the audit committee's report of critical audit matters would best be included in the issuer's annual report. We acknowledge that this alternative approach would require rule-making by the Securities and Exchange Commission as it relates to audit committee reporting of critical audit matters.

The following comments represent our observations on the Proposed Standard without consideration of the alternative approach above.

**Critical Audit Matters**

Definitional Clarity and Unintended Consequences

Appendix A of the Proposed Standard defines critical audit matters as those matters the auditor addressed during the audit of the financial statements that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming an opinion on the financial statements. Further, Paragraph 8 of the Proposed Standard states that critical audit matters ordinarily are matters of such importance that they are included in the matters required to be documented in the engagement completion document, reviewed by the engagement quality reviewer, communicated to the audit committee, or any combination of the three. We believe that the definition of critical audit matters is not sufficiently clear; given the three possible sources and that the matters to consider in the determination of critical audit matters in the Proposed Standard will lead to several unintended consequences:

- The subjectivity inherent in the Proposed Standard will result in inconsistencies in practice and the lack of comparability of auditors' reports. Based on auditor judgment, two different audit firms, or two separate engagement teams within the same audit firm, may identify and report different critical audit matters for a similar engagement. We believe that financial statement users prefer a clearly conveyed auditor's report with a concise and useful message. We also believe that introducing inconsistency and lack of comparability of auditors' reports could result in unintended assumptions by the users of the financial statements regarding the issuer's quality of accounting based on the number of critical audit matters in an issuer's auditor's report, or the inclusion or lack of specific critical audit matters in an issuer's audit report, compared to audit reports of other issuers. Users of the audit report may shift their focus from the auditor's conclusion that the financial statements are presented fairly, in all material respects, in conformity with the applicable financial reporting framework, a clear and concise conclusion, to inconsistencies in the number and type of critical audit matters within the auditors' reports.

- The lack of a clear definition of a critical audit matter increases auditor liability concerns. As a result, auditors' reports might include matters that do not meet the intent of the Proposed Standard in an effort to reduce auditor liability risk for the lack of sufficient disclosures. An auditor's report that provides other than important user information may not be understood by a user of the financial statements, and the relative importance of the information provided will be unclear.

- The lack of a clear definition of a critical audit matter will lead to a significant amount of documentation of matters that might appear to meet the definition of a critical audit matter but were ultimately determined to not be critical audit matters. Paragraph 14 of the Proposed Standard requires the auditor to document the basis for the determination that unreported audit matters that may appear to meet the definition of a critical audit matter were not critical audit matters. The matters and factors to consider in the determination of critical audit matters in paragraph 8 and paragraph 9 of the Proposed Standard are subjective judgments with no clear boundaries. As a result, we believe a significant number of audit matters will "appear to meet" the definition of a critical audit matter. It is not uncommon for a significant number of matters to be documented in the engagement completion form, reviewed by the engagement quality reviewer, or communicated to the audit committee. As a result, we believe the documentation of unreported audit matters will be of significant length and may likely exceed the documentation of critical audit matters that are disclosed in the auditor's report.

- Critical audit matters in the draft auditor's report will be reviewed by the issuer's audit committee, management, and their legal counsel. The additional time necessary to review the draft auditor's report will occur in a very critical and compressed period of time. Without clarity of the definition of a critical audit matter, we believe the additional time needed to review the draft disclosures in the auditor's report and resolve observations will be further magnified and create challenges for issuers to meet the current requirements for a timely filing. Further, documentation of items that were not deemed critical audit matters will not improve audit quality, but instead it will strain the auditors' ability to focus on other responsibilities during the critical wrap up stages of the audit.

To help avoid the unintended consequences noted above, we believe the definition of a critical audit matter in the Proposed Standard should be based on and limited to the existing communication requirements of AS 16. AS 16 includes materiality thresholds for required communications, which would also assist in determination of matters that are critical audit matters. We also recommend removing the requirement for the auditor to document the basis for the determination that unreported audit matters that may appear to meet the definition of a critical audit matter from the Proposed Standard.

Specific Critical Audit Matters and Examples

Paragraph 11 of the Proposed Standard requires the auditor's report to (1) identify the critical audit matter; (2) describe the considerations that led the auditor to determine that the matter is a critical audit matter; and (3) refer to the relevant financial statement accounts and disclosures that relate to the critical audit matter. The illustrative examples on pages A5-65 to A5-78 of the Proposed Standard include disclosures in excess of the requirements in the Proposed Standard. The additional disclosures in the illustrative examples, as noted below, raise several concerns.

- We do not believe that the auditor's report should contain commentary on the issuer's business and the anticipation of future events. We believe management is best suited to address their business and future plans, and to provide the most relevant information for investors; whereas the auditor's role is to provide independent assurance on the information that is disclosed by management.

- The examples include disclosures of audit procedures performed in response to a critical audit matter. Disclosure of audit procedures may not be clearly understood by a user, and put the user in the role of determining the sufficiency of the auditor's procedures in responding to critical audit matters. The disclosure of audit procedures will also result in increasing the length of the auditor's report, shifting the focus of the report from auditor conclusions on the issuer's financial statements to audit procedures that will be difficult for users to understand and determine their importance. The disclosure of audit procedures may also become boilerplate disclosures, further diminishing the value of the information to the users of the financial statements. In addition, we believe the disclosure of audit procedures could decrease audit quality by providing information on audit strategies and by reducing the element of unpredictability in the audit. As a result, we do not believe the auditor's report should discuss the audit procedures in response to critical audit matters.
- We do not believe that the auditor's report should disclose consultations with the auditor's national office or the use of specialists. Auditor interactions with the national office, audit firm specialists, or specialists engaged by the issuer, are routine considerations that occur during the audit process that are intended to provide assurance on the overall form and presentation of the financial statements, including any related audit affects. Specific reference to consultations or use of specialists in the auditor's report may appear to offer an inappropriate high level of assurance on these matters.

- We do not believe that the auditor's report should disclose internal control deficiencies that do not meet the definition of a material weakness. An internal control deficiency, or a combination of deficiencies, that is less severe than a material weakness, by definition, does not reach a threshold of a reasonable possibility that a material misstatement of the issuer's financial statements will not be prevented or detected on a timely basis. As a result, disclosure of internal control deficiencies that do not meet the definition of a material weakness is not of high importance to the user of the financial statements, and may result in confusion regarding the effectiveness of the issuer's overall system of internal controls. Further, disclosure of non-material weaknesses could result in disclosing original information about an issuer's processes or accounting systems. As previously noted, we believe the issuer should have the primary responsibility for disclosing original information.

- We do not believe that the auditor's report should disclose corrected and uncorrected financial statement misstatements. According to a January 2008 U.S. Government Accountability Office report, as referenced in an Appendix to the Proposed Standard, the sense of confidence in audited financial statements is key to the efficient functioning of markets. We believe the disclosure of corrected and uncorrected financial statement misstatements may add unfounded uncertainty that more misstatements may exist in the financial statements, or imply that the financial statements are not presented fairly, in all material respects, resulting in reduced confidence in the financial statements. Similar to the above observation, disclosure of these types of matters could also result in reporting original information in the auditors' report.

As a result of the above observations and to avoid the implication that such additional disclosures in the auditor's report are required, or become de facto required in practice, we recommend that the examples provided in the Appendices include only the disclosures required by the Proposed Standard.

Prior Period Critical Audit Matters

Paragraph 10 of the Proposed Standard requires the auditor to communicate the critical audit matters related to the audit of the current period's financial statements. Paragraph 10 further indicates that the auditor "should consider" communicating critical audit matters relating to prior periods when certain criteria are met. The additional discussion on page A5-34 states that when a predecessor auditor reissues an audit report, the communication of critical audit matters for the prior period need not be repeated. The language in the Proposed Standard and related discussion are not clear regarding the predecessor auditor's reporting responsibilities. We suggest modifying the Proposed Standard to clarify the requirement to communicate critical audit matters related to prior period's financial statements. Further, we suggest expanding the Proposed Standard to clarify a predecessor auditor's responsibilities when a predecessor auditor did not previously report an audit matter (since it did not meet the criteria) as a critical audit matter, however, based on subsequent events, the predecessor auditor's conclusion as to the need to report a matter as a critical audit matter may have changed. We believe guidance to explain the predecessor's reporting responsibilities in this situation would be helpful.

Basic Elements of the Auditor's Report

Paragraph 6b of the Proposed Standard specifies that the addressees in the auditor's report could include others besides shareholders and the board of directors. We recommend modifying the Proposed Standard to remove others from the entities to which the auditor's report may be addressed due to potential litigation risk.

Paragraph 6i of the Proposed Standard requires the auditor's report to include a statement containing the year the auditor began serving consecutively as the issuer's auditor. We believe an unintended consequence of including auditor tenure in the auditor's report is the implication of a correlation between auditor tenure and audit quality. The PCAOB's previous Concept Release on Auditor Independence and Audit Firm Rotation acknowledges that there is not a demonstrated relationship between an auditor's objectivity and professional skepticism and the tenure of the audit engagement. Further, the Proposed Standard does not suggest conclusive evidence of a relationship between audit quality and auditor tenure. Accordingly, we believe that auditor tenure should not be included in the auditor's report. We suggest it is more appropriate to disclose auditor tenure in the definitive proxy statement or in the registered public accounting firm's Annual Report Form 2 with the Public Company Accounting Oversight Board.

**Proposed Standard, *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report***

Definition of Other Information

Paragraph 1 of the Proposed Standard defines Other Information to include information in an annual report, other than the financial statements and auditor's report. Other Information is also defined to include information incorporated by reference, proxy statements filed within 120 days after the end of the fiscal year and, based on the circumstances, Other Information in amended annual reports. The suggested additions to the auditor's report regarding Other Information do not define the Other Information that is subject to the Proposed Standard. As a result, the scope of Other Information subject to the auditor's procedures may not be clear to users of the financial statements, resulting in an expectation gap between auditors and users. Further, unlike the requirements of AU 550, auditors would be required to evaluate Other Information to determine if a material misstatement of fact exists, even though such Other Information may be only tangentially related to the financial statements, resulting in significant additional time and cost by auditors. This tangential relationship between the financial statements and certain Other Information is particularly relevant to many documents incorporated into the annual report by reference. We suggest retaining the AU 550 requirement that the auditor consider Other Information only for the purpose of considering its consistency with the financial statements. This would allow users of the financial statements to understand that the Other Information that is subject to the auditor's procedures is limited to the Other Information that the auditor would consider when determining whether such information, or the manner of its presentation, is materially inconsistent with information, or the manner of its presentation, appearing in the financial statements.

Regarding the applicability of the Proposed Standard to Other Information that is not available prior to the issuance of the auditor's report, we do not believe that it is appropriate for the auditor to conclude in the auditor's report on information that is not available at the time the auditor's report is issued. Providing assurance on information after the auditor's report is issued presents practical and logistical concerns that would make this aspect of the Proposed Standard inoperable. We believe the Proposed Standard should reflect limiting the auditor's procedures to information that is only available at the time the auditor's report is issued.

Further, Paragraph 11 of the Proposed Standard indicates that when Other Information is not available prior to the issuance of the auditor's report, and the Other Information is not appropriately revised after the auditor has communicated a material inconsistency, material misstatement of fact, or both, to the audit committee, the auditor should apply the procedures in AU 561. The audit procedures required by AU 561 are only required if the new information that may affect the auditor's report existed at the date of the auditor's report, therefore the Other Information in this situation would not be available at the date of the auditor's report. If information not available prior to the issuance of the auditor's report is not excluded from the Proposed Standard, as recommended above, we recommend clarifying in the Proposed Standard the audit procedures that are required.

Auditor's Responsibilities

Paragraph 3 indicates that the auditor must evaluate whether Other Information contains a material inconsistency, a material misstatement of fact, or both. The level of materiality to be applied for this requirement is not clear based on the Proposed Standard. For an audit of the financial statements and internal control over financial reporting, federal security laws interpret a misstatement to be material if there is "a substantial likelihood that the ...fact would have been viewed by the reasonable investor as having significantly altered the 'total mix' of information made available." We believe that application of this interpretation of materiality to the wide variety of both financial and non-financial Other Information included in an annual report may be inconsistently applied and interpreted. Clarification in the Proposed

Standard of the auditor's application of materiality when evaluating whether Other Information contains a material inconsistency, a material misstatement of fact, or both, is suggested.

Paragraph 4 of the Proposed Standard includes the required procedures that an auditor should perform with respect to Other Information in an annual report. These procedures include evaluating Other Information not directly related to the financial statements as compared to relevant audit evidence obtained and conclusions reached during the audit. We suggest retaining the auditor's procedures in AU 550 with respect to Other Information for the following reasons:

- We believe an expectation gap with users of the auditor's report is possible due to introducing the term "evaluate", which is a previously unused term to express the level of assurance. We believe that users will interpret "evaluate" as a level of assurance that is beyond the "read and consider" language in current standard AU 550, and that significant additional procedures will be performed by auditors in response. Further, because users are not knowledgeable of the audit evidence obtained and conclusions reached during an audit, users' understanding of the extent of the auditor's procedures regarding Other Information may be inconsistent. Also, because the additional language that is proposed to be added to the auditor's report does not clarify the auditor's procedures, an expectation gap with users may result. Examples of Other Information that would be particularly susceptible to misunderstanding of the auditor's procedures include:
    - Forecasted information;
    - Assertions regarding the effectiveness of management's business plans;
    - Management's assertion regarding its internal controls when the auditor has not performed an audit of internal controls; and
    - Disclosed business risks, and the completeness of this information.

- Paragraph 4's requirement for auditors to read and evaluate Other Information based on relevant audit evidence obtained and conclusions reached during the audit will be difficult to implement. Consideration of every item of audit evidence in an audit file would often involve thousands of pages of audit file documentation, including copies of documents provided to the auditor by issuers. Also, many individual conclusions are reached in the conduct of an audit. To evaluate Other Information as compared to all relevant audit evidence obtained and conclusions reached could be viewed by auditors to involve detailed review and consideration of audit file documentation at the time of the auditor's evaluation of Other Information. Further, due to the significance of additional time and cost associated with auditors evaluating Other Information in this manner, issuers may consider this additional time and cost as they make judgments about the inclusion of Other Information in their annual reports, which could result in certain information that would be valuable to users not being disclosed.

- The following text from page A6-5 of the Appendix indicates that the auditor is not precluded from applying additional procedures beyond those described in the Proposed Standard:

  *"The proposed other information standard does not preclude the auditor from applying the procedures in the standard to such other documents. Also, the proposed other information standard does not preclude the auditor from applying additional procedures not described in the proposed other information standard to the other information."*

  This paragraph suggests to auditors that to "evaluate" Other Information in an annual report, additional procedures may be appropriate. Due to the lack of definition of the term "evaluate", as discussed above, the expectation gap between auditors and users regarding the scope of their procedures, and the additional risk of liability that auditors may incur as a result; significant additional effort by auditors is anticipated as compared to the work performed currently under AU 550. Further, we believe the text above provides an open ended obligation on auditors to consider whether to do more, which is in conflict with the introductory section on page 21, which does not require the auditor to perform other procedures or obtain additional information not directly related to the financial statement audit.

Paragraph 5 of the Proposed Standard indicates that if the auditor identifies a potential material inconsistency, a potential misstatement of fact, or both, the auditor should discuss the matter with management, and perform additional procedures, as necessary, to determine whether there is a material inconsistency, a material misstatement of fact, or both. We believe this requirement to consider performing additional procedures, as necessary, may cause auditors to perform unnecessary and time-consuming procedures. For example, the auditor may read in Other Information that the issuer is the leading provider of a product. Based on issuer-provided documents regarding revenue streams included in the audit file, the issuer's market positioning is discussed, but it is unclear whether the disclosure that the issuer is the leading provider of a product is correct or not. Paragraph 5 could lead the auditor to both discuss this matter with management, as well as perform additional procedures to make a determination. We consider the additional procedures in this example to be unnecessary and costly. Similar to our above concern with paragraph 4, we note that Paragraph 5 is inconsistent with page 21 of the introductory section to the Proposed Standards, which reads:

> "*The auditor's evaluation would be based on relevant audit evidence obtained and conclusions reached during the audit. The auditor would not be required to perform procedures to obtain additional evidence regarding other information not directly related to the financial statements that was not required to be obtained during the audit.*"

While we agree with the concept outlined in the above paragraph, we believe it will not be clear to users what Other Information was subject to procedures and what information was not, since a user will not know whether the auditor obtained evidence during the course of the audit.

AU No. 3, *Audit Documentation,* requires audit documentation to be prepared in sufficient detail to provide a clear understanding of its purpose, source, and the conclusions reached. Also, the documentation is to be appropriately organized to provide a clear link to the significant findings or issues. Additional guidance within the Proposed Standard is suggested regarding the nature and extent of auditor documentation required, particularly considering the "evaluate" level of engagement involved, and the significance of Other Information, including information incorporated by reference, that would be subject to an auditor's evaluation procedures.

## Other Observations

### Scope

The Board has requested comment on the applicability of the Proposed Standards to Broker-Dealer, Investment Company and Benefit Plan audit engagements. Due to the unique characteristics of these companies, as indicated in Appendices A5 and A6 of the Proposed Standards (i.e. filing requirements; ownership structure; degree of complexity; user needs; sufficiency of other information available), we do not believe that application of the Proposed Standards to audits of these companies would provide investors or other financial statements users with sufficient additional relevant information to justify the additional cost of such information.. If broker-dealer, investment company and benefit plan audit engagements are not excluded from the scope of the Proposed Standards, we recommend providing additional guidance to assist auditors of these companies in applying the Proposed Standards, given their unique characteristics and differences from issuer entities.

### Reports of Subsidiaries

We observe that many subsidiaries of issuers also present separate only subsidiary financial statements for a variety of reasons, and those financial statements also require the independent auditor to issue a report on such financial statements. These financial statements are normally not included in any public filings; however, the audit report often reflects that the audit was conducted in accordance with PCAOB standards. We believe critical audit matters and other information would not apply in these situations and recommend providing reporting illustrations for these situations.

Reference to City and State in Auditor's Report

Paragraph 6r of the Proposed Auditor Reporting Standard includes a requirement to include the city and state or country from which the auditor's report has been issued. Due to the participation in many audit engagements of audit personnel from various cities and countries, we suggest providing guidance in the Proposed Standard on the determination of the city and state or country that should be included in the auditor's report.

Reference to Accounting Standard

Page A3-18 refers to FASB Statement No. 107. We suggest the use of FASB Codification references.

Reference to Financial Statements

We suggest updating the text on page A5-10 to include in the listing of financial statements the Statement of Other Comprehensive Income and to include such statement in the illustrative examples.

**Field Testing and Cost/Benefit Considerations**

We anticipate that substantial additional work by auditors, audit committees and management will be necessary to implement and comply with the Proposed Standards. As a result, we encourage the Board to perform field testing to fully understand the costs and other implications of the Proposed Standards. Further, we encourage the Board to perform a thorough cost/benefit analysis to determine that the benefits will meaningfully exceed the initial and annual costs to comply with the Proposed Standards.

**Effective Date of the Proposed Standards**

The proposed effective date of these standards is for audits of financial statements for fiscal years beginning on or after December 15, 2015. Based on the significance of the implementation effort required by issuer companies and their audit firms in response to these Proposed Standards, including developing appropriate methodologies and training, we suggest that the Board re-assess the proposed effective date at the time the proposals are approved by the SEC, and re-establish the effective date to be at least one year after approval. We also suggest a further delay in the effective date for audits of smaller reporting companies.

Re: PCAOB Rulemaking Docket Matter No. 034 Proposed Auditing Standards The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and The Auditors' Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report

Dear Board Members;

Thank you for the opportunity to comment on the rulemaking referenced above. My comments are written from the perspective of specific constituents of the PCAOB: small, independently owned, non-public, non-custodial broker-dealers.

These firms, numbering approximately 4000, are not public companies. They are privately owned and operated small businesses. Approximately 1800 of these firms generate less than $1mm in annual revenues. Many of these firms have fewer than 50 employees.

For these small independent businesses, the proposed rules will inflict significant additional costs, with little or no relevance to the mission of the PCAOB, which is to protect the interests of public investors and to promote investor protection. Public investors do not review the audits of these privately held companies. The investors in these small businesses are the owners themselves.

I believe it is entirely consistent with the PCAOB mission for the Board to exercise its authority under the Dodd Frank Act, and exempt the auditors of small, privately held, non-custodial broker-dealers from its oversight.

Best regards,

//Lisa Roth//

**Date:** Wednesday, December 11, 2013 1:45:05 PM

---

To the members of the Board:

Thank you for the opportunity to comment on the rulemaking referenced above. My comments are written from the perspective of an owner of a small, independently owned, nonpublic, non-custodial broker-dealer.

Our firm, one of approximately 4000 SEC registered broker-dealers, is not a public company. We are a privately owned and operated small business with approximately 14 staff and about 45 independent financial advisors.
For small independent and privately owned businesses, the proposed rules will inflict significant additional costs, with little or no relevance to the mission of the PCAOB, which is to protect the interests of public investors and to promote investor protection. Public investors do not review the audits of these privately held companies. The investors in these small businesses are the owners themselves.

I believe it is appropriate and consistent with the PCAOB mission for the Board to exercise its authority under the Dodd Frank Act, and exempt the auditors of small, privately held, non-custodial broker-dealers from its oversight. It is important that regulation for small firms remain relevant to the business model and investing public; we encourage the Board to seriously consider the matter of an exemption for small, privately held firms.

Thank you for your consideration,

Deborah Castiglioni

Re: PCAOB Rulemaking Docket Matter No. 034

Members of the Board:

Thank you for the opportunity to comment on *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion, The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report,* and *Proposed Amendments to PCAOB Standards Related to the Proposed Auditor Reporting Standard* (collectively the "proposed standards").

We agree that certain of the proposed changes would be beneficial to users of the financial statements. The proposed changes that we support cover the proposal to include in the auditor's report a statement regarding auditor independence and inclusion of information on the auditor's tenure. In addition, we support the addition of language to the auditor's report clarifying that the audit includes the footnotes to the financial statements and support adding language to the Auditor's report stating that the conclusion that the financial statements are free of material misstatement covers both potential material errors and potential material instances of fraud.

In addition, we support including in the auditor's opinion a description of the auditor's responsibilities regarding "other information" in documents containing financial statements. However we do not believe there would be significant benefits in increasing the auditor's responsibility regarding this information, or to expand the definition of other information to include information incorporated by reference. We believe the current requirement for auditors to consider "other information" and discuss with Audit committees that they have read the "other information", as currently defined, is a sufficient process to identify any material discrepancies between the audited financial statements and the "other information". Our Audit Committee, and we believe all audit committees, expect a standard of care from the Auditors when they consider "other information". We believe the proposed requirement to "evaluate" such information is not significantly different enough to provide a corresponding significant benefit to users of the financial statements and would not justify what would likely lead to increases in time and expense to complete an audit.

Finally, regarding communication of critical audit matters, we are concerned that the potential exists that such communication could be perceived by the users of financial statements as questioning the quality of the financial statements taken as a whole, even if the proposed auditor's report would state otherwise. We believe that the matters which would most likely be identified as critical audit matters are already discussed under Significant Accounting Estimates / Critical Accounting Policies and that any differences would be confusing to users of the financial statements. We are also concerned that a requirement for auditors to document why certain matters are not considered to be critical audit matters has the potential for significant increases in management's time and audit fees to complete the audit. Another issue to consider is the cautiousness and boilerplate disclosures by the auditors that cover every possibility which would bring inconsistencies and confusion for users of financial statements due in part to variability of such between accounting firms and partners.

We believe the supported changes noted above provide clearer insight into the Auditor's independence, role and process in regarding registrant's financial statements. We appreciate the Board's efforts to improve the quality of financial reporting, and would again like to thank you for the opportunity to comment on the proposed standards.

Sincerely,

David M. Drillock
Chief Financial Officer
Cytec Industries Inc.

Re: PCAOB Rulemaking Docket Matter No. 034 Proposed Auditing Standards The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and The Auditors' Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report

Dear Board Members;

Thank you for the opportunity to comment on the rulemaking referenced above. My comments are written from the perspective of specific constituents of the PCAOB: small, independently owned, non-public, non-custodial broker-dealers.

These firms, numbering approximately 4000, are not public companies. They are privately owned and operated small businesses. Approximately 1800 of these firms generate less than $1mm in annual revenues. Many of these firms have fewer than 50 employees.

For these small independent businesses, the proposed rules will inflict significant additional costs, with little or no relevance to the mission of the PCAOB, which is to protect the interests of public investors and to promote investor protection. Public investors do not review the audits of these privately held companies. The investors in these small businesses are the owners themselves.

I believe it is entirely consistent with the PCAOB mission for the Board to exercise its authority under the Dodd Frank Act, and exempt the auditors of small, privately held, non-custodial broker-dealers from its oversight.

Best regards,

//Lisa Roth//

Re: **PCAOB Rulemaking Docket Matter No. 034**

*via email to comments@pcaobus.org*

Ms. Phoebe W. Brown
Secretary
Public Company Accounting Oversight Board
1666 K Street, NW
Washington, DC 20006-2803

Dear Ms. Brown:

We appreciate the opportunity to comment on two auditing standards, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the "**Auditor Reporting Standard**") and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (the "**Other Information Standard**"), proposed by the Public Company Accounting Oversight Board on August 13, 2013 in PCAOB Release No. 2013-005 (the "**Proposing Release**").

The Board's goal is to "increase the informational value of the auditor's report."[1] This is not a controversial objective, but we believe that the costs of implementing these specific proposals, to be borne by public companies and their investors, would substantially outweigh their benefits to investors and the public. As a result we question whether the Securities and Exchange Commission would be able to approve the proposals were they adopted by the Board. As former Commissioner Paredes observed in 2012:

> "[T]he PCAOB . . . needs to engage in rigorous cost-benefit analysis of its rules, including its auditing standards. We need to be assured that the potential consequences – both for better and for worse – of a PCAOB rule have been thoroughly evaluated and considered in a balanced way. Otherwise, for example, how can we determine on a reasoned basis whether a PCAOB proposal advances the public interest? Whether a PCAOB rule advances the public interest depends on its practical impacts. Cost-benefit analysis allows us to better

[1] Proposing Release at 5.

anticipate and assess these impacts so that a well-reasoned judgment can be made."[2]

As discussed below, we believe that a thorough analysis would show the costs of the proposals difficult to justify compared to their anticipated benefits. More fundamentally, we believe that if additional information for investors is the goal, the company itself should be the source of that information, rather than a third party whose expertise lies not in communicating with the marketplace, but in assessing whether the company's financial statements are presented in accordance with generally accepted accounting principles.

**Auditor Reporting Standard**

The proposed Auditor Reporting Standard requires the auditor's report to include a discussion of "critical audit matters," defined as "those matters addressed during the audit that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming the opinion on the financial statements."[3] The disclosure would include identification of the critical audit matters, a description of the considerations that resulted in the determination that a critical audit matter existed, and reference to the relevant financial statement accounts and disclosures that relate to the critical audit matters.[4]

The Proposing Release indicates that critical audit matters could be derived from issues currently identified in the engagement completion document, issues reviewed by the engagement quality reviewer, issues communicated to the audit committee, or any combination of the three.[5] Although the Proposing Release does not mention it, critical audit matters would almost certainly include all of a company's "critical accounting policies," which Section 204 of the Sarbanes-Oxley Act of 2002 requires auditors to report to the audit committee and which U.S. public companies disclose as part of Management's Discussion and Analysis in the Annual Report on Form 10-K.[6]

The auditor's discussion of critical audit matters would not occur in a risk-free vacuum. Although the language in the proposed Auditor Reporting Standard focuses the need for disclosure on only the *most difficult* matters, auditors would be heavily incentivized to include *all* matters identified in the engagement completion document, *all* issues reviewed by the engagement quality reviewer, and *all* significant issues communicated to the audit committee regarding the audit, including the company's critical accounting policies. The Proposing Release states that "[t]he Board would not expect that each matter included in any one or more of these sources would be a critical audit matter,"[7] but this ignores the reality that auditors are at risk of being sued on the basis of their report, including the critical audit matters discussion, in the event of a subsequent financial restatement or other financial difficulties at the audit client. This fact alone virtually guarantees

---

[2] Remarks of SEC Commissioner Troy A. Paredes at AICPA Council Spring Meeting, Washington, DC (May 17, 2012) (*available at* http://www.sec.gov/News/Speech/Detail/Speech/1365171490500).

[3] Proposing Release at 15.

[4] Proposing Release at 16.

[5] Proposing Release at 15.

[6] Critical accounting policies consist of accounting policies that "are both most important to the portrayal of the company's financial condition and results, and . . . require management's most difficult, subjective or complex judgments, often as a result of the need to make estimates about the effect of matters that are inherently uncertain." *Cautionary Advice Regarding Disclosure About Critical Accounting Policies*, SEC Rel. No. 33-8040 (Dec. 12, 2001).

[7] Proposing Release at 15.

that any discussion of critical audit matters will be a lengthy affair, because auditors will not want to be second-guessed in litigation about, for example, why some matters discussed with the audit committee were disclosed as critical audit matters while others were not. As a result we would expect the "critical audit matters" discussion to cover, for example, all matters that the engagement team discussed with their national office,[8] all matters on which the company may have consulted with the SEC or other regulatory agencies and all material weaknesses (and likely some significant deficiencies) in internal controls that were identified in the course of the audit, in addition to all critical accounting policies already discussed in the annual report. Because the discussion would appear in the company's own filings and express judgments about the company as well as provide a basis for liability against the company, we believe companies would insist on reviewing, potentially negotiating and approving all critical audit matters before finalizing the audit.

At the same time, because the engagement team will recognize that communications with the national office or with the audit committee will likely trigger a need for critical audit matter disclosure, we believe that a requirement to discuss critical audit matters in the audit report will invariably have a chilling effect on these discussions. It goes without saying that inhibiting communications between the auditor and the audit committee, or inhibiting the auditor's own internal discussions, will not have a healthy impact on the quality of public company financial reporting. Existing auditing standards promote an open dialogue between auditors and audit committees precisely because this communication results in better disclosure.[9]

The illustrative disclosure contained in the Proposing Release ranges from several paragraphs to more than a page of additional language for each critical audit matter.[10] This range multiplied by the number of critical audit matters a company is likely to have would dramatically lengthen the audit report. Because critical audit matters are expected to be subjective and variable among companies,[11] it will also be difficult or impossible for investors to compare one company's critical audit matters to another's. The sheer volume of critical audit matters, as well as the lack of comparability across companies even in the same industry, would undermine the benefits of the audit report's current pass/fail model, which the Proposing Release acknowledges enjoys investor support "because it clearly conveys the auditor's opinion regarding whether the financial statements are fairly presented."[12]

Given the length and scope of a company's critical audit matters, the effort to analyze, draft and negotiate them would be substantial, would raise costs and would increase pressure on management, audit committees and auditors during already-hectic annual reporting periods. We therefore question the Proposing Release's assertion that developing critical audit matters

[8] Auditing Standard No. 16, *Communications with Audit Committees*, states that "the auditor should communicate to the audit committee matters that are difficult or contentious for which the auditor consulted outside the engagement team and that the auditor reasonably determined are relevant to the audit committee's oversight of the financial reporting process."

[9] "The enhanced relevance, timeliness, and quality of communications should facilitate audit committees' financial reporting oversight, fostering improved financial reporting, thereby benefitting investors." PCAOB Rel. No. 2012-004 at 2-3 (Aug. 15, 2012).

[10] Proposing Release app. 5 at A5-65-78.

[11] "The communication of critical audit matters would result in differences among auditors' reports. For instance, the communication of critical audit matters is intended to be tailored to the audit of the company; therefore, auditors' reports are not expected to be comparable from one auditor's report to the next." Proposing Release app. 5 at A5-41-42.

[12] Proposing Release app. 5 at A5-5.

disclosure would not be unduly burdensome,[13] and find it at odds with its description of the process involved – which includes the attention of the senior members of engagement teams; the attention of the engagement quality reviewer; consultations with others, including the auditor's national office; and discussions with management or the audit committee.[14]

For all of the effort that the proposed requirement would entail, we wonder what the benefits to investors would be. To the extent critical audit matters merely echo the company's critical accounting policies already disclosed, the informational value would be minimal or non-existent. To the extent they summarize matters on which the engagement team needed to consult with their national office, they may be saying more about the experience of the individual auditors than the quality of the company's financial disclosures. To the extent they recap significant deficiencies or material weaknesses discussed with the audit committee, they would either be repeating information the company is already required to disclose, or information the SEC has already determined companies need not automatically disclose.[15]

We expect that the number of critical audit matters included in audit reports will only proliferate over time, exactly as experience has shown with respect to risk factor disclosure in public filings with the SEC. The inclusion of critical audit matters in audit reports will likely be seen to provide protection to auditors in the same manner risk factors are thought to provide protection to companies. It is hard to imagine that lawyers for auditors will not advise that the inclusion of more (rather than fewer) critical audit matters, together with a thorough and detailed discussion of each, would better serve to protect auditors from legal risk. If any auditor includes a critical audit matter with respect to a company in a particular industry, other auditors will be incentivized to include a comparable critical audit matter to avoid the litigation risk of having a less complete discussion.

The proposed Auditor Reporting Standard appears to be significantly driven by the belief that it could "alleviate the information asymmetry that exists between company management and investors"[16] and that investors want "more information." We do not believe these very general goals provide an adequate rationale for the dramatic expansion of the audit report with its increased costs, almost inevitable delays and potentially serious unintended consequences with respect to communication and consultation. If more disclosure is in fact necessary, it should be specifically identified and required to be provided by the company. The auditor's role as an independent third party should remain one of oversight.[17]

---

[13] Proposing Release app. 5 at A5-22.

[14] Proposing Release app. 5 at A5-37.

[15] Although companies are required to disclose material weaknesses in internal controls, they are not generally required to disclose significant deficiencies. *See* SEC, *Frequently Asked Questions, Management's Report on Internal Control Over Financial Reporting and Certification of Disclosure in Exchange Act Periodic Reports*, question 11 (Oct. 6, 2004) (*available at* http://www.sec.gov/info/accountants/controlfaq1004.htm).

[16] Proposing Release at 6.

[17] As Board member Jay D. Hanson noted at the Board's open meeting on June 21, 2011, "[A]uditors are not analysts or investment advisers. They are not trained to evaluate and communicate the overall business and strategic risks of the companies they audit." (a*vailable at* http://pcaobus.org/News/Speech/Pages/06212011_HansonStatement.aspx).

**Other Information Standard**

The proposed Other Information Standard requires the auditor to communicate its responsibilities for and conclusions with respect to "other information."[18] For a U.S. public company, this includes all information in its Annual Report on Form 10-K other than the audited financial statements and accompanying report.[19] Where the auditor does not identify a material inconsistency or material misstatement of fact in the "other information," the following language would appear in the auditor's report:

> "Our evaluation was based on relevant audit evidence obtained and conclusions reached during the audit. We did not audit the other information and do not express an opinion on the other information. Based on our evaluation, we have not identified a material inconsistency or a material misstatement of fact in the other information."[20]

The proposed Other Information Standard differs from the existing standard, AU Section 550, *Other Information in Documents Containing Audited Financial Statements*, in both scope and substance [21] and would significantly expand the auditor's responsibilities with respect to "other information." The current standard provides that the auditor "should read the other information and consider whether such information, or the manner of its presentation, is materially inconsistent with information, or the manner of its presentation, appearing in the financial statements."[22] It also explicitly provides that the auditor's responsibility is limited to financial information identified in its report.[23]

By contrast, the proposed Other Information Standard requires the auditor to evaluate "other information not directly related to the financial statements as compared to relevant audit evidence obtained and conclusions reached during the audit."[24] The auditor would need to perform "additional procedures, as necessary" to determine whether there is a material inconsistency or misstatement of fact in the "other information."[25] If the auditor identifies a material inconsistency or misstatement of fact, the auditor must request management to revise the "other information;" if management does not, the auditor may be required to contact the audit committee, consider resignation, withhold the audit report, or notify the appropriate regulator.[26]

Before proposal of the Other Information Standard, we believe it was generally agreed that auditors lack the necessary professional training, expertise and evidence to comment affirmatively on all "other information" in a company's annual report. In fact, the current standard

---

[18] Proposing Release app. 2 at A2-2-3.

[19] Id.

[20] Proposing Release app. 1 at A1-16.

[21] The existing standard and the proposal each provide that "other information" includes information, other than the audited financial statements and the related auditor's report, contained in a public company's annual report. The proposed Other Information Standard also covers information about executive compensation and corporate governance, typically contained in the company's proxy statement, which is often filed with the SEC several weeks after the audit report is issued. Proposing Release app. 2 at A2-2.

[22] AU § 550.04.

[23] Id.

[24] Proposing Release app. 2 at A2-3.

[25] Proposing Release app. 2 at A2-4.

[26] Proposing Release app. 2 at A2-4-5.

instructs that when an auditor encounters a potential misstatement or inconsistency, "the auditor should consider that he may not have the expertise to assess the validity of the statement, that there may be no standards by which to assess its presentation, and that there may be valid differences of judgment or opinion."[27] Similarly, AU Section 337, *Inquiry of a Client's Lawyer Concerning Litigation, Claims, and Assessments*, cautions that in obtaining information regarding litigation, claims and assessments, the auditor "ordinarily does not possess legal skills and, therefore, cannot make legal judgments concerning information coming to his attention. Accordingly, the auditor should request the client's management to send a letter of inquiry to those lawyers with whom management consulted concerning litigation, claims, and assessments."[28]

In preparing the "other information" in its annual report, the company is required to make numerous judgments, often of an explicitly "legal" character. One of the most frequent of these is to assess the "materiality" of information that may not be financial in nature. "Materiality," like the term "material," is not defined in the U.S. federal securities laws (or in authoritative accounting literature) but instead is expounded in numerous judicial decisions, including the U.S. Supreme Court's opinion in *TSC Indus., Inc.* v. *Northway, Inc.*, 426 U.S. 438, 449 (1976):

> "What the standard does contemplate is a showing of a substantial likelihood that, under all the circumstances, the omitted fact would have assumed actual significance in the deliberations of the reasonable shareholder. Put another way, there must be a substantial likelihood that the disclosure of the omitted fact would have been viewed by the reasonable investor as having significantly altered the 'total mix' of information made available."

Given the complexity of the relevant legal standard, companies typically make materiality judgments in close consultation with their internal and external legal advisers. The proposed Other Information Standard would, however, expressly require the auditor to make these judgments relating to information that is wholly or partly non-financial in character.

For example, a company is required to describe in its annual report development-stage products that are "material" to it;[29] the company's competitive position in its markets, if "material;"[30] and the location and general character of its principal plants, mines and other "materially important" physical properties;[31] and to file as exhibits to the annual report its "material" contracts.[32] Audit evidence will frequently exist about a new product (research and development expenditures), the company's competitive position in a particular market (evidence of increasing or decreasing sales to a customer) or a particular physical asset (lease payments), but the company may choose not to discuss the particular product, competitive dynamic or physical asset in its annual report. Likewise the auditor may have access to volumes of contracts that are not filed as exhibits to the annual report. If any of these things were "material" to the company, the absence of disclosure would point to a "material inconsistency" between the audit evidence and the "other information." What professional training enables the auditor to satisfy himself that the undisclosed product,

[27] AU § 550.05.

[28] AU § 337.06.

[29] SEC Regulation S-K, Item 101(c)(1)(ii).

[30] SEC Regulation S-K, Item 101(c)(1)(x).

[31] SEC Regulation S-K, Item 102.

[32] SEC Regulation S-K, Item 601(b)(10).

competitive dynamic, physical asset or contract is not somehow material to the company? The proposed standard does not say that the auditor can defer to the judgment of company management or its counsel on questions like this – actually, it would run contrary to the principle of an independent audit if the auditor could substitute management's assertions for the auditor's professional judgment. Will the auditor need to engage its own counsel for advice? This seems likely given the expertise required, and this additional expertise will come at a cost.

At the same time auditors are tasked with passing on matters outside the scope of their professional expertise, they will face a broader scope of liability under the proposed Other Information Standard than they currently do. The auditor's statement about the accuracy of "other information not directly related to the financial statements as compared to relevant audit evidence obtained and conclusions reached during the audit" would be included in the audit opinion and therefore would be relied upon by the investing public and available in investor litigation.[33]

Given the risk of litigation against auditors if a material inconsistency or misstatement subsequently arises, it is not realistic to expect that auditors would make the sweeping statement contemplated by the proposed Other Information Standard without substantially expanding the scope of the audit and enlisting the help of lawyers and other professional advisers with training and expertise that auditors lack. We therefore believe the Board underestimates the incentives auditors will have to augment their procedures in order to comply with the proposed Other Information Standard, thereby increasing both the cost and the lead time for audits under already-accelerated deadlines for annual filings.

We also do not believe that investors will have any appreciation as to which items of "other information" an auditor obtains relevant audit evidence and reaches conclusions during the audit, which is the stated basis of the auditor's evaluation. As a result, investors may be led to believe that the auditor's evaluation covers much more "other information" than it actually does, while at the same time leaving the auditor exposed to claims that it did or should have obtained such evidence or reached such conclusions.

We do not believe these additional costs in both money and time can be justified as being needed to ensure the absence of material misstatements and omissions in the annual report. We believe that the Board has not taken adequate account of the range of safeguards developed or strengthened since passage of the Sarbanes-Oxley Act of 2002 to achieve the same goal, including:

- Certifications required for each annual report and each Quarterly Report on Form 10-Q by Sections 302 and 906 of the Sarbanes-Oxley Act and SEC Rules 13a-14(a) and 15d-14(a), which among other things require a company's CEO and CFO to personally certify that the report "does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading." These certifications cover all "other information" in a company's annual report. Following promulgation of the Sarbanes-Oxley certification requirements, we believe most public companies significantly strengthened their internal processes in order to support the

[33] "In order to promote consistency in the addressees included in the auditor's report, the Board is proposing to require the auditor's report be addressed to investors in the company." Proposing Release app. 5 at A5-9.

required CEO and CFO certifications, by creating disclosure committees and by instituting “upward certification” procedures, for example.

- The requirement under SEC Rules 13a-15 and 15d-15 that each public company maintain and regularly evaluate the effectiveness of “disclosure controls and procedures” that are “designed to ensure that information required to be disclosed by the issuer in the reports that it files or submits under the [Securities Exchange Act of 1934] is recorded, processed, summarized and reported, within the time periods specified in the Commission’s rules and forms.” A company’s disclosure controls and procedures cover all “other information” contained in its annual report. In combination with the Sarbanes-Oxley certification requirements, in our experience the requirement that public companies maintain and evaluate the effectiveness of their disclosure controls and procedures has significantly increased the amount of management and audit committee attention focused on companies’ annual reports and other SEC filings, minimizing the risk of error in “other information.”

- The requirement for auditors to evaluate the effectiveness of a company’s internal controls provides further assurance of the material accuracy of information contained in filings by companies subject to Sarbanes-Oxley Section 404(b).

- Disclosures in the annual report are also subject to review and oversight by a company’s audit committee and board of directors.

While there may be some incremental value in a third party’s evaluation of “other information,” the benefits would be marginal given the extensive procedures that are already in place to ensure the consistency and accuracy of this information. We do not believe these benefits would justify the costs of introducing new and additional procedures by the auditor at the tail end of an already time-compressed process.

* * *

For the reasons discussed above, we believe that the anticipated benefits of the proposals do not justify the related costs, and we urge the Board to reconsider its proposals in light of these concerns.

We appreciate the opportunity to comment and would be pleased to discuss any questions the Board or its Staff may have. You may contact Joseph A. Hall, Michael Kaplan, Richard J. Sandler, Richard D. Truesdell, Jr. or Sarah Ashfaq of Davis Polk at 212-450-4000.

Very truly yours,

**Re: PCAOB Rulemaking Docket Matter No. 034.**

Deloitte & Touche LLP ("D&T") is pleased to respond to the request for comments from the Public Company Accounting Oversight Board (the "PCAOB" or the "Board") on its *Proposed Auditing Standards — The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the "proposed auditor reporting standard"); *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report* (the "proposed other information standard"); and *Related Amendments to PCAOB Standards* (the "proposed amendments") (collectively, "the proposal"); PCAOB Release No. 2013-005; and PCAOB Rulemaking Docket Matter No. 034 (August 13, 2013).

## OVERALL COMMENTS

We support the Board's efforts to increase the informational value, usefulness, and relevance of the auditor's report. The more information of value that auditors are able to provide to the users of financial statements, the greater the value and relevance audits will have to the capital markets. Additional transparency regarding the audit also stands to enhance investor confidence in the rigor of the independent audit process.

The proposed changes to the auditor's report would represent the most significant expansion of tailored information provided about a financial statement audit by auditors to the user community in the profession's history. We are supportive of the objectives of the Board's proposal, and offer certain constructive suggestions in this letter geared toward ensuring that the final standards the Board adopts:

- Add value to users of financial statements;
- Narrow the expectation gap between what users of financial statements might expect from a financial statement audit and the actual objective of a financial statement audit, which is the expression of an opinion regarding the financial statements taken as a whole based on having obtained reasonable assurance about whether the financial statements are free of material misstatement; and
- Enhance clarity regarding the responsibilities of the auditor, management, and the audit committee.

Consistent with the above objectives, we are supportive of the following changes to the auditor's report:

- Identifying and commenting upon those matters that are critical to a user's understanding of the audited financial statements;
- Providing transparency regarding the auditor's responsibilities for other information included within the Form 10-K;
- Including a statement that the auditor is required to be independent with respect to the company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the PCAOB and the U.S. Securities and Exchange Commission (SEC);
- Including additional standardized language regarding the auditor's responsibilities with respect to the detection of error or fraud and performing procedures to assess the risks of material misstatement; and
- Clarifying that an audit encompasses the financial statements and the related notes.

In addition to considering the changes included in the Board's proposal, we considered whether there are additional matters that could be addressed in the auditor's report to improve its value to investors. We believe a discussion about materiality would further enhance the utility of the report (see further discussion in the "Proposed Auditor Reporting Standard" section below).

We believe, however, that there are certain implementation and other issues that will need to be deliberated and resolved in order to ensure the objectives of the proposals are achieved. While some of these issues are complex and challenging, the potential benefits of the proposals are significant; accordingly, such issues should not stand in the way of moving forward. It is incumbent upon us, along with other interested stakeholders, to engage constructively with the Board and find reasonable solutions. A brief summary of the most significant issues we have identified is as follows (we offer further thoughts on each later in this letter):

**Critical Audit Matters (CAMs).** We agree that sharing information with investors and other financial statement users about the challenging aspects, from an audit perspective, of the company's financial statements would be useful. We recognize that application of the proposed standard could at times put auditors in the position of communicating original information that has not been disclosed by the company. Some constituents have expressed concerns that certain auditor disclosures may potentially be at odds with the long-standing, historical reporting model of management being responsible for the company's financial statements and disclosures and the auditor attesting to that information. We share these concerns. These perspectives raise the question as to whether additional companion disclosure requirements should be imposed upon companies in light of required CAM reporting, which would of course necessitate action by the SEC or accounting standard setters.

Given the broad implications of the issue of auditors communicating original information, we believe it is important that all stakeholders (e.g., audit committees, preparers, regulators, auditors and others, including those in non-U.S. jurisdictions who are affected by PCAOB standards), be actively involved in comprehensive discussions about such a significant change. We understand that the PCAOB plans to hold roundtable discussions during 2014 to solicit the views of stakeholders, and we look forward to participating constructively in a dialogue with the PCAOB, SEC, Financial Accounting Standards Board (FASB), and other interested parties.

We offer further observations on CAMs and suggest additional practical alternatives for consideration in the "Proposed Auditor Reporting Standard" section below.

**Auditor Responsibility with Respect to Other Information.** Investors would benefit from a transparent discussion of the auditor's involvement with certain financial information contained in the Form 10-K outside the basic financial statements and footnotes. In addition, when other information outside the financial statements is both within the competence of the auditor and closely associated with procedures performed by the auditor during the audit of the financial statements (and if applicable, audit of internal control), we believe this information may lend itself to additional auditor involvement, with an accompanying disclosure in the auditor's report outlining the procedures performed by the auditor. However, certain other information contained in the Form 10-K is not necessarily within the auditor's competence, and is not closely associated with procedures performed during the audit. We believe it is important to ensure that auditor performance requirements are clear, and that any statement made in the audit report about other information does not create an expectations gap as to the nature of the auditor's involvement with respect to such information, especially non-financial information and financial information not closely associated with procedures performed in connection with the audit. We discuss additional observations and potential alternatives in the "Proposed Other Information Standard" section below.

We commend the Board's outreach with the International Auditing and Assurance Standards Board (IAASB), which has also issued a proposal to modify the auditor's reporting model under the International Standards on Auditing. We believe it would be beneficial for the auditor's reporting model under PCAOB standards and IAASB standards to be aligned to the greatest extent possible, in order to provide a consistent basis for enhancing users' understanding of the audit process and the results of the audit and avoid unnecessary confusion. We encourage the PCAOB to continue to work with the IAASB as the two related proposals are finalized.

Some level of incremental costs will of course result from the application of the proposals. We believe the suggestions we offer in this letter will help manage costs for audits of companies of all sizes. In order to ensure that the benefits of the proposals outweigh the incremental costs, we encourage the PCAOB to carefully assess the costs associated with the various aspects of the proposals, particularly those aspects related to other information, by conducting appropriate research and outreach (including field testing where useful).

## PROPOSED AUDITOR REPORTING STANDARD

As articulated in the "Overall Comments" section of this letter, we support many of the PCAOB's proposed changes to the auditor's report. In order to provide meaningful feedback to the Board during the comment process and as requested by the Board, we conducted limited field testing (including interaction with financial management) of the proposed auditor reporting standard. The results of that field testing are summarized in Exhibit 1. In light of our field testing and our analysis of the proposal, we have identified several adjustments that could be made that would address certain implementation challenges we identified. We further describe our observations and recommendations to the proposed auditor reporting standard below.

*Determination of Critical Audit Matters.* In order to provide useful information to users of financial statements, we agree that CAMs should highlight the most significant, complex, subjective areas of the audit. Our field testing results demonstrated a wide range in the number of CAMs reported for individual audits, suggesting that applying the proposed definition of CAMs and the related factors to consider in identifying CAMs as stated in paragraph 9 of the proposed auditor reporting standard, could result in a large number of potential CAMs being identified and ultimately a large number being reported. Inclusion of a large number of CAMs in the auditor's report would potentially obscure the most relevant information (including possibly the overall pass/fail opinion still valued by investors), making the auditor's report less useful to investors. This would be contrary to the PCAOB's objectives in proposing this standard. Our field testing results also indicated that all CAMs identified were matters already communicated to the audit committee in accordance with extant PCAOB standards, including PCAOB Auditing Standard 16, *Communications with Audit Committees* (PCAOB AS 16). Our suggestions herein are intended to address these implementation issues and reduce the associated costs.

We recommend the PCAOB limit the population of *potential* CAMs to only those matters that were discussed with the audit committee under existing auditing standards. Current PCAOB standards addressing required communications with audit committees are thorough and result in the auditor discussing a variety of matters with the audit committee. Therefore, we believe starting with the population of matters communicated to the audit committee would improve the efficiency of the process of determining potential CAMs, and would still be an effective approach. Not all matters communicated to the audit committee during the course of an audit rise to the level of a CAM; however, in practical terms, auditors would not put themselves in the position of disclosing CAMs that had not already been discussed with the audit committee.

Further, the level of interaction, including the extent of discussion with the audit committee about a particular matter, could be highlighted as an additional consideration for the auditor when concluding which matters rise to the level of a CAM (i.e., in addition to the factors outlined in paragraph 9 of the proposed auditor reporting standard).

These suggested changes to the proposed auditor reporting standard will simplify the methodology for determining CAMs and should have the effect of appropriately limiting the number of CAMs so as to render the auditor's report more useful to users.

*Auditor Disclosure of Original Information.* Our field testing confirmed that CAM reporting under the proposal could result in (1) original information[1] about the company being communicated in the auditor's report, (2) disclosure of matters that, while requiring significant audit effort, were ultimately concluded to be immaterial to the company's financial statements and internal control, or (3) disclosure of information that the SEC or the FASB previously concluded need not be disclosed by a company. For example:

- **Going Concern:** If issues calling into question an entity's ability to continue as a going concern are overcome based on management's plans for dealing with the issues, and the auditor ultimately concurs with this conclusion after performing extensive auditing procedures and applying significant professional judgment, this matter may still be considered a CAM and thus require disclosure. This challenge would be substantially alleviated if the FASB moves forward with its proposal to require company disclosure of going concern uncertainties even when substantial doubt is not present.

- **Significant Deficiency:** If determining whether an identified control deficiency is a significant deficiency or a material weakness takes a significant amount of audit effort, results in modification of the planned substantive testing and is the subject of significant dialogue with the audit committee, and even if ultimately the company and the auditor conclude it is a significant deficiency and not a material weakness, this matter may still be considered a CAM under the proposed auditor reporting standard. This may result in disclosure by the auditor of the control issues, with no parallel disclosure obligation for the company under SEC rules.
- **Potential Illegal Act:** If the auditor encounters a potential illegal act, directs significant audit effort to the situation, and encounters challenges in gathering sufficient audit evidence but ultimately concludes, after extensive interaction with counsel, that an illegal act has not occurred, this matter may nonetheless be considered a CAM under the proposed auditor reporting standard; however, it is not clear that disclosure in the auditor's report of such a matter was intended by the proposed standard.

Some constituents have questioned whether additional information would be of value to users if matters determined to be CAMs relate to items determined not to rise to a level of required management disclosure under current regulatory requirements and accounting frameworks. We recommend stating (in the definition of CAM and in paragraph 9 of the proposed auditor reporting standard) that matters relating to amounts and disclosures that are ultimately determined not to be material to the financial statements (including footnote disclosures) or the company's internal control over financial reporting may not constitute CAMs, even if significant audit effort and professional judgment might have been required to reach such a conclusion. As supported by our field testing, it is important that the final standard explicitly state that the auditor uses both materiality and professional judgment in determining the CAMs to be communicated in the auditor's report.

*Describing CAMs in the Auditor's Report.* We support the requirements in paragraph 11 of the proposed auditor reporting standard for communication of CAMs in the auditor's report. We also agree with the Board that the auditor's communication of CAMs in the auditor's report should be presented using language and a format that is clear, concise, and understandable to users of financial statements.

We note that the release accompanying the Board's proposal states that "communicating critical audit matters in the auditor's report…would not require the auditor to describe the audit procedures related to critical audit matters"[2] but that the auditor would not be precluded from doing so. Further, paragraph 11 of the proposal does not address the auditor providing a description of the audit procedures related to each CAM. However, the illustrative examples of CAM reporting provided in Appendix 5 go beyond the stated requirements in the proposed auditor reporting standard and include a discussion of audit procedures performed (e.g., use of specialists, consultation with national office, among others). We believe it is important for the final standard to be clear as to whether the auditor is expected to describe the audit procedures performed, rather than relying upon examples and discussion in the accompanying release to set out this expectation. Further, we do not believe optionality would be appropriate as significant implementation challenges would result, including how the auditor would determine when to incorporate a discussion of audit procedures and to what extent they should be described.

If the Board intends for the auditor to include audit procedures performed in the CAM discussion in the auditor's report we offer the following observations:

- We recognize and support the objective that the Board is attempting to achieve, and believe users would in fact benefit from an appreciation of the rigor that underlies the audit of the identified CAMs. There are, however, significant challenges to accomplishing this objective—particularly on complex, large multinational audit engagements.
- Describing auditing procedures performed in the reporting of CAMs in complex audit engagements could make the auditor's report quite lengthy. In practice, written auditor communications to audit committees that include a description of some audit procedures in significant audit areas can be extensive, notwithstanding the opportunity the auditor has to supplement the written summary with dialogue at an audit committee meeting; no such opportunity for dialogue exists for a communication included in the auditor's report.
- In many cases, audit evidence with respect to material assertions is obtained through a combination of a large number of procedures. Because of the significant complex audit judgments and procedures that would be performed in connection with most (if not all) CAMs, it would be difficult to adequately describe even the significant procedures performed regarding a specific CAM in a concise manner. An overly brief description of two or three out of perhaps dozens of audit procedures would run the risk of decreasing confidence in the rigor of the audit, as it may imply that the auditor's procedures were much less in scope than was actually the case.

    - For example, our firm's practice aid for auditing goodwill, which is in excess of 80 pages, contains extensive auditing procedures for our practitioners to consider and apply. Auditing a discounted cash flow forecast prepared to support a goodwill impairment assessment involves significant procedures applied to a dozen or more unique variables. While incomplete, examples of the audit procedures applied would often include a review of external analyst reports, a retrospective review of the accuracy of the company's prior forecasts, in-depth analysis of future product portfolio and marketing plans, testing capital expenditure and working capital needs in relation to the future product portfolio, a review of the company's debt and equity structure, a review of the recent trends in the company's market capitalization, and consideration of competitor market multiples. During the course of performing these procedures, the auditor would often make use of internal specialists, external specialists, and other consultation resources of the firm. All of these procedures, in addition to several others, are essential in the aggregate to providing the auditor with the necessary level of evidence. An auditor could attempt to prepare such a summary for the report, but we believe it would often be quite lengthy.

If the intent of the Board is to require the auditor in all cases, to include a discussion of auditing procedures in the CAM discussion in the auditor's report, we suggest that the final auditor reporting standard include the following:

- A clear statement that for each CAM included in the auditor's report, the auditor should include a succinct description of the auditor's response to the financial statement risk associated with the CAM.
- An acknowledgement that the auditor applies professional judgment in determining which procedures to describe and how to describe them.

- A requirement for an explicit statement to be added to the auditor's report which states that the procedures described are not the totality of all procedures performed on any particular CAM.

*Documentation of Matters Not Concluded to Be CAMs.* Paragraph 14 of the proposed auditor reporting standard requires audit documentation to explain the basis of the auditor's determination that "non-reported audit matters addressed in the audit that would appear to meet the definition of a critical audit matter were not critical audit matters." While we support documenting those matters determined to be CAMs, we suggest that the Board modify the requirement in paragraph 14 to exclude the documentation of audit matters ultimately determined not to be CAMs.

As suggested previously, we believe the PCAOB should limit the population of *potential* CAMs to only those matters communicated to the audit committee under existing auditing standards. Under this approach, the auditor performance requirement would be directed towards identifying which of those matters (i.e., the potential CAMs) are to be included in the auditor's report as truly the most critical matters encountered during the audit. Accordingly, we believe it would be more appropriate for audit documentation to be focused on why matters are of such importance that they are included in the auditor's report (i.e., how the determination of actual CAMs was made from the population of matters communicated to the audit committee, as opposed to documenting why potential CAMs were determined not to be CAMs). Certain documentation would already be in place as a result of communicating matters to the audit committee, and as a result, extensive incremental documentation should not be required or necessary. Placing undue emphasis on documenting matters ultimately not concluded to be CAMs may have the unintended consequence of causing auditors to tend towards identifying too many CAMs, thereby reducing the usefulness of the CAM reporting. If the broad range of sources to be considered for identifying potential CAMs as proposed in paragraph 8 of the proposed auditor reporting standard is retained, for a complex audit engagement, this could lead to a very large population of potential CAMs; accordingly, the process to document why potential matters are not CAMs could become very lengthy and of limited value.

*CAMs and Continued Use of Emphasis of Matter Paragraphs.* The proposed auditor reporting standard does not address the interaction between an audit matter that is determined to be a CAM and where, under paragraph 16 of the proposed auditor reporting standard, the matter also requires an explanatory paragraph to emphasize the matter. We observe that the examples provided in paragraph 16 of the proposed auditor reporting standard would in many cases also likely qualify as CAMs. However, on page A5-49 in Appendix 5 of the proposal, it states "[t]he proposed requirement to communicate critical audit matters does not alter the auditor's ability to add an explanatory paragraph to the auditor's report to emphasize a matter in the financial statements. The auditor's communication of a critical audit matter may provide more information about the auditing aspect of the matter emphasized in the auditor's report."

We believe it would be confusing to have two disclosures included in the auditor's report addressing the same matter. Accordingly, we recommend that the Board clarify in the proposed auditor reporting standard that, if a matter would constitute a CAM and require an explanatory paragraph, the discussion in the auditor's report would be integrated so as to avoid duplication and repetitiveness.

*Additional Implementation Considerations.* As the Board finalizes its standards, it should consider various additional implementation matters, including:

- The real concern that CAM reporting over time may become boilerplate, which may result from marketplace pressure and auditing firms attempting to create standardization throughout their practices. If this were to happen, the Board's objective of providing unique information to investors would be compromised. In order to guard against this, we recommend clear language in the proposed auditor reporting standard indicating that CAM discussions in the auditor's report are intended to be tailored to the unique circumstances of each individual audit engagement.
- The likely increased pressure on senior audit resources (as well as on management and the audit committee) during the reporting phase of the audit as the identification of CAMs is finalized and related disclosures are drafted, and the implications on the timing of completing the audit and meeting SEC filing deadlines. In order to minimize the likelihood of problematic delays, the PCAOB should provide guidance in the proposed auditor reporting standard that it would be appropriate for auditors to communicate likely CAMs (along with draft report wording) to the audit committee when they are identified throughout the audit cycle, keeping in mind the requirements of PCAOB AS 16.26 to communicate matters to the audit committee on a timely basis.

*Reporting Period of CAMs.* We agree with the requirement in paragraph 10 of the proposed auditor reporting standard that CAM communications should pertain to the audit of the current period's financial statements. To provide further clarity for auditors, we also recommend that the Board include a statement in paragraph 10 of the proposed auditor reporting standard that each year the auditor is expected to take a fresh look at the CAMs and should not maintain a "rolling inventory" of CAMs that would need to be re-evaluated each year by the auditor with justification for why CAMs in prior periods may not be CAMs in the current period. We believe this is particularly important to avoid any tendency towards boilerplate disclosure.

*Implications of Proposed Standard on the Reissuance of Auditor's Report.* If the identification of CAMs is later questioned through a firm's internal inspection process or a regulatory review process and it is determined that a CAM was omitted from the auditor's report, the Board should consider how such a circumstance will affect the auditor's report and if revisions to the auditor's report will be required (including the presumed corresponding need for the company to amend its Form 10-K to include the revised report). If the auditor concludes that the omitted CAM is not significant in relation to the audit report taken as a whole, we do not believe there would be a need to revise and reissue audit reports and file amended Form 10-Ks. Rather, the auditor would consider any subsequently identified CAMs in connection with the next year's audit to the extent that the CAM remains applicable in the subsequent year. Therefore, we recommend that the PCAOB (1) specifically allow in the standard for auditor judgment to be exercised in applying PCAOB AU 561, *Subsequent Discovery of Facts Existing at the Date of the Auditor's Report,* (PCAOB AU 561) and determining whether reissuance of the auditor's report in question is necessary and (2) should further acknowledge that reissuances are not expected to occur frequently.

*Auditor Tenure.* As indicated in our comment letters to the PCAOB dated December 8, 2011 and April 20, 2012 in response to PCAOB Release No. 2011-006, *Concept Release on Auditor Independence and Audit Firm Rotation*, we performed a comprehensive review of available evidence with respect to the effect of auditor tenure on audit quality, and respectfully believe no nexus exists. Many stakeholders have expressed similar observations. While auditor tenure is a matter of fact, we do have some concern that an auditing standard requiring its inclusion in the auditor's report suggests or implies that tenure has a direct effect on the conduct and quality of the audit, and may lead to ill-founded conclusions regarding auditor independence.

We recognize, however, that some constituents have expressed an interest in disclosure of auditor tenure. If the Board concludes that tenure should be disclosed, we believe there are opportunities to do so in a manner that may alleviate the unintended consequences described above. For example, the Board may consider requiring that tenure information for each company audit engagement be included in a registered firm's annual PCAOB Form 2, rather than in the auditor's report. Registered public accounting firms are currently required to provide to the PCAOB a list of entities audited in an annual PCAOB Form 2, which is publicly available on the PCAOB's website; adding firm tenure to Form 2 would represent another factual disclosure, providing information on a firm's entire audit portfolio in one location. Alternatively, as audit committees are responsible for oversight of external auditors, the audit committee report may also be an appropriate location for disclosure of auditor tenure, if it is determined to be relevant to its oversight. Based on a recent study, 32% of Fortune 100 companies already disclose auditor tenure in the audit committee report or elsewhere in the proxy statement.[3] Recognizing that the PCAOB does not have oversight authority with respect to audit committees and, therefore, does not have the ability to change the proxy or other rules governing required audit committee disclosures, the PCAOB may consider a rule such that if a registrant's audit committee has not disclosed auditor tenure in its most recently issued audit committee report or proxy statement, then the auditor would be required to disclose tenure information either in Form 2 or the auditor's report.

*Discussion of Materiality.* As discussed previously, we believe users of the auditor's report would benefit from a better understanding of the concept of materiality and how it is used by the auditor in the conduct of the audit engagement, including in the evaluation of overall financial statement presentation. We would, therefore, be supportive of including such a discussion in the auditor's report, proposed language for which is as follows:

> The concept of materiality is applied by the auditor in planning and performing the audit and in evaluating the effect of any misstatements on our audit and on the financial statements. The determination of materiality is a matter of professional judgment in light of the particular circumstances, and is affected by the auditor's assessment of what amounts would influence the judgment of a reasonable investor. The determination of materiality requires the consideration of both quantitative and qualitative considerations. As a result, there is not one specific quantitative threshold that is used in determining materiality; rather, a combination of quantitative and qualitative factors is considered. $[*XXX*] was the materiality used in conducting the audit of the consolidated financial statements as of December 31, 20xx and for the year then ended and, when combined with qualitative considerations, was used in concluding whether such financial statements were presented fairly, in all material respects, in conformity with the applicable financial reporting framework.

## PROPOSED OTHER INFORMATION STANDARD

As articulated in the "Overall Comments" section of this letter, we support enhanced auditor association with other information that accompanies the financial statements we have audited. In the proposed other information standard, however, we observe that the language in the auditor's report (which provides an overall conclusion and, therefore, implies assurance on the entirety of other information) does not appear to align with the performance requirement (i.e., to evaluate the information based upon the evidence obtained during the audit). We believe there are two alternatives that would address this issue, and we support the PCAOB pursuing either alternative. If the Board's desire is to add auditor reporting to today's performance requirement (thereby maintaining current auditor practices), the proposed wording of the report will need to be modified so as to not suggest a greater level of assurance than that which can be obtained based on the procedures that are performed. On the other hand, if the Board's desire is for the auditor to provide assurance on some or all of the other information, additional performance requirements would be necessary as some of the other information currently is not addressed by the procedures the auditor performs as part of the financial statement audit or, if applicable, the audit of internal control. Below we discuss additional observations regarding each approach.

**Maintaining Current Auditor Practices.** If the Board prefers to maintain current practices with respect to other information, we offer the following observations and suggestions.

*Definition of "Other Information."* The Board has proposed that the definition of "other information" specifically include exhibits to the financial statements and information incorporated by reference in the annual report, including the proxy statement which may be filed up to 120 days after the year-end encompassed by the Form10-K. For practical reasons, we recommend that the current definition[4] of "other information" be maintained (i.e., "other information" should be defined as the information included in documents containing audited financial statements and the auditor's report thereon). In addition, doing so will avoid the PCAOB having to amend PCAOB AU 561, which addresses a subsequently discovered issue relating to the financial statements that the auditor has reported on, but does not address issues in the other information (such as a subsequently filed proxy statement) included in a document accompanying the audited financial statements.

*Objective of the Auditor in the Context of Other Information.* Paragraph 2 of the proposed other information standard states that the objective of the auditor is to "evaluate whether the other information contains (1) a material inconsistency with amounts or information, or the manner of their presentation, in the audited financial statements ('material inconsistency'); (2) a material misstatement of fact; or (3) both and, if so, to respond appropriately; and when issuing an auditor's report, to communicate in the auditor's report the auditor's responsibilities for other information and whether, based on relevant audit evidence obtained and conclusions reached during the audit, the other information contains a material inconsistency, a material misstatement of fact, or both." If the PCAOB intends to maintain current auditor practice, we recommend the proposed other information standard be revised to reflect that the auditor's objective is to read the other information and identify material inconsistencies with the financial statements based on knowledge gained during the audit of the financial statements (and, if applicable, audit of internal control). "Evaluate" is used throughout the PCAOB's auditing standards in the context of procedures that are performed to obtain reasonable assurance. Inclusion of the word "evaluate" in the proposed objective and in the auditor's report, therefore, implies a higher level of assurance than is present in existing practice and, as such, may cause confusion. In addition, extant PCAOB standards[5] incorporate an important distinction between the responsibilities of the auditor to identify a material inconsistency and a material misstatement of fact, highlighting that while reading the other information to identify material inconsistencies, the auditor may identify matters that may be material misstatements of fact. The extant standard acknowledges that the auditor may not have the expertise to assess the validity of a statement included in other information, that there may be no standard by which to assess its presentation, and that there may be valid differences of judgment or opinion. This distinction is important to preserve because, unlike identifying a material inconsistency with the financial statements, the auditor may have no basis (and may also lack the expertise) to identify a potential or actual material misstatement of fact in the other information.

*Reporting on Other Information in the Auditor's Report.* Under current practice, auditor reporting on other information occurs most frequently when providing a traditional "comfort letter" to underwriters. When an auditor provides a comfort letter, there is no ambiguity about the procedures that have been performed on individual amounts or disclosures. There is also no ambiguity regarding those amounts or disclosures for which the auditor has performed no procedures and, therefore, provides no "comfort" or level of assurance. Without some form of clarity in the auditor's report as to the nature and extent of the auditor's procedures and how those procedures might vary for the different types of other information, investors or users may assume the auditor has done more, which has the potential to exacerbate the expectations gap that currently exists regarding the auditor's association with other information. We believe providing clear language in the auditor's report regarding the auditor's responsibilities will mitigate this risk and suggest the following language for the auditor's report to describe what exists under current practice:

> In addition to auditing the Company's financial statements in accordance with the standards of the PCAOB, we have a responsibility to read other information included in the annual report on [*SEC Exchange Act form type*] filed with the SEC that contains both the December 31, 20X2 financial statements and our audit report on those financial statements, and based on relevant audit evidence obtained and conclusions reached during the audit of the financial statements [and internal control over financial reporting], consider whether such information, or the manner of its presentation, is materially inconsistent with information, or the manner of its presentation, appearing in the financial statements. Our responsibility with respect to other information does not extend beyond the procedures we performed on the financial statements identified in our report. Therefore, certain elements of other information were not subject to any procedures beyond reading because the audit evidence obtained and conclusions reached during our audit of the financial statements [and internal control over financial reporting] were not relevant to such other information. We did not audit the other information and do not express an opinion on the other information. Based on our reading of the other information and our consideration of the other information in light of relevant audit evidence obtained and conclusions reached during the audit of the financial statements [and internal control over financial reporting], nothing came to our attention that caused us to believe that the other information included a material inconsistency with the financial statements.

**Expanding Auditor Involvement with Other Information.** Expanding the auditor's involvement to include the entirety of the other information (as currently defined in the proposed standard) is also an option. We believe expanded auditor involvement with many elements of other information would add value to investors and other users of companies' Form 10-K filings. Depending on the extent to which auditor involvement is expanded, significant additional costs could also result. If the intent of the Board is to expand the auditor's involvement with other information and to provide some form of assurance on it through expanded auditor reporting, we believe explicit performance requirements for the auditor will be necessary, particularly in the context of qualitative other information, and other information not directly related to the financial statements. As the proposed other information standard is currently drafted, the auditor is to use information already obtained in the conduct of the audit and not perform additional procedures to evaluate the other information. As a result, it is likely that the auditor will have limited or no basis for evaluating certain non-financial data or other qualitative statements included in the other information. There are numerous examples of such other information; some examples include certain backlog information, the number of patents owned by the company, market share data by country, square footage of company facilities, and qualitative assertions regarding the reliability of individual products. The explicit performance standards needed to address these and other types of other information should consider, among others:

- How to evaluate qualitative statements or assertions;
- How to assess the materiality of non-financial data;
- What procedures are necessary when a potential material misstatement of the other information exists;
- Reporting requirements to ensure that users understand the scope and nature of the auditor's procedures and the level of assurance being provided on the other information;
- Audit documentation requirements.

We would be pleased to work with the PCAOB staff to create a workable model for expanded auditor involvement with other information.

*Attestation on Management's Discussion and Analysis (MD&A).* Another option the PCAOB could pursue for expanding the auditor's involvement in other information would be to suggest that audit committees consider attestation engagements regarding MD&A, or a portion thereof (e.g., critical accounting policies). The Board may wish to consider outreach with audit committees and the investor community, and engaging in discussions with the SEC regarding such engagements. We observe that current PCAOB Attestation Standard 701, *Management's Discussion and Analysis*, (PCAOB AT 701) provides guidance for the auditor to attest to MD&A. The benefit of pursuing this alternative is that standards already exist for the auditor to perform such an engagement and the current standard permits either a review or an examination of MD&A (i.e., provides for an engagement based on varying levels of assurance). Further, the information contained within MD&A generally is both within the competence of the auditor and closely associated with procedures performed by the auditor during the audit of the financial statements. However, we note very few instances in which an auditor has been engaged to provide this level of assurance.

An examination report under PCAOB AT 701 would result in a report from the auditor on whether "the presentation includes, in all material respects, the required elements of the rules and regulations adopted by the SEC; the historical financial amounts included therein have been accurately derived, in all material respects, from the Company's financial statements; the underlying information, determinations, estimates, and assumptions of the Company provide reasonable basis for the disclosures contained therein." We believe such an examination report may also meet the objectives of the Board with respect to the auditor's involvement with other information.

## OTHER MATTERS

### Applicability to Audits of Brokers and Dealers.

*Identification and Communication of CAMs.* As discussed in Appendix 5 of the proposal, there are no issuers among the 4,230 brokers and dealers that filed annual audited financial statements with the SEC and only 9% are subsidiaries of issuers. Of the remaining brokers and dealers, approximately 90% are owned by an individual or an entity that owns more than 50%, and approximately 75% have five or fewer owners. Additionally, almost 45% of brokers and dealers file statements of financial condition separately from the balance of the financial statements to obtain confidential treatment of their filings, including the full set of financial statements. For these brokers and dealers, only the auditor's report on the statement of financial condition would be available to the public, and the auditor's report on the full set of financial statements would be confidential and not available to the public. While applying the CAM requirements to audits of financial statements of audits of brokers and dealers would be possible, given (1) the closely held nature of many broker dealers, (2) the fact that in 45% of cases, only limited financial information is available publicly, and (3) what appears in most cases to be a limited number of users of their financial statements, we do not believe that there would be corresponding value to investors of CAM reporting in the same way as for issuers. Accordingly, we do not believe that the requirements relating to identification and communication of CAMs should apply to audits of financial statements of brokers and dealers.

*Auditor Responsibilities for Other information.* We believe the SEC's amendments to Rule 17a-5 provide users of financial statements of brokers and dealers with sufficient information and already require reporting by the auditor on various aspects of other information, such that additional reporting would not be necessary. Auditor reporting includes, as pointed out in Footnote 101 in Appendix 6 of the proposal, reporting on supporting schedules required by Rule 17a-5 in accordance with Auditing Standard 17, *Auditing Supplemental Information Accompanying Audited Financial Statements and Related Amendments to PCAOB Standards* (which was issued subsequent to the PCAOB's other information proposal). Therefore, we do not believe the proposed other information standard should apply to audits of financial statements of brokers and dealers. In addition, the language that would be required by the proposed auditor reporting standard regarding responsibilities with respect to other information should also not be required in the context of brokers and dealers.

### Applicability to Investment Companies.

*Identification and Communication of CAMs.* Appendix 5, page A5-61 of the proposal discusses the Board's consideration of comments to their concept release by investment companies. These commenters expressed the view that additional auditor reporting requirements should not apply to investment companies and that "financial statements [are] inherently less complex than operating companies' financial statements and … that the limited nature of an investment company's operations entails fewer estimates and judgments." We agree with the views expressed by these commenters and believe that the requirements to identify and communicate CAMs in the auditor's report should not apply to audits of investment companies. Registered investment companies typically have an operating company or investment advisor, and sometimes hundreds of registered investment companies can exist under that operating company. Due to the similar nature of the financial statements of registered investment companies, if auditors of investment companies were required to identify and report on

CAMs in the auditor's report, the CAMs identified would become standardized across the numerous funds and from one complex to the next and likely from one year to the next as strategies of investment companies do not change significantly; thereby resulting in the disclosures providing little if any benefit to investors. As such, the Board's objectives in reporting CAMs (i.e., to provide unique insights regarding the audit and related financial statements) will not be achieved.

*Auditor Tenure.* If the Board does decide to require disclosure of auditor tenure in the auditor's report or in PCAOB Form 2, there are some unique implementation challenges that would arise when applying this requirement to auditor's reports on financial statements of investment companies. As such, if ultimately required to be included in either the auditor's report or in its Form 2, we believe auditor tenure should only relate to the relationship with the investment company complex as a whole and not to the relationship with each investment company. Investment companies are created frequently under an investment company complex, and typically the auditor is the auditor of multiple related investment companies within the same operating environment. Reporting auditor tenure at the investment company level would have little meaning, as these entities may be frequently formed and merged or liquidated. For example, as currently proposed, if a particular audit firm has been the auditor of an investment company complex for ten years and this investment company complex created five new investment companies in the current year, the firm would report only a one-year tenure at the investment company level for the five new funds. To report different tenure periods at the operating company and investment fund levels would be confusing and/or misleading to investors. Therefore, if the Board ultimately requires disclosure of auditor tenure, we suggest that it only be required for the relationship at the investment company complex level.

## Applicability to Emerging Growth Companies and Initial Public Offerings.

In the proposal, the Board is soliciting feedback on the applicability of the proposals to emerging growth companies (EGCs). We do not believe there is a basis for exempting audits of EGCs from the requirements of the final standards as we believe investors of these companies would benefit from the additional information communicated in the auditor's report in the same way that investors of larger companies would. While some level of incremental costs will of course result from the application of the proposals, we believe the suggestions we offer in this letter would help manage costs for audits of companies of all sizes. With respect to the requirement to communicate CAMs in the auditor's report, we believe the final auditor reporting standard should clarify whether CAMs are required to be reported in the context of IPOs.

## Increase in Auditor Liability.

The proposals represent an important step to ensure the auditor's report includes information that is responsive to the needs of users and remains relevant and valuable to the functioning of our capital markets. As a result, concerns over auditor liability should not stand in the way of moving forward. Rather, auditor liability concerns should be recognized and managed as the Board proceeds.

We believe that the proposed standards, if adopted, do present the potential for increased litigation. The PCAOB recognizes in the proposal that new statements will be made in the auditor's reports that could potentially raise new liability. The proposed new auditor statements — both with respect to CAMs and other information — could engender claims under Section 10(b) of the Exchange Act, Section 11 of the

Securities Act of 1933, and various state laws. For example, if the proposed auditor reporting standard is adopted, auditors will be subject to challenge based on the selection of matters considered to be CAMs and those that they do not consider to be CAMs. Plaintiffs will also invariably challenge the sufficiency of the auditor's evaluation of and disclosure about other information. Also of concern is the possible effect that disclosing CAMs may have on undermining efforts by Congress, which imposed the stringent pleading standards of the Private Securities Litigation Reform Act of 1995 (PSLRA), to curtail non-meritorious claims against auditors and avoid the costs and burdens associated with them. Plaintiffs will use descriptions of an auditor's procedures in its CAM disclosures to try to plead around the strict requirements of the PSLRA and federal jurisprudence that has interpreted it. The modifications suggested elsewhere in this comment letter may help mitigate some of the concerns relating to the effect of the proposed standards on an increase in litigation.

* * *

D&T appreciates the opportunity to provide our perspectives on these important topics. Our comments are intended to assist the PCAOB in analyzing the relevant issues and potential effects of the proposals. We encourage the PCAOB to engage in active and transparent dialogue with commenters as the proposed standards are evaluated and changes are considered. If you have any questions or would like to discuss these issues further, please contact Joseph Ucuzoglu at 202-879-3109, William Platt at 203-761-3755, or Megan Zietsman at 203-761-3142.

Very truly yours,

## EXHIBIT 1 — Summary Results of Field Testing

In order to provide meaningful feedback to the Board during the comment process and as requested by the Board, we conducted limited field testing (including interaction with financial management) of aspects of identifying and communicating CAMs. We conducted field testing with nine engagement teams each of which was responsible for a separate audit; the applicable companies had revenues ranging from approximately $500 million to more than $50 billion. The field testing included, among other steps, identifying potential CAMs based on the guidance in paragraphs 7- 9 of the proposed auditor reporting standard. The determination of the final CAMs was made based on the consideration of the factors included in paragraph 9 along with additional factors we have recommended in the body of our letter. Summary results of our field testing are provided below:

| **Summary** | |
|---|---|
| **Identification of CAMs** | |
| Range of potential CAMs identified | 12 – 120 |
| Average # of potential CAMs identified | 40 |
| Range of final CAMs identified | 1 – 12 |
| Average # of final CAMs identified | 4 |
| **Characteristics of CAMs** | |
| % of final CAMs identified that were matters the engagement team had already discussed with the audit committee | 100% |
| % of final CAMs that are also included in at least one of the following: the discussion of risk factors in the 10-K, the discussion of critical accounting policies in the company's MD&A, and the footnotes to the financial statements | 82% |

[1] The PCAOB may need to consider whether providing original information regarding a company may implicate non-U.S. privacy and confidentiality laws and regulations, as well as accountants' professional obligations. For example, it appears that several countries impose strict confidentiality requirements on accountants not to reveal information about their work. In several countries, a violation of these confidentiality provisions also constitutes a criminal offense.

Re: PCAOB Rulemaking Docket Matter No. 034 Proposed Auditing Standards The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and The Auditors' Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report

Dear Board Members;

Thank you for the opportunity to comment on the rulemaking referenced above. My comments are written from the perspective of specific constituents of the PCAOB: small, independently owned, non-public, non-custodial broker-dealers.

These firms, numbering approximately 4000, are not public companies. They are privately owned and operated small businesses. Approximately 1800 of these firms generate less than $1mm in annual revenues. Many of these firms have fewer than 50 employees.

For these small independent businesses, the proposed rules will inflict significant additional costs, with little or no relevance to the mission of the PCAOB, which is to protect the interests of public investors and to promote investor protection. Public investors do not review the audits of these privately held companies. The investors in these small businesses are the owners themselves.

I believe it is entirely consistent with the PCAOB mission for the Board to exercise its authority under the Dodd Frank Act, and exempt the auditors of small, privately held, non-custodial broker-dealers from its oversight.

Best regards,

//Lisa Roth//

**To:** Comments
**Subject:** Docket 034: Proposed Auditing Standards on the Auditors" Report
**Date:** Friday, November 15, 2013 12:07:06 PM

I am a retired business executive. I am presently the chair of the audit committees of two public companies. My career in business includes being an audit partner with a big five accounting firm, a CFO of a major public company, and a board member of four public companies. In my role as CFO I supervised the Treasurer of my company and was very active in setting investment policy as well as the controls over the investment process. Also in that role as CFO I was the companies spokesperson to Wall Street analysts and investors and had extensive contact with that community.

I respectively suggest that the proposed changes in the Auditors' Report set forth in the Docket are not necessary and go against the rule "if it ain't broke don't fix it".

First of all, the proposed changes of having an Auditors' Discussion go against the long standing precept that the financial statement are the responsibility of management. The separation of the auditor from this primary responsibility should not be clouded. Sarbanes-Oxley has done much to reinforce this precept by requiring the CEO and CFO certifications. It is working. CEO's and CFO's are taking their responsibilities very seriously. Auditors should continue to opine of the financial statements and investors should not be confused about who has the primary responsibility.

Second, Sarbanes-Oxley has done much to reinforce the role and responsibilities of the audit committee in overseeing the production and communication of financial information to the investment community. We take our role very seriously. And the regulations contained in Sarbanes-Oxley are very effective. Audit committees are much more effective than before the SO rules and review and stay close to the "quality of earnings" of the companies they serve. Auditors are very candid with their audit committees about the financial statement they opine on both in general sessions and executive sessions with the audit committees.

And finally, I see little benefit to the investment community. With all of the disclosures required today by the SEC in our 10-Qs and 10-Ks there is more than sufficient information for the investor to make appropriate decisions.

These proposals will do little to improve the information available to investors and may indeed confuse the roles of the company and its auditor in the financial reporting process. More is not always better. These rules should not be adopted.

Respectfully,

Boh A. Dickey, CPA
Woodinville, Wa. 90872

File Reference: **PCAOB Rule Making Docket Matter No. 34- Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards**

Dear Office of the Secretary,

As the Chief Accounting Officer of DIRECTV, we appreciate having the opportunity to comment on the PCAOB's Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards ("Concept Release"). We also appreciate the PCAOB's concerns about the information and value of the auditor's report to promote the usefulness and informational value to users of financial statements. We understand the benefits the Board believes will ensue from an enhanced audit report and additional auditor responsibility for other information included in a Company's annual report filed with the Securities Exchange Commission ("SEC").

We agree with the Board that as the informational needs of users of financial statements and the amount of information available to them evolves, financial reporting by auditors, management of the company and the audit committee must change to meet those needs and such changes may include additional information. We agree that the auditor's report is an important communication of the audit work performed. We support the Board's proposal to include additional disclosure by the auditor to clarify that they are independent and to disclose their tenure with the company.

As part of our rigorous financial reporting process, we evaluate critical judgments and estimates and disclose these matters in our SEC filings based on generally accepted accounting principles in the United States, SEC requirements and if we as a company believe the information would be useful information to an investor. We review and discuss disclosure matters with both our disclosure committee and audit committee, as well as with our auditors. We believe we appropriately communicate critical accounting matters in our financial statement and footnotes. Under the proposal, our auditors could potentially be required to disclosure information that we as a company, along with our disclosure committee and audit committee have determined need not be disclosed.

2230 E. Imperial Hwy El Segundo, CA 90245

As a company, we work very closely with our auditors in the preparation of all of our SEC filings. They are active participants in the review process of the entire document and comply with the current auditing standard which requires them to read other information included in the filing and consider whether the other information is materially inconsistent with the financial statements. As part of our existing financial reporting process, we carefully consider and evaluate the input we receive from our auditors regarding other information included in our SEC filings. Because all information included in our SEC filings is the responsibility of our management, we do believe that the ultimate decision about what is communicated to our investors in other information should be made by the company and not by our auditors.

Thank you for this opportunity to comment on the PCAOB Concept Release No. 2013-005, Rulemaking Docket Matter No. 34.

Very Truly Yours,

John F. Murphy
Senior Vice President and Chief Accounting Officer

**Re: PCAOB Rulemaking Docket Matter No. 034**

To the members of the Board:

Thank you for the opportunity to comment on the rulemaking referenced above. My comments are written from the perspective of specific constituents of the PCAOB, namely:

## Small, Independently-owned, Non-public, Non-custodial, "Introducing" Broker-Dealers and Investment Advisers.

Our firms, numbering approximately 4000, are **NOT** public companies. They are privately-owned and operated small businesses. Approximately 1800 of these firms generate less than $1mm in annual revenues. The majority of these small firms have fewer than 50 employees.

For these small independent and privately-owned businesses, the proposed rules will inflict significant additional costs, with little or no relevance to the mission of the PCAOB, which is to protect the interests of public investors and to promote investor protection. Public investors do not review the audits of these privately held companies. The investors in these small businesses are the owners themselves.

I believe it is appropriate and consistent with the PCAOB mission for the Board to exercise its authority under the Dodd Frank Act, and **exempt** the auditors of small, privately held, non-custodial "introducing" broker-dealers and investment advisers from its oversight.

It is important that regulation for **small firms** remain relevant to the business model and investing public.

We encourage the Board to seriously consider the matter of a **small firm exemption**.

Thank you for your consideration,

Ray Thompson

DTE Energy

December 11, 2013

Office of the Secretary
Public Company Accounting Oversight Board
1666K Street, N.W.
Washington D.C. 20006-2803

**Re: Request for Public Comment – Docket 034: *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* and *Reports on Audited Financial Statements, and the Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report***

Dear Office of the Secretary:

DTE Energy Company ("DTE," "we," "us," "our," or the "Company") values the opportunity to respond to the Public Company Accounting Oversight Board's ("PCAOB" or "Board") proposed auditing standards. We also appreciate the Board's extensive efforts to solicit feedback from stakeholders, and the careful consideration thereof.

DTE is a diversified energy company involved in the development and management of energy-related businesses and services nationwide. Our revenues for the year ended December 31, 2012 were approximately $8.8 billion, and we employ approximately 10,000 people. Our electric and gas utility businesses have each been in operation for over a century and together provide services to more than three million residential, business and industrial customers throughout Michigan. We have leveraged that wealth of experience and assets to develop a number of non-utility subsidiaries which provide energy-related services to business and industry nationwide. We prepare consolidated financial statements in accordance with accounting principles generally accepted in the United States of America that we file with the U.S. Securities and Exchange Commission. Our securities are listed and traded on the New York Stock Exchange.

We value the financial statement audit and the consequential benefits to maintaining strong financial markets. Accordingly, we are fully supportive of changes to the auditor's report that serve to narrow the gap between what is expected of the auditors by financial statement users and what is actually conveyed. However, we are not supportive of any changes to the auditor's report that i) do not enhance its usefulness and meet the needs of financial statement users; ii) could compromise the relationships between issuers, auditors, audit committees and financial statement users; iii) would require auditors to disclose information about issuers that is subjective, lacking appropriate context and not otherwise required by U.S. Securities and Exchange Commission ("SEC") rules and regulations; and iv) do not have apparent benefits that exceed costs. The following pages provide our thoughts and views on the key facets of the proposed standards.

*Enhancements to Certain Standardized Auditor Report Language*

We agree with the Board's proposal to retain the current pass/fail model of the existing auditor's report, as it is a concise indication that the financial statements are fairly presented and free of material misstatement. Further, the current pass/fail reporting model provides for consistency from period to period and comparability across audits, thereby eliminating the need for user interpretation of the auditor's conclusion.

We are not opposed to the proposed enhancements to the auditor report in the Board's illustrative example with respect to the addressees of the report, as well as the introduction, basis of opinion and opinion on the financial statements paragraphs with the following exception. We believe that inclusion of the tenure of consecutive years that an auditor has served as the registered independent public accounting firm for an issuer of financial statements should not be included within the auditor opinion. Audit committees are responsible for ensuring that auditors are independent and that their audits are completed in accordance with all applicable standards, regardless of auditor tenure. Additionally, as the Board noted in its proposal, information regarding changes in auditors is currently available to investors, as filers are required to publicly disclose this information on Form 8-K via the EDGAR system. The Board also acknowledged in its proposal that current empirical data is inconclusive at best in drawing a connection between auditor tenure and audit quality. We believe that inclusion of auditor tenure in the auditor report would imply that the Board and other standard setters believe that a correlation does exist, and that users of financial statements should therefore give weight to the auditor's tenure in connection with the other risk factors that they assess in forming decisions. Until such time that conclusive or highly compelling evidence that supports inclusion of this data point exists, we find that it would be an unnecessary modification as it could lead to unwarranted and speculative conclusions by users of financial statements regarding audit quality and perceived risk. If the standard setting community does find auditor tenure to be predictive of audit quality and a meaningful data point to investors, we believe that proxy filing requirements are a more appropriate target to make this revision than the auditor report.

*Auditor Reporting of Critical Audit Matters*

We agree with and thank the Board for tabling the auditor's discussion and analysis ("AD&A") alternative that was included in the concept release. The AD&A would have indeed represented a fundamental shift in the role of the auditor with the potential for unintended and undesirable consequences, the foremost of which would have been auditors disclosing original or conflicting information concerning an issuer. While the critical audit matter ("CAM") model represents a preferred alternative for us as compared to the AD&A model, we question whether or not inclusion of CAM in the auditor's report as currently proposed would effectively serve the needs of users of financial statements.

We believe that the reporting of any and all company information is, and should remain, the responsibility of management and those charged with governance. Any alteration thereto would undermine the role of the audit committee and its relationships with management and the auditors. The success of these relationships is based on periodic and dynamic communications between parties. Conversely, the proposed standard would result in confusion and misinterpretation as users of financial statements would not share the benefit of open dialogue and receive only one-dimensional CAM information from auditors. Further, requiring auditors to report matters that would have traditionally been discussed and settled with management and the audit committee may limit the candor and completeness of those discussions.

Based on the subjective nature of identifying CAM, auditors' reports could range from reporting zero CAM to an overwhelming and unfocused amount of CAM. Both of these alternatives would undercut the intent of the proposal, not be meaningful to users and create a lack of comparability between auditor reports. Due to the broadness of the proposed standard, the majority of auditor reports would presumably include an unmanageable number of CAM in an attempt to achieve complete coverage. In addition, highlighting a set of matters is inconsistent with the auditor forming the basis for its conclusion on the financial statements taken as a whole and not on a piecemeal basis. The examples of auditor reported CAM that were illustrated in the proposed standard provide objective facts and circumstances, but only insofar as describing how and why the auditor found a matter to be a CAM. The auditor need not provide any further information or conclude individually upon CAM. Without further context, users of financial statements could perceive CAM to have negative connotations or equate CAM to the existence of an issue. The CAM examples in the proposal are also largely redundant with information disclosed by management.

In addition, the proposed standard calls for auditors to identify and report CAM through the lens of the audit. This will no doubt result in CAM including matters of significance to the auditor that are more than likely inconsequential to users of financial statements. An example is the inclusion of a CAM for an audit area that is difficult to test or observe. Such a CAM may be in the ordinary course of business for a given issuer, without any unique risk and unrepresentative of an aggressive accounting practice or policy. The fact that a matter may have been difficult for the auditor to test is not by itself indicative of increased risk or relevance to users of the financial statements. CAM would therefore cloud the auditor report by adding information that has limited meaningfulness to users of financial statements and render the conclusion more difficult to decipher.

Following our previously mentioned concern regarding AD&A and the potential for auditors to become providers of original issuer information, CAM could also represent information disclosed by the auditor that would not otherwise be disclosed by the issuer (e.g. a significant deficiency in internal control over financial reporting). In our view, CAM should not change the traditional role of the auditor, or cause them to report information that is in conflict with or not required by existing standards. Any and all public disclosures regarding issuers should be governed by SEC rules and regulations, and PCAOB standards should not indirectly alter those rules and regulations.

*Auditor Responsibilities Regarding Other Information*

We are not opposed to the auditor’s report including clarifying language of the auditor’s existing responsibilities over information outside of the financial statements. However, we do not believe that the scope of the auditor’s responsibilities should be altered as the existing standard for auditors to “read and consider” the information outside of the financial statements and identify and communicate material inconsistencies and/or material misstatements of fact through the corporate governance process is appropriate and sufficient in our view.

An extension of auditors’ responsibilities to “read and evaluate” and report conclusions on information outside of the financial statements beyond the current scope of AU sec. 550, *Other Information in Documents Containing Audited Financial Statements*, would not be a meaningful step towards meeting the desires of users of financial statements for more informative auditor reporting and deeper insight into financial information. Under existing rules and regulations, management and those charged with governance are collectively responsible for ensuring the completeness and accuracy of information outside of the financial statements. This information is inherently predicated upon a multitude of factors regarding risk, uncertainties, opportunities, trends and industry knowledge and expertise. Accordingly, this information may not be easily verifiable or subject to clear standards of assessment. Without a robust and tested framework, and as they are not experts in general and non-financial matters, auditors could reach varying conclusions on information outside of the financial statements that create inconsistency between audit reports. Additionally, broad application of the proposed standard to other information that is included within a document, exhibits or information incorporated by reference would result in an onerous set of procedures to be performed by the auditor. The time and effort required for evaluation of such a volume of information would be extensive, result in significant increases in audit fees and delay the issuance of information relevant to users of financial statements.

The introduction of tiered levels of assurance (i.e. “audited” vs. “evaluated”) within the auditor report could leave users of financial statements with an unclear understanding of the scope and basis for auditor conclusions and further widen the expectation gap. The basis of opinion section of the auditor report in both the current and proposed standards defines the audit by leveraging the concept of evaluation (i.e. evaluating the accounting principles used, significant estimates made by management and the overall presentation of the financial statements) thereby implying a synonymous relationship between audit and evaluate. We acknowledge that the modifications to the auditor report in the proposed standard would specify that the other information is not audited. Nonetheless, we believe that users of financial statements would have an incomplete understanding of the different levels of assurance being communicated and difficulty determining the basis by which the auditor reached its conclusion over the unaudited information.

*Conclusion*

We understand the evolving needs of users of financial statements and appreciate the Board’s commitment to achieving progress in the auditor’s reporting model. We agree with enhancements to the auditor report that clarify the role and responsibilities of the auditor. However, we are not supportive of changes that do not provide meaningful value to users of financial statements or that alter the scope and nature of the audit. Enhancements to the auditor report may indeed be valuable to users of financial statements, but the financial community would experience a greater return from changes that facilitate explicit enhancements to the quality of the audit itself over deterrent-based modifications to the auditor report.

We thank the Board for the opportunity to share our thoughts on the proposed standards. If you would like to discuss our letter further, or if there are any questions from the Board or PCAOB staff that we can address, please contact Donna England (313-235-3510).

Sincerely,

/s/ Donna M. England

Power by Association℠

Edison Electric Institute

December 11, 2013

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington DC 20006-2803

**File Reference:** PCAOB Rulemaking Docket Matter No. 034

Dear Ms. Brown:

The Edison Electric Institute ("EEI") respectfully submits our comments on the Public Company Accounting Oversight Board's ("PCAOB" or "the Board") proposed audit standards included in Release No. 2013-005 addressing both *The auditor's report on an audit of the financial statements when the auditor expresses an unqualified opinion* (the "proposed auditor reporting standard") and *The auditor's responsibilities regarding other information in certain documents containing audited financial statements and the related auditor's report* (the "proposed other information standard").

EEI is the association that represents all U.S. investor-owned electric companies. Our members provide electricity for 220 million Americans, operate in all 50 states, and directly employ more than a half-million workers. With more than $85 billion in annual capital expenditures, the electric power industry is responsible for millions of additional jobs. EEI has 70 international electric companies as Affiliate Members, and 250 industry suppliers and related organizations as Associate Members. Organized in 1933, EEI provides public policy leadership, strategic business intelligence, and essential conferences and forums.

**Overall concerns**

EEI appreciates the PCAOB's efforts to enhance the information provided to investors and financial statements users. We agree that financial statement users should have access to timely, accurate, objective and relevant information for purposes of making investment decisions. However, we strongly disagree with the proposed auditor reporting standard and proposed other information standard included in PCAOB Release No. 2013-005. We believe a company's financial information and the communication of that information is management's responsibility. We believe the SEC and the FASB should continue to serve as the standard setters for establishing the requirements for information to be provided to investors, and that management should be responsible for communicating such information.

The SEC has enacted various regulations over time (including designation of FASB as the organization responsible for promulgating US GAAP) on *what* information needs to be disclosed. Importantly, these rules designate management as the responsible party to determine *how* to communicate this information to most accurately reflect a company's financial results and position. The role of the external auditor is to verify that the information presented by management complies with the applicable SEC / FASB requirements and is presented fairly in all material respects. When such requirements are met, an auditor provides an unqualified audit opinion to investors. In the event that the financial statements do not meet these requirements, the external auditor is required under AU Section 508 to issue alternative audit opinions.

The audit committee is comprised of a subset of a company's shareholder-elected Board of Directors and is required to be independent[1] and either include at least one Financial Expert [2] or disclose why there is not one. This independent committee is charged with oversight of both the auditor and management's financial reporting. The SEC and PCAOB provide additional oversight of management, the audit committee and external auditors by reviewing the financial statements and the audits thereof to ensure these parties are performing their duties appropriately. If management, the audit committee, and the external auditors fulfill their respective responsibilities to communicate timely, accurate, objective and relevant information to financial statement users that is audited in accordance with existing professional standards, we believe the additional communications and requirements outlined in the proposed auditor reporting standard and the proposed other information standard are unnecessary.

In addition to these overall concerns, we provide the following specific observations regarding each proposal.

## The Auditor Reporting Standard

Of the various requirements proposed in the auditor reporting standard, we most strongly disagree with the requirement that the auditor disclose critical audit matters (CAMs) within the audit report. As such, we have limited our response on the auditor reporting standard to this matter. We believe the proposed standard would undermine the role of the audit committee and could be detrimental to the usefulness and relevance of the audit report. Further, we believe the proposed standard would result in lack of consistency and comparability of auditors' reports across companies while increasing the cost of regulatory compliance.

---

[1] Sarbanes-Oxley Act Section 301
[2] SEC Release No. 33-8177

*The proposal would undermine the role of the audit committee and could be detrimental to the usefulness of the audit report*

The audit committee, as part of the shareholder-elected Board of Directors, has the authority to oversee the audit and ensure the financial statements contain appropriate disclosure on behalf of shareholders. With its access to auditors, management and the Board of Directors, the audit committee has the requisite knowledge, perspective and authority to ensure the various risks or issues of the reporting entity are disclosed in a manner commensurate to their materiality and relevance to investors. The Board's proposal would undermine this oversight role by effectively requiring the auditor to make disclosure notwithstanding the views of the audit committee. Furthermore, this requirement could potentially limit discussions of significant audit matters with the audit committee or put the auditor in the role of making disclosures in their audit report of *any* significant audit matter discussed with the audit committee in order to avoid being challenged by the PCAOB. We believe that these considerations could have an adverse impact on the role of the audit committee by reducing transparency between the independent auditor and the audit committee. We believe investors are best served by retaining the audit committee as the primary oversight of the audit process.

In addition to the above, in the preparation of the financial statements, management has the responsibility to develop disclosures with sufficient clarity to aide investors and analysts, while not providing information that could be used by competitors or litigators to the company's detriment. This fiduciary duty is entrusted to a company's management and Audit Committee by the shareholders and does not extend to the company's audit firm. Requiring audit firms to disclose critical audit matters may result in a conflict of interest between an audit firm's interests to reduce its own regulatory and litigation risk and an Audit Committee / management's fiduciary interests to not disclose proprietary or other competitively sensitive information.

The auditor is expected to conduct an audit to obtain reasonable assurance that the financial statements are materially correct when taken *as a whole*. The auditor's report does not include, nor do we believe it would be appropriate or practical to include, all of the factors considered by an auditor when forming the overall audit conclusion. Therefore, without the full context of a company's financial transactions, business environment and internal controls obtained by the auditor throughout the audit process, an investor may inappropriately over-emphasize the importance of a CAM when making an investment decision. Likewise, highlighting CAMs in the audit report may lead investors to over-emphasize certain risks because they are disclosed as a CAM and under-emphasize other important business risks that may not meet the proposed CAM disclosure criteria. Additionally, disclosure by the auditor of the most difficult aspects of the audit may be interpreted by some as the auditor expressing reservations in their report on those transactions or accounts affected by a CAM, or as the auditor providing a "piecemeal" opinion on the financial statements which would undermine the usefulness, authority, and credibility of the audit report.

*The proposal would undermine the relevance of the audit report/financial statement disclosures*

The matters that would be required to be disclosed as CAMs should already be provided in the financial statements or are not material to investors in making investment decisions. The proposal states that CAMs are those matters addressed during the audit that (1) involved the most difficult, subjective, or complex auditor judgments; (2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or (3) posed the most difficulty to the auditor in forming the opinion on the financial statements. Many of those matters meeting the criteria above relate to subjective or complex accounting areas which are already disclosed within the financial statements as required by US GAAP or SEC rules. Examples include critical management judgments, risks and uncertainties, and accounting estimates and policies. Repeating these disclosures in the audit report would result in duplicative disclosure and would undermine the relevance of either the audit report or the financial statement disclosures. If any additional information or disclosure is deemed necessary, such disclosure should be addressed by the SEC and the FASB as part of the financial reporting standard setting process.

The proposed standard would also require that auditors disclose certain audit matters that we do not believe would be considered relevant to investors when making investment decisions. Examples include the level of audit effort applied to a particular account, immaterial or corrected misstatements, change in auditor risk assessment, and an auditor's use of a specialist. Such items may provide information on a business's accounting operations or an auditor's approach, but do not impact the underlying economics or accounting of the business and therefore may not be considered relevant by investors.

*Auditor reporting would no longer be comparable or consistent across entities*

Under the proposed standard, the auditor's determination of what is considered to be a CAM will involve a considerable amount of professional judgment and will decrease comparability of the auditor's report. There is a risk that auditors may take a conservative approach and include numerous CAMs in order to avoid potential PCAOB inspection findings or litigation, resulting in voluminous disclosure within the audit report and thereby obscuring the overall opinion. Further, investors may incorrectly interpret longer auditors' reports as an indicator of higher investment risk rather than as a matter of an auditor's professional judgment or reporting policy. There is also the risk that each audit firm's interpretation of what meets the definition of a CAM will differ, resulting in lack of comparability between audit reports for similar companies or industries. We therefore have concerns that the auditor's subjective determination of what is considered to be a CAM could be used erroneously as the basis for, or at least influence, differences in investor decisions among otherwise comparable entities.

*Potential implementation challenges and cost considerations*

We believe that the PCAOB should undertake a cost-benefit analysis to assess whether the increased costs of compliance with the proposal would outweigh any perceived benefit. A significant amount of additional time would be required by audit firms in order to develop, review and present CAMs, which would result in increased audit fees. Extensive discussion and consultation with Company management, legal and the audit committee would also be required, resulting in increased internal costs. Further, because some CAMs may not be identified until late in the audit process as the audit is performed, this additional work would be required during an already busy period within the audit and financial reporting cycle which would impact the timing of SEC filings, and would likely lead to filing delays. Consequently, the ability of investors to obtain financial information in a timely manner would be hindered. It is not clear to us that additional time and effort to comply with this standard would be cost beneficial to investors if management has complied with its responsibilities in preparation of financial statements.

While we do not support the inclusion of CAMs in the auditor's report, if the Board ultimately determines to implement the rule as proposed, we request that the effective date be delayed to allow companies and auditors to field test how the CAM provision would be applied in practice and provide an opportunity to mitigate the potential issues identified above.

**The Other Information Standard**

We support adding language to the auditor's report that will *clarify* the auditor's procedures and responsibility for other information contained in SEC filings (such as the MD&A). We do not support *expanding* the auditor's responsibilities regarding other information, or including language in the auditor's report that could be perceived as an expansion of the auditor's responsibilities. We believe the proposal would lead to higher costs with no commensurate benefit to investors. Further, we believe the proposal as written would result in several practice issues that would result in inconsistent application among audit firms.

Management should continue to prepare and present the other information contained in the annual reports of public companies, with over-sight from the Audit Committee, without the additional costs of such information being subject to additional procedures by the auditors. We support the retention of existing procedures contained in AU sec. 550, *Other Information in Documents Containing Audited Financial Statements,* which require auditors to "read and consider" other information to ensure the information is consistent with the audited financial statements. We believe AU 550 provides an appropriate level of assurance for the other information considering both the costs and benefits of such assurance.

We believe the "read and evaluate" language included in the proposed standard implies, and is likely to result in, a level of additional procedures that is substantively different from and greater than the requirements set forth in AU sec. 550. We do not agree with this change in the proposed language as it will have far reaching impacts on the procedures currently being applied to other information. We believe that, in carrying out their professional responsibilities, auditors presently are conducting a sufficient level of review commensurate with the nature and purpose of that information.

We believe the use of the term "evaluate" will prompt auditors to expand their procedures substantively beyond the existing requirements in AU sec. 550 resulting in unnecessary procedures and increased costs. Furthermore other information contained in annual reports is often subject to change late in the audit process. Similar to the timing of CAMs, the additional work over other information will be required during an already busy period within the audit and financial reporting cycle and would lengthen the timing of a company's SEC filings to the detriment of investors.

Alternatively, we recommend that the Board retain the existing procedures in AU sec. 550 but ensure that the language presented in the auditor's report clearly communicates what those existing procedures entail. If the Board believes further clarity is warranted to differentiate the level of assurance provided within the financial statements, we request the Board consider a more cost effective approach. For example, the Board could consider adding headers or other disclaimers on each page of the audited financial statements that indicate if the information is audited.

While we disagree with the proposal, we believe several practice issues need to be addressed within the standard if the Board determines to adopt the standard as proposed. These practice issues include determining what information would be subjected to the expanded procedures, what procedures to perform on forward-looking statements, and how an auditor should determine materiality of non-financial information.

**Conclusion**

As discussed above, we do not support the inclusion of CAMs in the auditor's report or expanded audit procedures on other information contained in the annual report. We urge the Board to reconsider the proposals. We believe that auditor reporting of CAMs would decrease the relevance of the audit report, the role of the audit committee, decrease audit report comparability and increase costs of compliance all to the detriment of investors. Further, we believe guidance currently contained in AU sec. 550 appropriately addresses the procedures to be performed by the external auditor over other information contained in SEC filings and it is unclear to us whether the benefits arising from any further audit scrutiny would justify the costs.

* * * * * *

EEI appreciates the opportunity to provide our input on the proposed audit standards included in the Release. We would be pleased to discuss our comments and to provide any additional information that you may find helpful.

Very truly yours,

/s/ Richard F. McMahon, Jr.

**Re: PCAOB Rulemaking Docket Matter Number 034**

Dear Madam Secretary:

We are pleased to submit our comments on the *Proposed Auditing Standards, PCAOB Release No. 2013-005 on Rulemaking Docket Matter #034 ("Proposal").* We serve as the Audit Committees ("Committee") for Edison International (NYSE:EIX) and Southern California Edison Company. Edison International ("Edison" or the "Company"), an integrated energy company, generates and distributes power, primarily through its wholly owned subsidiary, Southern California Edison Company, serving 14 million people across a 50,000 square mile area in Southern California. Our following comments are based not only on our experience serving Edison, but also from our experiences as senior leaders in business, academia and government.

We commend the Public Company Accounting Oversight Board ("PCAOB") for its decision to retain the current "pass/fail" model of the auditor's report and its efforts to consider improvements to the Auditor's Report and Responsibilities regarding Other Information.

**Auditor's Report**

Our corporate governance system consists of shareholders electing the Board of Directors ("Board"), as their representatives, to provide management oversight. Management is responsible for the financial statements and disclosures in accordance with the United States' Generally Accepted Accounting Principles ("GAAP") and Securities and Exchange Commission ("SEC") rules and regulations. The Board delegates the oversight of financial reporting, including the system of internal controls and risk management to the Audit Committee. In addition to financial reporting oversight, the Audit Committee has sole authority to retain the independent auditor and, therefore, primary responsibility for the assessment and approval of those services. The independent auditor opines on whether management's financial statements and disclosures are fairly presented, in all material respects, in conformity with GAAP and in the case of an integrated audit also provides an opinion on the effectiveness of internal controls over financial reporting. This division of responsibilities is the foundation of our current governance structure and clearly defines roles and responsibilities between and among management, the Audit Committee and independent auditor. We believe the audit committee has the requisite knowledge, perspective and authority to oversee that the reporting entity's management discloses the risks or issues in a manner commensurate with their materiality and relevance to investors. The Proposal would undermine our Committee's oversight role by effectively requiring the independent auditor to disclose matters that are management's responsibility, notwithstanding the views of the audit committee.

We strongly oppose the requirement that the independent auditors report Critical Audit Matters ("CAM") in the Auditor's Report. We believe that such disclosures:

- Would not provide meaningful discussion of the level of complexity or detail necessary to understand the full context and resolution of the audit issues—an audit committee responsibility and the proper forum within which to provide such oversight;
- May cause the reader to place inappropriate weight on the CAM from that provided by management in the financial statements and Management Discussion and Analysis of Financial Condition and Results of Operations (including critical accounting policies and estimates) or duplicate such disclosures;
- Could result in boilerplate language covering a number of generic audit topics relating to the issuer's industry (e.g. rate regulated matters);
- May result in financial statement users placing less reliance on the unqualified opinion on the fairness of the financial statements' presentation, taken as a whole—instead perceiving a series of piecemeal opinions.

The Proposal defines three conditions that could result in a CAM, one of which is a matter communicated to the audit committee. Currently, our Committee's discussions with the independent auditor are forthright and wide-ranging. Our Committee's agenda is the result of input from Committee members, management and the auditors. The topics range from routine, required matters, including significant events or transactions that impact financial reporting, to focused discussions on critical accounting and reporting matters, internal controls and risk management. Furthermore, in Executive sessions with the independent auditor, our Committee discusses management bias with respect to judgments, estimates, significant accounting policies and disclosures and whether any difficulties were encountered, such as obtaining appropriate audit evidence. These forthright and open discussions with the independent auditor provide our Committee with a perspective and understanding of audit issues, the business context of those issues, the auditor's professional skepticism and management's judgments.

We are concerned that the Proposal's condition for a CAM may inadvertently result in cautious and constrained discussions between the independent auditor and our Committee because the independent auditor might feel compelled to disclose any significant audit matter discussed with the audit committee or risk being criticized during PCAOB inspections. We believe that an open and transparent discussion between the audit committee and the independent auditors is essential to the effectiveness of our Committee in meeting our responsibilities.

**Other Information Responsibilities**

The auditor currently performs "read and consider" procedures on Other Information contained in SEC filings to assure there is no material inconsistency with the financial statements and disclosures. Currently, our independent auditor reports to us that they have performed these procedures on the quarterly and annual financial statements filed with the SEC and reports to us whether there are any material inconsistencies. The Proposal expands the independent auditor's responsibility by requiring that Other Information be "evaluated" if relevant audit evidence was obtained, regardless of whether that Other Information is directly related to the audited financial statements. As a result, the Proposal limits the scope of information to be evaluated to relevant audit evidence obtained.

We oppose the Proposal to change and expand the Auditor's Responsibility on Other Information because:

- The independent auditor may not have sufficient knowledge nor expertise to evaluate all of the Other Information; and
- Financial statement users will not know what relevant audit evidence was obtained and may conclude incorrectly that all Other Information was evaluated by the independent auditor, resulting in either confusion or unmet expectations.

Thank you for considering our views.

Yours truly,

Vanessa C.L. Chang

Respectfully submitted on behalf of the Audit Committees:

Vanessa C.L. Chang, Chair
Jagjeet S. Bindra, Member
France A. Cordova, Member
Luis G. Nogales, Member
Peter J. Taylor, Member

**Re: Amendments to the PCAOB Standards (Rulemaking Docket Matter No. 034)**

Dear Ms. Brown and Members of the Board,

Thank you for the opportunity to comment on the proposed new auditing standards. As an investor, I agree with what seems to be PCAOB's main assertion: that the pass/fail model does not address the current complexities of global business. However, the expanded disclosure requirements put an unnecessary burden on the audit committee and auditors; specifically, listing the critical audit matters (CAMs), may cause confusion for investors and become a liability for auditors and companies. The goal of the PCAOB can be met with less drastic changes to the current accounting standards.

I believe that the goal of "protect[ing] the interests of investors and further[ing] the public interest in the preparation of informative, accurate and independent audit reports" can be met with modest changes to the current pass/fail model. Slight revisions to the current model will help ensure that the new standards can be enacted seamlessly and will help prevent future fraud, which is starting to seem inevitable. According to *Audit Analytics*, there has been a sharp rise in earning restatements at large companies over the past three years. The PCAOB inspection reports issued in 2012, showed that 36% audits from the Big Four (Deloitte, E&Y, PwC, and KPMG) the inspectors scrutinized were deemed deficient, up from 14% two years before that.[1]

Below are suggested key edits to the proposed PCAOB standards.

**<u>Recommended Edits:</u>**

1. As mentioned in PCAOB's proposal, auditors should report how long they have been auditing the company. However, companies should also have a limit on the number of consecutive years the company can employ the same public accounting firm.

   Currently, a company hires and pays an accounting firm, typically one of the big four, to review their financial statements. This intertwined relationship does not encourage objectivity.

[1] Rapoport, Michael. "New Rules Expected for Annual Audit Reports." *Wall Street Journal*. N.p., 12 Aug. 2013. Web.

According to Barbara Roper, head of investor protection for the Consumer Federation of America, "when you look at some of the big audit failures over the years, whether it's Enron or Waste Management, you find instances where they've had the same auditor for in some cases decades."[2]

2. In general, CAMs are subjective and should not be included in the auditor's report. The name itself, "Critical Audit Matters" and complexity of listing every difficult or subjective decision made by the auditor, can cause unnecessary investor concern. Instead of CAMs, the audit opinion should include less subjective measures to express a company's health. The auditors should include:

a. Divergence from industry norms. Auditors should possess knowledge of the company's industry; if items in the financial statements are incongruent with industry norms, the public accounting firm should disclose that in the audit report.

b. Opinion on whether the company can continue as a going concern. As mentioned in the PCAOB proposal, if there is doubt that a company can continue as a going concern it should be disclosed to investors.

3. Auditors should review Management Discussion & Analysis ("MD&A") along with the financial statements. The audit report should provide reasonable assurance that the MD&A is free from material error and covers material changes (increases or decreases) seen from the previous quarter and/or year.

To provide further insight, yet avoid redundancy, I answered select questions from sections IV and V.

**Answers to Select Questions Posed in Sections IV and V:**

**2. The proposed auditor reporting standard would require the auditor's report to be addressed at least to (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body. Are there others to whom the auditor's report should be required to be addressed?**

The audit report should be addressed to the company's board of directors or the equivalent body and the entire investing public. The scope should not be limited to the company's current investors; future investors are also relying on the audit report and they should be addressed.

**5. The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor. a. Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?**

[2] Gao, Shirley. "Center for Public Integrity." *Center for Public Integrity*. N.p., 13 July 2011. Web.

The statement proposed would provide factual information to investors and potential investors about the relationship between the company and auditor. If there is not a limit placed on the number of years a public accounting firm can audit one company (I addressed this above), then this statement will allow shareholders to determine if the tenure of the auditor is a concern.

**b. Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?**

The PCAOB will need to create standards for mergers, acquisition, or other partnership agreements amongst public accounting firms.

**15. Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?**

Including audit procedures performed and the resolution of CAMs would be an overwhelming amount of detail to include in the audit report for very little additional value. As it stands now, the auditor, as the expert, provides reasonable assurance that the financial statements are free from material misstatements. How the auditor arrived at that decision should not be important unless the expertise or judgment of the auditor is in question.

**27. What benefits or unintended consequences would be associated with requiring auditors to communicate critical audit matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards, such as the examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?**

It is management's responsibility to prepare the company's financial statements and an auditor's responsibility to confirm accuracy; this proposal would shift that balance. The auditors should not disclose information that management is not required to reveal and has decided not to make public. Such information may be trade secrets that provide the company with a competitive advantage.

Again, I appreciate the opportunity to share my opinion. Thank you for your consideration on this matter.

Sincerely,

J. Edmunds

**Re: Proposed Auditing Standards – *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report***

Eide Bailly LLP commends the Board's ongoing commitment to the improvement of audit quality and appreciates the opportunity to provide our comments on these proposed auditing standards. Eide Bailly is a registered public accounting firm serving mid-sized and smaller issuer entities. We have provided general comments as noted below, followed by responses to certain of the detail questions for which the Board has sought specific comment.

**General Comments**

In our response to the Board's 2011 Concept Release on possible revisions to the auditor reporting model, we expressed our concerns related to requiring the auditor to provide information about the entity to the users of the entity's financial statements. We believe that the proposed standard achieves an appropriate balance between the responsibility of the auditor and the responsibility of management with respect to the nature of the information to be provided to users of financial statements, specifically in that auditor requirements will be focused on reporting related to the audit process and critical audit matters.

Acknowledging this, we are concerned about unintended consequences resulting from the implementation of the requirement for auditors to report on critical audit matters. As firms, and even individual engagement teams, perform assessments, arrive at conclusions, and prepare report language related to critical audit matters, invariably differences in reporting will result even when very similar circumstances exist for separate, but similar entities. A potential unintended consequence of these situations is that the same users of the separate entity financial statements arrive at different conclusions regarding the entities solely as a result of the differences in the respective auditor's reporting of critical audit matters, rather than as a result of any substantive difference in the respective entities. A possible response to this potential consequence is "boilerplate" language that will be developed and applied by auditors and used in the reporting on the financial statements for similar entities and/or similar audit matters, which will not achieve the desired result of this reporting requirement.

Lastly, we urge the Board to carefully consider and eliminate as many differences as possible between the Board's resulting standards on auditor reporting with those of the International Auditing and Assurance Standards Board (IAASB), even those appearing as simple as the difference in terminology of Critical Audit Matters versus Key Audit Matters. In consideration of this, we recommend that the Board specifically include as a part of its final adopted standards on Auditor Reporting and Other Information a summary of the differences between the Board's standards and the IAASB standards, and the reasons for those differences.

Following are our responses to certain of the specific questions for with the Board requested specific comment. We have not responded to all of the questions, rather only those for which we have comments for the Board to consider.

**Proposed Standard - The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion**

1. *Do the objectives assist the auditor in understanding the requirements of what would be communicated in an auditor's unqualified report? Why or why not?*

   Although this will not likely be a source of misunderstanding to auditors in applying the proposed standard, we question whether the communication of critical audit matters, or to state that the auditor determined that there were not critical audit matters, is a separate objective of the proposed standard. Alternatively, we believe the objective as stated in proposed paragraph 4(a) is sufficient.

4. *The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this statement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?*

   While we do not believe there will be negative consequences to the requirement to include such a statement, we question whether additional useful information will be provided as a result. We are not aware that this is an area that is currently misunderstood by users of the financial statements audited under the standards of the PCAOB.

5. *The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.*
   a. *Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?*

   b. *Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?*

   c. *Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?*

   We do not believe a requirement for the auditor to include a statement containing the year the auditor began serving consecutively as the company's auditor will result in significant challenges to the auditor in the reporting of this information.

However, we also believe that there is a potential unintended consequence related to the reporting of this information without additional context, as users may not consider other factors that are important to the consideration of auditor tenure. For example, the statement, as proposed, does not account for the existence and benefit of partner rotation, which is designed to allow for a "fresh look" in the audit of a company' s financial statements. Additionally, the statement, as proposed, would not provide any context with respect to changes in the company during the period of tenure being communicated. Accordingly, we believe that this information would be more appropriately communicated to users of the financial statements by the company's Audit Committee, accompanied by a discussion of other factors considered by the Audit Committee in their decision to engage the auditor.

6. *The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?*

   We agree that reporting of a description of the auditor's responsibilities with respect to other information is relevant to users when the other information is provided simultaneously with the financial statements and related auditor's report thereon. We agree that absent such a description, there is a risk of confusion related to what responsibility the auditor has with respect to this information.

7. *Should the Board require a specific order for the presentation of the basic elements required in the auditor's report? Why or why not?*

   We do not believe it is necessary for the Board to specify a specific order for the presentation of the basic elements required in the auditor's report; however recommend that the Board be cognizant of the order of presentation included in illustrative examples, as the order of presentation in these examples will ultimately be what most auditors will follow in their implementation of the final standard.

9. *What are the potential costs or other considerations related to the proposed basic elements of the auditor's report? Are cost considerations the same for audits of all types of companies? If not, explain how they might differ.*

   We believe that the only significant cost consideration related to the proposed basic elements of the auditor's report is related to time that auditors will incur with respect to reporting on Other Information.

   We do not believe that there will be significant cost considerations specifically related to the other proposed basic elements of the auditor's report, as we do not consider them to be fundamentally different than what is included in current auditor's reports, with the exception of the additional reporting related to the auditor's tenure, which we do not expect to result in a significant amount of additional cost and/or work effort by auditors.

10. *Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?*

    Generally speaking, we believe that investors and other financial statement users will find the auditor's communication of critical audit matters relevant and useful, as long as the reporting does not become boilerplate over time.

11. *What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?*

    As noted in our general comments above, we believe a potential unintended consequence may be that investors or other financial statement users arrive at varying, and potentially erroneous, conclusions about similar entities solely as a result of differences in the reporting of critical audit matters by different auditors in similar audit situations, rather than as a result of any substantive differences in the entities.

    We are also concerned about potential challenges resulting from the "negotiation" that will likely occur between auditors, Audit Committees, management, and potentially company legal counsel, related to the nature and language used in the auditor's communication of critical audit matters, particularly for audits of large, more complex entities. These discussions will likely often take place toward the end of the engagement, a time in which significant time pressures already exist.

12. *Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? Is the definition of a critical audit matter sufficiently clear for determining what would be a critical audit matter? Is the use of the word "most" understood as it relates to the definition of critical audit matters?*

    Although we believe the definition is sufficient for purposes of achieving the objectives of the proposed standard, we recommend that the final standard included examples of the communication of critical audit matters, as we believe this will assist in effective adoption of the final standard by auditors.

13. *Could the additional time incurred regarding critical audit matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have?*

    We do not believe that the additional time incurred will necessarily have a negative effect on the quality of the audit, inasmuch as the effect of the timing of these additional considerations, much of which will be incurred during the later stages of the audit. See our related response to question number 11.

14. *Are the proposed requirements regarding the auditor's determination and communication of critical audit matters sufficiently clear in the proposed standard? Why or why not? If not, how should the proposed requirements be revised?*

    We believe that the proposed requirements are sufficiently clear, with the exception of the requirement to communicate critical audit matters relating to the audit of the current period financial statements. We believe that the proposed requirements could be made clearer with respect to the fact that there is no requirement to communicate on critical audit matters related to the audits of prior periods that are also being reported on, and there is no requirement to communicate the reasons for differences in the identification of critical audit matters between periods.

15. *Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?*

    While investors and other users of the financial statements may find information on specific audit procedures performed useful, we do not believe the potential benefit of such reporting exceeds its costs. Not only would such reporting add additional time to the audit, the communication of specific audit procedures, particularly those related to the most significant areas in the audit, may result in a reduction of audit quality as the auditor's audit plan with respect to those risk areas will become "public information".

16. *Are the factors helpful in assisting the auditor in determining which matters in the audit would be critical audit matters? Why or why not?*

    We believe the factors included in the proposed standard are sufficient to assist the auditor in determining which matters would be considered to be critical audit matters.

18. *Is the proposed requirement regarding the auditor's documentation of critical audit matters sufficiently clear?*

    Yes.

19. *Does the proposed documentation requirement for non-reported audit matters that would appear to meet the definition of a critical audit matter achieve the Board's intent of encouraging auditors to consider in a thoughtful and careful manner whether audit matters are critical audit matters? If not, what changes should the Board make to the proposed documentation requirement to achieve the Board's intent?*

    We believe that a specific documentation requirement related to non-reported audit matters is unnecessary and will place an undue burden on auditors. Appropriate documentation of those matters concluded to be critical audit matters, accompanied by other required engagement documentation, such as the engagement completion document, is sufficient to achieve the Board's objective of encouraging auditors to appropriately consider whether audit matters are critical audit matters.

21. *What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of critical audit matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?*

    There will undoubtedly be additional costs related to the time incurred in the evaluation and determination of critical audit matters to be reported and the related documentation of those considerations and conclusions by the engagement team. Additional time will also be incurred by engagement quality reviewers to appropriately understand, question and concur with the conclusions of the engagement team. Also, there will likely be firms that will impose additional quality control requirements related to these considerations that will add additional time. These costs will be more significant for larger, more complex engagements.

22. *What are the additional costs, including indirect costs, or other considerations for companies, including their audit committees, related to critical audit matters that the Board should take into account? Are these costs or other considerations the same for audits of both large and small companies?*

    As noted above, we believe that additional costs will be incurred in the audits of companies of all sizes, as additional time will be incurred in considering and documenting the auditor's conclusions with respect to critical audit matters. In addition, we believe that the audits of the financial statements of larger, more complex entities will result in additional costs related to the likelihood of these types of companies also having their legal counsel consider the auditor's reporting of critical audit matters.

23. *How will audit fees be affected by the requirement to determine, communicate, and document critical audit matters under the proposed auditor reporting standard?*

    Audit fees will undoubtedly increase as a result of these requirements for the reasons we have noted above.

24. *Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, such as in an initial public offering or in a situation involving the issuance of an auditor's report on a prior period financial statement because the previously issued auditor's report could no longer be relied upon? If so, under what circumstances?*

    We do not believe that auditor should be required to communicate critical audit matters for each period presented unless the auditor is reporting on those financial statements for the first time; i.e. an initial public offering, or if the audit of the financial statements for the period being reported on is a "reaudit", that either being a reaudit of financial statements that is the initial audit of the respective financial statements by the current auditor, or a reaudit of the financial statements if an audit report was previously issued but subsequently determined that it could not be relied upon.

25. *Do the illustrative examples in the Exhibit to this Appendix provide useful and relevant information of critical audit matters and at an appropriate level of detail? Why or why not?*

    Yes.

26. *What challenges might be associated with the comparability of audit reports containing critical audit matters? Are these challenges the same for audits of all types of companies? If not, please explain how they might differ.*

    Please see our comments above regarding concerns about the potential unintended consequences of the users of financial statements forming different conclusions in similar situations solely as a result of differences in the reporting of critical audit matters by different auditors.

33. *Are the proposed amendments to PCAOB standards, as related to the proposed auditor reporting standard, appropriate? If not, why not? Are there additional amendments to PCAOB standards related to the proposed auditor reporting standard that the Board should consider?*

    We believe the Board needs to consider the requirements for reporting of critical audit matters when the auditor chooses to issue a separate report on internal controls over financial reporting, specifically, is the auditor required to communicate critical audit matters in both reports, or only in the auditor's report on the financial statements?

35. *Are the proposed auditor reporting standard and amendments appropriate for audits of brokers and dealers? If yes, are there any considerations that the Board should take into account with respect to audits of brokers and dealers?*

    We believe that the proposed requirements, including the communication of critical audit matters, are appropriate for audits of large brokers and dealers. However, we also believe that additional consideration by the Board is warranted with respect to the cost benefit relationship of these requirements for small broker/dealers and/or non-carrying broker/dealers, and if differential reporting requirements are determined to be appropriate, how a "small" broker/dealer would be defined.

39. *Are the proposed auditor reporting standard and amendments appropriate for audits of benefit plans? If yes, are there any considerations that the Board should take into account with respect to audits of benefit plans?*

    We believe that the proposed standard is also appropriate for the audits of benefit plans, with the possible exception of the requirement to communicate critical audit matters for all audits of benefit plans. We believe that the communication of critical audit matters for the audits of benefit plans will likely be similar for virtually all plans, and thus will quickly evolve to boilerplate reporting that will be the same for every benefit plan audit.

40. *Should audits of certain companies be exempted from being required to communicate critical audit matters in the auditor's report? Why or why not?*

    Despite our concerns about the cost benefit relationship of the requirement to communicate critical audit matters for smaller, less complex engagements, we do not believe that there should be an exemption for smaller public companies or Emerging Growth Companies. Such differential reporting will create a lack of consistency in reporting for public companies, thus creating possible confusion by the users of the financial statements, and/or a view that those audits are of lesser quality or relevance.

    As audits of non-issuer financial statements conducted under the standards of the PCAOB are not uncommon, we believe that the Board needs to address whether or not it is necessary for the auditor to communicate critical audit matters in such engagements, and for the final standard to clearly communicate whether or not these requirements are applicable for such engagements. We recommend that the final standard allow for, but not require the communication of critical audit matters for audits of non-issuer financial statements, consistent with the approach taken by the proposed IAASB auditor reporting standards.

41. *Is the Board's effective date appropriate for the proposed auditor reporting standard? Why or why not?*

    We believe the proposed effective date is appropriate and should allow auditors to effectively plan for the implementation of the standard.

42. *Should the Board consider a delayed compliance date for the proposed auditor reporting standard and amendments or delayed compliance date for certain parts of the proposed auditor reporting standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?*

    We do not support a delayed compliance date for audits of smaller companies. The reporting requirements will often be less burdensome to implement for the audits of smaller companies, and if they are not considered to be less burdensome as a result of the existence of critical audit matters, delaying these requirements in such situations is inconsistent with the objectives of the proposed standard.

**Proposed Standard - The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report**

We do not have specific concerns with respect to the proposed standard on Other Information; however do believe that it should be limited to information included in the company's annual report, as currently defined in paragraph 1 of the proposed standard.

In that regard, we do have the following questions and/or comments related to this proposed standard:

- The note following paragraph 1 of the proposed standard indicates that information incorporated by reference from the company's definitive proxy statement filed within 120 days after the end of the fiscal year covered by the Form 10-K is considered to be "other information" for purposes of this standard. Since in the proposed standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion,* the auditor is required to report on other information when reporting on the company's financial statements, it is unclear what the auditor's reporting responsibility is with respect to the information in a definitive proxy statement that will be subsequently filed. Accordingly, as this is a common situation, we believe that the standard needs to be more specific with respect to the auditor's reporting responsibilities in these situations.

- Paragraph 12(b) – it is unclear to us in what situations this provision would apply, as presumably the other information being reported on would have already been issued along with the financial statements as a part of the company's annual report filed with the SEC. We recommend that the final standard include an example of when such a situation would occur.

- As Other Information is defined with respect to a company's annual report filed with the SEC, it is unclear how this standard is to be applied in situations in which an audit of a non-issuer is conducted under the auditing standards of the PCAOB. For example, if such financial statements include supplementary information, is that information considered other information, or is the proposed standard essentially only applicable for audits of issuers that final an annual report with the SEC?

Once again, we appreciate the opportunity to comment on these proposed standards. We would be pleased to discuss our comments with the Board or its staff. Please direct any questions on our comments to Brian Bluhm, Director of Assurance Services, at 612.253.6590.

Sincerely,

Re: PCAOB Rulemaking docket matter No. 34

Dear Board Members:

Eli Lilly and Company ("Lilly") appreciates the opportunity to comment to the Public Company Accounting Oversight Board ("PCAOB") on the PCAOB Release No. 2013-005, *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards* . Lilly is a large, multinational pharmaceutical company, with presence in over 50 country jurisdictions, and creates and delivers innovative medicines that enable people to live longer, healthier, and more active lives.

Lilly understands the PCAOB's objective to revamp the existing Auditor's Reporting Model in an effort to "increase the informational value of the auditor's report to promote the usefulness and relevance of the audit and the related auditor's report". While we believe the current "pass/fail" model is effective, we do agree with the PCAOB that there are some potential enhancements that could make the auditor's report more transparent and relevant for the users. We believe that certain proposed amendments to the basic elements of the auditor's report could add value to the reporting model and enhance communication to users by improving the content of the auditor's report while retaining the current "pass/fail" model.

We believe that certain proposed changes, in particular the requirement for the auditor to report on Critical Audit Matters ("CAMs") and additional requirements around "other information" outside of the financial statements, could have a significant adverse impact to companies, auditors and financial statement users ("users"). We appreciate that the PCAOB has taken into consideration the comments raised by stakeholders through the 2011 Concept Release and has chosen not to pursue the implementation of the Auditor's Discussion and Analysis ("AD&A"). However, we are very concerned that requiring the auditor to report on CAMs, if adopted, could significantly increase the scope of the audit, blur the responsibility of auditors, audit committees, and management by changing the role of the auditor and lead to confusion of users among other concerns addressed throughout this response. We are concerned that imposing additional requirements around "other information" outside of the financial statements, if adopted, could also significantly increase the scope of the audit as well as substantially increase costs.

We address our thoughts and concerns in further detail below.

**Critical Audit Matters:**

We strongly oppose the proposal which would require the addition of a new section within the auditor's report in which critical audit matters specific to an audit would be communicated. The PCAOB defines CAMs as audit matters that involve the most difficult, subjective, or complex auditor judgments; pose the most difficulty to the auditor in obtaining sufficient appropriate audit evidence; or pose the most difficulty to the auditor in forming the opinion on the financial statements. While we support the goal of increasing the relevance and usefulness to investors and other financial statement users, we have concerns about the application of the proposal, the unintended consequences and question if this proposal would help to accomplish the intended goal.

The current proposal leaves a lot of judgment for what the auditors may consider to be 'key' or 'critical' audit issues, which could lead to unintended consequences. We are most concerned about the potential for the auditor to disclose information in their report that the company has not yet reported or is not required to be disclosed by the SEC or FASB, making the auditor the original source of the information. The auditor could identify a CAM around a transaction that has not yet been recorded in the financial statements by management due to timing or facts and circumstances of the item (i.e. restructuring, litigation, impairment of intangibles, etc.). For example, as required by the FASB, we record restructuring charges when they are estimable and probable. Based on the facts and circumstances, the restructuring charge may get recorded in the following year, however, the auditor may elect to disclose this item as a CAM in the prior year audit if it meets the CAM criteria. Disclosing this as a CAM would make it public information before the company would have had a chance to go through the appropriate communication channels and timeline. Additional examples where the auditor could be the original source of information include disclosing the dollar amount of items that are currently not required to be disclosed or disclosing details used to describe the CAM that have not been disclosed in the financial statements. It seems counterintuitive that a company would need to disclose information not because of the accounting standards but because of the potential to appear as a CAM and not elsewhere in the financial statements or footnotes.

Another concern of the proposal is that a CAM may disclose sensitive, confidential or proprietary information such as tax matters including settlement with the IRS, legal matters, restructurings, etc. The auditor may also disclose a CAM that conflicts with current requirements or legislation, such as disclosing significant control deficiencies, whereas only material weaknesses are required to be disclosed today. While the items may have been discussed with the audit committee, it may not be public information. The auditor would be disclosing details of the CAM that are not disclosed elsewhere in the financial statements or footnotes.

If the proposal to require the auditor to identify CAMs is adopted, this would put the auditor in a position under numerous circumstances to be the original source of information to financial statement users and is contrary to the current roles and responsibilities of the auditor. This will blur the responsibility of auditors, audit committees, and management and could cause confusion to the user, lead to legal implications in terms of releasing confidential information and/or force management to include items within the financial statements that they otherwise would not have included and which are not required to be disclosed under current requirements. When the auditor believes it is required to disclose confidential, sensitive company information that the company is not required to disclose and such disclosure would damage the company, contentious legal and relationship issues could arise between the company and the auditor. Relationships between issuers and auditors that contain healthy tension are to be desired; dysfunctional, adversarial relationships are not.

In addition to our concerns noted above, we also believe that CAMs as defined in the proposal are too broad and may lead to the auditor disclosing many CAMs thereby producing lengthy audit reports. Auditors will likely compile a comprehensive list of potential CAMs that would include items (1) documented in the engagement completion document, (2) reviewed by the engagement quality reviewer, (3) communicated to the audit committee, or (4) any combination of the three. The auditor would then need to determine which ones meet the definition of a CAM and would be included in the auditor's report. As part of their internal documentation, the auditor would need to justify why the matter is not considered a CAM. In applying this current PCAOB guidance, we are concerned that most auditors would err on the side of including more rather than fewer CAMs in their reports due to the fact that CAMs will be subject to second guessing by PCAOB inspectors. This could lead to lengthy discussion in the auditor's report causing confusion to the readers of the financial statements and distract from the primary purpose of the auditor's report. The CAM disclosure requirements would add to the "information overload" that is already a real concern with SEC disclosure documents today, as acknowledged in October by Mary Jo White, chairwoman of the SEC:

> When disclosure gets to be 'too much' or strays from its core purpose, it could lead to what some have called 'information overload' — a phenomenon in which ever-increasing amounts of disclosure make it difficult for an investor to wade through the volume of information she receives to ferret out the information that is most relevant.[1]

We are also concerned that if as part of the PCAOB inspection process the PCAOB felt that the auditor should have identified a matter as a CAM but did not, the auditor could be required to reissue their audit report, which would be concerning for the company impacted, the users and the auditor.

We believe that the costs associated with including CAMs in the auditor's report will be substantial due to the additional time required by the auditor to identify CAMs which would likely involve lengthy discussions with senior management on the audit team and could include consultation with the national office, in-house legal counsel, and others. In discussion with our auditors, they indicated that they expect that the process of identifying all potential CAMs will take a significant amount of time, which would translate to higher audit fees. In addition, significant indirect cost would likely be incurred by management in reviewing the CAMs and having discussions internally and with the auditor. We believe that the costs in terms of time and dollars to identify CAMs including the significant time the auditor would spend on justifying items that will ultimately not be reported to the public will add little, if any, value to the investors.

[1] Speech to National Association of Corporate Directors, October 15, 2013.

We also have concerns regarding the strong wording of the PCAOB's definition of a CAM which indicates that an audit matter is a CAM if it "posed the most difficulty to the auditor in forming the opinion on the financial statements". Auditors will likely use this same verbiage in their reports to indicate why an issue was selected as a CAM. When a user reads that an issue posed difficulty to the auditor in forming the opinion on the financial statements, this could be interpreted by the user that the auditor is not comfortable with the issue being referenced. In addition, if this statement is made for some CAMs but not others, it may not be apparent to the user of the differentiating factors in disclosing this statement. This could cause a lot of confusion and raise questions about the auditor's conclusion even though the auditor was able to get comfortable with the matter and issued an unqualified opinion.

We also believe that over time the language within the audit report may become boilerplate which would undermine the PCAOB's goal of increasing the informational value of the auditor's report. The audit issues identified as CAMs would be the same from year to year. In addition, audit firms will likely try and standardize the types of language used across various companies for similar issues in an effort to mitigate legal liability and to minimize PCAOB inspection findings.

Due to the various concerns identified above, Lilly strongly opposes the PCAOB's proposal to require auditors to identify critical audit matters within the auditor's report. We believe that any perceived shortcoming in the information presented to investors and other users should be communicated by management through the footnotes or MD&A and not through the auditor's report. If necessary, the FASB or SEC should address concerns through developing or further enhancing financial reporting disclosures. However, if the PCAOB does move forward with this requirement we would ask that the PCAOB strongly consider the following enhancements to the guidance/definition of a CAM:

a) An auditor must not be the original source of the information. The PCAOB should specifically clarify that if an issue is not required to be reported under current disclosure requirements then the matter should not be referenced by the auditor unless the company has elected to disclose this information.
b) CAMs must be material to the financial statements.
c) Highly sensitive (i.e. litigation, tax positions, etc.) and market or company confidential information should not be included as a CAM.
d) CAMs should not include information that is specifically excluded from disclosure by other legislation (i.e. significant deficiencies, etc.).
e) The audit report should not describe the audit procedures related to critical audit matters (we believe the examples in the Release are unclear and could lead audit firms to believe that such disclosures are required).
f) Auditors should not be required to separately document why audit matters are not considered to be CAMs.

**Proposed "Other Information" Standard**

The PCAOB "other information" proposal would require the auditor to 'read and evaluate' the other information as opposed to the current requirements under AU 550 which only require the auditor to 'read and consider' other information outside of the financial statements. The proposal specifically indicates that the auditor should evaluate the other information for a material misstatement of fact as well as for a material inconsistency with amounts or information, or the manner of their presentation, in the audited financial statements. In addition, the new proposal would expand the auditor's responsibility to include information incorporated by reference in the annual report including the proxy statement. Lilly generally supports the PCAOB proposal to clarify the auditor's current responsibilities under AU 550 and believe this information would be beneficial and help users to better understand the procedures being performed. However, we are concerned about the proposal to require the auditor to "evaluate" the other information which we believe could substantially increase the scope of the audit.

As stated above, the terminology change from "consider" to "evaluate" appears to represent a significant increase in the auditor responsibility for other information outside of the financial statements by introducing required audit procedures to support the auditor's conclusion about the auditor's evaluation of other information. We believe that this increase in scope would shift the auditor's focus away from the financial statements, negatively impacting audit quality and would lead to significant additional time and costs which would not be justified by the perceived benefits. The implementation of this proposal would lead companies to furnish periodic filings at an earlier stage of the process in order to allow the auditors to complete their procedures prior to the filing deadline. Doing so could put a severe strain on companies and auditors during the already tight reporting timelines and could delay of information being released to the public.

Due to the subjective nature of the information provided, it may be difficult for auditors to "evaluate" other information outside of the financial statements which includes non-financial data and information related to the company's operations. The MD&A provides historical and future business performance "through the eyes of management" and is intended to be qualitative and more forward-looking in nature. It could be very challenging for an auditor to "evaluate" qualitative statements for a "material misstatement of fact" and for consistency with the financial statements and relevant audit evidence. The guidance indicates that the auditor "would not be required to perform procedures to obtain additional audit evidence regarding other information not directly related to the financial statements that was not required to be obtained during the audit". However, we still have concerns that the auditor would need to expand their audit scope and procedures to fulfill their obligations to "evaluate" this type of information. The intent of this proposal is to further protect the interests of investors; however, this change could have the opposite effect as the information that management discusses in the MD&A may be influenced by the auditor or management may choose to limit the items they discuss in their MD&A to avoid issues with the auditor.

If this proposed requirement to evaluate the other information were implemented, the accounting firms would have to develop new methodology on their interpretation of the standard. This could lead to various discussions and questions as to how to interpret the standard and could lead to unintended consequences. For example, auditors would need to determine how differences in opinion or facts relating to other information would be compiled, evaluated and communicated to management and the audit committee. These differences could end up being reported in a manner that is similar to the summary of audit differences used in the financial statement audit which would give more weight to these items than what is necessary. Questions could also be raised as to whether management would need to develop controls around the MD&A and the other information and if a difference was identified, it could lead to discussions around whether the difference would constitute a control failure. While these consequences may not be the intent of the proposal, these are just a few examples of how the audit firms may interpret the guidance in a manner that extends beyond the intent of the PCAOB. We urge the PCAOB to strongly consider the impact of these changes and how they may be interpreted by auditors to avoid a situation similar to what occurred with the implementation of AS2 in which auditors performed substantially more work than was intended causing the standard to be subsequently modified.

We are also concerned about the implications of expanding the definition of “other information” to include “information incorporated by reference from the company’s definitive proxy statement”. The deadline for the filing the proxy is 120 days after year-end; therefore this information is often not available to the auditor until after the issuance of the audit report. The guidance is unclear as to how the auditor would issue their audit report without first reviewing the proxy if they are required to “evaluate” the proxy as part of their opinion. We are concerned that companies may be forced to move up the filing of the proxy to align with the company’s 10K filing date.

As stated above, we are supportive of clarifying the auditor’s current responsibility under AU550 for other information outside of the financial statements which we believe will increase transparency and relevance to users without increasing the scope of the audit. However, we oppose the PCAOB’s proposal to require the auditor to “evaluate” the other information for reasons discussed above. If the PCAOB elects to move forward with their proposal, we urge the PCAOB to field test the proposal first so that the implications of such a change can be properly assessed. In addition, we believe that the PCAOB should retain the section of AU 550 that specifically states that the auditor’s responsibility “does not extend beyond the financial information identified in [the audit] report” and we urge the PCAOB to specifically exclude the auditor from responsibility for prospective financial data. We also oppose the PCAOB’s proposal to expand the definition of “other information” to include information incorporated by reference from the proxy statement. We encourage the PCAOB to limit the auditor’s responsibility to information available prior to issuance of the audit report.

**Amendments to the Basic Elements of the Auditor’s Report**

The PCAOB release indicates that commenters on the PCAOB’s concept release noted that modifications to the language used in the auditor’s report could “improve financial statement users understanding of the nature of an audit, the auditor’s responsibilities, and the purpose of the auditor’s report.” The Board has therefore proposed certain clarifications to existing language in the report to include statements about (1) auditor independence; (2) auditor tenure; (3) the auditor’s responsibilities related to fraud and the financial statement footnotes; and (4) the auditor’s responsibilities for, and the results of the auditor’s evaluation of, other information. Below we discuss our view on each of the clarifications.

Lilly is generally supportive of the PCAOB’s proposed enhancement to the basic elements of the auditor’s report with the exception the proposal related to “Auditor Tenure”. We understand that there is some investor interest in having visibility of auditor tenure. However, we believe that including this type of information within the audit report could be misleading to investors as there is no substantiated evidence to support that audit tenure has an impact on the quality of the audit. The inclusion of this information could lead investors to infer that if the company has a new auditor or if a company and auditor have a longstanding relationship that the audit opinion is not as reliable. Auditor tenure is more appropriately considered a corporate governance matter and could easily be included in a company's proxy statement.

We are supportive of clarifying "Auditor Independence" within the auditor's report. We believe this could provide users with a better understanding of the auditor's role and provide more confidence in their judgments and process.

We are supportive of clarifying "Auditor's responsibility for fraud and the financial statement footnotes" within the auditor's report. We believe that including the auditor's responsibility for the detection of fraud within the standard auditor's report is more transparent to users. We are also supportive of revising the auditor's report to provide clarification on the auditor's responsibility for the financial statement footnotes that is consistent with the current auditing standard.

As discussed above within the "Proposed 'other information' Standard" section of this document, we are supportive of clarifying the auditor's current responsibilities under AU 550. We are supportive of the PCAOB's proposed language with the exception of the verbiage indicating that the auditor "read and evaluated" the other information. We believe that the PCAOB should retain the current requirements of AU 550 for the auditor to "read and consider" the other information. As such we would propose the following statement be included within the auditors report; "On the basis of relevant audit evidence obtained and conclusions reached during the audit we have read and considered the other information contained in this filing. We did not audit the other information and do not express an opinion on that information. Based on our review we have not identified a material inconsistency or material misstatement of fact in that information". We believe that the inclusion of this language would enhance the standard report by ensuring that the responsibility of the auditor related to the other information is clear to the financial statement users.

Clarifying auditor independence, auditor responsibility for fraud and footnotes and auditor responsibility for "other information", as outlined above, would not alter the scope of the audit nor impact the auditor's responsibilities; this would however provide additional information to users without changing the fundamental role of the auditor. We believe that these amendments to the basic elements of the auditor's report (with the exception of auditor tenure) most closely align with the PCAOB's goal of increasing transparency and relevance to users while not compromising audit quality. We also believe that this alternative is aligned with the principles of maintaining quality, adding value, providing objective communication and being cost effective. The more the users understand of the auditor's role, the better informed they can be when making decisions.

**Conclusion**

Again, Lilly supports the PCAOB's efforts to provide transparency and relevant information to users and believe that proposed changes to the basic elements of the auditor's report could add value to the reporting model and enhance communication to users by improving the content of the auditor's report while retaining the current "pass/fail" model. However, we are very concerned that requiring auditors to identify critical audit matters and expanding the auditor's responsibility for "other information" outside of the financial statements could result in a number of unintended consequences and negatively impact that audit process. We again urge the PCAOB to carefully consider and evaluate the impact that these proposals would have on the companies and the auditors who would be required to comply with any new standards issued and the related implications. We also urge the PCAOB to carefully consider the cost/benefit of all of the proposed alternatives prior to implementing any new standards.

We appreciate the opportunity to express our views and concerns regarding the concept release. If you have any questions regarding our response, or would like to discuss our comments further, please call me at (317) 651-2310.

Sincerely,

ELI LILLY AND COMPANY

Mr. Martin F. Baumann – Chief Auditor
Public Company Accounting Oversight Board (PCAOB)
1666 K Street NW
Washington, D.C. 20006-2803

Docket Matter No. 034 – Proposed Auditing Standards on "The Auditor's Report" and "The Auditor's Responsibilities Regarding Other Information"

Dear Mr. Baumann:

Emerson appreciates the opportunity to comment on the Revised Proposed Auditing Standards re: Reports on Audited Financial Statements. We agree with the Board's decision to withdraw the proposals regarding Auditor's Discussion and Analysis and mandatory use of Emphasis of Matter paragraphs. However, we also do not support the remaining proposals.

We continue to believe the pass/fail audit report functions properly in its current form. The proposed discussion of "Critical Audit Matters" is likely to be confusing to investors. If the audit is satisfactory, there is no benefit to describing the issues that presented the most challenge. Any perceived shortcomings of current reporting and disclosure requirements should be addressed through the SEC and the FASB. The auditor's role should remain one of oversight and should not be the original source of information for investors; that is the responsibility of management.

If all accounting and reporting matters are satisfactorily resolved, a discussion of what *might* have happened is unnecessary. Resolution of difficult matters is an everyday occurrence given the highly technical nature of accounting rules and complexity of issues in today's business environment. Auditor discussion of these items will be interpreted by investors as a disclosure of accounting *problems.* Investors do not have the benefit of deeply analyzing issues in the full context of the situation, nor do they have the benefit of interaction between auditors, management and the audit committee. A lengthy and highly technical discussion between management and auditors does not mean the matter is contentious, or even risky. Whether it is a new transaction, evolving business circumstances, adoption of a new accounting standard, or a complex matter elevated for SEC Staff consideration, once resolved, the background and process of resolution is not important. Investors cannot be expected to wade through highly technical matters and derive meaningful information from the type of report that is being proposed. An auditor rendering an unqualified opinion but then discussing transactions that *might have* resulted in a qualified opinion will likely confuse and potentially mislead investors.

On the other hand, unresolved material issues could lead to a qualified opinion, which should rightfully be accompanied by additional disclosure. We note there is already a requirement for management to report disagreements with auditors to the Audit Committee, as well as publicly disclose the nature of such disagreements under Rule S-X.

Our comments on the proposal follow:

- PCOAB efforts over the last several years have resulted in continued expansion of the audit scope and documentation requirements. We have not seen the benefit from the resulting increase in cost that has accompanied these efforts. We believe this proposal will lead to additional costs of compliance without improvement in audit quality. With the auditors' experience from the inspection process, we would expect they will exercise extreme caution to avoid second-guessing, resulting in an overabundance of Critical Audit Matters.

- It is not clear how this information will be of value to investors. In addition, the new report may distract from understanding the entities performance by giving undue prominence to elements of the financial statements that were difficult to audit. We do not see how investors would have behaved differently had this information been included in the auditor's report. Critical Audit Matters will only contain information that is already actionable from the MD&A or financial statements.

- We believe an expectation will be created that there must be Critical Audit Matters discussed in every audit report. This will quickly lead to boilerplate reciting of items such as critical accounting policies already disclosed in MD&A, as well as discussion of matters communicated to the audit committee (including, for example, significant deficiencies in internal control which is not required today), items included in the auditor's completion memorandums, consultations with auditor's quality review and national audit partners, and issues discussed by the company with the SEC. This may also result in audit firms developing *standard* Critical Audit Matters by industry that must be included in each report to avoid second-guessing and resulting in disclosure overload.

- As discussed with the original proposal, the requirement that every national office consultation or audit committee communication is potentially a Critical Audit Matter could have a significant "chilling effect" on the communications between auditors and the audit committee. The existing environment promotes an open dialogue.

- The illustrations contained in the proposal make it clear that compliance will require numerous pages of discussion. The proposed report will result in a lengthy technical summary that investors will not be able to understand or appreciate without direct and in-depth discussion of the matters with the company or auditor. The examination of these technical matters is why professional auditors are engaged in the first place, and what allows investors to rely on the financial statements.

- The proposed process will lead to significant effort on the part of the auditor to draft this information at a high level of quality required for external reporting to shareholders, and to undergo a rigorous internal review process. As the auditor's expanded report will appear in the company's filings, management will have a vested interest to review and provide input on all critical audit matters discussed. All this activity will occur in an already very compressed and stressful annual reporting cycle.

- The proposed change to the auditor's responsibility for Other Information is more substantive than it appears. Current requirements are to *read* the other information for inconsistency with the audited financial statements. The proposal requires an *evaluation* of all Other Information including that not directly related to the financial statements. This raises the auditor's responsibility and required standard of care which will result in increased procedures. Other Information includes statements which are not purely financial and are based on the knowledge, insight and experience of management which is not necessarily objectively verifiable. Auditors may not possess the expertise necessary to evaluate Other Information. This could lead to the auditor consulting with specialists, or conversely curtailed management commentary in MD&A. We believe there is only minor incremental value to be derived from this proposed requirement that will not justify the cost. We are not aware of problems in this area and believe the current approach is sufficient.

We appreciate the opportunity to respond to this proposal and trust that our comments will be seriously considered in future Board deliberations.

Sincerely,

Richard J. Schlueter

**File Reference:** PCAOB Rulemaking Docket Matter No. 034

Dear Members of the Board:

I appreciate the opportunity to comment on the PCAOB's proposed audit standards included in Release No. 2013-005 addressing *The auditor's report on an audit of the financial statements when the auditor expresses an unqualified opinion* (the "proposed auditor reporting standard"). I currently serve as the audit committee chair on Entergy Corporation's Board of Directors and have served on the Entergy board since 2003. I have also served on audit and other committees on the boards of other organizations. I was an audit partner with Arthur Andersen for almost 25 years until my retirement in 1998, serving as director of the firm's North American utility practice. It is from this experience and perspective that I am providing my response to the PCAOB's request for comment on its release, and these comments are solely my own and should not be ascribed to any other entity.

As has been described in some industry and firm publications, I understand that

- this proposal has been issued in response to concerns expressed in feedback from U.S. and global audit standard-setting constituents, including investor groups, that the current auditor's report contains little or no information specific to a particular audit,

- investors have also indicated that they would benefit from the auditor's unique and relevant insights, and

- the proposed changes are intended to increase the informational value, usefulness, and relevance of the auditor's report.

As an Audit Committee chair, I consider the audit process to be critical in meeting a company's objective of presenting information that is accurate, compliant and meaningful to users of financial statements. I am supportive of endeavors by the PCAOB to advance the goals of audit firms providing high quality audits and companies producing relevant and reliable financial statements. I do not agree, however, with the current proposal primarily because: (i) it results in the independent auditor becoming a primary source of a company's financial information through the audit report and (ii) the investor concerns noted above are not addressed properly through audit report disclosures.

The SEC has enacted regulations, including designation of the FASB as the organization responsible for promulgating US GAAP, defining *what* financial information needs to be disclosed. These rules designate management as the responsible party to determine *how* to communicate this information to most accurately reflect a company's financial results and position. The role of the external auditor is to express an opinion indicating that reasonable assurance has been obtained that the financial statements prepared by management are free from material misstatement, whether due to fraud or error, and that they are fairly presented in compliance with the applicable SEC and FASB requirements in all material respects. The audit committee, comprised of a company's shareholder-elected Board of Directors, is charged with oversight of both management's financial reporting and the audit process. If management, the external auditors, and the audit committee fulfill their respective responsibilities, I believe the additional communications and requirements outlined in the proposed auditor reporting standard are unnecessary. In fact, the additional communications and requirements are likely to lead to disclosure overload and confusion regarding the roles of the various parties in the process.

Of the requirements proposed in the auditor reporting standard, I most strongly disagree with the requirement that the auditor disclose critical audit matters (CAMs) within the audit report. The proposal regarding CAMs would be detrimental to the usefulness and relevance of the audit report and, as noted above, would change the role of the auditor to one of primary responsibility for communicating a company's financial information. Further, the proposal would result in lack of consistency and comparability of auditors' reports across companies while increasing the cost of compliance. I appreciate the Board's efforts to understand and incorporate investor and user feedback related to disclosure into consideration of how to improve the audit process, but I believe that issues associated with sufficiency of disclosure are more appropriately addressed by SEC and FASB rulemaking rather than through an unprecedented expansion of the independent auditor's role and responsibilities.

For further discussion regarding objections to the proposed CAMs requirement, I refer the PCAOB to the comment letter submitted by the Edison Electric Institute ("EEI"). Entergy is a member of EEI, and its management participated in the drafting of EEI's comment letter. I concur with the views expressed therein regarding the proposed auditor reporting standard and the CAMs requirement.

I thank the Board for its effort on this important matter and for your consideration of this letter.

Sincerely,

/s/ Steven V. Wilkinson

Building a better working world

Ms. Phoebe W. Brown, Secretary
Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington, D.C. 20006-2803

18 December 2013

**Re: Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments, PCAOB Rulemaking Docket Matter No. 034**

Dear Ms. Brown:

Ernst & Young LLP (Ernst & Young) is pleased to submit these comments to the Public Company Accounting Oversight Board (PCAOB or Board) on its Proposed Auditing Standards – *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion (Proposed Reporting Standard), The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report (Proposed Other Information Standard), and the Related Amendments to PCAOB Standards* (collectively, the Proposal).

We support the PCAOB's efforts to examine the adequacy of the existing auditor's reporting model and believe that, in general, the types of changes contemplated in the Proposal will improve and increase the informational value of the audit report.

We also appreciate that the Board is considering the work of other standard setters such as the International Auditing and Assurance Standards Board (IAASB) and the United Kingdom's Financial Reporting Council on this important topic. We believe the effort by the Board to work closely with these standard setters to harmonize auditor reporting, where possible, and minimize potential complexity for users of financial statements is commendable.

While we are supportive of the Board's overall efforts relating to the auditor's reporting model, we also believe that certain elements of the Proposal present challenges that may give rise to significant application difficulties in practice. We propose changes to address these concerns in support of the Board's objective to enhance the auditor's reporting model. We refer the Board to the comment letter on the Proposal from the Center for Audit Quality (CAQ), which identifies a number of these challenges and provides suggestions of how to address them. The CAQ's letter addresses the following areas of the Proposal:

- Critical audit matters (CAMs)
- Other information accompanying audited financial statements

- Auditor tenure
- Auditor's unqualified report and clarifying language changes
- Other considerations
  - Applicability
  - Legal considerations

We share the CAQ's concerns and support the suggestions outlined to address them, as discussed and further supplemented below. We have also included, in Appendix B, comments on the conforming amendments included in the Proposal.

**Critical audit matters**

We agree, as noted in the Proposal, that including critical audit matters (CAMs) in the auditor's report "…could help investors and other financial statement users focus on aspects of the company's financial statements that the auditor also found to be challenging." We also agree that the CAMs should be "…presented in language and in a format that is clear, concise, and understandable to a financial statement user." We support these objectives and believe these enhancements to the report could be beneficial to users of financial statements.

However, we do have some significant operational concerns which are highlighted below, along with suggestions for improvement.

Determining CAMs

Paragraph 8 of the Proposal would require, when identifying a CAM, auditors to consider matters included in the engagement completion document, matters reviewed by the engagement quality reviewer and matters communicated to the audit committee. We are concerned that this very general approach will be too broad and could lead to practices that are inconsistent with the Board's objectives.

We note that auditors presently identify a wide range of matters in the engagement completion document, in discussions with the engagement quality reviewer and in communications with the audit committee. Without revisions to the proposal that could assist auditors with how to further filter these matters, auditors will find it difficult to select, from this universe of issues, those matters that are most important to the audit. In this regard, we are concerned that certain matters that an auditor appropriately determined not to be CAMs at the time the audit report was issued, may, with the benefit of hindsight, be unfairly subject to second guessing. This risk, combined with the requirement in paragraph 14 of the Proposal to document matters addressed in the audit that "would appear to meet the definition" of a CAM, but were not so reported, could prompt auditors to identify a large number of matters in the audit report, some of which might not meet the Board's expectation of a CAM. This would reduce the relevance of the CAMs, which would be contrary to the Board's stated objectives.

## Communicating CAMs

Paragraph 11 of the Proposal would require the auditor to describe the considerations that led the auditor to determine that a particular matter is a CAM. However, we note that the example CAMs in the Proposal appear to indicate that the description of *each* CAM should address *each* of the paragraph 9 considerations that were present. If this is the PCAOB's intent, we believe it raises the following concerns:

- *Checklist approach to the communication of CAMs* — Requiring a description of all of the factors that may be present could result in a "checklist" approach to CAM communication. This could result in a long list of all of the items that might have related, even tangentially, to the matter. Many of these matters would be of limited use to financial statement users and may obscure the most significant factors the auditor considered when determining the matter was a CAM. For example, paragraph 9 lists consultations outside the engagement team as a consideration. We believe that auditors typically consult with a firm's national office or engage firm specialists in response to a challenging audit issue, not as part of a determination that the matter is critical. Moreover, the decision to consult with others outside the engagement team may depend more on the expertise or prior experiences of the engagement team. Requiring a description of these consultations in the audit report may lead to inappropriate inferences about the quality of other audits in which similar issues arose but consultations were not performed. As such, as more fully described below, we believe requiring the *principal consideration* that led the auditor to determine a matter is a CAM communication would be a more effective way of accomplishing the Board's objective.

- *Potential inclusion in the auditor's report of original information* — The examples in the Proposal would appear to require the communication of certain specific matters, such as control deficiencies less severe than a material weakness and corrected and accumulated uncorrected misstatements related to the CAM. At present, public companies are not required to disclose these matters, and we are concerned that having the auditor serve as the source of this and other original information about the entity could blur the roles of management and the auditor. We believe a final standard should stress that the auditor should avoid conveying, through a CAM, information that the entity is not required to disclose.

- M*ateriality* — Certain matters addressed in the audit may present challenges, but may not relate to items disclosed in the financial statements. For example, an audit team may expend effort evaluating a company's accounting for a potential loss contingency and ultimately concur with the company's conclusion that no accrual or financial statement disclosure is necessary. The Proposal is unclear about whether a CAM communication would be required in this case. We do not believe it would be appropriate for the auditor to describe matters in the auditor's report if they do not relate to material matters disclosed in the financial statements.

- *Potential for user misunderstanding* — While we recognize that the Proposal would not require the auditor to describe specific audit procedures in the CAM communication, the examples in the Proposal suggest that such a discussion should be so included.[1] We note that it is difficult to

[1] See on page A5-36 of the proposal, the Board states that "…when communicating critical audit matters in the auditor's report, the proposed auditor reporting standard would not require the auditor to describe the audit procedures related to critical audit matters. It would, however, not preclude an auditor from doing so."

explain, in a few sentences, the significant audit effort that may have gone into a particular area. We are also concerned that users of the financial statements might misunderstand the communication of audit procedures and may think it means the auditor has provided a specific level of assurance on the CAM (i.e., a piecemeal opinion). Further, if audit procedures are described in the audit report, we believe that preparers may also request that the results of such procedures be included in the description of the CAM to address users' questions or concerns about the outcome of the procedures. This would further exacerbate the potential for users to interpret the description of a CAM as providing a specific level of assurance on a particular matter.

### Documenting CAMs

As noted above, paragraph 14 of the Proposal would require the auditor to document why "non-reported audit matters addressed in the audit that would appear to meet the definition of a critical audit matter were not critical audit matters." We do not believe that such a requirement is operational because it is unclear how an auditor could easily demonstrate that such a matter *is not* a CAM. Consistent with the concern raised above, we fear that this requirement, if adopted, could result in auditors communicating a large volume of matters in order to avoid later challenges as to the completeness of the CAMs reported. Such an outcome would be contrary to the intent of the Proposal, and would likely add significant costs to the audit process without a corresponding benefit. In addition, inclusion of a significant number of matters in the audit report will likely result in significant time involved in developing their descriptions, which could put additional pressure on issuer's filing deadlines. As a result, we believe this aspect of the Proposal must be clarified.

## Suggestions to improve the PCAOB's CAM framework

Given the challenges noted above, we believe the changes we suggest below will result in:

- The identification of the matters in the audit of the financial statements that were most important
- A description of matters that should provide useful information to financial statement users, while minimizing potential unintended consequences
- A more efficient and effective process for identifying, describing and documenting the auditor's basis for his or her determination of CAMs

### Determining CAMs

As a starting point, we believe that the auditor should initially identify matters that were significant to the audit of the financial statements (significant audit matters). We believe all such matters should already be reflected in the required communications to the audit committee under PCAOB Auditing Standard (AS) No. 16. Such a CAM determination starting point is consistent with the Board's rationale for identifying the types of significant matters to be communicated to the audit committee.[2]

[2] We note, for example, in the adopting release for AS 16, the Board noted (emphasis added): "Auditing Standard No. 16 is intended to improve the audit by fostering constructive dialogue between the auditor and the audit committee about significant audit and financial statement matters. The standard requires the auditor to communicate certain matters regarding the audit and the financial statements to the audit committee, which should assist the audit committee in fulfilling its oversight responsibilities regarding the financial reporting process."

This approach would also have the benefit of more closely aligning the identification of CAMs with the IAASB's proposal.

From this initial population of significant audit matters, we believe the consideration of the factors included in paragraph 9 of the Proposal would help the auditor, using his or her judgment, to identify those matters most important to the audit of the financial statements. In our view, the determination of CAMs should represent those significant audit matters that (1) were material to the financial statements, (2) involved the most challenging, subjective or complex auditor judgments, posed the greatest challenge to the auditor in obtaining sufficient appropriate audit evidence or posed the greatest challenge to the auditor in forming an opinion on the financial statements and (3) resulted in the most significant interaction with the audit committee. We note that this approach builds upon the PCAOB's criteria in the following manner:

- *Focuses on matters that are material to the financial statements* — The PCAOB's release notes that CAMs "could help investors and other financial statement users focus on aspects of the company's financial statements that the auditor also found to be challenging.... that could enable them to analyze more closely any related financial statement accounts and disclosures." (emphasis added) We believe this is the key benefit to users of the financial statements. As such, we believe the auditor's determination of CAMs should include consideration of only matters that are material[3] to a company's financial statements.

- *Facilitates identification of most challenging matters* — Consistent with the Proposal, we believe the factors included in paragraph 9, when considered in conjunction with our suggestions, help facilitate the identification of the most important matters.

- *Resulted in the most significant interaction with the audit committee* — Consideration of matters that resulted in the most significant interaction with the audit committee builds upon investor requests for further insights into auditor/audit committee communications and is consistent with the audit committee's role of representing the interests of shareholders. In addition, we believe that, in practice, auditors and audit committees tend to spend the most time focusing on matters that have the characteristics, as generally contemplated in the Proposal, of CAMs. Accordingly, we believe the ultimate standard should reflect what we see in practice, and the extent of the auditor's interaction with the audit committee on the various matters that arise during the execution of an audit is an important measure in CAM determination. We believe changes along these lines, particularly the need for the additional filter tied to the extent of audit committee interaction on a significant audit matter, will improve the operational and cost effectiveness of the requirements.

**Communicating CAMs**

As previously discussed, we do not believe that the description of a CAM needs to include all of the factors that may relate to the matter. In fact, we believe such an approach would lead to problems in practice and would likely confuse users of the audit report. Rather, we recommend that the Board revise the Proposal such that auditors should focus on the *principal* consideration (or, in some more

---

[3] Although the concept of materiality is not mentioned in connection with the determination of critical audit matters in the Proposal, we note that such a concept is listed in one of the examples regarding the auditor's determination of critical audit matters. See Proposal page A5-76.

limited situations, the principal considerations) that led the auditor to determine that a matter was a CAM. We believe that in many cases, the principal consideration that led the auditor to determine that a matter was a CAM will also be apparent from a company's descriptions of such matters in the audited financial statements. Examples would include a high degree of complexity or subjectivity in determining the related amount or disclosure. We believe users of an audit report would benefit from the identification of the CAM and a short description of why the auditor concluded it was a CAM. The description should be concise and fact based, and we believe the example CAM communications in the CAQ letter illustrate this point. We also see significant challenges in practice, and the potential for user confusion, if the Board goes much beyond this approach, since a lengthy description of all of the factors may obscure the most significant issue the auditor considered when determining whether the matter was a CAM.

As noted above, we are especially concerned that a user might infer that a separate level of assurance is being provided on the matter described in a CAM, particularly if the description were to include a discussion of audit procedures performed. However, we also recognize that there may be some circumstances when a description of the CAM's effect on the audit may be necessary to explain why the matter was a CAM.[4] In our view, this may be the case when the principal consideration that led to the determination that a matter was a CAM was not apparent from the disclosures in the audited financial statements. For example, consider a situation in which a matter is identified as a CAM due to a material weakness in a company's internal control over financial reporting (ICFR) in an area that was integral to the determination of a material account or disclosure. While the company may describe the internal control matter in the filing that includes the audited financial statements, the audited financial statement may not, and a description of how the auditor considered the matter in the performance of the audit may be necessary to appropriately communicate to financial statement readers why the matter was a CAM. As a result, we recommend the Board revise the Proposal by stating explicitly that the auditor could provide a description of the CAM's effect on the audit if, and only if, the auditor considers it necessary to describe why a matter was determined to be a CAM. In this regard, while we observe that the examples in the CAQ letter include, in bracketed text, illustrations of potential descriptions of a CAM's effect on the audit, we believe this language is unnecessary given the facts and circumstances in those examples.

We have also included, in Appendix A, two examples of situations in which we believe an auditor may find it necessary to describe the effect that a CAM had on an audit.

**Documenting CAMs**

We believe it is important that the audit workpapers support the auditor's rationale for the determination of CAMs. As noted above, however, we do not believe the proposed documentation guidance is operational. Instead, we believe the PCAOB standard would be more practical if the auditor was required to document 1) those matters that were communicated to the audit committee that were determined to be significant audit matters and (2) which significant audit matters the auditor determined to be CAMs. Key to this determination is the auditor's assessment of the factors described in paragraph 9 of the Proposal and the consideration of those matters that involved the

---

4 We note, however, that each of the PCAOB's examples appears to include such descriptions (see pages A5-65 through A5-78).

highest degree of interaction with the audit committee. We believe this is how practice is working presently where, in view of all of the issues required to be communicated, audit committees typically ask for the auditor to highlight those most critical to the audit. These are the matters that tend to receive the most attention and interaction.

**The importance of robust field testing**

Due to the Proposal's significance, we strongly believe that robust field testing should be conducted to help identify unintended consequences, ambiguities or the potential for inconsistencies in application. We believe a careful consideration of the results of field tests would improve the quality of any final standard. Field testing would also provide information about the likely additional audit effort required and the related cost. While we believe the PCAOB would benefit from conducting such an effort itself, we are currently field testing the Proposal on a number of engagements and intend to share our observations with the PCAOB in early 2014.

**Other information**

We support the auditor's performance responsibilities related to other information being better codified in the standards. We also support describing, in the audit report, the auditor's responsibilities for other information. We believe this would respond to requests from financial statement users to obtain a better understanding of the auditor's responsibilities in this area.

However, we do not support the Proposal's contemplated changes to current requirements and practices in the following three areas: (1) expanding the auditor performance requirements related to other information to "read and evaluate" from "read and consider," (2) the lack of certainty surrounding the scope of the "other information" covered by the Proposal and (3) requiring the auditor's affirmative statement about other information to be reflected in the audit report.

We believe these issues, if not addressed, will expand the auditor's other information performance responsibilities significantly beyond what the PCAOB believes is today's current practice, and the contemplated reporting requirements will result in increased liability risks for audit firms. Such outcomes will result in higher audit performance and reporting costs.

**Expanding auditor performance requirements to "evaluate" other information**

***Use of the term "evaluate"***

PCAOB interim standard AU 550, *Other Information in Documents Containing Audited Financial Statements*, (AU 550) requires the auditor to "read and consider" whether the other information, or the manner of its presentation, is materially inconsistent with information in the financial statements or the manner of its presentation.[5] If while reading the other information for a material inconsistency, the auditor becomes aware of information that the auditor believes is a material misstatement of fact, the auditor is required to discuss the matter with management and, if the matter is not resolved,

---

[5] AU 550.04

consider other actions.[6] The Proposed Other Information Standard would require the auditor to "evaluate" the other information for a material inconsistency or a material misstatement of fact based on procedures performed, including reading the other information.

We understand that the PCAOB replaced "consider" with "evaluate" because AU 550 does not specify procedures to be performed by the auditor on other information. As more fully articulated in the CAQ's legal analysis, we believe the proposed use of the word "evaluate" implies a significantly higher expectation of performance on other information than what is required under the existing standard. For instance, we believe use of this term might result in an expanded responsibility for not only what the issuer has disclosed within its other information, but also for whether the issuer has identified all matters required to be disclosed (i.e., to assess completeness of all Regulation S-K requirements ). In other words, the auditor might be required to examine not only what the issuer has disclosed, but what it has not disclosed. Based on staff commentary on the Proposal provided at the 13 August 2013 open meeting, it is our understanding that the Board did not intend to significantly increase the performance standards in this area, so this issue needs to be clarified. In addition, as more fully described below, we believe the use of the term "evaluate" to describe the auditor's "conclusion" in the auditor's report could cause users to perceive that the auditor is providing a form of reasonable assurance on such information.

***Consideration of "relevant audit evidence obtained and conclusions reached during the audit"***

The Proposed Other Information Standard would require the auditor to base the evaluation on "relevant audit evidence obtained and conclusions reached during the audit."[7] We recognize that the auditor must use knowledge gained from the audit when considering whether a material inconsistency, or material misstatement of fact, exists in the other information. However, we are concerned that, as currently drafted, the requirement could be interpreted to mean that an auditor may need to perform a search for any and all documentation included in the audit workpapers related to each qualitative and quantitative statement in the other information. We believe that such an expectation would represent a significant expansion of auditor obligations relative to current practice.

***Other information not directly related to the financial statements***

The Proposed Other Information Standard would require the auditor to perform procedures on other information that are not directly related to the audited financial statements. In many instances, we believe the auditor may not have a basis (from the audit or otherwise) to "evaluate" such information based on information gained during the audit. However, from the proposed descriptions (and conclusion) included in the audit report, it would not be clear to users of the financial statements that the auditor may not have had a basis to "evaluate" such information. Such an outcome would appear to be contrary to the PCAOB's objectives of clarifying for users the auditor's responsibilities in this area.

---

6 AU 550.05

7 Paragraph 4 of the proposed other information standard

Building a better working world

### Scope of "other information"

The Proposed Other Information Standard defines other information broadly as information in the annual report, other than the audited financial statements and the related auditor's report, and includes documents contained in the list of exhibits to[8] and information incorporated by reference in the annual report.[9] We believe auditors would benefit from the following clarifications:

- *Identification of the exhibits that fall within the scope of the auditor's performance responsibilities* — For instance, certain exhibits (e.g., acquisition plans, material contracts) may have been subject to audit procedures due to their relevance to the audit of the financial statements. It may not be appropriate to subject these exhibits to the performance procedures within the Proposed Other Information Standard, since we may have more than read and evaluated this information.

- *Performance obligations related to the proxy statement* — The Proposed Other Information Standard would require the auditor to evaluate other information included in the proxy statement. Because the proxy statement may not be filed until 120 days after year-end, which may be after the Form 10-K is filed, it is unclear how this requirement can be applied in practice. In addition, if such procedures are performed on the proxy statement after the auditor's report is filed, it is unclear whether the auditor would be required to reissue an audit report that is dual-dated.

### Requiring the auditor's conclusion about other information in the report

While we support describing, in the audit report, the auditor's responsibilities for other information, we do not support the proposed requirement for the auditor to assert, based on relevant audit evidence obtained and conclusions reached during the audit, whether the other information contains a material inconsistency, a material misstatement of fact, or both. We believe that providing this "conclusion" may be interpreted by investors and other financial statement users as providing an opinion on other information, even though the proposed other information standard requires a statement that the auditor did not audit the other information. To address this concern, we believe the Board should revise the Proposal to require a description of the auditor's responsibilities with respect to other information, including responsibilities related to material inconsistencies or misstatements of fact that are not addressed by the company. In addition, as more fully discussed in the CAQ letter, we believe that the requirement to make an affirmative statement with respect to the results of the procedures performed on the other information would result in significant increased liability risk to audit firms. Accordingly, we recommend that this statement be removed as a requirement.

## Suggestions on the Proposed Other Information Standard

We support the suggestions provided by the CAQ, which we believe would clarify the auditor's performance and reporting responsibilities related to other information, help address some of the increased liability risks resulting from the proposed changes and still enable the PCAOB to achieve its objectives in this area. We have summarized key elements of these suggestions below.

---

[8] See the proposed other information standard, footnote 15, appendix 6.

[9] See the proposed other information standard, "Note" to paragraph 11.

*Replacing "evaluate" with "perform certain limited procedures"*

As indicated by the PCAOB, "evaluate" consists of reading the other information and performing specific procedures.[10] We do not support the use of this word to describe the results of the procedures required by the Proposal. As such, we believe the PCAOB should consider replacing "evaluate" with "perform certain limited procedures" in the audit report. As more fully discussed below, we also believe that the standard should articulate, in general terms, the limited procedures to be performed (on information that is directly related to the audited financial statements versus that not directly related to the audited financial statements), and that the auditor's report should also include a general description of these procedures.

*Performance requirements*

We believe the Board should revise the requirements to make a clearer distinction between the performance requirements related to information that is directly related to the audited financial statements and information that is not directly related to the financial statements.

We believe limited procedures (beyond reading) should apply only to "other information directly related to the audited financial statements," which would include information derived from either (1) the audited financial statements or (2) accounting records subject to the audit. This change would also make clear that the auditor does not have to perform an extensive search of the audit workpapers to determine whether other information was addressed in the audit. With respect to other information not directly related to the audited financial statements, we believe the Board should revise the requirements such that the auditor's performance responsibilities are to read the information and follow up accordingly if, based on knowledge gained during the course of the audit, any potential material misstatements of fact are identified.

In addition, we believe that it is important that the auditor consider the significance of the other information when performing the required procedures. We don't believe it is the Board's intention, nor would it be beneficial from a cost-benefit perspective, to have performance standards apply to other information that is not material. Accordingly, we recommend that the Board revise the requirement so that the auditor would only be required to perform procedures beyond reading with respect to *material* other information directly related to the audited financial statements.

We believe that these suggestions, combined with others in the CAQ's letter, would more closely align the Proposal's guidance on other information with what are often viewed as best practices under current standards.

**Communicating matters related to other information in the auditor's report**

We support additional transparency regarding the auditor's responsibilities related to other information in the audit report. Specifically, we believe the report should:

- Describe the auditor's responsibilities to perform certain limited procedures on other information

[10] Paragraphs 3-4 of the proposed other information standard

- Describe the limited procedures performed
- Emphasize that these limited procedures do not constitute an audit *or review* of the other information
- Include a statement that in the event the auditor becomes aware, based on the limited procedures performed, that the other information contains a material inconsistency with the audited financial statements, a material misstatement of fact in the other information, or both, that has not been appropriately revised, the auditor is required to describe the inconsistency or misstatement, or both, in the audit report
- Include a description of the material inconsistency, the material misstatement of fact, or both in situations where the auditor has become aware of a material inconsistency with the audited financial statements, a material misstatement of fact in the other information, or both, that has not been appropriately revised

We believe that this reporting would clearly communicate the auditor's responsibilities regarding other information and, if and when applicable, identify an unresolved material inconsistency with the financial statements or a material misstatement of fact of which the auditor is aware. It would also help mitigate the risk that investors or other financial statement users would infer that the auditor has a greater responsibility for the other information than is required by the Proposed Other Information Standard. Finally, we believe this reporting would help address, at least to some extent, the significant liability concerns as described in the CAQ letter.

*Clarifying other information documentation requirements*

We noted that the Proposal does not provide guidance on the nature and extent of documentation that would be required with respect to fulfilling the auditor's other information responsibilities. The proposal to "evaluate" other information implies that auditors would have to document the source of information for every qualitative and quantitative statement in the other information, regardless of whether the other information is directly related to the audited financial statements. Such an effort would be significant and, in our view, would not have a commensurate benefit to audit quality. While we believe the recommendations above will assist in focusing the auditor's documentation efforts, by more clearly articulating the auditor's performance requirements that go beyond reading the other information, we recommend that the PCAOB provide guidance on how the auditor should document the procedures performed.

**Auditor tenure**

The Board has stated that to date, it has not found a link between audit quality and auditor tenure. As a result, we are concerned that requiring tenure information in the auditor's report, particularly at the end of the auditor's description of his/her independence responsibilities, would imply, incorrectly and without an evidentiary basis, the PCAOB has determined such a correlation exists. As such, we do not support the inclusion of auditor tenure information in the audit report.

We do support the consideration of other ways of making auditor tenure more transparent. We note that disclosure about the length of the auditor relationship is becoming more common in practice. For example, a recent EY survey found that a growing number of audit committees of Fortune 100 companies are disclosing the tenure of their auditors in the audit committee reports included in annual proxy statements.[11] In addition, we note that the CAQ, in collaboration with several governance organizations, recently encouraged all audit committees to consider making such disclosures in a recent publication, "Call to Action."[12]

While the Board could consider having auditors provide tenure information in the PCAOB's annual report on Form 2, we believe that tenure information may be most meaningful if provided by audit committees in the context of their evaluation of the auditor. As such, we believe the PCAOB should work with the SEC to explore the best possible means of providing auditor tenure information to users of public company financial statements.

**Other considerations**

Liability concerns

As more fully discussed in the CAQ's letter, we believe the proposed identification and disclosure of CAMs, as well as the proposals related to other information, pose risks of increased legal liability that are real and substantial. We strongly believe the PCAOB must weigh the potential benefits of the Proposal against the increase in auditor liability and costs that we believe would occur. While we believe that the improvements we suggest in this letter would help to mitigate (at least, to some extent) the additional liability exposure, such risks would, even then, remain a significant issue for the profession and one that requires much more thought and analysis than is currently evident.

Scope — broker dealer, investment companies, employee benefit plans and emerging growth companies

*Critical audit matters*

We do not believe that auditors of the financial statements of brokers and dealers, investments companies and employee benefit plans (i.e., employee stock purchase, savings and similar plans) should be subject to the identification, communication and documentation of CAMs under the Proposal.

Generally, benefit plans and registered investment companies are designed for a specified purpose and these entities tend to be heavily invested in financial assets. As a result, we suspect the CAMs for these entities would be very similar (i.e., matters related to valuing financial assets). These entities already follow extensive financial statement disclosure requirements for financial assets, and we believe users of these reports tend to understand that fair value issues are important to both the preparation and audit of these financial statements. Consequently, we question whether extending the requirements to describe CAMs to audit reports of investment companies and employee benefit plans would provide a significant benefit to users of financial statements of these entities.

---

11 *Audit Committee Reporting to Shareholders, 2013 Proxy Season*, EY (link).

12 *Enhancing the Audit Committee Report: A Call to Action*, issued by the Audit Committee Collaboration consisting of the following organizations: National Association of Corporate Directors, New York Stock Exchange, Corporate Board Member, Tapestry Networks, Association of Audit Committee Members, Inc., and the CAQ (link).

As noted in the PCAOB Release, brokers and dealers are primarily closely held (the PCAOB's Office of Research and Analysis says approximately 75% of brokers and dealers have five or fewer direct owners), and the direct owners are generally part of the entity's management. In addition, many brokers and dealers are part of an issuer parent entity so the CAMs related to brokers and dealers would be considered in the parent's CAM communications. Accordingly, we believe that requiring the auditors of these entities to communicate CAMs would not provide financial statements users with additional relevant information to justify the additional cost.

***Other information***

In our view, audits of brokers and dealers and employee benefit plans should be excluded from the scope of the Proposed Other Information Standard. We believe that the compliance or exemption report required to be filed by brokers and dealers under Exchange Act Rule 17a-5[13] and required to be reported on by auditors under the *Standards for Attestation Engagements Related to Broker and Dealer Compliance or Exemption Reports Required by the U.S. Securities and Exchange Commission*[14] provides users of their financial statements with sufficient information to make any additional reporting by the auditor for such entities under the Proposed Other Information Standard unnecessary. Moreover, Form 11-Ks filed by employee benefit plans contain a limited amount of other information.

***Emerging growth companies***

We do not think that emerging growth companies (EGCs) should be excluded from the auditor reporting and other information standards. We believe EGCs exhibit characteristics similar to other public companies and that users of financial statement will benefit from similar auditor reporting requirements. In addition, we believe that the recommendations provided above should help mitigate the costs (for audits of EGCs and all other public companies) of the expanded auditor performance and reporting requirements reflected in the Proposal.

* * * * *

We would be pleased to discuss our comments with the Board or the PCAOB staff at your convenience

Yours sincerely,

Ernst + Young LLP

## Appendix A — Example CAM disclosures reflecting the "effect on the audit"

We have included the following two examples to demonstrate situations in which we believe an auditor may find it necessary to describe, in the audit report, the effect a CAM had on an audit.

### Example 1 — Implementation of new inventory system

*Background*

XYZ Company (the "Company") designs, manufactures, sells and services customized widgets. Revenues are recognized in accordance with the percentage-of-completion contract accounting method. During 2013, XYZ Company implemented a new inventory system, as its previous system was no longer supported by the vendor and was not suited to the Company's anticipated growth plans. The new system was also intended to better facilitate the gathering of production information and allow it to more efficiently plan, manage and track the production process. The system will include the following functionality, among others:

- Develop material requirements
- House bills of materials
- Collect production floor data
- Manage suppliers (ordering and receiving of materials)
- Manage the Company's inventory
- Track field service and warranties
- Track sales of parts and accessories

The new system caused the Company to redesign its internal controls in the inventory and revenue recognition areas. The Company worked with its software vendors to run the new and old systems on a parallel basis over a six-month period. As part of this process, it implemented controls to reconcile any differences in the cost information output from the two systems, as well as any differences in contract amounts. After the end of the 3rd quarter, the Company determined that the new system was operating effectively and ceased the parallel operations effective October 1, 2013.

*Company Disclosures*

<u>Significant Accounting Policies — Notes X and Y</u>

XYZ Company (the "Company") designs, manufactures, sells and services customized widgets. Revenues are recognized in accordance with contract accounting. The Company recognizes contract revenues under the percentage-of-completion method which is based on contract costs incurred to date compared with total estimated contract costs. Changes in estimates of total contract revenue (e.g., customer amendments to the agreed-upon design), total contract cost or the extent of progress towards completion are recognized in the period in which the changes in estimates are identified. Estimated losses on contracts are recognized in the period in which the loss is identified. If the final outcome of a contract cannot be reasonably estimated, but a loss on the contract is not expected, the Company recognizes revenues under the percentage-of-completion method based on a zero profit margin until more precise estimates can be made. If and when the Company can make more precise estimates, revenues and costs of revenues are adjusted in the same period.

Contracts accounted for in accordance with contract accounting are billable upon achievement of milestones specified in the contracts or upon customer acceptance. Costs incurred and revenues recognized under the percentage-of-completion method in excess of customer billings are included in "Accounts receivable" in the Consolidated Balance Sheets. Customer billings in excess of costs incurred and revenue recognized under the percentage-of-completion method, which typically reflect initial down payments, are included in "Advance payments from customers" in the Consolidated Balance Sheets.

Item 9A. Controls and Procedures: Changes in Internal Control Over Financial Reporting

During the 4th quarter, we implemented a new inventory system, which caused us to revise internal controls in the inventory and revenue areas.

The Company worked with its software vendors to run the new and old systems on a parallel basis over a six-month period. As part of this process, we also implemented controls to reconcile any differences in the cost information output from the two systems, as well as any differences in contract amounts. After the end of the 3rd quarter, the Company determined that the system was operating effectively and ceased the parallel operations effective October 1, 2013.

***Auditor's Considerations***

CAM Considerations

The external auditor determined this matter represented a CAM due to the following:

- Inventory, revenues and cost of goods sold are material financial statement accounts. The transition to the new system represented a significant area of risk to the accumulation of costs related to the Company's production of widgets, as well as the determination of revenue. The auditor made changes to the audit approach and planned procedures in this area in response to the changes in the Company's systems and underlying processes.

- Significant audit effort was expended evaluating the adequacy of the new controls related to the input of production cost and tracking information into the new system, including the reconciliation controls utilized during the 6-month period where both systems were operated in parallel.

- Significant effort was expended by the audit team, including significant involvement of the firm's IT personnel, to evaluate the effectiveness of the Company's IT controls related to the new system, including logical access, security and other application controls related to the accumulation of cost information related to production, inventory tracking/costing, supplier management, and revenue generation.

- The Company's audit committee was involved in tracking the progress the Company made in this area. For example, the audit committee (1) requested that management provide regular status updates related to the new system development and the related conversion, (2) inquired of management, internal audit and the external auditor about any challenges identified during the conversion, (3) requested the external auditor to specifically discuss the manner in which the audit approach would address the risks associated with the conversion and (4) directed the internal audit department to devote significant resources to evaluating the adequacy of the Company's controls in this area. As a result, this interaction represented some of the most significant with the audit committee during the course of the audit.

***Example CAM Disclosure***

The standards of the PCAOB require that we communicate in our report critical audit matters relating to the audit of the current period's financial statements or state that we determined that there are no critical audit matters. Critical audit matters are matters that, in our judgment, a) were material to the financial statements, b) involved our most challenging, subjective, or complex judgments, posed the greatest challenge to us in obtaining sufficient appropriate audit evidence, or posed the greatest challenge to us in forming an opinion on the financial statements, and c) resulted in the most significant interaction (in terms of nature or extent) with the audit committee. Our audit included performing procedures designed to address the risks of material misstatement associated with the matter(s) described below. Such procedures were designed in the context of our audit of the financial statements, taken as a whole, and do not provide assurance on individual accounts or disclosures. The communication below is not intended to identify all matters we considered to be significant to our audit. Other matters that we determined were not critical audit matters were discussed with the audit committee during the course of our audit.

Implementation of New Inventory System

The Company recognizes contract revenues under the percentage-of-completion method, which are based on contract costs incurred to date compared with total estimated contract costs. The amount of revenue recognized requires the company to estimate total contract costs at the outset of a contract and revise those estimates over the life of the contract as circumstances dictate.

During the 4th quarter, the Company implemented a new inventory accounting system. The system is integral to the accumulation of contract cost information which, in turn, is the key driver in the Company's determination of revenue to be recognized. Given the significance of the inventory system to the Company's ability to track and record production expenses, and in turn recognize revenue, we determined that the Company's implementation of the new inventory system was a critical audit matter in the audit of the financial statements as of and for the year ended December 31, 2013.

Our audit involved testing the company's conversion from its previous system to the new system, including evaluating the adequacy of the reconciliation controls used during a 6-month period where both systems were operated in parallel. Our audit procedures also included an evaluation of the revised internal control policies and procedures related to the new system. The Company's inventory and revenue recognition policies are discussed in Notes X and Y to the financial statements.

**Example 2 — Material Weakness in Internal Control Over Financial Reporting Identified During the Audit**

*Background*

XYZ Company (the "Company") is a leading manufacturer of widgets and is a non-accelerated filer with a non-integrated audit. During the preparation of the 2013 year-end financial statements, an error was identified in the current-year calculation of the valuation allowance recorded for deferred tax assets. The Company determined that the error was the result of a control deficiency regarding the preparation and review of the calculation of the valuation allowance by senior tax personnel. The review did not appropriately consider the reasonableness of the assumptions used in projecting taxable income and reversals of existing taxable temporary differences when developing the valuation allowance. Given the material amount of deferred tax assets recognized by the Company and the nature and extent of the control deficiency identified, the Company determined that a material weakness in its internal control over financial reporting existed as of December 31, 2013.

*Company Disclosures*

<u>Item 8 — Financial Statements and Supplementary Data in 10-K</u>

*Summary of Significant Accounting Policies — Income Taxes*
The Company recognizes deferred tax assets and liabilities for the expected future tax consequences or temporary differences between the financial statement carrying amounts and the tax bases of the assets and liabilities. Deferred tax balances are adjusted to reflect tax rates, based on current tax laws, which will be in effect in the years in which temporary differences are expected to reverse. Deferred tax assets are reduced by a valuation allowance when management determines that it is more likely than not that some portion or all of the deferred tax assets will not be realized (see Note Y)....

<u>Item 9A-Controls and Procedures in 10-K</u>

*Evaluation of Disclosure Controls and Procedures*
...Based on our evaluation, our CEO and CFO concluded that as of December 31, 2013, our disclosure controls and procedures are ineffective related to the preparation and review of the valuation allowance recorded for certain deferred tax assets...

*Management's Report on Internal Control Over Financial Reporting*
We assessed the effectiveness of the Company's internal control over financial reporting as of December 31, 2013 using the criteria set forth by the Committee of Sponsoring Organizations (COSO) of the Treadway Commission in *Internal Control — Integrated Framework*.... Based on our assessment, we have concluded that we did not maintain effective internal control over financial reporting as of December 31, 2013, due to the material weakness in our internal control over financial reporting described below.

We did not maintain effective controls over the preparation and review of the valuation allowance recorded for certain deferred tax assets. Specifically, the review of the valuation allowance did not consider all relevant facts and circumstances. This resulted in an adjustment during the 4th quarter to the Company's financial statements as of and for the year ended December 31, 2013. While the adjustment was not material to the prior year, management has concluded that this control deficiency, if not effectively remediated, could result in misstatements of the income tax accounts identified in Note X of the consolidated financial statements that would result in a material misstatement of the Company's annual or interim consolidated financial statements that would not be prevented or detected. Accordingly, we have determined that this control deficiency constitutes a material weakness.

In response to the identification of the material weakness, in early 2014, management plans to take actions to remediate its internal controls over the preparation and review of the calculation of valuation allowances recorded for deferred tax assets. The Company plans to implement more robust reviews over the determination of valuation allowances recognized, including more formal comparisons between deferred tax assets and all sources of future taxable income. In addition, the Company has added resources that will enable management review and oversight for those valuation allowances that involve a higher degree of inherent complexity and judgment required on the part of management.

***Auditor's Considerations***

CAM Considerations

The external auditor determined this matter represented a CAM due to the following:

- Deferred tax assets are material to the Company's financial statements.
- The estimate was complex and highly subjective, requiring projections of future taxable income and reversals of taxable temporary differences.
- The control deficiency identified was determined to be a material weakness by management and the external auditor, which resulted in changes to the auditor's risk assessments and the performance of additional control and substantive procedures in this area.
- An adjustment was identified as a result of the control deficiency related to the deferred tax valuation allowance.
- Due to the sensitivity of the area, the valuation allowance was typically the source of significant interaction with the audit committee. In addition, upon the identification of the error and related control deficiency, further interaction occurred related to the misstatement, the related control deficiency and management's remediation plans. This interaction represented some of the most significant with the audit committee during the course of the audit.

***Example CAM Disclosure***

The standards of the PCAOB require that we communicate in our report critical audit matters relating to the audit of the current period's financial statements or state that we determined that there are no critical audit matters. Critical audit matters are matters that, in our judgment, a) were material to the financial statements, b) involved our most challenging, subjective, or complex judgments, posed the greatest challenge to us in obtaining sufficient appropriate audit evidence, or posed the greatest challenge to us in forming an opinion on the financial statements, and c) resulted in the most significant interaction (in terms of nature or extent) with the audit committee. Our audit included performing procedures designed to address the risks of material misstatement associated with the matter(s) described below. Such procedures were designed in the context of our audit of the financial statements, taken as a whole, and do not provide assurance on individual accounts or disclosures. The communication below is not intended to identify all matters we considered to be significant to our audit. Other matters that we determined were not critical audit matters were discussed with the audit committee during the course of our audit.

Material Weakness Related to Deferred Tax Valuation Allowance

The Company determined that a material weakness in internal control over financial reporting existed as of December 31, 2013. Specifically, the Company determined it did not maintain effective controls over the preparation and review of the valuation allowance recorded for certain deferred tax assets. The determination of the valuation allowance is subject to significant estimation, including projections of future taxable income and reversals of taxable temporary differences.

Given the significance of the deferred tax assets recognized in the financial statements and the identification of the material weakness related to the determination of such amounts, we determined that our evaluation of the Company's valuation allowance for deferred tax assets represented a critical audit matter in the audit of the financial statements as of and for the year-ended December 31, 2013.

Our audit procedures included evaluating the reasonableness of the assumptions used in the projections of future taxable income and reversals of taxable temporary differences, as well as evaluating the controls over the preparation and review of the deferred tax asset valuation allowance. The Company's policy for accounting for income taxes and related income tax disclosures are discussed in Notes X and Y to the financial statements.

**Appendix B — Comments on the conforming amendments**

| Comment Number | Reference | Observation |
|---|---|---|
| 1 | Para. 1 | The auditor's report when the auditor expresses an unqualified opinion on the financial statements is defined as the "auditor's unqualified report." This term is used throughout the proposed standard. We believe that the terms "unqualified," "qualified," "adverse," and "disclaimer" should be reserved for describing the auditor's opinion, rather than the auditor's report.<br><br>On a related matter, the Amendments to PCAOB AU 508.10 refer to a departure from the "auditor's unqualified report," but the new title of this amended standard is "*Departures from Unqualified Opinions…*" |
| 2 | Para. 5 | We suggest that "The Auditor's Unqualified Report" requirements section should be presented after the "Basic Elements" section. |
| 3 | Para. 5.b. | The proposed OI standard indicates that the auditor's unqualified report includes communication of Critical Audit Matters as described in paragraphs 7-14. Paragraph 5 could be eliminated if the explanatory language/provision discussion were included in the Basic Elements section and if the Critical Audit Matters discussion were moved to paragraphs 7-14. Note that the Amendments to PCAOB AU 508.20A refer to paragraphs 7-13 rather than to paragraph 5. |
| 4 | Para. 5.c. | We suggest that "Other explanatory language (or an explanatory paragraph), as appropriate in the circumstances, as described in paragraphs 15-16" should be included in the Basic Elements section. |
| 5 | Para. 5.c. | Under the proposed auditor reporting standard, the auditor's report could have a matter discussed in both the Critical Audit Matters section of the report and in an explanatory paragraph. We suggest that the PCAOB consider addressing this situation in the new standard. One alternative would be that matters would not be required to be repeated in the explanatory paragraph if the same information is already addressed in the Critical Audit Matters section. |
| 7 | Auditor Reporting Standard Page A1-15 | The Introduction section includes the phrase "statements of operations." We suggest that this be updated for issuance of ASUs 2011-05 and 2011-12 for comprehensive income. For example, this could state "the statement of comprehensive income" or "the statement of comprehensive income and the statement of income." |

| | | |
|---|---|---|
| 8 | Auditor Reporting Standard<br>▸ Appendix B Page A1-15<br>▸ Appendix 3 Page A3-5 | We suggest that the defined term (PCAOB) be presented after (United States) rather than before that term since after this definition, only PCAOB is used. PCAOB should define the entire name of the PCAOB. Same comment for the Amendments to AU 722.38. Note that the amendments to AU 722.39 already have (PCAOB) after (United States). |
| 9 | Auditor Reporting Standard Appendix B Page A1-15 | We suggest that the phrase "appropriate evidence" be revised to say "appropriate audit evidence." |
| 10 | Auditor Reporting Standard Appendix 3 Page A3-5 | The updates to the report on internal control over financial reporting include the auditor tenure language. We challenge whether the auditor tenure language is needed in the ICFR report when separate reports are issued if it has already been included in the report on the financial statements. If it is retained, we suggest that guidance be provided on whether the tenure that is disclosed should be the same as that disclosed in the report on the financial statements, or whether this tenure disclosure would relate to the number of years that the auditor has been engaged to audit ICFR. |
| 12 | Auditor Reporting Standard Appendix 3 | Appendix 3 contains certain example reports from the Interim Standard AU 508 that have been updated for the new proposed auditor reporting standard. We suggest that the PCAOB review these examples to determine the applicability in an issuer environment and to reflect the SEC's reporting requirements. For example:<br>▸ AU 508.34 is for a balance sheet-only report<br>▸ AU 508.44 is for a situation when management declines to present a basic financial statement<br>▸ Various qualified, adverse and disclaimer opinion reports are presented (in the Appendix as well as in the Amendments to AU 9508)<br>▸ Examples refer to the Introductory paragraph of the new standard, which reflects a 3-year period for the results of operations and cash flows, but the examples provide an opinion paragraph that reflects a 2-year period for the results of operations and cash flows |

| | | |
|---|---|---|
| 13 | Auditor Reporting Standard Appendix 3 | Although the proposed auditor reporting standard does not require a certain order to the paragraphs of the auditor's report, we suggest that the PCAOB consider updating the examples to prominently present the opinion paragraph. The auditor's report length will significantly increase as a result of this new standard. Prominently presenting the opinion paragraph will help investors and other financial statement users readily determine the type of opinion issued. |
| 15 | Amendments to PCAOB AU 9508.36 | We suggest that the PCAOB determine that the example provided for a report on single-year financial statements in the year of adoption of the liquidation basis is in conformity with ASU 2013-07, *Presentation of Financial Statements* (Topic 205), or provides clarification on the portions of the report related to the stub-period that are not required by that ASU. |
| 16 | Amendments to PCAOB AU 9508.83 and .84 | These qualified and adverse opinion examples appear to relate to a non-registered investment partnership. We suggest that the PCAOB challenge the appropriateness of these examples. |

Washington, D.C. 20006-2803

Re: PCAOB Rulemaking Docket Matter No. 034: Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments

Dear Members of the Board:

Express Scripts Holding Company (the "Company") appreciates the opportunity to provide feedback on the Public Company Accounting Oversight Board ("PCAOB") Rulemaking Docket Matter No. 034 – Proposed Auditing Standards on the Auditor's Report and the Auditor's Responsibilities Regarding Other Information and Related Amendments (the "Proposal"). We support the continued efforts of the PCAOB to examine alternatives for increasing the transparency of the auditor's report and to increase audit quality and provide protection to financial statement users.

However, we have significant concerns regarding the Proposal. Specifically, we are concerned with the focus on enhanced auditor's responsibilities regarding other information and reporting of critical audit matters ("CAM"). Under the Proposal, the auditor will serve as an original source of disclosures. In our opinion, the current roles and responsibilities of management, auditors and the audit committee effectively maintain audit quality, independence and transparency; and the incremental costs of the Proposal far outweigh the measureable benefits.

Central to our concern is that the auditor should not be an original source of disclosures about the Company. It is the role of management, with the oversight of the audit committee, to determine if financial disclosures are complete, accurate and provide users with appropriate insight into the Company. Our Management is in the best position to disclose relevant information in public reports which increases the reliability of information used by investors and provides greater insight into the unique health care industry in which our Company operates. Similarly, our audit committee is in the best position to provide oversight of the quality and integrity of information reported to the public, as well as the performance of our auditors with respect to significant matters affecting the Company. Finally, our auditors are in the best position to provide oversight and assurance with respect to the financial statements overall. Based on the current disclosure requirements, we believe our financial statement disclosures already provide users with the appropriate level of information regarding significant matters and material estimates in order to make informed decisions. The Proposal would make it difficult for management and the audit committee to fulfill their current roles and responsibilities because auditors would serve as an original source of information within the Company's financial reports. Moving the role of the auditor from providing oversight and assurance to serving as an original source of information could result in reduced investor confidence due to the disclosure and discussion of the auditor's subjective views on complex matters that are inherently and properly resolved through the audit process.

EXPRESS SCRIPTS®

We believe that the current roles and responsibilities of management, auditors and the audit committee foster an environment of open communication and should remain unchanged in order to maintain audit quality. The current process of live interaction between all parties enhances financial reporting as all subjective and complex matters and significant material estimates, assessments and conclusions are discussed in an open and transparent manner. If the auditor's role changes from providing oversight and assurance to reporting subjective viewpoints on complex accounting matters, meaningful open communication would be strained. Furthermore, the auditor's report would likely lack comparability between public reports due to the introduction of subjective information presented by the auditor which would likely differ greatly between auditors. Without consistent auditor reporting, comparability between the public reports of companies in similar industries would be reduced, causing further confusion on the part of financial statement users. Disclosing the subjective views of auditors could also limit open and honest discussion between management, auditors and the audit committee, effectively limiting the audit committee's ability to carry out oversight responsibilities. Currently, there is a clear distinction between the roles and responsibilities of management, auditors and the audit committee; if those lines are blurred we expect confusion on the part of financial statement users and a decrease in overall audit quality.

We also believe that the Proposal would prove a great distraction to management and the auditor and adding significant costs at the same time. The Proposal, specifically related to the expanded audit procedures to evaluate and publicly report on other information, would likely result in significantly increased audit effort and could distract the focus of auditors away from more important components of the audit. Under the current Proposal the auditor would be required to "evaluate and report" versus "read and consider" other information, which would significantly increase audit fees due to the change in scope and the level of effort the auditor would need to evaluate subjective and forward looking information. Furthermore, considering this substantial increase in scope, the auditor's ability to perform the additional work, in a quality manner, within the tight reporting timeframes in which we operate, would be greatly strained. We support the Board's effort to clarify the auditor's responsibility around other information, but would recommend the "read and consider" model be retained due to the undue cost that would be incurred by companies without commensurate benefit under the Proposal.

As mentioned above, we support the efforts of the PCAOB to provide transparency and audit quality to financial statement users. However, we believe that the financial disclosures in our public reports already provide meaningful and detailed analysis around key business, operating performance and strategic risks and accounting practices, and are discussed with and considered by the auditor. The information provided by the auditor under the Proposal would not provide additional or meaningful information to users. The current roles and responsibilities of management, auditors and the audit committee represent the right balance to promote transparency and meet the needs of users as defined by the PCAOB. In our opinion, the benefits of the Proposal are simply outweighed by the costs, which could include impairing communication among management, auditors and the audit committee, and the financial costs of the time and effort required in order to comply with the Proposal. We strongly encourage the Board to consider and evaluate the impact that the Proposal would have on providing investors with straightforward, reliable and useful information.

We appreciate the opportunity to express our views.

Sincerely,

/s/Chris Knibb

**RE: PCAOB Rulemaking Docket Matter No. 034, The Auditor's Report and The Auditor's Responsibilities Regarding Other Information**

Dear Ms. Brown,

Exxon Mobil Corporation appreciates the opportunity to respond to the referenced Proposed Auditing Standards (the "Proposals"). We have concerns regarding disclosures of critical audit matters ("CAMs"), disclosures of the tenure of the audit firm, and the change in the level of assurance in the auditor's responsibilities regarding other information. We support similar observations expressed in the letter submitted by the Financial Executives International ("FEI") Committee on Corporate Reporting ("CCR"). Our most critical concerns are outlined below.

**Auditor's Reporting Model**

ExxonMobil agrees an opportunity exists for targeted improvements in the auditor's reporting model. We support the Proposal's enhancement to the language regarding the auditor's responsibilities for fraud and the notes to the financial statements. However, other elements of the auditor's report are working effectively and do not merit further change. Specifically, we support retaining the existing pass/fail model which both clearly and concisely conveys the auditor's opinion regarding whether the financial statements are fairly presented. As further explained below, we do not support the disclosure of CAMs or disclosure of audit tenure.

- *Critical Accounting Matters*

  The disclosure of CAMs will have an adverse effect on the clarity of management responsibilities for, and ownership of, the financial statements. Under the Proposals, the auditor's report would include information that duplicates items reported in Management's Discussion and Analysis or the financial statements. We therefore question its incremental value to users. We are also concerned that users may be confused regarding the opinion of the auditor and the relevance of the information found in this expanded auditor's report. The Board defines CAMs as those audit matters that involved the most difficult, subjective, or complex auditor judgments; posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; and posed the most difficulty to the auditor in forming an opinion on the financial statements. Based on the Proposals, the auditors would identify all potential CAMs and presumably screen the list to determine what would be disclosed. If the auditor determines that certain items should be excluded from disclosure, the auditor would need to justify that decision in the work papers. These judgments, like others of similar importance made during the audit, would be subject to review and exception by PCAOB inspectors. Most auditors, we believe, would err on the side of including more rather than fewer CAMs in their reports. This additional degree of subjectivity, and the prominence the disclosure would be given in the auditor report under the Proposals, will cause confusion among users regarding the overall opinion on the financial statements. In addition, the Proposals potentially would lead to the disclosure of items of lesser significance that were ultimately deemed immaterial or resolved satisfactorily, and could in fact dilute focus on those issues of more importance.

- *Audit Tenure*

  Including a statement containing the year the auditor began serving consecutively as the company's auditor is not relevant or useful to users. The background information in Appendix 5 of the Proposals indicates that academic research is mixed as to whether short or long term audit relationships are more likely to adversely affect audit quality. To require inclusion of that data point lends unwarranted importance to it and could lead investors to draw erroneous conclusions.

**Other Information**

ExxonMobil supports language that clarifies the auditor's responsibility regarding information outside the financial statements. However, we do not support the change in the level of assurance to "read and evaluate" qualitative and quantitative information. This implicit increase in the level of assurance would require the auditor to perform additional procedures and would correspondingly result in higher costs to preparers. In addition to the added cost to preparers and increase in the volume of procedures auditors would perform during a critical audit period, users may misinterpret the extent of procedures performed by the auditors. The language should simply clarify that the auditor's level of assurance is "read and consider", consistent with existing requirements, but require no change in audit procedures.

**Conclusion**

ExxonMobil supports the comment letter submitted by the FEI CCR on the Proposals. As noted above, we do support certain clarifications in the auditor's report. However, we do not support the disclosure of CAMs, the disclosure of the audit tenure, or an increase in the level of auditor's assurance of other information. We strongly encourage the PCAOB to engage in outreach or field testing designed to determine if the Proposals are justified from a cost / benefit perspective. Unless the Proposals clearly meet that hurdle, implementing them will simply contribute to the ongoing dilemma of disclosure overload. We appreciate the Board's consideration of our input and welcome the opportunity to discuss it further.

Sincerely,

c: Martin Baumann, PCAOB Chief Auditor
Paul Beswick, SEC Chief Accountant
Brian Croteau, SEC Deputy Chief Accountant

Re: PCAOB Release No. 2013-005
Rulemaking Docket Matter No. 034 (Auditor's Report and Responsibility)

Dear Ms. Brown:

We appreciate the opportunity to comment on the PCAOB proposals for two new audit standards, *The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion* and *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report.*

FBL Financial Group, Inc. through its primary operating subsidiary, Farm Bureau Life Insurance Company, underwrites and markets a broad range of life insurance and annuity products in the Midwest and western United States. In addition, FBL Financial Group manages all aspects of two Farm Bureau affiliated property-casualty insurance companies. FBL Financial Group, headquartered in West Des Moines, Iowa, is traded on the New York Stock Exchange under the symbol FFG.

We support the proposal to further highlight the auditor's responsibilities with regard to the notes to the financial statements as well as "other financial information" accompanying the audited financial statements. It should be clear to the users of the financial statements what the audit opinion represents, and we agree that currently the audit opinion is vague with regard to those items.

We do not believe indicating the number of years the auditor has served in that capacity provides relevant information. A short tenure may indicate an auditor providing a "fresh look". A longer tenure may indicate an auditor who knows the company and is in a better position to assess risk. In any case the information is currently readily available to the public through the Security and Exchange Commission's EDGAR database. A better approach to convey auditor qualifications would be to require each auditing firm to maintain an internet site with such data as number of dedicated audit professionals, locations, total revenue, number of clients, an overview of their internal quality review process, their latest PCAOB examination report, summary of sanctions etc. Such information would be beneficial to both external parties relying on the audit opinion as well as audit committees monitoring and comparing qualifications of auditors.

We do not agree with the proposal for disclosure of critical accounting matters within the audit opinion as the result will likely be confusing to the readers, costly to prepare and delay the issuance of the financial statements. We believe the current pass/fail opinion with limited qualification paragraphs is a better approach. There are several areas of concern with the current proposal including:

- The financial statements are required to stand on their own, with or without the auditor opinion. Significant financial transactions are required to be disclosed in the footnotes to the financial statements, which this proposal will emphasis is within the scope of the auditor opinion. Risks and estimates are laid out in the 10K. If the normal disclosures are adequate, then the reader should have the information they need to evaluate the company and its risks. Inclusion of such detailed matters within the auditing opinion implies that the financial statements and disclosures are incomplete.

- While the engagement quality reviewer and audit committee review certain information provided by the audit team regarding areas of audit emphasis, they have the benefit of personal interaction with the audit team in order to understand the issues. They also have deeper insights into the overall audit approach and qualifications of the audit team. It will be virtually impossible to provide a similar level of comfort within a written document in an abbreviated and understandable fashion.

- The users of the financial statements should be able to rely on the auditor's opinion without being required to perform a quality review of the audit firm's auditing techniques. A more effective approach would be to leave the review to those with the access and authority to do so including the firms' internal quality review team, audit committees and the various regulatory bodies including the PCAOB and Securities and Exchange Commission.

- We agree that certain transactions are more complex to audit than others, however, the proposal suggests that only certain aspects of the audit are important which is misleading to those relying on the audit opinion.

- Highlighting the auditor's conclusions on specific portions of their audit gives the impression of the issuance of mini-audit opinions rather than an overall opinion on the accuracy of the financial statements, which feels confusing. In addition the auditor's level of precision will likely increase as their opinion will now be at a level much lower than that of the financial statements taken as a whole, accordingly the cost of the audit will increase.

- There will be the natural tendency for auditors to error in the direction of over disclosure in order to avoid criticism that something was missed. Regurgitating a list of audit procedures will be overkill for most readers and very expensive to prepare.

We do not agree that the auditors should expand their procedures around the other information provided with the audited financial statements beyond the consistency check performed today. We are concerned the increased procedures will result in a significant additional cost and delay along with confusing readers as to the level of work performed by the auditor.

Thank you for the opportunity to review and respond to these proposals.

Sincerely
FBL Financial Group, Inc.

RE: PCAOB Rulemaking Docket Matter No. 034 – *Proposed Auditing Standards – The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion; The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards*

Dear Office of the Secretary:

The staffs of the four federal regulatory agencies (the agencies) responsible for supervising the safety and soundness of U.S. financial institutions appreciate the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB) Proposed Auditing Standards on the Auditor's Report, the Auditor's Responsibilities Regarding Other Information, and Related Amendments (Proposed Auditing Standards). On November 7, 2011, we commented on the PCAOB's *Concept Release on Possible Revisions to PCAOB Standards Related to Reports on Audited Financial Statements and Related Amendments to PCAOB Standards* (the Concept Release). The changes in the Proposed Auditing Standards on the Auditor's Report and Other Information strike a reasonable balance in addressing concerns raised by commenters on the Concept Release. We believe that the Proposed Auditing Standards will improve auditor reporting, provide additional useful information in the auditor's report, and enhance market discipline.

As we stated in our November 7, 2011, letter, the information provided in the auditor's report is relevant to the agencies given our requirements regarding independent audits and assessments of the effectiveness of internal control over financial reporting for financial institutions with total assets above certain thresholds.

The agencies support the PCAOB's decision to retain the pass/fail model for the auditor's report. The proposed changes to the auditor's reporting model should lessen the information and expectations gaps of investors and other users of audited financial statements. In this regard, we believe the communication of critical audit matters (CAMs) in the auditor's report will provide useful information that is based on audit procedures performed and may also aid in earlier identification of potential problems at individual public financial institutions. We also support the requirement for the auditor to document the determination of CAMs. Additionally, we believe investors and other users of audited financial statements will find the proposed disclosures regarding auditor independence and auditor tenure useful.

The Proposed Auditing Standard regarding Other Information is an improvement over the existing auditing standard on this subject. The Proposed Auditing Standard clearly articulates the objectives and responsibilities of the auditor regarding other information and may enhance the agencies' supervision of public financial institutions.

We offer the following specific comments and suggestions for your consideration as you evaluate possible changes to the Proposed Auditing Standards.

Deficiencies in Internal Control Over Financial Reporting (ICFR)

Paragraph 9 of the Proposed Auditing Standard on the Auditor's Report sets forth factors for determining whether a matter addressed during the audit of financial statements is a CAM. One such factor is the severity of any control deficiencies identified relevant to the matter. Section V of Appendix 5 to the Proposed Auditing Standard on the Auditor's Report provides additional discussion regarding the determination of CAMs, including the severity of control deficiencies. This section states that:

> Because a deficiency or deficiencies in the company's internal control over financial reporting could have a significant effect on the conduct of the audit and on the level of difficulty in gathering audit evidence or forming an opinion on the financial statements, an internal control deficiency might be an indicator of a critical audit matter.

Thus, in some cases when a deficiency or deficiencies in ICFR have been identified, the auditor may determine that the aspect of the financial statements affected by the deficiencies is not a CAM. In these situations, the agencies recommend that the Proposed Auditing Standard require the auditor to evaluate whether the deficiency or a combination of deficiencies in ICFR not associated with a CAM is such that there is a reasonable possibility that a material misstatement of the entity's financial statements will not be prevented or detected on a timely basis. If the auditor concludes that such a material misstatement is reasonably possible, the agencies believe that this information, by its nature, would be meaningful to users of the auditor's report. Thus, the agencies recommend that the PCAOB consider treating deficiencies that meet this condition as a CAM to be communicated in the auditor's report. Furthermore, the auditor's description of such deficiencies should explain the effect of their existence on the audit and the auditor's planned approach to the audit.

Disclosure of the Auditor's Responsibilities for Other Information

The Proposed Auditing Standard on Other Information articulates the objectives of the auditor in paragraph 2 and the procedures that the auditor should perform around the other information in paragraph 4. However, the proposed illustrative language in paragraph 14.a may cause confusion for users who are not familiar with the requirements of the Proposed Auditing Standard on Other Information. More specifically, the illustrative language seems to contain an implicit assertion regarding the accuracy of the other information although it also states that the other information was not audited and that the auditor does not express an opinion on the other information. We recommend that the disclosure in the auditor's report regarding other information be expanded to (1) more fully describe the other information evaluated by the auditor, and (2) disclose the procedures that the auditor performed regarding the other information to clarify the nature of the auditor's evaluation because the auditor is not opining on such other information. The procedures should be presented in a clear and concise manner similar to the second paragraph in the "Basis of Opinion" section presented in Appendix B of the Proposed Auditing Standard on the Auditor's Report – *An Illustrative Auditor's Unqualified Report*.

Scope of the Proposed Auditing Standard on Other Information

The scope of the Proposed Auditing Standard on Other Information, as set forth in paragraph 1, is limited to other information that is filed with the Securities and Exchange Commission (SEC) under the Securities Exchange Act of 1934 (Exchange Act). Certain banks and savings associations are required to file reports with the federal banking agencies, rather than the SEC, pursuant to Section 12(i) of the Exchange Act. The audits of such institutions are required to be performed in accordance with the PCAOB auditing standards. A literal reading of the scope paragraph of the Proposed Auditing Standard may suggest that other information filed with the federal banking agencies pursuant to Section 12(i) of the Exchange Act would be excluded from the requirements of the Proposed Auditing Standard. To clarify that the Proposed Auditing Standard is applicable to audits of banks and savings associations that are subject to Section 12(i), we recommend that the following footnote be added to paragraph 1: "This Auditing Standard is applicable to audits of banks and savings associations that file reports with the U.S. banking agencies, rather than the SEC, pursuant to Section 12(i) of the Securities Exchange Act of 1934."

Outreach Efforts

The agencies believe the PCAOB's outreach efforts to date on the auditor's reporting model have been beneficial. We encourage the PCAOB to continue to coordinate with other standard setters, particularly the American Institute of Certified Public Accountants' Auditing Standards Board and the International Auditing and Assurance Standards Board, in order to promote international consistency in the auditor's reporting model.

We appreciate your consideration of our comments and we would be pleased to discuss in more detail our views on the Proposed Auditing Standards.

December 11, 2013

Office of the Secretary
Public Company Accounting Oversight Board
1666 K Street, N.W.
Washington, DC 20006-2803

Dear Office of the Secretary:

The Federal Housing Finance Agency (FHFA or Agency) welcomes the opportunity to comment on the Public Company Accounting Oversight Board's (PCAOB or Board) proposed auditing standards on *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*; *The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*; *and Related Amendments to PCAOB Standards,* PCAOB Release No. 2013-005, PCAOB Rulemaking Docket Matter No. 34 (the proposed auditing standards).

FHFA commented on the Board's 2011 Concept Release on possible revisions to auditor's report (the 2011 Concept Release) in a letter dated September 30, 2011. In that letter, FHFA indicated support for (1) requiring an Auditor's Discussion and Analysis as a supplement to the standard auditor's report, (2) amending the format and content of the current standard auditor's report to improve clarity, and (3) requiring the auditor's assurance on other information outside of the financial statements, such as the Management's Discussion & Analysis (MD&A), earnings releases, and other non-generally accepted accounting principles (non-GAAP) information.

As the regulator of the Federal Home Loan Banks and the regulator and conservator of Fannie Mae and Freddie Mac, FHFA considers audited financial reports by its regulated entities an important input to the Agency's safety and soundness supervision process. The Agency therefore supports the proposed auditing standards' requirements that the auditor's report communicate:

(1) critical audit matters (CAMs);
(2) a statement relating to auditor independence;
(3) a statement relating to auditor tenure;
(4) the auditor's responsibilities to evaluate and report on other information; and
(5) more detailed information related to the auditor's responsibilities for fraud.

Further comments by FHFA are detailed on the following pages.

## I. CAMs

The Board has proposed, and FHFA concurs, that the auditor "communicating critical audit matters would provide investors and other financial statement users with previously unknown information about the audit that could enable them to analyze more closely any related financial statement accounts and disclosures." Having the external auditor provide such information would allow financial statement users to better understand the significant and complex areas of an audit.

FHFA is concerned, however, that the proposed auditing standard may result in auditors including a significant number of items as CAMs, rendering the auditor's report voluminous and possibly less useful to investors. Therefore, the Agency recommends that the PCAOB limit the CAMs included in the auditor's report to the most critical audit issues identified in the engagement, and set a limit to these CAMs, either a set number or range.

To foster consistency and utility in determining the scope of CAMs and the level of detail describing them in audit reports, FHFA also recommends that PCAOB publish more specific guidance as to what would constitute a CAM. FHFA believes that the Board's decision to collect and consider examples of CAMs from commentators will assist the PCAOB in identifying changes to its guidance that can provide sufficient clarity to external audit firms working to comply with the auditing standard.

## II. A statement relating to auditor independence

It is critical that auditors are independent and thus capable of exercising objective and impartial judgment. The PCAOB has proposed that the auditor's report include a statement that the auditor is "required to be independent with respect to the company in accordance with the United States federal securities laws and the applicable rules and regulations of the SEC and PCAOB." While that statement is an important component of the auditor's report, it does not affirm whether or not an auditor is independent.

FHFA would like the standard to also include language requiring auditors to affirm that they are in fact independent and in compliance with applicable independence rules. In July 2013, the International Auditing and Assurance Standards Board (IAASB) issued the exposure draft, *Reporting on Audited Financial Statements: Proposed New and Revised International Standards on Auditing*, to enhance auditor reporting globally. IAASB's exposure draft proposes a positive and explicit statement that the auditor is independent.

## III. A statement relating to auditor tenure

The proposed auditing standards would require a statement containing the year the auditor began serving consecutively as the company's auditor. This would provide greater transparency for investors to use in assessing whether an auditor's tenure, whether short or long, could affect the auditing firm's audit quality or their objectivity in planning and conducting financial statement engagements.

The Board's release indicates that while academic research on the impact of auditor tenure on audit quality is divided, "investors and other financial statement users have indicated strong interest in this information." The Board's release also mentions that disclosure of tenure has been considered by other regulators and standard setters, and cites the example of rules adopted by the United Kingdom Financial Reporting Council that require UK-listed companies to disclose the length of auditor tenure in a separate section of the annual report. For purposes of transparency with financial statement users, FHFA agrees with the Board that auditor tenure information should be located in the auditor's report.

## IV. The auditor's responsibilities to evaluate and report on other information

The proposed standard for other information is designed (1) to improve an auditor's identification of material inconsistencies or material misstatements between the financial statements and other financial-related data in the Form 10-K annual report and (2) to improve auditor procedures to allow auditors to evaluate such other information. Under the Board's proposal, auditors would be required to read and evaluate information outside the financial statements, rather than just read and consider as is currently permitted by AU Section 550, *Other Information in Documents Containing Audited Financial Statements*.

While FHFA supports the Board's proposal for the evaluation of other information in the annual report, FHFA believes that it should also be extended to earnings releases as this information is relevant to the investor community. However, FHFA suggests the Board consider describing with more specificity as to what "evaluate" actually means in terms of procedures required to be performed by the auditor, so there would be consistency in how this is applied across audit engagements and firms. In addition, FHFA recommends that the Board establish enhanced guidance by field testing how audit firms would apply the guidance proposed.

## V. More detailed information related to the auditor's responsibilities for fraud

The Board's proposal adds the phrase "whether due to error or fraud" in the auditor's report to describe the auditor's responsibilities to obtain reasonable assurance about whether the financial statements are free of material misstatement. Also, in identifying the audited financial statements the auditor's report would be required to refer to "related notes." FHFA concurs with the Board's proposal to make these additions to the standardized language in the auditor's report.

With regard to the Board's reproposal related to *Improving the Transparency of Audits: Proposed Amendments to PCAOB Auditing Standards to Provide Disclosure in the Auditor's Report of Certain Participants in the Audit*, consistent with our comments provided on the 2011 Concept Release, FHFA recommends that the Board consider requiring the audit engagement partner's signature be included as part of the auditor's report.

Thank you for the opportunity to provide the Agency's views on the Board's proposals. FHFA hopes the Board and staff will find these comments and recommendations helpful. If the Board and staff have any questions or comments regarding this letter, please feel free to contact me at 202-649-3450.

Sincerely,

Dear Sir or Madam,

**Re: FEE Comments on PCAOB Rulemaking Docket Matter No. 034 – Proposed Auditing Standards Regarding the Auditor's Report and the Auditor's Responsibilities Regarding Other Information**

FEE[1] is pleased to provide you with its comments on the aforementioned matter.

## 1. International alignment with the IAASB

In our previous comment letters to the PCAOB, we have consistently expressed the view that the alignment of auditing standards globally to the maximum extent possible enhances both the quality of audits and also the acceptance of audit reports beyond home jurisdictions.

In this context, since some entities require audit reports under both PCAOB and IAASB standards, it is important that there is consistency in what needs to be included in the auditor's reports especially around the area of "critical audit matters" (CAM) and "key audit matters" (KAM). It would not assist users if the terminology, the definitions in the standards covering this area and the requirements as to the determination of and content of such

[1] FEE is the Fédération des Experts comptables Européens (Federation of European Accountants). It represents 45 professional institutes of accountants and auditors from 33 European countries, including all 28 EU member states. In representing the European accountancy profession, FEE recognises the public interest. It has a combined membership of more than 700,000 professional accountants working in different capacities in public practice, small and large firms, government and education – all of whom contribute to a more efficient, transparent and sustainable European economy.

reporting could result in the auditor reporting either more or even different “matters” under the different standards.

As you may be aware, in the European Union (EU), there is currently a discussion about the reform of the auditor-related EU legislation[2].The projects on auditor reporting that are currently being addressed by the PCAOB, the IAASB and other bodies are of the utmost importance as they will also inform and influence the European debate.

FEE supports the European Commission’s (EC’s) proposals to enhance the auditor’s public communication for public-interest entities (PIEs), especially on:

- Qualitative information on the individual audit;
- More reporting on going-concern assumptions based on information provided by management.

These proposals have, at the time of writing this letter, reached the final stage of the political discussion, the so-called Trilogue, where the European Commission, the European Parliament and the Council – representing the Member States – have to agree on a consensual text for final legislation. FEE believes that it is important that the PCAOB, IAASB and EC proposals converge together and are consistent.

## 2. General comments

FEE welcomes the proposed auditing standards and acknowledges that the PCAOB is aware of developments in the related projects at the IAASB and elsewhere. FEE has recently issued a comment letter to the IAASB in which we very much welcome the approach taken while suggesting some areas of improvement[3].

FEE notes the circumstances that underpin significant differences between the proposed IAASB approach and that of the PCAOB, which is specific to defined national circumstances (including e.g. the separate project on naming the engagement partner). Nevertheless, we would, once again, recommend convergence to the maximum extent possible with International Standards on Auditing (ISAs) issued by the IAASB in due course, in order to avoid unnecessary additional differences between the two sets of standards.

It is not just those auditors who may need to apply both sets of standards who would be confused by such differences, but also – and more importantly – investors familiar with capital markets outside the US. For example, considerable confusion may result from the fact that the PCAOB proposals do not mention significant risks in regard to determining CAM (risks only mentioned in the Paragraph 9 (e)), whereas the IAASB’s approach

---

[2] Proposal of the European Commission available at:
http://ec.europa.eu/internal_market/auditing/reform/index_en.htm#maincontentSec1

[3] http://www.fee.be/images/publications/auditing/Gunn_131106_IAASB_EDs_comment_letter_auditor_reporting.pdf

essentially centers on these. Another example is the emphasis by the PCAOB on the relevance of “posed the most difficulty […] in the audit”, which is not a prominent feature of the IAASB’s proposals.

We do not comment on all the questions raised in the Rulemaking Docket. In particular, we have not responded to:

- Questions 33, 34 and 40 on Additional Discussion Related to the Proposed Auditor Reporting Standard;
- Questions 35 to 39, Appendix 5, Audits of Brokers and Dealers;
- Questions 41 and 42, Appendix 5, related to effective date;
- Questions on Emerging Growth Companies, Appendix 7.

We have included our general view on Other Information and the Responsibilities of the Auditor in relation thereto. However, given the uncertainty of the outcome of the IAASB work on other information (revision of ISA 720), we do not comment on the questions posed in Appendix 6, Additional Discussion Related to the Proposed Other Information Standard.

For further information on this FEE letter, please contact Hilde Blomme, Deputy Chief Executive at +32 2 285 40 77 or via email at hilde.blomme@fee.be or Noémi Robert, Project Manager at +32 2 285 40 80 or via email at noemi.robert@fee.be.

Yours sincerely,

André Kilesse
President

Olivier Boutellis-Taft
Chief Executive

## Appendix: Responses to Questions

### *Question Related to Section II*

**1. Do the objectives assist the auditor in understanding the requirements of what would be communicated in an auditor's unqualified report? Why or why not?**

Subject to our comments in the accompanying letter relating to the desirability for consistency in terms of the definition and content of reporting certain entity specific matters within the auditor's report, we agree it is appropriate for the auditor to report critical audit matters and to this end the objectives, as set in the proposals, are clear.

### *Questions Related to Section IV*

**2. The proposed auditor reporting standard would require the auditor's report to be addressed at least to (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body. Are there others to whom the auditor's report should be required to be addressed?**

From the European perspective, we agree that addressees should be limited to shareholders and those charged with governance (TCWG).

**3. The proposed auditor reporting standard retains the requirement for the auditor's report to contain a description of the nature of an audit, but revises that description to better align it with the requirements in the Board's risk assessment standards. Are there any additional auditor responsibilities that should be included to further describe the nature of an audit?**

A section describing the nature of an audit may need to include a mention of going concern.

The linkage between critical audit matters and the going concern basis of accounting could be clarified. More specifically, in cases where there is a potential going-concern issue and where, following a considerable amount of audit work, the auditor concludes that there is no material uncertainty, the audit report should be clear on the difficulty of the audit work performed on the going concern issues as required in a critical audit matter. More extensive disclosures would then be required such as additional details about the work carried out by the auditor in this regard and the conclusion that "the auditor has not identified a material uncertainty that may cast significant doubt about the entity's ability to continue as a going concern"

Therefore, the work of the auditor on the going-concern basis of accounting and the reporting of the auditor's conclusions on the management statement thereon should be included in the proposed PCAOB standard. In that case, we would very much welcome a clear requirement that going concern issues should be included as a critical audit matter if the definition is met.

**4. The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this statement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?**

Yes, we think that a statement like the one included in paragraph 6h is necessary, as it provides more information than simply mentioning the independence of the auditor in the title of the audit report. The reference to specific laws, rules and regulations provides further transparency to inform users. Nevertheless, this paragraph should be kept concise to avoid ambiguity and boilerplate statements.

**5. The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.**

a) **Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?**

b) **Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?**

c) **Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?**

In general, FEE believes that the auditor should not be the primary source of such information. It is up to the management or those charged with governance/the audit committee to disclose this type of information.

However, if not already disclosed in the management report or the annual financial statements for the same financial year, we agree that the auditor could indicate the date of the appointment of the audit firm and the period of total uninterrupted engagement including previous renewals and reappointments of the audit firm in the auditor’s report.

**6. The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?**

Yes, we consider that the proposed requirement would increase transparency in making the auditor’s involvement with other information clearer. FEE agrees it is necessary to revise the standards dealing with other information and the responsibilities of the auditor thereon. Therefore, we support the PCAOB proposal.

The objective of such revision should be to diminish confusion amongst stakeholders – including auditors - with regard to:

- What does, and what does not, constitute other information in the context of an audit of financial statements – in contrast to the IAASB's ED on ISA 720, this is far clearer in the US environment;
- The auditors' responsibilities in respect to this other information – we are concerned that the PCAOB term "evaluate" may be perceived to differ from the IAASB term "consider" (yet to be finalised) and would urge consistency if consistency is meant;
- The extent of the work effort – in this context, the last sentence in Paragraph 5 of the proposed Other Information Standard will need further clarification.

It is essential to be clear on the aforementioned "boundaries" as only then can there be clarity regarding the role of the auditor. FEE thinks that these boundaries are clear in the PCAOB proposals. More specifically:

- The PCAOB rightly uses the term "material inconsistency" with a clear definition of what is meant. We welcome the emphasis on materiality;
- The PCAOB proposal is more rule-based than the IAASB one[4], for instance in paragraph 3d of Appendix 6 with regard to calculations, the advantage of this proposal being that the auditor's involvement is more specific. The IAASB requires "considering whether there may be inconsistency […]", whereas the PCAOB concentrates the work of the auditor on the 'evaluation'. In addition, there might be a difference in approaches taken: the IAASB has included discussion with management in the first stage of the identification of the matters, whereas the PCAOB only refers to the evaluation of other information to be performed by the auditor without explicitly referring to discussion with management.

In the auditor's responsibilities for other information and the related reporting requirements, it is important that we concentrate on fostering international harmonisation as far as possible. We refer to our general comments included in the front letter on international alignment with the IAASB and the EU[5].

---

[4] We acknowledge that the PCAOB is aware that the IAASB is currently revising its standard dealing with other information and the role of the auditor thereon. FEE commented on the IAASB exposure draft where we expressed our concerns to the proposals. This comment letter is available at: http://www.fee.be/images/publications/auditing/AUD_Gunn_130314_isa720_exposure_draft_final.pdf

[5] For information, a new European requirement has recently been voted in the recast of the Accounting Directive. As stated in Article 34:
"[In addition to statutory audits on the basis of Directive 2006/43/EC], the statutory auditor(s) or audit firm(s) shall also:
- (a) express an opinion on:
- (i) whether the management report [which is often used as a proxy for other information] is consistent with the financial statements for the same financial year, and
- (ii) whether the management report has been prepared in accordance with the applicable legal requirements;
- (b) state whether, in the light of the knowledge and understanding of the undertaking and its environment obtained in the course of the audit, he, she or it has identified material misstatements in the management report, and shall give an indication of the nature of any such misstatements."

**7. Should the Board require a specific order for the presentation of the basic elements required in the auditor's report? Why or why not?**

FEE supports 'global standardisation' of the auditor's report, including the ordering of the paragraphs. This would help:

- Navigate users through the auditor's report; and
- Provide a comparison between auditor's reports.

However, we acknowledge that flexibility may be needed in some jurisdictions and/or in the circumstances of a particular engagement.

To this end, FEE welcomes the proposal of the IAASB to mitigate the risk of losing consistency at global level by requiring the report to include obligatory subheadings. Even if the paragraph order differs between jurisdictions, as a result of national laws or regulations, the reader can use those subheadings to navigate the report more easily. It would be most helpful if the PCAOB report uses the same headings, the comparison between auditor's reports will then be more straightforward.

**8. What other changes to the basic elements should the Board consider adding to the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor?**

Please refer to our response to Question 3.

**9. What are the potential costs or other considerations related to the proposed basic elements of the auditor's report? Are cost considerations the same for audits of all types of companies? If not, explain how they might differ.**

The new requirements are expected to result in a cost increase for the additional time needed and potential delays in finalising the auditor's report concerning the following matters:

- Drafting the additional information (CAM) to be included in the auditor's report;
- Discussing these matters, as well as any matters ultimately not determined as CAM internally within the audit firm, including with the engagement quality control reviewer and possibly with others outside the firm (e.g. in some cases recourse to advisory services by a professional institute); and
- Discussions with both management and those charged with governance.

Management and TCWG are also likely to spend additional time reviewing and discussing wording and presentation with the auditor. Nevertheless, the European audit profession agrees that the benefits generally outweigh the costs, and is ready to enhance the

---

The approved Directive is accessible at:
http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2013:182:0019:0076:EN:PDF

communication process. However, this step forward has to be done in an appropriate manner.

That is why responding to users' needs for more information should be proportionate to the nature, size and complexity of the entity, as foreign subsidiaries and smaller SEC issuers might have disproportionate costs attached to such disclosures.

***Questions Related to Section V***

**10. Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?**

Yes, we believe that enhanced auditor communication of critical audit matters or key audit matters would be relevant and useful to users of financial statements. There is evidence to support this as investors and shareholders have called for greater transparency about the audit outcome.

However, as noted in our accompanying letter, we consider it would be unhelpful to investors, auditors and regulators if the PCAOB and the IAASB were to use differing terminology, definitions and criteria in their respective final pronouncements. We have not been able to determine whether the differences in the proposals would lead to different reporting, and would encourage cooperation between the two Boards in this respect.

**11. What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?**

The auditor's communication of critical audit matters would be beneficial insofar as it would provide the public with more information on the audit and its outcome. However, there are cases that can be difficult to tackle. We refer to our response to Question 27.

It is worth noting that the critical audit matter proposals are an experiment, and that time will be needed to adapt and develop best practice. The definitions and requirements included in the proposals cannot currently respond to all possible questions which are bound to arise upon application of this new form of auditor reporting.

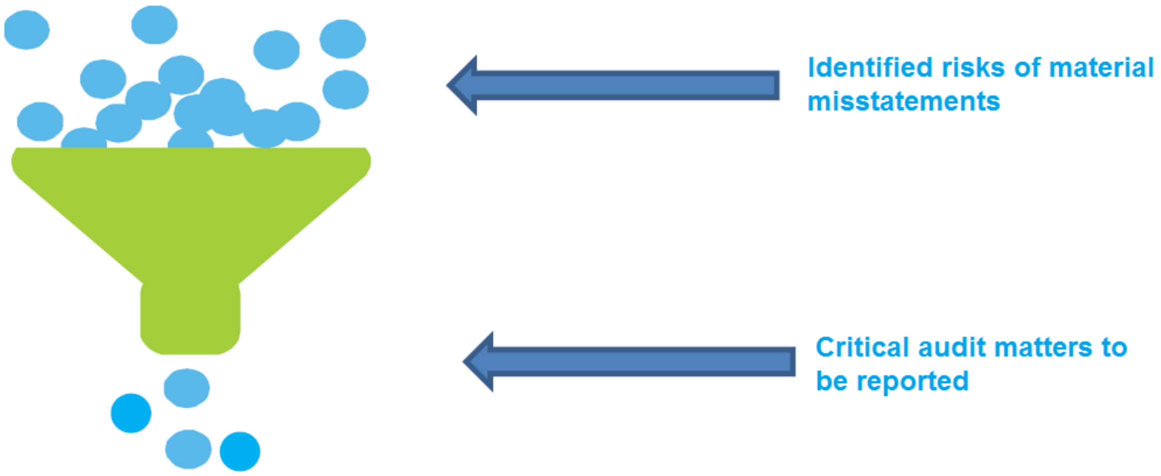
**12. Is the definition of a critical audit matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? Is the definition of a critical audit matter sufficiently clear for determining what would be a critical audit matter? Is the use of the word "most" understood as it relates to the definition of critical audit matters?**

We refer to our response to Question 10 regarding the use of the PCAOB and IAASB' proposals use of different terms, definitions and criteria.

The definition of a critical matter or a key matter needs to be sufficient to determine the inclusion of matters that have to be brought to the attention of users. However, FEE wonders whether it is a good solution to focus on the level of difficulty of audit matters to select the ones to be reported.

We would advocate the use of the following principles-based approach, which can be viewed as a type of ‘funnel’ process:

- Identification of the potential critical audit matters in the identified significant risks of material misstatements;
- As a subset of the identified risks of material misstatements, the critical audit matters to be reported in the audit report should be the ones that would be relevant to users of financial statements and internal control report – in general, with the opportunity to clearly refer to the related disclosure of the financial statements.



Both the number of items and the length of descriptions would need to be limited in order to avoid lengthy paragraphs and/or boilerplate information.

FEE has carried out some work in this area and published a policy statement in July 2012 with regard to ‘improved auditor reporting’, which contains some examples of reporting of significant audit risks:

http://www.fee.be/images/publications/auditing/PS_120709_-_Policy_Statement_on_Improved_Auditor_Reporting_1372012371225.pdf

**13. Could the additional time incurred regarding critical audit matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have?**

FEE would assume that the additional time incurred regarding critical audit matters would have an overall positive effect, but pose challenges to the timely completion of the audit.

Audit has become more complex over recent years with the increase in the complexity of entities’ business models and financial reporting. In this context, the auditor’s report cannot be viewed in a vacuum; rather there is a strong link to financial reporting. In addition, care needs to be taken to ensure that the so called “expectation gap” is not increased, i.e. that exactly what the auditor is reporting (and what the auditor is not reporting) is capable of being properly understood. This would ensure that the core service of the audit profession, the audit, continues to be valued by its users.

Improvements should only be made that really do meet user needs and enhance audit quality, i.e. by providing better information as opposed to merely providing more information.

In the broader context of the European debate on audit policy, it has become even more urgent to review at an international level whether improvements can be made as to how auditors should best communicate with all relevant stakeholders.

**14. Are the proposed requirements regarding the auditor's determination and communication of critical audit matters sufficiently clear in the proposed standard? Why or why not? If not, how should the proposed requirements be revised?**

The requirements are clear and understandable. The content of paragraphs 8 and 9 provide sufficient criteria to be used by the auditor to determine critical audit matters. However, we also refer to our responses to Questions 10 and 12.

With regard to communication of critical audit matters, it should be emphasised that the PCAOB proposal requires “identification” in each critical audit matter paragraph, whereas the IAASB requires a ‘description’ of each key audit matter. Practical differences may arise as ‘description’ could be seen as more detailed than ‘identification’.

**15. Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?**

Added-value from the auditor’s report will be provided by giving the following information for each critical audit matter reported:

- A clear reference to the related disclosure in the financial statements. This reference will help the users to link the point raised by the auditor to the disclosures, but not necessarily to navigate the users through the financial statements;
- The nature of the critical audit matter disclosed;
- The audit approach undertaken in response to this matter; and
- The key findings from that audit work.

FEE stresses that it is important to avoid piecemeal opinions. Accordingly, it is essential that the auditor states that the auditor’s opinion on the financial statements is not modified with respect to any of the matters reported, and the auditor does not express an opinion on these individual matters.

**16. Are the factors helpful in assisting the auditor in determining which matters in the audit would be critical audit matters? Why or why not?**

Yes. However, we also refer to our responses to Questions 10, 12 and 14.

**17. Are there other factors that the Board should consider adding to assist the auditor in determining which matters in the audit would be critical audit matters? Why or why not?**

We refer to our responses to Questions 10, 12 and 14.

**18. Is the proposed requirement regarding the auditor's documentation of critical audit matters sufficiently clear?**

Yes, the requirement as proposed is clear. The PCAOB's approach is more rule-based, as it requires documentation of the auditor's determination, including of matters not to be reported, whereas the IAASB does not require documentation of this step of the process in the proposed standard. However, we do not consider this a fundamental difference as the PCAOB 'explicitly' requires documentation in this standard while the IAASB includes an 'implicit' requirement, based on the objectives and requirements set out in ISA 230 'Audit Documentation'.

**19. Does the proposed documentation requirement for non-reported audit matters that would appear to meet the definition of a critical audit matter achieve the Board's intent of encouraging auditors to consider in a thoughtful and careful manner whether audit matters are critical audit matters? If not, what changes should the Board make to the proposed documentation requirement to achieve the Board's intent?**

No addition to what is already proposed.

**20. Is the proposed documentation requirement sufficient or is a broader documentation requirement needed?**

No addition to what is already proposed.

**21. What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of critical audit matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?**

Please refer to our response to Question 9. Furthermore, auditors may also incur additional costs in conferring within the firm, and possibly with others, in respect of the documentation of matters determined not to be critical audit matters (see note to proposed paragraph 14 of the standard).

**22. What are the additional costs, including indirect costs, or other considerations for companies, including their audit committees, related to critical audit matters that the Board should take into account? Are these costs or other considerations the same for audits of both large and small companies?**

Please refer to our response to Question 9.

**23. How will audit fees be affected by the requirement to determine, communicate, and document critical audit matters under the proposed auditor reporting standard?**

FEE is not commenting on this question.

**24. Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, such as in an initial public offering or in a situation involving the issuance of an auditor's report on a prior period financial statement because the previously issued auditor's report could no longer be relied upon? If so, under what circumstances?**

The auditor should first and foremost concentrate on those critical audit matters arising from the audit of the current period, even in the case of comparative financial statements, when the auditor is required to report on both the current period financial statements and the prior period financial statements in connection with the current year's audit.

Nevertheless, due to the fact that a number of these critical audit matters are likely to recur in the risk assessment of the audit of financial statements and internal control report year on year, there might be a need to consider whether critical audit matters of the previous period have to be reassessed or not.

**25. Do the illustrative examples in the Exhibit to this Appendix provide useful and relevant information of critical audit matters and at an appropriate level of detail? Why or why not?**

The examples are useful and will inform the implementation of the requirements, especially in the first year(s). With regard to relevance, we suspect that pointing out the "difficulties" as illustrated in the examples will be perceived as not sufficiently helpful, and that investors in particular will seek more information on the auditor's views.

However, as this could constitute piecemeal opinions, which should not be given, it is very important that the statement "The critical audit matters communicated below do not alter in any way our opinion on the financial statements taken as a whole" be read and properly understood in this context.

We consider these proposals as an experiment, and that time will be needed to adapt and develop best practice and acknowledge the difficulty to create examples in a vacuum.

**26. What challenges might be associated with the comparability of audit reports containing critical audit matters? Are these challenges the same for audits of all types of companies? If not, please explain how they might differ.**

It is likely that users will look for comparability of reports in particular industries or where circumstances giving rise to critical audit matters are pervasive. However, such reporting is intended to be non-boiler plate and specific to the audit on the financial statements and internal control report of a specific period, so comparability cannot be an overriding goal.

**27. What benefits or unintended consequences would be associated with requiring auditors to communicate critical audit matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards, such as the examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?**

It must be recognised that there are cases that can be contentious and difficult to tackle.

For instance, the reference "to the relevant financial statement accounts or disclosures that relate to the critical audit matter, *where applicable*" (paragraph 11 (c)) allows the auditor – if identified as necessary – to disclose as a critical audit matter a matter that is not disclosed either in the financial statement accounts or disclosures. For example, the auditor may determine a weakness in the IT system is a critical audit matter having identified it as a significant risk of material misstatement during the audit. The auditor will have reported its internal control assessment to TCWG, and would like to write a critical audit matter paragraph on this matter. What if the company has not disclosed this risk in the financial statements or internal control assessment, which is highly likely for this type of risk?

In general, FEE considers it is important to have a clear linkage between the information already reported by the company and the critical audit matter. This linkage would:

- Enhance the dialogue between auditors and TCWG, including audit committees;
- Improve the financial reporting by companies; and most importantly;
- Help the auditors apply their professional judgement in reporting potential contentious cases – such as the one described above.

To help the auditor resolve contentious cases, it may be strategic to state that discussions with the entity will be needed as to why an entity has not disclosed the issue and that the auditor will take this into account when forming the audit opinion.

**28. What effect, if any, would the auditor's communication of critical audit matters under the proposed auditor reporting standard have on an auditor's potential liability in private litigation? Would this communication lead to an unwarranted increase in private liability? Are there other aspects of the proposed auditor reporting standard that could affect an auditor's potential liability in private litigation? Are there steps the Board could or should take to mitigate the likelihood of increasing an auditor's potential liability in private litigation?**

The legal framework and litigation culture in many EU member states often still differ from the situation in the USA and the extent of private litigation is not necessarily a phenomenon of the same magnitude as it is in the US and some other jurisdictions. However, there are EU member states where an increase of litigation can be observed or feared. At this stage, there is no clear sign that an auditor's potential liability would be a major impediment inhibiting the communication of critical audit matters.

We would recommend, however, that the Board take the following into account:

- The difficulty of determining whether the auditor has reported all relevant critical audit matters;

- Users' expectations regarding the critical audit matters to be reported; and
- The ways in which the reporting of critical audit matters might be influenced by their sensitivity.

***Questions Related to Section VI***

**29. Is it appropriate for the Board to include the description of the circumstances that would require explanatory language (or an explanatory paragraph) with references to other PCAOB standards in the proposed auditor reporting standard?**

FEE agrees that it is appropriate to include these references to other PCAOB standards.

**30. Is retaining the auditor's ability to emphasize a matter in the financial statements valuable? Why or why not?**

FEE agrees with the decision to retain the ability to emphasise a matter. Users of auditor reports are used to having such paragraphs which have a different objective to reporting of critical audit matters.

**31. Should certain matters be required to be emphasized in the auditor's report rather than left to the auditor's discretion? If so, which matters? If not, why not?**

FEE is in favour of retaining the existing requirements as to matters to emphasise. The disclosure of critical audit matters should not change that situation.

**32. Should additional examples of matters be added to the list of possible matters that might be emphasized in the auditor's report? If so, what matters and why?**

FEE did not identify additional examples of matters to be added.

RE: PCAOB Rulemaking Docket Matter No. 034

FedEx Corporation has reviewed the Public Company Accounting Oversight Board ("PCAOB") proposed auditing standards Release No. 2013-005 dated August 13, 2013, and we appreciate the opportunity to comment on the proposal.

FedEx Corporation is a global company that provides customers and businesses worldwide with a broad portfolio of transportation, e-commerce and business services. Our annual revenues total approximately $45 billion, we have more than 300,000 team members, and we serve customers in more than 220 countries and territories. Our financial statements are prepared under U.S. GAAP, filed with the Securities and Exchange Commission (SEC) and we are registered with the New York Stock Exchange. We present our views from the perspective of a financial statement preparer, and we support the PCAOB's mission to oversee the auditing profession and improve audit quality. However, we do not support the proposal made by the PCAOB with respect to the auditor's report and have set forth below our views on this issue.

**Proposed Auditor Reporting Standard**

The financial statements of a public company are the responsibility of its management and the oversight of that responsibility lies with the company's Board of Directors through its Audit Committee. This responsibility encompasses the completeness, accuracy and quality of the disclosures, including the disclosures about the financial statements embodied in the other sections of a company's SEC reports. This responsibility has been the cornerstone of the framework for financial reporting and for the audits of financial statements. This principle was further strengthened by the CEO and CFO financial statement certifications required for public companies under the Sarbanes-Oxley Act. In our view, the PCAOB's proposal seeks to supplant management's responsibility for disclosure of critical accounting matters with a company's auditor and publicize aspects of the audit process that may not be useful to investors and other users of financial statements. We strongly disagree with this concept and believe that auditors should not be disclosing editorial details about the audit process publicly and that their role is to opine on the fair presentation of the totality of the information provided by management and the internal control over financial reporting.

The broad nature of the proposal by the PCAOB seeks to unduly burden all financial statement preparers and the entire audit profession for a perceived lack of disclosure transparency. While some investors may desire improvements in disclosures, the proper source of this information is management and not the auditor. If the PCAOB believes that companies have overall deficiencies in their financial statement disclosures on critical accounting policies and estimates, then the proper venue for this issue is with the FASB and SEC.

We believe the issues that the PCAOB is seeking to address with this proposal can be addressed without the auditor's report including a discussion of critical audit matters. First, we encourage the PCAOB to take the lead on providing observations on disclosure failures noted in its audit reviews to the SEC, and have the SEC seek enhanced disclosures from companies, where necessary. Second, we believe that an acceptable alternative to the PCAOB's proposal would be for the auditor's report to simply acknowledge the auditor's concurrence with the critical accounting policies and estimates disclosed by the company. Finally, we believe that the audit process works, and that auditors should continue to leverage the well-defined process for required communications with audit committees for discussion of critical audit matters. The matters described in the proposal should be discussed in the boardroom, not the auditor's report. The auditor required communications to the audit committee provide ample opportunities for the auditor to engage in discussions on critical audit matters and the auditor's report could also include a statement that these candid discussions were held.

Beyond our fundamental disagreement with the basic principle of the PCAOB proposal, we believe a separate listing of critical audit matters in an auditor's report is redundant to the disclosure of a company's significant accounting policies and critical accounting estimates required in its Annual Report. The preparation of financial statements in accordance with accounting principles generally accepted in the United States requires management to make significant judgments and estimates to develop amounts reflected and disclosed in the financial statements. Like many companies, we maintain a thorough process to review the application of our accounting policies and to evaluate the appropriateness of the many estimates that are required to prepare the financial statements of a complex, global corporation. In our judgment, the sections of the financial statements and MD&A covering critical accounting policies and estimates are fully informative for most public companies. If a company falls short of the transparency required under the disclosure standards outlined by the FASB and the SEC in its audited financial statements, then the auditor has the duty to communicate that to the company's audit committee and if necessary, issue a qualified opinion on the financial statements, which will carry significantly more weight to investors than lengthy, duplicative statements on critical accounting matters.

Finally, with respect to the discussion of critical audit matters in the auditor's report, we believe that inherent in the PCAOB's proposal is a presumption that critical accounting matters have a bias towards being areas that are "questionable." However, in many cases these matters are simply complex accounting areas. As a result, a lengthy list provided by an auditor could be viewed externally as an indicator of a poorly run company or risky investment. The proposal has no balance in this regard and at a minimum, should this proposal move forward, the auditor should also be required to highlight areas of preferred accounting, strong internal controls and best practices. Further, the proposal could have the unintended, and in our view, unfortunate effect of discouraging the candid discussion of accounting matters between issuers and auditors due to concerns that such discussions would be referenced in the auditor's report.

**Auditor's Responsibilities Regarding Other Information**

Under current PCAOB standards, the auditor has a responsibility to read and "consider" other information in certain documents that also contain the audited financial statements and the related auditor's report. We believe that the language in the proposal to require "evaluation" rather than "consideration" of the other information is unclear and could be very difficult to effectively operationalize and objectively regulate. Including an evaluation requirement would likely increase the scope of the auditor's responsibility, require the development of new auditing standards and require additional regulatory efforts. The performance of additional procedures to meet an evaluation standard rather than the current standard (consideration of whether information is materially consistent with the audited financial statements) will result in audit costs increasing (potentially materially), which would need to be weighed against potential benefits to financial statement users. The PCAOB should be conducting outreach to various constituents to assess the cost/benefit of this aspect of the proposal. We do not feel a written evaluation in the auditor's report will add value to the consideration already given to the other information based on relevant audit evidence obtained and conclusions reached during the audit. At a minimum, the intent of the proposal needs to be clarified by the PCAOB. Should the evaluation criteria be retained, we believe that the PCAOB needs to provide the audit firms with objective standards to meet the evaluation standard.

The PCAOB's inspection activities in recent years have identified numerous findings with respect to issuer audits, particularly with respect to the audit of internal control over financial reporting. Audit firms respond to these inspection findings by increasing their procedures and audit effort which directly impacts public companies and their internal control processes. As a result, the PCAOB has made public companies part of its constituency. We strongly urge the PCAOB to formally bring the views of public companies fully into the deliberation process on how this proposal moves forward.

We appreciate the opportunity to comment on these proposed changes and thank you for your consideration of our comments. If you have any questions, please contact Bert Nappier at 901-818-7068.

Sincerely,

John L Merino

Subject: PCAOB Rulemaking Docket Matter No. 34

Submitted via comments@pcaobus.org

Members of the PCAOB:

The Committee on Corporate Reporting ("CCR") of Financial Executives International ("FEI") appreciates the opportunity to share its views on the Public Company Accounting Oversight Board's ("PCAOB" or "Board") Release No. 2013-005, *The Auditor's Report on an Audit of Financial Statements when the Auditor expresses an unqualified opinion; The Auditor's Responsibilities regarding other information in certain document's containing audited financial statements and the related auditor's report* (collectively "the Release"). FEI is a leading international organization of senior-level financial executives. CCR is a technical committee of FEI, which reviews and responds to research studies, statements, pronouncements, pending legislation, proposals and other documents issued by domestic and international agencies and organizations. This document represents the views of CCR and not necessarily the views of FEI or its members individually.

Before discussing the current Release, CCR wishes to acknowledge the Board's decision not to pursue imposing a requirement for Auditor Discussion and Analysis (AD&A) contemplated in the 2011 Concept Release. For reasons outlined in our letter dated September 30, 2011, we believe that this was the appropriate action for the Board to take and sincerely appreciate the Board's consideration of the views expressed by CCR and others on this matter.

**CCR's Position on the Release**

CCR understands that the Board's underlying objective in proposing these changes is to enhance the informational value, usefulness and relevance of the auditor's report. CCR has significant concerns as to whether certain of the proposed requirements will accomplish that objective. We therefore believe it is imperative that the Board perform its own due diligence to examine the potential consequences of these requirements on the financial reporting process, auditor behavior, and communications amongst auditors, management and audit committees. We are concerned that the new procedures necessary to comply with the proposed requirements have the potential to be a significant distraction from the primary focus on the audit and consume valuable time and resources during the most critical phases. We believe that the Board needs to re-evaluate the scope and associated costs of the proposed rule, taking into consideration the effect on disclosure overload and other potential unintended consequences. Given these concerns, CCR is unable to support the requirements in the Release as proposed. In our comments below, we have made a number of recommendations which we believe would address these concerns.

CCR believes that the Board should ensure that the final standard will not alter or dilute the fundamental roles and responsibilities of management, auditors and the Audit Committee. We therefore concur with the Board's decision to retain the existing pass/fail model as we believe that this provides the clarity and accountability that investor's desire. We also believe that the current option for auditors to include an emphasis paragraph in the opinion, where appropriate, should be preserved.

**Field Testing by the PCAOB**

Before providing our views on the specific proposals, we wish to emphasize the value of robust and thorough due process in producing a high quality standard. We acknowledge and appreciate the steps the Board has already taken to solicit views from industry and the audit profession and welcome the opportunity to participate in the roundtables planned for the first half of 2014. However, we believe that with a proposal of this nature additional steps are essential to gain an understanding of the practical implications and effects on the audit processes prior to moving forward with these proposed requirements.

CCR believes that a comprehensive field test is the most effective way to address these questions and concerns. We believe it will be useful and insightful for the Board and Staff to determine whether the proposal will produce the information investors are seeking at an acceptable cost to preparers and auditors. We also believe that this work will provide the Board with the opportunity to study the impact that this proposal would have on the audit process to ensure the additional work does not unintentionally adversely affect audit quality.

It is the responsibility of the PCAOB to evaluate the benefits and costs of its proposals. CCR believes that, by playing a leading role in the conduct of a field test, the Board would gain valuable insights into the usefulness of the resulting disclosure and the likely costs (including those related to unintended consequences) of these requirements. It is possible that many of the issues that arose in the application of Auditing Standard (AS) 2 - *An Audit of Internal Control Over Financial Reporting Performed in Conjunction With an Audit of Financial Statements* could have been avoided had there been some form of field testing performed prior to issuance of the final standard. While we are aware that the major audit firms have undertaken some informal work on their own to assess the effect of the proposal, we also understand the scope of this work is limited and unlikely to serve as an effective substitute for formal field testing conducted by the Board. CCR, therefore, believes that the Board should directly undertake this work as part of its due process.

**Critical Audit Matters**

We do not agree with the PCAOB's proposal for auditors to provide disclosures of Critical Audit Matters ("CAMs"). While CCR agrees that there is an opportunity to make targeted improvements in the auditor's reporting model, we do not believe reporting of CAMs will make the audit report more informative.

Based on our reading of the proposal, it appears that one of the desired outcomes of the proposed rule would be to provide investors with additional insights into how an auditor has dealt with the complex and difficult issues that normally arise during the process and are highlighted by management in the financial statements. To the extent the information provided by management is not sufficient to enable investors to adequately understand the underlying financial statements; we believe any perceived shortcomings are better addressed by improved footnote or management discussion and analysis. Accordingly, improvements in this area are better addressed by the FASB or the SEC. As it is implicit in an unqualified opinion that an auditor is satisfied with the reasonableness of such matters, we do not believe that the proposed information regarding steps the auditor took in reaching that conclusion, will provide information value in excess of the associated incremental costs.

The Board defines CAMs as the audit matters that involved the most difficult, subjective, or complex auditor judgments; posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; and posed the most difficulty to the auditor in forming an opinion on the financial statements. The sources for CAMs include engagement completion documents, items reviewed by the engagement quality reviewer, and information communicated to the audit committee. In practice, we would expect the proposed documentation requirements for CAMs could draw upon any matters from these sources. If the auditor determines certain items should be excluded, he or she would need to document why these items were not CAMs. We expect that these judgments, like others of similar importance made during the audit, would be subject to close scrutiny by PCAOB inspectors. Accordingly, it is reasonable to assume that auditors will err on the side of being more inclusive, producing lengthy audit reports that include many CAMs.

CCR is concerned that such reports will give undue prominence to items of lesser importance that were ultimately deemed immaterial or resolved satisfactorily during the course of the audit. We also are concerned that these items may become “boilerplate” in nature due to their normal occurrence and the prevalence of accounting standards that require the use of judgment and/or significant estimates. We also believe that inclusion of CAMs could create the impression of a fragmented audit that provides differing levels of assurance on specific areas. Furthermore, if the information in the CAM disclosure is misinterpreted and leads to questions from the investment community, there is no obvious mechanism for the auditor to respond to them. This would put the issuer in the untenable position of feeling compelled to explain or speculate, after the fact, on what the auditor meant while adhering to the requirements in Regulation FD.

CCR observes that extensive information related to matters that may qualify as CAMs is already available in existing disclosures (e.g., critical accounting policies, significant estimates, business and operating trends, as well as financial and operating risks). Given the volume and complexity of the existing disclosure regime, and considering the concern investors have expressed regarding disclosure overload, we believe it is reasonable to expect that they may have difficulty in evaluating and assimilating this new information with other information provided by management.

CCR agrees with the Board that management should be the original source of information in external financial reports. In addition to the redundancy concerns expressed above, we observe that the Release provides examples which appear to suggest that disclosure will be compelled of certain additional information that is not currently being disclosed under existing requirements. For example, the implementation guidance appears to suggest that significant deficiencies and immaterial uncorrected errors meet the definition of a CAM. We ask the Board to more fully consider the implications and practical consequences of that conclusion. In addition to violating the principle that management should be the original source information, such a requirement would result in further complications related to the limited auditor involvement in interim filings. Specifically, the Board should consider the implications of occurrence of such items in interim filings and what management would be expected to do with them in annual financial statements. Given that such items are immaterial to the respective interim filings and absence of a requirement to report them, we would not expect management to change its practices regarding disclosure. However, the inclusion of these as CAMs would put management in the position of feeling compelled to make such disclosures. If they choose not to and such items are included in the Auditor's Report, the principle that the auditor should not be the original source of information about the company would be violated. This is just one example of the type of unintended consequence that could result from this proposal.

If after considering the results of its due process and field testing, the Board decides to retain the concept of CAMs, CCR believes that the final standard should adhere to the following principles:

- *Auditors must not be the original source of information.* The examples in the proposal provide extensive information well beyond the level of detail that management would normally be expected to provide in notes to financial statements or in MD&A. The examples are inconsistent with the principle of management being the original source of information.

- *CAMs must be material to the audit of the financial statements.* If the company is not otherwise required to include a particular disclosure in accordance with generally accepted accounting principles, regulation or legislation, the requirements for CAMs should not compel disclosure by the auditor.

- *CAMs should not be a source for highly sensitive, prejudicial information (e.g. litigation)*

- *CAMs identified should only include those communicated to the Audit Committee in accordance with PCAOB Standards (including AS 16) that provides additional investor insight into the audit.*

- *The audit report should not describe the audit procedures related to CAMs* (We believe the examples in the Release are unclear and could lead audit firms to believe that such disclosures are required).

- *Auditors should not be required to separately document why audit matters are not considered to be CAMs.*

**Other Information Outside the Financial Statements**

As part of the proposed disclosures in the auditor's report, CCR agrees that clarification of the auditor's association with other information included in the filing would be helpful and informative. CCR understands from speeches made by members of the Board that this was not intended to introduce a dramatic change from existing requirements with regard to role of the auditor in reviewing such information or the level of assurance provided. However, we believe that the change in terminology from *consider* to *evaluate* could, in practice, lead to significant additional work. We therefore believe that that the Board should not change the terminology and should not expand the scope of information to be considered as relevant other information.

CCR observes that the term *evaluate* is used in other parts of the auditing literature with a specific meaning that potentially broadens the obligations of the auditor beyond what is performed in practice today by audit firms at leading reporting companies. For example, the following excerpt from AS 17 appears to imply a more expansive scope and elevated responsibility for the term *evaluate*:

> The proposed standard included a requirement for the auditor to evaluate whether the supplemental information, including its form and content, is fairly stated, in all material respects, in relation to the financial statements as a whole, including whether the supplemental information is presented in conformity, in all material respects, with the relevant regulatory requirements or other applicable criteria. The evaluation should encompass, among other things, whether the information: is complete and accurate, is consistent with the audited financial statements, and complies with relevant regulatory requirements, if applicable.

CCR believes that this level of assurance is different and higher than what is provided today under the requirement to read and consider. We are concerned this level of assurance will, of necessity, expand the scope of audit work performed and potentially lead to many challenging situations for the auditor, particularly with regard to qualitative statements and non-financial information. For example, we do not believe that auditors regularly collect data related to non-financial performance metrics and may, therefore, need to expand their audit scope and procedures to fulfill their obligations related to evaluating this information.

CCR observes that SEC regulations already require CEO and CFO certifications of disclosures that are required in the annual and quarterly reports, as well as the establishment of disclosure controls. Further the NYSE and NASDAQ listing rules require independent audit committee supervision of annual and quarterly reports. Those procedures are generally viewed as rigorous and effective. We, therefore, believe that investors can reasonably expect that non-financial information has been verified by the company, its disclosure committee, and audit committee and subjected to a certification process by management. Accordingly, we see little benefit to requiring the auditors to do more than what is already required to be performed under existing standards.

As stated above, CCR believes it would be helpful to investors to clarify the auditor's role related to "other information" in the audit report. We would therefore support a statement that clearly defines the types of information considered, a clear statement that the auditor has not audited and expresses no opinion on such information and a clearer explanation of actual procedures undertaken with respect to the information outside the audited financial statements. Such a statement might read as follows: "On the basis of relevant audit evidence obtained and conclusions reached during the audit, we have read and considered the other financial information contained in pages X to Y filed with the SEC. We did not audit the other information and do not express an opinion on the other information. Based on the work performed, we have not identified a material inconsistency or material misstatement of fact in that information."

CCR agrees with the Board's view that auditors should not be required to obtain additional audit evidence regarding other information that was not required to be obtained during the audit. With respect to the scope of the other information standard, CCR agrees that XBRL exhibits should be excluded but disagrees on the inclusion of information incorporated by reference contained within the Company's definitive proxy statement. Such information often is not available to the auditor until after the issuance of the audit report. We believe that the auditor's responsibility should be limited to information available prior to issuance of the audit report.

**Clarification of the Standard Auditor's Report**

The Release proposes to add new elements to the auditor's report related to auditor independence, auditor tenure, and enhancements to certain standardized language in the auditor's report (including the addition of the phrase "whether due to error or fraud").

CCR is generally in support of adding clarifying language to the existing standard auditor's report provided that it enhances investors' understanding of the scope, process and limitations of the audit process. We do not believe information related to the tenure of the auditor contributes to this understanding and is more suitably placed in the proxy statement, as it is more directly relevant to investor decisions on whether the independent auditor should be reappointed.

**Concluding Remarks**

CCR believes that the proposals in the Release have the potential to produce profound changes in the conduct and effectiveness of the audit. We believe that it is imperative for the Board to undertake its own due diligence to understand the implications of the requirements and to evaluate whether or not the proposal will yield the desired information at an acceptable cost and without adversely affecting audit quality. We are concerned that the Board will not be able to gather the necessary information solely from the planned elements of its existing due process steps. We therefore urge the Board to undertake a field test of this proposal and evaluate the results before proceeding to a final standard. Only then do we believe that there will be sufficient clarity regarding the efficacy of the resulting disclosures and the time, costs and resources that will be consumed by preparers, auditors and Audit Committees.

We appreciate the Board's consideration of these matters and welcome the opportunity to discuss any and all related matters. If you have questions, please contact Lorraine Malonza at (973) 765-1047 or lmalonza@financialexecutives.org.

Sincerely,

Re: PCAOB Rulemaking Docket Matter No. 034

Dear Ms. Brown:

FirstEnergy Corp. appreciates the opportunity to provide comments to the Public Company Accounting Oversight Board (PCAOB or the Board) on its proposed auditing standard, *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (Proposal).

FirstEnergy is a diversified energy company in the United States with approximately $50 billion of assets, $15 billion in annual revenues, and $14 billion in market capitalization. Our subsidiaries and affiliates are involved in the generation, transmission and distribution of electricity, as well as energy management and other energy-related services. Our 10 electric utility operating companies comprise one of the nation's largest investor-owned electric systems, serving approximately 6 million customers within 65,000 square miles of Ohio, Pennsylvania, West Virginia, Maryland, New York and New Jersey. Our regulated and unregulated subsidiaries control approximately 18,500 megawatts of capacity.

We support the PCAOB's efforts to continue to explore avenues to increase the usefulness of the auditor's report and are pleased that the Board's proposal retains the pass/fail model. We believe this model clearly articulates the auditor's opinion on the fair presentation of the financial statements and is well understood by the investing community. However, we do not support the inclusion of critical audit matters (CAMs) in the auditor's report.

The Proposal defines CAMs as those matters the auditor addressed during the audit of the financial statements that:

(1) involved the most difficult, subjective, or complex auditor judgments;
(2) posed the most difficulty to the auditor in obtaining sufficient appropriate evidence; or
(3) posed the most difficulty to the auditor in forming an opinion on the financial statements.

Our primary concern is that CAMs contained in the auditor's report will alter the auditor's opinion in the eyes of investors. Although the Proposal states that "the auditor's communication of critical audit matters does not alter in any way the auditor's opinion on the financial statements taken as a whole", we are concerned that investors may question unqualified opinions nonetheless. Those of us who have been auditors understand that the responsibility in an audit engagement is to plan and perform the audit to obtain reasonable assurance that the financial statements, taken as a whole, are fairly presented in all material respects. Furthermore, we understand that the nature of an audit engagement often requires auditors to make judgments that are difficult, subjective or complex. For investors unfamiliar with the auditing profession, these challenges may be perceived as unique and unusual when in-fact, they are common and routine.

The Proposal discusses three elements that would be communicated in the auditor's report relative to issues identified as CAMs. These elements are:

(1) Identify the CAM
(2) Describe the considerations that led the auditor to determine that the matter is a CAM, and
(3) Refer to the relevant financial statement accounts and disclosures that relate to the CAM, when applicable.

Of the three, the second element is the most troubling. Page A5-36 of the Proposal describes the second element, in-part, as follows: "To enhance investors' and other financial statement users' understanding of the audit, the proposed auditor reporting standard would require the auditor to describe the considerations that led the auditor to determine that the matter is a critical audit matter. The description of considerations that led the auditor to determine a matter is a critical audit matter may be derived from one or more of the factors; however, the auditor would not be limited to the factors listed in the proposed auditor reporting standard, which also could include other factors specific to the audit. Additionally, the auditor's description should be specific to the circumstances. Further, when communicating critical audit matters in the auditor's report, the proposed auditor reporting standard would not require the auditor to describe the audit procedures related to critical audit matters. It would, however, not preclude an auditor from doing so." The description of the matter and the determination of the matter as a CAM are based on the training, expertise and experience of auditors. Investors would need to determine how the auditor's procedures (if provided) and the auditor's determination of the identified CAM affect their analysis and ultimately, their investment decision. For investors with little or no auditing background, this information will not provide additional, useful insight for making those investment decisions.

We also reviewed the illustrative examples of CAMs provided by the Board on pages A5-65-78. During the review, we noted that in all three examples, the auditor's report states "the critical audit matters communicated below do not alter in any way our opinion on the financial statements, taken as a whole." In each of the examples, the auditor's report communicates the challenges the auditor encountered during the engagement including difficult and subjective judgments, difficulty in obtaining audit evidence, difficulty in designing audit procedures and the involvement of in-house and other third-party experts. What is absent from each of the example reports is an explanation of how the auditor resolved these challenges in order to issue an unqualified audit opinion. On the one hand, each report communicates that the CAM does not alter the opinion of the auditor, taken as a whole. On the other, the auditor is required to disclose challenges in issuing an unqualified opinion with no reconciliation between the challenges and the final opinion. We find it difficult to understand how investors with no real understanding of the auditing profession will glean useful information from such a contradictory report. Instead of providing useful information, we believe reporting CAMs in the auditor's report will likely lead to further confusion by investors around the quality of the financial statements, no matter the type of opinion issued by the auditor.

In addition, we are concerned about the number of matters that may be identified as CAMs and the additional time, effort and cost that will be borne by companies. The Proposal identifies the source of potential CAMs as being:

(1) items documented in the engagement completion document;
(2) items reviewed by the engagement quality reviewer
(3) items communicated to the audit committee or,
(4) any combination of the three.

The Proposal states that "the Board would not expect that each matter included in any one or more of these sources would be a critical audit matter." We believe auditors would deem many of the items identified during the audit and noted above as CAMs in order to protect themselves from the scrutiny of PCAOB inspections. This will result in additional effort by the auditors and increased costs for companies while providing no additional benefit to readers of financial statements. Furthermore, the number of CAMs identified and included in auditor reports under this proposal could increase for all companies when new accounting standards are initially adopted and implemented. New accounting standards inevitably challenge audit teams requiring communication to the audit committee, consultation with national office personnel and other experts. Will investors be well-served by auditor reports communicating the challenges experienced during the adoption and implementation of the proposed lease and revenue recognition standards by the significant number of companies that will be affected by these standards? In our opinion, the answer is no.

Furthermore, given the level of judgment and subjectivity involved in identifying a CAM, we acknowledge, consistent with the Board's acknowledgement, that companies in the same industry with a similar risk profile could result in differences in the type and number of CAMs reported in the auditor's report. We are concerned by this lack of comparability and believe that similar audit matters between two different companies and two different audit firms could, and will likely, result in different conclusions surrounding the identification and reporting of certain matters as CAM. This lack of comparability and consistent reporting of CAMs will most likely inadvertently bias the decision of an investor, when in fact, the differences in the CAM reported in the auditor's report is not representative of the different risk involved.

Again, we are pleased that the Board's proposed auditing standard retains the pass/fail model but do not support the inclusion of CAMs in the auditor's report. In our opinion, providing this information will increase the size of already voluminous financial reports while providing no additional useful information to investors.

Thank you for the opportunity to express our opinion on the Proposal. Please feel free to contact me if you have any questions or need further clarification regarding our response.

Sincerely,

FITZGIBBON TOIGO & CO. LLC as a Broker/Dealer supports Lisa Roth's sensible position. Our Broker/Dealer is a placement agent, third party marketing firm that does not hold securities or handle customer money or accounts. We are not a public company and should be exempt from audits. These audits are expensive with no purpose. If the audits are to protect the interests of investors, they serve no intent other than as a auditor employment protection rule. I would hope that the PCAOB has a firm enough grasp of the placement business to see the folly of this rule.

Re: PCAOB Release No. 2013-005 The Auditor's Report on an Audit of Financial Statements when the Auditor Expresses an Unqualified Opinion;
PCAOB Rulemaking Document No. 034 The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report; and Related Amendments to PCAOB Standards

Dear Sirs:

The Accounting Principles and Auditing Standards Committee (the Committee) of the Florida Institute of Certified Public Accountants (FICPA) respectfully submits its comments on the referenced proposal. The Committee is a technical committee of the FICPA, which has approximately 18,500 members comprised primarily of CPAs in Public Practice and Industry. The Committee is comprised of 20 members, of whom 50% are from local or regional firms, 20% are from large multi-office firms, 10% are sole practitioners, 10% are in academia or private industry, and 10% are in international firms. Therefore we are addressing this exposure draft both from the viewpoint of preparers of financial statements as well as those performing attest services on them.

The Committee has reviewed and discussed the above referenced proposed auditing standards and the questions included in Appendix 5 of the proposed auditor reporting standard. The Committee concluded that it is in agreement with the reporting requirements as they relate to independence, with some clarification as noted in our response to question 4 below. However, there is a general disagreement with the auditor tenure reporting requirements and with the expanded disclosure requirements for critical audit matters. Our comments regarding these requirements are contained in our responses to questions 5 – 13 below. Questions 15 – 28 of Appendix 5 requested comments on more specific areas of the critical audit matters disclosure requirements. As the Committee strongly disagreed with inclusion of critical audit matters in the auditor's report, the Committee did not provide responses to those questions in this letter.

Finally, there was general agreement with the reporting requirements contained in the proposed other information standard, which we noted was in conformity with existing reporting standards for non-SEC reporting entities. Accordingly, the Committee has not provided responses to questions in Appendix 6.

1. The Committee believes the objectives in paragraph 4 of the proposed auditor reporting standard are clearly communicated in understanding the reporting requirements of an auditor's unqualified report.
2. The Committee is in agreement that the auditor's report should be addressed to at least (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body, and believes there should be others to whom the auditor's report is required to be addressed, depending upon the circumstances.
3. The Committee is in agreement and believes the auditor responsibilities outlined in paragraph 6 of the proposed auditor reporting standard are sufficient.
4. The Committee agrees that the proposed statement regarding independence as identified in Paragraph 6.h. of the proposed auditing standard will provide useful information, but believes that consideration should also be given to disclosing rules and regulations of other state regulatory bodies that have independence standards to which registered firms must comply. Absence of this reference might cause the audit firm to infer that the other rules and regulations would not apply in a PCAOB audit.
5. a) Although the information might be useful to users, the Committee finds it difficult to find what public interest is served through the inclusion of auditor tenure given the negative connotation of auditor tenure that the Board acknowledges in its commentary and footnote disclosures in the proposed auditor reporting standard. **Therefore, the Committee strongly disagrees with inclusion of auditor tenure in the auditor's report**, **as it believes that the tenure disclosure would dilute the independence disclosure already included in the auditor's report. The Committee believes this information is best reported in the other information accompanying the financial statements, such as the section on auditor fees in Series 10 SEC filings.**
   b) The proposed auditor reporting standard adequately addresses the reporting requirement regarding the year the auditor began serving as the company's auditor with the example paragraph provided in Appendix 5, Section IV.
   c) Inclusion of auditor tenure in the auditor's report as well as other information accompanying the financial statements would have only unintended negative consequences given the emphasis provided to the auditor's report in the SEC filing and the negative inferences on long-term auditor relationships.
6. The Committee agrees the proposed description regarding the auditor's responsibilities for other information would be informative and useful but believes that a specific description of the items covered is warranted. The Committee believes that some clarifying language should be added in the report and reporting guidance that there are no assurances as to the completeness and presentation of the exhibits and items incorporated by reference in an SEC filing.
7. The Committee believes a specific order for the presentation of basic elements in the auditor's report be required for consistency purposes. The ordering of the report implies order of importance. Allowing discretion here could cause inconsistency and allow the audit firm to "color" its opinion accordingly.
8. The Committee believes no other changes to the basic elements required in the auditor's report are necessary as it is consistent with existing reporting standards for non-SEC reporting companies.

9. The Committee believes outside of determination of tenure, which could cause some additional time and effort, the basic elements should not add more cost.
10. The Committee concurs that the communication of critical audit matters may be relevant and useful to users. However, there are negative factors that override the relevancy and usefulness of this information, such as potential liability issues regarding the content of the critical audit matters section of the auditor's report. **For these reasons, the Committee strongly disagrees with the inclusion of critical audit matters as other information to be included in the auditor's report.** The Committee considered one alternative to include the letter to those charged with governance required under AS 16 as an exhibit to the public filing, as an alternative to inclusion of critical audit matters in the auditor's report.
11. The Committee believes unintended consequences exist in the form of potential liability issues regarding the subjective analysis of inclusion or non-inclusion of content in the critical audit matters section of the auditor's report.
12. The Committee believes the definition of a critical audit matter is sufficient and clear as to what is considered a critical audit matter.
13. The Committee believes from a practical perspective, the additional time incurred regarding critical audit matters should improve the quality of the documentation supporting the disclosure. However in practice the Committee believes additional pressure would exist from management to dictate the content of the section.

The Committee appreciates this opportunity to respond to the proposed auditing standards. Members of the Committee are available to discuss any questions or concerns raised by this response.

Respectfully submitted,

Steven Morrison CPA, Chair
FICPA Accounting Principles and Auditing Standards Committee

entities required to file financial information with the SEC under both the '40 Act and the Securities Exchange Act of 1933 ("'33 Act").

**Overview:**

Fidelity believes that any changes to the Independent Auditor's Report issued by a Registered Public Accounting Firm (Auditor's Report) associated with a public company's financial statements should be guided by the principle that the opinion must provide a clear, concise and unambiguous message regarding the scope of the audit, the responsibility of the auditor and their conclusion reached in order to ensure the continued confidence of investors. We support changes to the Auditor's Report that clarify the scope of the audit, will not create confusion about the opinion rendered by the auditor, and avoid redundancy of disclosures already included in the financial statements that are evaluated by the auditor, such as significant judgments, estimates and assumptions. Any changes should also balance the benefit of such changes with their potential costs including impacts to audit fees, time spent by management and the audit committee to consider auditor communications and also on the ability of companies to meet financial statement regulatory filing deadlines.

We offer the following suggestions that we believe will further enhance the Proposed Standards:

- Critical Audit Matters should not be included in the Auditor's Report. These disclosures may confuse investors and financial statements users with respect to the roles of the auditor, management and the audit committee, who has ultimate responsibility to oversee the audits and select the auditor for investment companies, broker-dealers and insurance separate accounts.

- Auditor Tenure should not be included in the Auditor's Report. While there is no clear link between tenure and audit quality, we believe users of financial statements may view this information as an indicator of audit quality, and place less confidence in the opinion rendered by the auditor; and

- The PCAOB should limit the scope of audit procedures around Other Information to items related to the financial statement audit and maintain the current requirement to "read and consider" such information.

Each of these items is discussed in detail below.

<u>Critical Audit Matters</u>

The Proposed Auditor Reporting Standard would retain the existing "pass/fail" model and other basic elements of the current Auditor's Report. To make the Auditor's Report "more informative, thus increasing its relevance and usefulness to investors and other financial statement users", the Proposed Auditor Reporting Standard would also require auditors to provide additional information, such as "Critical Audit Matters" to investors and other users of the financial statements in the Auditor's Report. Critical

Audit Matters include those matters the auditor addressed during the audit of the financial statements that involved the most difficult, subjective or complex auditor judgments or posed the most difficulty to the auditor in obtaining sufficient appropriate audit evidence for forming an opinion on the financial statements. In addition to identifying each Critical Audit Matter, the auditor must also describe the considerations that led the auditor to classify the matter as a Critical Audit Matter and when applicable, cross-reference the relevant financial statement accounts and disclosures in the notes to the financial statements that refer to the Critical Audit Matter.

*Disclosure of Critical Audit Matters will confuse investors and other of financial statements s and may erode their confidence to invest*

We recommend that the PCAOB not adopt the proposed disclosure of Critical Audit Matters because we are concerned that shareholders of registered investment companies, separate accounts and customers of broker-dealers would be unsure of how to incorporate this information into their investment decision making. Today, there is an existing regulatory infrastructure supporting shareholders' interests that charges audit committees of boards of directors to select the auditor of the companies for which they serve, oversee the audits and ensure that financial statement audit issues are appropriately resolved. This existing infrastructure provides investors and other users of the financial statements with confidence in the integrity of investment products offered in the United States. We believe that communication of Critical Audit Matters will confuse investors and other users of the financial statements about how to respond to these disclosures and may erode their confidence, given the reliance they place on audit committees and boards to look out for their best interests.

If investors and other users of the financial statements were left to interpret Critical Audit Matters disclosures on their own, we believe this information will likely create confusion and introduce ambiguity concerning the auditor's opinion on the financial statements. Investors and other users of the financial statements may likely misinterpret the communication of a Critical Audit Matter, including considerations made by the auditor to arrive at a Critical Audit Matter, as an indication of a qualification of the Auditor's Report, therefore weakening the unqualified opinion. To avoid ambiguity, this information would need to be accompanied by a description of the procedures performed by the auditor that enabled the auditor to gain comfort with, and ultimately arrive at an unqualified opinion. However, the shear volume of additional disclosure that may be needed to achieve this goal would conflict with our recommended guiding principle noted above.

*Critical Audit Matters communications will increase fund audit fees and place pressure on regulatory deadlines*

Communication between an auditor and an audit committee is an essential and required aspect of an effective and efficient audit. We do not anticipate additional costs to identify Critical Audit Matters, as this activity would occur during the normal course of audit procedures. However, we believe the auditors will incur additional cost to develop and review their opinion and communicate the details of their report to management and the audit committee. We believe that these incremental costs will be borne by the shareholders that are already benefitting from the ongoing governance and oversight of the audit committee, among other entities, in place to protect their interests.[5]

*Critical Audit Matters will duplicate management disclosures*

We are concerned that auditor communications of Critical Audit Matters would be duplicative of information already provided to investors and other users of the financial statements. Existing disclosures either within the financial statements or other documents required by the SEC or other regulatory bodies already provide sufficient information related to matters that may qualify as Critical Audit Matters. These matters include the disclosure of critical accounting policies, significant estimates, business and operating trends (such as is with the prospectus or Computation of Net Capital pursuant to Rule 15c3-1 and the Computation for Determination of Reserve Requirements, pursuant to Rule 15c3-3 under the '34 Act), as well as other financial and operating risks. Fidelity believes those targeted risks for investment companies, broker-dealers and insurance entities are extensively disclosed within an existing reporting framework. Providing Critical Audit Matters will likely be repetitive of information already provided by management and not provide incremental benefit to investors and other users of the financial statements.

Other Clarifying Language within the Auditor's Report

Fidelity supports the new information requirements in the Proposed Auditor Reporting Standard that help clarify for investors and other users of the financial statements what an audit represents, as well as an auditor's responsibilities. We believe that including information in the Auditor's Report such as the auditor's responsibility for the financial statements, including the related notes and schedules (if applicable) and the description of the nature of an audit, will help clarify which components of the financial statements have been audited by the independent registered public accounting firm. We also believe that it is important to highlight the auditor's responsibility for fraud resulting in material misstatements to the financial statements and the auditor's independence. All of these proposed changes should bring value to the Auditor's Reports at minimal cost.

Auditor Tenure Information

Fidelity objects to including a statement expressing auditor tenure in the Auditor's Report. We believe that users of financial statements may place undue emphasis on this data point as a positive or negative indicator of audit quality, despite the fact research studies draw contradictory conclusions on the impact of an auditor's tenure on audit quality. If the PCAOB ultimately concludes that a statement expressing auditor tenure should be included in the Auditor's Report, we are concerned that this information for mutual funds in a mutual fund complex may not provide an accurate representation of

---

[5]Fidelity believes that disclosure of Critical Audit Matters may ultimately impact the frequency of currently established audit committee communications under CFR 210.2-07, facilitating quarterly communication between the auditors and audit committee of investment companies.

tenure. Mutual fund auditors are typically hired to audit all funds or a subset of funds advised by a particular manager. Under the current proposal, disclosing audit tenure for a newly commenced fund may not accurately address the auditors' overall tenure with the mutual fund complex, which may exceed the period listed within the Auditor's Report.

Operational Challenges

Fidelity urges the PCAOB to consider the significant operational challenges associated with adding Critical Audit Matters and auditor tenure information to the Auditor's Report. These challenges are particularly acute for mutual fund advisers who may have hundreds of mutual funds under management and dozens with the same period end reporting requirements. It is also common practice within the mutual fund industry, to present multiple mutual funds within a single financial statement book, to which the auditor's opine in a single Auditor's Report. If mutual funds are required to include different audit tenures and critical audit matters for each fund individually, the length of the Auditor's Report will expand superfluously. Moreover, we believe that investors and other users of the financial statements will be confused as to how to interpret multiple auditor tenure dates within the same fund family. If implemented, Fidelity asks the PCAOB to clarify the application of this proposal to specific mutual fund topics, including those noted above.

**Proposed Other Information Standard**

The PCAOB's Other Information Standard is intended to improve the auditor's procedures and enhance the auditor's responsibilities with respect to other information contained in a reporting entities annual filing, other than the audited financial statements and the related auditor's opinion.

Fidelity recommends that the PCAOB further consider the scope of procedures to be performed under this standard and suggest, in the case of mutual funds, that this information be limited to Management's Discussion of Fund Performance ("MDFP"), Shareholder Expense Example and Performance reporting. This approach will limit the auditor's review to information that is governed by SEC guidance,[6] is derived from information included in the financial statements, and is objective, verifiable and absent subjective or forward-looking statements.

Fidelity further encourages the PCAOB to exclude from their final Other Information Standard any exhibits filed that contain non-financial information, which in the case of a mutual fund's N-CSR includes the fund adviser's Code of Ethics, advisory contracts, presentation of non-audit services, and trustees and directors information, including any applicable information incorporated by reference. These documents while contributing minimal financial information, may be lengthy or potentially superseded by information updated subsequent to the audit period and will require a substantial use of auditor resources to review. Fidelity does not believe that additional audit procedures

[6]Item 27(b)(7) of Form N-1A

performed on this information will be useful to investors and other users of the financial statements in their review of financial statements and this additional review and work will substantially increase audit costs to fund shareholders.

*Challenges to executing procedures within the Other Information Standard*

Fidelity does not support the requirement to use the term "should evaluate" when defining procedures auditors are required to perform on "other information". This term replaces the existing terms codified in AU sec. 550 of "should consider". The PCAOB explains, within its discussion of the Other Information Standard, that the words "should evaluate" are used in PCAOB standards when the auditor is expected to come to a conclusion based on the performance of certain procedures. The proposal is also clear in its requirement that auditors identify material inconsistencies and material misstatements of fact based on relevant evidence obtained and conclusions reached during the audit. We are concerned with the auditor's ability to effectively meet the requirement to "conclude through evaluation" while adhering to language within the same PCAOB proposal that requires the auditors to use only information and evidence 'already obtained' rather than perform procedures 'to obtain' additional evidence. Fidelity believes that as a result of this change, any auditor's attempts to achieve the goal of this proposal by either increasing auditing procedures or to draw conclusions from audit procedures already performed may prove to be burdensome to financial statement preparers when working with their auditors. Fidelity believes the PCAOB's is effectively creating a requirement for auditors to conclude, but not allowing auditors an efficient mechanism to achieve this conclusion.

**RE: Rulemaking Docket Matter No. 34**
**Proposed Auditing Standards – Auditor's Report on an Audit of Financial Statements, Auditor's Responsibilities Regarding Other Information in Certain Documents, and Amendments to PCAOB Standards**

Members of the Board,

I appreciate the opportunity to submit my comments to the Board with respect to the *Proposed Auditing Standards – Auditor's Report on an Audit of Financial Statements and Auditor's Responsibilities Regarding Other Information in Certain Documents*. I retired from public accounting in 2007 after 27 years at Deloitte & Touche LLP and am currently a full-time faculty member at the University of Notre Dame teaching undergraduate and graduate courses in accounting and auditing.

Introduction:

My impression is that this project has been driven largely by user comments most of which appear to me to reflect perceived inadequacies in the GAAP reporting model. Users appear to be asking the auditors to tell them more about what is going on inside the company because management will not. I continue to believe that the appropriate course of action here is for the Board to coordinate its efforts with the Securities & Exchange Commission (Commission). The Board is in a unique position; it has access to information about registrants that the Commission only has in the course of litigation.

The Board's inspectors see the difference between what management discloses and what it could disclose as well as what audit committees do and don't do. Rather than pushing for a surrogate for difficult financial reporting matters as testifying users want, work with the Commission to improve the quality of management's reporting and the audit committee's oversight. For example:

- Work with the Commission to have management expand its disclosures of critical accounting policies to include comments on controls over those areas.

- Suggest to the Commission that it require management's certificates to address errors identified by the auditors, both corrected and uncorrected, and require they be addressed in audit committee reports as well.
- Request the Commission to require management and the audit committee to report on Significant Deficiencies that have gone un-remediated for more than one year.

It seems likely that the Board and the Commission are not jointly working on this project. For example, historically the Commission has not asked auditors to report on matters not governed by Regulation S-X yet the Board is forcing that on the Commission by virtue of this reporting model.

As I noted in my letter of July 21, 2012, commenting on the concept release related to this topic,

> "…the Board would better spend its time setting standards for the conduct of the audit rather than on reporting. I believe users, particularly those managing large investment portfolios, are intelligent business people who have the ability to fully understand what auditors do without an expanded auditors' report. PCAOB Standards are a matter of public record and available to any who want to understand the meaning of specific terminology or what auditors do in evaluating managements' assertions in the financial statements. The level of detail that should be added to the auditors' report would likely expand it to four or five pages, and yet the expanded report would be less comprehensive than the Center for Audit Quality's recently published "In-Depth Guide to Public Company Auditing: The Financial Statement Audit" (CAQ Guide). Any user who does not have the time or inclination to read the PCAOB standards but who reads the CAQ Guide once will have the information necessary to understand the auditors' report. Those who participated in the Board's outreach process would have invested much less time reading the introductory chapters to an undergraduate auditing textbook than they invested preparing to meet with the Board were they truly interested in understanding what auditors do…"

I believe the Board has exceeded its mission by focusing on perceived inadequacies in registrants' financial reporting and seeking to remedy this through the proposed changes to the independent auditors' report. I again suggest the Board work with the Commission to address users' concerns.

My specific comments are as follows:

Appendix 5 – Additional Discussion Related to the Proposed Auditor Reporting Standard

*1. Do the objectives assist the auditor in understanding the requirements of what would be communicated in an auditor's unqualified report? Why or why not?*

The second objective is inappropriate. By focusing on the communication of Critical Audit Matters as an objective of auditor reporting, the Board is shifting the emphasis away from the overall fairness of the financial statements taken as a whole and toward these Critical Audit Matters as the primary aspects of the registrant's statements on which users should focus. As I noted in my previous comment letter in response to question 14:

> "…this will cause investors and other users to rely on the auditors' report as a source to limit the extent to which they read financial statements and notes. This would also facilitate the development of software that would read the auditors' report, extract the related notes to the financial statements, and effectively eliminate the user's incentive to read the financial statements in their entirety. This implicitly places the auditor in the position of having to guess which areas are important to which users. The auditors' determination of what matters to emphasize would likely differ from those areas that would be emphasized by users and likely different from those areas the Board's inspectors would emphasize subjecting the auditors to additional litigation exposure from the former and criticism from the latter."

*2. The proposed auditor reporting standard would require the auditor's report to be addressed at least to (1) investors in the company, such as shareholders, and (2) the board of directors or equivalent body. Are there others to whom the auditor's report should be required to be addressed?*

In comments I have made to the FASB on the Conceptual Framework I have expressed concern that the reporting model is too focused on capital providers – debt and equity holders – to the exclusion of other stakeholders. The Board is continuing that trend by having auditors address their reports to existing shareholders and debt holders. There are many other users of financial statements including prospective equity and debt holders, employees, vendors, customers, regulators, as well as state and local governments. The appropriate addressee is the Board of Directors which has a fiduciary duty to the Company and by extension to the various stakeholders existing and potential.

*3. The proposed auditor reporting standard retains the requirement for the auditor's report to contain a description of the nature of an audit, but revises that description to better align it with the requirements in the Board's risk assessment standards. Are there any additional auditor responsibilities that should be included to further describe the nature of an audit?*

I suggest the following:

- Auditors have responsibilities to communicate with those charged with governance of the entity
- Auditors perform quarterly reviews which place them in contact with the entity throughout the year not just at the end

Auditors' responsibilities for internal control are noted in the current report, however for those with an integrated audit the standard should move to a combined report as this is all one, integrated audit not two separate audits with competing objectives

*4. The proposed auditor reporting standard would require the auditor to include a statement in the auditor's report relating to auditor independence. Would this statement provide useful information regarding the auditor's responsibilities to be independent? Why or why not?*

Given that the title of the report includes the statement that the firm is independent, adding the expanded language in the body of the report adds no additional information. Excess wording in any written communication should be minimized so as not to detract from other, important information. A report that is excessively long will likely not be read by unsophisticated investors; sophisticated investors already understand the concept of auditor independence. It would certainly not remind the auditors that they must be independent; if that's necessary, they should not be performing audits.

*5. The proposed auditor reporting standard would require the auditor to include in the auditor's report a statement containing the year the auditor began serving consecutively as the company's auditor.*

a. *Would information regarding auditor tenure in the auditor's report be useful to investors and other financial statement users? Why or why not? What other benefits, disadvantages, or unintended consequences, if any, are associated with including such information in the auditor's report?*

Audit partners rotate every five to seven years; audit staff turnover in public accounting firms is such that most of the individuals working on any public company audit are not the same individuals who were working on that audit ten years ago. Does it really make a difference that PricewaterhouseCoopers and its predecessor have been serving IBM for over 60 years given that fact? However, there may be some individuals who do serve the registrant as non-partners for decades.

The impetus behind this aspect of the proposed change to the reporting model appears to me to be an attempt to push audit committees to rotate auditors more frequently. These concerns could be alleviated if the Board took a more direct approach to the real problem of familiarity – that at the lower levels of the audit team. If the Board extended the maximum tenure of seven years to all individual auditors serving the registrant, much of the familiarity concern could be alleviated.

*b. Are there any additional challenges the auditor might face in determining or reporting the year the auditor began serving consecutively as the company's auditor?*

The Board must define who the 'Company" is. If Company B is acquired by a larger Company A but B's management is the surviving management of the combined entity, does the service clock start over if B's auditors are appointed to serve the new, combined entity? If A's auditors are the surviving firm are they still auditors of "the same company" given the changeover to B's management team? When companies go public by means of a reverse merger into a shell company, does the auditor service clock start over? Should consecutive years of service focus on continuity of the reporting entity and the audit firm or of the people involved? If an audit firm has been serving a registrant since 2002 and absorbed certain key Andersen professionals who previously served that entity has there truly been a change in auditors?

c. *Is information regarding auditor tenure more likely to be useful to investors and other financial statement users if included in the auditor's report in addition to EDGAR and other sources? Why or why not?*

I do not see how the information is useful to investors. The firm is not the significant bit of data here. When Andersen collapsed, WorldCom changed auditors – and the successor firm hired the former personnel from Andersen who continued to serve that entity. As noted above, the underlying concerns related to auditor tenure would be significantly addressed if the Board would adopt a rotation requirement that applied to all personnel on the audit not just the partners on the audit.

*6. The proposed auditor reporting standard would require the auditor to describe the auditor's responsibilities for other information and the results of the evaluation of other information. Would the proposed description make the auditor's report more informative and useful? Why or why not?*

As noted above, it seems highly likely that most users don't invest the time to understand the responsibilities the auditors already have with respect to that other information; so while auditors already know they have responsibilities for all information in a document that contains an auditors' report, no one other than the most sophisticated user has that knowledge. Accordingly, specifying an auditor's responsibilities for that other information would be valuable only to those actually reading that other information and reading the auditors' report. I do continue to express my concern that the users who testified before the Board won't read the expanded auditors' reports that will arise from this standard any more than they have read the CAQ Guide.

*7. Should the Board require a specific order for the presentation of the basic elements required in the auditor's report? Why or why not?*

The flow should mirror the sequence of the audit – from engagement acceptance to issuance of the report. The current flow of the report generally does that.

*8. What other changes to the basic elements should the Board consider adding to the auditor's report to communicate the nature of an audit, the auditor's responsibilities, the results of the audit, or information about the auditor?*

None; as noted above, the Board could require the complete CAQ Guide be reprinted in every set of financial statements, but I doubt any user would actually read that. The Board could require the auditors to include a link to a particular part of the Board's own website containing detailed descriptions of what auditors do and what standards they must follow, but again I do not believe users would actually follow that link to the Board's standards or read any other information describing what auditors do.

*9. What are the potential costs or other considerations related to the proposed basic elements of the auditor's report? Are cost considerations the same for audits of all types of companies? If not, explain how they might differ.*

Audit costs are correlated with the amount of effort the auditors must expend. This effort is dependent upon the complexity of the registrant's business, the competency of its management, and the skills of the auditors. As those combinations are unique for individual registrants, the costs should not be expected to be the same. I don't see how the inventory of basic elements in an auditors' report would impact those costs.

*10. Would the auditor's communication of Critical Audit Matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?*

I believe the users who testified before the Board want information about what is happening inside the registrant; not about what is happening inside the audit firm's conduct of the audit. To the extent users want additional information about areas that are critical for the registrant or difficult for management, they should request the Commission mandate that the Audit Committee make this communication as it has knowledge of what really is important from a risk standpoint. The auditors will report from the standpoint of what is critical to them – that which gets them sued or that which gets them criticized in PCAOB inspection reports – much of which is not critical to users. Investors do not want to know what the auditors find difficult; they want to know what management finds difficult. For example, the auditors have numerous specialists to help them evaluate Level 3 financial instruments; users would rather know whether the registrant has them. While the answer to this question will surface in a Critical Audit Matter, that answer should come from management, not the auditor.

If the Board ultimately adds these communications to the auditors' report, it must work with the Commission to mandate that management add its own comments in Item 9 on the registrant's controls over these areas and that the Audit Committee addresses in its report to shareholders in the annual proxy statement its oversight of the registrant's handling of these areas.

*11. What benefits or unintended consequences would be associated with the auditor's communication of Critical Audit Matters?*

I believe it will increase litigation exposure for auditors for anything that should have been a critical area and was not. The growth of critical areas will mirror the growth of risk factors in a registrant's filings. The report will be huge and no one will read it. A large corporation will likely have at least half a dozen Critical Audit Matters and commenting on those adequately should take three pages. Adding comments on controls over those areas will likely take more pages. Users will use key-word search software to focus only on those parts of the financial statements highlighted as Critical Audit Matters. They will ignore other parts which may not be critical for the auditors but would be critical for them.

*12. Is the definition of a Critical Audit Matter sufficient for purposes of achieving the objectives of providing relevant and useful information to investors and other financial statement users in the auditor's report? Is the definition of a Critical Audit Matter sufficiently clear for determining what would be a Critical Audit Matter? Is the use of the word "most" understood as it relates to the definition of Critical Audit Matters?*

Critical audit matters should comprise all those matters communicated to the Audit Committee. Additionally, all items listed in management's critical accounting policies should be candidates for Critical Audit Matters; these are supposed to be the drivers of the financial statements.

The Board must also include significant deficiencies in internal control as a possible Critical Audit Matter. For example if the auditor has determined the existence of a continuing significant deficiency, then testing any area affected by that significant deficiency should also be evaluated as a potential Critical Audit Matter. This does not apply only to those registrants subject to reporting or being audited pursuant to Section 404; it would apply to all registrants.

*13. Could the additional time incurred regarding Critical Audit Matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have?*

The reporting deadlines are already short. Auditor time will increase to document not only those matters that are critical but those that could be. Auditors will spend as much time documenting what they did not do as documenting what they did do so as to minimize second guessing. The additional time spent in quality control to manage exposure to second guessing will cause increased calls for extension of time to file. It is not clear that more time spent preparing documentation necessarily equates to a higher quality audit and therefore higher quality financial reporting.

*14. Are the proposed requirements regarding the auditor's determination and communication of Critical Audit Matters sufficiently clear in the proposed standard? Why or why not? If not, how should the proposed requirements be revised?*

All of the indicators and examples for the determination of Critical Audit Matters are clear; more importantly they are all related to management's relative ability to handle difficult areas. Again, I suggest the Board work with the Commission to expand management's disclosures in the 10-K about controls over difficult areas and the audit committee's disclosures in the annual proxy statement as to how it exercises oversight of these areas. As I stated previously, users are looking for information about what goes on inside the registrant not what goes on inside the audit firm.

*15. Would including the audit procedures performed, including resolution of the Critical Audit Matter, in the communication of Critical Audit Matters in the auditor's report be informative and useful? Why or why not*?

As noted above, if users truly were interested, they would do their homework. Accordingly these changes to the report will not be useful other than for second guessing the auditors in the course of subsequent litigation. I do not believe users are sincerely interested in knowing about the procedures the auditors performed as much as they are interested in knowing about the procedures management performed or failed to perform.

*16. Are the factors helpful in assisting the auditor in determining which matters in the audit would be Critical Audit Matters? Why or why not?*

The factors listed are appropriate for determining what matters are Critical Audit Matters.

*17. Are there other factors that the Board should consider adding to assist the auditor in determining which matters in the audit would be Critical Audit Matters? Why or why not?*

- Matters identified by the PCAOB as Critical Audit Matters by virtue of its inspection focus.
- All areas identified as potential fraud risk – revenue, management override of controls, large transactions at the ends of reporting periods, and so on.
- Any matters identified as Critical Audit Matters in the course of discussion with the audit committee.
- All items listed by management as Critical Accounting Policies in the notes to the financial statements or in MD & A and all matters listed as Risk Factors in Item 1A in the form 10-K.

The above are among the drivers of financial reporting, and should be a focal point for the audit of internal control as well.

*18. Is the proposed requirement regarding the auditor's documentation of Critical Audit Matters sufficiently clear?*

Yes and the consequence will be that the inventory of critical matters increases. Inspectors will by nature look for other matters not included as Critical Audit Matters. Auditors by nature will want to avoid criticism so any matters that are close calls will end up being included so that nothing is left as a potential Critical Audit Matter.

*19. Does the proposed documentation requirement for non-reported audit matters that would appear to meet the definition of a Critical Audit Matter achieve the Board's intent of encouraging auditors to consider in a thoughtful and careful manner whether audit matters are Critical Audit Matters? If not, what changes should the Board make to the proposed documentation requirement to achieve the Board's intent?*

As stated above, the auditors will want to avoid being second guessed so that list of non-reported matters will likely be empty or populated with Straw Men to placate inspectors.

*20. Is the proposed documentation requirement sufficient or is a broader documentation requirement needed?*

The Board's goal should be to improve the quality of the audit; it is not clear to me that more documentation automatically achieves that objective. What is clear is that the auditors will spend more time documenting matters for the purpose of passing inspections and that does not automatically lead to improved quality.

*21. What are the additional costs, including indirect costs, or other considerations related to the auditor's determination, communication, and documentation of Critical Audit Matters that the Board should take into account? Are these costs or other considerations the same for all types of audits?*

The indirect costs include those that will arise as users focus on the auditors' lists of critical matters rather than on the financial statements taken as a whole and those matters that would be critical to them as users. The Board will incur increased inspection costs as inspectors search for unreported possible Critical Audit Matters. Litigation costs should also increase if for no other reason than that they can.

*22. What are the additional costs, including indirect costs, or other considerations for companies, including their audit committees, related to Critical Audit Matters that the Board should take into account? Are these costs or other considerations the same for audits of both large and small companies?*

Critical Audit Matters will drive financial reporting as management and the audit committee move to match the level of financial statement disclosure with auditors' report disclosure. Management knows more about what's critical in financial reporting than do the auditors. Accordingly, areas not identified by the auditors as critical will not receive prominent disclosure even if management is aware of particular critical matters that it should disclose. I believe this will be most pronounced in small companies. Again, as stated above, the Board should work closely with the Commission to expand management's and the audit committee's reporting on critical accounting and reporting matters.

*23. How will audit fees be affected by the requirement to determine, communicate, and document Critical Audit Matters under the proposed auditor reporting standard?*

This is not only a matter of increased time spent but increased risk. Users will focus on what has been reported to the exclusion of what should be important to them; when things go badly they will find fault with the auditors because matters critical to them were not listed. This exposure to increased risk will likely drive some increase in fees. However there should also be an increase fees due to the increase in time related to documentation.

*24. Are there specific circumstances in which the auditor should be required to communicate Critical Audit Matters for each period presented, such as in an initial public offering or in a situation involving the issuance of an auditor's report on a prior period financial statement because the previously issued auditor's report could no longer be relied upon? If so, under what circumstances?*

If the Board goes forward with this proposed standard, it should require this expanded reporting for the most recent audit in all '34 Act and in '33 Act filings which include or incorporate by reference audited financial statements. The conditions at the registrant during the most current period under audit are the relevant conditions on which users would focus; those conditions are what will impact the registrant in the immediate future. As stated above, I do not believe users are concerned about what the auditors find difficult, but what management finds difficult. Accordingly, they will be even less concerned about what the auditors found difficult in the last reporting period.

*25. Do the illustrative examples in the Exhibit to this Appendix provide useful and relevant information of Critical Audit Matters and at an appropriate level of detail? Why or why not?*

I don’t believe it provides useful and relevant information about the entity which is what the Board’s users are asking for. It provides information about the auditors and their audits. For all these critical matters the reporting examples address how the auditors obtained competent audit evidence which really speaks to how the auditors assessed controls in these areas and management’s competence. As stated above, the Board should work with the Commission to augment management and audit committee disclosures about tough areas and the controls over those areas.

If the Board continues with this project, the amendments need to extend to internal control reporting. Critical Audit Matters all appear to be control related; this should impact the conduct of the 404 audit and the content of that report.

*26. What challenges might be associated with the comparability of audit reports containing Critical Audit Matters? Are these challenges the same for audits of all types of companies? If not, please explain how they might differ.*

These reports may not be comparable because management strengths and weaknesses will not necessarily be comparable; however, some situations will be. For example, all Level 3 fair value applications must be Critical Audit Matters. Just as Risk Factors and Critical Accounting Policies have become somewhat standardized over time, Critical Audit Matters will as well. Revenue, fair value disclosures, de-recognition of transferred assets, consolidation of variable interest entities, uncertain tax positions, litigation, environmental and other contingencies are areas common to most large companies so these will all be listed as Critical Audit Matters; the auditors’ report language will become standardized in response to PCAOB inspection comments initially, and litigation experience later.

*27. What benefits or unintended consequences would be associated with requiring auditors to communicate Critical Audit Matters that could result in disclosing information that otherwise would not have required disclosure under existing auditor and financial reporting standards, such as the examples in this Appendix, possible illegal acts, or resolved disagreements with management? Are there other examples of such matters? If there are unintended consequences, what changes could the Board make to overcome them?*

The items identified in Appendix 5 are already good examples of potential consequences of this process. We will end up with an “intermediate going concern opinion” – one in which the auditors discuss their struggle to issue an unmodified opinion but which none the less puts the user on notice that this was a close call. We’ll have “intermediate scope exceptions” wherein auditors will discuss the difficulty of obtaining sufficient competent evidential matter but which doesn’t really address the difficulty management had in documenting its position – the matter that is of most concern to users. Perhaps this tension will lead to improved disclosures by management and the audit committee, but I would prefer to see the Board and the Commission work on this together rather than hope for a satisfactory though unintended outcome.

For non-404 reporting companies the auditors must of necessity end up reporting on the existence of material weaknesses in internal control as those must certainly be associated with Critical Audit Matters.

*28. What effect, if any, would the auditor's communication of Critical Audit Matters under the proposed auditor reporting standard have on an auditor's potential liability in private litigation? Would this communication lead to an unwarranted increase in private liability? Are there other aspects of the proposed auditor reporting* *standard that could affect an auditor's potential liability in private litigation? Are there steps the Board could or should take to mitigate the likelihood of increasing an auditor's potential liability in private litigation?*

I'm not an attorney but in my experience the issue is not just about what is communicated but what is not communicated. Accordingly, Critical Audit Matters will likely put auditors in the same position as management is with Risk Factors – they grow and expand to include every possible risk that one could think of at the insistence of counsel who's trying to protect everyone from potential litigation. The same may happen here – Critical Audit Matters will expand to include things that are not critical to investors but are critical to the auditors' defense in litigation matters and in the face of PCAOB inspections. No published PCAOB inspection report will cite a firm for including too many Critical Audit Matters just as no published inspection report will ever cite an auditor for spending too much time in an area.

*29. Is it appropriate for the Board to include the description of the circumstances that would require explanatory language (or an explanatory paragraph) with references to other PCAOB standards in the proposed auditor reporting standard?*

It seems clear that every matter that could end up in an explanatory paragraph will be a Critical Audit Matter; it would also appear that we are destined for redundancy if the Board goes down this path. If the matter is discussed in Critical Audit Matters, no additional information will be provided by an explanatory paragraph.

*30. Is retaining the auditor's ability to emphasize a matter in the financial statements valuable? Why or why not?*

If the Board insists on auditors reporting on Critical Audit Matters these emphasis of a matter paragraphs will no longer be necessary since each example would be a Critical Audit Matter. Even a change in accounting principle is not an easy matter as one would have to take a fresh look at any unrecorded adjustments in those prior financial statements and conclude that not correcting them was still appropriate; if the change/restatement merits an explanatory paragraph under current standards, it is likely a Critical Audit Matter.

*31. Should certain matters be required to be emphasized in the auditor's report rather than left to the auditor's discretion? If so, which matters? If not, why not?*

Those required now include Going Concern Uncertainty, Change in Accounting Principle, and Restatement for Correction of an Error. Each of these would likely result in the inclusion of a Critical Audit Matter discussion; I fail to see what the additional paragraph would accomplish. There is no scenario where an auditor would consider adding an explanatory paragraph but not a corresponding Critical Audit Matter. An auditor who does add an explanatory paragraph would certainly include a corresponding Critical Audit Matter so as to not be subject to second guessing.

*32. Should additional examples of matters be added to the list of possible matters that might be emphasized in the auditor's report? If so, what matters and why?*

Any matter the Board comes up with will be a Critical Audit Matter; significant contingent liabilities, difficulty in obtaining evidence for fair value pricing, and so on are all Critical Audit Matters.

*33. Are the proposed amendments to PCAOB standards, as related to the proposed auditor reporting standard, appropriate? If not, why not? Are there additional amendments to PCAOB standards related to the proposed auditor reporting standard that the Board should consider?*

The time the Board spends working on Qualified Opinions, Disclaimers and Adverse Opinions is necessary because of the regulation model the Board has adopted. As the Board is aware, the Commission will not accept an opinion modified in that fashion – hence those types of reports cannot be issued as they cannot be filed. Spending time on that aspect of the project is not productive.

*34. What are the potential costs or other considerations related to the proposed amendments? Are these cost considerations the same for all types of audits? If not, explain how they might differ.*

The Board is shifting disclosure determination to the auditor rather than to the Commission, the Audit Committee and Management which is where it belongs. Critical Audit Matters should lead to significant disclosure in the financials however, those matters not critical to the auditor but critical to users will get less disclosure than they merit. Any area that's a Critical Audit Matter is necessarily a key area for internal control testing and that is not adequately addressed in the Board's example reports. The example management disclosures do not go beyond what the auditors include in their report; what is critical from an audit perspective is not necessarily what's critical from management's perspective or the investors' perspective. For example, consider Hypothetical Scenario #3; this is the type of situation where management should provide disclosure not only in MD&A and in Critical Accounting Policies but in Item 9 as well. The hypothetical note disclosure appears to follow from the auditors' Critical Audit Matter but there is no disclosure by management of the control deficiency likely because it is not considered a material weakness. Again, there are matters that are not critical to the conduct of the audit itself but that are critical to the business and those will get pushed aside or buried if they are disclosed at all. This project will naturally cause readers and perhaps the audit committee as well to focus on Critical Audit Matters to the exclusion of other items.

*35. Are the proposed auditor reporting standard and amendments appropriate for audits of brokers and dealers? If yes, are there any considerations that the Board should take into account with respect to audits of brokers and dealers?*

Critical Matters for Broker Dealers likely revolve around maintenance of minimum capital requirements and controls over customer accounts and assets. The Critical Audit Matters as structured will address the former but may not address the latter unless the Board incorporates those internal control matters into the standard.

*36. Is the requirement of the proposed auditor reporting standard to communicate in the auditor's report Critical Audit Matters appropriate for audits of brokers and dealers? If not, why not?*

If the Board continues with this standard, it should be applied to all registrants regardless of size or industry. I believe information on controls over customer funds or the computation of capital for example may be more important for users of Broker Dealers' financial statements than the actual statements themselves. Accordingly, the consideration of Critical Audit Matters should contemplate those computations and controls.

*37. Since a broker or dealer may elect to file with the Commission a balance sheet and related notes bound separately from the annual audited financial statements, should the Board address situations in which the auditor may issue two different reports for the same audit of a broker or dealer? Why or why not?*

If the Board goes this route, then all Critical Audit Matters need to be included in the report on the Balance Sheet; any that would impact the income statement will impact equity and therefore required minimum capital. The Board needs to address Critical Audit Matters related to controls over customer funds, execution of orders and any other matters that could impact a customer's account even though they would not directly impact financial statement reporting.

*38. Are the proposed auditor reporting standard and amendments appropriate for audits of investment companies? If yes, are there any considerations that the Board should take into account with respect to auditors' reports on affiliated investment companies, as well as companies that are part of master-feeder or fund of funds structures?*

Unless the investment company is invested solely in Level 1 instruments, there would be a Critical Audit Matter related to fair value. That being said, the Board needs to address controls here too – over timing, use of derivative instruments between reporting dates, etc.

*39. Are the proposed auditor reporting standard and amendments appropriate for audits of benefit plans? If yes, are there any considerations that the Board should take into account with respect to audits of benefit plans?*

Same comment on investments other than Level 1 instruments. Issues of diversification or control over employee funds, deposits and withdrawals, and so on, are all control items and those should be addressed as Critical Audit Matters even though the plan is not required to be audited for controls.

*40. Should audits of certain companies be exempted from being required to communicate Critical Audit Matters in the auditor's report? Why or why not?*

No. If the Board determines to go forward with this proposed standard, it must do it for all registrants. There is no reason why investors in one type of company should receive expanded auditor reporting and another not as that would suggest the Board had determined that certain users or potential users are more worthy.

*41. Is the Board's effective date appropriate for the proposed auditor reporting standard? Why or why not?*

I believe the effective date needs to be at least one year – one full audit cycle – following issuance of the standard.

That being said, I strongly encourage the Board to field test this with some public accounting firms if it has not already done so, and also share the results of that field test with the Commission if it has not already done so. The Commission may determine that it is preferable to change the requirements of Regulations S-K and S-X instead.

*42. Should the Board consider a delayed compliance date for the proposed auditor reporting standard and amendments or delayed compliance date for certain parts of the proposed auditor reporting standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?*

No; if the Board decides to do this, get it done and started for all registrants.

Appendix 6 – Other Information

1. *Is the scope of the proposed other information standard clear and appropriate? Why or why not? Are there Exchange Act documents, other than annual reports, that the Board should consider including in the scope of the proposed other information standard?*

First, the Board should consult with the Commission to determine whether there are other types of filings the Commission believes warrant increased auditor involvement. That being said, any Exchange Act filing that incorporates previously filed financial statements requires an auditors' consent. Auditors currently evaluate the information in those filings for consistency with the financial statements just as they do other information within a Form 10-K. Accordingly, if the Board goes forward with this proposed standard, auditors should report on other information in any Exchange Act filing that incorporates audited financial statements by reference by the inclusion of one or more additional paragraphs in their consent.

2. *Is it appropriate to apply the proposed other information standard to information incorporated by reference? Why or why not? Are there additional costs or practical issues with including information incorporated by reference in the scope of the proposed other information standard? If so, what are they?*

See my comment on the preceding question.

3. *Is it appropriate to apply the proposed other information standard to amended annual reports? Why or why not? Are there additional costs or practical issues with including amended annual reports in the scope of the proposed other information standard? If so, what are they?*

Yes it must apply to amended annual reports, especially if the other information is also amended. If the basic financial statements have changed, their relationship to the other information will also have changed. If the Board believes it appropriate to require the auditors in their reports to inform users of their association with the other information in a document, then the Board should require them to inform users that they are still willing to be associated with the other information in the amended document.

4. *Should the company's auditor, the other entity's auditor, or both have responsibilities under the proposed other information standard regarding audited financial statements of another entity that are required to be filed in a company's annual report under Article 3 of Regulation S-X? Why or why not? Are there practical issues with applying the proposed other information standard to the other entity's audited financial statements?*

Again, this is an area in which the Board must work with the Commission on the latter's filing requirements. The Commission requires financial statements to be filed in these situations as it believes it is important for users of the registrant's financial statements to receive that information. Any financial statements filed that include the report of a registered public accounting firm should be audited in accordance with the Board's standards and, accordingly, be reported on in accordance with those standards. If the Board moves forward with this standard, it should apply to all reports of registered public accounting firms filed with the Commission and provided to users under the requirements of the '34 Act. The other auditors will have to agree/consent to the inclusion of their report and, accordingly, are associated with the other information in the document being filed.

5. *Do the objectives assist the auditor in performing the procedures required by the proposed other information standard to evaluate the other information and report on the results of the evaluation?*

The objectives are incomplete; auditors should also address controls over other information in their audit of internal accounting controls over financial reporting.

6. *Is it appropriate to require the auditor to evaluate the other information for both a material inconsistency and for a material misstatement of fact? If not, why not?*

Yes, as auditors already do that as part of the audit; the only question is the extent to which that association gets reported in the auditors' opinion. Without some clear identification in the report as to the extent of the auditors' involvement, users will begin to expect that everything in the document has been "subjected to audit". I believe there needs to be some limit as to the extent of the auditors' reporting on other information and I believe that limit should be set by the Commission. It seems logical to include MD&A for example and the Management Compensation disclosures; reporting could be limited to that information by reference to page numbers. Blanket reference to other information is neither useful nor appropriate.

*7. Would the evaluation of the other information increase the quality of information available to investors and other financial statement users and sufficiently contribute to greater confidence in the other information? If not, what additional procedures should the Board consider?*

I do not believe there would be any increase in the quality of other information as a result of this standard. As stated in my letter to the Board on the Concept Release on this matter:

> "I do not believe reporting on MD&A would change either the form or content of those disclosures. Since it is included in the 10-K and auditors are therefore "associated" with that information, they already test those disclosures for consistency with the financial statements and underlying records; for 10-Ks incorporated by reference into registration statements, they are "comforted" in letters to underwriters. I have no expectation that the quality of MD&A would improve as a result of its inclusion in the financial statements and direct coverage by the auditors' report. The SEC has spent decades working to increase the quality of MD&A and the SEC certainly has all the leverage it needs in this area."

Again, I do not believe it would improve quality; it would however increase the visibility of the auditors' roles.

*8. Is the federal securities laws' definition of materiality the appropriate standard for the auditor's responsibility to evaluate the other information? Would applying this definition represent a change to the materiality considerations auditors currently use under AU sec. 550?*

The Commission's Staff Accounting Bulletin No. 99 is the appropriate source for materiality determination by auditors of registrants.

*9. Are the proposed procedures with respect to evaluating the other information clear, appropriate, and sufficient? If not, why not?*

They are not clear and in some cases are not appropriate. The Board should refer to AU634 *Letters for Underwriters*. Much "other information" in '33 Act filings, for example, is not comforted by auditors as it is not taken from the systems subject to the system of internal control that is the subject of the audit. Accordingly, the Board should not require auditors to report on anything they could not include in a letter to underwriters. As it says in that standard, auditors should not comment on matters just because they are present and can read or do arithmetic.

*10. Is it understood which amounts in the other information the auditor would be required to recalculate under paragraph 4.d.? If not, why not?*

Yes, but in a comfort letter process auditors report on those items individually so that it's clear what items they are comforting and which they are not. Under the proposed standard, users will not know which items are covered and which are not. Additionally, users should be advised as to what information is covered by controls; they will likely believe it all is covered by control testing if it is covered by the auditors' report. Auditors should not just being doing "simple math" as the proposed standard would imply.

*11. Are there additional costs beyond those described in this Appendix related to the proposed required procedures for the evaluation of the other information? If so, what would these costs be?*

The significant costs for the auditors relate to quality assurance and documentation. This process will require even more documentation than a comfort letter. So look at the typical additional costs for comfort letters and just add these to the annual audit fee every year; that should be a starting point to estimate what this could cost.

*12. Are the proposed auditor responses under paragraph 5 appropriate when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If not, why not?*

Yes; auditors currently have the same response to errors in other information identified in the process of issuing a comfort letter or any report for a registrant: get management to fix it or don't issue the report.

*13. Are there additional costs beyond those described in this Appendix related to responding when the auditor identifies a potential material inconsistency, a potential material misstatement of fact, or both? If so, what would these costs be?*

The Commission won't accept the reports so the costs are related to the increased time associated with a delayed filing if management does not immediately make the necessary corrections and the auditors are unwilling to sign off. In these situations there are always additional meetings with the Audit Committee and additional consultations.

*14. Are the proposed auditor's responses under paragraphs 8 and 9 appropriate when the auditor determines that the other information that was available prior to the issuance of the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?*

Yes, except for the listed response option pertaining to the issuance of a report noting the presence of a material inconsistency. The Board knows the Commission will not accept a qualified auditors' opinion. Accordingly, an auditors' report as described cannot exist.

*15. Is it appropriate for the auditor to issue an auditor's report that states that the auditor has identified in the other information a material inconsistency, a material misstatement of fact, or both, that has not been appropriately revised and describes the material inconsistency, the material misstatement of fact, or both? Under what circumstances would such a report be appropriate or not appropriate?*

This appears to be an inappropriate question. Again, the Board knows the Commission will not accept a filed document that is materially misstated nor will it accept a qualified auditors' opinion. Accordingly, an auditors' report as described cannot exist.

*16. Are the proposed auditor's responses under paragraphs 10 and 11 appropriate when the auditor determines that the other information that was not available prior to the issuance of the auditor's report contains a material inconsistency, a material misstatement of fact, or both? Why or why not?*

Reporting to the audit committee appears to be the appropriate response. It is difficult to contemplate that auditors would withdraw their report on filed financial statements if, for example, overly aggressive marketing information is included in a documents subsequently incorporated by reference into the previously filed form. The issue will, however, surface in the event the auditors are called upon to provide a consent to incorporate filed financial statements into a current filing and the inappropriate information is now incorporated into the financial statements that are the subject of the current consent. It would seem that the auditors should be unwilling to provide that consent absent the correction of the offending information.

*17. Are the proposed auditor's responses appropriate when, as a result of the procedures performed under the proposed other information standard, the auditor determines that there is a potential misstatement in the financial statements? Why or why not?*

Regardless of how the auditors learn of a material misstatement in the financial statements they need to require management to make the appropriate changes. The process is no different whether the error is detected looking at the President's Letter to Shareholders or in the audit of subsequent cash disbursements.

*18. Is the proposed reporting, including the illustrative language, appropriate and sufficiently clear? If not, why not?*

I believe it is not sufficiently clear because there's no distinction between the information covered by the system of internal control and information not so covered. As noted in AU 634 *Letters to Underwriters*, auditors have no business commenting on matters outside the financial reporting process. Just because auditors are capable of re-computing formulae does not mean they should do so and report as such.

*19. Should the Board consider permitting or requiring the auditor to identify in the auditor's report information not directly related to the financial statements for which the auditor did not have relevant audit evidence to evaluate against? If so, provide examples.*

The question relates not only to information not directly related to the financial statements but also to information for which there is no accounting standard. For example, Tenneco regularly discloses "non-recurring" items in an MD&A analysis of its earnings each quarter and many companies disclose comparisons of net income or operating cash flows to EBITDA. The former is a management judgment as to what constitutes "non-recurring" and the latter is a function of how EBITDA is defined in a particular entity's loan agreements.

Other examples include anything the auditors do not include in letters for underwriters such as backlog or the square footage of property owned and leased as well as any "forward looking information" included in the 10-K. The proposed standard will raise expectations that all this information is covered by the auditors' report. Any listing of items that are not covered by the auditors' report will be voluminous and will not be read by users.

*20. What additional costs would the auditor or the company incur related to auditor reporting when the auditor identifies a material inconsistency, a material misstatement of fact, or both?*

I don't see a difference in costs from those they have now. When auditors identify a material inconsistency they would incur time costs for meetings, consultation, documentation, and so on related to the decisions of how to proceed. However, all involved, including the Commission, will likely lose any discretion to correct these things prospectively.

*21. Would the proposed reporting, including the illustrative language, provide investors and other financial statement users with an appropriate understanding of the auditor's responsibilities for, and the results of, the auditor's evaluation of the other information? Why or why not?*

No as I believe this will generate an expectations gap with respect to the auditors' involvement with <u>everything</u> in the document. I think many users will come to believe that just about everything in the document has been audited regardless of how the opinion is worded. Users may not currently have expectations that auditors are reading the other information because they don't know that professional standards require that; going forward they will have expectations because they won't understand the practical limitations on what the auditors can do given the language in the opinion.

*22. Are there any practical considerations that the Board should consider when an auditor identifies a material inconsistency or a material misstatement of fact in the other information that management has appropriately revised prior to the issuance of the auditor's report?*

Yes; the Board has to address how this material inconsistency or material misstatement of fact is to be handled from the standpoint of reporting on internal control. The situation described is indicative of a material weakness in financial reporting of the other information. That weakness should be communicated no differently than any other material weakness.

*23. Are the proposed responsibilities of the predecessor auditor appropriate and sufficiently clear? If not, why not?*

If the registrant corrects other information in a current document and the Commission does not require restatement of that information for prior periods how will the successor report? Even if the Commission would prefer to have the information corrected prospectively, the predecessor auditor will know the older information was materially misstated and be unable to reissue an unqualified report. This appears to restrict the Commission's ability to exercise discretion; it may no longer be able to permit prospective correction.

*24. What effect, if any, would the reporting under the proposed other information standard have on an auditor's potential liability in private litigation? Would this reporting lead to an unwarranted increase in private liability? Are there steps the Board could or should take related to the other information requirements to mitigate the likelihood of increasing an accounting firm's potential liability in private litigation?*

All information in the document would be subject to testing by the auditor even that which is not related to the financial statements. For example, the Board can't say the auditor is not required to test or even understand a formula in order to prove that it is mathematically correct and expect the plaintiff's bar to accept that. Auditors will be exposed for the entire document even that which is clearly outside the auditors' expertise.

*25. Would reporting under the proposed other information standard affect an auditor's potential liability under provisions of the federal securities laws other than Section 10(b) of the Exchange Act, such as Section 11 of the Securities Act? Would it affect an auditor's potential liability under state law?*

As I am not an attorney, I cannot comment on the question, however the fact that this question has been raised suggests the Board has not consulted with the Commission with respect to the enforcement of the federal securities laws.

*26. Are the proposed amendments to PCAOB standards, as related to the proposed other information standard, appropriate? If not, why not? Are there additional amendments to PCAOB standards related to the proposed other information standard that the Board should consider?*

Reference to work of specialists – This amendment raises questions as to the extent of the Board's consultation with the Commission. The Commission expects experts to be named; it also expects reports of "other auditors" to be included in filings when the registrant's auditor refers to such others in its report on the financial statements. If auditors refer to specialists in their reports the Commission may require those specialists to provide consents. This will add significant cost and complexity to the filing process every time a registrant files a document incorporating a 10-K by reference as it will need to obtain consents from any such specialists.

The Board must also amend Auditing Standard No. 5 to specifically include requirements that auditors evaluate controls over other information particularly MD&A. It would seem logical that reading that other information for consistency without evaluating the controls over the processes that generate that information results in a very incomplete reporting process. I submit that reporting on management's controls over that information process is more valuable to users than the auditors' reading of that information.

*27. In the situations described in the proposed amendments to existing AU sec. 508, should the Board require, rather than allow, the auditor to include statements in the auditor's report that the auditor was not engaged to examine management's assertion on the effectiveness of internal control over financial reporting and that the auditor does not express an opinion on management's report?*

If the Board is changing the report, the auditors' responsibility for internal control should be addressed in the second paragraph of the opinion. Auditors should state what they have done with respect to internal control and by extension whether they have done an audit of controls or not. That reporting should also cover controls over other information.

That being said, any question about auditor reporting under AU Section 508 for registrants is an inappropriate question. As stated previously, the Commission will not accept a filing containing a Qualified, Adverse or Disclaimer of Opinion. Spending time with that reporting is not productive time.

*28. Are the proposed other information standard and amendments appropriate for audits of brokers and dealers? If not, why not?*

If these entities file annual reports with the Commission that are available to users and contain such "other information" and if the Board determines it appropriate for auditors to report on such other information, there is no reason to exempt broker dealers or any other particular industry such as insurance companies, public utilities, government entities and so on.

*29. Is the Board's effective date appropriate for the proposed other information standard? Why or why not?*

All of this needs to go through the Commission so having an effective date be one full year audit cycle following approval by the Commission is the minimum. If the Board determines to expand the scope of controls understanding to include other information, then the effective date cannot be less than two year ends away – to allow for a full year of controls documentation and consideration at interim periods.

*30. Should the Board consider a delayed compliance date for the proposed other information standard and amendments for audits of smaller companies? If so, what criteria should the Board use to classify companies, such as non-accelerated filer status? Are there other criteria that the Board should consider for a delayed compliance date?*

No; those who invest in small businesses have just as much right to protection as those who invest in very large registrants so there should be no size exemption when it comes to auditing standards, audit quality or financial statement quality. Auditors of smaller registrants are already reading the other information for consistency/inconsistency so the only additional need is for appropriate documentation and a means to assess information that would be covered by their reports. That situation will be true for all auditors not just those who audit smaller businesses.

*31. Should the Board extend the application of the proposed other information standard to documents containing audited financial statements and the related auditor's report that are filed under the Securities Act? If so, are there obstacles other than those previously mentioned that the Board should consider before such a proposal is made? If not, why not?*

If the Board expands reporting, it should extend that expanded reporting to Securities Act filings as well. Much of the other information is already "comforted" by auditors and reporting on that information would not require additional work other than preparation of additional documentation. Draft comfort letters are updated with each and every amendment; every time an auditor gives its consent it has read the document and considered whether there are inconsistencies in the information or the manner of its presentation. Accordingly, the procedures related to other information are in fact updated with each and every amendment to the registration statement. The auditors could easily add a paragraph on "other information" to their consents included in '33 Act filings.

However, the auditors are currently able to restrict their documentation and analysis to information that is rightly within the auditors' expertise and therefore able to restrict comfort letter procedures and related reporting to specific, appropriate items in the document being filed. The Board's standard is much more open-ended in its scope and would raise expectations on the part of users as to the breadth of the auditors' analysis.

*32. Are there some elements of the proposed other information standard that the Board should consider requiring the auditor to perform related to other information contained in filings under the Securities Act, such as the auditor's responsibility to evaluate the other information? If so, which elements of the proposed other* *information standard should the Board consider including in the procedures currently required for Securities Act documents under AU sec. 711? If not, why not?*

Again, the proposed standard would expand the auditors' responsibilities to include evaluation of information that is clearly outside the auditors' expertise. The amount of analysis and documentation implicit in the Board's standard would exceed that currently done in the comfort letter process. The auditors would be less exposed by having the comfort letter included as an exhibit to the filing than they would be by having that same information covered by the "other information" opinion paragraph proposed to by the Board. At least the comfort letter spells out specifically what the auditors have done to which information – and therefore which information in the filing is left to the reader of that letter.

Auditors' responsibilities for the information in current filings are quite significant; so are the responsibilities of the underwriters and private placement agents. Expanding the auditors' report to cover other information in this manner establishes expectations about the auditors' role and raises new expectations about the auditors' involvement with marketing information or forward looking information; these expectations would likely increase as users/securities purchasers assume auditors' are implicitly providing assurance on that information.

*33. What costs or other challenges should the Board consider when assessing whether to propose extending some elements of the proposed other information standard to other information contained in documents filed under the Securities Act?*

Requiring the auditors to report on the other information included in a '33 Act filing would not only convert a letter for the underwriter or private placement agent into a general use report, it would greatly expand the coverage of that letter to matters and information not currently subject to the comfort letter process. I submit that current fees for comfort letters would increase dramatically if that were to occur because, unlike the specific and detailed reporting in a comfort letter, the Board's proposed reporting on other information is broad if not all-encompassing; it would establish expectations in the minds of users that far exceed those of the underwriter or private placement agent.

Appendix 7 – Emerging Growth Companies - Comments on selected questions only:

1. *Should the proposed standards and amendments be applicable for audits of EGCs? Why or why not?*

Any changes the Board makes to auditors' reports should apply to EGCs as well. These entities are higher risk than existing registrants as evidenced by the Board's observations on going concern paragraphs for example. They should not be exempted from reporting standards.

****

*3. Are there any special characteristics of EGCs that the Board should consider related to the proposed auditor reporting standard, including the communication of Critical Audit Matters?*

As the Board is aware, EGCs are more likely to have significant deficiencies/material weaknesses in internal control, are more likely to be candidates for "going concern opinions", and are in general more risky than their more established brethren. If there is any logic behind the Board's auditor reporting project, exempting EGCs flies in the face of that logic. The only reason to exempt them is that the analyst community does not care about

EGCs enough to want the additional disclosures it wants from the auditors of established companies. I would submit that such a stance is not beneficial to investors in EGCs who are exposed to more relative risk than those who invest in established registrants who are routinely covered by analysts.

*4. Would audits of EGCs be more, less, or equally likely to have Critical Audit Matters?*

As noted above, EGCs have fewer knowledgeable employees (e.g., those trained to handle areas such as financial instruments or fair value accounting), more control weaknesses, greater liquidity concerns, frequent going concern doubts, and largely uncertain futures. My expectation is that their auditors will report a proportionately greater number of critical matters than larger, more established entities.

****

*6. What costs would audit firms incur when implementing the proposed auditor reporting standard, including the communication of Critical Audit Matters, for audits of EGCs? How will those costs differ from the costs for audits of larger and more established companies?*

Again, I believe the costs are outside the audit. Investors will look to the auditors' report for a "road map" as to the parts of the financial statements on which they should focus and disregard other parts of those statements, or other aspects of that business that should be relevant to them as investors.

*7. What costs would audit firms incur when implementing the proposed other information standard for audits of EGCs? How will those costs differ from the costs for audits of larger and more established companies?*

They will incur the incremental time difference between what they do now and what they would do to provide comfort on that information in a letter to underwriters, plus the time it takes to test other information not currently covered in a comfort letter but included in "other information" described in the Board's proposed standard. They will also incur time documenting their basis for reporting on the information that is not directly related to the financial statements but now affirmatively subject to auditor consideration by action of this proposed standard and the expectations it will raise among users. I suggest that EGCs should expect annual fees to increase by an amount comparable to the cost of a comfort letter.

I appreciate the opportunity to offer my comments.

Sincerely,

s/ James L. Fuehrmeyer, Jr.

**TO:** Office of the Secretary, PCAOB

**DATE:** December 2, 2013

**SUBJECT:** Comments on PCAOB Rulemaking Docket Matter No. 034

---

We appreciate the opportunity to submit our comments with respect to the Proposed Auditing Standards on the Auditor's Report (the Proposal) released by the PCAOB. Our comments below are in response to questions outlined in Section V of Appendix 5 and are based on some of our recent research.[1]

*Question 10. Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?*
*Question 11. What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?*

In response to Questions 10 and 11, our research suggests that information communicated in critical audit matters would be relevant and useful to investors and other financial statement users. In our study, we examine how experienced and knowledgeable nonprofessional investors react to the inclusion of a critical audit matter paragraph in the audit report.[2] We find that investors are more likely to stop considering a company as an investment when a critical matter paragraph in the audit report highlights significant estimation uncertainty. This is true both when compared to investors who receive a *standard audit report* and when compared to investors who receive the same information about estimation uncertainty in *management's footnotes*. These results indicate that both the existence *and* the source of the information is important.

Further, we find that information in the critical audit matter paragraph influences investors' perception of risk as well as their confidence in the potential investment. These results indicate that the Proposal's suggestion to include critical audit matters in the auditor's report would provide both useful and relevant information to investors. Our study did not identify any unintended consequences of including a critical audit matter paragraph in the auditor's report.

We note that our study does not answer all potential questions about how investors would use the information suggested in the Proposal. For example, would this information retain

---

[2] Study participants obtained at least a bachelor's degree in business; have on average 25 years of professional work experience; and have significant experience making personal investment decisions.

its usefulness in years subsequent to initial adoption, or would the disclosures lose their usefulness over time by becoming boilerplate? Additionally, we only test the inclusion of a single critical audit matter paragraph.

*Question 15. Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?*

In a second experiment, we include a paragraph following the critical audit matter that provides a brief description of the audit procedures performed on the account in question. This second paragraph also includes either positive or negative assurance specifically related to the critical audit matter. Our study finds that investors who receive both the critical audit matter and the second paragraph are less likely to stop investing than investors who receive the critical audit matter paragraph alone. As such, our findings would suggest that discussing the critical audit matter's resolution is informative and useful to investors.

*25. Do the illustrative examples in the Exhibit to this Appendix provide useful and relevant information of critical audit matters and at an appropriate level of detail? Why or why not?*

Of the three hypothetical scenarios included in Appendix 5, our study can most explicitly speak to the third hypothetical scenario, which is similar in both content and length to the scenario in our experiment. Based on the results of our study, including information at this level of detail in critical audit matter paragraphs is viewed by investors as useful and relevant in making investment decisions.

We appreciate the opportunity to offer our comments.

Kind regards,

Dr. Steven Glover, Brigham Young University

Dr. Christopher Wolfe, Texas A&M University

Dear Board Members:

I support the position of Lisa Roth (Monahan & Roth, LLC) which is described in the attachment.

Thank you for your consideration in this very important matter.

Sincerely,

Joseph M. Lydon

Re: PCAOB Rulemaking Docket Matter No. 034 Proposed Auditing Standards The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion and The Auditors' Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report

Dear Board Members;

Thank you for the opportunity to comment on the rulemaking referenced above. My comments are written from the perspective of specific constituents of the PCAOB: small, independently owned, non-public, non-custodial broker-dealers.

These firms, numbering approximately 4000, are not public companies. They are privately owned and operated small businesses. Approximately 1800 of these firms generate less than $1mm in annual revenues. Many of these firms have fewer than 50 employees.

For these small independent businesses, the proposed rules will inflict significant additional costs, with little or no relevance to the mission of the PCAOB, which is to protect the interests of public investors and to promote investor protection. Public investors do not review the audits of these privately held companies. The investors in these small businesses are the owners themselves.

I believe it is entirely consistent with the PCAOB mission for the Board to exercise its authority under the Dodd Frank Act, and exempt the auditors of small, privately held, non-custodial broker-dealers from its oversight.

Best regards,

//Lisa Roth//

**Re: PCAOB Release No. 2013-005, PCAOB Rulemaking Docket Matter No. 034**

Dear Sirs:

Goldcorp Inc. ("the Company") appreciates the opportunity to provide comments in response to the request for views on the proposed auditing standards: '*The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion*'; '*The Auditor's Responsibilities Regarding Other Information in Certain Documents Containing Audited Financial Statements and the Related Auditor's Report*'; and related amendments to PCAOB Standards as set out in PCAOB Release No. 2013-005, dated August 13, 2013.

The Company supports efforts to provide reporting enhancements and further clarity which would increase understanding of the audit report and the auditor's responsibilities to the reader of the financial statements. We do not however believe that the proposals set forth in the proposed auditing standards will address the concerns raised. The Company has provided the following comments on these proposals:

**Auditor Reporting of Critical Audit Matters**

In respect of the feedback received from investors during the Concept Release comment period requesting further information from the auditors, for example, on key areas of risk or those areas where critical judgment has been applied, the Company does not believe that the appropriate place for those disclosures is within the auditor's report. The preparation of financial statements is the responsibility of management and there are significant disclosure requirements contained within existing accounting standards which require management to disclose critical judgments and estimates, critical accounting policies and other areas of risk or key items within these statements. The Company believes the existing disclosure requirements are appropriate and retain the fundamental basis of preparation of financial statements, which is that these remain the responsibility of management. If the objective is to ensure that critical judgments are better disclosed, this would be better addressed through improvements to corporate reporting disclosure frameworks rather than through the auditor's report. An additional statement, incorporated into the auditor's report, referencing the completeness of the significant judgments disclosed and their consistency with the audit work performed would further augment the reporting and address the concerns raised.

Further, the Company believes that the existing auditor report pass/fail model provides a bright line for the reader as to whether the financial statements are represented fairly. To include critical audit matters within an unqualified report may lead to confusion over the reliability of the financial statement disclosures and the Company anticipates that any matters considered as critical audit matters would be included in the financial statement disclosures as required by the relevant accounting standards.

Depending on the process undertaken by the auditors to determine and report critical audit matters, this proposal may lead to unintended results whereby either excessive or insufficient areas of audit focus are reported to the audit committee. In either case, the Company foresees a significant drain on resources in the drafting of this commentary with little incremental benefit and believes that the financial statement disclosures as required by the relevant accounting standards are sufficiently transparent and comprehensive.

**Auditor Reporting on Other Information**

The Company supports a proposal to provide language clarifying the work performed by the auditors on other information included with the annual report or referenced therein. Current guidance within existing auditing standards requires the auditor to review and consider other information contained within the annual report, principally in the Management Discussion & Analysis. The current proposal, however, implies an increase to the scope of work being performed by the auditor with the proposed requirement to 'evaluate' the other information, and may result in audit procedures being performed on non-financial statement disclosures. Other information included in the annual report provides the platform for management to present other information outside of the financial statements which management considers useful to the reader in understanding its business and key operational trends. Inherently, some of this information is prepared on a forward-looking basis and a requirement for auditors to increase the scope of work on these disclosures may result in less disclosure provided by management, inevitably reducing the amount of information management considers useful to its stakeholders and raising the possibility of increased boilerplate language in non-financial statement disclosures.

**Additional Elements - Auditor Tenure/Independence**

The Company does not believe the changes proposed are warranted, specifically the proposal to include information on the auditors tenure may imply a reduction in audit quality based on length of tenure.

Overall, the Company is supportive of moves to improve reporting transparency to stakeholders; however the Company does not believe that the proposed changes provide the best avenue to address the concerns raised.

We appreciate the opportunity to provide the Company's views for your consideration.

Sincerely yours,

Wendy Louie

***Comments Related to Critical Audit Matters (Paragraphs 7 – 14 of the Proposed Auditor Reporting Standard)***

Members of the Board:

I appreciate the opportunity to respond to the request for comments on *The Auditor's Report on an Audit of Financial Statements When the Auditor Expresses an Unqualified Opinion* (the "Proposed Standard"). I am electing to limit my comments to this Proposed Standard, and I specifically wish to address selected questions concerning Critical Audit Matters. I write as a member of the financial community and a potential investor.

**Overview**

In general, I agree with the spirit and intent of the Proposed Standard. While the current form of the auditor's report gives boilerplate language regarding the auditor's procedures, there is a general understanding that in the course of their procedures certain matters may have warranted significant effort in order to gain comfort. The auditor is in a unique position to provide further detail regarding areas of significant judgment or risk that their own procedures identified as requiring additional attention. The investing community would certainly benefit from having this insight, as the current pass/fail model of the auditor's report gives no specifics as to the particular issues of concern for a company. There are several examples of public companies that have experienced financial scandals and subsequent restatements while having previously received an unqualified opinion from their auditor. While I am sure that such auditors did indeed perform sufficient procedures as to obtain reasonable assurance regarding the presentation of the financial statements, I cannot help but wonder whether insight regarding risky areas might have given the investing community at the very least some indication to tread lightly where there may have been aggressive accounting treatment or management estimation.

*****

The following comments are in response to certain questions set forth in the Proposed Standards.

**10. Would the auditor's communication of critical audit matters be relevant and useful to investors and other financial statement users? If not, what other alternatives should the Board consider?**

I believe that the communication of critical audit matters would unequivocally be useful to investors and other financial statement users. The purpose of financial statements is to give users pertinent information for decision-making, especially in the case of investors whether or not to invest. Identifying critical audit matters would only serve to assist a user focus on particular issues that would help complete their understanding of the financial statements.

For example, if during the year a company were to make several investments in entities with a less than majority-owned interest, they might have created multiple variable interest entities (VIEs) that would require careful analysis to determine whether the company was the primary beneficiary and thus would need to consolidate them. An auditor might dedicate a significant amount of time testing management's conclusions given the potentially significant balance sheet effects of consolidation, and given the high level of potentially complex judgments involved they might find it necessary to consult with their National office. Ultimately the auditor might obtain reasonable assurance that management's conclusions were accurate. However, given the high degree of judgment and complexity involved on both management and the auditor's parts, an investor might benefit from understanding that such transactions were a significant matter and might be given cause to perform their own due diligence such as performing sensitivity analyses around different scenarios if alternative conclusions could have been made.

**11. What benefits or unintended consequences would be associated with the auditor's communication of critical audit matters?**; and

**13. Could the additional time incurred regarding critical audit matters have an effect on the quality of the audit of the financial statements? What kind of an effect on quality of the audit can it have?**

I agree with many of the unintended consequences cited in the Proposed Standard, including the strain on an auditor's work in the final stages of the audit and the potential misunderstanding of critical audit matters by an investing community that is unfamiliar with such disclosure. In the case of strain on an auditor's work, I believe that this risk is minimal given that an auditor's work would likely already contain significant documentation regarding critical matters given existing documentation standards, and in short course this extra step would easily be absorbed into the audit process. I expect the additional time required to address critical audit matters to have, if anything, a positive impact on the quality of the audit by focusing the auditor's attention on those matters which have a high degree of risk, subjectivity, and/or complexity.

In regards to the potential misunderstanding by the investing community, I believe that the risk of confusing the investing community is greater in the case of not having critical audit matters to guide their focus than in the case of having critical audit matters that an investor inappropriately interprets.

I believe that a far bigger unintended consequence would be the strain critical audit matters could impose on the auditor-client relationship. The auditor-client relationship is already an unusual one in that an auditor is meant to be an external party expressing an opinion on the fairness of a company's financial statements, and yet they are paid by said company, often on-site for extended periods of time, and are able to be fired. I can imagine that management would be incentivized to pressure an auditor into not divulging areas of significant complexity or judgment in a critical audit matter for fear that the investing community would take any such matters as indications of "softer" numbers or aggressive accounting. The auditor would thus be confronted by the pressures to uphold its own professionalism and its desire to maintain a client relationship. In some cases, this might lead to the critical audit matters section being reduced to merely boilerplate language and thus undoing the very spirit of the Proposed Standard to give the investing community additional guidance on how to focus their reading of the financial statements.

**15. Would including the audit procedures performed, including resolution of the critical audit matter, in the communication of critical audit matters in the auditor's report be informative and useful? Why or why not?**

The audit procedures performed related to a critical audit matter may vary in complexity depending on the matter involved, and in the cases in which audit procedures are exceptionally complex their description may unduly create confusion for the investing community rather than providing illumination on the underlying issue.

On the other hand, in some situations I can imagine that an investor might find the description of certain audit procedures helpful in determining what level of due diligence would be required of their own analysis. For example, if the critical audit matter concerned something like unusual inventory balances, knowing that the auditor performed extensive physical inventory counts might give them less cause to perform sensitivity analyses regarding inventory balances than they would if the auditor performed some form of analytic. Thus, I think the usefulness of disclosing audit procedures will vary case by case but should be guided by the principle that discussion of audit procedures should only occur if it can be done so succinctly *and* if a reasonable investor might draw different conclusions based upon the type of approach used by the auditor.

**24. Are there specific circumstances in which the auditor should be required to communicate critical audit matters for each period presented, such as in an initial public offering or in a situation involving the issuance of an auditor's report on a prior period financial statement because the previously issued auditor's report could no longer be relied upon? If so, under what circumstances?**

In the spirit of the Proposed Standard, the investing community would be better served if the auditor was required to communicate critical audit matters for each period presented in the situations noted of an IPO or a previous auditor's report no longer being reliable, but *only if* these critical matters were not previously communicated in a public filing. Thus, especially in the case of an IPO where prior periods did not previously communicate critical audit matters, an investor can perform due diligence with full knowledge of where to focus attention in performing analyses for each given year. A company's critical audit matters could very well change from year to year, especially if the company undertook significant acquisitions or changed accounting policies in a given year but not in others. This might give an investor cause to focus their analyses on different aspects of the financial statements for each year in determining their full picture of a company's health.

**26. What challenges might be associated with the comparability of audit reports containing critical audit matters? Are these challenges the same for audits of all types of companies? If not, please explain how they might differ.**
